Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The present document is part of a TS-family covering the 3rd Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

- 32.441 "Trace Management Integration Reference Point (IRP): Requirements".
- 32.442 "Trace Management Integration Reference Point (IRP): Information Service (IS)".**
- 32.443 "Trace Management Integration Reference Point (IRP): Common Object Request Broker Architecture (CORBA) Solution Set (SS)".
- 32.445 "Trace Management Integration Reference Point (IRP): eXtensible Markup Language (XML) file format definition".

The present document is part of a TS-family which describes the information service necessary for the Telecommunication Management (TM) of 3G systems. The TM principles and TM architecture are specified in 3GPP TS 32.101 [1] and 3GPP TS 32.102 [2].

Trace provides very detailed information on call level for a specific subscriber or MS. This data is an additional information source to Performance Measurements and allows deeper investigations in problems solving or in case of optimization.

1 Scope

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

- [9] 3GPP TS 32.422: "Telecommunication management; Subscriber and equipment trace; Trace control and configuration management".
- [10] 3GPP TS 32.602: "Telecommunication management; Configuration Management (CM); Basic CM Integration Reference Point (IRP): Information Service (IS)".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.150 [3] and the following apply:

IRPAgent: See 3GPP TS 32.102 [2].

IRPManager: See 3GPP TS 32.102 [2].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.150 [3] and the following apply:

IOC	Information Object Class
IRP	Integration Reference Point
IS	Information Service
OMG	Object Management Group
UML	Unified Modelling Language (OMG)

4 System Overview

4.1 System context

The general definition of the System Context for the present IRP is found in 3GPP TS 32.150 [3] subclause 4.7.

In addition, the set of related IRP(s) relevant to the present IRP is shown in the two diagrams below.

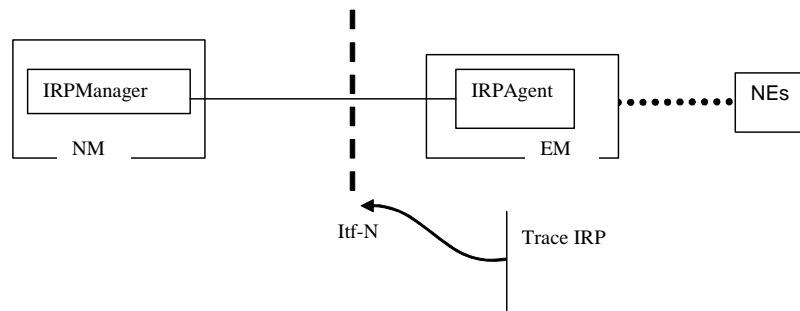

Figure 4.1.1: System Context A

Figure 4.1.2: System Context B

4.2 Compliance rules

For general definitions of compliance rules related to qualifiers (Mandatory/Optional/Conditional) for *operations*, *notifications* and *parameters* (of operations and notifications) please refer to 3GPP TS 32.150 [3].

5 Information Object Classes

5.1 Imported information entities and local labels

Label reference	Local label
3GPP TS 32.622 [5], information object class, Top	Top
3GPP TS 32.622 [5], information object class, IRPAgent	IRPAgent
3GPP TS 32.622 [5], information object class, GenericIRP	GenericIRP
3GPP TS 32.302 [6], information object class, NotificationIRP	NotificationIRP
3GPP TS 32.342 [7], information object class, FileTransferIRP	FileTransferIRP
3GPP TS 32.602 [10], information object class, ManagedEntity	ManagedEntity

5.2 Class diagram

5.2.1 Attributes and relationships

This clause introduces the set of Information Object Classes (IOCs) that encapsulate information within the IRPAgent. The intent is to identify the information required for the TraceIRP implementation of its operations and notification emission. This clause provides the overview of all support object classes in UML. Subsequent clauses provide more detailed specification of various aspects of these support object classes.

Figure 5.2.1: Information Object Class (IOC) UML diagram

5.2.2 Inheritance

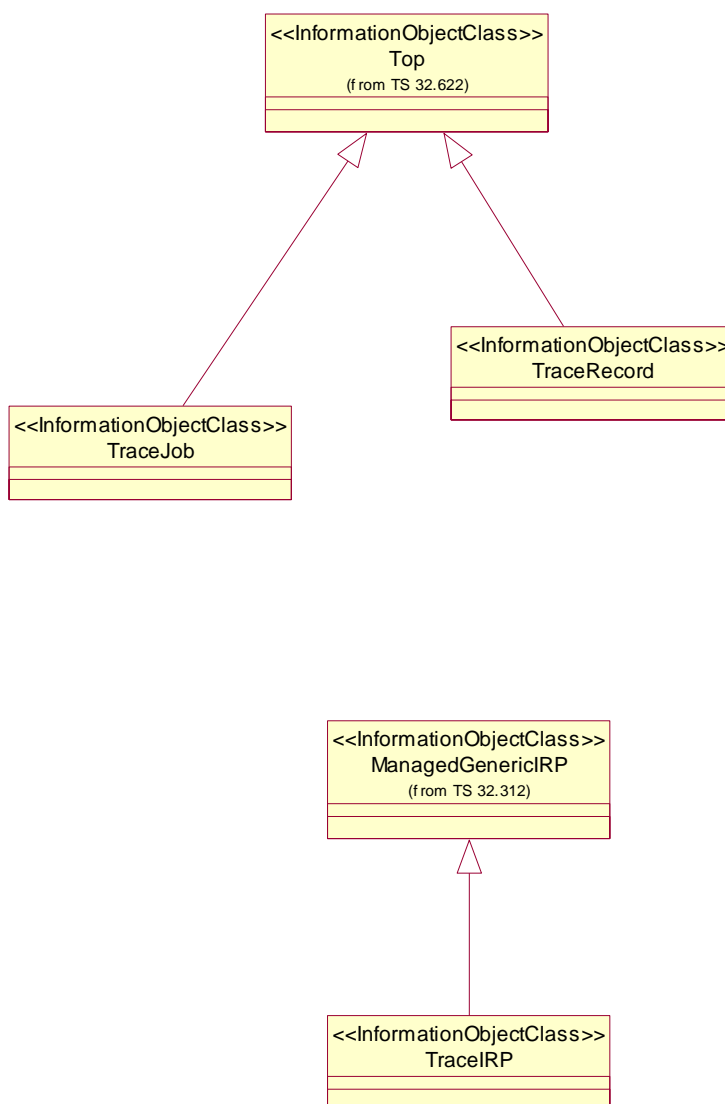

Figure 5.2.2: Information Object Class Inheritance UML Diagram

5.3 Information object class definitions

5.3.1 TraceJob

5.3.1.1 Definition

It represents a task that controls the Trace Sessions and collects the trace data (i.e. collects the `TraceRecord` of multiple `ManagedEntity` instances). The `TraceReference` is a unique ID, which identifies the Trace Session that has been created by the `TraceJob` and activated to one or multiple `ManagedEntity` instance(s).

It represents also the task that controls the UE based network performance measurements.

When a `TraceJob` is created the following attributes cannot be modified via the Itf-N:

- TraceReference
- ListOfInterfaces
- ListofNeTypes
- TraceDepth
- TraceTarget
- TriggeringEvent
- JobType
- MDTAreaScope
- ListOfMeasurements
- ReportingTrigger
- ReportInterval
- ReportAmount
- EventThreshold
- LoggingInterval
- LoggingDuration
- IPAddressOfTCE
- AnonymizationofMDTData

If for any reason the TraceIRP determines that a Trace Session has been activated in its ManagedEntity(ies) the TraceIRP shall emit the "noitfyTraceSessionLocalActivation" notification to the subscribed IRPManagers to inform the active Trace Sessions. The IRPManagers can decide whether they deactivate the Trace Session or keep the Trace Session active. (E.g. if the TraceReference is colliding with an existing TraceJob"s TraceReference, the IRPManager may decide to immediately deactivate the Trace Session in that ManagedEntity.)

The TraceJob shall use its information to activate and configure Trace Session(s) in the requested ManagedEntity instance(s). When the TraceIRP determines that there are available TraceRecord files, it shall emit a notification to all subscribed IRPManagers informing the availability of the files. The method and the notification of the available files is described in the File Transfer IRP (3GPP TS 32.342 [7]).

If a TraceJob receives an indication from one of its ManagedEntity that starting a Trace Recording Session is failed for any reason, the "notifyTraceRecordingSessionFailure" notification may be emitted to inform all subscribed IRPManagers that there was a Trace Recording Session that was not started in the ManagedEntity.

5.3.1.2 Attributes

Attribute name	Support Qualifier
traceReference	M
listOfInterfaces	O
listOfNeTypes	CM
traceDepth	CM
traceTarget	M
triggeringEvent	CM
traceCollectionEntityAddress	M
jobType	M
listOfMeasurements	CM
reportingTrigger	CM
reportInterval	CM
reportAmount	CM
eventThreshold	CM
loggingInterval	CM
loggingDuration	CM
mdtAreaScope	CM
anonymizationOfMDTData	CM

5.3.1.3 Attribute constraints

The `listOfNeTypes` attributes shall be present only for Signalling Based Activation.

The `traceTarget` shall be public ID in case of a Management Based Activation is done to an `ScscfFunction`.

The `TraceTarget` shall be `cell` only in case of the UTRAN cell traffic trace function.

The `TraceTarget` shall be `E-UtranCell` only in case of E-UTRAN cell traffic trace function. The `traceTarget` shall be either IMSI or IMEI(SV) if the Trace Session is activated to any of the following `ManagedEntity(ies)`:

- `HssFunction`
- `MscServerFunction`
- `SgsnFunction`
- `GgsnFunction`
- `BmscFunction`
- `RncFunction`
- `MmeFunction`

The `traceTarget` shall be IMSI if the Trace Session is activated to a `ManagedEntity` playing a role of `ServinGWFunction`.

In case of subscription based MDT, the `traceTarget` attribute shall be able to carry (IMSI or IMEI(SV)), the `mdtAreaScope` attribute shall be able to carry a list of (`cell` or `EUtranCell` or `TA/LA/RA`).

In case of area based Immediate MDT, the `traceTarget` attribute shall be null value, the `mdtAreaScope` attribute shall carry a list of (`Utrancell` or `E-UtranCell`).

In case of area based Logged MDT, the `traceTarget` attribute shall carry an `eNodeB` or a `RNC`. The Logged MDT should be initiated on the specified `eNodeB/RNC` in `TraceTarget`. The `mdtAreaScope` attribute shall carry a list of (`Utrancell` or `E-UtranCell` or `TA/LA/RA`).

- `traceTarget`: This attribute shall be present if Trace or subscription based MDT is supported.
- `mdtAreaScope`: This attribute shall be present if MDT is supported.
- `triggeringEvent`: This attribute shall be present only if Trace is supported.

- `listOfMeasurements`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `ImmediateMDT`.
- `reportingTrigger`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `ImmediateMDT` and the `ListOfMeasurements` attribute is configured for `M1`.
- `reportInterval`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `ImmediateMDT` and the `ReportingTrigger` is configured for `PeriodicMeasurements`.
- `reportAmount`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `ImmediateMDT` and the `ReportingTrigger` attribute is configured for `PeriodicMeasurements`.
- `eventThreshold`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `ImmediateMDT` and the `ReportTrigger` attribute is configured for `A2EventReporting`.
- `loggingInterval`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `LoggedMDT`.
- `loggingDuration`: This attribute shall be present only if MDT is supported and the `JobType` attribute is set to `LoggedMDT`.
- `anonymizationOfMDTData`: This attribute shall be present only if MDT is supported and the `mdtAreaScope` attribute is present.

5.3.2 TraceRecord

5.3.2.1 Definition

`TraceRecord` is the representation of the files containing the logged information from the Trace Recording Sessions.

5.3.2.2 Attributes

Attribute name	Visibility	Support Qualifier	Read Qualifier	Write Qualifier
<code>fileName</code>	+	M	M	-

5.3.3 TraceIRP

5.3.3.1 Definition

`TraceIRP` is the representation of the trace management capabilities specified by the present document. This IOC inherits from `ManagedGenericIRP` IOC specified in 3GPP TS 32.312 [8].

5.3.4 ManagedEntity

5.3.4.1 Definition

In case of Signalling Based Activation the `ManagedEntity` represents the role that can be played by an instance of one of the following IOCs:

- `HssFunction`
- `MscServerFunction`
- `SgsnFunction`
- `MmeFunction`

In case of Management Based Activation the `ManagedEntity` represents the role that can be played by an instance of the following IOCs:

- `HssFunction`
- `MscServerFunction`
- `SgsnFunction`
- `GgsnFunction`
- `BmscFunction`
- `RncFunction`
- `CscfFunction`
- `MmeFunction`
- `ServingGWFunction`

In case of Cell Traffic Trace the `ManagedEntity` represents the role that can be played by an instance of the following IOCs:

- `UtranCell`
- `E-UtranCell`

5.4 Information relationship definitions

5.4.1 relation-traceIRP-traceJob (M)

5.4.1.1 Definition

This represents the relationship between `TraceIRP` and the `TraceJob`.

5.4.1.2 Roles

Name	Definition
<code>theTraceIRP</code>	It represents the <code>TraceIRP</code>
<code>theTraceJobList</code>	It represents the <code>TraceJobList</code>

5.4.2 relation-traceJob-managedEntity (M)

5.4.2.1 Definition

This represents the relationship between `TraceJob` and the `ManagedEntity`.

5.4.2.2 Roles

Name	Definition
<code>theManagedEntity</code>	The <code>ManagedEntity</code> , when playing this role, represents the actual network resource instance, where a <code>Trace Session</code> is activated.
<code>theTraceJob</code>	It represents the <code>TraceJob</code>

5.4.3 relation-traceJob-traceRecord (M)

5.4.3.1 Definition

This represents the relationship between TraceJob and the TraceRecord.

5.4.3.2 Roles

Name	Definition
theTraceJob	It represents the TraceJob
theTraceRecord	It represents the TraceRecord.

5.5 Information attribute definitions

5.5.1 Definition and legal values

Attribute Name	Definition	Legal Values
<code>anonymizationOfMDTData</code>	It specifies the level of anonymization for an area based MDT.	See 3GPP TS 32.422 [9]
<code>listOfInterfaces</code>	It specifies the interfaces that needs to be traced in the given <code>ManagedEntityFunction</code> . The attribute is applicable only for Trace. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>listOfNETypes</code>	It specifies in which type of <code>ManagedFunction</code> the trace should be activated. The attribute is applicable only for Trace with Signalling Based Trace activation. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>traceCollectionEntityAddress</code>	It specifies the address of the Trace Collection Entity within an <code>IRPManager</code> . The attribute is applicable for for both Trace and MDT	See 3GPP TS 32.422 [9]
<code>traceDepth</code>	It specifies the trace depth of the <code>ManagedEntityFunction</code> instances. The attribute is applicable only for Trace. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>traceReference</code>	A globally unique identifier, which uniquely identifies the Trace Session that is created by the <code>TraceJob</code> . The attribute is applicable for both Trace and MDT.	Any positive integer value
<code>traceTarget</code>	It specifies the target object of the Trace and MDT. The attribute is applicable for both Trace and MDT.	IMSI or IMEI or IMEISV or Public ID or Private ID or a Cell (identified by its DN id) or an eNB or a RNC. IMSI, IMEI, IMEISV, Public ID, cell, eNB and RNC are mutually exclusive.
<code>triggeringEvent</code>	It specifies the triggering event parameter of the trace session. The attribute is applicable only for Trace. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>jobType</code>	It specifies the MDT mode and it specifies also whether the <code>TraceJob</code> represents only MDT, Trace or a combined Trace and MDT job. The attribute is applicable for both Trace and MDT.	See 3GPP TS 32.422 [9]
<code>mdtAreaScope</code>	It specifies MDT area scope when activates an MDT job.	List of cells/TA/LA/RA for subscription based MDT or area based Logged MDT. List of cells for area based Immediate MDT. Cell, TA, LA, RA are mutually exclusive.
<code>listOfMeasurements</code>	It specifies the UE measurements that shall be collected in an Immediate MDT job. The attribute is applicable only for Immediate MDT. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>reportingTrigger</code>	It specifies whether periodic or event based measurements should be collected. The attribute is applicable only for Immediate MDT and when the <code>listOfMeasurements</code> is configured for <code>M1</code> . In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
<code>reportInterval</code>	It specifies the interval between the periodical measurements that shall be taken when the UE is in connected mode. The attribute is applicable only for Immediate MDT and when <code>reportingTrigger</code> is configured for <code>periodical</code> measurements. In case this attribute	See 3GPP TS 32.422 [9]

Attribute Name	Definition	Legal Values
reportAmount	is not used, it carries a nulls semantic. It specifies the number of measurement reports that shall be taken for periodic reporting while the UE is in connected. The attribute is applicable only for Immediate MDT and when reportingTrigger is configured for periodical measurements. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]
eventThreshold	It specifies the threshold which should trigger the reporting in case A2 event reporting. The attribute is applicable only for Immediate MDT and when reportingTrigger is configured for A2 event . In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9] and 3GPP TS 36.331 [y]
loggingInterval	It specifies the periodicity for logging MDT. The attribute is applicable only for Logged MDT. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9], 3GPP TS 25.331 [] 3GPP TS 36.331 [y]
loggingDuration	It specifies how long the MDT configuration is valid at the UE in case of Logged MDT. The attribute is applicable only for Logged MDT. In case this attribute is not used, it carries a nulls semantic.	See 3GPP TS 32.422 [9]

6 Interface Definition

6.1 Class diagram representing interfaces

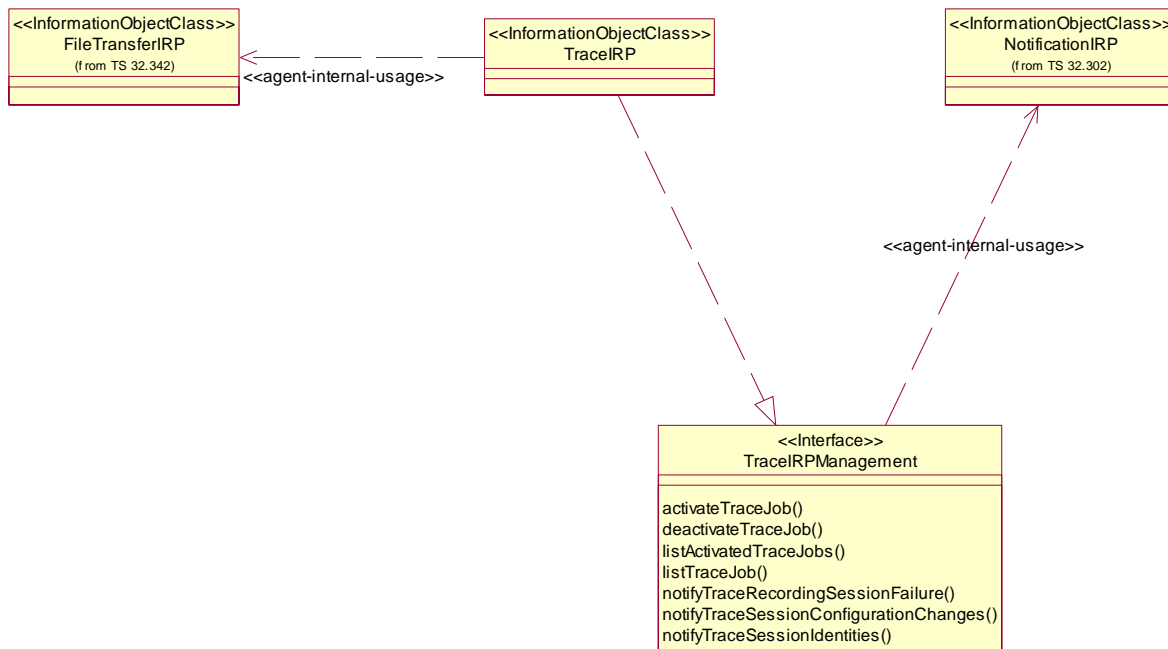

Figure 6.1: Class Diagram

6.2 Generic rules

- **Rule 1:** each operation with at least one input parameter supports a pre-condition `valid_input_parameter` which indicates that all input parameters shall be valid with regards to their information type. Additionally, each such operation supports an exception `operation_failed_invalid_input_parameter` which is raised when pre-condition `valid_input_parameter` is false. The exception has the same entry and exit state.
- **Rule 2:** each operation with at least one optional input parameter supports a set of pre-conditions `supported_optional_input_parameter_xxx` where "xxx" is the name of the optional input parameter and the pre-condition indicates that the operation supports the named optional input parameter. Additionally, each such operation supports an exception `operation_failed_unsupported_optional_input_parameter_xxx` which is raised when (a) the pre-condition `supported_optional_input_parameter_xxx` is false and (b) the named optional input parameter is carrying information. The exception has the same entry and exit state.
- **Rule 3:** each operation shall support a generic exception `operation_failed_internal_problem` which is raised when an internal problem occurs and that the operation cannot be completed. The exception has the same entry and exit state.

NOTE: These rules are mapped at the solution set level. Pre-conditions and exceptions, generated by these rules, need not appear explicitly in the present document.

6.3 TraceIRPManagement (M)

6.3.1 Operation activateTraceJob (M)

6.3.1.1 Definition

This operation support IPRManager"s request to create a TraceJob through Itf-N.

Once the TraceJob has been created, the attributes of the TraceJob will not be modified during the lifetime of the TraceJob.

One TraceJob can manage Trace Sessions in one or more ManagedEntity.

6.3.1.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
iOInstance	M	ManagedEntity.objectInstance	It specifies the DN of ManagedEntity instance where Trace Session is to be activated.
listOfInterfaces	O	TraceJob.listOfInterfaces	
listOfNeTypes	CM	TraceJob.listOfNeTypes	It specifies the type of ManagedFunctions.
traceDepth	M	TraceJob.traceDepth	It shows the traceDepth set to the Trace Session.
traceReference	M	TraceJob.traceReference	It identifies the TraceSession.
traceTarget	M	TraceJob.traceTarget	IMSI or IMEI or IMEISV or Public ID or Private ID or a Cell (identified by its DN id) or an eNB or a RNC. IMSI, IMEI, IMEISV, Public ID, Cell, eNB and RNC are mutually exclusive.
triggeringEvent	CO	TraceJob.triggeringEvent	
traceCollectionEntityAddress	CM,CO	TraceJob.traceCollectionEntityAddress	It specifies the address to the Trace Collection Entity that is associated to the TraceJob. See 3GPP TS 32.422 [9].
jobType	M	TraceJob.jobType	It specifies the type of the TraceJob
mdtAreaScope	CM,CO	TraceJob.mdtAreaScope	It specifies MDT area (Cells/TA/RA/LA) where the Logged MDT measurements shall be collected. It specifies MDT area (list of cells) where the Immediate MDT measurements shall be collected.
listOfMeasurements	CM	TraceJob.listOfMeasurements	It specifies the measurements to be collected from the UE
reportingTrigger	CM	TraceJob.reportingTrigger	It specifies the reporting trigger (event based reporting or periodic reporting) in the UE.
reportInterval	CM	TraceJob.reportInterval	It specifies the interval between the periodical measurements to be taken by the UE.
reportAmount	CM	TraceJob.reportAmount	It specifies the number of measurement reports to be taken in periodical reporting in the UE
eventThreshold	CM	TraceJob.eventThreshold	It specifies the threshold triggering the reporting in case

Parameter Name	Qualifier	Information type	Comment
			of A2 event reporting.
loggingInterval	CM	TraceJob.loggingInterval	It specifies the periodicity of Logged MDT.
loggingDuration	CM	TraceJob.loggingDuration	It specifies the duration of the Logged MDT at the UE.
anonymizationOfMDTData	CM	TraceJob.anonymizationOfMDTData	It specifies the anonymization level of an area based MDT.

6.3.1.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
status	M	ENUM (Success, Failure, PartialSuccess)	
unsupportedList	M	List of <ManagedEntity, TraceDepth, ListOfInterfaces, TraceTarget, mdtAreaScope, listOfMeasurements, reportingTrigger, reportInterval, reportAmount, eventThreshold, loggingInterval, loggingDuration, anonymizationOfMDTData, reason)	It specifies what attributes are not supported when a Trace Session is activated. The list can contain one or all of the elements and relevant only for error cases.

6.3.1.4 Pre-condition

validTraceReference AND validTraceDepth AND validTraceTarget

Assertion Name	Definition
validTraceDepth	The traceDepth input parameter is valid.
validTraceReference	The traceReference given is not matching to any existing traceReference value in the activated TraceJobs.
validTraceTarget	The traceTarget input parameter is valid.

6.3.1.5 Post-condition

traceSessionActivated

Assertion Name	Definition
traceSessionActivated	The Trace Session identified by the traceReference is activated in the given ManagedEntity instances.

6.3.1.6 Exceptions

Exception Name	Definition
invalidTraceDepth	Condition: (validTraceDepth) is false. Returned Information: output parameter status is set to "Failure". Exit state: Entry State.
invalidTraceTarget	Condition: (validTraceTarget) is false. Returned Information: output parameter status is set to "Failure". Exit state: Entry State.
notuniqueTraceReference	Condition: (validTraceReference) is false. Returned Information: output parameter status is set to "Failure". Exit state: Entry State.

6.3.1.7 Constraints

Name	Definition
listOfNeTypes	It is a Signalling Based Activated trace that is requested.
traceCollectionEntityAddress CM,CO qualifier	Mandatory when tracing in EPS is supported; Mandatory when MDT is supported; Optional when tracing in UMTS is supported
mdtAreaScope	MDT is supported
listOfMeasurements	MDT is supported
reportingTrigger	MDT is supported
reportInterval	MDT is supported
reportAmount	MDT is supported
eventThreshold	MDT is supported
loggingInterval	MDT is supported
loggingDuration	MDT is supported
listOfMeasurements	MDT is supported
traceDepth	Trace is supported
triggeringEvent	Trace is supported
anonymizationOfMDTData	MDT is supported

6.3.2 Operation deactivateTraceJob (M)

6.3.2.1 Definition

This operation supports IPRManager"s request to stop a TraceJob through Itf-N. When this operation is received in the TraceIRP the TraceJob shall deactivate the requested Trace Session in the requested ManagedEntity instances.

6.3.2.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
traceReference	M	TraceJob.traceReference	This is a unique ID of the TraceJob
traceTarget	M	TraceJob.traceTarget	(IMSI or IMEI or IMEISV or Public ID or Private ID or a Cell (identified by its DN id) or an eNB or a RNC. IMSI, IMEI, IMEISV, Public ID, Cell, eNB and RNC are mutually exclusive.

6.3.2.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
status	M	ENUM (Success, Failure)	The operation may fail because of a specified or an unspecified reason.
traceRecordingSessionReference	CM		This would indicate if a Trace Recording Session is ongoing when the deactivation command has been given.

6.3.2.4 Pre-condition

validTraceReference

Assertion Name	Definition
validTraceReference	The TraceReference input parameter is valid, which means that the TraceIRP is aware of such TraceJob, which has this traceReference value and is aware of the ManagedEntity holding such Trace Session.

6.3.2.4 Post-condition

TraceSessionisdeactivated

Assertion Name	Definition
TraceSessionisdeactivate	The Trace Session identified by the traceReference is deactivated in the requested ManagedEntity instance and the TraceJob is stopped.

6.3.2.6 Exceptions

Exception Name	Definition
notuniqueTraceReference	Condition: (validTraceReference) is false. Returned Information: output parameter status is set to "Failure". Exit state: Entry State.

6.3.3 Operation listTraceJob (M)

6.3.3.1 Definition

This operation support IPRManager"s request to list the parameters of a specific TraceJob through Itf-N.

6.3.3.2 Input parameters

Parameter Name	Qualifier	Information type	Comment
traceReference	M	TraceJob.traceReference	It specifies the Trace Session that is requested for interrogation.

6.3.3.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
iOCInstance	M	ManagedElement.objectInstance	It specifies the DN of ManagedElement instance where a Trace Session is activated.
listOfInterfaces	O	TraceJob.listOfInterfaces	It specifies the list of interfaces trace control and configuration parameter that is associated with the TraceJob. See 3GPP TS 32.422 [9]
Status	M	ENUM (Success, Failure)	The operation may fail because of a specified or an unspecified reason.
traceDepth	M	TraceJob.traceDepth	It shows the traceDepth trace control and configuration parameter that is associated to the TraceJob.
traceRecordingSessionReference	CM		This would indicate if a Trace Recording Session is ongoing when the deactivation command has been given.
traceTarget	M	TraceJob.traceTarget	IMSI or IMEI or IMEISV or Public ID or Private ID or a Cell (identified by its DN id) or an eNB or a RNC. IMSI, IMEI, IMEISV, Public ID, Cell, eNB and RNC are mutually exclusive.
triggeringEvent	CO	TraceJob.triggeringEvent	It specifies the triggering event trace control and configuration parameter that is associated to the TraceJob. See 3GPP TS 32.422 [9].
traceCollectionEntityAddress	CM,CO	TraceJob.traceCollectionEntityAddress	It specifies the address to the Trace Collection Entity that is associated to the TraceJob. See 3GPP TS 32.422 [9].
jobType	M	TraceJob.jobType	It specifies the type of the TraceJob. It can be one of the following: Trace, MDT data collection, Trace and MDT data collection.
mdtAreaScope	CM,CO	TraceJob.mdtAreaScope	It specifies MDT area (Cells/TA/RA/LA) where the Logged MDT measurements shall be collected. It specifies MDT area (list of cells) where the Immediate MDT measurements shall be collected.
listOfMeasurements	CM	TraceJob.listofMeasurements	It specifies the measurements to be collected from the UE
reportingTrigger	CM	TraceJob.reportingTrigger	It specifies the reporting trigger (event based reporting or periodic reporting) in the UE.
reportInterval	CM	TraceJob.reportInterval	It specifies the interval between the periodical measurements to be taken by the UE.
reportAmount	CM	TraceJob.reportAmount	It specifies the number of measurement reports to be taken in periodical reporting in the UE
eventThreshold	CM	TraceJob.eventThreshold	It specifies the threshold triggering the reporting in case of A2 event reporting.
loggingInterval	CM	TraceJob.loggingInterval	It specifies the periodicity of the logging for downlink pilot strength measurement in Logged MDT.
loggingDuration	CM	TraceJob.loggingDuration	It specifies the duration of the Logged MDT at the UE.
anonymizationOfMDTData	CM	TraceJob.anonymizationOfMDTData	It specifies the anonymization level of an area based MDT.

6.3.3.4 Pre-condition

validTraceReference

Assertion Name	Definition
validTraceReference	The traceReference input parameter is valid, which means that the TraceIRP is aware of such TraceJob, which has this traceReference value and is aware of the ManagedEntity holding such Trace Session.

6.3.3.5 Post-condition

TraceSessionFound

Assertion Name	Definition
TraceSessionFound	The TraceIRP has found the requested TraceJob with the traceReference and can read the configured parameters.

6.3.3.6 Exceptions

Exception Name	Definition
notuniqueTraceReference	Condition: (validTraceReference) is false. Returned Information: output parameter status is set to "Failure". Exit state: Entry State.

6.3.3.7 Constraints

Name	Definition
traceCollectionEntityAddress CM,CO qualifier	Mandatory when tracing in EPS is supported; Mandatory when MDT is supported; Optional when tracing in UMTS is supported
anonymizationOfMDTData	MDT is supported
mdtAreaScope	MDT is supported
listOfMeasurements	MDT is supported
reportingTrigger	MDT is supported
reportInterval	MDT is supported
reportAmount	MDT is supported
eventThreshold	MDT is supported
loggingInterval	MDT is supported
loggingDuration	MDT is supported
traceDepth	Trace is supported
triggeringEvent	Trace is supported

6.3.4 Operation listActivatedTraceJobs (M)

6.3.4.1 Definition

This operation support IPRManager"s request to list all the activated TraceJobs through Itf-N.

6.3.4.2 Input parameters

No input parameters for this operation.

6.3.4.3 Output parameters

Parameter Name	Qualifier	Matching Information	Comment
traceReferenceList	M	List of < TraceJob.traceReference.objectinstance >	The TraceReferenceList provides the identification of each activated Trace Session. If no TraceReference can be found, then this list is empty and status is "Success"
status	M	ENUM (Success, Failure)	The operation may fail because of a specified or an unspecified reason.

6.3.5 Notification notifyTraceRecordingSessionFailure (O)

6.3.5.1 Definition

The TraceIRP notifies all subscribed IRPManagers and the Trace Collection Entity (if its address is provided) if a Trace Recording Session in a ManagedEntity has not been started due to any problem.

6.3.5.2 Input parameters

Parameter Name	Qualifiers	Matching Information	Comment
objectClass	M,Y	TraceIRP.objectClass	Notification header
objectInstance	M,Y	TraceIRP.objectInstance	Notification header
eventTime	M,Y	--	Notification header
notificationType	M,Y	"notifyTraceRecordingSessionFailure"	Notification header
systemDN	M,Y	--	Notification header
notificationID	O,Y	--	Notification header
traceRecordingSessionReference	O,N	--	The Trace Recording Session Reference may be visible only in signalling based activation.
traceReference	M,Y	TraceJob.traceReference	
reason	O,N	--	

6.3.5.3 Triggering event

6.3.5.3.1 From state

internalProblemInManagedEntity

Assertion Name	Definition
internalProblemInManagedEntity	Because of an internal problem the ManagedEntity cannot start a Trace Recording Session.

6.3.5.3.2 To state

newNotificationReported

Assertion Name	Definition
newNotificationReported	The " notifyTraceRecordingSessionFailure " notification is emitted to the subscribed IRPManager(s).

6.3.6 Notification notifyTraceSessionLocalActivation (M)

6.3.6.1 Definition

The TraceIRP notifies all subscribed IRPManagers if a Trace Session is configured by the Element Manager.

6.3.6.2 Input parameters

Parameter Name	Qualifiers	Matching Information	Comment
objectClass	M,Y	TraceIRP.objectClass	Notification header
objectInstance	M,Y	TraceIRP.objectInstance	Notification header
eventTime	M,Y	--	Notification header
notificationType	M,Y	"notifyTraceSessionLocalActivation"	Notification header
systemDN	M,Y	--	Notification header
notificationID	O,Y	--	Notification header
traceReference	M,Y	TraceJob.traceReference	
traceTarget	M,Y	TraceJob.traceTarget	
iOCInstance	M,Y	ManagedEntity.objectInstance	

6.3.6.3 Triggering event

6.3.6.3.1 From state

unknownTraceReference

Assertion Name	Definition
unknownTraceReference	The TraceIRP has detected a traceReference associated to a Trace Session in a ManagedEntity that is not initiated via the ltf-N.

6.3.6.3.2 To state

newNotificationReported

Assertion Name	Definition
newNotificationReported	The " notifyTraceSessionLocalActivation " notification is emitted to the subscribed IRPManager(s).

6.3.7 Notification notifyTraceSessionIdentities (CM)

6.3.7.1 Definition

The TraceIRP or the MmeFunction notifies the Trace Collection Entity about the identities of the subscriber and Equipment in case of tracing a session in E-UTRAN only.

6.3.7.2 Input parameters

Parameter Name	Qualifiers	Matching Information	Comment
objectClass	M,Y	TraceIRP.objectClass, or MmeFunction.objectClass	Notification header
objectInstance	M,Y	TraceIRP.objectInstance, or MmeFunction.objectClass	Notification header
eventTime	M,Y	--	Notification header
notificationType	M,Y	"notifyTraceSessionIds"	Notification header
systemDN	M,Y	--	Notification header
notificationID	O,Y	--	Notification header
traceReference	M,Y	TraceJob.traceReference	
traceRecordingSessionReference	M,Y	TraceJob.traceRecordingSessionReference	
traceTarget	M,Y	TraceJob.traceTarget	

6.3.7.3 Triggering event

6.3.7.3.1 From state

FFS

Assertion Name	Definition
FFS	FFS

6.3.7.3.2 To state

FFS

Assertion Name	Definition
FFS	FFS

6.3.7.4 Constraint

Name	Definition
notifyTraceSessionIdentities Notification CM qualifier	Tracing is performed only in E-UTRAN

Annex A (informative): Change history

Change history								
Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Cat	Old	New
Apr 2007	S5_52	S5-070445	--	--	Submitted by SA5 prior SA#36 for Information with the intention to get SA#36 Rel-7 Approval for this TS and the CORBA Solution Set TS 32.443	--	1.0.0
