Physical parameters common for all UE physical layer categories

| | | |
|----------|----------|------------|
| HS-PDSCH | Midamble | 1024 chips |
|----------|----------|------------|

UE HS-DSCH Physical Layer category 1:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 2 |
| | Max Data Rate | 1.2 Mbps |

UE HS-DSCH Physical Layer category 2:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 1.2 Mbps |

UE HS-DSCH Physical Layer category 3:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 4 |
| | Max Data Rate | 2.4 Mbps |

UE HS-DSCH Physical Layer category 4:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 2.4 Mbps |

UE HS-DSCH Physical Layer category 5:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 6 |
| | Max Data Rate | 3.6 Mbps |

UE HS-DSCH Physical Layer category 6:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 3.6 Mbps |

UE HS-DSCH Physical Layer category 7:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 5.3 Mbps |

UE HS-DSCH Physical Layer category 8:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 7.3 Mbps |

UE HS-DSCH Physical Layer category 9:

| | | |
|----------|---|-----------------------------------|
| HS-PDSCH | Number of processes | 3 |
| | Process memory size | Split equally among all processes |
| | Maximum number of HS-DSCH timeslots per TTI | 12 |
| | Max Data Rate | 10.2 Mbps |

6.11.7 Reference Radio Bearer configurations used in Radio Bearer testing for 3.84 Mcps TDD IMB

6.11.7.1 Combinations of RABs and Signalling RBs

In the present document, physical channel parameters for following combinations of RABs and signalling RBs on a CCTrCH are described.

Combinations on SCCPCH

- 1) 7.6 kbps signalling RB for MBSFN MCCH with 40ms TTI

Combinations on SCCPCH Type 2

- 1) 124.4kbps RB for MBSFN MTCH with 80 ms TTI
- 2) 320.4kbps RB for MBSFN MTCH with 80 ms TTI
- 3) 497.6kbps RB for MBSFN MTCH with 80 ms TTI

6.11.7.2 Typical radio parameter sets

6.11.7.2.1 Combination on SCCPCH

6.11.7.2.1.1 7.6 kbps signalling RB for MBSFN MCCH with 40ms TTI

6.11.7.2.1.1.1 Transport channel parameters

6.11.7.2.1.1.1.1 Transport channel parameters for 7.6 kbps signalling RB for MCCH

| | | | |
|--------------|---|-----------|--------|

7 Generic setup procedures

7.1 Basic Generic Procedures

7.1.1 UE Test States for Basic Generic Procedures

This clause describes a set of procedures for use by test cases in 3GPP TS 34.123-1 [1]. Describing these procedures in a generic manner allows their use in many test cases. By using these procedures, test case descriptions need not detail signalling that is not relevant to its purpose or understanding.

The procedures are based upon default values that are adapted to the most common usage. Test cases that require values different from the default will, when specifying the Basic Generic Procedure, also specify those parameters that are modified.

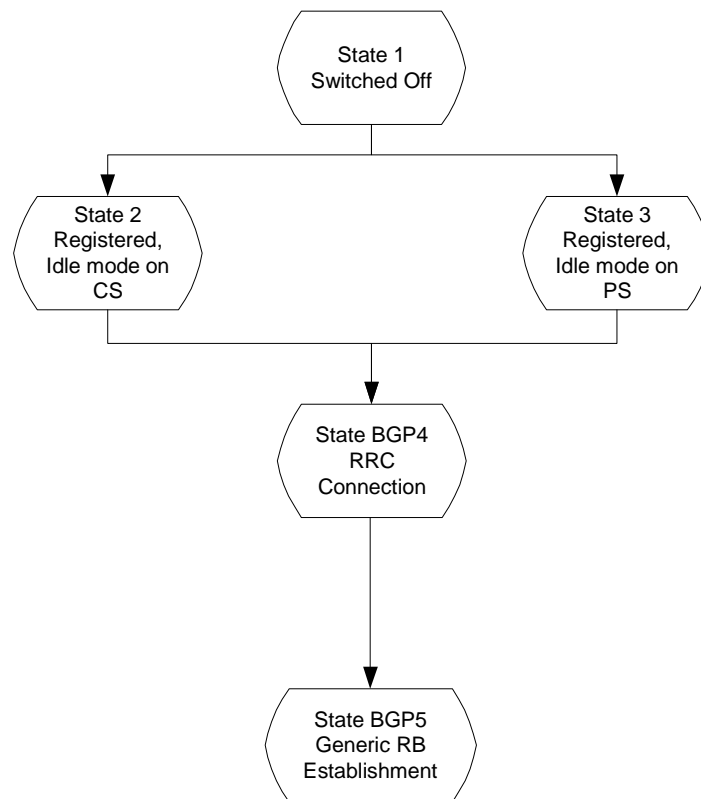

Figure 7.1.1: UE Test States for Basic Generic Procedures

In order that the UE can set up a call in UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.1.1 and the status of the relevant protocols in the UE in the different states are given in table 7.1.1.

Table 7.1.1: The UE states

| | | RRC | CC | MM | SM | GMM |
|------------|--------------------------|------------|-----------|-------------|--------------|------------------|
| State 1 | Power OFF | ----- | null | null | pdp-inactive | GMM-null |
| State 2 | CS Registered Idle Mode | idle | null | idle | pdp-inactive | GMM-deregistered |
| State 3 | PS Registered Idle Mode | idle | null | null | pdp-inactive | GMM-registered |
| State BGP4 | RRC Connection | connected | null | as previous | pdp-inactive | as previous |
| State BGP5 | Generic RB Establishment | connected | null | as previous | pdp-inactive | as previous |

7.1.2 Mobile terminated establishment of Radio Resource Connection

7.1.2.1 Initial conditions

System Simulator:

The system simulator will start from the default idle state. Parameters will be the default parameters for a single cell, unless otherwise specified in the test case.

User Equipment:

Unless otherwise specified in the test case, the UE will be in the following state:

- Default test operating conditions.
- The UE shall have followed the generic registration procedure for CS or PS operations, and will be in Idle Mode, Camped-on (State 2 or State 3).

7.1.2.2 Definition of system information messages

The default system information messages are used.

7.1.2.3 Procedure

- The SS sends a PAGING TYPE 1 message to the UE on the appropriate paging block, and with the IE "Paging record" containing the TMSI or P-TMSI of the UUT.
- The SS receives an RRC CONNECTION REQUEST message from the UE.
- On receipt of the RRC CONNECTION REQUEST the SS shall transmit a RRC CONNECTION SETUP message to the UE. The SS shall wait for the receipt of an RRC CONNECTION SETUP COMPLETE message from the UE.
- On receipt of an RRC CONNECTION SETUP COMPLETE message, the procedure is complete.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|---------------------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Default SI messages |
| 2 | ← | | PAGING TYPE 1 (PCCH) | Sent on appropriate cycle |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |

7.1.2.4 Specific message contents

7.1.2.4.1 PAGING TYPE 1

This message is sent from the SS to the UE, using the TM RLC SAP, on the PCCH logical channel.

| Information Element | | | | Value/Remark |
|--|---------------|---------------|--------------------|---|
| Message Type | | | | PAGING TYPE 1 |
| UE Information elements | | | | |
| Paging record list | Paging record | CN originator | Paging cause | Terminating Speech Call (note) |
| | | | CN domain identity | CS domain (note) |
| | | | UE Identity | TMSI (GSM-MAP) As specified during Registration procedure |
| Other information elements | | | | |
| BCCH modification info | | | | omit |
| NOTE: These defaults are applied if no subsequent procedure is to be run. Otherwise, the Paging cause, CN domain identity and UE Identity are selected in accordance with the requirements of the following procedure. | | | | |

7.1.2.4.2 RRC CONNECTION REQUEST

This message is sent by the UE to the SS using the TM-RLC SAP. It is sent on the CCCH Logical channel.

| Information Element | | | Value/Remark |
|--|-------------------------------|----------------|--|
| Message Type | | | RRC CONNECTION REQUEST |
| UE information elements | | | |
| Initial UE identity | TMSI and LAI | TMSI (GSM-MAP) | As specified during Registration procedure |
| | | LAI (GSM-MAP) | As specified by default 1 cell environment |
| Initial UE capability | Maximum number of AM entities | | As declared in UE ICS |
| Establishment cause | | | As appropriate |
| Protocol error indicator | | | FALSE |
| >UE Specific Behaviour Information 1 idle | | | This IE will not be checked by default behaviour, but in specific test case. |
| Measurement information elements | | | |
| Measured results on RACH | | | Not checked |
| NOTE: These defaults are applied if no subsequent procedure is to be run. Otherwise, the UE Identity is selected in accordance with the requirements of the following procedure. | | | |

7.1.2.4.3 RRC CONNECTION SETUP

This message is sent from the SS to the UE using the UM-RLC SAP. The message is sent on the CCCH Logical channel.

The default RRC CONNECTION SETUP message for the transition to connected mode CELL_DCH is used except for the IE fields specified below.

| Information Element | | | Value/Remark |
|--|--------------|----------------|--|
| Message Type | | | RRC CONNECTION SETUP |
| UE Information Elements | | | |
| Initial UE identity | TMSI and LAI | TMSI (GSM-MAP) | As specified during Registration procedure |
| | | LAI (GSM-MAP) | As specified by default 1 cell environment |
| RB Information Elements | | | |
| Use default | | | |
| TrCH Information Elements | | | |
| Use default | | | |
| PhyCH Information Elements | | | |
| Frequency info | | | As specified by default 1 cell environment |
| Uplink radio resources | | | |
| Use default | | | |
| Downlink radio resources | | | |
| Use default | | | |
| NOTE: These defaults are applied if no subsequent procedure is to be run. Otherwise, the UE Identity is selected in accordance with the requirements of the following procedure. | | | |

7.1.2.4.4 RRC CONNECTION SETUP COMPLETE

This message is sent by the UE to the SS using AM-RLC SAP. The message is sent on the DCCH Logical channel.

| Information Element | | | Value/Remark |
|--------------------------------|-----------------------------|--------------------------------------|-------------------------------|
| Message Type | | | RRC CONNECTION SETUP COMPLETE |
| UE Information Elements | | | |
| Hyper frame number | | | Not checked |
| UE radio access capability | Conformance test compliance | | R99 |
| | PDCP capability | Support for lossless SRNS relocation | Not checked |

| Information Element | | Value/Remark | |
|---------------------|------------------------------------|--|---|
| | | Supported algorithm types | Not checked |
| | RLC capability | Total RLC AM buffer size | Not checked |
| | | Maximum number of AM entities | Not checked |
| | Transport channel capability | Downlink | |
| | | Max no of bits received | Not checked |
| | | Max convolutionally coded bits received | Not checked |
| | | Max turbo coded bits received | Not checked |
| | | Maximum number of simultaneous transport channels | Not checked |
| | | Max no of received transport blocks | Not checked |
| | | Maximum number of TFC in the TFCS | Not checked |
| | | Maximum number of TF | Not checked |
| | | Support for turbo decoding | Not checked |
| | | Uplink | |
| | | Max no of bits transmitted | Not checked |
| | | Max convolutionally coded bits received | Not checked |
| | | Max turbo coded bits received | Not checked |
| | | Maximum number of simultaneous transport channels | Not checked |
| | | Max no of transmitted transport blocks | Not checked |
| | | Maximum number of TFC in the TFCS | Not checked |
| | | Maximum number of TF | Not checked |
| | | Support for turbo encoding | Not checked |
| | RF capability | UE power class | As declared for UE |
| | | Tx/Rx frequency separation | Not checked |
| | Physical channel capability | Downlink | |
| | | Maximum number of simultaneous CCTrCH | Not checked |
| | | Max no DPCH/PDSCH codes | Not checked (PDSCH: R99 and Rel-4 only) |
| | | Max no physical channel bits received | Not checked |
| | | Support for SF 512 | Not checked |
| | | Support of PDSCH | Not checked (R99 and Rel-4 only) |
| | | Simultaneous reception of SCCPCH and DPCH | Not checked |
| | | Max no of S-CCPCH RL | Not checked |
| | | Uplink | |
| | | Maximum number of DPDCH bits transmitted per 10 ms | Not checked |
| | | Support of PCPCH (R99 and Rel-4 only) | Not checked |
| | UE multi-mode/multi-RAT capability | Multi-RAT capability | |
| | | Multi-mode capability | FDD or FDD/TDD |
| | Security capability | Ciphering algorithm capability | Not checked |
| | | Integrity protection algorithm capability | Not checked |
| | LCS capability | Standalone location method(s) supported | Not checked |

| Information Element | | Value/Remark |
|-------------------------------|-----------------------------------|--------------|
| | UE based OTDOA supported | Not checked |
| | Network Assisted GPS support | Not checked |
| | GPS reference time capable | Not checked |
| | Support for IPDL | Not checked |
| Measurement capability | Need for downlink compressed mode | Not checked |
| | FDD measurements DL | Not checked |
| | TDD measurements DL | Not checked |
| | GSM 900 DL | Not checked |
| | DCS 1800 DL | Not checked |
| | GSM 1900 DL | Not checked |
| | Multi-carrier measurement DL | Not checked |
| | Need for uplink compressed mode | Not checked |
| | FDD measurements UL | Not checked |
| | TDD measurements UL | Not checked |
| | GSM 900 UL | Not checked |
| | DCS 1800 UL | Not checked |
| | GSM 1900 UL | Not checked |
| | Multi-carrier measurement UL | Not checked |
| UE system specific capability | | Not checked |

7.1.3 Radio Bearer Setup Procedure

7.1.3.1 Initial conditions

The procedure specified in clause 7.1.2 will be run. This procedure starts from the successful completion of clause 7.1.2.

7.1.3.2 Definition of system information messages

The default system information messages are used.

7.1.3.3 Procedure

- The SS sends a RADIO BEARER SETUP message to the UE on the DCCH established by the RRC Connection Establishment procedure.
- The SS receives a RADIO BEARER SETUP COMPLETE message from the UE in RLC Acknowledged mode on the DCCH.

On reception of the RADIO BEARER SETUP COMPLETE the procedure is complete.

| Step | Direction | | Message | Comments |
|------|-----------|----|------------------------------------|----------|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP (DCCH) | RRC |
| 2 | | → | RADIO BEARER SETUP COMPLETE (DCCH) | RRC |

7.1.3.4 Specific message contents

7.1.3.4.1 RADIO BEARER SETUP

The RADIO BEARER SETUP message is sent from the System Simulator to the UE, using AM-RLC on the DCCH logical channel.

The default RRC CONNECTION SETUP message for the setup of a speech radio access bearer is used except for the IE fields specified below.

| Information Element | Value/Remark |
|--------------------------------|---|
| Message Type | RADIO BEARER SETUP |
| UE Information Elements | |
| CN Information Elements | |
| RB Information Elements | |
| RAB information for setup | Default parameters for 12.2 kbps speech RAB + 3.4 kbps signalling radio bearer according to clause 6.10.2.4.1.4 for FDD, clause 6.10.3.4.1.4 for 3.84 Mcps TDD and 6.11.5.4.1.4 for 1.28 Mcps TDD |

7.1.3.4.2 RADIO BEARER SETUP COMPLETE

The RADIO BEARER SETUP COMPLETE message is sent from the UE to the System Simulator, using AM-RLC on the DCCH logical channel.

The default RADIO BEARER SETUP COMPLETE message is used.

| Information Element | Value/Remark |
|---------------------|-----------------------------|
| Message Type | RADIO BEARER SETUP COMPLETE |
| Use default | |

7.2 Generic setup procedures

7.2.1 UE Test States for Generic setup procedures

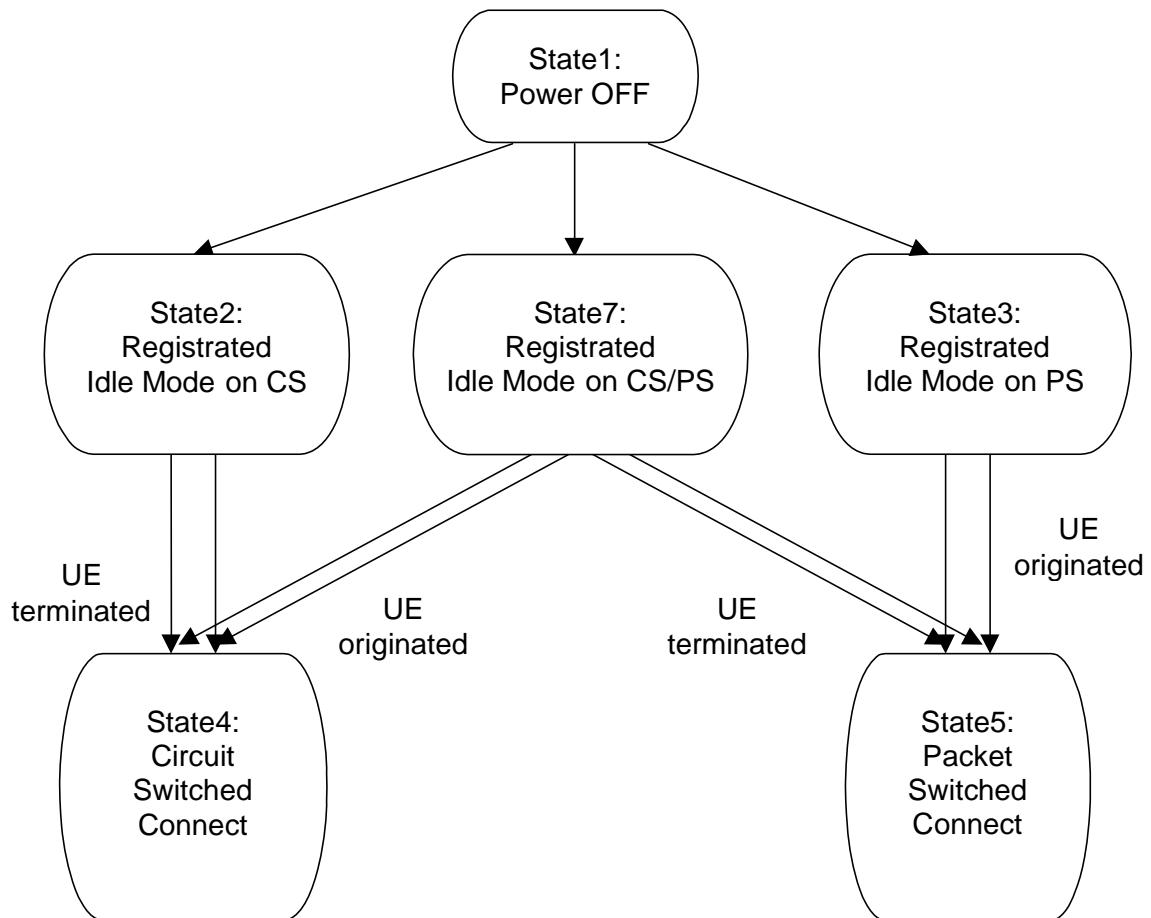

Figure 7.2.1.1: UE Test States for Generic setup procedures

In order that the UE can set up a call in UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.2.1.1 and the status of the relevant protocols in the UE in the different states are given in table 7.2.1.1.

Table 7.2.1.1: The UE states

| | | RRC | CC | MM | SM | GMM |
|--------|-------------------------------|------------|-----------|------------------------|--------------|------------------------|
| State1 | Power OFF | ----- | null | null | pdp-inactive | GMM-null |
| State2 | Registered Idle Mode on CS | idle | null | MM idle | pdp-inactive | GMM-deregistered |
| State3 | Registered Idle Mode on PS | idle | null | null | pdp-inactive | GMM-registered |
| State4 | Circuit Switched Connect | connected | active | MM connection active | pdp-inactive | same as previous state |
| State5 | Packet Switched Connect | connected | null | same as previous state | pdp-active | GMM-registered |
| State7 | Registered Idle Mode on CS/PS | idle | null | MM idle | pdp-inactive | GMM-registered |

7.2.2 Registration of UE

The default procedures required to achieve the changes of state between State 1, in clause 7.2.1, and States 2, 3 and 7 are illustrated in the following clauses.

The choice of which procedure to use given a UE supporting packet services is influenced by the Network Mode of Operation being simulated by the SS and by the Operation Mode of the UE, as described in 3GPP TS 24.008 [32] clause 1.7.2.2. Table 7.2.2 shows the appropriate clause number for each combination of these two modes of operation.

Table 7.2.2: Registration Procedures for UEs Supporting Packet Services

| Network Mode | | NMO I | NMO II |
|---------------------|--------------|--------------|---------------|
| UE Mode | PS/CS | 7.2.2.3 | 7.2.2.4 |
| | PS | 7.2.2.2 | 7.2.2.2 |

7.2.2.1 Registration on CS

7.2.2.1.1 Initial condition

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.2.1.2 Definition of system information messages

The default system information messages are used.

7.2.2.1.3 Procedure

Registration of UE for SS shall be established under ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|--------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | NW Broadcast |
| 2 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 3 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |

7.2.2.1.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.2.2 Registration on PS

7.2.2.2.1 Initial condition

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

-If RAN Assisted WLAN interworking test cases are being performed for ANDSF rules using RAN provided thresholds, ANDSF rules to match the RAN rules defined in TS 25.304 are available in the UE.

7.2.2.2.2 Definition of system information messages

The default system information messages are used.

7.2.2.2.3 Procedure

Registration of UE for SS shall be established under ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | NW Broadcast |
| 2 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |

| 11 | | → | ATTACH COMPLETE | GMM |
| 12 | | ← | RRC CONNECTION RELEASE | RRC |
| 13 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.2.2.2.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.2.3 Registration on CS / PS combined environment

7.2.2.3.1 Initial condition

System Simulator:

- 1 cell operating in network operation mode I, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.
- If RAN Assisted WLAN interworking test cases are being performed for ANDSF rules using RAN provided thresholds, ANDSF rules to match the RAN rules defined in TS 25.304 are available in the UE.

7.2.2.3.2 Definition of system information messages

The default system information messages are used.

7.2.2.3.3 Procedure UE establish PS registration immediately after the UE has been switched on

Registration of UE for SS shall be established under ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | NW Broadcast |
| 2 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 3 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 4 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 5 | | → | ATTACH REQUEST | GMM |
| 6 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 7 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 8 | | ← | SECURITY MODE COMMAND | RRC |
| 9 | | → | SECURITY MODE COMPLETE | RRC |
| 10 | | ← | ATTACH ACCEPT | GMM |
| 11 | | → | ATTACH COMPLETE | GMM |
| 12 | | ← | RRC CONNECTION RELEASE | RRC |
| 13 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.2.2.3.3a Procedure UE establish PS registration later the user decides to use the PS services

CS registration has been successfully completed and RRC connection is released, see clause 7.2.2.1. Registration of UE for SS shall be established under ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | NW Broadcast |
| 1a | | | | The UE initiates an attach by MMI or by AT command. |
| 2 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |

| | | | |
|----|---|---------------------------------|-----|
| 13 | → | RRC CONNECTION RELEASE COMPLETE | RRC |
|----|---|---------------------------------|-----|

7.2.2.3.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.2.4 Registration on CS / PS non-combined environment

7.2.2.4.1 Initial condition

System Simulator:

- 1 cell operating in network operation mode II, default parameters.

User Equipment:

- The UE set to Operation mode A
- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.2.4.2 Definition of system information messages

The default system information messages are used.

7.2.2.4.3 Procedure

Registration of UE for SS shall be established under ideal radio conditions as defined in clause 5.

Registrations in the CS domain and in the PS domain shall execute independently. The separate registration procedures may occur sequentially or in parallel. If the procedures occur sequentially PS domain registration can be started immediately after power on or the UE can initiate PS registration by MMI or by AT command. If MMI or AT commands are used, registrations are done with two separate RRC connections. The procedures for CS and PS registration shall be as defined in clauses 7.2.2.1 and 7.2.2.2.

7.2.2.4.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.3 Call setup

7.2.3.1 Generic call set up procedure for mobile terminating circuit switched calls

7.2.3.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.1.2 Definition of system information messages

The default system information messages are used.

7.2.3.1.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------|----------|
| | UE | SS | | |

| Step | Direction | | Message | Comments |
|--|-----------|----|--------------------------------------|-------------------------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING (PCCH) | Paging |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | PAGING RESPONSE | RR |
| 7 | ← | | AUTHENTICATION REQUEST | MM |
| 8 | → | | AUTHENTICATION RESPONSE | MM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |
| 11 | ← | | SET UP | CC (see note) |
| 12 | → | | CALL CONFIRMED | CC |
| 13 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 14 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | → | | ALERTING | CC (this message is optional) |
| 16 | → | | CONNECT | CC |
| 17 | ← | | CONNECT ACKNOWLEDGE | CC |
| NOTE: The "Signal" information element is not included in the SETUP message. | | | | |

7.2.3.1.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.3.2 Generic call set-up procedure for mobile originating circuit switched calls

7.2.3.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.2.2 Definition of system information messages

The default system information messages are used.

7.2.3.2.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|---------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |

|----|---|---------------------|----|
| 16 | → | CONNECT ACKNOWLEDGE | CC |
|----|---|---------------------|----|

7.2.3.2.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.3.3 Supplementary service procedures

7.2.3.3.1 Generic procedures for Multiparty call set up

7.2.3.3.1.1 General on generic procedures for Multiparty call set up

In the generic procedures for Multiparty call set up the following conventions shall apply. Subscriber A is the UE under test, and subscribers B, C, D and E are distant parties to the calls are made. The calls between the UE under test and subscriber B, C, D and E are referenced by Call A-B, Call A-C, Call A-D and Call A-E. The value of the transaction identifier for each call is arbitrary, except that each value must be different from the other ones.

7.2.3.3.1.2 Call A-B in state U10 "Active" with auxiliary state "Call held"

7.2.3.3.1.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.3.1.2.2 Definition of system information messages

The default system information messages are used.

7.2.3.3.1.2.3 Procedure

The procedure shall be performed under ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | UE | SS | | |
| 1 | | | The UE is made to have Call A-B in state U10 "Active". | This state is achieved by the procedure given in section 7.2.3.2. |
| 2 | | | Make the UE to put Call A-B on hold | |
| 3 | → | | HOLD | CC |
| 4 | | ← | HOLD ACKNOWLEDGE | CC |

7.2.3.3.1.2.4 Specific message contents

All Specific message contents shall be referred to clause 9 with the following exceptions.

HOLD (Step 3)

| Information Element | Value/remark |
|------------------------|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |
| Message type | xx01 1000 B, bits 7 and 8 are not checked |

HOLD ACKNOWLEDGE (Step 4)

| Information Element | Value/remark |
|------------------------|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B |

| Information Element | Value/remark |
|---------------------|--------------|
| Message type | 0001 1001 B |

7.2.3.3.1.3 Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U4 "Call Delivered"

7.2.3.3.1.3.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.3.1.3.2 Definition of system information messages

The default system information messages are used.

7.2.3.3.1.3.3 Procedure

The procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---|---|
| | UE | SS | | |
| 1 | | | The UE is made to have Call A-B in state U10 "Active" with auxiliary state "Call held". | This state is achieved by the procedure given in section 7.2.3.3.1.2. |
| 2 | | | Make the UE attempt a call to subscriber C | |
| 3 | → | | CM SERVICE REQUEST | MM |
| 4 | ← | | CM SERVICE ACCEPT | MM |
| 5 | → | | SET UP | CC |
| 6 | ← | | CALL PROCEEDING | CC |
| 7 | ← | | ALERTING | CC |

7.2.3.3.1.3.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.3.3.1.4 Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U10 "Active"

7.2.3.3.1.4.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.3.1.4.2 Definition of system information messages

The default system information messages are used.

7.2.3.3.1.4.3 Procedure

The procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | Message | Comments |
|------|-----------|---------|----------|
|------|-----------|---------|----------|

| | UE | SS | | |
|---|----|----|---|---|
| 1 | | | The UE is made to have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U4 "Call Delivered" with no auxiliary state. | This state is achieved by the procedure given in section 7.2.3.3.1.3. |
| 2 | ← | | CONNECT | CC |
| 3 | → | | CONNECT ACKNOWLEDGE | CC |

7.2.3.3.1.4.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.3.3.1.5 Call A-B and Call A-C in state U10 "Active" with Auxiliary state "Call in MPTY"

7.2.3.3.1.5.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.3.1.5.2 Definition of system information messages

The default system information messages are used.

7.2.3.3.1.5.3 Procedure

The procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | UE | SS | | |
| 1 | | | The UE is made to have Call A-B in state U10 "Active" with auxiliary state "Call held" and Call A-C in state U10 "Active" with no auxiliary state. | This state is achieved by the procedure given in section 7.2.3.3.1.4. |
| 2 | | | Make the UE to join Call A-B and Call A-C | |
| 3 | → | | FACILITY | CC |
| 4 | ← | | FACILITY | CC |

7.2.3.3.1.5.4 Specific message contents

All Specific message contents shall be referred to clause 9 with the following exceptions.

FACILITY with Invoke component (Step 3)

| Information Element | Value/remark |
|----------------------------------|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | The same value that has been used in Call A-B or Call A-C |
| Message type | xx11 1010 B, bits 7 and 8 are not checked |
| Facility IE | |
| - Length of Facility IE contents | 8 |
| - Component type tag | 1010 0001 B (invoke) |
| - Component length | 6 |
| - Invoke ID tag | 0000 0010 B (invoke ID) |
| - Invoke ID length | 1 |
| - Invoke ID | arbitrary integer value. |
| - Operation Code tag | 0000 0010 B |
| - Operation Code length | 1 |
| - Operation Code | 0111 1100 B (BuildMPTY) |
| - Parameters | not present |

FACILITY with Return Result component (Step 4)

| Information Element | Value/remark |
|----------------------------------|---|
| Protocol discriminator | 0011 B (call control; call related SS messages) |

7.2.3.3.1.10 Call A-B and Call A-C in state U10 "Active" with Auxiliary state "Call in MPTY" and Call A-D in state U7 "Call received"

7.2.3.3.1.10.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.3.3.1.10.2 Definition of system information messages

The default system information messages are used.

7.2.3.3.1.10.3 Procedure

The procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|---|
| | UE | SS | | |
| 1 | | | The UE is made to have a MultiParty call to two destinations (Call A-B and Call A-C) active. Both call states shall be U10 "Active" with auxiliary state "Call in MPTY". A mobile terminating call is set up between the UE and destination D (Call A-D). | This state is achieved by the procedure given in section 7.2.3.3.1.5. |
| 2 | ← | | SETUP | CC |
| 3 | → | | CALL CONFIRMED | CC |
| 4 | → | | ALERTING | CC |

7.2.3.3.1.10.4 Specific message contents

All Specific message contents shall be referred to clause 9.

SETUP (Step 2)

| Information Element | Value/remark |
|------------------------|--|
| Protocol discriminator | 0011 B (call control; call related SS messages) |
| Transaction identifier | A value that has not been used in Call A-B or Call A-C |
| Message type | 0000 0101 B |
| BC repeat indicator | not present |

| Information Element | Value/remark |
|--|--------------|
| Bearer capability 1 | Present |
| - Bearer capability IEI | 0000 0100 B |
| - Length of the bearer capability contents | 1 |
| - octet 3 | |
| - Extension | 1 B |
| - Radio Channel Requirement | 01 B |
| - Coding Standard | 0 B |
| - Transfer Mode | 0 B |
| - Information Transfer Capability | 000 B |
| Bearer capability 2 | not present |
| Facility | not present |
| Progress indicator | not present |
| Signal | Present |
| - Signal IEI | 0011 0100 B |
| - Signal Value | 0000 0111 B |
| Calling party BCD Number | not present |
| Calling party sub-Address | not present |
| Called party BCD Number | not present |
| Called party sub-Address | not present |
| Redirecting party BCD number | not present |
| Redirecting party sub-address | not present |
| LLC repeat indicator | not present |
| Low layer Compatibility I | not present |
| Low layer Compatibility II | not present |
| HLC repeat indicator | not present |
| High layer Compatibility i | not present |
| High layer Compatibility ii | not present |
| User-user | not present |
| Priority | not present |
| Alert | not present |
| Network Call Control Capabilities | not present |
| Cause of No CLI | not present |
| Backup bearer capability | not present |

7.2.4 Session setup

7.2.4.1 Generic session set up procedure for mobile terminating packet switched sessions

7.2.4.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.4.1.2 Definition of system information messages

The default system information messages are used.

7.2.4.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|-------------------------------|-----------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |

| | | | |
|----|---|---------------------------------------|----------------------|
| 5 | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | SERVICE REQUEST | GMM |
| 7 | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | ← | SECURITY MODE COMMAND | RRC |
| 10 | → | SECURITY MODE COMPLETE | RRC |
| 11 | ← | REQUEST PDP CONTEXT ACTIVATION | SM |
| 12 | → | ACTIVATE PDP CONTEXT REQUEST | SM (NOTE 1, NOTE 2) |
| 13 | ← | RADIO BEARER SETUP | RRC RAB SETUP |
| 14 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | ACTIVATE PDP CONTEXT ACCEPT | SM |

NOTE 1: The UE implemented according to the Rel-7 and earlier versions of the specification may include static PDP address. The UE implemented according to the Rel-8 and later versions of the specification shall not include the PDP address but the PDP address allocation is dynamic and shall be handled by the SS by including the IPv4 PDP address (set as per PIXIT) in the ACTIVATE PDP CONTEXT ACCEPT message. In UTRA-EUTRA test cases IPv4 and/or IPv6 address (set as per PIXIT) is included in the ACTIVATE PDP CONTEXT ACCEPT message.

NOTE 2: UEs supporting S1 mode shall indicate subscribed, interactive or background traffic class in the QoS requested. UEs not supporting S1 mode should indicate subscribed, interactive or background traffic class in the QoS requested.

NOTE 3: In RAN Assisted WLAN interworking test cases in the ACTIVATE PDP CONTEXT ACCEPT message WLAN Offload Indication is set as '0010'B indicating Offloading of the PDN connection is allowed.

7.2.4.1.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.4.2 Generic session set up procedure for mobile originating packet switched sessions

7.2.4.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions.
- The Test-USIM shall be inserted.

7.2.4.2.2 Definition of system information messages

The default system information messages are used.

7.2.4.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|-----------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |

NOTE 1: The UE implemented according to the Rel-7 and earlier versions of the specification may include static PDP address. The UE implemented according to the Rel-8 and later versions of the specification shall not include the PDP address but the PDP address allocation is dynamic and shall be handled by the SS by including the IPv4 PDP address (set as per PIXIT) in the ACTIVATE PDP CONTEXT ACCEPT message. In UTRA-EUTRA test cases IPv4 and/or IPv6 address (set as per PIXIT) in the ACTIVATE PDP CONTEXT ACCEPT message.

NOTE 2: UEs supporting S1 mode shall indicate subscribed, interactive or background traffic class in the QoS requested. UEs not supporting S1 mode should indicate subscribed, interactive or background traffic class in the QoS requested.

NOTE 3: In RAN Assisted WLAN interworking test cases in the ACTIVATE PDP CONTEXT ACCEPT message WLAN Offload Indication is set as '0010'B indicating Offloading of the PDN connection is allowed.

7.2.4.2.4 Specific message contents

All Specific message contents shall be referred to clause 9.

7.2.5 IMS Emergency Call setup

7.2.5.1 Generic IMS Emergency call set up procedure for mobile originating packet switched sessions – Normal Service

7.2.5.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 7).
- The Test-USIM shall be inserted and is capable of making Emergency Call.

7.2.5.1.2 Definition of system information messages

The default system information messages are used.

7.2.5.1.3 Procedure

The Emergency IMS Call Set-up procedure shall be performed under Ideal radio conditions as defined in clause 5.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|----------------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | | Make the UE attempt an IMS Emergency call | |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) with 'establishmentCause' set to 'emergency' | NOTE 1 |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | SERVICE REQUEST | GMM |
| 7 | | ← | SECURITY MODE COMMAND | RRC |
| 8 | | → | SECURITY MODE COMPLETE | RRC |
| 9 | | → | ACTIVATE PDP CONTEXT REQUEST with 'Request Type' set to 'Emergency' | SM (NOTE 2, NOTE 3) |

| | | | |
|----|---|--|---|
| 10 | ← | RADIO BEARER SETUP | The SS establishes the AM RAB for IMS signalling |
| 11 | → | RADIO BEARER SETUP COMPLETE | EXCEPTION: In parallel to the events described in steps 15 to 21 below, the behaviour in steps 13 and 14 occurs |
| 12 | | | |
| 13 | | | Steps 1-4 defined in annex C.20 in TS 34.229-1 [46] |
| 14 | | | Steps defined in annex C22 in TS 34.229-1[46] |
| 15 | ← | ACTIVATE PDP CONTEXT ACCEPT | The SS accepts the PDP context |
| 16 | ← | REQUEST SECONDARY PDP CONTEXT ACTIVATION | The SS requests a Secondary PDP context activation and starts timer T3385 (NOTE 4) |
| 17 | → | ACTIVATE SECONDARY PDP CONTEXT REQUEST | The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380 (NOTE 4) |
| 18 | | | The SS stops timer T3385 |
| 19 | ← | RADIO BEARER SETUP | The SS establishes the UM RAB for IMS voice |
| 20 | → | RADIO BEARER SETUP COMPLETE | The SS accepts the Secondary PDP context activation with the requested QoS |
| 21 | ← | ACTIVATE SECONDARY PDP CONTEXT ACCEPT | |

NOTE 1: The RRC establishment cause will be set to "Emergency".

NOTE 2: The UE shall not include the PDP address but the PDP address allocation is dynamic and shall be handled by the SS by including the IPv4 PDP and/or IPv6 address (set as per PIXIT) in the ACTIVATE PDP CONTEXT ACCEPT message.

NOTE 3: The UEs supporting S1 mode shall include interactive or background traffic class in the QoS requested. The UEs not supporting S1 mode should include interactive or background traffic class in the QoS requested.

NOTE 4: 'Conversational' is included in the QoS in the REQUEST SECONDARY PDP CONTEXT ACTIVATION and in the ACTIVATE SECONDARY PDP CONTEXT REQUEST message sent by the UE.

7.2.5.1.4 Specific message contents

All Specific message contents shall be referred to clause 9.

Step 5: The UE transmits an *RRCConnectionSetupComplete* message to confirm the successful completion of the connection establishment and

Step 6: The UE transmits the SERVICE REQUEST message.

Step 7: The SS transmits a *SecurityModeCommand* message to activate AS security.

Step 8: The UE transmits a *SecurityModeComplete* message and establishes the initial security configuration.

Step 9: UE transmits an Activate PDP Context Request message with Request Type set to Emergency with a PDP type number "IPv4v6 address" in the Requested PDP address information element. See TS 34.229 Annex C.17

Step 10: SS sends Radio Bearer Setup message - Use the same message as specified for "Packet to CELL_DCH / E-DCH / HS-DSCH using one multiplexing option (1/1) and SRBs mapped on E-DCH/HS-DSCH", condition A17c.

Step 19: Use the following specific message content:

RADIO BEARER SETUP

| Information Element | Value/remark |
|---|--|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| Integrity protection mode info | Not Present |
| Ciphering mode info | Not Present |
| Activation time | $(256 + \text{CFN} - (\text{CFN} \bmod 8 + 8)) \bmod 256$ |
| New U-RNTI | Not Present |
| New C-RNTI | Not Present |
| New DSCH-RNTI | Not Present |
| New H-RNTI | '1010 1010 1010 1010' |
| New Primary E-RNTI | '1010 1010 1010 1010' |
| New Secondary E-RNTI | Not Present |
| RRC State indicator | CELL_DCH |
| UTRAN DRX cycle length coefficient | Not Present |
| CN information info | Not Present |
| URA identity | Not Present |
| RNC support for change of UE capability | Not Present |
| CHOICE Specification mode | Complete specification |
| - Signalling RB information to setup | Not Present |
| - RAB information for setup | |
| - RAB info | (Conversational UM DTCH for PS domain) |
| - RAB identity | 0000 0110B |
| | The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. |
| - CN domain identity | PS domain |
| - NAS Synchronization Indicator | Not Present |
| - Re-establishment timer | useT314 |
| - RB information to setup | |
| - RB identity | 27 |

7.2.5.2 Generic IMS Emergency call set up procedure for mobile originating packet switched sessions – Limited Service

7.2.5.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in GMM-DEREGISTERED.LIMITED-SERVICE state. .
- The Test-USIM shall be inserted and is capable of making Emergency Call.

7.2.5.2.2 Definition of system information messages

The default system information messages are used, except the SIB3 contents specified in 7.2.5.2.4.

7.2.5.2.3 Procedure

The establishment of Emergency IMS Call Set-up procedure is assumed to be mobile originated.

| Step | Direction | | Message | Comments |
|------|-----------|----|--|----------|
| | UE | SS | | |
| 1 | | | Make the UE attempt an IMS Emergency call | |
| 2 | → | | RRC CONNECTION REQUEST (CCCH) with 'establishmentCause' set to 'emergency' | |
| 3 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 4 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |

| 12 | → | ACTIVATE PDP CONTEXT REQUEST with 'Request Type' set to 'Emergency' | SM (NOTE 1, NOTE 2) |
| 13 | ← | RADIO BEARER SETUP | The SS establishes the AM RAB for IMS signalling |
| 14 | → | RADIO BEARER SETUP COMPLETE | |
| 15 | | | EXCEPTION: In parallel to the events described in steps 17 to 23 below, the behaviour in steps 16 occurs. |
| 16 | | | Steps defined in annex C22 in TS 34.229-1[46] |
| 17 | ← | ACTIVATE PDP CONTEXT ACCEPT | The SS accepts the PDP context |
| 18 | ← | REQUEST SECONDARY PDP CONTEXT ACTIVATION | The SS requests a Secondary PDP context activation and starts timer T3385 (NOTE 3) |
| 19 | → | ACTIVATE SECONDARY PDP CONTEXT REQUEST | The UE requests a Secondary PDP context activation, enters the state PDP-ACTIVE-PENDING and starts timer T3380 (NOTE 3) |
| 20 | | | The SS stops timer T3385 |
| 21 | ← | RADIO BEARER SETUP | The SS establishes the UM RAB for IMS voice |
| 22 | → | RADIO BEARER SETUP COMPLETE | |
| 23 | ← | ACTIVATE SECONDARY PDP CONTEXT ACCEPT | The SS accepts the Secondary PDP context activation with the requested QoS |

NOTE 1: The UE shall not include the PDP address but the PDP address allocation is dynamic and shall be handled by the SS by including the IPv4 and/or IPv6 PDP address (set as per PIXIT) in the ACTIVATE PDP CONTEXT ACCEPT message.

NOTE 2: The UEs supporting S1 mode shall include interactive or background traffic class in the QoS requested. The UEs not supporting S1 mode should include interactive or background traffic class in the QoS requested.

NOTE 3: 'Conversational' is included in the QoS in the REQUEST SECONDARY PDP CONTEXT ACTIVATION and in the ACTIVATE SECONDARY PDP CONTEXT REQUEST message sent by the UE.

7.2.5.2.4 Specific message contents

All Specific message contents shall be referred to clause 9.

SYSTEM INFORMATION BLOCK TYPE 3 (Step 1)

The same content as in default message in TS 34.108 section 6.1.0b with the following exceptions:

| Information Element | Value/remark |
|---------------------------------|---|
| IMS Emergency Support Indicator | This IE specifies the support of IMS emergency call in the cell for limited service mode UE |

Step 4: The UE transmits an *RRCConnectionSetupComplete* message to confirm the successful completion of the connection establishment

ATTACH REQUEST (Step 5)

| Information Element | Value/remark |
|---------------------------------|---|
| Attach Request message identity | Emergency Attach, Follow-on request pending |
| Mobile identity | IMSI |

Step 8: The SS transmits a *SecurityModeCommand* message to activate AS security.

Step 9: The UE transmits a *SecurityModeComplete* message and establishes the initial security configuration.

ATTACH ACCEPT (Step 10)

| Information Element | Value/remark |
|---|---|
| Emergency number list | 10 numbers (TS 24.008, 10.5.3.13) The numbers shall be different than any of those indicated in TS 22.101 clause 10.1.1 AND the numbers stored in the USIM |
| Network feature support information element | Emergency bearer services supported in lu mode, but not supported in A/Gb mode |

Step 12: UE transmits a Activate PDP Context Request message with Request Type set to Emergency with a PDP type number "IPv4v6 address" in the Requested PDP address information element. See TS 34.229 Annex C.17

Step 13: SS sends Radio Bearer Setup message - Use the same message as specified in clause 7.2.5.1.4 step 10

Step 21: SS sends Radio Bearer Setup message - Use the same message as specified in clause 7.2.5.1.4 step 19.

7.2.6 IP address allocation

UE IP address is allocated during the mobile originating packet switched sessions procedure referred to 7.2.4.2.

If UE supports IPv4/IPv6 or IPv6, a full IPv6 address is allocated to UE via NAS signalling in the PDP CONTEXT ACCEPT message. Once the PDP context is established, if the UE supports IPv6 it may perform IPv6 Stateless Address Autoconfiguration. The UE sends an **ICMPv6 Router Solicitation** message; as response the network sends an **ICMPv6 Router Advertisement** message.

Depending on the UE configuration there may be unpredictable delay in the start of the Stateless Address Auto configuration procedure. A guarding time of 1.2 sec is granted within which the procedure is expected to start. If the timer expires then the test shall advance to the next specified step in the test sequence.

7.3 Test procedures for RF test

NOTE: In general parameters defined for specific test cases in 3GPP TS 34.121 [2] take priority over the default parameters defined in the present document.

7.3.1 UE Test States for RF testing

In this clause, the states of the UE for the test are defined. For RF testing the same UE test states as specified in section 7.2.1 apply plus an additional RB Test Mode State. The RB Test Mode State can be reached from the UE States 2, 3 and 7 according to section 7.2.1. For this RB Test Mode State the different protocols shall be in the following states:

| | RRC | CC | MM | SM | GMM |
|--|-----------|------|----------|--------------|------------------------|
| RB Test Mode State | connected | null | see Note | pdp-inactive | same as previous state |
| NOTE: The MM state is "MM connection active" if an RRC connection exists for the CS domain otherwise it is "same as previous state". | | | | | |

7.3.2 Test procedure for TX, RX and Performance Requirement (without handover)

7.3.2.1 Initial conditions

System Simulator

- test cases using 1 cell:
 - 1cell, default parameters.
- other test cases using this test procedure:
 - Number of cells and parameters for specific tests are defined in 3GPP TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.2.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.2.3 Procedure

7.3.2.3.1 For UE supporting CS

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|--------------------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |

| | | | |
|----|---|---------------------------------|---|
| 6 | → | PAGING RESPONSE | RR |
| 7 | ← | AUTHENTICATION REQUEST | MM |
| 8 | → | AUTHENTICATION RESPONSE | MM |
| 9 | ← | SECURITY MODE COMMAND | RRC |
| 10 | → | SECURITY MODE COMPLETE | RRC |
| 11 | ← | ACTIVATE RB TEST MODE | TC |
| 12 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | RADIO BEARER SETUP | RRC (RAB SETUP) |
| 14 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up) |
| 16 | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 17 | ← | OPEN UE TEST LOOP | TC |
| 18 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 19 | ← | RRC CONNECTION RELEASE | RRC |
| 20 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.2.3.2 For UE supporting PS only

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | SERVICE REQUEST | GMM |
| 7 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |
| 11 | ← | | ACTIVATE RB TEST MODE | TC |
| 12 | → | | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | | RADIO BEARER SETUP | RRC (RAB SETUP) |
| 14 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up) |
| 16 | → | | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 17 | ← | | OPEN UE TEST LOOP | TC |
| 18 | → | | OPEN UE TEST LOOP COMPLETE | TC |
| 19 | ← | | RRC CONNECTION RELEASE | RRC |
| 20 | → | | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.2.3.3 For CS+PS multi RAB combination

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|--------------------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | PAGING RESPONSE | RR |
| 7 | ← | | AUTHENTICATION REQUEST | MM |
| 8 | → | | AUTHENTICATION RESPONSE | MM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |

| | | | |
|----|---|---------------------------------|---|
| 11 | ← | PAGING TYPE 2 (DCCH) | TMSI (GSM-MAP)/ P-TMSI |
| 12 | → | SERVICE REQUEST | GMM |
| 13 | ← | SECURITY MODE COMMAND | RRC |
| 14 | → | SECURITY MODE COMPLETE | RRC |
| 15 | ← | ACTIVATE RB TEST MODE | TC |
| 16 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 17 | ← | RADIO BEARER SETUP | RRC CS radio bearer(s) are configured |
| 18 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 19 | ← | RADIO BEARER SETUP | RRC PS radio bearer(s) are configured |
| 20 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 21 | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up) |
| 22 | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 23 | ← | OPEN UE TEST LOOP | TC |
| 24 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 25 | ← | RRC CONNECTION RELEASE | RRC |
| 26 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.2.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.2.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE, used for the UE supporting PS only.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.2.4.2 Reference measurement channels

The configurations of the reference measurement channels for RF tests are described in 3GPP TS 34.121 [2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.2.4.3 Void

7.3.2.4.4 Compressed mode

[T.B.D]

7.3.2.4.5 Transmit diversity mode

[T.B.D]

7.3.3 Test procedure for test cases using Cell_PCH or URA_PCH state

7.3.3.1 Initial conditions

System Simulator:

- Number of cells and parameters for specific tests are defined in 3GPP TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.

- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.3.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.3.3 Procedure

7.3.3.3.1 For UE supporting PS

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------------------------|
| | UE | SS | | |
| 1 | | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | SERVICE REQUEST | GMM |
| 7 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | | ← | SECURITY MODE COMMAND | RRC |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | ACTIVATE RB TEST MODE | TC |
| 12 | | → | ACTIVATE RB TEST MODE COMPLETE | TC |

| | | | |
|----|---|---|--|
| 13 | ← | RADIO BEARER SETUP | RRC - RAB SETUP using Reference Radio Bearer Configuration |
| 14 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | PHYSICAL CHANNEL RECONFIGURATION | RRC - RRC state indicator is set to "Cell_PCH" or "URA_PCH" depending on the test case |
| 16 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | RRC The UE sends this message before it completes state transition. |
| 17 | | Void | SS sends the L2 ack on the PHYSICAL CHANNEL RECONFIGURATION COMPLETE message. NOTE: The SS should continue to keep the dedicated channel configuration during the time when the L2 ack is sent to the UE. |

7.3.3.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

The RADIO BEARER SETUP message is defined in clause 9.2.1, "Contents of RADIO BEARER SETUP message: AM or UM (UE supports PS RAB only)".

The PHYSICAL CHANNEL RECONFIGURATION message is defined in clause 9.1.1, "Contents of PHYSICAL CHANNEL RECONFIGURATION message: AM or UM" using condition A8 for URA_PCH and condition A10 for Cell_PCH.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.4 Test procedure for Handover

NOTE: This test procedure is also used for some other test cases involving more than 1 cell.

7.3.4.1 Initial conditions

System Simulator:

- Intra-frequency hard handover and soft handover (for FDD) case:
 - 2 cells, default parameters according to Cell 1 and Cell 2 in clause 6.1.4.
- Inter-frequency hard handover case:
 - 2 cells, default parameters according to Cell 1 and Cell 4 in clause 6.1.4.
- Inter-system handover UTRAN to GSM case:
 - 2 cells, default parameters according to Cell 1 and Cell 9 in clause 6.1.4.
- other test cases using this test procedure:
 - Number of cells and parameters for specific tests are defined in 3GPP TS 34.121 [2] for FDD and TS 34.122 [5] for TDD and take priority over the default parameters.

UserEquipment:

- The UE shall be initially operated under the normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.

- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.4.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

For the intra-frequency hard handover and soft handover (for FDD) case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 2 in clause 6.1.4 are used.

For the inter-frequency hard handover case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 4 in clause 6.1.4 are used.

For the inter-system handover from UTRAN to GSM case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 9 in clause 6.1.4 are used.

7.3.4.3 Procedure

7.3.4.3.1 For UE supporting CS

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|-----------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |

| | | | |
|----|---|--------------------------------------|---|
| 2 | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | PAGING RESPONSE | RR |
| 7 | ← | AUTHENTICATION REQUEST | MM |
| 8 | → | AUTHENTICATION RESPONSE | MM |
| 9 | ← | SECURITY MODE COMMAND | RRC |
| 10 | → | SECURITY MODE COMPLETE | RRC |
| 11 | ← | ACTIVATE RB TEST MODE | TC |
| 12 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | RADIO BEARER SETUP | RRC - RAB SETUP using Reference Radio Bearer Configuration - RRC state indicator is set to "CELL_DCH" |
| 14 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | RRC CONNECTION RELEASE | RRC |
| 16 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.4.3.2 For UE supporting PS only

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | SERVICE REQUEST | GMM |
| 7 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | | ← | SECURITY MODE COMMAND | RRC |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | ACTIVATE RB TEST MODE | TC |
| 12 | | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | | ← | RADIO BEARER SETUP | RRC - RAB SETUP using Reference Radio Bearer Configuration - RRC state indicator is set to "CELL_DCH" |
| 14 | | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | | ← | RRC CONNECTION RELEASE | RRC |
| 16 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.4.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.5 Test procedure for test cases using CELL_FACH state

7.3.5.1 Initial conditions

System Simulator:

- Number of cells and parameters for specific tests are defined in TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.5.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.5.3 Procedure

7.3.5.3.1 For UE supporting CS

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|--------------------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | PAGING RESPONSE | RR |

| | | | |
|----|---|----------------------------------|-----|
| 7 | ← | AUTHENTICATION REQUEST | MM |
| 8 | → | AUTHENTICATION RESPONSE | MM |
| 9 | ← | SECURITY MODE COMMAND | RRC |
| 10 | → | SECURITY MODE COMPLETE | RRC |
| 11 | ← | ACTIVATE RB TEST MODE | TC |
| 12 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | DEACTIVATE RB TEST MODE | TC |
| 14 | → | DEACTIVATE RB TEST MODE COMPLETE | TC |
| 15 | ← | RRC CONNECTION RELEASE | RRC |
| 16 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.5.3.2 For UE supporting PS only

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------------------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | SERVICE REQUEST | GMM |
| 7 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |
| 11 | ← | | ACTIVATE RB TEST MODE | TC |
| 12 | → | | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | | DEACTIVATE RB TEST MODE | TC |
| 14 | → | | DEACTIVATE RB TEST MODE COMPLETE | TC |
| 15 | ← | | RRC CONNECTION RELEASE | RRC |
| 16 | → | | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.5.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

The RRC connection setup is defined in clause 9.1.1, "Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)".

7.3.6 Test procedure for HSDPA RF Performance Requirement

7.3.6.1 Initial conditions

System Simulator:

- 1 HS-DSCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.6.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.6.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | PAGING RESPONSE | RR |
| 7 | | ← | AUTHENTICATION REQUEST | MM |
| 8 | | → | AUTHENTICATION RESPONSE | MM |
| 9 | | ← | SECURITY MODE COMMAND | RRC (CS domain) |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | PAGING TYPE2 (DCCH) | Paging (TMSI (GSM-MAP)/ P-TMSI) |
| 12 | | → | SERVICE REQUEST | GMM |
| 13 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 14 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 15 | | ← | SECURITY MODE COMMAND | RRC (PS domain, IE Integrity protection mode command set to "modify") |

| | | | |
|-----|------|---------------------------------|--|
| 16 | → | SECURITY MODE COMPLETE | RRC |
| 17 | ← | ACTIVATE RB TEST MODE | TC |
| 18 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 19 | ← | RADIO BEARER SETUP | RRC (RAB SETUP RMC 12.2 CS) |
| 20 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 21 | ← | RADIO BEARER SETUP | RRC (RAB SETUP HSDPA PS) |
| 22 | → | RADIO BEARER SETUP COMPLETE | RRC |
| A23 | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up to loop the RMC 12.2 to UL RMC 12.2) . Test steps A23, A24, A26 and A27 are only executed when the test method in TS 34.121 [2] specifies that loopback test shall be used. |
| A24 | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 25 | <--> | | Perform test |
| A26 | ← | OPEN UE TEST LOOP | TC |
| A27 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 28 | ← | RRC CONNECTION RELEASE | RRC |
| 29 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.6.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.6.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.6.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (HSDPA)" is used.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.6.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.3.7 Test procedure for inter-RAT handover used in RRM testing

7.3.7.1 Initial conditions

System Simulator:

- 2 cells, default parameters according to Cell 1 and Cell 9 in clause 6.1.4.

UserEquipment:

- The UE shall be initially operated under the normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.7.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

For the inter-system handover from UTRAN FDD to GSM case the default messages for SIB11 and SIB12 as specified for Cell 1 and Cell 9 in clause 6.1.4 are used.

7.3.7.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------|-----------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING (PCCH) | Paging |

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|-------------------------------|
| | UE | SS | | |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC (Transition to cell DCH) |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | PAGING RESPONSE | RR |
| 7 | ← | | AUTHENTICATION REQUEST | MM |
| 8 | → | | AUTHENTICATION RESPONSE | MM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |
| 11 | ← | | SET UP | CC (see note) |
| 12 | → | | CALL CONFIRMED | CC |
| 13 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 14 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | → | | ALERTING | CC (this message is optional) |
| 16 | → | | CONNECT | CC |
| 17 | ← | | CONNECT ACKNOWLEDGE | CC |

NOTE: The "Signal" information element is not included in the SETUP message.

7.3.7.4 Specific message contents

The default message contents specified in clause 9.1 are used with the following exceptions.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.8 Test procedure for inter-RAT cell FACH reselection used in RRM testing

7.3.8.1 Initial conditions

System Simulator:

- Number of cells and parameters for specific tests are defined in TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.8.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|--------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |

| | |
|---|--|
| - CN domain specific NAS system information - GSM-MAP NAS system information - CN domain specific DRX cycle length coefficient - UE Timers and constants in connected mode - T305 | 00(T3212 is set to infinity) 01 7 Infinity |
|---|--|

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--|---|
| - Secondary CCPCH system information - Secondary CCPCH info - CHOICE mode - Secondary scrambling code - STTD indicator - Spreading factor - Code number - Pilot symbol existence - TFCI existence - Fixed or Flexible position - Timing offset | FDD Not Present FALSE 64 2 FALSE TRUE (default value) Flexible (default value) Not Present Absence of this IE is equivalent to default value 0 |

7.3.8.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---------------|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 3 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 4 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 5 | → | | SERVICE REQUEST | GMM |
| 6 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 7 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 8 | ← | | SECURITY MODE COMMAND | RRC |
| 9 | → | | SECURITY MODE COMPLETE | RRC |
| 10 | → | | ACTIVATE PDP CONTEXT REQUEST | SM |
| 11 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 12 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 13 | ← | | ACTIVATE PDP CONTEXT ACCEPT | SM |

7.3.8.4 Specific message contents

The default message contents specified in clause 9.1 are used with the following exceptions.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

The RRC connection setup is defined in clause 9.1.1, "Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)".

7.3.9 Test procedure for E-DCH RF test cases

7.3.9.1 Initial conditions

System Simulator:

- 1 HS-DSCH plus E-DCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.9.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.9.3 Procedure

7.3.9.3.1 For UE transmitting on E-DCH with DCH

| Step | Direction | | Message | Comments |
|------|-----------|------|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | PAGING RESPONSE | RR |
| 7 | | ← | AUTHENTICATION REQUEST | MM |
| 8 | | → | AUTHENTICATION RESPONSE | MM |
| 9 | | ← | SECURITY MODE COMMAND | RRC (CS domain) |
| 10 | | → | SECURITY MODE COMPLETE | RRC |

| 14 | → | RADIO BEARER SETUP COMPLETE | RRC |
| A15 | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up) . Test steps A15, A16, A18 and A19 are only executed when the test method in TS 34.121 [2] specifies that loopback test shall be used. |
| A16 | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 17 | <--> | | Perform test |
| A18 | ← | OPEN UE TEST LOOP | TC |
| A19 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 20 | ← | RRC CONNECTION RELEASE | RRC |
| 21 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.9.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.9.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.9.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (E-DCH and HSDPA)" is used.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD. The configurations of the reference channels for E-DCH RF tests are described in 3GPP TS 34.121[2].

7.3.9.4.3 RRC CONNECTION SETUP

For step 4, the messages in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.3.10 Test procedure for MBMS RF/RRM test cases

7.3.10.1 Initial conditions

System Simulator:

- Number of cells and parameters for specific tests are defined in TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.10.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

As specified in 34.108 clause 6.1.0b with the following exceptions and using condition M2.

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.10.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---|--|
| | UE | SS | | |
| 0 | | | | UE selects the required MBMS broadcast service |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | MBMS MODIFIED SERVICES INFORMATION (MCCH) | No Service in Modified Service list |

| | | | |
|-----|------|--|--|
| 3 | ← | MBMS UNMODIFIED SERVICES INFORMATION (MCCH) | MBMS required UE action " set to acquire PTM RB info". |
| 4 | ← | MBMS GENERAL INFORMATION (MCCH) | |
| 5 | ← | MBMS COMMON P-T-M RB INFORMATION (MCCH) | Contains configuration of the MTCH radio bearer. |
| 6 | ← | MBMS CURRENT CELL P-T-M RB INFORMATION (MCCH) | Indicates the radio bearer configuration to be used for reception of the service. |
| 7 | ← | MBMS NEIGHBOURING CELL P-T-M RB INFORMATION (MCCH) | Optional depending on whether neighbour cells are required. |
| 8 | ← | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 9 | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 10 | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 11 | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 12 | → | SERVICE REQUEST | GMM |
| 13 | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 14 | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 15 | ← | SECURITY MODE COMMAND | RRC |
| 16 | → | SECURITY MODE COMPLETE | RRC |
| 17 | ← | ACTIVATE RB TEST MODE | TC |
| 18 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 19 | | void | |
| 20 | ← | CLOSE UE TEST LOOP | TC (UE test loop mode 3 set up) The RLC SDU counting shall be performed by the UE |
| 21 | → | CLOSE UE TEST LOOP COMPLETE | TC (test loop mode 3 on MTCH is activated) |
| A22 | ← | PHYSICAL CHANNEL RECONFIGURATION | RRC - RRC state indicator set to "Cell_PCH" Test steps A22 and A23 are only executed when the test method in TS 34.121 [2] specifies that transition to CELL_PCH state is required. |
| A23 | → | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | RRC The UE sends this message before it completes state transition. |
| | <--> | | Perform test. |
| A24 | ← | PAGING TYPE 1 | RRC - RRC state indicator set to "Cell_FACH" Test steps A24, A25 and A26 are only executed when the test method in TS 34.121 [2] specifies that the test is performed in CELL_PCH state. |
| A25 | → | CELL UPDATE | RRC |
| A26 | ← | CELL UPDATE CONFIRM | RRC |
| 27 | ← | OPEN UE TEST LOOP | TC |
| 28 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 29 | ← | RRC CONNECTION RELEASE | RRC |
| 30 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.10.4 Specific message contents

The default message contents specified in clause 9.1.1 are used with the following exceptions.

Contents of MBMS GENERAL INFORMATION message: UM (Step 4)

| Information Element | Value/remark | Version |
|--------------------------------|--------------|---------|
| MICH configuration information | | Rel-6 |
| - MICH Power offset | 0dB | Rel-6 |
| - CHOICE Mode | FDD | Rel-6 |

7.3.11 Test procedure for HSDPA with F-DPCH RF Performance Requirement

7.3.11.1 Initial conditions

System Simulator:

- 1 HS-DSCH with F-DPCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.11.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | FDD |
| - CHOICE mode | Not Present |
| - Secondary scrambling code | FALSE |
| - STTD indicator | 64 |
| - Spreading factor | 2 |
| - Code number | FALSE |
| - Pilot symbol existence | TRUE (default value) |
| - TFCI existence | Flexible (default value) |
| - Fixed or Flexible position | Not Present |
| - Timing offset | Absence of this IE is equivalent to default value 0 |

7.3.11.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|------|---------------------------------------|-----------------------------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | SERVICE REQUEST | GMM |
| 7 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | | ← | SECURITY MODE COMMAND | RRC (PS domain) |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | ACTIVATE RB TEST MODE | TC |
| 12 | | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | | ← | RADIO BEARER SETUP | RRC (RAB SETUP HSDPA with F-DPCH) |
| 14 | | → | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | | <--> | | Perform test |
| 16 | | ← | RRC CONNECTION RELEASE | RRC |
| 17 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.11.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.11.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.11.4.2 RADIO BEARER SETUP

For step 13, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (HSDPA with F-DPCH)" is used.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.11.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCCH and the HS-DPCCH) |

7.3.12 Test procedure for HSDPA in CELL_FACH RF Performance Requirement

7.3.12.1 Initial conditions

System Simulator:

- Number of cells and parameters for specific tests are defined in TS 34.121 [2] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.12.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

Additional crucial parameters for the test requirements are repeated in table 7.3.12-1 and these overrule the parameters defined in SIB type 5.

Table 7.3.12.1: UE parameters for Random Access test

| Parameter | Unit | Value |
|--|------------|----------|
| Maximum number of preamble ramping cycles (M_{max}). | | 2 |
| Maximum number of preambles in one preamble ramping cycle (Preamble Retrans Max) | | 2 |
| The backoff time T_{B01} $N_{B01min}=N_{B01max}$ | ms #TTI | N/A 0 |
| Power step when no acquisition indicator is received (Power offset P_0) | dB | 3 |
| Power offset between the last transmitted preamble and the control part of the message (Power offset P_{p-m}) | dB | 0 |
| Maximum allowed UL TX power | dBm | 21 |

7.3.12.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--|
| | UE | SS | | |
| 1 | ← | | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | ← | | PAGING TYPE1 (PCCH) | Paging (PS domain, P-TMSI) |
| 3 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | → | | SERVICE REQUEST | GMM |
| 7 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 8 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 9 | ← | | SECURITY MODE COMMAND | RRC |
| 10 | → | | SECURITY MODE COMPLETE | RRC |
| 11 | ← | | ACTIVATE RB TEST MODE | TC |
| 12 | → | | ACTIVATE RB TEST MODE COMPLETE | TC |
| 13 | ← | | RADIO BEARER SETUP | RRC (RAB SETUP HSDPA PS in CELL_FACH) |
| 14 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 15 | ← | | CLOSE UE TEST LOOP | TC (UE test loop mode 1 set up) The RLC SDU counting shall be performed by the SS |
| 16 | → | | CLOSE UE TEST LOOP COMPLETE | TC (test loop mode 1 on DTCH is activated) |
| 17 | <--> | | | Perform test. |
| 18 | ← | | OPEN UE TEST LOOP | TC |
| 19 | → | | OPEN UE TEST LOOP COMPLETE | TC |
| 20 | | | DEACTIVATE RB TEST MODE | TC |
| 21 | | | DEACTIVATE RB TEST MODE COMPLETE | TC |
| 22 | ← | | RRC CONNECTION RELEASE | RRC |

7.3.12.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

The RRC connection setup is defined in clause 9.1.1, "Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)".

For step 13, the message in clause 9.1.1, " Contents of RADIO BEARER SETUP message: AM or UM" is used with condition A24. Default parameters are set for "Interactive/Background / UL:32 DL: [max bit rate depending on UE category] with fixed RLC and MAC-ehs / PS RAB + SRBs for CCCH + DCCH on RACH and SRB with fixed RLC and MAC-ehs on HS-DSCH / DL:QPSK" in clause 6.10.2.4.7.1 using the 10 ms UL TTI alternative with the following exception:

| Information Element | Condition | Value/remark | Version |
|---|-----------|-------------------------------------|---------|
| - Number of uplink RLC logical channels | | 1 | |
| - Uplink transport channel type | | RACH | |
| - UL Transport channel identity | | Not Present | |
| - Logical channel identity | | 7 | |
| - CHOICE RLC size list | | Explicit list | |
| - RLC size index | | Reference to clause 6 Parameter Set | |
| - MAC logical channel priority | | 1 (Note 1) | - |

Note 1: The exception is required to get ASC #0 according to 25.321 section 11.2.1. ASC#0 guarantee persistence value 1 to not cause delay in the RACH procedure.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.13 Test procedure for DC-HSDPA and DB-DC-HSDPA RF tests

7.3.13.1 Initial conditions

System Simulator:

- Dual HS-DSCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.13.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.13.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|------|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | PAGING RESPONSE | RR |
| 7 | | ← | AUTHENTICATION REQUEST | MM |
| 8 | | → | AUTHENTICATION RESPONSE | MM |
| 9 | | ← | SECURITY MODE COMMAND | RRC (CS domain) |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | PAGING TYPE2 (DCCH) | Paging (TMSI (GSM-MAP)/ P-TMSI) |
| 12 | | → | SERVICE REQUEST | GMM |
| 13 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 14 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |

| 25 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.13.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.13.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.13.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "RADIO BEARER SETUP message: AM or UM (DC-HSDPA)" is used.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.13.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.3.14 Test procedure for DC-HSUPA RF tests

7.3.14.1 Initial conditions

System Simulator:

- Dual E-DCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.14.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.14.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|------|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |

| 17 | | ← | ACTIVATE RB TEST MODE | TC |
| 18 | | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 21 | | ← | RADIO BEARER SETUP | RRC (RAB SETUP DC-HSUPA PS) |
| 22 | | → | RADIO BEARER SETUP COMPLETE | RRC |
| 23 | | <--> | | Perform test |
| 24 | | ← | RRC CONNECTION RELEASE | RRC |
| 25 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.14.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.14.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.14.4.2 RADIO BEARER SETUP

The Radio Bearer Setup message is defined in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (DC-HSUPA)".

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.14.4.3 RRC CONNECTION SETUP

The RRC connection setup is defined in clause 9.1.1, "Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_FACH)".

7.3.15 Test procedure for Multiple-cell Performance Requirement for 1,28 Mcps TDD

7.3.15.1 Initial conditions

System Simulator

- Number of cells and parameters for specific tests are defined in TS 34.122 [5] and take priority over the default parameters.

User Equipment:

- The UE shall be operated under RF test conditions.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.15.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 11 (1.28 Mcps TDD)

This is the default message content of SIB 11 for cell 1.

| | | |
|--|--|--|
| <ul style="list-style-type: none"> - Intra-frequency measurement identity - Intra-frequency cell info list - CHOICE intra-frequency cell removal - New intra-frequency cells - Intra-frequency cell id - Cell info - Cell individual offset - Reference time difference to cell - Read SFN Indicator - CHOICE mode - Primary CCPCH info - Cell parameters ID - Primary CCPCH TX power - Timeslot list - CHOICE TDD option <ul style="list-style-type: none"> - 1.28 Mcps TDD - Timeslot number - Cell Selection and Re-selection info | | <p>Not Present Absence of this IE is equivalent to default value 1</p> <p>Not present (This IE shall be ignored by the UE for SIB11)</p> <p>1</p> <p>Not present Absence of this IE is equivalent to default value 0dB</p> <p>Not Present FALSE TDD</p> <p>19</p> <p>Not Present Not Present</p> <p>Not Present Not Present (The IE shall be absent as this is the serving cell)</p> |

7.3.15.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.15.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE, used for the UE supporting PS only.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.15.4.2 Reference measurement channels

The configurations of the reference measurement channels for RF tests are described in 3GPP TS 34.122 [5], annex C for TDD.

7.3.16 Test procedure for 4C-HSDPA RF tests

7.3.16.1 Initial conditions

System Simulator:

- Dual HS-DSCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.16.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|--------------|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |

| | |
|------------------------------|---|
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.16.3 Procedure

| Step | Direction | | Message | Comments |

| 25 | → | | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.16.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.16.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.16.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, " RADIO BEARER SETUP message: AM or UM (DC-HSDPA)" is used with secondary serving cell defined as per table 5.0aB or 5.0aC of 3GPP TS 25.101.

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.16.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.3.17 Test procedure for TX, RX and Performance Requirement for UL CLTD

7.3.17.1 Initial conditions

System Simulator:

- 1 HS-DSCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.17.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|--------------|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |

| | |
|------------------------------|---|
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.17.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|------|---------------------------------------|---|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |

| 22 | | → | RADIO BEARER SETUP COMPLETE | RRC |
| A23 | | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up to loop the RMC 12.2 to UL RMC 12.2). Test steps A23, A24, A26 and A27 are only executed when the test method in TS 34.121 [2] specifies that loopback test shall be used. |
| A24 | | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 25 | | <--> | | Perform test |
| A26 | | ← | OPEN UE TEST LOOP | TC |
| A27 | | → | OPEN UE TEST LOOP COMPLETE | TC |
| 28 | | ← | RRC CONNECTION RELEASE | RRC |
| 29 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.17.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.17.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.17.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (HSDPA)" is used, with following exceptions.

| Information Element | Value/remark | Version |
|---------------------------------|--|---------|
| Uplink CLTD info FDD | | Rel-11 |
| - CHOICE Mode | New | |
| - S-DPCCH Info | | |
| - S-DPCCH/DPCCH power offset | 0 | |
| - Initial CLTD activation state | First state | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Reference to clause 6.1 "Default settings (FDD)" | |

| Information Element | Value/remark | Version |
|------------------------|--------------|---------|
| F-TPICH Info | | Rel-11 |
| - F-TPICH slot format | 1 | |
| - F-TPICH Code number | 6 | |
| - F-TPICH frame offset | 1024 | |

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.17.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCCH and the HS-DPCCH) |

7.3.18 Test procedure for TX, RX and Performance Requirement for UL OLTD

7.3.18.1 Initial conditions

System Simulator:

- 1 HS-DSCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.

- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.18.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |

| 29 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.18.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.18.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.18.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (HSDPA)" is used, with following exceptions

| Information Element | Value/remark | Version |
|--------------------------|--------------|---------|
| Uplink OLTD info FDD | | Rel-11 |
| - Uplink OLTD activation | TRUE | |

| Information Element | Value/remark | Version |
|------------------------|--------------|---------|
| F-TPICH Info | | Rel-11 |
| - F-TPICH slot format | 1 | |
| - F-TPICH Code number | 6 | |
| - F-TPICH frame offset | 1024 | |

The configurations of the fixed reference channels for HSDPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.18.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.3.19 Test procedure for TX, RX and Performance Requirement for UL CLTD with HSDPA & E-DCH

7.3.19.1 Initial conditions

System Simulator:

- 1 HS-DSCH plus E-DCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.
- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.19.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|--------------|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | |
| - CHOICE mode | FDD |
| - Secondary scrambling code | Not Present |
| - STTD indicator | FALSE |

| | |
|------------------------------|---|
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.19.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--|

7.3.19.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.19.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.19.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (E-DCH and HSDPA)" is used, with following exceptions:

| Information Element | Value/remark | Version |
|---------------------------------|--|---------|
| Uplink CLTD info FDD | | Rel-11 |
| - CHOICE Mode | New | |
| - S-DPCCH Info | | |
| - S-DPCCH/DPCCH power offset | 0 | |
| - Initial CLTD activation state | First state | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Reference to clause 6.1 "Default settings (FDD)" | |

| Information Element | Value/remark | Version |
|------------------------|--------------|---------|
| F-TPICH Info | | Rel-11 |
| - F-TPICH slot format | 1 | |
| - F-TPICH Code number | 6 | |
| - F-TPICH frame offset | 1024 | |

The configurations of the fixed reference channels for HSPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.. The configurations of the reference channels for E-DCH RF tests are described in 3GPP TS 34.121[2].

7.3.19.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCCH and the HS-DPCCH) |

7.3.20 Test procedure for TX, RX and Performance Requirement for UL OLTD with HSDPA & E-DCH

7.3.20.1 Initial conditions

System Simulator:

- 1 HS-DSCH plus E-DCH cell, default parameters.

User Equipment:

- The UE shall initially be operated under normal RF test conditions if not otherwise stated in the initial conditions for the actual test case.
- The Test-USIM shall be inserted.

- The UE has a valid TMSI (CS) after the execution of the procedure described in clause 7.2.2.1.
- The UE has a valid P-TMSI (PS) after the execution of the procedure described in clause 7.2.2.2.

7.3.20.2 Definition of system information messages

The default system information messages specified in clause 6.1.0b are used with the following exceptions.

Contents of System information block type 1: RRC

| Information Element | Value/remark |
|---|---------------------------------|
| - CN domain system information | |
| - CN domain identity | PS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00 00 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - CN domain identity | CS |
| - CHOICE CN Type | GSM-MAP |
| - CN domain specific NAS system information | |
| - GSM-MAP NAS system information | 00(T3212 is set to infinity) 01 |
| - CN domain specific DRX cycle length coefficient | 7 |
| - UE Timers and constants in connected mode | |
| - T305 | Infinity |

Contents of System information block type 3 and 4: RRC

| Information Element | Value/remark |
|---------------------|--------------|
| - Qrxlevmin | -115 |

Contents of System Information Block type 5 (FDD)

| Information Element | Value/remark |
|--------------------------------------|---|
| - Secondary CCPCH system information | |
| - Secondary CCPCH info | FDD |
| - CHOICE mode | Not Present |
| - Secondary scrambling code | FALSE |
| - STTD indicator | FALSE |
| - Spreading factor | 64 |
| - Code number | 2 |
| - Pilot symbol existence | FALSE |
| - TFCI existence | TRUE (default value) |
| - Fixed or Flexible position | Flexible (default value) |
| - Timing offset | Not Present |
| | Absence of this IE is equivalent to default value 0 |

7.3.20.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|---------------------------------|
| | UE | SS | | |
| 1 | | ← | SYSTEM INFORMATION (BCCH) | Broadcast |
| 2 | | ← | PAGING TYPE1 (PCCH) | Paging (CS domain, TMSI) |
| 3 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 4 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 5 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 6 | | → | PAGING RESPONSE | RR |
| 7 | | ← | AUTHENTICATION REQUEST | MM |
| 8 | | → | AUTHENTICATION RESPONSE | MM |
| 9 | | ← | SECURITY MODE COMMAND | RRC (CS domain) |
| 10 | | → | SECURITY MODE COMPLETE | RRC |
| 11 | | ← | PAGING TYPE2 (DCCH) | Paging (TMSI (GSM-MAP)/ P-TMSI) |
| 12 | | → | SERVICE REQUEST | GMM |
| 13 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |

| | | | |
|-----|------|---------------------------------------|---|
| 14 | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 15 | ← | SECURITY MODE COMMAND | RRC (PS domain, IE Integrity protection mode command set to "modify") |
| 16 | → | SECURITY MODE COMPLETE | RRC |
| 17 | ← | ACTIVATE RB TEST MODE | TC |
| 18 | → | ACTIVATE RB TEST MODE COMPLETE | TC |
| 19 | ← | RADIO BEARER SETUP | RRC (RAB SETUP RMC 12.2 CS) |
| 20 | → | RADIO BEARER SETUP COMPLETE | RRC |
| 21 | ← | RADIO BEARER SETUP | RRC (RAB SETUP HSDPA and E-DCH PS) |
| 22 | → | RADIO BEARER SETUP COMPLETE | RRC |
| A23 | ← | CLOSE UE TEST LOOP (DCCH) | TC (UE test loop mode set up to loop the RMC 12.2 to UL RMC 12.2). Test steps A23, A24, A26 and A27 are only executed when the test method in TS 34.121 [2] specifies that loopback test shall be used. |
| A24 | → | CLOSE UE TEST LOOP COMPLETE | TC (confirms that loopback entities for the radio bearer(s) have been created and loop back is activated) |
| 25 | <--> | | Perform test |
| A26 | ← | OPEN UE TEST LOOP | TC |
| A27 | → | OPEN UE TEST LOOP COMPLETE | TC |
| 28 | ← | RRC CONNECTION RELEASE | RRC |
| 29 | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.3.20.4 Specific message contents

The default message contents specified in clause 9.2 are used with the following exceptions.

7.3.20.4.1 ATTACH ACCEPT

This message is sent from the SS to the UE.

Contents of Attach Accept message: GMM

| Information Element | Value/remark |
|--------------------------|---------------------------|
| Periodic RA update timer | E0 (timer is deactivated) |

7.3.20.4.2 RADIO BEARER SETUP

For step 19, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)" is used with condition A1. For step 21, the message in clause 9.2, "Contents of RADIO BEARER SETUP message: AM or UM (E-DCH and HSDPA)" is used, with following exceptions.

| Information Element | Value/remark | Version |
|--------------------------|--------------|---------|
| Uplink OLTD info FDD | | Rel-11 |
| - Uplink OLTD activation | TRUE | |

| Information Element | Value/remark | Version |
|------------------------|--------------|---------|
| F-TPICH Info | | Rel-11 |
| - F-TPICH slot format | 1 | |
| - F-TPICH Code number | 6 | |
| - F-TPICH frame offset | 1024 | |

The configurations of the fixed reference channels for HSPA RF tests are described in 3GPP TS 34.121[2], annex C for FDD and 3GPP TS 34.122 [5], annex C for TDD.

7.3.20.4.3 RRC CONNECTION SETUP

For step 4, the message in clause 9.2, "Contents of RRC CONNECTION SETUP message: UM" is used with the following exceptions:

Contents of RRC CONNECTION SETUP message: UM

| Information Element | Value/remark |
|-----------------------------|---|
| - Default DPCH Offset Value | Arbitrary set to value 1536..306176 by step of 2560 (this corresponds to a 0.5 slot timing offset between the DPCH and the HS-DPCH) |

7.4 Common generic procedures for AS testing

7.4.1 UE RRC Test States for common procedures

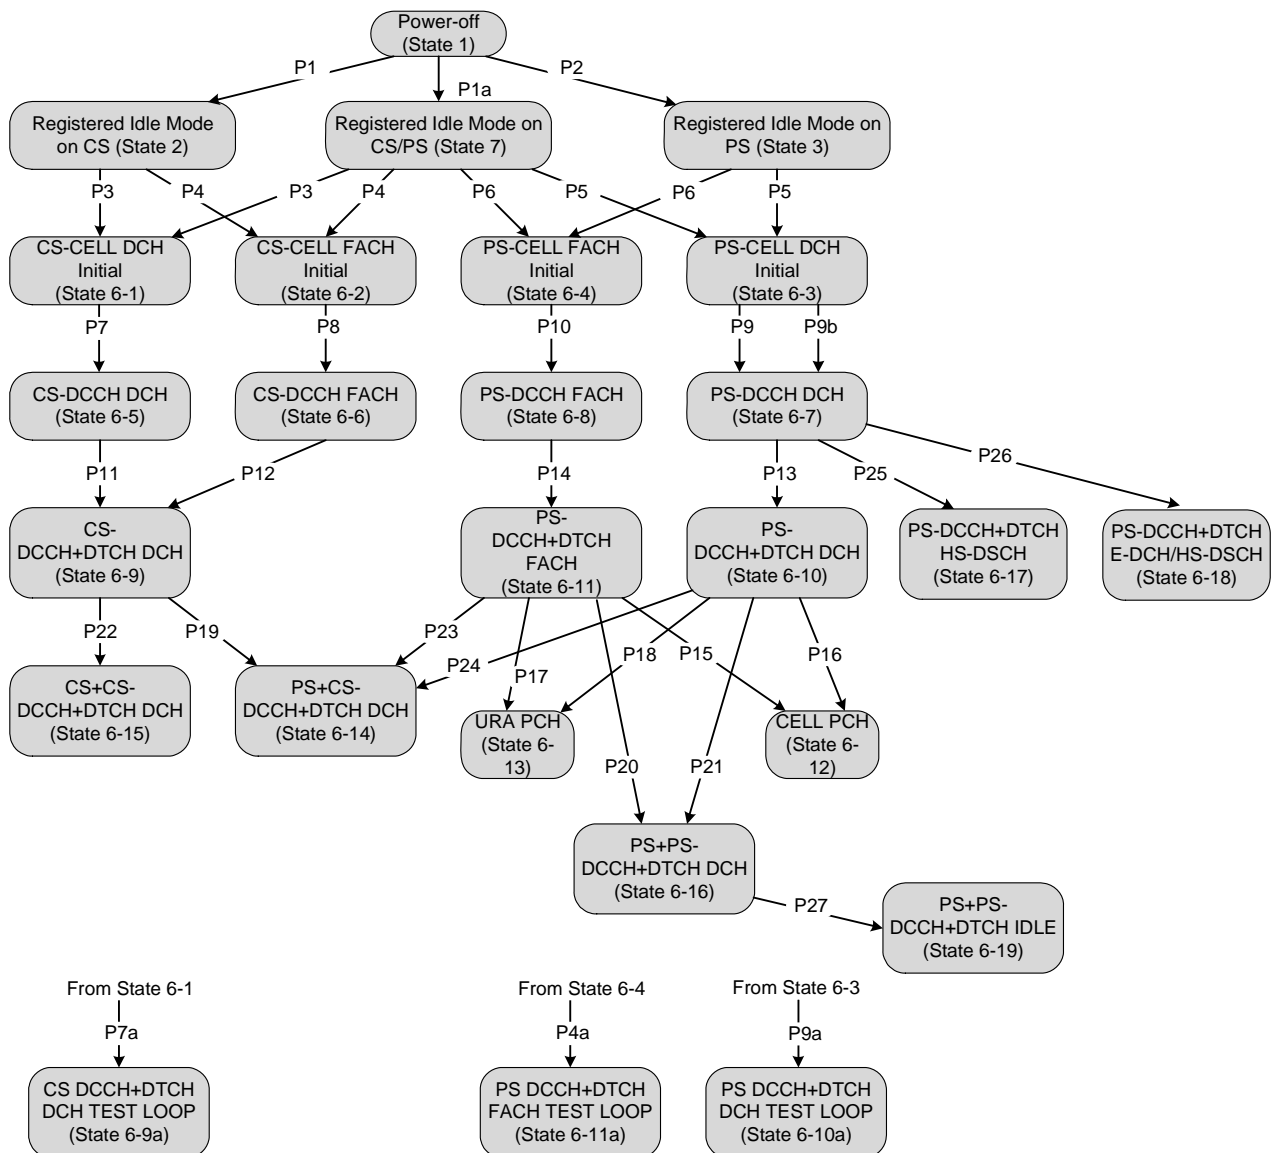

Figure 7.4.1.1: UE RRC test initial states and common procedures

For UE to set up a call in UTRAN there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 7.4.1.1; the operating states for various protocols in the UE are given in table 7.4.1.1.

It is noted that figure 7.4.1.1 should not be construed as a formal state transition diagram, in any manner. The intention here is to define the starting state of UE following the execution of the procedures indicated above.

Table 7.4.1.1: The UE states

| | | RRC | CC | MM | SM | GMM |
|----------------------|-------------------------------|-----------------------|-----------|----------------------|--------------------|------------------|
| State 1 | Power OFF | ----- | Null | Null | Pdp-Inactive | GMM-null |
| State 2 | Registered Idle Mode on CS | Idle | Null | MM Idle | Pdp-Inactive | GMM-deregistered |
| State 3 | Registered Idle Mode on PS | Idle | Null | Null | Pdp-Inactive | GMM-registered |
| State 7 | Registered Idle Mode on CS/PS | Idle | Null | MM Idle | Pdp-Inactive | GMM-registered |
| State BGP6-1 | CS-CELL_DCH_Initial | Connected | Null | MM Idle | Pdp-Inactive | As previous |
| State BGP6-2 | CS-CELL_FACH_Initial | Connected | Null | MM Idle | Pdp-Inactive | As previous |
| State BGP6-3 | PS-CELL_DCH_Initial | Connected | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-4 | PS-CELL_FACH_Initial | Connected | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-5 | CS-DCCH_DCH | Connected (CELL_DCH) | Null | MM Idle | Pdp-Inactive | As previous |
| State BGP6-6 | CS-DCCH_FACH | Connected (CELL_FACH) | Null | MM Idle | Pdp-Inactive | As previous |
| State BGP6-7 (NOTE1) | PS-DCCH_DCH | Connected (CELL_DCH) | Null | As previous | Pdp-Active pending | GMM registered |
| State BGP6-8 | PS-DCCH_FACH | Connected (CELL_FACH) | Null | As previous | Pdp-Active pending | GMM registered |
| State BGP6-9 | CS-DCCH+DTCH_DCH | Connected (CELL_DCH) | Active | MM connection active | Pdp-Inactive | As previous |
| State BGP6-9a | CS-DCCH+DTCH_DCH_TEST_LOOP | Connected (CELL_DCH) | Null | MM Idle | Pdp-Inactive | As previous |
| State BGP6-10 | PS-DCCH+DTCH_DCH | Connected (CELL_DCH) | Null | As previous | Pdp-Active | GMM registered |
| State BGP6-10a | PS-DCCH+DTCH_DCH_TEST_LOOP | Connected (CELL_DCH) | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-11 | PS-DCCH+DTCH_FACH | Connected (CELL_FACH) | Null | As previous | Pdp-Active | GMM registered |
| State BGP6-11a | PS-DCCH+DTCH_FACH_TEST_LOOP | Connected (CELL_FACH) | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-12 | CELL_PCH | Connected (CELL_PCH) | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-13 | URA_PCH | Connected (URA_PCH) | Null | As previous | Pdp-Inactive | GMM registered |
| State BGP6-14 | PS+CS-DCCH+DTCH_DCH | Connected (CELL_DCH) | Active | MM connection active | Pdp-Active | GMM registered |
| State BGP6-15 | CS+CS-DCCH+DTCH_DCH | Connected (CELL_DCH) | Active | MM connection active | Pdp-Inactive | As previous |
| State BGP6-16 | PS+PS-DCCH+DTCH_DCH | Connected (CELL_DCH) | Null | As previous | Pdp-Active | GMM registered |
| State BGP6-17 | PS-DCCH+DTCH_HS-DSCH | Connected (CELL_DCH) | Null | As previous | Pdp-Active | GMM registered |
| State BGP6-18 | PS-DCCH+DTCH_E-DCH/HS-DSCH | Connected (CELL_DCH) | Null | As previous | Pdp-Active | GMM registered |
| State BGP6-19 | PS+PS-DCCH+DTCH_Idle | Idle | Null | MM Idle | Pdp-Active | GMM registered |

NOTE1: The default procedure to move from state BGP6-1 to state BGP6-7 is the procedure P9.

State 1, state 2, state 3, P1, P2 and P1a are described in clause 7.2.

7.4.2 Generic Setup Procedure for RRC test cases

7.4.2.1 RRC connection establishment procedure for circuit-switched calls (procedure P3 and P4)

7.4.2.1.1 Mobile terminating call

7.4.2.1.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions as specified in the present document.
- The Test USIM shall be inserted.

7.4.2.1.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.1.1.3 Procedure

The Call Set-up procedure shall be performed under ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|----------|
| | UE | SS | | |
| 1 | | ← | PAGING TYPE 1 (PCCH) | RRC |
| 2 | | → | RRC CONNECTION REQUEST (CCCH) | RRC |
| 3 | | ← | RRC CONNECTION SETUP (CCCH) | RRC |
| 4 | | → | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 5 | | → | PAGING RESPONSE | RR |

7.4.2.1.1.4 Specific message contents

To execute procedure P3, all specific message contents shall be referred to clause 9.

To execute procedure P4, all specific message contents with the exception of step 3 shall be referred to clause 9. For step 3, the message of the same type titled "Transition to CELL_FACH" in clause 9 is used.

7.4.2.1.2 Mobile originating calls

7.4.2.1.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions as specified in the present document.
- The Test USIM shall be inserted.

7.4.2.1.2.2 Definition of system information messages

The default system information messages specified in clause 6.1 are used.

7.4.2.1.2.3 Procedure

The Call Set-up procedure shall be performed under ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|----------|
| | UE | SS | | |
| 1 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 2 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 3 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 4 | → | | CM SERVICE REQUEST | MM |

7.4.2.1.2.4 Specific message contents

To execute procedure P3, all specific message contents shall be referred to clause 9.

To execute procedure P4, all specific message contents with the exception of step 2 shall be referred to clause 9. For step 2, the message of the same type titled "Transition to CELL_FACH" in clause 9 is used.

7.4.2.2 RRC connection establishment procedure for packet switched sessions (procedure P5 and P6)

7.4.2.2.1 Mobile terminating session

7.4.2.2.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions as specified in the present document.
- The Test USIM shall be inserted.

7.4.2.2.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.2.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|----------|
| | UE | SS | | |
| 1 | ← | | PAGING TYPE1 (PCCH) | Paging |
| 2 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 3 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 4 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 5 | → | | SERVICE REQUEST | GMM |

7.4.2.2.1.4 Specific message contents

To execute procedure P5, all specific message contents shall be referred to clause 9.

To execute procedure P6, all specific message contents with the exception of step 3 shall be referred to clause 9. For step 3, the message of the same type titled "Transition to CELL_FACH" in clause 9 is used.

7.4.2.2.2 Mobile originating sessions

7.4.2.2.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be operated under normal test conditions as specified in the present document.

- The Test USIM shall be inserted.

7.4.2.2.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.2.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|--------------------------------------|----------|
| | UE | SS | | |
| 1 | → | | RRC CONNECTION REQUEST (CCCH) | RRC |
| 2 | ← | | RRC CONNECTION SETUP (CCCH) | RRC |
| 3 | → | | RRC CONNECTION SETUP COMPLETE (DCCH) | RRC |
| 4 | → | | SERVICE REQUEST | GMM |

7.4.2.2.2.4 Specific message contents

To execute procedure P5, all specific message contents shall be referred to clause 9.

To execute procedure P6, all specific message contents with the exception of step 2 shall be referred to clause 9. For step 2, the message of the same type titled "Transition to CELL_FACH" in clause 9 is used.

7.4.2.3 NAS call set up procedure for circuit switched calls (procedure P7 and P8)

7.4.2.3.1 Mobile terminating call

7.4.2.3.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-1 or state 6-2.
- The Test USIM shall be inserted.

7.4.2.3.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.3.1.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-------------------------|----------|
| | UE | SS | | |
| 1 | ← | | AUTHENTICATION REQUEST | MM |
| 2 | → | | AUTHENTICATION RESPONSE | MM |
| 3 | ← | | SECURITY MODE COMMAND | RRC |
| 4 | → | | SECURITY MODE COMPLETE | RRC |
| 5 | ← | | SET UP | CC |
| 6 | → | | CALL CONFIRMED | CC |

7.4.2.3.1.4 Specific message contents

All RRC specific message contents shall be referred to clause 9.

7.4.2.3.2 Mobile originating calls

7.4.2.3.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-1 or state 6-2.
- The Test USIM shall be inserted.

7.4.2.3.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.3.2.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-------------------------|----------|
| | UE | SS | | |
| 1 | ← | | AUTHENTICATION REQUEST | MM |
| 2 | → | | AUTHENTICATION RESPONSE | MM |
| 3 | ← | | SECURITY MODE COMMAND | RRC |
| 4 | → | | SECURITY MODE COMPLETE | RRC |
| 5 | → | | SET UP | CC |
| 6 | ← | | CALL PROCEEDING | CC |

7.4.2.3.2.4 Specific message contents

All RRC specific message contents shall be referred to clause 9.

7.4.2.4 NAS session activation procedure for packet switched sessions (procedure P9 and P10)

7.4.2.4.1 Mobile terminating session

7.4.2.4.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-3 or state 6-4.
- The Test USIM shall be inserted.

7.4.2.4.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.4.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------|
| | UE | SS | | |
| 1 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 2 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 3 | ← | | SECURITY MODE COMMAND | RRC |
| 4 | → | | SECURITY MODE COMPLETE | RRC |

| | | | |
|---|---|--------------------------------|----|
| 5 | ← | REQUEST PDP CONTEXT ACTIVATION | SM |
| 6 | → | ACTIVATE PDP CONTEXT REQUEST | SM |

7.4.2.4.1.4 Specific message contents

All RRC specific message contents shall be referred to clause 9.

7.4.2.4.2 Mobile originating sessions

7.4.2.4.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-3 or state 6-4.
- The Test USIM shall be inserted.

7.4.2.4.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.4.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------|
| | UE | SS | | |
| 1 | ← | | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 2 | → | | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 3 | ← | | SECURITY MODE COMMAND | RRC |
| 4 | → | | SECURITY MODE COMPLETE | RRC |
| 5 | → | | ACTIVATE PDP CONTEXT REQUEST | SM |

7.4.2.4.2.4 Specific message contents

All RRC specific message contents shall be referred to clause 9.

7.4.2.4a NAS session activation procedure for packet switched sessions with active set update (procedure P9b)

7.4.2.4a.1 Mobile terminating session

7.4.2.4a.1.1 Initial conditions

System Simulator:

- 1 serving cell default parameters. 1 neighbour cell.

User Equipment:

- The UE shall be in state 6-3.
- The Test USIM shall be inserted.

7.4.2.4a.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.4a.1.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--|
| | UE | SS | | |
| 1 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 2 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 3 | | ← | SECURITY MODE COMMAND | RRC |
| 4 | | → | SECURITY MODE COMPLETE | RRC |
| 5 | | ← | REQUEST PDP CONTEXT ACTIVATION | SM |
| 6 | | → | ACTIVATE PDP CONTEXT REQUEST | SM |
| 7 | | | | Set the power level of the neighbour cell to -60dBm. Any MEASUREMENT REPORT received is ignored. |
| 8 | | ← | ACTIVE SET UPDATE | RRC |
| 9 | | → | ACTIVE SET UPDATE COMPLETE | RRC |

7.4.2.4a.1.4 Specific message contents

All RRC specific message contents shall be referred to clause 9 with the following exceptions.

ACTIVE SET UPDATE (Step 8)

| Information Element | Value/remark | Version |
|--|---|--------------------|
| Radio link addition information | | |
| - Primary CPICH Info | | |
| - Primary Scrambling Code | Set to the Primary Scrambling Code of neighbour cell. Refer to clause 6.1. | |
| - Downlink DPCH info for each RL | | |
| - CHOICE mode | FDD | |
| - Primary CPICH usage for channel estimation | P-CPICH can be used. | |
| - DPCH frame offset | Calculated value from cells timing information | |
| - Secondary CPICH info | Not Present | |
| - DL channelisation code | | |
| - Secondary scrambling code | 1 | |
| - Spreading factor | According to clause 6.10.2.4.1.3 (standalone 13.6 kbps signalling radio bearer) | |
| - Code Number | 0 | |
| - Scrambling code change | Not Present | |
| - TPC Combination Index | 0 | |
| - SSDT Cell Identity | Not Present | R99 and Rel-4 only |
| - Close loop timing adjustment mode | Not Present | |
| - TFCI Combining Indicator | FALSE | |
| - SCCPCH information for FACH | Not Present | R99 and Rel-4 only |

7.4.2.4a.2 Mobile originating sessions

7.4.2.4a.2.1 Initial conditions

System Simulator:

- 1 serving cell default parameters. 1 neighbour cell.

User Equipment:

- The UE shall be in 6-3.
- The Test USIM shall be inserted.

7.4.2.4a.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.4a.2.3 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|--|
| | UE | SS | | |
| 1 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 2 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 3 | | ← | SECURITY MODE COMMAND | RRC |
| 4 | | → | SECURITY MODE COMPLETE | RRC |
| 5 | | → | ACTIVATE PDP CONTEXT REQUEST | SM |
| 6 | | | | Set the power level of the neighbour cell to -60dBm. Any MEASUREMENT REPORT received is ignored. |
| 7 | | ← | ACTIVE SET UPDATE | RRC |
| 8 | | → | ACTIVE SET UPDATE COMPLETE | RRC |

7.4.2.4a.2.4 Specific message contents

All RRC specific message contents shall be referred to clause 9 with the following exceptions.

ACTIVE SET UPDATE (Step 7) same as ACTIVE SET UPDATE (Step 8) in clause 7.4.2.4a.1.4.

7.4.2.5 Radio access bearer establishment procedure for circuit switched calls (procedure P11 and P12)

7.4.2.5.1 Mobile terminating call

7.4.2.5.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-5 or state 6-6.
- The Test USIM shall be inserted.

7.4.2.5.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.5.1.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-----------------------------|-------------------------------|
| | UE | SS | | |
| 1 | | ← | RADIO BEARER SETUP | RRC RAB SETUP |
| 2 | | → | RADIO BEARER SETUP COMPLETE | RRC |
| 3 | | → | ALERTING | CC (This message is optional) |
| 4 | | → | CONNECT | CC |
| 5 | | ← | CONNECT ACKNOWLEDGE | CC |

7.4.2.5.1.4 Specific message contents

To execute procedure P11, use the message titled "CS speech" (defined in clause 9) for the message in step 1. To execute procedure 12, use the message "The others of speech in CS" (defined in clause 9) for the message in step 1.

7.4.2.5.2 Mobile originating calls

7.4.2.5.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-5 or state 6-6.
- The Test USIM shall be inserted.

7.4.2.5.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.5.2.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-----------------------------|---------------|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 2 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 3 | ← | | ALERTING | CC |
| 4 | ← | | CONNECT | CC |
| 5 | → | | CONNECT ACKNOWLEDGE | CC |

7.4.2.5.2.4 Specific message contents

To execute procedure P11, use the message titled "CS speech" (defined in clause 9) for the message in step 1. To execute procedure 12, use the message "The others of speech in CS" (defined in clause 9) for the message in step 1.

7.4.2.5a Test loop activation and radio access bearer establishment procedure for circuit switched calls (procedure P7a)

7.4.2.5a.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-1.
- The Test USIM shall be inserted.

7.4.2.5a.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.5a.3 Procedure

The Call Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|---|
| | UE | SS | | |
| 1 | ← | | AUTHENTICATION REQUEST | MM |
| 2 | → | | AUTHENTICATION RESPONSE | MM |

| 1 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 2 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 14 | ← | | CLOSE UE TEST LOOP (DCCH) | TC UE test mode 1 RLC SDU size set as specified for the actual test case. |
| 15 | → | | CLOSE UE TEST LOOP COMPLETE (DCCH) | TC |

7.4.2.5a.4 Specific message contents

To execute procedure P7a, use the message titled "CS speech" (defined in clause 9) for the message in step 1.

7.4.2.6 Radio access bearer establishment procedure for packet switched sessions (procedure P13, P14, P25 and P26)

7.4.2.6.1 Mobile terminating session

7.4.2.6.1.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-7 or state 6-8.
- The Test USIM shall be inserted.

7.4.2.6.1.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.6.1.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-----------------------------|---------------|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 2 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 3 | ← | | ACTIVATE PDP CONTEXT ACCEPT | SM |

7.4.2.6.1.4 Specific message contents

For step 1, the messages in clause 9 are used. To execute procedure P13, use the message titled "Packet to CELL_DCH from CELL_DCH in PS". To execute procedure P14, use the message titled "Packet to CELL_FACH from CELL_FACH in PS". To execute procedure P25, use the message titled "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS". To execute procedure P26, use the RADIO BEARER SETUP message with one of the conditions A12, A13, A14, A15, A16, A19, A20, A21 or A22.

Contents of ACTIVATE PDP CONTEXT ACCEPT message: DCCH-AM (Step 3)

| Information Element | | Value/remark |
|-------------------------|------|--------------|
| WLAN offload indication | WLAN | '0010'B |

| Condition | Explanation |
|-----------|---|
| WLAN | For RAN Assisted WLAN interworking test cases |

7.4.2.6.2 Mobile originating sessions

7.4.2.6.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-7 or state 6-8.

- The Test USIM shall be inserted.

7.4.2.6.2.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.6.2.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

| Step | Direction | | Message | Comments |
|------|-----------|----|-----------------------------|---------------|
| | UE | SS | | |
| 1 | ← | | RADIO BEARER SETUP | RRC RAB SETUP |
| 2 | → | | RADIO BEARER SETUP COMPLETE | RRC |
| 3 | ← | | ACTIVATE PDP CONTEXT ACCEPT | SM |

7.4.2.6.2.4 Specific message contents

For step 1, the messages in clause 9 are used. To execute procedure P13, use the message titled "Packet to CELL_DCH from CELL_DCH in PS". To execute procedure P14, use the message titled "Packet to CELL_FACH from CELL_FACH in PS". To execute procedure P25, use the message titled "Packet to CELL_DCH / HS-DSCH from CELL_DCH in PS". To execute procedure P26, use the RADIO BEARER SETUP message with one of the conditions A12, A13, A14, A15 or A16.

Contents of ACTIVATE PDP CONTEXT ACCEPT message: DCCH-AM (Step 3)

| Information Element | | Value/remark |
|-------------------------|------|--------------|
| WLAN offload indication | WLAN | '0010'B |

| Condition | Explanation |
|-----------|---|
| WLAN | For RAN Assisted WLAN interworking test cases |

7.4.2.6a Test loop activation and radio access bearer establishment procedure for packet switched sessions (procedure P4a and P9a)

7.4.2.6a.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE shall be in state 6-3 or state 6-4.
- The Test USIM shall be inserted.

7.4.2.6a.2 Definition of system information messages

The default system information messages are used as specified in clause 6.1.

7.4.2.6a.3 Procedure

The Session Set-up procedure shall be performed under Ideal radio conditions as defined in clauses 5.2 and 6.1.

7.5 Test procedures for A-GPS and A-GNSS Performance requirements testing

This clause specifies the procedures that shall be used for testing of A-GPS and A-GNSS Performance requirements in TS 37.571-1 [47] clauses 5 and 6.

7.5.1 Normal UE based A-GPS procedure

The procedure in this clause shall be used for all UE-based A-GPS TTF test cases in CELL_DCH and CELL_FACH state as specified in TS 37.571-1 [47] clause 5.

7.5.1.1 Initial conditions

User Equipment:

The UE is in CELL_DCH or CELL_FACH state after executing the procedure defined in clause F.2 of TS 37.571-1 [47].

7.5.1.2 Procedure

7.5.2 UE based A-GPS procedure for moving scenario and periodic update test case

The procedure in this clause shall be used for the UE-based A-GPS moving scenario and periodic update test case in CELL_DCH and CELL_FACH state as specified in TS 37.571-1 [47] clause 5.

7.5.2.1 Initial conditions

User Equipment:

The UE is in CELL_DCH or CELL_FACH state after executing the procedure defined in clause F.2 of TS 37.571-1 [47].

7.5.2.2 Procedure

| Step | Direction | | Message | Comments |

7.5.9 UE assisted A-GNSS procedure for moving scenario and periodic update test case

The procedure in this clause shall be used for the UE-assisted A-GNSS moving scenario and periodic update test case in CELL_DCH and CELL_FACH state as specified in TS 37.571-1 [47] clause 6.

7.5.9.1 Initial conditions

User Equipment:

The UE is in CELL_DCH or CELL_FACH state after executing the procedure defined in clause F.2 of TS 37.571-1 [47].

7.5.9.2 Procedure

| Step | Direction | | Message | Comments |
|------|-----------|----|---|--|
| | UE | SS | | |
| 1 | ← | | RESET UE POSITIONING STORED INFORMATION | TC |
| 2 | ← | | RRC MEASUREMENT CONTROL | RRC (Setup, Periodical Reporting criteria, GPS Ref time, GPS UTC Model, GANSS Time Model) |
| 3 | → | | RRC MEASUREMENT CONTROL | RRC (Additional Assistance Data Request) |
| 4 | ← | | RRC MEASUREMENT CONTROL | RRC (Modify, No Reporting, Assistance Data GPS Satellites 1, 2, 3, 4, 5, 6, 7, 8, 9) |
| 5 | ← | | RRC MEASUREMENT CONTROL | RRC (Setup, Periodical Reporting criteria, Reference Measurement Info GANSS Satellites 1, 2, 3, 4, 5, 6, 7, 8, Aux Info GANSS Satellites 1, 2, 3, 4, 5, 6, 7, 8) |
| 6 | → | | RRC MEASUREMENT REPORT | RRC (GNSS Measured Results), 1 st test Instance |
| 7 | → | | RRC MEASUREMENT REPORT | RRC (GNSS Measured Results), 2 nd test Instance |
| ... | → | | ... | |
| n | → | | RRC MEASUREMENT REPORT | RRC (GNSS Measured Results), n th test Instance |

NOTE: In the actual testing the UE may report error messages at step 6 until it has been able to acquire GPS measured results.

7.5.9.3 Specific message contents

Contents of RESET UE POSITIONING STORED INFORMATION message: TC

The contents of the Reset UE Positioning Stored Information message in Step 1 are the same as specified for Normal UE assisted A-GNSS testing in clause 7.5.8.

Contents of MEASUREMENT CONTROL message: RRC

The contents of the Measurement Control message in steps 2 and 4 are the same as specified for Normal UE assisted A-GNSS testing in clause 7.5.8.

The contents of the Measurement Control message in step 5 are the same as specified for Normal UE assisted A-GNSS testing in clause 7.5.8 with the following exceptions:

| Information Element | Value/remark |
|---|---------------------|
| Amount of reporting | Infinite (see note) |
| Reporting interval | 2 000 ms |
| NOTE: Infinite means during the complete test time. | |

7.6 Test procedures for MBMS testing

This clause specifies the procedures that shall be used for MBMS testing.

7.6.1 GMM-REGISTERED with 1 MBMS Service Activated

7.6.1.1 Initial conditions

User Equipment:

For MBMS broadcast test cases:

- The UE is in registered Idle Mode on PS state (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domain. The UE states are specified in clause 7.4. For MBMS multicast test cases:

- The UE is in CELL_DCH (6-10 PS-DCCH+DTCH_DCH) or CELL_FACH (6-11 PS-DCCH+DTCH_FACH) state after executing the procedure P13 or P14 defined in clause 7.4.2.6.

For MBMS broadcast and multicast test cases:

- Subsequent to the broadcasting of System Information, MCCH messages are transmitted by the SS using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing service). See subclause 11.1.
- For MBMS the RRC messages used throughout the generic setup procedures make use of specific parameter settings as specified in clause 9.1.

7.6.1.2 Procedure

For MBMS broadcast test cases:

- The SS request the UE to activate the requested MBMS broadcast service.
- The SS waits until the MBMS broadcast service has been activated in the UE
- The SS change UE state to CELL_DCH (6-10 PS-DCCH+DTCH_DCH) or CELL_FACH (6-11 PS-DCCH+DTCH_FACH) state by executing the procedure P13 or P14 defined in clause 7.4.2.6 except for the reception of MBMS MODIFICATION REQUEST message after RRC CONNECTION SETUP COMPLETE message during P5 or P6 procedure in case of MBMS Selected Service.

Specific Message Content for MBMS MODIFICATION REQUEST:

MBMS MODIFICATION REQUEST

| Information Element | Value/remark |
|---------------------------------------|--|
| MBMS preferred frequency request | Check that the IE is not present |
| MBMS RB list requested to be released | Check that the IE is not present |
| MBMS Selected Service Info | Some |
| - CHOICE Status | |
| - MBMS Selected Services Full | MBMS service ID of the activated MBMS service |
| - MBMS Selected Service ID | |
| - MBMS Service ID | |
| - CHOICE PLMN identity | |
| - SameAs-MIB | Check to see that one of the below choice element is present (no data) |
| - explicitPLMN_Id | Check to see if it is set to the same value as "PLMN ID" in the Master Information block transmitted for the current serving cell. |

For MBMS multicast test cases:

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------------------------------|
| | UE | SS | | |
| 1 | | | | Make UE join a multicast service |
| 2 | | → | IGMP/MLD JOIN | IGMP/MLD |
| 3 | | ← | REQUEST MBMS CONTEXT ACTIVATION | SM |
| 4 | | → | ACTIVATE MBMS CONTEXT REQUEST | SM |
| 5 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 6 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 7 | | ← | ACTIVATE MBMS CONTEXT ACCEPT | SM |

If required, transition from CELL_FACH (6-11) to CELL_PCH (6-12) or URA_PCH (6-13) state using the procedures P15 or P17 respectively will be performed.

7.6.1.3 Specific message contents

All specific message contents shall be referred to clause 9 with the following exceptions:

PHYSICAL CHANNEL RECONFIGURATION (procedures 6-12 and 6-13)

| Information Element | Value/remark |
|------------------------------------|--------------|
| UTRAN DRX cycle length coefficient | 7 |

7.6.2 IDLE with 1 MBMS Service Activated

7.6.2.1 Initial conditions

User Equipment:

For MBMS broadcast test cases:

- The UE is in registered Idle Mode on PS state (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domain. The UE states are specified in clause 7.4.

For MBMS multicast test cases:

- The UE is in CELL_FACH (6-11 PS-DCCH+DTCH_FACH) state after executing the procedure P14 defined in clause 7.4.2.6.

For MBMS broadcast and multicast test cases:

- Subsequent to the broadcasting of System Information, MCCH messages are transmitted by the SS using MBMS configuration C1 (No ongoing service) and Default1 MCCH scheduling. See subclause 11.1.
- For MBMS the RRC messages used throughout the generic setup procedures make use of specific parameter settings as specified in clause 9.1.

7.6.2.2 Procedure

For MBMS broadcast test cases:

- The SS request the UE to active the requested MBMS broadcast service.
- The SS waits until the MBMS broadcast service has been activated in the UE

For MBMS multicast test cases:

| Step | Direction | | Message | Comments |
|------|-----------|----|---------------------------------------|----------------------------------|
| | UE | SS | | |
| 1 | | | | Make UE join a multicast service |
| 2 | | → | IGMP/MLD JOIN | IGMP/MLD |
| 3 | | ← | REQUEST MBMS CONTEXT ACTIVATION | SM |
| 4 | | → | ACTIVATE MBMS CONTEXT REQUEST | SM |
| 5 | | ← | AUTHENTICATION AND CIPHERING REQUEST | GMM |
| 6 | | → | AUTHENTICATION AND CIPHERING RESPONSE | GMM |
| 7 | | ← | ACTIVATE MBMS CONTEXT ACCEPT | SM |
| 8 | | ← | RRC CONNECTION RELEASE | RRC |
| 9 | | → | RRC CONNECTION RELEASE COMPLETE | RRC |

7.6.2.3 Specific message contents

All specific message contents shall be referred to clause 9 with the following exceptions:

Attach Accept message: GMM

| Information Element | Value/remark |
|-----------------------|----------------|
| NetworkFeatureSupport | MBMS supported |

Service Request message: GMM

| Information Element | Value/remark |
|---------------------|------------------------|
| ServiceType | MBMS Service Reception |

REQUEST MBMS CONTEXT ACTIVATION

| Information Element | Value/remark |
|-------------------------------------|--------------|
| Linked NSAPI | 5 |

7.6.3 MBSFN IDLE

7.6.3.1 Initial conditions

System Simulator:

- 1 MBMS MBSFN Cell 31 with default parameters.

In addition to broadcasting System Information, MCCH messages are transmitted by the SS using MBMS configuration C1 and Default1 MCCH scheduling (No ongoing service). See subclause 11.1.

- 1 unicast carrier Cell 1 with default parameters.

User Equipment:

- The UE is in MBSFN Idle mode with one service activated on the MBSFN cell as specified in subclause 7.6.4.
- On the unicast carrier cell the UE is in registered Idle Mode on PS (state 3) if the UE only supports PS domain or registered Idle Mode on CS/PS (state 7) if the UE supports both CS and PS domains. See subclause 7.6.4. The UE states are specified in subclause 7.4.

7.6.3.2 Procedure

- The SS requests the UE to de-activate the requested MBMS broadcast service.
- The SS waits until the MBMS broadcast service has been de-activated in the UE

Expected Sequence:

| Step | Direction | | Carrier | Message | Comment |
|------|-----------|----|---------|------------------------------------|--|
| | UE | SS | | | |
| 1 | | ← | M | SYSTEM INFORMATION (BCCH) | |
| 2 | | ← | M | MBMS MCCH Message Configuration C1 | MBMS configuration C1 and Default1 MCCH scheduling. No session ongoing. |
| 3 | | SS | | | SS requests the UE to de-activate the required MBMS broadcast service |
| 4 | | SS | | | SS waits until the MBMS broadcast service has been de-activated in the UE. |

7.6.3.3 Specific message contents

All message contents shall be as specified in clause 9.1.

7.6.4 MBSFN IDLE with 1 MBMS Service Activated

7.6.4.1 Initial conditions

System Simulator:

- 1 MBMS MBSFN Cell 31 with default parameters.

In addition to broadcasting System Information, MCCH messages are transmitted by the SS using MBMS configuration C2 and Default1 MCCH scheduling (No modified services. One ongoing service corresponding to that to be activated at the UE. 124 kbps PS RAB). See subclause 11.1.

- 1 unicast carrier Cell 1 with default parameters.

User Equipment:

- The UE is switched off.
- The Test-USIM shall be inserted.
- The UE shall be operated under normal test conditions.

7.6.4.2 Procedure

- The UE shall be switched on and the unicast carrier mobile termination shall be activated.
- The UE registers on the unicast carrier Cell 1. The UE registers on PS, as specified in clause 7.2.2.2 of TS 34.108 (state 3) if the UE only supports PS domain or registers on CS/PS, as specified in clause 7.2.2.3 of TS 34.108. (state 7) if the UE supports both CS and PS domains.
- The SS sends ACTIVATE RB TEST MODE on the unicast carrier cell. The UE acknowledges by sending ACTIVATE RB TEST MODE COMPLETE.
- The MBMS MBSFN mobile termination shall be activated. (See Note 1)
- The SS sends CLOSE UE TEST LOOP via the unicast carrier cell, requesting activation of Test Loop Mode 3 specifying the MBSFN MBMS short transmission identity of the MTCH for the activated service (on Cell 31).
- The SS requests the UE to activate the requested MBMS broadcast service.
- The UE performs an MBSFN cell search, reads System Information and camps on Cell 31.
- The UE reads the MCCH messages transmitted by the SS in accordance with Combination C2 and with Default1 MCCH information scheduling. See subclause 11.1. The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period.

- i) The UE shall establish the p-t-m radio bearer for the ongoing activated MBMS service indicated in the MBMS UNMODIFIED SERVICES INFORMATION message according to the configuration defined in the MBMS CURRENT CELL P-T-M INFORMATION (one ongoing session corresponding to the service activated at the UE. The UE closes the test loop and starts counting successfully received RLC PDUs on the MTCH. The UE will send CLOST UE TEST LOOP COMPLETE.
- j) The Test Loop is opened and RB Test Mode is deactivated.

Expected Sequence:

| Step | Direction | | Carrier | Message | Comment |
|------|-----------|----|---------|------------------------------------|---|
| | UE | SS | | | |
| 1 | UE | | U | | UE switched on and unicast carrier mobile termination is activated. |
| 2 | | | U | | UE registers on Unicast carrier Cell 1. |
| 3 | ← | | U | ACTIVATE RB TEST MODE | |
| 4 | → | | U | ACTIVATE RB TEST MODE COMPLETE | |
| 5 | UE | | | | MBMS MBSFN mobile termination is activated. UE starts MBSFN cell search. Note 1. |
| 6 | ← | | U | CLOSE UE TEST LOOP | Loop back mode 3 on MTCH on Cell 31 is requested. |
| 7 | SS | | | | SS requests the UE to activate the required MBMS broadcast service |
| 8 | ← | | M | SYSTEM INFORMATION (BCCH) | |
| 9 | ← | | M | MBMS MCCH Message Configuration C2 | No modified services. One ongoing service corresponding to that activated at the UE. 124 kbps PS RAB |
| 10 | UE | | M | | The UE shall continue acquiring the above MBMS messages until it has received a consistent set of MCCH information in the same modification period. |
| 11 | → | | M | CLOSE UE TEST LOOP COMPLETE | The UE shall establish the indicated p-t-m radio bearer and close the test loop. |
| 12 | ← | | U | OPEN UE TEST LOOP | |
| 13 | → | | U | OPEN UE TEST LOOP COMPLETE | |
| 14 | ← | | U | DEACTIVATE RB TEST MODE | |
| 15 | → | | U | DEACTIVATE RB TEST MODE COMPLETE | |

Note 1: If possible, activation of the MBMS Mobile Termination shall be delayed until registration on the unicast carrier is complete.

7.6.4.3 Specific message contents

All message contents shall be as specified in clause 9.1.

8 Test USIM Parameters

8.1 Introduction

This clause defines default parameters for programming the elementary files of the test USIM. The requirements of this clause do not apply to the USIM/ME tests of 3GPP TS 31.120 [39] and 3GPP TS 31.121 [40].

8.1.1 Definitions

"Test USIM card":

A USIM card supporting the test algorithm for authentication, programmed with the parameters defined in this clause. The electrical, mechanical and environmental requirements of the test USIM card are specified in 3GPP TS 31.101 [22] and 3GPP TS 31.102 [23].

"Test USIM":

Either a test USIM card or the USIM simulator programmed with the parameters defined in this clause.

8.1.2 Definition of the test algorithm for authentication

In order to be able to easily test the UMTS authentication and key agreement procedure as specified in 3GPP TS 33.102 [24] and 3GPP TS 33.105 [26] along the whole system, the availability of a test algorithm for generation of authentication vector based on quintets is needed (in GSM triplets was used). Additionally, calculation of the parameters for re-synchronization requests is needed. The definition of the test algorithm are the functions f_1 , f_2 , f_3 , f_4 , f_5 and the corresponding functions for re-synchronization are f_1^* and f_5^* .

For test USIM intended to be used for inter-RAT or GERAN-only test cases then the test USIM shall support the conversion functions c_2 and c_3 according to 3GPP TS 33.102 [24], clause 6.8.1.2 to derive the GSM SRES and ciphering key K_c from the UMTS XRES and cipher/integrity keys CK and IK .

The test algorithm defined in the present clause shall be implemented in test USIM cards as well in test USIM simulators and SS. The test algorithm may also, for test purposes, be implemented in AUC.

The following procedure employs bit wise modulo 2 addition ("XOR").

The following convention applies:

All data variables in the specification of this test algorithm are presented with the most significant substring on the left hand side and the least significant substring on the right hand side. A substring may be a bit, byte or other arbitrary length bitstring. Where a variable is broken down into a number of substrings, the leftmost (most significant) substring is numbered 0, the next most significant is numbered 1, and so on through to the least significant.

8.1.2.1 Authentication and key derivation in the test USIM and SS

The following steps describe sequence of operations for the functions f_1 , f_2 , f_3 , f_4 and f_5 to perform in the test USIM and SS, in order to obtain the XMAC/MAC, RES/XRES, CK , IK , K_c and AK respectively, to be used in the authentication and key agreement procedure.

Step 1:

XOR to the challenge **RAND**, a predefined number **K** (in which at least one bit is not zero, see clause 8.2), having the same bit length (128 bits) as **RAND**.

The result **XDOUT** of this is:

$$\mathbf{XDOUT}[\text{bits } 0,1, \dots 126,127] = \mathbf{K} [\text{bits } 0,1, \dots 126,127] \text{ XOR } \mathbf{RAND}[\text{bits } 0,1, \dots 126,127]$$

Step 2:

RES (test USIM), **XRES** (SS), **CK**, **IK** and **AK** are extracted from **XDOUT** this way:

$$\mathbf{RES}[\text{bits } 0,1, \dots n-1,n] = \mathbf{f}_2(\mathbf{XDOUT},n) = \mathbf{XDOUT}[\text{bits } 0,1, \dots n-1,n] \quad (\text{with } 30 < n < 128)$$

NOTE: Suggested length for RES is 128 bits (i.e. $n = 127$).

In SS and AUC, the XRES calculation is identical to RES.

$$\mathbf{CK}[\text{bits } 0,1, \dots 126,127] = \mathbf{f}_3(\mathbf{XDOUT}) = \mathbf{XDOUT}[\text{bits } 8,9, \dots 126,127,0,1, \dots 6,7]$$

$$\mathbf{IK}[\text{bits } 0,1, \dots 126,127] = \mathbf{f}_4(\mathbf{XDOUT}) = \mathbf{XDOUT}[\text{bits } 16,17, \dots 126,127,0,1, \dots 14,15]$$

$$\mathbf{AK}[\text{bits } 0,1, \dots 46,47] = \mathbf{f}_5(\mathbf{XDOUT}) = \mathbf{XDOUT}[\text{bits } 24,25, \dots 70,71]$$

For test USIM intended for inter-RAT testing the GSM ciphering key K_c shall be derived from the UMTS cipher/integrity keys:

$$\mathbf{K}_c[\text{bits } 0,1, \dots 62,63] = \mathbf{c}_3(\mathbf{CK},\mathbf{IK}), \text{ see 3GPP TS 33.102 [24], clause 6.8.1.2.}$$

Step 3:

Concatenate **SQN** with **AMF** to obtain **CDOUT** like this:

$$\mathbf{CDOUT}[\text{bits } 0,1, \dots 62,63] = \mathbf{SQN}[\text{bits } 0,1, \dots 46,47] \parallel \mathbf{AMF}[\text{bits } 0,1, \dots 14,15]$$

NOTE: For test USIM the $\mathbf{SQN} = \mathbf{SQN}_{\text{MS}} = \mathbf{SQN}_{\text{SS}}[\text{bits } 0,1, \dots 46,47] = \mathbf{AUTN}[\text{bits } 0,1, \dots 46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1, \dots 46,47]$ where AUTN is the received authentication token.

Step 4:

XMAC (test USIM) and **MAC** (SS) are calculated from **XDOUT** and **CDOUT** this way:

$$\mathbf{XMAC}[\text{bits } 0,1, \dots 62, 63] = \mathbf{f1}(\mathbf{XDOUT}, \mathbf{CDOUT}) = \mathbf{XDOUT}[\text{bits } 0,1, \dots 62,63] \text{ XOR } \mathbf{CDOUT}[\text{bits } 0,1, \dots 62,63]$$

NOTE: In SS and AUC, the MAC calculation is identical to XMAC.

Step 5:

The SS calculates the authentication token **AUTN**:

$$\mathbf{AUTN}[\text{bits } 0,1, \dots 126,127] = \mathbf{SQN} \oplus \mathbf{AK}[\text{bits } 0,1, \dots 46,47] \parallel \mathbf{AMF}[\text{bits } 0,1, \dots 14,15] \parallel \mathbf{MAC}[\text{bits } 0,1, \dots 62, 63]$$

$$\text{Where } \mathbf{SQN} \oplus \mathbf{AK}[\text{bits } 0,1, \dots 46,47] = \mathbf{SQN}[\text{bits } 0,1, \dots 46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1, \dots 46,47]$$

8.1.2.2 Generation of re-synchronization parameters in the USIM

For SS to be able to initiate an authentication re-synchronization procedure a specific AMF value has been defined.

$$\mathbf{AMF}_{\text{RESYNCH}} = \mathbf{AMF}[\text{bits } 0,1, \dots 14,15] = "1111 1111 1111 1111"$$

When the test USIM receives an authentication token (AUTN) having the value of AMF field equal to the $\mathbf{AMF}_{\text{RESYNCH}}$ value then the test USIM shall initiate the re-synchronization procedure.

When the test USIM starts the re-synchronization procedure, the MAC-S and AK have to be calculated using the functions $f1^*$ and $f5^*$, which in the test algorithm are identical to $f1$ and $f5$, respectively.

Step 1:

XOR to the challenge **RAND**, a predefined number **K** (in which at least one bit is not zero, see 8.2), having the same bit length (128 bits) as **RAND**.

The result **XDOUT** of this is:

$$\mathbf{XDOUT}[\text{bits } 0,1, \dots 126,127] = \mathbf{K}[\text{bits } 0,1, \dots 126,127] \text{ XOR } \mathbf{RAND}[\text{bits } 0,1, \dots 126,127]$$

Step 2:

AK is extracted from **XDOUT** this way:

$$\mathbf{AK}[\text{bits } 0,1, \dots 46,47] = \mathbf{f5}^*(\mathbf{XDOUT}) = \mathbf{XDOUT}[\text{bits } 24,25, \dots 70,71]$$

Step 3:

Concatenate \mathbf{SQN}_{MS} with \mathbf{AMF}^* to obtain **CDOUT** like this:

$$\mathbf{CDOUT}[\text{bits } 0,1, \dots 62,63] = \mathbf{SQN}_{\text{MS}}[\text{bits } 0,1, \dots 46,47] \parallel \mathbf{AMF}^*[\text{bits } 0,1, \dots 14,15]$$

Where \mathbf{AMF}^* assumes a dummy value of all zeros.

NOTE 1: For test USIM the $\mathbf{SQN}_{\text{MS}} = \mathbf{SQN}_{\text{SS}}[\text{bits } 0,1, \dots 46,47] = \mathbf{AUTN}[\text{bits } 0,1, \dots 46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1, \dots 46,47]$ where AUTN is the received authentication token.

NOTE 2: For SS and AUC the $\mathbf{SQN}_{\text{MS}} = \mathbf{AUTS}[\text{bits } 0,1, \dots 46,47] \text{ XOR } \mathbf{AK}[\text{bits } 0,1, \dots 46,47]$ where AUTS is the received re-synchronization parameter.

Step 4:

MAC-S is calculated from **XDOUT** and **CDOUT** this way:

$$\text{MAC-S}[\text{bits } 0,1, \dots 62, 63] = \mathbf{f1}*(\mathbf{XDOUT}, \mathbf{CDOUT}) = \mathbf{XDOUT}[\text{bits } 0,1, \dots 62,63] \text{ XOR } \mathbf{CDOUT}[\text{bits } 0,1, \dots 62,63]$$

NOTE: In SS and AUC, the XMAC-S calculation is identical to MAC-S.

Step 5:

The test USIM calculates the re-synchronization parameter **AUTS**:

$$\text{AUTS}[\text{bits } 0,1, \dots 110,111] = \text{SQN}_{\text{MS}} \oplus \text{AK}[\text{bits } 0,1, \dots 46,47] \parallel \text{MAC-S}[\text{bits } 0,1, \dots 62, 63]$$

Where $\text{SQN}_{\text{MS}} \oplus \text{AK}[\text{bits } 0,1, \dots 46,47] = \text{SQN}_{\text{MS}} [\text{bits } 0,1, \dots 46,47] \text{ XOR } \text{AK}[\text{bits } 0,1, \dots 46,47]$

8.1.2.3 Using the authentication test algorithm for UE conformance testing

8.1.2.3.1 Authentication accept case

The authentication accept case is illustrated in figures 8.1.2.3.1 and 8.1.2.3.2.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to step 5) using an AMF value different from the AMF_{RESYNCH} value.

The SS sends an authentication request, including RAND and AUTN parameters, to the ME/USIM.

Based on the received RAND parameter the test USIM calculates the RES, CK, IK, Kc and XMAC parameters according to clause 8.1.2.1 (step 1 to step 4). The test USIM extracts the SQN_{MS} = SQN_{SS}, AMF and MAC parameters from the received authentication token AUTN.

The test USIM checks that XMAC = MAC and then return the RES, CK and IK parameters to the ME.

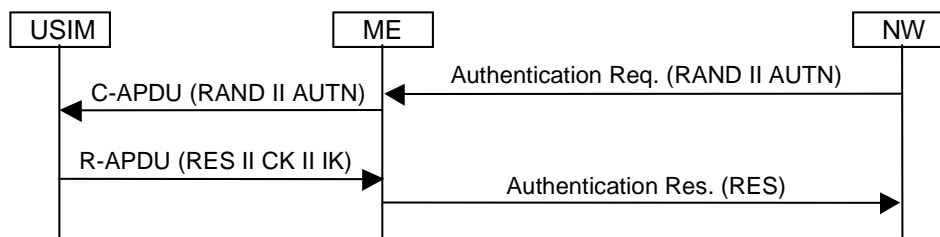

Figure 8.1.2.3.1: Network accepted by UE (USIM not supporting derivation of GSM cipher key Kc)

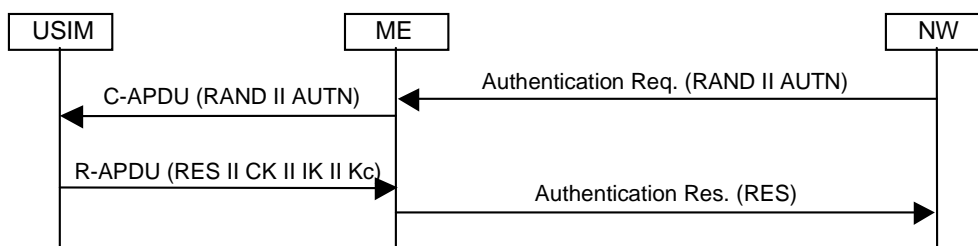

Figure 8.1.2.3.2: Network accepted by UE (USIM supporting derivation of GSM cipher key Kc)

8.1.2.3.2 MAC failure case

The MAC failure case is illustrated in figure 8.1.2.3.2.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to step 5) using an AMF value different from the AMF_{RESYNCH} value and a MAC value different from what is calculated in clause 8.1.2.1 step 4.

The SS sends an authentication request, including RAND and AUTN parameters, to the ME/USIM.

Based on the received RAND parameter The test USIM calculates the RES, CK, IK, Kc and XMAC parameters according to clause 8.1.2.1 (step 1 to step 4).

The test USIM extracts the $SQN_{MS} = SQN_{SS}$, AMF and MAC parameters from the received authentication token AUTN.

When the test USIM identifies that the calculated XMAC value is different from the MAC value received in AUTN then the USIM notifies the ME of the MAC failure and the ME sends an AUTHENTICATION FAILURE message to the SS (cause "MAC failure").

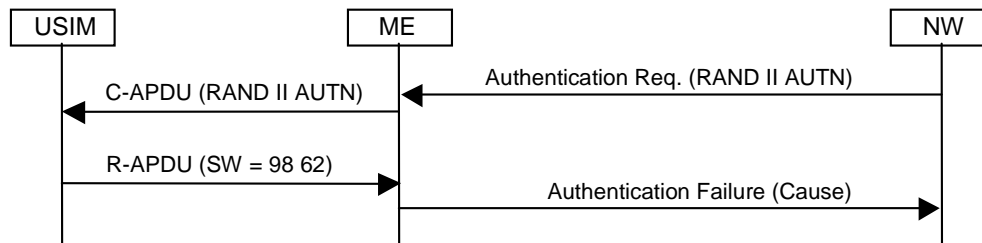

Figure 8.1.2.3.2: MAC failure cases

8.1.2.3.3 SQN failure case

The SQN failure case is illustrated in figure 8.1.2.3.3.

The SS calculates the authentication token AUTN according to the test algorithm as specified in clause 8.1.2.1 (step 1 to step 5) using an AMF value equal to $AMF_{RESYNCH}$.

The SS sends an authentication request, including RAND and AUTN parameters, to the UE/USIM.

The test USIM extracts the $SQN_{MS} = SQN_{SS}$, AMF and MAC parameters from the received authentication token AUTN.

When the test USIM identifies that the AMF field is equal to the $AMF_{RESYNCH}$ value it calculates the re-synchronization parameter AUTS as specified in clause 8.1.2.2 (step 1 to step 5) and forward it to the ME.

The ME sends an AUTHENTICATION FAILURE message to the SS including the AUTS parameter.

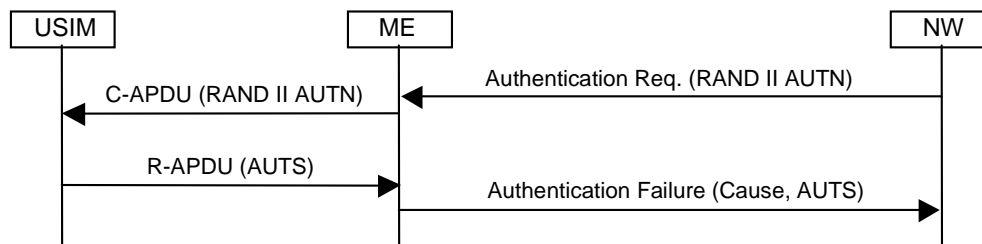

Figure 8.1.2.3.3: SQN failure case

8.1.3 Definition of the test algorithm for VGCS/VBS VSTK generation

In order to be able to easily test the VGCS/VBS key generation and encryption as specified in TS 43.020 [44] and TS 31.102 [23] along the whole system, the availability of a test algorithm for generation of the VSTK-key is needed.

The test algorithm defined in the present clause shall be implemented in test USIM cards as well in test USIM simulators and SS.

The following procedure employs bit wise modulo 2 addition ("XOR").

The following convention applies:

All data variables in the specification of this test algorithm are presented with the most significant substring on the left hand side and the least significant substring on the right hand side. A substring may be a bit, byte or other arbitrary

length bitstring. Where a variable is broken down into a number of substrings, the leftmost (most significant) substring is numbered 0, the next most significant is numbered 1, and so on through to the least significant.

8.1.3.1 VSTK generation in the test USIM and SS

The following steps describe the sequence of operations for the function A8_V (TS 43.020 [44]) to be performed in the test USIM and SS, in order to obtain the VSTK, to be used in the subsequent ME/BSS key derivation steps for VGCS/VBS ciphering.

Step 1:

Expand the 36-bit value **VSTK_RAND** to an intermediate 40-bit value **EXPAND**:

FILLER[bits 0,..7] = "11111111"

EXPAND [bits 0,1, . . .39] = **FILLER**[bits 0,..3] || **VSTK_RAND**[bits 0,1, . . .35]

Expand the 40-bit value **EXPAND** to a 128-bit value **EXP_RAND**:

EXP_RAND[bits 0,1, . . .126,127] = **EXPAND**[bits 0,1, . . .39] || **EXPAND**[bits 0,1, . . .39] || **EXPAND**[bits 0,1, . . .39] || **FILLER**[bits 0,..7]

Step 2:

XOR the expanded 128 bit **EXP_RAND** with a stored **V_Ki** i.e. a 128 bit Voice Group or Broadcast Group Key (128 bit) number taken by the USIM from an internal table indexed by VK_Id and Group_Id

The result **VSTK** of this is:

VSTK[bits 0,1, . . .126,127]= **V_Ki** [bits 0,1, . . .126,127] XOR **EXP_RAND**[bits 0,1, . . .126,127]

8.2 Default Parameters for the test USIM

K:

Size: 16 Bytes

Default values: Bytes 1 (HEX): 00
 Bytes 2 (HEX): 01
 Bytes 3 (HEX): 02
 Bytes 4 (HEX): 03
 Bytes 5 (HEX): 04
 Bytes 6 (HEX): 05
 Bytes 7 (HEX): 06
 Bytes 8 (HEX): 07
 Bytes 9 (HEX): 08
 Bytes 10 (HEX): 09
 Bytes 11 (HEX): 0A
 Bytes 12 (HEX): 0B
 Bytes 13 (HEX): 0C
 Bytes 14 (HEX): 0D

Bytes 15 (HEX): 0E

Bytes 16 (HEX): 0F

PIN Disabling:

The PIN enabled / disabled flag will be set to "PIN Disabled". This ensures that when the Test USIM is inserted into a UE the user will not be prompted for PIN entry.

8.3 Default settings for the Elementary Files (EFs)

The format and coding of elementary files of the USIM are defined in 3GPP TS 31.101 [22] and 3GPP TS 31.102 [23]. The following clauses define the default parameters to be programmed into each elementary file. Some files may be updated by the UE based on information received from the SS. These are identified in the following clauses.

If EFs have an unassigned value, it may not be clear from the main text what this value should be. This clause suggests values in these cases.

8.3.1 Contents of the EFs at the MF level

8.3.1.1 EF_{DIR}

8.3.1.2 EF_{ICCID} (ICC Identity)

The programming of this EF is a test house option.

8.3.1.3 EF_{PL} (Preferred Languages)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.1.4 EF_{ARR} (Access rule reference)

The programming of this EF is a test house option.

8.3.2 Contents of files at the USIM ADF (Application DF) level

8.3.2.1 EF_{LI} (Language Indication)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.2 EF_{IMSI} (IMSI)

The IMSI value will be chosen by the test house. The IMSI used by the SS will align this value.

File size: 9 bytes

Default values: Byte 1 (DEC): 8

Bytes 2 to 9 (HEX): 09 10 10 ** ** ** **

49 24 10 ** ** ** * (for Band VI and Band IX)

"*" indicates any number between 0 and 9 subject to the restriction that IMSI mod 1000 (i.e. bytes 7, 8 and 9) lies in one of the following ranges:

- 063 to 125, 189 to 251, 315 to 377, 441 to 503, 567 to 629, 693 to 755, 819 to 881 or 945 to 999.

NOTE: This ensures that the UE can listen to the second CCCH when more than one basic physical channel is configured for the CCCH. This is necessary for the test of "paging re-organization".

8.3.2.3 EF_{Keys} (Ciphering and Integrity Keys)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.4 EF_{KeysPS} (Ciphering and Integrity Keys for Packet Switched domain)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.5 EF_{PLMNwAcT} (User controlled PLMN selector with Access Technology)

File size: 5n bytes

Default values (HEX):

| | | |
|------------------------|----------|--|
| Bytes 1 to 3: | 32 F4 10 | (MCC, MNC) - Translates to 234, 01 |
| Bytes 4 to 5: | C0 B0 | (Access Technology) - Translates to UTRAN, E-UTRAN, GSM, cdma2000 HRPD, cdma2000 1xRTT |
| Bytes 6 to 8: | 32 F4 20 | (MCC, MNC) |
| Bytes 9 to 10: | C0 B0 | (Access Technology) |
| Bytes 11 to 13: | 32 F4 30 | (MCC, MNC) |
| | | |
| | | |
| | | |
| Bytes(5n-4) to (5n-2): | 32 F4 43 | (MCC, MNC) |
| Bytes (5n-1) to 5n: | C0 B0 | (Access Technology) |

PLMNs are shown coded above since this is the largest number required for a test. It is necessary to take this into account since the USIM cards must be dimensioned to cope with this number of records.

8.3.2.6 EF_{HPPLMN} (Higher Priority PLMN search period)

File size: 1 byte

Default value (HEX): 00 (No higher priority PLMN search attempts)

8.3.2.7 EF_{ACMmax} (ACM maximum value)

File size: 3 bytes

Default:

| | |
|---------|----|
| Byte 1: | 00 |
| Byte 2: | 00 |
| Byte 3: | 00 |

The above translates to: "Not valid".

8.3.2.8 EF_{UST} (USIM Service Table)

Services will be allocated and activated as follows.

| Services | | Activated | Version |
|---------------|---|-----------|---------|
| Service n°1 : | Local Phone Book | Option | |
| Service n°2 : | Fixed Dialling Numbers (FDN) | Option | |
| Service n°3 : | Extension 2 | Option | |
| Service n°4 : | Service Dialling Numbers (SDN) | Option | |
| Service n°5 : | Extension3 | Option | |
| Service n°6 : | Barred Dialling Numbers (BDN) | Option | |
| Service n°7 : | Extension4 | Option | |
| Service n°8 : | Outgoing Call Information (OCI and OCT) | Option | |
| Service n°9 : | Incoming Call Information (ICI and ICT) | Option | |
| Service n°10: | Short Message Storage (SMS) | Yes | |

| Services | | Activated | Version |
|---------------|--|-----------|-----------------|
| Service n°11: | Short Message Status Reports (SMSR) | Option | |
| Service n°12: | Short Message Service Parameters (SMSP) | Yes | |
| Service n°13: | Advice of Charge (AoC) | Yes | |
| Service n°14: | Capability Configuration Parameters (CCP) | Yes | |
| Service n°15: | Cell Broadcast Message Identifier | Yes | |
| Service n°16: | Cell Broadcast Message Identifier Ranges | Yes | |
| Service n°17: | Group Identifier Level 1 | Option | |
| Service n°18: | Group Identifier Level 2 | Option | |
| Service n°19: | Service Provider Name | Option | |
| Service n°20: | User controlled PLMN selector with Access Technology | Yes | |
| Service n°21: | MSISDN | Option | |
| Service n°22: | Image (IMG) | Option | |
| Service n°23: | Not used (reserved for SoLSA) | No | |
| Service n°24: | Enhanced Multi-Level Precedence and Pre-emption Service | Option | |
| Service n°25: | Automatic Answer for eLMPP | Option | |
| Service n°26: | RFU | No | |
| Service n°27: | GSM Access | Yes | |
| Service n°28: | Data download via SMS-PP | Option | |
| Service n°29: | Data download via SMS-CB | Option | |
| Service n°30: | Call Control by USIM | Option | |
| Service n°31: | MO-SMS Control by USIM | Option | |
| Service n°32: | RUN AT COMMAND command | Option | |
| Service n°33: | Packet Switched Domain | Yes | |
| Service n°34: | Enabled Services Table | Yes | |
| Service n°35: | APN Control List (ACL) | Option | |
| Service n°36: | Depersonalization Control Keys | Option | |
| Service n°37: | Co-operative Network List | Option | |
| Service n°38: | GSM security context | Yes | |
| Service n°39: | CPBCCH Information | Yes | |
| Service n°40: | Investigation Scan | Yes | |
| Service n°41: | MExE | Option | |
| Service n°42: | Operator controlled PLMN selector with Access Technology | Yes | |
| Service n°43: | HPLMN selector with Access Technology | Yes | |
| Service n°44: | Extension 5 | Option | |
| Service n°45: | PLMN Network Name | Option | |
| Service n°46: | Operator PLMN List | Option | |
| Service n°47: | Mailbox Dialling Numbers | Option | |
| Service n°48: | Message Waiting Indication Status | Option | |
| Service n°49: | Call Forwarding Indication Status | Option | |
| Service n°50: | Reserved and shall be ignored | Option | |
| Service n°51: | Service Provider Display Information | Option | |
| Service n°52: | Multimedia Messaging Service (MMS) | Option | |
| Service n°53: | Extension 8 | Option | |
| Service n°54: | Call control on GPRS by USIM | Option | |
| Service n°55: | MMS User Connectivity Parameters | Option | |
| Service n°56: | Network's indication of alerting in the MS (NIA) | Option | |
| Service n°57: | VGCS Group Identifier List (EF _{VGCS} and EF _{VGCSs}) | YES | |
| Service n°58: | VBS Group Identifier List (EF _{VBS} and EF _{VBSs}) | YES | |
| Service n°59: | Pseudonym | Option | REL-6 and later |
| Service n°60: | User Controlled PLMN selector for WLAN access | Option | REL-6 and later |
| Service n°61: | Operator Controlled PLMN selector for WLAN access | Option | REL-6 and later |
| Service n°62: | User controlled WSID list | Option | REL-6 and later |
| Service n°63: | Operator controlled WSID list | Option | REL-6 and later |
| Service n°64: | VGCS security | YES | REL-6 and later |
| Service n°65: | VBS security | YES | REL-6 and later |
| Service n°66: | WLAN Reauthentication Identity | Option | REL-6 and later |
| Service n°67: | Multimedia Messages Storage | Option | REL-6 and later |
| Service n°68: | Generic Bootstrapping Architecture (GBA) | Option | REL-6 and later |
| Service n°69: | MBMS security | Option | REL-6 and later |
| Service n°70: | Data download via USSD and USSD application mode | Option | REL-6 and later |
| Service n°71: | Equivalent HPLMN | Option | REL-6 and later |
| Service n°72: | Additional TERMINAL PROFILE after UICC activation | Option | REL-6 and later |
| Service n°73: | Equivalent HPLMN Presentation Indication | Option | REL-6 and later |

| Services | | Activated | Version |
|--------------|--|-----------|-----------------|
| Service n°74 | Last RPLMN Selection Indication | Yes | REL-7 and later |
| Service n°75 | OMA BCAST Smart Card Profile | No | REL-7 and later |
| Service n°76 | GBA-based Local Key Establishment Mechanism | Option | REL-7 and later |
| Service n°77 | Terminal Applications | No | REL-7 and later |
| Service n°78 | Service Provider Name Icon | Option | REL-8 and later |

| Service n°85 | EPS Mobility Management Information | Option | REL-8 and later |
| Service n°86 | Allowed CSG Lists and corresponding indications | Option | REL-8 and later |
| Service n°87 | Call control on EPS PDN connection by USIM | No | REL-8 and later |
| Service n°88 | HPLMN Direct Access | Option | REL-8 and later |
| Service n°89 | eCall Data | Option | REL-8 and later |
| Service n°90 | Operator CSG Lists and corresponding indications | Option | REL-9 and later |
| Service n°92 | Support of CSG Display Control | Option | REL-9 and later |

8.3.2.9 EF_{ACM} (Accumulated Call Meter)

File size: 3 bytes

Default: Byte 1: 00
Byte 2: 00
Byte 3: 00

The above translates to: "Not yet implemented".

8.3.2.10 EF_{GID1} (Group Identifier Level 1)

The programming of this EF is a test house option.

8.3.2.11 EF_{GID2} (Group Identifier Level 2)

The programming of this EF is a test house option.

8.3.2.12 EF_{SPN} (Service Provider Name)

The programming of this EF is a test house option.

8.3.2.13 EF_{PUCT} (Price per Unit and Currency Table)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.14 EF_{CBMI} (Cell Broadcast Message identifier selection)

The programming of this EF is a test house option.

The file size is 2n bytes, where n is the number of Cell broadcast message identifier records - each record defining a type of Cell Broadcast message which may be accessed by the UE. Care should be taken when dimensioning the USIM to take into account the number of Cell Broadcast message identifier records required.

8.3.2.15 EF_{ACC} (Access Control Class)

The EFACC type A is the default type.

Type A;

File size: 2 Bytes

Default values (BIN): Byte 1: 000000**
 Byte 2: *****

The test house may set any single bit shown by "*" to "1". All remaining bits of byte 2 will be set to "0". This determines the access control class of the USIM.

Type B;

Default values (BIN): Byte 1: 111110**
 Byte 2: *****

The test house may set any single bit shown by "*" to "1". All remaining bits of byte 2 will be set to "0". This determines the access control class of the USIM.

Type C;

File size: 2 Bytes
 Default values (BIN): Byte 1: 100010**
 Byte 2: *****

The test house may set any single bit shown by "*" to "1". This determines the access control class of the USIM.

Type D;

Default values (BIN): Byte 1: 011100**
 Byte 2: *****

The test house may set any single bit shown by "*" to "1". This determines the access control class of the USIM.

8.3.2.16 EF_{FPLMN} (Forbidden PLMNs)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.17 EF_{LOCi} (Location Information)

File size: 11 Bytes
 Default values: Bytes 1 to 4 (HEX): FF FF FF FF (TMSI)
 Bytes 5 to 9 (HEX): 42 F6 18 FF FE (LAI)
 Byte 10 (HEX): FF (RFU)
 Byte 11 (BIN): 00000001 (Location Update Status = "not updated")

Bytes 5 to 9: LAI-MCC = 246 (bytes 5 to 6) and LAI-MNC = 81 (byte 7) are frequently used. The LAC (bytes 8 to 9) is set to "FF FE" since this, in conjunction with byte 11 setting of "01", is used to ensure that the UE performs a location update at the beginning of a test.

Bytes in this file (e.g. TMSI in bytes 1 to 4) may be updated as a result of a location update attempt by the UE.

8.3.2.18 EF_{AD} (Administrative Data)

File size: 4 bytes
 Default values: Byte 1: 10000000 - (type approval operations)
 Byte 2: 00000000
 Byte 3: 00000000
 Byte 4: 00000010

8.3.2.19 Void**8.3.2.20 EF_{CBMID} (Cell Broadcast Message Identifier for Data Download)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.21 EF_{ECC} (Emergency Call Codes)

The programming of this EF is a test house option.

8.3.2.22 EF_{CBMIR} (Cell Broadcast Message Identifier Range selection)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.23 EF_{PSLOCI} (Packet Switched location information)

File size: 14 Bytes

Default values: Bytes 1 to 4 (HEX): FF FF FF FF (P-TMSI)

Bytes 5 to 7 (HEX): FF FF FF (P-TMSI signature value)

Bytes 8 to 13 (HEX): 42 F6 18 FF FE FF (RAI)

Byte 14 (BIN): 00000001 (Routing Area update status = "not updated")

Bytes 8 to 13: RAI-MCC = 246 (bytes 8 to 9) and RAI-MNC = 81 (byte 10) are frequently used. The LAC (bytes 11 to 12) is set to "FF FE" since this, in conjunction with byte 14 setting of "01", is used to ensure that the UE performs a location update at the beginning of a test.

Bytes in this file (e.g. P-TMSI in bytes 1 to 4) may be updated as a result of a location update attempt by the UE.

8.3.2.24 EF_{FDN} (Fixed Dialling Numbers)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.25 EF_{SMS} (Short messages)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.26 EF_{MSISDN} (MSISDN)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.27 EF_{SMSP} (Short message service parameters)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.28 EF_{SMSS} (SMS status)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.29 EF_{SDN} (Service Dialling Numbers)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.30 EF_{EXT2} (Extension2)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.31 EF_{EXT3} (Extension3)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.32 EF_{SMSR} (Short message status reports)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.33 EF_{ICI} (Incoming Call Information)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.34 EF_{OCl} (Outgoing Call Information)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.35 EF_{ICT} (Incoming Call Timer)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.36 EF_{OCT} (Outgoing Call Timer)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.37 EF_{EXT5} (Extension5)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.38 EF_{CCP2} (Capability Configuration Parameters 2)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.39 EF_{eMLPP} (enhanced Multi Level Precedence and Pre-emption)

The programming of this EF is a test house option.

8.3.2.40 EF_{AAeM} (Automatic Answer for eMLPP Service)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.41 Void

8.3.2.42 EF_{Hiddenkey} (Key for hidden phone book entries)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.43 Void

8.3.2.44 EF_{BDN} (Barred dialling numbers)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.45 EF_{EXT4} (Extension 4)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.46 EF_{CMl} (Comparison method information)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.47 EF_{EST} (Enabled service table)

The programming of this EF is a test house option.

8.3.2.48 EF_{ACL} (Access point name control list)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.49 EF_{DCK} (Depersonalization control keys)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.50 EF_{CNL} (Co-operative network list)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.51 EF_{START-HFN} (Initialisation values for Hyperframe number)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.52 EF_{THRESHOLD} (Maximum value of START)

The programming of this EF is a test house option.

8.3.2.53 EF_{OPLMNwACT} (Operator controlled PLMN selector with Access Technology)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.54 EF_{HPLMNwAcT} (HPLMN selector with Access Technology)

File size: 5n (n ≥ 1) Bytes

Default values: Bytes 1 to 3 (HEX): 00 F1 10 (MCC/MNC of Test UICC's Home PLMN)

Bytes 4 to 5 (HEX): C0 B0 (all Access Technologies)

Bytes 6 to 5n (HEX): FF FF FF 00 00
FF FF FF 00 00

...

FF FF FF 00 00

Bytes 1 to 3: 1st HPLMN entry with HPLMN-MCC = 001 (bytes 1 to 2) and HPLMN-MNC = 01 (byte 3) which are frequently used in multimode and equal the EF IMSI's default MCC/MNC information.

Bytes 4 to 5: All Access Technologies selected for 1st HPLMN entry.

Bytes 6 to 5n: 2nd and more HPLMN entries are empty as per default EF parameters given in 3GPP TS 31.102 [23], annex E.

8.3.2.55 EF_{ARR} (Access rule reference)

The programming of this EF is a test house option.

8.3.2.56 Void**8.3.2.57 EF_{NETPAR} (Network Parameters)**

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.58 EF_{PNN} (PLMN Network Name)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.59 EF_{OPL} (Operator PLMN List)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.60 EF_{MBDN} (Mailbox Dialling Numbers)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.61 EF_{EXT6} (Extension6)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.62 EF_{MBI} (Mailbox Identifier)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.63 EF_{MWIS} (Message Waiting Indication Status)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.64 EF_{CFIS} (Call Forwarding Indication Status)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.65 EF_{EXT7} (Extension7)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.66 EF_{SPDI} (Service Provider Display Information)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.67 EF_{MMSN} (MMS Notification)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.68 EF_{EXT8} (Extension 8)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.69 EF_{MMSICP} (MMS Issuer Connectivity Parameters)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.70 EF_{MMSUP} (MMS User Preferences)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.71 EF_{MMSUCP} (MMS User Connectivity Parameters)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.72 EF_{NIA} (Network's Indication of Alerting)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

If service n°57 is "available", this file shall be present.

This EF contains a list of those VGCS group identifiers the user has subscribed to. The elementary file is used by the ME for group call establishment and group call reception.

File size: Bytes 200

Default values:

| Bytes | Group ID | Value | BCD encoding in the USIM |

8.3.2.74 EF_{VGCS} (Voice Group Call Service Status)

.If service n°57 is "available", this file shall be present.

This EF contains the status of activation for the VGCS group identifiers. The elementary file is directly related to the EF_{VGCS}. This EF shall always be allocated if EF_{VGCS} is allocated. The following list of group ID are activated: 1, 4, 20, 30, 50.

File size: 7 Bytes

Default value(HEX) : Bytes 1-7: '09 00 08 20 00 00 FE'

8.3.2.75 EF_{VBS} (Voice Broadcast Service)

If service n°58 is "available", this file shall be present.

This EF contains a list of those VBS group identifiers the user has subscribed to. The elementary file is used by the ME for broadcast call establishment and broadcast call reception.

File size: Bytes 200

Default values:

| Bytes | Group ID | Value | BCD encoding in the USIM |
|-------|----------|-------|--------------------------|
| 1-4 | 1 | 12 | 21 FF FF FF |
| 5-8 | 2 | 123 | 21 F3 FF FF |

Bytes 16 (HEX): 01

8.3.2.77 EF_{VGCSA} (Voice Group Call Service Ciphering Algorithm)

If service n°64 is "available", this file shall be present.

This EF contains the ciphering algorithm identifiers for each of the Master Group Key (V_Ki) of each VGCS group that the user has subscribed to (defined in EF_{VGCS}).

File size: 2 Bytes

Default value: Byte 1 = '01' (i.e. A5/1) and Byte 2 = '03' (i.e. A5/3)

8.3.2.78 EF_{VBSA} (Voice Broadcast Service Ciphering Algorithm)

If service n°65 is "available", this file shall be present.

This EF contains the ciphering algorithm identifiers for each of the Master Group Key (V_Ki) of each VBS group that the user has subscribed to (defined in EF_{VBS}).

File size: 2 Bytes

Default value: Byte 1 = '01' (i.e. A5/1) and Byte 2 = '03' (i.e. A5/3)

8.3.2.79 EF_{GBABP} (GBA Bootstrapping parameters)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.80 EF_{MSK} (MBMS Service Keys List)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.81 EF_{MUK} (MBMS User Key)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.82 Void

8.3.2.83 EF_{GBANL} (GBA NAF List)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.84 EF_{EHPLMN} (Equivalent HPLMN)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.85 EF_{EHPLMNPI} (Equivalent HPLMN Presentation Indication)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.86 EF_{LRPLMNSI} (Last RPLMN Selection Indication)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.87 EF_{NAFKCA} (NAF Key Centre Address)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.88 EF_{SPNI} (Service Provider Name Icon)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.89 EF_{PNNI} (PLMN Network Name Icon)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.90 EF_{NCP-IP} (Network Connectivity Parameters for USIM IP connections)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.2.91 EF_{EPSLOCI} (EPS location information)

The programming of this EF is a test house option.

8.3.2.92 EF_{EPSNSC} (EPS NAS Security Context)

The programming of this EF is a test house option.

8.3.3 Contents of DFs at the USIM ADF (Application DF) level

8.3.3.1 Contents of files at the USIM SoLSA level

8.3.3.1.1 EF_{SAI} (SoLSA Access Indicator)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.2 EF_{SLL} (SoLSA LSA List)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.3 LSA Descriptor files

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.4 Contents of files at the MExE level

8.3.3.1.4.1 EF_{MExE-ST} (MExE Service table)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.4.2 EF_{ORPK} (Operator Root Public Key)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.4.3 EF_{ARPK} (Administrator Root Public Key)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.4.4 EF_{TPRPK} (Third Party Root Public Key)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.1.4.5 EF_{TKCDF} (Trusted Key/Certificates Data Files)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2 Contents of files at the DF PHONEBOOK level

8.3.3.2.1 EF_{PBR} (Phone Book Reference file)

The programming of this EF is a test house option.

8.3.3.2.2 EF_{IAP} (Index Administration Phone book)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.3 EF_{ADN} (Abbreviated dialling numbers)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.4 EF_{EXT1} (Extension1)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.5 EF_{PBC} (Phone Book Control)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.6 EF_{GRP} (Grouping file)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.7 EF_{AAS} (Additional number Alpha String)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.8 EF_{GAS} (Grouping information Alpha String)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.9 EF_{ANR} (Additional Number)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.10 EF_{SNE} (Second Name Entry)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.11 EF_{CCP1} (Capability Configuration Parameters 1)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.12 Phone Book Synchronization

8.3.3.2.12.1 EF_{UID} (Unique Identifier)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.12.2 EF_{PSC} (Phone book Synchronization Counter)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.12.3 EF_{CC} (Change Counter)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.12.4 EF_{PUID} (Previous Unique Identifier)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.2.13 EF_{EMAIL} (e-mail address)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.3 Contents of files at the DF GSM-ACCESS level (Files required for GSM Access)

8.3.3.3.1 EF_{Kc} (GSM Cipherring key Kc)

File size: 9 Bytes

Default values (HEX): Bytes 1 to 8: Align with Kc used by SS

Byte 9: 07

Byte 9 is set to 07 to indicate that there is no key available at the start of a test.

The bytes within this elementary file may be updated by the UE as a result of a successful authentication attempt.

8.3.3.3.2 EF_{KcGPRS} (GPRS Ciphering key KcGPRS)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.3.3 Void

8.3.3.3.4 EF_{CPBCCCH} (CPBCCCH Information)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.3.3.5 EF_{InvScan} (Investigation Scan)

The programming of this EF follows default parameter.

8.3.3.4 Contents of files at the DF HNB level

8.3.3.4.1 EF_{ACSGL} (Allowed CSG Lists)

The programming of this EF is a test house option.

8.3.3.4.2 EF_{CSGT} (CSG Type)

The programming of this EF is a test house option.

8.3.3.4.3 EF_{HNBName} (Home NodeB Name)

The programming of this EF is a test house option.

8.3.3.4.4 EF_{OCSGL} (Operator CSG Lists)

The programming of this EF is a test house option.

8.3.3.4.5 EF_{OCSGT} (Operator CSG Type)

The programming of this EF is a test house option.

8.3.3.4.6 EF_{OHNBName} (Operator Home NodeB Name)

The programming of this EF is a test house option.

8.3.4 Contents of EFs at the TELECOM level

8.3.4.1 EF_{ADN} (Abbreviated dialling numbers)

The programming of this EF is a test house option. It should be noted that sufficient space should be provided on the USIM card for 101 records.

8.3.4.2 EF_{EXT1} (Extension1)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.4.3 EF_{ECCP} (Extended Capability Configuration Parameter)

The programming of this EF is a test house option.

8.3.4.4 EF_{SUME} (SetUpMenu Elements)

The programming of this EF is a test house option.

8.3.4.5 EF_{ARR} (Access rule reference)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.5 Contents of DFs at the TELECOM level

8.3.5.1 Contents of files at the DF_{GRAPHICS} level

8.3.5.1.1 EF_{IMG} (Image)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.5.1.2 Image Instance Data Files

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

8.3.5.2 Contents of files at the DF_{PHONEBOOK} under the DF_{TELECOM}

The programming of this EF is a test house option.

9 Default Message Contents

9.1 Default Message Contents for Signalling

9.1.1 Default RRC Message Contents (FDD)

This clause contains the default values of common messages, which unless indicated otherwise in specific clauses of 3GPP TS 34.123-1 [1], shall be transmitted and checked by the system simulator.

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

Default SYSTEM INFORMATION:

NOTE: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Contents of ACTIVE SET UPDATE message: AM

| Information Element | Value/remark | Version |
|---|--|--------------------|
| Message Type | | |
| RRC transaction identifier | Arbitrarily selects one integer between 0 to 3 | |
| Integrity check info | | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |
| Activation time | Now | |
| New U-RNTI | Not Present | |
| New H-RNTI | Not Present | Rel-6 |
| New Primary E-RNTI | Not Present | Rel-6 |
| New Secondary E-RNTI | Not Present | Rel-6 |
| CN information info | Not Present | |
| DTX-DRX timing information | Not Present | Rel-7 |
| DTX-DRX Information | Not Present | Rel-7 |
| HS-SCCH less Information | Not Present | Rel-7 |
| MIMO parameters | Not Present | Rel-7 |
| MIMO mode with four transmit antennas parameters | Not Present | Rel-11 |
| DCH Enhancements info FDD | Not Present | Rel-12 |
| Maximum allowed UL TX power | Not Present – use default value | |
| Uplink secondary cell info FDD | Not Present | Rel-9 |
| E-DCH reconfiguration information on secondary UL frequency | Not Present | Rel-9 |
| Uplink CLTD info FDD | Not Present | Rel-11 |
| F-TPICH reconfiguration info | Not Present | Rel-11 |
| Uplink OLTD info FDD | Not Present | Rel-11 |
| Radio link addition information | Not Present | |
| Radio link addition information on secondary UL frequency | Not Present | Rel-9 |
| Serving Cell Change Parameters | Not present | Rel-8 |
| Radio link removal information | Not Present | |
| Radio link removal information on secondary UL frequency | Not present | Rel-9 |
| TX Diversity Mode | None | |
| SSDT information | Not Present | R99 and Rel-4 only |

| Information Element | Value/remark | Version |
|---|--------------|---------|
| DPC Mode | Not Present | Rel-5 |
| Serving HS-DSCH cell information | Not Present | Rel-6 |
| E-DCH reconfiguration information | Not Present | Rel-6 |
| UL 16QAM configuration | Not Present | Rel-7 |
| UL 64QAM configuration | Not Present | Rel-11 |
| Uplink MIMO info FDD | Not Present | Rel-11 |
| E-DCH reconfiguration information same serving cell | Not Present | Rel-7 |
| E-TFC Boost Info | Not Present | Rel-7 |
| E-DPDCH power interpolation | Not Present | Rel-7 |
| Downlink secondary cell info FDD | Not present | Rel-8 |
| Additional downlink secondary cell info list FDD | Not present | Rel-10 |
| Downlink secondary cell info FDD | Not Present | Rel-10 |
| Additional downlink secondary cell info list FDD 2 | Not present | Rel-11 |
| Downlink secondary cell info FDD | Not Present | Rel-11 |

Contents of ACTIVE SET UPDATE COMPLETE message: AM

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | Checked to see if it matches the same value used in the corresponding downlink ACTIVE SET UPDATE message |
| RRC transaction identifier | |
| Integrity check info | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - Message authentication code | |
| - RRC Message sequence number | |
| | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |

Contents of ACTIVE SET UPDATE FAILURE message: AM

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | Checked to see if it matches the same value used in the corresponding downlink ACTIVE SET UPDATE message |
| RRC transaction identifier | |
| Integrity check info | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - Message authentication code | |
| - RRC Message sequence number | |
| | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Failure cause | Refer to test requirement |

Contents of CELL UPDATE message: TM

| Information Element | Value/remark | Version |
|-------------------------------|--|---------|
| Message Type | Checked to see if it is set to the following values 0000 0000 0001B | |
| U-RNTI | | |
| - SRNC identity | 0000 0000 0000 0000 0001B | |
| - S-RNTI | | |
| RRC transaction identifier | Checked to see if it is absent | |
| Integrity check info | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - Message authentication code | | |
| - RRC Message sequence number | | |
| | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. | |
| START List | Checked to see if the 'CN domain identity' and 'START' IEs are present for all CN domains supported by the UE . | |
| | Checked to see if the 'CN domain identity' and 'START' | Rel-6 |

| | | |
|---|--|--------|
| | IEs are present for each CN domain for which RABs are established or is the latest configured CN domain. | |
| - CN domain identity - START | Checked to see if it is one of the supported CN domains This IE is checked to see if it is present. The first/ leftmost bit of the bit string contains the most significant bit of the START. | |
| AM_RLC error indication (RB2, RB3 or RB4) | Checked to see if it is set to 'FALSE' | |
| AM_RLC error indication (RB>4) | Checked to see if it is set to 'FALSE' | |
| Cell update cause | See the specific test case | |
| Traffic volume indicator | Checked to see if it is absent | Rel-6 |
| Failure cause | Checked to see if it is absent | |
| RB timer indicator | | |
| - T314 expired | Checked to see if it is set to 'FALSE' | |
| - T315 expired | Checked to see if it is set to 'FALSE' | |
| Establishment cause | This IE is checked to see if it is absent | Rel-5 |
| CS Call Type | Not Present | Rel-7 |
| HS-PDSCH in CELL_FACH | Not checked | Rel-7 |
| UE Mobility State Indicator | Not Present | Rel-7 |
| Capability change indicator | Not Present | Rel-7 |
| Reconfiguration Status Indicator | Checked to see if it is absent | Rel-6 |
| Measured results on RACH | Not checked | |
| Logged Meas Available | Not Present | Rel-10 |
| ANR Logging Results Available | Not Present | Rel-10 |

Contents of CELL UPDATE CONFIRM message: UM

| Information Element | Value/remark | Version |
|--|--|--------------------|
| Message Type | | |
| U-RNTI | If this message is sent on CCCH, use the following values. Else, this IE is absent. | |
| - SRNC identity | 0000 0000 0001B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| RRC transaction identifier | Selects an arbitrary integer between 0 to 3 | |
| Integrity check info | | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | |

Contents of DOWNLINK DIRECT TRANSFER message: AM

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Integrity check info | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | SS provides the value of this IE, from its internal counter. |
| CN domain identity | CS domain or PS domain |
| NAS message | See Specific Message Content for each test case |

Contents of HANDOVER FROM UTRAN COMMAND-GSM message: AM

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects one integer between 0 to 3 |
| Integrity check info | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | SS provides the value of this IE, from its internal counter. |
| Activation time | now |

| | |
|---------------------------------|---|
| RAB Info | |
| - RAB identity | 0000 0001B The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. |
| - CN domain identity | CS domain |
| - NAS Synchronization Indicator | Not present |
| - Re-establishment timer | Use T314 |
| Inter-system message | |
| - CHOICE System type | GSM |
| - Frequency Band | Set to "GSM/ PCS 1900" if GSM/ PCS 1900 is used in this test. Otherwise set to "GSM/DCS 1800 Band" |
| - CHOICE GSM message | Single GSM message |
| - Single GSM message | GSM HANDOVER COMMAND formatted and coded according to GSM specifications as BIT STRING (1..512). The first/ leftmost/ most significant bit of the bit string contains bit 8 of the first octet of the GSM message. The contents of the HANDOVER COMMAND is to be defined in the specific test case. |

Contents of HANDOVER FROM UTRAN FAILURE message: AM

| Information Element | Value/remark |
|-----------------------------------|--|
| Message Type | |
| RRC transaction identifier | Checked to see if it matches the same value used in the corresponding downlink HANDOVER FROM UTRAN COMMAND -GSM message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Inter-RAT handover failure | |
| -Inter-RAT handover failure cause | physical channel failure |
| Inter-system message | Not Checked |

Contents of INITIAL DIRECT TRANSFER message: AM

| Information Element | Value/remark | Version |
|--------------------------------|--|---------|
| Message Type | | |
| Integrity check info | | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. | |
| PLMN identity | This IE is checked to see if it is absent | Rel-6 |
| CN domain identity | Checked to see if set to supported CN domain as specified in the Ixit statements. | |
| Intra Domain NAS Node Selector | | |
| - CHOICE version | R99 | |
| - CHOICE CN type | GSM-MAP | |
| - CHOICE Routing basis | Local (P)TMSI | |
| - Routing parameter | If the IE "CN domain identity" is equal to "CS domain", this bit string is set to bits b14 through b23 of the TMSI. If the IE "CN domain identity" is equal to "PS domain", this bit string is set to bits b14 through b23 of the P-TMSI. The TMSI/P-TMSI consists of 4 octets (32bits). This can be represented by a string of bits numbered from b0 to b31, with bit b0 being the least significant The "Routing parameter" bit string consists of bits b14 through b23 of the TMSI/ PTMSI. The first/ leftmost/ most significant bit of the bit string contains bit b23 of the TMSI/ PTMSI. | |
| - Entered parameter | Not checked | |

| | | |
|--------------------------|--|-------|
| NAS message | Set according to that indicated in specific message content for each test case | |
| START | This IE is checked to see if it is present. | |
| Establishment cause | This IE is checked to see if it is absent | Rel-5 |
| Measured results on RACH | Not checked | |
| MBMS joined information | This IE is checked to see if it is absent | Rel-6 |

Contents of LOGGING MEASUREMENT CONFIGURATION message: AM

| Information Element | Condition | Value/remark | Version |
|--|-----------|---|---------|
| Message Type | | | Rel-10 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | Rel-10 |
| Integrity check info | | | Rel-10 |
| - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | |
| Logged Measurements Configuration Info | A1, A2 | Not present | Rel-10 |
| Logged ANR configuration Info | A1, A2 | | Rel-10 |
| - Logging Duration | | 1 hour | |
| - Intra-UTRA ANR | | | |
| - CHOICE <i>Absolute Threshold</i> | A1 | RSCP for ANR | |
| - RSCP | | Not present (default -100 dBm) | |
| - CHOICE <i>Absolute Threshold</i> | A2 | Ec/N0 for ANR | |
| - Ec/N0 | | Not present (default -10 dB) | |
| - Logging Relative Threshold | | Not present | |
| - Inter-RAT ANR for E-UTRA | | Not present | |
| Indicator | | | |
| - Inter-RAT ANR for GSM Indicator | | Not present | |

| Condition | Explanation | Version |
|-----------|---|---------|
| A1 | Configuring of IE for ANR over UTRAN testing using RSCP for Absolute Threshold | Rel-10 |
| A2 | Configuring of IE for ANR over UTRAN testing using Ec/N0 for Absolute Threshold | Rel-10 |

Contents of MBMS ACCESS INFORMATION message: UM

| Information Element | Value/remark | Version |
|------------------------------------|---|---------|
| Message type | | Rel-6 |
| Service list | 1 entry in the list | Rel-6 |
| - MBMS short transmission ID | Index to the MBMS transmission identity in the previous MBMS MODIFIED SERVICES INFORMATION or MBMS UNMODIFIED SERVICES INFORMATION corresponding to the service for which the current counting procedure applies. | Rel-6 |
| - Access probability factor – Idle | 0 (corresponding to the actual probability factor value 1) | Rel-6 |
| - Connected mode counting scope | | Rel-6 |
| - URA_PCH | FALSE | Rel-6 |
| - CELL_PCH | FALSE | Rel-6 |
| - CELL_FACH | FALSE | Rel-6 |

Contents of MBMS GENERAL INFORMATION message: UM

| Information Element | Value/remark | Version |

Contents of RADIO BEARER SETUP COMPLETE message: AM

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Checked to see if the value is identical to the same IE in the downlink RADIO BEARER SETUP message. |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Not checked. |
| CHOICE mode | FDD |
| START | Not checked (if ciphering is OFF), check the presence if ciphering is ON. |
| Deferred measurement control reading | Not present for Rel-7 or later, otherwise Not checked |
| COUNT-C activation time | The UE shall include this IE if the following two conditions are fulfilled: (a) The RADIO BEARER SETUP message did not contain the IE "Ciphering activation time for DPCH" and (b) The RADIO BEARER SETUP message established the first RB(s) mapped to RLC-TM for a CN domain. Else, this IE is absent. |
| Radio bearer uplink ciphering activation time info | Not checked |
| Uplink counter synchronization info | Not present |

Contents of RADIO BEARER SETUP FAILURE message: AM

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink RADIO BEARER SETUP message. |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Failure cause | Checked to see if it meets test requirement |
| Radio bearers for which reconfiguration would have succeeded | Not checked |

Contents of RADIO BEARER RECONFIGURATION message: AM or UM

| Information Element | Condition | Value/remark | Version | Index |
|--|---------------------|---|-----------------------|---------|
| Message Type | A1,A2,A3,A4,A5,A6 | | | RBC-001 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | | RBC-002 |
| Integrity check info | | | | RBC-003 |
| - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/leftmost bit of the bit string contains the most significant bit of the MAC-I. | | RBC-004 |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | | RBC-005 |
| Integrity protection mode info | | Not Present | | RBC-006 |

Contents of RADIO BEARER RECONFIGURATION FAILURE message: AM

| Information Element | Value/remark |
|---|--|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink RADIO BEARER RECONFIGURATION message. |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Failure cause | Checked to see if it meets test requirement |
| Radio bearers for which reconfiguration would have succeeded List | Not checked |

Contents of RADIO BEARER RECONFIGURATION COMPLETE message: AM

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Checked to see if the value is identical to the same IE in the downlink RADIO BEARER RECONFIGURATION COMPLETE message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |

Contents of RADIO BEARER RELEASE COMPLETE message: AM

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Checked to see the value is identical to the same IE in the downlink RADIO BEARER RELEASE message. |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Uplink integrity protection activation info | Not checked. |
| CHOICE mode | FDD |
| Deferred measurement control reading | Not present for Rel-7 or later, otherwise Not checked |
| COUNT-C activation time | Not checked |
| Radio bearer uplink ciphering activation time info | Not checked |
| Uplink counter synchronization info | Not present |

Contents of RADIO BEARER RELEASE FAILURE message: AM

| Information Element | Value/remark |
|--|--|
| Message Type | |
| RRC transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink RADIO BEARER RELEASE message. |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Failure cause | Checked to see if it meets test requirement |
| Radio bearers for which reconfiguration would have | Not checked |

succeeded

Contents of RRC CONNECTION REQUEST message: TM

| Information Element | Condition | Value/remark | Version |
|---|-----------|--|---------|
| Message Type | | | |
| Predefined configuration status information | | To be checked against requirement if specified | Rel-5 |
| Initial UE identity | | | |
| - CHOICE UE id type | | | |
| - TMSI and LAI (GSM-MAP) | | Set to the UE's TMSI and LAI. | |
| Establishment cause | | To be checked against requirement if specified | |
| Protocol error indicator | | FALSE | |
| UE Specific Behaviour Information 1 idle | | This IE will not be checked by default behaviour, but in specific test case. | |
| Domain indicator | | To be checked against requirement if specified | Rel-6 |
| Call type | | To be checked against requirement if specified | Rel-6 |
| UE capability indication | | To be checked against requirement if specified | Rel-6 |
| Support for F-DPCH | A1 | TRUE | Rel-6 |
| Support for F-DPCH | A2 | Not Present | Rel-6 |
| UE Mobility State Indicator | | Not Present | Rel-7 |
| Support for Enhanced F-DPCH | | To be checked against requirement if specified | Rel-7 |
| HS-PDSCH in CELL_FACH | | To be checked against requirement if specified | Rel-7 |
| MAC-ehs support | | To be checked against requirement if specified | Rel-7 |
| DPCCH Discontinuous Transmission support | | To be checked against requirement if specified | Rel-7 |
| Measured results on RACH | | To be checked against requirement if specified | Rel-4 |
| Access stratum release indicator | | To be checked against requirement if specified | Rel-4 |

| Condition | Explanation |
|-----------|--|
| A1 | This IE need to be set to TRUE when F-DPCH is fully supported by the UE. |
| A2 | This IE need to be absent when F-DPCH is not fully supported by the UE. |

Contents of RRC CONNECTION REJECT message: UM

| Information Element | Value/remark |
|----------------------------|---|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 |
| Initial UE identity | Select the same type as in the IE "Initial UE Identity" in RRC CONNECTION REQUEST" message. |
| Rejection cause | Unspecified |
| Wait Time | 0 |
| Redirection info | Not Present |

Contents of RRC CONNECTION RELEASE message: UM

| Information Element | Value/remark | Version |
|-----------------------------|--|------------|
| Message Type | | |
| U-RNTI | This IE is set to the following value when the message is transmitted on the CCCH. When transmitted on DCCH, this is absent. | R99, Rel-4 |
| - SRNC identity | 0000 0000 0001B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| CHOICE identity type | This IE is set to the following value when the message is transmitted on the CCCH. When transmitted on DCCH, this is absent. | Rel-5 |
| - U-RNTI | | |
| - SRNC identity | 0000 0000 0001B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| - Group identity | [FFS] | |
| - Group release information | [FFS] | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | |
| Integrity check info | This IE is present when this message is transmitted on downlink DCCH. Else, this IE and the sub-IEs are omitted. | |

| | | |
|---------------------------------------|--|-------|
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC Message sequence number N308 | SS provides the value of this IE, from its internal counter. 2 (for CELL_DCH state). Not Present (for UE in other connected mode states). | |
| Release cause | Normal event | |
| UE Mobility State Indicator | Not Present | Rel-7 |
| Rplmn information | Not Present | |

Contents of RRC CONNECTION RELEASE COMPLETE message: AM or UM

| Information Element | Semantics description |
|-------------------------------|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION RELEASE message. |
| Integrity check info | |
| - Message authentication code | Checked to see if it's identical to the value of XMAC-I calculated by the SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | Checked to see if it is present. This number is used by the SS to compute the XMAC-I |
| Error indication | Not checked |

| RRC transaction identifier | Checked to see if the value is the identical to the same IE in the downlink SECURITY MODE COMMAND message. |
| Integrity check info - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Failure cause | Refer to test requirement. |

Contents of TRANSPORT CHANNEL RECONFIGURATION message: AM or UM

| Information Element | Condition | Value/remark | Version | Index |
|--|------------------------|--|--------------------|--------------------|
| Message Type | A1, A2, A3, A4, A5, A6 | | | TCR-001 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | | TCR-002 |
| Integrity check info - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | | TCR-003 TCR-004 |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | | TCR-005 |
| Integrity protection mode info | | Not Present | | TCR-006 |
| Ciphering mode info | | Not Present | | TCR-007 |
| Activation time | A1, A2, A3 | (256+CFN-(CFN MOD 8 + 8))MOD 256 | | TCR-008 |
| Activation time | A4, A5, A6 | Not Present | | TCR-009 |
| Delay restriction flag | A1, A2, A3, A4, A5, A6 | Not Present | Rel-6 | TCR-010 |
| New U-RNTI | | Not Present | | TCR-011 |
| New C-RNTI | A1, A2, A3, A4 | Not Present | | TCR-012 |
| New C-RNTI | A5, A6 | '1010 1010 1010 1010' | | TCR-013 |
| New DSCH-RNTI | A1, A2, A3, A4, A5, A6 | Not Present | R99 and Rel-4 only | TCR-014 |
| New H-RNTI | A1, A2, A3, A4, A5, A6 | Not Present | Rel-5 | TCR-015 |
| New Primary E-RNTI | | Not Present | Rel-6 | TCR-016 |
| New Secondary E-RNTI | | Not Present | Rel-6 | TCR-017 |
| RRC State indicator | A1, A2, A3, A4 | CELL_DCH | | TCR-018 |
| RRC State indicator | A5, A6 | CELL_FACH | | TCR-019 |
| UE Mobility State Indicator | | Not Present | Rel-7 | TCR-020 |
| UTRAN DRX cycle length coefficient | A1, A2, A3, A4, A5, A6 | Not Present | | TCR-021 |
| CN information info | | Not Present | | TCR-022 |
| URA identity | | Not Present | | TCR-023 |
| RNC support for change of UE capability | | Not Present | Rel-7 | TCR-024 |
| Reconfiguration in response to requested change of UE capability | | Not Present | Rel-7 | TCR-025 |
| Downlink counter synchronization info | | Not Present | | TCR-026 |
| UL Transport channel information for all transport channels | A1, A2, A5, A6 | Not Present | | TCR-027 |
| UL Transport channel information for all transport channels | A3, A4 | | | TCR-028 |

Contents of UE CAPABILITY INFORMATION CONFIRM message

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | UE CAPABILITY INFORMATION |
| Integrity check info | Not Present |
| - Message authentication code | If present, SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | If present, SS provides the value of this IE, from its internal counter. |
| RRC transaction identifier | Checked to see if the value is identical to the same IE in the downlink UE CAPABILITY ENQUIRY message. |

| Integrity check info | |
| - Message authentication code | Set to MAC-I value computed by the SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I |
| - RRC Message sequence number | Set to an arbitrarily selected integer between 0 and 15 |
| Activation time | Not Present - use default value "now" |
| RAB info | For each RAB to be handed over. In this version, the maximum size of the list of 1 shall be applied for all system types. |
| - RAB identity | 0000 0001B |
| - CN domain identity | CS domain |
| - NAS Synchronization Indicator | Not present |
| - Re-establishment time | Use T315 |
| CHOICE <i>System type</i> | GSM |
| - Frequency band | Set to "GSM/ PCS 1900" if GSM/ PCS 1900 is used in this test. Otherwise set to "GSM/DCS 1800 Band" |

| Information Element | Value/remark |
|----------------------|--|
| - CHOIC GSM message | Single GSM message |
| - Single GSM message | GSM HANDOVER COMMAND formatted and coded according to GSM specifications as BIT STRING (1..512). The first/ <i>leftmost/ most significant</i> bit of the bit string contains bit 8 of the first octet of the GSM message. The contents of the HANDOVER COMMAND is to be defined in the specific test case. |

Contents of HANDOVER FROM UTRAN FAILURE message: AM

| Information Element/Group name | Value/remark |
|------------------------------------|---|
| Message Type | |
| RRC transaction identifier | Checked to see if it matches the same value used in the corresponding downlink HANDOVER FROM UTRAN COMMAND - GSM message |
| Integrity check info | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ <i>leftmost</i> bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. |
| Inter-RAT handover failure | |
| - Inter-RAT handover failure cause | physical channel failure |
| - Protocol error information | Check to see if it is absent |
| Inter-system message | Not checked |

Contents of DOWNLINK DIRECT TRANSFER message: AM

| Information Element | Value/remark |
|-------------------------------|--|
| Message Type | |
| RRC transaction identifier | 0 |
| Integrity check info | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | SS provides the value of this IE, from its internal counter. |
| CN domain identity | CS domain or PS domain |
| NAS message | See Specific Message Content for each test case |

Contents of INITIAL DIRECT TRANSFER message: AM

| Information Element | Value/remark | Version |
|--------------------------------|--|---------|
| Message Type | | |
| Integrity check info | | |
| - Message authentication code | This IE is checked to see if it is present. The value is compared against the XMAC-I value computed by SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC Message sequence number | This IE is checked to see if it is present. The value is used by SS to compute the XMAC-I value. | |
| CN domain identity | CS domain or PS domain | |
| Intra Domain NAS Node Selector | Set to the same octet string as in the IMSI stored in the USIM card | |
| NAS message | Set according to that indicated in specific message content for each test case | |
| START | This IE is checked to see if it is present. | |
| Establishment cause | See the specific test case | Rel-5 |
| Measured results on RACH | Not checked | |

Contents of RRC CONNECTION RELEASE message: UM

| Information Element | Value/remark | Version |
|-------------------------------|--|------------|
| Message Type | | |
| U-RNTI | This IE is set to the following value when the message is transmitted on the CCCH. When transmitted on DCCH, this is absent. 0000 0000 0001B | R99, Rel-4 |
| - SRNC identity | | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| CHOICE identity type | This IE is set to the following value when the message is transmitted on the CCCH. When transmitted on DCCH, this is absent. | Rel-5 |
| - U-RNTI | | |
| - SRNC identity | 0000 0000 0001B | |
| - S-RNTI | 0000 0000 0000 0000 0001B | |
| - Group identity | [FFS] | |
| - Group release information | [FFS] | |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | |
| Integrity check info | This IE is present when this message is transmitted on downlink DCCH. Else, this IE and the sub-IEs are omitted. | |
| - Message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | |
| - RRC Message sequence number | SS provides the value of this IE, from its internal counter. | |
| N308 | 2 (for CELL_DCH state). Not Present (for UE in other connected mode states). | |
| Release cause | Normal event | |
| UE Mobility State Indicator | Not Present | Rel-7 |
| Extended Wait Time | Not Present | Rel-10 |
| Rplmn information | Not Present | |
| Redirection info | Not Present | Rel-6 |

Contents of RRC CONNECTION RELEASE COMPLETE message: AM or UM

| Information Element | Semantics description |
|-------------------------------|---|
| Message Type | |
| RRC transaction identifier | The value of this IE is checked to see that it matches the value of the same IE transmitted in the downlink RRC CONNECTION RELEASE message. |
| Integrity check info | |
| - Message authentication code | Checked to see if it's identical to the value of XMAC-I calculated by the SS. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC Message sequence number | Checked to see if it is present. This number is used by the SS to compute the XMAC-I |

Error indication

Not checked

Contents of RRC CONNECTION SETUP message: UM (Transition to CELL_DCH) (3.84 Mcps TDD option)

| Information Element | Value/remark | Version | Index |
|--|--|---------|----------|
| Message Type | | | RCS3-001 |
| Initial UE identity | Select the same identity as in the IE "Initial UE Identity" in received RRC CONNECTION REQUEST message | | RCS3-002 |

| IPv6 Destination Address | A3 | Same value as UE IPv6 CoA in IP Source Address from Binding Update | |
| IPv6 Destination Address | A1, A2 | IPv6 Home Address | |
| Routing Header | A3 | Same value as UE IPv6 Home Address in Destination Header from Binding Update | |
| Payload Proto | | '00111011'B | |
| MH Type | | '00000110'B (Binding Acknowledgement message) | |
| Status | | '00000000'B (Binding Update accepted) | |
| K | | Set by the SS | |
| R | | '1'B | |
| P | | '0'B | |
| Sequence Number | | Same value as that sent by the UE in the Binding Update | |
| Lifetime | | '0000000010010110'B (10 min) | |
| IPv4 Address Acknowledgement option | | Optional: field present if IPv4 Home Address option was included by the UE in Binding Update at Step 2. Set to the IPv4 Home Address allocated to the UE | |
| Binding Refresh Advice option | | '0000000010010110'B (10 min) | |

| Condition | Explanation |
|-----------|---|
| A1 | UE is in an IPv4 visited network (see RFC 5555) |
| A2 | UE is in an IPv6 home network (see RFC 5555) |
| A3 | UE is in an IPv6 visited network (see RFC 5555) |

Contents of Binding Revocation Indication message:

| Information Element | Condition | Value/remark | Version |
|--------------------------|-----------|--|---------|
| IPv4 Source Address | A1 | IPv4 Home Agent address | |
| IPv4 Destination Address | A1 | Same value as UE IPv4 CoA in IP Source Address from Binding Update | |
| UDP header | A1 | | |
| Source Port | A1 | '0001000001011111'B | |
| Destination port | A1 | Same as Source port in Binding Update | |
| IPv6 Source Address | | IPv6 Home Agent address | |
| IPv6 Destination Address | A2 | Same value as UE IPv6 CoA in IP Source Address from Binding Update | |
| IPv6 Destination Address | A1 | IPv6 Home Address | |
| Routing Header | A2 | Same value as UE IPv6 Home Address in Destination Header from Binding Update | |
| B.R. Type | | '00000001'B (B.R.I) | |
| Sequence Number | | Set by the SS | |
| Revocation Trigger | | '00000001'B | |
| P | | '0'B | |
| G | | '0'B | |
| V | | '0'B | |

| Condition | Explanation |
|-----------|---|
| A1 | UE is in an IPv4 visited network (see RFC 5555) |
| A2 | UE is in an IPv6 visited network (see RFC 5555) |

Contents of Binding Revocation Acknowledgement message:

| Information Element | Condition | Value/remark | Version |
|--------------------------|-----------|--|---------|
| IPv4 Source Address | A1 | UE IPv4 CoA (IPv4 address acquired by UE during network attachment) | |
| IPv4 Destination Address | A1 | IPv4 of Home Agent discovered during preamble | |
| UDP header | A1 | | |
| Source Port | A1 | Set by UE | |
| Destination port | A1 | '0001000001011111'B | |
| IPv6 Source Address | A1 | IPv6 Home Address configured by the UE from Home Network Prefix assigned to UE during preamble | |
| IPv6 Source Address | A2 | UE IPv6 CoA (IPv6 address acquired by the UE during network attachment) | |
| IPv6 Destination Address | | IPv6 of Home Agent discovered during preamble | |
| Destination Header | A2 | IPv6 Home Address configured by the UE from Home Network Prefix assigned to the UE during preamble | |
| B.R. Type | | '00000010'B (B.R.A) | |
| Sequence Number | | Same value as Sequence Number sent by the SS in Binding Revocation Indication message | |
| Status | | '00000000'B (Success) | |
| P | | '0'B | |
| G | | '0'B | |
| V | | '0'B | |

| Condition | Explanation |
|-----------|---|
| A1 | UE is in an IPv4 visited network (see RFC 5555) |
| A2 | UE is in an IPv6 visited network (see RFC 5555) |

9.1.5 Default Message Contents for Supplementary Services

9.1.5.1 Default contents for RRC messages

Contents of RRC CONNECTION REQUEST message: TM

IEs not listed below should be set and checked according to 9.1.1 or 9.1.2.

| Information Element | Condition | Value/remark | Version |
|---------------------|-----------|--------------------------------------|---------|
| Establishment cause | | Originating High Priority Signalling | |

9.1.5.2 Default contents for NAS messages

9.1.5.2.1 Default contents for MM messages

Contents of MM INFORMATION:

| Information Element | Condition | Value/remark | Version |
|------------------------------------|-----------|--------------|---------|
| Full name for network | | Not present | |
| Short name for network | | Not present | |
| Local time zone | | Not present | |
| Universal time and local time zone | | Not present | |
| LSA Identity | | Not present | |
| Network Daylight Saving Time | | Not present | |

NOTE: In the test case specific message contents at least one of these IE's shall be specified as present.

9.1.5.2.2 Default contents for CC messages

Contents of CM SERVICE REQUEST message:

| Information Element | Condition | Value/remark | Version |
|-------------------------------|-----------|---------------|---------|
| CM service type | SS | '1000' B | |
| | CC | '0001' B | |
| Ciphering key sequence Number | | Correct value | |
| Mobile station classmark | | Not checked | |
| Mobile identity | | TMSI | |
| Priority | | Not present | |

| Condition | Explanation |
|-----------|--|
| SS | For Supplementary Services Activation |
| CC | For Mobile originated Call Establishment or packet mode connection establishment |

Contents of FACILITY with Invoke component:

| Information Element | Condition | Value/remark | Version |
|----------------------------------|---|--|---------|
| Protocol discriminator | | 1011 B (non call related SS messages) or 0011 B (call control; call related SS messages) | |
| Transaction identifier | | See the specific test case | |
| Message Type | | 0011 1010 B, if the message is sent by the SS xx 11 1010 B, if the message is sent by the UE (NOTE) | |
| Facility IE | | | |
| - Length of Facility IE contents | | 8 | |
| - Component type tag | | 1010 0001 B (invoke) | |
| - Component length | | 6 | |
| - Invoke ID tag | | 0000 0010 B (invoke ID) | |
| - Invoke ID length | | 1 | |
| - Invoke ID | | An arbitrary integer value. The same value must be used in the subsequent corresponding Return Result, Return Error or Reject component. | |
| - Linked ID tag | | Not present | |
| - Linked ID length | | Not present | |
| - Linked ID | | Not present | |
| - Operation Code tag | | 0000 0010 B | |
| - Operation Code length | | 1 | |
| - Operation Code | | See the specific test case | |
| - Parameters | | Not present | |
| SS Version Indicator | | Not checked, IE not present if message is sent by SS. | |
| NOTE: | Bits 7 and 8 are not checked, as these bits are reserved for the send sequence number in messages sent from the UE. | | |

Contents of FACILITY with Reject component:

| Information Element | Condition | Value/remark | Version |
|---|-----------|--|---------|
| Protocol discriminator | | 1011 B (non call related SS messages) or 0011 B (call control; call related SS messages) | |
| Transaction identifier | | See the specific test case | |
| Message Type | | 0011 1010 B, if the message is sent by the SS xx 11 1010 B, if the message is sent by the UE (NOTE) | |
| Facility IE | | | |
| - Length of Facility IE contents | | 8 | |
| - Component type tag | | 1010 0100 B (reject) | |
| - Component length | | 6 | |
| - Invoke ID tag | | 0000 0010 B (invoke ID) | |
| - Invoke ID length | | 1 | |
| - Invoke ID | | The same value that has been used in the corresponding Invoke component. | |
| - Problem Code tag | | See the specific test case | |
| - Problem Code length | | 1 | |
| - Problem Code | | See the specific test case | |
| SS Version Indicator | | Not checked, IE not present if message is sent by SS. | |
| NOTE: Bits 7 and 8 are not checked, as these bits are reserved for the send sequence number in messages sent from the UE. | | | |

Contents of FACILITY with Return Error component:

| Information Element | Condition | Value/remark | Version |
|---|-----------|--|---------|
| Protocol discriminator | | 1011 B (non call related SS messages) or 0011 B (call control; call related SS messages) | |
| Transaction identifier | | See the specific test case | |
| Message Type | | 0011 1010 B, if the message is sent by the SS xx 11 1010 B, if the message is sent by the UE (NOTE) | |
| Facility IE | | | |
| - Length of Facility IE contents | | 8 | |
| - Component type tag | | 1010 0011 B (return error) | |
| - Component length | | 6 | |
| - Invoke ID tag | | 0000 0010 B (invoke ID) | |
| - Invoke ID length | | 1 | |
| - Invoke ID | | The same value that has been used in the corresponding Invoke component. | |
| - Error Code tag | | 0000 0010 B | |
| - Error Code length | | 1 | |
| - Error Code | | See the specific test case | |
| - Parameters | | Not present | |
| SS Version Indicator | | Not checked, IE not present if message is sent by SS. | |
| NOTE: Bits 7 and 8 are not checked, as these bits are reserved for the send sequence number in messages sent from the UE. | | | |

Contents of FACILITY with Return Result component:

| Information Element | Condition | Value/remark | Version |
|---|-----------|--|---------|
| Protocol discriminator | | 1011 B (non call related SS messages) or 0011 B (call control; call related SS messages) | |
| Transaction identifier | | See the specific test case | |
| Message Type | | 0011 1010 B, if the message is sent by the SS xx 11 1010 B, if the message is sent by the UE (NOTE) | |
| Facility IE | | | |
| - Length of Facility IE contents | | 5 | |
| - Component type tag | | 1010 0010 B (return result) | |
| - Component length | | 3 | |
| - Invoke ID tag | | 0000 0010 B (invoke ID) | |
| - Invoke ID length | | 1 | |
| - Invoke ID | | The same value that has been used in the corresponding Invoke component. | |
| - Sequence tag | | Not present | |
| - Sequence length | | Not present | |
| - Operation Code tag | | Not present (omitted if the Return Result component does not include any parameters) | |
| - Operation Code length | | Not present | |
| - Operation Code | | Not present | |
| - Parameters | | Not present | |
| SS Version Indicator | | Not checked, IE not present if message is sent by SS. | |
| NOTE: Bits 7 and 8 are not checked, as these bits are reserved for the send sequence number in messages sent from the UE. | | | |

Contents of RELEASE COMPLETE message with *Return error* component:

| Information Element | Condition | Value/remark | Version |
|---------------------|-----------|--|---------|
| Cause | | Test case specific | |
| location | | Test case specific | |
| Cause value | | Test case specific | |
| Facility | | | |
| Component type tag | | '10100011' B | |
| Component length | | calculated | |
| Invoke ID | | Same as the one sent by the UE in the FACILITY message | |
| Error Code tag | | '00000010' B | |
| Error Code length | | calculated | |
| Error Code | | Test case specific | |
| Parameters | | Test case specific | |
| User-user | | Not present | |

Contents of RELEASE COMPLETE message with *Return result* component:

| Information Element | Condition | Value/remark | Version |
|---------------------|-----------|--|---------|
| Cause | | Normal event | |
| Facility | | | |
| Component type tag | | '10100010' B | |
| Component length | | calculated | |
| Invoke ID | | Same as the one sent by the UE in the FACILITY message | |
| Operation code | | Not present | |
| Parameters | | Not present | |

9.1.5.2.3 Default contents for GMM messages

Contents of GMM INFORMATION:

| Information Element | Condition | Value/remark | Version |
|--|-----------|--------------|---------|
| Full name for network | | Not present | |
| Short name for network | | Not present | |
| Local time zone | | Not present | |
| Universal time and local time zone | | Not present | |
| LSA Identity | | Not present | |
| Network Daylight Saving Time | | Not present | |
| NOTE: In the test case specific message contents at least one of these IE's shall be specified as present. | | | |

9.2 Default Message Contents for RF

This clause contains the default values of common messages for RF test. The parameters of the UL/DL reference measurement channel 12.2 kbps, the DL reference measurement channel for BTFD, UE test loop mode 1 without Dummy DCCH transmission and UE test loop mode 2 with Dummy DCCH transmission are set to default message contents.

9.2.1 Default Message Contents for RF (FDD)

Contents of Activate RB Test Mode message

| Information Element | Value/remark |
|------------------------|----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator | 0 (Length 1/2) |
| Message Type | 44h |

Contents of Close UE Test Loop message (UE test loop mode 1 without Dummy DCCH transmission)

| Information Element | Value/remark |
|------------------------------|-----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator | 0 (Length 1/2) |
| Message Type | 40h |
| UE test loop mode | 00h |
| UE test loop mode 1 LB setup | 03h 00h F4h 0Ah |

Contents of Close UE Test Loop message (UE test loop mode 2 without Dummy DCCH transmission)

| Information Element | Value/remark |
|------------------------|----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator | 0 (Length 1/2) |
| Message Type | 40h |
| UE test loop mode | 01h |

Contents of Open UE Test Loop message

| Information Element | Value/remark |
|------------------------|----------------|
| Protocol discriminator | F (Length 1/2) |
| Skip indicator | 0 (Length 1/2) |
| Message Type | 42h |

Contents of MBMS COMMON P-T-M RB INFORMATION message: UM

| Information Element | Value/remark | Version |
|--|---|---------|
| Message type | | Rel-6 |
| RB information list | One entry in the list | Rel-6 |
| - RB identity | 14 | Rel-6 |
| - PDCP info | | |
| - Support for lossless SRNS relocation | Not Present | |
| - PDCP PDU header | Absent | |
| - Header compression information | Not Present | |
| - RLC info | | |
| - DL UM RLC LI size | Selected with DL UM RLC data size | |
| - DL Duplication Avoidance and Reordering info | Not Present | |
| TrCh information for each TrCh | One entry in the list | Rel-6 |
| - Transport channel identity | 17 | Rel-6 |
| - TFS | | |
| - CHOICE <i>Transport channel type</i> | Common transport channels | |
| - Dynamic Transport format information | | |
| - RLC Size | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - Number of TBs List | (This IE is repeated for TFI number.) | |
| - Transmission Time Interval | Not Present | |
| - Number of Transport blocks | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - CHOICE <i>Logical channel list</i> | All | |
| - Semi-static Transport Format information | | |
| - Transmission time interval | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - Type of channel coding | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - Coding Rate | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - Rate matching attribute | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| - CRC size | Reference to TS34.121 [2] Annex C.12 DL reference parameters or as specified within test case in TS34.121 [2]. | |
| TrCh information for each CCTrCh | One entry in the list | Rel-6 |
| - CCTrCH identity | 1 | Rel-6 |
| - TFCS | | |
| - CHOICE <i>TFCI signalling</i> | Normal | |
| - TFCI Field 1 information | | |
| - CHOICE <i>TFCS representation</i> | Complete reconfiguration | |
| - TFCS complete reconfiguration information | | |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from TS34.121 [2] Annex C.12 parameter set or as specified within test case in TS34.121 [2]. | |
| - CTFC information | This IE is repeated for number of CTFCs from TS34.121 [2] Annex C.12 | |

| Information Element | Value/remark | Version |
|-----------------------------|--|---------|
| | parameter set or as specified within test case in TS34.121 [2]. | |
| - CTFC | Reference to TS34.121 [2] Annex C.12 parameter set or as specified within test case in TS34.121 [2]. | |
| - Power offset information | Not Present | |
| PhyCh information | One entry in list | Rel-6 |
| - PhyCh identity | 13 | Rel-6 |
| - Secondary CCPCH info MBMS | | |
| - CHOICE <i>mode</i> | FDD | |
| - Secondary scrambling code | Not Present | |
| - STTD indicator | FALSE | |
| - Spreading factor | Reference to TS34.121 [2] Annex C.12 DL reference parameters. | |
| - Code number | Reference to TS34.121 [2] Annex E.6.4 "Downlink physical channels code allocation for MBMS test cases" | |
| - Timing Offset | Not Present Absence of this IE is equivalent to default value 0. | |

Contents of PAGING TYPE 1 message: TM (CS)

| Information Element | Value/remark |
|-------------------------------|---|
| Message Type | |
| Paging record list | |
| -Paging record | |
| - CHOICE Used paging identity | CN identity |
| - Paging cause | Terminating Streaming Call |
| - CN domain identity | CS domain |
| - CHOICE UE identity | |
| - IMSI (GSM-MAP) | Set to the same octet string as in the IMSI stored in the USIM card |
| BCCH modification info | Not Present |

Contents of PAGING TYPE 1 message: TM (PS)

| Information Element | Value/remark |
|-------------------------------|---|
| Message Type | |
| Paging record list | |
| -Paging record | |
| - CHOICE Used paging identity | CN identity |
| - Paging cause | Terminating Interactive Call |
| - CN domain identity | PS domain |
| - CHOICE UE identity | |
| - IMSI (GSM-MAP) | Set to the same octet string as in the IMSI stored in the USIM card |
| BCCH modification info | Not Present |

Contents of PAGING TYPE 2 message: TM (PS)

| Information Element | Value/remark |
|---------------------------------|--|
| Message Type | |
| RRC transaction identifier | Arbitrarily selects one integer between 0 to 3 |
| Integrity check info | |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. |
| - Paging cause | Terminating Interactive Call |
| - CN domain identity | PS domain |
| - Paging record type identifier | TMSI(GSM-MAP)/P-TMSI |

Contents of RADIO BEARER SETUP message: AM or UM (Test Loop Mode1)

| Information Element | Condition | Value/remark | Version | Index |
|--------------------------------------|--------------------------------|--|--------------------|----------|
| Message Type | A1, A3, A4, A5, A6, A7, A8, A9 | | | RBST-001 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | | RBST-002 |
| Integrity check info | | | | RBST-003 |
| - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | | RBST-004 |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | | RBST-005 |
| Integrity protection mode info | | Not Present | | RBST-006 |
| Ciphering mode info | | Not Present | | RBST-007 |
| Activation time | | $(256 + \text{CFN} - (\text{CFN} \bmod 8 + 8)) \bmod 256$ | | RBST-008 |
| New U-RNTI | | Not Present | | RBST-009 |
| New C-RNTI | | Not Present | | RBST-010 |
| New DSCH-RNTI | | Not Present | R99 and Rel-4 only | RBST-011 |
| New H-RNTI | | Not Present | Rel-5 | RBST-012 |
| New Primary E-RNTI | | Not Present | Rel-6 | RBST-013 |
| New Secondary E-RNTI | | Not Present | Rel-6 | RBST-014 |
| RRC State indicator | | CELL_DCH | | RBST-015 |
| UTRAN DRX cycle length coefficient | | Not Present | | RBST-016 |
| CN information info | | Not Present | | RBST-017 |
| URA identity | | Not Present | | RBST-018 |
| CHOICE specification mode | | Complete specification | Rel-6 | RBST-019 |
| - Signalling RB information to setup | | Not Present | | RBST-020 |
| - RAB information for setup list | A1, A3, A4, A5 | | | RBST-021 |
| - RAB information for setup | | | | RBST-022 |
| - RAB info | | 0000 0001B | | RBST-023 |
| - RAB identity | | The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. | | RBST-024 |
| - CN domain identity | | CS domain | | RBST-025 |
| - NAS Synchronization Indicator | | Not Present | | RBST-026 |
| - Re-establishment timer | | UseT314 | | RBST-027 |
| - RB information to setup list | | | | RBST-028 |
| - RB information to setup | | | | RBST-029 |
| | | | | RBST-030 |
| - RAB information for setup list | A6, A7, A8, A9 | | | RBST-031 |
| - RAB information for setup | | | | RBST-032 |
| - RAB info | | 0000 0101B | | RBST-033 |
| - RAB identity | | The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. | | RBST-034 |
| - CN domain identity | | PS domain | | RBST-035 |
| - NAS Synchronization Indicator | | Not Present | | RBST-036 |
| - Re-establishment timer | | UseT315 | | RBST-037 |
| - RB information to setup list | | | | RBST-038 |
| - RB information to setup | | | | RBST-039 |
| | | | | RBST-040 |
| - RB identity | A1 | 10 | | RBST-041 |
| - PDCP info | | Not Present | | RBST-042 |
| - CHOICE RLC info type | | RLC info | | RBST-043 |
| - CHOICE Uplink RLC mode | | TM RLC | | RBST-044 |
| - Transmission RLC discard | | Not Present | | RBST-045 |
| - Segmentation indication | | FALSE | | RBST-046 |
| - CHOICE Downlink RLC mode | | TM RLC | | RBST-047 |
| - Segmentation indication | | FALSE | | RBST-048 |
| - One sided RLC re-establishment | | FALSE | | RBST-049 |
| - RB mapping info | | | Rel-5 | RBST-050 |

Contents of RADIO BEARER SETUP message: AM or UM (UE supports PS RAB only)

| Information Element | Value/remark | Version | Index |
|--------------------------------------|--|-----------------------|----------|
| Message Type | | | RBSP-001 |
| RRC transaction identifier | Arbitrarily selects an integer between 0 and 3 | | RBSP-002 |
| Integrity check info | | | RBSP-003 |
| - message authentication code | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | | RBSP-004 |
| - RRC message sequence number | SS provides the value of this IE, from its internal counter. | | RBSP-005 |
| Integrity protection mode info | Not Present | | RBSP-006 |
| Ciphering mode info | Not Present | | RBSP-007 |
| Activation time | $(256 + \text{CFN} - (\text{CFN} \bmod 8 + 8)) \bmod 256$ | | RBSP-008 |
| New U-RNTI | Not Present | | RBSP-009 |
| New C-RNTI | Not Present | | RBSP-010 |
| New DSCH-RNTI | Not Present | R99 and Rel-4 only | RBSP-011 |
| New H-RNTI | Not Present | Rel-5 | RBSP-012 |
| New Primary E-RNTI | Not Present | Rel-6 | RBSP-013 |
| New Secondary E-RNTI | Not Present | Rel-6 | RBSP-014 |
| RRC State indicator | CELL_DCH | | RBSP-015 |
| UTRAN DRX cycle length coefficient | Not Present | | RBSP-016 |
| CN information info | Not Present | | RBSP-017 |
| URA identity | Not Present | | RBSP-018 |
| CHOICE specification mode | Complete specification | Rel-6 | RBSP-019 |
| - Signalling RB information to setup | Not Present | | RBSP-020 |
| - RAB information for setup list | | | RBSP-021 |
| - RAB information for setup | | | RBSP-022 |
| - RAB info | (AM DTCH for PS domain) | | RBSP-023 |
| - RAB identity | 0000 0101B The first/ leftmost bit of the bit string contains the most significant bit of the RAB identity. | | RBSP-024 |

| Information Element | Value/remark | Version | Index |
|--|-------------------------------------|---------|----------|
| - CN domain identity | PS domain | | RBSP-025 |
| - NAS Synchronization Indicator | Not Present | | RBSP-026 |
| - Re-establishment timer | useT315 | | RBSP-027 |
| - RB information to setup | | | RBSP-028 |
| - RB identity | 20 | | RBSP-029 |
| - PDCP info | | | RBSP-030 |
| - Support for lossless SRNS relocation | FALSE | | RBSP-031 |
| - Max PDCP SN window size | Not present | | RBSP-032 |
| - PDCP PDU header | Absent | | RBSP-033 |
| - Header compression information | Not present | | RBSP-034 |
| - CHOICE RLC info type | RLC info | | RBSP-035 |
| - CHOICE Uplink RLC mode | AM RLC | | RBSP-036 |
| - Transmission RLC discard | | | RBSP-037 |
| - CHOICE SDU discard mode | No Discard | | RBSP-038 |
| - MAX_DAT | 15 | | RBSP-039 |
| - Transmission window size | 128 | | RBSP-040 |
| - Timer_RST | 500 | | RBSP-041 |
| - Max_RST | 4 | | RBSP-042 |
| - Polling info | | | RBSP-043 |
| - Timer_poll_prohibit | 200 | | RBSP-044 |
| - Timer_poll | 200 | | RBSP-045 |
| - Poll_PDU | Not Present | | RBSP-046 |
| - Poll_SDU | 1 | | RBSP-047 |
| - Last transmission PDU poll | TRUE | | RBSP-048 |
| - Last retransmission PDU poll | TRUE | | RBSP-049 |
| - Poll_Windows | 99 | | RBSP-050 |
| - Timer_poll_periodic | Not Present | | RBSP-051 |
| - CHOICE Downlink RLC mode | AM RLC | | RBSP-052 |
| - DL RLC PDU size | Reference to clause 6 Parameter Set | Rel-5 | RBSP-053 |
| - In-sequence delivery | TRUE | | RBSP-054 |
| - Receiving window size | 128 | | RBSP-055 |
| - Downlink RLC status info | | | RBSP-056 |
| - Timer_status_prohibit | 200 | | RBSP-057 |
| - Timer_EPC | Not Present | | RBSP-058 |
| - Missing PDU indicator | TRUE | | RBSP-059 |
| - Timer_STATUS_periodic | Not Present | | RBSP-060 |
| - RB mapping info | | | RBSP-061 |
| - Information for each multiplexing option | 2 RBMuxOptions | | RBSP-062 |
| - RLC logical channel mapping indicator | Not Present | | RBSP-063 |
| - Number of uplink RLC logical channels | 1 | | RBSP-064 |
| - Uplink transport channel type | DCH | | RBSP-065 |
| - UL Transport channel identity | 1 | | RBSP-066 |
| - Logical channel identity | Not Present | | RBSP-067 |
| - CHOICE RLC size list | Configured | | RBSP-068 |
| - MAC logical channel priority | 8 | | RBSP-069 |
| - Downlink RLC logical channel info | | | RBSP-070 |
| - Number of downlink RLC logical channels | 1 | | RBSP-071 |
| - Downlink transport channel type | DCH | | RBSP-072 |
| - DL DCH Transport channel identity | 6 | | RBSP-073 |
| - DL DSCH Transport channel identity | Not Present | | RBSP-074 |
| - Logical channel identity | Not Present | | RBSP-075 |
| - RLC logical channel mapping indicator | Not Present | | RBSP-076 |
| - Number of uplink RLC logical channels | 1 | | RBSP-077 |
| - Uplink transport channel type | RACH | | RBSP-078 |
| - UL Transport channel identity | Not Present | | RBSP-079 |
| - Logical channel identity | 7 | | RBSP-080 |
| - CHOICE RLC size list | Explicit list | | RBSP-081 |
| - RLC size index | Reference to clause 6 Parameter Set | | RBSP-082 |
| - MAC logical channel priority | 8 | | RBSP-083 |
| - Downlink RLC logical channel info | | | RBSP-084 |
| - Number of downlink RLC logical channels | 1 | | RBSP-085 |
| - Downlink transport channel type | FACH | | RBSP-086 |
| - DL DCH Transport channel identity | Not Present | | RBSP-087 |
| - DL DSCH Transport channel identity | Not Present | | RBSP-088 |
| - Logical channel identity | 7 | | RBSP-089 |

| Information Element | Value/remark | Version | Index |
|---|--|---------|----------|
| RB information to reconfigure list | Not Present | Rel-6 | RBSP-090 |
| RB information to be affected list | Not Present | | RBSP-091 |
| Downlink counter synchronization info | Not Present | | RBSP-092 |
| UL Transport channel information for all transport channels | | | RBSP-093 |
| - PRACH TFCS | Not Present | | RBSP-094 |
| - CHOICE mode | FDD | | RBSP-095 |
| - TFC subset | Not Present | | RBSP-096 |
| - UL DCH TFCS | | | RBSP-097 |
| - CHOICE TFCI signalling | Normal | | RBSP-098 |
| - TFCI Field 1 information | | | RBSP-099 |
| - CHOICE TFCS representation | Complete reconfiguration | | RBSP-100 |
| - TFCS complete reconfigure information | | | RBSP-101 |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from clause 6.10.2.4 Parameter Set. | | RBSP-102 |
| - CTFC information | This IE is repeated for TFC numbers and reference to clause 6.10.2.4 Parameter Set | | RBSP-103 |
| - CTFC | Reference to clause 6.10.2.4 Parameter Set | | RBSP-104 |
| - Power offset information | | | RBSP-105 |
| - CHOICE Gain Factors | Computed Gain Factors(The last TFC is set to Signalled Gain Factors) | | RBSP-106 |
| - Gain factor β_c | 11 (below 64 kbps) | | RBSP-107 |
| - Gain factor β_d | 9 (higher than 64 kbps) (Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) | | RBSP-108 |
| - Reference TFC ID | 15 | | RBSP-109 |
| - CHOICE mode | (Not Present if the CHOICE Gain Factors is set to Computed Gain Factors) | | RBSP-110 |
| - Power offset P _{p-m} | 0 | | RBSP-111 |
| Deleted UL TrCH information list | FDD | | RBSP-112 |
| Added or Reconfigured UL TrCH information list | Not Present | | RBSP-113 |
| Added or Reconfigured UL TrCH information | Not Present | | RBSP-114 |
| - Uplink transport channel type | 1 | | RBSP-115 |
| - UL Transport channel identity | 1 DCH added, 1 DCH reconfigured | | RBSP-116 |
| - TFS | DCH | | RBSP-117 |
| - CHOICE Transport channel type | 1 | | RBSP-118 |
| - Dynamic Transport format information | Dedicated transport channels | | RBSP-119 |
| - RLC Size | | | RBSP-120 |
| - Number of TBs and TTI List | Reference to clause 6.10 Parameter Set | | RBSP-121 |
| - Transmission Time Interval | (This IE is repeated for TFI number.) | | RBSP-122 |
| - Number of Transport blocks | Not Present | | RBSP-123 |
| - CHOICE Logical channel list | Reference to clause 6.10 Parameter Set | | RBSP-124 |
| - Semi-static Transport Format information | All | | RBSP-125 |
| - Transmission time interval | | | RBSP-126 |
| - Type of channel coding | Reference to clause 6.10 Parameter Set | | RBSP-127 |
| - Coding Rate | Reference to clause 6.10 Parameter Set | | RBSP-128 |
| - Rate matching attribute | Reference to clause 6.10 Parameter Set | | RBSP-129 |
| - CRC size | Reference to clause 6.10 Parameter Set | | RBSP-130 |
| - Uplink transport channel type | DCH | | RBSP-131 |
| - UL Transport channel identity | 5 | | RBSP-132 |
| - TFS | | | RBSP-133 |
| - CHOICE Transport channel type | Dedicated transport channels | | RBSP-134 |
| - Dynamic Transport format information | | | RBSP-135 |
| - RLC Size | Reference to clause 6.10 Parameter Set | | RBSP-136 |
| - Number of TBs and TTI List | (This IE is repeated for TFI number.) | | RBSP-137 |
| - Transmission Time Interval | Not Present | | RBSP-138 |
| - Number of Transport blocks | Reference to clause 6.10 Parameter Set | | RBSP-139 |
| - CHOICE Logical channel list | All | | RBSP-140 |
| - Semi-static Transport Format information | | | RBSP-141 |
| - Transmission time interval | Reference to clause 6.10 Parameter Set | | RBSP-142 |
| - Type of channel coding | Reference to clause 6.10 Parameter Set | | RBSP-143 |
| - Coding Rate | Reference to clause 6.10 Parameter Set | | RBSP-144 |

| Information Element | Value/remark | Version | Index |
|---|--|-------------------|----------|
| - Rate matching attribute | Reference to clause 6.10 Parameter Set | | RBSP-145 |
| - CRC size | Reference to clause 6.10 Parameter Set | | RBSP-146 |
| CHOICE mode | Not Present | | RBSP-147 |
| DL Transport channel information common for all transport channel | | | RBSP-148 |
| - SCCPCH TFCS | Not Present | | RBSP-149 |
| - CHOICE mode | FDD | | RBSP-150 |
| - CHOICE DL parameters | Explicit | | RBSP-151 |
| - DL DCH TFCS | | | RBSP-152 |
| - CHOICE TFCI Signalling | Normal | | RBSP-153 |
| - TFCI Field 1 Information | | | RBSP-154 |
| - CHOICE TFCS representation | Complete reconfiguration | | RBSP-155 |
| - TFCS complete reconfigure | | | RBSP-156 |
| - CHOICE CTFC Size | Number of bits used must be enough to cover all combinations of CTFC from clause 6.10.2.4 Parameter Set. | | RBSP-157 |
| - CTFC information | This IE is repeated for TFC numbers and reference to clause 6.10.2.4 | | RBSP-158 |
| - CTFC | Reference to clause 6.10.2.4 Parameter Set | | RBSP-159 |
| - Power offset information | Not Present | | RBSP-160 |
| Added or Reconfigured DL TrCH information list | 1 | | RBSP-161 |
| Added or Reconfigured DL TrCH information | 2 TrCHs(DCH for DCCH and DCH for DTCH) | | RBSP-162 |
| - Downlink transport channel type | DCH | | RBSP-163 |
| - DL Transport channel identity | 10 | | RBSP-164 |
| - CHOICE DL parameters | Same as UL | | RBSP-165 |
| - Uplink transport channel type | DCH | | RBSP-166 |
| - UL TrCH identity | 5 | | RBSP-167 |
| - DCH quality target | | | RBSP-168 |
| - BLER Quality value | -20 (-2.0) | | RBSP-169 |
| - Downlink transport channel type | DCH | | RBSP-170 |

| - CHOICE mode | FDD | | RBSP-209 |
| - Scrambling code type | Long | | RBSP-210 |
| - Scrambling code number | 0 (0 to 16777215) | | RBSP-211 |
| - Number of DPDCH | 1 | | RBSP-212 |
| - spreading factor | 64 | | RBSP-213 |
| - TFCI existence | TRUE | | RBSP-214 |
| - Number of FBI bit | Not Present(0) | | RBSP-215 |
| - Puncturing Limit | 1 | | RBSP-216 |
| CHOICE Mode | FDD | R99 and Rel-4 only | RBSP-217 |
| E-DCH Info | Not Present | Rel-6 | RBSP-218 |
| - Downlink PDSCH information | Not Present | R99 and Rel-4 only | RBSP-219 |
| Downlink HS-PDSCH Information | Not Present | Rel-5 | RBSP-220 |
| Downlink information common for all radio links | | | RBSP-221 |
| - Downlink DPCH info common for all RL | | | RBSP-222 |
| - Timing indicator | Maintain | | RBSP-223 |
| - CFN-targetSFN frame offset | Not Present | | RBSP-224 |
| - Downlink DPCH power control information | | | RBSP-225 |
| - CHOICE mode | FDD | | RBSP-226 |
| - DPC mode | 0 (single) | | RBSP-227 |
| - CHOICE mode | FDD | | RBSP-228 |
| - Power offset $P_{Pilot-DPCH}$ | 0 | | RBSP-229 |
| - DL rate matching restriction information | Not Present | | RBSP-230 |
| - Spreading factor | Reference to clause 6.10 Parameter Set | | RBSP-231 |
| - Fixed or Flexible Position | Reference to clause 6.10 Parameter Set | | RBSP-232 |
| - TFCI existence | Reference to clause 6.10 Parameter Set | | RBSP-233 |
| - CHOICE SF | Reference to clause 6.10 Parameter Set | | RBSP-234 |
| - CHOICE mode | FDD | | RBSP-235 |
| - DPCH compressed mode info | Not Present | | RBSP-236 |
| - TX Diversity mode | None | | RBSP-237 |
| - SSDT information | Not Present | R99 and Rel-4 only | RBSP-238 |
| - Default DPCH Offset Value | Not Present | | RBSP-239 |
| - MAC-hs reset indicator | Not Present | Rel-5 | RBSP-240 |
| - Post-verification period | Not Present | Rel-6 | RBSP-241 |
| Downlink information per radio link list | | | RBSP-242 |
| - Downlink information for each radio link | | | RBSP-243 |
| - CHOICE mode | FDD | | RBSP-244 |
| - Primary CPICH info | | | RBSP-245 |
| - Primary scrambling code | Reference to clause 6.1 "Default settings (FDD)" | | RBSP-246 |
| - PDSCH with SHO DCH info | Not Present | R99 and Rel-4 only | RBSP-247 |
| - PDSCH code mapping | Not Present | R99 and Rel-4 only | RBSP-248 |
| - Downlink DPCH info for each RL | | | RBSP-249 |
| - CHOICE mode | FDD | | RBSP-250 |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | | RBSP-251 |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 | | RBSP-252 |
| - Secondary CPICH info | Not Present | | RBSP-253 |
| - DL channelisation code | | | RBSP-254 |
| - Secondary scrambling code | Not present | | RBSP-255 |
| - Spreading factor | Reference to clause 6.10 Parameter Set | | RBSP-256 |
| - Code number | Depends upon radio bearer used. | | RBSP-257 |
| - Scrambling code change | No change | | RBSP-258 |
| - TPC combination index | 0 | | RBSP-259 |
| - SSDT Cell Identity | Not Present | R99 and | RBSP-260 |

| Information Element | Value/remark | Version | Index |
|---|----------------------------|-------------------------------------|----------------------|
| - Closed loop timing adjustment mode - SCCPCH information for FACH | Not Present Not Present | Rel-4 only R99 and Rel-4 only | RBSP-261 RBSP-262 |
| MBMS PL Service Restriction Information | Not Present | Rel-6 | RBSP-263 |

Contents of RADIO BEARER SETUP message: AM or UM (UE supports CS RAB for Test Loop Mode 2)

Contents of RADIO BEARER SETUP message: AM or UM (E-DCH and HSDPA)

| Information Element | Condition | Value/remark | Version | Index |
|--|------------|--|--------------------|----------|
| Message Type | A1, A2, A3 | | | RBSE-001 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | | RBSE-002 |
| Integrity check info | | | | RBSE-003 |
| - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | | RBSE-004 |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | | RBSE-005 |
| Integrity protection mode info | | Not Present | | RBSE-006 |
| Ciphering mode info | | Not Present | | RBSE-007 |
| Activation time | A1 | Not Present | | RBSE-008 |
| Activation time | A2, A3 | $(256+CFN-(CFN \text{ MOD } 8 + 8))\text{MOD } 256$ | | RBSE-009 |
| New U-RNTI | A1, A2, A3 | Not Present | | RBSE-010 |
| New C-RNTI | | Not Present | | RBSE-011 |
| New DSCH-RNTI | | Not Present | R99 and Rel-4 only | RBSE-012 |
| New H-RNTI | | '1010 1010 1010 1010' | Rel-5 | RBSE-013 |

| - CHOICE mode | FDD | | RBSD-152 |
| - Downlink 64QAM configured | Not Present | Rel-7 | RBSD-153 |
| - HS-DSCH TB size table | Not Present | Rel-7 | RBSD-153b |
| Downlink information common for all radio links | Not Present | | RBSD-154 |
| Downlink information per radio link list | | | RBSD-155 |
| - Downlink information for each radio link | | | RBSD-156 |
| - CHOICE mode | FDD | | RBSD-157 |
| - Primary CPICH info | | | RBSD-158 |
| - Primary scrambling code | Reference to clause 6.1 "Default settings (FDD)" | | RBSD-159 |
| - Serving HS-DSCH radio link indicator | TRUE | Rel-5 | RBSD-160 |
| - Downlink DPCH info for each RL | | | RBSD-161 |
| - CHOICE mode | FDD | | RBSD-162 |
| - Primary CPICH usage for channel estimation | Primary CPICH may be used | | RBSD-163 |
| - DPCH frame offset | Set to value Default DPCH Offset Value (as currently stored in SS) mod 38 400 | | RBSD-164 |
| - Secondary CPICH info | Not Present | | RBSD-165 |
| - DL channelisation code | | | RBSD-166 |
| - Secondary scrambling code | Not present | | RBSD-167 |
| - Spreading factor | 128 | | RBSD-168 |
| - Code number | 96 | | RBSD-169 |
| - Scrambling code change | No change | | RBSD-170 |
| - TPC combination index | 0 | | RBSD-171 |
| - Closed loop timing adjustment mode | Not Present | | RBSD-172 |
| Downlink secondary cell info FDD | | Rel-8 | RBSD-173 |
| - CHOICE Configuration info | New configuration | | RBSD-174 |
| - New H-RNTI | '1010 1010 1010 1010' | | RBSD-175 |
| - Downlink 64QAM configured | Not Present | | RBSD-176 |
| - HS-DSCH TB size table | Not Present | | RBSD-177 |
| - Primary CPICH info | | | RBSD-178 |
| - Primary scrambling code | Ref. to the Default setting in clause 6.1 (FDD) | | RBSD-179 |
| - DL Scrambling Code | Not Present | | RBSD-180 |
| - HS-SCCH Channelisation Code Information | | | RBSD-181 |
| - HS-SCCH Channelisation Code | 2 | | RBSD-182 |
| - HS-SCCH Channelisation Code | 3 | | RBSD-183 |
| - Measurement Power Offset | 6 dB | | RBSD-184 |
| - UARFCN downlink (Nd) | Reference to clause 5.1 Test frequencies | | RBSD-185 |
| MBMS PL Service Restriction Information | Not Present | Rel-6 | RBSD-186 |

Contents of RADIO BEARER SETUP message: AM or UM (DC-HSUPA)

| Information Element | Condition | Value/remark | Version | Index |
|--|-----------|--|--------------------|----------|
| Message Type | | | | RBSE-001 |
| RRC transaction identifier | | Arbitrarily selects an integer between 0 and 3 | | RBSE-002 |
| Integrity check info | | | | RBSE-003 |
| - message authentication code | | SS calculates the value of MAC-I for this message and writes to this IE. The first/ leftmost bit of the bit string contains the most significant bit of the MAC-I. | | RBSE-004 |
| - RRC message sequence number | | SS provides the value of this IE, from its internal counter. | | RBSE-005 |
| Integrity protection mode info | | Not Present | | RBSE-006 |
| Ciphering mode info | | Not Present | | RBSE-007 |
| New U-RNTI | | Not Present | | RBSE-008 |

10 Void

11 MBMS configurations for signalling test

Clause 11.1 specifies MCCH configurations for MBMS and MBSFN FDD mode. Clause 11.2 specifies MCCH configurations for MBSFN for 3.84 Mcps and 7.68 Mcps TDD

11.1 MCCH configurations

11.1.1 MCCH configuration parameters

MCCH is configured stand-alone on a separate SCCPCH for test. Four typical MCCH scheduling configurations are included in the clause. The MCCH RAB is found in 6.10.2.4.3.8.

11.1.1.1 Default1 MCCH information scheduling (mp 5.12s)

| MCCH configuration parameters | Values | Comments |

| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 2 k octets | 2432 octets |
| Max. MBMS neighbouring cells | 15 | |
| Max. MBMS services | 16 | |

11.1.1.4 Shortest MCCH information scheduling (mp 1.28s)

| MCCH configuration parameters | Values | Comments |
|---|--------------|------------|
| Modification period (mp) | 128 frames | 1.28 s |
| Repetition period (rp) | 64 frames | 0.64 s |
| Access information period (aip) | 16 frames | 0.16 s |
| MCCH configuration (number of mp-rp-aip) | 1-2-8 | |
| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 0.5 k octets | 608 octets |
| Max. MBMS neighbouring cells | 8 | |
| Max. MBMS services | 12 | |

11.1.2 MCCH messages transmission in test

The clause provides rules for MCCH messages transmission for MBMS test.

A whole set of MCCH messages is repeatedly transmitted.

The sending of the whole set of critical MCCH information messages is started at the first TTI of a repetition period if no ACCESS INFORMATION message is sent.

No ACCESS INFORMATION messages shall be transmitted in the modification period unless explicitly mentioned in the Test Procedure or Expected Sequence.

In case an ACCESS INFORMATION message transmission is explicitly mentioned in the test procedure or expected sequence these shall be transmitted starting at the first frame of the second access information period of the modification period, after MBMS MODIFIED SERVICES INFORMATION, unless stated otherwise. If the test case procedure describes more than one ACCESS INFORMATION message in the same modification period, this means that an ACCESS INFORMATION message is transmitted in every access info period from the first message until the end of the modification period, unless stated otherwise.

If an ACCESS INFORMATION message is to be sent in the access information period in a repetition period the critical MCCH messages are transmitted in the next frame after the ACCESS INFORMATION message.

If an ACCESS INFORMATION message is to be sent in the access information period that is not the first access information period in a repetition period,

And if a critical MCCH message is segmented into several RLC PDUs with consecutive sequence numbers and is occasionally, only partially transmitted at the end of the preceding access information period, the remaining RLC PDUs shall be transmitted after ACCESS INFORMATION (as out of sequence delivery) in the next access information period within the repetition period.

If an MBMS service is changed, this will be notified on MICH during one entire modification period before the change occurs. The service should then appear in MBMS MODIFIED SERVICES INFORMATION for one modification period, and then in the next modification period move to MBMS UNMODIFIED SERVICES INFORMATION. The MBMS MODIFIED SERVICES INFORMATION message should be transmitted once per repetition period throughout the modification period. All MCCH messages will contain the same content during and after this service change, except for MBMS MODIFIED SERVICES INFORMATION and MBMS UNMODIFIED SERVICES INFORMATION, unless stated otherwise in the test procedure.

11.1.3 Combinations and transmission order of critical MCCH messages

| Combination Id | Ordered message combinations | comment |
|----------------|--|--|
| C1 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION | No session ongoing or PTP session ongoing. |
| C2 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON RB INFORMATION + MBMS CURRENT CELL p-t-m RB INFORMATION | PTM sessions are ongoing, no service modification and no neighbouring cells are defined |
| C3 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON RB INFORMATION + MBMS CURRENT CELL p-t-m RB INFORMATION + MBMS NEIGHBOURING CELL p-t-m RB INFORMATION (per neighbouring cell) | PTM sessions are ongoing, no service modification |
| C4 | MBMS MODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON RB INFORMATION + MBMS CURRENT CELL p-t-m RB INFORMATION + MBMS UNMODIFIED SERVICES INFORMATION | PTM sessions are ongoing or starting, service modification indicated, no neighbouring cells (for one modification period) |
| C5 | MBMS MODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON RB INFORMATION + MBMS CURRENT CELL p-t-m RB INFORMATION + MBMS NEIGHBOURING CELL p-t-m RB INFORMATION (per neighbouring cell related to modified services) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS NEIGHBOURING CELL p-t-m RB INFORMATION (per neighbouring cell not related to modified services) | PTM sessions are ongoing or starting, service modification indicated (for one modification period) |
| C6 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION (empty services_list) + MBMS GENERAL INFORMATION | No MBMS services |
| C7 | MBMS MODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS UNMODIFIED SERVICES INFORMATION | PTP sessions are starting or another required UE action. MBMS UNMODIFIED SERVICES INFORMATION may or may not contain services. |

NOTE 1: PTM test cases shall use message combinations C2 and C4 by default, according to the rules in clause 11.1.2, unless stated otherwise. If MBMS neighbouring cells are configured in the PTM test case then combinations C3 and C5 shall be used unless stated otherwise. PTP and counting test cases shall use message combinations C6 and C7, unless stated otherwise.

NOTE 2: If combination C6 is used in the initial condition, then the list of services in MBMS UNMODIFIED SERVICES INFORMATION will be empty. Then if any service is modified this will be added to the list, so the list of services will grow during the test (e.g. C6->C4->C2 or C6->C5->C3 or C6->C7->C6). If combination C1 is used in the initial condition then a total of 12 services will always be included in MBMS UNMODIFIED SERVICES INFORMATION and MBMS MODIFIED SERVICES INFORMATION (e.g. C1->C4->C2 or C1->C5->C3 or C1->C7->C6).

11.2 MCCH configurations for MBSFN (TDD)

11.2.1 MCCH configuration parameters

11.2.1.1 Non-IMB

MCCH is configured stand-alone on a separate SCCPCH for testing MBSFN. Four typical MCCH scheduling configurations are included in this clause. The MCCH RB is found in clause 6.10.3.4.4.12 (3.84 Mcps TDD) or 6.11.5.4.4.12(1.28 Mcps TDD) or 6.11.6.4.4.12 (7.68 Mcps TDD).

11.2.1.1.1 Default1 MCCH information scheduling (mp 5.12s)

| MCCH configuration parameters | Values | Comments |
|---|------------|--|
| Modification period (mp) | 512 frames | 5.12s. Modification period coefficient = 9 |
| Repetition period (rp) | 128 frames | 1.28s. Repetition period coefficient = 2 |
| MCCH configuration (number of mp-rp) | 1-4 | |
| MCCH data rate | 7.2 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 1 k octets | 1152 octets |

11.1.1.1.2 Default2 MCCH information scheduling (mp 2.56s)

| MCCH configuration parameters | Values | Comments |
|---|------------|--|
| Modification period (mp) | 256 frames | 2.56s. Modification period coefficient = 8 |
| Repetition period (rp) | 128 frames | 1.28s. Repetition period coefficient = 1 |
| MCCH configuration (number of mp-rp) | 1-2 | |
| MCCH data rate | 7.2 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 1 k octets | 1152 octets |

11.1.1.1.3 Longest MCCH information scheduling (mp 10.24s)

| MCCH configuration parameters | Values | Comments |
|---|-------------|--|
| Modification period (mp) | 1024 frames | 10.24s. Modification period coefficient = 10 |
| Repetition period (rp) | 256 frames | 2.56s. Repetition period coefficient = 2 |
| MCCH configuration (number of mp-rp) | 1-4 | |
| MCCH data rate | 7.2 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 2 k octets | 2304 octets |

11.1.1.1.4 Shortest MCCH information scheduling (mp 1.28s)

| MCCH configuration parameters | Values | Comments |
|---|--------------|---|
| Modification period (mp) | 128 frames | 1.28 s. Modification period coefficient = 7 |
| Repetition period (rp) | 64 frames | 0.64 s. Repetition period coefficient = 1 |
| MCCH configuration (number of mp-rp) | 1-2 | |
| MCCH data rate | 7.2 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 0.5 k octets | 576 octets |

11.2.1.2 IMB

MCCH is configured stand-alone on a separate SCCPCH for testing MBSFN. Four typical MCCH scheduling configurations are included in this clause. The MCCH RB is found in clause 6.11.7.4.1.1.

11.2.1.2.1 Default1 MCCH information scheduling (mp 5.12s)

| MCCH configuration parameters | Values | Comments |
|---|------------|--|
| Modification period (mp) | 512 frames | 5.12s. Modification period coefficient = 9 |
| Repetition period (rp) | 128 frames | 1.28s. Repetition period coefficient = 2 |
| MCCH configuration (number of mp-rp) | 1-4 | |
| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 1 k octets | 1216 octets |

11.1.1.2.2 Default2 MCCH information scheduling (mp 2.56s)

| MCCH configuration parameters | Values | Comments |
|---|------------|--|
| Modification period (mp) | 256 frames | 2.56s. Modification period coefficient = 8 |
| Repetition period (rp) | 128 frames | 1.28s. Repetition period coefficient = 1 |
| MCCH configuration (number of mp-rp) | 1-2 | |
| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 1 k octets | 1216 octets |

11.1.1.2.3 Longest MCCH information scheduling (mp 10.24s)

| MCCH configuration parameters | Values | Comments |
|---|-------------|--|
| Modification period (mp) | 1024 frames | 10.24s. Modification period coefficient = 10 |
| Repetition period (rp) | 256 frames | 2.56s. Repetition period coefficient = 2 |
| MCCH configuration (number of mp-rp) | 1-4 | |
| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 2 k octets | 2432 octets |

11.1.1.2.4 Shortest MCCH information scheduling (mp 1.28s)

| MCCH configuration parameters | Values | Comments |
|---|--------------|---|
| Modification period (mp) | 128 frames | 1.28 s. Modification period coefficient = 7 |
| Repetition period (rp) | 64 frames | 0.64 s. Repetition period coefficient = 1 |
| MCCH configuration (number of mp-rp) | 1-2 | |
| MCCH data rate | 7.6 kbs | |
| Max. total lengths of MCCH PER-encoded messages | 0.5 k octets | 608 octets |

11.2.2 MCCH messages transmission in test

This clause provides rules for MCCH message transmission for MBMS testing on MBSFN clusters.

A whole set of MCCH messages is repeatedly transmitted.

The sending of the whole set of critical MCCH information messages is started at the first TTI of a repetition period.

If an MBMS service is changed, this will be notified on MICH during one entire modification period before the change occurs. The service should then appear in MBMS MODIFIED SERVICES INFORMATION for one modification period, and then in the next modification period move to MBMS UNMODIFIED SERVICES INFORMATION. The MBMS MODIFIED SERVICES INFORMATION message should be transmitted once per repetition period throughout the modification period. All MCCH messages will contain the same content during and after this service change, except for MBMS MODIFIED SERVICES INFORMATION and MBMS UNMODIFIED SERVICES INFORMATION, unless stated otherwise in the test procedure.

11.2.3 Combinations and transmission order of critical MCCH messages

| Combination Id | Ordered message combinations | comment |
|----------------|--|--|
| C1 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION | No session ongoing. |
| C2 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON P-T-M RB INFORMATION + MBMS CURRENT CELL P-T-M RB INFORMATION | PTM sessions are ongoing, no service modification |
| C3 | Reserved | |
| C4 | MBMS MODIFIED SERVICES INFORMATION + MBMS GENERAL INFORMATION + MBMS COMMON RB INFORMATION + MBMS CURRENT CELL P-T-M RB INFORMATION + MBMS UNMODIFIED SERVICES INFORMATION | PTM sessions are ongoing or starting, service modification indicated (for one modification period) |
| C5 | Reserved | |
| C6 | MBMS MODIFIED SERVICES INFORMATION (empty services_list) + MBMS UNMODIFIED SERVICES INFORMATION (empty services_list) + MBMS GENERAL INFORMATION | No MBMS services |
| C7 | Reserved | |

NOTE 1: MBSFN test cases shall use message combinations C2 and C4 by default, according to the rules in clause 11.2.2, unless stated otherwise.

NOTE 2: If combination C6 is used in the initial condition, then the list of services in MBMS UNMODIFIED SERVICES INFORMATION will be empty. Then if any service is modified this will be added to the list, so the list of services will grow during the test (e.g. C6->C4->C2). If combination C1 is used in the initial condition then a total of 8 services will always be included in MBMS UNMODIFIED SERVICES INFORMATION and MBMS MODIFIED SERVICES INFORMATION (e.g. C1->C4->C2).

11.2.4 MBSFN service availability

11.2.4.1 Non-IMB

By default a total of 14 MBMS services are defined. However, in each cell only a selection of these services are available.

The default cell environment comprising Cell 31 to Cell 38 is configured to simulate four geographical service areas. In each service area there is one cell (cluster) on carrier frequency f1 (referred to as the Dedicated National Carrier) providing only nationally available services and another cell (cluster) on carrier frequency f2 (referred to as the Mixed Local/National Carrier) providing a mix of national and local services. By default all cells will provide notification of all services available in that service area. The default allocation of cells to carrier frequencies is defined by a combination of clause 6.1 and clause 5.1.2.

Cell 31, Cell 32, Cell 37 and Cell 38 will by default provide Dedicated National Carrier services. Cell 33, Cell 34, Cell 35 and Cell 36 will by default provide Mixed Local/National Carrier services. The default service availability in each cell is given in Table 11.2.4-1.

Table 11.2.4-1: Default Service Availability in Cell 31 - Cell 38

| MBMS Service ID | Cell 31 | Cell 32 | Cell 33 | Cell 34 | Cell 35 | Cell 36 | Cell 37 | Cell 38 | Comments |
|------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|--------------------------------|
| 000001 | X | X | | | | | X | X | National service 1 |
| 000002 | X | X | | | | | X | X | National service 2 |
| 000003 | X | X | | | | | X | X | National service 3 |
| 000004 | X | X | | | | | X | X | National service 4 |
| 000005 | | | X | X | X | X | | | National service 5 |
| 000006 | | | X | X | X | X | | | National service 6 |
| 010001 | | | X | | | | | | Service Area 1 local service 1 |
| 010002 | | | X | | | | | | Service Area 1 local service 2 |
| 020001 | | | | X | | | | | Service Area 2 local service 1 |
| 020002 | | | | X | | | | | Service Area 2 local service 2 |
| 030001 | | | | | X | | | | Service Area 3 local service 1 |
| 030002 | | | | | X | | | | Service Area 3 local service 2 |
| 040001 | | | | | | X | | | Service Area 4 local service 1 |
| 040002 | | | | | | X | | | Service Area 4 local service 2 |

11.2.4.2 IMB

A total of 6 MBMS services are defined. However, in each cell only a selection of these services are available.

The default cell environment comprising Cell 31 to Cell 38 is configured to simulate four geographical service areas. By default all cells will provide notification of all services available in that service area. The default allocation of cells to carrier frequencies is defined by a combination of clause 6.1 and clause 5.1.2.

The default service availability in each cell is given in Table 11.2.4-2.

Table 11.2.4-2: Default Service Availability in Cell 31 - Cell 38

| MBMS Service ID | Cell 31 | Cell 32 | Cell 33 | Cell 34 | Cell 35 | Cell 36 | Cell 37 | Cell 38 | Comments |
|------------------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|--------------------|
| 000001 | X | X | | | | | X | X | National service 1 |
| 000002 | X | X | | | | | X | X | National service 2 |
| 000003 | X | X | | | | | X | X | National service 3 |
| 000004 | X | X | | | | | X | X | National service 4 |
| 000005 | | | X | X | X | X | | | National service 5 |
| 000006 | | | X | X | X | X | | | National service 6 |
