Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <https://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

28.621 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Requirements.

28.622 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Information Service (IS).

28.623 Generic Network Resource Model (NRM) Integration Reference Point (IRP); Solution Set (SS) definitions.

1 Scope

The TS 28.62x-series (Generic Network Resources IRP) define an Integration Reference Point (IRP) through which an "IRPAgent" (typically an Element Manager or Network Element) can communicate Network Management related information to one or several "IRPManagers" (typically Network Managers).

This TS-family specifies a generic Network Resource Model, NRM (also referred to as a Management Information Model - MIM) with definitions of Information Object Classes (IOCs) and Managed Object Classes (MOCs).

The present document specifies the Solution Set definition for the Generic NRM IRP.

The Solution Set definition is related to 3GPP TS 28.622 V16.4.X [4].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [15], 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [3], 3GPP TS 28.622 [4] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [15] and 3GPP TS 32.101 [1], 3GPP TS 32.102 [2] and 3GPP TS 32.600 [3] and 3GPP TS 28.622 [4].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [15], 3GPP TS 32.600 [3] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [15] and 3GPP TS 32.600 [3].

JSON	JavaScript Object Notation
SS	Solution Set

4 Solution Set (SS) definitions

This specification defines the following 3GPP Generic NRM IRP Solution Set Definitions:

- 3GPP Generic NRM IRP CORBA SS (Annex A).
- 3GPP Generic NRM IRP XML Definitions (Annex B).
- 3GPP Generic NRM IRP JSON Definitions (Annex C).
- 3GPP Generic NRM IRP YANG Definitions (Annex D).

Annex A (normative): CORBA Solution Set

A.0 General

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in Generic NRM IRP: Information Service (3GPP TS 28.622 [4]).

A.1 Architectural features

The overall architectural feature of Generic Network Resources IRP is specified in 3GPP TS 28.622 [4]. This clause specifies features that are specific to the CORBA SS.

A.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

A.1.2 Rules for NRM extensions

A.1.2.0 Introduction

This clause discusses how the models and IDL definitions provided in the present document can be extended for a particular implementation and still remain compliant with 3GPP SA5's specifications.

A.1.2.1 Allowed extensions

Vendor-specific MOCs may be supported. The vendor-specific MOCs may support new types of attributes.

The 3GPP SA5-specified notifications may be issued referring to the vendor-specific MOCs and vendor-specific attributes. New MOCs shall be distinguishable from 3GPP SA5 MOCs by name. 3GPP SA5-specified and vendor-specific attributes may be used in vendor-specific MOCs. Vendor-specific attribute names shall be distinguishable from existing attribute names.

NRM MOCs may be subclassed. Subclassed MOCs shall maintain the specified behaviour of the 3GPP SA5's superior classes. They may add vendor-specific behaviour with vendor-specific attributes. When subclassing, naming attributes cannot be changed. The subclassed MOC shall support all attributes of its superior class. Vendor-specific attributes cannot be added to 3GPP SA5 NRM MOCs without subclassing.

When subclassing, the 3GPP SA5-specified containment rules and their specified cardinality shall still be followed. As an example, ManagementNode (or its subclasses) shall be contained under SubNetwork (or its subclasses).

Managed Object Instances may be instantiated as CORBA objects. This requires that the MOCs be represented in IDL. 3GPP SA5's NRM MOCs are not currently specified in IDL, but may be specified in IDL for instantiation or subclassing purposes. However, management information models should not require that IRPManagers access the instantiated managed objects other than through supported methods in the present document.

Extension rules related to notifications (Notification categories, Event Types, Extended Event Types etc.) are for further study.

A.1.2.2 Extensions not allowed

The IDL specifications in the present document cannot be edited or altered. Any additional IDL specifications shall be specified in separate IDL files.

IDL interfaces (note: not MOCs) specified in the present document may not be subclassed or extended. New interfaces may be defined with vendor-specific methods.

A.2 Mapping

A.2.1 General mapping

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an MOReference. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type MOReferenceSet, which contains a sequence of MO references.

A.2.2 Information Object Class (IOC) mapping

This Solution Set supports reference attributes for relations other than containment relations between objects. Reference attributes are therefore introduced in each MOC where needed.

A.2.2.1 IOC SubNetwork

Mapping from NRM IOC SubNetwork attributes to SS equivalent MOC SubNetwork attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string
userLabel	userLabel	string
userDefinedNetworkType	userDefinedNetworkType	string
setOfMcc	setOfMcc	GenericNetworkResourcesIRPSystem::AttributeTypes::StringSet

A.2.2.2 IOC ManagedElement

Mapping from NRM IOC ManagedElement attributes and association roles to SS equivalent MOC ManagedElement attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string
userLabel	userLabel	string
locationName	locationName	string
vendorName	vendorName	string
userDefinedState	userDefinedState	string
managedElementType	managedElementType	GenericNetworkResourcesIRPSystem::AttributeTypes::StringSet
managedBy	managedBy	GenericNetworkResourcesIRPSystem::AttributeTypes::MOReferenceSet
swVersion	swVersion	string

A.2.2.3 IOC MeContext

Mapping from NRM IOC MeContext attributes to SS equivalent MOC MeContext attributes

IS Attributes	SS Attributes	SS Type
id	id	string
dnPrefix	dnPrefix	string

A.2.2.4 IOC ManagementNode

Mapping from NRM IOC ManagementNode attributes and association roles to SS equivalent MOC ManagementNode attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel	userLabel	string
locationName	locationName	string
vendorName	vendorName	string
userDefinedState	userDefinedState	string
managedElements	managedElements	GenericNetworkResourcesIRPSys::AttributeTypes::MOResourceSet
swVersion	swVersion	string

A.2.2.5 IOC VsDataContainer

Mapping from NRM IOC VsDataContainer attributes and association roles to SS equivalent MOC VsDataContainer attributes

IS Attributes	SS Attributes	SS Type
id	id	string
vsDataType	vsDataType	string
vsData	vsData	any
vsDataFormatVersion	vsDataFormatVersion	string

A.2.2.6 IOC ManagedFunction

Mapping from NRM IOC ManagedFunction attributes and association roles to SS equivalent MOC ManagedFunction attributes

IS Attributes	SS Attributes	SS Type
id	id	string
peeParametersList	peeParametersList	GenericNetworkResourcesIRPSys::AttributeTypes::PEEParametersListType
userLabel	userLabel	string
vnfParametersList	vnfParametersList	GenericNetworkResourcesIRPSys::AttributeTypes::VNFPParametersListType

A.2.2.7 IOC IRPAgent

Mapping from NRM IOC IRPAgent attributes to SS equivalent MOC IRPAgent attributes

IS Attributes	SS Attributes	SS Type
id	id	string
systemDN	systemDN	string

A.2.2.8 IOC Top

Mapping from NRM IOC Top attributes to SS equivalent attributes in all MOCs

IS Attributes	SS Attributes	SS Type
objectClass	CLASS	string
objectInstance	No direct mapping	

A.2.2.9 IOC Link

Mapping from NRM IOC Link attributes to SS equivalent MOC IRP Agent attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel (see note 2)	userLabel	string
aEnd	aEnd	GenericNetworkResourcesIRPSys tem::AttributeTypes::MOReference
zEnd	zEnd	GenericNetworkResourcesIRPSys tem::AttributeTypes::MOReference
linkType	linkType	LinkTypeType
protocolName	protocolName	string
protocolVersion	protocolVersion	string

NOTE 1: Void.

NOTE 2: Void.

A.2.2.10 IOC EP_RP

Mapping from NRM IOC EP_RP attributes to SS equivalent MOC EP_RP attributes

IS Attributes	SS Attributes	SS Type
id	id	string
userLabel	userLabel	string
farEndEntity	farEndEntity	GenericNetworkResourcesIRPSys tem::AttributeTypes::MOReference

A.2.2.11 IOC ThresholdMonitoringCapability

Mapping from NRM IOC ThresholdMonitoringCapability attributes to SS equivalent MOC ThresholdMonitoringCapability attributes

IS Attributes	SS Attributes	SS Type
supportedMonitoringGPs	supportedMonitoringGPs	GenericNetworkResourcesIRPSys tem::AttributeTypes::LongSe t

A.2.2.12 IOC ThresholdMonitor

Mapping from NRM IOC ThresholdMonitor attributes to SS equivalent MOC ThresholdMonitor attributes

IS Attributes	SS Attributes	SS Type
thresholdInfoList	thresholdInfoList	GenericNetworkResourcesIRPSys tem::AttributeTypes::ThresholdInfoListType
monitoringGP	monitoringGP	long
monitoringNotifTarget	monitoringNotifTarget	string
monitoredIOCName	monitoredIOCName	string
monitoredObjectDNs	monitoredObjectDNs	GenericNetworkResourcesIRPSys tem::AttributeTypes::DNListType

A.2.2.13 IOC TraceJob

Mapping from NRM IOC TraceJob attributes to SS equivalent MOC TraceJob attributes

IS Attributes	SS Attributes	SS Type
tjJobType	tjJobType	tjJobType-Type
tjListOfInterfaces	tjListOfInterfaces	tjListOfInterfaces-Type
tjListOfNeTypes	tjListOfNeTypes	tjListOfNeTypes-Type
tjPLMNTarget	tjPLMNTarget	tjPLMNTarget-Type
tjStreamingTraceConsumerURI	tjTraceConsumer	StreamingTraceConsumerURI-Type

A.3 Solution Set (SS) definitions

A.3.1 IDL definition structure

Clause A.3.2 defines the types which are used by the Generic NRM IRP.

Clause A.3.3 defines the MO classes for the Generic NRM IRP.

A.3.2 IDL specification "GenericNetworkResourcesIRPSysytem.idl"

```
//File: GenericNetworkResourcesIRPSysytem.idl
#ifndef _GENERIC_NETWORK_RESOURCES_IRP_SYSTEM_IDL_
#define _GENERIC_NETWORK_RESOURCES_IRP_SYSTEM_IDL_

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

module GenericNetworkResourcesIRPSysytem
{
    /**
     * The format of Distinguished Name (DN) is specified in "Name Convention
     * for Managed Objects (3GPP TS 32.300 [5])".
     */
    typedef string DN;

    /**
     * This module adds datatype definitions for types
     * used in the NRM which are not basic datatypes defined
     * already in CORBA.
     */
    module AttributeTypes
    {
        /**
         * An MO reference refers to an MO instance.
         * "otherMO" contains the distinguished name of the referred MO.
         * A conceptual "null" reference (meaning no MO is referenced)
         * is represented as an empty string ("").
         */
        struct MOReference
        {
            DN otherMO;
        };

        /**
         * MOReferenceSet represents a set of MO references.
         * This type is used to hold 0..n MO references.
         * A referred MO is not allowed to be repeated (therefore
         * it is denoted as a "Set")
         */
        typedef sequence<MOReference> MOReferenceSet;

        /**
         * A set of strings.
         */
        typedef sequence<string> StringSet;

        /**
         * A set of long.
         */
        typedef sequence<long> LongSet;
        /*
         * The LinkListSet represents the Link_X_Y objects (or subclasses of
         * Link_X_Y objects) that have a relationship with this object instance.
         * Each Link_X_Y object models interface(s) between objects of class X and
         * Y. The object containing this attribute must either be a class of type X,
         * Y, XFunction, YFunction or a subclass of one of those classes. The
         * LinkListSet may be empty, or there may be no instances for a particular
         * Link_X_Y class name.
         */
        typedef MOReferenceSet LinkListSet;
    }
}
```

```

/**
 * VNFParameters includes several attributes of a VNF instance.
 * The detailed definition of the attributes, see clause 4.4.1 of [4].
 */

Annex B (normative): XML Definitions

B.0 General

This annex contains the XML Definitions for the Generic NRM IRP as it applies to Itf-N, in accordance with Generic NRM IRP IS definitions TS 28.622 [4].

The XML file formats are based on XML W3C REC-xml11-20060816 [8], W3C XML Schema Definition Language (XSD) 1.1 Part 1: Structures [10] W3C XML Schema Definition Language (XSD) 1.1 Part 2: Datatypes [11] and W3C REC-xml-names-20060816 [12] standards.

B.1 Architectural features

B.1.0 Introduction

The overall architectural feature of Generic Network Resources IRP is specified in 3GPP TS 28.622 [4].

This clause specifies features that are specific to the Schema definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

B.2 Mapping

B.2.1 General mapping

An IOC maps to an XML element of the same name as the IOC's name in the IS. An IOC attribute maps to a sub-element of the corresponding IOC's XML element, and the name of this sub-element is the same as the attribute's name in the IS.

B.2.2 Information Object Class (IOC) mapping

The mapping is not present in the current version of this specification.

B.3 Solution Set (SS) definitions

B.3.1 XML definition structure

The overall description of the file format of configuration data XML files is provided by 3GPP TS 28.616 [7].

Annex B.3.3 of the present document defines the NRM-specific XML schema `genericNrm.xsd` for the Generic Network Resources IRP NRM defined in 3GPP TS 28.622 [4].

XML schema `genericNrm.xsd` explicitly declares NRM-specific XML element types for the related NRM.

The definition of those NRM-specific XML element types complies with the generic mapping rules defined in 3GPP TS 28.616 [7], with the following exception: as defined in 3GPP TS 28.616 [7], the `vsData` XML element type has an empty XML content.

Additionally, XML schema `genericNrm.xsd` also provides the following global XML declarations and definitions:

- XML complex type `NrmClass`: derivation base type (see [8], [10] and [11]) for all NRM class associated XML element types (see 3GPP TS 28.616 [7]);
- XML element type `vsData`: derivation base type (see [8], [10] and [11]) for all vendor-specific XML element types (see 3GPP TS 28.616 [7]);
- XML element type `SubNetworkOptionallyContainedNrmClass`: substitution group head (see [8], [10] and [11]) for all XML element types associated to further NRM classes optionally contained under SubNetwork NRM class;
- XML element type `ManagedElementOptionallyContainedNrmClass`: substitution group head (see [8], [10] and [11]) for all XML element types associated to further NRM classes optionally contained under ManagedElement NRM class.

B.3.2 Graphical Representation

The graphical representation is not present in the current version of this specification.

B.3.3 XML schema "genericNrm.xsd"

```

Annex C (normative): OpenAPI definitions

C.1 General

This annex contains the OpenAPI definition of the Generic NRM in YAML format.

The Information Service (IS) of the Generic NRM is defined in 3GPP TS 28.622 [4].

Mapping rules to produce the OpenAPI definition based on the IS are defined in 3GPP TS 32.160 [14].

C.2 Void

C.3 Void

C.4 Solution Set (SS) definitions

C.4.1 Void

C.4.2 Void

C.4.2a OpenAPI document "TS28623_ComDefs.yaml"

}

list ManagedElement {
description "Represents telecommunications equipment or TMN entities within
the telecommunications network providing support and/or service to the
subscriber. An ManagedElement IOC is used to represent a Network Element
defined in TS 32.101 including virtualization or non-virtualization
scenario. An ManagedElement instance is used for communicating with a
manager (directly or indirectly) over one or more management interfaces
for the purpose of being monitored and/or controlled. ManagedElement may
or may not additionally perform element management functionality.
An ManagedElement contains equipment that may or may not be geographically
distributed."
}

```

A telecommunication equipment has software and hardware components. The ManagedElement IOC described above represents following two case:

- In the case when the software component is designed to run on dedicated hardware component, the ManagedElement IOC description includes both software and hardware components.
- In the case when the software is designed to run on ETSI NFV defined NFVI [15], the ManagedElement IOC description would exclude the NFVI component supporting the above mentioned subject software.

A ManagedElement may be contained in either a SubNetwork or in a MeContext instance. A single ManagedElement may also exist stand-alone with no parent at all.

The relation of ManagedElement IOC and ManagedFunction IOC can be described as following:

- A ManagedElement instance may have 1..1 containment relationship to a ManagedFunction instance. In this case, the ManagedElement IOC may be used to represent a NE with single functionality. For example, a ManagedElement is used to represent the 3GPP defined RNC node;
- A ManagedElement instance may have 1..N containment relationship to multiple ManagedFunction IOC instances. In this case, the ManagedElement IOC may be used to represent a NE with combined ManagedFunction functionality (as indicated by the managedElementType attribute and the contained instances of different ManagedFunction IOCs). For example, a ManagedElement is used to represent the combined functionality of 3GPP defined gNBCUCPFunction, gNBCUUPFunction and gNBDUFFunction";

grouping MeasurementSubtree {
    description "Contains classes that define measurements.
Should be used in all classes (or classes inheriting from)
- SubNetwork
- ManagedElement
- ManagedFunction"
}

```

If a YANG module wants to augment these classes/list/groupings they must augment all user classes!

If a class uses this grouping in its list it shall also use the grouping SupportedPerfMetricGroupGrp to add SupportedPerfMetricGroup as an attribute to its grouping;

```

list PerfMetricJob {
    description "This IOC represents a performance metric production job. It
can be name-contained by SubNetwork, ManagedElement, or ManagedFunction."

```

To activate the production of the specified performance metrics, a MnS consumer needs to create a PerfMetricJob instance on the MnS producer. For ultimate deactivation of metric production, the MnS consumer should delete the job to free up resources on the MnS producer.

For temporary suspension of metric production, the MnS consumer can manipulate the value of the administrative state attribute. The MnS producer may disable metric production as well, for example in overload situations. This situation is indicated by the MnS producer with setting the operational state attribute to disabled. When production is resumed the operational state is set back to enabled.

The jobId attribute can be used to associate metrics from multiple PerfMetricJob instances. The jobId can be included when reporting performance metrics to allow a MnS consumer to associate received metrics for the same purpose. For example, it is possible to configure the same jobId value for multiple PerfMetricJob instances required to produce the measurements for a specific KPI.

The attribute performanceMetrics defines the performance metrics to be produced and the attribute granularityPeriod defines the granularity period to be applied.

All object instances below and including the instance name-containing the PerfMetricJob (base object instance) are scoped for performance metric production. Performance metrics are produced only on those object instances whose object class matches the object class associated to the performance metrics to be produced.

The attributes objectInstances and rootObjectInstances allow to restrict the scope. When the attribute objectInstances is present, only the object instances identified by this attribute are scoped. When the attribute rootObjectInstances is present, then the subtrees whose root objects are identified by this attribute are scoped. Both attributes may be present at the same time meaning the total scope is equal to the sum of both scopes. Object instances may be scoped by both the objectInstances and rootObjectInstances attributes. This shall not be considered as an error by the MnS producer.

When the performance metric requires performance metric production on multiple managed objects, which is for example the case for KPIs, the MnS consumer needs to ensure all required objects are scoped. Otherwise a PerfMetricJob creation request shall fail.

The attribute reportingCtrl specifies the method and associated control parameters for reporting the produced measurements to MnS consumers. Three methods are available: file-based reporting with selection of the file location by the MnS producer, file-based reporting with selection of the file location by the MnS consumer and stream-based reporting.

For file-based reporting, all performance metrics that are produced related to a 'PerfMetricJob' instance for a reporting period shall be stored in a single reporting file.

When the administrative state is set to 'UNLOCKED' after the creation of a 'PerfMetricJob' the first granularity period shall start. When the administrative state is set to 'LOCKED' or the operational state to 'DISABLED', the ongoing reporting period shall be aborted, for streaming the ongoing granularity period. When the administrative state is set back to 'UNLOCKED' or the operational state to 'ENABLED' a new reporting period period shall start, in case of streaming a new granularity period.

Changes of all other configurable attributes shall take effect only at the beginning of the next reporting period, for streaming at the beginning of the next granularity period.

When the 'PerfMetricJob' is deleted, the ongoing reporting period shall be aborted, for streaming the ongoing granularity period.

A PerfMetricJob creation request shall fail, when the requested performance metrics, the requested granularity period, the requested reporting method, or the requested combination thereof is not supported by the MnS producer.

Creation and deletion of PerfMetricJob instances by MnS consumers is optional; when not supported, PerfMetricJob instances may be created and deleted by the system or be pre-installed.";

```
key id;
uses top3gpp:Top_Grp ;
container attributes {
    uses PerfMetricJobGrp ;
}
uses files3gpp:FileSubtree {
    if-feature FilesUnderPerfMetricJob;
}
}

list ThresholdMonitor {
    key id;
    description "Represents a threshold monitor for performance metrics.
    It can be contained by SubNetwork, ManagedElement, or ManagedFunction.
    A threshold monitor checks for threshold crossings of performance metric
    values and generates a notification when that happens.
}
```

The ThresholdMonitor is used only when NRM based threshold monitoring is supported.

To activate threshold monitoring, a MnS consumer needs to create a ThresholdMonitor instance on the MnS producer. For ultimate deactivation of threshold monitoring, the MnS consumer should delete the monitor to free up resources on the MnS producer.

For temporary suspension of threshold monitoring, the MnS consumer can manipulate the value of the administrative state attribute. The MnS producer may disable threshold monitoring as well, for example in

overload situations. This situation is indicated by the MnS producer with setting the operational state attribute to disabled. When monitoring is resumed the operational state is set again to enabled.

All object instances below and including the instance containing the ThresholdMonitor (base object instance) are scoped for performance metric production. Performance metrics are monitored only on those object instances whose object class matches the object class associated to the performance metrics to be monitored.

The optional attributes objectInstances and rootObjectInstances allow to restrict the scope. When the attribute objectInstances is present, only the object instances identified by this attribute are scoped. When the attribute rootObjectInstances is present, then the subtrees whose root objects are identified by this attribute are scoped. Both attributes may be present at the same time meaning the total scope is equal to the sum of both scopes. Object instances may be scoped by both the objectInstances and rootObjectInstances attributes. This shall not be considered as an error by the MnS producer.

Multiple thresholds can be defined for multiple performance metric sets in a single monitor using thresholdInfoList. The attribute monitorGranularityPeriod defines the granularity period to be applied. The value is a multiple of a supported granularity period for the measurements being monitored.

A threshold is defined using the attributes thresholdValue , thresholdDirection and hysteresis.

When hysteresis is absent or carries no information, a threshold is triggered when the thresholdValue is reached or crossed. When hysteresis is present, two threshold values are specified for the threshold as follows: A high threshold value equal to the threshold value plus the hysteresis value, and a low threshold value equal to the threshold value minus the hysteresis value. When the monitored performance metric increases, the threshold is triggered when the high threshold value is reached or crossed. When the monitored performance metric decreases, the threshold is triggered when the low threshold value is reached or crossed. The hysteresis ensures that the performance metric value can oscillate around a comparison value without triggering each time the threshold when the threshold value is crossed. Using the thresholdDirection attribute a threshold can be configured in such a manner that it is triggered only when the monitored performance metric is going up or down upon reaching or crossing the threshold.

A ThresholdMonitor creation request shall be rejected, if the performance metrics requested to be monitored, the requested granularity period, or the requested combination thereof is not supported by the MnS producer. A creation request may fail, when the performance metrics requested to be monitored are not produced by a PerfMetricJob.

Creation and deletion of ThresholdMonitor instances by MnS consumers is optional; when not supported, ThresholdMonitor instances may be created and deleted by the system or be pre-installed.

A threshold crossing event detected by a 'ThresholdMonitor' shall trigger a 'notifyThresholdCrossing' notification. To subscribe to 'notifyThresholdCrossing' notifications the MnS consumer shall specify one or more 'ThresholdMonitor' instances in the subscription. All threshold crossings detected by the specified 'ThresholdMonitor' instances are sent as 'notifyThresholdCrossing' to subscribed MnS consumers (unless filtered out by the 'notificationFilter' attribute of 'NtfSubscriptionControl').";

list NtfSubscriptionControl {
    description "A NtfSubscriptionControl instance represents the
notification subscription of a particular notification recipient.
The scope attribute is used to select managed object instances.
The base object instance of the scope is the object instance
name-containing the NtfSubscriptionControl instance.
The notifications related to the selected managed object instances
are candidates to be sent to the address specified by the
notificationRecipientAddress attribute.
The notificationType attribute and notificationFilter attribute
allow MnS consumers to exercise control over which candidate
notifications are sent to the notificationRecipientAddress.
If the notificationType attribute is supported and present, its
value identifies the

```

types of notifications that are candidate to be sent to the notificationRecipientAddress. If the notificationType attribute is not supported or not present, all types of notifications are candidate to be sent to notificationRecipientAddress.

If supported, the notificationFilter attribute defines a filter that is applied to the set of candidate notifications. Only candidate notifications that pass the filter criteria are sent to the notificationRecipientAddress. If the notificationFilter attribute is not supported all candidate notifications are sent to the notificationRecipientAddress.

To receive notifications, a MnS consumer has to create NtfSubscriptionControl objects on the MnS producer.

A MnS consumer can create a subscription for another MnS consumer since it is not required the notificationRecipientAddress be his own address.

When a MnS consumer does not wish to receive notifications any more the MnS consumer shall delete the corresponding NtfSubscriptionControl instance.

Creation and deletion of NtfSubscriptionControl instances by MnS consumers is optional; when not supported, the NtfSubscriptionControl instances may be created and deleted by the system or be pre-installed.";

```
key id;

container attributes {
    uses NtfSubscriptionControlGrp;
}

list HeartbeatControl {
    description "MnS consumers (i.e. notification recipients) use heartbeat notifications to monitor the communication channels between themselves and MnS producers configured to emit notifications.
```

A HeartbeatControl instance allows controlling the emission of heartbeat notifications by MnS producers. The recipients of heartbeat notifications are specified by the notificationRecipientAddress attribute of the NtfSubscriptionControl instance containing the HeartbeatControl instance.

Note that the MnS consumer managing the HeartbeatControl instance and the MnS consumer receiving the heartbeat notifications may not be the same.

As a pre-condition for the emission of heartbeat notifications, a HeartbeatControl instance needs to be created. Creation of an instance with an initial non-zero value of the heartbeatNtfPeriod attribute triggers an immediate heartbeat notification emission. Creation of an instance with an initial zero value of the heartbeatPeriod attribute does not trigger an emission of a heartbeat notification. Deletion of an instance does not trigger an emission of a heartbeat notification.

Once the instance is created, heartbeat notifications are emitted with a periodicity defined by the value of the heartbeatNtfPeriod attribute. No heartbeat notifications are emitted if the value is equal to zero. Setting a zero value to a non zero value, or a non zero value to a different non zero value, triggers an immediate heartbeat notification, that is the base for the new heartbeat period. Setting a non zero value to a zero value stops emitting heartbeats immediately; no final heartbeat notification is sent.

Creation and deletion of HeartbeatControl instances by MnS Consumers is optional; when not supported, the HeartbeatControl instances may be created and deleted by the system or be pre-installed.

Whether and when to emit heartbeat notifications is controlled by HeartbeatControl. Subscription for heartbeat is not supported via the NtfSubscriptionControl.";

D.2.7 module _3gpp-common-yang-extensions.yang

```

<CODE BEGINS>
module _3gpp-common-yang-extensions {
    yang-version 1.1;
    namespace urn:3gpp:sa5:_3gpp-common-yang-extensions ;
    prefix yext3gpp ;

    organization "3GPP SA5";
    description "The module defines YANG extensions needed
    3GPP YANG modeling.

    Copyright 2023, 3GPP Organizational Partners (ARIB, ATIS, CCSA, ETSI, TSDSI,
    TTA, TTC). All rights reserved.

    Extensions MUST be defined with the following structure in the
    description statement:
        - What is this statement.
        - Newline,
        - This statement can be a substatement of the xxx statements with
        cardinality x..y.
        - This statement can have the following substatements with
        cardinality x..y.
        - Newline
        - Is changing this statement an editorial, BC(backwards compatible)
        or NBC(non-BC) change?
        - Newline.
        - The argument its meaning and type. Preferably use YANG types and
        constraints to define the argument's type.

    Any extension statement can be added with a
    deviation/deviate add statement. In this case the restriction about
    the parent statement of the extension SHALL be evaluated based on the
    target of the deviation statement.

    Support for this module does not mean that a YANG server implements
    support for each of these extensions.
    Implementers of each specific module using an extensions MUST check
    if the server implements support for the used extension.
    Note: modules use many extensions which individual
    implementations MAY or MAY NOT support.
    If support for an extension is missing the extension statement needs
    individual handling or it SHOULD be removed from the module using
    the extension e.g. with a deviation.
    ";

    revision 2019-06-23 { reference "Initial version"; }

    extension notNotifyable {
        description
            "Indicates that data change notifications shall not be sent
            for this attribute. If the extension is not present and other
            conditions are fulfilled data change notification should be sent.
            If a list or container already has the notNotifyable
            extension, that is also valid for all contained data nodes.

            The statement MUST only be a substatement of a leaf, leaf-list, list,
            container statement that is contained within the 'attributes'
            container of an IOC and that represents an attribute or sub-parts of
            an attribute .

            Zero or one notNotifyable statement is allowed per parent statement.
            NO substatements are allowed.

            Adding this statement is an NBC change, removing it is BC.";

    }

    extension inVariant {
        description
```

"Indicates that the value for the data node can only be set when the list data node representing the containing object(MOI) is created.
The above statement in YANG terms means, that the value for the data node can only be set when the list entry that is the parent of the restricted node's ancestor container named 'attributes' is being created.
To change the value after that, the mentioned list data node must be deleted and recreated with the restricted data node having the new value.

If a list or container already has the invariant extension, that is also valid for all contained data nodes.

It is unnecessary to use and MUST NOT be used for key leafs.

The statement MUST only be a substatement of a leaf, leaf-list, list statement that is config=true.
Zero or one invariant statement is allowed per parent statement.
NO substatements are allowed.

Adding this statement is an NBC change, removing it is BC.";

}

```
extension initial-value {
    description "Specifies a value that the system will set for a leaf
leaf-list if a value is not specified for it when its parent list
or container is created. The value has no effect in any other
modification e.g. changing or removing the value."
```

The description statement of the parent statement SHOULD contain the label 'Initial-value: ' followed by the text from the argument.

The statement MUST only be a substatement of a leaf or leaf-list.
The statement MUST NOT be present if the leaf or the leaf-list has a default statement or the type used for the data node has a default value.
The statement MUST NOT be used for config=false data or in an action, rpc or notification.
Zero or one initial-value statements are allowed for a leaf parent statement. Zero or more initial-value statements are allowed for a leaf-list parent statement. If the leaf-list is ordered-by user, the initial values are stored in the order they appear in the YANG definition.
NO substatements are allowed.

Always consider using a YANG-default statement instead.

Modification of the initial-value is a non-backwards-compatible change.

The argument specifies a single initial value for a leaf or leaf-list.
The value MUST be part of the valuespace of the leaf/leaf-list.
It follows the same rules as the argument of the default statement.";

```
argument "initial-value";

        enum ENABLED ;
    }
}

grouping nameValuePair {
    leaf name { type string; }
    leaf value { type string; }
}

grouping ProcessMonitorGrp {
    description "Provides attributes to monitor the progress of processes
    with specific purpose and limited lifetime running on MnS producers.
    It may be used as data type for dedicated progress monitor attributes
    when specifying the management representation of these processes.
    The attributes in this clause are defined in a generic way.
    For some attributes specialisations may be provided when specifying a
    concrete process representation.

    If a management operation on some IOCs triggers an associated
    asynchronous process (whose progress shall be monitored), this should
    also result in creating an attribute named 'processMonitor' (of type
    'ProcessMonitor') in these IOC(s). The processMonitor attribute may be
    accompanied by use-case specific additional data items.

    The progress of the process is described by the 'status' and
    'progressPercentage' attributes. Additional textual qualifications for
    the 'status' attribute may be provided by the 'progressStateInfo' and
    'resultStateInfo' attributes.

    When the process is instantiated, the 'status' is set to 'NOT_RUNNING'
    and the 'progressPercentage' to '0'. The MnS producer decides when to
    start executing the process and to transition into the 'RUNNING' state.
    This time is captured in the 'startTime' attribute. Alternatively, the
}

```

process may start to execute directly upon its instantiation. One alternative must be selected when using this data type.

During the 'RUNNING' state the 'progressPercentage' attribute may be repeatedly updated. The exact semantic of this attribute is subject to further specialisation. The 'progressInfo' attribute may be used to provide additional textual information in the 'NOT_RUNNING', 'CANCELLED' and 'RUNNING' states. Further specialisation of 'progressStateInfo' may be provided where this data type is used.

Upon successful completion of the process, the 'status' attribute is set to 'FINISHED', the 'progressPercentage' to 100%. The time is captured in the 'endTime' attribute. Additional textual information may be provided in the 'resultStateInfo' attribute. The type of 'resultStateInfo' in this data type definition is 'String'. Further specialisation of 'resultStateInfo' may be provided where this data type is used.

In case the process fails to complete successfully, the 'status' attribute is set to 'FAILED' or 'PARTIALLY_FAILED', the current value of 'progressPercentage' is frozen, and the time captured in 'endTime'. The 'resultStateInfo' specifies the reason for the failure. Specific failure reasons may be specified where the data type defined in this clause is used. The exact semantic of failure may be subject for further specialisation as well.

In case the process is cancelled, the 'status' attribute is first set to 'CANCELLED' and when the process is really cancelled then to 'CANCELLED'. The transition to 'CANCELLED' is captured in the 'endTime' attribute. The value of 'progressPercentage' is frozen. Additional textual information may be provided in the 'resultStateInfo' attribute.

The 'resultStateInfo' attribute is provided only for additional textual qualification of the states 'FINISHED', 'FAILED', 'PARTIALLY_FAILED' or 'CANCELLED'. It shall not be used for making the outcome, that the process may produce in case of success, available.

The process may have to be completed within a certain time after its creation, for example because required data may not be available any more after a certain time, or the process outcome is needed until a certain time and when not provided by this time is not needed any more. The time until the MnS producer automatically cancels the process is indicated by the 'timer' attribute.;

grouping ReportingCtrl {
choice reportingCtrl {
mandatory true;
description "
This choice defines the method for reporting collected performance
metrics to MnS consumers as well as the parameters for configuring the
reporting function. It is a choice between the control parameter
required for the reporting methods, whose presence selects the
reporting method as follows:
"
- When only the fileReportingPeriod attribute is present, the MnS
producer shall store files on the MnS producer at a location selected
by the MnS producer and, on condition that an appropriate subscription
is in place, inform the MnS consumer about the availability of new
files and the file location using the notifyFileReady notification.
In case the preparation of a file fails, 'notifyFilePreparationError'
shall be sent instead.
"
- When the 'fileReportingPeriod' and 'notificationRecipientAddress'

```

attributes are present, then the MnS producer shall behave like described for the case that only the 'fileReportingPeriod' is present. In addition, the MnS producer shall create on behalf of the MnS consumer a subscription, using 'NtfSubscriptionControl', for the notification types 'notifyMOICreation' and 'notifyMOIDeletion' related to the 'File' instances that will be produced later. In case an existing subscription does already include the 'File' instances to be produced, no new subscription shall be created. The 'notificationRecipientAddress' attribute in the created 'NtfSubscriptionControl' instance shall be set to the value of the 'notificationRecipientAddress' in the related 'PerfMetricJob'. This feature is called implicit notification subscription, as opposed to the case where the MnS consumer creates the subscription (explicit notification subscription). When the related 'PerfMetricJob' is deleted, the 'NtfSubscriptionControl' instance created due to the request for implicit subscription shall be deleted as well.

- When only the fileReportingPeriod and fileLocation attributes are present, the MnS producer shall store the files on a MnS consumer, that can be any entity such as a file server, at the location specified by fileLocation. No notification is emitted by the MnS producer.
- When only the streamTarget attribute is present, the MnS producer shall stream the data to the location specified by streamTarget.

For the file-based reporting methods the fileReportingPeriod attribute specifies the time window during which collected measurements are stored into the same file before the file is closed and a new file is opened.";

grouping TraceSubtree {
  description "Contains classes that manage Tracing.
Should be used in all classes (or classes inheriting from)
- SubNetwork
- ManagedElement
- ManagedFunction

If a YANG module wants to augment these classes/list/groupings they must
augment all user classes!";

list TraceJob {
  description "Represents the Trace Control and Configuration parameters of a
particular Trace Job (see TS 32.421 and TS 32.422 for details).
It can be name-contained by SubNetwork, ManagedElement, ManagedFunction
or NetworkSliceSubnet.

To activate Trace Jobs, a MnS consumer has to create TraceJob object
instances on the MnS producer. A MnS consumer can activate a Trace Job
for another MnS consumer since it is not required the value of
traceCollectionEntityAddress or streamingTraceConsumerUri to be his
own.

When a MnS consumer wishes to deactivate a Trace Job, the MnS consumer
shall delete the corresponding TraceJob instance.

For details of management Trace Job activation/deactivation see clause
4.1.1.1.2 of TS 32.422.

The attribute traceReference specifies a globally unique ID and
identifies a Trace session. One Trace Session may be activated to
multiple Network Elements. The traceReference is populated by the
consumer that makes the request for a Trace Session.

The attribute tjJobType specifies the kind of data to collect.
Dependent on the selected type various parameters shall be available.
The attributes tjJobType, tjTraceReference,
tjTraceCollectionEntityAddress and tjTraceReportingFormat are
mandatory for all job types. If streaming reporting is selected
for tjTraceReportingFormat, tjStreamingTraceConsumerURI shall be
present additionally. The attribute tjPLMNTarget shall be present
if trace activation method is management based.

For the different job types the attributes are differentiated as follows:
- In case of TRACE_ONLY additionally the following attributes shall be
available: listOfNeTypes, traceDepth, traceTarget and
triggeringEvent.

For this case the optional attribute listOfInterfaces allows to
specify the interfaces to be recorded.

- In case of IMMEDIATE_MDT_ONLY additionally the following attributes
shall be available:
- traceTarget
- MDTAnonymizationOfData,
- MDTLListOfMeasurements,
- MDTCollectionPeriodRrmUmts (conditional for M3, M4 and M5 in UMTS),
- MDTMeasurementPeriodUMTS (conditional for M6 and M7 in UMTS),
- MDTCollectionPeriodRrmLte (conditional for M2 and M3 in LTE),
- MDTMeasurementPeriodLTE (conditional for M4 and M5 in LTE),
- MDTCollectionPeriodM6Lte (conditional for M6 in LTE),
- MDTCollectionPeriodM7Lte (conditional for M7 in LTE),
- MDTCollectionPeriodRrmNR (conditional for M4 and M5 in NR),
- MDTCollectionPeriodM6NR (conditional for M6 in NR),
- MDTCollectionPeriodM7NR (conditional for M7 in NR),
- MDTReportInterval (conditional for M1 in LTE or NR and M1/M2 in
UMTS),
- MDTReportAmount (conditional for M1 in LTE or NR and M1/M2 in
UMTS),
- MDTReportingTrigger (conditional for M1 in LTE or NR and M1/M2 in
UMTS),

```

```

    UMTS),
- MDTEventThreshold (conditional for A2 event reporting or A2 event
triggered periodic reporting),
- MDTMeasurementQuantity (conditional for 1F event reporting).

```

For this case the optional attribute MDTAreaScope allows to specify the area in terms of cells or Tracking Area/Routing Area/Location area where the MDT data collection shall take place and the optional attributes MDTPositioningMethod, MDTSensorInformation allow to specify the positioning methods to use or the sensor information to include.

- In case of IMMEDIATE_MDT_AND_TRACE both additional attributes of TRACE_ONLY and IMMEDIATE_MDT_ONLY shall apply.

- In case of LOGGED_MDT_ONLY additionally the following attributes shall be available: traceTarget, MDTAnonymizationOfData, MDTTraceCollectionEntityID, MDTLoggingInterval, MDTLoggingDuration, MDTReportType, MDTEventListForTriggeredMeasurements.

For this case the optional attribute MDTAreaScope allows to specify the area in terms of cells or Tracking Area/Routing Area/Location area where the MDT data collection shall take place, the optional attribute MDTPLMNList allows to specify the PLMNs where measurement collection, status indication and log reporting is allowed, the optional attribute MDTAreaConfigurationForNeighCell allows to specify the area for which UE is requested to perform measurements logging for neighbour cells which have list of frequencies and the optional attribute MDTSensorInformation allows to specify the sensor information to include.

- In case of RLF_REPORT_ONLY and RCEF_REPORT_ONLY additionally the attribute traceTarget shall be available, the optional attribute MDTAreaScope allows to specify the eNB or list of eNBs or gNB or list of gNBs where the reports should be collected.

- In case of LOGGED_MBSFN_MDT additionally the following attributes shall be available: MDTAnonymizationOfData, MDTLoggingInterval, MDTLoggingDuration, MDTMBSFNAreaList.

Creation and deletion of TraceJob instances by MnS consumers is optional; when not supported, the TraceJob instances may be created and deleted by the system or be pre-installed.";

            description "Contains a geographical area and an association threshold.
            The geo-area is defined as a convex polygon using the attribute
            'geoArea'.

            This data type contains a geographical area and an association
            threshold. The geo-area is defined as a convex polygon using the
            attribute 'geoArea'.

            The MnS producer shall map the geographical area to cells. There are
            two evaluation criteria whether a cell belongs to a geographical area
            or not. If attribute 'associationThreshold' is absent, the location
            of the base station antenna determines the belonging. If attribute
            'associationThreshold' is configured, the coverage area is considered.
            The attribute 'associationThreshold' determines the lower boundary of
            the coverage ratio. For example, if the 'associationThreshold' is
            configured to 60%, a cell shall be considered as included in the
            geographical area if at least 60% of the coverage area of that
            cell overlaps with the specified geographical area.

            The mapping of the geographical area to cells is performed at

grouping NodeFilterGrp {
    description "This data type defines several selection criteria for the target node(s) i.e., the node(s) producing the requested management data.

```

The attribute 'areaOfInterest' determines the location for which the management data is collected. The system translates the area into the target managed objects. The location is either configured by a list of TAI, a list of cells (identified either by NG-RAN CGI, E-UTRAN CGI or UTRAN CGI) or by a geographical area. The geographical area will be mapped to the cells providing coverage for this area. The cell coverage status at the time of the request is used for the mapping. Managed objects providing service to these cells are considered as target managed objects. Furthermore, an object which name contains or is associated to a managed object providing service to the considered cell, is considered as target managed object as well.

The attribute 'networkDomain' is used to select a particular domain (e.g. RAN, CN) for which the management data is collected. The system translates this information into the target managed objects. Managed objects from this selected particular domain (e.g RAN, CN) are considered as target managed objects. Furthermore, an object which name contains or is associated to a managed object of that domain, is considered as target managed object as well.

The attribute 'cpUpType' is used to select the traffic type (CP, UP) for which the management data is collected. The system translates this information into the target managed objects. Managed objects catering particular traffic type (CP, UP) are considered as target managed objects. Furthermore, an object which name contains or is associated to a managed object of that traffic type, shall be considered as target managed object as well.

The attribute 'sst' is used to select the SST (Slice/Service Type) for which the management data is collected. The system translates this information into the target managed objects. Managed objects related to particular SST will be considered as target managed objects.

If it is not possible to select the target node(s) (based on a particular selection criteria) deterministically, the selection criteria should not be used.";

        uses top3gpp:Top_Grp ;
        container attributes {
            uses ManagementDataCollectionGrp;
        }
        description "This IOC represents a management data collection request
job. The requested data could be of kind Trace, MDT (Minimization
of Drive Test), RLF (Radio Link Failure) report, RCEF (RRC Connection
Establishment Failure) report, PM (performance measurements), KPI
(end-to-end key performance indicators) or a combination of these.

The attribute 'managementData' defines the management data which shall
be reported. This may either include a list of data categories or a
list of management data identified with their name. For further details
see TS 28.622 clause 4.3.50. The 'targetNodeFilter' attribute can be
used to target object instance(s) producing the required management
data. It is assumed that the consumer may not have detailed knowledge
of the network and hence may not identify the exact object instance
producing the required management data. In this case consumer can
request management data, specified by 3GPP, produced by certain network
function(s) based on a particular location, the domain (CN or RAN) of
the object instances, and the handled traffic (CP or UP) of the object
instances.

To activate the production of the requested data, a MnS consumer has to
create a 'ManagementDataCollection' object instance on the MnS producer.

The MnS producer will derive multiple jobs ('PerfMetricJob',
'TraceJob') from a single 'ManagementDataCollection' job for collecting
the required management data. Once it receives the measurement from
multiple sources, it consolidates the data into a set of management data
for reporting.

The attribute 'collectionTimeWindow' specifies the time window for which
the management data should be reported.

The attribute 'reportingCtrl' specifies the method and associated
control parameters for reporting the produced management data to MnS
consumers. Three methods are available: file-based reporting with
selection of the file location by the MnS producer, file-based
reporting with selection of the file location by the MnS consumer and
stream-based reporting.

The attribute 'dataScope' configures, whether the management data
should be reported per S-NSSAI or per 5QI, if applicable.";

grouping FilesSubtree {
description "Contains classes of the File retrieval NRM fragment.
Should be used in classes (or classes inheriting from)
- SubNnetwork
- ManagedElement
- PerfMetricJob
- TraceJob

```

If a YANG module wants to augment these classes/list/groupings they must augment all user classes!";

```
list Files {
    description "This IOC represents a collection of files. It can be
    name-contained by 'SubNetwork', 'ManagedElement', 'PerfMetricJob' or
    'TraceJob'. The 'Files' object name-contains 'File' objects, that
    represent the files of the collection. File collections allow to
    structure related files under a common root."
```

Instances of 'Files' are created by MnS producers. They shall be created at latest when the first file of the collection becomes available for retrieval by MnS consumers.

The attributes of 'Files' represent properties of the file collection and not properties of individual files.

When the file retrieval NRM fragment is used together with a data collection job ('PerfMetricJob' or 'TraceJob') the following provisions shall apply:

- The 'Files' object shall be created at the same time as the object representing the data collection job.
- The attributes 'jobRef' and 'jobId' shall be supported and present in a 'Files' instance. They shall identify the job that the files in the file collection relate to.
- A 'Files' instance shall contain files related to one and only one job.
- The files produced by one job shall be contained in one and only one 'Files' instance.
- The job object shall support an attribute with a link to the created 'Files' instance ('_linkToFiles').
- The attribute '_linkToFiles' shall be returned in the job creation response, if the stage 3 protocol supports returning attributes in an object creation response.
- The MnS producer decides where to name-contain the 'Files' instance related to a job.

The attribute '_linkToFiles' allows a MnS consumer to create simple and targeted subscriptions for 'notifyFileReady', and 'notifyFilePreparationError', or 'notifyMOICreation', 'notifyMOIChanges' and 'notifyFilePreparationError' related to 'File' instances created or deleted under the 'Files' instance of a specific job. The subscription needs to scope simply objects one level below the 'Files' object.

In addition, the attribute '_linkToFiles' allows for simple deployments not relying on notifications for reporting the availability of new files, where the MnS consumer polls regularly for new files under 'Files'.";

```
key id;
config false;
uses top3gpp:Top_Grp ;
container attributes {
    uses FilesGrp ;
}

list File {
    description "Represents a file. It is name-contained by 'Files'.
```

When a file becomes available on a MnS producer for retrieval by a MnS consumer, the MnS producer shall create a 'File' instance representing that file.

The time of creation shall be captured by the MnS producer in the 'fileReadyTime' attribute. The MnS producer shall keep the file at least until the time specified by 'fileExpirationTime'. After that time the MnS producer may delete the 'File' instance.

The 'fileExpirationTime' is determined by the MnS producer based on considerations such as available storage space or file retention policies.

The attributes 'fileSize', 'fileCompression', 'fileDataType' and 'fileFormat' describe the file properties.

The 'fileLocation' attribute indicates the address where the file can be retrieved. The address includes the file transfer protocol (schema).

Allowed file transfer protocols are 'sftp', 'ftpes' and 'https'.

The value of 'fileLocation' can be identical to or different from the address of the 'File' instance. The attribute 'fileContent' is provided for retrieving the actual file content. When identifying in the Read request a 'File' instance and specifying only the 'fileContent' attribute be returned, then only the file content shall be returned in the response. Note, as usual, multiple attributes can be specified to be returned, so that the file content together with some or all file meta data attributes can be returned in response to a single request.

In case the 'fileLocation' specifies a location different than the 'File' object location, then the attribute 'fileContent' cannot be used for retrieving the file content. For example, the 'File' object location may be given by

```
'https://companyA.com/ManagedElement=1/Files=1/File=1'  
and the value of the 'fileLocation' attribute by  
'sftp://companyA.com/datastore/fileName.xml'
```

In this case the file needs to be retrieved using 'sftp' from 'sftp://companyA.com/datastore/fileName.xml'. Attempts to read the 'fileContent' attribute shall return an error.

When the file retrieval NRM fragment is used together with a data collection job ('PerfMetricJob' or 'TraceJob') the following provisions shall apply:

- The attributes 'jobRef' and 'jobId' shall be supported and present. They shall identify the job that the file is related to.

The attributes 'jobRef' and 'jobId' allow to set notification filters in the subscription in such a way that only 'notifyMOICreation', 'notifyMOIChanges' and 'notifyMOIDeletion' notifications are sent to subscribed MnS consumers if the created or deleted 'File' instance represents data related to jobs the subscribed MnS consumer created or is interested in.

Upon creation of a 'File' instance, a notification of type 'notifyMOICreation' or 'notifyMOIChanges' shall be emitted to subscribed MnS consumers as usual. For the case that the file contains performance metric data ('fileDataType' is 'PERFORMANCE') the MnS producer shall emit either a notification of type 'notifyMOICreation', 'notifyMOICreation' or of type 'notifyFileReady'. The MnS consumer selects the notification type he wishes to receive with the subscription created on the MnS producer.

The 'objectClass' and 'objectInstance' parameters in the notification header of 'notifyFileReady' shall identify the new 'File' instance, instead of the related 'PerfMetricJob', 'TraceJob', 'ManagedElement' or 'ManagementNode' as described in 3GPP TS 28.532, clause 11.6.1.1 for the case that 'notifyFileReady' is used as part of the file data reporting MnS.

The notification 'notifyFilePreparationError' shall be supported as well by the 'File' object. It shall be sent when an error occurs during the preparation of the file. No 'notifyFileReady' or 'notifyMOICreation' shall be sent in that case. The 'objectClass' and 'objectInstance' parameters of the notification header shall identify the new 'File' instance representing the corrupted file, instead of the related 'PerfMetricJob', 'TraceJob', 'ManagedElement' or 'ManagementNode' as described in 3GPP TS 28.532, clause 11.6.1.1 for the case that 'notifyFilePreparationError' is used as part of the file data reporting MnS. When the file is not created at all or deleted, the 'objectClass' and 'objectInstance' parameters of the notification header are populated as described in 3GPP TS 28.532, clause 11.6.1.1. Note that to receive 'notifyFilePreparationError' in that case the notification subscription needs to include these objects in its scope.";

D.3 Void

D.4 Mount information

If the class ManagedElement and the underlying hierarchy is contained under a SubNetwork all YANG modules containing IOCs that can be contained under the ManagedElement directly or under other IOCs contained by the ManagedElement and the YANG module for ManagedElement itself shall be mounted at the mountpoint "children-of-SubNetwork" in the YANG module _3gpp-common-subnetwork.

See IETF RFC 8528 [16] that describes the mechanism that adds the schema trees defined by a set of YANG modules onto a mount point defined in the schema tree in another YANG module.

Annex E (informative): Change history

2022-03	SA#95e	SP-220171	0153	-	B	Add parameter to configure beam level measurements in NR MDT	17.1.0
2022-03	SA#95e	SP-220183	0154	-	B	Add attribute to configure an identifier of a TraceJob	17.1.0
2022-03	SA#95e	SP-220187	0156	-	B	Add file download NRM fragment (YANG)	17.1.0
2022-06	SA#96	SP-220498	0159	-	A	Stage 3 Yang fix for 3GPP Common Trace	17.2.0
2022-06	SA#96	SP-220498	0162	1	A	OpenAPI file name and dependence change for comDefs.yaml	17.2.0
2022-06	SA#96	SP-220498	0163	1	A	OpenAPI file name and dependence change for genericNrm.yaml	17.2.0
2022-06	SA#96	SP-220498	0166	-	A	yaml indentation correction for comDefs.yaml	17.2.0
2022-06	SA#96	SP-220516	0168	-	A	Alignment of attribute names of TraceJob IOC to TS 32.422 (stage 3)	17.2.0
2022-06	SA#96	SP-220496	0169	-	F	Fix description of attribute mnsScope	17.2.0
2022-06	SA#96	SP-220516	0174	-	A	Alignment of attribute values of attribute tjMDTReportInterval to TS 32.422, TS 38.413 and TS 38.423	17.2.0
2022-06	SA#96	SP-220505	0175	-	B	Add stage 3 for management data collection and discovery (OpenAPI definitions)	17.2.0
2022-06	SA#96					Correction of implementation in D.2.10	17.2.1
2022-06	SA#96					Further corrections on the changes in the code from the annexes	17.2.2
2022-09	SA#97e	SP-220853	0180	-	A	YANG Corrections	17.3.0
2022-09	SA#97e	SP-220859	0182	1	A	Adding missing interface for SMF	17.3.0
2022-09	SA#97e	SP-220863	0186	-	F	Correction of file names in OpenAPI Solution Set	17.3.0
2022-09	SA#97e	SP-220864	0188	-	A	Correction of attribute names according to Upper Camel Case Convention and WKA	17.3.0
2022-09	SA#97e					Alignment with FORGE code (MCC)	17.3.1
2022-12	SA#98e	SP-221168	0190	-	F	YANG Corrections in Word TS	17.4.0
2022-12	SA#98e	SP-221186	0193	-	F	Add YANG for ManagementDataCollection	17.4.0
2022-12	SA#98e	SP-221173	0200	1	A	Adding YANG begin and End markers	17.4.0
2022-12	SA#98e	SP-221186	0203	1	F	Correct yaml definition for ManagementDataCollection IOC	17.4.0
2022-12	SA#98e	SP-221187	0205	-	F	Adding a new data type to represent GeoArea via convex polygon - Stage 3	17.4.0
2022-12	SA#98e	SP-221197	0213	1	F	Correct M6 Delay Threshold to align with TS 38.314 and TS 38.413	17.4.0
2022-12	SA#98e	SP-221170	0217	-	A	Add missing attribute properties to YANG	17.4.0
2023-01	SA#98e					Removes yang files from the zip file that were added by mistake.	17.4.1
2023-01	SA#98e					Correcting the placing of <CODE ENDS> as a CR implementation error (MCC)	17.4.2
2023-03	SA#99	SP-230199	0222	2	A	Fix IpAddr stage 3 definition	17.5.0
2023-03	SA#99	SP-230207	0224	-	F	Adding altitude to GeoArea datatype - Stage 3	17.5.0
2023-03	SA#99	SP-230200	0229	-	A	Missing Mount information	17.5.0
2023-03	SA#99	SP-230210	0232	1	A	Correcting traceRecordingSessionReference property (stage3)	17.5.0
2023-03	SA#99	SP-230210	0236	-	A	Correct Trace IOC attribute names (stage3, yang)	17.5.0
2023-03	SA#99	SP-230208	0239	1	A	Clarify reporting and monitoring period usage in SupportedPerfMetricGroup datatype.	17.5.0
2023-03	SA#99					Alignment of the code with FORGE	17.5.1
2023-06	SA#100	SP-230649	0245	-	F	Correction to stage 3 implementation for MnSInfo and MnsRegistry	17.6.0
2023-06	SA#100	SP-230649	0249	-	F	YANG Corrections	17.6.0
2023-06	SA#100					CR implementation corrections	17.6.1
2023-09	SA#101	SP-230944	0242	4	F	Clarify MnsRegistry handling, YANG SS R17	17.7.0
2023-09	SA#101	SP-230944	0252	-	F	YANG Corrections 28.623 R17	17.7.0
2023-09	SA#101	SP-230942	0259	1	A	Rel-17 CR 28.622 Clarify HeartbeatControl IOC definition (stage3, yang)	17.7.0
2023-09	SA#101	SP-230944	0265	-	F	Improve Distinguished Name pattern in YANG - R17	17.7.0
2023-12	SA#102	SP-231492	0270	1	F	Rel-17 CR 28.623 YANG Corrections and inVariant	17.8.0
2023-12	SA#102	SP-231492	0273	-	F	Rel-17 CR TS 28.623 Stage 3 Correction of ExcessPacketDelayThreshold definition	17.8.0

2023-12	SA#102	SP-231452	0277	-	F	Rel-17 CR 28.623 Clarify MnS scope value for Managed Elements (stage3, yang)	17.8.0
2023-12	SA#102	SP-231457	0286	1	F	Rel-17 CR TS28.623 Correct the yaml definition for ThresholdMonitor IOC to align with stage2 definition	17.8.0
2023-12	SA#102	SP-231488	0293	2	A	Rel-17 CR TS28.623 Align N38 in SMF with TS23.501	17.8.0
2023-12	SA#102	SP-231471	0298	1	F	Rel-17 CR 28.623 Add measurement bin support to NRM (stage3, yang)	17.8.0
2023-12	SA#102	SP-231488	0301		A	Rel-17 CR TS28.623 Adding N16 and N16a into module_3gpp-common-trace.yang	17.8.0
2023-12	SA#102	SP-231492	0306		F	Rel-17 CR 28.623 YANG Corrections (SA5#152)	17.8.0
2024-03	SA#103	SP-240185	0310	-	F	TS28.623 Rel17 correction to ReportingCtrl stage 3 OpenAPI implementation	17.9.0
2024-03	SA#103	SP-240185	0327	1	F	Rel-17 CR 28.623 YANG Corrections	17.9.0
2024-06	SA#104	SP-240805	0332	1	F	Rel-17 CR 28.623 System created extension	17.10.0
2024-06	SA#104	SP-240805	0339	-	F	TS28.623 Rel17 correction to OpenAPI stage 3 issues in TS28623_ComDefs.yang	17.10.0
2024-06	SA#104	SP-240805	0341	1	F	Rel-17 CR 28.623 Add missing trace message support to trace job (stage 3, yang)	17.10.0
2024-06	SA#104	SP-240805	0343	1	F	Rel-17 CR 28.623 Add missing trace message support to trace job (stage 3, yaml)	17.10.0
2024-06	SA#104	SP-240805	0347	-	F	Rel-17 CR 28.623 YANG Corrections	17.10.0
2024-06	SA#104	SP-240805	0361	-	F	Rel-17 CR TS 28.623 Remove notifyFileDeletion as notification type (YANG, stage 3)	17.10.0
2024-06	SA#104	SP-240805	0363	-	F	Rel-17 CR 28.623 Fix trace attribute definition (stage 3, yaml)	17.10.0
2024-06	SA#104	SP-240805	0364	1	F	Rel-17 CR 28.623 Fix trace attribute definition (stage 3, yang)	17.10.0
