Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The present document is part 3 of a multi-part TS covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects, as identified below:

Part 1: "3G Fault Management Requirements";

Part 2: "Alarm Integration Reference Point: Information Service";

Part 3: "Alarm Integration Reference Point: CORBA Solution Set Version 1:1";

Part 4: "Alarm Integration Reference Point: CMIP Solution Set".

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the CORBA Solution Set (SS) for the IRP whose semantics is specified in Alarm IRP: Information Service (IS) (3GPP TS 32.111-2 [13]).

Clause 1 to 3 provides background information. Clause 4 provides key architectural features supporting the SS. Clause 5 defines the mapping of operations, notification, parameters and attributes defined in IS to their SS equivalents. Clause 6 defines the usage of OMG CORBA Structured Event to carry information defined in notifications carrying alarm information. Clause 7 describes the notification interface containing the push method. Annex A contains the IDL specification.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

In addition to the terms and definitions defined in 3GPP TS 32.111-2 [13], there are no additional definitions applicable to the present document.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA	Common Object Request Broker Architecture
IDL	Interface Definition Language
IRP	Integration Reference Point
MOC	Managed Object Class
MOI	Managed Object Instance
NE	Network Element
OMG	Object Management Group
TMN	Telecommunications Management Network
UML	Unified Model Language

3.3 IRP Solution Set version

The version of this CORBA SS is 1:1, where the first "1" indicates the version number of the Alarm IRP: IS (3GPP TS 32.111-2 [13]) and the second "1" indicates the version number of the present document.

4 Architectural features

The overall architectural feature of Alarm IRP is specified in 3GPP TS 32.111-2 [13]. This clause specifies features that are specific to the CORBA SS.

4.1 Notification Services

In implementations of CORBA SS, IRPAgent conveys Alarm Information to IRPManager via OMG Notification Service (OMG TC Document telecom [6]).

OMG Event Service provides event routing and distribution capabilities. OMG Notification Service provides, in addition to Event Service, event filtering and Quality Of Service (QOS) as well.

A necessary and sufficient sub set of OMG Notification Services shall be used to support AlarmIRPNotifications notifications as specified in 3GPP TS 32.111-2 [13].

4.2 Push and Pull Style

OMG Notification Service defines two styles of interaction. One is called push style. In this style, IRPAgent pushes notifications to IRPManager as soon as they are available. The other is called pull style. In this style, IRPAgent keeps the notifications till IRPManager requests for them.

This CORBA SS specifies that support of Push style is Mandatory (M) and that support of Pull style is Optional (O).

4.3 Support multiple notifications in one push operation

For efficiency reasons, IRPAgent may send multiple notifications using one single push operation. To pack multiple notifications into one push operation, IRPAgent may wait and not invoke the push operation as soon as notifications are available. To avoid IRPAgent to wait for an extended period of time that is objectionable to IRPManager, IRPAgent shall implement an IRPAgent wide timer configurable by administrator. On expiration of this timer, IRPAgent shall invoke push if there is at least one notification to be conveyed to IRPManager. This timer is re-started after each push invocation.

4.4 Filter

IRPAgent shall optionally support alarm filtering based on IRPManager's supplied alarm filter constraints (e.g., as parameter in subscribe() of 3GPP TS 32.106-2 [10]). Alarm filtering can be applied in the following cases:

- It is applicable to alarms emitted by IRPAgent via AlarmIRPNotifications. IRPManager supplies alarm filter constraint via the subscribe method. This filter is effective during the period of subscription.
- It is applicable to alarms returned by IRPAgent via the out parameter of get_alarm_list method. IRPManager supplies alarm filter constraint via the get_alarm_list method. This filter is effective only for this method invocation.
- It is applicable to the calculation of alarm counts returned by IRPAgent via the out parameters of get_alarm_count method. IRPManager supplies alarm filter constraint via the get_alarm_count method. This filter is effective only for this method invocation.

This SS shall use of filter constraint grammar specified by reference 3GPP TS 32.106-2 [10]. The name of the grammar is called "EXTENDED_TCL". See clause 2.4, Default Filter Constraint Language in 3GPP TS 32.106-2 [10]. This SS shall use this grammar only.

5 Mapping

5.1 Operation and Notification mapping

Alarm IRP: IS 3GPP TS 32.111-2 [13] defines semantics of operation and notification visible across the Alarm IRP. Table 1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table 1: Mapping from IS Notification/Operation to SS equivalents

IS Operation/ notification 3GPP TS 32.111-2 [13]	SS Method	Qualifier
acknowledgeAlarms	acknowledge_alarms	M
unacknowledgeAlarms	unacknowledge_alarms	O
getAlarmList	get_alarm_list	M
getAlarmIRPVersion	get_alarm_IRP_version	M
getAlarmCount	get_alarm_count	O
notifyNewAlarm	push_structured_events Note that OMG Notification Service 3GPP TS 32.106-2 [10] defines this method. See clause 8.1	M
notifyClearedAlarm	push_structured_events See clause 8.1	M
notifyChangedAlarm	push_structured_events See clause 8.1	M
notifyAckStateChanged	push_structured_events See clause 8.1	M
notifyAlarmListRebuilt	push_structured_events See clause 8.1	M

5.2 Operation parameter mapping

Reference 3GPP TS 32.111-2 [13] defines semantics of parameters carried in operations across the Alarm IRP. Table 2 and table 3 indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table 2: Mapping from IS acknowledgeAlarms parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarmInformation ReferenceList	AlarmIRPConstDefs::AlarmInformationIdSeq alarm_information_id_list	M
ackUserId	string ack_user_id	M
ackSystemId	string ack_system_id	O
bad AlarmInformation ReferenceList	AlarmIRPConstDefs::AlarmInformationIdSeq bad_alarm_information_id_list	M
status	CommonIRPConstDefs::Signal Exceptions: AcknowledgeAlarms, ParameterNotSupported, InvalidParameter	M

Table 3: Mapping from IS unacknowledgeAlarms parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarm InformationReferenceList	AlarmIRPConstDefs::AlarmInformationIdSeq alarm_information_id_list	M
ackUserId	string ack_user_id	M
ackSystemId	string ack_system_id	O
badAlarm Information ReferenceList	AlarmIRPConstDefs::AlarmInformationIdSeq bad_alarm_information_id_list	M
status	CommonIRPConstDefs::Signal Exceptions: UnacknowledgeAlarms, OperationNotSupported, ParameterNotSupported, InvalidParameter	M

Table 4: Mapping from IS getAlarmList parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarmAckState, filter	string filter	O
alarmInformation List	Return value of type AlarmIRPConstDefs::AlarmInformationSeq	M
status	Exceptions: GetAlarmList, ParameterNotSupported, InvalidParameter	M

Table 5: Mapping from IS getAlarmCount parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarmAckState, filter	string filter	O
criticalCount, majorCount, minorCount, warningCount, indeterminateCount, clearedCount	long critical_count, long major_count, long minor_count, long warning_count, long indeterminate_count, long cleared_count	M
status	Exceptions: GetAlarmCount, OperationNotSupported, ParameterNotSupported, InvalidParameter	M

Table 6: Mapping from IS getAlarmIRPVersion parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
versionNumberList	Return value of type CommonIRPConstDefs::VersionNumberSet	M
status	Exceptions: GetAlarmIRPVersion	M

5.3 Notification parameter mapping

Reference 3GPP TS 32.111-2 [13] defines semantics of parameters carried in notifications across the Alarm IRP. Table 7 and table 8 indicate the mapping of these parameters, as per notification, to their equivalents defined in this SS.

Table 7 and table 8 are relevant for notifyNewAlarm, notifyChangedAlarm, notifyClearedAlarm, notifyAckStateChanged.

Table 7: Mapping from IS notify[New, Changed, Cleared]Alarm and notifyAckStateChanged parameters to SS equivalents

IS Notification parameter	SS Notification parameter	Comment
notification Header	structuredEvent Note that OMG Notification Service [6] defines this structuredEvent. See Clause 4 as well.	Attributes of notificationHeader are mapped to attributes of structuredEvent. See clause 5.4 for attributes related to notificationHeader. See Table 9 for qualifiers for the parameter-attributes. For notifyNewAlarm, notifyChangedAlarm, notifyClearedAlarm and notifyAckStateChanged, the extendedEventType shall contain a string of extendedEventTypeValue.NOTIFY_FM_NEW_ALARM, extendedEventTypeValue.NOTIFY_FM_CHANGED_ALARM, extendedEventTypeValue.NOTIFY_FM_CLEARED_ALARM, extendedEventTypeValue.NOTIFY_FM_ACK_STATE_CHANGED respectively.
alarm Information Body	structuredEvent	Attributes of alarmInformationBody are mapped to attributes of structuredEvent. See clause 5.4 for attributes related to alarmInformationBody. See table 10 for qualifiers for the parameter-attributes.

Table 8 is relevant for notifyAlarmListRebuilt.

Table 8: Mapping from IS notifyAlarmListRebuilt parameters to SS equivalents

IS Notification parameter	SS equivalent	Comment
notification Header	structuredEvent	Attributes of notificationHeader are mapped to attributes of structuredEvent. See clause 5.4 for attributes related to notificationHeader. See Table 9 for qualifiers for the parameter-attributes. The eventType shall contain a zero-length string. The extendedEventType shall contain a string of extendedEventTypeValue.NOTIFY_FM_ALARM_LIST_REBUILT. The managedObjectInstance shall carries the DN of the IRPAgent whose Alarm List has been rebuilt. Syntax and semantics of this string conform to the Managed Object string representation specified in [8].
reason	reason	It is a string indicating the Alarm List rebuilt reason. See 3GPP TS 32.111-2 [13] for qualifiers for the parameter-attributes.

5.4 Parameter Attribute mapping

Notification IRP: IS 3GPP TS 32.106-2 [10] defines the semantics of attributes for `notificationHeader` parameter. Alarm IRP: IS 3GPP TS 32.111-2 [13] identifies `notificationHeader` for use for its IRP. 3GPP TS 32.111-2 [13] also qualifies the attributes of the `notificationHeader` parameter. Table 9 shows the mapping of these IS attributes to SS equivalents.

Table 9: Mapping from IS `notificationHeader` attributes to SS equivalents

IS Attribute of <code>notificationHeader</code> in [10]	SS Attribute	Qualifier
<code>managedObjectClass</code>	<code>managedObjectClass</code>	M
<code>managedObjectInstance</code>	<code>managedObjectInstance</code>	M
<code>notificationID</code>	<code>notificationID</code>	M
<code>eventTime</code>	<code>eventTime</code>	M
<code>systemDN</code>	<code>systemDN</code>	M
<code>eventType</code>	<code>eventType</code>	M
<code>extendedEventType</code>	<code>extendedEventType</code>	M

Alarm IRP: IS 3GPP TS 32.111-2 [13] defines and qualifies the semantics of attributes for `alarmInformationBody` parameter. The following table shows the mapping of these IS attributes to SS equivalents.

Table 10: Mapping from IS `alarmInformationBody` attributes to SS equivalents

IS Attribute of <code>alarmInformationBody</code> in 3GPP TS 32.111-2 [13]	SS Attribute	Qualifier
<code>probableCause</code>	<code>probableCause</code>	M

<code>additionalInformation.ackSystemId</code>	<code>ackSystemId</code>	note 1
<code>additionalInformation.ackState</code>	<code>ackState</code>	note 1
NOTE 1: See qualification information in 3GPP TS 32.111-2 [13], Table 13: Parameter-Attributes of <code>alarmInformationBody</code> .		

6 Use of OMG Structured Event

Operation `notify` defined in 3GPP TS 32.111-2 [13] carries parameters, such as `notificationHeader` and `alarmInformationBody`. In CORBA SS, OMG defined `StructuredEvent` (see ITU-T Recommendation X.736 [2]) is used to carry notification. This clause identifies the OMG defined `StructuredEvent` attributes that carry the attributes of parameters defined in 3GPP TS 32.111-2 [13].

The composition of OMG Structured Event, as defined in the OMG TC Document `telecom` [6], is:

```

Header
  Fixed Header
    domain_name
    type_name
    event_name
  Variable Header
Body
  filterable_body_fields
  remaining_body

```

Table 11 lists all OMG Structured Event attributes in the second column. The first column identifies the SS attributes, if any, that shall be carried in the Structured Event attributes.

Attributes that are denoted as “optional” in subclause 5.4 of the present document may be absent from the OMG Structured Event. As an example, if the optional `monitoredAttributes` attribute is not used for a particular notification, then the `IRPAgent` may exclude `monitoredAttributes` from the filterable body fields for that particular notification. Individual notifications from the same `IRPAgent` may include or exclude the same optional attribute.

Table 11: Use of OMG Structured Event

SS Attribute	OMG CORBA Structured Event attribute	Comment
There is no corresponding SS attribute.	<code>domain_name</code>	It contains a string defined by interface <code>IRPNotificationCategoryValue.alarmIRPVersion_1_1</code> . It indicates the syntax and semantics of this Structured Event defined by Alarm IRP: CORBA SS 1:1.
<code>eventType</code>	<code>type_name</code>	Attribute <code>eventType</code> is an attribute of <code>notificationHeader</code> . It shall indicate one of the following ITU-T defined semantics: communications alarm, processing error alarm, environmental alarm, quality of service alarm and equipment alarm. It is a string. See block of const string definitions starting with "ET_" in the IDL.
<code>extendedEventType</code>	<code>event_name</code>	Attribute <code>extendedEventType</code> is an attribute of <code>notificationHeader</code> . It shall identify one of the following: <ul style="list-style-type: none"> - notify a new alarm - notify changes in alarm state - notify changes in alarm acknowledgement state - notify alarm cleared - notify Alarm List has been successfully rebuilt It is a string. See block of const string definitions starting with "NOTIFY_FM_" in the IDL.
There is no corresponding SS attribute.	<code>variable Header</code>	
<code>managedObjectClass</code> , <code>managedObjectInstance</code>	One NV pair of <code>filterable_body_fields</code>	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. They are attributes of <code>notificationHeader</code> . Name of NV pair is a string, <code>NV_MANAGED_OBJECT_INSTANCE</code> defined in module <code>NotificationIRPConstDefs</code> . Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [11]).
<code>notificationId</code>	One NV pair of <code>filterable_</code>	It is an attribute of <code>notificationHeader</code> . Name of NV pair is a string, <code>NV_NOTIFICATION_ID</code> defined in module

SS Attribute	OMG CORBA Structured Event attribute	Comment
	body_fields	NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [11]).
eventTime	One NV pair of filterable_body_fields	It is an attribute of notificationHeader. Name of NV pair is NV_EVENT_TIME defined in module NotificationIRPConstDefs. Value of NV pair is a IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.106-3 [11]).
systemDN	One NV pair of filterable_body_fields	It is an attribute of notificationHeader. Name of NV pair is a string, NV_SYSTEM_DN defined in module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS [11].
probableCause	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_PROBABLE_CAUSE defined in module NotificationIRPConstDefs. Value of NV pair is a short defined by PC_INDETERMINATE, PC_ALARM_INDICATION_SIGNAL, etc.
perceivedSeverity	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_PERCEIVED_SEVERITY defined in module NotificationIRPConstDefs. Value of NV pair is a short defined by PS_INDETERMINATE, PS_CRITICAL, etc.
specificProblem	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_SPECIFIC_PROBLEM defined in module NotificationIRPConstDefs. Value of NV pair is a string.
correlatedNotifications	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_CORRELATED_NOTIFICATIONS defined in module NotificationIRPConstDefs. Value of NV pair is a CorrelatedNotificationSetType.
backedUpStatus	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_BACKED_UP_STATUS defined in module NotificationIRPConstDefs. Value of NV pair is a boolean BackedUpStatusType.
backUpObject	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_BACK_UP_OBJECT defined in module NotificationIRPConstDefs. Value of NV pair is a string carrying of DN of the back-up object. See 3GPP TS 32.106-8 [8] for the DN string representation.
trendIndication	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_TREND_INDICATION defined in module NotificationIRPConstDefs. Value of NV pair is an enum TrendIndicationType.
thresholdInfo	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_THRESHOLD_INFO defined in module NotificationIRPConstDefs. Value of NV pair is an enum ThresholdIndicationType.
stateChangeDefinition	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_STATE_CHANGE_DEFINITION defined in module NotificationIRPConstDefs. Value of NV pair is an AttributeChangeSetType.
monitoredAttributes	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_MONITORED_ATTRIBUTES defined in module NotificationIRPConstDefs. Value of NV pair is an AttributeSetType.
proposedRepairActions	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_PROPOSED_REPAIR_ACTIONS defined in module NotificationIRPConstDefs. Value of NV pair is a string.

SS Attribute	OMG CORBA Structured Event attribute	Comment
additionalText	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ADDITIONAL_TEXT defined in module NotificationIRPConstDefs. Value of NV pair is a string.
additionalInformation.alarmId	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ALARM_ID defined in module NotificationIRPConstDefs. Value of NV pair is a string. If the string is a zero-length string or if this NV pair is absent, the default semantics is that alarmId is a concatenation of managedObjectInstance, eventType, probableCause and specificProblem, if present, of this Structured Event. Since probableCause is encoded as a short, it shall be converted into string before concatenation. The resultant string shall not contain spaces.
additionalInformation.ackTime	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ACK_TIME defined in module NotificationIRPConstDefs. Value of NV pair is a IRPTime.
additionalInformation.ackUserId	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ACK_USER_ID defined in module NotificationIRPConstDefs. Value of NV pair is a string.
additionalInformation.ackSystemId	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ACK_SYSTEM_ID defined in module NotificationIRPConstDefs. Value of NV pair is a string.
additionalInformation.ackState	One NV pair of filterable_body_fields	It is an attribute of alarmInformationBody. Name of NV pair is a string, NV_ACK_STATE defined in module NotificationIRPConstDefs. Value of NV pair is a short defined by ACK_STATE_ACKNOWLEDGED and ACK_STATE_UNACKNOWLEDGED.
reason	One NV pair of filterable_body_fields	It is an attribute of Notify Alarm List Rebuilt notification. Name of NV pair is a string, NV_REASON, defined in module NotificationIRPConstDefs. Value of NV pair is a string.
There is no corresponding SS attribute.	remaining_body	

7 AlarmIRPNotifications Interface

OMG CORBA Notification push operation is used to realise the notification of AlarmIRPNotifications. All the notifications in this interface are implemented using this `push_structured_events` method.

7.1 Method `push` (M)

```
module CosNotifyComm {  
    ...  
    Interface SequencePushConsumer : NotifyPublish {  
        void push_structured_events(  
            in CosNotification::EventBatch notifications)  
        raises( CosEventComm::Disconnected);  
        ...  
    }; // SequencePushConsumer  
    ...  
}; // CosNotifyComm
```

NOTE 1: The `push_structured_events` method takes an input parameter of type `EventBatch` as defined in the `OMG CosNotification` module (OMG TC Document telecom [6]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter will contain a sequence of Structured Events being delivered to `IRPManager` by `IRPAgent` to which it is connected.

NOTE 2: The maximum number of events that will be transmitted within a single invocation of this operation is controlled by `IRPAgent` wide configuration parameter.

NOTE 3: The amount of time the supplier (`IRPAgent`) of a sequence of Structured Events will accumulate individual events into the sequence before invoking this operation is controlled by `IRPAgent` wide configuration parameter as well.

NOTE 4: `IRPAgent` may push `EventBatch` with only one Structured Event.

Annex A (normative): IDL specification

```
