NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. The UL RLC SDU size have been choosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.

See 18.1.1.1 for test procedure.

18.1.2.37.1.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
 - for sub-test 1: RB5/TF1 (1x336).
 - for sub-test 2: RB5/TF2 (2x336).
 - for sub-test 3: RB5/TF3 (4x336).
 - for sub-test 4: RB5/TF3 (8x336).
 - for sub-test 5 to 10: RB5/TF4 (12x336).
3. At step 15 the UE shall return
 - for sub-test 1 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

 RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over two subsequent TTIs, i.e. UL RLC SDU SIZE has been set to two times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit).

18.1.2.38.1.4 Test requirements

- for sub-test 4 and 7: an RLC SDU on RB5 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink; and no data shall be received on RB6 and RB7.
- for sub-test 5 and 8: an RLC SDU on RB5, RB6, RB7 having the same content as sent by SS and on RB8 having the first 312 bits equal to the content sent by the SS in the downlink.

RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 10 ms while the downlink TTI is 40 ms then, to achieve continuous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over four tsubsequent TTIs, i.e. UL RLC SDU SIZE has been set to four times the uplink TFS size minus 8 (the size of a 7 bit length indicator and expansion bit).

<p>NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).</p>

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTIs, i.e. UL RLC SDU SIZE has been set to the uplink TFS size under test minus 8 (the size of a 7 bit length indicator and expansion bit).						

18.1.2.42.1.4 Test requirements

See 18.1.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
 - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
 - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
 - for sub-test 3: an RLC SDU on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
 - for sub-test 4: an RLC SDU on RB8 having the first 312 bits equal to the content of the test data sent by the SS in downlink; an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

18.1.2.43.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 10 ms TTI

18.1.2.43.1.1 Conformance requirement

See 18.1.2.4.1.

18.1.2.43.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.43 for the downlink 10 ms TTI case.

18.1.2.43.1.3 Method of test

See 18.1.1.2 for test procedure.

For the PS DL:384/UL:64 kbps radio bearer the downlink TTI is 10ms while the uplink TTI is 20ms. As the SS will send one DL SDU every 10 ms then the UE test loop function will return 2 UL SDUs per uplink TTI. To not cause uplink transmission buffer overflow then the UL RLC SDU size should be chosen such that the UE will transmit 2 RLC SDUs per uplink TTI. For the case when the transport format under test does not allow for 2 SDUs to fit into the transport format size without requiring concatenation then the UL RLC SDU size shall be chosen such that one SDU is returned per uplink TTI.

The following RLC parameter value is used in the RADIO BEARER SETUP message used to setup the PS DL:384/UL:64 kbps radio bearer:

Uplink RLC Transmission window size	512
--	-----

NOTE The transmission window size value have been chosen to avoid that UE transmission buffer becomes full during the test.

Sub-test	Downlink TFCs Under Test	Uplink TFCs Under test	Implicitely tested	Restricted UL TFCIs	UL RLC SDU size (bits) (note 1)	Test data size (bits) (note 1)
<p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to the payload size of the DL TF under test minus 8 bits (size of 7 bit length indicator and expansion bit).</p> <p>NOTE 2: RB8 (TF1/TF3): For sub-tests where uplink transport format TF1 (1x336) or TF3 (3x336) are used then no adaptation to the difference in downlink TTI (10 ms) and uplink TTI (20ms) is possible as this would require the UE to concatenate 2 SDUs into one PDU for TF1; or into three PDUs for TF3. For these sub-tests the UL RLC SDU size is set equal to the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).</p> <p>NOTE 3: RB8 (TF2/TF4): For sub-tests where uplink transport formats TF2 (2x336) or TF4 (4x336) is used then to adopt to the difference in downlink TTI (10 ms) and uplink TTI (20ms) the UL RLC SDU size has been chosen such that 2 SDUs will be returned per uplink TTI. I.e. the UL RLC SDU size is set equal to half the payload size of the UL TF under test minus 8 bits (the size of 7 bit length indicator and expansion bit).</p>

NOTE:	See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).					

18.1.2.43.2.4 Test requirements

See 18.1.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
 - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
 - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
 - for sub-test 3: an RLC SDU on RB8 having the content equal to the content of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.

- for sub-test 25: an RLC SDU on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 26: an RLC SDU on RB8 having the content equal to the first 1272 bits of the test data sent by the SS in downlink; an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS.

4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the uplink TTI for RB8 is 20 ms while the downlink TTI is 10 ms then, to achieve continous data transmission in uplink the size of the uplink RLC SDU has been set such that it will be transmitted over each TTI, ie the uplink TFS size minus 8 bits (size of 7 bit length indicator and expansion bit).						

18.1.2.44.1.4 Test requirements

See 18.1.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and step 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 15 the UE shall return
 - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
 - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
 - for sub-test 3: an RLC SDU on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
 - for sub-test 4: an RLC SDU on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
 - for sub-test 5: an RLC SDU on RB8 having the content equal to the first 312 bits of the test data sent by the SS in downlink; an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS.

- for sub-test 26: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 27: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 28: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 29: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS.
- for sub-test 30: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 31: an RLC SDU on RB8 having the content equal to the first 2552 bits of the test data sent by the SS in downlink; an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

NOTE:	See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB8: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB8 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).

18.1.2.45.4 Test requirements

See 18.1.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCs as specified in the actual sub test.
3. At step 15 the UE shall return
 - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
 - for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
 - for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
 - for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
 - for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB6: Test data size has been set to DL TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit). As the TTI for RB5 and RB6 is the same for both downlink and uplink then UL RLC SDU size has been set to achieve UE to return one SDU per TTI, i.e. the UL RLC SDU size for RB6 has been set equal to the uplink TFS size under test minus 8 bits (size of 7 bit length indicator and expansion bit).and .the UL RLC SDU size for RB5 has been set equal to the uplink TFS size under test.

18.1.2.53.2.4 Test requirements

See 18.1.1.2 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15a and 15b the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual subtest.
3. At step 15 the UE shall return
 - for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.
 - for sub-test 5: four RLC SDUs on RB5 having the same content as sent by SS; and no data shall be received on RB6.
 - for sub-test 6, 7, 8 and 9: four RLC SDUs on RB5 and one RLC SDU on RB6 having the same content as sent by SS.
4. At step 15b the UE shall send at least one MEASUREMENT REPORT message.

18.1.2.54.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.11.5.4.1.54.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 64 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.11.5.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink.

If k is the signalled TFRI value then the corresponding HS-DSCH transport block size L_k is given by:

If $k = 1..62$

$$L_k = \lfloor L_{\min} p^{k-1} \rfloor$$

where

$$p = \frac{1340}{1269} \text{ if the HS-DSCH physical layer category is between 1 and 6 inclusively,}$$

$$p = \frac{1755}{1652} \text{ if the HS-DSCH physical layer category is between 7 and 12 inclusively,}$$

$$p = \frac{2345}{2196} \text{ if the HS-DSCH physical layer category is between 13 and 15 inclusively,}$$

and

$$L_{\min} = 240$$

If $k = 63$ then,

$$L_k = 7008 \text{ if the HS-DSCH physical layer category is between 1 and 6 inclusively,}$$

$$10204 \text{ if the HS-DSCH physical layer category is between 7 and 12 inclusively,}$$

14056 if the HS-DSCH physical layer category is between 13 and 15 inclusively.

If $k=0$, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in the following tables: –

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCIs.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
 RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.

18.1.5.3a.4 Test requirements

See 14.1.3.5 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
 - for sub-test 1: TF1 (1x336).
 - for sub-test 2: TF2 (2x336).
 - for sub-test 3: TF3 (4x336).
 - for sub-test 4: TF4 (8x336).

3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:32 kbps radio bearer (RB8) has the highest number of transport formats (4 excluding TF0) then 4 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF4 for RB8 and for the different speech transport formats are: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3 and UL_TFC13 for TF4.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

RB8: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.1.5.6.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:64 kbps radio bearer (RB8) has the highest number of transport formats (4 excluding TF0) then 4 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF4 for RB8 and for the different speech transport formats are: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3 and UL_TFC13 for TF4.

18.2 Radio Bearer Tests for 3.84 Mcps TDD option

18.2.1 General information for radio bearer tests (3.84 Mcps TDD)

The purpose of these radio bearer test cases is to test properly the Reference Radio Bearer configurations included in TS34.108 [9], clause 6.10.3 for 3.84 Mcps TDD option.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services.

18.2.1.1 Generic radio bearer test procedure for Single RB configuration

See 14.1.1 for test procedure

18.2.1.2 Generic test procedure for testing multi-RB configuration and simultaneous signalling

See 14.1.2 for test procedure

18.2.1.2a Generic test procedure for testing multi-RB combinations and simultaneous signalling in case of DSCH

This procedure is used to test multiple radio bearer combinations where PS data goes on the DSCH. This procedure is also used to verify simultaneous transmission and reception of user data and signalling data.

Test procedure

- a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test. For the case when the reference radio bearer configuration includes radio bearers for both CS and PS domain then the radio bearer setup procedure has to be performed once per domain. The first radio bearer setup procedure shall perform configuration of the physical channel for the radio bearer combination under test as well as the transport channels for the CS radio bearer(s), also the transport format combination set for only CS radio bearers has to be provided. The second radio bearer procedure shall perform the configuration for the transport channel for the PS radio bearers.
- b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. Here first time only the TFCs for the data on CS RAB and the data on PS RAB are restricted.
- c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 1.
- d) The SS transmits test data on all radio bearers under test. The number of RLC SDUs to transmit every TTI and the size "Test data size" is specified for each sub-test of the actual radio bearer test. See note 2.
- e) The SS checks that UE has looped back the data on the CS and PS Radio bearer.
- f) The SS opens the UE test loop.
- g) SS uses the RRC transport format combination control procedure. And now restricts the TFCs for the data on CS RAB and the data on PS RAB and also on SRB.
- h) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.
- i) SS transmit data on the CS RAB a MEASUREMENT CONTROL message requesting periodic reporting with a period of T2.

- j) SS transmits the data on PS RAB.
- k) SS waits the time equal to 2 times T2
- l) SS checks that, for all radio bearers under test, the content of the received RLC SDUs have the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loop back of RLC SDUs.
- m) The SS opens the UE test loop.
- n) (Void)
- o) Steps b) to m) are repeated for all sub-tests
- p) The SS may optionally release the radio bearer.
- q) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: Selection of UL RLC SDU size parameter:

For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall set the UL RLC SDU size equal to the UL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. Selection of UL RLC SDU size for the different radio bearers under test should be such that the UE returns data in sub-sequent TTIs without causing the UE transmission buffer to become full. To achieve this the UL RLC SDU size shall be set to UL TF payload size under test, minus the size of length indicator and expansion bit, and divided by the ratio between downlink and uplink TTI. E.g. for a AM radio bearer having the uplink RLC payload size equal to 320, the downlink TTI equal to 10 ms, and the uplink TTI equal to 20 ms, then for the transport format 4x336 (TF payload size = $4 \times 320 = 1280$ bits) the UL RLC SDU size parameter should be set to 632 bits ($= 1280 \text{ bits} / (20 \text{ ms} / 10 \text{ ms}) - 8$ bits).

NOTE 2: Selection of test data size:

For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode in downlink, the DL RLC SDU size/ test data size shall be set equal to the payload size of the DL TF under test minus the size of the length indicator and the expansion bit.

NOTE 3: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

Note.	For case B (CS+PS radio bearers) the second security mode procedure is needed to enable testing of ciphering on the PS radio bearers. For the CS domain the security mode procedure is performed as part of the CS paging procedure.			

NOTE 1:

Here using the test steps 11 to 14d, the simultaneous data on the CS and PS RAB can be tested.

And using the steps 15a to 15f, the simultaneous data on CS RAB, PS RAB and SRB can be tested.

For testing the simultaneous data on CS RAB, PS RAB and SRB, following procedure is used.

First data on the CS RAB is sent. Then in the next step Measurement Control message is sent.

In the Downlink the restricted transport format combination will be (1 1), that SS MAC has to send the data on CS RAB and the measurement control message on SRB simultaneously.

Here it is assumed that, since the transport format combination (1, 0) (that is send only data) will not be available in the DL, the MAC has to wait until it gets something to transmit on the SRB.

Then data on the PS RAB is sent.

With this on the UE UL Side, the data will be available on both CS and PS RAB and also on the SRB. With this the transport format combination (1,1, 1) that is simultaneous data on RAB and SRB can be tested in the uplink.

18.2.1.3 Generic test procedure for testing Single Speech Radio Bearers on USCH/DSCH channels and multiple radio configuration signalling on RACH/FACH

This procedure is used to test single speech only PS radio bearer on DSCH and USCH and multiple configuration signal bearers on RACH/FACH

Initial conditions

UE in idle mode

Test procedure

- a) The SS establish the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test.
- b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure.
- c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 1.

- d) The SS transmits test data on all radio bearers under test. The number of RLC SDUs to transmit every TTI and the size "Test data size" is specified for each sub-test of the actual radio bearer test. See note 2.
- e) The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format.
- f) The SS opens the UE test loop.
- g) SS uses the RRC transport format combination control procedure. And now restricts the TFCs for the data on CS RAB and the data on PS RAB and also on SRB.
- h) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test. See note 2.
- i) SS transmit data on the CS RAB a MEASUREMENT CONTROL message requesting periodic reporting with a period of T2.
- j) SS transmits the data on PS RAB.
- k) SS waits the time equal to 2 times T2
- l) SS checks that, for all radio bearers under test, the content of the received RLC SDUs have the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loop back of RLC SDUs.
- m) The SS opens the UE test loop.
- n) (Void)
- o) Steps b) to m) are repeated for all sub-tests
- p) The SS may optionally release the radio bearer.
- q) The SS may optionally deactivate the radio bearer test mode.

NOTE 1: Selection of UL RLC SDU size parameter:

For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall set the UL RLC SDU size equal to the UL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. Selection of UL RLC SDU size for the different radio bearers under test should be such that the UE returns data in sub-subsequent TTIs without causing the UE transmission buffer to become full. To achieve this the UL RLC SDU size shall be set to UL TF payload size under test, minus the size of length indicator and expansion bit, and divided by the ratio between downlink and uplink TTI. E.g. for a AM radio bearer having the uplink RLC payload size equal to 320, the downlink TTI equal to 10 ms, and the uplink TTI equal to 20 ms, then for the transport format 4x336 (TF payload size = $4 \times 320 = 1280$ bits) the UL RLC SDU size parameter should be set to 632 bits ($= 1280 \text{ bits} / (20 \text{ ms} / 10 \text{ ms}) - 8$ bits).

NOTE 2: Selection of test data size:

For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode. In case the reference radio bearer configuration under test does not use RLC transparent mode in downlink, the DL RLC SDU size/ test data size shall be set equal to the payload size of the DL TF under test minus the size of the length indicator and the expansion bit.

NOTE 3: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signalling radio bearers as well as the possible UE processing delays shall be taken into consideration. The restricted set of TFCIs must comply with the minimum set of TFCIs as specified in TS 25.331, clause 8.6.5.2.

18.2.1.4.1 HS-DSCH radio bearer test parameters

In the radio bearer tests on radio bearers mapped on HS-DSCH, the following UE specific parameters should be used.

18.2.1.4.2 Selecting TFRC test points

18.2.1.4.2.1 Principle

The principle for selecting TFRC test points is the same as specified for FDD in section 14.1.3.2.1 except the following:

- A total of 3 HARQ processes are assumed.
- Burst type 1 is assumed when calculating the number of physical channel bits (N_{phy_bits}) so that 1 HS-DSCH code in 1 TS carries 244bits for QPSK and 488bits for 16QAM.
- The number of HS-DSCH codes allocated in the HS-SCCH is termed N_{codes} and the number of TS allocated in the HS-SCCH is termed N_{TS} and thus the code rate is determined by:

$$Coding_rate = (TB_{size} + N_{CRC}) / (N_{codes} * N_{TS} * N_{phy_bits})$$

- d) The number of MAC-d PDUs, N_{PDU} can be incremented until N_{PDU} is 318.
- e) The HS-SCCH signalling is such that it is only possible to allocate resources in a rectangular fashion; i.e. 21 resource units can be allocated by 3 SF16 codes over 7 timeslots. However it is not possible to make an allocation of 3 SF16 codes in TS2 and 2 SF16 codes in TS3

Note that the number of codes allocated, N_{codes} , and the number of TS, N_{TS} , allocated in the HS-SCCH are used in the tables in sections 18.2.1.4.3 and 18.2.1.4.4.

See 18.2.2.4.1.

18.2.3.1.3.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.1** for the downlink **20 ms TTI** case.

On the **UL**

- **The USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB, SHCCH and the DCCH.**
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH** *excluding or including* an **Interactive/Background 64 kbps UL PS RAB.**

On the **DL**

- The **DSCH** can carry combinations of the 256 kbps Interactive/Background PS RAB, the SHCCH and the DCCH. The Interactive/Background PS RAB on the DSCH has a **20 ms TTI**. The **Interactive/Background 256 kbps UL PS RAB** channel has a **337 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for CCCH, DCCH, SCCH, BCCH and *excluding or including* an **Interactive/Background 256 kbps PS RAB.**

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

See 18.2.2.4.1.

18.2.3.2.4.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.1** for the downlink **20 ms TTI case**.

On the **UL**

- **The USCH channel can carry combinations of the Interactive/Background 64 kbps UL PS RAB, SHCCH and the DCCH.**

- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH** *excluding or including* an **Interactive/Background 64 kbps** UL PS RAB.

On the **DL**

- The DSCH can carry combinations of the **384 kbps** Interactive/Background PS RAB, the SHCCH and the DCCH. The Interactive/Background PS RAB on the DSCH has a **20 ms** TTI. The Interactive/Background **384 kbps** UL PS RAB channel has a **145 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for CCCH, DCCH, SCCH, BCCH and *excluding or including* an **Interactive/Background 384 kbps** PS RAB.

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

On the **DL**

- The **DSCH** can carry combinations of the Interactive/Background **2048 kbps PS RAB**, the **SHCCH** and the **DCCH**. The Interactive/Background PS RAB on the DSCH has a 10 ms TTI. The Interactive/Background **2048 kbps UL PS RAB** channel has a **337 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, SCCH, BCCH** and *excluding or including an Interactive/Background 2048 kbps PS RAB*.

DTCH: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.

See 18.2.1.3 for test procedure.

18.2.3.3.1.4 Test requirements

See 18.2.1.3 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step A10i or B10b the UE shall send PUSCH CAPACITY REQUEST
3. At step 15 the UE transmitted transport format shall be
 - for sub-test 1: DTCH/TF1 (1x337).

18.2.3.3.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.2** for the downlink **10 ms TTI case**.

On the **UL**

- **The USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB, SHCCH and the DCCH**.
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH excluding or including an Interactive/Background 64 kbps UL PS RAB**.

On the **DL**

- The **DSCH** can carry combinations of the Interactive/Background **384 kbps PS RAB**, the **SHCCH** and the **DCCH**. The Interactive/Background PS RAB on the DSCH has a 10 ms TTI. The Interactive/Background 256 kbps UL PS RAB channel has a **145 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, SCCH, BCCH and excluding or including an Interactive/Background 384 kbps PS RAB**.

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. DTCH: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.						

See 18.2.1.3 for test procedure.

18.2.3.3.4 Test requirements

See 18.2.1.3 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
 - for sub-test 1: DTCH/TF1 (1x337).
 - for sub-test 2: DTCH/TF2 (2x337).
 - for sub-test 3: DTCH/TF3 (3x337).
 - for sub-tests 4 to 18: DTCH/TF4 (4x337).
3. At step 15 the UE shall return

- for sub-test 1 to 18: an RLC SDU on DTCH having the same content as the DL RLC SDU sent by the SS.

18.2.3.3.4 Interactive or background / UL: 64(145 bit TBS – 20 ms TTI) DL: 2048 kbps (657 bit TBS – 20 ms TTI) / PS RAB + UL: 16.8 DL: 33.6 kbps SRBs for DCCH, CCCH and BCCH + UL: 16.8 DL: 16 kbps SRBs for SHCCH

18.2.3.3.4.1 Conformance requirement

See 18.2.2.4.1.

18.2.3.3.4.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.2** for the downlink **20 ms TTI case**.

On the **UL**

- **The USCH** channel can carry combinations of the Interactive/**Background 64 kbps UL PS RAB, SHCCH and the DCCH**.
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH** *excluding or including* an Interactive/**Background 64 kbps UL PS RAB**.

On the **DL**

- The **DSCH** can carry combinations of the Interactive/Background 2048 **kbps PS RAB**, the **SHCCH** and the **DCCH**. The Interactive/Background PS RAB on the DSCH has a **20 ms TTI**. The Interactive/Background 2048 **kbps UL PS RAB** channel has a **145 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, SCCH, BCCH** and *excluding or including* an **Interactive/Background 2048 kbps PS RAB**.

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

NOTE 2: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. DTCH: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.						

See 18.2.1.3 for test procedure.

18.2.3.3.4.4 Test requirements

See 18.2.1.3 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step A10i or B10b the UE shall send PUSCH CAPACITY REQUEST
3. At step 15 the UE transmitted transport format shall be
 - for sub-test 1: DTCH/TF1 (1x145).
 - for sub-test 2: DTCH/TF2 (3x145).
 - for sub-test 3: DTCH/TF3 (7x145).
 - for sub-tests 4 to 18: DTCH/TF4 (10x145).

4. At step 15 the UE shall return

- for sub-test 4 to 18: an RLC SDU on DTCH having the same content as the DL RLC SDU sent by the SS.
- for sub-test 2: an RLC SDU on DTCH having the first 1272 bits equal to the contents as the DL RLC SDU sent by the SS.
- for sub-test 3: an RLC SDU on DTCH having the first 2552 bits equal to the contents as the DL RLC SDU sent by the SS.

18.2.3.4.1.1 Conformance requirement

See 18.2.2.4.1.

18.2.3.4.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.4** for the downlink **10 ms TTI case**.

On the **UL**

- **The USCH** channel can carry combinations of the Interactive/**Background 384 kbps UL PS RAB, SHCCH and the DCCH.**
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH excluding or including** an Interactive/**Background 384 kbps UL PS RAB.**

On the **DL**

- **The DSCH** can carry combinations of the Interactive/**Background 2048 kbps PS RAB,** the SHCCH and the DCCH. The Interactive/Background PS RAB on the DSCH has a 10 ms TTI. The Interactive/Background **384 kbps UL PS RAB** channel has a **337 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for CCCH, DCCH, SCCH, BCCH and *excluding or including* an **Interactive/Background 384 kbps PS RAB.**

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.3.4.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.4** for the downlink **10 ms TTI case**.

On the **UL**

- **The USCH** channel can carry combinations of the Interactive/**Background 384 kbps UL PS RAB, SHCCH and the DCCH**.
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH** *excluding or including* an Interactive/**Background 384 kbps UL PS RAB**.

On the **DL**

- **The DSCH** can carry combinations of the Interactive/**Background 2048 kbps PS RAB**, the SHCCH and the DCCH. The Interactive/Background PS RAB on the DSCH has a 10 ms TTI. The Interactive/Background **384 kbps UL PS RAB** channel has a **145 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for CCCH, DCCH, SCCH, BCCH and *excluding or including* an **Interactive/Background 384 kbps PS RAB**.

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. DTCH: the UL RLC SDU size have been chosen such that the UE will return all data received in downlink and that the UL RLC SDU will fill up the uplink transport format set under test over one or several transmission time intervals.						

18.2.3.4.3.4 Test requirements

See 18.1.1.3 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step A10i or B10b the UE shall send PUSCH CAPACITY REQUEST.
3. At step 15 the UE transmitted transport format shall be
 - for sub-test 1: DTCH/TF1 (1x337).
 - for sub-test 2: DTCH/TF2 (2x337).
 - for sub-test 3: DTCH/TF3 (4x337).
 - for sub-test 4: DTCH/TF3 (8x337).
 - for sub-test 5: DTCH/TF4 (12x337)
 - for sub-test 6: DTCH/TF5 (16x337)

- for sub-test 7: DTCH/TF6 (20x337)
- for sub-test 8: DTCH/TF8 (24x337)
- for sub-test 9 to 13: DTCH/TF4 (8x337)
- for sub-test 11: DTCH/TF3 (4x337)

- for sub-test 15 to 17: DTCH/TF4 (8x337)
- for sub-test 18: DTCH/TF8 (24x337)

4. At step 15 the UE shall return

- for sub-test 1 to 18: an RLC SDU on DTCH having the same content as the DL RLC SDU sent by the SS.

18.2.3.4.4 Interactive or background / UL: 384(145 bit TBS – 20 ms TTI) DL: 2048 kbps (657 bit TBS – 20 ms TTI) / PS RAB + UL: 3.4 DL: 16.8 kbps SRBs for DCCH, CCCH and BCCH + UL: 16.8 DL: 16 kbps SRBs for SHCCH

18.2.3.4.4.1 Conformance requirement

See 18.2.2.4.1.

18.2.3.4.4.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **two UL transport** channels (a **RACH** and a **USCH**) and **two DL transport** channels (**DSCH** and **FACH**) as specified in TS 34.108, clause **6.10.3.4.2.4** for the downlink **20 ms TTI** case.

On the **UL**

- **The USCH** channel can carry combinations of the Interactive/**Background 384 kbps UL PS RAB, SHCCH and the DCCH.**
- **The RACH** channel can carry combinations of the signalling Radio Bearer for **CCCH, DCCH, and SHCCH excluding or including** an Interactive/**Background 384 kbps UL PS RAB.**

On the **DL**

- **The DSCH** can carry combinations of the Interactive/**Background 2048 kbps PS RAB,** the SHCCH and the DCCH. The Interactive/Background PS RAB on the DSCH has a 10 ms TTI. The Interactive/Background **384 kbps UL PS RAB** channel has a **145 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling Radio Bearer for CCCH, DCCH, SCCH, BCCH and *excluding or including* an **Interactive/Background 384 kbps PS RAB.**

To be able to test the **downlink** radio bearer on the DSCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.1.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.1**. Test is designed for the downlink shared channel (**DSCH**) **10 ms TTI case and 320 bit payload for the Interactive/Background PS RAB**.

On the **UL**

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and **16.8 kbps SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 320 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the **16.8 kbps signalling Radio Bearers for CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 256 kbps PS RAB** and the **16.8 kbps SHCCH**. The **Interactive/Background 256 kbps PS RAB on the DSCH has a 320 bit payload and 10 ms TTI**.
- The **FACH** can carry combinations of the signalling **33.6 kbps Radio Bearer for CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.1.3.1 Conformance requirement

See 18.2.2.4.1

18.2.4.1.3.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.1**. Test is designed for the downlink shared channel (DSCH) **20 ms TTI case and 320 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and **16.8 kbps SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 320 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the **16.8 kbps signalling Radio Bearers for CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the DL

- The **DSCH** can carry combinations of the Interactive/**Background 256 kbps** PS RAB and the 16.8 kbps SHCCH. The **Interactive/Background 256 kbps PS RAB on the DSCH has a 320 bit payload and 20 ms TTI.**
- The FACH can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH** and **SCCH.**
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.1.4.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.1**. Test is designed for the downlink shared channel (DSCH) **20 ms TTI case and 145 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 145 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the DL

- The **DSCH** can carry combinations of the **Interactive/Background 256 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background 256 kbps PS RAB on the DSCH has a 320 bit payload and 20 ms TTI**. (TBS).
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.2.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport** channels (**USCH, RACH, and DCH**) and **three DL transport** channels (**DSCH, FACH, and DCH**) as specified in TS 34.108, clause 6.10.3.4.3.2. Test is designed for the downlink shared channel (**DSCH**) **10 ms TTI case and 320 bit payload for the Interactive/Background PS RAB.**

On the **UL**

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 320 bit payload and 20 ms TTI.**
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH.**
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH.**

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 256 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background 256 kbps PS RAB on the DSCH has a 320 bit payload and 10 ms TTI.**
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH.**
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

See 18.2.2.4.1

18.2.4.2.3.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.2**. Test is designed for the downlink shared channel (DSCH) **20 ms TTI case and 320 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 320 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the DL

- The **DSCH** can carry combinations of the **Interactive/Background 384 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background 384 kbps PS RAB on the DSCH has a 320 bit payload and 20 ms TTI**.
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.2.4.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.2**. Test is designed for the downlink shared channel (DSCH) **20 ms TTI case and 320 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 145 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 384 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background 384 kbps PS RAB on the DSCH has a 320 bit payload and 20 ms TTI**. (TBS).
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.3.1.1 Conformance requirement

See 18.2.2.4.1

18.2.4.3.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.3**. Test is designed for the downlink shared channel (DSCH) **10 ms TTI case and 640 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH** has a **320 bit payload and 20 ms TTI**.

- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH** and **SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 2048 kbps PS RAB** and the 16.8 kbps SHCCH. The **Interactive/Background 2048 kbps PS RAB on the DSCH has a 640 bit payload and 10 ms TTI**.
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH** and **SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.3.2.1 Conformance requirement

See 18.2.2.4.1

18.2.4.3.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause 6.10.3.4.3.3. Test is designed for the downlink shared channel (DSCH) **10 ms TTI case and 640 bit payload for the Interactive/Background PS RAB.**

On the **UL**

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and **16.8 kbps SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 145 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the **16.8 kbps signalling Radio Bearers for CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 2048 kbps PS RAB** and the **16.8 kbps SHCCH**. The **Interactive/Background 2048 kbps PS RAB on the DSCH has a 640 bit payload and 10 ms TTI (TBS)**.
- The **FACH** can carry combinations of the signalling **33.6 kbps Radio Bearer for CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

See 18.2.2.4.1

18.2.4.3.3.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.3**. Test is designed for the downlink shared channel (**DSCH**) **20 ms TTI case and 640 bit payload for the Interactive/Background PS RAB**.

On the **UL**

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps UL PS RAB** channel has a **337 bit** Transport Block Size (TBS).
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the **DL**

- The **DSCH** can carry combinations of the **Interactive/Background 2048 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background PS RAB on the DSCH has a 20 ms TTI**. The **Interactive/Background 2048 kbps DL PS RAB** channel has a **657 bit** Transport Block Size (TBS).
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

18.2.4.3.3.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration for **three UL transport channels (USCH, RACH, and DCH)** and **three DL transport channels (DSCH, FACH, and DCH)** as specified in TS 34.108, clause **6.10.3.4.3.3**. Test is designed for the downlink shared channel (DSCH) **20 ms TTI case and 640 bit payload for the Interactive/Background PS RAB**.

On the UL

- The **USCH** channel can carry combinations of the **Interactive/Background 64 kbps UL PS RAB** and 16.8 kbps **SHCCH**. The **Interactive/Background 64 kbps PS RAB on the USCH has a 145 bit payload and 20 ms TTI**.
- The **RACH** channel can carry combinations of the 16.8 kbps signalling Radio Bearers for **CCCH and SHCCH**.
- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**.

On the DL

- The **DSCH** can carry combinations of the **Interactive/Background 2048 kbps PS RAB** and the 16.8 kbps **SHCCH**. The **Interactive/Background PS RAB on the DSCH has a 20 ms TTI**. The **Interactive/Background 2048 kbps PS RAB on the DSCH has a 640 bit payload and 20 ms TTI**. (TBS).
- The **FACH** can carry combinations of the signalling 33.6 kbps Radio Bearer for **CCCH, BCCH and SCCH**.

- The **DCH** channel can carry combinations of the **12.2 kbps Conversational/Speech/CS** and the **3.4 kbps DCCH**

To be able to test the **downlink** radio bearer on the DSCH and the DCH, the UE loopback function is used on the **uplink** radio bearer on the USCH.

See 18.2.2.4.1 and 7.4.2.1.2.

18.2.5.4.3 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.3.4.4.4 for the case when three SCCPCHs are used in this SYSTEM INFORMATION configuration. The **first SCCPCH** carries the **PCH**. The **second SCCPCH** carries the **FACH for CTCH (Cell Broadcast Service) and the FACH for SRBs on CCCH/ BCCH for idle mode UEs**. The **third SCCPCH** carries the **FACH for Interactive/Background 32 kbps PS RAB and the FACH for SRBs on CCCH/ DCCH/ BCCH** for connected mode UEs.

To verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clauses 6.10.3.4.4.3. Data transfer on CTCH is tested similar to testing BMC for a UE in idle mode as specified in TS 34.123-1, clause 7.4.2, data transfer on CCCH is tested by establishing a RRC connection.

18.2.5.4.4 Method of Test

Initial conditions:

The contents of System Information Block type 5 and 6 shall be as specified in TS 34.108, clause 6.1.2.

The UE is RRC idle mode, the BMC entity is established.

The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDUs). The CBS data type shall be allocated and activated in the UE.

Test Procedure:

- a) The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive CBS messages.
- b) The UE and the SS have configured their RLC, MAC, and PHYs layers with all CB related system information.
- c) The SS sends the CVS message containing an activated CGS message type according to CB-Data 1 to the UE; this shall be repeated for CPREP times (indicated by the parameter "repetition period").
- d) The UE indicates in an unambiguous way, that this message was received.
- e) Steps 1a → 1d in the Expected sequence are followed by the steps 2 – 6 of the test procedure according to clause 18.2.1.1.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1a		←	SYSTEM INFORMATION	
1b				The SS waits for about 10 s to make sure, that the UE is configured to receive CBS data
1c		←	BMC CBS Message	Activated CBS message with CB Data 1 message content as described by the manufacturer. This message shall be repeated "CPREP" times, Parameter: - Message_ID, - Serial-No, - Data coding scheme, - CB-Data 1,
1d				After having received the BMC CBS message the UE shall indicate the reception of CB Data 1 in a clear way.

18.2.5.4.5 Test Requirements

At step 1d in the table above, the UE shall store and decode a received activated CBS message.

At step 5 of the test procedure according to clause 18.2.1.1 the RRC Connection shall be established.

18.2.7.1.1.1 Conformance requirement

For HS-DSCH the transport block size is derived from the value signalled on the HS-SCCH. The mapping between the TFRI value and the transport block size for each mode is specified below:

Let k be the signalled TFRI value, then the corresponding HS-DSCH transport block size L_k is given by :

If $k=1..510$

$$L_k = \lfloor L_{\min} p^k \rfloor$$

$$p = \frac{8313}{8192}$$

$$L_{\min} = 57$$

If $k = 511$

$$L_k = 102000$$

If $k=0$, L_k indicates NULL and shall not be used to signal a transport block size in the TFRI.

Transport block sizes calculated by this formula shall equal the values indicated in Table 18.2.7.1.1.1.1.

<p>NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.</p> <p>NOTE 2: UL_TFC0, UL_TFC1 and UL_TFC5 are part of minimum set of TFCS.</p> <p>NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. RB5: The UL RLC SDU size is set to N*UL RLC payload size minus 8 bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will enable the UE to return th data within one UL TTI.</p>									

18.2.7.1.1.4 Test requirements

See 14.1.3.5 for definition of step 12 and step 18.

- At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
- At step 18 the UE transmitted transport format shall be
 - for sub-test 1: TF1 (1x336).

- for sub-test 2: TF2 (2x336).
- for sub-test 3: TF3 (3x336).
- for sub-test 4: TF4 (4x336).

3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{\text{PDU}_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

18.2.7.1.2.4 Test requirements

See 14.1.3.5 for definition of step 12 and step 18.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 18 the UE transmitted transport format shall be
 - for sub-test 1: TF1 (1x144).

- for sub-test 2: TF2 (3x144).
- for sub-test 3: TF3 (7x144).
- for sub-test 4: TF4 (10x144).

3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{\text{PDU}} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Speech and Interactive Background radio bearer. As the Interactive Background UL:384 kbps radio bearer (RB8) has the highest number of transport formats (5 for TTI=10 ms and excluding TF0) then 5 sub-tests has been defined. The selected UL TFCI to achieve test coverage of TF1 to TF5 for RB8 and for the different speech transport formats are: UL_TFC4 for TF1, UL_TFC8 for TF2, UL_TFC11 for TF3, UL_TFC13 for TF4 and UL_TFC17 for TF5.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC18 are part of minimum set of TFCSs.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

RB8: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.2.7.4.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{PDU_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

- NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.
- NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 and UL_TFC15 are part of minimum set of TFCIs.
- NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.
RB8: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.
- NOTE 4: The test data size for RB8 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.2.7.5.2.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{PDU_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCs.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

RB6: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.2.7.7.1.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{PDU_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC2, and UL_TFC10 are part of minimum set of TFCs.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

RB6: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit) , where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.2.7.9.1.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{PDU_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the 2 x Interactive Background PS radio bearer. As the 2 x Interactive Background UL:64 kbps radio bearer (RB5+RB6) has 4 transport formats then 4 sub-tests have been defined. The selected UL TFCI to achieve test coverage of TF1 to TF4 for RB5+RB6 are: UL_TFC1 for TF1, UL_TFC2 for TF2, UL_TFC3 for TF3 and UL_TFC4 for TF4.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

NOTE 1: The SS shall configure the RLC transmission and receiver window size depending on the UE category. The values are set to cope with the number of SDUs used in the sub-test and within the UE capabilities for the actual UE category under test.

NOTE 2: UL_TFC0, UL_TFC1, UL_TFC4 and UL_TFC20 are part of minimum set of TFCSs. Also the transport format combinations UL_TFC21 and UL_TFC24 using TF1 on either RB5 or RB6 and TF1 on DCCH has been included in the allowed TFCSs as those could happen during the sub-test.

NOTE 3: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

RB5 and RB6: The UL RLC SDU size is set to $N \times \text{UL RLC payload size} - 8$ bits (size of 7 bit length indicator and expansion bit), where N is the number of transport blocks for the UL transport format under test. This will make the UE to return one RLC SDU per UL TTI.

NOTE 4: The test data size for RB5 and RB6 is dependent on the actual TFRC test point, see the generic test procedure in 14.1.3.5.

18.2.7.10.1.4 Test requirements

See 14.1.3.5 for definition of the referenced step numbers.

1. At step 12 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At steps 17 to 20 the UE transmitted transport format shall be within the set of restricted TFCIs as specified for the actual sub-test.
3. At step 18 and for each TFRC test point:

If the downlink RLC SDU size is less than the configured UL RLC SDU for the actual sub-test then the UE shall return 4 RLC SDUs where the first bits of each SDU has the same content as the RLC SDUs sent by the SS in downlink. Otherwise the UE shall return 4 RLC SDUs where each SDU has the same content as the first bits of the RLC SDUs sent by the SS in downlink.

NOTE The generic test procedure as specified in 14.1.3.5.2 sends 4 SDUs of size $(N_{\text{PDU}_s} * \text{MAC-d PDU payload size}) / 4$ minus 8 bits (size of 7 bit length indicator and expansion bit). For the case when the downlink SDU size is less than the configured UL SDU size then all data is returned otherwise the returned data is truncated.

18.2.7.10.2.1 Conformance requirement

See 18.2.7.1.1.1.

18.2.7.10.2.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.3.4.6.10 for the UL 144 bit block size case.

18.2.7.10.2.3 Method of test

The generic test procedure in 14.1.3.5 is run for each sub-test.

Sub-tests:

The principle used to select sub-tests has been to cover all uplink and downlink TFS for the Streaming + Interactive Background PS radio bearer. The Streaming UL:128 kbps + Interactive Background UL:128 kbps radio bearer (RB5+RB6) have 40 transport format combinations. As the transport formats where RB5, RB6 or DCCH has no data (TF0 for RB5, RB6 or DCCH) is considered as implicitly tested when the transport format combinations with data is tested then no specific sub-tests for those transport format combinations have been specified. The selected UL TFCI to achieve test coverage of TF1 to TF3 for RB5 and TF1 to TF4 for RB6 are: UL_TFC5 to UL_TFC7, UL_TFC9 to UL_TFC11, UL_TFC13 to UL_TFC15 and UL_TFC17 to UL_TFC19.

Annex A (normative): Default RRC Message Contents

The default RRC message contents are provided in clause 9 of 3GPP TS 34.108 [9].

Annex B (informative):
Void

Annex C (normative): Generic Test Procedures to Check UE's State

This section described procedures to check the state of UE. These procedures will only be used in the final step of all RRC test cases. All procedures described in this section shall return an indication to the calling test entity whether or not the UE is in the designated state. In order to use these procedures, the test entity shall call for the test procedure in the test sequence. The test entity shall use the following syntax to call for the desire test procedure:

Call [test procedure index]

where the values of *test procedure index* are defined as:-

C.1 indicates generic test procedure to test that UE is in Idle Mode state.

C.2 indicates generic test procedure to test that UE is in CELL_FACH state.

C.3 indicates generic test procedure to test that UE is in CELL_DCH state.

C.4 indicates generic test procedure to test that UE is in CELL_PCH state.

C.5 indicates generic test procedure to test that UE is in URA_PCH state.

C.1 Verify that UE is in Idle Mode State

C.1.1 Conformance requirement

A UE in idle mode, CELL_PCH state or URA_PCH state shall receive the paging information for all its monitored paging occasions.

When the UE receives a PAGING TYPE 1 message, it shall perform the actions as specified below.

If the UE is in idle mode, for each occurrence of the IE "Paging record" included in the message the UE shall:

- 1> if the IE "Used paging identity" is a CN identity:
 - 2> compare the IE "UE identity" with all of its allocated CN UE identities:
 - 2> if one match is found:
 - 3> indicate reception of paging; and
 - 3> forward the IE "CN domain identity", the IE "UE identity" and the IE "Paging cause" to the upper layers.
 - 1> otherwise:
 - 2> ignore that paging record.

In the UE, the initial direct transfer procedure shall be initiated, when the upper layers request establishment of a signalling connection. This request also includes a request for the transfer of a NAS message.

Upon initiation of the initial direct transfer procedure when the UE is in idle mode, the UE shall:

...

- 1> perform an RRC connection establishment procedure;

...

The UE shall initiate the procedure when upper layers in the UE requests the establishment of a signalling connection and the UE is in idle mode (no RRC connection exists...

Upon initiation of the procedure, the UE shall:

...

1> submit the RRC CONNECTION REQUEST message for transmission on the uplink CCCH;

...

C.1.2 Reference

3GPP TS 25.331 clause 8.1.2.3, 8.1.3.2 and 8.1.8.2.

C.1.3 Test purpose

To test the UE is in idle mode state by confirming that UE responds with RRC CONNECTION REQUEST message after SS pages UE using UE's CN domain identity.

Test Procedure

SS sends a PAGING TYPE 1 using CN domain identity. If UE is in idle mode state, UE shall respond with RRC CONNECTION REQUEST message. Then SS shall transmit RRC CONNECTION SETUP message to request UE to move to CELL_DCH. UE shall configure the dedicated channels and then transmit RRC CONNECTION SETUP COMPLETE message. Annex D (normative): Generic procedure to use before and following inter-RAT handover/cell change order signalling test cases

Please note that the following procedures are applicable the default NMO in GERAN (NMO1) and UTRAN (NMO1).

D.1 Preamble for UTRAN to GERAN test cases

Before running inter-RAT test cases, radio conditions should be such that the mobile has to select the cell of the intended original RAT. The following steps should be used before running UTRAN to GERAN test cases.

GERAN cell is powered OFF. The default radio conditions for a suitable UTRAN cell (in a single cell environment) are used, as defined in 34.108 clause 6.1.5. This step is performed while the UE is still switched OFF.

UE is switched ON and performs registration and attach

1. The GSM cell is powered ON with an RF level such that the cell is suitable, using the RF conditions defined in 34.108 clause 6.1.7 for the suitable neighbor cell, so that the UE will not re-select the GSM cell.

D.2 Postamble to be used following for inter-RAT handover / cell change order test cases

The following procedure is used after inter-RAT handover or cell change order test cases (UTRAN to GERAN) in case the test needs to be performed multiple times in a loop.
