# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

---

# Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Intelligent Transport Systems (ITS).

The present document is part 3 of a multi-part deliverable covering Conformance test specifications for Facilities layer protocols and communication requirements for infrastructure services as identified below:

- Part 1: "Test requirements and Protocol Implementation Conformance Statement (PICS) pro forma";
- Part 2: "Test Suite Structure and Test Purposes (TSS & TP)";
- Part 3: "Abstract Test Suite (ATS) and Protocol Implementation eXtra Information for Testing (PIXIT)".**

The development of ITS test specifications follows the guidance provided in the ETSI EG 202 798 [i.1]. Therefore, the ATS documentation outlined in the present document is also based on the guidance provided in ETSI EG 202 798 [i.1].

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

---

# 1 Scope

The present document contains the Abstract Test Suite (ATS) for MAPEM-SPATEM, IVIM, SREM-SSEM and RTCMEM as defined in ETSI TS 103 301 [1] in compliance with the relevant requirements and in accordance with the relevant guidance given in ISO/IEC 9646-7 [i.7].

The objective of the present document is to provide a basis for conformance tests for MAPEM-SPATEM, IVIM, SREM-SSEM and RTCMEM equipment giving a high probability of interoperability between different manufacturers' equipment.

The ISO standards for the methodology of conformance testing (ISO/IEC 9646-1 [i.4] and ISO/IEC 9646-2 [i.5]) as well as the ETSI rules for conformance testing (ETSI ETS 300 406 [i.8]) are used as a basis for the test methodology.

---

## 2 References

### 2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

- [1] ETSI TS 103 301 (V1.3.1): "Intelligent Transport Systems (ITS); Vehicular Communications; Basic Set of Applications; Facilities layer protocols and communication requirements for infrastructure services".
- [2] ISO/TS 19091-2019: "Intelligent transport systems - Cooperative ITS - Using V2I and I2V communications for applications related to signalized intersections".
- [3] ISO/TS 19321-2020: "Intelligent transport systems - Cooperative ITS - Dictionary of in-vehicle information (IVI) data structures".
- [4] ETSI TS 103 191-1 (V1.3.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for Facilities layer protocols and communication requirements for infrastructure services; Part 1: Test requirements and Protocol Implementation Conformance Statement (PICS) pro forma".
- [5] ETSI TS 103 191-2 (V1.3.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for Facilities layer protocols and communication requirements for infrastructure services; Part 2: Test Suite Structure and Test Purposes (TSS & TP)".
- [6] ETSI TS 102 894-2 (V1.3.1): "Intelligent Transport Systems (ITS); Users and applications requirements; Part 2: Applications and facilities layer common data dictionary".

### 2.2 Informative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are not necessary for the application of the present document but they assist the user with regard to a particular subject area.

- [i.1] ETSI EG 202 798 (V1.1.1): "Intelligent Transport Systems (ITS); Testing; Framework for conformance and interoperability testing".
- [i.2] ETSI TS 103 096-3 (V1.3.1): "Intelligent Transport Systems (ITS); Testing; Conformance test specifications for ITS Security; Part 3: Abstract Test Suite (ATS) and Protocol Implementation eXtra Information for Testing (PIXIT)".
- [i.3] ETSI TR 103 099 (V1.4.1): "Intelligent Transport Systems (ITS); Architecture of conformance validation framework".
- [i.4] ISO/IEC 9646-1 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework - Part 1: General concepts".
- [i.5] ISO/IEC 9646-2 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 2: Abstract Test Suite specification".
- [i.6] ISO/IEC 9646-6 (1994): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 6: Protocol profile test specification".
- [i.7] ISO/IEC 9646-7 (1995): "Information technology -- Open Systems Interconnection -- Conformance testing methodology and framework -- Part 7: Implementation Conformance Statements".
- [i.8] ETSI ETS 300 406 (1995): "Methods for testing and Specification (MTS); Protocol and profile conformance testing specifications; Standardization methodology".
- [i.9] ETSI ES 201 873-1 (V4.5.1): "Methods for Testing and Specification (MTS); The Testing and Test Control Notation version 3; Part 1: TTCN-3 Core Language".
- [i.10] ETSI ES 201 873-7 (V4.5.1): "Methods for Testing and Specification (MTS); The Testing and Test Control Notation version 3; Part 7: Using ASN.1 with TTCN-3".

---

## 3 Definition of terms, symbols and abbreviations

### 3.1 Terms

For the purposes of the present document, the terms given ETSI TS 103 301 [1], ISO/IEC 9646-1 [i.4] and in ISO/IEC 9646-7 [i.7] apply.

### 3.2 Symbols

Void.

### 3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ASN	Abstract Syntax Notation
ASP	Abstract Services Primitives
ATM	Abstract Test Method
ATS	Abstract Test Suite
BI	Invalid Syntax or Behaviour Tests
BV	Valid Behaviour tests
CA	Certification Authority
DSRC	Dedicated Short-Range Communications
ES	ETSI Standard

FA	Facilities
GNSS	Global Navigation Satellite System
GPC	GNSS Positioning Correction
IS	Infrastructure Services
ISO	International Organization for Standardization
ITS	Intelligent Transport Systems
IUT	Implementation Under Test
IVI	Infrastructure to Vehicle Information
IVIM	IVI-Message
MAPEM	MapData Messages
MTC	Main Test Component
PA	Platform Adaptor
PCTR	Protocol Conformance Test Report
PICS	Protocol Implementation Conformance Statement
PIXIT	Partial Protocol Implementation eXtra Information for Testing
PTC	Parallel Test Component
PX	Pixit
RLT	Road and Lane topology
RTCMEM	Radio Technical Commission For Maritime Message
SA	System Adaptor
SAP	Service Access Point
SCS	System Conformance Statement
SCTR	System Conformance Test Report
SPATEM	Signal Phase And Timing Messages
SREM	Signal Request Message
SSEM	Signal Response Message
SSP	Service Specific Permissions
SUT	System Under Test
TC	Test Case
TLC	Traffic Light Control
TLM	Traffic Light Manoeuvre
TP	Test Purposes
TSS	Test Suite Structure
TTCN	Testing and Test Control Notation

---

## 4 Abstract Test Method (ATM)

### 4.1 Abstract protocol tester

The abstract protocol tester used by this test suite is described in figure 1. The test system simulates valid and invalid protocol behaviour, and analyses the reaction of the IUT.

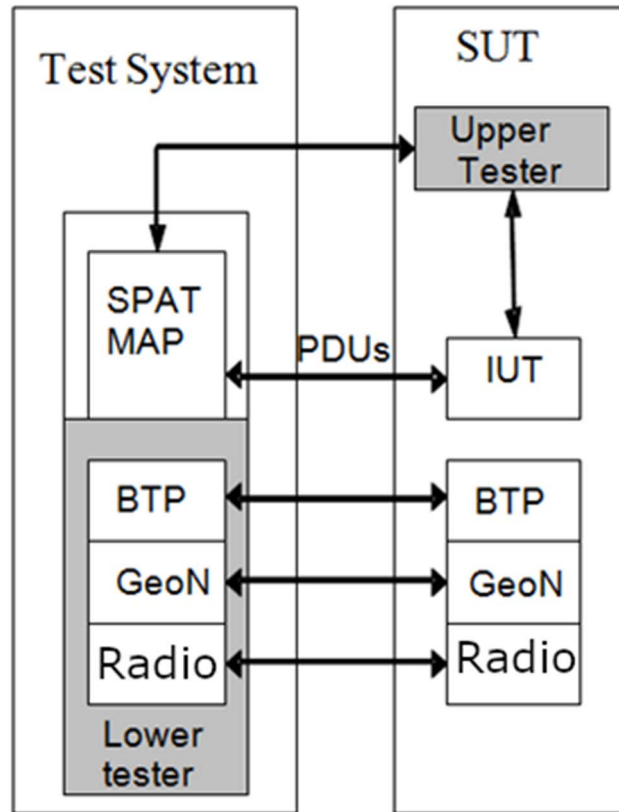

Figure 1: Abstract protocol tester - MAPEM SPATEM case

## 4.2 Test Configuration

This test suite uses a unique test configuration in order to cover the different test scenarios. In this configuration, the tester simulates one ITS station implementing the MAPEM SPATEM protocol.

## 4.3 Test architecture

The present document implements the general TTCN-3 test architecture described in ETSI EG 202 798 [i.1], clauses 6.3.2 and 8.3.1.

Figure 2 shows the test architecture used in for the MAPEM SPATEM ATS case. The MAPEM SPATEM test component requires using only the Main Test Component (MTC). The MTC communicates with the MAPEM SPATEM SUT over the MapemSpatemPort. The MapemSpatemPort is used to exchange MAPEM SPATEM protocol messages between the MAPEM SPATEM test component and the MAPEM SPATEM IUT.

NOTE: The same behaviour applies for IVIM and SREM SSEM.

The Upper tester entity in the SUT enables triggering MAPEM SPATEM functionalities by simulating primitives from application. It is required to trigger the MAPEM SPATEM layer in the SUT to send MAPEMs, which are resulting from upper layer primitives. Furthermore, receiving MAPEMs may result for the MAPEM SPATEM layer in sending primitives to the upper layer.

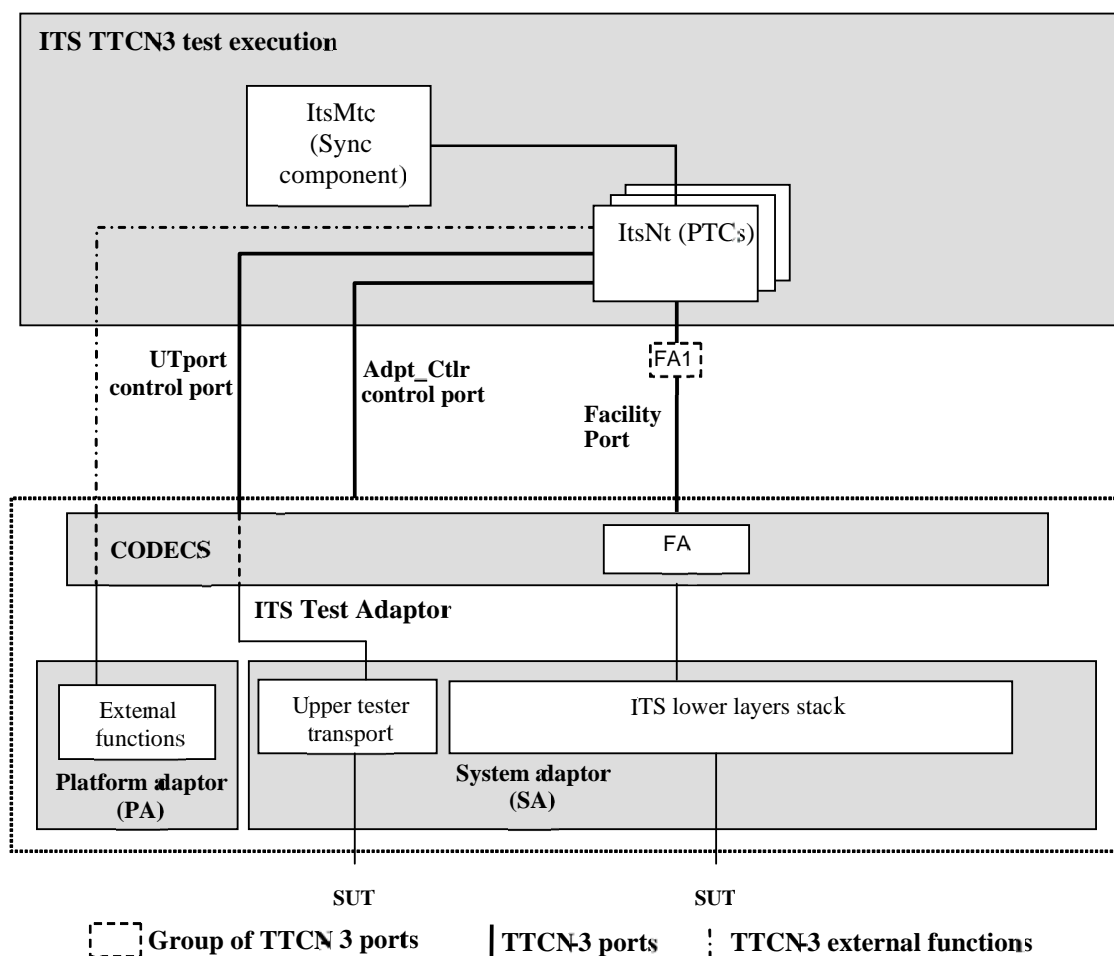

Figure 2: Test system architecture

## 4.4 Ports and ASPs (Abstract Services Primitives)

### 4.4.1 Introduction

Two ports are used by the MAPEM SPATEM ATS:

- The `mapemSpatemPort`, of type `MapemSpatemPort`.
- The `utPort`, of type `UpperTesterPort`.

Two ports are used by the IVIM ATS:

- The `ivimPort`, of type `IvimPort`.
- The `utPort`, of type `UpperTesterPort`.

Two ports are used by the SREM SSEM ATS:

- The `sremSsemPort`, of type `SremSsemPort`.
- The `utPort`, of type `UpperTesterPort`.

## 4.4.2 MAPEM SPATEM ATS

### 4.4.2.1 Primitives of the mapemSpatemPort

Four types of primitives are used in the mapSpatPort:

- The MapemInd primitive used to receive messages of type MapemMsg (MAPEM\_PDU + RawData).
- The SpatemInd primitive used to receive messages of type SpatemMsg (SPATEM\_PDU + RawData).
- The MapemReq primitive used to send messages of type MAPEM\_PDU.
- The SpatemReq primitive used to send messages of type SPATEM\_PDU.

These four primitives use the MAPEM type and the SPATEM type, which is declared in the ETSI\_TS\_103301.asn ASN.1 module, following the ASN.1 definition from CEN ISO/TS 19091 [2].

### 4.4.2.2 Primitives of the utPort

This port uses six types of primitives:

- The UtInitialize primitive used to initialize IUT.
- The UtMapemSpatemTrigger primitive used to trigger upper layer events in IUT.
- The UtInitializeResult primitive used to receive upper layer result of initialization in IUT.
- The UtMapemSpatemTriggerResult primitive used to receive upper layer result of triggering MAPEM-SPATEM in IUT.
- The UtMapemEventInd primitive used to receive upper layer event of MAPEM\_PDU in IUT.
- The UtSpatemEventInd primitive used to receive upper layer event of SPATEM\_PDU in IUT.

## 4.4.3 IVIM ATS

### 4.4.3.1 Primitives of the ivimPort

Two types of primitives are used in the ivimPort:

- The ivimInd primitive used to receive messages of type IvimMsg (IVIM\_PDU + RawData).
- The IvimReq primitive used to send messages of type IVIM\_PDU.

These two primitives use the IVIM\_PDU type, which is declared in the ETSI\_TS\_103301.asn ASN.1 module contained in the archive ts\_10319103v010301p0.zip which accompanies the present document, following the ASN.1 definition from CEN ISO/TS 19321 [3].

#### 4.4.3.2 Primitives of the utPort

This port uses five types of primitives:

- The UtInitialize primitive used to initialize IUT.
- The UtIvimtrigger primitive used to trigger upper layer events in IUT.
- The UtInitializeResult primitive used to receive upper layer result of initialization in IUT.
- The UtIvimTriggerResult primitive used to receive upper layer result of triggering IVIM in IUT.
- The UtIvimEventInd primitive used to receive upper layer event of IVIEM\_PDU in IUT.

#### 4.4.4 SREM SSEM ATS

##### 4.4.4.1 Primitives of the mapemSsemPort

Four types of primitives are used in the mapSpatPort:

- The SremInd primitive used to receive messages of type SremMsg (SREM\_PDU + RawData).
- The SsemInd primitive used to receive messages of type SsemMsg (SSEM\_PDU + RawData).
- The SremReq primitive used to send messages of type SREM\_PDU.
- The SsemReq primitive used to send messages of type SSEM\_PDU.

These four primitives use the SREM type and the SSEM type, which is declared in the ETSI\_TS\_103301.asn ASN.1 module, following the ASN.1 definition from CEN ISO/TS 19091 [2].

##### 4.4.4.2 Primitives of the utPort

This port uses six types of primitives:

- The UtInitialize primitive used to initialize IUT.
- The UtSremSsemTrigger primitive used to trigger upper layer events in IUT.
- The UtInitializeResult primitive used to receive upper layer result of initialization in IUT.
- The UtSremSsemTriggerResult primitive used to receive upper layer result of triggering SREM-SSEM in IUT.
- The UtSremEventInd primitive used to receive upper layer event of SREM\_PDU in IUT.
- The UtSsemEventInd primitive used to receive upper layer event of SSEM\_PDU in IUT.

#### 4.4.5 RTCMEM ATS

##### 4.4.5.1 Primitives of the rtcmemPort

Two types of primitives are used in the mapSpatPort:

- The RtcmemInd primitive used to receive messages of type RtcmmMsg (RTCMEM\_PDU + RawData).
- The RtcmmReq primitive used to send messages of type RTCMEM\_PDU.

These two primitives use the RTCMEM\_PDU type, which is declared in the ETSI\_TS\_103301.asn ASN.1 module contained in the archive ts\_10319103v010301p0.zip which accompanies the present document, following the ASN.1 definition from CEN ISO/TS 19091 [2].

#### 4.4.5.2 Primitives of the utPort

This port uses five types of primitives:

- The UtInitialize primitive used to initialize IUT.
- The UtRtcmemTrigger primitive used to trigger upper layer events in IUT.
- The UtInitializeResult primitive used to receive upper layer result of initialization in IUT.
- The UtRtcmTriggerResult primitive used to receive upper layer result of triggering RTCMEM in IUT.
- The UtRtcmEventInd primitive used to receive upper layer event of RTCMEM\_PDU in IUT.

### 4.5 Executing CA tests in secured mode

All the CA tests, with the exception of the SSP tests, can be executed with security enabled or with security disabled. The choice of running the CA tests in secured or non-secured mode has no impact on the result of the CA tests because the test verdicts assess CA protocol behaviour only.

The SSP tests can only be executed in secured mode.

The choice of running the CA tests in secured or non-secured mode can be controlled via the test suite parameter PICS\_IS\_IUT\_SECURED, see table A.4/1 in ETSI TS 103 191-1 [4].

Before running the CA tests in secured mode, the following steps need to be executed:

- security certificates need to be generated for the tester as well as for the IUT, see ETSI TS 103 096-3 [i.2], clause 5.3.2.5;
- security certificates need to be installed onto the IUT, see ETSI TS 103 096-3 [i.2] clause 5.3.2.6;
- in case of usage of the ETSI test adapter, the following test adapter parameters need to be configured:

**Table 0**

Test adapter parameter	Default value	Comment
TsSecuredRootPath	data/certificates	The path to the location where all certificates (tester and IUT certificates) are installed
TsSecuredConfigId	void	Name of the subfolder in TsSecuredRootPath in order to organize multiple IUTs

### 4.6 ETSI test adapter

All information of the ETSI test adapter is described in ETSI TR 103 099 [i.3].

---

## 5 Untestable Test Purposes

Table 1 gives a list of TPs, which are not implemented in the ATS Road & Lane Topology due to the chosen ATM or other restrictions.

**Table 1: Untestable TPs for Road & Lane Topology**

Test purpose	Reason
TC_IS_RLT_GEN_COM_BV_02	Removed
TP_IS_RLT_GEN_SEC_BV_02	Security elements to be verified are part of Network & Transport layer

Table 2 gives a list of TPs, which are not implemented in the ATS Traffic Lights Control due to the chosen ATM or other restrictions.

**Table 2: Untestable TPs for Traffic Lights Control**

Test purpose	Reason
TP_IS_TLCR_GEN_SEC_BV_02	Security elements to be verified are part of Network & Transport layer
TP_IS_TLCR_GEN_SEC_BO_02	
TP_IS_TLCR_GEN_SEC_BO_02	
TP_IS_TLCR_GEN_SEC_BV_05	
TP_IS_TLCR_GEN_SEC_BV_06	
TP_IS_TLCS_RCV_SSP_BV_05	

Table 3 gives a list of TPs, which are not implemented in the ATS Infrastructure to Vehicle Information due to the chosen ATM or other restrictions.

**Table 3: Untestable TPs for Infrastructure to Vehicle Information**

Test purpose	Reason
TC_IS_IVI_GEN_SEC_BV_02	Security elements to be verified are part of Network & Transport layer
TC_IS_IVI_GEN_SSP_BV_02	
TC_IS_IVI_GEN_SSP_BV_03	
TC_IS_IVI_GEN_SSP_BV_04	
TC_IS_IVI_GEN_SSP_BV_05	
TC_IS_IVI_GEN_SSP_BV_06	

---

## 6 ATS conventions

### 6.1 Introduction

The ATS conventions are intended to give a better understanding of the ATS but they also describe the conventions made for the development of the ATS. These conventions shall be considered during any later maintenance or further development of the ATS.

The ATS conventions contain two clauses, the testing conventions and the naming conventions. The testing conventions describe the functional structure of the ATS. The naming conventions describe the structure of the naming of all ATS elements.

To define the ATS, the guidelines of ETSI ETS 300 406 [i.8] were considered.

### 6.2 Testing conventions

#### 6.2.1 Testing states

##### 6.2.1.1 Initial state

All test cases start with the function `f_prInitialState`. This function brings the IUT in an "initialized" state by invoking the upper tester primitive `UtInitialize`.

##### 6.2.1.2 Final state

All test cases end with the function `f_poDefault`. This function brings the IUT back in an "idle" state. As no specific actions are required for the idle state in ETSI TS 103 301 [1], the function `f_poDefault` does not invoke any action.

As necessary, further actions may be included in the `f_poDefault` function.

## 6.2.2 Message types - ASN.1 definitions

ASN.1 definitions from ETSI TS 103 301 [1] are directly imported in TTCN-3 using the ASN.1 import method specified in ETSI ES 201 873-7 [i.10].

The following example shows the TTCN-3 import statement used to import ASN.1 definitions in the TTCN-3 modules:

```
import from DSRC language "ASN.1:1997" all;
```

Generic ASN.1 definitions (message header, station Id, etc.), are defined in the Common Data Dictionary ETSI TS 102 894-2 [6] ASN.1 module. Thus the MAPEM SPATEM ASN.1 modules shall import these definitions from the Common Data Dictionary ETSI TS 102 894-2 [6] ASN.1 module.

## 6.3 Naming conventions

### 6.3.1 Introduction

This test suite follows the naming convention guidelines provided in the ETSI EG 202 798 [i.1].

### 6.3.2 General guidelines

The naming convention is based on the following underlying principles:

- in most cases, identifiers should be prefixed with a short alphabetic string (specified in table 4) indicating the type of TTCN-3 element it represents;
- suffixes should not be used except in those specific cases identified in table 2;
- prefixes and suffixes should be separated from the body of the identifier with an underscore ("\_");

EXAMPLE 1: `c_sixteen`, `t_wait`.

- only module names, data type names and module parameters should begin with an upper-case letter. All other names (i.e. the part of the identifier following the prefix) should begin with a lower-case letter;
- the start of second and subsequent words in an identifier should be indicated by capitalizing the first character. Underscores should not be used for this purpose.

EXAMPLE 2: `f_initialState`.

Table 4 specifies the naming guidelines for each element of the TTCN-3 language indicating the recommended prefix, suffixes (if any) and capitalization.

**Table 4: ETSI TTCN-3 generic naming conventions**

Language element	Naming convention	Prefix	Example identifier
Module	Use upper-case initial letter	none	IPv6Templates
Group within a module	Use lower-case initial letter	none	messageGroup
Data type	Use upper-case initial letter	none	SetupContents
Message template	Use lower-case initial letter	m_	m_setupInit
Message template with wildcard or matching expression	Use lower-case initial letters	mw_	mw_anyUserReply
Signature template	Use lower-case initial letter	s_	s_callSignature
Port instance	Use lower-case initial letter	none	signallingPort
Test component instance	Use lower-case initial letter	none	userTerminal
Constant	Use lower-case initial letter	c_	c_maxRetransmission
Constant (defined within component type)	Use lower-case initial letter	cc_	cc_minDuration
External constant	Use lower-case initial letter	cx_	cx_macId
Function	Use lower-case initial letter	f_	f_authentication()
External function	Use lower-case initial letter	fx_	fx_calculateLength()
Altstep (incl. Default)	Use lower-case initial letter	a_	a_receiveSetup()
Test case	Use ETSI numbering	TC_	TC_COR_0009_47_ND
Variable (local)	Use lower-case initial letter	v_	v_macId
Variable (defined within a component type)	Use lower-case initial letters	vc_	vc_systemName
Timer (local)	Use lower-case initial letter	t_	t_wait
Timer (defined within a component)	Use lower-case initial letters	tc_	tc_authMin
Module parameters for PICS	Use all upper case letters	PICS_	PICS_DOOROPEN
Module parameters for other parameters	Use all upper case letters	PX_	PX_TESTER_STATION_ID
Formal Parameters	Use lower-case initial letter	p_	p_macId
Enumerated Values	Use lower-case initial letter	e_	e_syncOk

### 6.3.3 ITS specific TTCN-3 naming conventions

Next to such general naming conventions, table 5 shows specific naming conventions that apply to the ITS TTCN-3 test suite.

**Table 5: ITS specific TTCN-3 naming conventions**

Language element	Naming convention	Prefix	Example identifier
ITS Module	Use upper-case initial letter	Its"IUTname"_"	ItsMapemSpatem_
Module containing types and values	Use upper-case initial letter	Its"IUTname"_"TypesAndValues	ItsMapemSpatem_"TypesAndValues
Module containing Templates	Use upper-case initial letter	Its"IUTname"_"Templates	ItsMapemSpatem_"Templates
Module containing test cases	Use upper-case initial letter	Its"IUTname"_"TestCases	ItsMapemSpatem_"TestCases
Module containing functions and external functions	Use upper-case initial letter	Its"IUTname"_"Functions	ItsMapemSpatem_"Functions
Module containing main component definitions components, ports and message definitions	Use upper-case initial letter	Its"IUTname"_"TestSystem	ItsMapemSpatem_"TestSystem
Module containing the control part	Use upper-case initial letter	Its"IUTname"_"TestControl	ItsMapemSpatem_"TestControl

### 6.3.4 Usage of Log statements

All TTCN-3 log statements use the following format using the same order:

- Three asterisks.
- The TTCN-3 test case or function identifier in which the log statement is defined.
- One of the categories of log: INFO, WARNING, ERROR, PASS, FAIL, INCONC, TIMEOUT.
- Free text.
- Three asterisks.

EXAMPLE 1: `log("*** " & testcasename() & ": INFO: No more IVIM shall be set.  
***")`.

Furthermore, the following rules are applied for the whole ATSS:

- Log statements are used in the body of the functions, so that invocations of functions are visible in the test logs.
- All TTCN-3 setverdict statements are combined (as defined in ETSI ES 201 873-1 [i.9]) with a log statement following the same above rules (see example 2).

EXAMPLE 2: `setverdict(pass, "*** " & testcasename() & ": PASS: Expected IVIM  
received ***")`.

### 6.3.5 Test Case (TC) identifier

Table 6 shows the test case naming convention, which follows the same naming convention as the test purposes.

Table 6: TC naming convention

Identifier	TP_<root>_<gr>_<dir>_<x>_<nn>		
	<root> = root	IS_TLM	
	<dir> = direction	GEN	Message Generation behaviour
		RCV	Message Receiving behaviour
	<gr> = group	MSGF	Message Format
		EVGN	Event Generation
		COM	Communication
	<x> = type of testing	BV	Valid Behaviour tests
		BO	Invalid Syntax or Behaviour Tests
	<nn> = sequential number		01 to 99
	<root> = root	IS_RLT	
	<dir> = direction	GEN	Message Generation behaviour
		RCV	Message Receiving behaviour
	<gr> = group	MSGF	Message Format
		EVGN	Event Generation
		COM	Communication
	<x> = type of testing	BV	Valid Behaviour tests
		BO	Invalid Syntax or Behaviour Tests
	<nn> = sequential number		01 to 99
	<root> = root	IS_IVI	
	<dir> = direction	GEN	Message Generation behaviour
		RCV	Message Receiving behaviour
	<gr> = group	MSGF	Message Format
		EVGN	Event Generation
		EVUP	Event Update
		EVTR	Event Termination
		GFQ	Generation Frequency
		COM	Communication
	<x> = type of testing	BV	Valid Behaviour tests
		BO	Invalid Syntax or Behaviour Tests
		TI	Timer
	<nn> = sequential number		01 to 99
	<root> = root	IS_TLC	
	<dir> = direction	GEN	Message Generation behaviour
		RCV	Message Receiving behaviour
	<gr> = group	MSGF	Message Format
		EVGN	Event Generation
		COM	Communication
	<x> = type of testing	BV	Valid Behaviour tests
		BI	Invalid Syntax or Behaviour Tests
	<nn> = sequential number		01 to 99

EXAMPLE: TP identifier: TP\_IS\_GEN\_RLT\_MSGF\_BV\_01  
 TC identifier: TC\_IS\_GEN\_RLT\_MSGF\_BV\_01

---

## Annex A (normative): TTCN-3 library modules

### A.1 Electronic annex, zip file with TTCN-3 code

This test suite has been produced using the Testing and Test Control Notation (TTCN) according to ETSI ES 201 873-1 [i.9].

ETSI TS 103 301 [1], ETSI TS 103 191-1 [4] and ETSI TS 103 191-2 [5] have been applied to develop this test suite.

This test suite has been compiled error-free using two different commercial TTCN-3 compilers.

The TTCN-3 library modules, which form parts of the present document, are contained in the archive `ts_10319103v010301p0.zip` which accompanies the present document.

---

## Annex B (normative): Partial PIXIT pro forma

### B.1 Partial cancellation of copyright

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the Partial PIXIT pro forma in this annex so that it can be used for its intended purposes and may further publish the completed Partial PIXIT.

---

### B.2 Introduction

The PIXIT pro forma is based on ISO/IEC 9646-6.

---

### B.3 Identification summary

The Identification summary shall be as specified in table B.1.

**Table B.1: Identification summary**

PIXIT Number:	
Test Laboratory Name:	
Date of Issue:	
Issued to:	

---

### B.4 ATS summary

The ATS summary shall be as specified in table B.2.

**Table B.2: ATS summary**

Protocol Specification:	ETSI TS 103 301
Protocol to be tested:	MAPEM-SPATEM, IVIM, SREM-SSEM and RTCMEM
ATS Specification:	ETSI TS 103 191-3
Abstract Test Method:	Clause 4

## B.5 Test laboratory

The Test laboratory info shall be specified as in table B.3.

**Table B.3: Test laboratory info**

Test Laboratory Identification:	
Test Laboratory Manager:	
Means of Testing:	
SAP Address:	

## B.6 Client identification

The Client identification shall be specified as in table B.4.

**Table B.4: Client identification**

Client Identification:	
Client Test manager:	
Test Facilities required:	

## B.7 SUT

SUT shall be specified as in table B.5.

**Table B.5: SUT**

Name:	
Version:	
SCS Number:	
Machine configuration:	
Operating System Identification:	
IUT Identification:	
PICS Reference for IUT:	
Limitations of the SUT:	
Environmental Conditions:	

## B.8 Protocol layer information

### B.8.1 Protocol identification

Protocol identification shall be as specified in table B.6.

**Table B.6: Protocol identification**

Name:	ETSI TS 103 301
Version:	
PICS References:	ETSI TS 103 191-1

### B.8.2 IUT information

#### B.8.2.1 MAPEM/SPATEM

MAPEM/SPATEM PIXITs shall be as in table B.7.

**Table B.7: MAPEM SPATEM PIXITs**

Identifier	Description	
PX_MSG_ISSUE_REVISION	<b>Comment</b>	MsgCount of MAPEM sent by tester
	<b>Type</b>	MsgCount
	<b>Default value</b>	10
PX_INTERSECTIONSTATE_REVISION	<b>Comment</b>	Revision in IntersectionState of SPATEM sent by tester
	<b>Type</b>	MsgCount
	<b>Default value</b>	20
PX_INTERSECTION_ID	<b>Comment</b>	Id of Intersection of SPATEM sent by tester
	<b>Type</b>	IntersectionId
	<b>Default value</b>	'ABAB'O
PX_SIGNAL_GROUP_ID	<b>Comment</b>	SignalGroup of MovementState of SPATEM sent by tester
	<b>Type</b>	SignalGroupId
	<b>Default value</b>	128
PX_3D_REF_POINT_LATITUDE	<b>Comment</b>	3D Reference point latitude
	<b>Type</b>	Latitude
	<b>Default value</b>	0

#### B.8.2.2 IVIM

IVIM PIXITs shall be as in table B.8.

Table B.8: IVIM PIXITs

Identifier	Description	
PX_PROVIDER	<b>Comment</b>	Provider description of tester
	<b>Type</b>	Provider
	<b>Default value</b>	{ countryCode := '0000000000'B, providerIdentifier := 0 }
PX_IVI_ID	<b>Comment</b>	IVI identification number
	<b>Type</b>	integer
	<b>Default value</b>	2
PX_ZONEID_1	<b>Comment</b>	Zoneld 1 used in IVIM messages sent by the tester
	<b>Type</b>	Zid
	<b>Default value</b>	1
PX_ZONEID_2	<b>Comment</b>	Zoneld 2 used in IVIM messages sent by the tester
	<b>Type</b>	Zid
	<b>Default value</b>	2
PX_LANE	<b>Comment</b>	Laneld used in IVIM messages sent by the tester
	<b>Type</b>	LanePosition
	<b>Default value</b>	1 //innermostDrivingLane(1)
PX_RELAVANCE_ZONEID	<b>Comment</b>	RelavanceZoneld used in IVIM messages sent by the tester
	<b>Type</b>	Zid
	<b>Default value</b>	1
PX_DETECTION_ZONEID	<b>Comment</b>	DetectionZoneld used in IVIM messages sent by the tester
	<b>Type</b>	Zid
	<b>Default value</b>	1
PX_DRIVER_AWARENES_ZONEID	<b>Comment</b>	DriverAwarenesZoneld used in IVIM messages sent by the tester
	<b>Type</b>	Zid
	<b>Default value</b>	1
PX_LAYOUTID	<b>Comment</b>	LayoutId used in IVIM messages sent by the tester
	<b>Type</b>	Integer
	<b>Default value</b>	1

### B.8.2.3 SREM/SSEM

SREM/SSEM PIXITs shall be as in table B.9.

Table B.9: SREM/SSEM PIXITs

Identifier	Description	
PX_BASICVEHICLEROLE	<b>Comment</b>	Used by tester in SREM trigger request
	<b>Type</b>	BasicVehicleRole
	<b>Default value</b>	emergency
PX_REQUESTIMPORTANCELEVEL	<b>Comment</b>	Used by tester in SREM trigger request
	<b>Type</b>	RequestImportanceLevel
	<b>Default value</b>	requestImportanceLevel13
PX_SECOND	<b>Comment</b>	Used in SREM and SSEM sent by tester
	<b>Type</b>	DSecond
	<b>Default value</b>	0
PX_STATUS	<b>Comment</b>	Used in SSEM sent by tester
	<b>Type</b>	IntersectionStatusObject
	<b>Default value</b>	'1 000'

## B.8.2.4 RTCMEM

RTCMEM PIXITs shall be as in table B.10.

**Table B.10: RTCMEM PIXITs**

Identifier	Description	
PX_BASICVEHICLEROLE	<b>Comment</b>	Used by tester in SREM trigger request
	<b>Type</b>	BasicVehicleRole
	<b>Default value</b>	emergency
PX_REQUESTIMPORTANCELEVEL	<b>Comment</b>	Used by tester in SREM trigger request
	<b>Type</b>	RequestImportanceLevel
	<b>Default value</b>	requestImportanceLevel13
PX_SECOND	<b>Comment</b>	Used in SREM and SSEM sent by tester
	<b>Type</b>	DSecond
	<b>Default value</b>	0
PX_STATUS	<b>Comment</b>	Used in SSEM sent by tester
	<b>Type</b>	IntersectionStatusObject
	<b>Default value</b>	'1 000'

## B.8.2.5 Generic

Generic PIXITs shall be as in table B.11.

**Table B.11: Generic PIXITs**

Identifier	Description	
PX_IUT_STATION_ID	<b>Comment</b>	Station Id sent by the IUT
	<b>Type</b>	Integer
	<b>Default value</b>	1
PX_IUT_STATION_TYPE	<b>Comment</b>	Station Type sent by the IUT
	<b>Type</b>	Integer
	<b>Default value</b>	1
PX_TESTER_STATION_ID	<b>Comment</b>	Station Id sent by the tester
	<b>Type</b>	Integer
	<b>Default value</b>	111 111
PX_TESTER_STATION_TYPE	<b>Comment</b>	Station Type sent by the tester
	<b>Type</b>	Integer
	<b>Default value</b>	1
PX_TS_LATITUDE	<b>Comment</b>	The Latitude of the tester (microdegrees)
	<b>Type</b>	Integer
	<b>Default value</b>	436 175 790
PX_TS_LONGITUDE	<b>Comment</b>	The Longitude of the tester (microdegrees)
	<b>Type</b>	Integer
	<b>Default value</b>	70 546 480
PX_TIME_DELTA	<b>Comment</b>	Tolerance to be applied when checking timestamps (ms)
	<b>Type</b>	Integer
	<b>Default value</b>	1 000
PX_GNSS_SCENARIO_SUPPORT	<b>Comment</b>	Does the IUT support GNSS scenarios?
	<b>Type</b>	Boolean
	<b>Default value</b>	FALSE
PX_CERT_FOR_TS	<b>Comment</b>	The certificate identifier that the tester (TS) shall use in case of secured IUT
	<b>Type</b>	Charstring
	<b>Default value</b>	"CERT_TS_A_AT"

---

## Annex C (normative): PCTR pro forma

### C.1 Partial cancellation of copyright

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PCTR pro forma in this annex so that it can be used for its intended purposes and may further publish the completed PCTR.

---

### C.2 Introduction

The PCTR pro forma is based on ISO/IEC 9646-6.

---

### C.3 Identification summary

#### C.3.1 Protocol conformance test report

A protocol conformance test report shall be as in table C.1.

**Table C.1: Protocol conformance test report**

PCTR Number:	
PCTR Date:	
Corresponding SCTR Number:	
Corresponding SCTR Date:	
Test Laboratory Identification:	
Test Laboratory Manager:	
Signature:	

#### C.3.2 IUT identification

An IUT shall be identified as specified in table C.2.

**Table C.2: IUT identification**

Name:	
Version:	
Protocol specification:	
PICS:	
Previous PCTR if any:	

### C.3.3 Testing environment

The testing environment shall be as specified in table C.3.

**Table C.3: Testing environment**

PIXIT Number:	
ATS Specification:	
Abstract Test Method:	
Means of Testing identification:	
Date of testing:	
Conformance Log reference(s):	
Retention Date for Log reference(s):	

### C.3.4 Limits and reservation

Additional information relevant to the technical contents or further use of the test report, or the rights and obligations of the test laboratory and the client, may be given here. Such information may include restriction on the publication of the report.

.....

.....

.....

.....

.....

### C.3.5 Comments

Additional comments may be given by either the client or the test laboratory on any of the contents of the PCTR, for example, to note disagreement between the two parties.

.....

.....

.....

.....

.....

.....

---

## C.4 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non-conforming to the specified protocol specification.

*Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause C.3 in the present document) and there are no "FAIL" verdicts to be recorded (in clause C.6 in the present document) strike the words "has or", otherwise strike the words "or has not".*

---

## C.5 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

*Strike the appropriate words in this sentence.*

---

## C.6 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

*Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded in this clause, strike the words "did or" otherwise strike the words "or did not".*

Summary of the results of groups of test:

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

---

## C.7 Static conformance review report

If clause C.3 indicates non-conformance, this clause itemizes the mismatches between the PICS and the static conformance requirements of the specified protocol specification.

.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....  
.....

## C.8 Test campaign report

Table C.4: MAPEM and SPATEM test cases
