| NOTE 1: If Combination 6 - 9 contains aScheduling Block 3, the Scheduling Block 3 shall be located as the first IE in the list. | | | | | |

If the encoded message does not fill a transport block, the RRC layer shall insert padding according to subclause 12.1. Padding is needed e.g. if the remaining space is insufficient to start a new First Segment (which requires several bits for SIB type, SEG_COUNT and SIB data).

10.2.48.1 First Segment

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment fills the entire transport block (Combination 2).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| SEG_COUNT | MP | | SEG COUNT, 10.3.8.17 | |
| SIB data fixed | MP | | SIB data fixed, 10.3.8.19 | |

10.2.48.1a First Segment 2

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment fills the entire transport block (Combination 2). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|--------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| SEG_COUNT | MP | | SEG COUNT, 10.3.8.17 | |
| SIB data fixed | MP | | SIB data fixed 2, 10.3.8.19a | |

10.2.48.2 First Segment (short)

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment is concatenated after other segments in a transport block (Combination 5, 7 and 9).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| SEG_COUNT | MP | | SEG COUNT, 10.3.8.17 | |
| SIB data variable | MP | | SIB data variable, 10.3.8.20 | |

10.2.48.2a First Segment (short) 2

This segment type is used to transfer the first segment of a segmented system information block. The IE is used when the first segment is concatenated after other segments in a transport block (Combination 5, 7 and 9). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| SEG_COUNT | MP | | SEG COUNT, 10.3.8.17 | |
| SIB data variable | MP | | SIB data variable 2, 10.3.8.20o | |

10.2.48.3 Subsequent Segment

This segment type is used to transfer a subsequent segment of a segmented system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data fixed | MP | | SIB data fixed, 10.3.8.19 | |

10.2.48.3a Subsequent Segment 2

This segment type is used to transfer a subsequent segment of a segmented system information block. This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|--------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data fixed | MP | | SIB data fixed 2, 10.3.8.19a | |

10.2.48.4 Last Segment

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, from 215 through 222 (Combination 11).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data fixed | MP | | SIB data fixed, 10.3.8.19 | In case the SIB data is less than 222 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

10.2.48.4a Last Segment 2

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, from 225 through 232 (Combination 11). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data fixed | MP | | SIB data fixed 2, 10.3.8.19a | In case the SIB data is less than 232 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

10.2.48.5 Last Segment (short)

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, of upto 214 bits (Combination 4, 5, 6 and 7).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data variable | MP | | SIB data variable, 10.3.8.20 | |

10.2.48.5a Last Segment (short) 2

This segment type is used to transfer the last segment of a segmented system information block. The IE is used when the last segment has a length, excluding length denominator, of upto 224 bits (Combination 4, 5, 6 and 7). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| Segment index | MP | | Segment Index, 10.3.8.18 | |
| SIB data variable | MP | | SIB data variable 2, 10.3.8.20o | |

10.2.48.6 Complete SIB

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, from 215 through 226 (Combination 10).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |
| SIB data fixed | MP | | Bit string (226) | The first/leftmost/most significant bit of the bit string contains the first bit of the segment. In case the SIB data is less than 226 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

10.2.48.6a Complete SIB 2

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, from 225 through 236 (Combination 10). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| SIB data fixed | MP | | Bit string (236) | The first/leftmost/most significant bit of the bit string contains the first bit of the segment. In case the SIB data is less than 236 bits, padding shall be used. The same padding bits shall be used as defined in clause 12.1 |

10.2.48.7 Complete SIB (short)

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, of upto 214 bits (Combination 6, 7, 8 and 9).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB Type, 10.3.8.21 | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------|-----------------------|
| SIB data variable | MP | | SIB data variable, 10.3.8.20 | |

10.2.48.7a Complete SIB (short) 2

This segment type is used to transfer a non-segmented system information block. The IE is used when the complete SIB has a length, excluding length denominator, of upto 224 bits (Combination 6, 7, 8 and 9). This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|---------------------------------|-----------------------|
| Other information elements | | | | |
| SIB type | MP | | SIB and SB type 2, 10.3.8.22ab | |
| SIB data variable | MP | | SIB data variable 2, 10.3.8.20o | |

10.2.48.8 System Information Blocks

The IE "SIB data" within the IEs, "First Segment", "Subsequent or last Segment" and "Complete SIB" contains either complete system information block or a segment of a system information block. The actual system information blocks are defined in the following clauses.

10.2.48.8.1 Master Information Block

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------------------------|------------|-------|-------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|---------|
| Other information elements | | | | | |
| MIB Value tag | MP | | MIB Value tag 10.3.8.9 | | |
| CN information elements | | | | | |
| Supported PLMN types | MP | | PLMN Type 10.3.1.12 | | |
| PLMN Identity | CV-GSM | | PLMN Identity 10.3.1.11 | | |
| Multiple PLMN List | OP | | Multiple PLMN List 10.3.1.7a | If present, this IE specifies the PLMNs of the cell. If absent, the IE "PLMN Identity" specifies the PLMN of the cell. | REL-6 |
| ANSI-41 information elements | | | | | |
| ANSI-41 Core Network Information | CV-ANSI-41 | | ANSI-41 Core Network Information 10.3.9.1 | | |
| References to other system information blocks and scheduling blocks | MP | | References to other system information blocks and scheduling blocks 10.3.8.14 | | |
| CSG Indicator | OP | | Enumerated (TRUE) | If present, the cell is a CSG cell (see [4]). If absent, the cell is not a CSG cell. | REL-8 |
| SB3 information | OP | | SB3 information 10.3.8.14a | | REL-12 |

| Condition | Explanation |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|
| <i>GSM</i> | The IE is mandatory present if the IE "Supported PLMN Types" is set to 'GSM-MAP' or 'GSM-MAP AND ANSI-41', and not needed otherwise |
| <i>ANSI-41</i> | The IE is mandatory present if the IE "Supported PLMN Types" is set to 'ANSI-41' or 'GSM-MAP AND ANSI-41', and not needed otherwise |

10.2.48.8.2 Scheduling Block 1

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------|------|-------|---------------------------------------------------------|-----------------------|
| References to other system information blocks | MP | | References to other system information blocks 10.3.8.13 | |

10.2.48.8.3 Scheduling Block 2

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------|------|-------|------------------------------------------------------------|-----------------------|
| References to other system information blocks | MP | | References to other system information blocks 10.3.8.13 | |

10.2.48.8.3a Scheduling Block 3

This segment type is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------|------|-------|---------------------------------------------------------------|-----------------------|---------|
| SB3 value tag | MP | | Cell Value tag 2 10.3.8.4o | | REL-12 |
| References to other system information blocks | MP | | References to other system information blocks 2 10.3.8.13a | | REL-12 |

10.2.48.8.4 System Information Block type 1

The system information block type 1 contains NAS system information as well as UE timers and counters to be used in idle mode and in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------------|------|---------------------|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CN information elements | | | | |
| CN common GSM-MAP NAS system information | MP | | NAS system information (GSM-MAP) 10.3.1.9 | |
| CN domain system information list | MP | 1 to <maxCNdomains> | | Send CN information for each CN domain. |
| >CN domain system information | MP | | CN domain system information 10.3.1.2 | |
| UE information | | | | |
| UE Timers and constants in idle mode | MD | | UE Timers and constants in idle mode 10.3.3.44 | The UE behaviour is unspecified if this IE is absent. |
| UE Timers and constants in connected mode | MD | | UE Timers and constants in connected mode 10.3.3.43 | Default value means that for all timers and constants - For parameters with need MD, the defaults specified in 10.3.3.43 apply and - For parameters with need OP, the parameters are absent |

10.2.48.8.5 System Information Block type 2

The system information block type 2 contains the URA identity.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-----------------|--------------------------|-----------------------|
| UTRAN mobility information elements | | | | |
| URA identity list | MP | 1 ..<maxURA> | | |
| >URA identity | MP | | URA identity 10.3.2.6 | |

10.2.48.8.6 System Information Block type 3

The system information block type 3 contains parameters for cell selection and re-selection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------------|------|-------|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| SIB4 Indicator | MP | | Boolean | TRUE indicates that SIB4 is broadcast in the cell. When the UE receives SIB3 in the System Information Container message, this IE is interpreted as FALSE. | |
| UTRAN mobility information elements | | | | | |
| Cell identity | MP | | Cell identity 10.3.2.2 | | |
| Cell selection and re-selection info | MP | | Cell selection and re-selection info for SIB3/4 10.3.2.3 | | |
| Cell Access Restriction | MP | | Cell Access Restriction 10.3.2.1 | | |
| Domain Specific Access Restriction Parameters For PLMN Of MIB | OP | | Domain Specific Access Restriction Parameters 10.3.1.3c | This IE specifies the Domain Specific Access Restriction Parameters for UEs which has chosen the PLMN in the IE "PLMN identity" of the Master Information Block. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | REL-6 |
| Domain Specific Access Restriction For Shared Network | OP | | | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. | REL-6 |

10.2.48.8.7 System Information Block type 4

The system information block type 4 contains parameters for cell selection and re-selection to be used in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-------|-------------------------------------------------------------|-----------------------|
| UTRAN mobility information elements | | | | |
| Cell identity | MP | | Cell identity 10.3.2.2 | |
| Cell selection and re-selection info | MP | | Cell selection and re-selection info for SIB3/4 10.3.2.3 | |
| Cell Access Restriction | MP | | Cell Access Restriction 10.3.2.1 | |

10.2.48.8.8 System Information Block type 5 and 5bis

The system information block type 5 contains parameters for the configuration of the common physical channels in the cell. System information block type 5bis uses the same structure as System information block type 5. System information block type 5bis is sent instead of system information block type 5 in cells that use Band IV or Band IX or Band X if it is broadcasted.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|-------|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| SIB6 Indicator | MP | | Boolean | TRUE indicates that SIB6 is broadcast in the cell. When the UE receives SIB5 in the System Information Container message, this IE is interpreted as FALSE | |
| SIB22 Indicator | MP | | Boolean | TRUE indicates that SIB22 is broadcast in the cell. | REL-11 |
| PhyCH information elements | | | | | |
| PICH Power offset | MP | | PICH Power offset 10.3.6.50 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | |

| HSDPA cell Indicator | MD | | Enumerated (HSDPA Capable Cell) | Default is 'HSDPA capability not indicated'. 'HSDPA Capable Cell' means that the UE may consider this cell as part of the HSDPA coverage area for display indication only. This indication shall not be used for any other purpose. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | REL-6 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|------|-------|------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-DCH cell Indicator | MD | | Enumerated (E-DCH Capable Cell) | Default is 'E-DCH capability not indicated'. 'E-DCH Capable Cell' means that the UE may consider this cell as part of the E-DCH coverage area for display indication only. This indication shall not be used for any other purpose. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. | REL-6 |
| Secondary CCPCH system information MBMS | OP | | Secondary CCPCH system information MBMS 10.3.6.72a | Included if MCCH is on an S-CCPCH used only for MBMS. Note 2 | REL-6 |
| CHOICE <i>mode</i> | OP | | | | REL-7 |
| >FDD | | | | | REL-7 |
| >>HS-DSCH common system information | MP | | HS-DSCH common system information 10.3.6.36c | Included if cell supports HS-DSCH reception in CELL_FACH and during IDLE to RRC Connection state transition. | REL-7 |
| >>HS-DSCH paging system information | OP | | HS-DSCH paging system information 10.3.6.36d | Included if cell supports for UEs in RRC Connected state paging message reception on HS-DSCH. | REL-7 |
| >TDD | | | | | REL-7 |
| >>HS-DSCH common system information | MP | | HS-DSCH common system information 1.28Mcps TDD 10.3.6.36ca | Included if cell supports HS-DSCH reception in CELL_FACH and during IDLE to RRC Connection state transition. | REL-8 |
| >>HS-DSCH paging system information | OP | | HS-DSCH paging system information 1.28Mcps TDD 10.3.6.36da | Included if cell supports for UEs in RRC Connected state paging message reception on HS-DSCH. | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------|--------------|-------|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| TDD MBSFN information | OP | | TDD MBSFN Information 10.3.6.78b | TDD only: included only if some timeslots are designated to MBSFN. | REL-7 |
| HS-DSCH DRX in CELL_FACH Information | OP | | HS-DSCH DRX in CELL_FACH Information 10.3.6.36g | | REL-8 |
| HS-DSCH DRX in CELL_FACH Information 1.28 Mcps TDD | OP | | HS-DSCH DRX in CELL_FACH Information 1.28 Mcps TDD 10.3.6.36h | | REL-8 |
| Second Frequency info | OP | | Integer (0 .. 16383) | Note 3 | REL-8 |
| Treset Usage Indicator | OP | | Enumerated (TRUE) | Only for 1.28 Mcps TDD. The presence of this IE means the timer Treset is not valid when the dedicated H-RNTI is configured in CELL_FACH and CELL_PCH. | REL-8 |
| UpPCH Position Info | CV-Frequency | | Integer (0 .. 127) | Only for 1.28 Mcps TDD. | REL-8 |
| Cell Update message with optimised encoding | OP | | Enumerated (TRUE) | Only for FDD. The presence of this IE means that UE shall use the Rel-11 asn1 message type for Cell Update, if the UE supports this message type. | REL-11 |

NOTE 1: DL scrambling code of the Primary CCPCH is the same as the one for Primary CPICH (FDD only).

NOTE 2: There is only one MCCH in a cell, which may either be mapped on to an S-CCPCH also used for non-MBMS purposes or to an S-CCPCH dedicated to MBMS. In the first case the MCCH configuration is specified within the IE "Secondary CCPCH system information", in the latter case the MCCH configuration is provided within the IE "Secondary CCPCH system information MBMS".

NOTE 3: This IE is used in 1.28 Mcps TDD multi-frequency cell to indicate the secondary frequency at which enhanced E-DCH transmission and HS-PDSCH reception for 1.28 Mcps TDD is supported and to indicate that corresponding IEs: "Common E-DCH system info", "HS-DSCH common system information" (TDD) and "HS-DSCH DRX in CELL_FACH Information 1.28 Mcps TDD" can apply for this frequency. The absence of "Frequency info" means that enhanced E-DCH access transmission and HS-PDSCH reception and above IEs apply for primary frequency. For 1.28 Mcps TDD only.

| Condition | Explanation |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <i>CTCH</i> | The IE is mandatory present if the IE "CTCH indicator" is equal to TRUE for at least one FACH, otherwise the IE is not needed in the message |
| <i>Frequency</i> | The IE is optional if the IE "Frequency info" is present, otherwise the IE is not needed. |

10.2.48.8.9 System Information Block type 6

The system information block type 6 contains parameters for the configuration of the common and shared physical channels to be used in connected mode.

10.2.48.8.16.3 System Information Block type 13.3

The system information block type 13.3 contains the ANSI-41 Private Neighbour List information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-------|-----------------------------------------------------|-----------------------|
| ANSI-41 information elements | | | | |
| ANSI-41 Private Neighbour List information | MP | | ANSI-41 Private Neighbour List information 10.3.9.5 | |

10.2.48.8.16.4 System Information Block type 13.4

The system information block type 13.4 contains the ANSI-41 Global Service Redirection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------|------|-------|---------------------------------------------------------|-----------------------|
| ANSI-41 information elements | | | | |
| ANSI-41 Global Service Redirection information | MP | | ANSI-41 Global Service Redirection information 10.3.9.2 | |

10.2.48.8.17 System Information Block type 14

NOTE: Only for 3.84 Mcps TDD and 7.68 Mcps TDD.

The system information block type 14 contains parameters for common and dedicated physical channel uplink outer loop power control information to be used in both idle and connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------------|------|--------------|--------------------------------------------|-----------------------|
| PhyCH information elements | | | | |
| Individual Timeslot interference list | MP | 1 to <maxTS> | | |
| >Individual Timeslot interference | MP | | Individual Timeslot interference 10.3.6.38 | |
| Expiration Time Factor | MD | | Expiration Time Factor 10.3.3.12 | Default is 1. |

10.2.48.8.18 System Information Block type 15

The system information block type 15 contains information useful for UE-based or UE-assisted positioning methods.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|---------------|-------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| GPS Data ciphering info | OP | | UE positioning Ciphering info 10.3.7.86 | If this IE is present then the SIB types 15.1, 15.2 & 15.3 are ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] |
| Reference position | MP | | Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c | approximate position where the UE is located |
| GPS reference time | MP | | UE positioning GPS reference time 10.3.7.96 | |
| Satellite information | OP | 1 to <maxSat> | | This IE is present whenever bad (failed/failing) satellites are detected by UTRAN [18]. |
| >BadSatID | MP | | Enumerated(0..63) | |

10.2.48.8.18.0 System Information Block type 15bis

The system information block type 15bis contains information useful for UE-based or UE-assisted positioning methods. The content of this SIB is common to all GANSS.

| Information Element/Group name | Need | Type and Reference | Semantics description | Version |
|------------------------------------|------|----------------------------------------------------------------------|----------------------------------------------|---------|
| Reference position | MP | Ellipsoid point with altitude and uncertainty ellipsoid 10.3.8.4c | approximate position where the UE is located | REL-7 |
| GANSS reference time | MP | UE positioning GANSS reference time 10.3.7.96o | | REL-7 |
| GANSS ionospheric model | OP | UE positioning GANSS ionospheric model 10.3.7.92a | | REL-7 |
| GANSS additional ionospheric model | OP | UE positioning GANSS additional ionospheric model 10.3.7.92b | | REL-8 |
| GANSS Earth orientation parameters | OP | UE positioning GANSS Earth orientation parameters 10.3.7.92c | | REL-8 |

10.2.48.8.18.1 System Information Block type 15.1

The system information block type 15.1 contains information useful for UE positioning DGPS Corrections. The DGPS Corrections message contents are based on a Type-1 message of DGPS specified in [13].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------|-----------------------|
| DGPS corrections | MP | | UE positioning GPS DGPS corrections 10.3.7.91 | |

10.2.48.8.18.1a System Information Block type 15.1bis

The system information block type 15.1bis contains information useful for UE positioning DGNSS Corrections. The DGNSS Corrections message contents are based on a Type-1 message of DGNSS specified in [13]. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Type and Reference | Semantics description | Version |
|--------------------------------|------|------------------------------------------------|-----------------------|---------|
| DGNSS corrections | MP | UE positioning DGNSS corrections 10.3.7.91b | | REL-7 |

10.2.48.8.18.1b System Information Block type 15.1ter

The system information block type 15.1ter contains information useful for UE positioning DBDS corrections and UE positioning BDS Ionospheric Grid Model. The content of DBDS Corrections and BDS Ionospheric Grid Model are based on the NAV message specified in [86]. The content of this SIB is for BDS only.

| Information Element/Group name | Need | Type and Reference | Semantics description | Version |
|--------------------------------|------|------------------------------------------------------|-----------------------|---------|
| DBDS corrections | OP | UE positioning DBDS corrections 10.3.7.92e | | REL-12 |
| BDS Ionospheric Grid Model | OP | UE positioning BDS Ionospheric Grid Model 10.3.7.92d | | REL-12 |

10.2.48.8.18.2 System Information Block type 15.2

The system information block type 15.2 contains information useful for GPS Navigation Model. These IE fields are based on information extracted from the subframes 1 to 3 of the GPS navigation message [12].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|-----------------------------------------------|------|-------|-------------------------------------------------------------------------|----------------------------------------------------------------------------|
| Transmission TOW | MP | | Integer (0..604799) | The approximate GPS time-of-week when the message is broadcast. in seconds |
| SatID | MP | | Integer (0..63) | Satellite ID |
| GPS Ephemeris and Clock Correction Parameters | MP | | UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a | |

10.2.48.8.18.2a System Information Block type 15.2bis

The system information block type 15.2bis contains information useful for GANSS Navigation Model. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Type and Reference | Semantics description | Version |
|--------------------------------|------|--------------------------------------------------|-----------------------|---------|
| GANSS Navigation Model | MP | UE positioning GANSS navigation model 10.3.7.94a | | REL-7 |

10.2.48.8.18.2b System Information Block type 15.2ter

The system information block type 15.2ter contains information useful for GANSS Navigation Model. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Type and Reference | Semantics description | Version |
|------------------------------------|------|--------------------------------------------------------------|-----------------------|---------|
| GANSS additional navigation models | MP | UE positioning GANSS additional navigation models 10.3.7.94b | | REL-8 |

10.2.48.8.18.3 System Information Block type 15.3

The system information block type 15.3 contains information useful for ionospheric delay, UTC offset, and Almanac. These IEs contain information extracted from the subframes 4 and 5 of the GPS navigation message, [12].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|----------------------------------|-----------------------|-------|------------------------------------------------|----------------------------------------------------------------------------------|
| Transmission TOW | MP | | Integer (0..604799) | The approximate GPS time-of-week when the message is broadcast. in seconds |
| GPS Almanac and Satellite Health | OP | | UE positioning GPS almanac 10.3.7.89 | |
| GPS ionospheric model | OP | | UE positioning GPS ionospheric model 10.3.7.92 | |
| GPS UTC model | OP | | UE positioning GPS UTC model 10.3.7.97 | |
| SatMask | CV- <i>Almanac</i> | | Bit string(1..32) | indicates the satellites that contain the pages being broadcast in this data set |
| LSB TOW | CV- <i>Almanac</i> | | Bit string(8) | |

| Condition | Explanation |
|----------------|--------------------------------------------------------------------------------------|
| <i>Almanac</i> | This IE is mandatory present if the IE "GPS Almanac and Satellite Health" is present |

10.2.48.8.18.3a System Information Block type 15.3bis

The system information block type 15.3bis contains information useful for GANSS time model, UTC offset and Almanac, as well as auxiliary information. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|--------------------|-------------------------------------------------------|-----------------------|---------|
| GANSS Almanac | OP | | UE positioning GANSS almanac 10.3.7.89a | | REL-7 |
| GANSS time models | OP | 1 to <maxGAN SS-1> | | | REL-7 |
| >GANSS time model | OP | | UE positioning GANSS time model 10.3.7.97a | | REL-7 |
| GANSS UTC model | OP | | UE positioning GANSS UTC model 10.3.7.97c | | REL-7 |
| GANSS additional UTC models | OP | | UE positioning GANSS additional UTC models 10.3.7.97d | | REL-8 |
| GANSS auxiliary information | OP | | UE positioning GANSS auxiliary information 10.3.7.97f | | REL-8 |

10.2.48.8.18.4 System Information Block type 15.4

The system information block type 15.4 contains ciphering information for System Information Block type 15.5 and information useful for OTDOA UE-assisted Positioning method.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---------------------------------------|------|-------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTDOA Data ciphering info | OP | | UE positioning Ciphering info 10.3.7.86 | If this IE is present then the for UE-based the System Information Block type 15.5 is ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] |
| OTDOA assistance data for UE-assisted | MP | | UE positioning OTDOA assistance data for UE-assisted 10.3.7.103 | |

10.2.48.8.18.4a System Information Block type 15.5

The system information block type 15.5 contains information useful for OTDOA UE-based Positioning method.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|------------------------------------|------|-------|------------------------------------------------------------------|-----------------------|
| OTDOA assistance data for UE-based | MP | | UE positioning OTDOA assistance data for UE-based 10.3.7.103a | |

10.2.48.8.18.5 System Information Block type 15.6

The system information block type 15.6 contains information useful for acquisition of GNSS signals. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------|------|-------|---------------------------------------------------------------------|------------------------------------------------------------------------------------|---------|
| GNSS TOD | MP | | Integer (0..86399) | GNSS Time of Day in seconds where GNSS reference measurement information is valid. | REL-7 |
| GNSS reference measurement information | MP | | UE positioning GNSS reference measurement information 10.3.7.88b | | REL-7 |

10.2.48.8.18.6 System Information Block type 15.7

The system information block type 15.7 contains data bits which can be used for data wipe-off. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------------------------|-----------------------|---------|
| GNSS data bit assistance | MP | | UE positioning GNSS data bit assistance 10.3.7.97b | | REL-7 |

10.2.48.8.18.7 System Information Block type 15.8

The system information block type 15.8 contains ciphering information and real-time integrity information. The content of this SIB is GNSS specific.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GNSS Data ciphering info | OP | | UE positioning Ciphering info 10.3.7.86 | If this IE is present then the SIB types 15.1bis, 15.1ter, 15.2bis, 15.2ter, 15.3bis, 15.6 and 15.7 are ciphered in accordance with the Data Assistance Ciphering Algorithm specified in [18] | REL-7 |
| GNSS real-time integrity | OP | | UE positioning GNSS real-time integrity 10.3.7.95b | | REL-7 |

10.2.48.8.19 System Information Block type 16

The system information block type 16 contains radio bearer, transport channel and physical channel parameters to be stored by UE in idle and connected mode for use during handover to UTRAN.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|-----------------------------------|------|-------|------------------------------------------|-----------------------|
| RB information elements | | | | |
| Predefined RB configuration | MP | | Predefined RB configuration 10.3.4.7 | |
| TrCH Information Elements | | | | |
| Predefined TrCH configuration | MP | | Predefined TrCH configuration 10.3.5.9 | |
| PhyCH Information Elements | | | | |
| Predefined PhyCH configuration | MP | | Predefined PhyCH configuration 10.3.6.56 | |

10.2.48.8.20 System Information Block type 17

NOTE: Only for TDD.

The system information block type 17 contains fast changing parameters for the configuration of the shared physical channels to be used in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|-------|------------------------------------------|------------------------|---------|
| PhyCH information elements | | | | | |
| PUSCH system information | OP | | PUSCH system information 10.3.6.66 | | |
| PUSCH system information VHCR | OP | | PUSCH system information VHCR 10.3.6.66a | Only for 7.68 Mcps TDD | REL-7 |
| PDSCH system information | OP | | PDSCH system information 10.3.6.46 | | |

10.2.48.8.21 System Information Block type 18

The System Information Block type 18 contains PLMN identities of neighbouring cells to be considered in idle mode as well as in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|------|-------|----------------------------------------------------------------|-----------------------|---------|
| Idle mode PLMN identities | OP | | PLMN identities of neighbour cells 10.3.7.53a | | |
| Connected mode PLMN identities | OP | | PLMN identities of neighbour cells 10.3.7.53a | | |
| Idle mode PLMN identities for SIB 11bis | OP | | PLMN identities of neighbour cells 10.3.7.53a | | REL-6 |
| Connected mode PLMN identities for SIB 11bis | OP | | PLMN identities of neighbour cells 10.3.7.53a | | REL-6 |
| Idle mode PLMN identities for SIB 11ter | OP | | PLMN identities of neighbour cells for SIB 11ter 10.3.7.53b | | REL-12 |
| Connected mode PLMN identities for SIB 11ter | OP | | PLMN identities of neighbour cells for SIB 11ter 10.3.7.53b | | REL-12 |

10.2.48.8.22 System Information Block type 19

The system information block type 19 contains Inter-RAT frequency and priority information to be used in the cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------|------|-------|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| UTRA priority info list | MP | | UTRA priority info list 10.3.7.113 | | REL-8 |
| GSM priority info list | OP | | GSM priority info list 10.3.7.114 | | REL-8 |
| GSM ScalingFactor for Treselection | OP | | Real (0.25..4 by step of 0.25) | If present, it is used by the UE as scaling factor for $Treselection_s$ or $Treselection_{s,PCH}$ or $Treselection_{s,FACH}$ for inter-RAT absolute priority based cell reselection evaluation to GSM [4]. It replaces Inter-RAT ScalingFactor for Treselection in SIB3/4, if available. | REL-11 |
| E-UTRA frequency and priority info list | OP | | E-UTRA frequency and priority info list 10.3.7.115 | | REL-8 |
| E-UTRA ScalingFactor for Treselection | OP | | Real (0.25..4 by step of 0.25) | If present, it is used by the UE as scaling factor for $Treselection_s$ or $Treselection_{s,PCH}$ or $Treselection_{s,FACH}$ for inter-RAT absolute priority based cell reselection evaluation to E-UTRA [4]. It replaces Inter-RAT ScalingFactor for Treselection in SIB3/4, if available. | REL-11 |
| E-UTRA frequency RACH reporting information | OP | | E-UTRA frequency RACH reporting information 10.3.7.139 | | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------|------|-------|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CELL_FACH Absolute Priority Measurement Indicator | OP | | Enumerated (High Priority Layers, All Layers) | High Priority Layers means that absolute priority measurements are only required in CELL_FACH state on higher priority layers when Srxlev and Squal of the serving cell are above Sprioritysearch1 and Sprioritysearch2. All Layers means that absolute priority measurements are always required in CELL_FACH state according to the rules in [4] and requirements in [19]. A UE that indicates FGI3 but not FGI4 shall behave as if High priority Layers is indicated. | REL-11 |

10.2.48.8.23 System Information Block type 20

The system information block type20 contains HNBBName.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------|-----------------------|---------|
| HNB Name | OP | | HNB Name 10.3.8.4m | | REL-8 |

10.2.48.8.24 System Information Block type 21

The system information block type 21 contains parameters for EAB.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|--------|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| EAB Parameters | OP | | | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE behaviour upon reception of this IE is unspecified. | REL-11 |

10.2.48.8.25 System Information Block type 22

NOTE: Only for FDD.

The system information block type 22 contains information for Concurrent deployment of 2ms and 10ms TTI in a cell, NodeB triggered HS-DPCCH transmission, Fallback to R99 PRACH, TTI alignment, Per HARQ process activation and de-activation and HS-DSCH DRX operation with second DRX cycle in CELL_FACH. Further, it contains control parameters related to the PRACH access preamble.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------|------|-------|----------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| PRACH preamble control parameters extension list Type 1 (for Enhanced Uplink) | OP | | PRACH preamble control parameters extension list for Type 1 (for Enhanced Uplink) 10.3.6.135 | Control parameters of the physical signal. This and/or parameters in IE "PRACH preamble control parameters (for Enhanced Uplink)" is used for access by UE's supporting concurrent deployment when the outcome of the common E-DCH TTI selection is 10ms. Also used for access if "E-DCH Transmission Time Interval" is equal to 10ms when concurrent deployment is not used, by UEs that support either NodeB triggered HS-DPCCH transmission or HS-DSCH DRX operation with second DRX cycle or Fallback to R99 PRACH. See subclause 8.5.45, 8.5.73 and 8.5.74. | REL-11 |
| PRACH preamble control parameters extension list Type 2 (for Enhanced Uplink) | OP | | PRACH preamble control parameters extension list (for Enhanced Uplink) 10.3.6.134 | Control parameters of the physical signal. Used for access by UE's supporting only concurrent deployment, and by UEs supporting TTI alignment and Per HARQ process if the IE "Common E-DCH Resource Configuration Information List Extension" is not present, when the outcome of the common E-DCH TTI selection is 2ms. See subclause 8.5.45 and 8.5.73. | REL-11 |

| >Later | | | Bit string(15) | This bit string shall not be sent by mobiles that are compliant to this version of the protocol. |

10.3.1.7 Location Area Identification

Identifies uniquely a location area for a GSM-MAP type of PLMN. Setting specified in [5].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------|-----------------------------------------------------------------------------------------|
| PLMN identity | MP | | PLMN identity 10.3.1.11 | |
| LAC | MP | | Bit string(16) | The first/leftmost bit of the bit string contains the most significant bit of the LAC.. |

10.3.1.7oa Location/Registration Parameters

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------|------|-------|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>restriction status</i> | MP | | | | REL-8 |
| >no restriction | | | | (no data) This means 'no Access Class is barred' | REL-8 |
| >restriction | | | | | REL-8 |
| >>Location/Registration Access Class Barred List | MP | 15 | | The first ten instance of the parameter corresponds to Access Class 0 to 9, and eleventh to fifteenth instance of the parameter corresponds to Access Class 11 to 15, respectively. UE reads this IE of its access class stored in SIM (except for Access Class 10). | REL-8 |
| >>>Access Class Barred | MP | | Enumerated(barred, not barred) | | REL-8 |

10.3.1.7a Multiple PLMN List

This information element identifies the multiple Public Land Mobile Networks (for a GSM-MAP type of PLMN) of a cell in a shared network.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------|---------|
| MIB PLMN Identity | MP | | Boolean | The PLMN identity IE 10.3.1.11, broadcasted in the MIB, shall be included in the multiple PLMN list if and only if this IE is TRUE. | REL-6 |
| Multiple PLMNs | MP | 1 to 5 | | | REL-6 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------|------|-------|-----------------------------------------------|-----------------------|---------|
| >PLMN identity with Optional MCC | | | PLMN identity with Optional MCC 10.3.1.11a | | REL-6 |

10.3.1.8 NAS message

A non-access stratum message to be transferred transparently through UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| NAS message | MP | | Octet string (1..4095) | The first octet contains octet 1 [17] of the NAS message, the second octet contains octet 2 of the NAS message and so on. |

10.3.1.9 NAS system information (GSM-MAP)

This information element contains system information that belongs to the non-access stratum for a GSM-MAP type of PLMN. This information is transparent to RRC. It may contain either information specific to one CN domain (CS or PS) or information common for both CN domains.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GSM-MAP NAS system information | MP | | Octet string(1..8) | The first octet contains octet 1 [5] of the NAS system information element, the second octet contains octet 2 of the NAS system information element and so on. |

10.3.1.10 Paging record type identifier

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------------------------------------------------------------|-----------------------|
| Paging record type identifier | MP | | Enumerated (IMSI (GSM-MAP), TMSI (GSM-MAP)/ P-TMSI, IMSI (DS-41), TMSI (DS-41)) | |

10.3.1.10a Paging Permission with Access Control Parameters

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------|------|-------|-------------------------------------------------|-----------------------|---------|
| Paging Response Restriction Indication | MP | | Enumerated (All, CS, PS, None) | | REL-8 |
| Location/Registration Restriction Indicator | MP | | Enumerated (All, CS, PS) | | REL-8 |
| Location/Registration | MP | | Location /Registration Parameters 10.3.1.7oa | | REL-8 |

10.3.1.11 PLMN identity

This information element identifies a Public Land Mobile Network for a GSM-MAP type of PLMN. Setting of digits is defined in [11].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|--------|--------------------|----------------------------------------------------------------------------------------------------|
| MCC | MP | 3 | | The first element contains the first MCC digit, the second element the second MCC digit and so on. |
| >MCC digit | MP | | INTEGER(0..9) | |
| MNC | MP | 2 to 3 | | The first element contains the first MNC digit, the second element the second MNC digit and so on. |
| >MNC digit | MP | | INTEGER(0..9) | |

10.3.1.11a PLMN identity with Optional MCC

This information element is a PLMN identity in subclause 10.3.1.11 where MCC is optional. It is used in a shared network and inserted in the Multiple PLMN List in subclause 10.3.1.7a.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------|--------------------|----------------------------------------------------------------------------------------------------|---------|
| MCC | MD | 3 | | The first element contains the first MCC digit, the second element the second MCC digit and so on. | REL-6 |
| >MCC digit | MP | | Integer (0..9) | | REL-6 |
| MNC | MP | 2 to 3 | | The first element contains the first MNC digit, the second element the second MNC digit and so on. | REL-6 |
| >MNC digit | MP | | Integer (0..9) | | REL-6 |

10.3.1.12 PLMN Type

Identifies the type of Public Land Mobile Network (PLMN). This IE shall be used to control the interpretation of network dependent messages and information elements in the RRC protocol.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------------------|----------------------------|
| PLMN Type | MP | | Enumerated (GSM-MAP, ANSI-41, GSM-MAP and ANSI-41) | One spare value is needed. |

10.3.1.13 P-TMSI (GSM-MAP)

This IE contains a Packet Temporary Mobile Subscriber Identity, used towards a GSM-MAP type of PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------------------------|
| P-TMSI | MP | | Bit string (32) | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the P-TMSI. |

10.3.1.14 RAB identity

This information element uniquely identifies a radio access bearer within a CN domain.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>CHOICE RAB identity type</i> | MP | | | |
| >RAB identity (GSM-MAP) | | | Bit string (8) | Formatted according to [5]. The first/leftmost bit of the bit string contains the most significant bit of the RAB identity. In case of a radio bearer setup for an MBMS selected service, the RAB identity is set to the value reserved for 'MBMS Broadcast mode', see [5]. |
| >RAB identity (ANSI-41) | | | Bit string (8) | The first/leftmost bit of the bit string contains the most significant bit of the RAB identity. |

| <i>CHOICE NAS binding info type</i> | Condition under which the given <i>RAB identity type</i> is chosen |
|-------------------------------------|--------------------------------------------------------------------|
| RAB identity (GSM-MAP) | PLMN is of type GSM-MAP |
| RAB identity (ANSI-41) | PLMN is of type ANSI-41 |

10.3.1.15 Routing Area Code

Identifies a routing area within a location area for a GSM-MAP type of PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Routing Area Code | MP | | Bit string(8) | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the Routing Area Code. |

10.3.1.16 Routing Area Identification

Identifies uniquely a routing area for a GSM-MAP type of PLMN. Setting specified in [11].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------------|-----------------------|
| LAI | MP | | Location area identification 10.3.1.7 | |
| RAC | MP | | Routing area code 10.3.1.15 | |

10.3.1.17 TMSI (GSM-MAP)

This IE contains a Temporary Mobile Subscriber Identity, used towards a GSM-MAP type of PLMN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------|
| TMSI (GSM-MAP) | MP | | Bit string (32) | Setting specified in [11]. The first/leftmost bit of the bit string contains the most significant bit of the TMSI. |

10.3.2 UTRAN mobility Information elements

10.3.2.1 Cell Access Restriction

Indicates the restrictions to cell access.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------|-------------------|-------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Cell Barred | MP | | Enumerated(not barred, barred) | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 and the value in this IE is different from "barred" the UE behaviour is unspecified. | |
| Intra-frequency cell re-selection indicator | <i>CV-Barred</i> | | Enumerated(not allowed, allowed) | | |
| T_{barred} | <i>CV-Barred</i> | | Integer (10,20,40,80,160,320,640,1280) | [4] [s] | |
| Cell Reserved for operator use | MP | | Enumerated(reserved, not reserved) | | |
| Cell Reservation Extension | MP | | Enumerated(reserved, not reserved) | | |
| Cell Reserved for CSG | <i>CV-CSG</i> | | Enumerated(TR UE) | | REL-8 |
| Access Class Barred list | <i>CV-SIB3-MD</i> | maxAC | | Default is no access class barred is applied. The first instance of the parameter corresponds to Access Class 0, the second to Access Class 1 and so on up to Access Class 15. UE reads this IE of its access class stored in SIM. | |
| >Access Class Barred | MP | | Enumerated (barred, not barred) | | |

| Condition | Explanation |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Barred</i> | The IE is mandatory present if the IE "Cell Barred" has the value "Barred"; otherwise the element is not needed in the message. |
| <i>SIB3-MD</i> | The IE is mandatory and has a default value if the IE "Cell Access Restriction" is included in SIB 3. Otherwise the IE is not needed. |
| <i>CSG</i> | The IE is optional present if the cell is a CSG cell and the IE "Cell Reservation Extension" has the value "reserved". Otherwise the IE is not needed. The IE is not included in System Information Block type 4. |

10.3.2.2 Cell identity

This information element identifies a cell unambiguously within a PLMN.

NOTE: This information element may carry any implementation dependent identity that unambiguously identifies a cell within a PLMN. For GAN to UTRAN HO the Cell id is encoded as required in [9].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------------|-------------|--------------|---------------------------|------------------------------|
| Cell identity | MP | | bit string(28) | |

10.3.2.3 Cell selection and re-selection info for SIB3/4

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------|------|--------------------|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Mapping Info | OP | | Mapping info 10.3.2.5 | For FDD, 3.84 Mcps TDD and 7.68 Mcps TDD, this IE should not be sent. | |
| Cell selection and reselection quality measure | MP | | Enumerated (CPICH Ec/N0, CPICH RSCP) | Choice of measurement (CPICH Ec/N0 or CPICH RSCP) to use as quality measure Q for FDD cells. This IE is also sent to the UE in SIB11/12. Both occurrences of the IE should be set to the same value. | |
| CHOICE mode | MP | | | | |
| >FDD | | | | | |
| >>S _{intrasearch} | OP | | Integer (-32..20 by step of 2) | If a negative value is received the UE shall consider the value to be 0. [4] [dB] | |
| >>S _{intersearch} | OP | | Integer (-32..20 by step of 2) | If a negative value is received the UE shall consider the value to be 0. [4] [dB] | |
| >>S _{searchHCS} | OP | | Integer (-105..91 by step of 2) | If a negative value is received the UE shall consider the value to be 0. [4] [dB] | |

| >TDD | | | | | |
| >>Qrxlevmin | MD | | Integer (-115..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | |
| >> DeltaQrxlevmin | CV-Delta | | Integer(-4..-2 by step of 2) | If present, the actual value of Qrxlevmin = Qrxlevmin + DeltaQrxlevmin | REL-5 |
| >GSM | | | | | |
| >>Qrxlevmin | MD | | Integer (-115..-25 by step of 2) | GSM RSSI, [dBm] Default value is Qrxlevmin for the serving cell | |

| Condition | Explanation |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>FDD-Quality-Measure</i> | This IE is mandatory and has a default value for Intra/Inter Frequency Cells if the IE "Cell selection and reselection quality measure" has the value CPICH Ec/No. Otherwise the IE is absent. |
| <i>FDD-Serving-Cell</i> | This IE is mandatory and has a default value if the serving cell is an FDD cell. Otherwise the IE is mandatory present. |
| <i>Delta</i> | This IE is optional if Qrxlevmin is present and the value of Qrxlevmin is below -115dBm. It is not needed otherwise. |

10.3.2.5 Mapping Info

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------|------|--------------------------|------------------------------------------------------------------------------|-------------------------------------------|-------------------------------------------|
| Mapping List | MP | 1 to <MaxRAT> | | | |
| >RAT | MP | | Enumerated (UTRA FDD, UTRA TDD 3.84 Mcps, UTRA TDD 1.28 Mcps, GSM, cdma2000) | | UTRA TDD 1.28 Mcps is included for REL-4. |
| >Mapping Function Parameter List | MP | 1 to <maxMeas Intervals> | | | |
| >>Function type | MP | | | Type of the function within the interval. | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | | Enumerated (linear, function type 2, function type 3, function type 4) | For 1.28Mcps TDD only. If IE "RAT" is set to "UTRA TDD 3.84 Mcps", the IE should be interpreted as: Enumerated (frequency scope1, frequency scope2, frequency scope3, RSCP threshold). | REL-11 |
| >>Map_parameter_1 | MD | | Integer (0..99) | Parameter describing the mapping function between the quality measurement and the representing quality value, see [4]. Default value is zero for the first interval or otherwise the value of Map_parameter_2 of the interval before. | |
| | | | | For 1.28Mcps TDD only. See Note1/Note2 | REL-11 |
| | | | Integer (0..127) | For 1.28 Mcps TDD, the parameter is used to indicate the uplink access location of the serving cell. | REL-7 |
| >>Map_parameter_2 | MP | | Integer (0..99) | Parameter describing the mapping function between the quality measurement and the representing quality value, see [4]. | |
| | | | | For 1.28Mcps TDD only. See Note1 | REL-11 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|-------------------|-------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| >>Upper_limit | CV- <i>MaxInt</i> | | Integer (1..MaxMeas) | Upper limit of interval for which the Map_parameter_1 and Map_parameter_2 are valid. MaxMeas = 25 if RAT = UTRA FDD / CPICH Ec/N0, MaxMeas = 91 if RAT = UTRA TDD 3.84 Mcps or if RAT = UTRA TDD 1.28 Mcps or if RAT = UTRA FDD/ CPICH RSCP, MaxMeas = 63 if RAT = GSM. | UTRA TDD 1.28 Mcps is included for REL-4. |
| | | | | For 1.28Mcps TDD only. See Note1 | REL-11 |

| Condition | Explanation |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>MaxInt</i> | This IE is mandatory present if Mapping Function Parameter List has not reached maxMeasIntervals and is not needed otherwise. |
| Note1: | If IE "function type" is set to "frequency scope1", for "Map_parameter_1" and "Map_parameter_2", this value is interpreted as the frequency which applies to the mapping relationship: (0, 99)-> (9400, 9499); for "Upper_limit", this value is interpreted as the frequency which applies to the mapping relationship: (1, 91)-> (9400, 9490). If IE "function type" is set to "frequency scope2", for "Map_parameter_1" and "Map_parameter_2", this value is interpreted as the frequency which applies to the mapping relationship: (0, 99)-> (9500, 9599); for "Upper_limit", this value is interpreted as the frequency which applies to the mapping relationship: (1, 91)-> (9500, 9590). If IE "function type" is set to "frequency scope3", for "Map_parameter_1" and "Map_parameter_2", only the value among (0, 75) is valid and interpreted as frequency which applies to the mapping relationship: (0, 75)-> (10050, 10125); for "Upper_limit", only the value among (1, 75) is valid and interpreted as frequency which applies to the mapping relationship: (1, 75)-> (10050, 10124). |
| Note2: | If IE "function type" is set to "RSCP threshold", only the value among (0, 90) is valid and interpreted as P-CCPCH RSCP value which applies to the mapping relationship: (0, 90)-> (-115, -25); |

10.3.2.6 URA identity

Gives the identity of the UTRAN Registration Area. It can be used to indicate to the UE which URA it shall use in case of overlapping URAs.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| URA identity | MP | | bit string(16) | |

10.3.2.7 Dedicated priority Information

This IE indicates priority information for GERAN, UTRAN and E-UTRAN for reselections.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|-----------------------------------|------|-------------------------|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>Action</i> | MP | | | | REL-8 |
| >Clear dedicated priorities | | | NULL | | REL-8 |
| >Configure dedicated priorities | | | | | REL-8 |
| >>T322 | OP | | Integer (5, 10, 20, 30, 60, 120, 180) | Time in minutes for which the configured dedicated priorities are valid. When the timer expires the UE should revert to using the priorities signalled in system information. Absence of this IE means that the configured dedicated priorities are valid until the next update. One spare value needed. | REL-8 |
| >>Priority Level List | OP | 1 to <maxPrio> | | | REL-8 |
| >>>priority | OP | | Integer (0.. <maxPrio-1>) | If this IE is absent then the UE behaviour is unspecified. 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >>>CHOICE Radio Access Technology | MP | | | | REL-8 |
| >>>>UTRA FDD | | | | | REL-8 |
| >>>>>Frequency List | MP | 1 to <maxNumFDDFreqs> | | | REL-8 |
| >>>>>>UARFCN | MP | | Integer(0 .. 16383) | UARFCN of the downlink carrier frequency [25.101] | REL-8 |
| >>>>UTRA TDD | | | | | REL-8 |
| >>>>>Frequency List | MP | 1 to <maxNumTDDFreqs> | | | REL-8 |
| >>>>>>UARFCN | MP | | Integer(0 .. 16383) | UARFCN of the downlink carrier frequency [25.101] | REL-8 |
| >>>>E-UTRA | | | | | REL-8 |
| >>>>>Frequency List | | 1 to <maxNumEUTRAFreqs> | | | REL-8 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>>>>EARFCN | MP | | Integer(0 .. 65535) | EARFCN of the downlink carrier frequency [64]. If the IE indicates a value of 65535, then the EARFCN for this instance should be read from the corresponding instance of IE "EARFCN extension". | REL-8 |
| >>>>>EARFCN extension | OP | | Integer(65536 ... 262143) | EARFCN of the downlink carrier frequency [64]. | REL-11 |
| >>>>GSM | | | | | REL-8 |
| >>>>>GSM cell group | MP | | GSM cell group 10.3.7.9a | | REL-8 |
| >>E-UTRA detection | MP | | Boolean | 'TRUE' means that the UE may detect the presence of a E-UTRA cell and report to NAS | REL-8 |

NOTE: It is always ensured by the UTRAN that priorities for different Radio Access Technologies are always different (e.g. a GERAN group of cells cannot have the same priority as a UTRA or E-UTRA frequency).

NOTE: It is always ensured by the UTRAN that priorities for which both $Thresh_{x,high2}$ and $Thresh_{x,low2}$ are provided are always different from the priorities for which both $Thresh_{x,high1}$ and $Thresh_{x,low1}$ are not provided.

10.3.2.8 CSG Identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| CSG Identity | MP | | Bit string(27) | As defined in [76] | REL-8 |

10.3.2.9 CSG PSC Split Information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Start PSC | MP | | Integer (0..504 by step of 8) | The value of this IE specifies the start PSC of the first PSC range (NOTE 1). | REL-8 |
| Number of PSCs | MP | | Enumerated (5, 10, 15, 20, 30, 40, 50, 64, 80, 120, 160, 256, alltheRest) | This IE specifies the number of PSCs reserved for CSG cells in each PSC range. "alltheRest" indicates all values from Start PSC to 511. Three spare values are needed. | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-------|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| PSC Range 2 Offset | CV- <i>alltheRest</i> | | Integer (8..504 by step of 8) | If this IE is included, the UE shall calculate the second PSC range (NOTE 2). If this IE is not included, the UE shall consider the second PSC range to be not present. | REL-8 |
| NOTE 1: Let the IE "Start PSC" = s. and "Number of PSCs" = n. The complete set of (n) PSC values in range 1 is defined as: {s, ((s + 1) mod 512), ((s + 2) mod 512) ... ((s + n-1) mod 512)}. | | | | | |
| NOTE 2: Let the IEs "Start PSC" + "Number of PSCs" - 1 + "PSC Range 2 Offset" = s. and "Number of PSCs" = n. The complete set of (n) PSC values in range 2 is defined as: {(s mod 512), ((s + 1) mod 512), ((s + 2) mod 512) ... ((s + n-1) mod 512)}. | | | | | |

| Condition | Explanation |
|-------------------|----------------------------------------------------------------------------------------------------------------------------|
| <i>alltheRest</i> | This IE is optionally present if the value of IE "Number of PSCs" is not set to "alltheRest". Otherwise, it is not needed. |

10.3.2.10 Dedicated WLAN Offload Information

This IE indicates dedicated information for RAN-assisted WLAN interworking.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------------------------|---------------------------------------------|---------|
| CHOICE Configuration info | MP | | | | REL-12 |
| >Continue | | | (no data) | | REL-12 |
| >New configuration | | | | | REL-12 |
| >>T330 | OP | | Integer (5, 10, 20, 30, 60, 120, 180) | Time in minutes. One spare value is needed. | REL-12 |
| >>WLAN Offload Information | MP | | WLAN Offload Information 10.3.9b.3 | | REL-12 |

10.3.3 UE Information elements

10.3.3.1 Activation time

Activation Time defines the frame number/time at which the operation/changes caused by the related message shall take effect. Values between 0 and 255 indicate the absolute value of CFN (Connection Frame Number) of that frame number/time.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Activation time | MP | | Integer(0..255) | CFN [10] |

10.3.3.2 Capability Update Requirement

This IE indicates to the UE which specific capabilities to transfer to the network.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------|------|-------|--------------------|--------------------------------|---------|
| UE radio access FDD capability update requirement | MP | | Boolean | TRUE indicates update required | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------|-------------------|----------------------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| UE radio access 3.84 Mcps TDD capability update requirement | MP | | Boolean | TRUE indicates update required | Name changed in REL-4 |
| UE radio access 7.68 Mcps TDD capability update requirement | MP | | Boolean | TRUE indicates update required | REL-7 |
| UE radio access 1.28 Mcps TDD capability update requirement | MP | | Boolean | TRUE indicates update required | REL-4 |
| System specific capability update requirement list | OP | 1 to <maxSystemCapability> | | In this version, a maximum size of 4 of the list shall be applied and any items after the 4 th item in the list shall be ignored. | |
| >System specific capability update requirement | MP | | Enumerated (GSM, GERAN lu, E-UTRA) | Five spare values needed. | REL-5 REL-8 |
| Requested E-UTRA Frequency Band list | CV- <i>BCHopt</i> | 1 to 16 | | | REL-10 |
| >E-UTRA Frequency band | MP | | Integer (1..256) | As defined in [64]. The value of 64 is reserved and shall not be used | REL-10 |

| Condition | Explanation |
|---------------|--------------------------------------------------------------------------------------|
| <i>BCHopt</i> | This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is optional |

Default value is:

"UE radio capability FDD update requirement" = FALSE

"UE radio capability 3.84 Mcps TDD update requirement" = FALSE

"UE radio capability 7.68 Mcps TDD update requirement" = FALSE

"UE radio capability 1.28 Mcps TDD update requirement" = FALSE

"System specific capability update requirement" not present

"Requested E-UTRA Frequency Band list" not present.

10.3.3.3 Cell update cause

Indicates the cause for cell update.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|---------|
| Cell update cause | MP | | Enumerated (cell reselection, periodical cell update, uplink data transmission, paging response, re-entered service area, radio link failure, RLC unrecoverable error, | One spare value is needed. | REL-6 |
| | | | MBMS reception, MBMS ptp RB request) | | |

10.3.3.4 Ciphering Algorithm

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------|-----------------------|---------|
| Ciphering algorithm | MP | | Enumerated (UEA0, UEA1 | | REL-7 |
| | | | , UEA2) | | |

10.3.3.5 Ciphering mode info

This information element contains the ciphering specific security mode control information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------------|------|-------|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Ciphering mode command | MP | | Enumerated (start/restart) | |
| Ciphering algorithm | MP | | Ciphering algorithm 10.3.3.4 | |
| Ciphering activation time for DPCH | OP | | Activation time 10.3.3.1 | Used for radio bearers mapped on RLC-TM. Only applicable if the UE is already in CELL_DCH state |
| Radio bearer downlink ciphering activation time info | OP | | RB activation time info, 10.3.4.13 | Used for radio bearers mapped on RLC-AM or RLC-UM The UTRAN should not include this IE in a message other than a SECURITY MODE COMMAND |

10.3.3.6 CN domain specific DRX cycle length coefficient

A coefficient in the formula to count the paging occasions to be used by a specific UE (specified in [4]).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------------------|------|-------|--------------------|---------------------------------------------------------------------------|
| CN domain specific DRX cycle length coefficient | MP | | Integer(6...9) | Refers to 'k' in the formula as specified in [4], Discontinuous reception |

10.3.3.7 Void

10.3.3.7a Common E-RNTI info

NOTE: For 1.28 Mcps TDD only.

This IE defines the common E-RNTI used in enhanced CELL_FACH and Idle mode. Each instance in the IE "Common E-RNTI information" is related to an E-RUCCH which is defined in the PRACH system information in System Information Block 5. The first instance in IE "Common E-RNTI information" is related to the first instance of E-RUCCH in the PRACH system information in System Information Block 5 in the order of their appearances, the second instance in IE "Common E-RNTI information" is related to the second instance of E-RUCCH in the PRACH system information in System Information Block 5 and so on.

From each instance in the IE "Common E-RNTI information", we can compile a common E-RNTI list which is related to a certain E-RUCCH. For each E-RUCCH, there are a number of common E-RNTI groups related to it; up to 2 common E-RNTIs allocated in each group. The common E-RNTI list related to a certain E-RUCCH is derived in incremental manner with start code indicated by IE "Starting E-RNTI". The "Starting E-RNTI" corresponds to the first E-RNTI in the first group; if the "Number of E-RNTI per group" is bigger than one, then the second E-RNTI in the first group is derived by the first E-RNTI plus 1; the first E-RNTI in the second group is derived by the last of E-RNTI of the first group plus 1... the whole common E-RNTI list related to the E-RUCCH is compiled in this manner.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|------------------|------------------------------|----------------------------------------------------------------------|---------|
| Common E-RNTI information | MP | 1 to <maxERUCCH> | | | REL-8 |
| >Starting E-RNTI | MP | | E-RNTI 10.3.3.10a | Indicates the starting code of E-RNTI related to a certain E-RUCCH. | REL-8 |
| >Number of group | MP | | Integer(1..maxERNTIgroup) | Indicates the number of common E-RNTI groups related to the E-RUCCH. | REL-8 |
| >Number of E-RNTI per group | MP | | Integer(1..maxERNTIperGroup) | Indicates the number of common E-RNTIs in the group. | REL-8 |

10.3.3.8 C-RNTI

The cell RNTI (C-RNTI) identifies a UE having a RRC connection within a cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| C-RNTI | MP | | bit string(16) | |

10.3.3.8a CSG proximity indication capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------|---------|
| Support of intra-frequency proximity indication | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support intra-frequency proximity indication | REL-9 |
| Support of inter-frequency proximity indication | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support inter-frequency | REL-9 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------|---------|
| | | | | proximity indication | |
| Support of E-UTRA proximity indication | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-UTRA proximity indication | REL-9 |

10.3.3.9 Void

10.3.3.9a DSCH-RNTI

In TDD, the DSCH-RNTI identifies a UE in CELL_DCH or CELL_FACH using a DSCH or USCH within the cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| DSCH-RNTI | MP | | bit string(16) | |

10.3.3.10 Void

10.3.3.10a E-RNTI

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| E-RNTI | MP | | bit string(16) | | REL-6 |

10.3.3.11 Establishment cause

Cause for an RRC connection establishment request.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|---------|
| Establishment cause | MP | | Enumerated(Originating Conversational Call, Originating Streaming Call, Originating Interactive Call, Originating Background Call, Originating Subscribed traffic Call, Terminating Conversational Call, Terminating Streaming Call, Terminating Interactive Call, Terminating Background Call, Emergency Call, Inter-RAT cell re-selection, Inter-RAT cell change order, Registration, Detach, Originating High Priority Signalling, Originating Low Priority Signalling, Call re-establishment, Terminating High Priority Signalling, Terminating Low Priority Signalling, Terminating – cause unknown, MBMS reception, MBMS ptp RB request, | Nine spare values are needed. | |
| | | | Delay Tolerant Access) | | REL-10 |

10.3.3.12 Expiration Time Factor

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------------------------------------------------------|-----------------------|
| Expiration Time Factor | MP | | Enumerated(2times, 4times, 8times, 16times, 32times, 64times, 128times, 256times) | |

10.3.3.12a Extended Wait Time

The field defines the wait time for Delay Tolerant access request, to be passed to the UE upper layers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Extended Wait time | MP | | Integer(1..1800) | Value in seconds |

10.3.3.12b Expiration Time Factor 2

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Expiration Time Factor 2 | MP | | Integer (0..15) | | REL-12 |

10.3.3.13 Failure cause

Cause for failure to perform the requested procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| Failure cause | MP | | Enumerated (configuration unsupported, physical channel failure, incompatible simultaneous reconfiguration, protocol error, compressed mode runtime error, cell update occurred, invalid configuration, configuration incomplete, unsupported measurement, MBMS session already received correctly, lower priority MBMS service) | Five spare values are needed. |

10.3.3.14 Failure cause and error information

Cause for failure to perform the requested procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|----------------|-------|--------------------------------------|-----------------------|
| Failure cause | MP | | Failure cause 10.3.3.13 | |
| Protocol error information | CV-ProtErr | | Protocol error information 10.3.8.12 | |
| Deleted TGPSI | CV-CompModeErr | | TGPSI 10.3.6.82 | |

| Condition | Explanation |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>ProtErr</i> | The IE is mandatory present if the IE "Failure cause" has the value "Protocol error"; otherwise it is not needed in the message. |
| <i>CompModeErr</i> | The IE is mandatory present if the IE "Failure cause" has the value "Compressed mode runtime error"; otherwise it is not needed in the message. |

10.3.3.14o Group release information

Contains addressing information to perform a release of a group of RRC connections.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------|-----------------------|---------|
| U-RNTI group | MP | | U-RNTI group 10.3.3.47a | | REL-5 |

10.3.3.14a H-RNTI

The H-RNTI identifies an UE having a HS-PDSCH assignment within a cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| H-RNTI | MP | | bit string(16) | | REL-5 |

10.3.3.14b IMS Voice capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------|------|-------|--------------------|------------------------------------------------------------------------------------------|---------|
| Voice over UTRA PS HS Support | OP | | Enumerated (TRUE) | Absence of this IE means that the UE does not support IMS voice | REL-9 |
| SRVCC Support from UTRA to UTRA | OP | | Enumerated (TRUE) | Absence of this IE means that the UE does not support SRVCC from UTRA PS HS to UTRA CS | REL-9 |
| SRVCC Support from UTRA to GERAN | OP | | Enumerated (TRUE) | Absence of this IE means that the UE does not support SRVCC from UTRA PS HS to GERAN CS | REL-9 |
| rSRVCC support from UTRA CS to E-UTRAN FDD | OP | | Enumerated (TRUE) | Absence of this IE means that the UE does not support rSRVCC from UTRA CS to E-UTRAN FDD | REL-11 |
| rSRVCC support from UTRA CS to E-UTRAN TDD | OP | | Enumerated (TRUE) | Absence of this IE means that the UE does not support rSRVCC from UTRA CS to E-UTRAN TDD | REL-11 |

10.3.3.15 Initial UE identity

This information element identifies the UE at a request of an RRC connection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|-----------------------|
| <i>CHOICE UE id type</i> | MP | | | |

| >>IMSI (DS-41) | MP | | Octet string (SIZE (5..7)) | TIA/EIA/IS-2000-4 |
| >>ESN (DS-41) | MP | | Bit string (SIZE (32)) | TIA/EIA/IS-2000-4 |
| >TMSI (DS-41) | | | Octet string (SIZE (2..17)) | TIA/EIA/IS-2000-4 Although normally upto 12 digits are used for this IE, a bigger length is used to support future extension. |

10.3.3.16 Integrity check info

The Integrity check info contains the RRC message sequence number needed in the calculation of XMAC-I [40] and the calculated MAC-I.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Message authentication code | MP | | bit string(32) | MAC-I [40]. The first/leftmost bit of the bit string contains the most significant bit of the MAC-I. The 27 MSB of the IE shall be set to zero and the 5 LSB of the IE shall be set to the value of the IE "RB identity" for the used signalling radio bearer when the encoded RRC message is used as the MESSAGE parameter in the integrity protection algorithm. |
| RRC Message sequence number | MP | | Integer (0..15) | The local RRC hyper frame number (RRC HFN) is concatenated with the RRC message sequence number to form the input parameter COUNT-I for the integrity protection algorithm. The IE value shall be set to zero when the encoded RRC message is used as the MESSAGE parameter in the integrity protection algorithm. |

10.3.3.17 Integrity protection activation info

This IE contains the time, in terms of RRC sequence numbers, when a new integrity protection configuration shall be activated for the signalling radio bearers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|------|--------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| RRC message sequence number list | MP | 4 to 5 | | The RRC sequence number when a new integrity protection configuration shall be applied, for signalling radio bearers in the order RB0, RB1, RB2, RB3, RB4. The value for RB1 shall be ignored if this IE was included in a RRC message sent on RB1. The value for RB2 shall be ignored if this IE was included in a RRC message sent on RB2. |
| >RRC message sequence number | MP | | Integer (0..15) | |

10.3.3.18 Integrity protection Algorithm

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Integrity protection algorithm | MP | | Enumerated (UIA1 | | |
| | | | , UIA2) | | REL-7 |

10.3.3.19 Integrity protection mode info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------|------------------|-------|---------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Integrity protection mode command | MP | | Enumerated (start, modify) | |
| Downlink integrity protection activation info | <i>CV-modify</i> | | Integrity protection activation info 10.3.3.17 | |
| Integrity protection algorithm | OP | | Integrity protection algorithm 10.3.3.18 | |
| Integrity protection initialisation number | <i>CV-start</i> | | Bit string(32) | FRESH [40]. The first/leftmost bit of the bit string contains the most significant bit of the FRESH. |

| Condition | Explanation |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Start</i> | The IE is mandatory present if the IE "Integrity protection mode command" has the value "start ", otherwise it is not needed in the message. |
| <i>Modify</i> | The IE is mandatory present if the IE "Integrity protection mode command" has the value "modify" and not needed otherwise. |

10.3.3.19a Void

10.3.3.20 Void

10.3.3.21 Measurement capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------------------|---------------------------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------|---------|
| Inter-frequency detected set measurements | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to measure inter-frequency detected cells. | REL-10 |
| Cells excluded from detected set measurements | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to exclude cells from detected set measurements. | REL-11 |
| Wideband RSRQ FDD measurements | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to perform wideband RSRQ FDD measurements. | REL-11 |
| Wideband RSRQ TDD measurements | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to perform wideband RSRQ TDD measurements. | REL-11 |
| Event 2g reporting on a configured secondary downlink frequency | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to perform event 2g reporting on a configured secondary downlink frequency. | REL-12 |
| Enhanced UPH reporting | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE is able to perform reporting of filtered UPH measurement. | REL-12 |
| Increased UE carrier monitoring UTRA | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE supports increased number of UTRA carrier monitoring in connected and idle mode as defined in [19]. | REL-12 |
| Increased UE carrier monitoring E-UTRA | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE supports increased number of E-UTRA carrier monitoring in connected and idle mode as defined in [74]. | REL-12 |
| Extended RSRQ lower value range | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE supports the extended RSRQ lower value range from -34dB to -19.5dB. | REL-12 |
| RSRQ measurement on all symbols | <i>CV-not_iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE means that the UE supports the RSRQ measurement on all OFDM symbols and the extended upper RSRQ value range from -3dB to 2.5dB. | REL-12 |
| Need for downlink compressed mode | | | | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|---------------------------------|-------|--------------------|------------------------------------------------------------------------------------------------------|-----------------------|
| FDD measurements | MP | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on FDD | |
| 3.84 Mcps TDD measurements | CV- <i>3.84_Mcps_tdd_sup</i> | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on 3.84 Mcps TDD | Name changed in REL-4 |
| 7.68 Mcps TDD measurements | CV- <i>7.68_Mcps_tdd_sup</i> | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on 7.68 Mcps TDD | REL-7 |
| 1.28 Mcps TDD measurements | CV- <i>1.28_Mcps_tdd_sup</i> | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on 1.28 Mcps TDD | REL-4 |

| >GSM 1900 | MP | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on GSM 1900 | |
| Multi-carrier measurement | CV- mc_sup | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on multi-carrier | |

| Condition | Explanation |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>3.84_Mcps_tdd_sup</i> | The IE is mandatory present if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "3.84 Mcps". Otherwise this field is not needed in the message. |
| <i>7.68_Mcps_tdd_sup</i> | The IE is mandatory present if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "7.68 Mcps". Otherwise this field is not needed in the message. |
| <i>1.28_Mcps_tdd_sup</i> | The IE is mandatory present if an IE "TDD RF capability" is present with the IE "Chip rate capability" set to "1.28 Mcps". Otherwise this field is not needed in the message. |
| <i>gsm_sup</i> | The IE is mandatory present if the IE "Inter-RAT UE radio access capability" indicates support for GSM900, GSM1800 and/or GSM1900. Otherwise this field is not needed in the message. |
| <i>mc_sup</i> | The IE is mandatory present if the IE "Support of multi-carrier" has the value TRUE. Otherwise this field is not needed in the message. |
| <i>not_iRAT_HoInfo</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is optionally present. |

10.3.3.21a Measurement capability extension

This IE may be used to replace the measurement capability information provided within IE "Measurement capability".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|---------|--------------------------|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| FDD measurements | MP | 1 to <maxFreqBands FDD> | | The network should ignore the entry that includes the 'extension indicator'. | |
| | | 1 to <maxFreqBands FDD2> | | | REL-6 |
| | | 1 to <maxFreqBands FDD3> | | | REL-10 |
| >FDD Frequency band | CV-fdd2 | | Enumerated(Band I, Band II, | The default value is the same as indicated in the IE "Frequency band" included in the IE " UE radio access capability extension". Band numbering is defined in [21]. | |
| | | | Band III, | | REL-5 |
| | | | Band VI, Band IV, Band V, Band VII, extension indicator) | | REL-6 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|--------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >FDD Frequency band 2 | CV- <i>fdd1</i> | | Enumerated(Band VIII, Band IX, Band X, Band XI, Band XII, Band XIII, Band XIV, Band XIX, Band XXI, Band XX, Band XXII, extension Indicator) | The default value is the same as indicated in the IE "Frequency band 2" included in the IE " UE radio access capability extension", if the IE "FDD Frequency band" above is not included. The setting of the value 'extension indicator' by the UE is not specified in the specification. Four spare values are needed | REL-6 |
| >FDD Frequency band 3 | OP | | Enumerated (Band XXV, Band XXVI, Band XXXII, extension indicator) | If the IE is not present the value is the same as indicated in the IE "Frequency band 3" if included in the IE " UE radio access capability extension". The setting of the value 'extension indicator' by the UE is not specified in the specification. Sixty spare values are needed | REL-10 |
| >Need for DL compressed mode | MP | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on the FDD frequency band indicated by the IE "FDD Frequency band" | |
| >Need for UL compressed mode | MP | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on the FDD frequency band indicated by the IE "FDD Frequency band" | |
| TDD measurements | CV- <i>tdd_sup</i> | 1 to <maxFreqBands TDD> | | | |
| >TDD Frequency band | MP | | Enumerated(a, b, c) | | REL-7 |
| | | | Enumerated(a, b, c, d) | | |
| >Need for DL compressed mode | MP | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on TDD frequency band indicated by the IE "TDD Frequency band" | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|---------------------|---------------------------|------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Need for UL compressed mode | MP | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on TDD frequency band indicated by the IE "TDD Frequency band" | |
| GSM measurements | CV- <i>gsm_sup</i> | 1 to <maxFreqBands GSM> | | | |
| >GSM Frequency band | MP | | Enumerated(GSM450, GSM480, GSM850, GSM900P, GSM900E, GSM1800, GSM1900) | as defined in [45]. Nine spare values are needed. | |
| >Need for DL compressed mode | MP | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on GSM frequency band indicated by the IE "GSM Frequency band" | |
| >Need for UL compressed mode | MP | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on GSM frequency band indicated by the IE "GSM Frequency band" | |
| Multi-carrier measurement | CV- <i>mc_sup</i> | | | | |
| >Need for DL compressed mode | MP | | Boolean | TRUE means that the UE requires DL compressed mode in order to perform measurements on multi-carrier | |
| >Need for UL compressed mode | MP | | Boolean | TRUE means that the UE requires UL compressed mode in order to perform measurements on multi-carrier | |
| E-UTRA measurements | CV- <i>utra_sup</i> | 1 to <maxFreqBands EUTRA> | | Note 1 | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|-------------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >E-UTRA Frequency band | MP | | Integer (1..64) | As defined in [64]. If the IE indicates a value of 64, then the E-UTRA Frequency band for this instance should be read from the corresponding instance of IE "E-UTRA Frequency band extension" in the E-UTRA measurements extension. | REL-8 |
| >Need for compressed mode | MP | | Boolean | TRUE means that the UE requires DL and UL compressed mode in order to perform measurements on E-UTRA frequency band indicated by the IE "E-UTRA Frequency band" | REL-8 |
| E-UTRA measurements extension | CV-extended_utra_sup | 1 to <maxFreqBands EUTRA> | | Note 1 | REL-11 |
| >E-UTRA Frequency band extension | MP | | Integer (65..256) | As defined in [64]. Note 2 | REL-11 |
| E-UTRA measurements extension 1 | CV-extended_meas_utra_sup | 1 to <maxFreqBands EUTRA-ext> | | Note 1 | REL-11 |
| >E-UTRA Frequency band extension 1 | MP | | Integer (1..256) | As defined in [64]. The value of 64 is reserved and shall not be used. | REL-11 |
| >Need for compressed mode | MP | | Boolean | TRUE means that the UE requires DL and UL compressed mode in order to perform measurements on E-UTRA frequency band indicated by the IE "E-UTRA Frequency band extension 1" | REL-11 |
| Note 1: Indicates E-UTRA bands supported and the need for compressed mode, E-UTRAN measurement support may be separately indicated as specified in Annex E. | | | | | |
| Note 2: If the corresponding instance of IE "E-UTRA Frequency band" does not indicate the reserved value of 64, then the UE can signal any valid value of IE "E-UTRA Frequency band extension". | | | | | |

| Condition | Explanation |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>tdd_sup</i> | The IE is mandatory present if the IE "Multi-mode capability" has the value "TDD" or "FDD/TDD". Otherwise this field is not needed in the message. |
| <i>gsm_sup</i> | The IE is mandatory present if the IE "Support of GSM" has the value TRUE. Otherwise this field is not needed in the message. |
| <i>mc_sup</i> | The IE is mandatory present if the IE "Support of multi-carrier" has the value TRUE. Otherwise this field is not needed in the message. |
| <i>eutra_sup</i> | At least one of these IEs is mandatory present if the IE "Support of E-UTRA" has the value TRUE. Otherwise these fields are not needed in the message. |
| <i>extended_eutra_sup</i> | At least one of these IEs is mandatory present if the IE "Support of E-UTRA" has the value TRUE and the UE supports a E-UTRA frequency band greater than 64. Otherwise these fields are not needed in the message. |
| <i>extended_meas_eutra_sup</i> | At least one of these IEs is mandatory present if the IE "Support of E-UTRA" has the value TRUE and the UE needs to report E-UTRA measurement capability for more than 16 E-UTRA bands. Otherwise these fields are not needed in the message. |
| <i>fdd1</i> | The IE is mandatory default if the IE "FDD Frequency band" is not included in the message. Otherwise this field is not needed in the message. |
| <i>fdd2</i> | The IE is mandatory default if the IE "FDD Frequency band 2" is not included in the message. Otherwise this field is not needed in the message. |

10.3.3.21b Measurement capability TDD

This IE is only used for TDD if the UE is a multi-RAT capable which also supports E-UTRA.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|---------------------------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA measurements | CV- <i>eutra_sup</i> | 1 to <maxFreqBands EUTRA> | | Note 1 | REL-8 |
| >E-UTRA Frequency band | MP | | Integer (1..64) | As defined in [64]. If the IE indicates a value of 64, then the E-UTRA Frequency band for this instance should be read from the corresponding instance of IE "E-UTRA Frequency band extension" in the E-UTRA measurements extension. | REL-8 |
| >Need for Idle Interval | MP | | Boolean | TRUE means that the UE requires idle interval in order to perform measurements on E-UTRA frequency band indicated by the IE "E-UTRA Frequency band" | REL-8 |
| E-UTRA measurements extension | CV- <i>extended_eutra_sup</i> | 1 to <maxFreqBands EUTRA> | | Note 1 | REL-11 |
| >E-UTRA Frequency band extension | MP | | Integer (65..256) | As defined in [64]. Note 2 | REL-11 |
| Note 1: Indicates E-UTRA bands supported and the need for idle interval, E-UTRAN measurement support may be separately indicated as specified in Annex E. | | | | | |
| Note 2: If the corresponding instance of IE "E-UTRA Frequency band" does not indicate the reserved value of 64, then the UE can signal any valid value of IE "E-UTRA Frequency band extension". | | | | | |

| Condition | Explanation |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>eutra_sup</i> | At least one of these IEs is mandatory present if the IE "Support of E-UTRA" has the value TRUE. Otherwise these fields are not needed in the message. |
| <i>extended_eutra_sup</i> | At least one of these IEs is mandatory present if the IE "Support of E-UTRA" has the value TRUE and the UE supports a E-UTRA frequency band greater than 64. Otherwise these fields are not needed in the message. |

10.3.3.21ba Multiflow capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
|--------------------------------|------|-------|--------------------|-----------------------|---------|

| | | | | | |
|--------------------------------------------------------------|----|--|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Support for Multiflow with MIMO operation in different bands | OP | | Enumerated(single-stream, dual-stream) | Absence of this IE means that a UE does not support MIMO with Multiflow in different bands. Otherwise, it indicates whether a UE support single-stream or dual-stream MIMO. | REL-11 |
| Longer HARQ processing time | OP | | Enumerated(TRUE) | Presence of this IE indicates that a UE needs more time to generate the HARQ feedback with Multiflow and MIMO as described in [26], sub-clause 7.7.2. | REL-11 |

10.3.3.21bb Multiflow per band capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
|--------------------------------|------|-------|--------------------|-----------------------|---------|

| | | | | | |
|---------------------------|----|--|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Number of cells | MP | | Integer(2..8) | Total number of cells that can be configured to a UE as a part of Multiflow configuration. In this version of the specification, the maximum value is 4. | REL-11 |
| Number of frequencies | MP | | Integer(1..4) | Total number of frequencies, across which the Multiflow can be configured. In this version of the specification, the maximum value is 2. | REL-11 |
| MIMO support | OP | | Enumerated(single-stream, dual-stream) | Absence of this IE means that a UE does not support MIMO with Multiflow. Otherwise, it indicates whether a UE support single-stream or dual-stream MIMO. | REL-11 |
| Non-contiguous multi-cell | OP | | | Presence of this IE indicates that a UE supports Multiflow operation with non-contiguous cells. | REL-11 |
| >Gap size | MP | | Enumerated(fiveMHz, tenMHz, anyGapSize) | This IE indicates the maximum gap size between the aggregated cells. "fiveMHz" indicates that UE supports 5 MHz gap size. "tenMHz" indicates that UE supports 10 MHz gap size and 5 MHz gap size. "anyGapSize" indicates that UE supports any multiple of 5 MHz gap size. 5 spare values are required. | REL-11 |

10.3.3.21c Neighbour Cell SI acquisition capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------|------|-------|--------------------|---------------------------------------------------|---------|
| Support of intra-frequency SI acquisition for HO | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does | REL-9 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------------------------|---------|
| | | | | not support intra-frequency SI acquisition for HO | |
| Support of inter-frequency SI acquisition for HO | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support inter-frequency SI acquisition for HO | REL-9 |
| Support of E-UTRA SI acquisition for HO | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-UTRA SI acquisition for HO | REL-9 |

10.3.3.22 Paging cause

Cause for a CN originated page.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| Paging cause | MP | | Enumerated(Terminating Conversational Call, Terminating Streaming Call, Terminating Interactive Call, Terminating Background Call, Terminating High Priority Signalling, Terminating Low Priority Signalling, Terminating – cause unknown) | One spare value is needed. |

10.3.3.23 Paging record

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |

| <i>not_iRAT_HoInfo2</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is optional. |

10.3.3.25a Pre-redirectio info

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Support of E-UTRA FDD | MP | | Boolean | | REL-8 |
| Support of E-UTRA TDD | MP | | Boolean | | REL-8 |

10.3.3.26 Protocol error cause

This IE indicates the cause for a message or information that was not comprehended.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| Protocol error cause | MP | | Enumerated (ASN.1 violation or encoding error, Message type non-existent or not implemented, Message not compatible with receiver state, Information element value not comprehended, Information element missing, Message extension not comprehended) | Two spare values are needed. |

10.3.3.27 Protocol error indicator

This IE indicates whether a message was transmitted due to a protocol error or not.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------|
| Protocol error indicator | MP | | Boolean | TRUE means a protocol error occurred. FALSE means a protocol error did not occur. |

10.3.3.28 RB timer indicator

This IE is used to indicate to UTRAN if the timers T314 or T315 has expired in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------|
| T314 expired | MP | | Boolean | TRUE means that the timer has expired or the stored value is zero. FALSE means that the timer has not expired. |
| T315 expired | MP | | Boolean | TRUE means that the timer has expired or the stored value is zero. FALSE means that the timer has not expired. |

10.3.3.29 Redirection info

This IE is used to redirect the UE to another frequency or other system. With the Release 6 version a list of cells may be provided to the UE, where cell selection shall be started.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|-------|-----------------------------|-----------------------|---------|
| CHOICE <i>Redirection Information</i> | MP | | | | |
| >Frequency info | | | Frequency info 10.3.6.36 | | |
| >Inter-RAT info | | | Inter-RAT info 10.3.7.25 | | |

10.3.3.30 Re-establishment timer

This information element indicates which timer to associate with RAB.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------|-----------------------|
| Re-establishment timer | MP | | Enumerated(useT314, useT315) | |

10.3.3.31 Rejection cause

Cause for rejection of RRC connection establishment request.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------|-----------------------|
| Rejection cause | MP | | Enumerated(congestion, unspecified) | |

10.3.3.32 Release cause

Cause for release of RRC connection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|
| Release cause | MP | | Enumerated (normal event, unspecified, pre-emptive release, congestion, re-establishment reject, directed signalling connection re-establishment, user inactivity) | One spare value is needed. |

10.3.3.32a RF Capability Compressed

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------|------|-------------------------|--------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>FDD</i> | MP | | | | REL-5 |
| >Supported | | | | | REL-5 |
| >>RF capability band FDD list Compressed | MP | 1..<maxf reqband sFDD> | | | REL-5 |
| | | 1..<maxf reqband sFDD2> | | | REL-6 |
| | | 1..<maxf reqband sFDD3> | | | REL-10 |
| >>>RF Capability Band FDD Compressed | MP | | Enumerated (not supported, default TxRx separation) | TX/RX frequency separation capability for the supported frequency band(s). Default is the TX/RX frequency separation defined in [21] for each frequency band. Two spare values are needed. | REL-5 |
| >Not supported | | | NULL | | REL-5 |
| CHOICE <i>TDD-3.84Mcps</i> | MP | | | | REL-5 |
| >Supported | | | | | REL-5 |
| >>Radio Frequency Band TDD List | MP | | Enumerated (a, b, c, a+b, a+c, b+c, a+b+c) | As defined in [22]. One spare value needed | REL-5 |
| | | | Enumerated (a, b, c, d, a+b, a+c, a+d, b+c, b+d, c+d, a+b+c, a+b+d, a+c+d, b+c+d, a+b+c+d) | | REL-7 |
| >Not supported | | | NULL | | REL-5 |
| CHOICE <i>TDD-7.68Mcps</i> | MP | | | | REL-7 |
| >Supported | | | | | REL-7 |
| >>Radio Frequency Band TDD List | MP | | Enumerated (a, b, c, d, a+b, a+c, a+d, b+c, a+b+c, a+b+d, a+c+d, b+c+d, a+b+c+d) | As defined in [22]. One spare value needed | REL-7 |
| >Not supported | | | NULL | | REL-7 |
| CHOICE <i>TDD-1.28Mcps</i> | MP | | | | REL-5 |
| >Supported | | | | | REL-5 |
| >>Radio Frequency Band TDD List | MP | | Enumerated (a, b, c, a+b, a+c, b+c, a+b+c) | As defined in [22]. One spare value needed | REL-5 |
| | | | Enumerated (a, b, c, d, a+b, a+c, a+d, b+c, b+d, c+d, a+b+c, a+b+d, a+c+d, b+c+d, a+b+c+d) | | REL-7 |
| >Not supported | | | NULL | | REL-5 |

10.3.3.33 RF capability FDD

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| UE power class | MP | | Enumerated(1..4) | As defined in [21] | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|-----------------------------------------------|-------------------------------|-------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Tx/Rx frequency separation | MP | | Enumerated(default TxRx separation) | Default is the TX/RX frequency separation defined in [21] for each frequency band. Two spare values are needed. | |
| Support of Multiple Frequency Band Indicators | CV- <i>not_iRAT_HoInfo</i> | | Enumerated (TRUE) | FDD only. Absence of this IE means that the UE does not support the signalling requirements of multiple radio frequency bands, as defined in [85], and the UE does not understand the UARFCN signalling for all bands, that overlap with the band(s) supported by the UE. | REL-10 |

| Condition | Explanation |
|------------------------|-----------------------------------------------------------------------------------------|
| <i>not_iRAT_HoInfo</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is optional. |

10.3.3.33a RF capability FDD extension

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| UE power class extension | MP | | Enumerated(1..4) | As defined in [21]. A UE with UE power class 3bis signals the value 3. Four spare values are needed |
| Tx/Rx frequency separation | MP | | Enumerated(default TxRx separation) | Default is the TX/RX frequency separation defined in [21] for each frequency band. Two spare values are needed. |

10.3.3.33b RF capability TDD

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------------|------|----------------------------|--------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------|---------|
| UE power class | MP | | Enumerated (1..4) | as defined in [22] | |
| Radio frequency bands | MP | | Enumerated(a, b, c, a+b, a+c, b+c, a+b+c) | as defined in [22]. One spare value needed. | REL-7 |
| | | | Enumerated (a, b, c, d, a+b, a+c, a+d, b+c, b+d, c+d, a+b+c, a+b+d, a+c+d, b+c+d, a+b+c+d, Notabcd) | | REL-8 |
| | | | as defined in [22]. The value "Notabcd" indicate that the UE does not support neither one of the bands a, b, c nor d. | | |
| Radio frequency bands extension list | OP | 1 to <maxFreqBandsTDD-ext> | | as defined in [22]. | REL-8 |
| >Radio frequency bands ext | MP | | Enumerated (e, f, g, h, i, j, k, l, m, n, o, p) | as defined in [22]. Band g to band p are reserved for future use. | REL-8 |
| Chip rate capability | MP | | Enumerated (3.84Mcps, 1.28Mcps, 7.68 Mcps) | as defined in [22] | |
| | | | | | REL-7 |

10.3.3.33c RF capability TDD 1.28 Mcps

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------------------------------------------------------------|------------------------------------------------|---------|
| Radio frequency bands | MP | | Enumerated(a, b, c, a+b, a+c, b+c, a+b+c) | as defined in [22]. One spare value needed. | REL-7 |
| | | | Enumerated (a, b, c, d, a+b, a+c, a+d, b+c, b+d, c+d, a+b+c, a+b+d, a+c+d, b+c+d, a+b+c+d) | | |

10.3.3.34 RLC capability

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------|-------|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Total RLC AM buffer size | MP | | Integer (10, 50, 100, 150, 500, 1000, | Total receiving and transmitting RLC AM buffer and MAC-hs/ehs reordering buffer capability in kBytes. Note 1. Note 2. | |
| | | | 200, 300, 400, 750, | | REL-5 |
| | | | 1150, 1250, | | REL-9 |
| | | | 1500, 1800, 2300, 2550, | Total receiving and transmitting RLC AM buffer and MAC-hs/ehs reordering buffer capability in kBytes. Note 2. Four Spare values are needed. | Rel-10 |
| | | | 3400, 3500, 4400, 4500, 5000) | | REL-11 |
| Maximum RLC AM Window Size | MP | | Integer(20 47,4095) | Maximum supported RLC TX and RX window in UE | |
| Maximum number of AM entities | MP | | Integer (4,5,6,8,16,30) | | |
| Support for Two logical channel Configuration | CV- <i>not_iRA</i> <i>T_HoInfo</i> | | Boolean | TRUE means supported | REL-7 |
| Note 1: The IE "Total RLC AM buffer size" values 200, 300, 400 and 750 are not used in the INTER RAT HANDOVER INFO message. | | | | | |
| Note 2: The IE "Total RLC AM buffer size" values 1150, 1250, 1500, 1800, 2300, 2550, 3400, 3500, 4400, 4500 and 5000 are not used in the INTER RAT HANDOVER INFO message. | | | | | |

| Condition | Explanation |
|------------------------|--------------------------------------------------------------------------------------------------|
| <i>not_iRAT_HoInfo</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is mandatory present. |

10.3.3.35 RLC re-establish indicator

This IE is used to re-configure AM RLC on c-plane and u-plane.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------|
| RLC re-establish indicator | MP | | Boolean | TRUE means re-establish required FALSE means re-establish not required |

10.3.3.35a RRC State Indicator

Indicates to a UE the RRC state to be entered.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------------------|-----------------------|
| RRC State indicator | MP | | Enumerated(CELL_DCH, CELL_FACH, CELL_PCH, URA_PCH) | |

10.3.3.35o RRC connection release information

Indicates whether the UE shall perform a release of the RRC connection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|-------------------------|-------------------------------|---------|
| CHOICE <i>Release indicator</i> | MD | | | Default value is "No release" | REL-5 |
| >No release | | | | | REL-5 |
| >Release | | | | | REL-5 |
| >>Release cause | MP | | Release cause 10.3.3.32 | | REL-5 |

10.3.3.36 RRC transaction identifier

This IE contains an identification of the RRC procedure transaction local for the type of the message this IE was included within.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| CHOICE <i>RRC Tr Id type</i> | MP | | | | REL-5 |
| > <i>Normal</i> | | | | | |
| >>RRC transaction identifier | MP | | Integer (0..3) | | |
| > <i>Extended</i> | | | | | REL-5 |
| >>RRC transaction identifier | MP | | Integer (0..15) | | REL-5 |

| CHOICE <i>RRC Tr Id type</i> | Condition under which the given <i>RRC Tr Id type</i> is chosen |
|------------------------------|----------------------------------------------------------------------------------------------------|
| <i>Normal</i> | All cases where the <i>RRC Tr Id type: Extended</i> is not chosen. |
| <i>Extended</i> | Optional in the MEASUREMENT CONTROL message. Mandatory in the MEASUREMENT CONTROL FAILURE message. |

10.3.3.36a rSR-VCC Info

This IE contains information that allows the calculation of the CK and IK for the PS domain and the uplink traffic transmission information, due to an rSR-VCC procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------------|-------------------------------------------------------|---------|
| NONCE | OP | | Bit string (128) | | REL-11 |
| IMS information | MP | | Octet String(SIZE(1..32)) | Contains ATGW transfer details as defined in [24.237] | REL-11 |

10.3.3.37 Security capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Ciphering algorithm capability | MP | | | | |
| >UEA0 | MP | | Boolean | | |
| >UEA1 | MP | | Boolean | | |
| >UEA2 | MP | | Boolean | The value TRUE means that UEA2 is fully interoperability tested. If fully interoperability tested, also "Security capability indication" of "UE radio access capability compressed" shall be set to TRUE. | REL-7 |
| >Spare | MP | 13 | Boolean | Shall be set to FALSE by UEs complying with this version of the protocol. | |
| Integrity protection algorithm capability | MP | | | | |
| >UIA1 | MP | | Boolean | The value TRUE means that UIA1, Kasumi, is supported | |
| >UIA2 | MP | | Boolean | The value TRUE means that UIA2 is fully interoperability tested. If fully interoperability tested, also "Security capability indication" of "UE radio access capability compressed" shall be set to TRUE. | REL-7 |
| >Spare | MP | 14 | Boolean | Shall be set to FALSE by UEs complying with this version of the protocol. | |

10.3.3.37a Signalling Connection Release Indication Cause

This IE is used to indicate to the UTRAN that there is no more PS data for a prolonged period.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|------------------------------------------------|------|-------|----------------------------------------------------------------|-----------------------|---------|
| Signalling Connection Release Indication Cause | MP | | Enumerated (UE Requested PS Data session end, any other cause) | | REL-8 |

10.3.3.38 START

There is a START value per CN domain. The START is used to initialise the 20 MSBs of all hyper frame numbers (MAC-d HFN, RLC UM HFN, RLC AM HFN, RRC HFN) for a CN domain.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------------------------------------------------------------------------------|
| START | MP | | Bit string (20) | START [40]. The first/leftmost bit of the bit string contains the most significant bit of the START. |

10.3.3.39 Void

10.3.3.40 Transport channel capability

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|-------------------------------------------------------------------|-----------------------------|-------|--------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
| Downlink transport channel capability information elements | | | | |
| Max no of bits received | MP | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all transport blocks received at an arbitrary time instant |
| Max convolutionally coded bits received | MP | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all convolutionally coded transport blocks received at an arbitrary time instant |
| Max turbo coded bits received | CV- <i>turbo_dec_sup</i> | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all turbo coded transport blocks received at an arbitrary time instant |
| Maximum number of simultaneous transport channels | MP | | Integer(4, 8, 16, 32) | |
| Maximum number of simultaneous CCTrCH | MP | | Integer (1..8) | |
| Max no of received transport blocks | MP | | Integer(4, 8, 16, 32, 48, 64, 96, 128, 256, 512) | Maximum total number of transport blocks received within TTIs that end at within the same 10ms interval |
| Maximum number of TFC | MP | | Integer(16, 32, 48, 64, 96, 128, 256, 512, 1024) | |
| Maximum number of TF | MP | | Integer(32, 64, 128, 256, 512, 1024) | |
| Support for turbo decoding | MP | | Boolean | TRUE means supported |
| Uplink transport channel capability information elements | | | | |
| Max no of bits transmitted | MP | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all transport blocks transmitted at an arbitrary time instant |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|---------------------------------------------------|-----------------------------|-------|--------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Max convolutionally coded bits transmitted | MP | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all convolutionally coded transport blocks transmitted at an arbitrary time instant |
| Max turbo coded bits transmitted | CV- <i>turbo_enc_sup</i> | | Integer(640, 1280, 2560, 3840, 5120, 6400, 7680, 8960, 10240, 20480, 40960, 81920, 163840) | Maximum sum of number of bits of all turbo coded transport blocks transmitted at an arbitrary time instant |
| Maximum number of simultaneous transport channels | MP | | Integer(4, 8, 16, 32) | |
| Maximum number of simultaneous CCTrCH of DCH type | CH- <i>tdd_req_sup</i> | | Integer (1..8) | |
| Max no of transmitted transport blocks | MP | | Integer(4, 8, 16, 32, 48, 64, 96, 128, 256, 512) | Maximum total number of transport blocks transmitted within TTIs that start at the same time |
| Maximum number of TFC | MP | | Integer(16, 32, 48, 64, 96, 128, 256, 512, 1024) | |
| Maximum number of TF | MP | | Integer(32, 64, 128, 256, 512, 1024) | |
| Support for turbo encoding | MP | | Boolean | TRUE means supported |

| Condition | Explanation |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>turbo_dec_sup</i> | The IE is mandatory present if the IE "Support of turbo decoding" = TRUE. Otherwise this field is not needed in the message. |
| <i>turbo_enc_sup</i> | The IE is mandatory present if the IE "Support of turbo encoding" = TRUE. Otherwise this field is not needed in the message. |
| <i>tdd_req_sup</i> | The IE is mandatory present if the IE "Multi-mode capability" has the value "TDD" or "FDD/TDD" and a TDD capability update has been requested in a previous message. Otherwise this field is not needed in the message. |

10.3.3.41 UE multi-mode/multi-RAT capability

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|------------------------------------------------|---------------------|-------|---------------------------------------------------------|-------------------------------------------------------------------------------------------|---------|
| Multi-RAT capability | | | | | |
| Support of GSM | MP | | Boolean | | |
| Support of multi-carrier | MP | | Boolean | | |
| Multi-mode capability | MP | | Enumerated (TDD, FDD, FDD/TDD) | | |
| Support of UTRAN to GERAN NACC | CV-not_iRAT_HoInfo | | Boolean | | REL-5 |
| Support of Handover to GAN | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportHandoverToGAN) | Absence of this IE means that the UE does not support Handover to GAN. | REL-6 |
| Support of Inter-RAT PS handover | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportInter-RAT-PS-Handover) | Absence of this IE means that the UE does not support Inter-RAT PS Handover to GERAN | REL-6 |
| Support of PS Handover to GAN | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportPSHandoverToGAN) | Absence of this IE means that the UE does not support PS Handover to GAN. | REL-7 |
| Support of E-UTRA FDD | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportEUTRAFDD) | Absence of this IE means that the UE does not support E-UTRA FDD | REL-8 |
| Support of Inter-RAT PS Handover to E-UTRA FDD | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportInter-RAT-PS-HandoverToEUTRAFDD) | Absence of this IE means that the UE does not support Inter-RAT PS Handover to E-UTRA FDD | REL-8 |
| Support of E-UTRA TDD | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportEUTRATDD) | Absence of this IE means that the UE does not support E-UTRA TDD | REL-8 |
| Support of Inter-RAT PS Handover to E-UTRA TDD | CV-not_iRAT_HoInfo2 | | Enumerated (DoesSupportInter-RAT-PS-HandoverToEUTRATDD) | Absence of this IE means that the UE does not support Inter-RAT PS Handover to E-UTRA TDD | REL-8 |
| EUTRA Feature Group Indicators | CV-not_iRAT_HoInfo2 | | Bit string (4) | The definitions of the bits are described in Annex E | REL-8 |

| | | | | | |
|-------------------------------------------------------------------|-----------------------------|--|-----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Support of E-UTRA Multiple Frequency Band Indicators | CV- <i>not_iRAT_HoInfo2</i> | | Enumerated (TRUE) | Absence of this IE means that the UE does not support the signalling requirements of multiple radio frequency bands in E-UTRA, as defined in [67], and the UE does not understand the EARFCN signalling for all bands, that overlap with the band(s) supported by the UE. | REL-10 |
| Support of E-UTRA FDD measurements and reporting in CELL_FACH | CV- <i>not_iRAT_HoInfo2</i> | | Enumerated (DoesSupportEUTRAmeasurementsandreportinginCELLFACH) | Absence of this IE means that the UE does not support E-UTRA measurement for CELL_FACH for E-UTRA FDD | REL-11 |
| Support of E-UTRA TDD measurements and reporting in CELL_FACH | CV- <i>not_iRAT_HoInfo2</i> | | Enumerated (DoesSupportEUTRAmeasurementsandreportinginCELLFACH) | Absence of this IE means that the UE does not support E-UTRA measurement for CELL_FACH for E-UTRA TDD | REL-11 |
| Support of RAN-assisted WLAN interworking based on RAN rules | CV- <i>not_iRAT_HoInfo2</i> | | Enumerated (TRUE) | Absence of this IE means that the UE does not support RAN-assisted WLAN interworking based on access network selection and traffic steering rules. | REL-12 |
| Support of RAN-assisted WLAN interworking based on ANDSF policies | CV- <i>not_iRAT_HoInfo2</i> | | Enumerated (TRUE) | Absence of this IE means that the UE does not support RAN-assisted WLAN interworking based on ANDSF policies. | REL-12 |

| Condition | Explanation |
|-------------------------|--------------------------------------------------------------------------------------------------|
| <i>not_iRAT_HoInfo</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is mandatory present. |
| <i>not_iRAT_HoInfo2</i> | The IE is not needed in the INTER RAT HANDOVER INFO message. Otherwise, it is optional. |

NOTE: The UE sets the capability of Inter-RAT PS Handover (by means of the IE "Support of Inter-RAT PS handover") to the same value as the corresponding GERAN capability in [5].

10.3.3.42 UE radio access capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version | |
|-------------------------------------------------------|------------------------------------|---------|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|----------------------------|--------|
| Access stratum release indicator | MP | | Enumerated(R99) | Indicates the release of the UE according to [35]. The IE also indicates the release of the RRC transfer syntax supported by the UE. | | |
| | CV-not_rrc_connectionSetupComplete | | | Enumerated(REL-4, | 7 spare values are needed. | REL-4 |
| | | | | REL-5, | | REL-5 |
| | | | | REL-6, | | REL-6 |
| | | | | REL-7, | | REL-7 |

| | | | | REL-9, | | REL-9 |
| | | | | REL-10, | | REL-10 |
| | | | | REL-11, | | REL-11 |
| | | REL-12) | REL-12 | | | |
| DL capability with simultaneous HS-DSCH configuration | CV-not_iRAT_HoInfo | | Enumerated(32kbps, 64kbps, 128kbps, 384kbps) | | REL-5 | |
| PDCP capability | MP | | PDCP capability 10.3.3.24 | | | |
| RLC capability | MP | | RLC capability 10.3.3.34 | | | |
| Transport channel capability | MP | | Transport channel capability 10.3.3.40 | | | |
| RF capability FDD | OP | | RF capability FDD 10.3.3.33 | | | |
| RF capability TDD | OP | | RF capability TDD 10.3.3.33b | One "TDD RF capability" entity shall be included for every Chip rate capability supported. | | |
| | | 1 to 2 | | Note 1 | REL-4 | |
| RF capability TDD 1.28 Mcps | CV-iRAT_HoInfo | | RF capability TDD 1.28 Mcps 10.3.3.33c | Note 1 | REL-4 | |
| Physical channel capability | MP | | Physical channel capability 10.3.3.25 | | | |
| UE multi-mode/multi-RAT capability | MP | | UE multi-mode/multi-RAT capability 10.3.3.41 | | | |
| Security capability | MP | | Security capability 10.3.3.37 | | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------|------|-------|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| UE positioning capability | MP | | UE positioning capability 10.3.3.45 | | |
| Measurement capability | OP | | Measurement capability 10.3.3.21 | | |
| Measurement capability TDD | OP | | Measurement capability TDD 10.3.3.21b | | REL-8 |
| Device type | MD | | Enumerated (DoesNotBenefitFromBatteryConsumptionOptimisation) | <p>Absence of this value means that the device does benefit from NW-based battery consumption optimisation.</p> <p>UE may set the value to DoesNotBenefitFromBatteryConsumptionOptimisation when it does not foresee to particularly benefit from NW-based</p> <p>The IE is not needed in the INTER RAT HANDOVER INFO message.</p> | REL-6 |
| Support for System Information Block type 11bis | OP | | Enumerated (TRUE) | | REL-6 |
| | | | | The IE shall be present and set to TRUE | REL-7 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------|------------------------------------------|-------|--------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Support for F-DPCH | CV- <i>not_iRAT_</i> <i>HoInfo</i> | | Enumerated (TRUE) | The IE shall be set to TRUE when F-DPCH is fully supported by the UE. Absence of this information element indicates that F-DPCH is not fully supported | REL-6 |
| MAC-ehs support | OP | | Enumerated (TRUE) | The presence of this IE indicates that UE supports MAC-ehs, the use of special value of HE field to indicate end of an SDU for RLC AM, octet aligned transport block table and different HS-SCCHs in contiguous TTIs. The absence of this IE indicates that the UE does not support either MAC-ehs, octet aligned transport block table or the use of special value of HE field to indicate end of an SDU for RLC AM or different HS-SCCHs in contiguous TTIs. | REL-7 |
| UE specific capability Information LCR TDD | OP | | Enumerated (NF, TriRxUniTx, TriRxTriTx, HexRxUniTx, HexRxTriTx, HexRxHexT, | For 1.28 Mcps TDD only | REL-7 |
| | | | TwoRxUniTx Discontiguous, TwoRxTwoTxDiscontiguous, TwoRxUniTx Contiguous, TwoRxTwoTxContiguous) | TwoRxUniTxDiscontiguous and TwoRxTwoTxDiscontiguous mean that the UE is capable of supporting two non-adjacent carriers. TwoRxUniTxContiguous and TwoRxTwoTxContiguous mean that the UE is only capable of supporting two adjacent carriers. 6 spare values needed. Note 3. | REL-10 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------|--------------------|-------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Support for E-DPCCH Power Boosting | OP | | Enumerated (TRUE) | The absence of this IE indicates that the E-DPCCH Power Boosting is not supported. The presence of this IE indicates that the E-DPCCH Power Boosting is supported by the UE. | REL-7 |
| Support of common E-DCH | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-DCH enhanced random access in CELL_FACH state and Idle mode. | REL-8 |
| Support of MAC-i/is | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support MAC-i/is operation. | REL-8 |
| Support of Common E-RGCH based interference control | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support Common E-RGCH based interference control in CELL_FACH state. | REL-11 |
| Support of Fallback to R99 PRACH | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support Fallback to R99 PRACH in CELL_FACH state and IDLE mode. | REL-11 |
| Support of Concurrent deployment | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support Concurrent deployment of 2ms and 10ms TTI in a cell in CELL_FACH state and IDLE mode. | REL-11 |
| Support of TTI alignment and Per HARQ process | CV-not_iRAT_HoInfo | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support TTI alignment and Per HARQ process activation and deactivation in CELL_FACH state and IDLE mode. | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------------|------------------------------------------|---------|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|---------|
| Support of SPS operation | CV- <i>not_iRAT_</i> <i>HoInfo</i> | | Enumerated (TRUE) | For 1.28 Mcps TDD only. The absence of this IE indicates that the UE does not support SPS operation. | REL-8 |
| Support of Control Channel DRX operation | CV- <i>not_iRAT_</i> <i>HoInfo</i> | | Enumerated (TRUE) | For 1.28 Mcps TDD only. The absence of this IE indicates that the UE does not support Control Channel DRX operation | REL-8 |
| Support of CSG | CV- <i>not_iRAT_</i> <i>HoInfo</i> | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support access control based on CSG | REL-8 |
| Support for Two DRX schemes in URA_PCH and CELL_PCH | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support Two DRX schemes in URA_PCH and CELL_PCH | REL-7 |
| Support for E-DPDCH power interpolation formula | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-DPDCH power interpolation formula when 16QAM is not configured | REL-7 |
| Support for absolute priority based cell re-selection in UTRAN | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support absolute priority based cell re-selection to UTRA inter-frequency | REL-8 |
| Support of MU-MIMO | OP | | Enumerated (Uplink, Uplink and Downlink) | The absence of this IE indicates that the UE does not support MU-MIMO. This IE is used for 1.28 Mcps TDD only | REL-10 |
| Radio Access Capability Band Combination List | OP | 1 to 16 | | The absence of this IE indicates that the UE does not support Dual Band Operation. | REL-9 |
| >Band Combination | MP | | Integer(1..256) | The integer value n indicates that the n^{th} DB-DC Configuration (A,B) in table 5.0AA in [21] is supported by the UE. | REL-9 |

| 1.28 Mcps TDD physical channel capability for HS-PDSCH/E-DCH | OP | | | Absent if HS-PDSCH and E-DCH are not supported | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------|-------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|---------|
| >Support of SF Mode For HS-PDSCH dual stream | OP | | Enumerated (SF1, SF1/SF16) | For 1.28 Mcps TDD only The absence of this IE indicates that the UE does not support MIMO. | REL-8 |
| Support of common E-DCH | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support E-DCH enhanced random access in CELL_FACH state and Idle mode. | REL-8 |
| Support of MAC-i/is | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support MAC-i/is operation. | REL-8 |
| Support of Control Channel DRX operation | OP | | Enumerated (TRUE) | For 1.28 Mcps TDD only. The absence of this IE indicates that the UE does not support Control Channel DRX operation | REL-8 |
| Support of SPS operation | OP | | Enumerated (TRUE) | For 1.28 Mcps TDD only. The absence of this IE indicates that the UE does not support SPS operation. | REL-8 |
| Radio frequency bands extension list | OP | 1 to <maxFreqBandsTDD-ext> | | as defined in [22]. | REL-8 |
| >Radio frequency bands ext | MP | | Enumerated (e, f, g, h, i, j, k, l, m, n, o, p) | as defined in [22]. Band g to band p are reserved for future use. | REL-8 |
| NOTE 1: All UEs supporting HS-DSCH should signal a category between 1 and 15 for this IE even if the UE physical capability category is above 15. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured. | | | | | |
| NOTE 2: This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is configured. | | | | | |
| NOTE 3: All UEs supporting multi-carrier HS-DSCH should signal a category between 1 and 18 for this IE even if the UE physical capability category is above 18. This IE corresponds to the multi-carrier HS-DSCH category supported by the UE when MAC-ehs is not configured. | | | | | |
| NOTE 4: This IE corresponds to the multi-carrier HS-DSCH category supported by the UE when MAC-ehs is configured. | | | | | |

10.3.3.42a UE radio access capability extension

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|------|-------------------------|--------------------|------------------------------------------------------------------------------|---------|
| Frequency band specific capability list | MP | 1 to <maxFreqbandsFDD> | | The network should ignore the entry that includes the 'extension indicator'. | REL-6 |
| | | 1 to <maxFreqbandsFDD2> | | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | 1 to <maxFrequencyBands> | | | REL-10 |
| >Frequency band | MP | | Enumerated(Band I, Band II, | | REL-5 |
| | | | Band III, | | REL-6 |
| | | | Band VI, Band IV, Band V, Band VII, extension indicator) | The setting of the value 'extension indicator' by the UE is not specified in the specification. | |
| >Frequency band 2 | OP | | Enumerated(Band VIII, Band IX, Band X, Band XI, Band XII, Band XIII, Band XIV, Band XIX, Band XXI, Band XX, Band XXII, extension Indicator) | This IE indicates the supported frequency bands Band VIII and beyond. The setting of the value 'extension indicator' by the UE is not specified in the specification. Four spare values are needed | REL-6 |
| >Frequency band 3 | OP | | Enumerated (Band XXV, Band XXVI, extension Indicator) | This IE indicates the supported frequency bands Band XXIII and beyond. The setting of the value 'extension indicator' by the UE is not specified in the specification. Sixty One spare values are needed | REL-10 |
| >RF capability FDD extension | MD | | RF capability FDD extension 10.3.3.33a | the default values are the same values as in the immediately preceding IE "RF capability FDD extension"; the first occurrence is MP | |
| >Measurement capability extension | MP | | Measurement capability extension 10.3.3.21a | | |
| >Additional Secondary Cells | OP | | Enumerated(a1, a2) | The number of additional secondary serving cells supported by the UE. The absence of this IE means that the UE does not support multi-cell operation on three cells or multi-cell operation on four cells. | REL-10 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------------------------------|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Additional Secondary Cells 2 | OP | | Enumerated(a3, a4, a5, a6) | The number of additional secondary serving cells supported by the UE. The absence of this IE means that the UE does not support multi-cell operation on five cells or multi-cell operation on six cells or multi-cell operation on seven cells or multi-cell operation on eight cells. | REL-11 |
| >Non-contiguous multi-cell | OP | 1 to <maxNonContiguousMultiCellCombinations> | | The presence of this IE indicates that the UE supports the non-contiguous multi-cell HSDPA operation on two, three or four cells. | REL-10 |
| >>Aggregated cells | MP | | Enumerated(nc-2c, nc-3c, nc-4c) | This IE indicates the maximum number of cells supported in non-contiguous multi-cell operation. "nc-2c" indicates that UE supports 2 cells. "nc-3c" indicates that UE supports 2 and 3 cells. "nc-4c" indicates that UE supports 2, 3, and 4 cells. | REL-10 |
| >>Gap size | MP | | Enumerated(fiveMHz, tenMHz, anyGapSize) | This IE indicates the maximum gap size between the aggregated cells. "fiveMHz" indicates that UE supports 5 MHz gap size. "tenMHz" indicates that UE supports 10 MHz gap size and 5 MHz gap size. "anyGapSize" indicates that UE supports any multiple of 5 MHz gap size. 5 spare values are required. | REL-10 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------------------------|----------|-------|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>Non-contiguous multi-cell Combination (2,2) | CV-NC-4C | | Enumerated(TR UE) | The presence of this IE indicates that the UE supports an equal number of contiguous cells on each side of the gap. The absence of this IE indicates that the carrier combination (2,2) is not supported. | REL-10 |
| >>Non-contiguous multi-cell Combination (3,1) (1,3) | CV-NC-4C | | Enumerated(TR UE) | The presence of this IE indicates that UE supports a different number of contiguous cells on each side of the gap. The absence of this IE indicates that neither the carrier combination (3,1) nor the carrier combination (1,3) are supported. | REL-10 |
| >Support of uplink closed loop transmit diversity | OP | | Enumerated(TR UE) | Absence of this IE indicates that uplink CLTD is not supported on this frequency band. | REL-11 |
| >Support of uplink open loop transmit diversity | OP | | Enumerated(TR UE) | Absence of this IE indicates that uplink OLTD is not supported. | REL-11 |
| >Multiflow per band capability | OP | | Multiflow per band capability 10.3.3.21bb | | REL-11 |
| >Support of Uplink MIMO | OP | | Enumerated(TR UE) | Absence of this IE indicates that UL MIMO is not supported in this frequency band. | REL-11 |
| >MIMO mode with four transmit antennas per band capability | OP | | Enumerated(TR UE) | Absence of this IE indicates that MIMO mode with four transmit antennas is not supported on this frequency band. | REL-11 |
| >Frequency specific compressed mode for non-contiguous operation | OP | | Enumerated(TR UE) | Absence of this IE indicates that the frequency specific compressed mode for non-contiguous operation is not supported in this band. | REL-11 |

| Condition | Explanation |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NC-4C | This IE is optional when the IE "aggregated cells" is set to "nc-4c". Otherwise it is not needed. When the IE "aggregated cells" is set to "nc-4c", at least one of the optional IE shall be included. |

10.3.3.42b UE security information

Upon receiving a UE information request from another system, the UE shall indicate the requested security information. The UE security information includes the following RRC information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--------------------------------------------|
| UE information elements | | | | |
| START-CS | MP | | START 10.3.3.38 | START values to be used in this CN domain. |

10.3.3.42c UE security information2

Upon receiving a UE information request from another system, the UE shall indicate the requested security information. The UE security information includes the following RRC information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--------------------------------------------|---------|
| START-PS | MP | | START 10.3.3.38 | START values to be used in this CN domain. | Rel-6 |

10.3.3.43 UE Timers and Constants in connected mode

This information element specifies timer- and constants values used by the UE in connected mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| T301 | MD | | Integer(100, 200 .. 2000 by step of 200, 3000, 4000, 6000, 8000) | Value in milliseconds. Default value is 2000. This IE should not be used by the UE in this release of the protocol. One spare value is needed. | |
| N301 | MD | | Integer(0..7) | Default value is 2. This IE should not be used by the UE in this release of the protocol. | |
| T302 | MD | | Integer(100, 200... 2000 by step of 200, 3000, 4000, 6000, 8000) | Value in milliseconds. Default value is 4000. One spare value is needed. | |
| N302 | MD | | Integer(0..7) | Default value is 3. | |
| T304 | MD | | Integer(100, 200, 400, 1000, 2000) | Value in milliseconds. Default value is 2000. Three spare values are needed. | |
| N304 | MD | | Integer(0..7) | Default value is 2.. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|---------|
| T305 | MD | | Integer(5, 10, 30, 60, 120, 360, 720, infinity) | Value in minutes. Default value is 30. Infinity means no update | |
| T307 | MD | | Integer(5, 10, 15, 20, 30, 40, 50) | Value in seconds. Default value is 30. One spare value is needed. | |
| T308 | MD | | Integer(40, 80, 160, 320) | Value in milliseconds. Default value is 160. | |
| T309 | MD | | Integer(1 ..8) | Value in seconds. Default value is 5. | |
| T310 | MD | | Integer(40 .. 320 by step of 40) | Value in milliseconds. Default value is 160. | |
| N310 | MD | | Integer(0 .. 7) | Default value is 4. | |
| T311 | MD | | Integer(250 .. 2000 by step of 250) | Value in milliseconds. Default value is 2000. | |
| T312 | MD | | Integer (0..15) | Value in seconds. Default value is 1. The value 0 is not used in this version of the specification. | |
| N312 | MD | | Integer (1, 2, 4, 10, 20, 50, 100, 200, 400, 600, 800, 1000) | Default value is 1. | |
| T313 | MD | | Integer (0..15) | Value in seconds. Default value is 3. | |
| N313 | MD | | Integer (1, 2, 4, 10, 20, 50, 100, 200) | Default value is 20. | |
| T314 | MD | | Integer(0, 2, 4, 6, 8, 12, 16, 20) | Value in seconds. Default value is 12. | |
| T315 | MD | | Integer (0,10, 30, 60, 180, 600, 1200, 1800) | Value in seconds. Default value is 180. | |
| N315 | MD | | Integer (1, 2, 4, 10, 20, 50, 100, 200, 400, 600, 800, 1000) | Default value is 1. | |
| T316 | MD | | Integer(0, 10, 20, 30, 40, 50, infinity) | Value in seconds. Default value is 30. One spare value is needed. | |
| T317 | MD | | | Default value is infinity. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|---------|
| | | | Enumerated (infinity, infinity, infinity, infinity, infinity, infinity, infinity) | All the values are changed to "infinity" in the Rel-5. | REL-5 |
| T323 | OP | | Enumerated (0, 5, 10, 20, 30, 60, 90, 120) | Value in seconds. The use of 0secs indicates no need to apply the inhibit timer. See Note 1 | REL-8 |

NOTE 1: If T323 is configured or cleared via non-critical extensions of UTRAN MOBILITY INFORMATION message, UTRAN should explicitly signal the other timers and constants in the same message. Otherwise the T323 configuration change is not applied to UE.

10.3.3.44 UE Timers and Constants in idle mode

This information element specifies timer- and constant values used by the UE in idle mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| T300 | MP | | Integer(100, 200... 2000 by step of 200, 3000, 4000, 6000, 8000) | Value in milliseconds. Default value is 1000. Use of Default is described in 10.2.48.8.4 and in 10.2.48.8.16. |
| N300 | MP | | Integer(0..7) | Default value is 3. Use of Default is described in 10.2.48.8.4 and in 10.2.48.8.16. |
| T312 | MP | | Integer(0..15) | Value in seconds. Default value is 1. Use of Default is described in 10.2.48.8.4 and in 10.2.48.8.16. The value 0 is not used in this version of the specification. |
| N312 | MP | | Integer (1, 2, 4, 10, 20, 50, 100, 200, 400, 600, 800, 1000) | Default value is 1. Use of Default is described in 10.2.48.8.4 and in 10.2.48.8.16. |

10.3.3.45 UE positioning capability

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|--------------------|-----------------|----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Standalone location method(s) supported | MP | | Boolean | Defines if a UE can measure its location by some means unrelated to UTRAN TRUE means supported | |
| UE based OTDOA supported | MP | | Boolean | TRUE means supported | |
| Network Assisted GPS support | MP | | Enumerated ('Network based', 'UE based', 'Both', 'None') | Defines if the UE supports network based or UE based GPS methods. | |
| Network Assisted GANSS support List | CV-not_iRAT_HoInfo | 1 to <maxGANSS> | | Absent if GANSS is not supported | REL-7 |
| >GANSS ID | OP | | Enumerated(| Absence of this IE means Galileo. Eight spare values needed. | REL-7 |
| | | | SBAS, Modernized_GPS, QZSS, GLONASS, | Absence of this IE means Galileo. Four spare values needed. | REL-8 |
| | | | BDS) | Absence of this IE means Galileo. Three spare values needed. | REL-12 |
| >SBAS IDs | CV-GANSS-ID-SBAS | | Bit String(8) | Defines the specific SBAS(s) supported. This is represented using a bit string with one bit per SBAS as defined in NOTE 1 where a one value indicates support and a zero value no support. | REL-8 |
| >GANSS mode | MP | | Enumerated ('Network based', 'UE based', 'Both', 'None') | Defines if the UE supports network based or UE based GANSS methods | REL-7 |
| >GANSS Signal ID | OP | | 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS ID. | REL-7 |
| >GANSS Signal IDs | OP | | Bit String(8) | Defines if a UE has the capability to perform measurements on more than one GANSS signal and which signals are supported. This is represented using a bit string with one bit per signal as defined in NOTE 2 where a one value indicates support and a zero value no support. | REL-8 |

| | | | | | |
|---------------------------------------------------------------------------------|------------------------|--|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| >Support for GANSS timing of cell frames measurement | MP | | Boolean | Defines if a UE has the capability to perform the UE GANSS timing of cell frames measurement. TRUE means capable | REL-7 |
| >Support for GANSS Carrier-Phase Measurement | OP | | Boolean | Defines if a UE has the capability to perform the UE GANSS Carrier-Phase Measurement. TRUE means capable | REL-7 |
| >Support for non-native assistance choices | OP | | Enumerated (TRUE) | Absence of this element means not supported and presence means the UE supports assistance data choices in formats not defined in the ICD of a particular GANSS. Multiple choices exist for assistance data elements defined in 10.3.7.89a, 10.3.7.94a/b, 10.3.7.97d. | REL-8 |
| GANSS support indication | CV- <i>iRAT_HoInfo</i> | | Enumerated (TRUE) | TRUE indicates that the UE supports GANSS | REL-7 |
| Support for GPS timing of cell frames measurement | MP | | Boolean | Defines if a UE has the capability to perform the UE GPS timing of cell frames measurement [7]. TRUE means capable | |
| Support for IPDL | MP | | Boolean | Defines if a UE has the capability to use IPDL to enhance its 'SFN-SFN observed time difference –type 2' measurement. TRUE means supported | |
| Support for Rx-Tx time difference type2 measurement | MP | | Boolean | TRUE means supported | |
| Support for UP assisted GPS measurement validity in CELL_PCH and URA_PCH states | CV-GPSSupported | | Enumerated (TRUE) | | |
| Support for SFN-SFN observed time difference type 2 measurement | OP | | Enumerated (TRUE) | Absence of this element means not supported and presence means supported. | |

| Condition | Explanation |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>GPSSupported</i> | This IE is mandatory present if the IE "Network Assisted GPS support" is set to 'Network based', 'UE based' or 'Both'. Otherwise, it is not needed. |
| <i>not_iRAT_HoInfo</i> | These IEs are not needed in the INTER RAT HANDOVER INFO message. Otherwise, they are optionally present. |
| <i>iRAT_HoInfo</i> | This IE is optionally present in the INTER RAT HANDOVER INFO message. Otherwise, the IE is not needed. |
| <i>GANSS-ID-SBAS</i> | This IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise. |

NOTE 1: Coding of SBAS IDs:

| SBAS IDs Bit String(8) | | | | | | | |
|------------------------|-------|-------|-------|-------|-------|-------|-------------|
| Bit 1 (MSB) | Bit 2 | Bit 3 | Bit 4 | Bit 5 | Bit 6 | Bit 7 | Bit 8 (LSB) |
| WAAS | EGNOS | MSAS | GAGAN | - | - | - | - |

NOTE 2: Coding of GANSS Signal IDs:

| GANSS | GANSS Signal IDs Bit String(8) | | | | | | | |
|----------------|--------------------------------|---------|---------|--------|---------|-------|-------|-------------|
| | Bit 1 (MSB) | Bit 2 | Bit 3 | Bit 4 | Bit 5 | Bit 6 | Bit 7 | Bit 8 (LSB) |
| Galileo | E1 | E5a | E5b | E6 | E5a+E5b | - | - | - |
| Modernized GPS | L1C | L2C | L5 | - | - | - | - | - |
| SBAS | L1 | - | - | - | - | - | - | - |
| QZSS | QZS-L1 | QZS-L1C | QZS-L2C | QZS-L5 | - | - | - | - |
| GLONASS | G1 | G2 | G3 | - | - | - | - | - |
| BDS | B1I | - | - | - | - | - | - | - |

10.3.3.45a GANSS Signal Id

The GANSS Signal ID encodes the identification of the signal for each GANSS. It depends on the GANSS Id.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|-------|--------------------|-----------------------|---------|
| GANSS Signal Identity per Signal Id | MD | | INTEGER (0..7) | See NOTE 1 | REL-7 |

NOTE 1:

| GANSS Id | Value | Explanation | Version |
|------------------|---------------|-------------------|---------|
| Default: Galileo | Default Value | Galileo E1 | REL-7 |
| | 0 | Galileo E5A | |
| | 1 | Galileo E5B | |
| | 2 | Galileo E6 | |
| | 3 | Galileo E5A + E5B | |
| | 4-7 | Reserved | |
| Modernized GPS | Default Value | GPS L1C | REL-8 |
| | 0 | GPS L2C | |
| | 1 | GPS L5 | |
| | 2-7 | Reserved | |
| SBAS | Default Value | L1 | |
| | 0-7 | Reserved | |
| QZSS | Default Value | QZS-L1 | |
| | 0 | QZS-L1C | |
| | 1 | QZS-L2C | |
| | 2 | QZS-L5 | |
| | 3-7 | Reserved | |
| GLONASS | Default Value | GLONASS G1 | |
| | 0 | GLONASS G2 | |
| | 1 | GLONASS G3 | |
| | 2-7 | Reserved | |
| BDS | Default Value | B1I | REL-12 |
| | 0-7 | Reserved | |

10.3.3.46 URA update cause

Indicates the cause for s URA update.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------------------|----------------------------|
| URA update cause | MP | | Enumerated(change of URA, periodic URA update) | One spare value is needed. |

10.3.3.47 U-RNTI

The U-RNTI (UTRAN Radio Network Temporary Identity) is allocated to a UE having a RRC connection and identifies the UE within UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SRNC identity | MP | | bit string(12) | <p>The SRNC ID unique in PLMN is encoded to SRNC identity IE in descending order from b31 . The b31 is the most significant bit.</p> <p>If the SRNC ID is more than 12 bits as defined in [57], the remaining bits are included as most significant bits of S-RNTI IE.</p> <p>If the UE ID unique in SRNS encoded in S-RNTI IE is more than 20 bits as defined in [57], the most significant bits are included as the least significant bits of SRNC ID.</p> |
| S-RNTI | MP | | bit string(20) | <p>The UE ID unique in SRNS is encoded to the S-RNTI IE in descending order.</p> <p>If the S-RNTI IE is more than 20 bits as defined in [57], the remaining bits are included as the least significant bits of SRNC ID.</p> <p>If the SRNC ID is more than 12 bits as defined in [57], S-RNTI include both part of the SRNC ID and the UE-ID. The least significant bits encode the UE-ID to the S-RNTI IE in descending order. The b0 is the least significant bit.</p> |

10.3.3.47a U-RNTI group

The U-RNTI group is used to identify a group of UEs having an RRC connection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|-------|------------------------------|-------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>group discriminator</i> | MP | | | | REL-5 |
| >All | | | | (no data) | REL-5 |
| >U-RNTI mask | | | | | REL-5 |
| >>U-RNTI | MP | | U-RNTI 10.3.3.47 | The bits that are less significant than the bit position indicated by the U-RNTI bit mask index shall be ignored. | REL-5 |
| >>U-RNTI bit mask index | MP | | Enumerated(b1, b2,..b31) | Values b1 to b31 indicate bit positions in the S-RNTI and in the SRNC identity. | REL-5 |

10.3.3.48 U-RNTI Short

The U-RNTI (UTRAN Radio Network Temporary Identity) is allocated to a UE having a RRC connection and identifies the UE within UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SRNC identity | MP | | bit string(12) | The SRNC identity bits are numbered b20 to b31, where b20 is the least significant bit. If the SRNC ID is more than 12 bits as defined in [57], the remaining bits are included as most significant bits of S-RNTI 2 IE. |
| S-RNTI 2 | MP | | bit string(10) | The UE ID is encoded in S-RNTI 2 in descending order. If the SRNC ID is more than 12 bits as defined in [57], S-RNTI include both part of the SRNC ID and the UE-ID. The least significant bits encode the UE-ID to the S-RNTI IE in descending order. The b0 is the least significant bit. |

10.3.3.49 UTRAN DRX cycle length coefficient

A coefficient in the formula to count the paging occasions to be used by a specific UE (specified in [4]).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------|
| DRX cycle length coefficient | MP | | Integer(3..9) | Refers to 'k' in the formula as specified in [4], Discontinuous reception | |
| DRX cycle length coefficient 2 | MD | | Integer(3..9) | Refers to 'k' in the formula as specified in [4], Discontinuous reception. The default value is "same as DRX cycle length coefficient". | REL-7 |
| Time for DRX cycle 2 | MD | | Integer(80, 160, 320, 640, 1280, 2560, 5120) | Values in milliseconds. The default value is 0 ms. | REL-7 |

10.3.3.50 Wait time

Wait time defines the time period the UE has to wait before repeating the rejected procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wait time | MP | | Integer(0..15) | Wait time in seconds The value 0 indicates that repetition is not allowed. Wait time should be set to zero if the IE "Extended Wait Time" is present in the RRC Connection Reject message. |

10.3.3.51 UE Specific Behaviour Information 1 idle

This IE indicates the UE conformance typically for RRC connection establishment from idle mode.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|------------------------------------------|------|-------|--------------------|-----------------------|
| UE Specific Behaviour Information 1 idle | MP | | bit string(4) | |

10.3.3.52 UE Specific Behaviour Information 1 interRAT

This IE indicates the UE conformance typically for RRC connection establishment from another RAT.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|----------------------------------------------|------|-------|--------------------|-----------------------|
| UE Specific Behaviour Information 1 interRAT | MP | | bit string(8) | |

10.3.3.53 UE based network performance measurements parameters

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|-----------------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------------------------------------------------|---------|
| Support of Logged Measurements Idle PCH | OP | | Enumerated (TRUE) | The absence of this IE indicates that the UE does not support logged measurements in Idle mode, URA_PCH or CELL_PCH states. | REL-10 |

10.3.4 Radio Bearer Information elements

10.3.4.0a Common RB mapping info

NOTE: For FDD and 1.28 Mcps TDD only.

A multiplexing option between a logical channel and a MAC-ehs queue.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------|-----------------------|---------|
| Logical channel identity | MP | | Integer(1..15) | Note | REL-7 |
| MAC-ehs queue identity | MP | | MAC-ehs Queue Id 10.3.5.7f | | REL-7 |

NOTE: the IE "Logical channel identity" conveys the value to be used in the "LCH-ID" field of the MAC-ehs header [15] associated with the MAC-ehs reordering queue identified by the IE "MAC-ehs queue identity".

10.3.4.0 Default configuration identity

This information element identifies a default radio parameter configuration. The corresponding default configurations are specified in subclause 13.7.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------------------------------------------------|-------------------------------|--------|--------------------|----------------------------------------------------------------------------------|---------|
| Default configuration identity | MP | | Integer (0..10, | See NOTE 1 | |
| | | | 11, | | REL-4 |
| | | | 13, | Default configuration ID 2 is not used. | REL-5 |
| | | | 12, 14, 15, 16 | | REL-6 |
| | | | 17, | Used only in RRC Connection Setup message. | REL-6 |
| | | | 18..22, | See NOTE 1 | REL-6 |
| | | | 23, | Default configuration 23 shall not be used in this version of the specification. | REL-9 |
| | | | 24, | | REL-10 |
| 25..31) | Reserved for future extension | REL-10 | | | |
| NOTE 1: For TDD, default configuration identities 0, 1, 5, 6, 7 and 22 are only valid from REL-10. | | | | | |

10.3.4.0a Default configuration for CELL_FACH

This information element identifies a default radio parameter configuration for CELL_FACH. The corresponding default configurations are specified in subclause 13.8.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|------|-------|-----------------------|-------------------------------------------------------------------------------------|---------|
| Default configuration mode | MP | | Enumerated (FDD, TDD) | Indicates whether the FDD or TDD version of the default configuration shall be used | REL-8 |
| Default configuration identity for CELL_FACH | MP | | Integer (0, | | REL-8 |
| | | | 1..15) | Reserved for future extension | REL-8 |

10.3.4.1 Downlink RLC STATUS info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------------------------------------------|-------------------------|-------|---------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|---------|
| Timer_Status_Prohibit | OP | | Integer(10..550 by step of 10, 550..1000 by step of 50) | Minimum time in ms between STATUS reports | |
| Missing PDU Indicator | MP | | Boolean | Value TRUE indicates that UE should send a STATUS report for each missing PDU that is detected | |
| Timer_STATUS_periodic | OP | | Integer(100, 200, 300, 400, 500, 750, 1000, 2000) | Time in milliseconds | |
| Timer_Reordering | CV- <i>Multiflow</i> | | Integer(50, 100, 150, 200, 400, 600, 800, 1000) | Time in milliseconds for which a UE should wait upon encountering a gap in the RLC sequence numbers. NOTE1. | REL-11 |
| NOTE1: If this IE is included for SRB0 or SRB1, then the UE behaviour is unspecified. | | | | | |

| Condition | Explanation |
|------------------|--------------------------------------------------------------------------------------------|
| <i>Multiflow</i> | The IE is optional when the Multiflow operation is configured, otherwise it is not needed. |

10.3.4.1a PDCP context relocation info

This information element indicates that the header compression context relocation is to be performed during SRNS relocation for the given radio bearer.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------|------|-------|-----------------------|-----------------------------------------------------------------|---------|
| RB identity | MP | | RB identity 10.3.4.16 | | REL-5 |
| Downlink RFC 3095 context relocation indication | MP | | Boolean | TRUE means RFC 3095 context relocation is performed in downlink | REL-5 |
| Uplink RFC 3095 context relocation indication | MP | | Boolean | TRUE means RFC 3095 context relocation is performed in uplink | REL-5 |

10.3.4.2 PDCP info

The purpose of the PDCP info IE is to indicate which algorithms shall be established and to configure the parameters of each of the algorithms.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------------------------------|-----------------------------|------------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|---------|
| Support for lossless SRNS relocation or for lossless DL RLC PDU size change | CV- <i>LosslessCriteria</i> | | Boolean | TRUE means support | |
| Max PDCP SN window size | CV- <i>Lossless</i> | | Enumerated(sn255, sn65535) | Maximum PDCP sequence number window size. The handling of sequence number when the Max PDCP SN window size is 255 is specified in [23]. | |
| PDCP PDU header | MP | | Enumerated (present, absent) | Whether a PDCP PDU header is existent or not. | |
| Header compression information | OP | 1 to <maxPDCPAlgoType> | | | |
| >CHOICE <i>algorithm type</i> | MP | | | Note 1 | |
| >>RFC 2507 | | | | Header compression according to IETF standard RFC 2507 | |
| >>>F_MAX_PERIOD | MD | | Integer (1..65535) | Largest number of compressed non-TCP headers that may be sent without sending a full header. Default value is 256. | |
| >>>F_MAX_TIME | MD | | Integer (1..255) | Compressed headers may not be sent more than F_MAX_TIME seconds after sending last full header. Default value is 5. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------------------------|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|---------|
| >>>MAX_HEADER | MD | | Integer (60..65535) | The largest header size in octets that may be compressed. Default value is 168. | |
| >>>TCP_SPACE | MD | | Integer (3..255) | Maximum CID value for TCP connections. Default value is 15. | |
| >>>NON_TCP_SPACE | MD | | Integer (3..65535) | Maximum CID value for non-TCP connections. Default value is 15. | |
| >>>EXPECT_REORDERING | MD | | Enumerated (reordering not expected, reordering expected) | Whether the algorithm shall reorder PDCP SDUs or not. Default value is "reordering not expected". | |
| >>RFC 3095 | | | | Header compression according to IETF ROHC standard [83], [84]. | REL-4 |
| >>>Profiles | MP | 1 to <maxROHC-Profiles> | | Profiles supported by both compressor and decompressor in both UE and UTRAN. Profile 0 shall always be supported. | REL-4 |
| >>>>Profile instance | MP | | Integer(1.. 3) | 1 = 0x0001, 2 = 0x0002, 3 = 0x0003 (see [52]) | REL-4 |
| >>>Uplink | OP | | | Indicates the necessary information elements for Uplink. | REL-4 |
| >>>>Max_CID | MD | | Integer (1.. 16383) | Highest context ID number to be used by the UE compressor. Default value is 15. | REL-4 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>>Downlink | OP | | | Indicates the necessary information elements for Downlink. | REL-4 |
| >>>>Max_CID | MD | | Integer (1..16383) | Highest context ID number to be used by the UE decompressor. Default value is 15. | REL-4 |
| >>>>Reverse-Decompression_Depth | MD | | Integer (0..65535) | Determines whether reverse decompression should be used or not and the maximum number of packets that can be reverse decompressed by the UE decompressor. Default value is 0 (reverse decompression shall not be used). | REL-4 |
| Note 1: If several occurrences of the same algorithm type are included in the same IE "header compression information", the UE behaviour is unspecified. | | | | | |

| Condition | Explanation |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>LosslessCriteria</i> | This IE is mandatory present if the IE "RLC mode" is "Acknowledged", the IE "In-sequence delivery" is TRUE and the IE "SDU Discard Mode" is "No discard" and not needed otherwise. |
| <i>Lossless</i> | This IE is mandatory present if the IE "Support for lossless SRNS relocation or for lossless RLC PDU size change" is TRUE, otherwise it is not needed. |

10.3.4.2a PDCP ROHC target mode

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------|---------------------------------------------------------------------------------------------|---------|
| Target Mode | MP | | Enumerated (O-mode, R-mode) | The UE shall only transit to the signalled mode for operation of ROHC as described in [36]. | REL-5 |

10.3.4.3 PDCP SN info

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------|
| Receive PDCP sequence number | MP | | Integer(0..65535) | The PDCP sequence number, which the sender of the message is expecting next to be received. |

10.3.4.4 Polling info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------------|-----------------------------------------------------------------------|
| Timer_poll_prohibit | OP | | Integer(10..50 by step of 10, 600..1000 by step of 50) | Minimum time between polls in ms |
| Timer_poll | OP | | Integer(10..50 by step of 10, 600..1000 by step of 50) | Time in ms. |
| Poll_PDU | OP | | Integer(1,2,4,8,16,32,64,128) | Number of PDUs, interval between pollings |
| Poll_SDU | OP | | Integer(1,4,16,64) | Number of SDUs, interval between pollings |
| Last transmission PDU poll | MP | | Boolean | TRUE indicates that poll is made at last PDU in transmission buffer |
| Last retransmission PDU poll | MP | | Boolean | TRUE indicates that poll is made at last PDU in retransmission buffer |
| Poll_Window | OP | | Integer(50,60,70,80,85,90,95,99) | Percentage of transmission window, threshold for polling |
| Timer_poll_periodic | OP | | Integer(100, 200, 300, 400, 500, 750, 1000, 2000) | Time in milliseconds Timer for periodic polling. |

10.3.4.5 Predefined configuration identity

This information element identifies a pre- defined radio parameter configuration.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------|------|-------|--------------------|-----------------------|
| Predefined radio configuration identity | MP | | Integer (0..15) | |

10.3.4.5a Predefined configuration status information

Another system may provide the UE with one or more predefined UTRAN configurations, comprising of radio bearer, transport channel and physical channel parameters. If requested, the UE shall indicate the configurations it has stored. The predefined configuration status information should include the following RRC information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------|------|-----------------------|---------------------------------------------|---------------------------------------------------------------------------------|
| RB information elements | | | | |
| Predefined configurations | | maxPredef ConfigCount | | The list is in order of preconfiguration identity |
| >Predefined configuration value tag | OP | | Predefined configuration value tag 10.3.4.6 | The UE shall include the value tag if it has stored the concerned configuration |

| Multi Bound | Explanation |
|----------------------|---------------------------------------------|
| MaxPredefConfigCount | Maximum number of predefined configurations |

10.3.4.5b Predefined configuration status information compressed

Another system may provide the UE with one or more predefined UTRAN configurations, comprising of radio bearer, transport channel and physical channel parameters. If requested, the UE shall indicate the configurations it has stored. The compressed predefined configuration status information should include the following RRC information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------|------|-----------------------|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Sets with different value tags | MP | | | | REL-5 |
| >Pre-defined configuration set with different value tags | MP | 1..2 | | | REL-5 |
| >>Start position | MD | | INTEGER (0..10) | Default value is 0, corresponding with the first pre-defined configuration. The pre-defined configuration where the consecutive sequence of pre-defined configurations begins. | REL-5 |
| >>Pre-defined configuration value tag list | MP | 6..<max PredefConfig> | Pre-defined configuration value tag 10.3.4.6 | Value Tags for each pre-defined configuration starting from the lowest. | REL-5 |
| Other Entries | OP | | | | REL-5 |
| >Pre-defined configuration list with variable size | MP | 1..<max PredefConfig> | | List of other pre-defined configurations not included within the Sets with different value tags, in consecutive order starting with the lowest. If there are stored pre-defined configurations positioned after a pre-defined configuration that is not stored, the UE shall indicate the not-stored pre-defined configuration by explicitly indicating it to be absent. If there are no stored pre-defined configurations positioned after a pre-defined configuration that is not stored, then the UE may totally omit these pre-defined configurations from the IE, i.e. reduce the size of the list to correspond to the last position that contained a stored pre-defined configuration. | REL-5 |
| >>Predefined configuration value tag | OP | | Predefined configuration value tag 10.3.4.6 | The UE shall include the value tag if it has stored the concerned configuration | REL-5 |

10.3.4.6 Predefined configuration value tag

This information element is used to identify different versions of a radio bearer configuration as may be used within one PLMN e.g. to support different UTRAN implementations.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|------------------------------------|------|-------|--------------------|-----------------------|
| Predefined configuration value tag | MP | | Integer(0..15) | |

10.3.4.7 Predefined RB configuration

This information element concerns a pre- defined configuration of radio bearer parameters

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------------------|------|----------------------|-------------------------------------------------|----------------------------------|
| UE information elements | | | | |
| Re-establishment timer | MP | | Re-establishment timer 10.3.3.30 | Only one RAB supported |
| Signalling radio bearer information | | | | |
| Signalling RB information to setup List | MP | 1 to <maxSRBs setup> | | For each signalling radio bearer |
| >Signalling RB information to setup | MP | | Signalling RB information to setup 10.3.4.24 | |
| RB information | | | | |
| RB information to setup list | MP | 1 to <maxRBperRAB> | | Only one RAB supported |
| >RB information to setup | MP | | RB information to setup 10.3.4.20 | |

10.3.4.8 RAB info

This IE contains information used to uniquely identify a radio access bearer.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|-------|--------------------------------------------|----------------------------------------------------------------------------------|---------|
| RAB identity | MP | | RAB identity 10.3.1.14 | | |
| MBMS Service Identity | CV- Message | | MBMS service ID 10.3.9a.8a | Included when establishing a RB for a MBMS service of the broadcast type; NOTE 1 | REL-6 |
| MBMS Session identity | CV- Message | | MBMS Session identity 10.3.9a.9 | | REL-6 |
| CN domain identity | MP | | CN domain identity 10.3.1.1 | | |
| NAS Synchronization Indicator | OP | | NAS Synchronization indicator 10.3.4.12 | | |
| Re-establishment timer | MP | | Re-establishment timer 10.3.3.30 | | |
| NOTE 1: Only the "MBMS Service ID" part of the MBMS service identity is signalled in this IE. The UE should consider that the "PLMN identity" part of the MBMS service identity equals the PLMN identity of an MBMS service with the same "MBMS Service ID" stored in the variable ACTIVATED_MBMS_SERVICES. If there is no such MBMS service or more than one such MBMS service, the UE behaviour is unspecified. | | | | | |

| Condition | Explanation |
|----------------|-------------------------------------------------------------------------------------------------------------------------|
| <i>Message</i> | This IE is optionally present in the RADIO BEARER SETUP and the SRNS RELOCATION INFO messages and not needed otherwise. |

10.3.4.9 RAB info Post

This IE contains information used to uniquely identify a radio access bearer.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------------|-----------------------|
| RAB identity | MP | | RAB identity 10.3.1.14 | |
| CN domain identity | MP | | CN domain identity 10.3.1.1 | |
| NAS Synchronization Indicator | OP | | NAS Synchronization indicator 10.3.4.12 | |

10.3.4.9a RAB information for MBMS ptp bearers

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------------------|---------------------------------------------------------------------------------------|---------|
| RB identity | MP | | RB identity 10.3.4.16 | | REL-7 |
| MBMS Service Identity | MP | | MBMS Service ID 10.3.9a.8a | Indicates that this radio bearer is used for a different MBMS service. | REL-7 |
| MBMS Session Identity | OP | | MBMS Session identity 10.3.9a.9 | Indicates that this radio bearer is used for a different session of the MBMS service. | REL-7 |

10.3.4.10 RAB information for setup

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|----------|---------------------------|----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| RAB info | MP | | RAB info 10.3.4.8 | | |
| CS-HSPA information | CV-CS | | | | REL-8 |
| >UL AMR rate | MD | | Enumerated (t0, t1, t2, t3, t4, t5, t6, t7, t8) | Indicates the bit rate as defined in [62] and [63]. In case NAS Synchronization Indicator indicates AMR, default value is "t7". In case NAS Synchronization Indicator indicates AMR-WB, default value is "t8". 7 spare values are needed. | REL-8 |
| >Max CS delay | MP | | Integer (20..200 by step of 10) | Indicates the maximum possible delay for CS voice frames Unit is ms | REL-8 |
| RAB info to replace | CV-SRVCC | | RAB info to replace 10.3.4.11a | | REL-8 |
| RB information to setup list | MP | 1 to <maxRBpe rRAB> | | | |
| >RB information to setup | MP | | RB information to setup 10.3.4.20 | | |

| Condition | Explanation |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CS | This IE is mandatory if the IE "CN domain identity" has the value "CS domain" and the RAB is mapped on HS-DSCH/E-DCH. It is not needed otherwise. |
| SRVCC | This IE is mandatory if the RAB is established as part of an SR-VCC procedure and the message is not HANDOVER TO UTRAN COMMAND message and not needed otherwise. |

10.3.4.11 RAB information to reconfigure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|-------|-------|------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| RAB identity | MP | | RAB Identity 10.3.1.14 | | |
| CN domain identity | MP | | CN domain identity 10.3.1.1 | | |
| NAS synchronization indicator | MP | | NAS Synchronization info 10.3.4.12 | Note 1 | |
| CS-HSPA information | CV-CS | | | | REL-8 |
| >UL AMR rate | MD | | Enumerated(t0, t1, t2, t3, t4, t5, t6, t7, t8) | Indicates the bit rate as defined in [62] and [63]. In case NAS Synchronization Indicator indicates AMR, default value is "t7". In case NAS Synchronization Indicator indicates AMR-WB, default value is "t8". 7 spare values are needed. | REL-8 |
| >Max CS delay | MP | | Integer(20..200 by step of 10) | Indicates the maximum possible delay for CS voice frames Unit is ms | REL-8 |

| Condition | Explanation |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| CS | This IE is mandatory if the IE "CN domain identity" has the value "CS domain" and the RAB is mapped on HS-DSCH/E-DCH. It is not needed otherwise. |

NOTE 1: This IE is only relevant for the CS domain.

10.3.4.11a RAB info to replace

This IE contains information to identify a radio access bearer to be replaced with a new radio access bearer as part of SR-VCC procedures. This IE is not included in case SR-VCC from LTE to UMTS.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------|-----------------------|---------|
| RAB identity | MP | | RAB identity 10.3.1.14 | | REL-8 |
| CN domain identity | MP | | CN domain identity 10.3.1.1 | | REL-8 |

10.3.4.12 NAS Synchronization indicator

A container for non-access stratum information to be transferred transparently through UTRAN.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------------------------------------------------------------------------------------------|
| NAS Synchronization indicator | MP | | Bit string(4) | The first/leftmost bit of the bit string contains the most significant bit of the NAS Synchronization indicator. |

10.3.4.13 RB activation time info

This IE contains the time, in terms of RLC sequence numbers, when a certain configuration shall be activated, for a number of radio bearers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|--------------|-----------------------|--------------------------------------------------------------|
| Radio bearer activation time | MP | 1 to <maxRB> | | |
| >RB identity | MP | | RB identity 10.3.4.16 | |
| >RLC sequence number | MP | | Integer (0..4095) | RLC SN [16] . Used for radio bearers mapped on RLC AM and UM |

10.3.4.14 RB COUNT-C MSB information

The MSB of the COUNT-C values of the radio bearer.

| Information Element/Group name | Needed | Multi | Type and reference | Semantics description |
|--------------------------------|--------|-------|---------------------------|--------------------------------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |
| COUNT-C-MSB-uplink | MP | | Integer (0.. $2^{25}-1$) | 25 MSBs from COUNT-C associated to this RB |
| COUNT-C-MSB-downlink | MP | | Integer (0.. $2^{25}-1$) | 25 MSBs from COUNT-C associated to this RB |

10.3.4.15 RB COUNT-C information

The COUNT-C values of the radio bearer.

| Information Element/Group name | Needed | Multi | Type and reference | Semantics description |
|--------------------------------|--------|-------|---------------------------|-----------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |
| COUNT-C-uplink | MP | | Integer (0.. $2^{32}-1$) | |
| COUNT-C-downlink | MP | | Integer (0.. $2^{32}-1$) | |

10.3.4.16 RB identity

An identification number for the radio bearer affected by a certain message.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| RB identity | MP | | Integer(1..32) | Values 1-4 shall only be used for signalling radio bearers. The IE value minus one shall be used as BEARER in the ciphering algorithm. |

10.3.4.17 RB information to be affected

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------|-----------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |
| RB mapping info | MP | | RB mapping info 10.3.4.21 | |

10.3.4.18 RB information to reconfigure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------|-----------------------------------------------------------------------------------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |
| PDCP info | OP | | PDCP info 10.3.4.2 | |
| PDCP SN info | OP | | PDCP SN info 10.3.4.3 | PDCP sequence number info from the network. Present only in case of lossless SRNS relocation. |
| RLC info | OP | | RLC info 10.3.4.23 | |
| RB mapping info | OP | | RB mapping info 10.3.4.21 | |
| RB stop/continue | OP | | Enumerated(stop, continue) | |

10.3.4.19 RB information to release

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------|-----------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |

10.3.4.20 RB information to setup

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------|---------------------------------------------------------|
| RB identity | MP | | RB identity 10.3.4.16 | |
| PDCP info | OP | | PDCP info 10.3.4.2 | |
| CHOICE <i>RLC info type</i> | MP | | | |
| >RLC info | | | RLC info 10.3.4.23 | |
| >Same as RB | | | RB identity 10.3.4.16 | Identity of RB with exactly the same RLC info IE values |
| RB mapping info | MP | | RB mapping info 10.3.4.21 | |

NOTE: This information element is included within IE "Predefined RB configuration".

10.3.4.21 RB mapping info

A multiplexing option for each possible transport channel MAC-d flow or E-DCH MAC-d flow this RB can be multiplexed on.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------|--------------------------|------------------------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Information for each multiplexing option | MP | 1 to <maxRBmuxOptions> | | | |
| >RLC logical channel mapping indicator | CV-UL-RLCLogicalChannels | | Boolean | TRUE indicates that the first logical channel shall be used for data PDUs and the second logical channel shall be used for control PDUs. FALSE indicates that control and data PDUs can be sent on either of the two logical channels. This parameter is not used in this release and shall be set to TRUE. | |
| >Number of uplink RLC logical channels | CV-UL-RLC info | 1 to MaxLoCHperRLC | | 1 or 2 logical channels per RLC entity or radio bearer RLC [16] | |
| >>CHOICE Uplink transport channel type | | | | | REL-6 |
| >>>DCH, RACH, USCH | | | | | REL-6 |
| >>>>Uplink transport channel type | MP | | Enumerated(DCH,RACH,USCH) | USCH is TDD only | |
| >>>>ULTransport channel identity | CV-UL-DCH/USCH | | Transport channel identity 10.3.5.18 | This is the ID of a DCH or USCH (TDD only) that this RB could be mapped onto. | |
| >>>>Logical channel identity | OP | | Integer(1..15) | This parameter is used to distinguish logical channels multiplexed by MAC on a transport channel. | |
| >>>>CHOICE RLC size list | MP | | | The RLC sizes that are allowed for this logical channel. | |

| Use special value of HE field | <i>CV-Not-SIB16o</i> | | Enumerated (TRUE) | The absence of this IE implies: "do not use special value of the HE field in the uplink RLC entity". | REL-7 |
| NOTE 1: If included in SIB type 16, the "Flexible size" does not apply for downlink RLC PDU size (AM RLC). | | | | | |
| NOTE 2: Void. | | | | | |
| NOTE 3: If this IE is absent and the radio bearer is connected to a CS domain radio access bearer, the UE behaviour is unspecified. | | | | | |

| Condition | Explanation |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>Not-SIB16o</i> | If included in SYSTEM INFORMATION BLOCK TYPE 16, this IE is not needed. Otherwise the IE is optional |
| <i>CS-HSPA</i> | This IE is mandatory present If the radio bearer is connected to a CS domain radio access bearer, Otherwise the IE is optional. |

NOTE: This information element is included within IE "Predefined RB configuration".

10.3.4.23a RLC info MBMS

The IE RLC info MBMS is used for point-to-multipoint radio bearers, featuring only the downlink RLC UMD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|----------------|-------|--------------------------------------------------------|-------------------------------------------------|---------|
| DL UM RLC LI size | MP | | Integer (7, 15) | Size in bits to use for the downlink RLC UM LI. | REL-6 |
| DL Duplication Avoidance and Reordering info | <i>CV-MTCH</i> | | UM Duplication Avoidance and Reordering info 10.3.4.26 | | REL-6 |
| DL Out of sequence delivery info | <i>CV-MCCH</i> | | UM Out of sequence delivery info 10.3.4.27 | | REL-6 |

| Condition | Explanation |
|-------------|--------------------------------------------------------------------------------------------|
| <i>MTCH</i> | If the IE concerns MTCH (see Note 1), this IE is optional. Otherwise the IE is not needed. |
| <i>MCCH</i> | If the IE concerns MCCH, this IE is optional. Otherwise the IE is not needed. |

NOTE 1: The UE behaviour is unspecified if this IE is received with regard to an MTCH configured for MBSFN operation. A network should not send this IE with regard to an MTCH configured for MBSFN operation.

10.3.4.24 Signalling RB information to setup

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------|---------------------------------------------------------|
| RB identity | MD | | RB identity 10.3.4.16 | Default value is specified in subclause 8.6.4.1 |
| <i>CHOICE RLC info type</i> | MP | | | |
| >RLC info | | | RLC info 10.3.4.23 | |
| >Same as RB | | | RB identity 10.3.4.16 | Identity of RB with exactly the same RLC info IE values |
| RB mapping info | MP | | RB mapping info 10.3.4.21 | |

NOTE: This information element is included within IE "Predefined RB configuration".

10.3.4.24a SR-VCC Info

This IE contains information that allows the calculation of the CK and IK for the CS domain, due to a SR-VCC procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| NONCE | OP | | Bit string (128) | | REL-8 |

10.3.4.25 Transmission RLC Discard

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHOICE <i>SDU Discard Mode</i> | MP | | | Different modes for discharge the RLC buffer on the transmitter side; "Timer based with explicit signalling", "Timer based without explicit signalling", "Discard after Max_DAT retransmissions" or "No_discard". For unacknowledged mode and transparent mode, only Timer based without explicit signalling is applicable. If "No_discard" is used, reset procedure shall be done after Max_DAT retransmissions |
| >Timer based explicit | | | | |
| >>Timer_MRW | MP | | Integer(50,60, 70, 80, 90, 100, 120, 140, 160, 180, 200, 300, 400, 500, 700, 900) | Elapsed time in milliseconds. It is used to trigger the retransmission of a STATUS PDU containing an MRW SUFI field |
| >>Timer_discard | MP | | Integer(100, 250, 500, 750, 1000, 1250, 1500, 1750, 2000, 2500, 3000, 3500, 4000, 4500, 5000, 7500) | Elapsed time in milliseconds before a SDU is discarded. |

| >T1 | MP | | Integer (10, 20, 30, 40, 50, 60, 70, 80, 90, 100, 120, 140, 160, 200, 300, 400) | Timer (in milliseconds) when PDUs are released to the upper layers even though there are outstanding PDUs with lower TSN values. | REL-7 |
| >Treset | MD | | Integer (1, 2, 3, 4) | Timer in multiples of T1 values (milliseconds). Used when MAC-ehs reordering queue is reset in CELL_FACH and CELL_PCH (FDD and 1.28 Mcps TDD only). Default value is 2 | REL-7 |
| >MAC-ehs window size | MP | | Integer (4, 6, 8, 12, 16, 24, 32) | | REL-7 |

10.3.5.3b Common E-DCH MAC-d flows

This IE is used in relation to MAC-d and MAC-c (for FDD) flows mapped to the E-DCH transport channels.

NOTE: Only for FDD and 1.28 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------|-------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Configured E-DCH MAC-d flow list | MP | 1 to <maxE-DCHMACdFlow> | | | REL-8 |
| >E-DCH MAC-d flow identity | MP | | E-DCH MAC-d Flow Identity 10.3.5.7e | NOTE 1 | REL-8 |
| >E-DCH MAC-d flow power offset | MP | | Integer(0..6) | | REL-8 |
| >E-DCH MAC-d flow maximum number of retransmissions | MP | | Integer (0..15) | | REL-8 |
| >E-DCH MAC-d flow multiplexing list | CV- NotCCCHFDD | | Bitstring (maxE-DCHMACdFlow) | Indicates, if this is the first MAC-d flow for which PDUs are placed in the MAC-i PDU, the other MAC-d flows from which MAC-d PDUs are allowed to be included in the same MAC-i PDU. Bit 0 is for MAC-d flow 0, Bit 1 is for MAC-d flow 1, ... Value '1' for a bit means multiplexing is allowed. Bit 0 is the first/leftmost bit of the bit string. NOTE: The bit that corresponds to the MAC-d flow itself is ignored. | REL-8 |
| >E-DCH MAC-d flow retransmission timer | CV- <i>Tdd128</i> | | Enumerated (10, 15, 20, 25, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, 95, 100, 110, 120, 140, 160, 200, 240, 280, 320, 400, 480, 560) | Unit: ms | REL-8 |

NOTE 1: For FDD, E-DCH MAC-d flow identity 7 is reserved for CCCH transmission.

| Condition | Explanation |
|-------------------|------------------------------------------------------------------------------------------------------------------|
| <i>Tdd128</i> | This IE is mandatory present for 1.28 Mcps TDD, otherwise it is not needed. |
| <i>NotCCCHFDD</i> | This IE is not needed for the E-DCH MAC-d flow reserved for CCCH transmission for FDD, otherwise it is optional. |

10.3.5.4 Deleted DL TrCH information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------------------------------------------------------------------------------------------------|------------|-------|--------------------------------------|-----------------------|---------------|
| Downlink transport channel type | MP | | Enumerated (DCH,DSCH | Note 1 | REL-5 |
| | | | , HS-DSCH) | | |
| DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | | REL-5 |
| | | | | | CV-notHS-DSCH |
| CHOICE DL MAC header type | CV-HS-DSCH | | | | REL-7 |
| >MAC-hs | | | | | REL-7 |
| >>DL HS-DSCH MAC-d flow identity | MP | | MAC-d flow identity 10.3.5.7c | | REL-5 |
| >MAC-ehs | | | | | REL-7 |
| >>DL HS-DSCH MAC-ehs reordering queue | MP | | MAC-ehs Queue Id 10.3.5.7f | | REL-7 |
| Note 1: The IE "Downlink transport channel type" value " DSCH " should not be used for FDD. If received the UE behaviour is unspecified. | | | | | |

| Condition | Explanation |
|-------------------|-------------------------------------------------------------------------------------------------------------|
| <i>NotHS-DSCH</i> | If the downlink transport channel type is DCH or DSCH then this IE is mandatory otherwise it is not needed. |
| <i>HS-DSCH</i> | If the downlink transport channel type is HS-DSCH then this IE is mandatory otherwise it is not needed. |

10.3.5.5 Deleted UL TrCH information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|----------|-------|--------------------------------------|-----------------------|-------------|
| Uplink transport channel type | MP | | Enumerated(DCH,USCH | USCH is TDD only | REL-6 |
| | | | ,E-DCH) | | |
| UL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | | REL-6 |
| | | | | | CV-NotE-DCH |
| E-DCH MAC-d flow identity | CV-E-DCH | | E-DCH MAC-d flow identity 10.3.5.7e | | REL-6 |

| Condition | Explanation |
|-----------------|-----------------------------------------------------------------------------------------------------------|
| <i>NotE-DCH</i> | If the uplink transport channel type is DCH or USCH then this IE is mandatory otherwise it is not needed. |
| <i>E-DCH</i> | If the uplink transport channel type is E-DCH then this IE is mandatory otherwise it is not needed. |

10.3.5.6 DL Transport channel information common for all transport channels

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|------------------|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|---------|
| SCCPCH TFCS | OP | | Transport Format Combination Set 10.3.5.20 | This IE should not be included in this version of the protocol. | |
| CHOICE <i>mode</i> | MP | | | Although this IE is not always required, need is MP to align with ASN.1 | |
| | OP | | | | REL-4 |
| >FDD | | | | | |
| >>CHOICE <i>DL parameters</i> | OP | | | | |
| >>>Explicit | | | | | |
| >>>>DL DCH TFCS | MP | | Transport Format Combination Set 10.3.5.20 | Although this IE is not always required, need is MP to align with ASN.1 | |
| | OP | | | | REL-4 |
| >>>SameAsUL | | | | (no data) See note 2 | |
| >TDD | | | | | |
| >>Individual DL CCTrCH information | OP | 1 to <maxCCTrCH> | | | |
| >>>DL TFCS Identity | MP | | Transport format combination set identity 10.3.5.21 | Identifies a special CCTrCH for shared or dedicated channels. | |
| >>>CHOICE <i>DL parameters</i> | MP | | | | |
| >>>>Independent | | | | | |
| >>>>>DL TFCS | MP | | Transport format combination set 10.3.5.20 | | |
| >>>>>SameAsUL | | | | See note 2 | |
| >>>>>>UL DCH TFCS Identity | MP | | Transport format combination set identity 10.3.5.21 | Same TFCS applies as specified for the indicated UL DCH TFCS identity except for information applicable for UL only | |

NOTE 1: This information element is included within IE "Predefined TrCh configuration".

NOTE 2: The UTRAN should only use the choice "SameAsUL" if the transport channel numbering, the number of TFs in the TFS of each transport channel, and the TFCS are identical in the uplink and downlink.

10.3.5.7 Void

10.3.5.7a HARQ Info

This IE is used in relation to the HS-DSCH transport channel.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------------|------|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|---------|

| Condition | Explanation |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Message | This IE is not needed if the IE "Uplink Transport channel information common for all transport channels" is included in RRC CONNECTION SETUP or SYSTEM INFORMATION BLOCK TYPE 16 messages. Otherwise it is optional. |

10.3.5.16 TFCS Removal Information

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|---------------|----------------------------------------------|------------------------------|
| Removal TFCI information | MP | 1 to <maxTFC> | | |
| >TFCI | MP | | Transport Format Combination (TFC) 10.3.5.19 | In TDD 0 is a reserved value |

10.3.5.17 Void

10.3.5.18 Transport channel identity

This information element is used to distinguish transport channels. Transport channels of different type (RACH, USCH, FACH/PCH, DSCH or DCH) have separate series of identities. This also holds for uplink and downlink transport channel identities (i.e. for DCH). Depending on in which context a transport channel identity n that is sent, it will have different meaning

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Transport channel identity | MP | | Integer(1..32) | |

10.3.5.19 Transport Format Combination (TFC)

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Transport format combination | MP | | Integer (0..1023) | |

10.3.5.20 Transport Format Combination Set

Indicates the allowed combinations of already defined Transport formats and the mapping between these allowed TFCs and the corresponding TFCI values.

For TDD, different coded composite transport channels have independent transport format combination sets and thus independent TFCI values.

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------------------|-----------------------|
| TFCI Field 1 Information | MP | | TFCS explicit Configuration 10.3.5.13 | |

10.3.5.21 Transport Format Combination Set Identity

NOTE: Only for TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------------------------------------------------------|
| TFCS ID | MD | | Integer (1..8) | Indicates the identity of every TFCS within a UE. Default value is 1. |

| | | | | |
|--------------------------|----|--|---------|--------------------------------------------------------------|
| Shared Channel Indicator | MP | | Boolean | TRUE indicates the use of shared channels. Default is FALSE. |
|--------------------------|----|--|---------|--------------------------------------------------------------|

10.3.5.22 Transport Format Combination Subset

Indicates which Transport format combinations in the already defined Transport format combination set are allowed.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------------|------|----------------|----------------------------------------|-----------------------|
| CHOICE <i>Subset representation</i> | MP | | | |
| >Minimum allowed Transport format combination index | | | Transport format combination 10.3.5.19 | |
| >Allowed transport format combination list | | 1 to <maxTFC> | | |
| >>Allowed transport format combination | MP | | Transport format combination 10.3.5.19 | |
| >Non-allowed transport format combination list | | 1 to <maxTFC> | | |
| >>Non-allowed transport format combination | MP | | Transport format combination 10.3.5.19 | |
| >Restricted TrCH information | | 1 to <maxTrCH> | | |
| >>Uplink transport channel type | MP | | Enumerated(DCH, USCH) | USCH is TDD only |
| >>Restricted UL TrCH identity | MP | | Transport channel identity 10.3.5.18 | |
| >>Allowed TFIs | OP | 1 to <maxTF> | | |
| >>>Allowed TFI | MP | | Integer(0..31) | |
| >Full transport format combination set | | | | (No data) |

| TFCI coding | MD | | Integer(4,8,16,32) | Describes the amount of bits for the TFCI bits code word as described in [31]. Defaults is no TFCI bit: In case of 8 PSK in 1.28Mcps TDD: 4 corresponds to 6 TFCI code word bits. 8 corresponds to 12 TFCI code word bits. 16 corresponds to 24 TFCI code word bits. 32 corresponds to 48 TFCI code word bits. |
| Puncturing limit | MP | | Real(0.40..1.0 by step of 0.04) | |

10.3.6.11 Constant value

NOTE: Only for FDD.

This constant value is used by the UE to calculate the initial output power on PRACH according to the Open loop power control procedure.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Constant value | MP | | Integer (-35..-10) | In dB |

10.3.6.11a Constant value TDD

NOTE: Only for 3.84 Mcps TDD and 7.68 Mcps TDD.

3.84 Mcps TDD and 7.68 Mcps TDD constant values are used for open loop power control of PRACH, USCH, HS-SICH and UL DPCH as defined in subclause 8.5.7.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| TDD Constant value | MP | | Integer (-35..+10) | In dB |

10.3.6.12 Void

10.3.6.13 Void

10.3.6.14 Void

10.3.6.15 Void

10.3.6.16 Default DPCH Offset Value

Indicates the default offset value within interleaving size at a resolution of 512chip (1/5 slot) in FDD and a resolution of one frame in TDD to offset CFN in the UE. This is used to distribute discontinuous transmission periods in time and also to distribute NodeB-RNC transmission traffics in time. Even though the CFN is offset by DOFF, the start timing of the interleaving will be the timing that "CFN mod (interleaving size)"=0 (e.g. interleaving size: 2,4,8) in both UE and SRNC.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|------|-------|------------------------------------|------------------------------------------------------|
| CHOICE <i>mode</i> | | | | |
| >FDD | | | | |
| >>Default DPCH Offset Value (DOFF) | MP | | Integer (0..306688 by step of 512) | Number of chips=. 0 to 599 time 512 chips, see [10]. |
| >TDD | | | | |
| >>Default DPCH Offset Value (DOFF) | MP | | Integer(0..7) | Number of frames; See [10] |

10.3.6.17 Downlink channelisation codes

NOTE: Only for 1.28 Mcps TDD and 3.84 Mcps TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CHOICE <i>codes representation</i> | MP | | | |
| >Consecutive codes | | | | |
| >>First channelisation code | MP | | Enumerated ((16/1)...(16/16)) | If a TFCI exists in this timeslot, it is mapped to the channelisation code as defined in [30]. |
| >>Last channelisation code | MP | | Enumerated ((16/1)...(16/16)) | If this is the same as First channelisation code, only one code is used by the physical layer. |
| >Bitmap | | | | |
| >>Channelisation codes bitmap | MP | | Bit string(chCode16-SF16, chCode15-SF16, chCode14-SF16, chCode13-SF16, chCode12-SF16, chCode11-SF16, chCode10-SF16, chCode9-SF16, chCode8-SF16, chCode7-SF16, chCode6-SF16, chCode5-SF16, chCode4-SF16, chCode3-SF16, chCode2-SF16, chCode1-SF16) SIZE (16) | Each bit indicates the availability of a channelisation code for SF16, where the channelisation codes are numbered as channelisation code 1 (SF16) to channelisation code 16 (SF16). (For SF 16, a 1 in the bitmap means that the corresponding code is used, a 0 means that the corresponding code is not used.) If all bits are set to zero, SF 1 shall be used. For dedicated MBSFN frequency timeslot, if the first half in the bit pattern is set to 1010101000000000, the first channelisation code with SF 2 shall be used; if the second half of bit pattern is set to 0000000010101010, the second channelisation code with SF 2 shall be used; if all bits are set to 1010101010101010, both the first and second channelisation codes with SF2 shall be used. |

10.3.6.17a Downlink channelisation codes VHCR

NOTE: Only for 7.68 Mcps TDD VHCR

10.3.6.33 DPCH compressed mode info

NOTE: Only for FDD.

This information element indicates the parameters of the compressed mode to be used by the UE in order to perform inter-frequency and inter-RAT measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------|---------------|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Transmission gap pattern sequence | MP | 1 to <maxTGPS> | | | |
| >TGPSI | MP | | TGPSI 10.3.6.82 | | |
| >TGPS Status Flag | MP | | Enumerated(activate, deactivate) | This flag indicates whether the Transmission Gap Pattern Sequence shall be activated or deactivated. | |
| >TGCFN | CV-Active | | Integer (0..255) | Connection Frame Number of the first frame of the first pattern within the Transmission Gap Pattern Sequence. | |
| >Transmission gap pattern sequence configuration parameters | OP | | | | |
| >>TGMP | MP | | Enumerated(TDD measurement, FDD measurement, GSM carrier RSSI measurement, GSM Initial BSIC identification, GSM BSIC re-confirmation, Multi-carrier measurement) | Transmission Gap pattern sequence Measurement Purpose. | |
| | | | E-UTRA measurement) | One spare value is needed | REL-8 |
| >>Frequency specific compressed mode | CV-Active-FDD | | Enumerated (TRUE) | TRUE means that the frequency specific compressed mode is configured. | REL-10 |
| >>TGPRC | MP | | Integer (1..511, Infinity) | The number of transmission gap patterns within the Transmission Gap Pattern Sequence. | |
| >>TGSN | MP | | Integer (0..14) | Transmission Gap Starting Slot Number The slot number of the first transmission gap slot within the TGCFN. | |
| >>TGL1 | MP | | Integer(1..14) | The length of the first Transmission Gap within the transmission gap pattern expressed in number of slots | |
| >>TGL2 | MD | | Integer (1..14) | The length of the second Transmission Gap within the transmission gap pattern. If omitted, then TGL2=TGL1. The value of TGL2 shall be ignored if TGD is set to "undefined" | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|-------|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>TGD | MP | | Integer(15..269, undefined) | Transmission gap distance indicates the number of slots between starting slots of two consecutive transmission gaps within a transmission gap pattern. If there is only one transmission gap in the transmission gap pattern, this parameter shall be set to undefined. | |
| >>TGPL1 | MP | | Integer (1..144) | The duration of transmission gap pattern 1. | |
| >>RPP | MP | | Enumerated (mode 0, mode 1). | Recovery Period Power control mode during the frame after the transmission gap within the compressed frame. Indicates whether normal PC mode or compressed PC mode is applied | |
| >>ITP | MP | | Enumerated (mode 0, mode 1). | Initial Transmit Power is the uplink power control method to be used to compute the initial transmit power after the compressed mode gap. | |
| >>CHOICE <i>UL/DL mode</i> | MP | | | | |
| >>>DL only | | | | Compressed mode used in DL only | |
| >>>>Downlink compressed mode method | MP | | Enumerated (SF/2, higher layer scheduling) | Method for generating downlink compressed mode gap. If F-DPCH is configured this IE shall not be used by the UE | |
| >>>>UL only | | | | Compressed mode used in UL only | |
| >>>>Uplink compressed mode method | MP | | Enumerated (SF/2, higher layer scheduling) | Method for generating uplink compressed mode gap | |
| >>>>UL and DL | | | | Compressed mode used in UL and DL | |
| >>>>Downlink compressed mode method | MP | | Enumerated (SF/2, higher layer scheduling) | Method for generating downlink compressed mode gap. If F-DPCH is configured this IE shall not be used by the UE | |
| >>>>Uplink compressed mode method | MP | | Enumerated (SF/2, higher layer scheduling) | Method for generating uplink compressed mode gap | |
| >>Downlink frame type | MP | | Enumerated (A, B) | If F-DPCH is configured this IE shall not be used by the UE | |
| >>DeltaSIR1 | MP | | Real(0..3 by step of 0.1) | Delta in DL SIR target value to be set in the UE during the frame containing the start of the first transmission gap in the transmission gap pattern (without including the effect of the bit-rate increase). | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|---------------------------|-------|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | | | If F-DPCH is configured this IE shall not be used by the UE | |
| >>DeltaSIRafter1 | MP | | Real(0..3 by step of 0.1) | Delta in DL SIR target value to be set in the UE one frame after the frame containing the start of the first transmission gap in the transmission gap pattern. If F-DPCH is configured this IE shall not be used by the UE | |
| >>DeltaSIR2 | OP | | Real(0..3 by step of 0.1) | Delta in DL SIR target value to be set in the UE during the frame containing the start of the second transmission gap in the transmission gap pattern (without including the effect of the bit-rate increase) When omitted, DeltaSIR2 = DeltaSIR1. If F-DPCH is configured this IE shall not be used by the UE | |
| >>DeltaSIRafter2 | OP | | Real(0..3 by step of 0.1) | Delta in DL SIR target value to be set in the UE one frame after the frame containing the start of the second transmission gap in the transmission gap pattern. When omitted, DeltaSIRafter2 = DeltaSIRafter1. If F-DPCH is configured this IE shall not be used by the UE | |
| >>N Identify abort | <i>CV-Initial BSIC</i> | | Integer(1..128) | Indicates the maximum number of repeats of patterns that the UE shall use to attempt to decode the unknown BSIC of the GSM cell in the initial BSIC identification procedure | |
| >>T Reconfirm abort | <i>CV-Re-confirm BSIC</i> | | Real(0.5..10.0 by step of 0.5) | Indicates the maximum time allowed for the re-confirmation of the BSIC of one GSM cell in the BSIC re-confirmation procedure. The time is given in steps of 0.5 seconds. | |

| Condition | Explanation |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Active</i> | This IE is mandatory present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |
| <i>Active-FDD</i> | This IE can be included only for FDD measurements. It is optional present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |
| <i>Initial BSIC</i> | This IE is mandatory present when the value of the IE "TGMP" is set to "GSM Initial BSIC identification" and not needed otherwise. |
| <i>Re-confirm BSIC</i> | This IE is mandatory present when the value of the IE "TGMP" is set to "GSM BSIC re-confirmation" and not needed otherwise. |

10.3.6.34 DPCH Compressed Mode Status Info

This information element indicates status information of the compressed mode used by the UE in order to perform inter-frequency and inter-RAT measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------|--------------|-----------------|----------------------------------|---------------------------------------------------------------------------------------------------------------|
| TGPS reconfiguration CFN | MP | | Integer (0..255) | |
| Transmission gap pattern sequence | MP | 1 to <maxTGP S> | | |
| >TGPSI | MP | | TGPSI 10.3.6.82 | Transmission Gap Pattern Sequence Identifier |
| >TGPS Status Flag | MP | | Enumerated(activate, deactivate) | This flag indicates whether the Transmission Gap Pattern Sequence it shall be activated or deactivated. |
| >TGCFN | CV-Active | | Integer (0..255) | Connection Frame Number of the first frame of the first pattern within the Transmission Gap Pattern Sequence. |
| >Frequency specific compressed mode | CV-Active-OP | | Enumerated (TRUE) | TRUE means that the frequency specific compressed mode is configured. |

| Condition | Explanation |
|------------------|------------------------------------------------------------------------------------------------------------------|
| <i>Active</i> | This IE is mandatory present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |
| <i>Active-OP</i> | This IE is optional present when the value of the IE "TGPS Status Flag" is "Activate" and not needed otherwise. |

10.3.6.34a DTX-DRX information

| >>Timeslot Resource Related Informationl | MP | | Bit string (6) | Each bit indicates availability of a timeslot, where the bit 0 corresponds to TS0, the bit 1 is TS2, the bit 2 is TS3... bit 6 corresponds to TS6. The value 1 of a bit indicates that the corresponding timeslot is available. Bit 0 is the first/leftmost bit of the bit string. | REL-8 |
| >>Code Resource Information | MP | | | Note 2 | REL-8 |
| >>>Start code | MP | | Enumerated((16/1)..(16/1 6)) | | REL-8 |
| >>>Stop code | MP | | Enumerated((16/1)..(16/1 6)) | | REL-8 |

| | | | | | |
|------------------------------|----|--------|-----------------|-------------------------------------------------------------------------------------------------------|-------|
| >Paging Sub-Channel Size | MP | | Integer (1..3) | number of frames for a Paging sub-channel | REL-8 |
| >Transport Block Size List | MP | 1 to 2 | | | REL-8 |
| >>Transport Block Size Index | MP | | Integer (1..32) | Index of value range 1 to 32 of the MAC-ehs transport block size as described in Table 9.2.3.3.8 [15] | REL-8 |

NOTE 1: The IE is not signalled when the "PICH info" is present in "Secondary CCPCH system information" in SIB5 and SIB6.

NOTE 2: HS-PDSCH channelisation codes are allocated contiguously from a signalled start code to a signalled stop code, and the allocation includes both the start and stop code. If a value of Start code = 16 and Stop code = 1 is signalled, a spreading factor of SF=1 shall be used for the HS-PDSCH resources.

NOTE 3: The timing between PICH and the paging associated HS-PDSCH is specified in [30]. UE should receive the HS-PDSCH based on the timing specification.

10.3.6.36e HS-SCCH system info

These parameters enable the UE to receive transmission on HSDPA cell resources, when the UE is not in CELL_DCH.

NOTE: for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|------|--------------------|----------------------------------------|---------------------------------------------------------------------------------------------------------------------|---------|
| DL Scrambling Code | MD | | Secondary scrambling code 10.3.6.74 | DL Scrambling code to be applied for HS-DSCH and HS-SCCH. Default is same scrambling code as for the primary CPICH. | REL-7 |

10.3.6.41 Midamble shift and burst type

NOTE: Only for TDD.

This information element indicates burst type and midamble allocation. Three different midamble allocation schemes exist:

- Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)
- Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)
- UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL).

|--------------------------------|------|-------|--------------------|-----------------------|---------|

| | | | | | |
|---------------------------------|----|--|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Available Signature | MD | | Bit string(16) | The default value is the inverse of the bitstring indicated in the IE "Available Signature" in the IE "PRACH Info (for RACH)" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. Each bit indicates availability for a signature. Each available signature on the AICH is associated with one Common E-DCH Resource Configuration in the "Common E-DCH resource configuration information list". | REL-8 |
| E-AI Indication | MP | | BOOLEAN | TRUE: E-AIs are in use on the AICH. FALSE: E-AIs are not in use on the AICH. | REL-8 |
| Preamble scrambling code number | MD | | Integer (0 .. 15) | The default value is the value indicated in the IE "Preamble scrambling code number" in the IE "PRACH Info (for RACH)" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. Identification of scrambling code, see [28] | REL-8 |
| Available Sub Channel Number | MD | | Bit string(12) | The default value is the same value indicated in the IE "Available Sub Channel Number" in the IE "PRACH system information list" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. Each bit indicates availability for a subchannel, where the subchannels are numbered "subchannel 0" to "subchannel 11". The value 1 of a bit indicates that the corresponding subchannel is available and the value 0 indicates that it is not available. | REL-8 |

| | | | | | |
|-------------------------------|----|--|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| PRACH partitioning | MD | | PRACH partitioning 10.3.6.53 | Default value is the value of "PRACH partitioning" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. | REL-8 |
| Persistence scaling factors | OP | | Persistence scaling factors 10.3.6.48 | This IE shall not be present if only ASC 0 and ASC 1 are defined. If this IE is absent, default value is the value of "Persistence scaling factors" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis, if value exists | REL-8 |
| AC-to-ASC mapping | MD | | AC-to-ASC mapping 10.3.6.1 | Default value is the value of "AC-to-ASC mapping" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. | REL-8 |
| Primary CPICH TX power | MD | | Primary CPICH TX power 10.3.6.61 | Default value is the value of "Primary CPICH TX power" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. | REL-8 |
| Constant value | MD | | Constant value 10.3.6.11 | Default value is the value of "Constant value" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis | REL-8 |
| PRACH power offset | MD | | PRACH power offset 10.3.6.54 | Default value is the value of "PRACH power offset" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis | REL-8 |
| PRACH transmission parameters | MD | | RACH transmission parameters 10.3.6.67 | Default value is the value of "RACH transmission parameters" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. | REL-8 |
| AICH info | MD | | AICH info 10.3.6.2 | Default value is the value of "AICH info" in the first occurrence in list "PRACH system information list" in SIB5 or SIB5bis. | REL-8 |
| Power offset P_{p-e} | MP | | Integer(-5..10) | In dB. Power offset between the last transmitted preamble and the initial DPCCH transmission as defined in [26] | REL-8 |

| Condition | Explanation |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| <i>SIB5-MD</i> | The information element is present only in SIB 5 and in SIB5bis. In SIB 5 and in SIB 5bis it is mandatory with default. |
| <i>Add-RACH-TFS</i> | The information element is MP if the IE "Additional RACH TFS for CCCH" is included. Otherwise the information element is not needed. |

NOTE: If the setting of the PRACH information results in that a combination of a signature, preamble scrambling code and subchannel corresponds to a RACH with different TFS and/or TFCS, then for that combination only the TFS/TFCS of the PRACH listed first is valid, where PRACHs listed in System Information Block type 5 or 5bis shall be counted first.

10.3.6.56 Predefined PhyCH configuration

This information element concerns a pre- defined configuration of physical channel parameters.

| CHOICE event result | Condition under which the given event result is chosen |
|-------------------------------------------|--------------------------------------------------------|
| Intra-frequency measurement event results | If measurement type = intra-frequency measurement |
| Inter-frequency measurement event results | If measurement type = inter-frequency measurement |
| Inter-RAT measurement event results | If measurement type = inter-RAT measurement |
| Traffic volume measurement event results | If measurement type = traffic volume measurement |
| Quality measurement event results | If measurement type = Quality measurement |
| UE internal measurement event results | If measurement type = UE internal measurement |
| UE positioning measurement event results | If measurement type = UE positioning measurement |

10.3.7.8 FACH measurement occasion info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------|------|-------|--------------------|-------------------------------------------|---------|
| FACH Measurement occasion cycle length coefficient | OP | | Integer(1..12) | | |
| Inter-frequency FDD measurement indicator | MP | | Boolean | TRUE means that measurements are required | |
| Inter-frequency TDD 3.84 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |
| Inter-frequency TDD 7.68 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-7 |
| Inter-frequency TDD 1.28 Mcps measurement indicator | MP | | Boolean | TRUE means that measurements are required | REL-4 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------|-------------------------|-----------------------|---------|
| Inter-RAT measurement indicators | OP | 1 to <maxOther RAT> | | | |
| >RAT type | MP | | Enumerated(GSM, IS2000) | NOTE 1 | |
| NOTE1: If "CELL_FACH Absolute Priority Measurement Indicator" is received in SIB19 then measurement occasions configured for GSM shall be used by the UE for GSM and/or EUTRAN measurements according to the rules in [4] | | | | | |

10.3.7.9 Filter coefficient

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------------------------------|-----------------------|
| Filter coefficient | MD | | Integer(0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 13, 15, 17, 19) | Default value is 0 |

10.3.7.9a GSM cell group

This IE encodes a list of GSM cells specified by their ARFCN values [45].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------|-------------------------------|----------------------------------------------|---------|
| Starting ARFCN | MP | | Integer (0..1023) | First ARFCN value in the set | REL-8 |
| Band Indicator | MP | | Enumerated (dcs1800, pcs1900) | GSM BAND_INDICATOR [45] | REL-8 |
| CHOICE <i>Following ARFCNs</i> | MP | | | | REL-8 |
| >Explicit list | | | | | REL-8 |
| >>List of ARFCNs | MP | 0 to 31 | Integer (0..1023) | Following ARFCN values | REL-8 |
| >Equally spaced | | | | | REL-8 |
| >>ARFCN spacing | MP | | Integer (1..8) | Increment "d" ARFCN values | REL-8 |
| >>Number of following ARFCNs | MP | | Integer (0..31) | Number "n" of following ARFCN values, NOTE 1 | REL-8 |
| >Variable bitmap format | | | | | REL-8 |
| >>Bitmap | MP | | Octet string (1..16) | NOTE 2 | REL-8 |
| >Continuous range | | | | | REL-8 |
| >>Ending ARFCN | MP | | Integer (0..1023) | Last ARFCN value in the set, NOTE 3 | REL-8 |
| NOTE 1: Let the IE "Starting ARFCN" = s. The complete set of (n+1) ARFCN values is defined as: {s, ((s + d) mod 1024), ((s + 2*d) mod 1024) ... ((s + n*d) mod 1024)}. | | | | | |
| NOTE 2: Bitmap representing the following ARFCN values in the set. Let the IE "Starting ARFCN" = s. The first bit of the first octet in the bitmap corresponds to ARFCN = ((s + 1) mod 1024), the next bit to the ARFCN = ((s + 2) mod 1024), and so on. If the bitmap consist of N octets, the last bit of octet N corresponds to ARFCN = ((s + 8*N) mod 1024). The complete set of ARFCN values consists of ARFCN = s and the ARFCN values, where the corresponding bit in the bitmap is set to "1". | | | | | |
| NOTE 3: Let the IEs "Starting ARFCN" = s and "Ending ARFCN" = t. The complete set of ARFCN values is defined as: {s, ((s + 1) mod 1024), ((s + 2) mod 1024) ... ((t - 1) mod 1024), t}. | | | | | |

10.3.7.10 HCS Cell re-selection information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|-------------------------------|-------|---------------------------------------|---------------------------------------------------------|
| Penalty_time | MD | | Integer(0, 10, 20, 30, 40, 50, 60) | Default value is 0 which means = not used In seconds |
| Temporary_offsets | <i>CV-Penalty used</i> | | | |
| >Temporary_offset1 | MP | | Integer(3, 6, 9, 12, 15, 18, 21, inf) | [dB] |
| >Temporary_offset2 | <i>CV-FDD-Quality-Measure</i> | | Integer(2, 3, 4, 6, 8, 10, 12, inf) | [dB] |

| Condition | Explanation |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Penalty used</i> | This IE is not needed if the IE "Penalty time" equals "not used", else it is mandatory present. |
| <i>FDD-Quality-Measure</i> | This IE is not needed if the IE "Cell selection and reselection quality measure" has the value CPICH RSCP, otherwise the IE is mandatory present. This conditional presence is implemented in ASN.1 by the use of a specific RSCP and EcN0 variant of 10.3.7.10. |

10.3.7.11 HCS neighbouring cell information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------|------|-------|------------------------------------------------|-----------------------|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| HCS Cell Re-selection Information | MP | | HCS Cell Re-selection Information 10.3.7.10 | |

10.3.7.12 HCS Serving cell information

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|-----------------------------|-------|--------------------------------------------------|----------------------------------|
| HCS_PRIO | MD | | Integer (0..7) | Default value = 0 |
| Qhcs | MD | | Qhcs 10.3.7.54a | Default value = 0 |
| T _{CRmax} | MD | | Enumerated(not used, 30, 60, 120, 180, 240) | [s] Default value is not used |
| NCR | <i>CV-UE speed detector</i> | | Integer(1..16) | Default value = 8 |
| T _{CRmaxHyst} | <i>CV-UE speed detector</i> | | Enumerated(not used, 10, 20, 30, 40, 50, 60, 70) | [s] |

| Condition | Explanation |
|--------------------------|----------------------------------------------------------------------------------------------|
| <i>UE Speed detector</i> | This IE is not needed if T _{CRmax} equals 'not used', else it is mandatory present. |

10.3.7.12a Idle Interval Information

NOTE: Used for TDD only. If the multi-RAT UE needs idle interval for E-UTRAN measurements in CELL_DCH state, this IE may be configured.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| k | MD | | Integer (2..3) | This IE is the coefficient parameter to calculate the idle interval period. Default value is 2. The actual idle interval period equal to 2^k radio frames. | REL-8 |
| Offset | MD | | Integer (0..7) | The idle interval position in the period. Default value is 0. | REL-8 |

10.3.7.13 Inter-frequency cell info list

Contains the information for the list of measurement objects for an inter-frequency measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------|------|---------------------------|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>Inter-frequency cell removal</i> | OP | | | | |
| >Remove all inter-frequency cells | | | | No data | |
| >Remove some inter-frequency cells | | | | | |
| >>Removed inter-frequency cells | MP | 1 .. <maxCellMeas> | | | |
| | | 1 .. <maxCellMeas-ext> | | NOTE 2 | REL-12 |
| >>>Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| | | | Integer(0 .. <maxCellMeas-ext>-1) | NOTE 2 | REL-12 |
| >No inter-frequency cells removed | | | | No data | |
| New inter-frequency cells | OP | 1 to <maxCellMeas> | | | |
| | | 1 to <maxCellMeas-ext> | | NOTE 2 | REL-12 |
| >Inter-frequency cell id | MD | | Integer(0 .. <maxCellMeas>-1) | | |
| | | | Integer(0 .. <maxCellMeas-ext>-1) | NOTE 2 | REL-12 |
| >Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list. It is always ensured by the UTRAN that more than one measurement object for the same physical frequency is not configured regardless of the UARFCN used to indicate this. NOTE: The first occurrence is then MP. | |
| >Cell info | MP | | Cell info 10.3.7.2 | | |
| >CHOICE <i>mode specific info</i> | MP | | | | REL-7 |
| >>No information | | | | No data for FDD, TDD 3.84 Mcps or TDD 7.68 Mcps | REL-7 |
| >>>TDD 1.28 Mcps | | | | | REL-7 |

| | | | | | |
|------------------------------------------------|------------|-----------------------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| >>>Intra-SecondaryFrequency Indicator | MP | | Boolean | TRUE means the inter frequency neighbour cell has a secondary frequency which is the same as the current working frequency of UE. | REL-7 |
| >>>SNPL Monitor Set Indicator | OP | | Bit string(5) | Each bit indicates whether the inter frequency neighbour cell has a secondary frequency which is the same as the frequency of a specific E-DCH carrier of UE. Bit0 indicate the E-DCH carrier with lowest UARFCN, and Bit1 indicate the E-DCH carrier with the second lowest UARFCN, Bit n indicate the E-DCH carrier with the n+1 lowest UARFCN. the Primary E-DCH carrier shall not be considered in the bitmap. | REL-10 |
| Reduced measurement performance frequency list | CV-Measure | 1 to <maxRMPf frequencies > | | | REL-12 |
| >Reduced measurement performance | MP | | BOOLEAN | TRUE indicates that the frequency is configured for reduced measurement performance [19]. FALSE indicates that the frequency is configured for normal measurement performance [19]. The ith entry in the Reduced measurement performance frequency list corresponds to the ith frequency signalled in the "New inter-frequency cells" list. | REL-12 |
| Cells for measurement | CV-BCHopt | 1 to <maxCellMeas> | | | |

| | | | | | |
|-------------------------------------------------|----------------|-------------------------------------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| | | 1 to <maxCellMeas-ext> | | | REL-12 |
| >Inter-frequency cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| | | | Integer(0 .. <maxCellMeas-ext>-1) | | REL-12 |
| CSG Inter-frequency cell info | CV- BCHopt | | 10.3.7.120 | | REL-9 |
| Inter-frequency SI Acquisition | CV- BCHopt | | 10.3.7.124 | | REL-9 |
| Multiple Frequency Info List FDD | CV- MCM_opt | 1 to <maxNum FDDFreqs > | | Each entry in the list corresponds to a UARFCN listed in the "New inter-frequency cells" IE (common to all those cells sharing the same "Frequency info" value). See NOTE 1. | REL-10 |
| >Multiple Frequency bands Indicator List FDD | OP | 1 to< maxMultipl eFrequencyBandsFD D > | | Indicates, per neighbour UARFCN, a list of frequency bands which the cells belong to. Absence of this IE indicates that there are no Multiple Bands for the particular UARFCN. | REL-10 |
| >>CHOICE frequency bands indicator | MP | | | | REL-10 |
| >>>Frequency band indicator | | | Frequency band indicator 10.3.6.35b | | REL-10 |
| >>>Frequency band indicator 2 | | | Frequency band indicator 2 10.3.6.35c | | REL-10 |
| >>>Frequency band indicator 3 | | | Frequency band indicator 3 10.3.6.35ca | | REL-10 |

NOTE 1: The UTRAN should signal the "Frequency info" IE only once in "New Inter-frequency cells" for each UARFCN i.e. for the first Inter-frequency neighbour cell using that UARFCN. For each subsequent Inter-frequency neighbour cell having the same UARFCN, the "Frequency info" should not be included, but rather the Mandatory Default (MD) value will be used. See Annex G.2.

NOTE 2: Not applicable when sent in SYSTEM INFORMATION.

| Condition | Explanation |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>BCHopt</i> | This IE is not needed when sent in SYSTEM INFORMATION. Otherwise, the IE is Optional |
| <i>MCM_opt</i> | This IE is OPTIONAL when sent in SYSTEM INFORMATION. Otherwise, the IE is not needed. |
| <i>Measure</i> | The IE is optional present in System Information Block type 11, 11bis, 11ter, 12 and MEASUREMENT CONTROL message. Otherwise the IE is not needed. |

10.3.7.14 Inter-frequency event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------|----------------------------|
| Inter-frequency event identity | MP | | Enumerated(2a, 2b, 2c, 2d, 2e, 2f, 2g) | One spare value is needed. |

10.3.7.15 Inter-frequency measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------------|------|--------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Inter-frequency measurement results | OP | 1 to <maxFreq> | | |
| >Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the value of the previous "frequency info" in the list. NOTE: The first occurrence is then MP. |
| >UTRA carrier RSSI | OP | | Integer(0..76) | According to UTRA_carrier_RSSI_LEV in [19] and [20]. Fifty-one spare values are needed. |
| >Inter-frequency cell measurement results | OP | 1 to <maxCellMeas> | | Only cells for which all reporting quantities are available should be included. |
| >>Cell measured results | MP | | Cell measured results 10.3.7.3 | |

10.3.7.19 Inter-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an inter-frequency measurements. All events concerning inter-frequency measurements are labelled 2x where x is a,b,c, ...

Event 2a: Change of best frequency.

Event 2b: The estimated quality of the currently used frequency is below a certain threshold **and** the estimated quality of a non-used frequency is above a certain threshold.

Event 2c: The estimated quality of a non-used frequency is above a certain threshold.

Event 2d: The estimated quality of the currently used frequency is below a certain threshold.

Event 2e: The estimated quality of a non-used frequency is below a certain threshold.

Event 2f: The estimated quality of the currently used frequency is above a certain threshold.

Event 2g: Change of best cell on a configured secondary downlink frequency.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------|-----------------|---------------------|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|---------|
| Parameters required for each event | OP | 1 to <maxMeasEvent> | | | |
| >Inter-frequency event identity | MP | | Inter-frequency event identity 10.3.7.14 | | |
| >Threshold used frequency | CV- clause 0 | | Integer(-115..0) | Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -115..-25dBm | |
| | | | Integer (-120..0) | Ranges used depend on measurement quantity. CPICH Ec/No -24..0dB CPICH/Primary CCPCH RSCP -120..-25dBm | REL-6 |
| >Delta _{Threshold used frequency} | CV- clause 3 | | Integer(-5..-1) | If present, the actual value of Threshold used frequency = Threshold used frequency + Delta _{Threshold used frequency} | REL-5 |

10.3.7.22 Inter-frequency SET UPDATE

NOTE 1: Only for FDD.

This information makes it possible to use events defined for Intra-frequency measurement within the same non-used frequency for Inter-frequency measurement reporting criteria.

| Information Element/group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|---------------------------------------------------------------------------------------------|
| UE autonomous update mode | MP | | Enumerated (On with no reporting) | Required for backwards compatibility with a UE not supporting this revision of the standard |

10.3.7.23 Inter-RAT cell info list

Contains the information for the list of measurement objects for an inter-RAT measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------|------|-----------------------|------------------------------------|-----------------------|---------|
| CHOICE <i>Inter-RAT cell removal</i> | MP | | | | |
| >Remove all inter-RAT cells | | | | (no data) | |
| >Remove some inter-RAT cells | | | | | |
| >>Removed inter-RAT cells | MP | 1 to <maxCellMeas> | | | |
| >>>Inter-RAT cell id | MP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >Remove no inter-RAT cells | | | | (no data) | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|--------------------|--------------------|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|---------|
| New inter-RAT cells | MP | 1 to <maxCellMeas> | | Although this IE is not always required, need is MP to align with ASN.1 | |
| | OP | | | | REL-4 |
| >Inter-RAT cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | |
| >CHOICE <i>Radio Access Technology</i> | MP | | | | |
| >>GSM | | | | | |
| >>>Cell individual offset | MP | | Integer (-50..50) | In dB Used to offset measured quantity value | |
| >>>Cell selection and re-selection info | OP | | Cell selection and re-selection info for SIB11/12 10.3.2.4 | See subclause 8.6.7.3 | |
| >>>BSIC | MP | | BSIC 10.3.8.2 | | |
| >>>Band indicator | MP | | Enumerated (DCS 1800 band used, PCS 1900 band used) | Indicates how to interpret the BCCH ARFCN | |
| >>>BCCH ARFCN | MP | | Integer (0..1023) | [45] | |
| >>IS-2000 | | | | | |
| >>>System specific measurement info | MP | | enumerated (frequency, timeslot, colour code, output power, PN offset) | For IS-2000, use fields from TIA/EIA/IS-2000.5, subclause 3.7.3.3.2.27, <i>Candidate Frequency Neighbour List Message</i> | |
| >>None | | | (no data) | This value has been introduced to handle the case when IE "New inter-RAT cells" is not required | |
| Cells for measurement | OP | 1 to <maxCellMeas> | | | |
| >Inter-RAT cell id | MP | | Integer(0 .. <maxCellMeas>-1) | | |
| Inter-RAT cell info indication | CV- <i>Message</i> | | Integer (0..3) | NOTE 1 and 2 | REL-5 |

| Condition | Explanation |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <i>Message</i> | The IE is optionally present in the MEASUREMENT CONTROL and in the SRNS RELOCATION INFO messages, otherwise the IE is not needed. |

NOTE 1: The UTRAN may choose not to use the "Inter-RAT cell info indication" value "0" in the MEASUREMENT CONTROL message, to distinguish that case from those cases where the UE receives the IE "Inter-RAT cell info list" in SIB11 or SIB12.

NOTE 2: In case of an SRNS relocation, if the UE has been sent the "Inter-RAT cell info indication" in the MEASUREMENT CONTROL message and the IE "Inter-RAT cell info list" is included in the SRNS RELOCATION INFO sent from the source RNC to the target RNC, the "Inter-RAT cell info indication" should be included in the IE "Inter-RAT cell info list".

NOTE 3: If the UTRAN configures a UE with a "Inter-RAT cell info list" containing a set of GSM cells where one or more cell(s) belong to DCS 1800 band and one or more cell(s) belong to PCS 1900 band, the UE behaviour is unspecified.

10.3.7.24 Inter-RAT event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|-----------------------|
| Inter-RAT event identity | MP | | Enumerated (3a, 3b, 3c, 3d) | |

10.3.7.25 Inter-RAT info

Inter-RAT info defines the target system for redirected cell selection.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|-----------|-------|--------------------------------|-----------------------|---------|
| Inter-RAT info | MP | | Enumerated (GSM, E-UTRA) | | REL-8 |

| >>SOFT SLOPE | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.3 and 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >>ADD_INTERCEPT | OP | | Integer (0..63) | Admission criteria for neighbours, see subclause 2.6.6.2.5.2 of TIA/EIA/IS-2000.5 | |
| >E-UTRA | | | | | REL-8 |
| >>Measurement quantity | MP | | Enumerated (RSRP, RSRQ) | This IE indicates the quantity that the UE uses to determine the event trigger. | REL-8 |
| >>Filter coefficient | MP | | Filter coefficient 10.3.7.9 | | REL-8 |

10.3.7.30 Inter-RAT measurement reporting criteria

The triggering of the event-triggered reporting for an inter-RAT measurement. All events concerning inter-RAT measurements are labelled 3x where x is a,b,c, ...

Event 3a: The estimated quality of the currently used UTRAN frequency is below a certain threshold **and** the estimated quality of the other system is above a certain threshold.

Event 3b: The estimated quality of other system is below a certain threshold.

Event 3c: The estimated quality of other system is above a certain threshold.

Event 3d: Change of best cell in other system.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|-------------|----------------------|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Parameters required for each event | OP | 1 to <maxMeas Event> | | | |
| >Inter-RAT event identity | MP | | Inter-RAT event identity 10.3.7.24 | | |
| >Threshold own system | CV–clause 0 | | Integer (-115..0) | | |

| >>>Measurement quantity | MP | | Enumerated(Primary CCPCH, RSCP, Pathloss, Timeslot ISCP) | |

10.3.7.39 Intra-frequency measurement reporting criteria

The triggering of the event-triggered reporting for an intra-frequency measurement. All events concerning intra-frequency measurements are labelled 1x where x is a, b, c,....

Event 1a: A Primary CPICH enters the Reporting Range (FDD only).

Event 1b: A Primary CPICH leaves the Reporting Range (FDD only).

Event 1c: A Non-active Primary CPICH becomes better than an active Primary CPICH (FDD only).

Event 1d: Change of best cell (FDD only).

Event 1e: A Primary CPICH becomes better than an absolute threshold (FDD only).

Event 1f: A Primary CPICH becomes worse than an absolute threshold (FDD only).

Event 1g: Change of best cell in TDD.

Event 1h: Timeslot ISCP below a certain threshold (TDD only).

Event 1i: Timeslot ISCP above a certain threshold (TDD only).

Event 1j: A Non-active E-DCH but active DCH Primary CPICH becomes better than an active E-DCH Primary CPICH (FDD only).

10.3.7.44 Measured results

Contains the measured results of the quantity indicated optionally by Reporting Quantity in Measurement Control. "Measured results" can be used for both event trigger mode and periodical reporting mode. For intra-frequency and inter-frequency measurements the list shall be in the order of the value of the measurement quantity (the first cell shall

be the best cell). The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP". For intra-frequency measurements, the ordering shall be applied to all cells included in the IE "Measured results". For inter-frequency measurements, the ordering shall be applied to all cells on the same frequency included in the IE "Measured results". For other measurements, the order of reported measurement objects is not specified.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |

10.3.7.45 Measured results on RACH

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non-used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss". The "best" TDD cell has the largest value when measurement quantity is "Primary CCPCH RSCP".

For measurements on E-UTRA frequencies, this IE includes a bit string, of which the i-th bit should be set to 1 only if the quantity of the i-th E-UTRA frequency configured for measurement and reporting on RACH in the IE "E-UTRA frequency list indicator" received in System Information Block Type 19 exceeds the threshold specified by

- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRP

2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold".

1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRQ

2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold" minus the offset "EUTRA-RSRQ-offsetWB" and "EUTRA-RSRQ-OnAllSymbolsOffset", if stored in the variable PRIORITY_INFO_LIST for that frequency.

If the threshold is not exceeded, set the corresponding bit to 0.

NOTE: Monitored cells consist of neighbouring cells.

10.3.7.45a Measured results on RACH FDD

NOTE 1: Only for FDD.

For measurements on used frequency, this IE contains the measured results on RACH of the quantity indicated by Reporting quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" in system information broadcast on BCH. The list, measurement results for monitored cells (not including the current cell) shall be in the order of the value of the measurement quantity as indicated by Reporting Quantity in the IE "Intra-frequency reporting quantity for RACH Reporting" (the first cell shall be the best cell).

For measurements on non-used frequencies, this IE includes the best cell on each non-used frequency, in order of decreasing quality and up to a maximum number as specified by the IE "Maximum number of inter-frequency RACH reporting cells".

The "best" FDD cell has the largest value when the measurement quantity is "Ec/No" or "RSCP". On the other hand, the "best" cell has the smallest value when the measurement quantity is "Pathloss".

For measurements on E-UTRA frequencies, this IE includes a bit string, of which the i-th bit should be set to 1 only if the quantity of the i-th E-UTRA frequency configured for measurement and reporting on RACH in the IE "E-UTRA frequency list indicator" received in System Information Block Type 19 exceeds the threshold specified by

- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRP
 - 2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold".
- 1> if the "E-UTRA frequency RACH reporting quantity" is set to RSRQ
 - 2> the threshold specified by the IE "E-UTRA frequency RACH reporting threshold" minus the offset "EUTRA-RSRQ-offsetWB" and "EUTRA-RSRQ-OnAllSymbolsOffset", if stored in the variable PRIORITY_INFO_LIST for that frequency.

If the threshold is not exceeded, set the corresponding bit to 0.

| Use of HCS | MP | | Enumerated (Not used, used) | Indicates if the serving cell belongs to a HCS structure If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received. |
| Cell selection and reselection quality measure | MP | | Enumerated (CPICH Ec/N0, CPICH RSCP) | Choice of measurement (CPICH Ec/N0 or CPICH RSCP) to use as quality measure Q. NOTE: For TDD, each choice of this parameter represents PCCPCH RSCP. If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaves as if this IE would not have been received |
| Intra-frequency measurement system information | OP | | Intra-frequency measurement system information 10.3.7.40 | |
| Inter-frequency measurement system information | OP | | Inter-frequency measurement system information 10.3.7.20 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. |
| Inter-RAT measurement system information | OP | | Inter-RAT measurement system information 10.3.7.31 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. |
| Traffic volume measurement system information | OP | | Traffic volume measurement system information 10.3.7.73 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3 the UE behaviour upon reception of this IE is unspecified. |

| Condition | Explanation |
|-----------|-----------------------------------------------------------------|
| MBSFN | This IE is mandatory present in a cell operating in MBSFN mode. |

10.3.7.47a Measurement control system information extension

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------|------|--------------------------|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Intra-frequency cell info list | OP | | | | REL-6 |
| >New intra-frequency cells | MP | 1 to <maxCellMeas> | | | REL-6 |
| >>Intra-frequency cell id | OP | | Integer(0 .. <maxCellMeas> - 1) | | REL-6 |

| Condition | Explanation |
|----------------|---------------------------------------------------------------------------------------|
| <i>MCM_opt</i> | This IE is OPTIONAL when sent in SYSTEM INFORMATION. Otherwise, the IE is not needed. |

10.3.7.48 Measurement Identity

A reference number that is used by the UTRAN at modification and release of the measurement, and by the UE in the measurement report.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Measurement identity | MP | | Integer(1..16 | | |
| | | | 17..32) | | REL-9 |

NOTE: The specific handling of the Measurement Identity for UEs supporting the measurement identity extension is captured in ASN.1

10.3.7.49 Measurement reporting mode

Contains the type of Measurement Report transfer mode and the indication of periodical/event trigger.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------------|------|-------|-------------------------------------------------------------|-----------------------|
| Measurement Report Transfer Mode | MP | | enumerated (Acknowledged mode RLC, Unacknowledged mode RLC) | |
| Periodical Reporting / Event Trigger Reporting Mode | MP | | Enumerated (Periodical reporting, Event trigger) | |

10.3.7.50 Measurement Type

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Measurement Type | MP | | Enumerated (Intra-frequency, Inter-frequency, Inter-RAT, Traffic volume, Quality, UE internal, UE positioning, CSG proximity) | |

10.3.7.51 Measurement validity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------------------------------------------|-----------------------|
| UE state | MP | | Enumerated (CELL_DCH, all states except CELL_DCH, all states) | |

10.3.7.52 Void

10.3.7.53 Periodical reporting criteria

Contains the periodical reporting criteria information. It is necessary only in the periodical reporting mode.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Amount of reporting | MD | | Integer(1, 2, 4, 8, 16, 32, 64, Infinity) | The default value is infinity. | |
| Reporting interval | MP | | Integer(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000) | Indicates the interval of periodical report. Interval in milliseconds. If this IE is configured for SI acquisition, then it specifies the maximum time the UE can take for SI acquisition. | |

10.3.7.53aa Periodical reporting info-1b

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Amount of reporting | MP | | Integer(1, 2, 4, 8, 16, 32, 64, Infinity) | | REL-5 |
| Reporting interval | MP | | Integer(0, 250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the interval of periodical reporting when such reporting is triggered by an event. Interval in milliseconds. 0 means no periodical reporting. | REL-5 |

10.3.7.53a PLMN identities of neighbour cells

This IE contains the PLMN identities of neighbour cells.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|---------------------|-------------------------|---------------------------------------------------------------|---------|
| PLMNs of intra-frequency cells list | OP | 1 to <maxCeII meas> | | NOTE | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-frequency cells list | OP | 1 to <maxCeII meas> | | NOTE | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |
| PLMNs of inter-RAT cells list | OP | 1 to <maxCeII meas> | | | |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|------|--------------------|------------------------------------------------|---------------------------------------------------------------|---------|
| Multiple PLMNs of intra-frequency cells list | OP | 1 to <maxCeIIMeas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11 a | | REL-8 |
| Multiple PLMNs of inter-frequency cells list | OP | 1 to <maxCeIIMeas> | | | REL-8 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-8 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11 a | | REL-8 |

NOTE: The IE "PLMNs of intra-frequency cells list" and/or the IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of intra-frequency cells list" and/or the IE "Multiple PLMNs of inter-frequency cells list" instead.

10.3.7.53b PLMN identities of neighbour cells for SIB 11ter

This IE contains the PLMN identities of inter-frequency neighbour cells.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|------|------------------------|------------------------------------------------|---------------------------------------------------------------|---------|
| PLMNs of inter-frequency cells list | OP | 1 to <maxCeIIMeas-ext> | | NOTE | REL-12 |
| >PLMN identity | OP | | PLMN identity 10.3.1.11 | Action when not present is specified in subclause 8.1.1.6.18. | REL-12 |
| Multiple PLMNs of inter-frequency cells list | OP | 1 to <maxCeIIMeas-ext> | | | REL-12 |
| >Multiple PLMN list | OP | 1 to 6 | | Action when not present is specified in subclause 8.1.1.6.18. | REL-12 |
| >> PLMN identity with Optional MCC | MP | | PLMN identity with Optional MCC 10.3.1.11 a | | REL-12 |

NOTE: The IE "PLMNs of inter-frequency cells list" can be used when each entry in those lists is either empty or includes a single PLMN identity. If multiple PLMNs need to be indicated in a non-empty entry, the network uses the IE "Multiple PLMNs of inter-frequency cells list" instead.

10.3.7.54 Primary CCPCH RSCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description | Version |
|-------------------------------------|---------|-------|-----------------------|---------------------------------------------------------------------------------------------------------------|---------|
| Primary CCPCH RSCP | MP | | Integer(0..91) | According to P-CCPCH_RSCP_LEV in [19] and [20]. Thirty-six spare values are needed. | |
| Delta _{Primary} CCPCH RSCP | CV-Rel5 | | Integer(-5..-1) | If present, the actual value of Primary CCPCH RSCP = Primary CCPCH RSCP + Delta _{Primary} CCPCH RSCP | REL-5 |

| Condition | Explanation |
|-----------|-----------------------------------------------------------------------------------------------------|
| Rel5 | This IE is mandatory if the value of Primary CCPCH RSCP is below 0. Otherwise the IE is not needed. |

10.3.7.54a Qhcs

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Qhcs | MP | | Integer(0..99) | Qhcs, mapped from CPICH Ec/No (FDD), see [4] [dB] 0: -24 1: -23.5 2: -23 3: -22.5 ... 45: -1.5 46: -1 47: -0.5 48: 0 49: (spare) ... 98: (spare) 99: (spare) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|---------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | | | Qhcs, mapped from CPICH RSCP (FDD), see [4] [dBm] 0: -115 1: -114 2: -113 : 88: -27 89: -26 90: -(spare) 91: -(spare) : 98: -(spare) 99: -(spare) | |
| | | | | Qhcs, mapped from PCCPCH RSCP (TDD), see [4] [dBm] 0: -115 1: -114 2: -113 : 88: -27 89: -26 90: -(spare) 91: -(spare) : 98: -(spare) 99: -(spare) | |
| | | | | Qhcs level, mapped from Averaged received signal level RSSI (GSM), see [4] [dBm] 0: -110 1: -109 2: -108 : 61: -49 62: -48 63: -47 64: -46 65: -45 66: -44 67: -43 68: -42 69: -41 70: -40 71: -39 72: -38 73: -37 74: -(spare) : 98: -(spare) 99: -(spare) | |
| Delta _{Qhcs-RSCP} | CV-RSCP | | Integer(-5..-1) | If present, the actual value of Qhcs = Qhcs + Delta _{Qhcs-RSCP} | REL-5 |

| Condition | Explanation |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>RSCP</i> | This IE is optional if Qhcs is mapped from CPICH RSCP or PCCPCH RSCP, and if the value of the RSCP is below 0 (-115dBm). It is not needed otherwise. |

10.3.7.55 Quality measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|------------------|--------------------------------------|---------------------------------------------------|
| BLER measurement results | OP | 1 to <maxTrCH > | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| >DL Transport Channel BLER | OP | | Integer (0..63) | According to BLER_LOG in [19] and [20] |
| CHOICE <i>mode</i> | MP | | | |
| >FDD | | | | No data |
| >TDD | | | | |
| >>SIR measurement results | OP | 1 to <MaxCCTrCH> | | SIR measurements for DL CCTrCH |
| >>>TFCS ID | MP | | Integer(1..8) | |
| >>>Timeslot list | MP | 1 to <maxTS> | | for all timeslot on which the CCTrCH is mapped on |
| >>>>SIR | MP | | Integer(0..63) | According to UE_SIR in [20] |

10.3.7.56 Quality measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------|------|-------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Quality reporting quantity | OP | | Quality reporting quantity 10.3.7.59 | |
| CHOICE <i>report criteria</i> | MP | | | |
| >Quality measurement reporting criteria | | | Quality measurement reporting criteria 10.3.7.58 | Note Given this choice, the IE "DL Transport Channel BLER" shall be set to FALSE (see subclause 10.3.7.59) |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | Note |
| >No reporting | | | | Note (no data) Chosen when this measurement only is used as additional measurement to another measurement |

NOTE: In this version of the specification, BLER as additional measurement is not supported.

10.3.7.57 Quality measurement event results

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------|------|-----------------|--------------------------------------|------------------------------|
| Transport channels causing the event | OP | 1 to <maxTrCH > | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |

10.3.7.58 Quality measurement reporting criteria

Event 5a: Number of bad CRCs on a certain transport channel exceeds a threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-----------------|--------------------------------------|------------------------------|
| Parameters sent for each transport channel | MP | 1 to <maxTrCH > | | |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| >Total CRC | MP | | Integer(1..512) | Number of CRCs |
| >Bad CRC | MP | | Integer(1..512) | Number of CRCs |
| >Pending after trigger | MP | | Integer(1..512) | Number of CRCs |

10.3.7.59 Quality reporting quantity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------------|--------------------------|-------------------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| DL Transport Channel BLER | MP | | Boolean | TRUE means report requested |
| Transport channels for BLER reporting | <i>CV-BLER reporting</i> | 1 to <maxTrCH > | | The default, if no transport channel identities are present, is that the BLER is reported for all downlink transport channels |
| >DL Transport channel identity | MP | | Transport channel identity 10.3.5.18 | transport channel type = DCH |
| <i>CHOICE mode</i> | MP | | | |
| >FDD | | | | No data |
| >TDD | | | | |
| >>SIR measurement list | OP | 1 to <maxCCTrCH > | | SIR measurements shall be reported for all listed TFCS IDs |
| >>>TFCS ID | MP | | Integer(1..8) | |

| Condition | Explanation |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>BLER reporting</i> | This IE is not needed if the IE "DL Transport Channel BLER" is FALSE and optional if the IE "DL Transport Channel BLER" is TRUE |

10.3.7.60 Reference time difference to cell

In the System Information message, the reference time difference to cell indicates the timing difference between the primary CCPCH of the current cell and the primary CCPCH of a neighbouring cell..

In the Measurement Control message, the reference time difference to cell indicates the timing difference between UE uplink transmission timing and the primary CCPCCH of a neighbouring cell.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------------|-----------------------|
| CHOICE <i>accuracy</i> | MP | | | |
| >40 chips | | | | |
| >>Reference time difference | MP | | Integer(0..38400 by step of 40) | In chips |
| >256 chips | | | | |
| >>Reference time difference | MP | | Integer(0..38400 by step of 256) | In chips |
| >2560 chips | | | | |
| >>Reference time difference | MP | | Integer(0..38400 by step of 2560) | In chips |

10.3.7.61 Reporting Cell Status

Indicates maximum allowed number of cells to report and whether active set cells and/or virtual active set cells and/or monitored set cells and/or detected set cells on used frequency and/or monitored set cells and/or detected set cells on non used frequency should/should not be included in the IE "Measured results".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>reported cell</i> | MP | | | | |
| >Report cells within active set | | | | This choice is not valid for inter-RAT measurements. For inter-frequency measurements it is only valid for reporting events 2D and 2F. See NOTE 1. | |
| >>Maximum number of reported cells | MP | | Integer(1..6) | | |
| >Report cells within monitored set cells on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Integer(1..6) | | |
| >Report cells within active set and/or monitored set cells on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Integer(1..6) | | |
| >Report cells within detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Integer(1..6) | | |
| >Report cells within monitored set and/or detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Integer(1..6) | | |
| >Report all active set cells + cells within monitored set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------------------------------------------------------------------|------|-------|--------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|---------|
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2,, virtual/active set cells+6) | | |
| >Report all active set cells + cells within detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2,, virtual/active set cells+6) | | |
| >Report all active set cells + cells within monitored set and/or detected set on used frequency | | | | This choice is not valid for inter-RAT or inter-frequency measurements | |
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2,, virtual/active set cells+6) | | |
| >Report cells within virtual active set | | | | This choice is not valid for intra-frequency or inter-RAT measurements | |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | | |
| >Report cells within monitored set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements | |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | | |
| >Report cells within monitored and/or virtual active set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements | |
| >>Maximum number of reported cells per reported non-used frequency | MP | | Integer(1..6) | | |
| >Report all virtual active set cells + cells within monitored set on non-used frequency | | | | This choice is not valid for intra-frequency or inter-RAT measurements | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------------------------------------------------------------------------------------------|------|-------|--------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>Maximum number of reported cells per reported non-used frequency | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2,, virtual/active set cells+6) | | |
| >Report cells within active set or within virtual active set or of the other RAT | | | | If this choice is selected for inter-RAT measurements, the UE shall report only cells of the other RAT. If this choice is selected for intra-frequency measurements, the UE shall report cells within the active set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set. | |
| >>Maximum number of reported cells | MP | | Integer (1..12) | | |
| >Report cells within active and/or monitored set on used frequency or within virtual active and/or monitored set on non-used frequency | | | | This choice is not valid for inter-RAT measurements. If this choice is selected for intra-frequency measurements, the UE shall report cells within the active and/or monitored set. If this choice is selected for inter-frequency measurements, the UE shall report cells within the virtual active set and/or monitored set on non-used frequency. | |
| >>Maximum number of reported cells | MP | | Integer(1..12) | | |
| >Report all virtual active set cells + cells within monitored set and/or detected set on non-used frequency | | | | This choice is not valid for inter-RAT or intra-frequency measurements | REL-10 |
| >>Maximum number of reported cells | MP | | Enumerated (virtual/active set cells+1, virtual/active set cells+2,, virtual/active set cells+6) | | REL-10 |

NOTE 1: For Inter-frequency reporting events 2D and 2F, only CHOICE "Report cells within active set" is valid.

10.3.7.62 Reporting information for state CELL_DCH

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------------------|------|-------|-------------------------------------------------------------|------------------------------------------------------------------------------------------|
| Intra-frequency reporting quantity | MP | | Intra-frequency reporting quantity 10.3.7.41 | |
| Measurement Reporting Mode | MP | | Measurement Reporting Mode 10.3.7.49 | |
| CHOICE <i>report criteria</i> | MP | | | |
| >Intra-frequency measurement reporting criteria | | | Intra-frequency measurement reporting criteria 10.3.7.39 | This IE may only contain measurement events from 1A to 1I, but not measurement event 1J. |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

10.3.7.63 SFN-SFN observed time difference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>type</i> | MP | | | | |
| >Type 1 | | | Integer(0..9830399) | According to T1_SFNSFN_TIME in [19] and [20]. For FDD and 3.84 Mcps TDD and 7.68 Mcps TDD: 6946816 spare values are needed. | |
| | | | Integer(0..3276799) | For 1.28 Mcps TDD: 13500416 spare values are needed. | Rel-4 |
| >Type 2 | | | Integer(0..40961) | According to T2_SFNSFN_TIME in [19] and [20]. 24574 spare values are needed. | |
| | | | Integer(0..27649) | For 1.28 Mcps TDD: 37886 spare values are needed. | Rel-4 |

10.3.7.64 Time to trigger

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------------------------------------------------------|-----------------------|
| Time to trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms |

10.3.7.65 Timeslot ISCP info

NOTE: Only for TDD

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|--------------------------------------------------------------------------|
| Timeslot ISCP | MP | | Integer (0..91) | According to UE_TS_ISCP_LEV in [20]. Thirty-six spare values are needed. |

10.3.7.66 Traffic volume event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Traffic volume event identity | MP | | Enumerated(4a, 4b) | |

10.3.7.67 Traffic volume measured results list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|------|--------------|----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| Traffic volume measurement results | OP | 1 to <maxRB> | | |
| >RB Identity | MP | | RB Identity 10.3.4.16 | |
| >RLC Buffers Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed. |
| >Average of RLC Buffer Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K, 32K, 64K, 128K, 256K, 512K, 1024K) | In bytes And N Kbytes = N*1024 bytes. Twelve spare values are needed. |
| >Variance of RLC Buffer Payload | OP | | Enumerated(0, 4, 8, 16, 32, 64, 128, 256, 512, 1024, 2K, 4K, 8K, 16K) | In bytes And N Kbytes = N*1024 bytes. Two spare values are needed. |

10.3.7.68 Traffic volume measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------|------|-------|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| Traffic volume measurement Object | OP | | Traffic volume measurement Object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measurement quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | |
| <i>CHOICE report criteria</i> | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measurement reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | | (no data) Chosen when this measurement only is used as additional measurement to another measurement |

10.3.7.69 Traffic volume measurement event results

Contains the event result for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-------------------------------------------------|-----------------------|-------|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Uplink transport channel type causing the event | MP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| UL Transport Channel identity | <i>CV-UL-DCH/USCH</i> | | Transport channel identity 10.3.5.18 | |
| Traffic volume event identity | MP | | Traffic volume event identity 10.3.7.66 | |

| Condition | Explanation |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

10.3.7.70 Traffic volume measurement object

Contains the measurement object information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------|----------------|-----------------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Traffic volume measurement objects | MP | 1 to <maxTrCH > | | |
| >Uplink transport channel type | MP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Target Transport Channel ID | CV-UL-DCH/USCH | | Transport channel identity 10.3.5.18 | |

| Condition | Explanation |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is mandatory present. Otherwise the IE is not needed. |

10.3.7.71 Traffic volume measurement quantity

Contains the measurement quantity information for a traffic volume measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------|--------|-------|--------------------------------------------------------------------------------------------|-----------------------------------|
| Measurement quantity | MP | | Enumerated(RLC buffer payload, Average RLC buffer payload, Variance of RLC buffer payload) | This parameter should be ignored. |
| Time Interval to take an average or a variance | CV-A/V | | Integer(20, 40, ..260, by steps of 20) | In ms |

| Condition | Explanation |
|------------|--------------------------------------------------------------------------------------------------------------------------------|
| <i>A/V</i> | This IE is mandatory present when "Average RLC buffer" or "Variance of RLC buffer payload" is chosen and not needed otherwise. |

10.3.7.72 Traffic volume measurement reporting criteria

Contains the measurement reporting criteria information for a traffic volume measurement.

Event 4a: Transport Channel Traffic Volume [15] exceeds an absolute threshold.

Event 4b: Transport Channel Traffic Volume [15] becomes smaller than an absolute threshold.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|----------------|-------------------------|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parameters sent for each transport channel | OP | 1 to <maxTrCH > | | This IE is always required, need is OP to align with ASN.1 |
| >Uplink transport channel type | OP | | Enumerated(DCH,RACH, USCH) | USCH is TDD only. RACH is the currently configured default in the uplink. For 1.28 Mcps TDD, if E-DCH is configured to the UE, and the Uplink transport channel type is USCH and UL Transport Channel identity is 32, it means E-DCH TVM is configured. |
| >UL Transport Channel ID | CV-UL-DCH/USCH | | Transport channel identity 10.3.5.18 | |
| >Parameters required for each Event | OP | 1 to <maxMeas parEvent> | | |
| >>Traffic volume event identity | MP | | Traffic volume event identity 10.3.7.66 | |
| >>Reporting Threshold | MP | | Enumerated(8,16,32,64,128,256,512,1024,2K,3K,4K,6K,8K,12K,16K,24K,32K,48K,64K,96K,128K,192K,256K,384K,512K,768K) | Threshold in bytes And N Kbytes = N*1024 bytes |
| >>Time to trigger | OP | | Time to trigger 10.3.7.64 | Indicates the period of time during which the event condition has to be satisfied, before sending a Measurement Report. Time in ms |
| >>Pending time after trigger | OP | | Integer(250, 500, 1000, 2000, 4000, 8000, 16000) | Indicates the period of time during which it is forbidden to send any new measurement reports with the same Traffic volume event identity even if the triggering condition is fulfilled. Time in milliseconds |
| >>Tx interruption after trigger | OP | | Integer (250, 500, 1000, 2000, 4000, 8000, 16000) | Time in milliseconds. Indicates how long the UE shall block DTCH transmissions on the RACH after a measurement report is triggered. |

| Condition | Explanation |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <i>UL-DCH/USCH</i> | If IE "Uplink transport channel type" is equal to "DCH" or "USCH" (TDD only) this IE is optional. Otherwise the IE is not needed. |

10.3.7.73 Traffic volume measurement system information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------|------|-------|------------------------------------------------------------|--------------------------------------------------------------|
| Traffic volume measurement identity | MD | | Measurement identity 10.3.7.48 | The traffic volume measurement identity has default value 4. |
| Traffic volume measurement object | OP | | Traffic volume measurement object 10.3.7.70 | |
| Traffic volume measurement quantity | OP | | Traffic volume measurement quantity 10.3.7.71 | |
| Traffic volume reporting quantity | OP | | Traffic volume reporting quantity 10.3.7.74 | |
| Measurement validity | OP | | Measurement validity 10.3.7.51 | |
| Measurement Reporting Mode | MP | | Measurement Reporting Mode 10.3.7.49 | |
| <i>CHOICE reporting criteria</i> | MP | | | |
| >Traffic volume measurement reporting criteria | | | Traffic volume measurement reporting criteria 10.3.7.72 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |

10.3.7.74 Traffic volume reporting quantity

Contains the reporting quantity information for a traffic volume measurement.

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-------|--------------------|-----------------------|
| RLC Buffer Payload for each RB | MP | | Boolean | |
| Average of RLC Buffer Payload for each RB | MP | | Boolean | |
| Variance of RLC Buffer Payload for each RB | MP | | Boolean | |

10.3.7.75 UE internal event identity

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|------------------------------------|-----------------------|
| UE internal event identity | MP | | Enumerated(6a,6b,6c,6d,6e, 6f, 6g) | |

10.3.7.76 UE internal measured results

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |

10.3.7.77 UE internal measurement

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------------------|------|-------|---------------------------------------------------------|---------------------------------------------------------------------------------------------------------|
| UE internal measurement quantity | OP | | UE internal measurement quantity 10.3.7.79 | |
| UE internal reporting quantity | OP | | UE internal reporting quantity 10.3.7.82 | |
| <i>CHOICE report criteria</i> | MP | | | |
| >UE internal measurement reporting criteria | | | UE internal measurement reporting criteria 10.3.7.80 | |
| >Periodical reporting criteria | | | Periodical reporting criteria 10.3.7.53 | |
| >No reporting | | | | (no data) Chosen when this measurement only is used as additional measurement to another measurement |

| <i>CHOICE report criteria</i> | Condition under which the given <i>report criteria</i> is chosen |
|--------------------------------------------|--------------------------------------------------------------------------------------------|
| UE internal measurement reporting criteria | Chosen when UE internal measurement event triggering is required |
| Periodical reporting criteria | Chosen when periodical reporting is required |
| No reporting | Chosen when this measurement only is used as additional measurement to another measurement |

10.3.7.78 UE internal measurement event results

This IE contains the measurement event results that are reported to UTRAN for UE internal measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|--------------------|-------|-----------------------------------------|-----------------------|
| UE internal event identity | MP | | UE internal event identity 10.3.7.75 | |
| <i>CHOICE mode</i> | MP | | | |
| >FDD | | | | |
| >Primary CPICH info | <i>CV-clause 1</i> | | Primary CPICH info 10.3.6.60 | |
| >TDD | | | | (no data) |

| Condition | Explanation |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------|
| <i>Clause 1</i> | This IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |

10.3.7.79 UE internal measurement quantity

The quantity the UE shall measure in case of UE internal measurement.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>mode</i> | MP | | | | |
| >FDD | | | | | |
| >>Measurement quantity | MP | | Enumerated(UE Transmitted Power, UTRA Carrier RSSI, UE Rx-Tx time difference) | | |
| >TDD | | | | | |
| >>Measurement quantity | MP | | Enumerated(UE Transmitted Power, UTRA Carrier RSSI, | | |
| | | | T _{ADV}) | Measurement on Timing Advance is for 1.28 Mcps TDD | REL-4 |
| Filter coefficient | OP | | Filter coefficient 10.3.7.9 | If the IE "Measurement quantity" is set to "Rx-Tx time difference" and this IE is present, the UE behaviour is unspecified. | |

10.3.7.80 UE internal measurement reporting criteria

The triggering of the event-triggered reporting for a UE internal measurement. All events concerning UE internal measurements are labelled 6x where x is a, b, c.... In TDD, the events 6a - 6d are measured and reported on timeslot basis.

Event 6a: The UE Transmitted Power becomes larger than an absolute threshold

Event 6b: The UE Transmitted Power becomes less than an absolute threshold

Event 6c: The UE Transmitted Power reaches its minimum value

Event 6d: The UE Transmitted Power reaches its maximum value

Event 6e: The UE RSSI reaches the UEs dynamic receiver range

Event 6f (FDD): The UE Rx-Tx time difference for a RL included in the active set becomes larger than an absolute threshold

Event 6f (1.28 Mcps TDD): The time difference indicated by T_{ADV} becomes larger than an absolute threshold

Event 6g: The UE Rx-Tx time difference for a RL included in the active set becomes less than an absolute threshold

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------------------------------|------|----------------------|--------------------------------------|-----------------------|---------|
| Parameters sent for each UE internal measurement event | OP | 1 to <maxMeas Event> | | | |
| >UE internal event identity | MP | | UE internal event identity 10.3.7.75 | | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------|-------------|-------|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|---------|
| >Time-to-trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms. Indicates the period of time between the timing of event detection and the timing of sending Measurement Report. | |
| >UE Transmitted Power Tx power threshold | CV-clause 1 | | Integer(-50..33) | Power in dBm. In event 6a, 6b. | |
| >UE Rx-Tx time difference threshold | CV-clause 2 | | Integer(768..1280) | Time difference in chip. In event 6f, 6g. | |
| >T _{ADV} threshold | CV-clause 3 | | Real (0..63 step 0.125) | Time difference in chip. In event 6f | REL-4 |

| Condition | Explanation |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------|
| Clause 1 | The IE is mandatory present if the IE "UE internal event identity" is set to "6a" or "6b", otherwise the IE is not needed. |
| Clause 2 | In FDD, the IE is mandatory present if the IE "UE internal event identity" is set to "6f" or "6g", otherwise the IE is not needed. |
| Clause 3 | In 1.28 Mcps TDD the IE is mandatory present if the IE "UE internal event identity" is set to "6f", otherwise the IE is not needed. |

10.3.7.81 Void

10.3.7.82 UE Internal reporting quantity

For all boolean types TRUE means inclusion in the report is requested.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| UE Transmitted Power | MP | | Boolean | | |
| CHOICE <i>mode</i> | MP | | | | |

| >>>>T _{ADV} info | MP | | Boolean | | REL-4 |

10.3.7.83 UE Rx-Tx time difference type 1

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7]. This measurement is for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|-------------------------------------------|
| UE Rx-Tx time difference type 1 | MP | | Integer(768..1280) | In chips. 511 spare values are needed. |

10.3.7.84 UE Rx-Tx time difference type 2

The difference in time between the UE uplink DPCCH/DPDCH frame transmission and the first detected path (in time), of the downlink DPCH or F-DPCH frame from the measured radio link, as defined in [7].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|---------------------------------|------|-------|--------------------|-----------------------|
| UE Rx-Tx time difference type 2 | MP | | Integer (0..8191) | According to [19]. |

10.3.7.85 UE Transmitted Power info

| Information Element/Group name | Need | Multi | IE type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|-------------------------------------------|
| UE Transmitted Power | MP | | Integer (0..104) | According to UE_TX_POWER in [19] and [20] |

10.3.7.86 UE positioning Ciphering info

This IE contains information for the ciphering of UE positioning assistance data broadcast in System Information.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------|
| Ciphering Key Flag | MP | | Bit string(1) | |
| Ciphering Serial Number | MP | | Integer(0..65535) | The serial number used in the DES ciphering algorithm |

10.3.7.87 UE positioning Error

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|------------------------------------------|-----------------------------|-------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|---------|
| Error reason | MP | | Enumerated(Not Enough OTDOA Cells, Not Enough GPS Satellites, Assistance Data Missing, Not Accomplished GPS Timing Of Cell Frames, Undefined Error, Request Denied By User, Not Processed And Timeout, Reference Cell Not Serving Cell, | Note 1 | |
| | | | Not Enough GANSS Satellites, Not Accomplished GANSS Timing Of Cell Frames) | Note 1 | REL-7 |
| GPS Additional Assistance Data Request | CV- <i>GPSdataMissing</i> | | UE positioning GPS Additional Assistance Data Request 10.3.7.88a | | |
| GANSS Additional Assistance Data Request | CV- <i>GANSSdataMissing</i> | | UE positioning GANSS Additional Assistance Data Request 10.3.7.88c | | REL-7 |

NOTE 1: The following table describes each value of the IE "Error reason".

| Value | Indication |
|----------------------------------------------|----------------------------------------------------------------------------|
| Not Enough OTDOA Cells | There were not enough cells to be received. |
| Not Enough GPS Satellites | There were not enough GPS satellites to be received. |
| Assistance Data Missing | UE positioning GANSS or/and GPS assistance data missing. |
| Not Accomplished GPS Timing Of Cell Frames | UE was not able to accomplish the GPS timing of cell frames measurement. |
| Undefined Error | Undefined error. |
| Request Denied By User | UE positioning request denied by upper layers. |
| Not Processed And Timeout | UE positioning request not processed by upper layers and timeout. |
| Reference Cell Not Serving Cell | UE was not able to read the SFN of the reference cell. |
| Not Enough GANSS Satellites | There were not enough GANSS satellites to be received. |
| Not Accomplished GANSS Timing Of Cell Frames | UE was not able to accomplish the GANSS timing of cell frames measurement. |

| Condition | Explanation |
|-------------------------|----------------------------------------------------------------------------------------------------|
| <i>GPSdataMissing</i> | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |
| <i>GANSSdataMissing</i> | The IE is optional if the IE "Error reason" is "Assistance Data Missing" and not needed otherwise. |

10.3.7.88 UE positioning GPS acquisition assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------------|------|---------------|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GPS TOW msec | MP | | Integer(0..6.048*10 ⁸ -1) | GPS Time of Week in milliseconds rounded down to the nearest millisecond unit. It is also the time when satellite information is valid. | |
| UTRAN GPS reference time | OP | | | | |
| >UTRAN GPS timing of cell frames | MP | | Integer(0 ... 2322431999999) | GPS timing of cell frames in steps of 1 chip. | |
| >CHOICE <i>mode</i> | OP | | | | |
| >>FDD | | | | | |
| >>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >>TDD | | | | | |
| >>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GPS TOW-SFN relationship | |
| >SFN | MP | | Integer(0..4095) | The SFN which the UTRAN GPS timing of cell frames time stamps. | |
| UE Positioning GPS ReferenceTime Uncertainty | OP | | UE positioning GPS reference time uncertainty 10.3.7.96a | | REL-7 |
| Confidence | OP | | Integer(0..100) | Confidence level (in percent) of the reference location area or volume used to calculate the Satellite information parameters (search windows). | REL-12 |
| Satellite information | MP | 1 to <maxSat> | | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------|------|-------|--------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |

| <i>Navigation Model</i> | This IE is mandatory present if "Navigation Model" is set to TRUE otherwise it is absent. |

10.3.7.88b UE positioning GANSS reference measurement information

This IE provides reference code and Doppler measurement information of visible satellites of a GNSS constellation. The information enables fast acquisition of the GANSS signals in UE-assisted GANSS positioning. If the IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the Satellite Information is valid at the time as given in the IE "UE positioning GANSS reference time" IE. I.e., if IE "UE positioning GANSS reference measurement information" is included in IE "UE positioning GANSS assistance data" and IE "UE positioning GPS acquisition assistance" is not included in IE "UE positioning measurement", the IE "UE positioning GANSS reference time" shall also be included. If the IE "UE positioning GPS acquisition assistance" is included in IE "UE positioning measurement", the IE "GPS TOW msec" and IE "UTRAN GPS reference time" included in IE "UE positioning GPS acquisition assistance" is also valid for the Satellite information in IE "UE positioning GANSS reference measurement information".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------|------|---------------------|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. If this IE is asked by SIB 15.6, the GANSS shall be solved by the scheduling information. | REL-7 |
| Confidence | OP | | Integer(0..100) | Confidence level (in percent) of the reference location area or volume used to calculate the Satellite information parameters (search windows). | REL-12 |
| Satellite information | MP | 1 to <maxGAN SSSat> | | | REL-7 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite within a GANSS constellation. For coding description, see Note 2. | REL-7 |
| >Doppler (0 th order term) | MP | | Real(-1024..1023.5 by step of 0.5) | m/s Conversion between m/s and Hz shall be made by using the <i>nominal</i> wavelength of the assisted signal. | REL-7 |
| >Extra Doppler | OP | | | | REL-7 |
| >>Doppler (1 st order term) | MP | | Real (-0.2..0.1 by step of 1/210) | m/s ² | REL-7 |
| >>Doppler Uncertainty | MP | | Enumerated (40,20,10,5, 2.5) | m/s. The Doppler experienced by a stationary UE is in the range "Doppler – Doppler Uncertainty" to "Doppler + Doppler Uncertainty". Three spare values are needed. | REL-7 |
| >Extra Doppler Extension | OP | | | If this field is present, the "Extra Doppler" field should not be present. | REL-12 |
| >>Doppler (1 st order term) | MP | | Real (-0.2..0.1 by step of 1/210) | m/s ² | REL-12 |
| >>Doppler Uncertainty Extension | MP | | Enumerated (60, 80, 100, 120, 'No Information') | m/s. The Doppler experienced by a stationary UE is in the range "Doppler – Doppler Uncertainty Extension" to "Doppler + Doppler Uncertainty Extension". Three spare values are needed. | REL-12 |
| >Code Phase | MP | | Integer(0..1023) | ms, scaling factor 2 ⁻¹⁰ <i>Nominal</i> chipping rate of the GNSS signal shall be used in conversion. Increasing binary values of the field signify increasing predicted code phases. | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Integer Code Phase | MP | | Integer(0..127) | ms. Integer code phase (expressed modulo 128 ms) . The satellite integer milli-seconds code phase currently being transmitted at the Reference Time included in either IE "UE positioning GANSS reference time" or IE "UE positioning GPS acquisition assistance", as seen by a receiver at the Reference Location is calculated as Reference Time (expressed in milli-seconds) minus (Integer_Code_Phase + (n×128 ms)), with n = ...-2,-1,0,1,2..... The UE can calculate the expected code phase as follows: Reference Time – Integer Code Phase + Code Phase. | REL-7 |
| >Code Phase Search Window | MP | | Bit string (5) | Coded expected code-phase is in the range "Code Phase – Code Phase Search Window" to "Code Phase + Code Phase Search Window". For coding description, see Note 1 | REL-7 |
| >Azimuth and Elevation | OP | | | | REL-7 |
| >>Azimuth | MP | | Real(0..348.75 by step of 11.25) | Degrees An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+11.25$ degrees. | REL-7 |
| >>Elevation | MP | | Real(0..78.75 by step of 11.25) | Degrees An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+11.25$ degrees except for y=78.75 where the range is extended to include 90 degrees. | REL-7 |
| >>Azimuth LSB | MP | | Real(0..10.546875 by step of 0.703125) | Degrees The full satellite azimuth is constructed as "Azimuth" + "Azimuth LSB". An azimuth angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+0.703125$ degrees Range 0-359.296875 deg. | REL-10 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |

| Condition | Explanation |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>GANSS-ID-SBAS</i> | This IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise. |
| <i>GANSSNavigation Model</i> | The IE is mandatory present if the IE "GANSS Navigation Model" is set to TRUE or if the IE "GANSS Additional Navigation Models" is included and not needed otherwise. |
| <i>AssistanceChoices</i> | This IE is mandatory present if non-native or non-default assistance data choices are requested and not needed otherwise. |
| <i>GANSS-ID-BDS</i> | This IE is optionally present if the IE "GANSS ID" is "BDS" and not needed otherwise. |

10.3.7.88d DGANSS Signal Id

The DGANSS signal Id refers to the signal for which differential corrections or data bit assistance are required. It depends on the GANSS ID. Each bit refers to a particular signal. When the bit is set to 1, this means that the differential corrections or data bit assistance are requested for this particular signal. Differential corrections or data bit assistance can be requested for several signals using the bit string.

| >ω | MP | | Bit string(24) | Argument of Perigee (semi-circles) [12] | |
| >af ₀ | MP | | Bit string(11) | apparent clock correction [12] | |
| >af ₁ | MP | | Bit string(11) | apparent clock correction [12] | |
| SV Global Health | OP | | Bit string(364) | This enables GPS time recovery and possibly extended GPS correlation intervals. It is specified in page 25 of subframes 4 and 5 [12] | |

10.3.7.89a UE positioning GANSS almanac

This IE contains a reduced-precision subset of the ephemeris and clock correction parameters.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------|------|--------------------|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Week Number | MP | | Integer(0..255) | Almanac reference week , number of weeks since the beginning of GANSS specific system time (mod 256). Note, in case of Galileo, the almanac reference week number WNa natively contains only the 2 LSB's [61, section 5.1.10]. | REL-7 |
| | | | | If "Model 5" or "Model 6" is included, the UE shall ignore the Week Number. | REL-8 |
| Complete Almanac Provided | OP | | Boolean | This field indicates whether the RNC provided almanac for the full GANSS constellation or not. TRUE means complete GANSS almanac is provided. | REL-10 |
| Keplerian parameters ("Model 1") | OP | | | NOTE | REL-7 |
| >T _{oa} | MP | | Integer(0..613800 by step of 600) | Almanac Reference Time common to all satellites in GANSS Almanac using Keplerian Parameters given in GNSS specific system time [61]. | REL-12 |
| >IOD _a | MP | | INTEGER(0..15) | Issue-Of -Data, common to all satellites [61] | REL-12 |
| >Satellite information KP | MP | 1 to <maxGANSSSat> | | Almanacs are in the order of the SV IDs, the smallest ID first. | REL-7 |
| >>SV ID | MP | | Integer (0..63) | Satellite ID, as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>e | MP | | Bit string(11) | Eccentricity, dimensionless [61] | REL-7 |
| >>δ _i | MP | | Bit string(11) | Parameter δ _i , inclination at reference time relative to i ₀ =56°; semi-circles [61] | REL-7 |
| >>OMEGADOT | MP | | Bit string(11) | Parameter $\dot{\Omega}$, rate of change of right ascension (semi-circles/sec) [61]. | REL-7 |
| >>SV Status INAV | MP | | Bit string(4) | This field contains the I/NAV signal health status [61, section 5.1.10], E5 _{bHS} and E1-B _{HS} , where E5 _{bHS} occupies the 2 MSBs and E1-B _{HS} the two LSBs. | REL-7 |
| >>SV Status FNAV | OP | | Bit string(2) | This field contains the F/NAV signal health status [61, section 5.1.10], E5 _{aHS} . | REL-12 |
| >>delta A ^{1/2} | MP | | Bit string(13) | Parameter Δ(a ^{1/2}), difference with respect to the square root of the nominal semi-major axis, (meters) ^{1/2} [61]. | REL-12 |
| >>OMEGA ₀ | MP | | Bit string(16) | Longitude of ascending node of orbital plane at weekly epoch (semi-circles) [61] | REL-7 |
| >>M ₀ | MP | | Bit string(16) | Mean Anomaly at Reference Time (semi-circles) [61] | REL-7 |
| >>ω | MP | | Bit string(16) | Argument of Perigee (semi-circles) [61] | REL-7 |
| >>af ₀ | MP | | Bit string(16) | Parameter af ₀ , satellite clock correction bias. Seconds [61] | REL-12 |
| >>af ₁ | MP | | Bit string(13) | Parameter af ₁ , satellite clock correction linear, sec/sec [61] | REL-12 |

| | | | | | |
|------------------------------------------|----|---------------------------|-------------------------------------------|-------------------------------------------------------------------------------------|-------|
| NAV Keplerian Parameters ("Model 2") | OP | | | NOTE | REL-8 |
| >T _{oa} | MP | | Integer(0..60 2112 by step of 4096) | Almanac Reference Time | REL-8 |
| >Satellite information NAV-KP | MP | 1 to <maxGAN SSSat> | | | REL-8 |
| >>SV ID | MP | | Integer (0..63) | Satellite ID, as defined in Note 2 of 10.3.7.88b. | REL-8 |
| >>e | MP | | Bit String(16) | Eccentricity, dimensionless [72] | REL-8 |
| >> δ_i | MP | | Bit String(16) | Correction to inclination, semi-circles [72] | REL-8 |
| >>OMEGADOT | MP | | Bit String(16) | Rate of right ascension, semi-circles/sec [72] | REL-8 |
| >>SV Health | MP | | Bit String(8) | Satellite health [72] | REL-8 |
| >>A ^{1/2} | MP | | Bit String(24) | Square root of the semi-major axis, meters ^{1/2} [72] | REL-8 |
| >>OMEGA ₀ | MP | | Bit String(24) | Longitude of ascending node of orbit plane at weekly epoch, semi-circles [72] | REL-8 |
| >> ω | MP | | Bit String(24) | Argument of perigee semi-circles [72] | REL-8 |
| >>M ₀ | MP | | Bit String(24) | Mean anomaly at reference time semi-circles [72] | REL-8 |
| >>af ₀ | MP | | Bit String(11) | Apparent satellite clock correction seconds [72] | REL-8 |
| >>af ₁ | MP | | Bit String(11) | Apparent satellite clock correction sec/sec [72] | REL-8 |
| Reduced Keplerian Parameters ("Model 3") | OP | | | NOTE | REL-8 |
| >T _{oa} | MP | | Integer(0..60 2112 by step of 4096) | Almanac Reference Time | REL-8 |
| >Satellite information RED-KP | MP | 1 to <maxGAN SSSat> | | | REL-8 |
| >>SV ID | MP | | Integer (0..63) | Satellite ID, as defined in Note 2 of 10.3.7.88b. | REL-8 |

NOTE: If included, only one of the optional fields indicated by "NOTE" shall be present.

| Condition | Explanation |
|---------------|--------------------------------------------------------------------------------------|
| GANSS-ID-SBAS | The IE is mandatory present if the IE "GANSS ID" is "SBAS" and not needed otherwise. |
| GANSS-ID-BDS | The IE is optionally present if the IE "GANSS ID" is "BDS" and not needed otherwise. |

NOTE 1: Coding of GANSS ID

| Value of GANSS ID | GANSS | Version |
|-------------------|-------------------------|---------|
| 0 | SBAS | REL-8 |
| 1 | Modernized GPS | |
| 2 | QZSS | |
| 3 | GLONASS | |
| 4 | BDS | REL-12 |
| 5-7 | Reserved for future use | |

10.3.7.91 UE positioning GPS DGPS corrections

This IE contains DGPS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------------------|---------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GPS TOW sec | MP | | Integer(0..604799) | seconds GPS time-of-week when the DGPS corrections were calculated | |
| Status/Health | MP | | Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | | |
| DGPS information | CV-Status/Health | 1 to <maxSat> | | If the Cipher information is included these fields are ciphered. | |
| >SatID | MP | | Enumerated (0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >IODE | MP | | Integer(0..255) | | |
| >UDRE | MP | | Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. | |
| >PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters (different from [13]) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------|------|-------|-----------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec (different from [13]) | |
| >Delta PRC2 | MP | | Integer(-127..127) | In this version of the protocol this IE should be set to zero and the UE shall ignore it | |
| >Delta RRC2 | MP | | Real(-0.224..0.224 by step of 0.032) | In this version of the protocol this IE should be set to zero and the UE shall ignore it | |
| >Delta PRC3 | OP | | Integer(-127..127) | This IE should not be included in this version of the protocol and if received the UE shall ignore it | |
| >Delta RRC3 | OP | | Real(-0.224..0.224 by step of 0.032) | This IE should not be included in this version of the protocol and if received the UE shall ignore it | |
| >UDRE Growth Rate | OP | | Enumerated(UDRE growth 1.5, UDRE growth 2, UDRE growth 4, UDRE growth 6, UDRE growth 8, UDRE growth 10, UDRE growth 12, UDRE growth 16) | This field provides an estimate of the growth rate of uncertainty (1- σ) in the corrections. The UDRE at time value specified in the <i>Time of Validity for UDRE Growth Rate</i> field is the value of this field times the value of UDRE. | REL-9 |
| >Time of Validity for UDRE Growth Rate | OP | | Enumerated(val20sec, val40sec, val80sec, val160sec, val320sec, val640sec, val1280sec, val2560sec) | This field specifies the time when the <i>UDRE Growth Rate</i> field applies. | REL-9 |

| Condition | Explanation |
|----------------------|-----------------------------------------------------------------------------------------------------------------------|
| <i>Status/Health</i> | This IE is mandatory present if "status" is not equal to "no data" or "invalid data", otherwise the IE is not needed. |

10.3.7.91a UE positioning GPS Ephemeris and Clock Correction parameters

This IE contains information for GPS ephemeris and clock correction.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|----------------------------|
| C/A or P on L2 | MP | | Bit string(2) | Code(s) on L2 Channel [12] |
| URA Index | MP | | Bit string(4) | User Range Accuracy [12] |
| SV Health | MP | | Bit string(6) | [12] |
| IODC | MP | | Bit string(10) | Issue of Data, Clock [12] |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------|
| L2 P Data Flag | MP | | Bit string(1) | [12] |
| SF 1 Reserved | MP | | Bit string(87) | [12] |
| TGD | MP | | Bit string(8) | Estimated group delay differential [12] |
| t_{oc} | MP | | Bit string(16) | apparent clock correction [12] |
| af_2 | MP | | Bit string(8) | apparent clock correction [12] |
| af_1 | MP | | Bit string(16) | apparent clock correction [12] |
| af_0 | MP | | Bit string(22) | apparent clock correction [12] |
| C_{rs} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| Δn | MP | | Bit string(16) | Mean Motion Difference From Computed Value (semi-circles/sec) [12] |
| M_0 | MP | | Bit string(32) | Mean Anomaly at Reference Time (semi-circles) [12] |
| C_{uc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| e | MP | | Bit string(32) | c |
| C_{us} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) [12] |
| $(A)^{1/2}$ | MP | | Bit string(32) | Semi-Major Axis (meters) ^{1/2} [12] |
| t_{oe} | MP | | Bit string(16) | Reference Time Ephemeris [12] |
| Fit Interval Flag | MP | | Bit string(1) | [12] |
| AODO | MP | | Bit string(5) | Age Of Data Offset [12] |
| C_{ic} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |
| $OMEGA_0$ | MP | | Bit string(32) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) [12] |
| C_{is} | MP | | Bit string(16) | Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) [12] |
| i_0 | MP | | Bit string(32) | Inclination Angle at Reference Time (semi-circles) [12] |
| C_{rc} | MP | | Bit string(16) | Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) [12] |
| ω | MP | | Bit string(32) | Argument of Perigee (semi-circles) [12] |
| $OMEGA\dot{}$ | MP | | Bit string(24) | Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles/sec) [12] |
| $i\dot{}$ | MP | | Bit string(14) | Rate of Inclination Angle (semi-circles/sec) [12] |

10.3.7.91b UE positioning DGANSS corrections

This IE contains DGANSS corrections to be used by the UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| DGANSS Reference Time | MP | | Integer(0..3570 by step of 30) | Seconds. Time in GNSS system time (modulo 3600 s) when the DGANSS corrections were calculated | REL-7 |
| DGANSS information | MP | 1 to <maxSgnType> | | | REL-7 |
| >GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. | REL-7 |
| >Status/Health | MP | | Enumerated(UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data) | | REL-7 |
| >DGANSS signal information | CV-Status/Health | 1 to <maxGANSSSat> | | If the Cipher information is included these fields are ciphered. | REL-7 |
| >>SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>IOD | MP | | Bit string(10) | 10 LSBs of Issue of Data field, which contains the identity of the GANSS Navigation Model. | REL-7 |
| >>UDRE | MP | | Enumerated(UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE) | The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite. | REL-7 |
| >>PRC | MP | | Real(-655.04..655.04 by step of 0.32) | meters Pseudo-range corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |
| >>RRC | MP | | Real(-4.064..4.064 by step of 0.032) | meters/sec Pseudo-range rate corrections are provided with respect to GNSS specific geodetic datum (e.g., PZ-90.02 if GANSS ID indicates GLONASS). | REL-7 |

| β_2 | MP | | Bit string(8) | sec/(semi-circle) ² [72] | REL-8 |
| β_3 | MP | | Bit string(8) | sec/(semi-circle) ³ [72] | REL-8 |

10.3.7.92c UE positioning GANSS Earth orientation parameters

This IE provides parameters to construct the ECEF and ECI coordinate transformation as defined in [68]. The Earth Orientation Parameters (EOP) indicate the relationship between the Earth's rotational axis and WGS-84 reference system.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------|---------|
| t _{EOP} | MP | | Bit String(16) | EOP data reference time (seconds) [68] | REL-8 |
| PM_X | MP | | Bit String(21) | X-axis polar motion value at reference time (arc-seconds) [68] | REL-8 |
| PM_X_dot | MP | | Bit String(15) | X-axis polar motion drift at reference time (arc-seconds/day) [68] | REL-8 |
| PM_Y | MP | | Bit String(21) | Y-axis polar motion value at reference time (arc-seconds) [68] | REL-8 |
| PM_Y_dot | MP | | Bit String(15) | Y-axis polar motion drift at reference time (arc-seconds/day) [68] | REL-8 |
| ΔUT1 | MP | | Bit String(31) | UT1-UTC difference at reference time (seconds) [68] | REL-8 |
| ΔUT1_dot | MP | | Bit String(19) | Rate of UT1-UTC difference at reference time (seconds/day) [68] | REL-8 |

10.3.7.92d UE positioning BDS Ionospheric Grid Model

This IE contains BDS Ionospheric Grid information to calculate the propagation delays of the B1I signal through the ionosphere.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------|------|---------------------|--------------------------------|--------------------------------------------------------------------------------------------------------|---------|
| BDS Reference Time | MP | | Integer(0..3570 by step of 30) | Seconds. Time in BDS system time (modulo 3600 s) when the BDS Ionospheric Grid Information is valid. | REL-12 |
| BDS Ionospheric Grid Information | MP | 1 to <maxI GPInfo > | | Ionospheric information for upto 16 grid points will be included in this version of the specification. | REL-12 |
| >IGP number | MP | | INTEGER (1..320) | Ionospheric grid point number (dimensionless) [86]. | REL-12 |
| >Vertical Delay | MP | | BIT STRING (9) | Vertical Delay at Ionospheric Grid Points ,(meters) [86] | REL-12 |
| >GIVEI | MP | | BIT STRING (4) | Grid Ionospheric Vertical Error Index (dimensionless) [86]. | REL-12 |

10.3.7.92e UE positioning DBDS corrections

This IE contains the BDS differential corrections to be used by UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|---------------------|--------------------------------|------------------------------------------------------------------------------------------|---------|
| DBDS Reference Time | MP | | Integer(0..3570 by step of 30) | Seconds. Time in BDS system time (modulo 3600 s) when the DBDS corrections are valid. | REL-12 |
| DBDS information | MP | 1 to <maxSgnType> | | | REL-12 |
| >DBDS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the B11 | REL-12 |
| >DBDS signal information | MP | 1 to <maxGANSS Sat> | | | REL-12 |
| >>SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | |
| >>UDREI | MP | | Integer (0..15) | User Differential Range Error Index (dimensionless) [86]. | REL-12 |
| >>RURAI | MP | | Integer (0..15) | BDS Regional User Range Accuracy Index, (dimensionless) [86]. | REL-12 |
| >>>Δt | MP | | BIT STRING (13) | Equivalent Clock Correction (meters) [86] | REL-12 |

10.3.7.93 UE positioning GPS measured results

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |

| Measurement Parameters | MP | 1 to <maxSat> | | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Satellite ID | MP | | Enumerated(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. | |
| >C/N ₀ | MP | | Integer(0..63) | the estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (typical levels will be in the range of 20 – 50 dB-Hz). | |
| >Doppler | MP | | Integer(-32768..32768) | Hz, scale factor 0.2. | |
| >Whole GPS Chips | MP | | Integer(0..1022) | Unit in GPS chips. Whole value of the UE GPS code-phase measurement, where increasing binary values of the field signify increasing measured pseudoranges. The UE GPS code-phase measurement is divided into the fields "Whole GPS Chips" and "Fractional GPS Chips". | |
| >Fractional GPS Chips | MP | | Integer(0..(2 ¹⁰ -1)) | Scale factor 2 ⁻¹⁰ Fractional value of the UE GPS code-phase measurement. | |
| >Multipath Indicator | MP | | Enumerated(NM, low, medium, high) | Note 1. | |
| >Pseudorange RMS Error | MP | | Enumerated(range index 0..range index 63) | Note 2. | |

NOTE 1: The following table gives the mapping of the multipath indicator field.

| Value | Multipath Indication |
|--------|----------------------|
| NM | Not measured |
| Low | MP error < 5m |
| Medium | 5m < MP error < 43m |
| High | MP error > 43m |

NOTE 2: The following table gives the bitmapping of the Pseudorange RMS Error field.

| Range Index | Mantissa | Exponent | Floating-Point value, x _i | Pseudorange value, P |
|-------------|----------|----------|--------------------------------------|---------------------------------------|
| 0 | 000 | 000 | 0.5 | P < 0.5 |
| 1 | 001 | 000 | 0.5625 | 0.5 ≤ P < 0.5625 |
| l | X | Y | 0.5 * (1 + x/8) * 2 ^y | x _{i-1} ≤ P < x _i |
| 62 | 110 | 111 | 112 | 104 ≤ P < 112 |
| 63 | 111 | 111 | -- | 112 ≤ P |

| >>GANSS Signal ID | OP | | GANSS Signal Id 10.3.3.45a | Absence of this field means the default value as defined in 10.3.3.45a for the GANSS identified by GANSS_ID. | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|----------------------------------------|------|--------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>GANSS Code Phase Ambiguity | OP | | Integer (0..31) | The "GANSS Code Phase Ambiguity" field gives the ambiguity of the code phase measurement. It is given in ms and is an integer between 0 and 31. The Total Code Phase for a satellite k (Satk) is given modulo this "GANSS Code Phase Ambiguity" and is reconstructed with: $\text{Code_Phase_Tot}(\text{Satk}) = \text{Code_Phase}(\text{Satk}) + \text{Integer Code Phase}(\text{Satk})$ If there is no code phase ambiguity, the "GANSS Code Phase Ambiguity" shall be set to 0. The field is optional. If "GANSS Code Phase Ambiguity" and "GANSS Code Phase Ambiguity Extension" is absent, the default value is 1ms. | REL-7 |
| >>GANSS Code Phase Ambiguity Extension | OP | | Integer(32..127) | If the total GANSS code phase ambiguity is greater than 31 ms, then this field shall be used. The definition is the same as for the "GANSS Code Phase Ambiguity" field except the value range is from 32 to 127 ms. | REL-8 |
| >>GANSS Measurement Parameters | MP | 1 to <maxGANSSSat> | | | REL-7 |
| >>>Satellite ID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >>>C/N ₀ | MP | | Integer(0..63) | The estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (typical levels will be in the range of 20 – 50 dB-Hz). | REL-7 |
| >>>Multipath Indicator | MP | | Enumerated(NM, low, medium, high) | Coding as in 10.3.7.93 | REL-7 |
| >>>Carrier Quality Indicaton | OP | | Bit string(2) | Note 1 | REL-7 |
| >>>GANSS Code Phase | MP | | Integer(0..2 ²¹ -1) | Scale factor 2 ⁻²¹ Code phase for the particular satellite signal at the time of measurement in the units of milliseconds. Increasing binary values of the field signify increasing measured pseudoranges. GNSS specific code phase measurements (e.g. chips) are converted into unit of ms by dividing the measurements by the nominal values of the measured signal chipping rate. | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---------------------------------------|------|-------|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >>>GANSS Integer Code Phase | OP | | Integer(0..63) | In ms Indicates the integer millisecond part of the code phase, that is expressed modulo the GANSS Code Phase Ambiguity. | REL-7 |
| >>>GANSS Integer Code Phase Extension | OP | | Integer(64..127) | If the total GANSS integer code phase is greater than 63 ms, then this field shall be used. The definition is the same as for the GANSS Integer Code Phase field except the value range is from 64 to 127 ms. | REL-8 |
| >>>Code Phase RMS Error | MP | | Enumerated(range index 0..range index 63) | Coding as in Note 2 of 10.3.7.93 | REL-7 |
| >>>Doppler | MP | | Integer(-32768..32767) | m/s, scale factor 0.04. Doppler measured by the UE for the particular satellite signal | REL-7 |
| >>>ADR | OP | | Integer(0..33554431) | Meters, scale factor 2^{-10} ADR measurement measured by the UE for the particular satellite signal. | REL-7 |

NOTE 1: Coding of Carrier quality indication:

| MSB | LSB | Explanation |
|-----|-----|------------------------------|
| 0 | | Carrier phase not continuous |
| 1 | | Carrier phase continuous |
| | 0 | Data direct |
| | 1 | Data Inverted |

NOTE 2: Coding of GANSS Time Id:

| Value of GANSS Time id | Explanation | Version |
|------------------------|---------------------|---------|
| 0 | GPS system time | REL-8 |
| 1 | QZSS system time | |
| 2 | GLONASS system time | |
| 3 | BDS system time | REL-12 |
| 4-7 | Reserved | |

10.3.7.94 UE positioning GPS navigation model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|---------------|---------------------------------------|--------------------------------------------------------------------------------------------|
| Satellite information | MP | 1 to <maxSat> | | |
| >SatID | MP | | Enumerated(0..63) | Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in [12]. |
| >Satellite Status | MP | | Enumerated(NS_NN, ES_SN, ES_NN, REVD) | NOTE |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|------------------------------------------------|--------------------------------|-------|-------------------------------------------------------------------------|-----------------------|
| >GPS Ephemeris and Clock Correction parameters | CV- <i>Satellite status</i> | | UE positioning GPS Ephemeris and Clock Correction parameters 10.3.7.91a | |

NOTE: The UE shall interpret enumerated symbols as follows.

| Value | Indication |
|-------|-------------------------------------------|
| NS_NN | New satellite, new Navigation Model |
| ES_SN | Existing satellite, same Navigation Model |
| ES_NN | Existing satellite, new Navigation Model |
| REVD | Reserved |

| Condition | Explanation |
|-------------------------|---------------------------------------------------------------------------------------------|
| <i>Satellite status</i> | The IE is not needed if the IE "Satellite status" is ES_SN and mandatory present otherwise. |

10.3.7.94a UE positioning GANSS navigation model

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|---------------------|---------------------------------------------|---------------------------------------------------------------------------------------|---------|
| Non-Broadcast Indication | OP | | Enumerated (TRUE) | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-7 |
| Satellite information | MP | 1 to <maxGAN SSSat> | | | REL-7 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >SV Health | MP | | Bit string(9) | NOTE | REL-12 |
| >IOD | MP | | Bit string(10) | | REL-7 |
| >GANSS Clock Model | MP | | UE positioning GANSS clock model 10.3.7.91d | | REL-7 |
| > GANSS Orbit Model | MP | | UE positioning GANSS orbit model 10.3.7.91c | | REL-7 |

NOTE: The Health values are GNSS specific. For Galileo, the UE shall interpret the bit string as follows [61]:

| Parameter | Bit | Type | Explanation |
|---------------------------|-----|------------|-------------|
| E5a Data Validity Status | 0 | Boolean | |
| E5b Data Validity Status | 1 | Boolean | |
| E1-B Data Validity Status | 2 | Boolean | |
| E5a Signal Health Status | 3-4 | Bit string | |
| E5b Signal Health Status | 5-6 | Bit string | |
| E1-B Signal Health Status | 7-8 | Bit string | |

10.3.7.94b UE positioning GANSS additional navigation models

This IE contains information required to manage the transfer of precise navigation data to the GANSS-capable UE.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|---------------------|---------------------------------------------------------|---------------------------------------------------------------------------------------|---------|
| Non-Broadcast Indication | OP | | Enumerated (TRUE) | If this IE is present, GANSS navigation model is not derived from satellite broadcast | REL-8 |
| Satellite information | MP | 1 to <maxGAN SSSat> | | | REL-8 |
| >SatID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-8 |
| >SV Health | MP | | Bit string(6) | NOTE 1 | REL-8 |
| >IOD | MP | | Bit string(11) | NOTE 2 | REL-8 |
| >GANSS additional clock models | MP | | UE positioning GANSS additional clock models 10.3.7.91f | | REL-8 |
| >GANSS additional orbit models | MP | | UE positioning GANSS additional orbit models 10.3.7.91e | | REL-8 |

NOTE 1: The SV Health values are GNSS specific as identified by the GANSS ID :

| GANSS | SV Health Bit String(6) | | | | | |
|---------------------|------------------------------------|----------------------------------|-------------------------------|-------------------|----------------|----------------|
| | Bit 1 (MSB) | Bit 2 | Bit 3 | Bit 4 | Bit 5 | Bit 6 (LSB) |
| Modernized GPS | L1C Health [70] | L1 Health [68,69] | L2 Health [68,69] | L5 Health [68,69] | '0' (reserved) | '0' (reserved) |
| SBAS | Ranging On (0), Off(1) [71] | Corrections On (0), Off (1) [71] | Integrity On (0), Off(1) [71] | '0' (reserved) | '0' (reserved) | '0' (reserved) |
| QZSS QZS-L1 | SV Health [72] | | | | | |
| QZSS QZS-L1C/L2C/L5 | L1C Health [72] | L1 Health [72] | L2 Health [72] | L5 Health [72] | '0' (reserved) | '0' (reserved) |
| GLONASS | B _n (MSB) [73, page 23] | F _T [73, Table 4.4] | | | | '0' (reserved) |
| BDS | B1I Health (SatH1) [86] | '0' (reserved) | '0' (reserved) | '0' (reserved) | '0' (reserved) | '0' (reserved) |

NOTE 2: The IOD values are GNSS specific as identified by the GANSS ID :

| GANSS | IOD Bit String(11) | | | | | | | | | | |
|---------------------|-----------------------------------------------------------------------------------|---------------------------|-------|--------------------------------------|----------------------------------------------------------------|-------|-------|-------|-------|--------|--------------|
| | Bit 1 (MSB) | Bit 2 | Bit 3 | Bit 4 | Bit 5 | Bit 6 | Bit 7 | Bit 8 | Bit 9 | Bit 10 | Bit 11 (LSB) |
| Modernized GPS | t _{oe} (seconds, scale factor 300, range 0 – 604500) [68, 69, 70] | | | | | | | | | | |
| SBAS | '0' | '0' | '0' | Issue of Data ([71], Message Type 9) | | | | | | | |
| QZSS QZS-L1 | '0' | Issue of Data, Clock [72] | | | | | | | | | |
| QZSS QZS-L1C/L2C/L5 | t _{oe} (seconds, scale factor 300, range 0 – 604500) [72] | | | | | | | | | | |
| GLONASS | '0' | '0' | '0' | '0' | t _b (minutes, scale factor 15, range 0 – 1425) [73] | | | | | | |
| BDS | 11 MSB bits of t _{oe} (seconds, scale factor 512, range 0 – 604672) [86] | | | | | | | | | | |

10.3.7.95 UE positioning GPS real-time integrity

This IE contains parameters that describe the real-time status of the GPS constellation.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|---------------|--------------------|--------------------------------------------------------------------------------------------|
| Satellite information | MP | 1 to <maxSat> | | |

| NOTE 1: If the IE "UE Positioning GPS ReferenceTime Uncertainty" is present, the IE "SFN-TOW Uncertainty" is not needed and shall be ignored. | | | | | |

10.3.7.96o UE positioning GANSS reference time

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|-------------------------------------|------|-------|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GANSS Day | OP | | Integer(0..8191) | The sequential number of days (with day count starting at 0) from the origin of the GNSS system time indicated by GANSS Time ID modulo 8192 days (about 22 years). If this field is not present and the UE cannot obtain GNSS system time information by other means, the UE behaviour is unspecified. NOTE. | REL-7 |
| GANSS Day Cycle Number | OP | | Integer(0..7) | This field provides the number of 8192 day cycles occurred since the GANSS zero time-point defined in NOTE below. The first 8192 GANSS days since the zero time-point is GANSS Day Cycle Number 0. When this field is included, the GANSS Day field shall be included as well. | REL-10 |
| GANSS TOD | MP | | Integer(0..86399) | GANSS Time of Day in seconds | REL-7 |
| GANSS TOD Uncertainty | OP | | Integer(0..127) | Coding as in subclause 10.3.7.96a | REL-7 |
| GANSS Time ID | OP | | Integer (0..7) | Absence of this IE means Galileo, values 0-7 are reserved for future use | REL-7 |
| | | | | Absence of this IE means Galileo, For coding description see NOTE 2 in 10.3.7.93a. | REL-8 |
| UTRAN GANSS reference time | OP | | | | REL-7 |
| >UTRAN GANSS timing of cell frames | MP | | Integer(0..999999750 by step of 250) | UTRAN GANSS timing of cell frames in steps of 250 ns. Indicates sub-second part of GANSS TOD | REL-7 |
| >CHOICE <i>mode</i> | MP | | | | REL-7 |
| >>FDD | | | | | REL-7 |
| >>>Primary CPICH Info | MP | | Primary CPICH Info 10.3.6.60 | Identifies the reference cell for the GANSS TOD-SFN relationship | REL-7 |
| >>TDD | | | | | REL-7 |
| >>>cell parameters id | MP | | Cell parameters id 10.3.6.9 | Identifies the reference cell for the GANSS TOD-SFN relationship | REL-7 |
| >SFN | MP | | Integer(0..4095) | The SFN which the UTRAN GANSS timing of cell frames time stamps. | REL-7 |
| T _{UTRAN-GANSS} drift rate | OP | | ENUMERATED (0, 1, 2, 5, 10, 15, 25, 50, -1, -2, -5, -10, -15, -25, -50) | in 1/256 chips per sec. One spare value needed. | REL-7 |

NOTE: Definition of GNSS system time origin:

| GNSS | GNSS System Time Origin |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Galileo System Time | 13 seconds before midnight between 21 st August and 22 nd August 1999; i.e., GST was equal to 13 seconds at August 22, 1999; 00:00:00 UTC |
| GPS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| QZSS System Time | January 6, 1980; 00:00:00 UTC(USNO) |
| GLONASS System Time | December 31, 1995; 21:00:00 UTC(SU), which is local UTC Moscow January 1, 1996; 00:00:00, defined as UTC(SU) + 3 hours in [73] |
| BDS System Time | January 1, 2006; 00:00:00 UTC(NTSC) |

10.3.7.96a UE positioning GPS reference time uncertainty

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| UE Positioning GPS Reference Time Uncertainty | MP | | Integer (0..127) | This element provides the accuracy of the provided GPS time, or alternatively the accuracy of the provided relation between GPS and UTRAN time. If "GPS TOW" is the provided GPS time, or alternatively the GPS time corresponding to the UTRAN time provided, then the true GPS time lies in the interval ["GPS TOW" - "GPS Reference Time Uncertainty", "GPS TOW" + "GPS Reference Time Uncertainty"]. The uncertainty r , expressed in microseconds, is mapped to a number K with the following formula: $r = C * (((1+x)^K) - 1)$ with $C = 0.0022$ and $x = 0.18$. To encode any higher value of the uncertainty than that corresponding to $K=127$ in the formula above, or to indicate an undefined value of the "GPS TOW", the same value, $K=127$, shall be used. | REL-7 |

NOTE: This IE is not needed in the SRNS RELOCATION INFO message.

10.3.7.97 UE positioning GPS UTC model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| A_1 | MP | | Bit string(24) | sec/sec [12] |
| A_0 | MP | | Bit string(32) | seconds [12] |
| t_{tot} | MP | | Bit string(8) | seconds [12] |
| WN_t | MP | | Bit string(8) | weeks [12] |
| Δt_{LS} | MP | | Bit string(8) | seconds [12] |
| WN_{LSF} | MP | | Bit string(8) | weeks [12] |
| DN | MP | | Bit string(8) | days [12] |
| Δt_{LSF} | MP | | Bit string(8) | seconds [12] |

10.3.7.97a UE positioning GANSS time model

The GANSS time model field contains a set of parameters needed to relate GANSS time for the GANSS indicated by "GANSS ID" to selected time reference indicated by "GNSS_TO_ID".

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---------------------------------|------|-------|-------------------------------------|-----------------------------------------------------------------------------------------------------------------|---------|
| GANSS Time Model Reference Time | MP | | Integer(0..604784 by step of 16) | GANSS reference time of week for GANSS Time Model, given in GNSS specific system time, with a 16s scale factor. | REL-7 |
| T _{A0} | MP | | Integer (-2147483648 .. 2147483647) | Seconds, scale factor 2 ⁻³⁵ | REL-7 |
| T _{A1} | OP | | Integer (-8388608 .. 8388607) | sec/sec, scale factor 2 ⁻⁵¹ | REL-7 |
| T _{A2} | OP | | Integer (-64 .. 63) | sec/sec ² , scale factor 2 ⁻⁶⁸ | REL-7 |
| GNSS_TO_ID | MP | | Enumerated (GPS, | GNSS Time Offset ID Seven spare values needed. | REL-7 |
| | | | Galileo, QZSS, GLONASS, | GNSS Time Offset ID Four spare values needed. | REL-8 |
| | | | BDS) | GNSS Time Offset ID Three spare values needed. | REL-12 |
| Week Number | OP | | Integer(0..8191) | Reference week of GANSS Time Model given in GNSS specific system time | REL-7 |
| Delta_T | OP | | Integer(-128..127) | This field specifies the integer seconds of the GNSS-GNSS Time Offset. Scale factor 1 second. | REL-10 |

10.3.7.97b UE positioning GANSS data bit assistance

This element provides data bit assistance data for specific satellite signals for data wipe-off.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|--------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GANSS TOD | MP | | Integer(0..59) | Reference time (modulo 1 minute) of the first bit of the data in IE "Data Bits", in seconds | REL-7 |
| Data Bit Assistance List | MP | 1 to <maxGANSSSat> | | The following fields are present N_Sat times, with $1 \leq N_Sat \leq \text{maxGANSSSat}$ | REL-7 |
| >Satellite ID | MP | | Integer (0..63) | Identifies the satellite and is as defined in Note 2 of 10.3.7.88b. | REL-7 |
| >Data bit assistance Sgn List | MP | 1 to <maxSgnType> | | The following fields are present N_Sgn times, with $1 \leq N_Sgn \leq \text{maxSgnType}$ | REL-7 |
| >>GANSS Signal ID | MP | | GANSS Signal ID 10.3.3.45a | | REL-7 |
| >>Data Bits | MP | | Bit string (1..1024) | Raw data bits as transmitted from a specific satellite at the time indicated by GANSS_TOD. In case of Galileo, it contains the FEC encoded and interleaved modulation symbols. The logical levels 1 and 0 correspond to signal levels -1 and +1, respectively. N_BIT is the actual number of elements in Data bits: $1 \leq N_BIT \leq 1024$. | REL-7 |

| | | | | | |
|--|--|--|--|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| | | | | <p>In case of Modernized GPS L1C, it contains the encoded and interleaved modulation symbols as defined in [70] section 3.2.3.1.</p> <p>In case of Modernized GPS L2C, it contains either the NAV data modulation bits, the FEC encoded NAV data modulation symbols, or the FEC encoded CNAV data modulation symbols, dependent on the current signal configuration of this satellite as defined in [68, Table 3-III].</p> <p>In case of Modernized GPS L5, it contains the FEC encoded CNAV data modulation symbols as defined in [69].</p> <p>In case of SBAS, it contains the FEC encoded data modulation symbols as defined in [71].</p> <p>In case of QZSS QZS-L1, it contains the NAV data modulation bits as defined in [72] section 5.2. In case of QZSS QZS-L1C, it contains the encoded and interleaved modulation symbols as defined in [72] section 5.3. In case of QZSS QZS-L2C, it contains the encoded modulation symbols as defined in [72] section 5.5. In case of QZSS QZS-L5, it contains the encoded modulation symbols as defined in [72] section 5.6.</p> <p>In case of GLONASS, it contains the 100 sps differentially Manchester encoded modulation symbols as defined in [73] section 3.3.2.2.</p> | REL-8 |
| | | | | <p>In case of BDS, it contains the encoded and interleaved modulation symbols as defined in [86] section 5.1.3.</p> | REL-12 |

10.3.7.97c UE positioning GANSS UTC model

The UTC Model field contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| A ₁ | MP | | Bit string(24) | |
| A ₀ | MP | | Bit string(32) | |
| t _{tot} | MP | | Bit string(8) | |
| Δt _{LS} | MP | | Bit string(8) | |
| WN _t | MP | | Bit string(8) | |
| WN _{LSF} | MP | | Bit string(8) | |
| DN | MP | | Bit string(8) | |
| Δt _{LSF} | MP | | Bit string(8) | |

For a GANSS Id referring to Galileo, the definition and the unit of the elements are provided in [61].

10.3.7.97d UE positioning GANSS additional UTC models

This element contains several sets of parameters needed to relate GNSS system time to Universal Time Coordinate (UTC), as defined in [68, 69, 70, 71, 72, 73]. Only one parameter set can be included in one UE positioning GANSS additional UTC models and which set of parameters to include depends on the GANSS-ID and UE capabilities.

The UTC time standard, UTC(k), is GNSS specific. E.g., if GANSS ID indicates QZSS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate QZST to UTC(NICT). If GANSS ID indicates Modernized GPS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GPS system time to UTC(USNO). If GANSS ID indicates GLONASS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate GLONASS system time to UTC(RU). If GANSS ID indicates SBAS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate SBAS network time for the SBAS indicated by SBAS ID to the UTC standard defined by the UTC Standard ID. If GANSS ID indicates BDS, UE positioning GANSS additional UTC models contains a set of parameters needed to relate BDS system time to UTC (NTSC).

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------------------------------------------|---------|
| Model-1 | OP | | | NOTE | REL-8 |

| >>cell and channel ID | MP | | Cell and Channel Identity info 10.3.6.8a | Identifies the channel to be measured on. |
| Frequency info | MD | | Frequency info 10.3.6.36 | Default value is the existing value of frequency information |
| IPDL parameters | CV-IPDLs | | UE positioning IPDL parameters 10.3.7.98 | |
| SFN offset | MP | | Integer (0 .. 4095) | Although this IE is not always required, need is MP to align with ASN.1. Define Tref as the time of beginning of system frame number SFNref of the reference cell. Define Tnc as the beginning of a frame from the neighbour cell occurring immediately after the time Tref. Let the corresponding system frame number be SFNnc. Then SFNnc = SFNref-SFN offset modulo 4096. |
| SFN offset validity | MD | | Enumerated (FALSE) | Absence of this element means SFN offset is valid. FALSE means SFN offset is not valid. |
| SFN-SFN relative time difference | MP | | Integer(0..38399) | Gives the relative timing compared to the reference cell. Equal to $\lfloor (Tnc - Tref) * (3.84 * 10^6) \rfloor$ where $\lfloor () \rfloor$ denotes rounding to the nearest lower integer. In chips, Tnc = the time of beginning of a system frame from the neighbour cell, Tref = the time of beginning of a system frame from the reference cell. |
| SFN-SFN drift | OP | | Integer (0, -1, -2, -3, -4, -5, -8, -10, -15, -25, -35, -50, -65, -80, -100, 1, 2, 3, 4, 5, 8, 10, 15, 25, 35, 50, 65, 80, 100) | in 1/256 chips per second |
| Search Window Size | MP | | Integer(20, 40, 80, 160, 320, 640, 1280, infinity) | In chips. If the value is X then the expected SFN-SFN observed time difference is in the range [RTD-X, RTD+X] where RTD is the value of the field SFN-SFN relative time difference. Infinity means that the uncertainty is larger than 1280 chips. |

10.3.7.109a UE positioning Relative Time Difference quality

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|-----------------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Relative Time Difference Std Resolution | MP | | Bit string(2) | Std Resolution field includes the resolution used in Std of Relative Time Difference field. Encoding on two bits as follows: '00' 10 meters '01' 20 meters '10' 30 meters '11' Reserved |
| Std of Relative Time Difference | MP | | Bit string(5) | Std of Relative Time difference field includes standard deviation of (SFN-SFN relative time difference + Fine SFN-SFN). Following linear 5 bit encoding is used: '00000' 0 - (R*1-1) meters '00001' R*1 – (R*2-1) meters '00010' R*2 – (R*3-1) meters ... '11111' R*31 meters or more where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,...,620+ m. |

10.3.7.110 UE positioning reporting criteria

The triggering of the event-triggered reporting for a UE positioning measurement.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|---------|
| Parameters required for each event | MP | 1 to <maxMeas Event> | | Note: need corrected to MP in Rel-7 to align with ASN.1. | |
| >Amount of reporting | MP | | Integer(1, 2, 4, 8, 16, 32, 64,infinite) | | |
| >Report first fix | MP | | Boolean | If TRUE the UE reports the position once the measurement control is received, and then each time an event is triggered. | |
| >Measurement interval | MP | | Integer(5,15,60,300,900,1800,3600,7200) | Indicates how often the UE should make the measurement In seconds | |
| >CHOICE Event ID | MP | | | | |
| >>7a | | | | | |
| >>>Threshold Position Change | MP | | Integer(10, 20,30,40,50,100,200, 300,500,1000,2000,5000,10000,20000,50000,100000) | Meters. Indicated how much the position should change compared to last reported position fix in order to trigger the event. | |
| >>7b | | | | | |
| >>>Threshold SFN-SFN change | MP | | Real(0.25, 0.5,1,2,3,4, 5,10,20,50, 100,200,500,1000,2000,5000) | Chips. Indicates how much the SFN-SFN measurement of ANY measured cell is allowed to change before the event is triggered. | |
| >>7c | | | | | |
| >>>Threshold SFN-GPS TOW | MP | | Integer(1,2,3,5,10,20, 50,100) | Time in ms. When the GPS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | |
| | | | | Time in micro seconds (NOTE 1). | REL-7 |
| >>7d | | | | | REL-7 |
| >>>Threshold SFN-GANSS TOW | MP | | Integer(1,2,3,5,10,20, 50,100) | Time in micro seconds. When the GANSS TOW and SFN timer has drifted apart more than the specified value the event is triggered. | REL-7 |
| NOTE 1: In previous versions of the protocol, the IE "Threshold SFN-GPS TOW" was provided in units of milli seconds. If the information is provided in units of micro seconds, the UE shall ignore any information provided in units of milli seconds. | | | | | |

10.3.7.111 UE positioning reporting quantity

The purpose of the element is to express the allowed/required location method(s), and to provide information desired QoS.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------------------|-----------------------|---------|
| Method Type | MP | | Enumerated(UE assisted, UE based, UE based is | | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|------------------------------------|--------------------------|-------|----------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | | preferred but UE assisted is allowed, UE assisted is preferred but UE based is allowed) | | |
| Positioning Methods | MP | | Enumerated(OTDOA, GPS, OTDOA or GPS, Cell ID) | | |
| Response Time | MP | | Integer(1,2,4, 8, 16, 32, 64, 128) | This IE shall be ignored. | |
| Horizontal Accuracy | CV- <i>MethodType</i> | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 10*(1.1^k-1)$ in meters. | |
| Vertical Accuracy | CV- <i>MethodType</i> | | Bit string(7) | The uncertainty is derived from the "uncertainty code" k by $r = 45*(1.025^k-1)$ in meters. | |
| GPS timing of Cell wanted | MP | | Boolean | If TRUE the SRNC wants the UE to report the SFN-GPS timing of the reference cell. This is however optional in the UE. | |
| Multiple Sets | MP | | Boolean | This IE shall be ignored. | |
| Additional Assistance Data Request | MP | | Boolean | TRUE indicates that the UE is requested to send the IE "GPS Additional Assistance Data Request" and/or the "IE "GANSS Additional Assistance Data Request" (if the IE "GANSS Positioning Methods" is included) when the IE "UE positioning Error" is present in the UE positioning measured results. FALSE indicates that the UE shall use the assistance data available. | |
| Environment Characterisation | OP | | Enumerated(possibly heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment) | One spare value is needed. | |
| Velocity Requested | OP | | Enumerated (TRUE) | If this element is present the UE is requested to send a velocity estimate | REL-7 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GANSS Positioning Methods | OP | | Bit string(16) | For each bit, if set to '1', indicates that respective GNSS is allowed. bit 0: GPS bit 1: Galileo bit 2-15: reserved for future GNSSes Note 1 | REL-7 |
| | | | | bit 2: SBAS (WAAS, EGNOS, MSAS, GAGAN) bit 3: Modernized GPS (L1C, L2C, L5) bit 4: QZSS bit 5: GLONASS bit 6-15: reserved for future GNSSes Note 1 | REL-8 |
| | | | | bit 6: BDS bit 7-15: reserved for future GNSSes Note 1 | REL-12 |
| GANSS timing of Cell wanted | OP | | Bit string(8) | Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved. If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE. | REL-7 |
| | | | | Bit 1 is for Modernized GPS; Bit 2 is for QZSS; Bit 3 is for GLONASS; Other bits are reserved. If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE. If more than one bit is set to one, the UE will select the GANSS among the allowed GANSS for the SFN-GANSS timing of the reference cell in the measurement report. | Rel-8 |
| | | | | Bit 4 is for BDS; Other bits are reserved. If one bit is set to one the SRNC wants the UE to report the SFN-GANSS timing of the reference cell. This is however optional in the UE. If more than one bit is set to one, the UE will select the GANSS among the allowed GANSS for the SFN-GANSS timing of the reference cell in the measurement report. | REL-12 |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description | Version |
|---------------------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| GANSS Carrier-Phase Measurement Requested | OP | | Bit string(8) | Each bit refers to a GANSS. Bit 0 is for Galileo. Other bits are reserved. This is however optional in the UE. | REL-7 |
| | | | | Bit 1 is for SBAS; Bit 2 is for Modernized GPS; Bit 3 is for QZSS; Bit 4 is for GLONASS; Other bits are reserved. This is however optional in the UE. | Rel-8 |

| GANSS Multi-frequency Measurement Requested | OP | | Bit String(8) | Each bit refers to a GANSS. Bit 0 is for Galileo; Bit 1 is for SBAS; Bit 2 is for Modernized GPS; Bit 3 is for QZSS; Bit 4 is for GLONASS; Other bits are reserved. This is however optional in the UE. | REL-8 |
| | | | | Bit 5 is for BDS; Other bits are reserved. This is however optional in the UE. | REL-12 |

| Condition | Explanation |
|--------------------|-------------------------------------------------------------------------------------------------|
| <i>Method Type</i> | The IE is optional if the IE "Method Type" is "UE assisted"; otherwise it is mandatory present. |

NOTE 1: Bit 0 of this bitmap shall not be the only one set to 1.

10.3.7.112 T_{ADV} info

NOTE: Only for 1.28 Mcps TDD.

T_{ADV} indicates the difference between the Rx timing and Tx timing of a UE.

| Information Element/group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------|-----------------------------------------------------------|---------|
| T_{ADV} | MP | | Integer (0..2047, 2048..8191) | As defined in [20]. | REL-4 |
| | | | | | REL-7 |
| SFN | MP | | Integer(0..4095) | SFN during which the T_{ADV} measurement was performed. | REL-4 |

10.3.7.113 UTRA priority info list

Contains priority based reselection information for UTRA.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------|------|-----------------------|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| UTRA Serving Cell | MP | | | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio-1>) | 0 is the lowest priority and maxPrio-1 is the highest | REL-8 |
| >S _{prioritysearch1} | MP | | Integer (0..62 by step of 2) | dB | REL-8 |
| >S _{prioritysearch2} | MD | | Integer (0..7 by step of 1) | dB, default value is 0 | REL-8 |
| >Thresh _{-serving,low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >Thresh _{-serving,low2} | MD | | Integer (0..31) | Ec/N0, dB, default value is 0 | REL-9 |
| UTRAN FDD Frequencies | OP | 1 to <maxNumFDDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16383) | It is always ensured by the UTRAN that more than one entry for the same physical frequency is not configured regardless of the UARFCN used to indicate this. | REL-8 |
| >priority | MP | | Integer (0..<maxPrio-1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QqualminFDD | MD | | Integer (-24..0) | Ec/N0, [dB] Default value is Qqualmin for the serving cell | REL-8 |
| >QrxlevminFDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |
| UTRAN TDD Frequencies | OP | 1 to <maxNumTDDFreqs> | | | REL-8 |
| >UARFCN | MP | | Integer(0..16383) | | REL-8 |
| >priority | MP | | Integer (0..<maxPrio-1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSCP, dB | REL-8 |
| >QrxlevminTDD | MD | | Integer (-119..-25 by step of 2) | RSCP, [dBm] Default value is Qrxlevmin for the serving cell | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

10.3.7.114 GSM priority info list

Contains priority based reselection information for GSM.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------------|----------------------------------|------------------------------------------------------------|---------|
| GSM Priority Info | MP | 1 to <maxNum GSMCellGroup> | | | REL-8 |
| >GSM cell group List | MP | | GSM cell group 10.3.7.9a | | REL-8 |
| >priority | MP | | Integer (0..<maxPriority-1>) | 0 is the lowest priority and maxPriority-1 is the highest. | REL-8 |
| >QrxlevminGSM | MP | | Integer (-115..-25 by step of 2) | GSM RSSI, [dBm] | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | GSM RSSI, dB | REL-8 |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

10.3.7.115 E-UTRA frequency and priority info list

Contains information about neighbour E-UTRA frequencies (with associated blacklists), together with priority based reselection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA frequency and priority | | 1 to <maxNum EUTRAFreqs> | | | REL-8 |
| >EARFCN | MP | | Integer(0..65535) | EARFCN of the downlink carrier frequency [64]. For UTRAN FDD, it is always ensured by the UTRAN that more than one entry for the same physical frequency is not configured regardless of the EARFCN used to indicate this. | REL-8 |
| >Measurement Bandwidth | MD | | Enumerated(6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, N_{RB} [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-8 |
| >priority | MP | | Integer (0..<maxPriority-1>) | 0 is the lowest priority and <maxPriority-1> is the highest. | REL-8 |
| >QrxlevminEUTRA | MP | | Integer (-140..-44 by step of 2) | RSRP, [dBm] | REL-8 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-8 |
| >QqualminEUTRA | MD | | Integer (-34..-3) | RSRQ, dB default value is negative infinity | REL-9 |
| >Thresh _{x, high2} | OP | | Integer (0..31) | RSRQ, dB | REL-9 |
| >Thresh _{x, low2} | OP | | Integer (0..31) | RSRQ, dB | REL-9 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------|------------------------|---------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >QqualminEUTRA-WB | CV-WB- RSRQ | | Integer (-34..-3) | RSRQ, dB, If this IE is present, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [74] | REL-11 |
| >QqualminRSRQ-OnAllSymbols | OP | | Integer (-34..-3) | RSRQ, dB, If this IE is present, the UE shall, when performing RSRQ measurements, perform RSRQ measurement on all OFDM symbols in accordance with TS 25.215 [7] and TS 25.225 [8] | REL-12 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUT RACellPer Freq> | | | REL-8 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-8 |
| >E-UTRA detection | MP | | Boolean | 'TRUE' means that the UE may detect the presence of a E-UTRA cell and report to NAS. NOTE 1. | REL-8 |
| >Reduced measurement performance | OP | | Enumerated (TRUE) | TRUE indicates that the frequency is configured for reduced measurement performance [19]. Absence indicates that the frequency is configured for normal measurement performance [19]. | REL-12 |
| Number of applicable EARFCN | CV- EARFCNB ands | | Integer (0..7) | The number N of EARFCN in "E-UTRA frequency and priority" which are applicable. If present this IE indicates the first N occurrences of EARFCN in "E-UTRA frequency and priority" which shall be read by UE. | REL-11 |
| E-UTRA frequency and priority extension | OP | 1 to <maxNum EUTRAFreqs> | | NOTE 2 | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------------|-------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >EARFCN extension | MP | | Integer (65536..262143) | EARFCN of the downlink carrier frequency [64]. For UTRAN FDD, it is always ensured by the UTRAN that more than one entry for the same physical frequency is not configured regardless of the EARFCN used to indicate this | REL-11 |
| >Measurement Bandwidth | MD | | Enumerated(6, 15, 25, 50, 75, 100) | Measurement bandwidth information common for all neighbouring cells on the carrier frequency. It is defined by the parameter Transmission Bandwidth Configuration, N_{RB} [36.104]. The values indicate the number of resource blocks over which the UE could measure. Default value is 6. | REL-11 |
| >priority | MP | | Integer (0..<maxPrio-1>) | 0 is the lowest priority and maxPrio-1 is the highest. | REL-11 |
| >QrxlevminEUTRA | MP | | Integer (-140..-44 by step of 2) | RSRP, [dBm] | REL-11 |
| >Thresh _{x, high} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-11 |
| >Thresh _{x, low} | MP | | Integer (0..62 by step of 2) | RSRP, dB | REL-11 |
| >QqualminEUTRA | MD | | Integer (-34..-3) | RSRQ, dB default value is negative infinity | REL-11 |
| >Thresh _{x, high2} | OP | | Integer (0..31) | RSRQ, dB | REL-11 |
| >Thresh _{x, low2} | OP | | Integer (0..31) | RSRQ, dB | REL-11 |
| >QqualminEUTRA-WB | CV-WB-RSRQ | | Integer (-34..-3) | RSRQ, dB, If this IE is present, the UE shall, when performing RSRQ measurements, use a wider bandwidth in accordance with TS 36.133 [74] | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------------|------|---------------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >QqualminRSRQ-OnAllSymbols | OP | | Integer (-34..-3) | RSRQ, dB, If this IE is present, the UE shall, when performing RSRQ measurements, perform RSRQ measurement on all OFDM symbols in accordance with TS 25.215 [7] and TS 25.225 [8] | REL-12 |
| >Blacklisted cells per freq list | OP | 1 to <maxEUTRACellPerFreq> | | | REL-11 |
| >>Physical Cell identity | MP | | Integer (0..503) | A list of blacklisted cells can be signalled per frequency | REL-11 |
| >E-UTRA detection | MP | | Boolean | 'TRUE' means that the UE may detect the presence of a E-UTRA cell and report to NAS. NOTE 1. | REL-11 |
| >Reduced measurement performance | OP | | Enumerated (TRUE) | TRUE indicates that the frequency is configured for reduced measurement performance [19]. Absence indicates that the frequency is configured for normal measurement performance [19]. | REL-12 |
| Multiple E-UTRA frequency info list | OP | 1 to <maxNumEUTRAFreqs> | | Each entry in the list corresponds to an entry in the "E-UTRA frequency and priority" IE, or an entry in the "E-UTRA frequency and priority extension" IE. NOTE 3. | REL-10 |
| >Multiple E-UTRA frequency band indicator list | OP | 1 to <maxMultipleFrequencyBandsEUTRA> | | Indicates, per neighbour EARFCN, a list of frequency bands which the E-UTRA cells belong to. Absence of this IE indicates that there are no Multiple Bands for the particular EARFCN. | REL-10 |
| >>E-UTRA Frequency band | MP | | Integer (1..64) | As defined in [64]. | REL-10 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------------------------------------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Multiple E-UTRA frequency info extension list | OP | 1 to <maxNumEUTRAFreqs> | | Each entry in the list corresponds to an entry in the "E-UTRA frequency and priority" IE or the "E-UTRA frequency and priority extension" IE. NOTE 3 | REL-11 |
| >Multiple E-UTRA frequency band indicator extension list | OP | 1 to <maxMultipleFrequencyBandsEUTRA> | | Indicates, per neighbour EARFCN, a list of frequency bands which the E-UTRA cells belong to. Absence of this IE indicates that there are no Multiple Bands for the particular EARFCN. | REL-11 |
| >>E-UTRA Frequency band extension | MP | | Integer (65..256) | As defined in [64]. | REL-11 |
| NOTE 1: If the value of "E-UTRA detection" is not identical across the frequency layers, UE behaviour is unspecified. | | | | | |
| NOTE 2: The number of instances of IE "E-UTRA frequency and priority extension" shall be less than or equal to maxNumEUTRAFreqs – the value specified in IE "Number of applicable EARFCN" | | | | | |
| NOTE 3: The number of bands signalled in "Multiple E-UTRA frequency band indicator list" and "Multiple E-UTRA frequency band indicator extension list" combined, for the same occurrence of EARFCN or EARFCN extension, should be less than or equal to maxMultipleFrequencyBandsEUTRA. | | | | | |

NOTE: The network should ensure that priorities for different Radio Access Technologies are always different.

NOTE: The network should ensure that priorities for which both $\text{Thresh}_{x,\text{high}2}$ and $\text{Thresh}_{x,\text{low}2}$ are provided are always different from the priorities for which both $\text{Thresh}_{x,\text{high}2}$ and $\text{Thresh}_{x,\text{low}2}$ are not provided.

| Condition | Explanation |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>EARFCNBands</i> | This IE is mandatory present when the IE "E-UTRA frequency and priority extension" is present, otherwise it is not needed. |
| <i>WB-RSRQ</i> | The field is optionally present if the measurement bandwidth indicated by <i>Measurement Bandwidth</i> is 50 resource blocks or larger. Otherwise it is not needed. |

10.3.7.116 Intra-frequency cell info list on secondary UL frequency

NOTE: For FDD only.

Contains the information for the list of measurement objects for an intra-frequency measurement on secondary uplink frequency.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-------------------------------------|------|--------------------------------|---------------------------------------------|-------------------------------------------------------------------------------|---------|
| CHOICE Intra-frequency cell removal | OP | | | Absence of this IE is equivalent to choice "Remove no intra-frequency cells". | REL-9 |

|---------------------------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Measurement purpose | OP | | BIT STRING (5) | Measurement Purpose. Bit 0 is for Inter-frequency measurement. Bit 1 is for GSM carrier RSSI measurement. Bit 2 is for Initial BSIC identification. Bit 3 is for BSIC re-confirmation. Bit 4 is for E-UTRA measurement. The value 1 of a bit means that the measurement occasion pattern sequence is applicable for the corresponding type of measurement. Bit 0 is the first/leftmost bit of the bit string. | REL-9 |
| >Measurement occasion pattern sequence parameters | OP | | | | REL-9 |
| >>k | MP | | Integer(1..9) | CELL_DCH measurement occasion cycle length coefficient. The actual measurement occasion period equal to 2^k radio frames. | REL-9 |
| >>Offset | MP | | Integer(0..511) | In frames. The measurement occasion position in the measurement period. | REL-9 |
| >>M_Length | MP | | Integer(1..512) | The measurement occasion length in frames starting from the Offset. | REL-9 |
| >>Timeslot Bitmap | MD | | Bit string (7) | Bitmap indicating which of the timeslot(s) is/are allocated for measurement. Bit 0 is for timeslot 0. Bit 1 is for timeslot 1. Bit 2 is for timeslot 2. Bit 3 is for timeslot 3. Bit 4 is for timeslot 4. Bit 5 is for timeslot 5. Bit 6 is for timeslot 6. The value 0 of a bit means the corresponding timeslot is not used for measurement. The value 1 of a bit means the corresponding timeslot is used for measurement. | REL-9 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------------------------------|---------|
| | | | | Bit 0 is the first/leftmost bit of the bit string. Absence of this IE means all the timeslots can be used for measurement. | |

| >>>Logged Measurement Info-TDD | MP | | Logged Measurement Info-TDD 10.3.7.130 | | REL-10 |
| Logged Meas Available | OP | | Enumerated (TRUE) | Indicates the UE has logged measurements to report to the network | REL-10 |

10.3.7.132 Logged Measurements Configuration Info

Parameters used to configure logged measurements.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Absolute Time Info | MP | | Bit Sting (48) | Indicates the reference to network absolute time <i>absoluteTimeInfo</i> provided at the point of measurement logging configuration. Format is YY-MM-DD HH:MM:SS using BCD encoding | REL-10 |

| | | | | | |
|---------------------------|----|-----------------------|--------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Logging Duration | MP | | Enumerated (10 min, 20 min, 40 min, 1 hour, 1 hour 30 min, 2 hour) | Timer for logging duration. The timer is activated at the moment of configuration. When the timer expires the logging is stopped and the configuration is cleared. 2 spare values are needed. | REL-10 |
| Logging Interval | MP | | Enumerated (1.28, 2.56, 5.12, 10.24, 20.48, 30.72, 40.96, 61.44) | Indicates periodicity for storing measurement results. UE behaviour is unspecified when the UE is configured with a DRX period larger than the logging interval. In seconds. | REL-10 |
| Trace reference | MP | | Trace Reference 10.3.7.133 | Parameter trace reference: See TS 32.422 [81] | REL-10 |
| Trace recording session | MP | | Trace Recording Session 10.3.7.134 | Parameter trace recording session reference: See TS 32.422 [81] | REL-10 |
| TCE Id | MP | | TCE Id 10.3.7.135 | Parameter TCE Id: See TS 32.422 [81] | REL-10 |
| CHOICE Area Configuration | OP | | | Indicates area for which the UE is requested to perform logging. If absent, the configuration is valid in the RPLMN of the UE and the PLMNs provided in IE "PLMN Identity List", if present. | REL-10 |
| >Cell IDList | | 1..32 | | | REL-10 |
| >>Cell ID | MP | | Cell ID 10.3.2.2 | | REL-10 |
| >>PLMN identity | OP | | PLMN identity 10.3.1.11 | Indicates the PLMN for which the Cell ID is applicable. If not present, the Cell ID is applicable in the RPLMN. | REL-11 |
| >Location Area Code List | | 1..8 | | | REL-10 |
| >>LAI | MP | | Location area identification 10.3.1.7 | | REL-10 |
| >Routing Area Code List | | 1..8 | | | REL-10 |
| >>RAI | MP | | Routing area identification 10.3.1.16 | | REL-10 |

| >PLMN identity | MP | | PLMN identity 10.3.1.11 | | REL-11 |

10.3.7.132a Connection Establishment Failure Report

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------------|------|-------|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Time Since Failure | MP | | INTEGER (0..172800) | Indicates the elapsed time in seconds between Logging and reporting of Connection establishment failure info. If the elapsed time is greater than 172800s then UE shall use the value 172800. | REL-11 |
| CHOICE mode | MP | | | | REL-11 |
| >FDD | | | | | REL-11 |
| >>Logged Connection Establishment Failure Info-FDD | MP | | Logged Connection Establishment Failure Info-FDD 10.3.7.129a | | REL-11 |
| >TDD | | | | | REL-11 |
| >>Logged Connection Establishment Failure Info-TDD | MP | | Logged Connection Establishment Failure Info-TDD 10.3.7.130a | | REL-11 |

10.3.7.133 Trace Reference

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------|-----------------------|---------|
| PLMN Identity | MP | | PLMN identity 10.3.1.11 | PLMN Identity | REL-10 |
| Trace ID | MP | | Octet string (3) | | REL-10 |

10.3.7.134 Trace Recording Session

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| Trace Recording Session | MP | | Octet string (2) | | REL-10 |

10.3.7.135 TCE Id

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| TCE Id | MP | | Octet string (1) | | REL-10 |

10.3.7.136 Periodical reporting criteria on secondary UL frequency

Contains the periodical reporting criteria information. It is necessary only in the intra-frequency periodical reporting mode on the secondary uplink frequency.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------------|-----------------------|---------|
| Frequency info | MP | | Frequency info 10.3.6.36 | NOTE1 | REL-10 |
| Periodical reporting criteria | MP | | Periodical reporting criteria 10.3.7.53 | | REL-10 |
| Reporting cell status | OP | | Reporting cell status 10.3.7.61 | | REL-10 |

NOTE1: If the IE "Frequency info" is different from the current downlink frequency associated with the secondary UL frequency, the UE behaviour is unspecified.

10.3.7.137 E-UTRA measurement for CELL_FACH

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-----------------------------------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA frequencies for measurement | MP | 1 to <maxNumEU TRAFreqs_FACH> | | | REL-11 |
| | | 1 to <maxNumEU TRAFreqs_FACH-ext> | | | REL-12 |
| >EARFCN | MP | | Integer (0..65535) | EARFCN of the downlink carrier frequency [64]. If the IE indicates a value of 65535, then the EARFCN for this instance should be read from the corresponding instance of IE "EARFCN extension" | REL-11 |
| >EARFCN extension | OP | | Integer (65536..262143) | EARFCN of the downlink carrier frequency [64]. | REL-11 |
| Report criteria | MP | | Enumerated (Event-triggered, Periodical reporting) | | REL-11 |
| Measurement quantity | MP | | Enumerated (RSRP, RSRQ) | This IE indicates the quantity that the UE uses to determine the event trigger. | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Reporting Threshold | MP | | Integer (0..97) | In dB. Ranges used depend on measurement quantity: if measurement quantity is RSRQ, range should be (0..34), if measurement quantity is RSRP, range should be (0..97). | REL-11 |
| | | | Integer (-30..-97) | In dB. Ranges used depend on measurement quantity: if measurement quantity is RSRQ, range should be (-30..46), if measurement quantity is RSRP, range should be (0..97). | REL-12 |

10.3.7.138 E-UTRA results for CELL_FACH

NOTE: Only for FDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA frequency indicator | MP | | Bit string(max NumEUTRAFreqs_FACH) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates whether the radio quality of an E-UTRA frequency is above the reporting threshold or not, where a one value indicates above and a zero value not. Bit n corresponds to the n-th E-UTRA frequency in the list provided by the IE E-UTRA frequencies for measurement. | REL-11 |
| | | | Bit string(max NumEUTRAFreqs_FACH-ext) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates whether the radio quality of an E-UTRA frequency is above the reporting threshold or not, where a one value indicates above and a zero value not. Bit n corresponds to the n-th E-UTRA frequency in the list provided by the IE E-UTRA frequencies for measurement. | REL-12 |

10.3.7.139 E-UTRA frequency RACH reporting information

NOTE: Only for FDD.

Contains the reporting configuration information for an E-UTRA frequency measurement report, which is sent on the RACH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------|------|-------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA frequency list indicator | MP | | Bit string(maxNumEUTRAFreqs) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates the E-UTRA frequency that the UE is required to measure and report on RACH. Bit n corresponds to the n-th E-UTRA frequency received in SIB19. Value '1' for a bit means the corresponding E-UTRA frequency has been configured to measure and report on RACH. Max. 4 EUTRA frequencies shall be configured in this version of the specification. | REL-11 |
| E-UTRA frequency list indicator2 | OP | | Bit string(maxNumEUTRAFreqs) | Bit 0 is the first/leftmost bit of the bit string. Each bit indicates the E-UTRA frequency that the UE is required to measure and report on RACH. Bit n corresponds to the n-th E-UTRA frequency received in SIB19. Value '1' for a bit means the corresponding E-UTRA frequency has been configured to measure and report on RACH. | REL-12 |
| E-UTRA frequency RACH reporting quantity | MP | | Enumerated (RSRP, RSRQ) | | REL-11 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------------------------|------|-------|--------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA frequency RACH reporting threshold | MP | | Integer (0..97) | In dB. Ranges used depend on measurement quantity: if measurement quantity is RSRQ, range should be (0..46), if measurement quantity is RSRP, range should be (0..97). In case measurement quantity is RSRQ, if the IE indicates a value of 0 and the "E-UTRA frequency RACH reporting threshold Extension" IE is present, then the RSRQ for this instance should be read from the corresponding instance of IE "E-UTRA frequency RACH reporting threshold Extension", the range is from -30 to -1. | REL-11 |
| E-UTRA frequency RACH reporting threshold Extension | OP | | Integer (-30..-1) | | REL-12 |
| RACH reporting priority | MD | | Enumerated (IntraEUTRAInter, InterIntraEUTRA, InterEUTRAIntra, EUTRAIntraInter, EUTRAInterIntra) | The default value is that E-UTRA measurements shall be omitted first, followed by limiting the number of inter-frequency cells, before limiting the number of intra-frequency cells. Measurement result for the current cell shall be omitted last. Three spare values are needed. | REL-11 |

10.3.7.140 Filtered UE power headroom reporting information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Time-to-trigger | MP | | Integer(0, 10, 20, 40, 60, 80, 100, 120, 160, 200, 240, 320, 640, 1280, 2560, 5000) | Time in ms. Indicates the period of time between the detection of the triggering condition [15] and the sending of the Filtered UPH Report. | REL-12 |
| Hysteresis1 | OP | | Real(0..7.5 by step of 0.5) | | REL-12 |
| Hysteresis2 | OP | | Real(0..7.5 by step of 0.5) | | REL-12 |
| UE Power Headroom threshold1 | OP | | Integer(-50..33) | | REL-12 |
| UE Power Headroom threshold2 | OP | | Integer(-50..33) | | REL-12 |
| Filter coefficient | OP | | Filter coefficient 10.3.7.9 | | REL-12 |

10.3.8 Other Information elements

10.3.8.1 BCCH modification info

Indicates modification of the System Information on BCCH.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------|--------------------------------------------------------|---------|
| MIB Value tag | MP | | MIB Value tag 10.3.8.9 | | |
| BCCH modification time | OP | | Integer (0..4088 in step of 8) | All SFN values in which MIB may be mapped are allowed. | |
| SB3 value tag | OP | | Cell Value tag 2 10.3.8.4o | | REL-12 |

10.3.8.2 BSIC

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------|
| Base transceiver Station Identity Code (BSIC) | MP | | | [11] |
| >Network Colour Code (NCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the NCC. |
| >Base Station Colour Code (BCC) | MP | | bit string(3) | The first/leftmost bit of the bit string contains the most significant bit of the BCC. |

10.3.8.3 CBS DRX Level 1 information

This information element contains the CBS discontinuous reception information to be broadcast for CBS DRX Level 1 calculations in the UE.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|---------|-------|-----------------------------------|--------------------------------------------------------|---------|
| Period of CTCH allocation (N) | MP | | Integer (1..256) | $M_{TTI} \leq N \leq 256$, N multiple of M_{TTI} | |
| CBS frame offset (K) | MP | | Integer (0..255) | $0 \leq K \leq N-1$, K multiple of M_{TTI} | |
| Period of BMC scheduling messages (P) | CV-SIB5 | | Integer (8, 16, 32, 64, 128, 256) | | REL-6 |

| Condition | Explanation |
|-----------|------------------------------------------------------------------------------------------------------|
| SIB5 | The IE is optional when the IE "CBS DRX Level 1 information" in SIB5, otherwise the IE is not needed |

10.3.8.4 Cell Value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Cell Value tag | MP | | Integer (1..4) | |

10.3.8.4o Cell Value tag 2

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| Cell Value tag 2 | MP | | Integer (1..16) | |

10.3.8.4a Ellipsoid point

This IE contains the description of an ellipsoid point as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0... $2^{23}-1$) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (- 2^{23} ... $2^{23}-1$) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |

10.3.8.4b Ellipsoid point with Altitude

This IE contains the description of an ellipsoid point with altitude as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|---------------------------|-----------------------|
| Latitude sign | MP | | Enumerated (North, South) | |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Degrees Of Latitude | MP | | Integer (0...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (-2 ²³ ...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer (0..2 ¹⁵ -1) | The IE value (N) is derived by this formula: $N \leq a < N+1$ a being the altitude in metres |

10.3.8.4c Ellipsoid point with Altitude and uncertainty ellipsoid

This IE contains the description of an ellipsoid point with altitude and uncertainty ellipsoid as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (-2 ²³ ...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |
| Altitude Direction | MP | | Enumerated (Height, Depth) | |
| Altitude | MP | | Integer (0..2 ¹⁵ -1) | The IE value (N) is derived by this formula: $N \leq a < N+1$ a being the altitude in metres |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |
| Orientation of major axis | MP | | Integer (0..89) | The IE value (N) is derived by this formula: $2N \leq a < 2(N+1)$ a being the orientation in degree (0°.. 179°) |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Uncertainty Altitude | MP | | Integer(0..127) | The uncertainty in altitude, h, expressed in metres is mapped from the IE value (K), with the following formula: $h = C((1 + x)^K - 1)$ with C = 45 and x = 0.025. |
| Confidence | MP | | Integer (0..100) | in percentage |

10.3.8.4d Ellipsoid point with uncertainty Circle

This IE contains the description of an ellipsoid point with an uncertainty circle as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (-2 ²³ ...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |
| Uncertainty Code | MP | | Integer (0...127) | The uncertainty r is derived from the "uncertainty code" k by $r = 10x(1.1^k - 1)$ |

10.3.8.4e Ellipsoid point with uncertainty Ellipse

This IE contains the description of an ellipsoid point with an uncertainty ellipse as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Latitude sign | MP | | Enumerated (North, South) | |
| Degrees Of Latitude | MP | | Integer (0...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°) |
| Degrees Of Longitude | MP | | Integer (-2 ²³ ...2 ²³ -1) | The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°) |
| Uncertainty semi-major | MP | | Integer (0...127) | The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by $r = 10 \times (1.1^k - 1)$ |
| Uncertainty semi-minor | MP | | Integer (0...127) | The uncertainty <i>r</i> is derived from the "uncertainty code" <i>k</i> by $r = 10 \times (1.1^k - 1)$ |
| Orientation of major axis | MP | | Integer (0..89) | The IE value (N) is derived by this formula: $2N \leq a < 2(N+1)$ a being the orientation in degree (0°.. 179°) |
| Confidence | MP | | Integer (0..100) | in percentage |

10.3.8.4ea ETWS information

Indication of an ETWS primary notification. The ETWS warning type is used to notify upper layers.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------|--------------------------------------------|---------|

10.3.8.4h Horizontal Velocity

This IE contains the description of a horizontal velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$, for (N=0) $N - 0.5 \leq h < N + 0.5$, for (0 < N < 2 ¹¹ -1) $N - 0.5 \leq h$, for (N = 2 ¹¹ -1) |

10.3.8.4i Horizontal with Vertical Velocity

This IE contains the description of horizontal with vertical velocity as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------|------------------------------------------------------------------------------------------------------|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: N ≤ h < N + 0.5, for (N=0) N-0.5 ≤ h < N + 0.5, for (0 < N < 2 ¹¹ -1) N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula: N ≤ v < N + 0.5, for (N=0) N-0.5 ≤ v < N + 0.5, for (0 < N < 2 ⁸ -1) N - 0.5 ≤ v, for (N = 2 ⁸ -1) |

10.3.8.4j Horizontal Velocity with Uncertainty

This IE contains the description of horizontal velocity with uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: N ≤ h < N + 0.5, for (N=0) N-0.5 ≤ h < N + 0.5, for (0 < N < 2 ¹¹ -1) N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

10.3.8.4k Horizontal with Vertical Velocity and Uncertainty

This IE contains the description of horizontal with vertical velocity and uncertainty as in [24].

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|----------------------------------|------------------------------------------------------------------------------------------------------|
| Vertical Speed direction | MP | | ENUMERATED (upward, downward) | |
| Bearing | MP | | Integer (0...359) | The direction of movement is given in degrees where '0' represents North, '90' represents East, etc. |

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Horizontal Speed | MP | | Integer (0...2 ¹¹ -1) | The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: N ≤ h < N + 0.5, for (N=0) N-0.5 ≤ h < N + 0.5, for (0 < N < 2 ¹¹ -1) N - 0.5 ≤ h, for (N = 2 ¹¹ -1) |
| Vertical Speed | MP | | Integer (0..255) | The relationship between (N) and the vertical speed (v) in kilometres per hour it describes is given by the formula: N ≤ v < N + 0.5, for (N=0) N-0.5 ≤ v < N + 0.5, for (0 < N < 2 ⁸ -1) N - 0.5 ≤ v, for (N = 2 ⁸ -1) |
| Horizontal Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |
| Vertical Uncertainty Speed | MP | | Integer (0..255) | The IE value is encoded in increments of 1 kilometer per hour. The value of N give the uncertainty speed except for N=255 which indicates that the uncertainty is not specified |

10.3.8.4L E-UTRA Target Info

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|-----------------------------------|------|-----------------------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| E-UTRA Target Frequency Info List | MP | 1 to <maxEUTRA targetFreqs> | | | REL-8 |
| >DL Carrier frequency | MP | | Integer (0..65535) | EARFCN of the downlink carrier frequency [64]. If the IE indicates a value of 65535, then the EARFCN for this instance should be read from the corresponding instance of IE "EARFCN extension" in the E-UTRA Target Frequency Info extension List. | REL-8 |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------|------|----------------------------|-------------------------|------------------------------------------------|---------|

| >EARFCN extension | OP | | Integer (65536..262143) | EARFCN of the downlink carrier frequency [64]. | REL-11 |

10.3.8.4m HNB Name

This information element is used to carry the name of the home NodeB, coded in UTF-8 with variable number of bytes per character [75].

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------------------|-------------------------------------------------------------------------------------------------|---------|
| HNB Name | MP | | Octet string (1 to <maxHNBNameSize>) | Carries the name of the Home NodeB with a maximum of maxHNBNameSize octets, using UTF-8 coding. | REL-8 |

10.3.8.5 Inter-RAT change failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|-------------------|-------|------------------------------------------------------------------------------------------------|-------------------------------|
| Inter-RAT change failure cause | MP | | Enumerated(Configuration unacceptable, physical channel failure, protocol error, unspecified) | Four spare values are needed. |
| Protocol error information | <i>CV-ProtErr</i> | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|----------------|---------------------------------------------------------------------------------------------------------------------------------|
| <i>ProtErr</i> | The IE is mandatory present if the IE "Inter-RAT change failure cause" has the value "Protocol error" and not needed otherwise. |

10.3.8.6 Inter-RAT handover failure

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|------------|-------|--------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------|
| Inter-RAT handover failure cause | MD | | Enumerated(Configuration unacceptable, physical channel failure, protocol error, inter-RAT protocol error, unspecified) | Default value is "unspecified". Eleven spare values are needed. |
| Protocol error information | CV-ProtErr | | Protocol error information 10.3.8.12 | |

| Condition | Explanation |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <i>ProtErr</i> | The IE is mandatory present if the IE "Inter-RAT handover failure cause" has the value "Protocol error" and not needed otherwise. |

10.3.8.7 Inter-RAT UE radio access capability

This Information Element contains the inter-RAT UE radio access capability that is structured and coded according to the specification used for the corresponding system type.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| CHOICE <i>system</i> | MP | | | | |
| >GSM | | | | | |
| >>Mobile Station Classmark 2 | MP | | Octet string (5) | This IE is formatted as 'TLV' and is coded in the same way as the <i>Mobile Station Classmark 2</i> information element in [5]. The first octet is the <i>Mobile station classmark 2 IEI</i> and its value shall be set to 33H (except in the case of NOTE 2). The second octet is the <i>Length of mobile station classmark 2</i> and its value shall be set to 3. The octet 3 contains the first octet of the value part of the <i>Mobile Station Classmark 2</i> information element, the octet 4 contains the second octet of the value part of the <i>Mobile Station Classmark 2</i> information element and so on. For each of these octets, the first/ leftmost/ most significant bit of the octet contains b8 of the corresponding octet of the <i>Mobile Station Classmark 2</i> . See NOTE 2. | |
| >>Mobile Station Classmark 3 | MP | | Octet string (1..32) | This IE is formatted as 'V' and is coded in the same way as the value part in the <i>Mobile station classmark 3</i> information element in [5]. The first octet contains octet 1 of the value part of <i>Mobile station classmark 3</i> , the second octet contains octet 2 of the value part of <i>Mobile station classmark 3</i> and so on. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| | | | | See NOTE 1, NOTE 2. | |
| >>MS Radio Access Capability | OP | | Octet string (1..64) | This IE is formatted as 'V' and is coded in the same way as the value part in the <i>MS Radio Access Capability</i> information element in [5]. | REL-6 |
| >GERAN Iu | | | | | REL-5 |
| >>MS GERAN Iu mode Radio Access Capability | MP | | Bit string (1..170) | Formatted and coded according to [53]. The first/leftmost/most significant bit of the bit string contains bit 8 of the first octet of the IE. | REL-5 |
| >cdma2000 | | | | | |
| >>cdma2000Message | MP | 1.to.<maxInterSystemMessages> | | | |
| >>>MSG_TYPE(s) | MP | | Bit string (8) | Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the MSG_TYPE. | |
| >>>cdma2000MessagePayload(s) | MP | | Bit string (1..512) | Formatted and coded according to cdma2000 specifications. The first/leftmost/most significant bit of the bit string contains bit 7 of the first octet of the cdma2000 message. | |
| >E-UTRA | | | | | REL-8 |
| >>UE E-UTRA Capability | MP | | Octet string | Formatted and coded according to the <i>UE-EUTRA-Capability</i> information element in [67]. The first/leftmost/most significant bit of the first octet of the octetstring contains bit 8 of octet 1 of the <i>UE-EUTRA-Capability</i> IE. | REL-8 |
| NOTE 1: The value part is specified by means of CSN.1, which encoding results in a bit string, to which final padding may be appended upto the next octet boundary [5]. The first/ leftmost bit of the CSN.1 bit string is placed in the first/ leftmost/ most significant bit of the first octet. This continues until the last bit of the CSN.1 bit string, which is placed in the last/ rightmost/ least significant bit of the last octet. | | | | | |
| NOTE 2: The information in these IEs is optionally present in the INTER RAT HANDOVER INFO WITH INTER RAT CAPABILITIES message, otherwise it is mandatory present. If the information in the IEs "Mobile Station Classmark 2" and "Mobile Station Classmark 3" is not included, it is indicated by setting the first octet (IEI) of the IE "Mobile Station Classmark 2" to 00H. In this case, the receiver should ignore the value parts of the <i>Mobile Station Classmark 2</i> and the <i>Mobile Station Classmark 3</i> . The contents of those are set to zero. | | | | | |

10.3.8.8 Void

10.3.8.8a Inter-RAT UE security capability

| >PLMN Value tag | | | PLMN Value tag 10.3.8.10 | This IE is included if the following conditions are fulfilled: the SIB type equals system information block type 1 Note: IE 'PLMN value tag' is used for SIB1 but the area scope for SIB 1 is Cell. | |
| >Predefined configuration identity and value tag | | | Predefined configuration identity and value tag 10.3.8.11 | This IE is included if the following conditions are fulfilled: the SIB type equals system information block type 16 | |
| >Cell Value tag | | | Cell Value tag 10.3.8.4 | This IE is included if the following conditions are fulfilled: the SIB type does not equal system information block type 1; and the area scope for the system information block is set to "cell" in table 8.1.1; and a value tag is used to indicate changes in the system information block. | |

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------|------|-------|-------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| >Cell Value tag extension | OP | | Integer(0..3) | This IE may be included if the following conditions are fulfilled: the SIB type equals system information block type 3, 5, 5bis, 21 or 22. NOTE 1. | REL-12 |
| >SIB occurrence identity and value tag | | | SIB occurrence identity and value tag 10.3.8.20b | This IE is included if the following conditions are fulfilled: the SIB type equals system information block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis | |
| Scheduling | MP | | | | |
| >SEG_COUNT | MD | | SEG COUNT 10.3.8.17 | Default value is 1 | |
| | MD | | SEG COUNT 10.3.8.17 | Default value is size of SIB_POS offset info plus one when SIB_POS offset info is present, otherwise it is 1. NOTE 2. | REL-12 |
| >SIB_REP | MP | | Integer (4, 8, 16, 32, 64, 128, 256, 512, 1024, 2048, 4096) | Repetition period for the SIB in frames | |
| >SIB_POS | MP | | Integer (0 ..Rep-2 by step of 2) | Position of the first segment Rep is the value of the SIB_REP IE | |
| >SIB_POS offset info | MD | 1..15 | | see below for default value | |
| >>SIB_OFF | MP | | Integer(2..32 by step of 2) | Offset of subsequent segments | |
| | MD | | Integer(2..32 by step of 2) | Offset of subsequent segments. Default value is 2. NOTE 3. | REL-12 |

| Field | Default value |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SIB_POS offset info | The default value is that all segments are consecutive, i.e., that the SIB_OFF = 2 for all segments except when MIB segment/complete MIB is scheduled to be transmitted in between segments from same SIB. In that case, SIB_OFF=4 in between segments which are scheduled to be transmitted at SFN _{prime} = 8 *n-2 and 8*n + 2, and SIB_OFF=2 for the rest of the segments. |

NOTE 1: The Cell Value tag value equals IE "Cell Value tag" plus (IE "Cell Value tag extension" times 4).

NOTE 2: The UE behaviour is unspecified when no value is transmitted for system information that is not of REL-12 or later, and the system information consists of more than one segment.

NOTE 3: The UE behaviour is unspecified when no value is transmitted for system information that is not of REL-12 or later.

10.3.8.17 SEG COUNT

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|----------------------------------------------------|
| SEG_COUNT | MP | | Integer (1..16) | Number of segments in the system information block |

10.3.8.18 Segment index

Each system information segment has an individual segment index.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Segment index | MP | | Integer (1..15) | Segments of a system information block are numbered starting with 0 for the first segment and 1 for the next segment, which can be the first subsequent segment or a last segment. |

10.3.8.18a SIB and SB type

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|-----------------------------|
| SIB and SB type | MP | | Enumerated, see below | Two spare values are needed |

| List of enumerated values | Version |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18, Scheduling Block 1, Scheduling Block 2, | |
| System Information Type 5bis | REL-6 |

10.3.8.18b SIB type extension

The SIB type identifies a specific extension system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------|-----------------------|---------|
| SIB type extension | MP | | Enumerated, see below | | REL-6 |

| List of enumerated values | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| System Information Type 11bis | REL-6 |
| System Information Type 15bis, System Information Type 15.1bis, System Information Type 15.2bis, System Information Type 15.3bis, System Information Type 15.6, System Information Type 15.7 System Information Type 15.8 | REL-7 |

10.3.8.18c SIB type extension2

The SIB type identifies a specific extension system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------|-----------------------|---------|
| SIB type extension2 | MP | | Enumerated, see below | | REL-8 |

| List of enumerated values | Version |
|---------------------------------|---------|
| System Information Type 19 | REL-8 |
| System Information Type 15.2ter | |
| System Information Type 20 | |
| System Information Type 21 | REL-11 |
| System Information Type 22 | REL-11 |
| System Information Type 15.1ter | REL-12 |
| System Information Type 23 | REL-12 |
| System Information Type 24 | REL-12 |

10.3.8.18ca SIB type extension3

The SIB type identifies a specific extension system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------|---------------------------------|---------|
| SIB type extension3 | MP | | Enumerated, see below | Sevenspare values are needed | REL-12 |

| List of enumerated values | Version |
|-------------------------------|---------|
| System Information Type 11ter | REL-12 |

10.3.8.18d GANSS SIB type

The GANSS SIB type identifies a GANSS specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------------|-------------------------------|---------|
| GANSS SIB type | MP | | Enumerated, see below | Nine spare value is needed | REL-8 |

| List of enumerated values | Version |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| System Information Type 15.1bis, System Information Type 15.2bis, System Information Type 15.2ter, System Information Type 15.3bis, System Information Type 15.6, System Information Type 15.7 System Information Type 15.8 | REL-8 |

10.3.8.19 SIB data fixed

Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------------------------------|
| SIB data fixed | MP | | Bit string (222) | The first bit contains the first bit of the segment. |

10.3.8.19a SIB data fixed 2

Contains the result of a system information block after encoding and segmentation. The IE is used for segments with fixed length (segments filling an entire transport block). The IE is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|------------------------------------------------------|
| SIB data fixed | MP | | Bit string (232) | The first bit contains the first bit of the segment. |

10.3.8.20 SIB data variable

Contains either a complete system information block or a segment of a system information block. Contains the result of a master information block or a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|------------------------------------------------------|
| SIB data variable | MP | | Bit string (1..214) | The first bit contains the first bit of the segment. |

10.3.8.20o SIB data variable 2

Contains either a complete system information block or a segment of a system information block. Contains the result of a system information block after encoding and segmentation. The IE is used for segments with variable length. The system information blocks are defined in clauses 10.2.48.8.1 to 10.2.48.8.18. The IE is used on the second system information broadcast channel (BCH on SCCPCH).

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------|------------------------------------------------------|
| SIB data variable | MP | | Bit string (1..224) | The first bit contains the first bit of the segment. |

10.3.8.20a SIB occurrence identity

This information element identifies a SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis. For System Information Block type 15.2, 15.2bis and 15.2ter, this identity is assigned to the visible satellite only. Unused identities are claimed by newly rising satellites.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| SIB occurrence identity | MP | | Integer (0..15) | |

10.3.8.20b SIB occurrence identity and value tag

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|----------------------------------------|-----------------------|
| SIB occurrence identity | MP | | SIB occurrence identity 10.3.8.20a | |
| SIB occurrence value tag | MP | | SIB occurrence value tag 10.3.8.20c | |

10.3.8.20c SIB occurrence value tag

This information element is used to identify different versions of SIB occurrence for System Information Block types 15.2, 15.2bis, 15.2ter, 15.3 and 15.3bis.

| Information Element/Group name | Need | Multi | Type and Reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| SIB occurrence value tag | MP | | Integer(0..15) | |

10.3.8.21 SIB type

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------|-----------------------|-----------------------|
| SIB type | MP | | Enumerated, see below | NOTE 1 |
| NOTE 1: If the value "Extension Type" is signalled, the UE shall use the scheduling information in the MIB and, if present, in the SB1 and SB2 to identify the specific type of system information block. | | | | |

| List of enumerated values | Version |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Master information block, System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18, Scheduling Block 1, Scheduling Block 2, | |
| System Information Type 5bis, Extension Type | REL-6 |

10.3.8.22 SIB type SIBs only

The SIB type identifies a specific system information block.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------------|------------------------------|
| SIB type SIBs only | MP | | Enumerated, see below | Four spare values are needed |

| List of enumerated values | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15.1, System Information Type 15.2, System Information Type 15.3, System Information Type 15.4, System Information Type 15.5, System Information Type 16, System Information Type 17, System Information Type 18, | |
| System Information Type 5bis | REL-6 |

10.3.8.22ab SIB and SB type 2

The SIB and SB type 2 identifies a specific system information block or scheduling block on the second system information broadcast channel.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|-----------------------------------|
| SIB and SB type 2 | MP | | Enumerated, see below | Twentytwo spare values are needed |

| List of enumerated values | Version |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Scheduling Block 3, System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 5bis, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 11bis, System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15bis, System Information Type 15.1, System Information Type 15.1bis, System Information Type 15.1ter, System Information Type 15.2, System Information Type 15.2bis, System Information Type 15.2ter, System Information Type 15.3, System Information Type 15.3bis, System Information Type 15.4, System Information Type 15.5, System Information Type 15.6, System Information Type 15.7, System Information Type 15.8, System Information Type 16, System Information Type 17, System Information Type 18, System Information Type 19, System Information Type 20, System Information Type 21, System Information Type 22, System Information Type 23, System Information Type 24 | REL-12 |

10.3.8.22ac SIB type SIBs only 2

The SIB type identifies a specific system information block on the second system information broadcast channel.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------|-------------------------------------|
| SIB type SIBs only | MP | | Enumerated, see below | Twentythree spare values are needed |

| List of enumerated values | Version |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| System Information Type 1, System Information Type 2, System Information Type 3, System Information Type 4, System Information Type 5, System Information Type 5bis, System Information Type 6, System Information Type 7, System Information Type 11, System Information Type 11bis System Information Type 12, System Information Type 13, System Information Type 13.1, System Information Type 13.2, System Information Type 13.3, System Information Type 13.4, System Information Type 14, System Information Type 15, System Information Type 15bis, System Information Type 15.1, System Information Type 15.1bis, System Information Type 15.1ter, System Information Type 15.2, System Information Type 15.2bis, System Information Type 15.2ter, System Information Type 15.3, System Information Type 15.3bis, System Information Type 15.4, System Information Type 15.5, System Information Type 15.6, System Information Type 15.7 System Information Type 15.8, System Information Type 16, System Information Type 17, System Information Type 18, System Information Type 19, System Information Type 20, System Information Type 21, System Information Type 22, System Information Type 23, System Information Type 24, System Information Type 11ter | |

10.3.8.23 UE History Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| UE inactivity period | MP | | Integer (1..120) | Provides expired time since last u-plane activity. If the integer value x is between 1 and 59, it represents the expired time x in seconds. If the integer value x is between 60 and 119, it represents the expired time (x-59) in minutes. If integer value is set to 120, no u-plane activity has been for 60 minutes or more. | REL-8 |
| UE Mobility State indicator | OP | | Enumerated (High-mobilityDetected) | Absence of this IE implies that, according to [4] either the High mobility state is not applicable or it has not been detected by the UE. | REL-8 |
| UL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |
| DL data volume history | OP | | Data volume history 10.3.8.24 | | REL-8 |

10.3.8.24 Data volume history

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------------|------|--------------|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Data volume monitoring window | MP | | Integer (1..120) | If the integer value x is between 1 and 59, it represents seconds. If the integer value is between 60 and 120, it represents the value minus 59 in minutes. | REL-8 |
| Data transmission frequency | OP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Data transmission frequency granularity | MP | | Integer (100, 250, 500, 1000, 2000, 5000, 10000, 60000) | In ms | REL-8 |
| >Number of data transmission occasions | MP | | Integer (0..610) | Measure of data transmission frequency. The data volume monitoring window is organised in time periods of "Data transmission frequency granularity", and each transmission within such a period is counted. | REL-8 |
| Data volume per RB | OP | 1 to <maxRB> | | | REL-8 |
| >RB identity | MP | | RB identity 10.3.4.16 | | REL-8 |
| >Data volume | MP | | Integer (0..4294967295) | Data volume monitored during the data volume monitoring window, in byte. | REL-8 |

10.3.9 ANSI-41 Information elements

10.3.9.1 ANSI-41 Core Network Information

| Information element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-----------------------|
| P_REV | MP | | P_REV 10.3.9.10 | |
| MIN_P_REV | MP | | MIN_P_REV 10.3.9.8 | |
| SID | MP | | SID 10.3.9.11 | |
| NID | MP | | NID 10.3.9.9 | |

10.3.9.2 ANSI-41 Global Service Redirection information

This Information Element contains ANSI-41 Global Service Redirection information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|------------------------------------------------|------|-------|---------------------------------|------------------------------------------------------------------------------|
| ANSI-41 Global Service Redirection information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.3 ANSI-41 NAS parameter

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|-----------------------------|------------------------------------------------------------------|
| ANSI-41 NAS parameter | MP | | Bit string (size (1..2048)) | The first bit contains the first bit of the ANSI-41 information. |

10.3.9.4 ANSI-41 NAS system information

This Information Element contains ANSI-41 system information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------|------|-------|---------------------------------|------------------------------------------------------------------------------|
| NAS (ANSI-41) system information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.5 ANSI-41 Private Neighbour List information

This Information Element contains ANSI-41 Private Neighbour List information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------------------|------|-------|---------------------------------|------------------------------------------------------------------------------|
| ANSI-41 Private Neighbour List information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.6 ANSI-41 RAND information

This Information Element contains ANSI-41 RAND information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|---------------------------------|------------------------------------------------------------------------------|
| ANSI-41 RAND information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.7 ANSI-41 User Zone Identification information

This Information Element contains ANSI-41 User Zone Identification information.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|----------------------------------------------|------|-------|---------------------------------|------------------------------------------------------------------------------|
| ANSI-41 User Zone Identification information | MP | | ANSI-41 NAS parameter, 10.3.9.3 | Formatted and coded according to the 3GPP2 document "G3G CDMA DS on ANSI-41" |

10.3.9.8 MIN_P_REV

This Information Element contains minimum protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------|
| MIN_P_REV | MP | | Bit string (8) | Minimum protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the MIN_P_REV. |

10.3.9.9 NID

This Information Element contains Network identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|----------------------------------------------------------------------------------------------------------------|
| NID | MP | | Bit string (16) | Network identification. The first/leftmost bit of the bit string contains the most significant bit of the NID. |

10.3.9.10 P_REV

This Information Element contains protocol revision level.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------|
| P_REV | MP | | Bit string (8) | Protocol revision level. The first/leftmost bit of the bit string contains the most significant bit of the P_REV. |

10.3.9.11 SID

This Information Element contains System identification.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description |
|--------------------------------|------|-------|--------------------|---------------------------------------------------------------------------------------------------------------|
| SID | MP | | Bit string (15) | System identification. The first/leftmost bit of the bit string contains the most significant bit of the SID. |

10.3.9a MBMS Information elements

10.3.9a.1 MBMS Common CCTrCH identity

Identifies a Coded Composite Transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common CCTrCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.2 MBMS Common PhyCh identity

Identifies a physical channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common PhyCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.3 MBMS Common RB identity

Identifies a radio bearer channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common RB identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.4 MBMS Common TrCh identity

Identifies a transport channel configuration included within the MBMS COMMON P-T-M RB INFORMATION message.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Common TrCh identity | MP | | Integer (1..32) | | REL-6 |

10.3.9a.5 MBMS Current cell S-CCPCH identity

Identifies one of the current cell's Secondary CCPCH's.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|-------------------------|-----------------------|---------|
| MBMS Current cell S-CCPCH identity | MP | | Integer (1..maxSC CPCH) | | REL-6 |

10.3.9a.6 Void

10.3.9a.7 MBMS L1 combining schedule

Includes information about the MBMS L1 combining schedule.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|----------------------|---------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|---------|
| MBMS L1 combining cycle length | MP | | Enumerated (32, 64, 128, 256, 512, 1024) | In number of radio frames | REL-6 |
| MBMS L1 combining cycle offset | MD | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Start of the L1 combining cycle (relative to the timing of the current cell) in number of radio frames. Default value is no offset | REL-6 |
| MTCH L1- combining period list | MP | 1 to < maxMBMS-L1CP> | | One or more periods in which L1 combining is performed | REL-6 |
| >Start | MP | | Integer (0.. MBMS L1 combining cycle length - 4) by step of 4 | Number of frames from the end of the previous combining period or the start of the cycle (for the first period) | REL-6 |
| >Duration | MP | | Integer (4.. MBMS L1 combining cycle length) by step of 4 | Number of frames (see note) | REL-6 |

NOTE: The MTCH L1- combining period should indicate one or more complete TTIs.

10.3.9a.7o MBMS p-t-m activation time

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|--------------------|--------------------------------------|---------|
| MBMS p-t-m activation time | MP | | Integer (0..2047) | The 11 LSB of the SFN. Note 1 and 2. | REL-6 |
| Note 1: | The "MBMS p-t-m activation time" indicates the start of the 10 ms frame corresponding to the indicated SFN value and of the primary CCPCH of the cell where this IE is transmitted. | | | | |
| Note 2: | The range of the "MBMS p-t-m activation time" is from 10 ms after the beginning of the MCCH modification period wherein it is transmitted and to the end of next following MCCH modification period. The UE shall consider a value out of this range as expired. | | | | |

10.3.9a.7a MBMS p-t-m RB information

Includes information about an MBMS p-t-m radio bearers mapped on a TrCH.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|-----------------|-------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|---------|
| RB information | <i>CV-Curr</i> | | MBMS Common RB identity 10.3.9a.3 | | REL-6 |
| MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| MBMS logical channel identity | MP | | Integer (1..15) | This identifier is used to distinguish different MTCH mapped on to a TrCh ("MBMS-Id" within the MAC header[15]) | REL-6 |
| L1 combining status | <i>CV-Neigh</i> | | Boolean | The IE is only applicable in case of partial L1 combining, in which case value TRUE means that L1 combining is used for this radio bearer | REL-6 |

| Condition | Explanation |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Curr</i> | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS CURRENT CELL P-T-M RB INFORMATION message and not needed otherwise |
| <i>Neigh</i> | The IE is mandatory present if the IE "MBMS p-t-m RB information list" is included in the MBMS NEIGHBOURING CELL P-T-M RB INFORMATION message and not needed otherwise |

10.3.9a.7b MBMS Selected Service Info

This IE indicates whether the UE has any MBMS Selected Services, and if it does it includes the list of MBMS Selected Services.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------------------------|-----------------------|---------|
| CHOICE <i>Status</i> | | | | | |
| >None | | | | (no data) | |
| >Some | MP | | MBMS Selected Services Full 10.3.9a.7c | | REL-6 |

10.3.9a.7c MBMS Selected Services Full

This IE provides the MBMS Selected Services by means of the full identity.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------------|---------------------------------|-----------------------|---------|
| MBMS Selected Services | MP | 1 to <maxMBMSservSelect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS service identity 10.3.9a.8 | | REL-6 |

10.3.9a.7d MBMS Selected Services Short

This IE indicates the MBMS Selected Services by means of a short identity to identify the MBMS transmission by referencing the services included in the MBMS MODIFIED SERVICES INFORMATION and the MBMS UNMODIFIED SERVICES INFORMATION messages.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------------|---------------------------------------------|-----------------------------------------------------------------------------------|---------|
| MBMS Selected Services | MP | 1 to <maxMBMSservSelect> | | | REL-6 |
| >MBMS Selected Service ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-6 |
| Modification period identity | MP | | Integer (0..1) | Indicates the modification period the MBMS short transmission identities refer to | REL-6 |

10.3.9a.8 MBMS Service identity

Includes information about the identity of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|-------|----------------------------|------------------------------------------------------------------------------------------------|---------|
| MBMS Service ID | MP | | MBMS Service ID 10.3.9a.8a | | REL-6 |
| CHOICE <i>PLMN identity</i> | MP | | | | REL-6 |
| > <i>SameAs-MIB</i> | | | | (No data) The PLMN identity is the same as indicated by the IE "PLMN identity" in MIB | REL-6 |
| > <i>SameAsMIB-MultiPLMN-Id</i> | | | | | REL-6 |
| >>Multi PLMN id | MP | | Integer (1..5) | The PLMN identity is one of the PLMN identities (1 to 5) in the IE "Multiple PLMN List" in MIB | REL-6 |
| > <i>ExplicitPLMN-Id</i> | | | | | REL-6 |
| >>PLMN identity | MP | | PLMN identity 10.3.1.11 | | REL-6 |

10.3.9a.8a MBMS Service ID

Uniquely identifies an MBMS bearer service within a PLMN.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------|---------|
| MBMS Service ID | MP | | Octet string (3) | The content of the MBMS Service ID field is coded as octets 3 to 5 of the IE <i>Temporary Mobile Group Identity</i> [5] | REL-6 |

10.3.9a.9 MBMS Session identity

Includes information about the the identity of a session of an MBMS service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MBMS Session ID | MP | | Octet string (1) | | REL-6 |

10.3.9a.10 MBMS Short transmission identity

Includes a short identity of the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------|------|-------|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------|---------|
| MBMS short transmission identity | MP | | Integer (1..maxMBMSservUnmodif) | Reference/ index to a transmission listed in the MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION | REL-6 |

10.3.9a.10a MBMS Soft Combining Timing Offset

Indicates the timing offset applied in the CFN calculation in sub-clause 8.5.15.5 for a secondary CCPCH carrying only MBMS logical channels. It is used for FDD only.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|------------------------------------|------|-------|-------------------------|-----------------------------------------------------------------------------|---------|
| >MBMS Soft Combining Timing Offset | MP | | Integer (0, 10, 20, 40) | Timing offset applied in the CFN calculation in sub-clause 8.5.15.5, in ms. | REL-6 |

10.3.9a.11 MBMS specific timers and counters

Includes MBMS specific timers and counters.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|-----------------------------------------------------------------------------------|-----------------------------------------------|---------|
| T318 | MD | | Integer(25 0... 2000 by step of 250, 3000, 4000, 6000, 8000, 10000, 12000, 16000) | Value in milliseconds. Default value is 1000. | REL-6 |

10.3.9a.12 MBMS Transmission identity

Includes information about the MBMS transmission identity, which concerns a session of a specific service.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|---------------------------------|-----------------------|---------|
| MBMS Service ID | MP | | MBMS Service identity 10.3.9a.8 | | REL-6 |
| MBMS Session ID | OP | | MBMS Session identity 10.3.9a.9 | | REL-6 |

10.3.9a.12a MBSFN frequency list

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|--------------------------|----------------------------|-------------------------------------------------------------------|---------|
| MBSFN frequency list | MP | 0 to <maxMBSFNclusters > | | | REL-7 |
| >MBSFN frequency | MP | | Frequency info 10.3.6.36 | | REL-7 |
| >IMB indication | OP | | Enumerated (TRUE) | If present: 3.84 Mcps TDD MBSFN IMB is applied on this frequency. | REL-8 |
| >Cell parameter ID | OP | <0..127> | Cell parameter Id 10.3.6.9 | Only for 1.28 Mcps TDD [32]. NOTE 1 | REL-7 |

NOTE 1: For 1.28 Mcps TDD the IE "Cell Parameter ID" indicates the cell which is providing MBMS service in MBSFN only mode on the corresponding frequency; if it is not included, the IE "MBSFN frequency" indicates the secondary frequency providing MBMS service in non-MBSFN only mode of current multi-frequency cell.

10.3.9a.12b MBSFN TDM Information List

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------------------------------|---------------------------------------------|-----------------------|---------|
| MBSFN TDM Information List | MP | 1 to <maxM BMSservUnmodified> | | | REL-7 |
| >MBMS short transmission ID | MP | | MBMS Short transmission identity 10.3.9a.10 | | REL-7 |
| >TDM_Rep | MP | | Integer (2..9) | | REL-7 |
| >TDM_Offset | MP | | Integer (0..8) | | REL-7 |
| >TDM_Length | MP | | Integer (1..8) | | REL-7 |

10.3.9a.13 MCCH configuration information

Includes information about the MCCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|---------|-------|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| Access Info Period coefficient | MP | | Integer (0..3) | Represents a , the access information coefficient. The number of repetitions per modification period equals 2^a while the actual access information period, in number of frames, equals $MP \text{ DIV } 2^a$ | REL-6 |
| Repetition Period coefficient | MP | | Integer (0..3) | Represents r , the repetition period coefficient. The number of repetitions per modification period equals 2^r while the actual repetition period, in number of frames, equals $MP \text{ DIV } 2^r$ | REL-6 |
| Modification period coefficient | MP | | Integer (7..10) | Represents m , the modification period coefficient. The actual modification period (MP), in number of frames, equals 2^m | REL-6 |
| RLC info | MP | | RLC info MBMS 10.3.4.23a | | REL-6 |
| TCTF presence | CV-MBMS | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

| Condition | Explanation |
|-------------|--------------------------------------------------------------------------------------------------------------------------------|
| <i>MBMS</i> | This IE is not needed if the IE is contained within the IE "Secondary CCPCH system information", otherwise the IE is optional. |

10.3.9a.14 MICH configuration information

Includes information about the MICH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------|------|--------|------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| MICH Power offset | MP | | MICH Power offset 10.3.9a.15 | | REL-6 |
| CHOICE <i>mode</i> | MP | | | | REL-6 |
| >FDD | | | | | REL-6 |
| >>Channelisation code | MP | | Integer (0..255) | | REL-6 |
| >>Number of NI per frame | MP | | Integer (18, 36, 72, 144) | | REL-6 |
| >>STTD indicator | MP | | STTD Indicator 10.3.6.78 | If the cell is operating in MBSFN mode as indicated in subclause 8.1.1.6.3, the UE behaviour upon reception of this IE is unspecified. | REL-6 |
| >TDD | | | | | REL-6 |
| >>Timeslot number | MP | | Timeslot number 10.3.6.84 | | REL-6 |
| >>Midamble shift and burst type | MP | | Midamble shift and burst type 10.3.6.41 | For 1.28 Mcps TDD, if the cell is operating in MBSFN mode, the UE shall ignore the contents of this IE. | REL-6 |
| >>CHOICE <i>TDD option</i> | MP | | | | REL-6 |
| >>>3.84 Mcps TDD | | | | | REL-6 |
| >>>>Channelisation code | MP | | Enumerated (16/1)...(16/16) | | REL-6 |
| >>>>7.68 Mcps TDD | | | | | REL-7 |
| >>>>Channelisation code | MP | | Enumerated (32/1)...(32/32) | | REL-7 |
| >>>>1.28 Mcps TDD | | | | | REL-6 |
| >>>>>Codes list | MP | 1 to 2 | | | REL-6 |
| >>>>>Channelisation code | MP | | Enumerated (16/1)...(16/16) | | REL-6 |
| >>>>> MBSFN Special Time Slot | OP | | Time Slot LCR Extension 10.3.6.83a | For 1.28 Mcps TDD MBSFN only mode, this IE indicates the SCCPCH is deployed on the MBSFN Special Time Slot [30]. The IE 'Timeslot number' shall be ignored if this IE appears. | REL-7 |
| >>Repetition period/length | MD | | Enumerated (4/2),(8/2), (8/4),(16/2), (16/4), (32/2),(32/4),(64/2),(64/4) | Default value is "(64/2)". | REL-6 |
| >>Offset | MP | | Integer (0...Repetition period - 1) | SFN mod Repetitionperiod = Offset. | REL-6 |

| | | | | | |
|--------------------------------------|----|--|---------------------------|--------------------------------------------------------------------------------------|-------|
| >>MBMS Notification indicator length | MD | | Integer (4, 8, 16) | Indicates the length of one MBMS Notification indicator in bits. Default value is 4. | REL-6 |
| >3.84 Mcps TDD MBSFN IMB | | | | | REL-8 |
| >>Channelisation code | MP | | Integer (0..255) | SF = 256; only the channelisation codes 2 to 15 are applicable | REL-8 |
| >>Number of NI per frame | MP | | Integer (16, 32, 64, 128) | | REL-8 |

10.3.9a.15 MICH Power offset

This is the power transmitted on the MICH minus power of the Primary CPICH in FDD and Primary CCPCH Tx Power in TDD.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-----------------------|---------|
| MICH Power offset | MP | | Integer(-10 .. +5) | Offset in dB | REL-6 |

10.3.9a.16 MSCH configuration information

Includes information about the MSCH configuration.

| Information element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| MSCH Scheduling information | MP | | | For FDD, scheduling information is provided starting at (SFN – (SCTO div 10ms)) mod MSCH_REP = MSCH_OFF For TDD, scheduling information is provided starting at SFN mod MSCH_REP = MSCH_OFF | REL-6 |
| >Scheduling period | MD | | Enumerated (32, 64, 128, 256, 512, 1024) | The period, in number of frames, between MBMS scheduling messages (MSCH_REP) Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >Scheduling offset | MD | | Integer (0..(MSCH_REP-1)) | The position of MBMS scheduling messages relative to timing of the corresponding cell (MSCH_OFF) Default value is the value included in the MBMS GENERAL INFORMATION message | REL-6 |
| >RLC info | MD | | RLC info MBMS 10.3.4.23a | Default value is the one included in the MBMS GENERAL INFORMATION message | REL-6 |
| TCTF presence | OP | | Enumerated (FALSE) | By default the TCTF is present even though the FACH only carries one logical channel (type). When this IE is included, the TCTF is absent | REL-6 |

10.3.9a.17 Network Standard Time Information

NOTE: Only for 1.28Mcps TDD

This IE includes information about the Network Standard Time and a related SFN value. If Correlative SFN is absent, the default Correlative SFN is equal to zero, this means the "Network Standard Time" indicate the standard time value when SFN equal zero.

The "Network Standard Time" occupied 40 bits; the format refers to "ETSI EN 300 468 V1.5.1 (2003-05)".

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------|---------|
| Network Standard Time | MP | | BIT STRING (40) | Network Standard Time | REL-8 |
| Correlative SFN | OP | | Integer (0..4095) | System frame number which is correlative with Network Standard Time Information. If it is absent, Correlative SFN is equal to zero. | REL-8 |

10.3.9b WLAN Information elements

10.3.9b.1 WLAN Offload Configuration

This IE indicates information for RAN-assisted WLAN interworking.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|----------------------------------------------|------|-------|----------------------------------------|-----------------------|---------|
| Threshold Serving RSCP | OP | | | | REL-12 |
| >Thresh _{servingOffloadWLAN, low} | MP | | Integer (-119..-25 by step of 2) | RSCP, dBm | REL-12 |
| >Thresh _{servingOffloadWLAN, high} | MP | | Integer (-119..-25 by step of 2) | RSCP, dBm | REL-12 |
| Threshold Serving Ec/N0 | OP | | | | REL-12 |
| >Thresh _{servingOffloadWLAN, low2} | MP | | Integer (-24..0) | Ec/N0, dB | REL-12 |
| >Thresh _{servingOffloadWLAN, high2} | MP | | Integer (-24..0) | Ec/N0, dB | REL-12 |
| Threshold Channel Utilization | OP | | | | REL-12 |
| >Thresh _{chUtilWLAN, low} | MP | | Integer (0..255) | | REL-12 |
| >Thresh _{chUtilWLAN, high} | MP | | Integer (0..255) | | REL-12 |
| Threshold Backhaul Bandwidth | OP | | | | REL-12 |
| >Thresh _{backhRateDLWLAN, low} | MP | | WLAN Threshold Backhaul Rate 10.3.9b.4 | Value in kbps. | REL-12 |
| >Thresh _{backhRateDLWLAN, high} | MP | | WLAN Threshold Backhaul Rate 10.3.9b.4 | Value in kbps. | REL-12 |
| >Thresh _{backhRateULWLAN, low} | MP | | WLAN Threshold Backhaul Rate 10.3.9b.4 | Value in kbps. | REL-12 |
| >Thresh _{backhRateULWLAN, high} | MP | | WLAN Threshold Backhaul Rate 10.3.9b.4 | Value in kbps. | REL-12 |
| Threshold Beacon RSSI | OP | | | | REL-12 |
| >Thresh _{BeaconRSSIWLAN, low} | MP | | Integer (0..255) | | REL-12 |
| >Thresh _{BeaconRSSIWLAN, high} | MP | | Integer (0..255) | | REL-12 |
| Offload Preference Indicator | OP | | Bitstring (16) | | REL-12 |
| T _{steeringWLAN} | OP | | Integer (0..31) | Value in seconds | REL-12 |

10.3.9b.2 WLAN Identifier

This IE indicates the WLAN identifier for RAN-assisted WLAN interworking.

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|------|-------|----------------------|------------------------------------------------------------------------------|---------|
| SSID | OP | | Octet string (1..32) | Service Set Identifier defined in IEEE 802.11-2012 [87]. | REL-12 |
| BSSID | OP | | Octet string (6) | Basic Service Set Identifier defined in IEEE 802.11-2012 [87]. | REL-12 |
| HESSID | OP | | Octet string (6) | Homogenous Extended Service Set Identifier defined in IEEE 802.11-2012 [87]. | REL-12 |

10.3.9b.3 WLAN Offload Information

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|--------------------------------|-------------------------|---------------------|-----------------------------------------|-----------------------|---------|
| WLAN Offload Configuration | CV- <i>Dedicated</i> | | WLAN Offload Configuration 10.3.9b.1 | | REL-12 |
| WLAN Identifier List | OP | 1 to <maxWLANID> | | | REL-12 |
| >WLAN Identifier | MP | | WLAN Identifier 10.3.9b.2 | | REL-12 |

| Condition | Explanation |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| <i>Dedicated</i> | The IE is mandatory present in the UTRAN MOBILITY INFORMATION or CELL UPDATE CONFIRM message. Otherwise the IE is optionally present. |

10.3.9b.4 WLAN Threshold Backhaul Rate

| Information Element/Group name | Need | Multi | Type and reference | Semantics description | Version |
|---------------------------------------|------|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|---------|
| WLAN Threshold Backhaul Backhaul Rate | MP | | Enumerated {r0, r4, r8, r16, r32, r64, r128, r256, r512, r1024, r2048, r4096, r8192, r16384, r32768, r65536, r131072, r262144, r524288, r1048576, r2097152, r4194304, r8388608, r16777216, r33554432, r67108864, r134217728, r268435456, r536870912, r107374182 4, r214748364 8, r429496729 6} | Value in kbps. | REL-12 |

10.3.10 Multiplicity values and type constraint values

The following table includes constants that are either used as multi bounds (name starting with "max") or as high or low value in a type specification (name starting with "lo" or "hi"). Constants are specified only for values appearing more than once in the RRC specification. In case a constant is related to one or more other constants, an expression is included in the "value" column instead of the actual value.

| Constant | Explanation | Value | Version |
|-----------------------------------|-----------------------------------------------------------------------------------------------|-----------------|---------|
| CN information | | | |
| maxCNdomains | Maximum number of CN domains | 4 | |
| UTRAN mobility information | | | |
| maxRAT | Maximum number of Radio Access Technologies | maxOtherRAT + 1 | |
| maxOtherRAT | Maximum number of other Radio Access Technologies | 15 | |
| maxURA | Maximum number of URAs in a cell | 8 | |
| maxInterSysMessages | Maximum number of Inter System Messages | 4 | |
| maxRABsetup | Maximum number of RABs to be established | 16 | |
| maxDedicatedCSGFreq | Maximum number of dedicated CSG frequencies | 4 | REL-8 |
| UE information | | | |
| maxtransactions | Maximum number of parallel RRC transactions in downlink | 25 | |
| maxPDCPaigoType | Maximum number of PDCP algorithm types | 8 | |
| maxMultipleFrequencyBands FDD | Maximum number of additional frequency bands broadcasted in SIB5, SIB6, SIB11, SIB11bis, SB12 | 8 | REL-10 |
| maxMultipleFrequencyBands EUTRA | Maximum number of additional frequency bands broadcasted in SIB19 | 8 | REL-10 |

| Constant | Explanation | Value | Version |
|------------------------------|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------|---------|
| maxNumAccessGroups | Maximum number of Access Groups | 16 | REL-12 |
| maxFreqBandsFDD | Maximum number of frequency bands as defined in [21] and treated by RRC | 8 | |
| maxFreqBandsFDD2 | Maximum number of frequency bands as defined in [21] and treated by RRC | 22 | REL-6 |
| maxFreqBandsFDD3 | Maximum number of frequency bands as defined in [21] and treated by RRC | 86 | REL-10 |
| maxFreqBandsFDD-ext | Used in asn.1 to signal additional bands maxFreqBandsFDD2 – (maxFreqBandsFDD-1) | 15 | REL-6 |
| maxFreqBandsFDD-ext2 | Used in asn.1 to signal additional bands maxFreqBandsFDD3 – maxFreqBandsFDD2 | 64 | REL-10 |
| maxFreqBandsFDD-ext3 | Used in asn.1 to signal additional bands maxFreqBandsFDD3 – maxFreqBandsFDD | 78 | REL-10 |
| maxFreqBandsTDD | Maximum number of frequency bands supported by the UE as defined in [22] | 4 | |
| maxFreqBandsTDD-ext | Maximum number of frequency bands supported by the UE as defined in [22] | 16 | REL-8 |
| maxFreqBandsGSM | Maximum number of frequency bands supported by the UE as defined in [45] | 16 | |
| maxFreqBandsEUTRA | Maximum number of frequency bands supported by the UE as defined in [36.101] | 16 | REL-8 |
| maxFreqBandsEUTRA-ext | Maximum number of frequency bands supported by the UE as defined in [36.101] | 48 | REL-11 |
| maxFreqBandsIndicatorSupport | Maximum number of frequency bands broadcasted in SIB5/5bis | 2 | REL-10 |
| maxPage1 | Number of UEs paged in the Paging Type 1 message | 8 | |
| maxSystemCapability | Maximum number of system specific capabilities that can be requested in one message. | 16 | |
| MaxURNTIgroup | Maximum number of U-RNTI groups in one message | 8 | REL-5 |
| maxCommonHRNTI | Maximum number of common H-RNTI per cell | 4 | REL-7 |
| maxERNTIgroup | Maximum number of common E-RNTI group per cell (1.28 Mcps TDD) | 32 | REL-8 |
| maxERNTIperGroup | Maximum number of common E-RNTI in a group (1.28 Mcps TDD) | 2 | REL-8 |
| RB information | | | |
| maxPredefConfig | Maximum number of predefined configurations | 16 | |
| maxRB | Maximum number of RBs | 32 | |
| maxSRBsetup | Maximum number of signalling RBs to be established | 8 | |
| maxRBperRAB | Maximum number of RBs per RAB | 8 | |
| maxRBallRABs | Maximum number of non signalling RBs | 27 | |
| maxRBperTrCh | Maximum number of RB per TrCh | 16 | REL-6 |
| maxRBMuxOptions | Maximum number of RB multiplexing options | 8 | |
| maxLoCHperRLC | Maximum number of logical channels per RLC entity | 2 | |
| maxRLCPDUsizePerLogChan | Maximum number of RLC PDU sizes per logical channel mapped on E-DCH | 32 | REL-6 |
| MaxROHC-PacketSizes | Maximum number of packet sizes that are allowed to be produced by ROHC. | 16 | |
| MaxROHC-Profiles | Maximum number of profiles supported by ROHC on a given RB. | 8 | |
| maxRFC 3095-CID | Maximum number of available CID values per radio bearer | 16384 | REL-5 |
| TrCH information | | | |
| maxCommonQueueID | Maximum number of common Mac-ehs queues | 2 | REL-7 |
| maxE-DCHMACdFlow | Maximum number of E-DCH MAC-d flows | 8 | REL-6 |
| MaxHProcesses | Maximum number of H-ARQ processes | 8 | REL-5 |
| MaxHSDSCH_TB_index | Maximum number of TB set size configurations for the HS-DSCH. | 64 (FDD and 1.28 MCPS TDD); 512 (3.84 Mcps TDD); 1024 (7.68 Mcps TDD) | REL-5 |

| Constant | Explanation | Value | Version |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------|--------------------------------------|---------|
| maxMACdPDUSizes | Maximum number of MAC-d PDU sizes per queue permitted for MAC-hs | 8 | REL-5 |
| maxTrCH | Maximum number of transport channels used in one direction (UL or DL) | 32 | |
| maxTrCHpreconf | Maximum number of preconfigured Transport channels, per direction | 16 | |
| maxNrOfConcatTrCH | Maximum number of DL Transport Channels of type DCH that are subject to concatenation in the physical layer | 3 | REL-12 |
| maxCCTrCH | Maximum number of CCTrCHs | 8 | |
| maxQueueID | Maximum number of Mac-hs queues | 8 | REL-5 |
| MaxTF | Maximum number of different transport formats that can be included in the Transport format set for one transport channel | 32 | |
| maxTFC | Maximum number of Transport Format Combinations | 1024 | |
| maxTFCsub | Maximum number of Transport Format Combinations Subset | 1024 | |
| maxSIBperMsg | Maximum number of complete system information blocks per SYSTEM INFORMATION message | 16 | |
| maxSIB | Maximum number of references to other system information blocks. | 32 | |
| maxSIB2 | Maximum number of references to other system information blocks on second system information broadcast channel. | 64 | REL-12 |
| maxSIB-FACH | Maximum number of references to system information blocks on the FACH | 8 | |
| PhyCH information | | | |
| maxHSSCCHs | Maximum number of HSSCCH codes that can be assigned to a UE | 4 | REL-5 |
| maxHS-SCCHLessTrBlk | Maximum number of HS-DSCH Transport Block Sizes used for HS-SCCH-less operation | [4] | REL-7 |
| maxTDD128Carrier | The maximum number of carriers for 1.28 Mcps TDD | 6 | REL-7 |
| maxAC | Maximum number of access classes | 16 | |
| maxASC | Maximum number of access service classes | 8 | |
| maxASCmap | Maximum number of access class to access service classes mappings | 7 | |
| maxASCpersist | Maximum number of access service classes for which persistence scaling factors are specified | 6 | |
| maxPRACH | Maximum number of PRACHs in a cell | 16 | |
| maxEDCHs | Maximum number of common E-DCH resources in a cell | 32 | REL-8 |
| maxPRACH_EUL | Maximum number of PRACH preamble control parameters (for Enhanced Uplink) in a cell | 4 | REL-11 |
| MaxPRACH_FPACH | Maximum number of PRACH / FPACH pairs in a cell (1.28 Mcps TDD) | 8 | REL-4 |
| maxFACHPCH | Maximum number of FACHs and PCHs mapped onto one secondary CCPCHs | 8 | |
| maxRL | Maximum number of radio links | 8 | |
| maxEDCHRL | Maximum number of E-DCH radio links | 4 | REL-6 |
| maxSCCPCH | Maximum number of secondary CCPCHs per cell | 16 | |
| maxDPDCH-UL | Maximum number of DPDCHs per cell | 6 | |
| maxDPCH-DLchan | Maximum number of channelisation codes used for DL DPCH | 8 | |
| maxPUSCH | Maximum number of PUSCHs | (8) | |
| maxPDSCH | Maximum number of PDSCHs | 8 | |
| maxTS | Maximum number of timeslots used in one direction (UL or DL) | 14 (3.84 Mcps TDD and 7.68 Mcps TDD) | |
| | | 6 (1.28 Mcps TDD) | REL-4 |
| hiPUSCHidentities | Maximum number of PUSCH Identities | 64 | |

| Constant | Explanation | Value | Version |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-------|---------|
| hiPDSCHidentities | Maximum number of PDSCH Identities | 64 | |
| maxNumE-AGCH | Maximum number of E-AGCHs (TDD) | 4 | REL-7 |
| maxNumE-HICH | Maximum number of E-HICHs (1.28 Mcps TDD) | 4 | REL-7 |
| maxERUCCH | Maximum number of E-RUCCH on primary frequency (1.28Mcps TDD) | 256 | REL-8 |
| Measurement information | | | |
| maxTGPS | Maximum number of transmission gap pattern sequences | 6 | |
| maxAdditionalMeas | Maximum number of additional measurements for a given measurement identity | 4 | |
| maxExcludedDetectedSet Cells | Maximum number of cells that can be excluded from a detected set measurement | 64 | REL-11 |
| maxNonContiguousMultiCell Combinations | Maximum number of non-contiguous multi-cell HSDPA combinations in one band | 3 | REL-10 |
| maxMeasEvent | Maximum number of events that can be listed in measurement reporting criteria | 8 | |
| maxMeasEventOnSecULFreq | Maximum number of events that can be listed in measurement reporting criteria on the downlink frequency associated with secondary uplink frequency | 8 | REL-9 |
| maxMeasIdentity | Maximum number of measurement identities that can be removed from variable MEASUREMENT_IDENTITY | 32 | REL-12 |
| maxMeasParEvent | Maximum number of measurement parameters (e.g. thresholds) per event | 2 | |
| maxMeasIntervals | Maximum number of intervals that define the mapping function between the measurements for the cell quality Q of a cell and the representing quality value | 1 | |
| maxCellMeas | Maximum number of cells to measure | 32 | |
| maxCellMeasExt | Maximum number of cells to measure | 64 | REL-12 |
| maxMeasCSGRange | Maximum number of ranges of cells for CSG measurement | 4 | REL-9 |
| maxSrequest | Maximum number of cell request for reading System Information | 4 | REL-9 |
| maxCellMeasOnSecULFreq | Maximum number of cells to measure on the downlink frequency associated with the secondary uplink frequency | 32 | REL-9 |
| maxReportedGSMCells | Maximum number of GSM cells to be reported | 8 | |
| maxReportedEUTRAFreqs | Maximum number of E-UTRA frequencies to report | 4 | REL-8 |
| maxReportedEUTRAFreqs-ext | Maximum number of E-UTRA frequencies to report | 8 | REL-12 |
| maxReportedEUTRACellperFreq | Maximum number of E-UTRA cells to report per frequency | 4 | REL-8 |
| maxFreq | Maximum number of frequencies to measure | 8 | |
| maxFreqMeasWithoutCM | Maximum number of inter frequencies to measure without CM | 2 | REL-10 |
| maxNumPrio | Maximum number of priorities to store | 11 | REL-8 |
| maxPrio | Maximum number of RAT or Frequency Priority levels | 8 | REL-8 |
| maxRMPfrequencies | Maximum number of UTRA inter-frequencies that the network can request to be measured with Reduced Measurement Performance. | 8 | REL-12 |
| maxEUTRACellPerFreq | Maximum number of E-UTRA cells per frequency | 16 | REL-8 |
| maxSat | Maximum number of satellites to measure | 16 | |
| maxGANSSSat | Maximum number of GANSS satellites to measure | 64 | REL-7 |
| maxGANSS | Maximum number of GANSS supported | 8 | REL-7 |
| maxSgnType | Maximum number of additional signals in GANSS to measure | 8 | REL-7 |
| maxSatClockModels | Maximum number of clock models in a GANSS | 4 | REL-7 |
| maxSatAlmanacStorage | Maximum number of satellites for which to store GPS Almanac information | 32 | |

| Constant | Explanation | Value | Version |
|------------------------------------------|-------------------------------------------------------------------------------------|-------|---------|
| HiRM | Maximum number that could be set as rate matching attribute for a transport channel | 256 | |
| maxDCHMeasurementOccasionPatternSequence | Maximum number of CELL_DCH measurement occasion pattern sequences | 5 | REL-9 |
| maxIGPInfo | Maximum number of ionospheric grid points for BDS as defined in [86]. | 320 | REL-12 |
| Frequency information | | | |
| MaxFDDFreqList | Maximum number of FDD carrier frequencies to be stored in USIM | 4 | |
| MaxTDDFreqList | Maximum number of TDD carrier frequencies to be stored in USIM | 4 | |
| MaxFDDFreqCellList | Maximum number of neighbouring FDD cells to be stored in USIM | 32 | |
| MaxTDDFreqCellList | Maximum number of neighbouring TDD cells to be stored in USIM | 32 | |
| MaxGSMCellList | Maximum number of GSM cells to be stored in USIM | 32 | |
| Other information | | | |
| MaxGERANSI | Maximum number of GERAN SI blocks that can be provided as part of NACC information | 8 | REL-5 |
| maxNumGSMFreqRanges | Maximum number of GSM Frequency Ranges to store | 32 | |
| MaxNumFDDFreqs | Maximum number of FDD centre frequencies to store | 8 | |
| MaxNumTDDFreqs | Maximum number of TDD centre frequencies to store | 8 | |
| maxNumCDMA200Freqs | Maximum number of CDMA2000 centre frequencies to store | 8 | |

| Constant | Explanation | Value | Version |
|---------------------------------------|---------------------------------------------------------------------------------------------------------|-------|---------|
| maxGSMTARGETCells | Maximum number of GSM target cells | 32 | REL-6 |
| maxNumGSMCellGroup | Maximum number of GSM frequency groups to store | 16 | REL-8 |
| maxNumEUTRAFreqs | Maximum number of EUTRA centre frequencies to store | 8 | REL-8 |
| maxNumEUTRAFreqs_FACH | Maximum number of EUTRA centre frequencies to store when in CELL_FACH | 4 | REL-11 |
| maxNumEUTRAFreqs_FACH-ext | Maximum number of EUTRA centre frequencies to store when in CELL_FACH | 8 | REL-12 |
| maxEUTRATargetFreqs | Maximum number of target E-UTRA frequencies | 8 | REL-8 |
| maxHNBNameSize | Maximum number of octets for the HNB Name | 48 | REL-8 |
| MBMS information | | | |
| maxMBMS-CommonCCTrCh | Maximum number of CCTrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonPhyCh | Maximum number of PhyCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonRB | Maximum number of RB configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-CommonTrCh | Maximum number of TrCh configurations included in the MBMS COMMON P-T-M RB INFORMATION message | 32 | REL-6 |
| maxMBMS-Freq | Maximum number of MBMS preferred frequencies | 4 | REL-6 |
| maxMBMS-L1CP | Maximum number of periods in which layer 1 combining applies | 4 | REL-6 |
| maxMBMsservCount | Maximum number of MBMS services in a Access Info message | 8 | REL-6 |
| maxMBMsservModif | Maximum number of MBMS services in a MBMS MODIFIED SERVICES INFORMATION message | 32 | REL-6 |
| maxMBMsservSched | Maximum number of MBMS services in a MBMS SCHEDULING INFORMATION message | 16 | REL-6 |
| maxMBMsservSelect | Maximum number of MBMS Selected Services in a CELL UPDATE or RRC CONNECTION REQUEST message | 8 | REL-6 |
| maxMBMsservUnmodif | Maximum number of MBMS services in a MBMS UNMODIFIED SERVICES INFORMATION message | 64 | REL-6 |
| maxMBMSTransmis | Maximum number of transmissions for which scheduling information is provided within a scheduling period | 4 | REL-6 |
| maxMBMS-Services | Maximum number of MBMS services the UE stores in the variable MBMS_ACTIVATED_SERVICES | 64 | REL-6 |
| maxMBSFNclusters | Maximum number of MBSFN clusters indicated in system information | 16 | REL-7 |
| Logged Measurement information | | | REL-10 |
| MaxnumLoggedMeas | Maximum number of Cells or Frequencies that can be listed in Logged Measurement Report. | 8 | REL-10 |
| MaxLoggedMeas | Maximum number of logged measurements entries that can be stored by the UE | 4405 | REL-10 |
| MaxLoggedMeasReport | Maximum number of Logged Measurement Info sent in LoggedMeasReport | 128 | REL-10 |
| MaxnumMDTPLMN | Maximum number of PLMNs in PLMN list for MDT | 15 | REL-11 |
| ANR information | | | REL-10 |
| MaxNumANRLoggedItems | Maximum number of entries in Logged ANR Report info | 4 | REL-10 |
| WLAN information | | | REL-12 |
| maxWLANID | Maximum number of WLAN identifiers | 16 | REL-12 |

10.3.11 Void

11 Message and Information element abstract syntax (with ASN.1)

This clause contains definitions for RRC PDUs and IEs using a subset of ASN.1 as specified in [14]. PDU and IE definitions are grouped into separate ASN.1 modules.

11.0 General

Some messages and/or IEs may include one or more IEs with name "dummy" that are included only in the ASN.1. The UE should avoid sending information elements that are named "dummy" to UTRAN. Likewise, UTRAN should avoid sending IEs with name "dummy" to the UE. If the UE anyhow receives an information element named "dummy", it shall ignore the IE and process the rest of the message as if the IE was not included.

NOTE: An IE with name "dummy" concerns an information element that was (erroneously) included in a previous version of the specification and has been removed by replacing it with a dummy with same type.

The UE shall only include the "variable length extension container" when it sends a non critical extension that according to this specification shall be transferred within this container.

If the abstract syntax of an IE is defined using the ASN.1 type "BIT STRING", and this IE corresponds to a functional IE definition in tabular format, in which the significance of bits is semantically defined, the following general rule shall be applied:

The bits in the ASN.1 bit string shall represent the semantics of the functional IE definition in decreasing order of bit significance;

- with the first (or leftmost) bit in the bit string representing the most significant bit; and
- with the last (or rightmost) bit in the bit string representing the least significant bit.
