Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <https://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

32.411: Performance Management (PM) Integration Reference Point (IRP): Requirements

32.412: Performance Management (PM) Integration Reference Point (IRP): Information Service (IS)

32.416: Performance Management (PM) Integration Reference Point (IRP): Solution Set (SS) definitions

The present document is part of a set of TSs which describe the requirements and information model necessary for the Telecommunication Management (TM) of 3G systems. The TM principles and TM architecture are specified in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2].

A 3G system is composed of a multitude of Network Elements (NE) of various types and, typically, different vendors, which inter-operate in a co-ordinated manner in order to satisfy the network users' communication requirements. Any evaluation of PLMN-system behaviour will require performance data collected and recorded by its NEs according to a schedule established by the EM.

This aspect of the management environment is termed Performance Management. The purpose of any Performance Management activity is to collect performance related data, which can be used to locate potential problems in the network.

1 Scope

The present document specifies the Solution Set definitions for the IRP whose semantics is specified in PM (Performance Management) IRP: Information Service 3GPP TS 32.412 [7].

This Solution Set definitions specification is related to 3GPP TS 32.412 V14.0.X.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.401 [10], 3GPP TS 32.411 [3], 3GPP TS 32.331 [12], 3GPP TS 32.150 [14] and the following apply:

IRP document version number string (or "IRPVersion"): See 3GPP TS 32.311 [4].

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CM	Configuration Management
CORBA	Common Object Request Broker Architecture
DN	Distinguished Name
EM	Element Manager
IDL	Interface Definition Language
IRP	Integration Reference Point
IS	Information Service
MOC	Managed Object Class
NE	Network Element
NL	Notification Log
OMG	Object Management Group
PM	Performance Management
PMIRP	Performance Management Integration Reference Point
SS	Solution Set
WSDL	Web Service Description Language
XML	eXtensible Markup Language

4 Solution Set definitions

This specification defines the following 3GPP PM IRP Solution Set definitions:

- 3GPP PM IRP CORBA SS (Annex A).
- 3GPP PM IRP XML definitions (Annex B).
- 3GPP PM IRP SOAP Solution Set (Annex C).

Annex A (normative): CORBA Solution Set

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in PM IRP: Information Service (TS 32.412 [7]).

A.1 Architectural Features

The overall architectural feature of PM IRP is specified in 3GPP TS 32.411 [3].

This clause specifies features that are specific to the CORBA SS.

A.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

A.1.2 Notifications

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.306 [5]).

The contents of the PM IRP notifications are defined in the present document.

A.2 Mapping

A.2.1 Operation and Notification mapping

PM IRP: IS 3GPP TS 32.412 [7] defines semantics of operation and notification visible across the PMIRP. Table A.2.1.1 indicates mapping of these operations and notifications to their equivalents defined in this SS.

Table A.2.1.1: Mapping from IS Operations and Notification to SS equivalents

IS Operations/ notification 3GPP TS 32.412 [7]	SS Method	Qualifier
createMeasurementJob	create_measurement_job	M
stopMeasurementJob	stop_measurement_job	M
suspendMeasurementJob	suspend_measurement_job	O
resumeMeasurementJob	resume_measurement_job	O
listMeasurementJobs	list_measurement_jobs	M
createThresholdMonitor	create_threshold_monitor	O
deleteThresholdMonitor	delete_threshold_monitor	O
listThresholdMonitors	list_threshold_monitors	O
suspendThresholdMonitor	suspend_threshold_monitor	O
resumeThresholdMonitor	resume_threshold_monitor	O
getIRPVersion	get_pm_irp_versions	M
getOperationProfile (see note)	get_pm_irp_operations_profile	O
getNotificationProfile (see note)	get_pm_irp_notification_profile	O
notifyMeasurementJobStatusChanged	push_structured_events(See subclause 6.1)	M
notifyThresholdMonitorObjectCreation	push_structured_events (See subclause 6.1)	O
notifyThresholdMonitorObjectDeletion	push_structured_events (See subclause 6.1)	O
notifyThresholdMonitorStatusChanged	push_structured_events(See subclause 6.1)	O
NOTE:	This operation is of ManagedGenericIRP IOC specified in 3GPP TS 32.312 [8]. The PM IRP IOC of [7] inherits from it.	

A.2.2 Operation parameter mapping

The PM IRP: IS 3GPP TS 32.412 [7] defines semantics of parameters carried in operations across the PM IRP. The following tables indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

Table A.2.2.1: Mapping from IS createMeasurementJob parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iocName	PMIRPCConstDefs::MOClassName mo_class	M
iocInstanceList	PMIRPCConstDefs::MOInstanceList mo_instance_list	M
measurementCategoryList	PMIRPCConstDefs::MeasurementCategoryList measurement_category_list	M
granularityPeriod	PMIRPCConstDefs::GranularityPeriod granularity_period	M
reportingPeriod	PMIRPCConstDefs::ReportingPeriod reporting_period	M
startTime	PMIRPCConstDefs::IRPTimeOpt start_time	O
stopTime	PMIRPCConstDefs::IRPTimeOpt stop_time	O
schedule	PMIRPCConstDefs::ScheduleOpt schedule	O
jobId	PMIRPCConstDefs::JobId job_id	M
unsupportedList	PMIRPCConstDefs::JUnsupportedList unsupported_list	M
priority	PMIRPCConstDefs::JobPriorityOpt priority	O
reliability	PMIRPCConstDefs::JobReliabilityOpt reliability	O
status	Return value of type ManagedGenericIRPConstDefs::Signal Exception: CreateMeasurementJob, ManagedGenericIRPSystem::InvalidParameter, ManagedGenericIRPSystem::ParameterNotSupported, HighWorkLoad	M

Table A.2.2.2: Mapping from IS stopMeasurementJob parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
jobId	PMIRPCConstDefs::JobId job_id	M
status	Return value of type PMIRPCConstDefs::Result Exception: StopMeasurementJob, UnknownJob, JobCannotBeStopped	M

Table A.2.2.3: Mapping from IS suspendMeasurementJob parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
jobId	PMIRPCConstDefs::JobId job_id	M
status	Return value of type PMIRPCConstDefs::Result Exception: SuspendMeasurementJob, UnknownJob, JobAlreadySuspended, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.4: Mapping from IS resumeMeasurementJob parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
jobId	PMIRPCConstDefs::JobId job_id	M
status	Return value of type PMIRPCConstDefs::Result Exception: ResumeMeasurementJob, UnknownJob, JobsNotSuspended, HighWorkLoad, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.5: Mapping from IS listMeasurementJobs parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
jobIdList	PMIRPCConstDefs::JobIdList job_list_id	M
jobInfoList	PMIRPCConstDefs::JobInfoList job_info_list	M
status	Return value of type PMIRPCConstDefs::Result Exception: ListMeasurementJobs, ManagedGenericIRPSystem::InvalidParameter	M

Table A.2.2.6: Mapping from IS createThresholdMonitor parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iocName	PMIRPCConstDefs::MOClassName mo_class	M
iocInstanceList	PMIRPCConstDefs::MOInstanceList mo_instance_list	M
thresholdInfoList	PMIRPCConstDefs::ThresholdInfoList threshold_info_list	M
monitorGranularityPeriod	PMIRPCConstDefs::MonitorGranularityPeriod monitor_granularity_period	M
monitorId	PMIRPCConstDefs::MonitorId monitor_id	M
unsupportedList	PMIRPCConstDefs::MUnsupportedList unsupported_list	M
status	Return value of type ManagedGenericIRPConstDefs::Signal Exception: CreateThresholdMonitor, ManagedGenericIRPSystem::InvalidParameter, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.7: Mapping from IS deleteThresholdMonitor parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
monitorId	PMIRPCConstDefs::MonitorId monitor_id	M
status	Return value of type PMIRPCConstDefs::Result Exception: DeleteThresholdMonitor, UnknownThresholdMonitor, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.8: Mapping from IS listThresholdMonitors parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
monitorIdList	PMIRPCConstDefs::MonitorIdList monitor_id_list	M
monitorInfoList	PMIRPCConstDefs::MonitorInfoList monitor_info_list	M
status	Return value of type PMIRPCConstDefs::Result Exception: ListThresholdMonitors, ManagedGenericIRPSystem::InvalidParameter, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.9: Mapping from IS suspendThresholdMonitor parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
monitorId	PMIRPCConstDefs::MonitorId monitor_id	M
status	Return value of type PMIRPCConstDefs::Result Exception: SuspendThresholdMonitor, UnknownThresholdMonitor, ThresholdMonitorAlreadySuspended, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.10: Mapping from IS `resumeThresholdMonitor` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
monitorId	PMIRPConstDefs::MonitorId monitor_id	M
status	Return value of type PMIRPConstDefs::Result Exception: ResumeThresholdMonitor, UnknownThresholdMonitor, ThresholdMonitorIsNotSuspended, ManagedGenericIRPSystem::OperationNotSupported	M

Table A.2.2.11: Mapping from IS `getIRPVersion` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
versionNumberSet	Return value of type ManagedGenericIRPConstDefs::VersionNumberSet	M
status	Exception: GetPMIRPVersions	M

Table A.2.2.12: Mapping from IS `getOperationProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iRPVersion	ManagedGenericIRPConstDefs::VersionNumber pm_irp_version	M
operationNameProfile, operationParameterProfile	Return value of type ManagedGenericIRPConstDefs::MethodList	M
status	Exception: GetPMIRPOperationsProfile, ManagedGenericIRPSystem::OperationNotSupported, ManagedGenericIRPSystem::InvalidParameter	M

Table A.2.2.13: Mapping from IS `getNotificationProfile` parameters to SS equivalents

IS Operation parameter	SS Method parameter	Qualifier
iRPVersion	ManagedGenericIRPConstDefs::VersionNumber pm_irp_version	M
notificationNameProfile, notificationParameterProfile	Return value of type ManagedGenericIRPConstDefs::MethodList	M
status	Exception: GetPMIRPNotificationProfile, ManagedGenericIRPSystem::OperationNotSupported, ManagedGenericIRPSystem::InvalidParameter	M

A.2.3 Notification parameter mapping

The PM IRP: IS 3GPP TS 32.412 [7] defines semantics of parameters carried in notifications. The following table indicates the mapping of these parameters to their OMG CORBA Structured Event (defined in OMG Notification Service [9]) equivalents. The composition of OMG Structured Event, as defined in the OMG Notification Service [9], is:

```
Header
  Fixed Header
    domain_name
    type_name
    event_name
  Variable Header
Body
  filterable_body_fields
  remaining_body
```

The following tables list all OMG Structured Event attributes in the second column. The first column identifies the PM IRP: IS 3GPP TS 32.412 [7] defined notification parameters.

Table A.2.3.1: Mapping for notifyMeasurementJobStatusChanged

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.
notificationType	type_name	M	This is constant string "notifyMeasurementJobStatusChanged".
There is no corresponding IS attribute.	event_name	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
objectClass, objectInstance	One NV pair of filterable_body_fields	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining_body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
jobId	One NV pair of filterable_body_fields	M	Name of NV pair is the JOB_ID of PMIRPNotifications::notifyMeasurementJobStatusChanged. Value of NV pair is JobId of module PMIRPConstDefs.
jobStatus	One NV pair of remaining_body	M	Name of NV pair is the JOB_STATUS of PMIRPNotifications::notifyMeasurementJobStatusChanged. Value of NV pair is JobStatus of module PMIRPConstDefs.
reason	One NV pair of remaining_body	O	Name of NV pair is the REASON of PMIRPNotifications::notifyMeasurementJobStatusChanged. Value of NV pair is a string.

Table A.2.3.2: Mapping for notifyThresholdMonitorObjectCreation

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
notificationType	type_name	M	This is constant string "notifyThresholdMonitorObjectCreation".
There is no corresponding IS attribute.	event_name	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
objectClass, objectInstance	One NV pair of filterable_body_fields	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPCConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPCConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPCConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPCConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
monitorId	One NV pair of remaining body	M	Name of NV pair is the MONITOR_ID of module PMIRPNotifications::notifyThresholdMonitorObjectCreation. Value of NV pair is MonitorId of module PMIRPCConstDefs.
monitorGranularityPeriod	One NV pair of remaining body	M	Name of NV pair is the MONITOR_GRANULARITY_PERIOD of module PMIRPNotifications::notifyThresholdMonitorObjectCreation. Value of NV pair is MonitorGranularityPeriod of module PMIRPCConstDefs.
thresholdMonitorStatus	One NV pair of remaining body	M	Name of NV pair is the MONITOR_STATUS of module PMIRPNotifications::notifyThresholdMonitorObjectCreation. Value of NV pair is MonitorStatus of module PMIRPCConstDefs.

Table A.2.3.3: Mapping for notifyThresholdMonitorObjectDeletion

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.
notificationType	type_name	M	This is constant string "notifyThresholdMonitorObjectDeletion".
There is no corresponding IS attribute.	event_name	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
objectClass, objectInstance	One NV pair of filterable_body_fields	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
monitorId	One NV pair of filterable_body_fields	M	Name of NV pair is the MONITOR_ID of PMIRPNotifications::notifyThresholdMonitorObjectDeletion. Value of NV pair is MonitorId of module PMIRPConstDefs.

Table A.2.3.4: Mapping for notifyThresholdMonitorStatusChanged

IS Parameters	OMG CORBA Structured Event attribute	Qualifier	Comment
There is no corresponding IS attribute.	domain_name	M	It carries the IRP document version number string. See subclause 3.1. It indicates the syntax and semantics of the Structured Event as defined by the present document.
notificationType	type_name	M	This is constant string "notifyThresholdMonitorStatusChanged".
There is no corresponding IS attribute.	event_name	M	It carries no information.
There is no corresponding IS attribute.	Variable Header		
objectClass, objectInstance	One NV pair of filterable_body_fields	M	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
notificationId	One NV pair of remaining_body	M	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
eventTime	One NV pair of filterable_body_fields	M	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
systemDN	One NV pair of filterable_body_fields	M	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [5]).
monitorId	One NV pair of filterable_body_fields	M	Name of NV pair is the MONITOR_ID of PMIRPNotifications::notifyThresholdMonitorStatusChanged Value of NV pair is MonitorId of module PMIRPConstDefs.
monitorStatus	One NV pair of remaining_body	M	Name of NV pair is the MONITOR_STATUS of PMIRPNotifications::notifyThresholdMonitorStatusChanged Value of NV pair is MonitorStatus of module PMIRPConstDefs.
reason	One NV pair of remaining_body	O	Name of NV pair is the REASON of PMIRPNotifications::notifyThresholdMonitorStatusChanged Value of NV pair is a string.

A.3 PMIRPNotification Interface

OMG CORBA Notification push operation is used to realise the notification of PMIRP Notifications. All the notifications in this interface are implemented using this `push_structured_event` method.

A.3.1 Method `push` (M)

```
module CosNotifyComm {  
  ...  
  Interface SequencePushConsumer : NotifyPublish {  
    void push_structured_events(  
      in CosNotification::EventBatch notifications)  
      raises( CosEventComm::Disconnected);  
    ...  
  }; // SequencePushConsumer  
  ...  
}; // CosNotifyComm
```

NOTE 1: The `push_structured_events` method takes an input parameter of type `EventBatch` as defined in the `OMG CosNotification` module (OMG Notification Service [9]). This data type is the same as a sequence of Structured Events. Upon invocation, this parameter will contain a sequence of Structured Events being delivered to `IRPManager` by `IRPAgent` to which it is connected.

NOTE 2: The maximum number of events that will be transmitted within a single invocation of this operation is controlled by `IRPAgent` wide configuration parameter.

NOTE 3: The amount of time the supplier (`IRPAgent`) of a sequence of Structured Events will accumulate individual events into the sequence before invoking this operation is controlled by `IRPAgent` wide configuration parameter as well.

NOTE 4: `IRPAgent` may push `EventBatch` with only one Structured Event.

A.4 Solution Set definitions

A.4.1 IDL definition structure

Clause A.4.2 defines the constants and types used by the PM IRP.

Clause A.4.3 defines the operations which are performed by the PM IRP agent.

Clause A.4.4 defines the notifications which are performed by the PM IRP agent.

A.4.2 IDL specification “PMIRPConstDefs.idl”

```
//File: PMIRPConstDefs.idl

Annex B (normative): XML definitions

This annex specifies the XML definitions for the Performance Management (PM) Integration Reference Point (IRP) as it applies to Itf-N, in accordance with PM IRP IS definitions in 3GPP TS 32.412 [7], for usage with the SOAP Solution Set in Annex C as well as Notification Log IRP XML definitions in 3GPP TS 32.336 [11].

B.1 Architectural features

The overall architectural feature of PM IRP is specified in 3GPP TS 32.412 [7].

This clause specifies features that are specific to the XML Schema definitions.

B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

B.2 Mapping

Not present in the current version of this specification.

B.3 Solution Set definitions

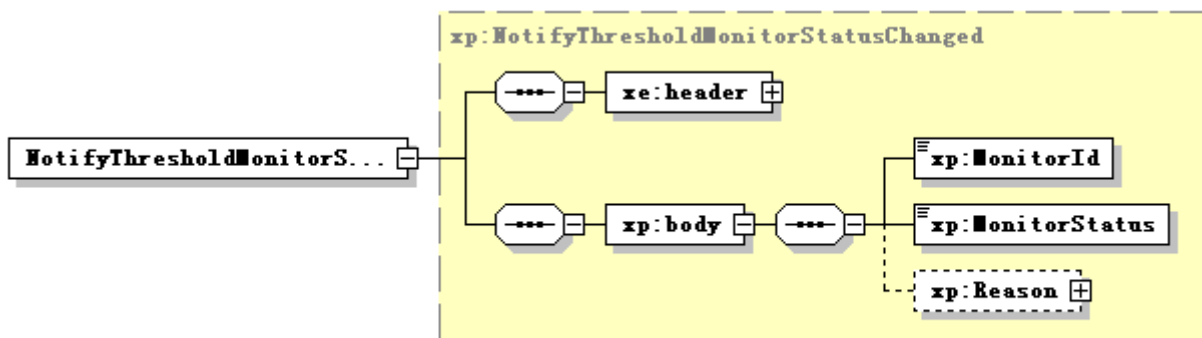

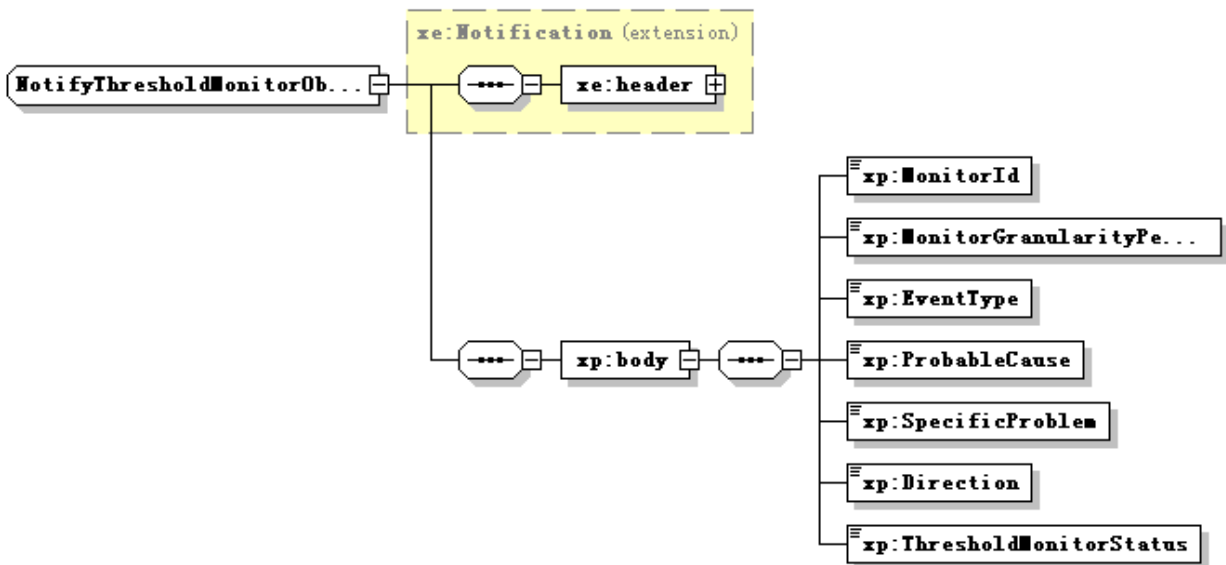

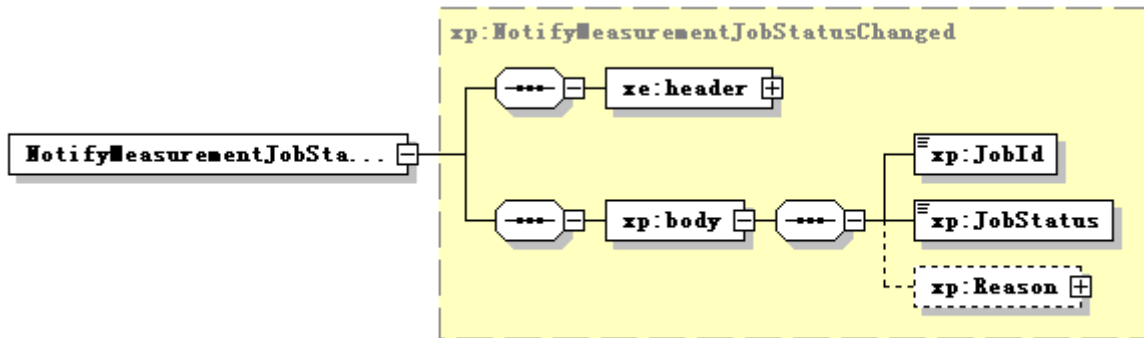

B.3.1 XML definition structure

Clause B.3.2 provides a graphical representation of the XML elements.

Clause B.3.3 provides XML definitions of PM IRP notifications as defined in 3GPP TS 32.412 [7].

Clause B.3.4 provides XML definitions of PM IOC as defined in 3GPP TS 32.412 [7].

B.3.2 Graphical Representation

B.3.3 XML Schema “pMIRPNotif.xsd”

```

<?xml version="1.0" encoding="UTF-8"?>
<!--
  3GPP TS 32.416 PMIRP Notification XML Schema
  pMIRPNotif.xsd
-->

Annex C (normative): SOAP Solution Set

This annex specifies the SOAP Solution Set for the IRP whose semantics are specified in PM IRP: Information Service (3GPP TS 32.412[7]).

C.1 Architectural Features

The overall architectural feature of the Performance Management (PM) IRP is specified in 3GPP TS 32.412 [7]. This clause specifies features that are specific to the SOAP Solution Set.

The SOAP 1.1 specification [15] and WSDL 1.1 specification [17] are supported.

The SOAP 1.2 specification [18] is supported optionally.

This specification uses "document" style in WSDL file.

This specification uses "literal" encoding style in WSDL file.

The filter language used in the SS is the XPath Language (see W3C XPath 1.0 specification [16]). IRPAgents may throw a FilterComplexityLimit fault when a given filter is too complex.

The PM IRP SOAP SS uses the Notification IRP SOAP SS of 3GPP TS 32.306 [5]. The IRPAgent shall support the push interface model, which means that the IRPAgent sends PM notifications to the IRPManager as soon as new events occur. The IRPManager does not need to check ("pull") for events.

Relevant definitions are imported from the PM IRP XML definitions of Annex B.

This specification uses a number of namespace prefixes throughout that are listed in Table C.1.1.

Table C.1.1: Prefixes and Namespaces used in this specification

PREFIX	NAMESPACE
(no prefix)	http://schemas.xmlsoap.org/wsdl/
soap	http://schemas.xmlsoap.org/wsdl/soap/
pMIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.416#PMIRPSystem
pMIRPData	http://www.3gpp.org/ftp/specs/archive/32_series/32.416#PMIRPData
xpi	http://www.3gpp.org/ftp/specs/archive/32_series/32.416#pMIRPIOCs
xn	http://www.3gpp.org/ftp/specs/archive/32_series/32.626#genericNrm
genericIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.316#GenericIRPSystem

C.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

C.2 Mapping

C.2.1 Operation and notification mapping

The PM IRP IS (3GPP TS 32.412 [7]) defines the operations and their semantics.

Table C.2.1 maps the operations defined in the PM IRP IS to their equivalent port type and binding operations in this Solution Set (SS).

Table C.2.1 also maps the notifications of the PM IRP IS, as well as inherited operations.

Table C.2.1 also qualifies if an operation is Mandatory (M) or Optional (O).

Table C.2.1: Mapping from IS Operation to SS Equivalents

IS Operation in 3GPP TS 32.412 [7]	SS: Operation for WSDL port type and WSDL binding	SS: Port of PMIRPService	Qualifier
createMeasurementJob	createMeasurementJob (note 1)	PMIRPPort	M
stopMeasurementJob	stopMeasurementJob (note 1)	PMIRPPort	M
suspendMeasurementJob	suspendMeasurementJob (note 1)	PMIRPPort	O
resumeMeasurementJob	resumeMeasurementJob (note 1)	PMIRPPort	O
listMeasurementJobs	listMeasurementJobs (note 1)	PMIRPPort	M
createThresholdMonitor	createThresholdMonitor (note 1)	PMIRPPort	M (note 4 a)
deleteThresholdMonitor	deleteThresholdMonitor (note 1)	PMIRPPort	M (note 4 a)
listThresholdMonitors	listThresholdMonitors (note 1)	PMIRPPort	M (note 4 a)
suspendThresholdMonitor	suspendThresholdMonitor (note 1)	PMIRPPort	M (note 4 b)
resumeThresholdMonitor	resumeThresholdMonitor (note 1)	PMIRPPort	M (note 4 b)
notifyMeasurementJobStatusChanged	notify (note 2)	NotificationIRPNtfPort	M
notifyThresholdMonitorObjectCreation	notify (note 2)	NotificationIRPNtfPort	M (note 4 c)
notifyThresholdMonitorObjectDeletion	notify (note 2)	NotificationIRPNtfPort	M (note 4 c)
notifyThresholdMonitorStatusChanged	notify (note 2)	NotificationIRPNtfPort	O
getIRPVersion (note 3)	See TS 32.316 [13]	GenericIRPPort	M
getOperationProfile (note 3)	See TS 32.316 [13]	GenericIRPPort	O
getNotificationProfile (note 3)	See TS 32.316 [13]	GenericIRPPort	O
NOTE 1: The operation is under the port type pMIRPSystem:PMIRPPortType and under the binding pMIRPSystem:PMIRPBinding.			
NOTE 2: The IS equivalent maps to an XML definition specified in Annex B, and this being an input parameter to the operation notify under the port type ntfIRPNtfSystem:NotificationIRPNtf and under the binding ntfIRPNtfSystem:NotificationIRPNtf of 3GPP TS 32.306 [5]. This binding is linked to a port of the PMIRPService as indicated in the table above.			
NOTE 3: The IS operation is inherited from the ManagedGenericIRP IOC specified in 3GPP TS 32.312 [8]. This inheritance is by the PMIRP IOC of 3GPP TS 32.412 [7] inheriting from the ManagedGenericIRP IOC. The corresponding binding is linked to a port of the PMIRPService as indicated in the table above.			
NOTE 4: a) Mandatory if the optional PMIRPOperations_2 interface (see the PM IRP IS clause 7.4) is supported. b) Mandatory if the optional PMIRPOperations_3 interface (see the PM IRP IS clause 7.5) is supported. c) Mandatory if the optional PMIRPNotification_2 interface (see the PM IRP IS clause 7.7) is supported.			

C.2.2 Operation parameter mapping

The PM IRP IS (3GPP TS 32.412 [7]) defines semantics of parameters carried in the operations. The tables below show the mapping of these parameters, as per operation, to their equivalents defined in this SS.

C.2.2.1 Operation createMeasurementJob

C.2.2.1.1 Input parameters

Table C.2.2.1.1: Mapping from IS createMeasurementJob input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
iOCName	iOCName	M
iOCInstanceList	iOCInstanceList	M
measurementCategoryList	measurementCategoryList	M
granularityPeriod	granularityPeriod	M
reportingPeriod	reportingPeriod	M
startTime	startTime	O
stopTime	stopTime	O
schedule	schedule	O
priority	priority	O
reliability	reliability	O

C.2.2.1.2 Output parameters

Table C.2.2.1.2: Mapping from IS createMeasurementJob output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
jobId	jobId	M
unsupportedList	unsupportedList	M
status	status	M

C.2.2.1.3 Fault definition

Table C.2.2.1.3: Mapping from IS createMeasurementJob exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
invalidStartTime	InvalidStartTime	M
invalidStopTime	InvalidStopTime	M
invalidSchedule	InvalidSchedule	M
invalidGranularityPeriod	InvalidGranularityPeriod	M
invalidReportingPeriod	InvalidReportingPeriod	M
highWorkLoad	HighWorkLoad	M
invalidPriority	InvalidPriority	M
noValidMeasurementType	NoValidMeasurementType	M
invalidReliability	InvalidReliability	M

C.2.2.2 Operation stopMeasurementJob

C.2.2.2.1 Input parameters

Table C.2.2.2.1: Mapping from IS stopMeasurementJob input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
JobId	jobId	M

C.2.2.2.2 Output parameters

Table C.2.2.2.2: Mapping from IS stopMeasurementJob output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
Status	status	M

C.2.2.2.3 Fault definition

Table C.2.2.2.3: Mapping from IS stopMeasurementJob exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
unknownJob	UnknownJob	M
jobCannotBeStopped	JobCannotBeStopped	M

C.2.2.3 Operation suspendMeasurementJob

C.2.2.3.1 Input parameters

Table C.2.2.3.1: Mapping from IS suspendMeasurementJob input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
jobId	jobId	M

C.2.2.3.2 Output parameters

Table C.2.2.3.2: Mapping from IS suspendMeasurementJob output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
status	status	M

C.2.2.3.3 Fault definition

Table C.2.2.3.3: Mapping from IS `suspendMeasurementJob` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
<code>unknownJob</code>	<code>UnknownJob</code>	M
<code>jobAlreadySuspended</code>	<code>JobAlreadySuspended</code>	M

C.2.2.4 Operation `resumeMeasurementJob`

C.2.2.4.1 Input parameters

Table C.2.2.4.1: Mapping from IS `resumeMeasurementJob` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
<code>jobId</code>	<code>jobId</code>	M

C.2.2.4.2 Output parameters

Table C.2.2.4.2: Mapping from IS `resumeMeasurementJob` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
<code>status</code>	<code>status</code>	M

C.2.2.4.3 Fault definition

Table C.2.2.4.3: Mapping from IS `resumeMeasurementJob` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
<code>unknownJob</code>	<code>UnknownJob</code>	M
<code>jobIsNotSuspended</code>	<code>JobIsNotSuspended</code>	M
<code>highWorkLoad</code>	<code>HighWorkLoad</code>	M

C.2.2.5 Operation listMeasurementJobs

C.2.2.5.1 Input parameters

Table C.2.2.5.1: Mapping from IS listMeasurementJobs input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
jobIdList	jobIdList	M

C.2.2.5.2 Output parameters

Table C.2.2.5.2: Mapping from IS listMeasurementJobs output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
jobInfoList	jobInfoList	M
status	status	M

C.2.2.5.3 Fault definition

Table C.2.2.5.3: Mapping from IS listMeasurementJobs exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
invalidJobIdList	InvalidJobIdList	M

C.2.2.6 Operation createThresholdMonitor

C.2.2.6.1 Input parameters

Table C.2.2.6.1: Mapping from IS createThresholdMonitor input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
iOCName	iOCName	M
iOCInstanceList	iOCInstanceList	M
thresholdInfoList	thresholdInfoList	M
monitorGranularityPeriod	monitorGranularityPeriod	M

C.2.2.6.2 Output parameters

Table C.2.2.6.2: Mapping from IS createThresholdMonitor output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
monitorId	monitorId	M
unsupportedList	unsupportedList	M
status	status	M

C.2.2.6.3 Fault definition

Table C.2.2.6.3: Mapping from IS createThresholdMonitor exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
invalidClassOrInstances	InvalidClassOrInstances	M
invalidGranularityPeriod	InvalidGranularityPeriod	M
noValidMeasurementType	NoValidMeasurementType	M
invalidNumberOfThresholdPackElements	InvalidNumberOfThresholdPackElements	M
invalidOrderOfThresholdPackElements	InvalidOrderOfThresholdPackElements	M
invalidDirection	InvalidDirection	M

C.2.2.7 Operation deleteThresholdMonitor

C.2.2.7.1 Input parameters

Table C.2.2.7.1: Mapping from IS deleteThresholdMonitor input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
monitorId	monitorId	M

C.2.2.7.2 Output parameters

Table C.2.2.7.2: Mapping from IS deleteThresholdMonitor output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
status	status	M

C.2.2.7.3 Fault definition

Table C.2.2.7.3: Mapping from IS deleteThresholdMonitor exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
unknownThresholdMonitor	UnknownThresholdMonitor	M

C.2.2.8 Operation listThresholdMonitors

C.2.2.8.1 Input parameters

Table C.2.2.8.1: Mapping from IS listThresholdMonitors input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
monitorIdList	monitorIdList	M

C.2.2.8.2 Output parameters

Table C.2.2.8.2: Mapping from IS listThresholdMonitors output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
status	status	M

C.2.2.8.3 Fault definition

Table C.2.2.8.3: Mapping from IS listThresholdMonitors exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
invalidMonitorIdList	InvalidMonitorIdList	M

C.2.2.9 Operation suspendThresholdMonitor

C.2.2.9.1 Input parameters

Table C.2.2.9.1: Mapping from IS suspendThresholdMonitor input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
monitorIdList	monitorIdList	M

C.2.2.9.2 Output parameters

Table C.2.2.9.2: Mapping from IS `suspendThresholdMonitor` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
status	status	M

C.2.2.9.3 Fault definition

Table C.2.2.9.3: Mapping from IS `suspendThresholdMonitor` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
unknownThresholdMonitor	UnknownThresholdMonitor	M
thresholdMonitorAlreadySuspended	ThresholdMonitorAlreadySuspended	M

C.2.2.10 Operation `resumeThresholdMonitor`

C.2.2.10.1 Input parameters

Table C.2.2.10.1: Mapping from IS `resumeThresholdMonitor` input parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding input message under corresponding port type operation as indicated in Table C.2.1	Qualifier
monitorId	monitorId	M

C.2.2.10.2 Output parameters

Table C.2.2.10.2: Mapping from IS `resumeThresholdMonitor` output parameters to SS equivalents

IS Operation parameter	SS WSDL type sub-element used in corresponding output message under corresponding port type operation as indicated in Table C.2.1	Qualifier
status	status	M

C.2.2.10.3 Fault definition

Table C.2.2.10.3: Mapping from IS `resumeThresholdMonitor` exceptions to SS equivalents

Assertion name	SS WSDL type enumeration value used in corresponding fault message under corresponding port type operation as indicated in Table C.2.1	Qualifier
unknownThresholdMonitor	UnknownThresholdMonitor	M
thresholdMonitorIsNotSuspended	ThresholdMonitorIsNotSuspended	M

C.3 Solution Set definitions

C.3.1 WSDL definition structure

Clause C.3.2 provides a graphical representation of the PM IRP service.

Clause C.3.3 defines the services which are supported the PM IRP agent.

C.3.2 Graphical Representation

The WSDL structure is depicted in Figure C.3.2 below depicting port type, binding and service. The port type contains port type operations, which again contains input, output and fault messages. The binding contains binding operations, which have the same name as the port type operations. The binding connects to a port inside the service.

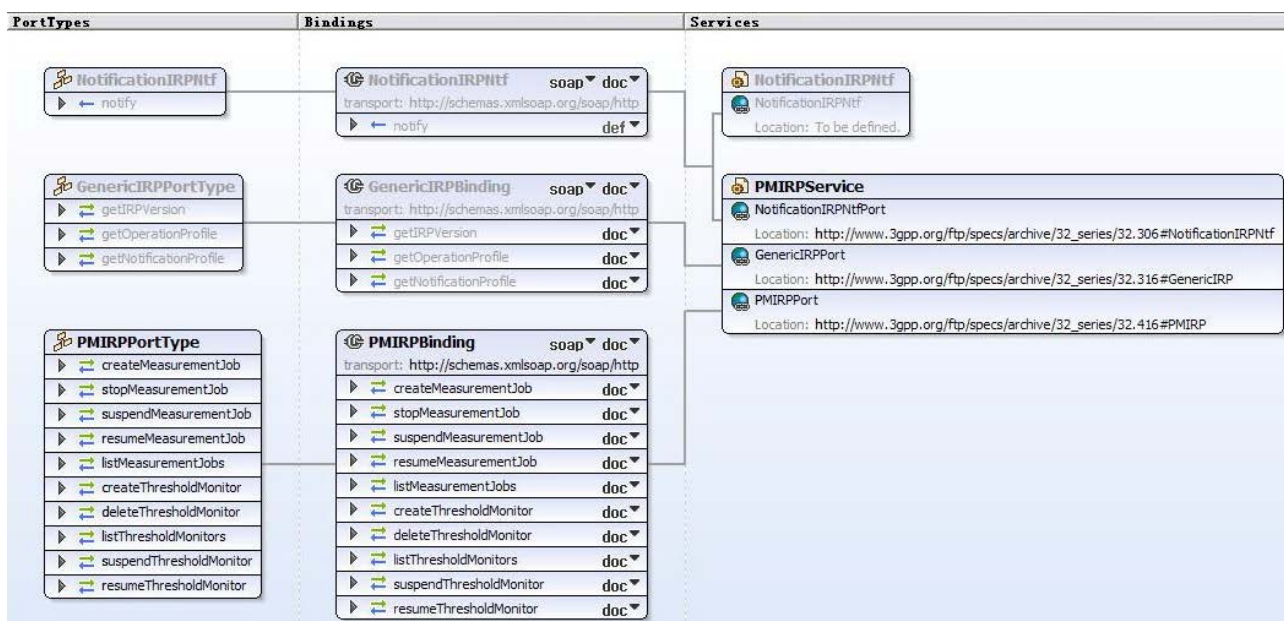

Figure C.3.2: Performance Management IRP SOAP Solution Set WSDL structure

C.3.3 WSDL specification “PMIRPSystem.wsdl”

Annex D (informative): Change history

Change history							
Date	Meeting	TDoc	CR	Rev	Cat	Subject/Comment	New version
2010-09	SA#49	SP-100518	--	--		Presentation to SA for Information and Approval	1.0.0
2010-10	--	--	--	--		Publication	10.0.0
2011-03	SA-51	SP-110095	001	1		Add the missing exception in create measurement operation - Align with 32.412 PM IRP Information Service	10.1.0
2012-09	SA-57	-	-	-		Automatic upgrade from previous Release version 10.1.0	11.0.0
2013-06	SA-60	SP-130266	003	-		PM IRP SS Remove iRPId	11.1.0
2014-09	SA-65	SP-140559	004	-		Update the link from Solution Set to Information Service due to the end of Release 12	12.0.0
2016-01	-	-	-	-		Update to Rel-13 version (MCC)	13.0.0
2016-06	SA#72	SP-160407	0005	-	F	Update the link from IRP Solution Set to IRP Information Service	13.1.0
2017-03	SA#75	SP-170141	0006	3	B	Add attributes corresponding to updated IS for operation "Create measurement job" related to measurement job reliability	14.0.0
2018-06	-	-	-	-	-	Update to Rel-15 version (MCC)	15.0.0
2020-07	-	-	-	-	-	Update to Rel-16 version (MCC)	16.0.0
2022-04	-	-	-	-	-	Update to Rel-17 version (MCC)	17.0.0
2024-04	-	-	-	-	-	Update to Rel-18 version (MCC)	18.0.0
