Foreword

This Technical Specification (TS) has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

To evaluate conformance of a particular implementation, it is necessary to have a statement of which capabilities and options have been implemented for a telecommunication specification. Such a statement is called an Implementation Conformance Statement (ICS).

The present document is part 2 of a multi-part conformance test specification for UE.

3GPP TS 34.123-1 [49]: "User Equipment (UE) conformance specification; Part 1: Protocol conformance specification".

3GPP TS 34.123-2: "User Equipment (UE) conformance specification; Part 2: Implementation Conformance Statement (ICS) proforma specification". (the current document)

3GPP TS 34.123-3 [50]: "Abstract Test Suite (ATS)".

1 Scope

The present document provides the Implementation Conformance Statement (ICS) proforma for 3rd Generation User Equipment (UE), in compliance with the relevant requirements, and in accordance with the relevant guidance given in ISO/IEC 9646-7 [2] and ETS 300 406 [3].

The present document also specifies a recommended applicability statement for the test cases included in TS 34.123-1. These applicability statements are based on the features implemented in the UE.

Special conformance testing functions can be found in 3GPP TS 34.109 [45] and the common test environments are included in 3GPP TS 34.108 [44].

The present document is valid for UE implemented according to 3GPP releases starting from Release 1999 up to the Release indicated on the cover page of the present document.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
 - For a Release 1999 UE, references to 3GPP documents are to version 3.x.y, when available.
 - For a Release 4 UE, references to 3GPP documents are to version 4.x.y, when available.
 - For a Release 5 UE, references to 3GPP documents are to version 5.x.y, when available.
 - For a Release 6 UE, references to 3GPP documents are to version 6.x.y, when available.
 - For a Release 7 UE, references to 3GPP documents are to version 7.x.y, when available.
 - For a Release 8 UE, references to 3GPP documents are to version 8.x.y, when available.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

- terms defined in the relevant 3GPP core specifications (see normative references);
- terms defined in ISO/IEC 9646-1 [1] and in ISO/IEC 9646-7 [2].

In particular, the following terms defined in ISO/IEC 9646-1 [1] apply:

Implementation Conformance Statement (ICS): statement made by the supplier of an implementation or system claimed to conform to a given specification, stating which capabilities have been implemented The ICS can take several forms: protocol ICS, profile ICS, profile specific ICS, information object ICS, etc.

ICS proforma: document, in the form of a questionnaire, which when completed for an implementation or system becomes an ICS

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

SCS System Conformance Statement UEUT User Equipment Under Test

4 Recommended test case applicability

The applicability of each individual test is identified in the table 1. This is just a recommendation based on the purpose for which the test case was written.

The applicability of every test is formally expressed by the use of Boolean expression that are based on parameters (ICS) included in annex A of the present document and of TS 51.010-2 [52].

The columns in table 1 have the following meaning:

Clause

The clause column indicates the clause number in TS 34.123-1 that contains the test body.

Title

The title column describes the name of the test.

Release

The release column indicates the earliest release from which each testcase is applicable, except if otherwise stated of an individual test case.

Applicability

The following notations are used for the applicability column:

R recommended - the test case is recommended

O optional – the test case is optional

N/A not applicable - in the given context, the test case is not recommended.

Ci conditional - the test is recommended ("R") or not ("N/A") depending on the support of other

items. "i" is an integer identifying an unique conditional status expression which is defined immediately following the table. For nested conditional expressions, the syntax "IF ... THEN (IF ...

THEN ... ELSE...) ELSE ..." is used to avoid ambiguities.

Status column

The following notations, defined in ISO/IEC 9646-7, are used for the status column:

A applicable – the applicability is required to be supported.

O optional – the capability may be supported or not.

N/A not applicable – in the given context, it is impossible to use the capability.

X prohibited (excluded) – there is a requirement not to use this capability in the given context.

O.i qualified optional – for mutually exclusive or selectable options from a set. "i" is an integer which

identifies an unique group of related optional items and the logic of their selection which is

defined immediately following the table.

Ci

conditional – the requirement on the capability ("M", "O", "X" or "N/A") depends on the support of other optional or conditional items. "i" is an integer identifying an unique conditional status expression which is defined immediately following the table. For nested conditional expressions, the syntax "IF ... THEN (IF ... THEN ... ELSE...) ELSE ..." shall be used to avoid ambiguities.

Comments

This column contains a verbal description of the condition included in the applicability column.

Number of TC Executions

This column indicates the recommended number of TC executions. In case this recommended number is less than the number of TC executions imposed by the individual TC applicability, this column also indicates the preferred domain for testing. The different entries shall be read as follows:

1 Execution:

px_CN_DomainTested is not applicable in any case.

CS - TC is recommended to execute in CS domain

CS+PS - TC is recommended to execute CS+PS with pc_CS and pc_PS set to TRUE

CS+PS preferred - If pc_CS and pc_PS set to TRUE TC is recommended for CS+PS

else if pc_CS or pc_PS set to FALSE, TC is recommended in the relevant domain.

PS - TC is recommended to execute in PS domain

PS preferred - TC is recommended to execute in PS domain unless UE supports only CS domain.

2 Executions:

CS+PS, PS+CS - With pc_CS and pc_PS set to TRUE, TC is recommended to execute CS+PS with CS

domain first (by specifying px_CN_DomainTested = cs_domain), and PS+CS with PS

domain first (by specifying px_CN_DomainTested= ps_domain)

1 or 2 Executions:

CS, PS - If pc_CS and pc_PS set to TRUE, TC is recommended for 2 executions

in CS domain (by specifying px_CN_DomainTested = cs_domain) and in PS domain (by specifying px_CN_DomainTested = ps_domain),

else if pc CS or pc PS set to FALSE, TC is recommended for 1 execution in the relevant

domain.

CS+ PS or (CS, PS) - If Operation Mode A is supported by the UE (pc_SupportOpModeA=TRUE), then the TC

is recommended to execute once CS+PS,

else the TC follows the above (CS, PS) recommendations.

Note: The execution guideline for interRAT TCs of GERAN to UTRAN can be found in TS 51.010-5.

Annex A (normative): ICS proforma for 3rd Generation User Equipment

Notwithstanding the provisions of the copyright related to the text of the present document, The Organizational Partners of 3GPP grant that users of the present document may freely reproduce the ICS proforma in this annex so that it can be used for its intended purposes and may further publish the completed ICS.

A.1 Guidance for completing the ICS proforma

A.1.1 Purposes and structure

The purpose of this ICS proforma is to provide a mechanism whereby a supplier of an implementation of the requirements defined in relevant specifications may provide information about the implementation in a standardised manner.

The ICS proforma is subdivided into clauses for the following categories of information:

- instructions for completing the ICS proforma;
- identification of the implementation;
- identification of the protocol;
- ICS proforma tables (for example: UE implementation types, Teleservices, etc).

A.1.2 Abbreviations and conventions

The ICS proforma contained in this annex is comprised of information in tabular form in accordance with the guidelines presented in ISO/IEC 9646-7.

Item column

The item column contains a number which identifies the item in the table.

Item description column

The item description column describes in free text each respective item (e.g. parameters, timers, etc.). It implicitly means "is <item description> supported by the implementation?".

Reference column

The reference column gives reference to the relevant 3GPP core specifications.

Release column

The release column indicates the earliest release from which the capability or option is relevant.

Mnemonic column

The Mnemonic column contains mnemonic identifiers for each item.

Comments column

This column is left blank for particular use by the reader of the present document.

References to items

A.2.1

For each possible item answer (answer in the support column) within the ICS proforma there exists a unique reference, used, for example, in the conditional expressions. It is defined as the table identifier, followed by a solidus character "/", followed by the item number in the table. If there is more than one support column in a table, the columns shall be discriminated by letters (a, b, etc.), respectively.

EXAMPLE 1: A.5/4 is the reference to the answer of item 4 in table A.5.

EXAMPLE 2: A.6/3b is the reference to the second answer (i.e. in the second support column) of item 3 in

table A.6.

A.1.3 Instructions for completing the ICS proforma

The supplier of the implementation may complete the ICS proforma in each of the spaces provided. More detailed instructions are given at the beginning of the different clauses of the ICS proforma.

A.2 Identification of the User Equipment

Date of the statement

Identification of the User Equipment should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

NOTE The UE Categories in this table refers to the UE capability as signalled in the Rel-5 IE "HS-DSCH physical layer category" (1 to 12). All UEs supporting HS-DSCH should signal a category between 1 and 12 for this IE even if the UE physical capability category is above 12. This IE corresponds to the HS-DSCH category supported by the UE when MAC-ehs is not configured.

NOTE The UE Categories in this table refers to the UE capability as signalled in the Rel-7 IE "E-DCH physical layer category" (1 to 6). All UEs supporting E-DCH should signal a category between 1 and 6 for this IE even if the UE physical capability category is above 6.

A.4.3.3.1 FDD Interoperability Radio Bearer Capabilities

The applicability column in table A.18c to A.18f specifies the minimum UE radio access capability for which the reference radio bearer configurations are applicable. The UE radio access capability parameters and their possible value range are defined in TS 25.306 [34a] clause 5.1. The UE does not need to support any RAB which has higher bit rate than the highest value indicated by the UE in "maximum bit rate for uplink" (respectively "maximum bit rate for downlink") in the Quality of Service information element (TS 24.008 [29] clause 10.5.6.5) for the traffic class of the RAB.

The following labels have been used in tables A.18c to A.18f to represent the various UE radio access capability parameters:

| | Label | UE radio access capability parameter as defined in [34a] 25.306. |
|---------------|-------------------|---|
| Transport | DL Max TB bits | Maximum sum of number of bits of all transport blocks being received at an |
| channel | | arbitrary time instant |
| parameters in | DL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| downlink | | being received at an arbitrary time instant |
| | DL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | received at an arbitrary time instant |
| | DL Max TrCHs | Maximum number of simultaneous transport channels |
| | DL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | DL Max TTI TB | Maximum total number of transport blocks received within TTIs that end |
| | | within the same 10 ms interval |
| | DL Max TFS | Maximum number of TFC in the TFCS |
| | DL Max TF | Maximum number of TF |
| | DL TC | Support for turbo decoding |
| Transport | UL Max TB bits | Maximum sum of number of bits of all transport blocks being transmitted at |
| channel | | an arbitrary time instant |
| parameters in | UL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| uplink | | being transmitted at an arbitrary time instant |
| | UL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | transmitted at an arbitrary time instant |
| | UL Max TrCHs | Maximum number of simultaneous transport channels |
| | UL Max TTI TB | Maximum total number of transport blocks transmitted within TTIs that start |
| | | at the same time |
| | UL Max TFS | Maximum number of TFC in the TFCS |
| | UL Max TF | Maximum number of TF |
| | UL TC | Support for turbo encoding |

NOTE: To enable UE loopback of test data for the FDD interoperability reference radio bearer configurations having zero rate in uplink or downlink (items 18 to 22, items 47 to 49 and items 54 and 55 in table A.18c) the "Streaming / unknown / UL:14,4 kbps / CS RAB" and "Streaming / unknown / DL:14,4 kbps / CS RAB" have been used instead of the zero-rate uplink and downlink configuration. The impact on the UE radio access capability has been taken into account in the applicability statement for those items.

A.4.3.3.2 TDD Radio Bearer Capabilities (1.28 Mcps option)

The applicability column in table A.18g specifies the minimum UE radio access capability for which radio bearer configurations are applicable. The UE radio access capability parameters and their possible value range are defined in TS 25.306 [34a] clause 5.1.

The following labels have been used in table A.18g to represent the various UE radio access capability parameters:

| | Label | UE radio access capability parameter as defined in [34a] 25.306. |
|---------------|-------------------|---|
| Transport | DL Max TB bits | Maximum sum of number of bits of all transport blocks being received at an |
| channel | | arbitrary time instant |
| parameters in | DL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| downlink | | being received at an arbitrary time instant |
| | DL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | received at an arbitrary time instant |
| | DL Max TrCHs | Maximum number of simultaneous transport channels |
| | DL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | DL Max TTI TB | Maximum total number of transport blocks received within TTIs that end within |
| | | the same 10 ms interval |
| | DL Max TFS | Maximum number of TFC in the TFCS |
| | DL Max TF | Maximum number of TF |
| | DL TC | Support for turbo decoding |
| Transport | UL Max TB bits | Maximum sum of number of bits of all transport blocks being transmitted at an |
| channel | | arbitrary time instant |
| parameters in | UL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| uplink | | being transmitted at an arbitrary time instant |
| | UL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | transmitted at an arbitrary time instant |
| | UL Max TrCHs | Maximum number of simultaneous transport channels |
| | UL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | UL Max TFS | Maximum number of TFC in the TFCS |
| | UL Max TF | Maximum number of TF |
| | UL TC | Support for turbo encoding |

NOTE: To enable UE loopback of test data for the TDD (1.28 Mcps Option) reference radio bearer configurations having zero rate in uplink or downlink (items 18 to 22, items 47 to 49 and items in table A.18g) the "Streaming / unknown / UL:14,4 kbps / CS RAB" and "Streaming / unknown / DL:14,4 kbps / CS RAB" have been used instead of the zero-rate uplink and downlink configuration. The impact on the UE radio access capability has been taken into account in the applicability statement for those items.

A.4.3.3.3 TDD Radio Bearer Capabilities (3.84 Mcps option)

The applicability column in table A.18k specifies the minimum UE radio access capability for which radio bearer configurations are applicable. The UE radio access capability parameters and their possible value range are defined in TS 25.306 [34a] clause 5.1.

The following labels have been used in tables A.18k to A.18p represent the various UE radio access capability parameters:

| | Label | UE radio access capability parameter as defined in [34a] 25.306. |
|---------------|-------------------|---|
| Transport | DL Max TB bits | Maximum sum of number of bits of all transport blocks being received at an |
| channel | | arbitrary time instant |
| parameters in | DL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| downlink | | being received at an arbitrary time instant |
| | DL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | received at an arbitrary time instant |
| | DL Max TrCHs | Maximum number of simultaneous transport channels |
| | DL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | DL Max TTI TB | Maximum total number of transport blocks received within TTIs that end |
| | | within the same 10 ms interval |
| | DL Max TFS | Maximum number of TFC in the TFCS |
| | DL Max TF | Maximum number of TF |
| | DL TC | Support for turbo decoding |
| Transport | UL Max TB bits | Maximum sum of number of bits of all transport blocks being transmitted at |
| channel | | an arbitrary time instant |
| parameters in | UL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks |
| uplink | | being transmitted at an arbitrary time instant |
| | UL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being |
| | | transmitted at an arbitrary time instant |
| | UL Max TrCHs | Maximum number of simultaneous transport channels |
| | UL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | UL Max TTI TB | Maximum total number of transport blocks transmitted within TTIs that start |
| | | at the same time |
| | UL Max TFS | Maximum number of TFC in the TFCS |
| | UL Max TF | Maximum number of TF |
| | UL TC | Support for turbo encoding |

NOTE:

To enable UE loopback of test data for the 3.84Mcps TDD interoperability reference radio bearer configurations having zero rate in uplink or downlink (items 18 and 19, in table A.18k the "Streaming / unknown / UL:14,4 kbps / CS RAB" and "Streaming / unknown / DL:14,4 kbps / CS RAB" have been used instead of the zero-rate uplink and downlink configuration. The impact on the UE radio access capability has been taken into account in the applicability statement for those items.

A.4.3.3.4 TDD Radio Bearer Capabilities (7.68 Mcps option)

The applicability column in table A.18k specifies the minimum UE radio access capability for which radio bearer configurations are applicable. The UE radio access capability parameters and their possible value range are defined in TS 25.306 [34a] clause 5.1.

The following labels have been used in tables A.18q to A.18v to represent the various UE radio access capability parameters:

| | Label | UE radio access capability parameter as defined in [34a] 25.306. |
|------------------------|-------------------|--|
| Transport | DL Max TB bits | Maximum sum of number of bits of all transport blocks being received at an |
| channel | | arbitrary time instant |
| parameters in downlink | DL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks being received at an arbitrary time instant |
| | DL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being received at an arbitrary time instant |
| | DL Max TrCHs | Maximum number of simultaneous transport channels |
| | DL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | DL Max TTI TB | Maximum total number of transport blocks received within TTIs that end within the same 10 ms interval |
| | DL Max TFS | Maximum number of TFC in the TFCS |
| | DL Max TF | Maximum number of TF |
| | DL TC | Support for turbo decoding |
| Transport channel | UL Max TB bits | Maximum sum of number of bits of all transport blocks being transmitted at an arbitrary time instant |
| parameters in uplink | UL Max CC TB bits | Maximum sum of number of bits of all convolutionally coded transport blocks being transmitted at an arbitrary time instant |
| | UL Max TC TB bits | Maximum sum of number of bits of all turbo coded transport blocks being transmitted at an arbitrary time instant |
| | UL Max TrCHs | Maximum number of simultaneous transport channels |
| | UL Max CCTrCH | Maximum number of simultaneous CCTrCH |
| | UL Max TTI TB | Maximum total number of transport blocks transmitted within TTIs that start at the same time |
| | UL Max TFS | Maximum number of TFC in the TFCS |
| | UL Max TF | Maximum number of TF |
| | UL TC | Support for turbo encoding |

NOTE: To enable UE loopback of test data for the 3.84Mcps TDD interoperability reference radio bearer configurations having zero rate in uplink or downlink (items 18 and 19, in table A.18k the "Streaming / unknown / UL:14,4 kbps / CS RAB" and "Streaming / unknown / DL:14,4 kbps / CS RAB" have been used instead of the zero-rate uplink and downlink configuration. The impact on the UE radio access capability has been taken into account in the applicability statement for those items.

Annex B (informative): Void

Annex C (informative): Labelling of signalling test cases

This Annex provides a labelling guideline for the FDD signalling test cases. The purpose of this Annex is to aid clear and traceable test case identification, both for the purposes of validation reporting in the certification organisations as well as for test houses to unambiguously identify the tested frequency bands. Note that actual band combinations to be tested shall be specified by the certification organisations.

C.1 Labelling of FDD inter-band tests

It is recommended the following labelling convention should be used for the inter-band derivative test cases covering different FDD band combinations:

"Test Case number" ("Primary FDD band"-"Secondary FDD band")

FDD bands are listed using Roman numerals.

For example: 6.1.2.1(I-V) for inter-band test covering bands I and V.

The above mentioned labeling convention shall apply to the following inter-band tests defined in TS 34.123-1:

| Test Type | Test Case Number |
|-----------|---|
| Idle Mode | 6.1.2.1a, 6.1.2.10a |
| RRC | 8.1.2.10a, 8.2.1.24a, 8.2.1.34a, 8.2.6.37b, 8.3.1.1a, 8.3.2.1a, 8.4.1.2B, |
| | 8.4.1.24A, 8.4.1.25A |

C.2 FDD/GSM band combinations for inter-RAT tests

It is recommended the following labelling convention should be used for the inter-RAT derivative test cases covering different FDD/GSM band combinations:

"Test Case number" ("FDD band"-"GSM Frequency band")

FDD bands are listed using Roman numerals.

For example: 6.2.1.1(I-900) for inter-RAT test covering FDD band I and GSM 900.

The above mentioned labeling convention shall apply to the following inter-RAT tests defined in TS 34.123-1:

| Test Type | Test Case Number |
|------------|--|
| Idle Mode | 6.2.1.1, 6.2.1.2, 6.2.1.3, 6.2.1.4, 6.2.1.5, 6.2.1.6, 6.2.1.7, 6.2.1.8, 6.2.1.9, |
