Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under
<http://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "may not", "need", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the *Positioning Calculation Application Part (PCAP)* between the Radio Network Controller (RNC) and the Stand-Alone SMLC (SAS). It fulfills the RNC-SAS communication requirements specified in TS 25.305 [6] and thus defines the Iupc interface and its associated signaling procedures.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

Stand-Alone SMLC (SAS): logical node that interconnects to the RNC over the Iupc interface via the PCAP protocol. An SAS performs the following procedures:

- provide GNSS (i.e. GPS or GANSS (e.g. Galileo)) related data to the RNC;
- performs the position calculation function based upon UE Positioning measurement data;
- in SAS centric mode, selects the positioning method and controls the positioning procedure.

Elementary Procedure: PCAP consists of Elementary Procedures (EPs).

An Elementary Procedure is a unit of interaction between the RNC and the SAS. An EP consists of an initiating message and possibly a response message. Two kinds of EPs are used:

- **Class 1:** Elementary Procedures with response (success or failure).
- **Class 2:** Elementary Procedures without response.

For Class 1 EPs, the types of responses can be as follows:

Successful:

- A signalling message explicitly indicates that the elementary procedure successfully completed with the receipt of the response.

Unsuccessful:

- A signalling message explicitly indicates that the EP failed.

Class 2 EPs are considered always successful.

Information Exchange Context: Information Exchange Context is created by the first Information Exchange Initiation Procedure initiated by the RNC and requested from the SAS.

The Information Exchange Context is deleted after the Information Exchange Termination or the Information Exchange Failure procedure when there is no more Information Exchange to be provided by the RNC to the SAS. The Information Exchange Context is identified by an SCCP connection as, for Information Exchanges, only the connection oriented mode of the signalling bearer is used.

Positioning Initiation Context: In the SAS centric mode of operation each positioning request is assigned a unique logical connection identity, i.e., SCCP Source and Destination Local Reference numbers.

RNC Centric Mode of Operation: The RNC determines, initiates and controls the positioning method to be used for each positioning request.

SAS Centric Mode of Operation: The SAS determines, initiates and controls the positioning method to be used for each positioning request.

Positioning Event: The activity associated with the positioning of a UE resulting from the reception of UE positioning request from the CN.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

A-GANSS	Assisted GANSS
A-GPS	Assisted GPS
ASN.1	Abstract Syntax Notation One
BDS	BeiDou Navigation Satellite System
CN	Core Network
CRNC	Controlling RNC
DBDS	Differential BDS
DGANSS	Differential GANSS
DGPS	Differential GPS
ECEF	Earth-Centered, Earth-Fixed
EGNOS	European Geostationary Navigation Overlay Service
EP	Elementary Procedure
FDD	Frequency Division Duplex
GAGAN	GPS Aided Geo Augmented Navigation
GANSS	Galileo and Additional Navigation Satellite Systems
GLONASS	GLObal'naya NAVigatsionnaya Sputnikovaya Sistema (Engl.: Global Navigation Satellite System)
GNSS	Global Navigation Satellite System
GPS	Global Positioning System
ICD	Interface Control Document
MSAS	Multi-functional Satellite Augmentation System
OTDOA	Observed Time Difference Of Arrival
PCAP	Positioning Calculation Application Part
PRC	Pseudorange Correction
QZSS	Quasi-Zenith Satellite System
RNC	Radio Network Controller
RNS	Radio Network Subsystem
RRC	Radio Resource Control
SAS	Stand-Alone SMLC
SBAS	Satellite Based Augmentation System
SCCP	Signalling Connection Control Part
SIB	System Information Block
SMLC	Serving Mobile Location Center
SRNC	Serving RNC
SV	Space Vehicle
TDD	Time Division Duplex
TOD	Time of Day
TOW	Time of Week

UE	User Equipment
UTC	Universal Coordinated Time
U-TDOA	Uplink Time Difference Of Arrival
UTRAN	Universal Terrestrial Radio Access Network
WAAS	Wide Area Augmentation System

4 General

4.1 Procedure Specification Principles

The principle for specifying the procedure logic is to specify the functional behaviour of the SAS exactly and completely. The RNC functional behaviour is left unspecified.

The following specification principles have been applied for the procedure text in clause 8:

- The procedure text discriminates between:
 - 1) Functionality which "shall" be executed:
 - The procedure text indicates that the receiving node "shall" perform a certain function Y under a certain condition. If the receiving node supports procedure X but cannot perform functionality Y requested in the REQUEST message of a Class 1 EP, the receiving node shall respond with the message used to report unsuccessful outcome for this procedure, containing an appropriate cause value.
 - 2) Functionality which "shall, if supported" be executed:
 - The procedure text indicates that the receiving node "shall, if supported," perform a certain function Y under a certain condition. If the receiving node supports procedure X, but does not support functionality Y, the receiving node shall proceed with the execution of the EP, possibly informing the requesting node about the not supported functionality.
- Any required inclusion of an optional IE in a response message is explicitly indicated in the procedure text. If the procedure text does not explicitly indicate that an optional IE shall be included in a response message, the optional IE shall not be included.

4.2 Forwards and Backwards Compatibility

The forwards and backwards compatibility of the protocol is assured by mechanism where all current and future messages, and IEs or groups of related IEs, include Id and criticality fields that are coded in a standard format that will not be changed in the future. These parts can always be decoded regardless of the standard version.

4.3 Specification Notations

For the purposes of the present document, the following notations apply:

- | | |
|----------------|---|
| [FDD] | This tagging of a word indicates that the word preceding the tag "[FDD]" applies only to FDD. This tagging of a heading indicates that the heading preceding the tag "[FDD]" and the section following the heading applies only to FDD. |
| [TDD] | This tagging of a word indicates that the word preceding the tag "[TDD]" applies only to TDD, including 3.84Mcps TDD, 7.68Mcps TDD and 1.28Mcps TDD. This tagging of a heading indicates that the heading preceding the tag "[TDD]" and the section following the heading applies only to TDD, including 3.84Mcps TDD, 7.68Mcps TDD and 1.28Mcps TDD. |
| [3.84Mcps TDD] | This tagging of a word indicates that the word preceding the tag "[3.84Mcps TDD]" applies only to 3.84Mcps TDD. This tagging of a heading indicates that the heading preceding the tag "[3.84Mcps TDD]" and the section following the heading applies only to 3.84Mcps TDD. |

[1.28Mcps TDD]	This tagging of a word indicates that the word preceding the tag "[1.28Mcps TDD]" applies only to 1.28Mcps TDD. This tagging of a heading indicates that the heading preceding the tag "[1.28Mcps TDD]" and the section following the heading applies only to 1.28Mcps TDD.
[7.68Mcps TDD]	This tagging of a word indicates that the word preceding the tag "[7.68Mcps TDD]" applies only to 7.68Mcps TDD. This tagging of a heading indicates that the heading preceding the tag "[7.68Mcps TDD]" and the section following the heading applies only to 7.68Mcps TDD.
[FDD - ...]	This tagging indicates that the enclosed text following the "[FDD - " applies only to FDD. Multiple sequential paragraphs applying only to FDD are enclosed separately to enable insertion of TDD specific (or common) paragraphs between the FDD specific paragraphs.
[TDD - ...]	This tagging indicates that the enclosed text following the "[TDD - " applies only to TDD, including 7.68 Mcps TDD, 3.84Mcps TDD, 7.68Mcps TDD and 1.28Mcps TDD. Multiple sequential paragraphs applying only to TDD are enclosed separately to enable insertion of FDD specific (or common) paragraphs between the TDD specific paragraphs.
[3.84Mcps TDD - ...]	This tagging indicates that the enclosed text following the "[3.84Mcps TDD - " applies only to 3.84Mcps TDD. Multiple sequential paragraphs applying only to 3.84Mcps TDD are enclosed separately to enable insertion of FDD and TDD specific (or common) paragraphs between the 3.84Mcps TDD specific paragraphs.
[1.28Mcps TDD - ...]	This tagging indicates that the enclosed text following the "[1.28Mcps TDD - " applies only to 1.28Mcps TDD. Multiple sequential paragraphs applying only to 1.28Mcps TDD are enclosed separately to enable insertion of FDD and TDD specific (or common) paragraphs between the 1.28Mcps TDD specific paragraphs.
[7.68Mcps TDD - ...]	This tagging indicates that the enclosed text following the "[7.68Mcps TDD - " applies only to 7.68Mcps TDD. Multiple sequential paragraphs applying only to 7.68Mcps TDD are enclosed separately to enable insertion of FDD and TDD specific (or common) paragraphs between the 7.68Mcps TDD specific paragraphs.
Procedure	When referring to an elementary procedure in the specification the Procedure Name is written with the first letters in each word in upper case characters followed by the word "procedure", e.g. Position Calculation procedure.
Message	When referring to a message in the specification the MESSAGE NAME is written with all letters in upper case characters followed by the word "message", e.g. POSITION CALCULATION REQUEST message.
IE	When referring to an information element (IE) in the specification the <i>Information Element Name</i> is written with the first letters in each word in upper case characters and all letters in Italic font followed by the abbreviation "IE", e.g. <i>Request Type IE</i> .
Value of an IE	When referring to the value of an information element (IE) in the specification the "Value" is written as it is specified in clause 9.2 enclosed by quotation marks, e.g. "Abstract Syntax Error (Reject)" or "Geographical Coordinates".

5 PCAP Services

PCAP provides the signalling services between RNC and SAS that are required to fulfill the PCAP functions described in clause 7. PCAP services are categorized as follows:

1. Position Calculation Service: They are related to a single UE and involve the transfer of UE Positioning measurement data and UE position estimate data over the Iupc interface between the SRNC and the SAS. They utilise connectionless signalling transport provided by the Iupc signalling bearer.
2. Information Exchange Service: They involve the transfer of GPS or GANSS related data over the Iupc interface between the RNC and the SAS on demand, on modification, or at regular intervals. They utilise connection-oriented signalling transport provided by the Iupc signalling bearer.

3. SAS Centric Position Service: They are related to the capability of the SAS to determine the positioning method used for individual positioning events. In this case the SRNC may allow A-GPS, A-GANSS, OTDOA, Cell ID and U-TDOA positioning events for a single UE to be originated by the SAS via PCAP messages. They utilise connection-oriented signalling transport provided by the Iupc signalling bearer.

6 Services Expected from Signalling Transport

Signalling transport (TS 25.452 [3]) shall provide the following service for the PCAP.

1. Connection oriented data transfer service. This service is supported by a signalling connection between the RNC and the SAS. It shall be possible to dynamically establish and release signalling connections based on the need. Each point-to-point operation shall have its own signalling connection. The signalling connection shall provide in sequence delivery of PCAP messages. PCAP shall be notified if the signalling connection breaks.
2. Connectionless data transfer service. PCAP shall be notified in case a PCAP message did not reach the intended peer PCAP entity.

7 Functions of PCAP

PCAP has the following functions:

- Position Calculation. This function enables the SRNC to interact with an SAS in the process of performing a position estimate of a UE.
- Information Exchange. This function enables the RNC to obtain GPS or GANSS related data from an SAS.
- Reporting of General Error Situations. This function allows reporting of general error situations for which function specific error messages have not been defined.
- SAS Centric Position. This function enables the SRNC to interact with an SAS in the process of performing a position estimate of a UE.

The mapping between the above functions and PCAP elementary procedures is shown in the table 1.

Table 1: Mapping between functions and PCAP elementary procedures

Function	Elementary Procedure(s)
Position Calculation	a) Position Calculation b) Position Parameter Modification c) Abort
Information Exchange	a) Information Exchange Initiation b) Information Reporting c) Information Exchange Termination d) Information Exchange Failure
Reporting of General Error Situations	a) Error Indication
SAS Centric Position	a) Position Initiation b) Position Activation c) Position Parameter Modification d) Abort e) Position Periodic Report f) Position Periodic Result g) Position Periodic Termination

8 PCAP Procedures

8.1 Elementary Procedures

In the following tables, all EPs are divided into class 1 and class 2 EPs (see clause 3.1 for explanation of the different classes).

Table 2: Class 1

Elementary Procedure	Initiating Message	Successful Outcome	Unsuccessful Outcome
		Response message	Response message
Position Calculation	POSITION CALCULATION REQUEST	POSITION CALCULATION RESPONSE	POSITION CALCULATION FAILURE
Information Exchange Initiation	INFORMATION EXCHANGE INITIATION REQUEST	INFORMATION EXCHANGE INITIATION RESPONSE	INFORMATION EXCHANGE INITIATION FAILURE
Position Initiation	POSITION INITIATION REQUEST	POSITION INITIATION RESPONSE	POSITION INITIATION FAILURE
Position Activation	POSITION ACTIVATION REQUEST	POSITION ACTIVATION RESPONSE	POSITION ACTIVATION FAILURE

Table 3: Class 2

Elementary Procedure	Message
Information Reporting	INFORMATION REPORT
Information Exchange Termination	INFORMATION EXCHANGE TERMINATION REQUEST
Information Exchange Failure	INFORMATION EXCHANGE FAILURE INDICATION
Error Indication	ERROR INDICATION
Position Parameter Modification	POSITION PARAMETER MODIFICATION
Abort	ABORT
Position Periodic Report	POSITION PERIODIC REPORT
Position Periodic Result	POSITION PERIODIC RESULT
Position Periodic Termination	POSITION PERIODIC TERMINATION

8.2 Position Calculation

8.2.1 General

The purpose of the Position Calculation procedure is to enable an SRNC to query an SAS for a position estimate of a UE. The procedure uses connectionless signalling.

8.2.2 Successful Operation

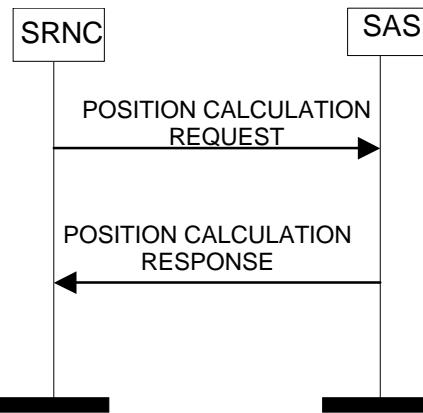

Figure 1: Position Calculation procedure, Successful Operation

The procedure is initiated with a POSITION CALCULATION REQUEST message sent from the SRNC to the SAS. When the SAS receives the POSITION CALCULATION REQUEST message, it shall calculate the UE position and, if supported and requested, velocity based on the provided measurement data. This procedure may be repeated by the SRNC as needed for periodic location. If the POSITION CALCULATION REQUEST message is part of periodic location, this message may include the *Periodic Position Calculation Info* IE to enable the SAS to better fulfill future such requests.

If the *Initial UE Position Estimate* IE is included in the POSITION CALCULATION REQUEST message, the SAS shall use this value for the calculation of the UE Position Estimate in case of A-GPS or A-GANSS positioning methods are used. The SAS may use this value for the calculation of the UE Position when any other methods are used.

If the *Cell-ID Measured Results Sets* IE is included in the POSITION CALCULATION REQUEST message and both of the *Round Trip Time Info* IE and the *Round Trip Time Info With Type 1* IE are included in the *Cell-ID Measured Results Info List* IE, the SAS shall use the *Round Trip Time Info* IE.

If the *Horizontal Accuracy Code* IE and possibly the *Vertical Accuracy Code* IE are included in the POSITION CALCULATION REQUEST message, the SAS shall use these values in order to assess whether the resulting position estimation fulfills the requested accuracy.

If the *SAS Response Time* IE is included in the POSITION CALCULATION REQUEST message, the SAS shall send a POSITION CALCULATION RESPONSE message within the indicated time after reception of the POSITION CALCULATION REQUEST message.

If the *Include Velocity* IE is set to "requested" in the POSITION CALCULATION REQUEST message, the SAS shall include the *Velocity Estimate* IE, if available, in the POSITION CALCULATION RESPONSE message.

If a *GANSS Measured Results* IE is included in the POSITION CALCULATION REQUEST message and does not contain the *GANSS Time ID* IE, the SAS shall assume that the corresponding GANSS timing refers to the "Galileo" timing.

The *GANSS Measured Results* IE contains one or several *GANSS Generic Measurement Information* IEs, each of them associated with a given GANSS:

- If a *GANSS Generic Measurement Information* IE does not contain the *GANSS ID* IE, the SAS shall assume that the associated GANSS is "Galileo".
- If a *GANSS Generic Measurement Information* IE associated with a particular GANSS does not contain the *GANSS Signal ID* IE, the SAS shall assume the default value as defined in TS 25.331 [4].
- If a *GANSS Generic Measurement Information* IE does not contain the *GANSS Code Phase Ambiguity* IE and the *GANSS Code Phase Ambiguity Extension* IE, the SAS shall assume the value "1" (ms).
- If the *GANSS Integer Code Phase* IE and the *GANSS Integer Code Phase Extension* IE associated to a given satellite (identified by the *Sat ID* IE value) is not present within the *GANSS Measurement Parameters* IE, the SAS shall use the default "1" (ms) for the GANSS Code Phase Ambiguity value in order to compute the value of

the Total Code Phase (as defined in TS 25.331 [4]) for the related satellite, whatever the value of the *GANSS Code Phase Ambiguity IE*.

If an optional *Cell-ID IRAT Measured Results Sets IE* is included in the POSITION CALCULATION REQUEST message, the SAS shall, if supported, use this value for the calculation of the UE Position Estimate in case of RFPM positioning method is used. The SAS may use this value for the calculation of the UE Position when any other methods are used.

If the *IMSI IE*, or *IMEI IE* is included in the POSITION CALCULATION REQUEST message, the SAS may save these IEs for use in location session correlation.

Response Message:

If the SAS was able to calculate the position estimate, it shall respond with a POSITION CALCULATION RESPONSE message.

Whenever one of the geographic area shapes *Ellipsoid point with uncertainty Ellipse IE*, *Ellipsoid point with altitude and uncertainty Ellipsoid IE* or *Ellipsoid Arc IE* is reported, the *Confidence IE* shall indicate the probability that the UE is located within the uncertainty region of the shape. The value of the *Confidence IE* shall be in the interval of "1" to "100".

If at least the *Horizontal Accuracy Code IE* was included in the POSITION CALCULATION REQUEST message and the calculated position estimate fulfils the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy fulfilled" shall be included in the POSITION CALCULATION RESPONSE message. If the calculated position estimate does not fulfil the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy not fulfilled" shall be included in the POSITION CALCULATION RESPONSE message.

8.2.3 Unsuccessful Operation

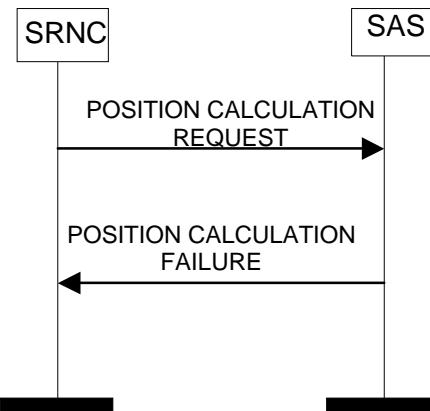

Figure 2: Position Calculation procedure, Unsuccessful Operation

If the SAS is unable to perform the position estimate for any reason, it shall return a POSITION CALCULATION FAILURE message to the SRNC.

Typical cause values are:

- Invalid reference information;
- Position calculation error: invalid GPS, Galileo, GLONASS, BDS or GANSS measured results;
- Initial UE Position Estimate missing;
- Processing Overload;
- Hardware Failure;
- O&M Intervention;
- Invalid U-TDOA measured results;

- U-TDOA positioning method not supported;
- U-TDOA positioning method not supported in specified UTRAN cell;
- SAS unable to perform U-TDOA positioning within Response Time.

8.2.4 Abnormal Conditions

If the *Vertical Accuracy Code* IE is included and the *Horizontal Accuracy Code* IE is not included in the POSITION CALCULATION REQUEST message, the SAS shall reject the procedure.

If the *RRC State* included in the *UTDOA Group* IE is indicated as being *CELL_DCH* in the POSITION CALCULATION REQUEST message and [FDD - neither the *DCH Information* IE nor the *E-DPCH Information* IE][TDD – no *DCH Information* IE] is included, the SAS shall reject the procedure using the POSITION CALCULATION FAILURE message.

If the *GPS Measured Results* IE is included in the POSITION CALCULATION REQUEST message but the *Initial UE Position Estimate* IE is not, the SAS shall return the POSITION CALCULATION FAILURE message to the SRNC.

If the *GANSS Measured Results* IE is included in the POSITION CALCULATION REQUEST message but the *Initial UE Position Estimate* IE is not, the SAS shall return the POSITION CALCULATION FAILURE message to the SRNC.

If neither of the *GPS Measurement Results* IE, the *Cell-ID Measured Results Sets* IE ,the *OTDOA Measurement Group* IE nor the *GANSS Measured Results* IE is included in the POSITION CALCULATION REQUEST message, the SAS shall return the POSITION CALCULATION FAILURE message to the SRNC.

8.3 Information Exchange Initiation

8.3.1 General

This procedure is used by a RNC to request the initiation of an information exchange with a SAS.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.3.2 Successful Operation

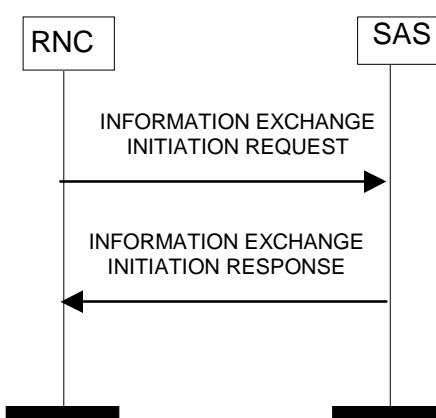

Figure 3: Information Exchange Initiation procedure, Successful Operation

The procedure is initiated with an INFORMATION EXCHANGE INITIATION REQUEST message sent from RNC to SAS.

If the *Information Type* IE is set to "Implicit", the SAS is responsible for selecting the type of assistance data.

Upon reception, the SAS shall provide the requested information according to the parameters given in the request. Unless specified below, the meaning of the parameters are given in other specifications.

If the *Information Exchange Object Type* IE is set to "Cell-ID Measured Results Sets" the SAS shall use the "Cell-ID Measured Results Info List" for obtaining an initial UE position estimate.

If the *GANSS-UTRAN Time Relationship Uncertainty* IE included in the INFORMATION EXCHANGE INITIATION REQUEST message does not contain the *GANSS ID* IE, the SAS shall assume that the *GANSS-UTRAN Time Relationship Uncertainty* IE is associated with "Galileo".

If the *Information Type* IE is set to "Explicit" and an *Explicit Information Item* IE is set to "GANSS Common Data", at least one of the GANSS Reference Time, GANSS Ionosphere Model, GANSS Reference Location, GANSS Additional Ionospheric Model, or GANSS Earth Orientation Parameters types shall be requested.

If the *Information Type* IE is set to "Explicit" and an *Explicit Information Item* IE is set to "GANSS Generic Data", at least one of the *GANSS Real Time Integrity*, *GANSS Data Bit Assistance*, *DGANSS Corrections*, *GANSS Almanac and Satellite Health*, *GANSS Reference Measurement Information*, *GANSS UTC Model*, *GANSS Time Model GNSS-GNSS*, *GANSS Navigation Model*, *GANSS Additional Navigation Models*, *GANSS Additional UTC Models*, *GANSS Auxiliary Information*, *DBDS Corrections*, or *BDS Ionospheric Grid ModelRequest* IEs shall be present in each *GANSS Generic Data Item* IE associated with a given GANSS.

- If the *GANSS Generic Data Item* IE does not contain the *GANSS ID* IE, the SAS shall assume that the corresponding GANSS is "Galileo".

Information Report Characteristics:

The *Information Report Characteristics* IE indicates how the reporting of the information shall be performed.

If the *Information Report Characteristics* IE is set to "On-Demand", the SAS shall report the requested information immediately.

If the *Information Report Characteristics* IE is set to "Periodic", the SAS shall report the requested information immediately and then shall periodically initiate the Information Reporting procedure for all the requested information, with the requested report frequency.

If the *Information Report Characteristics* IE is set to "On-Modification", the SAS shall report the requested information immediately if available. If the requested information is not available at the moment of receiving the INFORMATION EXCHANGE INITIATION REQUEST message, but expected to become available after some acquisition time, the SAS shall initiate the Information Reporting procedure when the requested information becomes available. The SAS shall then initiate the Information Reporting procedure in accordance to the following conditions:

- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Almanac and Satellite Health", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{oa} or WN_a parameter has occurred in almanac/health information for at least one visible satellite.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "UTC Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{ot} or WN_t parameter has occurred in the GPS UTC model.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Ionospheric Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the GPS ionospheric model.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Navigation Model", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the clock/ephemeris information for at least one visible satellite or in the list of visible satellites.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.

- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "DGPS Corrections", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the quality of the DGPS corrections information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Reference Time", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the time-of-week assistance information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Acquisition Assistance", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in acquisition assistance information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Real Time Integrity", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the real-time integrity status of at least one visible satellite.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE includes "Almanac and Satellite Health SIB", the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in almanac/health information for at least one visible satellite.
 - If the *Transmission TOW Indicator* IE is set to "requested", then the SAS shall include the *GPS Transmission TOW* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Almanac and Satellite Health* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the T_{oa} , IOD_a , or Week Number parameter has occurred in almanac/health information for at least one visible satellite.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS UTC Model* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{ot} or WN_t parameter has occurred in the GANSS UTC model.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Additional UTC Models* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{ot} , WN_{ot} , WN_t , or N^A parameter has occurred in the GANSS Additional UTC model.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Common Data" and includes the *GANSS Ionosphere Model* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the GANSS ionospheric model.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Common Data" and includes the *GANSS Additional Ionospheric Model* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the GANSS additional ionospheric model.
 - If the *Data ID* IE is set to value "11", then the SAS shall include the *GANSS Additional Ionospheric Model* IE for the area as defined in IS-QZSS [27]. If the *Data ID* IE is set to value "00", then the SAS shall include the *GANSS Additional Ionospheric Model* IE applicable worldwide as defined in IS-QZSS [27]. If the *Data ID* IE is set to value "01", then the SAS shall include the *GANSS Additional Ionospheric Model* IE for the area as defined in BDS-SIS-ICD-B1I-1.0 [33].

- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Common Data" and includes the *GANSS Earth Orientation Parameters* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the t_{EOP} parameter has occurred in the GANSS Earth Orientation Parameters.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Navigation Model* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the ephemeris information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Additional Navigation Models* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the ephemeris information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Time Model GNSS-GNSS* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the time information.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *DGANSS Corrections* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the quality of the DGANSS corrections information for at least one visible satellite or in the list of visible satellites.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *DBDS Corrections* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the quality of the DBDS corrections information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *BDS Ionospheric Grid Model Request* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the BDS ionospheric grid model.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Common Data" and includes the *GANSS Reference Time* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the time-of-week assistance information for at least one visible satellite or in the list of visible satellites.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Reference Measurement Information* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in acquisition assistance information for at least one visible satellite or in the list of visible satellites.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Real Time Integrity* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change has occurred in the real-time integrity status of at least one visible satellite.
 - If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Auxiliary Information* IE, the SAS shall initiate the Information Reporting procedure for this specific Explicit Information Type when a change in the *Signals Available* or *Channel Number* IEs has occurred in the GANSS Auxiliary Information.

- If the *GANSS Time Indicator* IE is set to "requested", then the SAS shall include the *GANSS Reference Time* IE in the INFORMATION REPORT message.
- If any of the above *Information Type* IEs becomes temporarily unavailable, the SAS shall initiate the Information Reporting procedure for this specific Information Item by indicating "Information Not Available" in the *Requested Data Value Information* IE. If the Information becomes available again, the SAS shall initiate the Information Reporting procedure for this specific Information.

If the *IMSI* IE, or *IMEI* IE is included in the INFORMATION EXCHANGE INITIATION REQUEST message, the SAS may save these IEs for use in location session correlation.

Response message:

If the SAS is able to determine the information requested by the RNC, it shall respond with the INFORMATION EXCHANGE INITIATION RESPONSE message. The message shall include the same Information Exchange ID that was included in the INFORMATION EXCHANGE INITIATION REQUEST message. When the *Report Characteristics* IE is set to "On Modification" or "Periodic", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the *Requested Data Value* IE if the data are available. When the *Report Characteristics* IE is set to "On Demand", the INFORMATION EXCHANGE INITIATION RESPONSE message shall contain the *Requested Data Value* IE.

When the response message includes data to be reported (see above), the SAS shall include at least one IE in the *Requested Data Value* IE.

If the *Requested Data Value* IE contains the *GANSS Common Assistance Data* IE, at least one of the *GANSS Reference Time*, *GANSS Ionospheric Model*, *GANSS Reference Location*, *GANSS Additional Ionospheric Model*, or *GANSS Earth Orientation Parameters* IEs shall be present.

- If the *GANSS Reference Time* IE does not contain the *GANSS Time ID* IE, the corresponding GANSS timing refers to the "Galileo" timing.

Any *GANSS Generic Assistance Data* IE associated with a given GANSS included in the *Requested Data Value* IE shall contain at least one of the *GANSS Real Time Integrity*, *GANSS Data Bit Assistance*, *DGANSS Corrections*, *GANSS Almanac and Satellite Health*, *GANSS Reference Measurement Information*, *GANSS UTC Model*, *GANSS Time Model*, *GANSS Navigation Model*, *GANSS Additional Time Models*, *GANSS Additional Navigation Models*, *GANSS Additional UTC Models*, *GANSS Auxiliary Information*, *DBDS Correction Information*, or *BDS Ionospheric Grid Model* IEs.

- If the *GANSS Generic Assistance Data* IE does not contain the *GANSS ID* IE, the corresponding GANSS is "Galileo".
- The *DGANSS Corrections* IE contains one or several *DGANSS Information* IE(s), each of them associated with a GANSS Signal. A *DGANSS Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].
- The *GANSS Real Time Integrity* IE contains one or several *Satellite Information* IEs, each of them associated with a satellite and a GANSS Signal. A *Satellite Information* IE for a particular GANSS that does not contain the *Bad GANSS Signal ID* IE is by default associated with all the signals of the corresponding satellite (see OS SIS ICD [22], IS-GPS-200 [23], IS-GPS-705 [24], IS-GPS-800 [25], DTFA01-96-C-00025 [26], IS-QZSS [27], [28], BDS-SIS-ICD-B1I-1.0 [33]).
- The *GANSS Reference Measurement Information* IE is associated with a GANSS Signal. A *GANSS Reference Measurement Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Time Model GNSS-GNSS* IE with exactly one bit set to value "1" in the *GNSS-GNSS Time ext* IE, the SAS shall include the *GANSS Time Model* IE in the *Requested Data Value* IE with the requested time information.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Time Model GNSS-GNSS* IE with more than one bit set to value "1" in the *GNSS-GNSS Time ext* IE, the SAS shall include the *GANSS Additional Time Models* IE in *Requested Data Value* IE with the requested time information for each GANSS.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "DGPS Corrections", the SAS shall include the *DGPS Corrections* IE in *Requested Data Value* IE with the *DGNSS Validity Period* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "DGANSS Corrections", the SAS shall include the *DGANSS Corrections* IE in *Requested Data Value* IE with the *DGNSS Validity Period* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "Acquisition Assistance", the SAS shall include the *GPS Acquisition Assistance* IE in *Requested Data Value* IE with the *Azimuth and Elevation* and *Azimuth and Elevation LSB* IEs included, if available, and with the *Confidence* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "Almanac and Satellite Health", the SAS shall include the *GPS Almanac and Satellite Health* IE in *Requested Data Value* IE with the *Complete Almanac Provided* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "Reference Time", the SAS shall include the *GPS Reference Time* IE in *Requested Data Value* IE with the *GPS Week Cycle Number* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Almanac and Satellite Health", the SAS shall include the *GANSS Almanac and Satellite Health* IE in *Requested Data Value* IE with the *Complete Almanac Provided* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Reference Measurement Information", the SAS shall include the *GANSS Reference Measurement Information* IE in *Requested Data Value* IE with the *Azimuth and Elevation* and *Azimuth and Elevation LSB* IEs included, if available, and with the *Confidence* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Reference Time", the SAS shall include the *GANSS Reference Time* IE in *Requested Data Value* IE with the *GANSS Day Cycle Number* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Time Model GNSS-GNSS", the SAS shall include the *GANSS Time Model* IE in *Requested Data Value* IE with the *Delta_T* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "DBDS Corrections", the SAS shall include the *DBDS Correction Information* IE in *Requested Data Value* IE with the *DBDS information* IE included, if available.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "BDS Ionospheric Grid Model Request", the SAS shall include the *BDS Ionospheric Grid Model* IE in *Requested Data Value* IE, if available.

8.3.3 Unsuccessful Operation

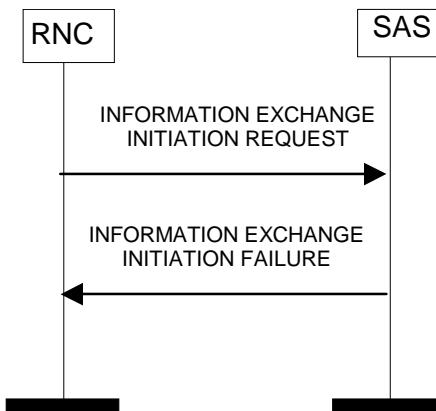

Figure 4: Information Exchange Initiation procedure, Unsuccessful Operation

If the requested Information Type received in the *Information Type* IE indicates a type of information that SAS cannot provide, the SAS shall regard the Information Exchange Initiation procedure as failed.

If the requested information provision cannot be carried out, the SAS shall send the INFORMATION EXCHANGE INITIATION FAILURE message. The message shall include the same Information Exchange ID that was used in the INFORMATION EXCHANGE INITIATION REQUEST message and the *Cause* IE set to an appropriate value.

Typical cause values are as follows:

- Information temporarily not available;
- Information Provision not supported for the object;
- Processing Overload;
- Hardware Failure;
- O&M Intervention.

8.3.4 Abnormal Conditions

If the *Information Exchange Object Type* IE is set to "Reference Position" and the *Information Type* IE set to "Explicit" and the *Explicit Information Item* IE is set to "Reference Location" or "GANSS Reference Location" the SAS shall reject the Information Exchange Initiation procedure and shall send the INFORMATION EXCHANGE INITIATION FAILURE message.

The allowed combinations of the Information Type and Information Report Characteristics are shown in the table below marked with "X". For not allowed combinations, the SAS shall reject the Information Exchange Initiation procedure using the INFORMATION EXCHANGE INITIATION FAILURE message.

Table 3a: Allowed Information Type and Information Report Characteristics combinations

Type	Information Report Characteristics Type		
	On Demand	Periodic	On Modification
Almanac and Satellite Health	X	X	X
UTC Model	X	X	X
Ionospheric Model	X	X	X
Navigation Model	X	X	X
DGPS Corrections	X	X	X
Reference Time	X	X	X
Acquisition Assistance	X	X	X
Real Time Integrity	X	X	X
Almanac and Satellite Health SIB	X	X	X
Reference Location	X		
GANSS Reference Time	X	X	X
GANSS Ionosphere Model	X	X	X
GANSS Reference Location	X		
GANSS Additional Ionospheric Model	X	X	X
GANSS Earth Orientation Parameters	X	X	X
GANSS Real Time Integrity	X	X	X
GANSS Data Bit Assistance	X	X	
DGANSS Corrections	X	X	X
GANSS Almanac and Satellite Health	X	X	X
GANSS Reference Measurement Information	X	X	X

8.4 Information Reporting

8.4.1 General

This procedure is used by a SAS to report the result of information requested by a RNC using the Information Exchange Initiation.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.4.2 Successful Operation

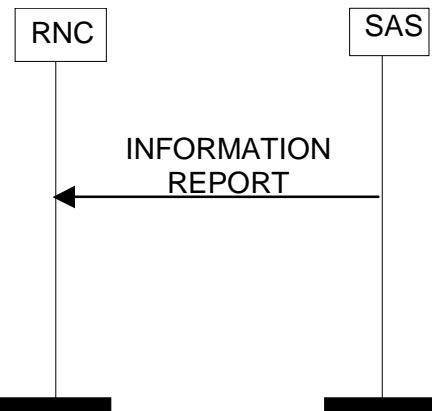

Figure 5: Information Reporting procedure, Successful Operation

If the requested information reporting criteria are met, the SAS shall initiate an Information Reporting procedure. Unless specified below, the meaning of the parameters are given in other specifications.

The *Information Exchange ID* IE shall be set to the Information Exchange ID provided by the RNC when initiating the information exchange with the Information Exchange Initiation procedure.

The *Requested Data Value* IE shall include at least one IE containing the data to be reported.

If the *Requested Data Value* IE contains the *GANSS Common Assistance Data* IE, at least one of the *GANSS Reference Time*, *GANSS Ionospheric Model*, *GANSS Reference Location*, *GANSS Additional Ionospheric Model*, or *GANSS Earth Orientation Parameters* IEs shall be present.

Any *GANSS Generic Assistance Data* IE associated with a given GANSS included in the *Requested Data Value* IE shall contain at least one of the *GANSS Real Time Integrity*, *GANSS Data Bit Assistance*, *DGANSS Corrections*, *GANSS Almanac and Satellite Health*, *GANSS Reference Measurement Information*, *GANSS UTC Model*, *GANSS Time Model*, *GANSS Navigation Model*, *GANSS Additional Time Models*, *GANSS Additional Navigation Models*, *GANSS Additional UTC Models*, *GANSS Auxiliary Information*, *DBDS Corrections*, or *BDS Ionospheric Grid Model* IEs.

- If the *GANSS Generic Assistance Data* IE does not contain the *GANSS ID* IE, the corresponding GANSS is "Galileo".
- The *DGANSS Corrections* IE contains one or several *DGANSS Information* IE(s), each of them associated with a GANSS Signal. A *DGANSS Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].
- The *GANSS Real Time Integrity* IE contains one or several *Satellite Information* IEs, each of them associated with a satellite and a GANSS Signal. A *Satellite Information* IE for a particular GANSS that does not contain the *Bad GANSS Signal ID* IE is by default associated with all the signals of the corresponding satellite (see OS SIS ICD [22], IS-GPS-200 [23], IS-GPS-705 [24], IS-GPS-800 [25], DTFA01-96-C-00025 [26], IS-QZSS [27], [28], BDS-SIS-ICD-B1I-1.0 [33]).
- The *GANSS Reference Measurement Information* IE is associated with a GANSS Signal. A *GANSS Reference Measurement Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Time Model GNSS-GNSS* IE with exactly one bit set to value "1" in the *GNSS-GNSS Time ext* IE, the SAS shall include the *GANSS Time Model* IE in the *Requested Data Value* IE with the requested time information.

If the *Information Type* IE is set to "Explicit" and the *Explicit Information Item* IE is set to "GANSS Generic Data" and includes the *GANSS Time Model GNSS-GNSS* IE with more than one bit set to value "1" in the *GNSS-GNSS Time ext* IE, the SAS shall include the *GANSS Additional Time Models* IE in *Requested Data Value* IE with the requested time information for each GANSS.

8.4.3 Abnormal Conditions

8.5 Information Exchange Termination

8.5.1 General

This procedure is used by a RNC to terminate the information exchange requested using the Information Exchange Initiation.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.5.2 Successful Operation

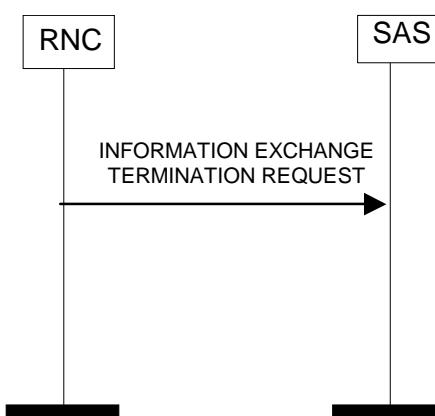

Figure 6: Information Exchange Termination procedure, Successful Operation

This procedure is initiated with an INFORMATION EXCHANGE TERMINATION REQUEST message.

Upon reception, the SAS shall terminate the information exchange corresponding to the Information Exchange ID.

8.5.3 Abnormal Conditions

8.6 Information Exchange Failure

8.6.1 General

This procedure is used by a SAS to notify a RNC that the information exchange it previously requested using the Information Exchange Initiation can no longer be reported.

This procedure uses the signalling bearer connection for the Information Exchange Context.

8.6.2 Successful Operation

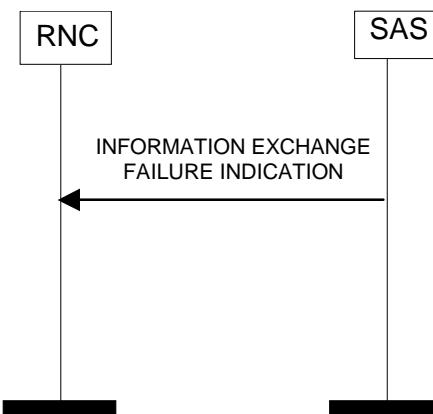

Figure 7: Information Exchange Failure procedure, Successful Operation

This procedure is initiated with a INFORMATION EXCHANGE FAILURE INDICATION message, sent from the SAS to the RNC, to inform the RNC that information previously requested by the Information Exchange Initiation procedure can no longer be reported. The message shall include the same Information Exchange ID that was used in the INFORMATION EXCHANGE INITIATION REQUEST message and the *Cause* IE set to an appropriate value.

Typical cause values are as follows:

- Information temporarily not available.

8.7 Error Indication

8.7.1 General

The Error Indication procedure is used by a node to report detected errors in one incoming message, provided they cannot be reported by an appropriate failure message.

8.7.2 Successful Operation

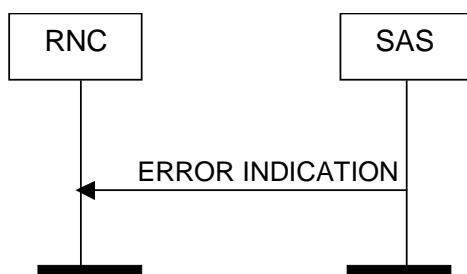

Figure 8: Error Indication procedure, SAS Originated, Successful Operation

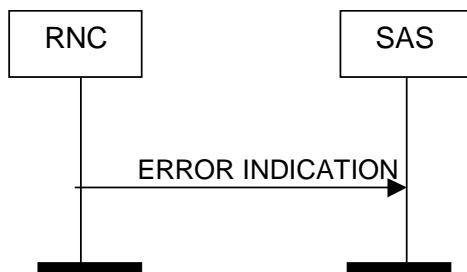

Figure 9: Error Indication procedure, RNC Originated, Successful Operation

When the conditions defined in clause 10 are fulfilled, the Error Indication procedure is initiated by an ERROR INDICATION message sent from the receiving node. This message shall use the same mode of the signalling bearer and the same signalling bearer connection (if connection oriented) as the message that triggers the procedure.

The ERROR INDICATION message shall include either the *Cause* IE, or the *Criticality Diagnostics* IE, or both the *Cause* IE and the *Criticality Diagnostics* IE.

Typical cause values are as follows:

- Transfer Syntax Error;
- Abstract Syntax Error (Reject);
- Abstract Syntax Error (Ignore and Notify);
- Message not Compatible with Receiver State;
- Unspecified.

8.7.3 Abnormal Conditions

8.8 Position Initiation

8.8.1 General

This procedure is used by an SRNC to request from an SAS the position (non-periodic or periodic) of a UE using the SAS centric mode of operation.

The connection-oriented service of the signalling bearer shall be established in conjunction with this procedure.

8.8.2 Successful Operation

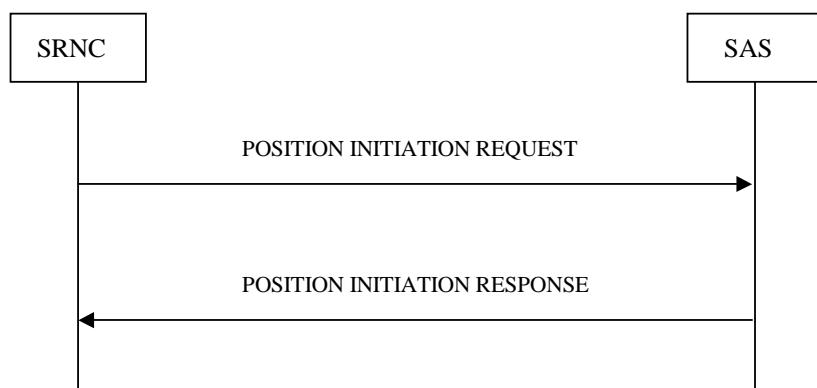

Figure 9a: Position Initiation procedure, Successful Operation

This procedure is initiated with a POSITION INITIATION REQUEST message sent from the SRNC to the SAS and ends with a POSITION INITIATION RESPONSE message from the SAS to the SRNC.

The POSITION INITIATION REQUEST message may contain one or several *Network Assisted GANSS Support* IE(s), each of them indicating the UE position capability with regard to GANSS.

- If a *Network Assisted GANSS Support* IE does not contain the *GANSS ID* IE, the SAS shall assume that the corresponding GANSS is "Galileo".

- If a *Network Assisted GANSS Support IE* corresponding to a particular GANSS does not contain the *GANSS Signal ID IE* and the *GANSS Signal IDs IE*, the SAS shall assume that the corresponding GANSS Signal is the default signal defined in TS 25.331 [4].

If the *IMSI IE*, or *IMEI IE* is included in the in POSITION INITIATION REQUEST message, the SAS may save these IEs for use in location session correlation.

Response Message:

If the POSITION INITIATION REQUEST message contains a request for direct reporting, and following completion of one or more positioning attempts, possibly using multiple positioning methods, the SAS shall pass the UE position to the SRNC in a POSITION INITIATION RESPONSE message.

If the POSITION INITIATION REQUEST message contains a request for periodic reporting, the SAS shall pass the final UE position to the SRNC in a POSITION INITIATION RESPONSE message.

Whenever one of the geographic area shapes *Ellipsoid point with uncertainty Ellipse IE*, *Ellipsoid point with altitude and uncertainty Ellipsoid IE* or *Ellipsoid Arc IE* is reported, the *Confidence IE* shall indicate the probability that the UE is located within the uncertainty region of the shape. The value of the *Confidence IE* shall be in the interval of "1" to "100".

If at least the *Horizontal Accuracy Code IE* was included in the POSITION INITIATION REQUEST message and the calculated position estimate fulfils the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy fulfilled" shall be included in the POSITION INITIATION RESPONSE message. If the calculated position estimate does not fulfil the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy not fulfilled" shall be included in the POSITION INITIATION RESPONSE message.

8.8.3 Unsuccessful Operation

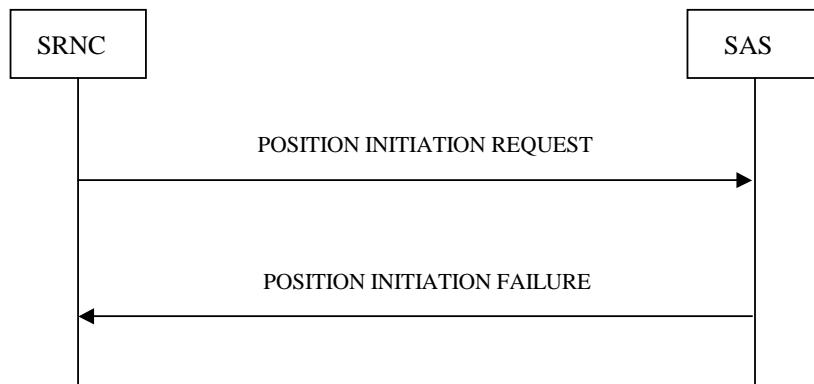

Figure 9b: Position Initiation procedure, Unsuccessful Operation

When the SAS is unable to accept a POSITION INITIATION REQUEST message or the SAS cannot provide a position estimate in case of direct reporting, the POSITION INITIATION FAILURE message shall be sent to the SRNC.

Typical cause values are:

- Processing Overload;
- Hardware Failure;
- O&M Intervention;
- Information temporarily not available.

8.8.4 Abnormal Conditions

If the *Vertical Accuracy Code* IE is included and the *Horizontal Accuracy Code* IE is not included in the POSITION INITIATION REQUEST message, the SAS shall reject the procedure.

8.9 Position Activation

8.9.1 General

The purpose of the Position Activation procedure is to enable the SAS to initiate a particular positioning method used for an individual positioning event. This procedure uses connection-oriented signalling.

8.9.2 Successful Operation

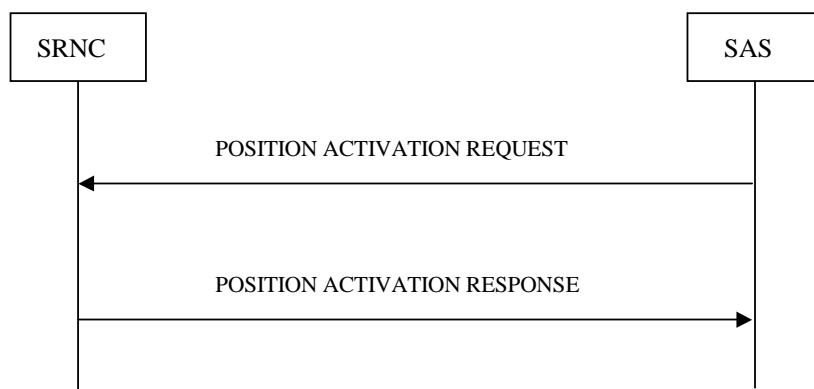

Figure 9c: Position Activation procedure, Successful Operation

The SAS initiates this procedure by sending a POSITION ACTIVATION REQUEST message to the SRNC containing the required positioning method and any assistance data and instructions associated with that positioning method. The SRNC then sends a POSITION ACTIVATION RESPONSE message to the SAS confirming the requested action and providing any information required by the requested positioning method; e.g. UE channel information for the U-TDOA positioning method or A-GPS measurements for UE assisted A-GPS. In the POSITION ACTIVATION RESPONSE message, the SRNC should include either the *UE Position Estimate Info* IE, *GPS Measurement Results* IE, *Cell-ID Measured Results Sets* IE, *OTDOA Measured Results Sets* IE, *UTDOA Group* IE, *GANSS Measurement Results* IE, *Required GPS Assistance Data* IE or *Required GANSS Assistance Data* IE.

If the *Positioning Method* IE in a POSITION ACTIVATION REQUEST message includes the *GNSS Positioning Method* IE indicating allowance of "GPS" and any other GNSS ("Galileo", "SBAS", "Modernized GPS", "QZSS", "GLONASS", "BDS"), the SRNC may include both, the *GPS Measurement Results* IE and the *GANSS Measurement Results* IE, or both, the *Required GPS Assistance Data* IE or *Required GANSS Assistance Data* IE in the POSITION ACTIVATION RESPONSE message.

If the POSITION ACTIVATION REQUEST message contains periodic reporting information to start a periodic RNC positioning procedure (i.e., *Amount of Reporting* IE is included), the POSITION ACTIVATION RESPONSE message may be returned confirming the requested action and not including any measurements. In that case, all periodic measurement reports are conveyed using POSITION PERIODIC REPORT messages.

If the *GPS Positioning Instructions* IE or the *GANSS Positioning Instructions* IE is included in a POSITION ACTIVATION REQUEST message containing the *Measurement Validity* IE, the SRNC should include the *Measurement Instructions Used* IE in a POSITION ACTIVATION RESPONSE message if the Measurement Validity used by the SRNC is different from the Measurement Validity requested by the SAS.

If the *GERAN* IE is included in the *Requested Cell-ID Measurements* IE in the *Cell-ID Positioning* IE, the SRNC shall use it to determine the requested inter-RAT measurements.

If the POSITION ACTIVATION REQUEST message contains the *Position Method* IE with value "Cell ID", the *Amount of Reporting* IE shall not be included. If the POSITION ACTIVATION REQUEST message contains the *Position Method* IE with value 'Cell ID' the *Amount of Reporting* IE shall not be included.

If the POSITION ACTIVATION REQUEST message contains the *Position Method* IE with value "Cell ID", the RNC may include the measurements requested in the *Requested Cell-ID Measurements* IE in the POSITION ACTIVATION RESPONSE message. If the RNC includes the measurements in the *Requested Cell-ID Measurements* IE it shall, if supported, do so for all cells (i.e. those in the active, monitored and detected sets) for which measurements are available from the UE. If both of the *Round Trip Time Info* IE and the *Round Trip Time Info With Type 1* IE are included in the POSITION ACTIVATION RESPONSE message, the SAS shall use the *Round Trip Time Info* IE.

If the SRNC receives a new POSITION ACTIVATION REQUEST message before it has responded to a previous non-periodic request, the SRNC should terminate all activity for the previous request, without sending any response to the initial request, and process the new request.

If the SRNC receives a new POSITION ACTIVATION REQUEST message for UE position measurement reporting using A-GPS or A-GANSS or OTDOA (periodic or non-periodic) while it is still performing activity for a previous A-GPS or A-GANSS or OTDOA periodic request, the SRNC should terminate all activity for the previous request, including terminating the periodic measurement reporting in the UE, and should process the new request.

If the SRNC receives a new POSITION ACTIVATION REQUEST message for Cell-ID or U-TDOA positioning while it is still performing activity for a previous A-GPS or A-GANSS or OTDOA periodic request (but after returning any POSITION ACTIVATION RESPONSE for this request), the SRNC may both continue with the previous request and process the new request.

If the *GANSS Positioning* IE is included in the POSITION ACTIVATION REQUEST message and contains the *Requested Data Value* IE:

- If the *GANSS Generic Assistance Data* IE, associated with a given GANSS, is included in the *Requested Data Value* IE, it shall contain a *GANSS Real Time Integrity*, *GANSS Data Bit Assistance*, *DGANSS Corrections*, *GANSS Almanac and Satellite Health*, *GANSS Reference Measurement Information*, *GANSS UTC Model*, *GANSS Time Model*, *GANSS Navigation Model*, *GANSS Additional Time Models*, *GANSS Additional Navigation Models*, *GANSS Additional UTC Models*, *GANSS Auxiliary Information*, *DBDS Corrections*, or *BDS Ionospheric Grid Model* IE.
- If the *GANSS Generic Assistance Data* IE does not contain the *GANSS ID* IE, the corresponding GANSS is "Galileo".
- The *DGANSS Corrections* IE contains one or several *DGANSS Information* IE(s), each of them associated with a GANSS Signal. A *DGANSS Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].
- The *GANSS Real Time Integrity* IE contains one or several *Satellite Information* IE(s), each of them associated with a satellite and a GANSS Signal. A *Satellite Information* IE for a particular GANSS that does not contain the *Bad GANSS Signal ID* IE is by default associated with all the signals of the corresponding satellite (see OS SIS ICD [22], IS-GPS-200 [23], IS-GPS-705 [24], IS-GPS-800 [25], DTFA01-96-C-00025 [26], IS-QZSS [27], [28], BDS-SIS-ICD-B1I-1.0 [33]).
- The *GANSS Reference Measurement Information* IE is associated with a GANSS Signal. A *GANSS Reference Measurement Information* IE for a particular GANSS that does not contain the *GANSS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].
- The *DBDS Corrections* IE contains one or several *DBDS Information* IE(s), each of them associated with a BDS Signal. A *DBDS Information* IE that does not contain the *BDS Signal ID* IE is by default associated with the default signal defined in TS 25.331 [4].

If the RRC State included in the *UTDOA Group* IE is indicated as being *CELL_DCH* in the POSITION ACTIVATION RESPONSE message, [FDD - either the *DCH Information* IE or the *E-DPCH Information* IE][TDD - the *DCH Information* IE] should be included.

If the *GANSS Measured Results* IE is included in the POSITION ACTIVATION RESPONSE message and does not contain the *GANSS Time ID* IE, the SAS shall assume that the corresponding GANSS timing refers to the "Galileo" timing.

The *GANSS Measured Results* IE contains one or several *GANSS Generic Measurement Information* IEs, each of them associated with a given GANSS:

- If a *GANSS Generic Measurement Information* IE does not contain the *GANSS ID* IE, the SAS shall assume that the associated GANSS is "Galileo".
- If a *GANSS Generic Measurement Information* IE associated with a particular GANSS does not contain the *GANSS Signal ID* IE, the SAS shall assume the default value as defined in TS 25.331 [4].
- If a *GANSS Generic Measurement Information* IE does not contain the *GANSS Code Phase Ambiguity* IE and the *GANSS Code Phase Ambiguity Extension* IE, the SAS shall assume the value "1" (ms).
- If the *GANSS Integer Code Phase* IE and the *GANSS Integer Code Phase Extension* IE associated to a given satellite (identified by the *Sat ID* IE value) is not present within the *GANSS Measurement Parameters* IE, the SAS shall use the default "1" (ms) for the GANSS Code Phase Ambiguity value in order to compute the value of the Total Code Phase (as defined in TS 25.331 [4]) for the related satellite, whatever the value of the *GANSS Code Phase Ambiguity* IE.

If the *OTDOA Measured Results Sets* IE is included in the POSITION ACTIVATION RESPONSE message the SRNC should also include the *OTDOA Reference Cell Info*. The SAS shall use the cell identified in the *OTDOA Reference Cell Info* IE as reference cell for the measurements provided in the *OTDOA Measured Results Info List* IE.

If an optional *Cell-ID IRAT Measured Results Sets* IE is included in the POSITION ACTIVATION RESPONSE message, the SAS shall, if supported, use this value for the calculation of the UE Position Estimate in case of RFPM positioning method is used. The SAS may use this value for the calculation of the UE Position when any other methods are used.

8.9.3 Unsuccessful Operation

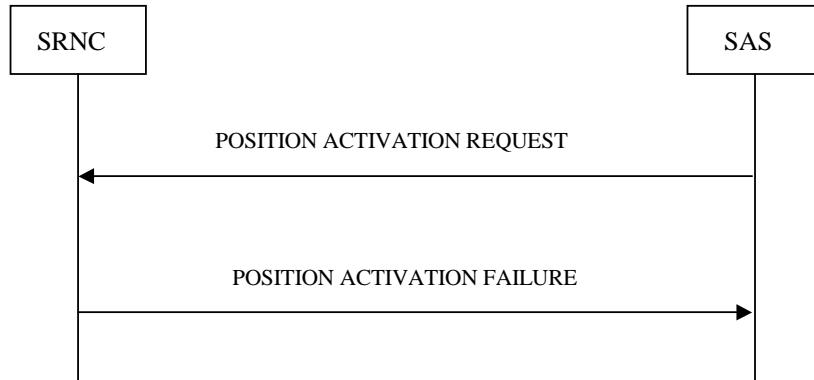

Figure 9d: Position Activation procedure, Unsuccessful Operation

When the SRNC is unable to accept a POSITION ACTIVATION REQUEST message, the POSITION ACTIVATION FAILURE message should be sent to the SAS.

Typical cause values are:

- Processing Overload;
- Hardware Failure;
- O&M Intervention;
- Positioning Method Not Supported;
- Location Measurement Failure.

8.9.4 Abnormal Conditions

8.10 Position Parameter Modification

8.10.1 General

The purpose of the Position Parameter Modification procedure is to inform the SAS of any relevant changes to the RF connection or other changes during a positioning event. This procedure uses connectionless signalling when invoked in RNC centric mode and connection-oriented signalling when invoked in SAS centric mode.

8.10.2 Successful Operation

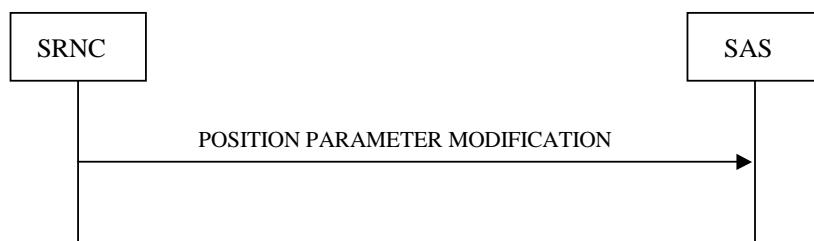

Figure 9e: Position Parameter Modification procedure, Successful Operation

If the SAS receives a POSITION PARAMETER MODIFICATION message, the SAS shall apply the information to the ongoing position estimate (e.g. reconfigure LMUs for U-TDOA) or to a new positioning attempt (e.g. use new serving cell to provide A-GPS assistance data). If there is more than one signalling connection for a UE, the SRNC should send the POSITION PARAMETER MODIFICATION message on each connection. When operating in the RNC centric mode the *Transaction ID* IE should be used to associate the POSITION PARAMETER MODIFICATION message to the correct positioning event.

In the POSITION PARAMETER MODIFICATION message, only one of the *UTRAN Cell Identifier* IE or the *UTDOA GROUP* IE should be included.

The SRNC should send a POSITION PARAMETER MODIFICATION message if an RRC measurement procedure for periodic UE positioning measurement reporting in the UE has been activated by the SRNC upon reception of a POSITION ACTIVATION REQUEST message, and if there is a RRC state transition during the RRC measurement procedure, which does not result in a termination of the UE measurement reporting. The SRNC should continue to notify the SAS of such RRC state changes until the periodic position measurement reporting has been completed or terminated.

8.10.3 Abnormal Conditions

8.11 Abort

8.11.1 General

The purpose of the Abort procedure is to inform the SAS that the RNC is unable to continue the current positioning activity for a particular UE. This procedure uses connectionless signalling when invoked in RNC centric mode and connection-oriented signalling when invoked in SAS centric mode.

8.11.2 Successful Operation

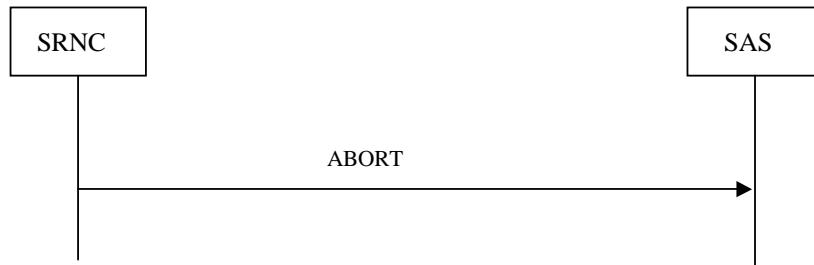

Figure 9f: Abort procedure, Successful Operation

The SRNC should send an ABORT message when the SRNC is unable to continue positioning activity due to cell reselection that results in a different SRNC, loss of contact with the UE or any other reason. When operating in the RNC centric mode the *Transaction ID* IE should be used to associate the ABORT message to the correct positioning event.

If the SAS receives an ABORT message while in the SAS centric mode it should immediately cease positioning attempts and return a POSITION INITIATION RESPONSE message to the SRNC carrying any location estimate already obtained or a POSITION INITIATION FAILURE message if no location estimate was obtained.

If the SAS receives an ABORT message while in the RNC centric mode it should immediately cease positioning attempts and return a POSITION CALCULATION RESPONSE message to the SRNC carrying any location estimate already obtained or a POSITION CALCULATION FAILURE message if no location estimate was obtained. After sending an ABORT message the SRNC should cease positioning activity, if any.

Typical cause values are:

- Processing Overload;
- Hardware Failure;
- O&M Intervention;
- Loss of contact with the UE.

8.11.3 Abnormal Conditions

8.12 Position Periodic Report

8.12.1 General

The purpose of the Position Periodic Report procedure is to send measurement information or UE position estimate from the SRNC to the SAS for periodic location in SAS-centric mode. This procedure uses connection-oriented signalling.

8.12.2 Successful Operation

Figure 9g: Position Periodic Report procedure, Successful Operation

This procedure is initiated with a POSITION PERIODIC REPORT message sent from the SRNC to the SAS. The POSITION PERIODIC REPORT message provides the SAS measurement information such as GPS or OTDOA measurements, or an indication of measurement failure.

The SRNC should send the first POSITION PERIODIC REPORT message one reporting interval after the POSITION ACTIVATION RESPONSE message, and should continue to send further POSITION PERIODIC REPORT messages one reporting interval after the previous POSITION PERIODIC REPORT message based on the available measurements. If the RNC can not deliver measurement information when a POSITION PERIODIC REPORT is triggered, the *Cause IE* should be included in the POSITION PERIODIC REPORT message, indicating the reason for measurement failure, e.g. "UE Positioning Error: Not enough OTDOA cells", "UE Positioning Error: Not enough GPS Satellites", "UE Positioning Error: Not Accomplished GPS Timing of Cell Frames" or "UE Positioning Error: Undefined Error". If the *Cause IE* is included in a POSITION PERIODIC REPORT message, the *UE Position Estimate Info IE*, *Velocity Estimate IE*, *GPS Measurement Results IE*, *GANSS Measurement Results IE*, *Cell-ID Measured Results Sets IE*, and *OTDOA Measured Results Sets IE* should not be included. If and only if the *Cause IE* indicates the error reason "UE Positioning Error: Assistance Data Missing" the SRNC may include the *Required GPS Assistance Data IE* and/or the *Required GANSS Assistance Data IE* in the POSITION PERIODIC REPORT message.

If the *Cell-ID Measured Results Sets IE* is included in the POSITION PERIODIC REPORT message and both of the *Round Trip Time Info IE* and the *Round Trip Time Info With Type 1 IE* are included in the *Cell-ID Measured Results Info List IE*, the SAS shall use the *Round Trip Time Info IE*.

If the *GANSS Measured Results IE* is included in the POSITION PERIODIC REPORT message and does not contain the *GANSS Time ID IE*, the SAS shall assume that the corresponding GANSS timing refers to the "Galileo" timing.

The *GANSS Measured Results IE* contains one or several *GANSS Generic Measurement Information IE*s, each of them associated with a given GANSS:

- If a *GANSS Generic Measurement Information IE* does not contain the *GANSS ID IE*, the SAS shall assume that the associated GANSS is "Galileo".
- If a *GANSS Generic Measurement Information IE* associated with a particular GANSS does not contain the *GANSS Signal ID IE*, the SAS shall assume the default value as defined in TS 25.331 [4].
- If a *GANSS Generic Measurement Information IE* does not contain the *GANSS Code Phase Ambiguity IE* and the *GANSS Code Phase Ambiguity Extension IE*, the SAS shall assume the value "1" (ms).
- If the *GANSS Integer Code Phase IE* and the *GANSS Integer Code Phase Extension IE* associated to a given satellite (identified by the *Sat ID IE* value) is not present within the *GANSS Measurement Parameters IE*, the SAS shall use the default "1" (ms) for the GANSS Code Phase Ambiguity value in order to compute the value of the Total Code Phase (as defined in TS 25.331 [4]) for the related satellite, whatever the value of the *GANSS Code Phase Ambiguity IE*.

If the *OTDOA Measured Results Sets IE* is included in the POSITION PERIODIC REPORT message the SRNC should also include the *OTDOA Reference Cell Info*. The SAS shall use the cell identified in the *OTDOA Reference Cell Info IE* as reference cell for the measurements provided in the *OTDOA Measured Results Info List IE*.

If an optional *Cell-ID IRAT Measured Results Sets IE* is included in the POSITION PERIODIC REPORT message, the SAS shall, if supported, use this value for the calculation of the UE Position Estimate in case of RFPM positioning method is used. The SAS may use this value for the calculation of the UE Position when any other methods are used.

8.12.3 Abnormal Conditions

8.13 Position Periodic Result

8.13.1 General

The purpose of the Position Periodic Result procedure is to provide UE position estimates from the SAS to the SRNC for periodic location in SAS-centric mode. This procedure uses connection-oriented signalling.

8.13.2 Successful Operation

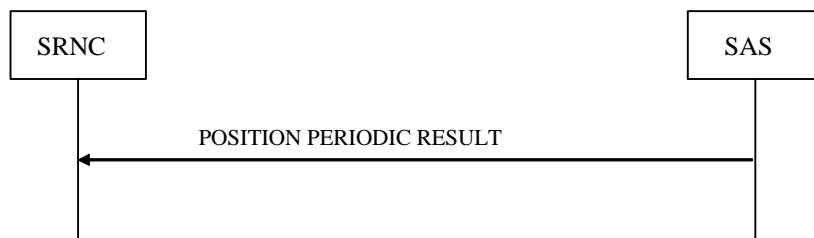

Figure 9h: Position Periodic Result procedure, Successful Operation

This procedure is initiated with a POSITION PERIODIC RESULT message sent from the SAS to the SRNC. The POSITION PERIODIC RESULT message conveys the UE position estimate (or an indication of positioning failure) from the SAS to the SRNC.

The SAS shall send a POSITION PERIODIC RESULT message one reporting interval after the previous POSITION PERIODIC RESULT message. If the SAS can not deliver measurement information when a POSITION PERIODIC RESULT is triggered, the *Cause IE* shall be included in the POSITION PERIODIC RESULT message, indicating the reason for measurement failure, e.g. 'Position Calculation error: invalid GPS measured results', 'Position Calculation error: invalid Cell-ID measured results', 'Position Calculation error: invalid OTDOA measured results' or 'Position Calculation error: invalid U-TDOA measured results'. If the *Cause IE* is included in a POSITION PERIODIC RESULT message, the *UE Position Estimate IE*, *Velocity Estimate IE*, *Position Data IE*, and *Accuracy Fulfilment Indicator IE* shall not be included.

If the *UE Position Estimate IE* is included in a POSITION PERIODIC RESULT message, the *Position Data IE* shall also be included.

Whenever one of the geographic area shapes *Ellipsoid point with uncertainty Ellipse IE*, *Ellipsoid point with altitude and uncertainty Ellipsoid IE* or *Ellipsoid Arc IE* is reported, the *Confidence IE* shall indicate the probability that the UE is located within the uncertainty region of the shape. The value of the *Confidence IE* shall be in the interval of "1" to "100".

If at least the *Horizontal Accuracy Code IE* was included in a POSITION INITIATION REQUEST message which initiates periodic position reporting, and the periodic position estimate included in a POSITION PERIODIC RESULT messages fulfils the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy fulfilled" shall be included. If the calculated position estimate does not fulfil the requested accuracy, the *Accuracy Fulfilment Indicator IE* with the value "requested accuracy not fulfilled" shall be included in the POSITION PERIODIC RESULT message.

8.13.3 Abnormal Conditions

8.14 Position Periodic Termination

8.14.1 General

The Position Periodic Termination procedure is used by a node to request termination of an ongoing periodic location, or to inform a node about termination of periodic location in SAS-centric mode. This procedure uses connection-oriented signalling.

8.14.2 Successful Operation

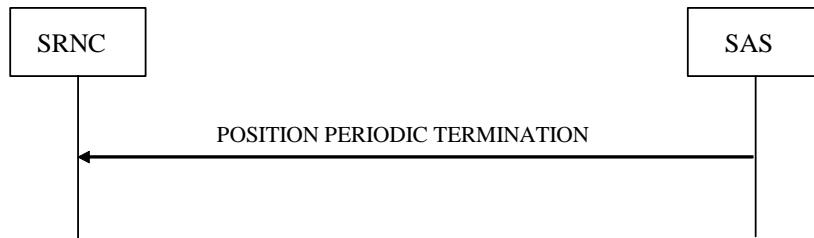

Figure 9i: Position Periodic Termination procedure, SAS Originated, Successful Operation

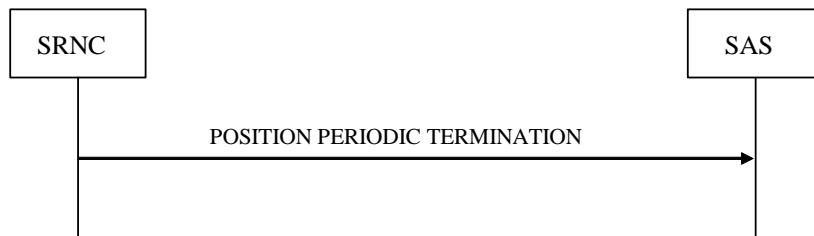

Figure 9k: Position Periodic Termination procedure, RNC Originated, Successful Operation

When the SAS or SRNC needs to terminate ongoing periodic location, a POSITION PERIODIC TERMINATION message is sent to the receiving node.

If an RRC measurement procedure for periodic UE positioning measurement reporting in the UE has been activated by the SRNC upon reception of a POSITION ACTIVATION REQUEST message, and if the SRNC receives a POSITION PERIODIC TERMINATION message, the SRNC should terminate the periodic UE positioning measurement reporting in the UE.

The SRNC should send a POSITION PERIODIC TERMINATION message if an RRC measurement procedure for periodic UE positioning measurement reporting in the UE has been activated by the SRNC upon reception of a POSITION ACTIVATION REQUEST message, and if the SRNC or UE terminates the measurement reporting (e.g., after RRC state transition).

8.14.3 Abnormal Conditions

9 Elements for PCAP Communication

9.1 Message Functional Definition and Content

9.1.1 General

Clause 9.1 presents the contents of PCAP messages in tabular format. The corresponding ASN.1 definitions are presented in clause 9.3. In case there is contradiction between the tabular format in clause 9.1 and the ASN.1 definition, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional IEs, where the tabular format shall take precedence.

NOTE: The messages have been defined in accordance to the guidelines specified in TS 25.921 [12].

9.1.2 Message Contents

9.1.2.1 Presence

All information elements in the message descriptions below are marked mandatory, optional or conditional according to table 4.

Table 4: Meaning of abbreviations used in PCAP messages

Abbreviation	Meaning
M	IEs marked as Mandatory (M) shall always be included in the message.
O	IEs marked as Optional (O) may or may not be included in the message.
C	IEs marked as Conditional (C) shall be included in a message only if the condition is satisfied. Otherwise the IE shall not be included.

9.1.2.2 Criticality

Each Information Element or Group of Information Elements may have a criticality information applied to it. Following cases are possible.

Table 5: Meaning of content within "Criticality" column

Abbreviation	Meaning
-	No criticality information is applied explicitly.
YES	Criticality information is applied. This is usable only for non-repeatable IEs
GLOBAL	The IE and all its repetitions together have one common criticality information. This is usable only for repeatable IEs.
EACH	Each repetition of the IE has its own criticality information. It is not allowed to assign different criticality values to the repetitions. This is usable only for repeatable IEs.

9.1.2.3 Range

The Range column indicates the allowed number of copies of repetitive IEs/IE groups.

9.1.2.4 Assigned Criticality

This column provides the actual criticality information as defined in clause 10.3.2, if applicable.

9.1.3 Position Calculation Request

9.2 Information Element Functional Definitions and Contents

9.2.1 General

Clause 9.2 presents the PCAP IE definitions in tabular format. The corresponding ASN.1 definitions are presented in clause 9.3. In case there is contradiction between the tabular format in clause 9.2 and the ASN.1 definition, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional elements, where the tabular format shall take precedence.

When specifying information elements which are to be represented by bitstrings, if not otherwise specifically stated in the semantics description of the concerned IE or elsewhere, the following principle applies with regards to the ordering of bits:

- The first bit (leftmost bit) contains the most significant bit (MSB);
- The last bit (rightmost bit) contains the least significant bit (LSB);

- When importing bitstrings from other specifications, the first bit of the bitstring contains the first bit of the concerned information;

9.2.2 Radio Network Layer Related IEs

9.2.2.1 Almanac and Satellite Health SIB

Table 18

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GPS Almanac and Satellite Health	M		9.2.2.9	
SatMask	M		BIT STRING(1..32)	indicates the satellites that contain the pages being broadcast in this data set
LSB TOW	M		BIT STRING (8)	

9.2.2.2 Altitude and direction

Table 19

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Direction of Altitude	M		ENUMERATED (Height, Depth)	
Altitude	M		INTEGER (0.. 2^{15} -1)	The relation between the value (N) and the altitude (a) in meters it describes is $N \leq a < N+1$, except for $N=2^{15}-1$ for which the range is extended to include all greater values of (a).

9.2.2.3 Cause

The purpose of the cause information element is to indicate the reason for a particular event for the whole protocol.

Table 20

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
<i>CHOICE Cause Group</i>				
<i>>Radio Network Layer</i>				
>>Radio Network Layer Cause	M		<p>ENUMERATED (invalid reference information, information temporarily not available, information provision not supported for the object, position calculation error: invalid GPS measured results, position calculation error: invalid Cell- ID measured results, position calculation error: invalid OTDOA measured results, position calculation error: A-GPS positioning method not supported, position calculation error: Cell-ID positioning method not supported, position calculation error: OTDOA positioning method not supported, Initial UE Position Estimate missing, position calculation error: invalid U- TDOA measured results, position calculation error: U-TDOA positioning method not supported, position calculation error: U-TDOA positioning method not supported in specified UTRAN cell, positioning method not supported, loss of contact with UE, SAS unable to perform U-TDOA positioning within Response Time, Location measurement failure, UE Positioning Error: Not enough OTDOA cells, UE Positioning Error: Not enough GPS Satellites, UE Positioning Error: Reference Cell not serving cell, UE Positioning Error: Not Accomplished GPS Timing of Cell Frames, UE Positioning Error: Undefined Error, position calculation error: invalid Galileo measured results, position calculation error: A-Galileo positioning method not supported, UE Positioning Error: Not enough Galileo Satellites, UE Positioning Error: Not Accomplished Galileo Timing of Cell Frames, UE Positioning Error: Assistance Data Missing position calculation error: invalid GLONASS measured results, position calculation error: invalid GANSS measured results, position calculation error: A-GANSS positioning method not supported, UE Positioning Error: Not enough GANSS Satellites, UE Positioning Error: Not Accomplished GANSS Timing of Cell Frames, position calculation error: invalid BDS measured results, UE Positioning Error: Not enough BDS Satellites, position calculation error: A-BDS positioning method not supported)</p>	

>Transport Layer			
>>Transport Layer Cause	M		ENUMERATED (Transport Resource Unavailable, Unspecified, ...)
>Protocol			
>>Protocol Cause	M		ENUMERATED (Transfer Syntax Error, Abstract Syntax Error (Reject), Abstract Syntax Error (Ignore and Notify), Message not Compatible with Receiver State, Semantic Error, Unspecified, Abstract Syntax Error (Falsely Constructed Message), ...)
>Misc			
>>Misc Cause	M		ENUMERATED (Processing Overload, Hardware Failure, O&M Intervention, Unspecified, ...)

The meaning of the different cause values is described in the following table. In general, "not supported" cause values indicate that the concerning capability is missing. On the other hand, "not available" cause values indicate that the concerning capability is present, but insufficient resources were available to perform the requested action.

Table 21

Radio Network Layer cause	Meaning
Invalid reference information	The reference information (GPS-UTRAN Time Relationship Uncertainty and/or Initial UE Position Estimate) provided by the RNC are invalid
Information temporarily not available	The information requested by RNC is temporarily not available
Information Provision not supported for the object	The SAS does not support provision of the requested information for the concerned object types
Position calculation error: invalid GPS measured results	The SAS cannot calculate position due to invalid GPS measured results
Position calculation error: invalid Cell-ID measured results	The SAS cannot calculate position due to invalid Cell-ID measured results
Position calculation error: invalid OTDOA measured results	The SAS cannot calculate position due to invalid OTDOA measured results
Position calculation error: A-GPS positioning method not supported	The SAS cannot calculate position because it does not support the A-GPS positioning method
Position calculation error: Cell-ID positioning method not supported	The SAS cannot calculate position because it does not support the Cell-ID positioning method
Position calculation error: OTDOA positioning method not supported	The SAS cannot calculate position because it does not support the OTDOA positioning method
Position calculation error: invalid U-TDOA measured results	The SAS cannot calculate position due to invalid U-TDOA measured results
Position calculation error: U-TDOA positioning method not supported	The SAS cannot calculate position because it does not support the U-TDOA positioning method
Position calculation error: U-TDOA positioning method not supported in specified UTRAN cell	The SAS cannot calculate position because it does not support the U-TDOA positioning method in the specified UTRAN cell
Positioning method not supported	The RNC does not support the requested positioning method
Loss of contact with UE	The RNC reports that it has lost contact with the UE
SAS unable to perform U-TDOA positioning within Response Time	The SAS did not send a U-TDOA position estimate within the interval defined by the Response Time IE
Location measurement failure	The SRNC cannot deliver the requested positioning measurement due to measurement failure.
UE Positioning Error: Not enough OTDOA cells	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not enough OTDOA cells'.
UE Positioning Error: Not enough GPS Satellites	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not enough GPS Satellites'.
UE Positioning Error: Reference Cell not serving cell	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Reference Cell not serving cell'
UE Positioning Error: Not Accomplished GPS Timing of Cell Frames	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not Accomplished GPS Timing of Cell Frames'
UE Positioning Error: Undefined Error	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Undefined Error'
Position calculation error: invalid Galileo measured results	The SAS cannot calculate position due to invalid Galileo measured results
Position calculation error: A-Galileo positioning method not supported	The SAS cannot calculate position because it does not support the A-Galileo positioning method
UE Positioning Error: Not enough Galileo Satellites	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not enough Galileo Satellites'.
UE Positioning Error: Not Accomplished Galileo Timing of Cell Frames	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not Accomplished Galileo Timing of Cell Frames'
UE Positioning Error: Assistance Data Missing	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Assistance Data Missing'
Position calculation error: invalid GLONASS measured results	The SAS cannot calculate position due to invalid GLONASS measured results
Position calculation error: invalid GANSS measured results	The SAS cannot calculate position due to invalid GANSS measured results

Position calculation error: A-GANSS positioning method not supported	The SAS cannot calculate position because it does not support any A-GANSS positioning method
UE Positioning Error: Not enough GANSS Satellites	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not Enough GANSS Satellites'.
UE Positioning Error: Not Accomplished GANSS Timing of Cell Frames	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not Accomplished GANSS Timing of Cell Frames'
Position calculation error: invalid BDS measured results	The SAS cannot calculate position due to invalid BDS measured results
UE Positioning Error: Not enough BDS Satellites	The SRNC cannot deliver the requested positioning measurement due to UE positioning error reported by the UE with error reason 'Not Enough BDS Satellites'.
Position calculation error: A-BDS positioning method not supported	The SAS cannot calculate position because it does not support any A-BDS positioning method

Table 22

Transport Network Layer cause	Meaning
Transport resource unavailable	The required transport resources are not available
Unspecified	Sent when none of the above cause values applies but still the cause is Transport Network Layer related

Table 23

Protocol cause	Meaning
Abstract Syntax Error (Reject)	The received message included an abstract syntax error and the concerning criticality indicated "reject" (see clause 10.3)
Abstract Syntax Error (Ignore and Notify)	The received message included an abstract syntax error and the concerning criticality indicated "ignore and notify" (see clause 10.3)
Abstract syntax error (falsely constructed message)	The received message contained IEs or IE groups in wrong order or with too many occurrences (see clause 10.3)
Message not Compatible with Receiver State	The received message was not compatible with the receiver state (see clause 10.4)
Semantic Error	The received message included a semantic error (see clause 10.4)
Transfer Syntax Error	The received message included a transfer syntax error (see clause 10.2)
Unspecified	Sent when none of the above cause values applies but still the cause is Protocol related

Table 24

Miscellaneous cause	Meaning
Processing Overload	RNC/SAS processing overload
Hardware Failure	RNC/SAS hardware failure
O&M Intervention	Operation and Maintenance intervention related to RNC/SAS equipment
Unspecified	Sent when none of the above cause values applies and the cause is not related to any of the categories Radio Network Layer, Transport Network Layer or Protocol

9.2.2.4 Criticality Diagnostics

The *Criticality Diagnostics* IE is sent by the RNC or the SAS when parts of a received message have not been comprehended or are missing. It contains information about which IE was not comprehended or is missing.

For further details on how to use the *Criticality Diagnostics* IE, see annex A.

Table 25

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Procedure Code	O		INTEGER (0..255)	
Triggering Message	O		ENUMERATED (initiating message, successful outcome, unsuccessful outcome, outcome)	The Triggering Message is used only if the Criticality Diagnostics is part of Error Indication.
Procedure Criticality	O		ENUMERATED (reject, ignore, notify)	This Procedure Criticality is used for reporting the Criticality of the Triggering message (Procedure).
Transaction ID	O		9.2.2.28	
Information Element Criticality Diagnostics		0..<maxnoof errors>		
>IE Criticality	M		ENUMERATED (reject, ignore, notify)	The IE Criticality is used for reporting the criticality of the triggering IE. The value "Ignore" shall never be used.
>IE Id	M		INTEGER (0..65535)	The IE Id of the not understood or missing IE as defined in the ASN.1 part of the specification.
>Repetition Number	O		INTEGER (0..255)	<p>The <i>Repetition Number</i> IE gives</p> <ul style="list-style-type: none"> - in case of a not understood IE: The number of occurrences of the reported IE up to and including the not understood occurrence - in case of a missing IE: The number of occurrences up to but not including the missing occurrence. <p>Note: All the counted occurrences of the reported IE must have the same top-down hierarchical message structure of IEs with assigned criticality above them.</p>
>Message Structure	O		9.2.2.23	The <i>Message Structure</i> IE describes the structure where the not understood or missing IE was detected. This IE is included if the not understood IE is not the top level of the message.
>Type of Error	M		ENUMERATED(not understood, missing, ...)	

Table 26

Range bound	Explanation
maxnooferrors	Maximum number of IE errors allowed to be reported with a single message. The value for maxnooferrors is 256.

9.2.2.5 DGPS Corrections

This IE contains DGPS corrections, which may be employed to compensate for ranging errors due to atmospheric delay, orbital modelling, and satellite clock drift.

Table 27

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
GPS TOW sec	M		INTEGER (0..604799)	In seconds GPS time-of-week when the DGPS corrections were calculated	—	
Status/Health	M		ENUMERATED (UDRE scale 1.0, UDRE scale 0.75, UDRE scale 0.5, UDRE scale 0.3, UDRE scale 0.2, UDRE scale 0.1, no data, invalid data)		—	
DGPS information	C-Status/Hea lth	1..<maxSat>			—	
>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].	—	
>IODE	M		INTEGER (0..255)		—	
>UDRE	M		ENUMERATED (UDRE ≤ 1.0 m, 1.0m < UDRE ≤ 4.0m, 4.0m < UDRE ≤ 8.0m, 8.0m < UDRE)	The value in this field shall be multiplied by the UDRE Scale Factor in the IE Status/Health to determine the final UDRE estimate for the particular satellite.	—	
>PRC	M		INTEGER (-2047..2047.)	Scaling factor 0.32 Meters	—	
>Range Rate Correction	M		INTEGER (-127..127)	Scaling factor 0.032 meters/sec	—	
>DGNSS Validity Period	O		9.2.2.154		YES	ignore

Table 28

Condition	Explanation
Status/Health	This IE shall be present if the <i>Status/Health</i> IE is not equal to "no data" or "invalid data"

Table 29

Range bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.6 Geographical Area

Geographical Area IE is used to identify an area using geographical coordinates. The reference system is the same as the one used in TS 23.032 [11].

Table 30

IE/Group Name	Presence	Range	IE type and reference	Semantics description
CHOICE Geographical Area				
>Point				Ellipsoid point
>>Geographical Coordinates	M		9.2.2.7	
>Point With Uncertainty				Ellipsoid point with uncertainty circle
>>Geographical Coordinates	M		9.2.2.7	
>>Uncertainty Code	M		INTEGER (0..127)	The uncertainty "r" expressed in meters is derived from the "Uncertainty Code" k by $r = 10x(1.1^k - 1)$
>Polygon				List of Ellipsoid points
>>Polygon		1..<maxnoofPoints>		
>>>Geographical Coordinates	M		9.2.2.7	
>Ellipsoid point with uncertainty Ellipse				
>>Geographical Coordinates	M		9.2.2.7	
>>Uncertainty Ellipse	M		9.2.2.30	
>>Confidence	M		INTEGER (0..100)	In percentage
>Ellipsoid point with altitude				
>>Geographical Coordinates	M		9.2.2.7	
>>Altitude and direction	M		9.2.2.2	
>Ellipsoid point with altitude and uncertainty Ellipsoid				
>>Geographical Coordinates	M		9.2.2.7	
>>Altitude and direction	M		9.2.2.2	
>>Uncertainty Ellipse	M		9.2.2.30	
>>Uncertainty Altitude	M		INTEGER (0..127)	The uncertainty altitude 'h' expressed in metres is derived from the 'Uncertainty Altitude' k, by: $h=45x(1.025^k - 1)$
>>Confidence	M		INTEGER (0..100)	In percentage
>Ellipsoid Arc				
>>Geographical Coordinates	M		9.2.2.7	
>>Inner radius	M		INTEGER (0..2 ¹⁶ -1)	The relation between the value (N) and the radius (r) in meters it describes is $5N \leq r < 5(N+1)$, except for $N=2^{16}-1$ for which the range is extended to include all greater values of (r).
>>Uncertainty radius	M		INTEGER (0..127)	The uncertainty "r" is derived from the "Uncertainty radius" k by $r = 10x(1.1^k - 1)$

IE/Group Name	Presence	Range	IE type and reference	Semantics description
>>Offset angle	M		INTEGER (0..179)	The relation between the value (N) and the angle (a) in degrees it describes is $2N \leq a < 2(N+1)$
>>Included angle	M		INTEGER (0..179)	The relation between the value (N) and the angle (a) in degrees it describes is $2N < a \leq 2(N+1)$
>>Confidence	M		INTEGER (0..100)	

Table 31

Range bound	Explanation
maxnoofPoints	Maximum no. of points in polygon. Value is 15.

9.2.2.7 Geographical Coordinates

This IE contains the geographical coordinates.

Table 32

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Latitude Sign	M		ENUMERATED (North, South)	
Degrees Of Latitude	M		INTEGER (0.. 2^{23} -1)	The IE value (N) is derived by this formula: $N \leq 2^{23} X / 90 < N+1$ X being the latitude in degree (0°.. 90°)
Degrees Of Longitude	M		INTEGER (- 2^{23} .. 2^{23} -1)	The IE value (N) is derived by this formula: $N \leq 2^{24} X / 360 < N+1$ X being the longitude in degree (-180°..+180°)

9.2.2.8 GPS Acquisition Assistance

This IE contains parameters that enable fast acquisition of the GPS signals in UE-assisted GPS positioning.

Table 33

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
GPS TOW msec	M		INTEGER (0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit).	—	
Satellite information		1..<maxSat>			—	
>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].	—	
>Doppler (0 th order term)	M		INTEGER (-2048..2047)	Scaling factor 2.5Hz	—	
>Extra Doppler		0..1			—	
>>Doppler (1 st order term)	M		INTEGER (-42..21)	Scaling factor 1/42	—	
>>Doppler Uncertainty	M		ENUMERATED (12.5,25,50,100,200,...)	In Hz	—	
>Code Phase	M		INTEGER (0..1022)	In Chips, specifies the centre of the search window	—	
>Integer Code Phase	M		INTEGER (0..19)	Number of 1023 chip segments	—	
>GPS Bit number	M		INTEGER (0..3)	Specifies GPS bit number (20 1023 chip segments)	—	
>Code Phase Search Window	M		ENUMRATED (1023,1,2,3,4,6,8,12,16,24,32,48,64,96,128,192)	Specifies the width of the search window.	—	
>Azimuth and Elevation		0..1			—	
>>Azimuth	M		INTEGER (0..31)	Scaling factor 11.25 Degrees	—	
>>Elevation	M		INTEGER (0..7)	Scaling factor 11.25 Degrees	—	
>>Azimuth and Elevation LSB		0..1			YES	ignore
>>>Azimuth LSB	M		INTEGER (0..15)	Scale factor 0.703125. The full satellite azimuth is constructed as 'Azimuth' × 11.25 + 'Azimuth LSB' × 0.703125 degrees.	—	
>>>Elevation LSB	M		INTEGER (0..15)	Scale factor 0.703125.	—	

				The full satellite elevation is constructed as 'Elevation' × 11.25 + 'Elevation LSB' × 0.703125 degrees.		
>Extra Doppler Extension		0..1		If this field is present, the "Extra Doppler" field should not be present.	YES	ignore
>>Doppler (1 st order term)	M		INTEGER (-42..21)	Scaling factor 1/42	–	
>>Doppler Uncertainty Extension	M		ENUMERATED (300, 400, 500, 600, "No Information", ...)	In Hz	–	
UTRAN GPS Reference Time	O		9.2.2.103	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
GPS Reference Time Uncertainty	O		9.2.2.132	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
Confidence	O		INTEGER (0..100)	Confidence level (in percent) of the reference location area or volume used to calculate the Satellite information parameters (search windows).	YES	ignore

Table 34

Range bound	Explanation
mMaxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.9 GPS Almanac and Satellite Health

This IE contains a reduced-precision subset of the clock and ephemeris parameters.

Table 35

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
WN _a	M		BIT STRING (8)		–	
Satellite information		1..<maxSatAlmanac>			–	
>DataID	M		BIT STRING (2)	See ICD-GPS-200 [10]	–	
>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].	–	
>e	M		BIT STRING (16)	Eccentricity (ICD-GPS-200 [10])	–	
>t _{oa}	M		BIT STRING (8)	Reference Time of Almanac (ICD-GPS-200 [10])	–	
>δi	M		BIT STRING (16)	Correction to Inclination (semi-circles) (ICD-GPS-200 [10])	–	
>OMEGADOT	M		BIT STRING (16)	Rate of Right Ascension (semi-circles/sec) (ICD-GPS-200 [10])	–	
>SV Health	M		BIT STRING (8)	ICD-GPS-200 [10]	–	
>A ^{1/2}	M		BIT STRING (24)	Semi-Major Axis (meters) ^{1/2} (ICD-GPS-200 [10])	–	
>OMEGA ₀	M		BIT STRING (24)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) (ICD-GPS-200 [10])	–	
>M ₀	M		BIT STRING (24)	Mean Anomaly at Reference Time (semi-circles) (ICD-GPS-200 [10])	–	
>ω	M		BIT STRING (24)	Argument of Perigee (semi-circles) (ICD-GPS-200 [10])	–	
>af ₀	M		BIT STRING (11)	apparent clock correction (ICD-GPS-200 [10])	–	
>af ₁	M		BIT STRING (11)	apparent clock correction (ICD-GPS-200 [10])	–	
SV Global Health	O		BIT STRING (364)	This enables GPS time recovery and possibly extended GPS correlation intervals	–	
Complete Almanac Provided	O		BOOLEAN	This field indicates whether the SAS provided almanac for the full GPS constellation or not. TRUE means complete GPS almanac is provided.	YES	ignore

Table 36

Range bound	Explanation
maxSatAlmanac	Maximum number of satellites for which data is included in this IE. The value of maxSatAlmanac is 32.

9.2.2.10 GPS Clock and Ephemeris Parameters

The IE contains the GPS clock information and GPS Ephemeris.

Table 37

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
C/A or P on L2	M		BIT STRING (2)	Code(s) on L2 Channel (ICD-GPS-200 [10])
URA Index	M		BIT STRING (4)	User Range Accuracy (ICD-GPS-200 [10])
SV Health	M		BIT STRING (6)	ICD-GPS-200 [10]
IODC	M		BIT STRING (10)	Issue of Data, Clock (ICD-GPS-200 [10])
L2 P Data Flag	M		BIT STRING (1)	ICD-GPS-200 [10]
SF 1 Reserved	M		BIT STRING (87)	ICD-GPS-200 [10]
T _{GD}	M		BIT STRING (8)	Estimated group delay differential (ICD-GPS-200 [10])
t _{oc}	M		BIT STRING (16)	apparent clock correction (ICD-GPS-200 [10])
a _{f2}	M		BIT STRING (8)	apparent clock correction (ICD-GPS-200 [10])
a _{f1}	M		BIT STRING (16)	apparent clock correction (ICD-GPS-200 [10])
a _{f0}	M		BIT STRING (22)	apparent clock correction (ICD-GPS-200 [10])
C _{rs}	M		BIT STRING (16)	Amplitude of the Sine Harmonic Correction Term to the Orbit Radius (meters) (ICD-GPS-200 [10])
Δn	M		BIT STRING (16)	Mean Motion Difference From Computed Value (semi-circles/sec) (ICD-GPS-200 [10])
M ₀	M		BIT STRING (32)	Mean Anomaly at Reference Time (semi-circles) (ICD-GPS-200 [10])
C _{uc}	M		BIT STRING (16)	Amplitude of the Cosine Harmonic Correction Term To The Argument Of Latitude (radians) (ICD-GPS-200 [10])
e	M		BIT STRING (32)	Eccentricity (ICD-GPS-200 [10])
C _{us}	M		BIT STRING (16)	Amplitude of the Sine Harmonic Correction Term To The Argument Of Latitude (radians) (ICD-GPS-200 [10])
(A) ^{1/2}	M		BIT STRING (32)	Semi-Major Axis (meters) ^{1/2} (ICD-GPS-200 [10])
t _{oe}	M		BIT STRING (16)	Reference Time Ephemeris (ICD-GPS-200 [10])
Fit Interval Flag	M		BIT STRING (1)	ICD-GPS-200 [10]
AODO	M		BIT STRING (5)	Age Of Data Offset (ICD-GPS-200 [10])
C _{ic}	M		BIT STRING (16)	Amplitude of the Cosine Harmonic Correction Term To The Angle Of Inclination (radians) (ICD-GPS-200 [10])
OMEGA ₀	M		BIT STRING (32)	Longitude of Ascending Node of Orbit Plane at Weekly Epoch (semi-circles) (ICD-GPS-200 [10])
C _{is}	M		BIT STRING (16)	Amplitude of the Sine Harmonic Correction Term To The Angle Of Inclination (radians) (ICD-GPS-200 [10])
i ₀	M		BIT STRING	Inclination Angle at Reference

		(32)	Time (semi-circles) (ICD-GPS-200 [10])
C_{rc}	M	BIT STRING (16)	Amplitude of the Cosine Harmonic Correction Term to the Orbit Radius (meters) (ICD-GPS-200 [10])
ω	M	BIT STRING (32)	Argument of Perigee (semi-circles) (ICD-GPS-200 [10])
OMEGAdot	M	BIT STRING (24)	Rate of Right Ascension (semi-circles/sec) (ICD-GPS-200 [10])
Idot	M	BIT STRING (14)	Rate of Inclination Angle (semi-circles/sec) (ICD-GPS-200 [10])

9.2.2.11 GPS Ionospheric Model

The IE contains fields needed to model the propagation delays of the GPS signals through the ionosphere.

Table 38

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
α_0	M		BIT STRING (8)	NOTE 1
α_1	M		BIT STRING (8)	NOTE 1
α_2	M		BIT STRING (8)	NOTE 1
α_3	M		BIT STRING (8)	NOTE 1
β_0	M		BIT STRING (8)	NOTE 2
β_1	M		BIT STRING (8)	NOTE 2
β_2	M		BIT STRING (8)	NOTE 2
β_3	M		BIT STRING (8)	NOTE 2
NOTE 1: The parameters α_n are the coefficients of a cubic equation representing the amplitude of the vertical delay (ICD-GPS-200 [10]).				
NOTE 2: The parameters β_n are the coefficients of a cubic equation representing the period of the ionospheric model (ICD-GPS-200 [10]).				

9.2.2.12 GPS Measured Results

The purpose of this information element is to provide reported GPS measurement information from the SRNC to the SAS.

Table 39

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
GPS TOW msec	M		INTEGER (0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit). If the <i>UTRAN GPS reference time Result</i> is present, this IE shall be set to 0 by the transmitter and ignored by the receiver.	–	
Measurement Parameters		1..<maxSat>			–	
>Satellite ID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].	–	
>C/N _o	M		INTEGER (0..63)	The estimate of the carrier-to-noise ratio of the received signal from the particular satellite used in the measurement. It is given in units of dB-Hz (Typical levels will be in the range of 20 – 50 dB-Hz).	–	
>Doppler	M		INTEGER (-32768..32768)	Hz, scale factor 0.2.	–	
>Whole GPS Chips	M		INTEGER (0..1022)	Unit in GPS chips	–	
>Fractional GPS Chips	M		INTEGER (0..(2 ¹⁰ -1))	Scale factor 2 ⁻¹⁰	–	
>Multipath Indicator	M		ENUMERATED (NM, low, medium, high)	See NOTE 1	–	
>Pseudorange RMS Error	M		INTEGER (0..63)	See NOTE 2	–	
UTRAN GPS Reference Time Result	O		9.2.2.104	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
GPS Reference Time Uncertainty	O		9.2.2.132		YES	ignore

NOTE 1: Table 41 gives the mapping of the multipath indicator field.

NOTE 2: Table 42 gives the bitmapping of the Pseudorange RMS Error field.

Table 40

Range bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

Table 41

Value	Multipath Indication
NM	Not measured
Low	MP error < 5m
Medium	5m < MP error < 43m
High	MP error > 43m

Table 42

Value	Mantissa	Exponent	Floating-Point value, x_i	Pseudorange value, P
0	000	000	0.5	$P < 0.5$
1	001	000	0.5625	$0.5 \leq P < 0.5625$
i	X	Y	$0.5 * (1 + x/8) * 2^y$	$x_{i-1} \leq P < x_i$
62	110	111	112	$104 \leq P < 112$
63	111	111	--	$112 \leq P$

9.2.2.13 GPS Navigation Model

This IE contain information required to manage the transfer of precise navigation data to the GPS-capable UE.

Table 43

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Satellite information		$1..<\text{maxSat}>$		
>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].
>Satellite Status	M		ENUMERATED (NS_NN, ES_SN, ES_NN, REVD)	See NOTE
>GPS Clock and Ephemeris parameters	C-Satellite status		9.2.2.10	

NOTE: The UE shall interpret enumerated symbols as follows.

Table 44

Value	Indication
NS_NN	New satellite, new Navigation Model
ES_SN	Existing satellite, same Navigation Model
ES_NN	Existing satellite, new Navigation Model
REVD	Reserved

Table 45

Condition	Explanation
<i>Satellite status</i>	The IE shall be present if the <i>Satellite Status</i> IE is not set to ES_SN

Table 46

Range bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.14 GPS Real Time Integrity

Table 47

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CHOICE <i>Bad Satellites Presence</i>				
>Bad Satellites				
>> Satellite information		1..<maxSat>		
>>>BadSatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].
>No Bad Satellites			NULL	

Table 48

Range bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.15 GPS Reference Time

Table 49

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
GPS Week	M		INTEGER (0..1023)		–	
GPS TOW msec	M		INTEGER (0..6.048*10 ⁸ -1)	GPS Time of Week in milliseconds (rounded down to the nearest millisecond unit).	–	
GPS TOW Assist		0.. <maxSat>			–	
>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].	–	
>TLM Message	M		BIT STRING (14)		–	
>Anti-Spoof	M		BOOLEAN		–	
>Alert	M		BOOLEAN		–	
>TLM Reserved	M		BIT STRING (2)		–	
UTRAN GPS Reference Time	O		9.2.2.103	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
SFN-TOW Uncertainty	O		GPS-UTRAN Time Relationship Uncertainty 9.2.2.18	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
TUTRAN-GPS Drift Rate	O		9.2.2.105	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
GPS Reference Time Uncertainty	O		9.2.2.132	This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
GPS Week Cycle Number	O		INTEGER (0..7)	Number of 1024 GPS week cycles occurred since the GPS zero time-point (midnight of the night of January 5, 1980/morning of January 6, 1980). The first 1024 GPS weeks since the zero time-point is GPS Week Cycle Number 0.	YES	ignore

Table 50

Range bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.16 GPS Transmission TOW

Table 51

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GPS Transmission TOW			INTEGER (0..604799)	The GPS time-of-week in seconds

9.2.2.17 GPS UTC Model

The UTC Model field contains a set of parameters needed to relate GPS time to Universal Time Coordinate (UTC).

Table 52

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
A ₁	M		BIT STRING (24)	sec/sec (ICD-GPS-200 [10])
A ₀	M		BIT STRING (32)	seconds (ICD-GPS-200 [10])
t _{ot}	M		BIT STRING (8)	seconds (ICD-GPS-200 [10])
Δt _{LS}	M		BIT STRING (8)	seconds (ICD-GPS-200 [10])
WN _t	M		BIT STRING (8)	weeks (ICD-GPS-200 [10])
WN _{LSF}	M		BIT STRING (8)	weeks (ICD-GPS-200 [10])
DN	M		BIT STRING (8)	days (ICD-GPS-200 [10])
Δt _{LSF}	M		BIT STRING (8)	seconds (ICD-GPS-200 [10])

9.2.2.18 GPS-UTRAN Time Relationship Uncertainty

This IE contains the uncertainty of the GPS and UTRAN time relationship.

Table 53

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GPS-UTRAN Time Relationship Uncertainty			ENUMERATED (50ns, 500ns, 1us, 10us, 1ms, 10ms, 100ms, unreliable,...)	RNC or SAS estimate of uncertainty in GPS-UTRAN time relationship

9.2.2.19 Information Exchange ID

The Information Exchange ID uniquely identifies any requested information per RNC-SAS pair.

Table 54

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Information Exchange ID			INTEGER (0 .. 2^20-1)	

9.2.2.20 Void

9.2.2.21 Information Report Characteristics

The information report characteristics define how the reporting shall be performed.

Table 56

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Information Report Characteristics Type	M		ENUMERATED(On Demand, Periodic, On Modification, ...)	
CHOICE <i>Information Report Periodicity</i>	C-Periodic			Indicates the frequency with which the SAS shall send broadcast data reports.
>Min				
>>Minutes	M		INTEGER (1..60, ...)	
>Hour				
>>Hours	M		INTEGER (1..24, ...)	

Table 57

Condition	Explanation
Periodic	This IE shall be present if the <i>Information Report Characteristics Type</i> IE indicates 'periodic'

9.2.2.22 Information Type

The Information Type indicates which kind of information the SAS shall provide.

Table 58

Table 59

Range Bound	Explanation
maxnoofExplInfo	Maximum number of Explicit Information supported in one Information Exchange. The value of maxnoofExplInfo is 32.

maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.
maxGANSS	Maximum number of GANSS systems for which data is included in this IE. The value of maxGANSS is 8.
maxGANSSat	Maximum number of satellites for which data is included in this IE. The value of maxGANSSat is 64

Table 59A

Condition	Explanation
GANSS-ID	This IE shall be present if the <i>GANSS ID</i> IE indicates 'SBAS'.

9.2.2.23 Message Structure

The *Message Structure* IE gives information for each level with assigned criticality in an hierarchical message structure from top level down to the lowest level above the reported level for the occurred error (reported in the *Information Element Criticality Diagnostics* IE).

Table 60

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Message structure		1..<maxnooflevels>		The first repetition of the <i>Message Structure</i> IE corresponds to the top level of the message. The last repetition of the <i>Message Structure</i> IE corresponds to the level above the reported level for the occurred error of the message.
>IE ID	M		INTEGER (0..65535)	The IE ID of this level's IE containing the not understood or missing IE.
>Repetition Number	O		INTEGER (1..256)	The <i>Repetition Number</i> IE gives, if applicable, the number of occurrences of this level's reported IE up to and including the occurrence containing the not understood or missing IE. Note: All the counted occurrences of the reported IE must have the same top-down hierarchical message structure of IEs with assigned criticality above them.

Table 61

Range bound	Explanation
maxnooflevels	Maximum no. of message levels to report. The value for maxnooflevels is 256.

9.2.2.24 Message Type

Message Type IE uniquely identifies the message being sent. It is mandatory for all messages.

Table 62

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Procedure Code	M		INTEGER(0..255)	'1' = Position Calculation '2' = Information Exchange Initiation '3' = Information Reporting '4' = Information Exchange Termination, '5' = Information Exchange Failure '6' = Error Indication '7' = Private Message '8' = Position Parameter Modification '9' = Position Initiation '10' = Position Activation '11' = Abort '12' = Position Periodic Report '13' = Position Periodic Result '14' = Position Periodic Termination
Type of Message	M		ENUMERATED (Initiating Message, Successful Outcome, Unsuccessful Outcome, Outcome)	

9.2.2.25 Method Type

Table 63

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Method Type			ENUMERATED (UE_Assisted, UE_Based)	

9.2.2.26 Requested Data Value

The Requested Data Value contains the relevant data concerning the ongoing information exchange, or positioning event.

Table 64

Table 64A

Range Bound	Explanation
maxGANSS	Maximum number of GANSS systems for which data is included in this IE. The value of maxGANSS is 8.

Table 64B

Condition	Explanation
GANSS-ID	This IE shall be present if the GANSS ID IE indicates 'SBAS'.

9.2.2.27 Requested Data Value Information

The *Requested Data Value Information* IE provides information on whether or not the Requested Data Value is available in the message and also the Requested Data Value itself if available.

In case of "Periodic" and "On Modification" reporting, "Information Not Available" shall be used when at least one part of the requested information was not available at the moment of initiating the Information Reporting procedure.

Table 65

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
CHOICE <i>Information Availability Indicator</i>	M				–	
> Information Available					–	
>>Requested Data Value	M		9.2.2.26		–	
>Information not Available			NULL		–	

9.2.2.28 Transaction ID

The Transaction ID is used to associate all the messages belonging to the same procedure. Messages belonging to the same procedure shall use the same Transaction ID.

The Transaction ID is determined by the initiating peer of a procedure.

The Transaction ID shall uniquely identify a procedure among all ongoing parallel procedures using the same procedure code, and initiated by the same protocol peer.

Table 66

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CHOICE <i>Transaction ID Length</i>				The Transaction ID shall be interpreted for its integer value, not for the type of encoding ("short' or "long').
>Short				
>>Transaction ID Value	M		INTEGER (0..127)	
>Long				
>>Transaction ID Value	M		INTEGER (0..32767)	

9.2.2.29 Transmission TOW Indicator

Table 67

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Transmission TOW Indicator			ENUMERATE D (requested, not requested)	

9.2.2.30 Uncertainty Ellipse

This IE contains the uncertainty ellipse of a geographical area.

Table 68

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Uncertainty semi-major	M		INTEGER (0..127)	The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k-1)$
Uncertainty semi-minor	M		INTEGER (0..127)	The uncertainty "r" is derived from the "uncertainty code" k by $r = 10x(1.1^k-1)$
Orientation of major axis	M		INTEGER (0..89)	The relation between the IE value (N) and the angle (a) in degrees it describes is $2N \leq a < 2(N+1)$

9.2.2.31 Cell-ID Measured Results Info List

This IE contains the Cell-ID measurements of signals associated with one or more cells.

Table 69

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Cell-ID Measured Results Info		1..<maxN oOfMeas NCell>			–

Table 70

Range bound	Explanation
maxNoOfMeasNCell	Maximum number of neighbour cells on which information can be reported. The value of maxNoOfMeasNCell is 32.

9.2.2.32 OTDOA Measured Results Info List

This IE contains the OTDOA measurements of signals sent from the reference and neighbour cells.

Table 71

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
OTDOA Measured Results Info		1..<Maxno ofMeasNC ell>			–	
>UC-ID	M		9.2.2.37	The identifier of the neighbour cell.	–	
>UE SFN-SFN Observed Time Difference Type 2 Info		1			–	
>>SFN-SFN Observed Time Difference Type 2	M		INTEGER (0..40961)	Gives the observed timing of the neighbour cell relative to the reference cell.	–	
>>UE Positioning Measurement Quality	M		9.2.2.35	Quality of the observed time difference measurement.	–	
>>Measurement Delay	M		INTEGER (0..65535)	<p>The interval of time, in units of 10ms frames, spanning the following two events:</p> <p>1) Time of applicability of the SFN-SFN Value or TUTRAN-GPS/SFN relationship provided for the corresponding neighbour cell in 9.2.2.33 or TUTRAN-GANSS/SFN relationship provided for the corresponding neighbour cell in 9.2.2.33.</p> <p>2) The point in time when this corresponding SFN-SFN observed time difference measurement was captured by the UE.</p> <p>If the SAS operates in SAS-centric mode, 1) above shall be set to zero. I.e., in SAS-centric mode this IE</p>	–	

				indicates the SFN during which the corresponding SFN-SFN observed time difference measurement was captured by the UE.		
>Additional OTDOA Measured Results	O			This IE may only be present if SAS operates in SAS-centric mode.	YES	ignore
>>Primary CPICH Info	M		Primary Scrambling Code 9.2.2.46	The identifier of the neighbour cell.	–	

Table 72

Range bound	Explanation
MaxNoOfMeasNCell	Maximum number of neighbouring cells on which information can be reported. The value of MaxNoOfMeasNCell is 32.

9.2.2.33 OTDOA Neighbour Cell Info

Table 73

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UC-ID	M		9.2.2.37	The identifier of the neighbour cell.
UTRAN Access Point Position with Altitude	M		9.2.2.36	Exact geographical position of the base station antenna.
CHOICE <i>Relative Timing Difference Info</i>	M			
>SFN-SFN Measurement Value Information				
>>SFN-SFN Value	M		INTEGER (0..614399)	
>>SFN-SFN Quality	O		INTEGER (0..255)	Indicates the standard deviation (std) of the SFN-SFN otd (observed time difference) measurements in 1/16 chip. SFN-SFN Quality = $\sqrt{E[(x-\mu)^2]}$ = std of reported SFN-SFN Value, where x is the reported SFN-SFN Value and $\mu = E[x]$ is the expectation value of x.
>>SFN-SFN Drift Rate	M		INTEGER (-100..+100)	Indicates the SFN-SFN drift rate in 1/256 chip per second. A positive value indicates that the Reference cell clock is running at a greater frequency than the measured neighbouring cell.
>>SFN-SFN Drift Rate Quality	O		INTEGER (0..100)	Indicates the standard deviation (std) of the SFN-SFN drift rate measurements in 1/256 chip per second. SFN-SFN Drift Rate Quality = $\sqrt{E[(x-\mu)^2]}$ = std of reported SFN-SFN Drift Rate, where x is the reported SFN-SFN Drift Rate and $\mu = E[x]$ is the expectation value of x.
> <i>T_{UTRAN-GPS} Measurement Value Information</i>				
>>SFN	M		INTEGER (0..4095)	SFN during which the T _{UTRAN-GPS} measurement was performed

9.2.2.35 UE Positioning Measurement Quality

Table 75

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Std Resolution	M		BIT STRING (2)	Std Resolution field includes the resolution used in Std of Measurements field. Encoding on two bits as follows: '00' 10 meters '01' 20 meters '10' 30 meters '11' Reserved
Number of Measurements	M		BIT STRING (3)	The 'Number of Measurements' field indicates how many measurements have been used in the UE to determine the sample standard deviation of the measurements. Following 3 bit encoding is used: '001' 5-9 '010' 10-14 '011' 15-24 '100' 25-34 '101' 35-44 '110' 45-54 '111' 55 or more Special case: '000': In this case the field 'Std of Measurements' contains the std of the reported measurement value = $\sqrt{E[(x-\mu)^2]}$, where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x. This std can be used irrespective of the number of measurements and reporting of the number of measurements is not needed. Also other measurements such as Ec/No or Rx levels can be utilised in this case to evaluate the 'Std of Measurements' reported in this IE.

Std of Measurements	M		BIT STRING (5)	Std of Measurements field includes sample standard deviation of measurements (when number of measurements is reported in 'Number of Measurements' field) or standard deviation of the reported measurement value = $\sqrt{E[(x-\mu)^2]}$, where x is the reported value and $\mu = E[x]$ is the expectation value (i.e. the true value) of x (when '000' is given in 'Number of Measurements' field). Following linear 5 bit encoding is used: '00000' 0 - (R*1-1) meters '00001' R*1 - (R*2-1) meters '00010' R*2 - (R*3-1) meters ... '11111' R*31 meters or more where R is the resolution defined by Std Resolution field. E.g. R=20 m corresponds to 0-19 m, 20-39 m,...,620+ m.
---------------------	---	--	-------------------	---

9.2.2.36 UTRAN Access Point Position with Altitude

The UTRAN Access Point Position with Altitude indicates the exact geographical position of the base station antenna. The altitude shall be included when available.

Table 76

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Geographical Coordinates	M		9.2.2.7	
Altitude and direction	O		9.2.2.2	

9.2.2.37 UTRAN Cell Identifier (UC-ID)

The UC-ID (UTRAN Cell identifier) is the identifier of a cell in one UTRAN.

Table 77

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
RNC-ID	M		INTEGER (0..4095)	The identifier of one RNC in UTRAN. If the <i>Extended RNC-ID</i> IE is included in the <i>UC-ID</i> IE, the <i>RNC-ID</i> IE shall be ignored.	—	—
C-ID	M		INTEGER (0..65535)	The identifier of a cell in one RNS.	—	—
Extended RNC-ID	O		9.2.2.37A	The <i>Extended RNC-ID</i> IE shall be used if the RNC identity has a value larger than 4095.	YES	reject

9.2.2.37A Extended RNC-ID

This is the identifier of one RNC in UTRAN.

Table 77A

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Extended RNC-ID			INTEGER (4096..65535)	Note: Application of the <i>Extended RNC-ID</i> IE to very large networks is FFS.

9.2.2.38 Horizontal Accuracy Code

Table 78

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Horizontal Accuracy Code	M		INTEGER(0..127)	The requested accuracy "r" is derived from the "Horizontal Accuracy Code" k by $r = 10x(1.1^k - 1)$

9.2.2.39 Vertical Accuracy Code

Table 79

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Vertical Accuracy Code	M		INTEGER (0..127)	The requested accuracy "v" is derived from the "Vertical Accuracy Code" k by $v = 45x(1.025^k - 1)$.

9.2.2.40 Accuracy Fulfilment Indicator

This IE indicates whether the returned position estimate satisfies the requested accuracy or not.

Table 80

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Accuracy Fulfilment Indicator	M		ENUMERATED (requested accuracy fulfilled, requested accuracy not fulfilled, ...)	

9.2.2.41 Uplink DPCH information

This IE indicates the Uplink DPCH information used in the U-TDOA positioning method.

Table 81

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Choice mode	M			
>FDD				
>>Scrambling code type	M		ENUMERATED (short, long)	
>>Scrambling code number	M		INTEGER(0..16 777215)

Table 92A

Range bound	Explanation
maxTFC	Maximum number of TFC. Value is 1024.

9.2.2.50 Request Type

This IE contains the Request Type parameters used for SAS centric positioning method selection.

Table 93

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Event	M		ENUMERATED(S top Change of service area, Direct, Change of service area, Stop Direct, ..., Periodic, Stop Periodic)	Requests related to service area reporting are not supported in the current version of this specification.
Report Area	M		ENUMERATED(S ervice Area, Geographical Area, ...)	
Horizontal Accuracy Code	O		INTEGER(0..127)	The requested accuracy "r" is derived from the "accuracy code" k by $r = 10 \times (1.1^k - 1)$.

9.2.2.51 UE Positioning Capability

This IE contains the UE Positioning Capability information used for SAS centric positioning method selection.

Table 94

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Standalone location method(s) supported	M		BOOLEAN	Defines if a UE can measure its location by some means unrelated to UTRAN. TRUE means supported	–	
UE based OTDOA supported	M		BOOLEAN	TRUE means supported	–	
Network Assisted GPS support	M		ENUMERATED (Network based, UE based, Both, None,...)	Defines if the UE supports network based or UE based GPS methods.	–	
Support for GPS timing of cell frames measurement	M		BOOLEAN	Defines if a UE has the capability to perform the UE GPS timing of cell frames measurement (TS 25.331 [4]). TRUE means capable	–	
Support for IPDL	M		BOOLEAN	Defines if a UE has the capability to use IPDL to enhance its 'SFN-SFN observed time difference –type 2' measurement. TRUE means supported	–	
Support for Rx-Tx time difference type2 measurement	M		BOOLEAN	TRUE means supported	–	
Support for UE assisted GPS measurement validity in CELL_PCH and URA_PCH states	M		BOOLEAN	TRUE means supported	–	
Support for SFN-SFN observed time difference type 2 measurement	M		BOOLEAN	TRUE means supported	–	
Network Assisted GANSS Support		0..<max GANSS>			GLOBAL	ignore
>GANSS ID	O		9.2.2.130	Absence of this IE means Galileo.	–	
>GANSS mode	M		ENUMERATED ('Network based', 'UE based', 'Both', 'None')	Defines if the UE supports network based or UE based GANSS methods	–	
>GANSS Signal ID	O		9.2.2.131	Absence of this field means the default value for the GANSS	–	

				identified by 'GANSS ID' (TS 25.331 [4]).		
>Support for GANSS timing of cell frames measurement	M		BOOLEAN	Defines if a UE has the capability to perform the UE GANSS timing of cell frames measurement (TS 25.331 [4]). TRUE means capable	-	
>Support for GANSS Carrier-Phase Measurement	M		BOOLEAN	Defines if a UE has the capability to perform the UE GANSS Carrier-Phase Measurement. TRUE means capable	-	
>SBAS IDs	C-GANSS-ID		9.2.2.150		YES	ignore
>GANSS Signal IDs	O		9.2.2.131a		YES	ignore
>Support for non-native assistance choices	O		Support for Non-Native Assistance Choices Indication 9.2.2.139		YES	ignore

Table 94A

Range Bound	Explanation
maxGANSS	Maximum number of GANSS systems for which data is included in this IE. The value of maxGANSS is 8.

Table 94B

Condition	Explanation
GANSS-ID	This IE shall be present if the GANSS /ID IE indicates 'SBAS'.

9.2.2.52 Response Time

This IE contains the Response Time used for SAS centric mode.

Table 95

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Response Time			ENUMERATED(Low Delay, Delay Tolerant,...)	The value refers to TS 22.071 [15].

9.2.2.53 Positioning Priority

This IE contains the Positioning Priority used for SAS centric mode.

Table 96

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Positioning Priority			ENUMERATED(High Priority, Normal Priority, ...)	The value refers to TS 22.071 [15]

9.2.2.54 Client Type

This IE contains the Client Type used for SAS centric mode.

Table 97

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Client Type			ENUMERATED(Emergency Services, Value Added Services, PLMN Operator Services, Lawful Intercept Services, PLMN Operator - broadcast services, PLMN Operator - O&M, PLMN Operator - anonymous statistics, PLMN Operator - Target MS service support, ...)	Identifies the type of client.

9.2.2.55 Positioning Method

This IE contains the Positioning Method used for SAS centric positioning method selection.

Table 98

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Additional Method Type	M		9.2.2.58		—	
Selected Position Method	M		ENUMERATE D(OTDOA, GPS, OTDOA or GPS, Cell ID, UTDOA, ..., GNSS, OTDOA or GNSS)		—	
GNSS Positioning Method	C-GNSS		BIT STRING(9)	<p>For each bit, if set to "1", indicates that respective GNSS is allowed.</p> <p>Bit 1 is the MSB and bit 9 is the LSB (see clause 9.2.1).</p> <p>bit 1: GPS bit 2: Galileo bit 3: SBAS(WAAS, EGNOS, MSAS, GAGAN) bit 4: Modernized GPS (L1C, L2C, L5) bit 5: QZSS bit 6: GLONASS bits 7-9: reserved for future GNSSes</p> <p>Note: Bit 1 cannot be the only one set to 1.</p>	YES	ignore

Table 98A

Condition	Explanation
GNSS	This IE shall be present if the <i>Selected Position Method</i> IE value is set to "GNSS" or 'OTDOA or GNSS'

9.2.2.56 U-TDOA Bit Count

This IE contains the recommended number of pre-coded bits to be transmitted by the UE when the U-TDOA positioning method is selected.

Table 99

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
U-TDOA Bit Count			INTEGER (0..5000)	Number of bits to be transmitted by the target UE

9.2.2.57 U-TDOA Time Interval

This IE contains the recommended maximum time interval for transmission of the U-TDOA Bit Count number of bits for U-TDOA positioning.

Table 100

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
U-TDOA Time Interval			INTEGER (0..3000)	Time in ms in which the U-TDOA Bit Count is to be transmitted by the UE

9.2.2.58 Additional Method Type

This IE contains the selected positioning method type for SAS-centric mode.

Table 101

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Additional Method Type			ENUMERATED (UE_Assisted, UE_Based, UE_Based is preferred but UE_assisted is allowed, UE_Assisted is preferred but UE_Based is allowed, ...)	

9.2.2.59 UE Positioning OTDOA Assistance Data

This IE contains the UE Positioning OTDOA Assistance Data used in the SAS centric mode.

Table 102

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
UE Positioning OTDOA Reference Cell Info	O				—	
>SFN	O		INTEGER (0..4095)	Time stamp (SFN of Reference Cell) of the SFN-SFN relative time differences and SFN-SFN drift rates. Included if any SFN-SFN drift value is included in IE <i>UE positioning OTDOA neighbour cell info</i> .	—	
> <i>CHOICE mode</i>					—	
>> <i>Fdd</i>					—

>>>Relative Altitude	O		INTEGER (-4000..4000)	Relative altitude in meters compared to ref. cell.	-	
>>>Fine SFN-SFN	O		INTEGER (0..15)	Gives finer resolution	-	
>>>Round Trip Time	O		INTEGER (0..32766)	In chips. Included if cell is in active set	-	

>> UE assisted					-	
>>Extended Round Trip Time	O		INTEGER (32767..103041)	In chips. Included if cell is in active set. Included only if the <i>Round Trip Time IE</i> above is included with its maximum value and if the actual value is outside the possible range for the <i>Round Trip Time IE</i> .	YES	ignore

Table 103

Range bound	Explanation
maxCellMeas	Maximum number of cells to measure. The value is 32.

9.2.2.60 UL TrCH information

This IE contains the UL TrCH information used for the U-TDOA positioning method.

Table 104

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Uplink transport channel type	M		ENUMERATED(DCH,USCH,...)	USCH is TDD only
TFS	M		9.2.2.48	

9.2.2.61 Semi-static Transport Format Information

This IE contains the Semi-static Transport Format information used for the U-TDOA positioning method.

Table 105

IE/Group Name	Presence	Range	IE Type and Reference	Semantics description
Transmission time interval	M		ENUMERATED(5, 10, 20, 40, 80, dynamic, ...)	In ms. The value dynamic is only used in TDD mode
Type of channel coding	M		ENUMERATED(No coding, Convolutional, Turbo, ...)	The option "No coding" is only valid for TDD.
Coding Rate	C-Coding		ENUMERATED(1/2, 1/3, ...)	
Rate matching attribute	M		INTEGER(1..hiRM)	
CRC size	M		ENUMERATED(0, 8, 12, 16, 24, ...)	In bits

Table 106

Condition	Explanation
Coding	This IE shall be present if Type of channel coding IE is 'Convolutional' or 'Turbo'.

Table 107

Constant	Explanation	Value
----------	-------------	-------

Constant	Explanation	Value
hiRM	Maximum number that could be set as rate matching attribute for a transport channel	256

9.2.2.62 Environment Characterisation

This IE contains the Environment Characterisation information used for the SAS centric mode.

Table 108

IE/Group Name	Presence	Range	IE Type and Reference	Semantics description
Environment Characterisation			ENUMERATED(heavy multipath and NLOS conditions, no or light multipath and usually LOS conditions, not defined or mixed environment, ...)	

9.2.2.63 Chip Offset

This IE contains the Chip Offset information used for the U-TDOA positioning method.

The Chip Offset is defined as the radio timing offset inside a radio frame. The Chip offset is used as offset relative to the Primary CPICH timing for the DL DPCH or for the F-DPCH.

Table 109

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Chip Offset			INTEGER(0..38399)	Unit: chips

9.2.2.64 Frame Offset

This IE contains the Frame Offset information used for the U-TDOA positioning method.

The Frame Offset is the required offset between the dedicated channel downlink transmission frames (CFN, Connection Frame Number) and the broadcast channel frame offset (Cell Frame Number). The Frame Offset is used in the translation between Connection Frame Number (CFN) on Iub/Iur and the least significant 8 bits of SFN (System Frame Number) on Uu. The Frame Offset is UE and cell specific

Table 110

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Frame Offset			INTEGER(0..255)	Unit: Frames

9.2.2.65 Position Data

This IE provides data related to the positioning methods used and reported in the SAS centric mode.

Table 111

IE/Group Name	Presence	Range	IE type and reference	Semantics description	Criticality	Assigned Criticality
Position Data	M				—	
>Positioning Data Discriminator	M		BIT STRING (4)	<p>The positioning data discriminator defines the type of data provided for each positioning method:</p> <p>0000 indicates the presence of the <i>Positioning Data Set IE</i> (that reports the usage of each non-GANSS method that was successfully used to obtain the location estimate) and optional presence of the <i>GANSS Positioning Data Set IE</i></p> <p>0001 indicates the presence of the GANSS Positioning Data Set IE (that reports the usage of each GANSS method that was successfully used to obtain the location estimate) and the absence of the <i>Positioning Data Set IE</i></p> <p>1 octet of data is provided for each positioning method included.</p> <p>All other values are reserved.</p>	—	
>Positioning Data Set	C- ifDiscriminator=0				—

Table 112

Condition	Explanation
ifDiscriminator=0	This IE is present if the <i>Positioning Data Discriminator</i> IE is set to "0000"

Table 113

Range bound	Explanation
maxSet	Maximum size of the data set. Value is 9.
maxGANSSSet	Maximum size of the data. Value is 9.

9.2.2.66 Transmission Gap Pattern Sequence Information

This IE contains the Transmission Gap Pattern Sequence information used for the U-TDOA positioning method when the UE is operating in the compressed mode.

Table 114

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Transmission Gap Pattern Sequence Information		1..<maxTGPS>		
>TGPS Identifier	M		INTEGER (1..maxTGPS)	Transmission Gap Pattern Sequence Identifier: Establish a reference to the compressed mode pattern sequence. Up to <maxTGPS> simultaneous compressed mode pattern sequences can be used.
>TGSN	M		INTEGER (0..14)	Transmission Gap Starting Slot Number: The slot number of the first transmission gap slot within the TGCFN.
>TGL1	M		INTEGER (1..14)	The length of the first Transmission Gap within the transmission gap pattern expressed in number of slots.
>TGL2	O		INTEGER (1..14)	The length of the second Transmission Gap within the transmission gap pattern. If omitted, then TGL2=TGL1.
>TGD	M		INTEGER (0,15..269)	Transmission Gap Distance: indicates the number of slots between the starting slots of two consecutive transmission gaps within a transmission gap pattern. If there is only one transmission gap in the transmission gap pattern, this parameter shall be set to "0" ("0" =undefined).
>TGPL1	M		INTEGER (1..144, ...)	The duration of transmission gap pattern 1 in frames.
>Uplink Compressed Mode Method	M		ENUMERATED(SF/2, Higher Layer Scheduling, ...)	Method for generating uplink compressed mode gap.

Table 115

Range bound	Explanation
maxTGPS	Maximum number of transmission gap pattern sequences. The value is 6.

9.2.2.67 Active Pattern Sequence Information

This IE contains the Active Pattern Sequence information used for the U-TDOA positioning method when the UE is operating in the compressed mode.

Table 116

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CM Configuration Change CFN	M		CFN 9.2.2.68	
Transmission Gap Pattern Sequence Status		0..<maxTGPS>		
>TGPS Identifier	M		INTEGER (1..maxTGPS)	If the group is not present, none of the pattern sequences are activated. References an already defined sequence.
>TGPRC	M		INTEGER (0..511)	The number of transmission gap patterns within the Transmission Gap Pattern Sequence. "0"=Infinity
>TGCFN	M		CFN 9.2.2.68	Connection Frame Number of the first frame of the first pattern 1 within the Transmission Gap Pattern Sequence.

Table 117

Range bound	Explanation
maxTGPS	Maximum number of transmission gap pattern sequences. The value is 6.

9.2.2.68 CFN

This IE contains the CFN used for the U-TDOA positioning method when the UE is operating in the compressed mode.

Table 118

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CFN			INTEGER(0..255)	

9.2.2.69 Positioning Response Time

This IE contains the Positioning Response Time information used for SAS centric mode.

Table 119

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Positioning Response Time			ENUMERATED(250, 500, 1000, 2000, 3000, 4000, 6000, 8000, 12000, 16000, 20000, 24000, 28000, 32000, 64000, ...)	Unit: millisecond

9.2.2.70 Reference Cell Position

Reference Cell Position IE is used to identify the position of the reference cell using geographical coordinates. The reference system is the same as the one used in TS 23.032 [11].

Table 120

IE/Group Name	Presence	Range	IE type and reference	Semantics description
CHOICE Geographical Area				
>Point				Ellipsoid point
>>Geographical Coordinates	M		9.2.2.7	
>>Ellipsoid point with altitude				
>>Geographical Coordinates	M		9.2.2.7	
>>Altitude and direction	M		9.2.2.2	

9.2.2.71 UE Positioning IPDL Parameters

The *UE Positioning IPDL Parameters* IE is used for OTDOA in the SAS centric mode.

Table 121

IE/Group Name	Presence	Range	IE type and reference	Semantics description
CHOICE mode				
>FDD				
>>IP Spacing	M		ENUMERATED(5,7,10,15,20,30,40,50,...)	See TS 25.331 [4]

Table 125

Range bound	Explanation
maxTFC	Maximum number of TFC. The value is 1024.
maxTrCH	Maximum number of Transport Channels. The value is 32.

9.2.2.75 Maximum Set of E-DPDCHs

The Maximum Set of E-DPDCHs parameter, as defined in TS 25.212 [16], is used in UTDOA positioning method.

Table 126

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Maximum Set of E-DPDCHs			ENUMERATED (vN64, vN32, vN16, vN8, vN4, v2xN4, v2xN2, v2xN2plus2xN4, ...)	

9.2.2.76 Puncture Limit

The Puncture Limit parameter is used in UTDOA positioning method indicating the limit in the amount of puncturing that can be applied in order to minimise the number of dedicated physical channels.

Table 127

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Puncture Limit			INTEGER (0..15)	Unit: % Range: 40..100 % Step: 4 % 100% means no puncturing

9.2.2.77 E-DCH Transport Format Combination Set Information (E-TFCS Information)

This IE is used in UTDOA positioning method. Whereas the related Transport Block sizes are standardised in [ref is FFS] this IE gives details on the referenced Transport Block Size Table and the Reference E-TFCIs.

Table 128

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
E-DCH Transport Format Combination Set Index	M		INTEGER (1..4, ...)	Indicates which standardised E-TFCS Transport Block Size Table shall be used. The related tables are specified in [ref FFS].
Reference E-TFCI Information		0..<maxnoofRefETFCIs>		
>Reference E-TFCI	M		INTEGER (0..127)	
>Reference E-TFCI Power Offset	M		9.2.2.78	

Table 129

Range Bound	Explanation
maxnoofRefETFCIs	Maximum number of signalled reference E-TFCIs

9.2.2.78 Reference E-TFCI Power Offset

The Reference E-TFCI Power Offset is used in UTDOA positioning method indicating how to calculate the reference E-TFC gain factor.

Table 130

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Reference E-TFCI Power Offset			INTEGER (0..8)	According to mapping in ref. TS 25.213 [17].

9.2.2.79 E-TTI

The E-TTI parameter is used in UTDOA positioning method indicating the Transmission Time Interval for E-DPCH operation.

Table 131

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
E-TTI			ENUMERATED (2ms, 10ms, ...)	

9.2.2.80 E-DPCCH Power Offset

The E-DPCCH Power Offset is used in UTDOA positioning method indicating how to calculate the E-DPCCH gain factor.

Table 132

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
E-DPCCH Power Offset			INTEGER (0..8)	According to mapping in ref. TS 25.213 [17].

9.2.2.81 Cell Parameter ID

The Cell Parameter ID identifies unambiguously the Code Groups, Scrambling Codes, Midambles and Toffset (see ref. TS 25.223 [18]).

Table 133

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Cell Parameter ID			INTEGER (0..127,...)	

9.2.2.82 TFCI Coding

The TFCI Coding describes the way how the TFCI bits are coded. By default 1 TFCI bit is coded with 4 bits, 2 TFCI bits are coded with 8 bits, 3-5 TFCI bits are coded with 16 bits and 6-10 TFCI bits are coded with 32 bits.

Table 134

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
TFCI Coding			ENUMERATED (4, 8, 16, 32,...)	

9.2.2.83 Repetition Length

The Repetition Length represents the number of consecutive Radio Frames inside a Repetition Period in which the same Time Slot is assigned to the same Physical Channel see ref. TS 25.331 [4].

Table 135

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Repetition Length			INTEGER (1..63)	

9.2.2.84 Repetition Period

The Repetition Period represents the number of consecutive Radio Frames after which the same assignment scheme of Time Slots to a Physical Channel is repeated. This means that if the Time Slot K is assigned to a physical channel in the Radio Frame J , it is assigned to the same physical channel also in all the Radio Frames $J+n^*\text{Repetition Period}$ (where n is an integer) see ref. TS 25.331 [4].

Table 136

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Repetition Period			ENUMERATED (1, 2, 4, 8, 16, 32, 64,...)	

9.2.2.85 TDD DPCH Offset

The Offset represents the phase information for the allocation of a group of dedicated physical channels. The first range is used when a starting offset is not required and the TDD Physical channel offset for each DPCH in the CCTrCH shall be directly determined from the TDD DPCH Offset. The second range is used when a starting offset is required. The TDD DPCH Offset shall map to the CFN and the TDD Physical Channel Offset for each DPCH in this CCTrCH shall be calculated by TDD DPCH Offset \bmod Repetition period, see ref. TS 25.331 [4].

Table 137

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CHOICE Offset Type				
>Initial Offset				
>>TDD DPCH Offset Value	M		INTEGER (0..255)	
>No Initial Offset				
>>TDD DPCH Offset Value	M		INTEGER (0..63)	

9.2.2.86 UL Timeslot Information

The *UL Timeslot Information* IE provides information on the time slot allocation for an UL DPCH.

Table 138

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UL Timeslot Information		$1..<\maxnoofULts>$		
>Time Slot	M		9.2.2.87	
>Midamble Shift And Burst Type	M		9.2.2.88	
>TFCI Presence	M		9.2.2.89	
>UL Code Information	M		9.2.2.90	

Table 138A

Range Bound	Explanation
\maxnoofULts	Maximum number of allocated time slots for an UL DPCH. The value of \maxnoofULts is 15.

9.2.2.87 Time Slot

The Time Slot represents the minimum time interval inside a Radio Frame that can be assigned to a Physical Channel.

Table 139

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Time Slot			INTEGER (0..14)	

9.2.2.88 Midamble Shift And Burst Type

This information element indicates burst type and midamble allocation.

The 256 chip midamble supports 3 different time shifts, the 512 chips midamble may support 8 or even 16 time shifts.

Three different midamble allocation schemes exist:

Default midamble: the midamble shift is selected by layer 1 depending on the associated channelisation code (DL and UL)

Common midamble: the midamble shift is chosen by layer 1 depending on the number of channelisation codes (possible in DL only)

UE specific midamble: a UE specific midamble is explicitly assigned (DL and UL)

Table 140

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
CHOICE Burst Type				
>Type1

>>CHOICE Midamble Allocation Mode	M			
>>>Default Midamble			NULL	
>>>UE Specific Midamble				
>>>Midamble Shift Long	M		INTEGER (0..15)	

9.2.2.89 TFCI Presence

The TFCI Presence parameter indicates whether the TFCI shall be included. [TDD - If it is present in the timeslot, it will be mapped to the channelisation code defined by TS 25.221 [19].]

Table 141

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
TFCI presence			ENUMERATED (Present, Not Present)	

9.2.2.90 TDD UL Code Information

The *TDD UL Code Information* IE provides information for UL Codes that have been established.

Table 142

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
TDD UL Code Information		$1..<\maxno_{ofDPCHs}>$		
>TDD Channelisation Code	M		9.2.2.91	

Table 143

Range Bound	Explanation
$\maxno_{ofDPCHs}$	Maximum number of DPCHs in one CCTrCH

9.2.2.91 TDD Channelisation Code

The Channelisation Code Number indicates which Channelisation Code is used for a given Physical Channel. In TDD the Channelisation Code is an Orthogonal Variable Spreading Factor code, that can have a spreading factor of 1, 2, 4, 8 or 16.

Table 144

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
TDD Channelisation Code			ENUMERATED ((1/1), (2/1), (2/2), (4/1), .. (4/4), (8/1), .. (8/8), (16/1), .. (16/16),...)	

9.2.2.92 Special Burst Scheduling

This information element expresses the number of frames between special burst transmissions during DTX.

Table 145

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Special Burst Scheduling			INTEGER (1..256)	Number of frames between special burst transmission during DTX

9.2.2.93 Max PRACH Midamble Shift

Indicates the maximum number of Midamble shifts to be used in a cell.

Table 146

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Max PRACH Midamble Shift			ENUMERATED (4, 8,...)	

9.2.2.94 PRACH Midamble

The PRACH Midamble indicates if only the Basic Midamble Sequence or also the time-inverted Midamble Sequence is used.

Table 147

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
PRACH Midamble			ENUMERATED (Inverted, Direct, ...)	

9.2.2.95 USCH Parameters

In Cell-FACH state, when the UE supports the USCH, and the CRNC is equal to the SRNC, the UE may be given periodic allocations on the uplink shared channel. Furthermore, the UE may also be configured to generate special bursts instead of uplink shared channel transmissions. This information element defines the uplink shared channel transmissions.

Table 148

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Cell Parameter ID	M		9.2.2.81	
TFCI Coding	M		9.2.2.82	
Puncture Limit	M		9.2.2.76	
Repetition Period	M		9.2.2.84	This is the scheduling interval on the USCH.
USCH Scheduling Offset	M		9.2.2.96	
UL Timeslot Information	M		9.2.2.86	
TFCS		1..<maxTF C>		
>CTFC	M		9.2.2.49	
TrCH Information List		1..<maxTr CH>		
>UL TrCH Information	M		9.2.2.60	

Table 149

Range bound	Explanation
maxTFC	Maximum number of TFC. The value is 1024.
maxTrCH	Maximum number of Transport Channels. The value is 32.

9.2.2.96 USCH Scheduling Offset

This information element indicates the offset relative to CFN=0 that the transmission on the uplink shared channel shall take place.

Table 150

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
USCH scheduling offset			INTEGER(0..255)	

9.2.2.97 Include Velocity

This element indicates that the UE's velocity is requested.

Table 151

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Include Velocity	M		ENUMERATED (requested)	

9.2.2.98 Velocity Estimate

The *Velocity Estimate* IE is used to describe the UE's velocity. The reference system is the same as used in TS 23.032 [11].

Table 152

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Choice Velocity Estimate				
>Horizontal Velocity				Horizontal speed and bearing (the direction of travel).
>>Horizontal Speed and Bearing	M		9.2.2.99	
>Horizontal with Vertical Velocity				Horizontal speed and bearing (the direction of travel) as well as vertical speed and the direction (upward or downward)
>>Horizontal Speed and Bearing	M		9.2.2.99	
>>Vertical Velocity	M		9.2.2.100	
>Horizontal Velocity with Uncertainty				Horizontal speed, bearing (the direction of travel), and the uncertainty of the reported speed.
>>Horizontal Speed and Bearing	M		9.2.2.99	
>>Uncertainty Speed	M		INTEGER (0..255)	Uncertainty speed is encoded in increments of 1 kilometer per hour using an 8 bit binary coded number (N). The value of N gives the uncertainty speed except for N=255 which indicates that the uncertainty is not specified
>Horizontal with Vertical Velocity and Uncertainty				Horizontal speed and bearing (the direction of travel) as well as vertical speed and the direction (upward or downward) and the uncertainty of the reported speed.
>>Horizontal Speed and Bearing	M		9.2.2.99	
>>Vertical Velocity	M		9.2.2.100	
>>Horizontal Uncertainty Speed	M		INTEGER (0..255)	Horizontal Uncertainty Speed is encoded in increments of 1 kilometer per hour using an 8 bit binary coded number (N). The value of N gives the uncertainty speed except for N=255 which indicates that the uncertainty is not specified
>>Vertical Uncertainty Speed	M		INTEGER (0..255)	Vertical Uncertainty Speed is encoded in increments of 1 kilometer per hour using an 8 bit binary coded number (N). The value of N gives the uncertainty speed except for N=255 which indicates that the uncertainty is not specified

9.2.2.99 Horizontal Speed and Bearing

This IE contains the two components of horizontal velocity: speed and bearing

Table 153

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Bearing	M		INTEGER (0..359)	The direction of movement is given in degrees where "0" represents North, "90" represents East, etc.
Horizontal Speed	M		INTEGER (0..<2 ¹¹ -1)	The relationship between (N) and the horizontal speed (h) in kilometers per hour it describes is: $N \leq h < N + 0.5$ (N=0) $N - 0.5 \leq h < N + 0.5$ (0<N<2 ¹¹ -1) $N - 0.5 \leq h$ $= 2^{11}-1$ (N)

9.2.2.100 Vertical Velocity

This IE contains the two components of vertical velocity: speed and direction

Table 154

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Vertical Speed	M		INTEGER (0..2 ⁸ -1)	The relationship between (N) and the vertical speed (v) in kilometers per hour it describes is: $N \leq v < N + 0.5$ (N = 0) $N - 0.5 \leq v < N + 0.5$ (0 < N < 2 ⁸ -1) $N - 0.5 \leq v$ (N = 2 ⁸ -1)
Vertical Speed Direction			ENUMERATED (upward, downward)	

9.2.2.101 GPS Positioning Instructions

This information element contains positioning instructions for GPS positioning method in SAS-centric mode.

Table 155

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Horizontal Accuracy Code	O		9.2.2.38		–	
Vertical Accuracy Code	O		9.2.2.39		–	
GPS Timing of Cell Wanted	M		BOOLEAN	This IE is set to TRUE if the UE is requested to report SFN-GPS timing of the reference cell.	–	
Additional Assistance Data Request	M		BOOLEAN	TRUE indicates that the UE is requested to send an additional assistance data request if the provided assistance data are not sufficient.	–	
Measurement Validity	O		ENUMERATED(CELL_DCH, all states except CELL_DCH, all states, ...)		YES	ignore

9.2.2.102 UE Position Estimate Info

The UE Position Estimate Info is used in UE-based positioning methods providing the UE position estimate from the RNC to the SAS in SAS-centric mode.

Table 156

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
CHOICE Reference Time	M				—	
>UTRAN GPS reference time Result			9.2.2.104		—	
>GPS reference time only					—	
>>GPS TOW msec	M		INTEGER (0..6.048*10 ⁸ -1, ...)	GPS Time of Week in milliseconds.	—	
>Cell timing					—	
>>SFN	M		INTEGER (0..4095)	SFN during which the position was calculated.	—	
>>UC-ID	M		UTRAN Cell Identifier 9.2.2.37	Identifies the reference cell for SFN.	—

>>UTRAN-GANSS Reference Time Result	M		9.2.2.136		YES	ignore
>GANSS reference time only					—	
>>GANSS reference time only	M				YES	ignore
>>>GANSS TOD msec	M		INTEGER(0..35 99999)	GANSS Time of Day in milliseconds.	—	
>>>GANSS time ID	O		GANSS ID 9.2.2.130	Absence of this IE means Galileo system time. The value "0" ("SBAS") shall not be used for GANSS Time ID.	—	
UE Position Estimate	M		Geographical Area 9.2.2.6		—	
GPS Reference Time Uncertainty	O		9.2.2.132		YES	ignore
Position Data	O		Position Data UE-Based 9.2.2.140		YES	ignore

9.2.2.103 UTRAN-GPS Reference Time

Table 157

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UTRAN GPS timing of cell frames	M		INTEGER (0..2322431999999, ...)	GPS timing of cell frames in steps of 1 chip.
UC-ID	O		UTRAN Cell Identifier 9.2.2.37	Identifies the reference cell for the GPS TOW-SFN relationship.
SFN	M		INTEGER (0..4095)	The SFN which the UTRAN GPS timing of cell frames time stamps.

9.2.2.104 UTRAN-GPS Reference Time Result

Table 158

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UE GPS timing of cell frames	M		INTEGER(0..37158911999999,...)	GPS Time of Week in units of 1/16 th UMTS chips according to TS 25.133 [13].
UC-ID	M		UTRAN Cell Identifier 9.2.2.37	Identifies the reference cell for the GPS TOW-SFN relationship
SFN	M		INTEGER(0..4095)	This IE indicates the SFN at which the UE timing of cell frame is captured.

9.2.2.105 $T_{\text{UTRAN-GPS}}$ Drift Rate

Table 159

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
$T_{\text{UTRAN-GPS}}$ Drift Rate	O		ENUMERATED (0, 1, 2, 5, 10, 15, 25, 50, -1, -2, -5, -10, -15, -25, -50, ...)	In 1/256 chips per sec.

9.2.2.106 Periodic Position Calculation Info

The Periodic Position Calculation Info contains information required for periodic location in RNC-centric mode.

Table 160

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Reference Number	M		INTEGER (0..32767,...)	This IE is used to uniquely associate all periodic Position Calculation procedures belonging to the location of the same target UE for periodic location. Position Calculation procedures belonging to the same target UE for periodic location shall use the same Reference Number.
Amount of Outstanding Requests	M		INTEGER (1.. 8639999,...)	This IE indicates the amount of outstanding periodic requests. This IE shall be set to the total number of periodic requests in the first Position Calculation Request message, and decrement by 1 for each new Position Calculation Request for periodic location. When the number reaches 1, the SAS will know that the periodic location is complete.
Reporting Interval	M		INTEGER (1.. 8639999,...)	This IE indicates the reporting interval in seconds when the SAS can expect a next Position Calculation Request associated to the same target UE in periodic location.

9.2.2.107 Periodic Location Info

The Periodic Location Info contains the periodic reporting interval and reporting amount for periodic location.

Table 161

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Reporting Amount	M		INTEGER (1.. 8639999,...)	This IE indicates the amount of periodic reports.
Reporting Interval	M		INTEGER (1.. 8639999,...)	This IE indicates the reporting interval in seconds.

9.2.2.108 Amount of Reporting

The Amount of Reporting together with the *RNC Response Time IE* in a POSITION ACTIVATION REQUEST message defines the periodical reporting criteria.

Table 162

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Amount of Reporting	M		ENUMERATED(2, 4, 8, 16, 32, 64, Infinity, ...)	Amount of reporting for a periodic location procedure.

9.2.2.109 Measurement Instructions Used

This information element contains measurement instructions used by the SRNC upon reception of a POSITION ACTIVATION REQUEST message.

Table 163

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Measurement Validity	M		ENUMERATED(CELL_DCH, all states except CELL_DCH, all states, ...)	

9.2.2.110 RRC State Change

Table 164

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
New RRC State	M		ENUMERATED(CELL_DCH, CELL_FACH, CELL_PCH, URA_PCH, ...)	

9.2.2.111 Periodic Position Termination Cause

The Position Periodic Termination Cause element indicates the reason for termination of a periodic reporting procedure in SAS-centric mode.

Table 165

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Periodic Position Termination Cause	M		ENUMERATED(RRC State Transition, Cancelled by SRNC, Cancelled by SAS, Undefined, ...)	

9.2.2.112 Requested Cell-ID Measurements

This information element contains a list of requested measurements for Cell-ID positioning method in SAS-centric mode.

Table 166

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Choice mode	M				-	
>FDD					-	
>>Round Trip Time Info	M		BOOLEAN	If set to TRUE, the RNC is requested to include the <i>Round Trip Time Info</i> IE in the Cell-ID Measured Results Info List.	-

Condition	Explanation
<i>ClockModel</i>	This IE shall be present if 'SBAS Satellite Clock Model' (Model-5) in IE <i>GANSS Additional Clock Models</i> is not included in <i>GANSS Additional Navigation Models</i> IE.

9.2.2.120 GANSS Positioning Instructions

This information element contains positioning instructions for GANSS positioning method in SAS-centric mode.

Table 174

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
Horizontal Accuracy Code	O		9.2.2.38		–	
Vertical Accuracy Code	O		9.2.2.39		–	
GANSS Timing of Cell Wanted	M		BIT STRING(8)	For each bit, if set to "1", indicates that for respective GANSS the GANSS Timing of Cell is wanted. Bit 1 is the MSB and bit 8 is the LSB (see clause 9.2.1). bit 1: Galileo bit 2: Modernized GPS bit 3: QZSS bit 4: GLONASS bit 5: BDS bits 6-8: reserved for future GANSS.	–	
Additional Assistance Data Request	M		BIT STRING(8)	For each bit, if set to "1", indicates that the UE is requested to send an additional assistance data request for the respective GANSS. Bit 1 is the MSB and bit 8 is the LSB (see clause 9.2.1). bit 1: Galileo bit 2: SBAS bit 3: Modernized GPS bit 4: QZSS bit 5: GLONASS bit 6: BDS bits 7-8: reserved for future GANSS.	–	
Measurement Validity	O		ENUMERATED (CELL_DCH, all states except CELL_DCH, all states, ...)		–	
GANSS Carrier-Phase Measurement Requested	O		9.2.2.143		YES	ignore
GANSS Multi-frequency Measurement Requested	O		9.2.2.144		YES	ignore

9.2.2.121 GANSS-UTRAN Time Relationship Uncertainty

This IE contains the uncertainty of the GANSS and UTRAN time relationship.

Table 175

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS-UTRAN Time Relationship Uncertainty	M		ENUMERATED (50ns, 500ns, 1us, 10us, 1ms, 10ms, 100ms, unreliable,...)	RNC estimate of uncertainty in GANSS-UTRAN time relationship
GANSS ID	O		9.2.2.130	Absence of this IE means Galileo.

9.2.2.122 GANSS Real Time Integrity

This IE contains parameters that describe the real-time status of the GANSS constellation.

Table 176

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
Satellite Information		1..<maxGA NSSSat>		
>Bad GANSS Sat ID	M		INTEGER(0.. .63)	Defined in TS 25.331 [4].
>Bad GANSS Signal ID	O		BIT STRING(8)	Coded as defined in TS 25.331 [4].

Table 176A

Range bound	Explanation
maxGANSSSat	Maximum number of satellites for which data is included in this IE. The value of maxGANSSSat is 64

9.2.2.123 GANSS Reference Measurement Information

This IE contains parameters that enable fast acquisition of the GANSS signals in UE-assisted GANSS positioning.

Table 177

IE/Group name	Presence	Range	IE Type and Reference	Semantics description	Criticality	Assigned Criticality
GANSS Signal ID	O		9.2.2.131	Absence of this field means the default value for the GANSS identified by 'GANSS ID' TS 25.331 [4].	–	
Satellite Information		1..<maxGANSat>			–	
>Sat ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].	–	
>Doppler (0 th order term)	M		INTEGER(-2048..2047)	Scaling factor 0.5 m/s Conversion between m/s and Hz shall be made by using the <i>nominal wavelength</i> of the assisted signal.	–	
>Extra Doppler		0..1			–	
>>Doppler (1 st order term)	M		INTEGER (-42..21)	Scaling factor 1/210 m/s ²	–	
>>Doppler Uncertainty	M		ENUMERATED (40,20,10,5,2.5)	m/s. The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty' to 'Doppler + Doppler Uncertainty'.	–	
>Code Phase	M		INTEGER(0..1023)	ms, scaling factor 2 ⁻¹⁰ <i>Nominal</i> chipping rate of the GNSS signal shall be used in conversion. Increasing binary values of the field signify increasing predicted pseudoranges.	–	
>Integer Code Phase	M		INTEGER(0..127)	ms. Integer code phase (expressed modulo 128 ms) currently being transmitted at the GANSS Reference Time, as seen by a receiver at the Reference Location	–	
>Code Phase Search Window	M		INTEGER(0..31)	Expected code-phase is in the range 'Code Phase – Code Phase Search Window' to 'Code Phase + Code Phase Search Window'. Coded as defined in TS 25.331 [4].	–	
>Azimuth and Elevation		0..1			–	
>>Azimuth	M		INTEGER(0..31)	Scaling factor 11.25 Degrees.	–	

IE/Group name	Presence	Range	IE Type and Reference	Semantics description	Criticality	Assigned Criticality
>>Elevation	M		INTEGER(0..7)	Scaling factor 11.25 Degrees.	–	
>>Azimuth and Elevation LSB		0..1			YES	ignore
>>>Azimuth LSB	M		INTEGER(0..15)	The full satellite azimuth is constructed as 'Azimuth' × 11.25 + 'Azimuth LSB' × 0.703125 degrees. An angle of x degrees means the satellite azimuth a is in the range $x \leq a < x+0.703125$ degrees.	–	
>>>Elevation LSB	M		INTEGER(0..15)	The full satellite elevation is constructed as 'Elevation' × 11.25 + 'Elevation LSB' × 0.703125 degrees. An angle of y degrees means the satellite elevation e is in the range $y \leq e < y+0.703125$ degrees.	–	
>Extra Doppler Extension		0..1		If this field is present, the "Extra Doppler" field should not be present.	YES	ignore
>>Doppler (1st order term)	M		INTEGER (-42..21)	Scaling factor 1/210 m/s ²	–	
>>Doppler Uncertainty Extension	M		ENUMERATED (60, 80, 100, 120, "No Information")	m/s. The Doppler experienced by a stationary UE is in the range 'Doppler – Doppler Uncertainty Extension' to 'Doppler + Doppler Uncertainty Extension'.	–	
Confidence	O		INTEGER (0..100)	Confidence level (in percent) of the reference location area or volume used to calculate the Satellite information parameters (search windows).	YES	ignore

Table 177A

Range bound	Explanation
maxGANSSat	Maximum number of satellites for which data is included in this IE. The value of maxGANSSat is 64

9.2.2.124 GANSS Reference Time

Table 178

IE/Group name	Presence	Range	IE Type and Reference	Semantics description	Criticality	Assigned Criticality
GANSS Day	O		INTEGER(0..8191)	The number of days from the beginning of GNSS system time (mod 8192)	–	
GANSS TOD	M		INTEGER(0..86399)	GNSS Time of Day in seconds	–	
GANSS TOD Uncertainty	O		INTEGER(0..127)	Provides the accuracy of the relation between GNSS TOD and UTRAN time if UTRAN GNSS timing of cell frames is provided. Its coding is defined in TS 25.331 [4]. This IE may only be present if SAS operates in SAS-centric mode.	–	
GANSS Time ID	O		GANSS ID 9.2.2.130	Absence of this IE means Galileo system time. The value "0" ("SBAS") shall not be used for GANSS Time ID.	–	
UTRAN GANSS Reference Time		0..1		This IE may only be present if SAS operates in SAS-centric mode.	–	
>UTRAN GANSS Timing of Cell Frames	M		INTEGER(0..999999750 by step of 250)	UTRAN GNSS timing of cell frames in steps of 250 ns. Indicates sub-second part of GANSS TOD IE. See TS 25.331 [4].	–	
>UC-ID	O		UTRAN Cell Identifier 9.2.2.37	Identifies the reference cell for the GANSS TOD-SFN relationship.	–	
>SFN	M		Integer(0..4095)	The SFN which the UTRAN GNSS timing of cell frames time stamps.	–	
TUTRAN-GANSS Drift Rate	O		ENUMERATED (0, 1, 2, 5, 10, 15, 25, 50, -1, -2, -5, -10, -15, -25, -50,...)	in 1/256 chips per sec.	–	
GANSS Day Cycle Number	O		INTEGER (0..7)	Number of 8192 day cycles occurred since the GNSS zero time-point defined in TS 25.331 [4]. The first 8192 GNSS days since the zero time-point is GANSS Day Number 0.	YES	ignore

9.2.2.125 GANSS Time Model

The *GANSS Time Model* IE contains a set of parameters needed to relate GANSS time to selected time reference indicated by GNSS_TO_ID.

Table 179

IE/Group name	Presence	Range	IE Type and Reference	Semantics description	Criticality	Assigned Criticality
GANSS Time Model Reference Time	M		INTEGER (0..37799)	GANSS reference time (modulo 1 week) in seconds. Scale Factor 2^4	–	
T _{A0}	M		INTEGER(-2147483648..2147483647)	Seconds, scale factor 2^{-35}	–	
T _{A1}	O		INTEGER(-8388608..8388607)	sec/sec, scale factor 2^{-51}	–	
T _{A2}	O		INTEGER (-64..63)	sec/sec ² , scale factor 2^{-68}	–	
GNSS_TO_ID	M		ENUMERATED(GPS,..., Galileo, QZSS, GLONASS, BDS)		–	
Week Number	O		INTEGER (0..8191)	Reference week of GANSS Time Model	–	
Delta_T	O		INTEGER (-128..127)	This field specifies the integer seconds of the GNSS-GNSS Time Offset. Scale factor 1 second.	YES	ignore

9.2.2.125A GANSS Additional Time Models

The *GANSS Additional Time Models* IE contains a set of parameters needed to relate GANSS time to selected time references.

Table 179A

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
GNSS-GNSS Time Model		1..<maxGANSS-1>		
>GANSS Time Model			9.2.2.125	

Table 179B

Range Bound	Explanation
maxGANSS-1	Maximum number of GANSS systems for which data is included in this IE. The value of maxGANSS-1 is 7.

9.2.2.126 GANSS UTC Model

The *GANSS UTC Model* IE contains a set of parameters needed to relate GANSS time to Universal Time Coordinate (UTC).

Table 180

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
A ₁	M		BIT STRING(24)	sec/sec (OS SIS ICD [22])
A ₀	M		BIT STRING(32)	seconds (OS SIS ICD [22])
t _{ot}	M		BIT STRING(8)	seconds (OS SIS ICD [22])
WN _t	M		BIT STRING(8)	weeks (OS SIS ICD [22])
Δt _{LS}	M		BIT STRING(8)	seconds (OS SIS ICD [22])

Table 181B

Range bound	Explanation
maxSgnType	Maximum number of signals for which data is included in this IE. The value of maxSgnType is 8.
maxGANSSat	Maximum number of GANSS satellites for which data is included in the IE. The value of maxGANSSat is 64.

9.2.2.128 Additional GPS Assistance Data Required

This IE lists the GPS assistance data types required by the UE.

Table 182

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Almanac	M		BOOLEAN	TRUE means requested
UTC Model	M		BOOLEAN	TRUE means requested
Ionospheric Model	M		BOOLEAN	TRUE means requested
Navigation Model	M		BOOLEAN	TRUE means requested
DGPS Corrections	M		BOOLEAN	TRUE means requested
Reference Location	M		BOOLEAN	TRUE means requested
Reference Time	M		BOOLEAN	TRUE means requested
Acquisition Assistance	M		BOOLEAN	TRUE means requested
Real-Time Integrity	M		BOOLEAN	TRUE means requested
Nav. Model Additional Data		0..1		
>GPS Week	M		INTEGER (0..1023)	GPS week number
>GPS_Toe	M		INTEGER (0..167)	GPS time of ephemeris in hours of the latest ephemeris set
>T-Toe limit	M		Integer (0..10)	ephemeris age tolerance in hours
>Satellites related data		0..<maxSat>		
>>SatID	M		INTEGER (0..63)	Identifies the satellite and is equal to (SV ID No - 1) where SV ID No is defined in ICD-GPS-200 [10].
>>IODE	M		INTEGER (0..255)	Issue of Data Ephemeris for SatID

Table 183

Range Bound	Explanation
maxSat	Maximum number of satellites for which data is included in this IE. The value of maxSat is 16.

9.2.2.129 Additional GANSS Assistance Data Required

This IE lists the GANSS assistance data types required by the UE.

Table 184

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description	Criticality	Assigned Criticality
GANSS Reference Time	M		BOOLEAN	TRUE means requested	–	
GANSS Reference Location	M		BOOLEAN	TRUE means requested	–	
GANSS Ionospheric model	M		BOOLEAN	TRUE means requested	–	
GANSS Additional Ionospheric Model	O		GANSS Additional Ionospheric Model Required 9.2.2.145	Presence means required.	YES	ignore
GANSS Earth Orientation Parameters	O		GANSS Earth Orientation Parameters Required 9.2.2.146		YES	ignore
GANSS Requested Generic Assistance Data		1..<maxGANS>			–	
>GANSS ID	O		9.2.2.130	Absence of this IE means Galileo	–	
>GANSS Real-Time Integrity	O		BOOLEAN	TRUE means requested	–	
>GANSS Differential Corrections		0..1			–	
>>DGANSS Signal	M		BIT STRING (8)	Coded as defined in TS 25.331 [4].	–	
>GANSS Almanac	O		BOOLEAN	TRUE means requested	–	
>GANSS Navigation Model	O		BOOLEAN	TRUE means requested	–	
>GANSS Time Model GNSS-GNSS	O		BIT STRING (9)	Defines the time model. Bit 1 is the MSB and bit 9 is the LSB (see clause 9.2.1). Bit 1 is set for GPS, Bit 2 is set for Galileo. Bit 3 is set for QZSS Bit 4 is set for GLONASS Bit 5 is set for BDS. Other bits are reserved.	–	
>GANSS Reference Measurement Information	O		BOOLEAN	TRUE means requested	–	
>GANSS Data Bits		0..1			–	
>>GANSS TOD	M		INTEGER (0..86399)	The GANSS TOD for which	–	

				the data bits are requested.		
>>Data Bit Assistance		1			-	
>>>GANSS Signal ID	M		BIT STRING(8)	Coded as defined in TS 25.331 [4].	-	
>>>GANSS Data Bit Interval	M		INTEGER(0..15)	This field represents the time length for which the Data Bit Assistance is requested. The Data Bit Assistance shall be relative to the time interval (GANSS TOD, GANSS TOD + Data Bit Interval). The Data Bit Interval r , expressed in seconds, is mapped to a binary number K with the following formula: $r = 0.1^* 2^K$ Value $K=15$ means that the time interval is not specified.	-	
>>>Satellite Information		0..<maxGANSat>			-	
>>>>Satellite ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].	-	
>GANSS UTC model	O		BOOLEAN	TRUE means requested	-	
>GANSS Navigation Model Additional data		0..1			-	
>>GANSS Week/Day	M		INTEGER(0..4095)	Defined in TS 25.331 [4].	-	
>>GANSS_Toe	M		INTEGER(0..167)	Defined in TS 25.331 [4].	-	
>>T-Toe limit	M		INTEGER(0..10)	Defined in TS 25.331 [4].	-	
>>Satellites list related data	M	0..<maxGANSSat>			-	
>>>Sat ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].	-

>GANSS Additional Navigation Models	O		GANSS Additional Navigation Models Required 9.2.2.147		YES	ignore
>GANSS Additional UTC Models	O		GANSS Additional UTC		YES	ignore

			Models Required 9.2.2.148			
>GANSS Auxiliary Information	O		GANSS Auxiliary Information Required 9.2.2.149		YES	ignore
>SBAS ID	O		9.2.2.134		YES	ignore
>GANSS Additional Assistance Data Choices	O		9.2.2.151		YES	ignore
>BDS Ionospheric Grid Model	O		BOOLEAN	This IE may be present if the GANSS ID IE indicates "BDS". TRUE means requested	YES	ignore
>DBDS Corrections	O	0..1		This IE may be present if the GANSS ID IE indicates "BDS".	YES	ignore
>>DGANSS Signal	M		BIT STRING(8)	Coded as defined in TS 25.331 [4]		

Table 185

Range Bound	Explanation
maxGANSS	Maximum number of GANSS for which data is included in this IE. The value of maxGANSS is 8.
maxGANSSSat	Maximum number of GANSS satellites for which data is included in this IE. The value of maxGANSSSat is 64.

9.2.2.130 GANSS ID

This IE defines a particular GANSS.

Table 186

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS ID	M		INTEGER(0..7)	Defines the GANSS and is coded as defined in the <i>UE positioning GANSS additional assistance data request IE</i> in TS 25.331 [4].

9.2.2.131 GANSS Signal ID

This IE defines a specific signal within a particular GANSS.

Table 187

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Signal ID	M		INTEGER (0..3,...,4..7)	Defines the GANSS signal and is coded as defined in TS 25.331 [4].

9.2.2.131a GANSS Signal IDs

This IE defines multiple signals within a particular GANSS.

Table 187A

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Signal IDs	M		BIT STRING(8)	Each bit represents one signal as defined in TS 25.331 [4].

9.2.2.132 GPS Reference Time Uncertainty

Table 188

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GPS Reference Time Uncertainty	M		Integer (0..127)	<p>This element provides the accuracy of the provided GPS time, or alternatively the accuracy of the provided relation between GPS and UTRAN time. If "GPS TOW" is the provided GPS time, or alternatively the GPS time corresponding to the UTRAN time provided, then the true GPS time lies in the interval ["GPS TOW" - "GPS Reference Time Uncertainty", "GPS TOW" + "GPS Reference Time Uncertainty"].</p> <p>The uncertainty r, expressed in microseconds, is mapped to a number K with the following formula:</p> $r = C * ((1+x)K - 1)$ <p>with C = 0.0022 and x = 0.18.</p> <p>To encode any higher value of the uncertainty than that corresponding to K=127 in the formula above, or to indicate an undefined value of the "GPS TOW", the same value, K=127, shall be used.</p>

9.2.2.133 GANSS Earth Orientation Parameters

Table 189

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
tEOP	M		BIT STRING(16)	EOP data reference time (seconds) (IS-GPS-200 [23])
PM_X	M		BIT STRING (21)	X-axis polar motion value at reference time (arc-seconds) (IS-GPS-200 [23])
PM_X_dot	M		BIT STRING (15)	X-axis polar motion drift at reference time (arc-seconds/day) (IS-GPS-200 [23])
PM_Y	M		BIT STRING (21)	Y-axis polar motion value at reference time (arc-seconds) (IS-GPS-200 [23])
PM_Y_dot	M		BIT STRING (15)	Y-axis polar motion drift at reference time (arc-seconds/day) (IS-GPS-200 [23])
ΔUT1	M		BIT STRING (31)	UT1-UTC difference at reference time (seconds) (IS-GPS-200 [23])
ΔUT1_dot	M		BIT STRING (19)	Rate of UT1-UTC difference at reference time (seconds/day) (IS-GPS-200 [23])

9.2.2.134 SBAS ID

This IE defines a specific SBAS.

Table 190

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
SBAS ID	M		ENUMERATED(WAAS, EGNOS, MSAS, GAGAN, ...)	

9.2.2.135 GANSS Auxiliary Information

Table 191

IE/Group name	Presence	Range	IE Type and Reference	Semantics description

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
CHOICE GANSS-ID				
>GANSS-ID-1				This choice may only be present if GANSS ID indicated 'Modernized GPS'
>>Aux Info List		1 .. <maxGANSSat>		
>>>Sat ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].
>>>Signals Available	M		BIT STRING(8)	Coded as defined in TS 25.331 [4].
>GANSS-ID-3				This choice may be present if GANSS ID indicated 'GLONASS'
>>Aux Info List		1 .. <maxGANSSat>		
>>>Sat ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].
>>>Signals Available	M		BIT STRING(8)	Coded as defined in TS 25.331 [4].
>>>Channel Number	M		INTEGER (-7..13)	This field indicates the GLONASS carrier frequency number of the satellite identified by <i>Sat ID</i> , as defined in [28].

Table 192

Range Bound	Explanation
maxGANSSat	Maximum number of GANSS satellites for which data is included in this IE. The value of maxGANSSat is 64.

9.2.2.136 UTRAN-GANSS Reference Time Result

Table 193

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UE GANSS timing of cell frames	M		INTEGER(0..34559 9999999,...)	GANSS Time of Day in steps of 250 ns TS 25.331 [4].
GANSS time ID	O		GANSS ID 9.2.2.130	Absence of this IE means Galileo system time. The value "0" ("SBAS") shall not be used for GANSS Time ID.
GANSS TOD Uncertainty	O		INTEGER(0..127)	Coded as defined in TS 25.331 [4].
UC-ID	M		UTRAN Cell Identifier 9.2.2.37	Identifies the reference cell for the GANSS TOD-SFN relationship.
SFN	M		INTEGER (0..4095)	This IE indicates the SFN at which the UE timing of cell frame is captured.

9.2.2.137 GANSS Additional Ionospheric Model Request

Table 194

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Data ID	M		BIT STRING(2)	Data ID for GANSS Additional Ionospheric Model as defined in TS 25.331 [4].

9.2.2.138 GANSS Earth Orientation Parameters Request

Table 195

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Earth Orientation Parameters Request	M		ENUMERATED(Requested, Not-Requested)	

9.2.2.139 Support for Non-Native Assistance Choices Indication

Table 196

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Support for Non-Native Assistance Choices Indication	M		BOOLEAN	TRUE means supported.

9.2.2.140 Position Data UE-Based

Table 197

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Position Data UE-Based	M		Bit String(16)	For each bit, if set to "1" indicates that respective GNSS or position system was used by the UE for position calculation. Coded as defined in TS 25.331 [4].

9.2.2.141 GANSS Code Phase Ambiguity Extension

Table 198

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Code Phase Ambiguity Extension	M		INTEGER(32..127)	In milliseconds. Defined in TS 25.331 [4].

9.2.2.142 GANSS Integer Code Phase Extension

Table 199

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Integer Code Phase Extension	M		INTEGER(64..127)	In milliseconds. Defined in TS 25.331 [4].

9.2.2.143 GANSS Carrier-Phase Measurement Requested

Table 200

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Carrier-Phase Measurement Requested	M		BIT STRING(8)	<p>For each bit, if set to "1", indicates that the UE is requested to report carrier phase measurements for the respective GANSS.</p> <p>Bit 1 is the MSB and bit 8 is the LSB (see clause 9.2.1).</p> <ul style="list-style-type: none"> bit 1: Galileo bit 2: SBAS bit 3: Modernized GPS bit 4: QZSS bit 5: GLONASS bit 6: BDS <p>bits 7-8: reserved for future GANSS.</p>

9.2.2.144 GANSS Multi-frequency Measurement Requested

Table 201

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Multi-frequency Measurement Requested	M		BIT STRING(8)	<p>For each bit, if set to "1", indicates that the UE is requested to report measurements for multiple GANSS signals for the respective GANSS.</p> <p>Bit 1 is the MSB and bit 8 is the LSB (see clause 9.2.1).</p> <ul style="list-style-type: none"> bit 1: Galileo bit 2: SBAS bit 3: Modernized GPS bit 4: QZSS bit 5: GLONASS bit 6: BDS <p>bits 7-8: reserved for future GANSS.</p>

9.2.2.145 GANSS Additional Ionospheric Model Required

Table 202

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Data ID	M		BIT STRING(2)	Data ID for GANSS Additional Ionospheric Model as defined in the <i>UE positioning GANSS additional assistance data request IE</i> of TS 25.331 [4].

9.2.2.146 GANSS Earth Orientation Parameters Required

Table 203

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Earth Orientation Parameters Required	M		BOOLEAN	TRUE means required.

9.2.2.147 GANSS Additional Navigation Models Required

Table 204

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Additional Navigation Models Required	M		BOOLEAN	TRUE means required.

9.2.2.148 GANSS Additional UTC Models Required

Table 205

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Additional UTC Models Required	M		BOOLEAN	TRUE means required.

9.2.2.149 GANSS Auxiliary Information Required

Table 206

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Auxiliary Information Required	M		BOOLEAN	TRUE means required.

9.2.2.150 SBAS IDs

This IE defines multiple SBASs.

Table 207

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
SBAS IDs	M		BIT STRING(8)	Each bit represents one SBAS as defined in TS 25.331 [4], subclause 10.3.3.45.

9.2.2.151 GANSS Additional Assistance Data Choices

Table 208

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
GANSS Additional Assistance Data Choices		1		
>Orbit Model ID	O		INTEGER(0..7)	Coded as defined in the <i>UE positioning GANSS additional assistance data request IE</i> of TS 25.331 [4].
>Clock Model ID	O		INTEGER(0..7)	Coded as defined in the <i>UE positioning GANSS additional assistance data request IE</i> of TS 25.331 [4].
>UTC Model ID	O		INTEGER(0..7)	Coded as defined in the <i>UE positioning GANSS additional assistance data request IE</i> of TS 25.331 [4].
>Almanac Model ID	O		INTEGER(0..7)	Coded as defined in the <i>UE positioning GANSS additional assistance data request IE</i> of TS 25.331 [4].

9.2.2.152 Cell-ID Measured Results Sets

This IE contains the list of Cell-ID measurements of signals associated with one or more cells.

Table 209

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Cell-ID Measured Results Sets		1..<maxNoOfMeasurements>		
>Cell-ID Measured Results Info List	M		9.2.2.31	For SAS-centric mode.

Table 209A

Range Bound	Explanation
maxNoOfMeasurements	Maximum number of Measurements of <i>Cell-ID Measured Results Info List</i> and <i>OTDOA Measured Results Info List</i> included in the Position Calculation Request message. The value for maxNoOfMeasurements is 16.

9.2.2.153 OTDOA Reference Cell Info SAS-centric mode

Table 210

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UC-ID	M		9.2.2.37	The identifier of the reference cell for the SFN-SFN Observed Time Difference Type 2 measurements.

9.2.2.154 DGNSS Validity Period

This IE defines the validity period of the GNSS differential corrections provided in *DGPS corrections* and *DGANSS corrections* IEs

Table 211

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
UDRE Growth Rate	M		Enumerated(UDRE growth 1.5, UDRE growth 2, UDRE growth 4, UDRE growth 6, UDRE growth 8, UDRE growth 10, UDRE growth 12, UDRE growth 16)	This field provides an estimate of the growth rate of uncertainty ($1-\sigma$) in the corrections. The UDRE at time value specified in the <i>Time of Validity for UDRE Growth Rate</i> field is the value of this field times the value of UDRE provided in <i>DGPS Corrections</i> or <i>DGANSS corrections</i> IE (TS 25.331 [4]).
Time of Validity for UDRE Growth Rate	M		Enumerated(val20sec, val40sec, val80sec, val160sec, val320sec, val640sec, val1280sec, val2560sec)	This field specifies the time when the <i>UDRE Growth Rate</i> field applies (TS 25.331 [4]).

9.2.2.155 IRAT Measured Results Info List

This IE contains the Cell-ID measurements of signals associated with one or more Inter-RAT cells.

Table 212

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Cell-ID IRAT Measured Results Info				
>GERAN Measured Results Info	O			
>>GERAN Measured Results	M	1 to <maxReportedGERANCells>		
>>GERAN Cell Global Identity	O		9.2.2.156	
>>>GERAN PCI		1		
>>>bsic	M		9.2.2.157	
>>>arfcn	M		INTEGER (0..1023)	TS 45.005 [29]
>>>GSM RSSI	M		INTEGER (0..63)	RXLEV is mapped to a value between 0 and 63, TS 45.008 [30].

Table 212A

Range bound	Explanation
maxReportedGERANCells	Maximum number of GERAN neighbour cells. The value of maxReportedGERANCells is 6.

9.2.2.156 GERAN Cell Global Identity

Table 213

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
PLMN Identity	M		OCTET STRING (SIZE (3))	<ul style="list-style-type: none"> - digits 0 to 9, encoded 0000 to 1001, - 1111 used as filler digit, two digits per octet, - bits 4 to 1 of octet n encoding digit 2n-1 - bits 8 to 5 of octet n encoding digit 2n <p>-The PLMN identity consists of 3 digits from MCC followed by either -a filler digit plus 2 digits from MNC (in case of 2 digit MNC) or -3 digits from MNC (in case of a 3 digit MNC).</p>
LAC	M		INTEGER(0..65535)	Location Area Code
CI	M		INTEGER(0..65535)	Cell Identifier

9.2.2.157 GSM BSIC

Table 214

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
Network Colour Code (NCC)	M		BIT STRING (3)	The first/leftmost bit of the bit string contains the most significant bit of the NCC.
Base Station Colour Code (BCC)	M		BIT STRING (3)	The first/leftmost bit of the bit string contains the most significant bit of the BCC.

9.2.2.158 IMSI

This information element identifies the International Mobile Subscriber Identity of the target UE (see TS 25.413 [32]).

Table 215

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
IMSI	M		OCTET STRING (SIZE (3..8))	<ul style="list-style-type: none"> - digits 0 to 9, encoded 0000 to 1001, - 1111 used as filler digit, two digits per octet, - bit 4 to 1 of octet n encoding digit 2n-1 - bit 8 to 5 of octet n encoding digit 2n <p>-Number of decimal digits shall be from 6 to 15 starting with the digits from the PLMN identity. When the IMSI is made of an odd number of digits, the filler digit shall be added at the end to make an even number of digits of length 2N. The filler digit shall then be consequently encoded as bit 8 to 5 of octet N.</p>

9.2.2.159 IMEI

This information element identifies the International Mobile Station Equipment Identity of the target UE (see TS 25.413 [32]).

Table 216

IE/Group Name	Presence	Range	IE Type and Reference	Semantics Description
IMEI	M		OCTET STRING (SIZE (8))	<ul style="list-style-type: none"> - hexadecimal digits 0 to F, two hexadecimal digits per octet, - each hexadecimal digit encoded 0000 to 1111, - 1111 used as filler for bits 8 to 5 of last octet - bit 4 to 1 of octet n encoding digit 2n-1 - bit 8 to 5 of octet n encoding digit 2n <p>Number of hexadecimal digits shall be 15.</p>

9.2.2.160 BDS Ionospheric Grid Model

This IE contains BDS Ionospheric Grid information to calculate the propagation delays of the B1I (BDS-SIS-ICD-B1I-1.0 [33]) signal through the ionosphere.

Table 217

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
BDS Reference Time	M		Integer(0..3570 by step of 30)	Seconds. Time in BDS system time (modulo 3600 s) when the BDS Ionospheric Grid Information is valid.
BDS Ionospheric Grid Information	O	1 ..<maxlonGridInfo>		Ionospheric information for up to 16 grid points will be included in this version of the specification.
>IGP number	M		INTEGER (1..320)	Ionospheric grid point number (dimensionless) (BDS-SIS-ICD-B1I-1.0 [33]).
>Vertical Delay	M		BIT STRING (9)	Vertical Delay at Ionospheric Grid Points (meters) (BDS-SIS-ICD-B1I-1.0 [33]).
>GIVEI	M		BIT STRING (4)	Grid Ionospheric Vertical Error Index (dimensionless) (BDS-SIS-ICD-B1I-1.0 [33]).

Table 218

Range Bound	Explanation
maxlonGridInfo	Maximum number of ionospheric grid points information for which data is included in this IE. The value of maxlonGridInfo is 320.

9.2.2.161 DBDS Correction Information

This IE contains BDS differential corrections to be used by the UE.

Table 219

IE/Group name	Presence	Range	IE Type and Reference	Semantics description
DBDS Reference Time	M		INTEGER (0..3570 by step of 30)	Seconds. Time in BDS system time (modulo 3600 s) when the DBDS corrections are valid.
DBDS information	M	1 to <maxSgnType>		
>DBDS Signal ID	O		9.2.2.131	Absence of this field means the B1I.
>DGANSS signal information	M	1..<maxGANSSat>		
>>Sat ID	M		INTEGER(0..63)	Defined in TS 25.331 [4].
>>UDREI	M		INTEGER(0..15)	Defined in TS 25.331 [4].
>>RURAI	M		INTEGER(0..15)	Defined in TS 25.331 [4].
>>Δt	M		BIT STRING (13)	Defined in TS 25.331 [4].

Table 220

Range bound	Explanation
maxSgnType	Maximum number of signals for which data is included in this IE. The value of maxSgnType is 8.
maxGANSSat	Maximum number of satellites for which data is included in this IE. The value of maxGANSSat is 64.

9.3 Message and Information Element Abstract Syntax (with ASN.1)

9.3.0 General

PCAP ASN.1 definition conforms with ITU-T Rec. X.680 [7], ITU-T Rec. X.681 [8], and ITU-T Rec. X.691 [9].

The ASN.1 definition specifies the structure and content of PCAP messages. PCAP messages can contain any IEs specified in the object set definitions for that message without the order or number of occurrence being restricted by ASN.1. However, for this version of the standard, a sending entity shall construct a PCAP message according to the PDU definitions module and with the following additional rules (Note that in the following IE means an IE in the object set with an explicit id. If one IE needed to appear more than once in one object set, then the different occurrences have different IE ids):

- IEs shall be ordered (in an IE container) in the order they appear in object set definitions.
- Object set definitions specify how many times IEs may appear. An IE shall appear exactly once if the presence field in an object has value "mandatory". An IE may appear at most once if the presence field in an object has value "optional" or "conditional". If in a tabular format there is multiplicity specified for an IE (i.e. an IE list) then in the corresponding ASN.1 definition the list definition is separated into two parts. The first part defines an IE container list where the list elements reside. The second part defines list elements. The IE container list appears as an IE of its own. For this version of the standard an IE container list may contain only one kind of list elements.

If a PCAP message that is not constructed as defined above is received, this shall be considered as Abstract Syntax Error, and the message shall be handled as defined for Abstract Syntax Error in clause 10.3.6.

Clause 9.3 presents the Abstract Syntax of PCAP protocol with ASN.1. In case there is contradiction between the ASN.1 definition in this clause and the tabular format in clauses 9.1 and 9.2, the ASN.1 shall take precedence, except for the definition of conditions for the presence of conditional elements, where the tabular format shall take precedence.

9.3.1 Usage of private message mechanism for non-standard use

The private message mechanism for non-standard use may be used:

- for special operator- (and/or vendor) specific features considered not to be part of the basic functionality, i.e. the functionality required for a complete and high-quality specification in order to guarantee multivendor interoperability;
- by vendors for research purposes, e.g. to implement and evaluate new algorithms/features before such features are proposed for standardisation.

The private message mechanism shall not be used for basic functionality. Such functionality shall be standardised.

9.4 Message Transfer Syntax

PCAP shall use the ASN.1 Basic Packed Encoding Rules (BASIC-PER) Aligned Variant as transfer syntax, as specified in ITU-T Rec. X.691 [9].

10 Handling of Unknown, Unforeseen and Erroneous Protocol Data

10.1 General

Protocol Error cases can be divided into three classes:

- Transfer Syntax Error.
- Abstract Syntax Error.
- Logical Error.

Protocol errors can occur in the following functions within a receiving node.

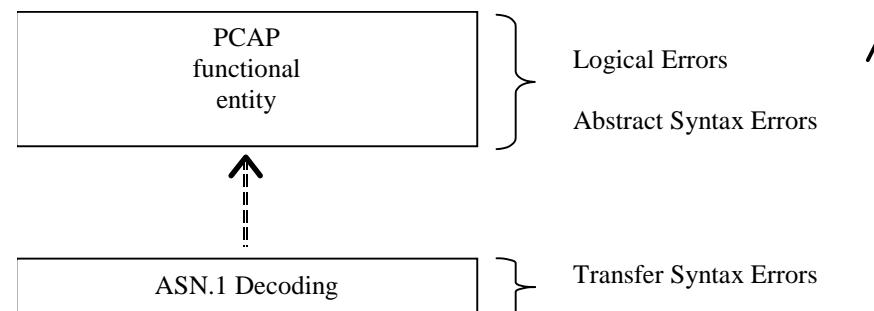

Figure 10: Protocol Errors in PCAP

The information stated in subclauses 10.2, 10.3 and 10.4, to be included in the message used when reporting an error, is what at minimum shall be included. Other optional information elements within the message may also be included, if available. This is also valid for the case when the reporting is done with a response message. The latter is an exception to what is stated in subclause 4.1.

10.2 Transfer Syntax Error

A Transfer Syntax Error occurs when the receiver is not able to decode the received physical message. Transfer syntax errors are always detected in the process of ASN.1 decoding. If a Transfer Syntax Error occurs, the receiver should initiate Error Indication procedure with appropriate cause value for the Transfer Syntax protocol error.

Examples for Transfer Syntax Errors are:

- Violation of value ranges in ASN.1 definition of messages. e.g.: If an IE has a defined value range of 0 to 10 (ASN.1: INTEGER (0..10)), and 12 will be received, then this will be treated as a transfer syntax error.
- Violation in list element constraints. e.g.: If a list is defined as containing 1 to 10 elements, and 12 elements will be received, than this case will be handled as a transfer syntax error.
- Missing mandatory elements in ASN.1 SEQUENCE definitions (as sent by the originator of the message).
- Wrong order of elements in ASN.1 SEQUENCE definitions (as sent by the originator of the message).

10.3 Abstract Syntax Error

10.3.1 General

An Abstract Syntax Error occurs when the receiving functional PCAP entity:

- 1) receives IEs or IE groups that cannot be understood (unknown IE id);
- 2) receives IEs for which the logical range is violated (e.g.: ASN.1 definition: 0 to 15, the logical range is 0 to 10 (values 11 to 15 are undefined), and 12 will be received; this case will be handled as an abstract syntax error using criticality information sent by the originator of the message);
- 3) does not receive IEs or IE groups but according to the specified presence of the concerning object, the IEs or IE groups should have been present in the received message;
- 4) receives IEs or IE groups that are defined to be part of that message in wrong order or with too many occurrences of the same IE or IE group;
- 5) receives IEs or IE groups but according to the conditional presence of the concerning object and the specified condition, the IEs or IE groups should not have been present in the received message.

Cases 1 and 2 (not comprehended IE/IE group) are handled based on received Criticality information. Case 3 (missing IE/IE group) is handled based on Criticality information and Presence information for the missing IE/IE group specified in the version of the specification used by the receiver. Case 4 (IEs or IE groups in wrong order or with too many occurrences) and Case 5 (erroneously present conditional IEs or IE groups) result in rejecting the procedure.

If an Abstract Syntax Error occurs, the receiver shall read the remaining message and shall then for each detected Abstract Syntax Error that belong to cases 1-3 act according to the Criticality Information and Presence Information for the IE/IE group due to which Abstract Syntax Error occurred in accordance with subclauses 10.3.4 and 10.3.5. The handling of cases 4 and 5 is specified in subclause 10.3.6.

10.3.2 Criticality Information

In the PCAP messages there is criticality information set for individual IEs and/or IE groups. This criticality information instructs the receiver how to act when receiving an IE or an IE group that is not comprehended, i.e. the entire item (IE or IE group) which is not (fully or partially) comprehended shall be treated in accordance with its own criticality information as specified in subclause 10.3.4.

In addition, the criticality information is used in case of the missing IE/IE group abstract syntax error (see subclause 10.3.5).

The receiving node shall take different actions depending on the value of the Criticality Information. The three possible values of the Criticality Information for an IE/IE group are:

- Reject IE.
- Ignore IE and Notify Sender.
- Ignore IE.

The following rules restrict when a receiving entity may consider an IE, an IE group, or an EP not comprehended (not implemented), and when action based on criticality information is applicable:

1. IE or IE group: When one new or modified IE or IE group is implemented for one EP from a standard version, then other new or modified IEs or IE groups specified for that EP in that standard version shall be considered comprehended by a receiving entity (some may still remain unsupported).
2. EP: The comprehension of different EPs within a standard version or between different standard versions is not mandated. Any EP that is not supported may be considered not comprehended, even if another EP from that standard version is comprehended, and action based on criticality shall be applied.

10.3.3 Presence Information

For many IEs/IE groups which are optional according to the ASN.1 transfer syntax, PCAP specifies separately if the presence of these IEs/IE groups is optional or mandatory with respect to RNS application by means of the presence field of the concerning object of class PCAP-PROTOCOL-IES, PCAP -PROTOCOL-IES-PAIR, PCAP -PROTOCOL-EXTENSION or PCAP -PRIVATE-IES.

The presence field of the indicated classes supports three values:

1. Optional;
2. Conditional;
3. Mandatory.

If an IE/IE group is not included in a received message and the presence of the IE/IE group is mandatory or the presence is conditional and the condition is true according to the version of the specification used by the receiver, an abstract syntax error occurs due to a missing IE/IE group.

If an IE/IE group is included in a received message and the presence of the IE/IE group is conditional and the condition is false according to the version of the specification used by the receiver, an abstract syntax error occurs due to this erroneously present conditional IE/IE group.

10.3.4 Not comprehended IE/IE group

10.3.4.1 Procedure Code

The receiving node shall treat the different types of received criticality information of the *Procedure Code* IE according to the following:

Reject IE:

- If a message is received with a *Procedure Code* IE marked with "*Reject IE*" which the receiving node does not comprehend, the receiving node shall reject the procedure using the Error Indication procedure.

Ignore IE and Notify Sender:

- If a message is received with a *Procedure Code* IE marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the procedure and initiate the Error Indication procedure.

Ignore IE:

- If a message is received with a *Procedure Code* IE marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the procedure.

When using the Error Indication procedure to reject a procedure or to report an ignored procedure it shall include the *Procedure Code* IE, the *Triggering Message* IE, and the *Procedure Criticality* IE in the *Criticality Diagnostics* IE.

10.3.4.1A Type of Message

When the receiving node cannot decode the *Type of Message* IE, the Error Indication procedure shall be initiated with an appropriate cause value.

10.3.4.2 IEs other than the Procedure Code and Type of Message

The receiving node shall treat the different types of received criticality information of an IE/IE group other than the *Procedure Code* IE and *Type of Message* IE according to the following:

Reject IE:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Reject IE*" which the receiving node does not comprehend; none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the rejection of one or more IEs/IE groups using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a message *initiating* a procedure that does not have a message to report unsuccessful outcome is received containing one or more IEs/IE groups marked with "*Reject IE*" which the receiving node does not comprehend, the receiving node shall terminate the procedure and initiate the Error Indication procedure.

- If a *response* message is received containing one or more IEs/IE groups marked with "*Reject IE*", that the receiving node does not comprehend, the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

Ignore IE and Notify Sender:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups, and report in the response message of the procedure that one or more IEs/IE groups have been ignored. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the response message, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a message *initiating* a procedure that does not have a message to report the outcome of the procedure is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups, and initiate the Error Indication procedure to report that one or more IEs/IE groups have been ignored.
- If a *response* message is received containing one or more IEs/IE groups marked with "*Ignore IE and Notify Sender*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups, continue with the procedure as if the not comprehended IEs/IE groups were not received (except for the reporting) using the understood IEs/IE groups and initiate the Error Indication procedure.

Ignore IE:

- If a message *initiating* a procedure is received containing one or more IEs/IE groups marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups and continue with the procedure as if the not comprehended IEs/IE groups were not received using the understood IEs/IE groups.
- If a *response* message is received containing one or more IEs/IE groups marked with "*Ignore IE*" which the receiving node does not comprehend, the receiving node shall ignore the content of the not comprehended IEs/IE groups.

When reporting not comprehended IEs/IE groups marked with "*Reject IE*" or "*Ignore IE and Notify Sender*" using a response message defined for the procedure, the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group. The *Repetition Number* IE shall be included in the *Information Element Criticality Diagnostics* IE if the reported IE/IE group was part of a "SEQUENCE OF" definition.

When reporting not comprehended IEs/IE groups marked with "*Reject IE*" or "*Ignore IE and Notify Sender*" using the Error Indication procedure, the *Procedure Code* IE, the *Triggering Message* IE, *Procedure Criticality* IE, the *Transaction Id* IE, and the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group. The *Repetition Number* IE shall be included in the *Information Element Criticality Diagnostics* IE if the reported IE/IE group was part of a "SEQUENCE OF" definition.

10.3.5 Missing IE or IE group

The receiving node shall treat the missing IE/IE group according to the criticality information for the missing IE/IE group in the received message specified in the version of the present document used by the receiver:

Reject IE:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Reject IE*"; none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the missing IEs/IE groups using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a received message *initiating* a procedure that does not have a message to report unsuccessful outcome is missing one or more IEs/IE groups with specified criticality "*Reject IE*", the receiving node shall initiate the Error Indication procedure.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Reject IE*", the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

Ignore IE and Notify Sender:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and report in the response message of the procedure that one or more IEs/IE groups were missing. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the response message, the receiving node shall instead terminate the procedure and initiate the Error Indication procedure.
- If a received message *initiating* a procedure that does not have a message to report the outcome of the procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and initiate the Error Indication procedure to report that one or more IEs/IE groups were missing.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Ignore IE and Notify Sender*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message and initiate the Error Indication procedure to report that one or more IEs/IE groups were missing.

Ignore IE:

- If a received message *initiating* a procedure is missing one or more IEs/IE groups with specified criticality "*Ignore IE*", the receiving node shall ignore that those IEs are missing and continue with the procedure based on the other IEs/IE groups present in the message.
- If a received *response* message is missing one or more IEs/IE groups with specified criticality "*Ignore IE*", the receiving node shall ignore that those IEs/IE groups are missing.

When reporting missing IEs/IE groups with specified criticality "*Reject IE*" or "*Ignore IE and Notify Sender*" using a response message defined for the procedure, the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group.

When reporting missing IEs/IE groups with specified criticality "*Reject IE*" or "*Ignore IE and Notify Sender*" using the Error Indication procedure, the *Procedure Code* IE, the *Triggering Message* IE, *Procedure Criticality* IE, the *Transaction Id* IE, and the *Information Element Criticality Diagnostics* IE shall be included in the *Criticality Diagnostics* IE for each reported IE/IE group.

10.3.6 IEs or IE groups received in wrong order or with too many occurrences or erroneously present

If a message with IEs or IE groups in wrong order or with too many occurrences is received or if IEs or IE groups with a conditional presence are present when the condition is not met (i.e. erroneously present), the receiving node shall behave according to the following:

- If a message *initiating* a procedure is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, none of the functional requests of the message shall be executed. The receiving node shall reject the procedure and report the cause value "Abstract Syntax Error (Falsely Constructed Message)" using the message normally used to report unsuccessful outcome of the procedure. In case the information received in the initiating message was insufficient to determine a value for all IEs that are required to be present in the message used to report the unsuccessful outcome of the procedure, the receiving node shall instead terminate the procedure and initiate the Error Indication.
- If a message *initiating* a procedure that does not have a message to report unsuccessful outcome is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, the receiving node shall terminate the procedure and initiate the Error Indication procedure, and use cause value "Abstract Syntax Error (Falsely Constructed Message)".
- If a *response* message is received containing IEs or IE groups in wrong order or with too many occurrences or erroneously present, the receiving node shall consider the procedure as unsuccessfully terminated and initiate local error handling.

10.4 Logical Error

Logical error situations occur when a message is comprehended correctly, but the information contained within the message is not valid (i.e. semantic error), or describes a procedure which is not compatible with the state of the receiver. In these conditions, the following behaviour shall be performed (unless otherwise specified) as defined by the class of the elementary procedure, irrespective of the criticality of the IEs/IE groups containing the erroneous values.

Class 1:

Protocol Causes:

Where the logical error occurs in a request message of a class 1 procedure, and the procedure has a message to report this unsuccessful outcome, this message shall be sent with an appropriate cause value. Typical cause values are:

1. Semantic Error.
2. Message not compatible with receiver state.

Where the logical error is contained in a request message of a class 1 procedure, and the procedure does not have a message to report this unsuccessful outcome, the procedure shall be terminated and the Error Indication procedure shall be initiated with an appropriate cause value.

Where the logical error exists in a response message of a class 1 procedure, the procedure shall be considered as unsuccessfully terminated and local error handling shall be initiated.

Class 2:

Where the logical error occurs in a message of a class 2 procedure, the procedure shall be terminated and the Error Indication procedure shall be initiated with an appropriate cause value.

10.5 Exceptions

The error handling for all the cases described hereafter shall take precedence over any other error handling described in the other subclauses of clause 10.

- If any type of error (Transfer Syntax Error, Abstract Syntax Error or Logical Error) is detected in the ERROR INDICATION message, it shall not trigger the Error Indication procedure in the receiving Node but local error handling.
- In case a response message or Error Indication message needs to be returned, but the information necessary to determine the receiver of that message is missing, the procedure shall be considered as unsuccessfully terminated and local error handling shall be initiated.
- If an error that terminates a procedure occurs, the returned cause value shall reflect the error that caused the termination of the procedure even if one or more abstract syntax errors with criticality 'ignore and notify' have earlier occurred within the same procedure.

Annex A (informative): Guidelines for Usage of the Criticality Diagnostics IE

A.1 EXAMPLE MESSAGE Layout

Assume the following message format:

Table A.1

IE/Group Name	Presence	Range	IE type and reference	Semantics description	Criticality	Assigned Criticality
Message Type	M				YES	Reject
Transaction ID	M				-	
A	M				YES	reject
B	M				YES	reject
>E		1..<maxE>			EACH	ignore
>>F		1..<maxF>			-	
>>>G		0..3, ...			EACH	ignore
>>H		1..<maxH>			EACH	ignore
>>>G		0..3, ...			EACH	ignore and notify
>>G	M				YES	reject
>>J		1..<maxJ>			-	
>>>G		0..3, ...			EACH	reject
C	M				YES	reject
>K		1..<maxK>			EACH	ignore and notify
>>L		1..<maxL>			-	
>>>M	O				-	
D	M				YES	reject

NOTE: The IEs F, J, and L do not have assigned criticality. The IEs F, J, and L are consequently realised as the ASN.1 type SEQUENCE OF of "ordinary" ASN.1 type, e.g. INTEGER. On the other hand, the repeatable IEs with assigned criticality are realised as the ASN.1 type SEQUENCE OF of an IE object, e.g. ProtocolIE-Single-Container.

For the corresponding ASN.1 layout, see clause A.4.

A.2 Example on a Received EXAMPLE MESSAGE

Assume further more that a received message based on the above tabular format is according to figure A.1.

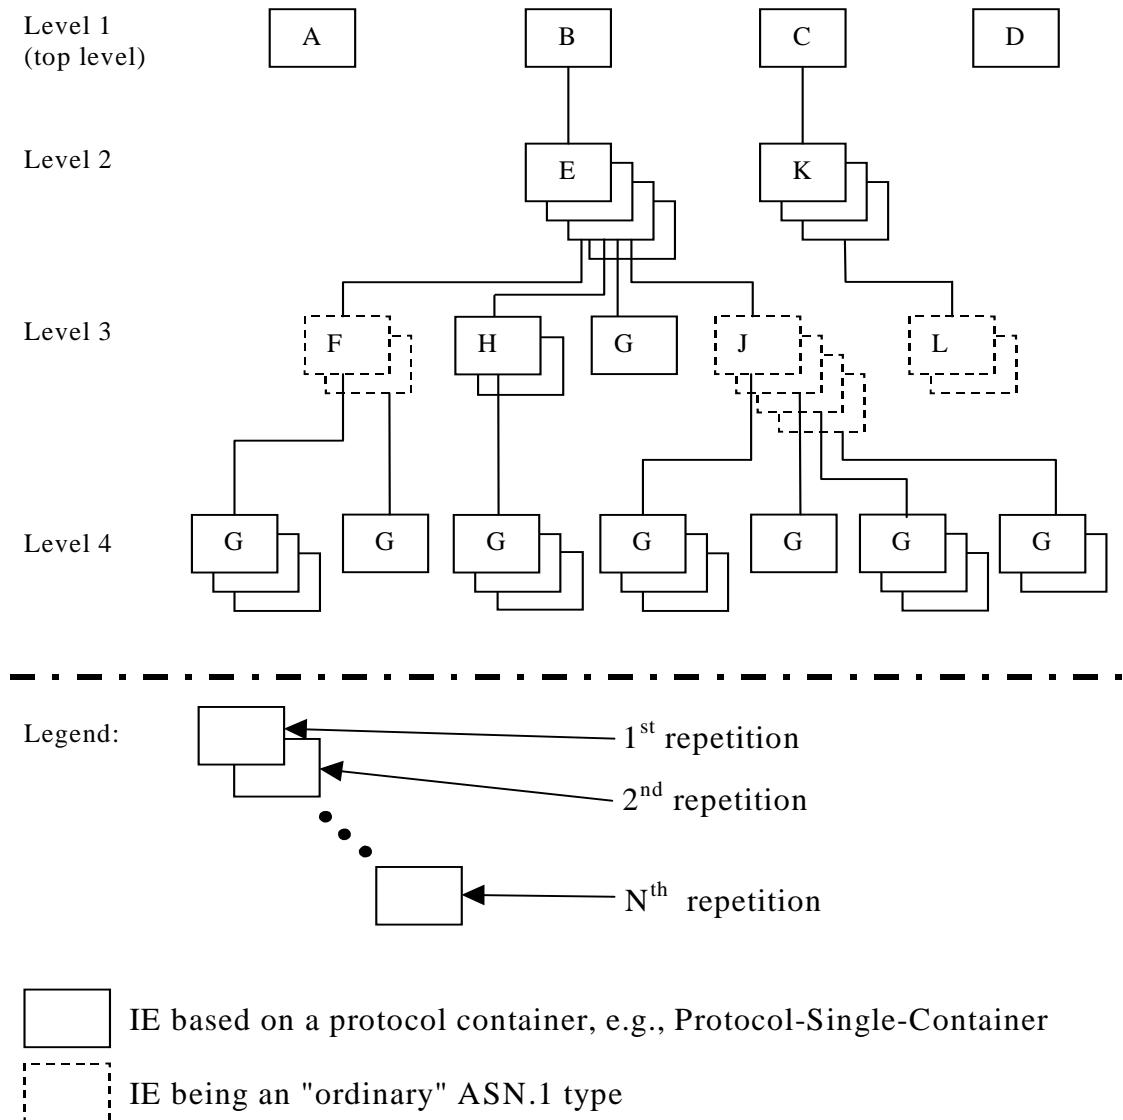

Figure A.1: Example of content of a received PCAP message based on the EXAMPLE MESSAGE

A.3 Content of Criticality Diagnostics

A.3.1 Example 1

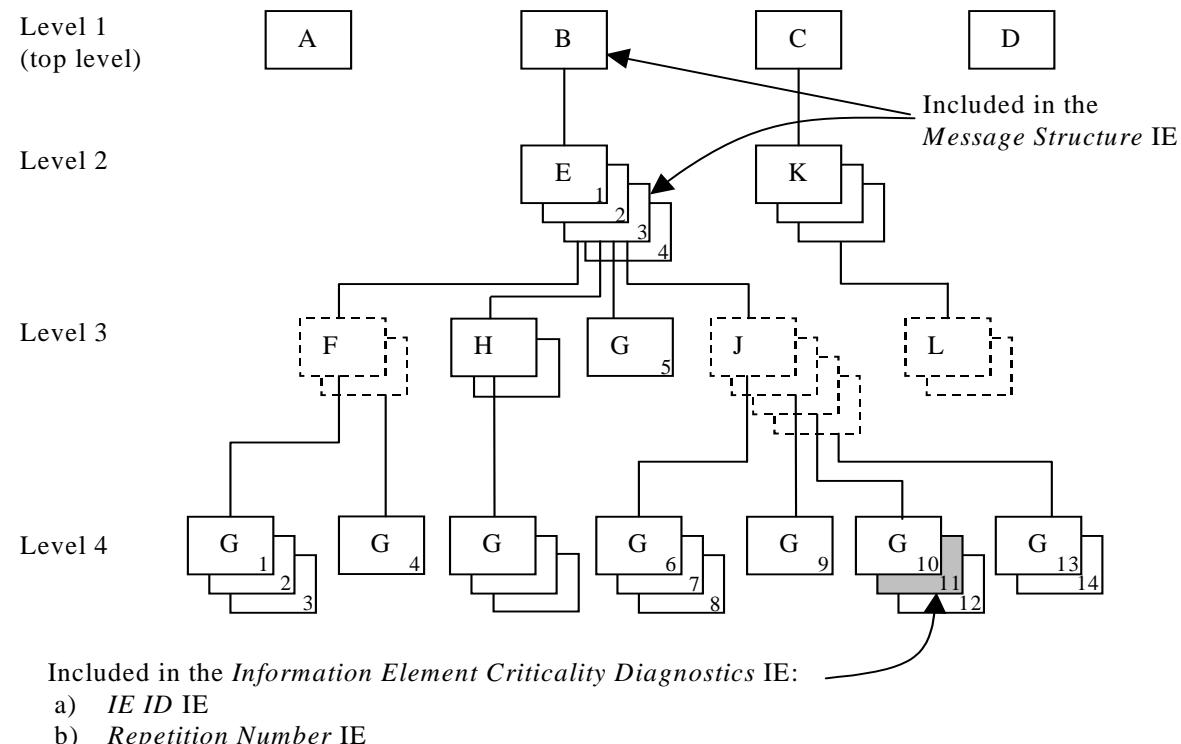

Figure A.2: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE J shown in the figure A.2, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE* as in table A.2.

Table A.2

IE name	Value	Comment
IE Criticality	Reject	Criticality for IE on the reported level, i.e. level 4.
IE ID	id-G	IE ID from the reported level, i.e. level 4.
Repetition Number	11	Repetition number on the reported level, i.e. level 4. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure IE</i> this is the eleventh occurrence of IE G within the IE E (level 2).)
Type of Error	not understood	
<i>Message Structure, first repetition</i>		
>IE ID	id-B	IE ID from level 1.
<i>Message Structure, second repetition</i>		
>IE ID	id-E	IE ID from the lowest level above the reported level, i.e. level 2.
>Repetition Number	3	Repetition number from the lowest level above the reported level, i.e. level 2.

NOTE 1: The IE J on level 3 cannot be included in the *Message Structure IE* since they have no criticality of their own.

NOTE 2: The repetition number of the reported IE indicates the number of repetitions of IE G received up to the detected erroneous repetition, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.3.2 Example 2

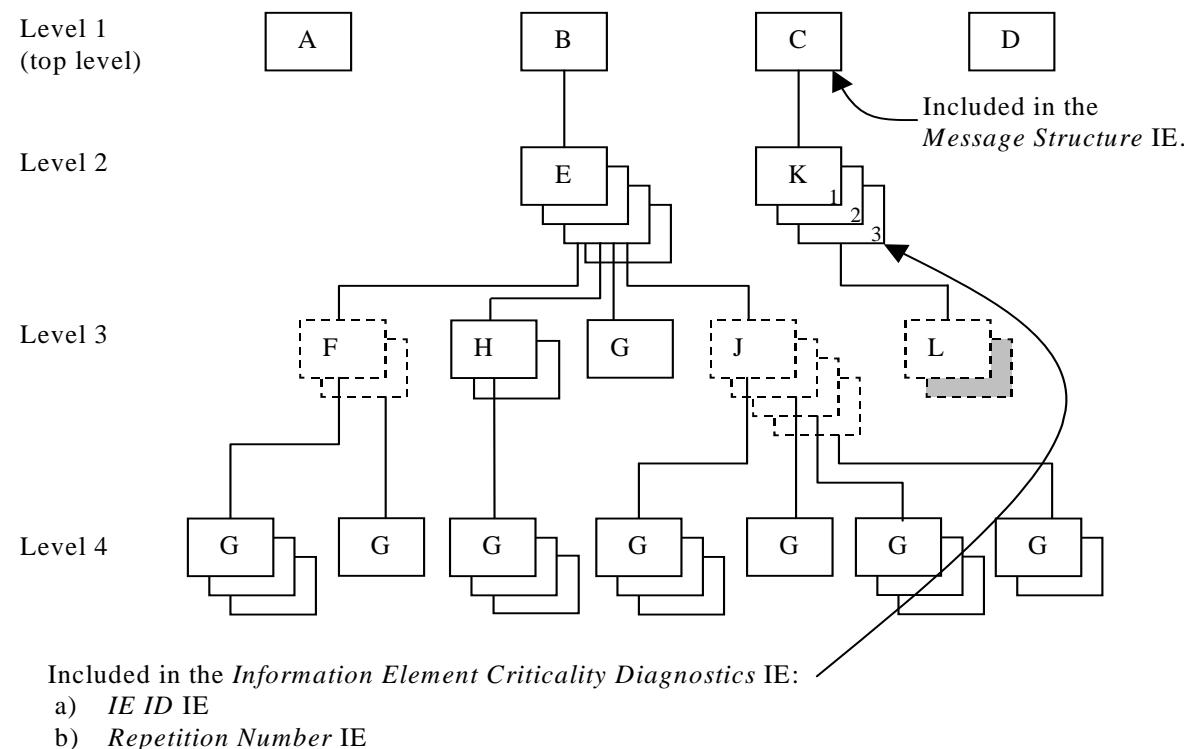

Figure A.3: Example of a received PCAP message containing a not comprehended IE

If there is an error within the second instance (marked as grey) in the sequence (IE L in the tabular format) on level 3 below IE K in the structure shown in the figure A.3, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE* as in table A.3.

Table A.3

IE name	Value	Comment
IE Criticality	ignore and notify	Criticality for IE on the reported level, i.e. level 2.
IE ID	id-K	IE ID from the reported level, i.e. level 2.
Repetition Number	3	Repetition number on the reported level, i.e. level 2.
Type of Error	not understood	
<i>Message Structure, first repetition</i>		
>IE ID	id-C	IE ID from the lowest level above the reported level, i.e. level 1.

NOTE: The IE L on level 3 cannot be reported individually included in the *Message Structure* IE since it has no criticality of its own.

A.3.3 Example 3

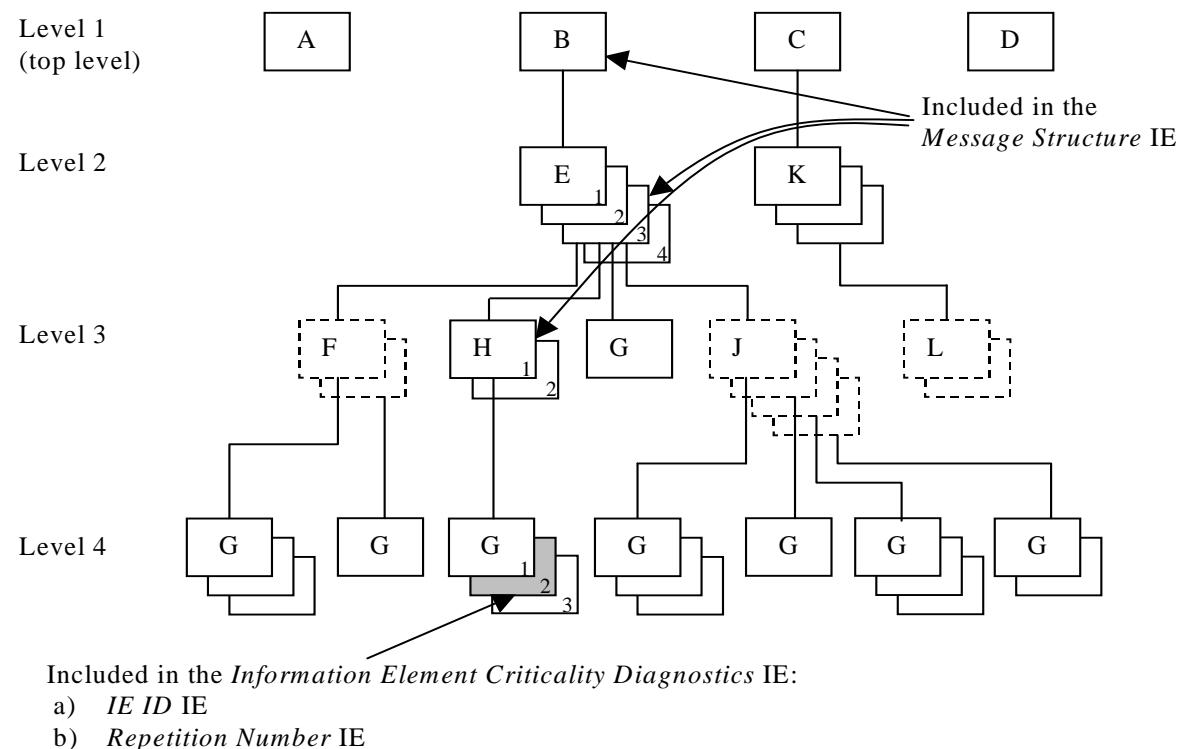

Figure A.4: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE H shown in the figure A.4, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE* as in table A.4.

Table A.4

IE name	Value	Comment
IE Criticality	ignore and notify	Criticality for IE on the reported level, i.e. level 4.
IE ID	id-G	IE ID from the reported level, i.e. level 4.
Repetition Number	2	Repetition number on the reported level, i.e. level 4.
Type of Error	not underst ood	
<i>Message Structure, first repetition</i>		
>IE ID	id-B	IE ID from level 1.
<i>Message Structure, second repetition</i>		
>IE ID	id-E	IE ID from level 2.
>Repetition Number	3	Repetition number from level 2.
<i>Message Structure, third repetition</i>		
>IE ID	id-H	IE ID from the lowest level above the reported level, i.e. level 3.
>Repetition Number	1	Repetition number from the lowest level above the reported level, i.e. level 3.

NOTE: The repetition number of level 4 indicates the number of repetitions of IE G received up to the detected erroneous repetition, counted below the same instance of the previous level with assigned criticality (instance 1 of IE H on level 3).

A.3.4 Example 4

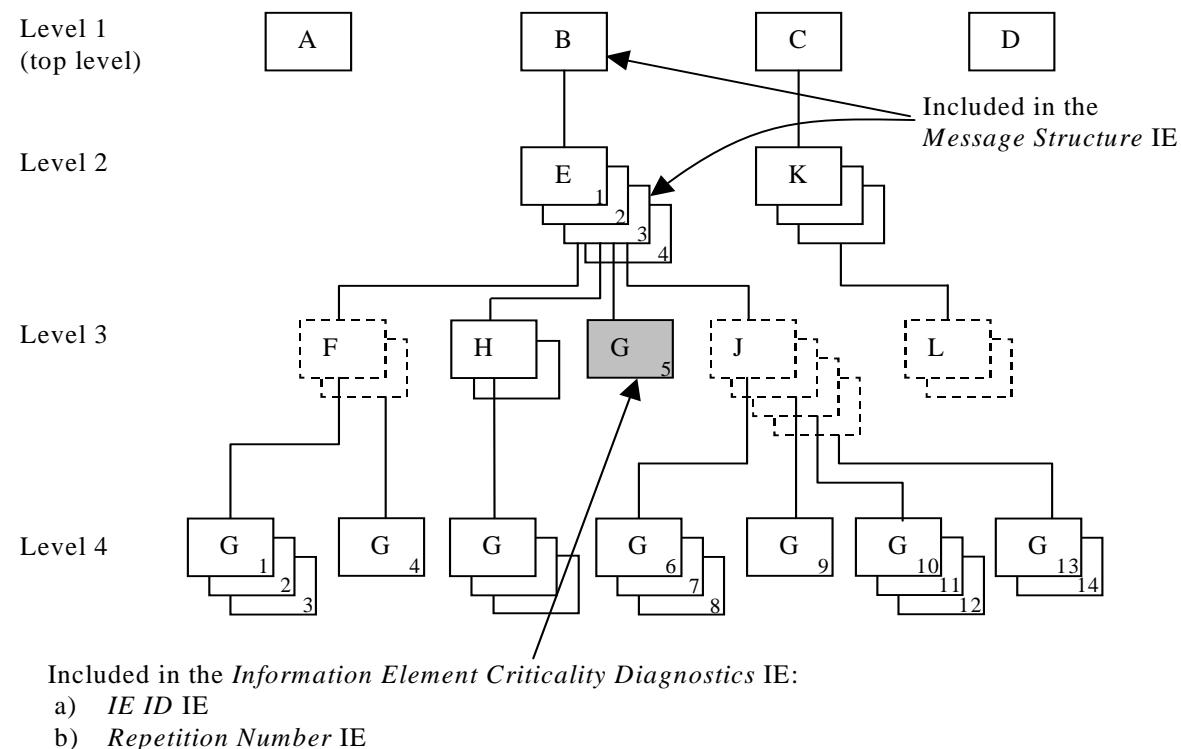

Figure A.5: Example of a received PCAP message containing a not comprehended IE

If there is an error within the instance marked as grey in the IE G in the IE E shown in the figure A.5, this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*, as in table A.5.

Table A.5

IE name	Value	Comment
IE Criticality	Reject	Criticality for IE on the reported level, i.e. level 3.
IE ID	id-G	IE ID from the reported level, i.e. level 3.
Repetition Number	5	Repetition number on the reported level, i.e. level 3. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure IE</i> this is the fifth occurrence of IE G within the IE E (level 2).)
Type of Error	not understood	
<i>Message Structure, first repetition</i>		
>IE ID	id-B	IE ID from level 1.
<i>Message Structure, second repetition</i>		
>IE ID	id-E	IE ID from the lowest level above the reported level, i.e. level 2.
>Repetition Number	3	Repetition number from the lowest level above the reported level, i.e. level 2.

NOTE: The repetition number of the reported IE indicates the number of repetitions of IE G received up to the detected erroneous repetition, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.3.5 Example 5

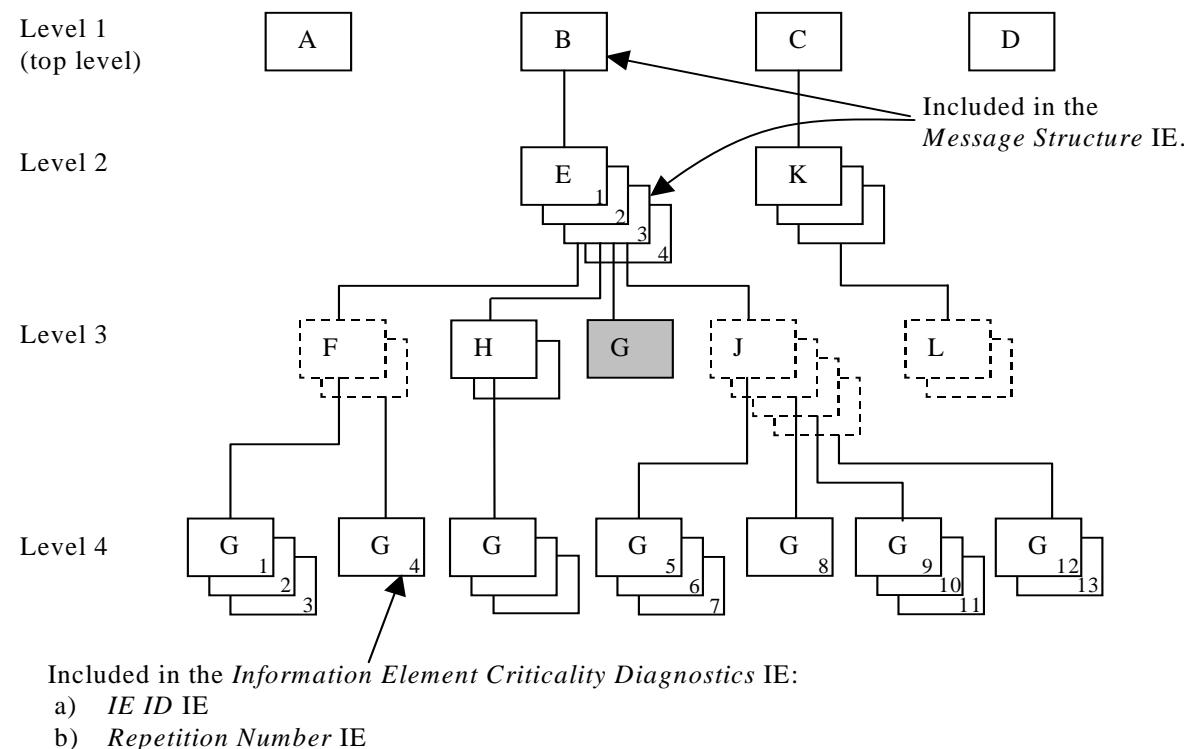

Figure A.6: Example of a received PCAP message with a missing IE

If the instance marked as grey in the IE G in the IE E shown in the figure A.6, is missing this will be reported within the *Information Element Criticality Diagnostics IE* within the *Criticality Diagnostics IE*, as in table A.6.

Table A.6

IE name	Value	Comment
IE Criticality	reject	Criticality for IE on the reported level, i.e. level 3.
IE ID	id-G	IE ID from the reported level, i.e. level 3.
Repetition Number	4	Repetition number up to the missing IE on the reported level, i.e. level 3. (Since the IE E (level 2) is the lowest level included in the <i>Message Structure</i> IE there have been four occurrences of IE G within the IE E (level 2) up to the missing occurrence.)
Type of Error	missing	
<i>Message Structure, first repetition</i>		
>IE ID	id-B	IE ID from level 1.
<i>Message Structure, second repetition</i>		
>IE ID	id-E	IE ID from the lowest level above the reported level, i.e. level 2.
>Repetition Number	3	Repetition number from the lowest level above the reported level, i.e. level 2.

NOTE: The repetition number of the reported IE indicates the number of repetitions of IE G received up to but not including the missing occurrence, counting all occurrences of the IE G below the same instance of the previous level with assigned criticality (instance 3 of IE E on level 2).

A.4 ASN.1 of EXAMPLE MESSAGE

```

ExampleMessage ::= SEQUENCE {
