IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://webapp.etsi.org/IPR/home.asp).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

### Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Intelligent Transport System(ITS).

The present document is part 1, sub-part 2 of a multi-part deliverable covering Intelligent Transport Systems (ITS); Road Transport and Traffic Telematics (RTTT); Test specifications for Dedicated ShortRange Communication (DSRC) transmission equipment as identified below:

#### Part 1: "DSRC data link layer: medium access and logical link control;

Sub-part 1: "Protocol Implementation Conformance Statement (PICS) proforma specification";

#### Sub-part 2: "Test Suite Structure and Test Purposes (TSS&TP)";

Sub-part 3: "Abstract Test Suite (ATS) and partial PIXIT proforma".

Part 2: "DSRC application layer".

### 1 Scope

The present document contains the Test Suite Structure (TSS) and Test Purposes (TP) to test the Dedicated Short Range Communication (DSRC); Data Link Control (DLC) layer.

The objective of this test specification is to provide a basis for conformance tests for DSRC equipment giving a high probability of inter-operability between different manufacturer's equipment.

The ISO standard for the methodology of conformance testing (ISO/IEC 9646-1 [5] and ISO/IEC 9646-2 [6]) as well as the ETSI rules for conformance testing (ETS 300 406 [4]) are used as a basis for the test methodology.

### 2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific.

- For a specific reference, subsequent revisions do not apply.
- Non-specific reference may be made only to a complete document or a part thereof and only in the following cases:
  - if it is accepted that it will be possible to use all future changes of the referenced document for the purposes of the referring document;
  - for informative references.

Referenced documents which are not found to be publicly available in the expected location might be found at <a href="http://docbox.etsi.org/Reference">http://docbox.etsi.org/Reference</a>.

For online referenced documents, information sufficient to identify and locate the source shall be provided. Preferably, the primary source of the referenced document should be cited, in order to ensure traceability. Furthermore, the reference should, as far as possible, remain valid for the expected life of the document. The reference shall include the method of access to the referenced document and the full network address, with the same punctuation and use of upper case and lower case letters.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

### 2.1 Normative references

The following referenced documents are indispensable for the application of the present document. For dated references, only the edition cited applies. For non-specific references, the latest edition of the referenced document (including any amendments) applies.

- [1] CEN EN 12795 (2003): "Road transport and traffic telematics Dedicated Short Range Communication (DSRC) - DSRC data link layer: medium access and logical link control".
- [2] CEN EN 12253 (2003): "Road transport and traffic telematics Dedicated short-range communication Physical layer using microwave at 5,8 GHz".
- [3] CEN EN 13372 (2003): "Road transport and traffic telematics (RTTT) Dedicated short-range communication Profiles for RTTT".
- [4] ETSI ETS 300 406: "Methods for Testing and Specification (MTS); Protocol and profile conformance testing specifications; Standardization methodology".
- [5] ISO/IEC 9646-1 (1991): "Information technology Open Systems Interconnection Conformance testing methodology and framework Part 1: General concepts".

- [6] ISO/IEC 9646-2 (1991): "Information technology Open Systems Interconnection Conformance testing methodology and framework Part 2: Abstract Test Suite specification".
- [7] ISO/IEC 9646-6 (1991): "Information technology Open Systems Interconnection Conformance testing methodology and framework Part 6: Protocol profile test specification".
- [8] ISO/IEC 9646-7 (1991): "Information technology Open Systems Interconnection Conformance testing methodology and framework Part 7: Implementation Conformance Statement".

### 2.2 Informative references

The following referenced documents are not essential to the use of the present document but they assist the user with regard to a particular subject area. For non-specific references, the latest version of the referenced document (including any amendments) applies.

[i.1] ETSI TS 102 178: "Broadband Radio Access Networks (BRAN); HiperMAN; Data Link Control (DLC) layer".

# 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in ISO/IEC 9646-7 [8], EN 12253 [2], EN 12795 [1] and EN 13372 [3] and the following apply:

blocked signal: signal without clock and bit information, e.g. a very weak signal

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in ISO/IEC 9646-1 [5], ISO/IEC 9646-6 [7], ISO/IEC 9646-7 [8], TS 102 178 [i.1] and EN 12795 [1] and the following apply:

DLC	Data Link Control
PrWA	MAC frame Private Window Allocation
PrWRq	MAC frame Private Window Request
U8	Uplink bit rate
U13a	Uplink preamble length (duration)
TSS	Test Suite Structure

# 4 Test Suite Structure (TSS)

### 4.1 Structure

Figure 1 shows the DLC Test Suite Structure (TSS) including its subgroups defined for the conformance testing.

Group	Type of SUT	Behaviour
	On Board Unit	Valid behaviour
DI C MAC Sub lover		Invalid behaviour
DLC MAC Sub layer	Road Side Unit	Valid behaviour
		Invalid behaviour
	On Board Unit	Valid behaviour
DLC LLC Sub layer		Invalid behaviour
DLC LLC Sub layer	Deed Cide Linit	Valid behaviour
	Road Side Unit	Invalid behaviour

Figure 1: TSS for DSRC DLC

### 4.2 Test groups

The test groups are organized in two groups. The first is designed for the DLC MAC sub layer testing and the second is designed for DLC LLC sub layer testing.

### 4.3 Type of SUT test groups

The type of SUT test groups are organized in two groups. The first is designed for the On Board Unit testing and the second is designed for Road Side Unit testing.

### 4.4 Behaviour test groups

### 4.4.1 Valid Behaviour (BV) tests

This test sub group shall verify that the IUT reacts in conformity with the EN, after receipt or exchange of a valid Protocol Data Units (PDUs). Valid PDUs means that the exchange of messages and the content of the exchanged messages are considered as valid.

### 4.4.2 Invalid Behaviour (BI) tests

This test sub group shall verify that the IUT reacts in conformity with the EN, after receipt of a syntactically invalid PDU.

5 Test Purposes (TP)

### 5.1 Introduction

### 5.1.1 TP definition conventions

The TPs are defined following particular rules as shown in table 1.

#### Table 1: TP definition rules

TP Id according to the TF	P Title	
naming conventions	Reference	
	PICS Selection	
	TC Reference	
	Initial condition	
	Stimulus and Expected behaviour	

TP ld	The TP Id is a unique identifier. It shall be specified according to the TP naming		
	conventions defined in the sub-clause below.		
Title	Short description of test purpose objective.		
Reference	The reference should contain the references of the subject to be validated by the actual		
	TP (specification reference, clause, paragraph).		
PICS Selection	Reference to the PICS statement involved for selection of the TP. Contains a Boolean		
	expression. Only those PICS statements are shown that are explicitly related to the te		
TC reference	Shows the reference number of the related Test Case in the ATS.		
Initial condition	The condition defines in which initial state the IUT has to be to apply the actual TP.		
Stimulus and Expected	<b>d</b> Definition of the events the tester performs, and the events that are expected from the		
behaviour	IUT to conform to the base specification.		

### 5.1.2 TP naming conventions

The identifier of the TP is built according to table 2.

Table 2: TP naming convention

Identifier:	TP/ <layer>/<sut>/<x>-<nn></nn></x></sut></layer>		
	<layer></layer>	MAC	MAC sub-layer
		LLC	LLC sub-layer
	<sut> = type of SUT</sut>	OBU	On Board Unit
		RSU	Road Side Unit
	x = Type of testing	BV	Valid Behaviour Tests
		BI	Invalid Behaviour Tests
	<nn> = sequential number</nn>	(01-99)	Test Purpose Number

### 5.1.3 Sources of TP definitions

All TPs are specified according to EN 12795 [1] and EN 13372 [3] with side-information from EN 12253 [2].

### 5.2 MAC test purposes for On-Board Unit

### 5.2.1 BV test purposes

Test subgroup objective:

- to test the behaviour of the IUT in relation to syntactically and contextual correct behaviour of the test system.

TP/MAC/OBU/BV/01	Verify that the OBU can receive downlink frames of maximum allowed length as defined by N2	
	Reference:	EN 12795 [1], clauses 7.3.3, 7.4.3.1.1 d) and annex A
	PICS Selection:	Table A.2/2 AND Table A.5/4 AND Table A.6/7
	TC reference:	TC_MAC_OBU_BV_01
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Expected Behaviour:	
	windows. of octets i	nds downlink frame containing BST, allocating N5 public uplink The number of profiles in the profilelist shall be such, that the number n the frame equals the maximum number as defined by N2. does send a PrWRq within one of the public uplink windows

TP/MAC/OBU/BV/02	Verify that the OBU can receive a downlink frame following immediately within T1 after the end of an uplink frame transmitted by the same OBU
	Reference: EN 12795 [1], clause 7.3.3 and annex A
	PICS Selection: Table A.2/2 AND Table A.5/4 AND Table A.6/1
	TC reference: TC_MAC_OBU_BV_02
	Initial condition: OBU not in sleep mode and not yet initialized
	Stimulus and Expected Behaviour:
	<ol> <li>Tester sends downlink frame containing BST, allocating N5 public uplink windows.</li> </ol>
	2. Verify IUT sends a PrWRq in any of the public uplink windows allocated.
	3. Tester sends PrWA.
	<ol><li>Verify IUT sends a VST within the private uplink window allocated.</li></ol>
	5. Tester sends ACn command, e.g. DLL ECHO or EFC ECHO, such, that the preamble of the ACn command frame starts exactly T1 after the end of the last bit of the end flag of the VST frame.
	<ol><li>Verify IUT sends the ACn response.</li></ol>

TP/MAC/OBU/BV/03	Verify that the OBU implements the timing constraints T3, T4b and T5 for public	
	uplink windows	
	Reference: EN 12795 [1], clause 7.3.4.2 and annex A	
	PICS Selection: Table A.2/2 AND Table A.6/3 AND Table A.6/5 AND Table A.6/6	
	TC reference: TC_MAC_OBU_BV_03	
	Initial condition: OBU not in sleep mode and not yet initialized	
	Stimulus and Expected Behaviour:	
	1. Tester sends downlink frame containing BST, allocating N5 public uplink	
	windows.	
	<ol><li>Verify IUT sends a PrWRq in one of the public uplink windows allocated.</li></ol>	
	3. Tester records time:	
	<ul> <li>Ts from the end of last bit of the end flag of the BST frame until the beginning of the preamble of the PrWRq frame, and time.</li> </ul>	
	<ul> <li>Te from the end of last bit of the end flag of the BST frame until the end of the last bit of the end flag of the PrWRq frame.</li> </ul>	
	<ol><li>Verify IUT behaves according to table 3.</li></ol>	
	<ol><li>Repeat the previous steps until the IUT has selected each of the N5 public uplink windows at least once.</li></ol>	

### Table 3: Timing for public uplink window

Public uplink window number	Start time Ts	End time Te
1	T3 < Ts < T3 + T4b	Te < T3 + T5
2	T3 + T5 < Ts < T3 + T5 +T4b	Te < T3 + 2·T5
N5	T3 + ((N5-1)⋅T5) < Ts < T3 + ((N5-1)⋅T5) +T4b	Te < T3 + N5⋅T5

TP/MAC/OBU/BV/04	Verify that the OBU can receive a downlink frame which follows another downlink frame immediately within T2	
	Reference:	EN 12795 [1], clause 7.3.3 and annex A
	<b>PICS Selection:</b>	Table A.2/2 AND Table A.5/4 AND Table A.6/2
	TC reference:	TC_MAC_OBU_BV_04
	Initial condition:	OBU being not initialized and not in sleep mode
	Stimulus and Expected Behaviour:	
	<ol> <li>Tester se</li> </ol>	nds a frame with a private LID, not allocating a frame.
	2. Within T2	, the tester sends downlink frame containing BST, allocating N5 public
	uplink wir	
	<ol><li>Verify IUT</li></ol>	sends a PrWRq in one of the public uplink windows allocated.

TP/MAC/OBU/BV/05	Verify that the OBU implements the timing constraints T3 and T4a and N3 for private uplink windows	
	Reference:	EN 12795 [1], clause 7.3.4.1 and annex A
		EN 12253 [2], clause 5.3
	PICS Selection:	Table A.2/2 AND Table A.5/2 AND Table A.6/3 AND Table A.6/4
		AND Table A.6/8
	TC reference:	TC_MAC_OBU_BV_05
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Expected Behaviour:	
	<ol> <li>Tester per</li> </ol>	erforms an initialization cycle BST / PrWRq / PrWA / VST.
	<ol><li>Tester re</li></ol>	cords time:
	• Ts from the end of the last bit of the end flag of the PrWA frame allocating a private uplink window until the beginning of the preamble of the VST frame in the allocated private uplink window, and time.	
	<ul> <li>Te from the end of the last bit of the end flag of the PrWA frame allocating a private uplink window until the end of the last bit of the end flag of the VST frame in the allocated private uplink window.</li> </ul>	
	3. Verify IU	T behaves according to table 4.

Start time Ts	End time Te
T3 < Ts < T3 + T4a	Te < T3 + T4a + U13a +(8·N3 + stuff bits)/ U8

TP/MAC/OBU/BV/06		BU correctly manages the S-bit and L-Bit in the MAC control field f possible re-transmission of VST frames
	Reference:	EN 12795 [1], clauses 7.3.2.1, 7.4.3.1.3 and 7.4.3.1.4
	PICS Selection:	Table A.2/2 AND Table A.4/6 AND Table A.7/2 AND Table A.7/3
	TC reference:	TC_MAC_OBU_BV_06
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Expected Behaviour:	
	1. Tester se windows.	nds downlink frame containing BST, allocating N5 public uplink
	2. Verify IUT	sends a PrWRq in one of the public uplink windows allocated.
		nds PrWA and records the value of the S-bit used.
	<ol> <li>Tester ignores a possible reception of a VST in the allocated private uplink window.</li> </ol>	
	5. Tester se	nds PrWA with the S-bit set to the same value as in step 3.
	6. Verify IUT	sends the VST.

TP/MAC/OBU/BV/07		U correctly manages the local S-bit state variable based on the S-
		e received MAC control field, where an LPDU is present in the
	allocating downli	nk frame.
	Reference:	EN 12795 [1], clauses 7.3.2.1, 7.4.3.1.3 and 7.4.3.1.4
	PICS Selection:	Table A.2/2 AND Table A.4/6 AND Table A.7/2 AND Table A.7/3
		AND Table A.7/4
	TC reference:	TC_MAC_OBU_BV_07
	Initial condition:	OBU being fully initialized and not in sleep mode.
	Stimulus and Exp	ected Behaviour:
	1. Tester se	nds the EFC ECHO ACn command with ECHO_DATA1 and notes the
	value of the	ne S-bit.
	2. Verify IUT	sends the EFC ECHO response with ECHO_DATA1.
	3. Tester se	nds the EFC ECHO ACn command with ECHO_DATA2. The S-bit
	shall be set to the same value as used in step 1.	
	4. Verify IUT	sends the EFC ECHO response with ECHO_DATA2.
	5. Tester se	nds PrWA with the S-bit set to the same value as in step 3.
	6. Verify IUT	sends the EFC ECHO response with ECHO_DATA2.

TP/MAC/OBU/BV/08	Verify that the OB	U randomly selects one of the N5 public uplink windows.
	Reference:	EN 12795 [1], clause 7.3.4.3
	PICS Selection:	Table A.2/2 AND Table A.5/1
	TC reference:	TC_MAC_OBU_BV_08
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Exp	ected Behaviour:
	1. Tester se windows.	nds downlink frame containing BST, allocating N5 = three public uplink
	2. Verify IUT sends a PrWRq within one of the public uplink windows allocated.	
	<ol><li>Tester records number of public uplink window selected.</li></ol>	
	<ol> <li>Tester repeats steps 1. to 3. X times with X = 100.</li> </ol>	
	5. Verify IUT	selects all possible public uplink windows at least 0,3-X times.
NOTE: In case the test	ase the test fails, increase value of X and repeat test.	

TP/MAC/OBU/BV/09	Verify that the OE MAC control field	BU can detect and manage both valid values of the C/R-bit in the of a PrWa frame
	Reference:	EN 12795 [1], clauses 7.3.2.1 and 7.4.3.1.1 c)
	<b>PICS Selection:</b>	Table A.2/2 AND Table A.4/6
		Note: Test does not apply for profiles 0/1 of EN 13372 [3]
	TC reference:	TC_MAC_OBU_BV_09
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Exp	ected Behaviour:
	1. Tester se windows.	nds downlink frame containing BST, allocating N5 public uplink
	2. Verify IUT	sends PrWRq in the allocated private uplink window.
	<ol><li>Tester se</li></ol>	nds PrWA frame with the C/R-bit of the MAC control field set to 1.
	<ol><li>Verify IUT</li></ol>	sends VST in the allocated private uplink window.
	<ol><li>Tester se</li></ol>	nds PrWA frame with the C/R-bit of the MAC control field set to 0. The
		I have the same value as in step 3.
	<ol><li>Verify IUT</li></ol>	sends VST in the allocated private uplink window.

### 5.2.2 BI test purposes

Test subgroup objective:

- to check the behaviour of the of the IUT in response to invalid messages and behaviour from the test tool.

TP/MAC/OBU/BI/01		BU can detect and manage double-bit errors in the LID field, MAC LPDU field of the downlink frame using the FCS field	
	Reference:	EN 12795 [1], clauses 5.5 and 7.4.3.1.1 e)	
	<b>PICS Selection:</b>	Table A.2/2 AND Table A.4/8 AND Table A.7/1 AND Table A.7/6	
	TC reference:	TC_MAC_OBU_BI_01	
	Initial condition:	OBU not in sleep mode and not yet initialized	
	Stimulus and Expected Behaviour:		
	windows, The bit e	<ol> <li>Tester sends downlink frame containing BST, allocating N5 public uplink windows, but introduces a random double-bit error in the frame on transmission. The bit error shall be introduced between the end of the start flag and the start of the FCS field.</li> </ol>	
		2. Verify IUT does not respond within any of the public uplink windows allocated.	
	<ol><li>Repeat test in case the errors produced a flag or an abort sequence.</li></ol>		

TP/MAC/OBU/BI/02	Verify that the OBU can detect and manage double-bit errors in the FCS field of the downlink frame using the FCS field		
	Reference: EN 12795 [1], clauses 5.5 and 7.4.3.1.1 e)		
	PICS Selection: Table A.2/2 AND Table A.4/8 AND Table A.7/1 AND Table A.7/6		
	TC reference: TC_MAC_OBU_BI_02		
	Initial condition: OBU not in sleep mode and not yet initialized		
	Stimulus and Expected Behaviour:		
	<ol> <li>Tester sends downlink frame containing BST, allocating N5 public uplink windows, but introduces a random double-bit error in the FCS field on transmission.</li> </ol>		
	<ol> <li>Verify IUT does not respond within any of the public uplink windows allocated.</li> <li>Repeat test in case the errors produced a flag or an abort sequence.</li> </ol>		

TP/MAC/OBU/BI/03	Verify that the OBU can detect and manage a block of 15 bit errors in the downlink		
	frame using the FCS field		
	Reference:	EN 12795 [1], clauses 5.5 and 7.4.3.1.1 e)	
	PICS Selection:	Table A.2/2 AND Table A.4/8 AND Table A.7/1 AND Table A.7/6	
	TC reference:	TC_MAC_OBU_BI_03	
	Initial condition:	OBU not in sleep mode and not yet initialized	
	Stimulus and Expected Behaviour:		
	1. Tester sends downlink frame containing BST, allocating N5 public up		
	windows, but introduces a block of 15 subsequent bit errors randomly located i		
	the frame on transmission. The block of bit errors shall be introduced between		
	the end of the start flag and the start of the end flag.		
		does not respond within any of the public uplink windows allocated.	
	<ol><li>Repeat te</li></ol>	st in case the errors produced a flag or an abort sequence.	

TP/MAC/OBU/BI/04	Verify that the OBU can detect and manage the abort sequence in the LPDU field of a downlink frame		
	Reference: EN 12795 [1], clauses 5.7 and 7.4.3.1.1		
	PICS Selection: Table A.2/2 AND Table A.7/1		
	TC reference: TC_MAC_OBU_BI_04		
	Initial condition: OBU not in sleep mode and not yet initialized		
	Stimulus and Expected Behaviour:		
	1. Tester sends downlink frame containing BST modified such, that the beaconId		
	contains a sequence of seven consecutive one bits, allocating N5 public uplink		
	windows. The zero-bit insertion shall not be applied to the beaconId field. The		
	FCS shall be correct with respect to the actually transmitted frame.		
	2. Verify IUT does not respond within any of the public uplink windows allocated.		

TP/MAC/OBU/BI/05	Verify that the OE downlink frame	BU can detect and manage the abort sequence at the end of a
	Reference:	EN 12795 [1], clauses 5.7 and 7.4.3.1.1
	PICS Selection:	Table A.2/2 AND Table A.7/1
	TC reference:	TC_MAC_OBU_BI_05
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Exp	pected Behaviour:
		nds downlink frame containing BST modified such, that the end flag is by the abort sequence, allocating N5 public uplink windows. The FCS orrect.
	2. Verify IUT	f does not respond within any of the public uplink windows allocated.

TP/MAC/OBU/BI/06	Verify that the OE according to N2	3U can detect and manage a downlink frame being too long
	Reference:	EN 12795 [1], clauses 7.3.3, 7.4.3.1.1 d) and annex A
	PICS Selection:	Table A.2/2 AND Table A.5/4 AND Table A.7/1 AND Table A.6/7

	Stimulus and Exp	ected Behaviour:
	1. Tester ser windows.	nds downlink frame containing BST, allocating N5 public uplink
		sends a PrWRq within one of the public uplink windows allocated ate LID = LID1.
	<ol><li>Tester ser</li></ol>	nds PrWA with private LID different to LID1, but with correct format.
		does not send VST in the allocated private uplink window.
		nds PrWA with private LID = LID1.
	6. Verify IUT	sends VST in the allocated private uplink window.

TP/MAC/OBU/BI/24	Verify that the OE	BU can manage retransmission of PrWRq
	Reference:	EN 12795 [1], clause 7.4.3.2.2
	<b>PICS Selection:</b>	Table A.7/5
	TC reference:	TC_MAC_OBU_BI_24
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Exp	ected Behaviour:
	1. Tester se windows.	nds downlink frame containing BST, allocating N5 public uplink
		sends a PrWRq within one of the public uplink windows allocated ate LID = LID1.
	<ol><li>Tester igr</li></ol>	nores PrWRq and repeats step 1.
4. Verify IUT		repeats step 2.

# 5.3 MAC test purposes for Road-Side Unit

### 5.3.1 BV test purposes

Test subgroup objective:

- to test the behaviour of the IUT in relation to syntactically and contextual correct behaviour of the test system.

TP/MAC/RSU/BV/01	Verify that the RSU can receive uplink frames of maximum allowed length in private uplink windows defined by N3.	
	Reference:	EN 12795 [1], clauses 7.3.4.1, 7.4.2.1.1 e) and annex A
	<b>PICS Selection:</b>	Table B.2/2 AND Table B.5/2 AND Table B.6/8
	TC reference:	TC_MAC_RSU_BV_01
	Initial condition:	RSU is running any application, and is periodically inviting for initialization, i.e. sending BST with subsequent allocation of N5 public uplink windows. No LID is registered
	Stimulus and Exp	
		nds PrWRq in one of the allocated public uplink windows.
		allocates a private uplink window.
	<ol> <li>Tester sends VST in the allocated private uplink window. The length of applicationList shall be such that the number of octets in the frame equ maximum number as defined by N3.</li> <li>Verify IUT sends a privately addressed frame in order to acknowledge of the VST.</li> </ol>	

TP/MAC/RSU/BV/02	Verify that the RS	U implements the timing constraint T1
	Reference:	EN 12795 [1], clauses 7.3.3 and annex A
	PICS Selection:	Table B.2/2 AND Table B.5/1 AND Table B.6/1
	TC reference:	TC_MAC_RSU_BV_02
	Initial condition:	RSU is running any application, and is periodically inviting for
		initialization, i.e. sending BST with subsequent allocation of N5
		public uplink windows. No LID is registered
	Stimulus and Exp	
		d IUT perform a complete initialization cycle including the privately
		d acknowledge frame following BST. Tester records time
		Γ from the end of the last bit of the end flag in an uplink window
		=PrWRq frame) until the beginning of the preamble of the frame in the
		subsequent downlink window. In case of public uplink windows, the
		number of the selected window is considered to calculate the proper
		vindow timing.
		or the whole application cycle, where applicable.
	2. Verify IUT	complies with the requirement for T1 always.

TP/MAC/RSU/BV/03		SU implements the correct private medium response time N12 for private uplink windows
	Reference:	EN 12795 [1], clause 7.4.2.2.3 and annex A
	PICS Selection:	Table B.2/2 AND Table B.7/5
	TC reference:	TC_MAC_RSU_BV_03
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with subsequent allocation of N5 public uplink windows. The repetition rate for BST transmissions shall be set such, that in between subsequent BST transmissions several PrWA frames are possible. No LID is registered
	Stimulus and Exp	pected Behaviour:
	<ol> <li>Tester se</li> </ol>	nd PrWRq in one of the allocated public uplink windows.
	<ol><li>Verify the</li></ol>	IUT sends PrWA.
	<b>v</b>	nores all possible receptions of PrWA frames and reception of all ent BST frames.
	4. Verify IU	F repeats PrWA only until it transmits the next BST.

TP/MAC/RSU/BV/04	Verify that the RSU implements the correct S-bit mechanism for re-allocations of private uplink windows and performs correct initialization of the S-bit.	
	Reference:	EN 12795 [1], clauses 7.4.2.2.2, 7.4.2.2.3 and annex A
	PICS Selection:	Table B.2/2 AND Table B.7/4 and Table B.7/5
	TC reference:	TC_MAC_RSU_BV_04
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with
		subsequent allocation of N5 public uplink windows. The repetition
		rate for BST transmissions shall be set such, that in between
		subsequent BST transmissions several PrWA frames are possible.
		No LID is registered
	Stimulus and Exp	ected Behaviour:

- Tester sends PrWRq with LID=LID1 in one of the allocated public uplink windows. 1.
  - 2.
  - Verify the IUT sends PrWA. Tester records the value of the S-bit received and ignores all possible receptions of PrWA frames. Verify ITU only uses S=0. 3.

4.

TP/MAC/RSU/BV/05		U can detect and manage the unusal value of the C/R-bit in the of a PrWRq frame
	Reference:	EN 12795 [1], clauses 7.3.2.2 and 7.4.2.1.1 d)
	PICS Selection:	Table B.2/2 AND Table B.4/7 AND Table B.7/1
		Note Test does not apply for profiles 0/1 of EN 13372 [3]
	TC reference:	TC_MAC_RSU_BV_05
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with subsequent allocation of N5 public uplink windows. No private LID is registered.
	Stimulus and Exp	ected Behaviour:
		nds PrWR in one of the N5 public uplink windows with the C/R-bit of control field set to 1 (=response).

TP/MAC/RSU/BV/06	Verify that the RS	U can receive in all N5 public uplink windows
	Reference:	EN 12795 [1], clauses 7.3.4
	PICS Selection:	Table B.5/3 and Table B.6/10
	TC reference:	TC_MAC_RSU_BV_06, TC_MAC_RSU_BV_07,
		TC_MAC_RSU_BV_08
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with
		subsequent allocation of N5 public uplink windows. No private LID is
		registered.
	Stimulus and Expected Behaviour:	
	1. Tester se	nds PrWR in the first of the N5 public uplink windows.
	<ol><li>Verify IUT</li></ol>	sends PrWA.
		ores PrWA from step 2, and ignores all further downlink frames except
	BST.	
	<ol><li>Repeat st</li></ol>	eps 1. through 3. for all other public uplink windows.

TP/MAC/RSU/BV/07	Verify that the RS	U correctly manages private uplink window request
	Reference:	EN 12795 [1], clauses 7.4.2.1.3
	PICS Selection:	Table B.5/3 and Table B.7/4
	TC reference:	implicitly tested
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with
		subsequent allocation of N5 public uplink windows. No private LID is registered.
	Stimulus and Expected Behaviour:	
	1. Tester se	nds PrWRq in one of the N5 public uplink windows.
	2. Verify IUT	sends PrWA before the next BST.

TP/MAC/RSU/BV/08		U correctly manages private uplink window allocation in
	downlink frames	requesting an immediate response
	Reference:	EN 12795 [1], clauses 7.4.2.2.2
	PICS Selection:	Table B.7/4
	TC reference:	implicitly tested
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with
		subsequent allocation of N5 public uplink windows. No private LID is
		registered. RSU is serving an application that requires transmission
		of an ACn command as first command.
	Stimulus and Expected Behaviour:	
	1. Tester se	nds PrWRq in one of the N5 public uplink windows.
	2. Upon rece	eption of PrWA tester send VST.
	3. Verify IUT uplink win	sends an ACn command with the A-bit set to one allocating a private

20

### 5.3.2 BI test purposes

Test subgroup objective:

- to check the behaviour of the of the IUT in response to invalid messages and behaviour from the test tool.

TP/MAC/RSU/BI/01		the RSU can detect and manage double-bit errors in the in the n field of the LPDU of the uplink frame using the FCS field
	Reference:	: EN 12795 [1], clauses 5.5 and 7.4.2.1.1 f)
	PICS Selec	ction: Table B.2/2 AND Table B.7/1 AND Table B.7/7
	TC reference	nce: TC_MAC_RSU_BI_01
	Initial cond	dition: RSU is periodically inviting for initialization, i.e. sending BST with subsequent allocation of N5 public uplink windows. No private LID is registered
	Stimulus a	and Expected Behaviour:
	1. Te	ester sends PrWRq in one of the allocated public uplink windows.
	2. Ve	erify IUT responds with PrWA.
	tra	ester sends VST but introduces a random double-bit error in the frame on ansmission. The bit error shall be introduced in the information field of the PDU.
		erify IUT does not respond with a privately addressed frame.
	5. Re	epeat test in case the errors produced a flag or an abort sequence.

TP/MAC/RSU/BI/02	Verify that the RS uplink frame usin	U can detect and manage double-bit errors in the FCS field of the g the FCS field
	Reference:	EN 12795 [1], clauses 5.5 and 7.4.2.1.1 f)
	PICS Selection:	Table B.2/2 AND Table B.7/1 AND Table B.7/7
	TC reference:	TC_MAC_RSU_BI_02
	Initial condition:	RSU is periodically inviting for initialization, i.e. sending BST with subsequent allocation of N5 public uplink windows. No private LID is registered
	Stimulus and Exp	ected Behaviour:
		nds PrWRq in one of the allocated public uplink windows, but s a random double-bit error in FCS field on transmission.
	2. Verify IUT	does not respond within PrWA.
3. Repeat te		st in case the errors produced a flag or an abort sequence.

TP/MAC/RSU/BI/03	Verify that the RSU can detect and manage a block of 15 bit errors in the uplink		
	frame using the FCS field		
	Reference: EN 12795 [1], clauses 5.5 and 7.4.2.1.1 f)		
	PICS Selection: Table B.2/2 AND Table B.7/1 AND Table B.7/7		
	TC reference: TC_MAC_RSU_BI_03		
	Initial condition: RSU is periodically inviting for initialization, i.e. sending BST with		
	subsequent allocation of N5 public uplink windows. No private LID is		
	registered		
	Stimulus and Expected Behaviour:		
	<ol> <li>Tester sends PrWRq in one of the allocated public uplink windows.</li> </ol>		
	2. Verify IUT sends PrWA.		
	3. Tester sends VST in the allocated private uplink window, but introduces a block		
	of 15 subsequent bit errors randomly located in the frame on transmission. The		
	block of bit errors shall be introduced in the information field of the LPDU.		
	4. Verify IUT does not acknowledge reception of the VST by sending a privately		
	addressed frame with the MAC L-bit set to 1.		
	5. Repeat test in case the errors produced a flag or an abort sequence.		

TP/MAC/RSU/BI/04	04 Verify that the R an uplink frame		SU can detect and manage the abort sequence in the LPDU field of
	Refere	nce:	EN 12795 [1], clauses 5.7 and 7.4.2.1.1 a)

	Initial co	ondition:	RSU is periodically inviting for initialization, i.e. sending BST with
			subsequent allocation of N5 public uplink windows. No private LID is
			registered
	Stimulus and Exp		ected Behaviour:
	<ol> <li>Tester ser</li> </ol>		nds PrWRq in one of the allocated public uplink windows.
			allocates a private uplink window.
	3.	0	ores all receptions of PrWA.
	4.		sends a further BST with subsequent allocation of N5 public uplink
			hanging private LID, tester sends VST in the first public uplink window
		allocated.	
	6.	Verify IUT	does not acknowledge VST by sending a privately addressed frame.

# 5.4 LLC test purposes for On-Board Unit

### 5.4.1 BV test purposes

Test subgroup objective:

- to test the behaviour of the IUT in relation to syntactically and contextual correct behaviour of the test system.

TP/LLC/OBU/BV/01	Verify that the OBU can exchange UI commands.	
	Reference:	EN 12795 [1], clause 8.4.2
	PICS Selection:	Table A2/2 AND Table A.10/1 AND Table A.11/1
	TC reference:	TC_LLC_OBU_BV_01
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Expected Behaviour:	
	1. Tester sends an UI command containing a BST.	
	<ol><li>Verify IUT</li></ol>	replies with an UI command containing a VST, with the poll bit in the
	LLC contr	rol field set to P=0.

TP/LLC/OBU/BV/02	Verify that the OBU can manage ACn data transmission.	
	Reference:	EN 12795 [1], clause 8.4.3.5
	PICS Selection:	Table A.8/2 AND Table A.13/2 AND Table A.14/1 AND Table A.14/3
		AND Table A.14/5 AND Table A.14/7 AND Table A.15/1
	TC reference:	TC_LLC_OBU_BV_02
	Initial condition:	OBU initialized
	Stimulus and Ex	pected Behaviour:
	1. Tester s	ends an AC0 command with Poll bit set to 0.
	<ol><li>Verify IU</li></ol>	T replies with an AC1 response with Final bit set to 0 and status
		equal to NR_OK.
	<ol><li>Tester sends an AC1 command with Poll bit set to 0.</li></ol>	
		T replies with an AC0 response with Final bit set to 0 and status
	subfield	equal to NR_OK.

TP/LLC/OBU/BV/03	Verify that the O	BU can manage ACn data exchange.
	Reference:	EN 12795 [1], clause 8.4.3.5
	PICS Selection:	Table A.8/2 AND Table A.13/3 AND Table A.14/2 AND Table A.14/4
		AND Table A.14/6 AND Table A.14/8 AND Table A.15/1
	TC reference:	TC_LLC_OBU_BV_03
	Initial condition:	OBU initialized, prepared to allow for retrieval of data without causing
		late response
	Stimulus and Ex	pected Behaviour:
		ends an AC0 command with poll bit set to P=1 requesting retrieval of n the IUT.
	2. Verify IU	T provides the requested data in the LSDU subfield of an AC1
	response	e, with final bit set to F=1 and with the status subfield indicating OK_OK
		ends an AC1 command with poll bit set to P=1 requesting retrieval of
	4. Verify IU	T provides the requested data in the LSDU subfield of an AC0 e, with final bit set to F=1 and with the status subfield indicating OK_OK.
	TP/LLC/OB0/BV/03	Reference:         PICS Selection:         TC reference:         Initial condition:         Stimulus and Ex         1. Tester se         data from         2. Verify IU         response         3. Tester se         data from         4. Verify IU

TP/LLC/OBU/BV/04	Verify that the OBU can manage correctly a Data Link Echo command.	
	Reference:	EN 12795 [1], clauses 8.4.3.2 and 8.4.3.3
	<b>PICS Selection:</b>	Table A.8/2 AND Table A.13/1 AND (Table A.14/1 OR Table A.14/3)
		AND (Table A.14/5 OR) Table A.14/7 AND Table A.15/3
	TC reference:	TC_LLC_OBU_BV_04
	Initial condition:	OBU initialized
	Stimulus and Expected Behaviour:	
	1. Tester sends a Data Link Echo.	
	<ol><li>Verify IUT</li></ol>	replies to the Data Link Echo received with the F bit set to F=0, the
	status sul	pfield set to NR_OK and the LSDU subfield being empty

TP/LLC/OBU/BV/05	Verify that the OBU can manage late response Procedure I
	Reference: EN 13372 [3], clause 7.2
	PICS Selection: Table E.4/1
	TC reference: TC_LLC_OBU_BV_05
	Initial condition: OBU already initialized, waiting to be served by tester
	Stimulus and Expected Behaviour:
	1. Tester sends application layer request for data retrieval from the OBU that
	causes late response.
	2. Verify IUT sends ACn response frame with LLC status subfield containing the
	value NE_OK, but not providing the requested data.
	<ol> <li>Tester waits for at least the time needed to make the requested data available at the IUT.</li> </ol>
	4. The MAC of the tester re-transmits the request from step 1.
	5. Observe whether IUT provides the data requested in step 1 in the response
	frame related to step 4. If it does, go to step 8.
	<ol><li>Tester sends INITIALizaTION.request (BST) with FlowControl=2, granting</li></ol>
	immediately a private uplink window, if requested.
	7. Verify IUT provides the data requested in step 1 using a UI command.
	If in step 5 the IUT does not provide the data requested, proceed as follows.
	<ol> <li>Tester invites for initialization using a new BeaconID and processes correctly all requests from the IUT until reception of VST.</li> </ol>
	<ol> <li>As first command after reception of VST, tester sends application layer request for data retrieval from the OBU that causes late response.</li> </ol>
	<ol> <li>Verify IUT sends ACn response frame with LLC status subfield containing the value NE_OK, but not providing the requested data.</li> </ol>
	<ol> <li>Tester waits for at least the time needed to make the requested data available at the IUT.</li> </ol>
	<ol> <li>Tester sends INITIALizaTION.request (BST) granting immediately a private uplink window, if requested.</li> </ol>
	6. Verify IUT provides the data requested in step 9 using a UI command.
	e application caused by possible double reception of the requested data, see step 8, are not his test, as such problems are outside the scope of DSRC.

### 5.4.2 BI test purposes

Test subgroup objective:

- to check the behaviour of the of the IUT in response to invalid messages and behaviour from the test tool.

TP/LLC/OBU/BI/01	Verify that the OB when a UI comma	U can correctly detect and manage corrupted LLC control field nd is expected.
	Reference:	EN 12795 [1], clauses 8.4.2.1 and 8.3.2.2
	PICS Selection:	Table A.2/2 AND A.8/1 AND Table A.9/1 AND Table A.11/1
	TC reference:	TC_LLC_OBU_BI_01
	Initial condition:	OBU not in sleep mode and not yet initialized
	Stimulus and Exp	ected Behaviour:
		nds an UI command containing a BST, with the two least significant LLC control field being set to zero.
	2. Verify IUT	ignores the received LPDU.
		eps 1. and 2. for all invalid values of the reserved bits in the LLC ld, with new beaconID in each trial.
	4. Tester ser	nds a valid UI command containing a BST with new beaconID.
	5. Verify IUT correctly v	is not blocked by the previous erroneous commands, but replies with VST.

TP/LLC/OBU/BI/02	Verify that the OBU can detect and manage an invalid LPDU, containing a fractional number of octets in length.	
	Reference:	EN 12795 [1], clause 8.3.5
	PICS Selection:	Table A.2/2 AND Table A.8/2 AND Table A.13/3
	TC reference:	TC_LLC_OBU_BI_02
	Initial condition:	OBU initialized
	Stimulus and Expected Behaviour: 1. Tester sends an ACn command (ECHO.request) with an invalid length of the	
		t is not an integer multiple of one octet.
	2. Verify IUT	ignores the received LPDU.

TP/LLC/OBU/BI/03	Verify that the OBU can correctly detect and manage corrupted LLC control fields when an ACn command is expected.
	Reference: EN 12795 [1], clause 8.3.5
	PICS Selection: Table A.2/2 AND Table A.8/2 Table A.9/1 AND Table A.13/3
	TC reference: TC_LLC_OBU_BI_03
	Initial condition: OBU initialized
	Stimulus and Expected Behaviour:
	1. Tester sends an ACn command (ECHO.request) with Poll bit set to P=1, but
	with invalid modifier bits in the LLC control field such, that the LLC control field
	does not indicate a UI command.
	<ol><li>Verify IUT ignores the received LPDU.</li></ol>
	<ol><li>Repeat steps 1. and 2. for all invalid values of the modifier bits.</li></ol>
	4. Repeat steps 1. and 2. for all invalid combinations of the reserved bits and with correct setting of the modifier bits.
	5. Tester sends a valid ACn command (ECHO.request) with Poll bit set to P=1.
	<ol> <li>Verify IUT is not blocked by the previous erroneous commands, but replies correctly with ACn response (ECHO.response).</li> </ol>

TP/LLC/OBU/BI/04	Verify that the OBU can detect and manage an LPDU, containing an acknowledged connectionless LLC command control field when the LID is multicast or broadcast
	Reference: EN 12795 [1],, clause 8.3.5
	PICS Selection: Table A.2/2 AND Table A.8/2 AND Table A.13/3
	TC reference: TC_LLC_OBU_BI_04
	Initial condition: OBU initialized
	Stimulus and Expected Behaviour:
	<ol> <li>Tester sends an LPDU, containing an ACn command with Poll bit set to P=1, and with broadcast LID.</li> </ol>
	2. Verify IUT ignores the received LPDU.
	3. Repeat steps 1. and 2. for all possible values of a multicast LID instead of the broadcast LID.
	<ol><li>Repeat step 1. with valid private LID.</li></ol>
	5. Verify IUT is not blocked by the pervious erroneous commands, but replies correctly.

TP/LLC/OBU/BI/05	Verify that the OBU can detect and manage an invalid LPDU, containing a fractional number of octets in length.
	Reference: EN 12795 [1], clause 8.3.5
	PICS Selection: Table A.2/2 AND Table A.8/1
	TC reference: TC_LLC_OBU_BI_05
	Initial condition: OBU not initialized
	Stimulus and Expected Behaviour:
	<ol> <li>Tester sends UI command carrying a BST with a length that is not an integer multiple of one octet.</li> </ol>
	2. Verify IUT ignores the received LPDU.
	<ol><li>Tester sends valid UI command carrying a BST.</li></ol>
	<ol> <li>Verify IUT is not blocked by the previous erroneous frame, but responds correctly with VST.</li> </ol>

TP/LLC/OBU/BI/06	Verify that the OBU can detect and manage an invalid ACn command with P=1 an	
	no LSDU.	
	Reference:	EN 12795 [1], clause 8.4.3.2
	PICS Selection:	Table A.12/6
	TC reference:	TC_LLC_OBU_BI_06
	Initial condition:	OBU initialized
	Stimulus and Exp	ected Behaviour:
	1. Tester se	nds the invalid AC0 command with P=1 but without LSDU.
	<ol><li>Verify IUT</li></ol>	ignores the received LPDU.

TP/LLC/OBU/BI/07	Verify that the OB	SU can detect and manage duplicate ACn commands.
	Reference:	EN 12795 [1], clause 8.4.3.4.2
	PICS Selection:	Table A.12/2
	TC reference:	TC_LLC_OBU_BI_07
	Initial condition:	OBU initialized
	Stimulus and Exp	ected Behaviour:
	1. Tester se	nds valid ACn command.
		sends correct ACn response.
		peats step 1. The n-bit shall not toggle.
		sends the same ACn response as in step 2.
		nds another valid ACn command (different from that in steps 1 and 3),
		ne n-bit toggled.
	<ol><li>Verify IUT</li></ol>	sends correct ACn response.

# 5.5 LLC test purposes for Road-Side Unit

### 5.5.1 BV test purposes

Test subgroup objective:

- to test the behaviour of the IUT in relation to syntactically and contextual correct behaviour of the test system.

TP/LLC/RSU/BV/01	Verify that the RSU can exchange UI commands.		
	Reference:	EN 12795 [1], clause 8.4.2	
	<b>PICS Selection:</b>	Table B.2/2 AND Table B.3/2 AND Table B.10/2	
	TC reference:	TC_LLC_RSU_BV_01	
	Initial condition:		
	Stimulus and Expected Behaviour:		
	<ol> <li>Verify IUT sends an UI command containing a BST.</li> </ol>		
	<ol><li>Tester replies with an UI command containing a VST.</li></ol>		
		correctly acknowledges the VST with a privately addressed frame.	
NOTE: The frame expe	ected in step 3. may be any privately addressed frame.		

and n-value sequence         Reference:       EN 12795 [1], clause 8.4.3.1         PICS Selection:       Table B.2/2 AND Table B.8/2 AND (Table B.13/2 OR Table B.13/3) AND Table B.14         TC reference:       TC_LLC_RSU_BV_02         Initial condition:       Tester initialized with RSU. RSU set up to run an application that needs to send at least three ACn commands         Stimulus and Expected Behaviour:       1.         Verify IUT sends an AC0 command as the first ACn command.	TP/LLC/RSU/BV/02	Verify that the RSU can manage ACn commands with correct n-value initialization		
PICS Selection:       Table B.2/2 AND Table B.8/2 AND (Table B.13/2 OR Table B.13/3) AND Table B.14         TC reference:       TC_LLC_RSU_BV_02         Initial condition:       Tester initialized with RSU. RSU set up to run an application that needs to send at least three ACn commands         Stimulus and Expected Behaviour:       1.         Verify IUT sends an AC0 command as the first ACn command.		and n-value sequence		
AND Table B.14         TC reference:       TC_LLC_RSU_BV_02         Initial condition:       Tester initialized with RSU. RSU set up to run an application that needs to send at least three ACn commands         Stimulus and Expected Behaviour:       1.       Verify IUT sends an AC0 command as the first ACn command.		Reference: EN 12795 [1], clause 8.4.3.1		
TC reference:       TC_LLC_RSU_BV_02         Initial condition:       Tester initialized with RSU. RSU set up to run an application that needs to send at least three ACn commands         Stimulus and Expected Behaviour:       1.         Verify IUT sends an AC0 command as the first ACn command.		PICS Selection: Table B.2/2 AND Table B.8/2 AND (Table B.13/2 OR Table B.13/3)		
Initial condition:       Tester initialized with RSU. RSU set up to run an application that needs to send at least three ACn commands         Stimulus and Expected Behaviour:       1.         1.       Verify IUT sends an AC0 command as the first ACn command.		AND Table B.14		
needs to send at least three ACn commands <b>Stimulus and Expected Behaviour:</b> 1. Verify IUT sends an AC0 command as the first ACn command.		TC reference: TC_LLC_RSU_BV_02		
Stimulus and Expected Behaviour: 1. Verify IUT sends an AC0 command as the first ACn command.		Initial condition: Tester initialized with RSU. RSU set up to run an application that		
1. Verify IUT sends an AC0 command as the first ACn command.		needs to send at least three ACn commands		
		•		
2 Tester replies with an AC1 response		1. Verify IUT sends an AC0 command as the first ACn command.		
2. rester replies with an ACT response.		<ol><li>Tester replies with an AC1 response.</li></ol>		
<ol><li>Verify IUT sends an AC1 command as the next ACn command.</li></ol>		<ol><li>Verify IUT sends an AC1 command as the next ACn command.</li></ol>		
4. Tester replies with an AC0 response.		<ol><li>Tester replies with an AC0 response.</li></ol>		
<ol><li>Verify IUT sends an AC0 command as the next ACn command.</li></ol>		<ol><li>Verify IUT sends an AC0 command as the next ACn command.</li></ol>		

TP/LLC/RSU/BV/03	Verify that the RS	U can correctly manage the re-transmission of ACn command.
	Reference:	EN 12795 [1], clause 8.4.3.3
	PICS Selection:	Table B.2/2 AND Table B.8/2 AND Table B.12/1
	TC reference:	TC_LLC_RSU_BV_03
	Initial condition:	Tester initialized with RSU. RSU set up to run an application that
		requires at least transmission of two ACn commands
	Stimulus and Exp	ected Behaviour:
	<ol> <li>Verify IUT sends an AC0 command as the first ACn command.</li> </ol>	
	<ol><li>Tester responds correctly to the AC0 command.</li></ol>	
	<ol><li>Verify IUT sends an AC1 command as second ACn command.</li></ol>	
	<ol><li>Verify IUT transmits the same AC1 command N11 times.</li></ol>	
	<ol><li>Verify IUT</li></ol>	transmits any new command after N11-1 re-transmissions of the AC1
	command	l.

TP/LLC/RSU/BV/04	Verify that the RSU can correctly manage multiple link communications.	
	Reference:	EN 12795 [1], clause 8.4.3.1
	PICS Selection:	Table B.2/2 AND Table B.8/2 AND Table B.12/5
	TC reference:	TC_LLC_RSU_BV_04
	Initial condition:	Tester is simulating 3 OBUs. Application in IUT has to exchange at
		least two ACn messages after initialization with each OBU
	Stimulus and Exp	
	1. Tester shall request private uplink windows for all three OBUs simultaneous	
		sequence of public uplink windows.
		performs correctly the complete transaction consisting of two ACn
	cycles for	every OBU.

TP/LLC/RSU/BV/05	Verify that the RSU can manage late response Procedure I	
	Reference: EN 13372 [3], clause 7.2	
	PICS Selection: Table B.2/2 AND Table B.15/2 AND Table F.3/1	
	TC reference: TC_LLC_RSU_BV_05	
	Initial condition: RSU ready for normal operation of an application. Tester already registered, awaiting request for retrieval of data causing late response.	
	Stimulus and Expected Behaviour:	
	<ol> <li>Tester LLC acknowledges application layer request for data retrieval from the OBU, carried in an ACn command with poll bit set to P=1, with the LLC status subfield value NE_OK, but not providing the requested APDU. In the remaining test the tester shall handle correctly all further requests from the RSU immediately.</li> </ol>	
	<ol> <li>Observe whether IUT resends the request. If yes, tester shall provide missin APDU in the ACn response.</li> <li>Tester sends PrWRq following the next BST.</li> <li>Verify IUT sends PrWA.</li> </ol>	
	5. Tester sends missing APDU, see step 1, in the allocated private uplink window using a UI-command.	
	6. Verify IUT accepts this late response and continues with the application.	

### 5.5.2 BI test purposes

Test subgroup objective:

- to check the behaviour of the of the IUT in response to invalid messages and behaviour from the test tool.

TP/LLC/RSU/BI/01	Verify that the RSU can correctly manage corrupted LLC control fields.
	Reference: EN 12795 [1], clauses 8.4.2.1 and 8.3.2.2
	PICS Selection: Table B.2/2 AND Table B.9/1 AND Table B.11/1
	TC reference: TC_LLC_RSU_BI_01
	Initial condition: Tester initialized with RSU
	Stimulus and Expected Behaviour:
	<ol> <li>Verify IUT sends an UI command containing a BST.</li> </ol>
	2. Tester replies with an UI command containing a VST, where the reserved bits in
	the LLC control field are set to zero.
	<ol><li>Verify IUT ignores the received LPDU.</li></ol>
	4. Repeat steps 1. through 3. for all remaining invalid combinations of the reserved bits.
	5. Repeat step 1.
	<ol><li>Verify IUT acknowledges VST with a privately addressed command.</li></ol>

TP/LLC/RSU/BI/02	Verify that the RSU can detect and manage an invalid ACn LPDU, containing a fractional number of octets in length.			
	Reference: EN 12795 [1], clauses 5.4, 8.3.4, 8.3.5			
	PICS Selection:	PICS Selection: Table B.2/2 AND Table B.8/2		
	TC reference:	TC_LLC_RSU_BI_02		
	Initial condition: Tester initialized with RSU			
	Stimulus and Expected Behaviour:			
	1. Tester ser octet.	nds an invalid LPDU with length different to an integer multiple of one		
	2. Verify IUT	ignores the received LPDU.		

TP/LLC/RSU/BI/03	Verify that the RSU can detect and manage an ACn response, not containing a valid response control field.
	Reference: EN 12795 [1], clauses 5.4 and 8.3.5
	PICS Selection: Table B.2/2 AND Table B.8/2
	TC reference: TC_LLC_RSU_BI_03
	Initial condition: Tester initialized with RSU
	Stimulus and Expected Behaviour:
	<ol> <li>Verify IUT sends an AC0 command as the first ACn command.</li> </ol>
	<ol> <li>Tester sends an AC1 response, not containing a valid response control field, except for the n-Bit and for the P/F-bit.</li> </ol>
	<ol><li>Verify IUT ignores the received LPDU.</li></ol>
	4. 4. Repeat steps 1. through 3. for all missing invalid values of the response control field, but excluding the value which is valid for a UI command.

TP/LLC/RSU/BI/04	Verify that the RSU can detect and manage an ACn response control field with a corrupted ACn response status subfield.	
	Reference: EN 12795 [1] clauses 5.4 and 8.3.5	
	PICS Selection: Table B.2/2 AND Table B.8/2	
	TC reference: TC_LLC_RSU_BI_04	
	Initial condition: Tester initialized with RSU	
	Stimulus and Expected Behaviour:	
	<ol> <li>Verify IUT sends an AC0 command as the first ACn command.</li> </ol>	
	<ol> <li>Tester sends an AC1 response with status subfield different to any of the valid values (OK_OK = 0x00, NE_OK = 0x30, NR_OK = 0x40, 0x10).</li> <li>Verify IUT ignores the received LPDU.</li> </ol>	
	<ol> <li>Repeat steps 1. through 3. for all missing invalid values of the response status subfield.</li> </ol>	

TP/LLC/RSU/BI/05	Verify that the RSU can correctly manage an ACn response with invalid sequence	
	number n.	
	Reference:	EN 12795 [1], clauses 8.4.3.3 and 8.4.3.6
	PICS Selection:	Table B.2/2 AND Table B.8/2 AND Table B.12
	TC reference:	TC_LLC_RSU_BI_05
	Initial condition:	Tester initialized with RSU. Value of N11 parameter is greater than
		1. No re-transmission at application level.
	Stimulus and Expected Behaviour:	
	<ol> <li>Verify IUT sends an AC0 command as the first ACn command.</li> </ol>	
	<ol><li>Tester sends an AC0 response.</li></ol>	
	3. Verify IUT, after expiry of the acknowledgement timer, retransmits the same	
	AC0 command.	

# Annex A (informative): Test coverage matrix

# A.1 Introduction

The following tables show the test purposes coverage with respect to:

- a) Relevant clauses in the base standard; and
- b) PICS statements.

There is one table for OBU and one table for RSU.

The tables are ordered by base standard clauses. When no other indication is given, it is assumed that the referenced clause contains one testable statement. Otherwise, the referenced statement is identified by the order of sentences, list items, or rules specified in the related base standard clause.

# A.2 OBU test coverage matrix

Base standard clause	PICS reference	Test purpose
Foreword	None	Nothing to be tested
1 Scope	None	Nothing to be tested
2 Normative References	None	Nothing to be tested
3 Terms and Definitions	None	Nothing to be tested
4 Abbreviations	None	Nothing to be tested
5 Frame structure with LPDU	Table A.3 - Item 1	Implicitly tested in all TPs
5 Frame structure without LPDU	Table A.3 - Item 1	Implicitly tested in all TPs
5 Frame structure physical layer	Table A.3 - Item 1	Implicitly tested in all TPs
5.1 Delimitation with start and end flag	Table A.3 - Item 2	Nothing testable
5.1 Separate end / start flags	Table A.3 - Item 2	N.A.
5.1 Zero bit insertion	Table A.3 - Item 2	Implicitly tested in all TPs
5.2 Link address field - types of LIDs	None	Nothing testable
5.2 Link address field - extension bit	None	Implicitly tested in all TPs
5.2.1 Private LID	Table A.3 - Item 3	TP/MAC/OBU/BI/07 Implicitly tested in
Range and encoding		several TPs (validity of frame)
5.2.2 Broadcast LID	Table A.3 - Item 4	Implicitly tested in several TPs (validity
Value and encoding		of frame)
5.2.3 Multicast LID	Table A.3 - Item 5	Implicitly tested (validity of frame)
Range and encoding		
5.2.3 Multicast LID	Table A.3 - Item 5	No TPs specified.
Value for test purposes		
5.2.3 Multicast LID	Table A.3 - Item 5	No TPs specified.
Range of values for private use	-	
5.3 MAC control field encoding	See base standard clause 7.3.2.1	-
5.4 LPDU encoding	See base standard clause 8.3	-
5.5 Frame Check Sequence	Table A.3 - Item 8	Implicitly tested in several TPs (validity
	Table A.6 - Item 1	of frame)
	Table A.6 - Item 6	
5.6 Bit order	Table A.3 - Item 9	Implicitly tested in all TPs
All except FCS		
5.6 Bit order FCS	Table A.3 - Item 9	Implicitly tested in all TPs
5.7 Zero bit insertion	Table A.6 - Item 7	Implicitly tested in all TPs
Procedure		
5.7 Zero bit insertion	Table A.6 - Item 7	TP/MAC/OBU/BI/04
Abort sequence		TP/MAC/OBU/BI/05
6 One broadcast SAP in FE	None	N.A., RSU test

Base standard clause	PICS reference	Test purpose
6 One private SAP in FE per ME	None	N.A., RSU test
known to FE		
6 One broadcast SAP in ME	Table A.2 - Item 1	Implicitly tested
6 One optional private SAP in ME	Table A.2 - Item 2	Implicitly tested
6 Multiple optional multicast SAPs in ME	Table A.2 - Item 3	No TPs specified.
6 Downlink communication	Table A.1 - Item 1	Implicitly tested
6 Uplink communication	Table A.1 - Item 2	Implicitly tested
	Table C.1 - A.2 Item 2	
6.1 Broadcast SAP establishment	None	Implicitly tested
6.2 Mobile private SAP establishment	None	Implicitly tested
Request from application layer 6.2 Mobile private SAP establishment	None	Implicitly tested
LID generation by application layer	none	
6.2 Mobile private SAP establishment	None	Implicitly tested
Usage of private LID in uplinks		
6.3 Fixed private SAP establishment	None	N.A., RSU test
7 MAC data service	None	All MAC TPs
7.1 MAC sublayer architecture	None	Nothing testable
7.2 MAC service primitives	None	These service primitives are not testable
7.2.1.1 F-MA-DATA.request	None	Nothing testable
Usage		
7.2.1.1 F-MA-DATA.request	None	Nothing testable
LID parameter 7.2.1.1 F-MA-DATA.request	None	Nothing tootoblo
LPDU parameter	none	Nothing testable
7.2.1.1 F-MA-DATA.request	None	Nothing testable
RR parameter		
7.2.1.2 F-MA-DATA.indication	None	Nothing testable
Usage		
7.2.1.2 F-MA-DATA.indication	None	Nothing testable
LID Parameter	N1	
7.2.1.2 F-MA-DATA.indication LPDU Parameter	None	Nothing testable

.4.3.2 F bit - LSDU cknowledgement, no data requested	Table B.11 - Item 6	N.A., OBU test
8.4.3.2 F bit - LSDU Acknowledgement, requested data	Table B.11 - Item 6	N.A., OBU test
inavailable		

Base standard clause	PICS reference	Test purpose
8.4.3.2 F bit - LSDU	Table B.11 - Item 6	N.A., OBU test
Acknowledgement, requested data		
available		
8.4.3.2 F bit - LSDU	Table B.11 - Item 6	N.A., OBU test
Invalid combination response		
8.4.3.3 Transmitting ACn command	Table B.11 - Item 1	TP/LLC/RSU/BV/02
Setting of n-bit		,,,
8.4.3.3 Transmitting ACn command	Table B.11 - Item 1	TP/LLC/RSU/BV/03
Retransmission procedure		
Acknowledgement timer		
8.4.3.3 Transmitting ACn command	Table B.11 - Item 1	TP/LLC/RSU/BV/03
Retransmission procedure		
Transmission count variable		
8.4.3.3 Transmitting ACn command	Table B.11 - Item 1	TP/LLC/RSU/BV/03
Maximum number of retransmissions		
N11 - 1		
8.4.3.3 Transmitting ACn command	Table B.11 - Item 1	Nothing testable
Maximum value of N13 of		
acknowledgement timer		
8.4.3.4 Receiving ACn command	Table B.11 - Item 2	N.A., OBU test
Procedure to detect duplicate		
commands		
8.4.3.4.1 Non-duplicate ACn command	Table B.11 - Item 2	N.A., OBU test
V(RI) value assignment		
8.4.3.4.1 Non-duplicate ACn command	Table B.11 - Item 2	N.A., OBU test
Response transmission		
8.4.3.4.1 Late response	Table F.3 - Item 1	TP/LLC/RSU/BV/05
Procedure I	Note: only provided by 13372	
8.4.3.4.2 Duplicate ACn command	Table B.11 - Item 2	N.A., OBU test
basic procedure		
8.4.3.5 Transmitting ACn responses	Table B.11 - Item 3	N.A., OBU test
n bit procedure		
8.4.3.6 Receiving acknowledgement	Table B.11 - Item 4	TP/LLC/RSU/BV/02
Valid n-bit procedure		
8.4.3.7 N11	None	Nothing testable
8.4.3.8 N13	None	Nothing testable
8.4.4 Bit order	None	Implicitly tested in all TPs
A Data link layer parameter values	See above where parameter is used	Used in TPs above
B Data link layer overhead	None	Informative
C Evolution of MAC sequence bit	None	Informative
D Address establishment	None	Informative
E A-deviations	None	Informative
