DECTTM, **PLUGTESTS**TM and **UMTS**TM are Trade Marks of ETSI registered for the benefit of its Members.
TIPHONTM and the **TIPHON logo** are Trade Marks currently being registered by ETSI for the benefit of its Members.
3GPPTM is a Trade Mark of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners.

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification has been produced by the 3GPP.

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

0 Scope

The present document defines a set of Circuit Bearer Services to be provided to PLMN subscribers by a PLMN itself and in connection with other networks. This TS should also be used as a reference for defining the corresponding required mobile network capabilities.

0.1 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

0.2 Abbreviations

Abbreviations used in this TS are listed in TS 41.004 [1] and TR 21.905 [13].

1 Framework for defining Circuit Bearer Services

Bearer Services are described by attributes, which are intended to be independent. These attributes are described and defined in TS 22.001 [2]. They are grouped into four categories:

- i) Information transfer attributes, which characterize the network capabilities for transferring information from a user access point in a PLMN to a user access point in another network. (Refer to TS 22.001 [2]).
- ii) Access attributes, which describe the means for accessing network functions or facilities as seen at the access point in the PLMN (see TS 22.001 [2]).
- iii) Interworking attributes, which describe properties of the terminating network and its access point. The terminating network may include another PLMN or the originating PLMN.
- iv) General attributes, which deal with the service in general.

Figure 1 shows the relation between the groups of attributes and their fields of applicability.

NOTE 1: A transit network may not exist for a Bearer Service.

NOTE 2: Communication may be established from either end.

NOTE 3: The information transfer and access attributes of a Bearer Service relate to a direct peer-to-peer communication of:

- TE to TE;
- TE to a network gateway (supporting, for example, PSTN interworking); or
- network gateway to a TE.

Figure 1: Relation between the groups of attributes and fields of applicability

The following table lists the individual attributes in each of the four groups. The Bearer Service definitions in this specification are based on the "Minimal Set" of attributes.

Table 1: List of Bearer Service attributes

	Minimal Set
Information Transfer Attributes	
Information Transfer Mode	X
Information Transfer Rate	X
Information Transfer Capability	X
Establishment of Communication	X
Symmetry	X
Communication Configuration	X
Data Compression	X
Access Attributes	
Access Channel and Rate	
Signalling Access Protocols	
Information Access Protocols	
Information Access Structure	X
Information Access Rate	X
Interworking Attributes	
General Attributes	
Supplementary Services Provided	
Quality of Service	X
Operational and Commercial	

Attributes that are not part of the minimal set provide further technical detail and are required to fully define the use of each Bearer Service.

See specifications [4], [5], [6], [7] for information about the Signalling Access Protocols, Information Access Protocols and related access attributes.

Supplementary services are defined in TS 22.004 [3].

Intercommunication is required with services in the PSTN, ISDN and other PLMNs. The capabilities that describe the Interworking Attributes are described in specifications [8] to [9] and [15].

2 Bearer Service categories

All Bearer Service categories provide information transfer between the reference points and allow the use of sub-rate information streams which are rate-adapted.

The Bearer Services can be grouped into the following categories:

- Unrestricted Digital Information (UDI);

Provides the transfer of unrestricted digital information.

- 3,1 kHz (External to the PLMN);

Used to select a "3,1 kHz audio" interworking function at the MSC. This service category is used when interworking with the ISDN or PSTN "3,1 kHz audio" service and includes the capability to select a modem at the interworking function. "External to the PLMN" indicates that the "3,1 kHz audio" service is only used outside of the PLMN, in the ISDN/PSTN. The connection within the PLMN, user access point to the interworking function, is an unrestricted digital connection.

3 Bearer Services

This clause provides a list of the existing Bearer Services and indicates the values for each attribute in the minimal set.

The following attributes have the same value for all Bearer Services. Their values are as follows:

Information Transfer Mode: "Circuit";

Information Transfer Rate: Not applicable (note 1);
 Establishment of Communication: "Demand";
 Symmetry: "Bi-directional Symmetric";
 Communication Configuration: "Point to point".

NOTE 1: The Information Transfer Rate attribute is not applicable because it depends on the reference point assumed in the PLMN, transit or terminating network.

All asynchronous NT Bearer Services may support data compression to enhance user data throughput.

NT Bearer Services 20 may support V.120 interworking, enabling data terminals connected to an UE to interwork with V.120 [12] terminal adapters on the ISDN as shown in the figure 2 below.

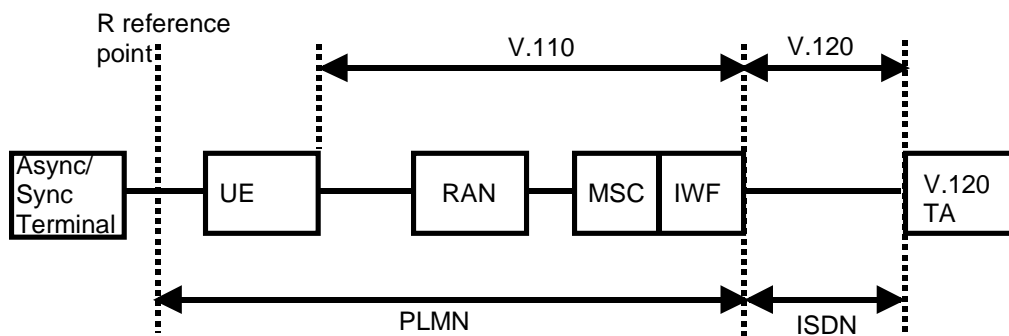

Figure 2: Model of V.120 Interworking

Table 2 contains the list of the Bearer Services and the values for the remaining attributes in the minimal set.

Table 2

Bearer Service Number	Bearer Service Name	Access Structure	Access Rate	Information Transfer Capability	QOS Attribute	Notes
20	Asynchronous General Bearer Service	Asynch	note 1	3.1 kHz , UDI, RDI	NT / T	
30	Synchronous General Bearer Service	Synch	note 1	3.1 kHz , UDI, RDI	T	

Note 1: This General Bearer is independent of any nominal rate. It is elaborated in more detail in subclause 3.1

3.1 General bearer service user data characteristics

The tables below describe the characteristics of the General Bearer Services. The indicated fixed network user rates are possible, but support of General Bearer Service does not imply support of all rates.

3.1.1 BS 20 (asynchronous services)

3.1.1.1 BS 20 T (transparent asynchronous services)

3.1.1.1.1 BS 20 transparent in regular mode for analogue interworking

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS attributes	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
0.3 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
1.2 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
2.4 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
4.8 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
9.6 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
14.4 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
19.2 kbit/s	Asynch	3,1 kHz	-	T	-	-	Supported	
28.8 kbit/s	Asynch	3,1 kHz	-	T	Supported	Supported	Supported	

3.1.1.1.2 BS 20 transparent in regular mode for digital interworking

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS Attribute	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
0.3 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
1.2 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
2.4 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
4.8 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
9.6 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
14.4 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
19.2 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
28.8 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	
38.4 kbit/s	Asynch	UDI	V.110	T	-	-	Supported	

3.1.1.2 BS 20 NT (non-transparent asynchronous services)

3.1.1.2.1 BS 20 non-transparent in regular mode for analogue interworking

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS attributes	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Note
0.3 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	Note 2
1.2 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	Note 2
2.4 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	Note 2
4.8 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	Note 2
9.6 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	
14.4 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	
19.2 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	
28.8 kbit/s	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	
	Asynch	3,1 kHz	-	NT	Supported	Supported	Supported	Note 1

NOTE 1: This is used with high speed modems such as V.90 (56kbit/s). Modem type = 'Autobauding Type 1' is selected. FNUR has no meaning in this case.

NOTE 2: In case of UTRAN and in GERAN Iu mode the FNURs 300, 1200, 2400 and 4800 bit/s towards the fixed network can be provided only with modem type = 'Autobauding Type 1' is selected.

3.1.1.2.2 BS 20 non-transparent in regular mode for digital interworking

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS Attribute	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
0.3 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	Note 1
1.2 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	Note 1
2.4 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	Note 1
4.8 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	Note 1
9.6 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	
14.4 kbit/s	Asynch,	UDI	V.110	NT	Supported	Supported	Supported	
19.2 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	
28.8 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	
38.4 kbit/s	Asynch	UDI	V.110	NT	Supported	Supported	Supported	

NOTE 1: In case of UTRAN and in GERAN Iu mode the user rates 300, 1200, 2400 and 4800 bit/s towards the fixed network can be provided only for mobile terminated calls.

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS Attribute	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
1.2 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	Note 2
2.4 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	Note 2
4.8 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	Note 2
9.6 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	
14.4 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	
19.2 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	
28.8 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	Note 1
38.4 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	
48 kbit/s	Asynch	UDI / RDI	V.120	NT	Supported	Supported	Supported	
56 kbit/s	Asynch	UDI	V.120	NT				

NOTE 1: Requires a new code point in V.120 specification to be defined.

NOTE 2: In case of UTRAN and in GERAN Iu mode the user rates 1200, 2400 and 4800 bit/s toward the fixed network can be provided only for mobile terminated calls.

3.1.1.2.3 BS 20 non-transparent for PIAFS

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS Attribute	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
32 kbit/s	Asynch	UDI	PIAFS	NT	Supported	-	-	
64 kbit/s	Asynch	UDI	PIAFS	NT	Supported	-	-	

3.1.1.2.4 BS 20 non-transparent for Frame Tunnelling Mode

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS Attribute	UTRAN	GERAN Iu mode	GERAN A/Gb mode	Notes
56kbit/s	Asynch	RDI	X.31 flag stuffing	NT	Supported	Supported	Supported	
64 kbit/s	Asynch	UDI	X.31 flag stuffing	NT	Supported	Supported	Supported	

3.1.2 BS 30 (synchronous services)

3.1.2.1 BS 30 T (transparent synchronous services)

3.1.2.1.1 BS 30 transparent in regular mode for analogue interworking

Fixed Network User Rate	Access Structure	Information Transfer Capability	Rate Adaptation	QoS attributes	UTRAN	GERAN Iu mode	GERAN A/Gb	Notes
1.2 kbit/s	Synch	3,1 kHz	-	T	-	-	Supported
