## 4 Test configurations

### 4.1 Introduction

Test purposes of the present document address the VoLTE functional entity MME that is accessible via the standardized S1-MME interface.

### 4.2 Test configuration using the S1-MME interface

The S1-MME interface is located between the eNB and the MME. The NAS messages are transparent for the eNB, therefore only the MME is considered a System Under test (SUT).

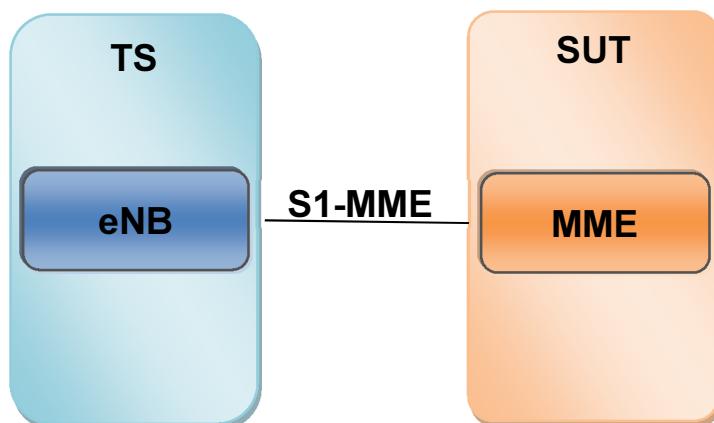

Figure 1: Test configuration CF\_S1-MME

## 5 Test Suite Structure (TSS) and Test Purposes (TP)

### 5.1 Test Suite Structure

#### 5.1.1 TP naming convention

TPs are numbered, starting at 01, within each group. Groups are organized according to the TSS.

**Table 1: TP identifier naming convention scheme**

Identifier: <TP>_<iut>_<scope>_<nn>	
<tp>	= Test Purpose:
<interface or protocol>	fixed to "TP"
<iut>	= type of IUT:
<scope>	= group
	MME
	MGR EMM / GUTI relocation procedure
	MAU EMM / Authentication procedure
	MSM EMM / Security mode control procedure
	MID EMM / Identification procedure
	MEI EMM / EMM information procedure
	MAT EMM / Attach procedure

	SRR ESM / Remote UE Report procedure
	STU ESM / Transport of user data via the control plane procedure
<nn>	= sequential number (01 to 99)

## 5.1.2 Test strategy

As the base specification in ETSI TS 124 301 [1] contains no explicit requirements for testing, the TPs were generated as a result of an analysis of the base standard and the PICS specification ETSI TS 103 530-1 [2].

## 5.1.3 TP structure

Each TP has been written in a manner which is consistent with all other TPs. The intention of this is to make the TPs more readable and checkable. A particular structure has been used which is illustrated in table 2. Table 2 should be read in conjunction with any TP, i.e. please use a TP as an example to facilitate the full comprehension of table 2.

**Table 2: Structure of a single TP**

TP part	Text	Example
<b>Header</b>	<Identifier>	see table 1
	<clause number in base ETSI TS 124 301 [1]>	clause 8.2.1
	<PICS reference>	A.4/3
<b>Summary</b>	<i>Short free text description of the test objective</i>	Verify that the IUT can successfully process all mandatory IEs in an ATTACH REQUEST received due to attach procedure
<b>Configuration</b>	<i>Test configuration as described in clause 4.2</i>	CF_S1-MME
<b>Initial condition (optional)</b>	<i>Free text description of the condition that the IUT has reached before the test purpose applies</i>	
<b>Start point</b>	Ensure that the IUT in the  <state> see ETSI TS 124 301 [1] clause 8.1  and/or further actions before stimulus if the action is sending/receiving see below for message structure	Network initiated detach procedure  Having sent a DETACH REQUEST
<b>Stimulus</b>	<trigger>, see below for message structure  or <goal>	On receipt of an ATTACH REQUEST (see note 2)
<b>Reaction</b>	<action>  if the action is sending see below for message structure <next action>, etc.	Sends, saves, does, etc.
<b>Message structure</b>	<message type>  a) containing a(n) <IE name> IE b) indicating <coding of the field> and back to a) or b) (see note 3)	Message exchange, etc. (see note 2)

NOTE 1: Text in italics will not appear in TPs and text between <> is filled in for each TP and may differ from one TP to the next.

NOTE 2: All messages are considered as "valid and compatible" unless otherwise specified in the test purpose. This includes the presence of all NAS mandatory IEs as specified in ETSI TS 124 301 [1]. For better overview of the document there are S1AP messages (ex. DOWNLINK\_NAS\_TRANSPORT) written with underscore character and NAS messages (ex. ATTACH REQUESTS) with space character.

NOTE 3: An IE can be embedded into another IE. This is expressed by indentations, e.g. if Message1 contains IE1 and IE2 where IE1 has IE3 embedded this will be expressed like this:  
 sends/receives Message 1  
     containing IE1  
         containing IE3  
             indicating  
             containing IE2  
             indicating.

## 5.2 Test Purposes

### 5.2.1 PICS references

All PICS items referred in this clause are as specified in ETSI TS 103 530-1 [2] unless indicated otherwise by another numbered reference. PICS items are only meant for test selection, therefore only PICS items with status optional or conditional are explicitly mentioned.

### 5.2.2 S1\_MME interface NAS – MME Role

#### 5.2.2.1 Test selection
