# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

---

# Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# Introduction

The present document is part of a TS-family covering the 3<sup>rd</sup> Generation Partnership Project; Technical Specification Group Services and System Aspects; Telecommunication management; as identified below:

32.661: Configuration Management (CM); Kernel CM Requirements.

32.662: Configuration Management (CM); Kernel CM Information Service (IS).

**32.666: Configuration Management (CM); Kernel CM Integration Reference Point (IRP); Solution Set (SS) definitions.**

Configuration Management (CM), in general, provides the operator with the ability to assure correct and effective operation of the 3G network as it evolves. CM actions have the objective to control and monitor the actual configuration on the Network Elements (NEs) and Network Resources (NRs), and they may be initiated by the operator or by functions in the Operations Systems (OSs) or NEs.

CM actions may be requested as part of an implementation programme (e.g. additions and deletions), as part of an optimisation programme (e.g. modifications), and to maintain the overall Quality of Service (QoS). The CM actions are initiated either as single actions on single NEs of the 3G network, or as part of a complex procedure involving actions on many resources/objects in one or several NEs.

---

# 1 Scope

The present document specifies the Solution Set definitions for the IRP whose semantics is specified in Kernel CM (Configuration Management) IRP: Information Service 3GPP TS 32.662 [7].

This Solution Set definitions specification is related to 3GPP TS 32.662 V14.0.X [7].

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TS 32.101 [1], 3GPP TS 32.102 [2], 3GPP TS 32.600 [3], 3GPP TS 32.662 [4] and 3GPP TS 32.331[15] apply.

**IRP document version number string (or "IRPVersion"):** See 3GPP TS 32.311 [13].

### 3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

CORBA	Common Object Request Broker Architecture
DN	Distinguished Name
IDL	Interface Definition Language (OMG)
IRP	Integration Reference Point
IS	Information Service
MO	Managed Object
MOC	Managed Object Class
NL	Notification Log
NRM	Network Resource Model
OMG	Object Management Group
SS	Solution Set
UML	Unified Modelling Language
VSE	Vendor Specific Extensions
XML	eXtensible Markup Language

---

## 4 Solution Set definitions

This specification defines the following 3GPP Kernel CM IRP Solution Set definitions:

- 3GPP Kernel CM IRP CORBA SS (Annex A);
- 3GPP Kernel CM IRP XML definitions (Annex B);
- 3GPP Kernel CM IRP SOAP Solution Set (Annex C).

## Annex A (normative): CORBA Solution Set

This annex contains the CORBA Solution Set for the IRP whose semantics is specified in Kernel CM IRP: Information Service (TS 32.662 [4]).

### A.1 Architectural Features

The overall architectural feature of Kernel Configuration Management IRP is specified in 3GPP TS 32.662 [4].

This clause specifies features that are specific to the CORBA SS.

#### A.1.1 Syntax for Distinguished Names and Versions

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

The version of this IRP is represented as a string (see also clause 3.1).

#### A.1.2 Notifications

Notifications are sent according to the Notification IRP: CORBA SS (see 3GPP TS 32.303 [9]).

The contents of the Kernel CM IRP notifications are defined in the present document.

#### A.1.3 Filter language

The filter language used in the SS is the Extended Trader Constraint Language (see OMG Notification Service [6]). IRPAgents may throw a FilterComplexityLimit exception when a given filter is too complex.

## A.2 Mapping

### A.2.1 Operation and Notification mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) defines semantics of operation and notification visible across the Kernel Configuration Management IRP. The following table in this subclause indicates mapping of these operations and notifications to their equivalents defined in this SS.

**Table A.2.1: Mapping from IS Notification/Operation to SS equivalents**

IS Operation/ notification (3GPP TS 32.662 [4])	SS Method	Qualifier
getNRMIRPVersion	get_nrm_irp_version	M
notifyObjectCreation	See Notification IRP: CORBA SS [9]	O
notifyObjectDeletion	See Notification IRP: CORBA SS [9]	O
notifyAttributeValueChange	See Notification IRP: CORBA SS [9]	O
notifyStateChange	See Notification IRP: CORBA SS [9]	O
getIRPVersion	get_kernel_cm_irp_versions	M
getOperationProfile	get_kernel_cm_irp_operations_profile	O
getNotificationProfile	get_kernel_cm_irp_notification_profile	O
notifyCMSynchronizationRecommended	See Notification IRP: CORBA SS [9]	O

### A.2.2 Operation parameter mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) defines semantics of parameters carried in operations across the Kernel Configuration Management IRP. The following tables in this subclause indicate the mapping of these parameters, as per operation, to their equivalents defined in this SS.

**Table A.2.2.1: Mapping from IS `getNRMIRPVersion` parameters to SS equivalents**

IS Operation parameter	SS Method parameter	Qualifier
<code>versionNumberList</code>	<code>ManagedGenericRPCConstDefs::VersionNumberSet version_number_list</code>	M
<code>vSEVersionNumberList</code>	<code>ManagedGenericRPCConstDefs::VersionNumberSet vse_version_number_list</code>	M
<code>status</code>	Exceptions: <code>GetNRMIRPVersion</code>	M

**Table A.2.2.2: Mapping from IS `getIRPVersion` parameters to SS equivalents**

IS Operation parameter	SS Method parameter	Qualifier
<code>versionNumberList</code>	Return value of type <code>ManagedGenericRPCConstDefs::VersionNumberSet</code>	M
<code>status</code>	exception <code>GetKernelCmIRPVersionsException</code>	M

**Table A.2.2.3: Mapping from IS `getOperationProfile` parameters to SS equivalents**

IS Operation parameter	SS Method parameter	Qualifier
<code>irpVersion</code>	<code>ManagedGenericRPCConstDefs::VersionNumber kernel_cm_irp_version</code>	M
<code>operationNameProfile, operationParameterProfile</code>	Return value of type <code>ManagedGenericRPCConstDefs::MethodList</code>	M
<code>status</code>	Exceptions: <code>GetKernelCMIRPOperationsProfileException,</code> <code>ManagedGenericIRPSystem::OperationNotSupported,</code> <code>ManagedGenericIRPSystem::InvalidParameter</code>	M

**Table A.2.2.4: Mapping from IS `getNotificationProfile` parameters to SS equivalents**

IS Operation parameter	SS Method parameter	Qualifier
<code>irpVersion</code>	<code>ManagedGenericRPCConstDefs::VersionNumber kernel_cm_irp_version</code>	M
<code>notificationNameProfile, notificationParameterProfile</code>	Return value of type <code>ManagedGenericRPCConstDefs::MethodList</code>	M
<code>status</code>	Exceptions: <code>GetKernelCMIRPNotificationProfileException,</code> <code>ManagedGenericIRPSystem::OperationNotSupported,</code> <code>ManagedGenericIRPSystem::InvalidParameter</code>	M

## A.2.3 Notification attribute mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) identifies and defines the semantics of attributes for `notifyObjectCreation`, `notifyObjectDeletion`, `notifyAttributeValueChange`, `notifyStateChange` and `notifyCMSynchronizationRecommended` for use for its IRP. The following table in this subclause shows the mapping of the IS notifications to SS equivalents.

**Table A.2.3.1: Mapping from IS notifications to SS equivalents**

IS notifications in 3GPP TS 32.662 [4]	SS notifications	Qualifier
<code>NotifyObjectCreation</code>	<code>push_structured_event</code>	O
<code>NotifyObjectDeletion</code>	<code>push_structured_event</code>	O
<code>NotifyAttributeValueChange</code>	<code>push_structured_event</code>	O
<code>NotifyStateChange</code>	<code>push_structured_event</code>	O
<code>NotifyCMSynchronizationRecommended</code>	<code>push_structured_event</code>	O

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) also qualifies the attributes. The following tables in this subclause show the mapping of these IS attributes to SS equivalents.

**Table A.2.3.2: Mapping from IS Notification Header attributes to SS equivalent**

IS Attribute of Notification Header in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
objectClass,objectInstance	NotificationIRPConstDefs::AttributeNameValue::MANAGED_OBJECT_INSTANCE	M
notificationId	NotificationIRPConstDefs::AttributeNameValue::NOTIFICATION_ID	M
eventTime	NotificationIRPConstDefs::AttributeNameValue::EVENT_TIME	M
systemDN	NotificationIRPConstDefs::AttributeNameValue::SYSTEM_DN	O
notificationType	--	M

**Table A.2.3.3: Mapping from IS notifyObjectCreation attributes to SS equivalent OBJECT\_CREATION**

IS Attribute of notifyObjectCreation in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
notificationHeader	See table A.2.3.2	M
correlatedNotifications	KernelCmNotifications::MOCreation::CORRELATED_NOTIFICATIONS	O
additionalText	KernelCmNotifications::MOCreation::ADDITIONAL_TEXT	O
sourceIndicator	KernelCmNotifications::MOCreation::SOURCE_INDICATOR	O
attributeList	KernelCmNotifications::MOCreation::InitialAttributeValues (contained in remainder_of_body)	O

**Table A.2.3.4: Mapping from IS notifyObjectDeletion attributes to SS equivalent OBJECT\_DELETION**

IS Attribute of notifyObjectDeletion in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
notificationHeader	See table A.2.3.2	M
correlatedNotifications	KernelCmNotifications::MODEletion::CORRELATED_NOTIFICATIONS	O
additionalText	KernelCmNotifications::MODEletion::ADDITIONAL_TEXT	O
sourceIndicator	KernelCmNotifications::MODEletion::SOURCE_INDICATOR	O
attributeList	KernelCmNotifications::MODEletion::AttributeValues (contained in remainder_of_body)	O

**Table A.2.3.5: Mapping from IS notifyAttributeValueChange attributes to SS equivalent ATTRIBUTE\_VALUE\_CHANGE**

IS Attribute of notifyAttributeValueChange in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
notificationHeader	See table A.2.3.2	M
correlatedNotifications	KernelCmNotifications::AttributeValueChange::CORRELATED_NOTIFICATIONS	O
additionalText	KernelCmNotifications::AttributeValueChange::ADDITIONAL_TEXT	O
sourceIndicator	KernelCmNotifications::AttributeValueChange::SOURCE_INDICATOR	O
attributeValueChangeDefinition	KernelCmNotifications::AttributeValueChange::ModifiedAttributeSet (contained in remainder_of_body)	M

**Table A.2.3.6: Mapping from IS notifyCMSynchronizationRecommended attributes to SS equivalent REQUEST\_CM\_SYNCHRONIZATION**

IS Attribute of notifyCMSynchronization Recommended in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
notificationHeader	See table A.2.3.2	M
baseMOClass	KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_CLASS	M
baseMOInstance	KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_INSTANCE	M
scope	KernelCmNotifications::CMSynchronizationRecommended::SCOPE	M
additionalText	KernelCmNotifications::CMSynchronizationRecommended::ADDITIONAL_TEXT	O

**Table A.2.3.7: Mapping from IS notifyStateChange attributes to SS equivalent STATE\_CHANGE**

IS Attribute of notifyStateChange in 3GPP TS 32.662 [4]	SS Attribute	Qualifier
notificationHeader	See table A.2.3.2	M
stateChange	StateManagementIRPConstDefs::AttributeNameValue (see note)	M
correlatedNotifications	KernelCmNotifications::StateChange::CORRELATED_NOTIFICATIONS	O
additionalText	KernelCmNotifications::StateChange::ADDITIONAL_TEXT	O
sourceIndicator	KernelCmNotifications::StateChange::SOURCE_INDICATOR	O
NOTE:	The stateChange attribute is mapped into name-value pairs that contain the state identifier in the name and the new and optional old state values in the attribute field (See TS 32.676 [12] StateManagementIRPConstDefs IDL <State Name>OldNewValue structures).	

## A.3 Use of OMG Structured Event

In CORBA SS, OMG defined StructuredEvent (see OMG Notification Service [6]) is used to carry notifications. This clause identifies the OMG defined StructuredEvent attributes that carry the attributes of notifications defined in 3GPP TS 32.662 [4].

The composition of OMG Structured Event, as defined in OMG Notification Service [6], is:

```

Header
  Fixed Header
    domain_name
    type_name
    event_name
  Variable Header
Body
  filterable_body_fields
  remainder_of_body

```

The following table in this clause lists all OMG Structured Event attributes in its leftmost column. The second column identifies the SS attributes, if any, that shall be carried there.

Attributes that are denoted as "optional" may be absent from the OMG Structured Event. As an example, if the optional additionalText attribute is not used for a particular notification, then the IRP Agent may exclude additionalText from the filterable body fields for that particular notification. Individual notifications from the same IRP Agent may include or exclude the same optional attribute.

**TableA.3.1: Use of OMG Structured Event**

IS Parameters	OMG CORBA Structured Event attribute	Comment
There is no corresponding IS parameter	domain_name	It contains the supported SS document version. This version is defined by the string constant KernelCmIRPSystem::VERSION defined in this specification.
notificationType	type_name	It is an attribute of notificationHeader. It shall indicate one of the following: Object Creation, Object Deletion, Attribute Value Change, State Change and CM Synchronization Recommended. It is a string. Its value is either defined by KernelCmNotifications::MOCreation::EVENT_TYPE, KernelCmNotifications::MODeletion::EVENT_TYPE, KernelCmNotifications::AttributeValueChanged::EVENT_TYPE, KernelCmNotifications::StateChange::EVENT_TYPE or KernelCmNotifications::CMSynchronizationRecommended::EVENT_TYPE
There is no corresponding IS parameter	event_name	It shall be set to an empty string.
There is no corresponding IS parameter	variable Header	
objectClass, objectInstance	One NV pair of filterable_body_fields	NV stands for name-value pair. Order arrangement of NV pairs is not significant. The name of NV-pair is always encoded in string. Name of this NV pair is the MANAGED_OBJECT_INSTANCE of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [9]).
notificationId	One NV pair of remainder_of_body	Name of NV pair is the NOTIFICATION_ID of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a long. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [9]).
eventTime	One NV pair of filterable_body_fields	Name of NV pair is the EVENT_TIME of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is IRPTime. See corresponding table in Notification IRP: CORBA SS (3GPP TS 32.306 [9]).
systemDN	One NV pair of filterable_body_fields	Name of NV pair is the SYSTEM_DN of interface AttributeNameValue of module NotificationIRPConstDefs. Value of NV pair is a string. See corresponding table in Notification IRP: CORBA SS [9].
correlatedNotifications	One NV pair of remainder_of_body	It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications. Name of NV pair is the KernelCmNotifications::NotificationCommon::CORRELATED_NOTIFICATIONS. Value of NV pair is a NotificationIRPConstDefs::CorrelatedNotificationSet defined in 3GPP TS 32.306 [9].
additionalText	One NV pair of remainder_of_body	It is an attribute of the Object Creation, Object Deletion, Attribute Value Change and CM Synchronization Recommended notifications. Name of NV pair is the KernelCmNotifications::NotificationCommon::ADDITIONAL_TEXT Value of NV pair is a string.

sourceIndicator	One NV pair of remainder_of_body	<p>It is an attribute of the Object Creation, Object Deletion and Attribute Value Change notifications.</p> <p>Name of NV pair is the KernelCmConstDefs::AttributeNameValue::SOURCE_INDICATOR.</p> <p>Value of NV pair is the KernelCmNotifications::NotificationCommon::RESOURCE_OPERATION or MANAGEMENT_OPERATION or UNKNOWN_OPERATION.</p>
attributeList	remainder_of_non_filterable_body (see 3GPP TS 32.306 [9])	<p>It is used to transport attribute information.</p> <p>For Object Creation notification, this is defined by KernelCmNotifications::MOCreation::InitialAttributeValues.</p> <p>For Object Deletion notification, this is defined by KernelCmNotifications::MODeletion::AttributeValues.</p> <p>The name component of InitialAttributeValues and AttributeValues will be set to attribute names defined in KernelCmNRMDefs.</p>
attributeValueChangeDefinition	remainder_of_non_filterable_body (see 3GPP TS 32.306 [9])	<p>For Attribute Value Change notification, this is defined by KernelCmNotifications::AttributeValueChange::ModifiedAttributeSet.</p> <p>The name component of ModifiedAttributeSet will be set to attribute name defined in KernelCmNRMDefs.</p>
StateManagementIRPConstDefs::AttributeNameValue	A set of up to 9 Name-value pairs See table A.3.2. All these 9 NV pairs are part of the remainder_of_body	<p>For state change notifications a series of up to 9 name-value pairs might be sent corresponding with the new and old values of each state/status attribute which has changed it's value.</p> <p>The new values of each state/status attributes that have changed are sent.</p> <p>The IRP agent may optionally send the old state/status changes.</p> <p>The name of the name-value pairs are defined by StateManagementIRPConstDefs::AttributeNameValue</p>
baseMOClass	One NV pair of remainder_of_body	<p>It is an attribute of the CMSynchronizationRecommended notification.</p> <p>Name of NV pair is a string,</p> <p>KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_CLASS.</p> <p>Value of NV pair is a string. This string conveys the semantics of the Managed Object Class.</p>
baseMOInstance	One NV pair of remainder_of_body	<p>It is an attribute of the CMSynchronizationRecommended notification.</p> <p>Name of NV pair is the KernelCmNotifications::CMSynchronizationRecommended::BASE_MO_INSTANCE.</p> <p>Value of NV pair is a string. This is the DN string of the Managed Object Instance.</p>
scope	One NV pair of remainder_of_body	<p>It is an attribute of the CMSynchronizationRecommended notification.</p> <p>Name of NV pair is the KernelCmNotifications::CMSynchronizationRecommended::SCOPE.</p> <p>Value of NV pair is KernelCmConstDefs::ScopePara.</p>

**Table A.3.2 Name – value pairs for state change notifications**

<b>Name</b>	<b>Value</b>
OPERATIONAL_STATE	StateManagementIRPCConstDefs::OperationalStateOldNewValue
USAGE_STATE	StateManagementIRPCConstDefs::UsageStateOldNewValue
ADMINISTRATIVE_STATE	StateManagementIRPCConstDefs::AdministrativeStateOldNewValue
ALARM_STATUS	StateManagementIRPCConstDefs::AlarmStatusOldNewValue
PROCEDURAL_STATUS	StateManagementIRPCConstDefs::ProceduralStatusOldNewValue
AVAILABILITY_STATUS	StateManagementIRPCConstDefs::AvailabilityStatusOldNewValue

---

## A.4 Rules for NRM extensions

This clause discusses how the models and IDL definitions provided in the present document can be extended for a particular implementation and still remain compliant with 3GPP SA5's specifications.

### A.4.1 Extensions not allowed

The IDL specifications in the present document cannot be edited or altered. Any additional IDL specifications shall be specified in separate IDL files.

IDL interfaces (note: not MOCs) specified in the present document may not be subclassed or extended. New interfaces may be defined with vendor-specific methods.

---

## A.5 Solution Set definitions

### A.5.1 IDL definition structure

Clause A.5.2 defines the constants and types used by the Kernel CM IRP.

Clause A.5.3 defines the operations which are performed by the Kernel CM IRP agent.

Clause A.5.4 defines the notifications which are performed by the Kernel CM IRP agent.

## A.5.2 IDL specification “KernelCmConstDefs.idl”

```

//File: KernelCmConstDefs.idl
#ifndef _KERNEL_CM_CONST_DEFS_IDL_
#define _KERNEL_CM_CONST_DEFS_IDL_

// This statement must appear after all include statements
#pragma prefix "3gppsa5.org"

module KernelCmConstDefs
{
  /**
   * Information about one attribute
   * - name defines the name of the attribute
   * - value defines the value of the attribute
   *
   */
  struct MOAttribute
  {
    string name;
    any value;
  };

  /**
   * A set of attribute names and values
   */
  typedef sequence<MOAttribute> MOAttributeSet;

  /**
   * ScopeType defines the kind of scope to use in a CM synchronization
   * request together with ScopePara.level, in the SCOPE field.
   *
   * ScopePara.level is always >= 0. If a level is bigger than the
   * depth of the tree there will be no exceptions thrown.
   * BASE_ONLY: level ignored, just return the base object.
   * BASE_NTH_LEVEL: return all subordinate objects that are on "level"
   * distance from the base object, where 0 is the base object.
   * BASE_SUBTREE: return the base object and all of its subordinates
   * down to and including the nth level.
   * BASE_ALL: level ignored, return the base object and all of it's
   * subordinates.
   */
  enum ScopeType
  {
    BASE_ONLY,
    BASE_NTH_LEVEL,
    BASE_SUBTREE,
    BASE_ALL
  };

# Annex B (normative): XML definitions

The annex specifies the XML Definitions for the Kernel CM Integration Reference Point (IRP) as it applies to Itf-N, in accordance with Kernel CM IRP IS definitions [4] as well as Notification Log IRP XML Definitions [14].

## B.1 Architectural features

The overall architectural feature of Kernel CM IRP is specified in 3GPP TS 32.662 [4].

This clause specifies features that are specific to the XML Schema definitions.

### B.1.1 Syntax for Distinguished Names

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [6].

## B.2 Mapping

Not present in the current version of this specification.

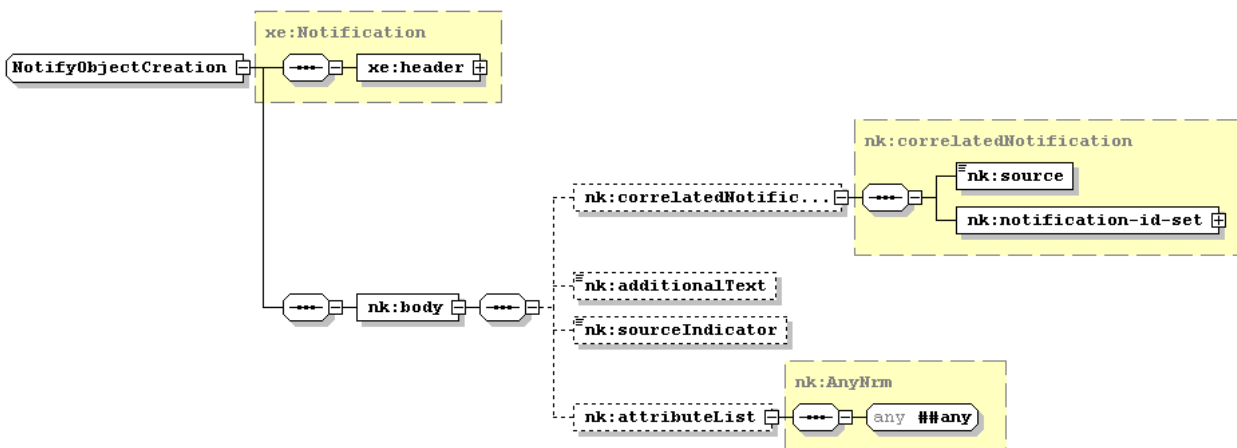

## B.3 Solution Set definitions

### B.3.1 XML definition structure

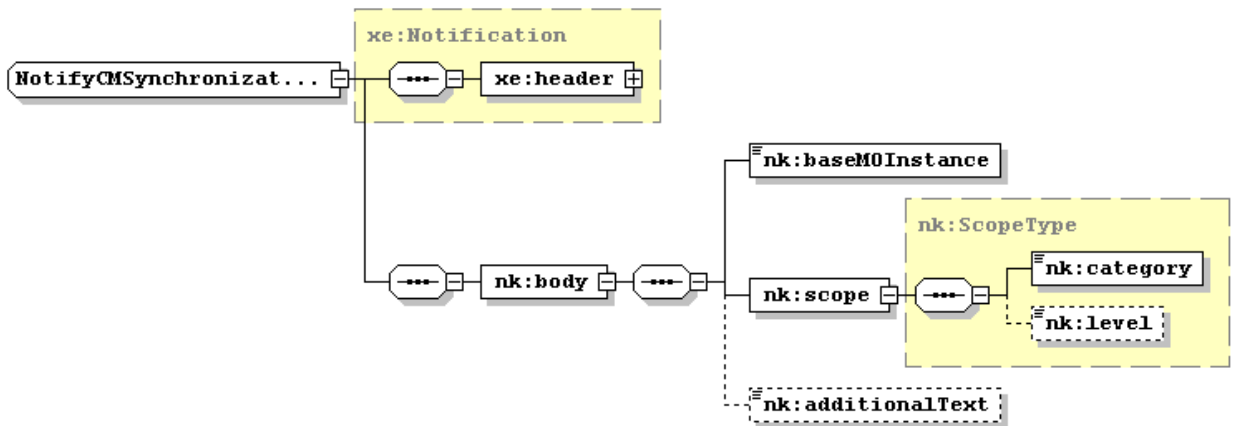

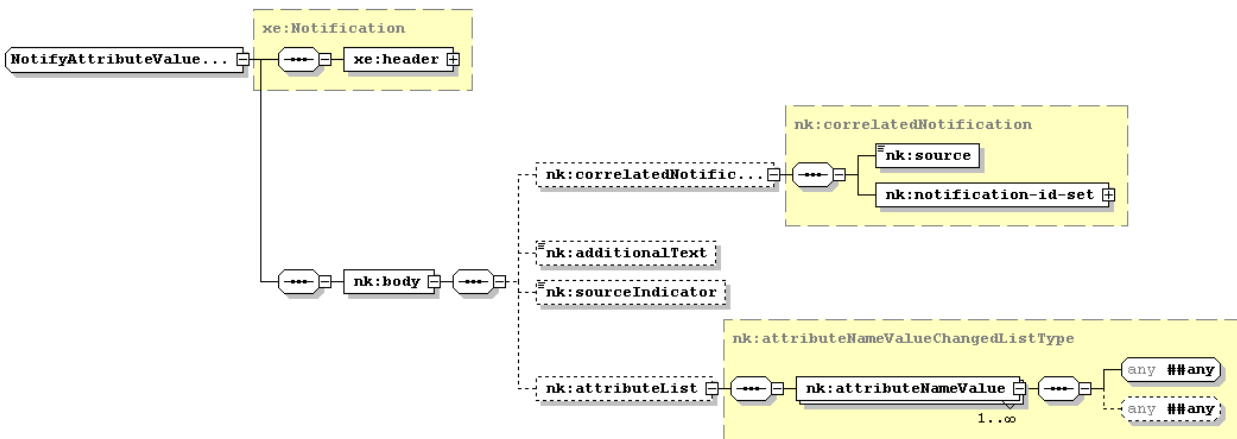

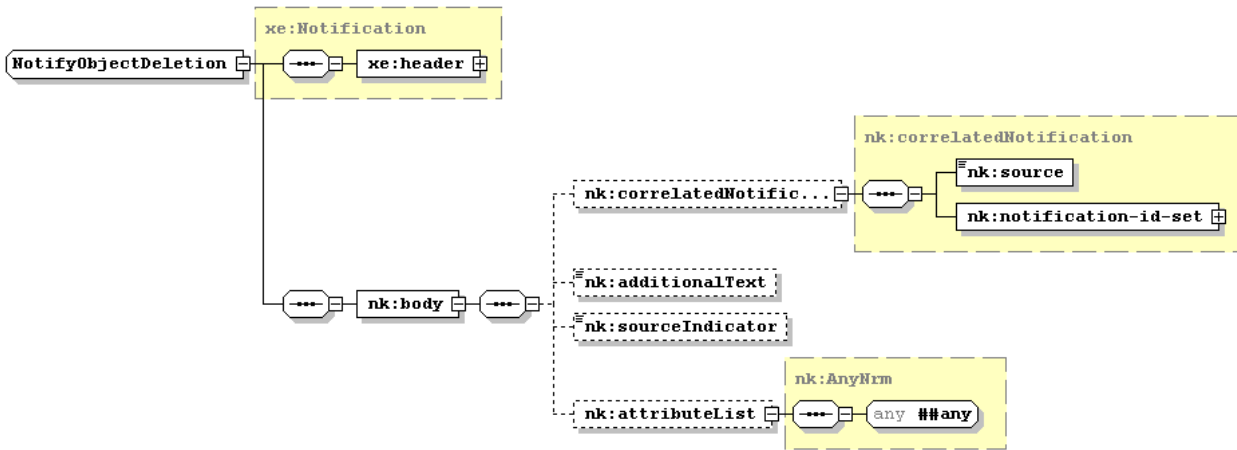

Clause B.3.2 provides a graphical representation of the XML elements.

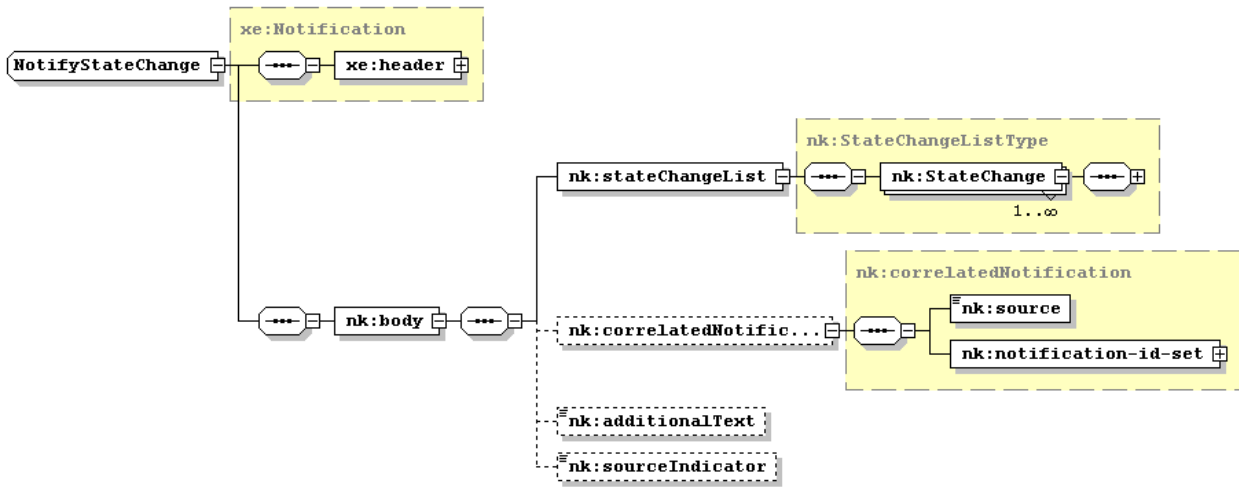

Clause B.3.3 provides XML definitions of Kernel CM IRP notifications as defined in 3GPP TS 32.662 [4].

### B.3.2 Graphical Representation

### B.3.3 XML Schema “kernelNtf.xsd”

```

<?xml version="1.0" encoding="UTF-8"?>

## Annex C (normative): SOAP Solution Set

The overall architectural feature of Kernel Configuration Management IRP is specified in 3GPP TS 32.662 [4].

This clause specifies features that are specific to the SOAP SS.

The SOAP 1.1 specification [18] and WSDL 1.1 specification [21] are supported.

The SOAP 1.2 specification [22] is supported optionally.

This specification uses "document" style in WSDL file.

This specification uses "literal" encoding style in WSDL file.

This specification uses a number of namespace prefixes throughout that are listed in Table C.1.

**Table C.1: Prefixes and Namespaces used in this specification**

PREFIX	NAMESPACE
http	http://schemas.xmlsoap.org/wsdl/http/
soap	http://schemas.xmlsoap.org/wsdl/soap/
SOAP-ENV	http://schemas.xmlsoap.org/soap/envelope/
SOAP-ENC or soapenc	http://schemas.xmlsoap.org/soap/encoding/
xs or xsd	http://www.w3.org/2001/XMLSchema
xsi	http://www.w3.org/2001/XMLSchema-instance
kernelCMIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.666#KernelCMIRPSystem
kernelCMIRPData	http://www.3gpp.org/ftp/specs/archive/32_series/32.666#KernelCMIRPData
ntfIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.306#NotificationIRPNtfSystem
genericIRPSystem	http://www.3gpp.org/ftp/specs/archive/32_series/32.316#GenericIRPSystem

## C.1 Architectural Features

### C.1.1 Syntax for Distinguished Names and versions

The syntax of a Distinguished Name is defined in 3GPP TS 32.300 [5].

The version of this IRP is represented as a string (see also clause C.1.3).

### C.1.2 Notifications

Notifications are sent according to the Notification IRP: SOAP SS (see 3GPP TS 32.306 [9]).

The contents of the Kernel CM IRP notifications are defined in KernelCM IRP XML definition in Annex B.

### C.1.3 IRP document version number string

The IRP document version number (sometimes called "IRPVersion" or "SS version number") string is used to identify this specification. The string is derived using a rule described in 3GPP TS 32.311 [13]. The value of this string is defined by a constant in C.3.3.

This string (or sequence of strings, if more than one version is supported) is returned in `getIRPVersion` method and is carried in the first field of the notification header of all notifications related to this IRP.

## C.2 Mapping

### C.2.1 General mappings

The IS parameter name `managedObjectInstance` is mapped into DN.

Attributes modelling associations as defined in the NRM (here also called "reference attributes") are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an `MOReference`. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type `MOReferenceSet`, which contains a sequence of MO references.

If a reference attribute is changed, an `AttributeValueChange` notification is emitted.

### C.2.2 Operation and Notification mapping

The Kernel CM IRP: IS (see 3GPP TS 32.662 [4]) defines semantics of operation and notification visible across the Kernel Configuration Management IRP. The following table in this subclause indicates mapping of these operations and notifications to their equivalents defined in this SS.

**Table C.2.2: Mapping from IS Notification/Operation to SS equivalents**

IS Operation/ notification (3GPP TS 32.662 [4])	SS Operation	Qualifier
<code>getNRMIRPVersion</code>	<code>getNRMIRPVersion</code>	M
<code>notifyObjectCreation</code>	<code>ntfIRPSystem:notify (note 2)</code>	O
<code>notifyObjectDeletion</code>	<code>ntfIRPSystem:notify (note 2)</code>	O
<code>notifyAttributeValueChange</code>	<code>ntfIRPSystem:notify (note 2)</code>	O
<code>notifyCMSynchronizationRecommended</code>	<code>ntfIRPSystem:notify (note 2)</code>	O
<code>notifyStateChange</code>	<code>ntfIRPSystem:notify (note 2)</code>	O
<code>getIRPVersion(see note 1)</code>	<code>getIRPVersion</code>	M
<code>getOperationProfile(see note 1)</code>	<code>getOperationProfile</code>	O
<code>getNotificationProfile(see note 1)</code>	<code>getNotificationProfile</code>	O
NOTE 1: This operation is of IOC ManagedGenericIRP specified in [18]. The IOC KernelCmIRP of [4] inherits from it.		
NOTE 2: The IS equivalent is mapped into parameters of <code>ntfIRPSystem::notify</code> .		

## C.2.3 Operation parameter mapping

The Kernel CM IRP: IS (3GPP TS 32.662 [4]) defines semantics of parameters carried in operations across the Kernel Configuration Management IRP. The tables below show the mapping of these parameters, as per operation, to their equivalents defined in this SS.

### C.2.3.1 Operation `getNRMIRPVersion`

#### C.2.3.1.1 Input parameters

None.

Here is the XML schema fragment of the `getNRMIRPVersion` request:

```
<!-- getNRMIRPVersion Request -->
<element name="getNRMIRPVersion">
</element>
```

#### C.2.3.1.2 Output parameters

**Table C.2.3.1.2: Mapping from IS `getNRMIRPVersion` output parameters to SS equivalents**

IS Operation parameter	SS Operation parameter	Qualifier
versionNumberList	kernelCMIRPData:VersionNumberSetType versionNumberSet	M
vSEVersionNumberList	kernelCMIRPData:VersionNumberSetType vSEVersionNumberList	M
status	kernelCMIRPData:getNRMIRPVersionFault	M

Here is the XML schema fragment of the `getNRMIRPVersion` response:

```
<!-- getNRMIRPVersion Response -->
<element name="getNRMIRPVersionResponse">
  <complexType>
    <sequence>
      <element name="versionNumberList" type="kernelCMIRPData:VersionNumberSetType"/>
      <element name="vSEVersionNumberList" type="
kernelCMIRPData:VersionNumberSetType"/>
    </sequence>
  </complexType>
</element>
```

#### C.2.2.1.3 Fault definition

```
<!-- getNRMIRPVersion Fault -->
<element name="getNRMIRPVersionFault">
  <complexType>
    <choice>
      <element name="getNRMIRPVersionFault" type="string"/>
    </choice>
  </complexType>
</element>
```

## C.3 Solution Set definitions

### C.3.1 WSDL definition structure

Clause C.3.2 provides a graphical representation of the Kernel CM IRP service.

Clause C.3.3 defines the services which are supported the Kernel CM IRP agent.

### C.3.2 Graphical Representation

The WSDL structure is like Figure C.3.2:

**Figure C.3.2: kernelCM IRP SOAP Solution Set WSDL structure**

### C.3.3 WSDL specification "KernelCMIRPSystem.wsdl"

```
