Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

The definition of the Conformance Tests for UE in 3G will be a complex task as the complete test suite covers RF, EMC and Protocol aspects of the UE.

Each test requires a Test Environment to be defined in which the UE has to operate to defined standards, constraints and performance. The overall task can be simplified if there are a number of well defined and agreed Common Test Environments where every one can be used for a number of tests. Hence the present document defines testing conditions that are common to several tests avoiding the need to duplicate the same information for every single test.

The present document defines default values for a variety of common areas. Where values are not specified in test cases, the defaults in the present document will apply. If specified, the test case values will take precedence.

The present document addresses the FDD mode as well as the TDD mode.

1 Scope

The present document contains definitions of reference conditions and test signals, default parameters, reference radio bearer configurations used in radio bearer interoperability testing, common radio bearer configurations for other test purposes, common requirements for test equipment and generic set-up procedures for use in UE conformance tests.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document unless the context in which the reference is made suggests a different Release is relevant (information on the applicable release in a particular context can be found in e.g. test case title, description or applicability, message description or content).

3 Definitions, abbreviations and symbols

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [9], 3GPP TR 25.990 [10] and the following apply:

maximum average power: average transmitter output power obtained over any specified time interval, including periods with no transmission, when the transmit time slots are at the maximum power setting

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [9], 3GPP TR 25.990 [10] and the following apply:

| | |
|-------------|--|
| 4C-HSDPA | Four-Carrier HSDPA. HSDPA operation configured on 3 or 4 DL carriers |
| AFC | Automatic Frequency Control |
| A-GPS | Assisted - Global Positioning System |
| AM | Acknowledgement Mode |
| ATT | ATTenuator |
| BCCH | Broadcast Control Channel |
| CBS | Cell Broadcast Service |
| CC | Convolutional Coding |
| CCCH | Common Control Channel |

| NAS | Non-Access Stratum |
| OBW | Occupied BandWidth |
| OCNS | Orthogonal Channel Noise Simulator |

NOTE: A mechanism used to simulate the users or control signals on the other orthogonal channels of a downlink.

| | |
|-------|--------------------------------|
| PRACH | Physical Random Access Channel |
| PS | Packet Switching |
| RAB | Radio Access Bearer |
| RB | Radio Bearer |
| RRC | Radio Resource Control |

NOTE: (for sub-Layer of layer 3) but also Root-Raised Cosine (for Filter shape).

| | |
|----------|---|
| SB-DF-3C | Single Band Dual Frequency Three Cell |
| SCCPCH | Secondary Common Control Physical Channel |
| SMS | Short Message Service |
| SRB | Signalling Radio Bearer |
| SS | System Simulator |
| SSD | Source Statistics Descriptor |
| TC | Turbo Coding |
| TLM | TeLeMetry word |

NOTE: It contains an 8-bits preamble (10001011).

| | |
|------|------------------------|
| TM | Transparent Mode |
| TOW | Time Of Week |
| TTFX | Time To First Fix |
| UL | UpLink |
| UM | Unacknowledgement Mode |

3.3 Symbols

For the purposes of the present document, the following symbols apply:

| | |
|----------|---|
| I_{oc} | The power spectral density of a band limited white noise source (simulating interference from other cells) as measured at the UE antenna connector. |
|----------|---|

4 Common requirements of test equipment

Mobile conformance testing can be categorized into 3 distinct areas:

- RF Conformance Testing.
- EMC Conformance Testing.
- Signalling Conformance Testing.

The test equipment required for each category of testing may or not be different, depending on the supplier of the test equipment. However, there will be some generic requirements of the test equipment that are essential for all three categories of test, and these are specified in this clause.

In addition, there will be requirements to test operation in multi-system configurations (e.g. UTRA plus GSM/DCS1800). However, these would not form a common test equipment requirement for the three test areas and are not considered in the present document.

4.1 General Functional Requirements

NOTE: This clause has been written such that it does not constrain the implementation of different architectures and designs of test equipment.

All test equipment used to perform conformance testing on a UE shall provide a platform suitable for testing UE's that are either:

- FDD Mode; or
- TDD Mode; or
- both FDD/TDD Modes.

All test equipment shall provide (for the mode(s) supported) the following minimum functionality.

- The capability of emulating a single UTRA cell with the appropriate channels to allow the UE to register on the cell.

- The capability to allow the UE to set up an RRC connection with the System Simulator, and to maintain the connection for the duration of the test.
- The capability (for the specific test):
 - to select and support an appropriate Radio Bearer for the downlink;
 - to set the appropriate downlink power levels;
 - to set up and support the appropriate Radio Bearer for the uplink;
 - to set and control the uplink power levels.

4.2 Minimum performance levels

4.2.1 Supported Cell Configuration

The System Simulator shall provide the capability to simulate a minimum number of cells (of the appropriate UTRA Mode) whose number and capabilities are governed by the test cases that need to be performed (test cases are defined in 3GPP TS 34.123-1 [1] (Signalling), 3GPP TS 34.121 [2] (RF-FDD) and 3GPP TS 34.122 [5] (RF-TDD)). For this purpose test cases can be split into two different categories: Tests that require only one cell and Tests that require several cells.

To perform test cases requiring one cell, the system simulator must provide a Cell offering the capabilities to perform all the test cases in this category.

To perform test cases requiring several cells, additional cells must be provided by the system simulator. The additional cells, however, need only provide a minimum set of capabilities so as to support the first cell in carrying out the multi-cell test cases.

To perform test cases for MBMS in MBSFN mode the SS must provide simultaneous support for both the MBSFN cell(s) (TDD or FDD) directly applicable to the test cases and must also provide support for cells(s) on a unicast carrier providing other necessary services to the UE such as PLMN registration. The choice of supporting unicast carrier cell(s) may be TDD or FDD decided by the capabilities of the UE under test, and the choice may be independent of the mode (TDD or FDD) of the MBSFN cell(s).

The type and number of channels (especially physical channels) constitute an important set of capabilities for a cell. The following clauses list possible channels that may be supported by the SS. Each channel type, however, and the minimum number of channels needed are only mandatory if specific test cases require them.

The mapping between Logical and Transport channels is as described in 3GPP TS 25.301 [7]. Similarly the mapping between Transport channels and Physical channels is as described in 3GPP TS 25.211 [13] for the FDD mode, and 3GPP TS 25.221 [28] for the TDD mode. The reference measurement channels (mapping between Transport channels and Physical channels for DTCH/DCCH to be tested) are defined in 3GPP TS 34.121 [2] annex C for FDD and 3GPP TS 34.122 [5] annex C for TDD.

4.2.1.1 Supported Channels for FDD Mode

4.2.1.1.1 Logical channels

| Logical channel | Minimum number | Comments |
|-----------------|----------------|--|
| BCCH | 1 | |
| CCCH | 1 | |
| DCCH | 4 | 2 for RRC testing, 2 for NAS testing |
| PCCH | 1 | |
| DTCH | n <FFS> | Depending on SS's support for RB service testing (See clause 14 of 3GPP TS 34.123-1 [1]) |

4.2.1.1.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|----------|
| BCH | 1 | |
| FACH | 1 | |

| | | |
|--------|---------|--------------------------------|
| PCH | 1 | |
| DCH | n <FFS> | |
| DSCH | 1 | Release 99 and Release 4 only. |
| RACH | 2 | |
| CPCH | 1 | Release 99 and Release 4 only. |
| FAUSCH | N/A | Not in Release 1999 |

4.2.1.1.3 Physical channels

| Physical channel | Minimum number | Comments |
|------------------|------------------|--|
| P-CCPCH | 1 | Primary Common Control Physical channel. This is used by the Cell to Broadcast System Information messages; it is transmitted using the Primary Scrambling Code for the Cell. |
| P-CPICH | 1 | Primary Common Pilot Channel using the Primary Scrambling Code for the Cell. |
| S-CPICH | 1 (For RF Tests) | Secondary Common Pilot Channel. This signal is used as the phase reference for some RF tests. |
| SCH | 1 | Synchronization Channel (includes P-SCH and S-SCH) |
| S-CCPCH | 2 | Secondary Common Control Physical channel. |
| PICH | 1 | To identify when the UE should access the PCCH for Paging Messages. |
| AICH | 1 | General Acquisition Indicator Channel that can be used for: <ul style="list-style-type: none"> - Acquisition Indicator Channel, for PRACH - Access Preamble Acquisition Indicator Channel (AP-ICH), for PCPCH. (For release 99 and release 4 only) - Collision-Detection/Channel-Assignment Indicator Channel (CD/CA-ICH), for PCPCH. (For release 99 and release 4 only) |
| DPDCH | 3 | Downlink Physical Data Channel. There will be a single DPCCCH associated with all the DPDCHs used for Layer 1 signalling. This number is for the First Cell. Additional Cells may define a lower number which should be at least 1. |
| PDSCH | 1 | Physical Downlink Shared Channel. Release 99 and Release 4 only. |
| DPCH | 1 | Uplink Dedicated Physical channel |
| PRACH | 2 | Physical Random Access Channel. |
| PCPCH | 1 | Physical Common Packet Channel. (For release 99 and release 4 only) |
| CSICH | 1 | CPCH Status Indicator Channel. (For release 99 and release 4 only) |

4.2.1.2 Supported Channels for TDD Mode

4.2.1.2.1 Logical channels

| Logical channel | Minimum number | Comments |
|-------------------------|----------------|--|
| Control channels | | |
| BCCH | 1 | Broadcast Control Channel: DL channel for broadcasting system control information. |
| CCCH | 1 | Common Control Channel: Bi-directional channel for transmitting control information between network and UEs. This channel is commonly used by the UEs having no RRC connection with the network and by the UEs using common transport channels when accessing a new cell after cell reselection. |
| DCCH | 4 | Dedicated Control Channel: A point-to-point bi-directional channel that transmits dedicated control information between a UE and the network. This channel is established through RRC connection setup procedure. 2 channels for RRC testing and 2 channels for NAS testing estimated. |
| PCCH | 1 | Paging Control Channel: DL channel that transfers paging information. This channel is used when the network does not know the location cell of the UE, or, the UE is in the cell connected state |
| SHCCH | 1 | Shared Channel Control Channel: Bi-directional channel that transmits control information for uplink and downlink shared channels between network and UEs. This channel is for TDD only. |
| Traffic channels | | |
| DTCH | 1 | Dedicated Traffic Channel is a point-to-point channel, dedicated to one UE, for the transfer of user information. A DTCH can exist in both UL and DL. |

| | | |
|------|---|--|
| CTCH | 1 | Common Traffic Channel is a point-to-multipoint unidirectional channel for transfer of dedicated user information for all or a group of specified UEs. |
|------|---|--|

4.2.1.2.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|---|
| BCH | 1 | Broadcast Channel: DL channel used to broadcast system and cell-specific information. |
| FACH | 1 | Forward Access Channel: DL channel used to carry control information to a mobile station when the system knows the location cell of the mobile station (may also carry short user packets). |
| PCH | 1 | Paging Channel: DL channel used to carry control information to a mobile station when the system does not know the location cell of the mobile station. |
| DCH | 2 | Dedicated Channel: UL or DL channel used to carry user or control information between the UTRAN and a UE |
| DSCH | 1 | DL shared channel: DL channel shared by several UEs carrying dedicated control or traffic data. |
| USCH | 1 | UL shared channel: UL channel shared by several UEs carrying dedicated control or traffic data. |
| RACH | 1 | Random Access Channel: UL channel used to carry control information from mobile station. The RACH may also carry short user packets. |

4.2.1.2.3 Physical channels (3.84 Mcps option)

| Physical channel | Minimum number | Comments |
|------------------|----------------|---|
| P-CCPCH | 1 | Primary Common Control Physical channel. . The BCH as described in clause 4.2.1 is mapped onto the P-CCPCH. The position (time slot / code) of the P-CCPCH is known from PSCH. |
| SCH | 1 | Synchronization Channel. Code group of a cell can be derived from the synchronization channel. In order not to limit the uplink/downlink asymmetry the SCH is mapped on one or two downlink slots per frame only. |
| S-CCPCH | 2 | Secondary Common Control Physical channel. PCH and FACH as described in clause 4.2.1 are mapped onto one or more S-CCPCH. |
| PICH | | Paging Indicator Channel is a physical channel used to carry the paging indicators. |
| DPCH (DL) | 3 | Downlink Dedicated Physical channel. DCH channels are mapped onto DPCH |
| PDSCH | 1 | Physical Downlink Shared Channel. DSCH as described in clause 4.2.1 is mapped onto one or more PDSCH. |
| DPCH (UL) | 1 | Uplink Dedicated Physical channel. DCH channels are mapped onto DPCH. |
| PUSCH | 1 | Physical Uplink Shared Channel. The USCH as described in clause 4.2.1 is mapped onto one or more PUSCH. Timing advance, as described in 3GPP TS 25.224 [27], clause 4.3, is applied to the PUSCH. |
| PRACH | 2 | Physical Random Access Channel. The RACH as described in clause 4.2.1 is mapped onto PRACH |
| PNBSCH | 1 | Physical node B synchronization channel: In case cell sync bursts are used for Node B synchronization the PNBSCH shall be used for the transmission of the cell sync burst 3GPP TS 25.223 [35]. The PNBSCH shall be mapped on the same timeslot as the PRACH. |

4.2.1.2.4 Physical channels (1.28 Mcps option)

| Physical channel | Minimum number | Comments |
|------------------|----------------|--|
| P-CCPCH | 2 | Primary Common Control Physical channel. The BCH as described in clause 4.2.1 is mapped onto the P-CCPCH1 and P-CCPCH2. The position (time slot / code) of the P-CCPCHs is fixed in the 1.28 Mcps TDD. The P-CCPCHs are mapped onto the first two code channels of timeslot#0 with spreading factor of 16. |
| DwPCH | 1 | Synchronization Channel for DL. Present in each 5 ms subframe. |
| UpPCH | 1 | Synchronization Channel for UL. Present in each 5 ms subframe. |
| S-CCPCH | 2 | Secondary Common Control Physical channel. PCH and FACH as described in clause 4.2.1 are mapped onto one or more S-CCPCH. |

| | | |
|-----------|---|---|
| PICH | | Paging Indicator Channel is a physical channel used to carry the paging indicators. |
| DPCH (DL) | 3 | Downlink Dedicated Physical channel. DCH channels are mapped onto DPCH |
| PDSCH | 1 | Physical Downlink Shared Channel. PDSCH provides the possibility for transmission of TFCI, SS, and TPC in downlink. |
| DPCH (UL) | 1 | Uplink Dedicated Physical channel. DCH channels are mapped onto DPCH. |
| PUSCH | 1 | Physical Uplink Shared Channel. PUSCH provides the possibility for transmission of TFCI, SS, and TPC in uplink. |
| FPACH | 1 | Fast Physical Access Channel. FPACH is used by the Node B to carry, in a single burst, the acknowledgement of a detected signature with timing and power level adjustment indication to a user equipment. |
| PRACH | 2 | Physical Random Access Channel. The RACH as described in clause 4.2.1 is mapped onto one or more uplink Physical Random Access Channels (PRACH). |

4.2.1.2A Supported Channels for MBSFN (FDD and TDD Mode)

4.2.1.2A.1 Logical channels

| Logical channel | Minimum number | Comments |
|-------------------------|----------------|---|
| Control channels | | |
| BCCH | 1 | Broadcast Control Channel: DL channel for broadcasting system control information. |
| MCCH | 1 | MBMS point-to-multipoint Control Channel: A point-to-multipoint downlink channel used for transmitting control information from the network to the UE. This channel is only used by UEs that receive MBMS. |
| MSCH | 1 | MBMS point-to-multipoint Scheduling Channel: A point-to-multipoint downlink channel used for transmitting scheduling control information, from the network to the UE, for one or several MTCHs carried on a CCTrCH. This channel is only used by UEs that receive MBMS. |
| Traffic channels | | |
| MTCH | 1 | MBMS point-to-multipoint Traffic Channel: A point-to-multipoint downlink channel used for transmitting traffic data from the network to the UE. This channel is only used for MBMS. |

4.2.1.2A.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|--|
| BCH | 1 | Broadcast Channel: DL channel used to broadcast system and cell-specific information. |
| FACH | 2 | Forward Access Channel: Common downlink channel without closed-loop power control used for transmission of relatively small amounts of data. In addition FACH is used to carry broadcast and multicast data. |

4.2.1.2A.3 Physical channels (3.84/7.68 Mcps options)

| Physical channel | Minimum number | Comments |
|------------------|----------------|---|
| P-CCPCH | 1 | Primary Common Control Physical channel: The BCH as described in clause 4.2.1 is mapped onto the P-CCPCH. The position (time slot / code) of the P-CCPCH is known from PSCH. |
| SCH | 1 | Synchronization Channel: Code group of a cell can be derived from the synchronization channel. In order not to limit the uplink/downlink asymmetry the SCH is mapped on one or two downlink slots per frame only. |
| S-CCPCH | 2 | Secondary Common Control Physical channel: FACH as described in clause 4.2.1 is mapped onto one or more S-CCPCH. |
| MICH | 1 | MBMS Indicator Channel: Used to carry the MBMS notification indicators |

4.2.1.2A.3A Physical channels (3.84 Mcps TDD IMB option)

| Physical channel | Minimum number | Comments |
|------------------|----------------|--|
| P-CPICH | 1 | Primary Common Pilot Channel using the Primary Scrambling Code for the Cell. |

| | | |
|----------------|---|---|
| T-CPICH | 1 | Time multiplexed Common Pilot Channel using the same Scrambling Code as P-CPICH for the Cell. |
| P-CCPCH | 1 | Primary Common Control Physical channel: The BCH as described in clause 4.2.1.2A.2 is mapped onto the P-CCPCH. |
| SCH | 1 | Synchronization Channel (includes P-SCH and S-SCH) |
| S-CCPCH | 1 | Secondary Common Control Physical channel: FACH carrying MCCH logical channel is mapped onto one S-CCPCH. |
| S-CCPCH Type 2 | 1 | Secondary Common Control Physical CHannel Type 2: one or more FACH carrying MTCH logical channels is/are mapped onto one S-CCPCH Type 2 |
| MICH | 1 | MBMS Indicator Channel: Used to carry the MBMS notification indicators |

4.2.1.3 Support of T_{cell} timing offset

In test case parameter declarations, the parameter T_{cell} may be specified between 0 to 38 399, to allow for extensibility. However, the system simulator is required only to support a maximum T_{cell} value of 2 304, with a step resolution of 256. The SS may limit a T_{cell} value of greater than 2 304, and may round T_{cell} to the nearest multiple of 256.

4.2.2 RF Performance

4.2.2.1 Frequency of Operation

The System Simulator shall be capable of adjusting the Carrier Frequency of the DL channels to any frequency allowed in the DL frequency band. The DL frequency shall be accurate to the level of accuracy set by the core specifications 3GPP TS 25.104 [20] for FDD and 3GPP TS 25.105 [21] for TDD.

For RF tests, the requirement of Test Equipment is described in 3GPP TS 34.121 [2] annex F for FDD and 3GPP TS 34.122 [5] annex F for TDD respectively.

4.2.2.2 Power Level Setting Accuracy

The system simulator shall be able to adjust the average power output of the DL Channels to meet the absolute accuracy of the system simulator DL power levels covered in clause 5.4.1 Downlink Signal Levels.

For RF tests, the requirement of Test Equipment is described in 3GPP TS 34.121 [2] annex F for FDD and 3GPP TS 34.122 [5] annex F for TDD respectively.

The system simulator shall be capable of altering the power of the DL Dedicated channels under control of the UE Layer 1 Signalling information.

4.2.2.3 Uplink Power Control

The system simulator shall be able to command the UE to transmit at the maximum level for its power class or a lower level required for specific tests. The system simulator shall also provide the capability of generating the Layer 1 Signalling information to set the power levels of the Uplink Dedicated Channels from the UE to lower levels if required.

4.2.2.4 Uplink Signal Handling

For FDD mode, the System Simulator shall not be damaged by a Power Class 1 UE transmitting at the maximum power level permitted in 3GPP TS 25.101 [11] and for TDD mode by a Power Class 2 UE transmitting at the maximum power level permitted in 3GPP TS 25.102 [12].

4.2.2.5 Uplink Sensitivity

The simulator shall be able to receive uplink transmissions from the UE when it is transmitting at the minimum power level defined in 3GPP TS 25.101 [11] for FDD mode, and 3GPP TS 25.102 [12] for TDD mode.

Editor's note: this is obviously a useful feature for the system simulator; however it is <ffs> if it should be an essential common requirement for a protocol test system.

4.2.3 Timers Tolerances

All the timers used during testing are within a tolerance margin given by the equation below. If for a specific test a different tolerance value is required then this should be specified in the relevant test document (i.e. the document where the test is described).

Timer tolerance = 10%, or $2 \times TTI + t_{\text{delta}}$, whichever value is the greater.

Where t_{delta} is 55 ms.

5 Reference test conditions

5.1 Test frequencies

The test frequencies are based the UMTS frequency bands defined in the core specifications.

To avoid interference with adjacent frequency bands the lowest test frequency (downlink and uplink) needs to be offset upwardly by at least 2.6 MHz since the channel's width is 5 MHz for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option since the channel's width is 1.6 MHz. The raster spacing is 200KHz. Similarly the highest test frequency (downlink and uplink) needs to be offset downwardly by at least 2.6 MHz for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option.

NOTE1: Additional regulations concerning interferences to frequency bands used by different systems may also exist. Those regulations are specific to the country where the test equipment is used and need to be taken into account if they require a higher offset than 2.6 MHz from the edge frequencies for FDD and 3.84 Mcps TDD option, and 0.8 MHz for 1.28 Mcps TDD option.

NOTE2: In Band VI, to avoid interference with adjacent frequency bands the lowest test frequency (downlink and uplink) needs to be offset upwardly by at least 2.5 MHz, highest test frequency (downlink and uplink) needs to be offset downwardly by at least 2.5 MHz from the edge frequencies since additional centre frequencies are specified according to 3GPP TS 25.101 [11].

5.1.1 FDD Mode Test frequencies

UTRA/FDD is designed to operate in one or more paired bands specified in 3GPP TS 25.101 [11]. The reference test frequencies for the common test environment for each operating bands are defined in the following tables.

In DC-HSDPA mode UE receives two cells simultaneously, the serving HS-DSCH cell and the secondary serving HS-DSCH cell. The spacing of carrier frequencies of the two cells is 5 MHz.

In DC-HSUPA mode UE transmits two cells simultaneously, the Primary uplink frequency and the Secondary uplink frequency. The spacing of carrier frequencies of the two cells is 5 MHz.

In DB-DC-HSDPA mode UE receives two cells simultaneously, the serving HS-DSCH cell and the secondary serving HS-DSCH cell. The serving and secondary serving cell are on different operating bands and therefore utilize the same reference test frequencies per operating band as in single cell operation. The same test frequency ID (Low, Mid or High) is configured on both bands. The serving cell is placed on the lowest band number and the secondary serving cell is placed on the highest band number in the band combination defined in table 5.0aA of 3GPP TS 25.101 [11].

In 4C-HSDPA mode UE receives up to four cells simultaneously, the serving HS-DSCH cell and the secondary serving HS-DSCH cells. The serving cell and the secondary serving cells configuration for single band and dual band are defined in tables 5.0aB and 5.0aC of 3GPP TS 25.101 [11] respectively. The spacing of the adjacent carrier frequencies in downlink and uplink shall be 5 MHz and Mid frequency shall be used on both the bands wherever applicable. The downlink test frequencies for the different 4C-HSDPA band combinations are specified under each associated band (A and B).

NOTE: Example 4C-HSDPA band combination II-2-IV-2: The test frequencies for the Serving Cell and one of the Secondary Serving Cells are specified in subclause 5.1.1.2 for band II (Band A); and the other two Secondary Serving Cells are specified in subclause 5.1.1.4 for band IV (Band B).

In Multiflow HSDPA mode, UE receives up to four cells simultaneously, the serving HS-DSCH cell, assisting serving HS-DSCH Cell, the secondary serving HS-DSCH cell and assisting secondary serving HS-DSCH Cell. The serving cell and the secondary serving cells configuration for single band and dual band are defined in tables 5.0aB and 5.0aC of 3GPP TS 25.101 [11] respectively. The spacing of the adjacent carrier frequencies in downlink and uplink shall be 5

MHz and Mid frequency shall be used on both the bands wherever applicable. The downlink test frequencies for the different Multiflow HSDPA band combinations are specified under each associated band (A and B).

For the requirements for UEs supporting HS-DSCH categories 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 35, 36, 37 or 38, when the carriers are located in the same frequency band or the carriers belong to the same cell group in Multiflow mode, the spacing of the carrier frequencies of the two cells shall be 5 MHz.

For Multiflow HSDPA requirements in subclause 9.2.5, the serving HS-DSCH cell and the assisting serving HS-DSCH cell shall have the same carrier frequency, and the secondary serving HS-DSCH cell and the assisting secondary serving HS-DSCH cell shall have the same carrier frequency.

For Multiflow performance with a UE supporting one of the categories 21, 22, 23, 24, 25, 26, 27 or 28, the simplified testing method in Annex C.5.4A can be applied.

5.1.1.1 FDD reference test frequencies for Operating Band I

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 9613 | 1922.6 MHz | 10563 | 2112.6 MHz |

NOTE 1: For Band VI testing, the Mobile Country Code shall be set to (MCC = '442/443').

NOTE 2: In DC-HSDPA mode and in DC-HSUPA mode only Mid Range frequencies are specified since the available downlink bandwidth is only 10 MHz at Band VI and hence the specified Mid Range frequencies already cover the whole available downlink bandwidth.

5.1.1.7 FDD reference test frequencies for Operating Band VII

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 2013 | 2502.6 MHz | 2238 | 2622.6 MHz |
| Mid Range | 2175 | 2535.0 MHz | 2400 | 2655.0 MHz |
| High Range | 2337 | 2567.4 MHz | 2562 | 2687.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2013 | 2502.6 MHz | 2238 | 2622.6 MHz |
| | Secondary Serving Cell | - | - | 2263 | 2627.6 MHz |
| Mid Range | Serving Cell | 2175 | 2535.0 MHz | 2400 | 2655.0 MHz |
| | Secondary Serving Cell | - | - | 2425 | 2660.0 MHz |
| High Range | Serving Cell | 2337 | 2567.4 MHz | 2562 | 2687.4 MHz |
| | Secondary Serving Cell | - | - | 2537 | 2682.4 MHz |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2013 | 2502.6 MHz | 2238 | 2622.6 MHz |
| | Secondary Serving Cell | 2038 | 2507.6 MHz | 2263 | 2627.6 MHz |

| | Secondary Serving Cell | 2312 | 2562.4 MHz | 2537 | 2682.4 MHz |

5.1.1.8 FDD reference test frequencies for Operating Band VIII

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 2713 | 882.6 MHz | 2938 | 927.6 MHz |
| Mid Range | 2788 | 897.6 MHz | 3013 | 942.6 MHz |
| High Range | 2862 | 912.4 MHz | 3087 | 957.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2713 | 882.6 MHz | 2938 | 927.6 MHz |
| | Secondary Serving Cell | - | - | 2963 | 932.6 MHz |
| Mid Range | Serving Cell | 2788 | 897.6 MHz | 3013 | 942.6 MHz |
| | Secondary Serving Cell | - | - | 3038 | 947.6 MHz |
| High Range | Serving Cell | 2862 | 912.4 MHz | 3087 | 957.4 MHz |
| | Secondary Serving Cell | - | - | 3062 | 952.4 MHz |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2713 | 882.6 MHz | 2938 | 927.6 MHz |
| | Secondary Serving Cell | 2738 | 887.6 MHz | 2963 | 932.6 MHz |
| Mid Range | Serving Cell | 2788 | 897.6 MHz | 3013 | 942.6 MHz |
| | Secondary Serving Cell | 2813 | 902.6 MHz | 3038 | 947.6 MHz |
| High Range | Serving Cell | 2862 | 912.4 MHz | 3087 | 957.4 MHz |
| | Secondary Serving Cell | 2837 | 907.4 MHz | 3062 | 952.4 MHz |

For 3C/4C DC-HSDPA mode:

Applicable 3C/4C configurations: I-2-VIII-1 and I-3-VIII-1 with up to 1 uplink carrier.

NOTE See subclause 5.1.1.1 for test frequencies for the associated carriers on band I.

| Test Frequency ID | HS-DSCH Cell | Applicable VIII-x configuration | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|---------------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Secondary Serving Cell | VIII-1 | - | - | 2938 | 927.6 MHz |
| Mid Range | Secondary Serving Cell | VIII-1 | - | - | 3013 | 942.6 MHz |
| High Range | Secondary Serving Cell | VIII-1 | - | - | 3087 | 957.4 MHz |

5.1.1.9 FDD reference test frequencies for Operating Band IX

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 8 762 | 1752.4 MHz | 9 237 | 1847.4 MHz |

| High Range | 8 912 | 1782.4 MHz | 9 387 | 1877.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------------|--------|---------------------|--------|-----------------------|
| | | | | | |

| | | | | | |
|------------|------------------------|-------|------------|------|------------|
| Low Range | Serving Cell | 8762 | 1752.4 MHz | 9237 | 1847.4 MHz |
| | Secondary Serving Cell | - | - | 9262 | 1852.4 MHz |
| Mid Range | Serving Cell | 8837 | 1767.4MHz | 9312 | 1862.4 MHz |
| | Secondary Serving Cell | - | - | 9337 | 1867.4 MHz |
| High Range | Serving Cell | 8 912 | 1782.4 MHz | 9387 | 1877.4 MHz |
| | Secondary Serving Cell | - | - | 9362 | 1872.4 MHz |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 8762 | 1752.4 MHz | 9237 | 1847.4 MHz |
| | Secondary Serving Cell | 8787 | 1757.4 MHz | 9262 | 1852.4 MHz |
| Mid Range | Serving Cell | 8837 | 1767.4MHz | 9312 | 1862.4 MHz |
| | Secondary Serving Cell | 8862 | 1772.4MHz | 9337 | 1867.4 MHz |
| High Range | Serving Cell | 8912 | 1782.4 MHz | 9387 | 1877.4 MHz |
| | Secondary Serving Cell | 8887 | 1777.4 MHz | 9362 | 1872.4 MHz |

NOTE 1: For Band IX testing, the Mobile Country Code shall be set to (MCC = '442/443').

5.1.1.10 FDD reference test frequencies for Operating Band X

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 2888 | 1712.6 MHz | 3113 | 2112.6 MHz |
| Mid Range | 3025 | 1740.0 MHz | 3250 | 2140.0 MHz |
| High Range | 3162 | 1767.4 MHz | 3387 | 2167.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2888 | 1712.6 MHz | 3113 | 2112.6 MHz |
| | Secondary Serving Cell | - | - | 3138 | 2117.6 MHz |
| Mid Range | Serving Cell | 3025 | 1740.0 MHz | 3250 | 2140.0 MHz |
| | Secondary Serving Cell | - | - | 3275 | 2145.0 MHz |
| High Range | Serving Cell | 3162 | 1767.4 MHz | 3387 | 2167.4 MHz |
| | Secondary Serving Cell | - | - | 3362 | 2162.4 MHz |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 2888 | 1712.6 MHz | 3113 | 2112.6 MHz |
| | Secondary Serving Cell | 2913 | 1717.6 MHz | 3138 | 2117.6 MHz |
| Mid Range | Serving Cell | 3025 | 1740.0 MHz | 3250 | 2140.0 MHz |
| | Secondary Serving Cell | 3050 | 1745.0 MHz | 3275 | 2145.0 MHz |
| High Range | Serving Cell | 3162 | 1767.4 MHz | 3387 | 2167.4 MHz |
| | Secondary Serving Cell | 3137 | 1762.4 MHz | 3362 | 2162.4 MHz |

5.1.1.11 FDD reference test frequencies for Operating Band XI

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 3487 | 1430.4 MHz | 3712 | 1478.4 MHz |
| Mid Range | 3525 | 1438.0 MHz | 3750 | 1486.0MHz |
| High Range | 3562 | 1445.4 MHz | 3787 | 1493.4MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 3487 | 1430.4 MHz | 3712 | 1478.4 MHz |
| | Secondary Serving Cell | - | - | 3737 | 1483.4 MHz |
| Mid Range | Serving Cell | 3525 | 1438.0 MHz | 3750 | 1486.0 MHz |
| | Secondary Serving Cell | - | - | 3775 | 1491.0 MHz |
| High Range | Serving Cell | 3562 | 1445.4 MHz | 3787 | 1493.4 MHz |
| | Secondary Serving Cell | - | - | 3762 | 1488.4 MHz |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 3487 | 1430.4 MHz | 3712 | 1478.4 MHz |
| | Secondary Serving Cell | 3512 | 1435.4 MHz | 3737 | 1483.4 MHz |
| Mid Range | Serving Cell | 3525 | 1438.0 MHz | 3750 | 1486.0 MHz |
| | Secondary Serving Cell | 3550 | 1443.0 MHz | 3775 | 1491.0 MHz |
| High Range | Serving Cell | 3562 | 1445.4 MHz | 3787 | 1493.4 MHz |
| | Secondary Serving Cell | 3537 | 1440.4 MHz | 3762 | 1488.4 MHz |

5.1.1.12 FDD reference test frequencies for Operating Band XII

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 3618 | 701.6 MHz | 3843 | 731.6 MHz |
| Mid Range | 3645 | 707.0 MHz | 3870 | 737.0 MHz |
| High Range | 3677 | 713.4 MHz | 3902 | 743.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 3618 | 701.6 MHz | 3843 | 731.6 MHz |
| | Secondary Serving Cell | - | - | 3868 | 736.6 MHz |
| Mid Range | Serving Cell | 3652 | 708.4 MHz | 3877 | 738.4 MHz |
| | Secondary Serving Cell | - | - | 3902 | 743.4 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | 3618 | 701.6 MHz | 3843 | 731.6 MHz |
| | Secondary Serving Cell | 3643 | 706.6 MHz | 3868 | 736.6 MHz |
| Mid Range | Serving Cell | 3652 | 708.4 MHz | 3877 | 738.4 MHz |
| | Secondary Serving Cell | 3677 | 713.4 MHz | 3902 | 743.4 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

NOTE: In DC-HSDPA mode and in DC-HSUPA mode only Low Range and Mid Range frequencies are specified since the available downlink bandwidth is only 18 MHz at Band XII and hence the specified Low Range and Mid Range frequencies already cover the whole available downlink bandwidth.

5.1.1.13 FDD reference test frequencies for Operating Band XIII

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 3793 | 779.6 MHz | 4018 | 748.6 MHz |
| Mid Range | 3805 | 782.0 MHz | 4030 | 751.0 MHz |
| High Range | 3817 | 784.4 MHz | 4042 | 753.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |
| Mid Range | Serving Cell | 3842 | 779.5 MHz | 4067 | 748.5 MHz |
| | Secondary Serving Cell | - | - | 4092 | 753.5 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |
| Mid Range | Serving Cell | 3842 | 779.5 MHz | 4067 | 748.5 MHz |
| | Secondary Serving Cell | 3867 | 784.5 MHz | 4092 | 753.5 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

NOTE: In DC-HSDPA mode and in DC-HSUPA mode only Mid Range frequencies are specified since the available downlink bandwidth is only 10 MHz at Band XIII and hence the specified Mid Range frequencies already cover the whole available downlink bandwidth.

5.1.1.14 FDD reference test frequencies for Operating Band XIV

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------|---------------------|--------|-----------------------|
| Low Range | 3893 | 790.6 MHz | 4118 | 760.6 MHz |
| Mid Range | 3905 | 793.0 MHz | 4130 | 763.0 MHz |
| High Range | 3917 | 795.4 MHz | 4142 | 765.4 MHz |

For DC-HSDPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|------------------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |
| Mid Range | Serving Cell | 3942 | 790.5 MHz | 4167 | 760.5 MHz |
| | Secondary Serving Cell | - | - | 4192 | 765.5 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

For DC-HSUPA mode:

| Test Frequency ID | HS-DSCH Cell | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |
|-------------------|--------------|--------|---------------------|--------|-----------------------|
| Low Range | Serving Cell | - | - | - | - |

| | | | | | |
|------------|------------------------|------|-----------|------|-----------|
| | Secondary Serving Cell | - | - | - | - |
| Mid Range | Serving Cell | 3942 | 790.5 MHz | 4167 | 760.5 MHz |
| | Secondary Serving Cell | 3967 | 795.5 MHz | 4192 | 765.5 MHz |
| High Range | Serving Cell | - | - | - | - |
| | Secondary Serving Cell | - | - | - | - |

NOTE: In DC-HSDPA mode and in DC-HSUPA mode only Mid Range frequencies are specified since the available downlink bandwidth is only 10 MHz at Band XIV and hence the specified Mid Range frequencies already cover the whole available downlink bandwidth.

|------------------------|---|---|---|---|

NOTE: In DC-HSDPA mode and in DC-HSUPA mode only Low Range and Mid Range frequencies are specified since the available downlink bandwidth is only 15 MHz at Band XXI and hence the specified Low Range and Mid Range frequencies already cover the whole available downlink bandwidth.

5.1.1.22 FDD reference test frequencies for Operating Band XXII

| Test Frequency ID | UARFCN | Frequency of Uplink | UARFCN | Frequency of Downlink |

5.1.2 TDD Mode Test frequencies

UTRA/TDD is designed to operate in one of three unpaired bands (3GPP TS 25.102 [12]). The reference test frequencies for the common test environment for each of the 3 operating bands are defined in the following tables:

5.1.2.1 Standard TDD reference test frequencies (3.84 Mcps option)

| Test Frequency ID | Band a | | Band b | | Band c | |
|-------------------|--------|-----------------------|--------|-----------------------|--------|-----------------------|
| | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) |
| Low Range | 9 513 | 1 902.6 MHz | 9 263 | 1 852.6 MHz | 9 563 | 1 912.6 MHz |
| Mid Range | 9 550 | 1 910 MHz | 9 400 | 1 880 MHz | 9 600 | 1 920 MHz |
| High Range | 9 587 | 1 917.4 MHz | 9 537 | 1 907.4 MHz | 9 637 | 1 927.4 MHz |
| Low Range | 10 063 | 2 012.6 MHz | 9 663 | 1 932.6 MHz | | |
| Mid Range | 10 087 | 2 017.4 MHz | 9 800 | 1 960 MHz | | |
| High Range | 10 112 | 2 022.4 MHz | 9 937 | 1 987.4 MHz | | |

5.1.2.2 Standard TDD reference test frequencies (1.28 Mcps option)

| Test Frequency ID | Band a | | Band b | | Band c | |
|-------------------|--------|-----------------------|--------|-----------------------|--------|-----------------------|
| | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) |

| Test Frequency ID | Band d | | Band e | | Band f | |
|-------------------|--------|-----------------------|--------|-----------------------|--------|-----------------------|
| | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) | UARFCN | Frequency (UL and DL) |
| Low Range | 12854 | 2570.8 MHz | 11504 | 2300.8 MHz | 9404 | 1880.8 MHz |
| Mid Range | 12950 | 2595 MHz | 11750 | 2350 MHz | 9500 | 1900 MHz |
| High Range | 13096 | 2619.2 MHz | 11996 | 2399.2 MHz | 9596 | 1919.2 MHz |
| Low Range | | | | | | |
| Mid Range | | | | | | |
| High Range | | | | | | |

NOTE: In China, Band a only includes 2010 - 2025 MHz for 1.28 Mcps TDD option.

5.1.2.3 Standard TDD reference test frequencies (7.68 Mcps option)

| Test Frequency ID | Band a | | Band b | | Band c | |

5.2 Radio conditions

There are a number of radio propagation conditions defined in 3GPP TS 34.121 [2] for FDD mode and 3GPP TS 34.122 [5] for TDD mode, which may be required for a number of tests and hence can be considered as Common Conditions for FDD mode and TDD mode respectively.

NOTE: The System Simulator is required to support at least the normal Propagation Condition; support of the other propagation conditions is optional, depending on the specific test supported by the simulator.

5.2.1 Normal propagation condition

This condition provides a connection between the System Simulator that is effectively free from Additive White Gaussian Noise, and where there are no fading or multipath effects. This condition will be used for Signalling tests.

5.2.2 Static propagation condition

See 3GPP TS 34.121 [2], annex D for FDD.

For TDD mode, the propagation for the static performance measurement is an Additive White Gaussian Noise (AWGN) environment. No fading and multi-paths exist for this propagation model.

5.2.3 Multi-path fading propagation conditions

See 3GPP TS 34.121 [2], annex D for FDD and 3GPP TS 34.122 [5], annex D for TDD.

5.2.4 Moving propagation conditions

See 3GPP TS 34.121 [2], annex D for FDD. There are no currently defined Moving propagation conditions for TDD.

5.2.5 Birth-Death propagation conditions

See 3GPP TS 34.121 [2], annex D for FDD. There are no currently defined Birth-Death propagation conditions for TDD.

5.2.6 High speed train conditions

See 3GPP TS 34.121 [2], annex D for FDD. There are no currently defined High speed train conditions for TDD.

5.3 Standard test signals

Reference 3GPP TS 25.101 [11] and 3GPP TS 25102 [12] for definitions of standard test signals.

5.4 Signal levels

The power levels given in clauses 5.4.1 and 5.4.2 apply for Signalling tests only. For RF tests power levels are given in 3GPP TS 34.121 [2], annex E for FDD and 3GPP TS 34.122 [5], annex E for TDD.

5.4.1 Downlink signal levels

The default signal levels are defined in clauses 6.1.5, 6.1.6, and 6.1.7 of this document. The SS shall be capable of setting these downlink signal levels, and any levels specifically defined in a test case within a maximum tolerance of +/- 3dB. If a test case fails due to inaccurate setting of the downlink signal levels by the SS, then the SS is adjusted in order that it provides the correct level, measured at the UE antenna, for the specific test case.

5.4.2 Uplink signal levels

The SS shall be capable of transmitting uplink TPC commands in order to meet the requirements specified in 3GPP TS 34.123-3 clause 7.3.2.2.14a.

5.5 Downlink Physical Channels Code Allocation

5.5.1 Downlink physical channels code allocation for Signalling (FDD)

5.5.1.1 Downlink physical channels code allocation for non-HSDPA test cases

Table 5.5.1.1.1 shows details of the downlink code tree for the Primary Scrambling Code, SF=16 & Code=0 used in the non-HSDPA test cases. The numbers in the Code columns indicate the code number with the respective spreading factor (SF). The Note column refers to specifications where the code allocation is defined.

5.5.1.2 Downlink physical channels code allocation for HSDPA test cases

Table 5.5.1.2.1 shows details of the downlink code tree for the Primary Scrambling Code, SF=16 & Code=0 used in the HSDPA test cases. Table 5.5.1.2.2 shows the downlink code tree used for 64QAM HSDPA test cases. The numbers in the Code columns indicate the code number with the respective spreading factor (SF). The Note column refers to specifications where the code allocation is defined.

The HS-PDSCH channels are allocated dynamically by the SS during execution of the HSDPA test case, under the same Scrambling Code as the HS-SCCH channel, on SF=16, in the range Code=1 to Code=15.

5.5.1.3 Downlink physical channels code allocation for E-DCH test cases

Table 5.5.1.3.1 shows details of the downlink code tree for the Primary Scrambling Code, SF=16 and Code=0 used in the E-DCH test cases for the case when HSDPA 64QAM is not used. Table 5.5.1.3.2 shows details of the downlink code tree for the Primary Scrambling Code, SF=16 and Code=0 used in the E-DCH test cases for the HSDPA 64QAM case. Table 5.5.1.3.3 shows in addition to Table 5.5.1.3.2 details of the downlink code trees for the Primary Scrambling Code, SF=16 and Code=1 used in the E-DCH test cases for the HSDPA 64QAM and MIMO case. The numbers in the Code columns indicate the code number with the respective spreading factor (SF). The Note column refers to specifications where the code allocation is defined.

The HS-PDSCH channels are allocated dynamically by the SS during execution of the HSDPA test case, under the same Scrambling Code as the HS-SCCH channel, on SF=16, in the range Code=1 to Code=15 when Tables 5.5.1.3.1 or 5.5.1.3.2 are used; or in the range Code=2 to Code=15 when Table 5.5.1.3.3 is used in combination with Table 5.5.1.3.2 (HSDPA with 64QAM and MIMO).

5.5.1.4 Downlink physical channels code allocation for MBMS/MBSFN test cases

Table 5.5.1.4 shows details of the downlink code tree for the Primary Scrambling Code used in the MBMS/MBSFN test cases. The numbers in the Code columns indicate the code number with the respective spreading factor (SF). The Note column refers to specifications where the code allocation is defined.

5.5.3 Downlink physical channels code allocation for RF

The downlink physical channels code allocation for RF tests is defined in 3GPP TS 34.121 [2] Annex E.6.

6 Reference system configurations

This clause defines a number of Reference System Configurations which can be used for different tests.

6.1 Simulated network environments

The UE will eventually have to operate in either single mode networks (FDD or TDD), dual mode networks (FDD+TDD), or inter-RAT networks (FDD or TDD + GSM).

The following tables list the default parameters for 1 to 8 cell environments for testing.

To simplify TTCN implementation the total number of simultaneous cells in intra-frequency, inter-frequency and inter-RAT cell information lists (SIB11) have been limited to 8 (or 16 in MBMS test cases) and a specific cell numbering scheme have been defined to associate cell identifiers with type of cell.

- Cell 1, Cell 2, Cell 3, Cell 7, Cell 8 and Cell 11 are associated with FDD/TDD cells using frequency f1; Note that Cell 7 and Cell 8 can be configured on frequency f3 in some cases.
- Cell 4, Cell 5 and Cell 6 are associated with FDD/TDD cells using frequency f2;
- Cell 9 and Cell 10 are associated with GSM cells;
- Cell 21, Cell 22, Cell 23, Cell 27 and Cell 28 are associated with MBMS cells using frequency f1; Note that Cell 27 and Cell 28 can be configured on frequency f3 in some cases.
- Cell 24, Cell 25 and Cell 26 are associated with MBMS cells using frequency f2.
- Cell 31, Cell 32, Cell 37 and Cell 38 are associated with MBMS in MBSFN mode cells (clusters) using frequency f1 (FDD and TDD).
- Cell 33, Cell 34, Cell 35 and Cell 36 are associated with MBMS in MBSFN mode clusters using frequency f2. Note that Cell 36 and/or Cell 37 can be configured on frequency f3 in some cases (FDD and TDD).
- Cell 39 is associated with WLAN AP using Mid range frequency as defined in 36.508[45]

Note: For the purpose of protocol conformance testing the simulation of an MBSFN cluster may be achieved with a single MBSFN cell.

For protocol testing in FDD and TDD intra- and inter-frequency cell environment Cell 1 to Cell 8 are used.

For RF and RRM in FDD and TDD intra- and inter-frequency cell environment Cell 1 to Cell 8 and Cell 11 are used.

For FDD/GSM and TDD/GSM inter-RAT cell environment Cell 1 to Cell 6, Cell 9 and Cell 10 are used.

For RAN assisted WLAN interworking FDD cell+ WLAN AP and TDD cell+ WLAN AP scenarios Cell 1 and Cell 39 are used.

For FDD inter-band testing the cells using frequency f1 are on one supported FDD band and the cells using frequency f2 are on a different supported FDD band. FDD inter-band testing only applies for UEs supporting multiple FDD bands simultaneously.

For MBMS testing intra- and inter-frequency cell environment Cell 21 to Cell 28 are used.

For MBSFN testing intra- and inter-frequency cell environment Cell 31 to Cell 38 are used (FDD and TDD).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

If a test case includes cells in a band which only exist in one country, the MCC of these cells shall be set to the MCC of this country. Also, unless this test case is simulating a inter-PLMN scenario with a foreign MCC, the MCC of all cells in the test case shall be set to the MCC of this country too.

6.1.0a.2 SIB configurations

The following SIB configurations are used.

Configuration 1 is the default. It is used for the following test case scenarios:

- UTRAN/FDD only SYSTEM.
- UTRAN/FDD + GERAN SYSTEM (not involving inter-RAT handover from GERAN to UTRAN).
- UTRAN/TDD only SYSTEM.
- UTRAN/TDD + GERAN SYSTEM (not involving inter-RAT handover from GERAN to UTRAN).
- inter-RAT handover from GERAN to UTRAN test cases.

Configuration 2 is for test cases which need two S_{CCPCH} or two PRACH.

Configuration 3 is for inter-RAT handover from GERAN to UTRAN test cases.

Configuration 4 is applied to MBMS test cases.

Configuration 5 is applied to MBMS MBSFN test cases.

Configuration 6 is applied to the interRAT E-UTRA - UTRA test. The UTRA SIB scheduling is referred to 36.508 [45] clause 4.4.4.2.

Configuration 7 is applied to the interRAT EUTRA - UTRA - GERAN test. The UTRA SIB scheduling is referred to 36.508 [45] clause 4.4.4.3.

Configuration 8 is applied to the test cases which need a long SIB5/SIB5bis content: for example, enhanced FACH Uplink.

Configuration 9 is applied to the EAB test cases which need SIB21.

Configuration 10 is applied to test cases for Concurrent deployment of 2ms and 10ms TTI in a cell, NodeB triggered HS-DPCCH transmission, Fallback to R99 PRACH, TTI alignment, Per HARQ process activation and de-activation and HS-DSCH DRX operation with second DRX cycle in CELL_FACH which need SIB22 and long SIB5/SIB5bis.

Configuration 11 is applied to the RAN Assisted WLAN interworking test cases which need SIB23

The SEG_COUNT in the table specifies the maximum possible transport BCH blocks scheduled for broadcasting. The more contents a SIB has, the more transport BCH blocks are needed for broadcasting. In order to keep SIB repetition period, SIB_REP, unchanged in different test cases, each specific SIB in the individual test cases after the PER encoding shall not exceed the SEG_COUNT scheduled.

If the transport BCH blocks actually required for a SIB is less than the scheduled SEG_COUNT, the no_segment blocks shall be placed at the rest scheduled transport BCH blocks. In addition, the corresponding SEG_COUNT IE value in MIB or in SB1 shall be set to the number of transport BCH blocks actually required.

6.1.1 SCCPCH configuration with Stand-alone SRB for PCCH in the first SCCPCH and Interactive/Background 32 kbps PS RAB + SRBs for CCCH/DCCH/BCCH in the second SCCPCH

Two SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and the second SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/DCCH/BCCH.

This Reference System Configuration is the same as defined in clause 6.1, except for the following SIBs.

6.1.2 SCCPCH configuration with Stand-alone SRB for PCCH in the first SCCPCH, RB for CTCH + SRBs for CCCH/BCCH in the second SCCPCH and Interactive/Background 32 kbps PS RAB + SRBs for CCCH/DCCH/BCCH in the third SCCPCH (FDD only)

Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH. The second SCCPCH carries the FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs. The third SCCPCH carries the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH for connected mode UEs.

This Reference System Configuration is the same as defined in clause 6.1, except for the following SIBs.

6.1.3 SCCPCH configuration with Stand-alone SRB for PCCH in the first SCCPCH and Interactive/Background 32 kbps PS RAB + SRBs for CCCH/DCCH/BCCH in the second and third SCCPCHs

Three SCCPCHs are used in this SYSTEM INFORMATION configuration. The first SCCPCH carries the PCH and both the second and third SCCPCHs carry the FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH.

This Reference System Configuration is the same as defined in clause 6.1, except for the following SIBs. (SIB6 is not used in this configuration.)

6.1.5 Reference Radio Conditions (FDD)

The following transmission parameters shall be used unless otherwise stated in the description of the individual test case.

Table 6.1.3 are the default settings for a non-suitable cell which is configured and always present whereas table 6.1.4 is for a cell that is switched off. Cells configured according to table 6.1.3 are for test cases in which it is necessary to make a cell unsuitable, and then subsequently make it suitable. This could be achieved by switching the cell off and then reconfiguration as in table 6.1.4, but this takes a lot of time to do.

Table 6.1.1: Default settings for a serving cell in a single cell environment

| Parameter | Unit | Cell 1/Cell 21 |
|---------------------------------|--------------|--------------------------|
| Cell type | | Serving cell |
| UTRA RF Channel Number (Note 3) | | Mid Range Test Frequency |
| Qqualmin | dB | -24 |
| Qrxlevmin | dBm | -79 |
| UE_TXPWR_MAX_RACH | dBm | 21 |
| CPICH Ec (see notes 1 and 2) | dBm/3.84 MHz | -60 |

NOTE 1: The power level is specified in terms of CPICH_Ec instead of CPICH_RSCP as RSCP is a receiver measurement and only CPICH_Ec can be directly controlled by the SS.
 NOTE 2: The cell fulfils 3GPP TS 25.304 [36], clause 5.2.3.1.2 and 3GPP TS 25.133 [30], clause 8.1.2.2.1.
 NOTE 3: The Test Frequencies are selected from the Tables in section 5.1.1 for the band under test.

Table 6.1.2: Default settings for a serving cell and a suitable neighbour cell in a multi-cell environment

| Parameter | Unit | Cell 1/Cell 21 | Cell 2/Cell 22 | Cell 4/Cell 24 |
|--|--------------|--------------------------|---|---|
| Cell type | | Serving cell | Suitable neighbour intra-frequency cell | Suitable neighbour inter-frequency cell |

| Qqualmin | dB | -24 | -24 | |
| Qrxlevmin | dBm | -79 | -79 | |
| UE_TXPWR_MAX_RACH | dBm | 21 | 21 | |
| CPICH Ec (see notes 1 and 2) | dBm/3.84 MHz | -60 | -70 | |
| NOTE 1: The power level is specified in terms of CPICH_Ec instead of CPICH_RSCP as RSCP is a receiver measurement and only CPICH_Ec can be directly controlled by the SS. | | | | |
| NOTE 2: Both cells fulfil 3GPP TS 25.304 [36], clause 5.2.3.1.2 and 3GPP TS 25.133 [30], clause 8.1.2.2.1. | | | | |
| NOTE 3: The Test Frequencies are selected from the Tables in section 5.1.1 for the band(s) under test. For the test frequencies for low and high ranges for serving cell, the mid range is used for suitable neighbour of inter-frequency cell in SIB11. For Band VI the Low Range Test Frequencies are used for Cell 1 and Cell 2 because of the small bandwidth available. For FDD interband testing the Test Frequencies will be selected from different Bands. | | | | |

6.1.5.1 HARQ Transmission Parameters (FDD)

The following HARQ transmission parameters shall be used for test cases in 34.123-1 configuring HS-DSCH channels.

Table 6.1.5.1 : HARQ transmission parameters without MIMO

| Parameter | QPSK modulation | 16QAM modulation | 64QAM modulation |

| Maximum number of HARQ transmission | 8 | 8 | 8 |

6.1.5.2 Inter-band testing (FDD)

FDD inter-band testing only applies for UEs supporting multiple FDD bands simultaneously. In this case the UE can perform cell (re-)selection or inter-frequency mobility between a primary band and a secondary band. The primary and secondary FDD bands are selected according to PIXIT parameters. If a UE supports more than 2 FDD frequency bands, then the test may be executed for various band combinations.

6.1.6 Reference Radio Conditions (TDD)

The following transmission parameters shall be used for TDD modes other than 3.84 Mcps TDD IMB unless otherwise stated in the description of the individual test case.

Table 6.1.6a: Default settings for a serving cell in a single cell environment

| Parameter | Unit | Cell 1/Cell 21/Cell 31 |

6.1.6.1 Reference Radio Conditions (3.84 Mcps TDD IMB)

The following transmission parameters shall be used unless otherwise stated in the description of the individual test case.

Table 6.1.6.3 gives the default settings for a non-suitable cell which is configured and always present whereas table 6.1.6.4 is for a cell that is switched off. Cells configured according to table 6.1.6.3 are for test cases in which it is necessary to make a cell unsuitable, and then subsequently make it suitable. This could be achieved by switching the cell off and then reconfiguring as in table 6.1.6.4, but this takes a lot of time to do.

Table 6.1.6.1: Default settings for a serving cell in a single cell environment

| Parameter | Unit | Cell 31 |

6.1.8 Reference Radio Conditions (WLAN AP)

The same transmission parameters as in 36.508[45] clause 4.4.8 shall be used unless otherwise stated in the description of the individual test case.

6.2 Number of neighbour cells

The options for the number of neighbour cells (i.e. the total number of active cells in the simulated network) are given below. See clause 6.1 for cell configurations.

6.2.1 Basic Network

| Number of Cells | Use of Network Configuration |
|-----------------|--|
| 1 | Basic UE registration; RRC Connection Establishment and Release; operation of dedicated channels in non-handover modes; general RF and EMC testing |

6.2.2 Soft Handover Network (FDD)

| Number of Cells | Use of Network Configuration/Constraints |
|-----------------|--|
| 2 | Can be used in place of basic network, plus offering operation of dedicated channels in 2 way soft handover or in 2 way SSDT (R99 and Rel-4 only) handover for RF or signalling tests; simple cell reselection tests |

6.2.3 Hard Handover Network

| Number of Cells | Use of Network Configuration |
|-----------------|--|
| 2 | Can be used in place of basic network, plus offering operation in 2 cell hard handover (inter-frequency) |

6.2.4 'Roaming' Network

| Number of Cells | Use of Network Configuration |
|-----------------|--|
| 6 | This configuration is intended to provide the capability for extensive cell selection and reselection testing, as defined under Idle Mode Testing. The maximum number of separate RF test channels is 4 in order to limit the test equipment complexity. |

6.3 Cell/BS codes etc

See clause 6.1.

6.4 Routing/location area

See clause 6.1.

6.5 Network options settings

See clause 6.1.

6.6 Power control mode

6.6.1 Downlink Power Control

6.6.1.1 Outer Loop Power Control

This is used to set the SIR requirements from the given BER/BLER requirements for the dedicated channel - the reference configuration is for the BER/BLER and SIR requirements to be fixed, i.e. Outer Loop Power Control is disabled.

6.6.1.2 Inner Loop Power Control

The inner loop power control adjusts the power of the dedicated channel to meet the SIR requirements. The reference condition is for the Inner Loop Power Control to be disabled.

6.6.2 Uplink Power Control

6.6.2.1 Outer Loop Power Control

This is used to set the SIR requirements from the given BER/BLER requirements for the dedicated channel - the reference configuration is for the BER/BLER and SIR requirements to be fixed, i.e. Outer Loop Power Control is disabled.

6.6.2.2 Inner Loop Power Control (FDD)

The inner loop power control adjusts the power of the dedicated channel to meet the SIR requirements.

6.7 Tx Diversity modes

The reference settings for Tx Diversity Mode shall be:

6.7.1 Non-Diverse Operation

DL Transmit Diversity shall be disabled on all cells in the simulated network.

6.7.2 Diverse Operation

6.7.2.1 Diverse Operation (FDD mode)

The diversity options applied to the DL channels shall be as below for all cells in the simulated network.

| Channel | Open loop mode | | Closed loop Mode |

6.8 Compressed mode parameters

In this clause, Parameters for reference compressed mode patterns are defined which are used in signalling test cases such as inter frequency FDD measurement, inter frequency TDD measurement and inter RAT measurement in 3GPP TS 34.123-1 [1]. These parameters are defined in 3GPP TS 25.133 [30] for measurement performance tests.

Depending on UE capability, there are four methods constructed of three types using of compressed mode such as UL only, DL only and both UL and DL, and using without application of compressed for the above measurement purposes. As test requirement is the same even if the test methods are different, ICS/IXIT statement is applied to the test cases so that the test procedure and specific message contents specified in 3GPP TS 34.123-1 [1] can be distinguished.

6.8.1 Single compressed mode pattern

Configuration parameters in single compressed mode pattern for one type of measurement objects are described in the following clauses.

6.8.1.1 Inter Frequency FDD measurement

The configuration parameters for an inter frequency FDD measurement is shown in table 6.8.1.

Table 6.8.1: Compressed mode parameters (Inter Frequency FDD measurement)

| Parameter | Value | Note |
|--|---|--|
| TGSN (Transmission Gap Starting Slot Number) | 4 | |
| TGL1 (Transmission Gap Length 1) | 7 | |
| TGL2 (Transmission Gap Length 2) | - | Only one gap in use. |

6.10 Reference Radio Bearer configurations used in Radio Bearer interoperability testing

The reference radio bearer configurations are typical configurations of the radio interface. This sub-set of the mandatory set of radio bearer configurations supported by the UE is intended to be used as test configurations for testing of the UE. The purpose of the reference radio bearer configurations is to ensure interoperability of UE's in different regions and networks.

The reference radio bearer configurations are used in the radio bearer interoperability test cases, clause 14 of 3GPP TS 34.123-1 [1]. The reference radio bearer configurations are also intended to be the first choice for other test cases where a radio bearer configuration is needed. For test cases requiring alternative configurations not provided by the reference radio bearer configurations then these specific radio bearer configurations are either specified in the actual test case itself; or in case the configurations are used by more than one test case then these common radio bearer configurations are specified in clause 6.11 of the present document.

NOTE: If not specifically specified then the mid-value of the RM attribute value range as specified by the actual reference radio bearer configuration shall be applied for testing. However, in the case of UL and DL:3.4 kbps SRBs for DCCCH and where the Choice "Same As UL" is used for the IE "DL Transport channel information common for all transport channel", the RM attribute for the "DL:3.4 kbps SRBs for DCCCH" shall be set to the same value as that used in the Uplink.

6.10.1 QoS Architecture and RAB attributes

From a user point-of-view services are considered end-to-end, this means from a Terminal Equipment (TE) to another TE. An End-to-End Service may have a certain Quality of Service (QoS) which is provided for the user through the different networks. In UMTS, it is the UMTS Bearer Service that provides the requested QoS through the use of different QoS classes as defined in 3GPP TS 23.107 [15].

The UMTS Bearer Service consists of two parts, the Radio Access Bearer Service, RAB, and the Core Network Bearer Service. The Radio Access Bearer Service is realized by a Radio Bearer Service and an Iu-Bearer Service. The relationship between the services is illustrated in figure 6.10.1.1.

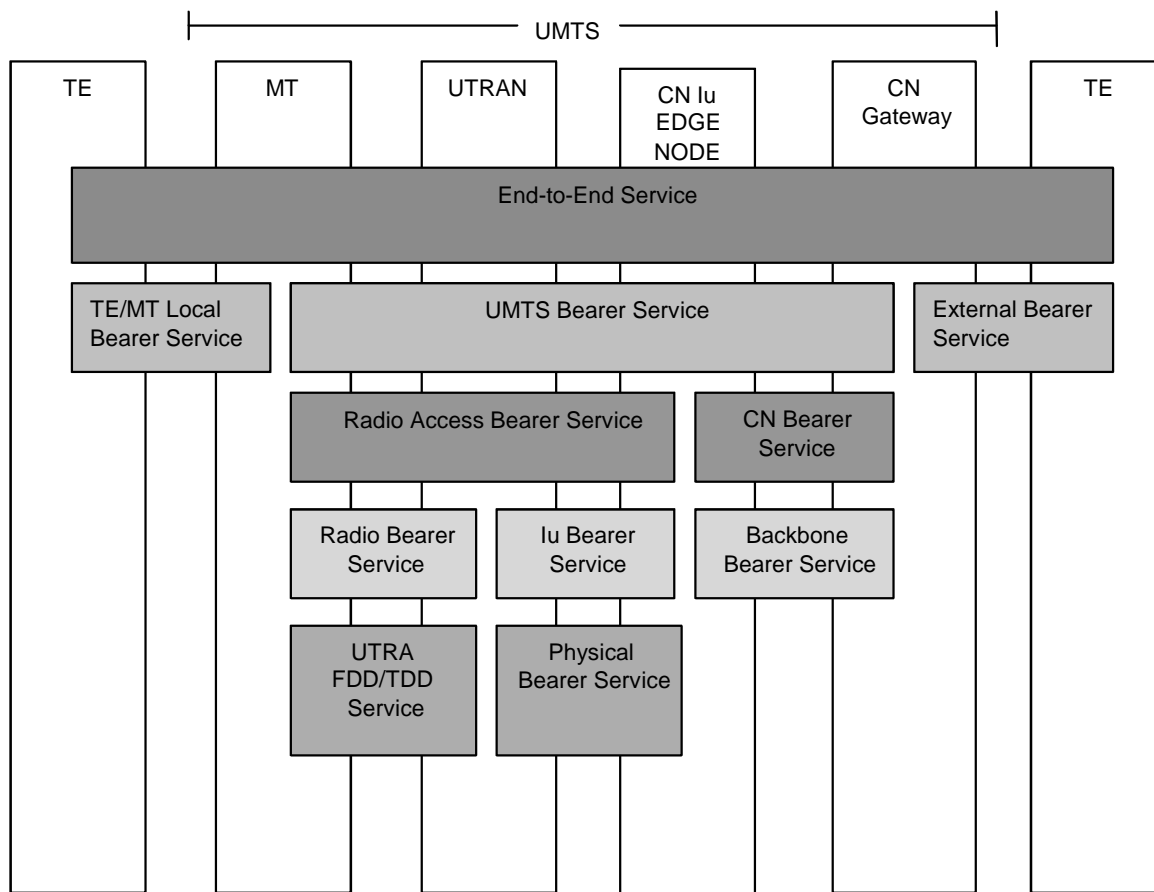

Figure 6.10.1.1: UMTS QoS Architecture

The Radio Access Bearer Service is characterized by a number of attributes such as Traffic class, Maximum bit rate, Guaranteed bit rate, SDU error ratio, Residual BER, Transfer Delay etc. As a first approach the four following attributes have been considered to come up with the parameter settings in clause 6.10.2.4 for FDD mode and clause 6.10.3.4 for TDD mode:

- Traffic class;
- SSD;
- Maximum bit rate;
- Residual BER.

The Traffic classes are explained in table 6.10.1.1. The Maximum bit rate has been considered at RLC layer and Physical Layer for the acknowledged and unacknowledged modes respectively. The Residual BER is understood as BER at RLC layer and Transport BLER for the acknowledged and unacknowledged modes respectively.

NOTE: The maximum bit rate in clause 6.10.2.4 for FDD mode and clause 6.10.3.4 for TDD mode is one of the RAB attribute as described above. For Interactive/Background PS RABs, however, the maximum bit rate of Radio Bearer can be lower than the maximum bit rate of RAB attributes due to radio resource management. Bit rates of Interactive/Background PS RABs described in 6.10.2.4 for FDD mode and clause 6.10.3.4 for TDD mode may represent the maximum bit rate of Radio Bearer taking account into this management.

Table 6.10.1.1: Traffic classes

| Traffic class | Conversational class conversational RT | Streaming class streaming RT | Interactive class Interactive best effort | Background Background best effort |
|------------------------------------|---|--|--|---|
| Fundamental characteristics | - Preserve time relation (variation) between information entities of the stream Conversational pattern (stringent and low delay) | - Preserve time relation (variation) between information entities of the stream (i.e. some but constant delay) | Request response pattern Preserve payload content | Destination is not expecting the data within a certain time Preserve payload content |
| Example of the application | - speech, video, etc. | - facsimile (NT) - streaming audio and video | - Web browsing | - background download of emails |

6.10.2 RAB and signalling RB for FDD

6.10.2.1 RABs and signalling RBs

In the following clauses, the typical parameter sets are presented for reference RABs, signalling RBs and important combinations of them. The data rate given for each RAB is the maximum data rate that can be supported by that RAB.

NOTE: The granularity for each RAB needs to be clarified.

6.10.2.2 Combinations of RABs and Signalling RBs

In the present document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

NOTE: It is understood that for speech service the AMR mode may be operated asymmetrically for the uplink and downlink.

Combinations on DPCH

- 1) Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH (R99 and Rel-4 only).
- 2) Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH.

6.10.2.3 Example of linkage between RABs and services

RABs, which are included in the present document, can provide the services as shown in table 6.10.1.1. Furthermore, the required BER for each RAB, which is assumed in the present document, is shown in table 6.10.2.3.1.

Table 6.10.2.3.1: Example of linkage between RABs and services

| NOTE 1: The peak throughput may be limited by the maximum number of MAC-d PDUs that can be included in a single MAC-hs or MAC-ehs PDU (see 3GPP TS 25.321 [38]). | | | | |
| NOTE 2: Alternative 1 with Fixed RLC + MAC-hs is the default configuration. For test cases that use alternatives 2 (Fixed RLC + MAC-ehs) or 3 (Flexible RLC + MAC-ehs) then this shall be explicitly stated in the test case. | | | | |
| NOTE 3: The Maximum RLC payload size for Flexible RLC is 12024 bits (1503 octets, ref: TS 25.322 clause 9.2.2.9). The maximum SDU size above PDCP layer is limited to 12000 bits (1500 octets limit in QoS parameter "Max SDU size", ref: TS 24.008 clause 10.5.6.5). As no PDCP header is used in this radio bearer configuration then the RLC payload size has been limited to 12000 bits. | | | | |

NOTE 1: The peak throughput may be limited by the maximum number of MAC-d PDUs that can be included in a single MAC-ehs PDU (see 3GPP TS 25.321 [38]).

NOTE 2: MAC-d PDU size is equal to RLC PDU size as there is no MAC-d header. Therefore RLC PDU size is commonly used and referenced in 3GPP TS 25.331 [34].

NOTE 3: MAC-c header can be either 0 or 32 bits (U-RNTI = 32 bits) for SRB1. The U-RNTI is only included as MAC-c header to MAC-d PDU for DCCH (SRB#1 only) when common H-RNTI is used (see 3GPP TS 25.321 [38]).

6.10.3.3 Example of linkage between RABs and services

RABs, which are included in the present document, can provide the services as shown in table 6.10.1.1: Traffic classes. Furthermore, the required BER for each RAB, which is assumed in the present document, is shown in table 6.10.3.3.1.

Table 6.10.3.3.1: Example of linkage between RABs and services

NOTE 1: SMS can be provided via the signalling RB (DCCH) on DPCH or SCCPCH.

NOTE 2: CBS can be provided via the signalling RB (CTCH) on SCCPCH

NOTE 3: UDI *n*B can be provided via *n* RABs of conversational 64 kbps.

6.10.3.4 Typical radio parameter sets

NOTE The order of tables and MAC-d flow numbering in this section may be different than the RB IDs and MAC-d flow IDs as defined in default messages in section 9.

6.11 Common Radio Bearer configurations for other test purposes

The common radio bearer configurations are used for functional testing of various UE functions. Only common configurations that are used by multiple test cases and are not covered by the reference radio bearer configurations in clause 6.10 are specified in the present clause. Radio bearer configurations only used by a single test case are specified in the actual test case itself.

NOTE If not specifically specified then the mid-value of the RM attribute value range as specified by the actual reference radio bearer configuration shall be applied for testing.

NOTE The order of tables and MAC-d flow numbering in this section may be different than the RB IDs and MAC-d flow IDs as defined in default messages in section 9.

6.11.1 Unacknowledged Mode Radio Bearer configuration (7 bit Length Indicator)

This configuration is based on the Interactive or background / UL:8 DL 8 kbps / PS RAB + UL:3.4 DL 3.4 kbps SRBs for DCCH (see clause 6.10.2.4.1.23a) with the transport channels parameters of the RAB and TFCS defined as follows.

6.11.5.1 RABs and signalling RBs

See clause 6.10.3.1.

6.11.5.2 Combinations of RABs and Signalling RBs

In the present document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

NOTE: It is understood that for speech service the AMR mode may be operated asymmetrically for the uplink and downlink.

6.11.6.1 RABs and signalling RBs

In the following clauses, the typical parameter sets are presented for reference RABs, signalling RBs and important combinations of them. The data rate given for each RAB is the maximum data rate that can be supported by that RAB.

NOTE: The granularity for each RAB needs to be clarified.

6.11.6.2 Combinations of RABs and Signalling RBs

In the present document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

NOTE: It is understood that for speech service the AMR mode may be operated asymmetrically for the uplink and downlink.

6.11.6.3 Example of linkage between RABs and services

RABs, which are included in the present document, can provide the services as shown in table 6.10.1.1: Traffic classes. Furthermore, the required BER for each RAB, which is assumed in the present document, is shown in table 6.11.6.3.1.

Table 6.11.6.3.1: Example of linkage between RABs and services

NOTE 1: SMS can be provided via the signalling RB (DCCH) on DPCH or SCCPCH.

NOTE 2: CBS can be provided via the signalling RB (CTCH) on SCCPCH

NOTE 3: UDI *n*B can be provided via *n* RABs of conversational 64 kbps.
