Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <https://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management, as identified below:

32.341: "File Transfer (FT) Integration Reference Point (IRP): Requirements"

32.342: "File Transfer (FT) Integration Reference Point (IRP): Information Service (IS)"

32.346: "File Transfer (FT) Integration Reference Point (IRP): Solution Set (SS) definitions"

The present document is part of a TS-family which describe the requirements and information model necessary for the Telecommunication Management (TM) of 3G systems. The TM principles and TM architecture are specified in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2].

Network Elements (NEs) under management, element managers as well as network managers generate various management information stored in file format. This IRP is addressing how these files are exchanged through Itf-N as well as certain aspects of file management and maintenance. It is anticipated that management functions (e.g. PM, Call Trace, CM) make reuse of capabilities provided by this File Transfer IRP.

1 Scope

The present document contains the Solution Sets for the IRP whose semantics are specified in File Transfer IRP: Information Service (3GPP TS 32.342 [15]).

This Solution Set specification is related to 3GPP TS 32.342 V14.0.X [15].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.150 [9], 3GPP TS 32.331 [17] and 3GPP TS 32.341 [3] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [4].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM	Configuration Management
CORBA	Common Object Request Broker Architecture
DN	Distinguished Name
FT	File Transfer
FTIRP	File Transfer IRP
IDL	Interface Definition Language
IRP	Integration Reference Point
IS	Information Service
NE	Network Element
NL	Notification Log
NRM	Network Resource Model
OMG	Object Management Group
PM	Performance Management
SS	Solution Set
UML	Unified Modelling Language
WSDL	Web Service Description Language
XML	eXtensible Markup Language

4 Solution Set Definitions

This specification defines the following 3GPP FT IRP Solution Set Definitions:

Annex A provides the CORBA Solution Set.

Annex B provides the XML Definitions.

Annex C provides the SOAP Solution Set.

Annex A (normative): CORBA Solution Set

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in FT IRP: Information Service (3GPP TS 32.342 [15]).

A.1 Architectural features

The overall architectural feature of FT IRP is specified in 3GPP TS 32.341 [3].

This clause specifies features that are specific to the CORBA SS.

A.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

A.1.2 Notification Services

In implementations of CORBA SS, IRPAgent conveys FT Information to IRPManager via OMG Notification Service (OMG Notification Service [10]).

A necessary and sufficient sub set of OMG Notification Services shall be used to support `FileTransferIRPNotifications` notifications as specified in 3GPP TS 32.342 [15].

A.1.3 Push and Pull Style

OMG Notification Service defines two styles of interaction. One is called push style. In this style, IRPAgent pushes notifications to IRPManager as soon as they are available. The other is called pull style. In this style, IRPAgent keeps the notifications till IRPManager requests for them.

This CORBA SS specifies that support of Push style is Mandatory (M) and that support of Pull style is Optional (O).

A.1.4 Support multiple notifications in one `push` operation

For efficiency reasons, IRPAgent may send multiple notifications using one single push operation. To pack multiple notifications into one push operation, IRPAgent may wait and not invoke the push operation as soon as notifications are available. To avoid IRPAgent to wait for an extended period of time that is objectionable to IRPManager, IRPAgent shall implement an IRPAgent wide timer configurable by administrator. On expiration of this timer, IRPAgent shall invoke push if there is at least one notification to be conveyed to IRPManager. This timer is re-started after each push invocation.

A.1.5 FileTransferIRP Notification Interface

OMG CORBA Notification push operation is used to realise the notification of FileTransferIRP Notifications. All the notifications in this interface are implemented using this `push_structured_event` method.

A.1.5.1 Method `push` (M)

```
module CosNotifyComm {
...
  Interface SequencePushConsumer : NotifyPublish {
    void push_structured_events(
      in CosNotification::EventBatch notifications)
      raises( CosEventComm::Disconnected);
...
}
```

```
}; // SequencePushConsumer  
...  
}; // CosNotifyComm
```

NOTE 1: The `push_structured_events` method takes an input parameter of type `EventBatch` as defined in the `OMG CosNotification` module (OMG Notification Service [10]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter will contain a sequence of Structured Events being delivered to `IRPManager` by `IRPAgent` to which it is connected.

NOTE 2: The maximum number of events that will be transmitted within a single invocation of this operation is controlled by `IRPAgent` wide configuration parameter.

NOTE 3: The amount of time the supplier (`IRPAgent`) of a sequence of Structured Events will accumulate individual events into the sequence before invoking this operation is controlled by `IRPAgent` wide configuration parameter as well.

NOTE 4: `IRPAgent` may push `EventBatch` with only one Structured Event.

A.2 Mapping

A.2.1 Operation and Notification mapping

FileTransferIRP: IS 3GPP TS 32.342 [15] defines semantics of operation and notification visible across the FileTransferIRP. Table A.2.1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table A.2.1: Mapping from IS Operations and Notification to SS equivalents

IS Operations/ notification 3GPP TS 32.342 [15]	SS Method	Qualifier
listAvailableFiles	list_available_files	M
fileDownloadIndication	file_download_indication	O
getIRPVersion (see note)	get_file_transfer_irp_versions	M
getOperationProfile (see note)	get_file_transfer_irp_operations_profile	O
getNotificationProfile (see note)	get_file_transfer_irp_notifications_profile	O
notifyFileReady	push_structured_events (see subclause A.1.5)	M
notifyFilePreparationError	push_structured_events (see subclause A.1.5)	M
NOTE: This operation is of ManagedGenericIRP IOC specified in 3GPP TS 32.312 [7]. The FileTransferIRP IOC of 3GPP TS 32.342 [15] inherits from it.		

A.2.2 Operation parameter mapping

The FileTransferIRP: IS 3GPP TS 32.342 [15] defines semantics of parameters carried in operations across the FileTransferIRP. The following tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table A.2.2.1: Mapping from IS listAvailableFiles parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
managementDataType	short management_data_type	M
beginTime	FileTransferIRPConstDefs::UTCTime begin_time	M
endTime	FileTransferIRPConstDefs::UTCTime end_time	M
fileInfoList	FileTransferIRPConstDefs::FileInfoList file_info_list	M
status	Return value of type FileTransferIRPConstDefs::Result Exception: ListAvailableFiles, InvalidTimes, ManagedGenericIRPSystem::InvalidParameter	M

Table A.2.2.2: Mapping from IS fileDownloadIndication parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
fileInfoList	FileTransferIRPConstDefs::FileInfoList file_info_list	M
status	Return value of type FileTransferIRPConstDefs::Result Exception: FileDownloadIndication, InvalidFileInfoList, ManagedGenericIRPSystem:OperationNotSupported	M

Table A.2.2.3: Mapping from IS getIRPVersion parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
versionNumberSet	Return value of type ManagedGenericIRPConstDefs::VersionNumberSet	M
status	Exception: GetFileTransferIRPVersions	M

Table A.2.2.4: Mapping from IS `getOperationProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
<code>irpVersion</code>	<code>ManagedGenericIRPConstDefs::VersionNumber irp_version</code>	M
<code>operationNameProfile</code> , <code>operationParameterProfile</code>	Return value of type <code>ManagedGenericIRPConstDefs::MethodList</code>	M
<code>status</code>	Exception: <code>GetFileTransferIRPOperationsProfile</code> , <code>ManagedGenericIRPSystem::OperationNotSupported</code> , <code>ManagedGenericIRPSystem::InvalidParameter</code>	M

Table A.2.2.5: Mapping from IS `getNotificationProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
<code>irpVersion</code>	<code>ManagedGenericIRPConstDefs::VersionNumber irp_version</code>	M
<code>notificationNameProfile</code> , <code>notificationParameterProfile</code>	Return value of type <code>ManagedGenericIRPConstDefs::MethodList</code>	M
<code>status</code>	Exception: <code>GetFileTransferIRPNotificationsProfile</code> , <code>ManagedGenericIRPSystem::OperationNotSupported</code> , <code>ManagedGenericIRPSystem::InvalidParameter</code>	M

A.2.3 Notification parameter mapping

The FileTransferIRP: IS 3GPP TS 32.342 [15] defines semantics of parameters carried in notifications. The following table indicates the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [10]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [10], is:

Header

```

Fixed Header
  domain_name
  type_name
  event_name
Variable Header

```

Body

```

filterable_body_fields
remaining_body

```

The following tables list all OMG Structured Event attributes in the second column. The first column identifies the FileTransferIRP: IS 3GPP TS 32.342 [15] defined notification parameters.

Table A.2.3.1: Mapping for `notifyFileReady`

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	<code>domain_name</code>	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.
<code>notificationType</code>	<code>type_name</code>	M	This is the <code>ET_FILE_READY</code> of module of <code>FileTransferIRPNotifDefs</code> .
There is no corresponding IS attribute.	<code>event_name</code>	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
<code>objectClass</code> , <code>objectInstance</code>	One NV pair of <code>filterable_body_fields</code>	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string.

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
			Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining_body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
fileInfoList	One NV pair of remaining_body	M	Name of NV pair is the FILE_INFO_LIST of interface NotifyFileReady of module FileTransferIRPNotifications. Value of NV pair is FileInfoList of module FileTransferIRPConstDefs.
additionalText	One NV pair of remaining_body	O	Name of NV pair is the ADDITIONAL_TEXT interface NotifyFileReady of module FileTransferIRPNotifications. Value of NV pair is a string.

Table A.2.3.2: Mapping for notifyFilePreparationError

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.
notificationType	Type_name	M	This is the ET_FILE_PREPARATION_ERROR of module of FileTransferIRPNotifDefs.
There is no corresponding IS attribute.	event_name	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
objectClass, objectInstance	One NV pair of filterable_body_fields	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining_body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
fileInfoList	One NV pair of remaining_body	M	Name of NV pair is the FILE_INFO_LIST of interface NotifyFilePreparationError of module FileTransferIRPNotifications. Value of NV pair is FileInfoList of module FileTransferIRPConstDefs.
reason	One NV pair of remaining_body	M	Name of NV pair is the REASON of interface NotifyFilePreparationError of module FileTransferIRPNotifications. Value of NV pair is a string.
additionalText	One NV pair of remaining_body	O	Name of NV pair is the ADDITIONAL_TEXT of interface NotifyFilePreparationError of module FileTransferIRPNotifications. Value of NV pair is a string.

A.3 Solution Set definitions

A.3.1 IDL definition structure

Clause A.3.2 defines the constants and types used by the FT IRP.

Clause A.3.3 defines the operations which are performed by the FT IRP agent.

Clause A.3.4 defines the notifications which are emitted by the FT IRP agent.

A.3.2 IDL specification "FileTransferIRPConstDefs.idl"

```

//File: FileTransferIRPConstDefs.idl
#ifndef _FILE_TRANSFER_IRP_CONST_DEFS_IDL_
#define _FILE_TRANSFER_IRP_CONST_DEFS_IDL_

#include <TimeBase.idl>

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

/* ## Module: FileTransferIRPConstDefs
This module contains commonly used definitions for FileTransferIRP.

Annex B (normative): XML Definitions

This annex contains the XML Definitions for the File Transfer Integration Reference Point (FT IRP) as it applies to Itf-N, in accordance with FT IRP IS definitions [15] as well as Notification Log IRP XML Definitions [16].

Apart from being used for the Notification Log, the XML definitions for FT IRP notifications are also used by the FT IRP SOAP SS.

B.1 Architectural Features

The overall architectural feature of FT IRP is specified in 3G TS 32.342 [15]. This clause specifies features that are specific to the XML definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

B.1.2 Notification Services

This annex defines the XML syntax of FT IRP notifications that is to be used for the FT IRP SOAP Solution Set and in conjunction with Notification Log IRP XML Definitions for Notification Log IRP XML Data File and the NL IRP XML Notification Format [16].

B.1.3 IOC Definitions

This annex defines the XML syntax for the IOC definitions of the FT IRP IS [15], which are used by the XML definitions for the FT IRP notifications and the FT IRP IS operations.

B.2 Mapping

Not present in the current version of this specification.

B.3 Solution Set definitions

B.3.1 XML definition structure

Clause B.3.2 provides a graphical representation of the XML elements.

Clause B.3.3 provides XML definitions of FT IRP notifications as defined in [15]. These definitions are to be used for the FT IRP SOAP Solution Set and in conjunction with Notification Log IRP XML Definitions for Notification Log IRP XML Data File and the NL IRP XML Notification Format [16], as well as considerations for NL IRP XML File Name Conventions defined therein.

Clause B.3.4 provides XML definitions of FT IOC as defined in [15].

B.3.2 Graphical Representation

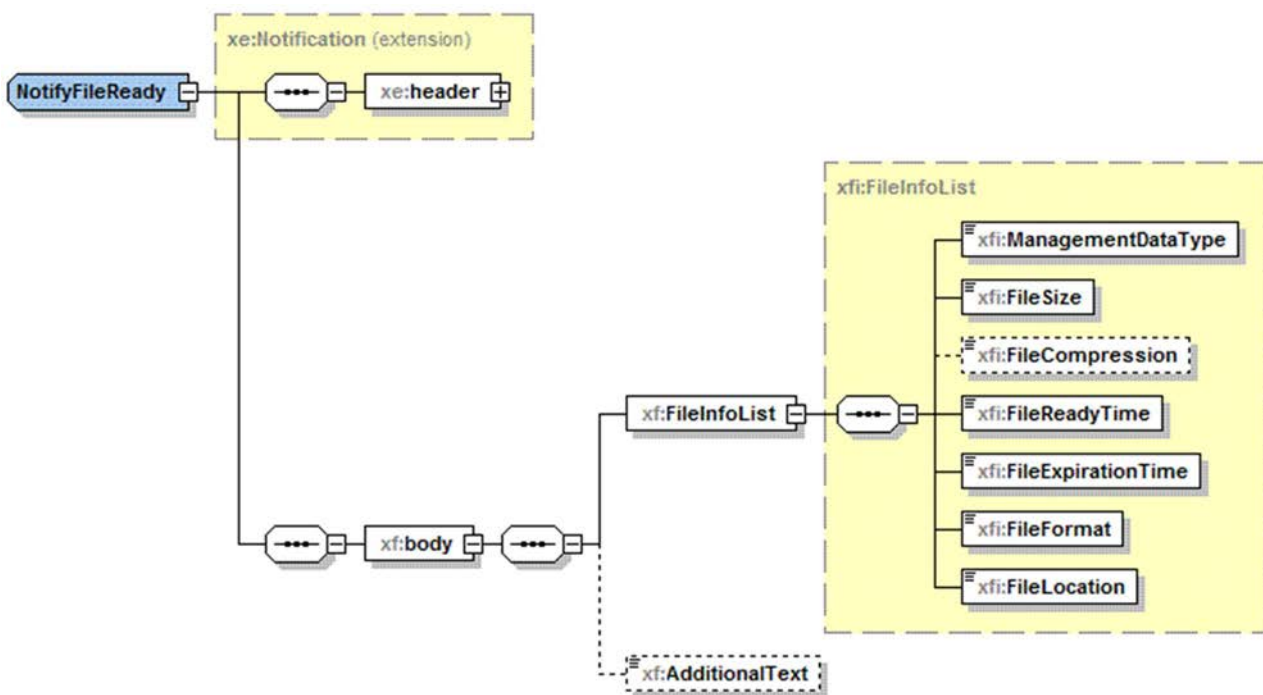

Figure B.3.2.1

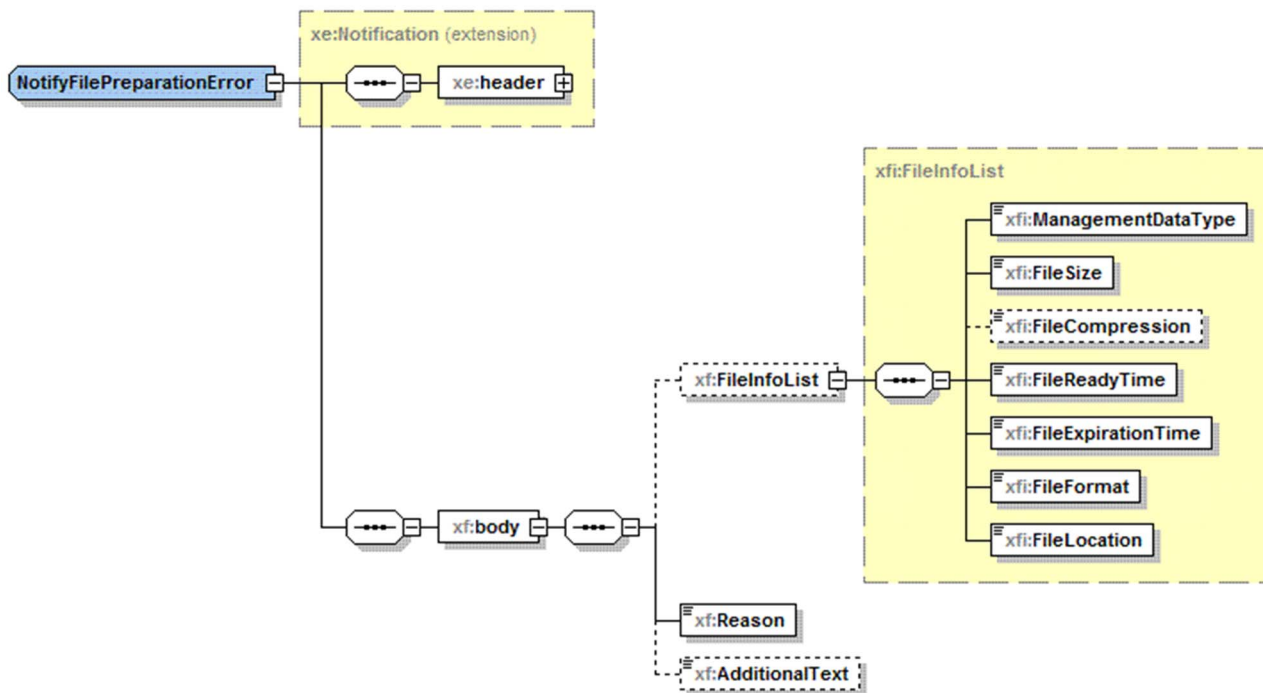

Figure B.3.2.2

NOTE: The use of XML schema key word "sequence" to support IS-defined set (not sequence) is for the purpose of XML processor efficiency. This shall not imply the use of "sequence" in other technology.

B.3.3 XML Schema “fTIRPNotif.xsd”

```

Annex C (normative): SOAP Solution Set

This annex specifies the SOAP Solution Set for the IRP whose semantics are specified in FT IRP: Information Service (3GPP TS 32.342 [15]).

C.1 Architectural features

The overall architectural feature of the FT IRP is specified in 3GPP TS 32.342 [15]. This clause specifies features that are specific to the SOAP Solution Set.

C.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

C.1.2 Notification Services

The FT IRP SOAP SS uses the Notification IRP SOAP SS of 3GPP TS 32.336 [16]. The IRPAgent shall support the push interface model, which means that the IRPAgent sends FT notifications to the IRPManager as soon as new events occur. The IRPManager does not need to check ("pull") for events.

Relevant definitions are imported from the FT IRP XML definitions in Annex B.

C.1.3 Supported W3C specifications

The SOAP 1.1 specification [11] and WSDL 1.1 specification [13] are supported.

The SOAP 1.2 specification [14] is supported optionally.

This specification uses "document" style in WSDL file.

This specification uses "literal" encoding style in WSDL file.

The filter language used in the SS is the XPath Language (see W3C XPath 1.0 specification [12]). IRPAgents may throw a FilterComplexityLimit fault when a given filter is too complex.

The FT IRP SOAP SS uses the Notification IRP SOAP SS of 3GPP TS 32.336 [5]. The IRPAgent shall support the push interface model, which means that the IRPAgent sends FT notifications to the IRPManager as soon as new events occur. The IRPManager does not need to check ("pull") for events.

C.1.4 Prefixes and namespaces

This specification uses a number of namespace prefixes throughout that are listed in Table C.1.4.

Table C.1.4: Prefixes and Namespaces used in this specification

PREFIX	NAMESPACE
(no prefix)	http://schemas.xmlsoap.org/wsdl/
soap	http://schemas.xmlsoap.org/wsdl/soap/
fTIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.346#FTIRPSystem
fTIRPData	http://www.3gpp.org/ftp/specs/archive/32_series/32.346#FTIRPData
xfi	http://www.3gpp.org/ftp/specs/archive/32_series/32.346#FTIRPIOCs
genericIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.316#GenericIRPSystem
ntfIRPNtfSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.306#NotificationIRPNtfSystem

C.2 Mapping

C.2.1 Operation and notification mapping

The FT IRP IS (3GPP TS 32.342 [15]) defines the operations and their semantics.

Table C.2.1 maps the operations defined in the FT IRP IS to their equivalent port type and binding operations in this Solution Set (SS).

Table C.2.1 also maps the notifications of the FT IRP IS, as well as inherited operations.

Table C.2.1 also qualifies if an operation is Mandatory (M) or Optional (O).

Table C.2.1: Mapping from IS Operation to SS Equivalents

IS Operation in 3GPP TS 32.342 [15]	SS: Operation for WSDL port type and WSDL binding	SS: Port of FileTransferIRPService	Qualifier
listAvailableFiles	listAvailableFiles (note 1)	FileTransferIRPPort	M
fileDownloadIndication	fileDownloadIndication (note 1)	FileTransferIRPPort	O
notifyFileReady	notify (note 2)	NotificationIRPNtfPort	M
notifyFilePreparationError	notify (note 2)	NotificationIRPNtfPort	M
getIRPVersion (note 3)	See TS 32.316 [8]	GenericIRPPort	M
getOperationProfile (note 3)	See TS 32.316 [8]	GenericIRPPort	O
getNotificationProfile (note 3)	See TS 32.316 [8]	GenericIRPPort	O
NOTE 1: The operation is under the port type ftIRPSystem:FileTransferIRPPortType and under the binding ftIRPSystem:FileTransferIRPBinding.			
NOTE 2: The IS equivalent maps to an XML definition defined in Annex B, and this being an input parameter to the operation notify under the port type ntflRPNtfSystem:NotificationIRPNtf and under the binding ntflRPNtfSystem:NotificationIRPNtf of 3GPP TS 32.306 [5]. This binding is linked to a port of the FileTransferIRPService as indicated in the table above.			
NOTE 3: The IS operation is inherited from the ManagedGenericIRP IOC specified in 3GPP TS 32.312 [7]. This inheritance is by the FileTransferIRP IOC of 3GPP TS 32.342 [15] inheriting from the ManagedGenericIRP IOC. The corresponding binding is linked to a port of the FileTransferIRPService as indicated in the table above.			

C.2.2 Operation parameter mapping

The FT IRP IS (3GPP TS 32.342 [15]) defines semantics of parameters carried in the operations. The tables below show the mapping of these parameters, as per operation, to their equivalents defined in this SS.

C.2.2.1 Operation listAvailableFiles

C.2.2.1.1 Input parameters

Table C.2.2.1.1: Mapping from IS listAvailableFiles input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
managementDataType	managementDataType	M
beginTime	beginTime	M
endTime	endTime	M

C.2.2.1.2 Output parameters

Table C.2.2.1.2: Mapping from IS `listAvailableFiles` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>fileInfoList</code>	<code>fileInfoList</code>	M
<code>status</code>	<code>status</code>	M

C.2.2.1.3 Fault definition

Table C.2.2.1.3: Mapping from IS `listAvailableFiles` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>invalidTimes</code>	<code>InvalidTimes</code>	M

C.2.2.2 Operation `fileDownloadIndication`

C.2.2.2.1 Input parameters

Table C.2.2.2.1: Mapping from IS `fileDownloadIndication` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>fileInfoList</code>	<code>fileInfoList</code>	M

C.2.2.2.2 Output parameters

Table C.2.2.2.2: Mapping from IS `fileDownloadIndication` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>status</code>	<code>status</code>	M

C.2.2.2.3 Fault definition

Table C.2.2.2.3: Mapping from IS `fileDownloadIndication` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table 5.1	Qualifier
<code>InvalidFileInfoList</code>	<code>InvalidFileInfoList</code>	M

C.3 Solution Set definitions

C.3.1 WSDL definition structure

Clause C.3.2 provides a graphical representation of the FT IRP service.

Clause C.3.3 defines the services which are supported the FT IRP agent.

C.3.2 Graphical Representation

The WSDL structure is depicted in Figure C.3.2 below, depicting port type, binding and service. The port type contains port type operations, which again contains input, output and fault messages. The binding contains binding operations, which have the same name as the port type operations. The binding connects to a port inside the service.

Figure C.3.2: File Transfer IRP SOAP Solution Set WSDL structure
