Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (http://www.etsi.org/legal/home.htm).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under www.etsi.org/key .

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The present document is part 3 of a multi-part TS covering the 3rd Generation Partnership Project: Technical Specification Group Services and System Aspects, as identified below:

- Part 1: "3G Fault Management Requirements";
- Part 2: "Alarm Integration Reference Point: Information Service";

Part 3: "Alarm Integration Reference Point: CORBA Solution Set";

Part 4: "Alarm Integration Reference Point: CMIP Solution Set".

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the CORBA Solution Set (SS) for the IRP whose semantics is specified in Alarm IRP: Information Service (IS) (3G TS 32.111-2 [6]).

Clause 1 to 3 provides background information. Clause 4 provides key architectural features supporting the SS. Clause 5 defines the mapping of operations, notification, parameters and attributes defined in IS to their SS equivalents. Clause 6 describes the notification interface containing the push method. Annex A contains the IDL specification.

2 References

The following documents contain provisions, which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies.
- [1] OMG TC Document telecom/98-11-01: "OMG Notification Service".
- [2] OMG CORBA Services: "Common Object Services Specification, Update: November 22, 1996" (Clause 4 contains the Event Service specification).
- [3] 3G TS 32.106-8: "Name Convention for Managed Objects".
- [4] 3G TS 32.106-2: "Notification IRP: Information Service".
- [5] 3G TS 32.106-3: "Notification IRP: CORBA Solution Set".
- [6] 3G TS 32.111-2: "Alarm Integration Reference Point: Information Service".

3 Definitions and abbreviations

3.1 Definitions

In addition to the terms and definitions defined in TS 32.111-2 [6], there are no additional definitions applicable to the present document.

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA	Common Object Request Broker Architecture
IDL	Interface Definition Language
IRP	Integration Reference Point
MOC	Managed Object Class
MOI	Managed Object Instance
NE	Network Element
OMG	Object Management Group
TMN	Telecommunications Management Network
UML	Unified Model Language

3.3 IRP document version number string

The IRP document version number (sometimes called "IRP version" or "version number") string is used to identify this specification. The string is derived using the following rule.

Take the 3GPP document number on the front page of this specification, such as "3GPP TS 32.106-3 V3.2.0 (2000-12)". Discard the leading "3GPP TS ". Discard all characters after and including the last period. Eliminate leading and trailing spaces. Reduce multiple consecutive spaces with one space. Express the resultant in a string. Capitalised the string. For example, if the 3GPP document version number is "3GPP TS 32.106-3 V3.2.0 (2000-12)", then the IRP document version number shall be "32.106 V3.2".

This string is returned in getAlarmIRPVersion method and is carried in the first field of the notification header of all notifications related to alarm IRP.

4 Architectural Features

The overall architectural feature of Alarm IRP is specified in 3G TS 32.111-2 [6]. This clause specifies features that are specific to the CORBA SS.

4.1 Notification Services

In implementations of CORBA SS, IRPAgent conveys Alarm Information to IRPManager via OMG Notification Service (OMG Notification Service [1]).

OMG Event Service [2] provides event routing and distribution capabilities. OMG Notification Service provides, in addition to Event Service, event filtering and Quality Of Service (QOS) as well.

A necessary and sufficient sub set of OMG Notification Services shall be used to support AlarmIRPNotifications notifications as specified in 3G TS 32.111-2 [6].

4.2 Push and Pull Style

OMG Notification Service defines two styles of interaction. One is called push style. In this style, IRPAgent pushes notifications to IRPManager as soon as they are available. The other is called pull style. In this style, IRPAgent keeps the notifications till IRPManager requests for them.

This CORBA SS specifies that support of Push style is Mandatory (M) and that support of Pull style is Optional (O).

4.3 Support multiple notifications in one push operation

For efficiency reasons, IRPAgent may send multiple notifications using one single push operation. To pack multiple notifications into one push operation, IRPAgent may wait and not invoke the push operation as soon as notifications are available. To avoid IRPAgent to wait for an extended period of time that is objectionable to IRPManager, IRPAgent shall implement an IRPAgent wide timer configurable by administrator. On expiration of this timer, IRPAgent shall invoke push if there is at least one notification to be conveyed to IRPManager. This timer is re-started after each push invocation.

4.4 Filter

IRPAgent shall optionally support alarm filtering based on IRPManager's supplied alarm filter constraints (e.g., as parameter in subscribe() of 3G TS 32.106-2 [4]. Alarm filtering can be applied in the following cases:

- It is applicable to alarms emitted by IRPAgent via AlarmIRPNotifications. IRPManager supplies alarm filter constraint via the subscribe method. This filter is effective during the period of subscription.
- It is applicable to alarms returned by IRPAgent via the out parameter of get_alarm_list method. IRPManager supplies alarm filter constraint via the get_alarm_list method. This filter is effective only for this method invocation.
- It is applicable to the calculation of alarm counts returned by IRPAgent via the out parameters of get_alarm_count method. IRPManager supplies alarm filter constraint via the get_alarm_count method. This filter is effective only for this method invocation.

This SS shall use of filter constraint grammar specified by reference OMG Notification Service [1]. The name of the grammar is called "EXTENDED_TCL". See clause 2.4, Default Filter Constraint Language in OMG Notification Service [1]. This SS shall use this grammar only.

5 Mapping

5.1 Operation and Notification mapping

Alarm IRP: IS 3G TS 32.111-2 [6] defines semantics of operation and notification visible across the Alarm IRP. Table 1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

IS Operation/ notification 3G TS 32.111-2 [13]	SS Method	Qualifier
acknowledgeAlarms	acknowledge_alarms	М
unacknowledgeAlarms	unacknowledge_alarms	0
getAlarmList	get_alarm_list	М
getAlarmIRPVersion	get_alarm_IRP_version	М
getAlarmCount	get_alarm_count	0
setComment	set_comment	0
notifyNewAlarm	push_structured_event Note that OMG Notification Service OMG Notification Service [1] defines this method. See clause 6.1	М
notifyClearedAlarm	push_structured_eventSee clause 6.1	М
notifyChangedAlarm	push_structured_eventSee clause 6.1	М
notifyAckStateChanged	push_structured_eventSee clause 6.1	М
notifyAlarmListRebuilt	push_structured_event See clause 6.1	М
notifyComments	push_structured_eventSee clause 6.1	0

Table 1: Mapping from IS Notification/Operation to SS equivalents

5.2 Operation parameter mapping

Reference 3G TS 32.111-2 [6] defines semantics of parameters carried in operations across the Alarm IRP. The following set of tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

IS Operation parameter	SS Method parameter	Qualifier	
alarmInformation	AlarmIRPConstDefs::AlarmInformationIdSeq	М	
ReferenceList	alarm_information_id_list		
ackUserId	string ack_user_id	М	
ackSystemId	string ack_system_id	0	
bad AlarmInformation	AlarmIRPConstDefs::AlarmInformationIdSeq	М	
ReferenceList	bad_alarm_information_id_list		
status	CommonIRPConstDefs::Signal	М	
	Exceptions:		
	AcknowledgeAlarms, ParameterNotSupported,		
	InvalidParameter		

Table 2: Mapping from IS acknowledgeAlarms parameters to SS equivalents

Table 3: Mapping from IS unacknowledgeAlarms parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarm	AlarmIRPConstDefs::AlarmInformationIdSeq	М
InformationReferenceList	alarm_information_id_list	
ackUserId	string ack_user_id	М
ackSystemId	string ack_system_id	0
badAlarm Information	AlarmIRPConstDefs::AlarmInformationIdSeq	М
ReferenceList	bad_alarm_information_id_list	
status	CommonIRPConstDefs::Signal	М
	Exceptions:	
	UnacknowledgeAlarms, OperationNotSupported,	
	ParameterNotSupported, InvalidParameter	

Table 4: Mapping from IS getAlarmList parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarmAckState, filter	string filter	0
alarmInformation List	Return value of type	М
	AlarmIRPConstDefs::AlarmInformationSeq	
status	Exceptions:	М
	GetAlarmList, ParameterNotSupported,	
	InvalidParameter	

Table 5: Mapping from IS getAlarmCount parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
alarmAckState, filter	string filter	0
minorCount, warningCount,	<pre>long critical_count, long major_count, long minor_count, long warning_count, long indeterminate_count, long cleared_count</pre>	М
status	Exceptions: GetAlarmCount, OperationNotSupported, ParameterNotSupported, InvalidParameter	М

IS Operation parameter	SS Method parameter	Qualifier
versionNumberList	Return value of type	М
	CommonIRPConstDefs::VersionNumberSet	
status	Exceptions:	М
	GetAlarmIRPVersion	

 Table 6: Mapping from IS getAlarmIRPVersion parameters to SS equivalents

Table 7: Mapping from IS setComment parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
AlarmInformation	AlarmIRPConstDefs::AlarmInformationIdSeq	М
ReferenceList	alarm_information_id_list	
commentUserId	string comment_user_id	М
commentSystemId	string comment_system_id	М
commentText	string comment_text	М
badAlarmInformationIdList	AlarmIRPConstDefs::BadAlarmInformationIdSe bad_alarm_information_id_list	
status	Exceptions: CommentAlarms,OperationNotSupported.	

5.3 Notification parameter mapping

Reference 3G TS 32.111-2 [6] defines semantics of parameters carried in notifications. The following tables indicate the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [1]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [1], is:

```
Header
Fixed Header
domain_name
type_name
event_name
Variable Header
Body
filterable_body_fields
remaining_body
```

The following tables list all OMG Structured Event attributes in the second column. The first column identifies the Alarm IRP: IS [6] defined notification parameters.

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding SS attribute.	domain_name		It carries the IRP document version number string. See sub-clause 3.3. It indicates the syntax and semantics of the Structured Event as defined by this specification.
notification Type	type_name	М	This is the NOTIFY_FM_NEW_ALARM of interface NotificationType of module NotificationIRPConstDefs.
alarmType	event_name	М	It identifies one of the following: • communications alarm, • processing error alarm, • environmental alarm, • quality of service alarm and • equipment alarm.

Table 8: Mapping for notifyNewAlarm

			It is a string. See block of const string definitions encapsulated by
			interface AlarmTypes in the IDL. The strings start with "ET_".
There is no	variable		
corresponding SS attribute.			
managed0bjec	One NV pair of	М	NV stands for name-value pair. Order arrangement of NV pairs is not
tClass, managedObjec	filterable_ body_fields		significant. The name of NV-pair is always encoded in string.
tInstance			Name of NV pair is the MANAGED_OBJECT_INSTANCE of
			interface AttributeNameValue of module NotificationIRPConstDefs.
			Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3G TS 32.106-3 [5]).
notification		М	Name of NV pair is the NOTIFICATION_ID of interface
Id	filterable_ body_fields		AttributeNameValue ofmodule NotificationIRPConstDefs.
			Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3G TS 32.106-3 [5]).
eventTime	One NV pair of	Μ	Name of NV pair is the EVENT_TIME of interface
	filterable_		AttributeNameValue of module
	body_fields		NotificationIRPConstDefs.
			Value of NV pair is a IRPTime. See corresponding table in Notification IRP: CORBA SS (3G TS 32.106-3 [5]).
systemDN	One NV pair of	М	Name of NV pair is the SYSTEM_DN of interface
	filterable_ body_fields		AttributeNameValue of module NotificationIRPConstDefs.
			Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS [5].
probableCaus		М	Name of NV pair is the PROBABLE_CAUSE of interface
e	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a short defined by interface ProbableCause.
perceivedSev erity	One NV pair of filterable_ body_fields	М	Name of NV pair is the PERCEIVED_SEVERITY of interface AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a short defined by interface PerceivedSeverity.
specificProb	One NV pair of	0	Name of NV pair is the SPECIFIC_PROBLEM of interface
lem	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a string.
correlatedNo		0	Name of NV pair is the CORRELATED_NOTIFICATIONS of
tifications	filterable_ body_fields		interface AttributeNameValue.
			Value of NV pair is a CorrelatedNotificationSetType.
backedUpStat		0	Name of NV pair is the BACKED_UP_STATUS of interface
us	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs
			Value of NV pair is a boolean BackedUpStatusType.
backUpObject		0	Name of NV pair is the BACKED_UP_OBJECT of interface
	filterable_ body_fields		AttributeNameValue of module AlarmIRPConstDefs.
			Value of NV pair is a string carrying of DN of the back-up object. See 3G TS 32.106-8 [3] for the DN string representation.
trendIndicat	One NV pair of	0	Name of NV pair is the TREND_INDICATION of interface

ion	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
1011	body_fields		ACCIDACENAMEVALUE OF MODULE ALARMIRPCONSEDELS.
			Value of NV pair is an enum TrendIndicationType.
thresholdInf	One NIV pair of	0	Name of NV pair is the THRESHOLD_INFO of interface
0	filterable_	Ŭ	ParameterNameValue of module AlarmIRPConstDefs.
Ŭ,	body_fields		rarameternamevarue of module Ararminerconstders.
	2004 <u>/</u> 0		Value of NV pair is an enum ThresholdIndicationType.
stateChange	One NV pair of	0	Name of NV pair is the STATE_CHANGE_DEFINITION of interface
Definition	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		
			Value of NV pair is an AttributeChangeSetType.
monitoredAtt	One NV pair of	0	Name of NV pair is the MONITORED_ATTRIBUTES of interface
ributes	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		
			Value of NV pair is an AttributeSetType.
proposedRepa	One NV pair of	0	Name of NV pair is the PROPOSED_REPAIR_ACTIONS of inteface
irActions	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		
			Value of NV pair is a string.
additionalTe		0	Name of NV pair is the ADDITIONAL_TEXT of interface
xt	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		
	-		Value of NV pair is a string.
alarmId	One NV pair of	М	Name of NV pair is the ALARM_ID of interface
	filterable_		AttributeNameValue of module AlarmIRPConstDefs.
	body_fields		
			Value of NV pair is a string.
			If the string is a zero-length string or if this NV pair is absent, the default semantics is that alarmId is a concatenation
			ofmanagedObjectInstance, eventType, probableCause
			and specificProblem, if present, of this Structured Event. Since
			probableCuase is encoded as a short, it shall be converted into string
There is no	remaining_		before concatenation. The resultant string shall not contain spaces.
	body

There is no	remaining_		
corresponding IS	body		
attribute.			

6 AlarmIRPNotifications Interface

OMG CORBA Notification push operation is used to realise the notification of AlarmIRPNotifications. All the notifications in this interface are implemented using this push_structured_event method.

6.1 Method push (M)

```
module CosNotifyComm {
    ...
    Interface SequencePushConsumer : NotifyPublish {
        void push_structured_events(
            in CosNotification::EventBatch notifications)
        raises( CosEventComm::Disconnected);
        ...
```

- }; // SequencePushConsumer
- }; // CosNotifyComm

•••

- NOTE 1: The push_structured_events method takes an input parameter of type EventBatch as defined in the OMG CosNotification module (OMG Notification Service [1]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter will contain a sequence of Structured Events being delivered to IRPManager by IRPAgent to which it is connected.
- NOTE 2: The maximum number of events that will be transmitted within a single invocation of this operation is controlled by IRPAgent wide configuration parameter.

- NOTE 3: The amount of time the supplier (IRPAgent) of a sequence of Structured Events will accumulate individual events into the sequence before invoking this operation is controlled by IRPAgent wide configuration parameter as well.
- NOTE 4: IRPAgent may push EventBatch with only one Structured Event.

Annex A (normative): IDL specification

```
#include "CosNotification.idl"
#include "generic.idl"
#ifndef AlarmIRP_idl
#define AlarmIRP_idl
// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"
/* ## Module: AlarmIRPConstDefs
