3A	15	3	2 x 2	10	-3	-3	0	3	-85	OP.2 TDD	Multiplexing
4,6	20	3	2 x 2	10	-3	-3	0	3	-85	OP.1 TDD	Multiplexing

Table 8.7.4-3: Minimum requirement (TDD)

Test	Number of bits of a DL-SCH transport block received within a TTI for normal/special sub-frame	Measurement channel	Reference value
			TB success rate [%]
1	10296/0	R.31E-1 TDD	95
2	25456/0	R.31E-2 TDD	95
3	51024/0	R.31E-3 TDD	95
3A	51024/0	R.31E-3A TDD	85
4	75376/0 (Note 2)	R.31E-4 TDD	85
6	75376/0 (Note 2)	R.31E-4 TDD	85

Note 1: For 2 layer transmissions, 2 transport blocks are received within a TTI.
 Note 2: 71112 bits for sub-frame 5.
 Note 3: The TB success rate is defined as TB success rate = 100% * $N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks.

Table 8.7.4-4: Test points for sustained data rate (FRC)

CA config	Bandwidth/ Bandwidth combination	Category 1	Category 2	Category 3	Category 4	Category 6	Category 7
-----------	----------------------------------	------------	------------	------------	------------	------------	------------

	(MHz)						
Single carrier	10	1	2	-	-	-	-
	15	-	-	3A	3A	-	-
	20	-	-	3	4	6	6

Note 1: The test is selected for maximum supported bandwidth.

8.7.5 TDD FDD CA

The parameters specified in Table 8.7.5-1 are valid for all TDD FDD CA tests unless otherwise stated.

Table 8.7.5-1: Common Test Parameters (TDD FDD CA)

Parameter		Unit	Value
Uplink downlink configuration (Note 1) for TDD CC			1
Special subframe configuration (Note 2) for TDD CC			4
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0
Cyclic prefix			Normal
Cell ID			0
Inter-TTI Distance			1
Maximum number of HARQ processes per component carrier	FDD PCell	Processes	8 for FDD and TDD CCs
	TDD PCell	Processes	11 for FDD CC; 7 for TDD CC
Maximum number of HARQ transmission			4
Redundancy version coding sequence			{0,0,1,2} for 64QAM, 256QAM
Number of OFDM symbols for PDCCH per component carrier		OFDM symbols	1
Cross carrier scheduling			Not configured
Propagation condition			Static propagation condition No external noise sources are applied
Transmission mode			TM3
Codebook subset restriction			10
Antenna configuration			2 x 2
\hat{E}_s at antenna port (dBm/15kHz)			-85
Symbols for unused PRBs			OP.1 FDD for FDD CC, OP.1 TDD for TDD CC
ACK/NACK feedback mode			PUCCH format 3
Downlink HARQ-ACK timing	FDD PCell		As specified in Clause 7.3.3 in TS36.213 [6]
	TDD PCell		As specified in Clause 7.3.4 in TS36.213 [6]

Note 1: as specified in Table 4.2-2 in TS 36.211 [4].

Note 2: as specified in Table 4.2-1 in TS 36.211 [4].

8.7.5.1 Minimum Requirement FDD PCell

For UE not supporting 256QAM, the requirements for TDD FDD CA with FDD PCell are specified in Table 8.7.5.1-1 with the additional parameters specified in Table 8.7.5-1, and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.5.1-2. The TB success rate shall be sustained during at least 300 frames.

For UE supporting 256QAM, the requirements for TDD FDD CA with FDD PCell are specified in Table 8.7.5.1-3 with the additional parameters specified in Table 8.7.5-1, and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category or UE DL category, and bandwidth combination with the maximum aggregated bandwidth as specified in Table 8.7.5.1-4. The TB success rate shall be sustained during at least 300 frames. For UE supporting 256QAM, the requirement in Table 8.7.5.1-1 is not applicable.

The applicability of the requirements are specified in Clause 8.1.2.3B. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.7.5.1-1: test parameters for sustained downlink data rate (TDD FDD CA 64QAM)

Test number	Bandwidth (MHz)			Number of bits of a DL-SCH transport block received within a TTI (for normal/special subframe for TDD, except for subframe #5)		Measurement channel		Reference value
	Total	FDD CC	TDD CC	FDD CC	TDD CC	FDD CC	TDD CC	TB success rate [%]

Note 1:	If DL category is signalled by the UE under test, then select the test point according to UE DL Category. Otherwise, select the test point according to the UE category signalled.								

8.7.5.2 Minimum Requirement TDD PCell

For UE not supporting 256QAM, the requirements for TDD FDD CA with TDD PCell are specified in Table 8.7.5.2-1 with the additional parameters specified in Table 8.7.5-1, and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.5.2-2. The TB success rate shall be sustained during at least 300 frames.

For UE supporting 256QAM, the requirements for TDD FDD CA with FDD PCell are specified in Table 8.7.5.2-3 with the additional parameters specified in Table 8.7.5-1, and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category or UE DL category, and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.5.2-4. The TB success rate shall be sustained during at least 300 frames. For UE supporting 256QAM, the requirements in Table 8.7.5.2-1 is not applicable.

The applicability of their requirements are specified in Clause 8.1.2.3B. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.7.5.2-1: test parameters for sustained downlink data rate (TDD FDD CA 64QAM)

Test number	Bandwidth (MHz)			Number of bits of a DL-SCH transport block received within a TTI (for normal/special subframe for TDD, except for subframe #5)		Measurement channel		Reference value
	Total	FDD CC	TDD CC	FDD CC	TDD CC	FDD CC	TDD CC	TB success rate [%]
1	2x20	20	20	75376	75376/0	R.31-4 FDD	R.31-4 TDD	85

	2x20+5x20	2x20	5x20				30		

Note 1: If DL category is signalled by the UE under test, then select the test point according to UE DL Category. Otherwise, select the test point according to the UE category signalled.

8.7.6 FDD (DC)

The parameters specified in Table 8.7.6-1 are valid for all FDD DC tests unless otherwise stated.

Table 8.7.6-1: Common Test Parameters (FDD)

Parameter	Unit	Value	
Cyclic prefix		Normal	
Cell ID		0	
Inter-TTI Distance		1	
Number of HARQ processes per component carrier	Processes	8	
Maximum number of HARQ transmission		4	
Redundancy version coding sequence		{0,0,1,2} for 64QAM and 256QAM	
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	1	
Cross carrier scheduling		Not configured	
Propagation condition		Static propagation condition No external noise sources are applied	
Transmission mode		TM3	
Codebook subset restriction		10	
Antenna configuration		2x2	
\hat{E}_s at antenna port (dBm/15kHz)		-85	
Symbols for unused PRBs		OP.1 FDD	
ACK/NACK feedback mode		Separate ACK/NACK feedbacks with PUCCH format 3 on the MCG and SCG	
Time offset between MCG CC and SCG CC	μ s	0 for UE under test supporting synchronous dual connectivity; 500 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 1)	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0

Note 1: Asynchronous and synchronous dual connectivity are defined in TS36.300 [11].
Note 2: If the UE supports both SCG bearer and Split bearer, the Split bearer is configured.

For UE not supporting 256QAM, the requirements are specified in Table 8.7.6-2, with the addition of the parameters in Table 8.7.6-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.6-3. The TB success rate across CGs shall be sustained during at least 300 frames.

For UE supporting 256QAM, the requirements are specified in Table 8.7.6-4, with the addition of the parameters in Table 8.7.6-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.6-5. The TB

success rate across CGs shall be sustained during at least 300 frames. For UE supporting 256QAM, the requirements in Table 8.7.6-2 are not applicable.

The applicability of their requirements are specified in Clause 8.1.2.3A.

Table 8.7.6-2: Minimum requirement (DC 64QAM)

Test number	Bandwidth combination (MHz)	Number of bits of a DL-SCH transport block received within a TTI	Measurement channel	Reference value TB success rate(%)		
				DRB type of Split bearer (Note 2)	DRB type of SCG bearer (Note 3)	
					MCG	SCG

4	2x15	55056 (Note 6)	R.31-4B FDD	85	85	85
5	15+20	55056 for 15MHz CC 75376 (Note 5) for 20MHz CC	R.31-5 FDD for 15MHz CC R.31-4 FDD for 20MHz CC	85	85	85
6	2x20	75376 (Note 5)	R.31-4 FDD	85	85	85
6A	10+15	36696 (Note 4) for 10MHz CC 55056 (Note 6) for 15MHz CC	R.31-2 FDD for 10MHz CC R.31-5 FDD for 15MHz CC	85	85	85
7	15+5	55056 for 15MHz CC 18336 for 5MHz CC	R.31-5 FDD for 15MHz CC R.31-6 FDD for 5MHz CC	85	85	85
8	15+20+20	55056 for 15MHz CC 75376 (Note 5) for 20MHz CC	R.31-5 FDD for 15MHz CC R.31-4 FDD for 20MHz CC	85	85	85
9	15+15+20	55056 for 15MHz CC 75376 (Note 5) for 20MHz CC	R.31-5 FDD for 15MHz CC R.31-4 FDD for 20MHz CC	85	85	85
10	10+10+20	36696 (Note 4) for 10MHz CC 75376 (Note 5) for 20MHz CC	R.31-2 FDD for 10MHz CC R.31-4 FDD for 20MHz CC	85	85	85
11	10+15+15	36696 (Note 4) for 10MHz CC 55056 (Note 6) for 15MHz CC	R.31-2 FDD for 10MHz CC R.31-5 FDD for 15MHz CC	85	85	85
12	10+15+20	36696 (Note 4) for 10MHz CC 55056 (Note 6) for 15MHz CC 75376 (Note 5) for 20MHz CC	R.31-2 FDD for 10MHz CC R.31-5 FDD for 15MHz CC R.31-4 FDD for 20MHz CC	85	85	85
13	10+20+20	36696 (Note 4) for 10MHz CC 75376 (Note 5) for 20MHz CC	R.31-2 FDD for 10MHz CC R.31-4 FDD for 20MHz CC	85	85	85
14	3x20	75376 (Note 5)	R.31-4 FDD	85	85	85
Note 1:	For 2 layer transmissions, 2 transport blocks are received within a TTI.					
Note 2:	For the configuration of DRB type of Split bearer, the TB success rate across CGs is defined as TB success rate = $100\% \cdot N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks. All the above numbers of transmitted, retransmitted or correctly received DL transport blocks are calculated as the sum of the numbers of DL transport blocks across all the CGs used for DC transmission or reception.					

Note 3: For the configuration of DRB type of SCG bearer, the TB success rate across CGs is defined as TB success rate = $100\% \times \text{N}_{\text{DL_correct_rx}} / (\text{N}_{\text{DL_newtx}} + \text{N}_{\text{DL_retx}})$, where $\text{N}_{\text{DL_newtx}}$ is the number of newly transmitted DL transport blocks, $\text{N}_{\text{DL_retx}}$ is the number of retransmitted DL transport blocks, and $\text{N}_{\text{DL_correct_rx}}$ is the number of correctly received DL transport blocks. All the above numbers of transmitted, retransmitted or correctly received DL transport blocks are calculated as the sum of the numbers of DL transport blocks per CG used for DC transmission or reception, separately.

Note 4: 35160 bits for sub-frame 5.

Note 5: 71112 bits for sub-frame 5.

Note 6: 52752 bits for sub-frame 5.

8.7.7 TDD (DC)

The parameters specified in Table 8.7.7-1 are valid for all TDD DC tests unless otherwise stated.

Table 8.7.7-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Uplink downlink configuration		2 (Note 2)

Special subframe configuration			4
Cyclic prefix			Normal
Cell ID			0
Inter-TTI Distance			1
Number of HARQ processes per component carrier	Processes		7
Maximum number of HARQ transmission			4
Redundancy version coding sequence			{0,0,1,2} for 64QAM and 256QAM
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols		1
Cross carrier scheduling			Not configured
Propagation condition			Static propagation condition No external noise sources are applied
Transmission mode			TM3
Codebook subset restriction			10
Antenna configuration			2x2
\hat{E}_s at antenna port (dBm/15kHz)			-85
Symbols for unused PRBs			OP.1 TDD
ACK/NACK feedback mode			Separate ACK/NACK feedbacks with PUCCH format 3 on the MCG and SCG
Time offset between MCG CC and SCG CC	μ s		0 for UE under test supporting synchronous dual connectivity; 500 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 1)
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0
Note 1: Asynchronous and synchronous dual connectivity are defined in TS36.300 [11].			
Note 2: If the UE supports both SCG bearer and Split bearer, the Split bearer is configured.			

For UE not supporting 256QAM, the requirements are specified in Table 8.7.7-2, with the addition of the parameters in Table 8.7.7-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.7-3. The TB success rate shall be sustained during at least 300 frames.

For UE supporting 256QAM, the requirements are specified in Table 8.7.7-4, with the addition of the parameters in Table 8.7.7-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.7-5. The TB success rate shall be sustained during at least 300 frames. For UE supporting 256QAM, the requirements in Table 8.7.7-2 are not applicable.

The applicability of their requirements are specified in Clause 8.1.2.3A.

Table 8.7.7-2: Minimum requirement (DC 64QAM)

Test number	Bandwidth combination (MHz)	Number of bits of a DL-SCH transport block received within a TTI	Measurement channel	Reference value TB success rate across CGs(%)		
				DRB type of Split bearer (Note 2)	DRB type of SCG bearer (Note 3)	
					MCG	SCG
1	2x20	75376/0 (Note 4)	R.31-4A TDD	85	85	85
2	3x20	75376/0 (Note 4)	R.31-4A TDD	85	85	85
3	4x20	75376/0 (Note 4)	R.31-4A TDD	85	85	85
4	15+3x20	55056/0 for 15MHz CC 75376/0 for 20MHz CC (Note 4)	R.31-5 TDD for 15MHz CC R.31-4 TDD for 20MHz CC	85	85	85
Note 1: For 2 layer transmissions, 2 transport blocks are received within a TTI.						
Note 2: For the configuration of DRB type of Split bearer, the TB success rate across CGs is defined as TB success rate = $100\% \cdot N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks. All the above numbers of transmitted, retransmitted or correctly received DL						

transport blocks are calculated as the sum of the numbers of DL transport blocks across all the CGs used for DC transmission or reception.

Note 3: For the configuration of DRB type of SCG bearer, the TB success rate across CGs is defined as TB success rate = $100\% \cdot N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks. All the above numbers of transmitted, retransmitted or correctly received DL transport blocks are calculated as the sum of the numbers of DL transport blocks per CG used for DC transmission or reception, separately.

Note 4: 71112 bits for sub-frame 5.

8.7.8 TDD FDD (DC)

The parameters specified in Table 8.7.8-1 are valid for all TDD FDD DC tests unless otherwise stated.

Table 8.7.8-1: Common Test Parameters (TDD FDD DC)

Parameter		Unit	Value
Uplink downlink configuration for TDD CC			2 (Note 2)
Special subframe configuration for TDD CC			4
Cyclic prefix			Normal
Cell ID			0
Inter-TTI Distance			1
Number of HARQ processes per component carrier		Processes	8 for FDD CC; 7 for TDD CC
Maximum number of HARQ transmission			4
Redundancy version coding sequence			{0,0,1,2} for 64QAM and 256QAM
Number of OFDM symbols for PDCCH per component carrier		OFDM symbols	1
Cross carrier scheduling			Not configured
Propagation condition			Static propagation condition No external noise sources are applied
Transmission mode			TM3
Codebook subset restriction			10
Antenna configuration			2x2
\hat{E}_s at antenna port (dBm/15kHz)			-85
Symbols for unused PRBs			OP.1 TDD for TDD CC; OP.1 FDD for FDD CC
ACK/NACK feedback mode			Separate ACK/NACK feedbacks with PUCCH format 3 on the MCG and SCG
Time offset between MCG CC and SCG CC		μ s	0 for UE under test supporting synchronous dual connectivity; 500 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 1)
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0
Note 1: Asynchronous and synchronous dual connectivity are defined in TS36.300 [11].			
Note 2: If the UE supports both SCG bearer and Split bearer, the Split bearer is configured.			

For UE not supporting 256QAM, the requirements are specified in Table 8.7.8-2, with the addition of the parameters in Table 8.7.8-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.8-3. The TB success rate shall be sustained during at least 300 frames.

For UE supporting 256QAM, the requirements are specified in Table 8.7.8-4, with the addition of the parameters in Table 8.7.7-1 and the downlink physical channel setup according to Annex C.3.2. The test points are applied to UE category and bandwidth combination with maximum aggregated bandwidth as specified in Table 8.7.8-5. The TB success rate shall be sustained during at least 300 frames. For UE supporting 256QAM, the requirements in Table 8.7.8-2 are not applicable.

The applicability of their requirements are specified in Clause 8.1.2.3A.

Table 8.7.8-2: Minimum requirement (TDD FDD DC 64QAM)

Test number	Bandwidth (MHz)	Number of bits of a DL-SCH transport block received within a TTI (for normal/special subframe for TDD,	Measurement channel	Reference value

CA configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select one CA bandwidth combination among all supported CA configurations with bandwidth combination and MIMO layer on each CC that leads to largest equivalent aggregated bandwidth among all CA bandwidth combinations supported by UE. Equivalent aggregated bandwidth is defined as

$$B_{agg} = \sum_{i=0}^{N-1} R_i B_i$$

where N is number of CCs, $R_i \in \{2,4\}$ and $B_i \in \{5,10,15,20\}$ is MIMO layer and bandwidth of CC i .

- When there are multiple sets of {CA configuration, bandwidth combination, MIMO layer} with same largest aggregated bandwidth, select one among sets with largest number of 4 layer CCs.
- The procedure applies also for single carrier using operating band instead of CA configuration, and bandwidth instead of bandwidth combination.

CA configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select one CA bandwidth combination among all supported CA configurations with bandwidth combination and MIMO layer on each CC following the equation that leads to largest equivalent aggregated bandwidth among all CA bandwidth combinations supported by UE. Equivalent aggregated bandwidth is defined as

$$B_{agg} = \sum_{i=0}^{N-1} R_i B_i$$

where N is number of CCs, $R_i \in \{2,4\}$ and $B_i \in \{5,10,15,20\}$ is MIMO layer and bandwidth of CC i .

- When there are multiple sets of {CA configuration, bandwidth combination, MIMO layer} with same largest aggregated bandwidth, select one among sets with largest number of 4 layer CCs.

8.7.12.2 TDD CA in licensed bands

The parameters specified in Table 8.7.12.2-1 are valid for all LAA CA SDR tests unless otherwise stated.

Table 8.7.12.2-1: Common Test Parameters

Parameter	Unit	TDD CC	LAA CC
Transmission mode			3
Uplink downlink configuration (Note 1)		1	N/A

Downlink power allocation	2 layer CC	$\rho_A = -3\text{dB}$, $\rho_B = -3\text{dB}$, $\sigma = 0\text{dB}$	
	4 layer CC	$\rho_A = -6\text{dB}$, $\rho_B = -6\text{dB}$, $\sigma = 3\text{dB}$	
Symbols for unused PRBs		OP.1 TDD	OP.1 FS3

Note 1: as specified in Table 4.2-2 in TS 36.211 [4].
Note 2: as specified in Table 4.2-1 in TS 36.211 [4].

For UE not supporting 256QAM, the TB success rate shall be higher than 85% when PDSCH are scheduled with FRC in Table 8.7.12.2-2 with the downlink physical channel setup according to Annex C.3.2.

For UE supporting 256QAM, the TB success rate shall be higher than 85% when PDSCH are scheduled with FRC in Table 8.7.12.2-3 with the downlink physical channel setup according to Annex C.3.2. For UE supporting 256QAM, the requirement with 64QAM is not applicable.

For LAA SCell, per-CC separate FRCs are defined for different UE capability for endingDwPTS and secondSlotStartingPosition.

The TB success rate is defined as $100\% * N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks. The TB success rate shall be sustained during at least 300 frames.

The UE capability for 1024QAM is signalled per band or per band combination, hence the SDR tests with the mixed modulation orders and the mixed receiver antenna numbers across CC-s are specified.

For UE not supporting CA and supporting 1024QAM, the TB success rate shall be higher than 85% when PDSCH is scheduled with FRC in Table 8.7.16-4 according the UE capability. The maximum supported channel bandwidth and MIMO layer are configured during the test.

For UE supporting CA and supporting 1024QAM at least on one CC for a supported CA configuration, the SDR requirements are specified as follows:

- If UE is capable of supporting 256QAM, the TB success rate shall be higher than 85% on each CC when PDSCH-s are scheduled with FRC-s in Table 8.7.16-3 for the transmission with 256QAM and Table 8.7.16-4 for the transmission with 1024QAM according to the reported capability of supported modulation order for the determined CA configuration.
- If UE is not capable of supporting 256QAM, the TB success rate shall be higher than 85% on each CC when PDSCH-s are scheduled with FRC-s in Table 8.7.16-2 for the transmission with 64QAM and Table 8.7.16-4 for the transmission with 1024QAM according to the reported capability of supported modulation order for the determined CA configuration.

For UE supporting 1024 QAM, the SDR requirement with 64QAM and 256QAM only is not applicable.

The CA configuration or band for single carrier, bandwidth combination or bandwidth for single carrier, modulation order on each CC and MIMO layer on each CC are determined by the following procedure.

- Among all the supported CA configurations which support 1024QAM at least on one CC, select one set of {CA configuration or a band, bandwidth combination or bandwidth, modulation order on each CC, MIMO layer on each CC}, which leads to the largest equivalent aggregated bandwidth. The equivalent aggregated bandwidth is defined as

$$B_{agg} = \sum_{i=0}^{N-1} M_i R_i B_i$$

Where N is the number of CCs, $R_i \in \{2,4\}$ represents the MIMO layer, $B_i \in \{5,10,15,20\}$ represents the bandwidths on each CC, $[M_i \in \{0.75,1,1.25\}]$ is the scaling factor according to the supported modulation order on each CC, where $M_i = 0.75$ is used if the maximum modulation order of CC i is 64QAM, $M_i = 1$ is used if the maximum modulation order of CC i is 256QAM, and $M_i = 1.25$ is used if the maximum modulation order of CC i is 1024QAM.]

- When there are multiple sets of {CA configuration or a band, bandwidth combination or bandwidth, modulation order on each CC, MIMO layer on each CC} which can reach the same equivalent aggregated bandwidth, select one among the sets with the largest number of CCs supporting 1024QAM.
- When there are multiple sets of {CA configuration or a band, bandwidth combination or bandwidth, modulation order on each CC, MIMO layer on each CC} which can reach the same equivalent aggregated bandwidth with the same number of CCs supporting 1024QAM, select one among the sets with the largest number of CCs supporting 4 layer.
- The procedure applies also for the single carrier operating band instead of CA configuration, and bandwidth instead of bandwidth combination.

The TB success rate for single carrier or on each CC for CA is defined as $100\% * N_{DL_correct_rx} / (N_{DL_newtx} + N_{DL_retx})$, where N_{DL_newtx} is the number of newly transmitted DL transport blocks, N_{DL_retx} is the number of retransmitted DL transport blocks, and $N_{DL_correct_rx}$ is the number of correctly received DL transport blocks. The TB success rate shall be sustained during at least 300 frames.

	15	R.68-9 TDD
	20	R.68-10 TDD

CA configuration, bandwidth combination and MIMO layer on each CC is determined by following procedure.

- Select the set(s) of {CA configuration, bandwidth combination, MIMO layer} among all the supported CA configurations that leads to the largest equivalent aggregated bandwidth which does not cause the transport block bits within a TTI to exceed the capability of the category of UE under test when the defined reference channel applies on each CC. The equivalent aggregated bandwidth is defined as

$$B_{agg} = \sum_{i=0}^{N-1} a(R_i) R_i B_i$$

Where N is the number of CCs, $R_i \in \{2, 4, 8\}$ and $B_i \in \{5, 10, 15, 20\}$ are MIMO layer and bandwidth of CC i . And $a(R_i) = 1$ for $R_i = 2, 4$ and $a(R_i) = 0.75$ for $R_i = 8$

- The procedure applies also for single carrier using operating band instead of CA configuration, and bandwidth instead of bandwidth combination.

8.8 Demodulation of EPDCCH

The receiver characteristics of the EPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg). For the distributed transmission tests in 8.8.1, EPDCCH and PCFICH are tested jointly, i.e. a miss detection of PCFICH implies a miss detection of EPDCCH. For other tests, EPDCCH and PCFICH are not tested jointly.

8.8.1 Distributed Transmission

8.8.1.1 FDD

The parameters specified in Table 8.8.1.1-1 are valid for all FDD distributed EPDCCH tests unless otherwise stated.

Table 8.8.1.1-1: Test Parameters for Distributed EPDCCH

Parameter	Unit	Value

8.8.4 Enhanced Downlink Control Channel Performance Requirements Type A - Localized Transmission with CRS Interference Model

8.8.4.1 FDD

For the parameters specified in Table 8.8.4.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.8.4.1-2. The purpose of this test is to verify the localized EPDCCH performance, when the EPDCCH transmission in the serving cell is interfered by the CRS of the interfering cells, applying the CRS interference model defined in clause B.6.5. In Table 8.8.4.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical setup is in accordance with Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes Cell 2 and Cell 3.

Table 8.8.4.1-1: Test Parameters for EPDCCH

8.8.5 Enhanced Downlink Control Channel Performance Requirements Type A - Distributed Transmission with TM9 Interference Model

8.8.5.1 TDD

For the parameters specified in Table 8.8.5.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.8.5.1-2. The purpose of this test is to verify the distributed EPDCCH performance when the EPDCCH transmission in the serving cell is interfered by two interfering cells and applying TM9 interference model. In Table 8.8.5.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical setup is in accordance with Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes Cell 2 and Cell 3.

Table 8.8.5.1-1: Test Parameters for EPDCCH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Number of PDCCH symbols		symbols	2 (Note 1)	2	2
PHICH duration			Normal	Normal	Normal
Cell ID			0	6	1
Downlink power allocation	ρ_A	dB	-3	-3	-3

1	10 MHz	4 ECCE	R.55-1 TDD	OP.7 TDD	EPA5	2 x 2 Low	1	14.8

8.8.6 Enhanced Downlink Control Channel Performance Requirements Type A - Distributed Transmission with TM3 Interference Model

8.8.6.1 FDD

For the parameters specified in Table 8.8.6.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.8.6.1-2. The purpose of this test is to verify the distributed EPDCCH performance when the serving cell EPDCCH transmission is interfered by two interfering cells applying asynchronous TM3 interference model. In Table 8.8.6.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The

downlink physical setup is in accordance with Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is not provided.

Table 8.8.6.1-1: Test Parameters for EPDCCH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Number of PDCCH symbols		symbols	2 (Note 1)	2	2
PHICH duration			Normal	Normal	Normal
Cell ID			0	1	6
Downlink power allocation	ρ_A	dB	-3	-3	-3
	ρ_B	dB	-3	-3	-3
	σ	dB	0	0	0
	δ	dB	3	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98

8.9 Demodulation (single receiver antenna)

The SNR definition is given in Clause 8.1.1 where the number of receiver antennas N_{RX} assumed for the minimum performance requirement in this clause is 1.

8.9.1 PDSCH

8.9.1.1 FDD and half-duplex FDD (Fixed Reference Channel)

The parameters specified in Table 8.9.1.1-1 are valid for FDD and half-duplex FDD tests unless otherwise stated.

Table 8.9.1.1-1: Common Test Parameters (FDD and half-duplex FDD)

Parameter	Unit	Value
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	8
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths
Cyclic Prefix		Normal
Precoder update granularity		Frequency domain: 1 PRG Time domain: 1 ms for Transmission mode 9

8.9.1.1.1 Transmit diversity performance (Cell-Specific Reference Symbols)

8.9.1.1.1.1 Minimum Requirement 2 Tx Antenna Port

The requirements are specified in Table 8.9.1.1.1-2, with the addition of the parameters in Table 8.9.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.9.1.1.1-1: Test Parameters for Transmit diversity Performance (FRC)

Parameter	Unit	Test 1-2	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
PDSCH transmission mode		2	

Note 1: $P_B = 1$.

Table 8.9.1.1.1-2: Minimum performance Transmit Diversity (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.62 FDD	OP.1 FDD	EPA5	2x1 Low	70	9.0	0
2	10 MHz 16QAM 1/2	R.84 FDD	OP.1 FDD	EPA5	2x1 Low	70	9.3	1bis

8.9.1.1.2 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

8.9.1.1.2.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.9.1.1.2-2, with the addition of the parameters in Table 8.9.1.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.9.1.1.2.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	6
PMI delay (Note 2)	ms	8
Reporting interval	ms	8
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction on bitmap		001111
PDSCH transmission mode		4
Note 1: $P_B = 1$.		
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).		

Table 8.9.1.1.2.1-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.63 FDD	OP.1 FDD	EPA5	2x1 Low	70	13.2	0

8.9.1.1.2.2 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port

The requirements are specified in Table 8.9.1.1.2.2-2, with the addition of the parameters in Table 8.9.1.1.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.9.1.1.2.2-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	6
PMI delay (Note 2)	ms	8
Reporting interval	ms	8
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction on bitmap		000000000000FFFF
PDSCH transmission mode		4
Note 1: $P_B = 1$.		
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).		

Table 8.9.1.1.2.2-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.85 FDD	OP.1 FDD	EPA5	4x1 Low	70	11.3	1bis

8.9.1.1.2.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.9.1.1.2.3-2, with the addition of parameters in Table 8.9.1.1.2.3-1. In Table 8.9.1.1.2.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.9.1.1.2.3-1: Test Parameters

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	ρ_A	dB	-6	-6	-6
	ρ_B	dB	-6 (Note 1)	-6 (Note 1)	-6 (Note 1)
	σ	dB	3	3	3
N_{oc} at antenna port		dBm/15kHz	-98	N/A	N/A
\hat{E}_s/N_{oc}		dB	N/A	10.45	4.6
$BW_{Channel}$		MHz	10	10	10
Cyclic prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID			0	1	6
Cell-specific reference signals			Antenna ports 0,1,2,3		
Number of control OFDM symbols (CFI)			2	2	2
PDSCH transmission mode			4	N/A	N/A
Precoding granularity		PRB	50	N/A	N/A
PMI delay (Note 2)		ms	8	N/A	N/A
Reporting interval		ms	1	N/A	N/A
Reporting mode			PUSCH 3-1	N/A	N/A
CodeBookSubsetRestriction bitmap			000000000000FF	N/A	N/A
Time offset relative to Cell 1		μ s	N/A	3	-1
Frequency shift relative to Cell 1		Hz	N/A	300	-100
Interference model			N/A	As specified in clause B.5.3	As specified in clause B.5.3
Probability of occurrence of transmission in interference cells		%	N/A	20	20
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
Note 1: $P_B = 1$.					
Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF #(n-4), this reported PMI cannot be applied at the eNB downlink before SF #(n+4).					
Note 3: SIB-1 will not be transmitted in Cell 2 and Cell 3 in this test.					

Table 8.9.1.1.2.3-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.93 FDD	OP.1F DD	N/A	N/A	EPA5			4x1 Low	70	16.7	1bis

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
 Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
 Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.

8.9.1.1.3 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

8.9.1.1.3.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.9.1.1.3.1-2 with the addition of the parameters in Table 8.9.1.1.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8, and to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power.

Table 8.9.1.1.3.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with multiple CSI-RS configurations

parameter	Unit	Test 1	Test 2
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Beamforming model		Annex B.4.1	Annex B.4.3
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1
CSI reference signals		Antenna ports 15,...,18	Antenna ports 15,16
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 2	5 / 2
CSI reference signal configuration		0	0
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap	Subframes / bitmap	3 / 0001000000000000	3 / 0001000000000000
N_{oc} at antenna port	dBm/15kHz	-98	-98
Symbols for unused PRBs		OCNG (Note 4)	OCNG (Note 3)
Reporting mode		N/A	PUSCH 3-1
Reporting interval		N/A	5
PMI delay (Note 4)		N/A	8
CodeBookSubsetRestriction bitmap		N/A	001111
Number of allocated resource blocks (Note 2)	PRB	6	50
PDSCH transmission mode		9	

Note 1: $P_B = 1$.
 Note 2: The modulation symbols of the signal under test are mapped onto antenna port 7 or 8.
 Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.
 Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Table 8.9.1.1.3.1-2: Minimum performance for CDM-multiplexed DM RS (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz QPSK 1/3	R.64 FDD	OP.1 FDD	EPA5	2x1 Low	70	4.7	0
2	10 MHz QPSK 1/3	R.86 FDD	OP.1 FDD	EPA5	2x1 Low	70	2.5	1bis

8.9.1.1.3.2 Single-layer Spatial Multiplexing with CRS assistance information

The requirements are specified in Table 8.9.1.1.3.2-2, with the addition of parameters in Table 8.9.1.1.3.2-1. In Table 8.9.1.1.3.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the single-layer spatial multiplexing TM9 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.9.1.1.3.2-1: Test Parameters

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	ρ_A	dB	0	0	0
	ρ_B	dB	0 (Note 1)	0 (Note 1)	0 (Note 1)
	σ	dB	-3	-3	-3
N_{oc} at antenna port		dBm/15kHz	-98	N/A	N/A
\bar{E}_s/N_{oc}		dB	N/A	11.75	5.69
$BW_{Channel}$		MHz	10	10	10
Cyclic prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID			0	1	6
Cell-specific reference signals			Antenna ports 0,1		
Number of control OFDM symbols (CFI)			2	2	2
CSI reference signals			Antenna ports 15,16	N/A	N/A
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 2	N/A	N/A
CSI reference signal configuration			8	N/A	N/A
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap		Subframes / bitmap	3 / 00100000000000 00	N/A	N/A
PDSCH transmission mode			TM9	N/A	N/A
Precoding granularity			Frequency domain: 1 PRG Time domain: 1 ms	N/A	N/A
Beamforming model			Annex B.4.1	N/A	N/A
CodeBookSubsetRestriction bitmap			001111	N/A	N/A
Time offset relative to Cell 1		μs	N/A	3	-1
Frequency shift relative to Cell 1		Hz	N/A	300	-100
Interference model			N/A	As specified in clause B.5.4	As specified in clause B.5.4
Probability of occurrence of transmission in interference cells		%	N/A	10	10

Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: SIB-1 will not be transmitted in Cell 2 and Cell 3 in this test.					

Table 8.9.1.1.3.2-2: Minimum Performance

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.94 FDD	OP.1F DD	N/A	N/A	EPA5			2x1 Low	70	11.9	1bis
Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.											

8.9.1.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.9.1.2-1 are valid for all TDD tests unless otherwise stated.

Table 8.9.1.2-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Uplink downlink configuration (Note 1)		1
Special subframe configuration (Note 2)		4
Cyclic prefix		Normal
Cell ID		0
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	7
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths
Precoder update granularity		Frequency domain: 1 PRG Time domain: 1 ms for Transmission mode 9
ACK/NACK feedback mode		Multiplexing
Note 1: as specified in Table 4.2-2 in TS 36.211 [4]. Note 2: as specified in Table 4.2-1 in TS 36.211 [4].		

8.9.1.2.1 Transmit diversity performance (Cell-Specific Reference Symbols)

8.9.1.2.1.1 Minimum Requirement 2 Tx Antenna Port

The requirements are specified in Table 8.9.1.2.1.1-2, with the addition of the parameters in Table 8.9.1.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.9.1.2.1.1-1: Test Parameters for Transmit diversity Performance (FRC)

Parameter		Unit	Test 1-2
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
PDSCH transmission mode			2
Note 1: $P_B = 1$.			

Table 8.9.1.2.1.1-2: Minimum performance Transmit Diversity (FRC)

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.62 TDD	OP.1 TDD	EPA5	2x1 Low	70	8.8	0
2	10 MHz 16QAM 1/2	R.84 TDD	OP.1 TDD	EPA5	2x1 Low	70	9.5	1bis

8.9.1.2.2 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

8.9.1.2.2.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.9.1.2.2.1-2, with the addition of the parameters in Table 8.9.1.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.9.1.2.2.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
Precoding granularity		PRB	6
PMI delay (Note 2)		ms	10 or 11
Reporting interval		ms	1 or 4 (Note 3)
Reporting mode			PUSCH 1-2
CodeBookSubsetRestriction bitmap			001111
ACK/NACK feedback mode			Multiplexing
PDSCH transmission mode			4

Note 1: $P_B = 1$.
 Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).
 Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.

Table 8.9.1.2.2.1-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.63 TDD	OP.1 TDD	EPA5	2x1 Low	70	13.1	0

8.9.1.2.2.2 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port

The requirements are specified in Table 8.9.1.2.2.2-2, with the addition of the parameters in Table 8.9.1.2.2.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.9.1.2.2.2-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	-6
	ρ_B	-6 (Note 1)
	σ	0
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	6
PMI delay (Note 2)	ms	10 or 11
Reporting interval	ms	1 or 4 (Note 3)
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction bitmap		000000000000FFFF
ACK/NACK feedback mode		Multiplexing
PDSCH transmission mode		4
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.		

Table 8.9.1.2.2.2-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.85 TDD	OP.1 TDD	EPA5	4x1 Low	70	11.6	1bis

8.9.1.2.2.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Ports with CRS assistance information

The requirements are specified in Table 8.9.1.2.2.3-2, with the addition of parameters in Table 8.9.1.2.2.3-1. In Table 8.9.1.2.2.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.9.1.2.2.3-1: Test Parameters

Parameter		Unit	Cell 1	Cell 2	Cell 3
Uplink downlink Configuration			1	1	1
Special subframe configuration			4	4	4
Downlink power allocation	ρ_A	dB	-6	-6	-6
	ρ_B	dB	-6 (Note 1)	-6 (Note 1)	-6 (Note 1)
	σ	dB	3	3	3
N_{oc} at antenna port		dBm/15kHz	-98	N/A	N/A
\hat{E}_s/N_{oc}		dB	N/A	10.45	4.6
BW _{Channel}		MHz	10	10	10
Cyclic prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID			0	1	6
Cell-specific reference signals			Antenna ports 0,1,2,3		
Number of control OFDM symbols (CFI)			2	2	2
PDSCH transmission mode			4	N/A	N/A
Precoding granularity		PRB	50	N/A	N/A
PMI delay (Note 2)		ms	8	N/A	N/A
Reporting interval		ms	1 or 4 (Note 4)	N/A	N/A
Reporting mode			PUSCH 3-1	N/A	N/A
CodeBookSubsetRestriction bitmap			000000000000FF	N/A	N/A
Time offset relative to Cell 1		μs	N/A	3	-1
Frequency shift relative to Cell 1		Hz	N/A	300	-100
Interference model			N/A	As specified in clause B.5.3	As specified in clause B.5.3
Probability of occurrence of transmission in interference cells		%	N/A	20	20
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF #(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: SIB-1 will not be transmitted in Cell 2 and Cell 3 in this test. Note 4: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.					

Table 8.9.1.2.2.3-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.93 TDD	OP.1TDD	N/A	N/A	EPA5			4x1 Low	70	16.8	1bis

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
 Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
 Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.

8.9.1.2.3 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

8.9.1.2.3.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.9.1.2.3.1-2 with the addition of the parameters in Table 8.9.1.2.3.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8, and to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power.

Table 8.9.1.2.3.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with multiple CSI-RS configurations

Parameter	Unit	Test 1	Test 2
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1
CSI reference signals		Antenna ports 15,...,18	Antenna ports 15,16
Beamforming model		Annex B.4.1	Annex B.4.3
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 4	5 / 4
CSI reference signal configuration		1	1
Zero-power CSI-RS configuration $I_{CSI-RS} / \text{ZeroPowerCSI-RS}$ bitmap	Subframes / bitmap	4 / 0010000100000000	4 / 0000001000000000
N_{oc} at antenna port	dBm/15kHz	-98	-98
Symbols for unused PRBs		OCNG (Note 4)	OCNG (Note 3)
Reporting mode		N/A	PUSCH 3-1
Reporting interval		N/A	5
PMI delay (Note 4)		N/A	10
CodeBookSubsetRestriction bitmap		N/A	001111
Number of allocated resource blocks (Note 2)	PRB	6	
Simultaneous transmission		No	
PDSCH transmission mode		9	
Note 1: $P_B = 1$. Note 2: The modulation symbols of the signal under test are mapped onto antenna port 7 or 8. Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			

Table 8.9.1.2.3.1-2: Minimum performance for CDM-multiplexed DM RS without simultaneous transmission (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and	Reference value		UE DL category
						Fraction of Maximum	SNR (dB)	

					Antenna Configuration	Throughput (%)		
1	10 MHz QPSK 1/3	R.64 TDD	OP.1 TDD	EPA5	2x1 Low	70	4.5	0
2	10 MHz QPSK 1/3	R.86 TDD	OP.1 TDD	EPA5	2x1 Low	70	2.9	1bis

8.9.1.2.3.2 Single-layer Spatial Multiplexing with CRS assistance information

The requirements are specified in Table 8.9.1.2.3.2-2, with the addition of parameters in Table 8.9.1.2.3.2-1. In Table 8.9.1.2.3.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the single-layer spatial multiplexing TM9 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.9.1.2.3.2-1: Test Parameters

Parameter	Unit	Cell 1	Cell 2	Cell 3
Uplink downlink Configuration		1	1	1
Special subframe configuration		4	4	4
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0 (Note 1)
	σ	dB	-3	-3
N_{oc} at antenna port	dBm/15kHz	-98	N/A	N/A
\hat{E}_s/N_{oc}	dB	N/A	11.75	5.69
$BW_{Channel}$	MHz	10	10	10
Cyclic prefix		Normal	Normal	Normal
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID		0	1	128
Cell-specific reference signals		Antenna ports 0,1		
Number of control OFDM symbols (CFI)		2	2	2
CSI reference signals		Antenna ports 15,16	N/A	N/A
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 4	N/A	N/A
CSI reference signal configuration		1	N/A	N/A
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap	Subframes / bitmap	4 / 00100000000000 00	N/A	N/A
Number of control OFDM symbols		2	2	2
PDSCH transmission mode		TM9	N/A	N/A
Precoding granularity		Frequency domain: 1 PRG Time domain: 1 ms	N/A	N/A
Beamforming model		Annex B.4.1	N/A	N/A
CodeBookSubsetRestriction bitmap		001111	N/A	N/A
Time offset relative to Cell 1	μs	N/A	3	-1
Frequency shift relative to Cell 1	Hz	N/A	300	-100
Interference model		N/A	As specified in clause B.5.4	As specified in clause B.5.4
Probability of occurrence of transmission in interference cells	%	N/A	10	10
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20

Note 1: $P_B = 1$.

Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Note 3: SIB-1 will not be transmitted in Cell 2 and Cell 3 in this test.

Table 8.9.1.2.3.2-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.94 TDD	OP.1TDD	N/A	N/A	EPA5			2x1 Low	70	11.3	1bis

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.

Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.

Note 3: SNR corresponds to $\frac{E_s}{N_{0c}}$ of cell 1.

8.9.2 PHICH

8.9.2.1 FDD and half-duplex FDD

8.9.2.1.1 Transmit diversity performance

For the parameters specified in Table 8.5.1-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.9.2.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.9.2.1.1-1: Minimum performance PHICH

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE DL category
						Pm-an (%)	SNR (dB)	
1	10 MHz	R.19	OP.1 FDD	EPA5	2 x 1 Low	0.1	8.6	0, 1bis

8.9.2.2 TDD

8.9.2.2.1 Transmit diversity performance

For the parameters specified in Table 8.5.2-1 the average probability of a miss-detecting ACK for NACK (Pm-an) shall be below the specified value in Table 8.9.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.9.2.2.1-1: Minimum performance PHICH

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE DL category
						Pm-an (%)	SNR (dB)	
1	10 MHz	R.19	OP.1 TDD	EPA5	2 x 1 Low	0.1	8.6	0, 1bis

8.9.3 PBCH

8.9.3.1 FDD and half-duplex FDD

8.9.3.1.1 Transmit diversity performance

For the parameters specified in Table 8.6.1-1 the average probability of a miss-detected PBCH (Pm-bch) shall be below the specified value in Table 8.9.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.9.3.1.1-1: Minimum performance PBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE DL category
					Pm-bch (%)	SNR (dB)	
1	1.4 MHz	R.22	EPA5	2 x 1 Low	1	-1.3	0, 1bis

8.9.3.2 TDD

8.9.3.2.1 Transmit diversity performance

For the parameters specified in Table 8.6.2-1 the average probability of a miss-detected PBCH (Pm-bch) shall be below the specified value in Table 8.9.3.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.9.3.2.1-1: Minimum performance PBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE DL category
					Pm-bch (%)	SNR (dB)	
1	1.4 MHz	R.22	EPA5	2 x 1 Low	1	-1.7	0, 1bis

8.9.4 PDCCH/PCFICH

8.9.4.1 FDD and half-duplex FDD

8.9.4.1.1 Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 2 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1. For the parameters specified in Table 8.4.1-1 and Table 8.9.4.1.1-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.9.4.1.1-2. In Table 8.9.4.1.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes Cell 2 and Cell 3.

Table 8.9.4.1.1-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3	-3
	PHICH_RA	dB	-3	N/A	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3	-3
	PHICH_RB	dB	-3	N/A	N/A

Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port	dBm/15kHz	-98		
\hat{E}_s/N_{oc}	dB	As defined in Table 8.9.4.1.1- 2	13.91	3.34
$BW_{Channel}$	MHz	10	10	10
Cyclic Prefix		Normal	Normal	Normal
Cell Id		0	1	6
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols		1	1	1
CFI indicated in PCFICH		1	1	1
PHICH Ng (Note 1)		1/6	N/A	N/A
PHICH duration		Normal	N/A	N/A
PDSCH TM		4	N/A	N/A
Interference model		NA	As specified in clause B.7.1	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)		OCNG	OCNG	OCNG
Time Offset relative to Cell 1	μ s	N/A	2	3
Frequency shift relative to Cell 1	Hz	N/A	200	300
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 and Cell 3 unused RE-s and PRB-s do not include control region REs.				

Table 8.9.4.1.1-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	4 CCE	R.16-4 FDD	OP.1 FDD	EPA5	EPA5	EPA5	2x1 Low	1	16.0

Note 1: The OCNG pattern applies for Cell 1, Cell 2 and Cell 3.
 Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
 Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
 Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.

8.9.4.1.2 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.4.1-1 and Table 8.9.4.1.2-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.9.4.1.2-2. In Table 8.9.4.1.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes information on Cell 2 and Cell 3.

Table 8.9.4.1.2-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3	-3
	PHICH_RA	dB	-3	N/A	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3	-3
	PHICH_RB	dB	-3	N/A	N/A

Cell-specific reference signals		Antenna ports 0,1,2,3		
N_{oc} at antenna port	dBm/15kHz	-98		
\hat{E}_s/N_{oc}	dB	As defined in Table 8.9.4.1.2-2	13.91	3.34
$BW_{Channel}$	MHz	10	10	10
Cyclic Prefix		Normal	Normal	Normal
Cell ID		0	1	6
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols		2	2	2
CFI indicated in PCFICH		2	2	2
PHICH Ng (Note 1)		1/6	N/A	N/A
PHICH duration		Normal	N/A	N/A
PDSCH TM		4	N/A	N/A
Interference model		NA	As specified in clause B.7.1	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)		OCNG	OCNG	OCNG
Time Offset relative to Cell 1	μ s	N/A	2	3
Frequency shift relative to Cell 1	Hz	N/A	200	300
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 and Cell 3 unused RE-s and PRB-s do not include control region REs.				

Table 8.9.4.1.2-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	4 CCE	R.17-3 FDD	OP.1 FDD	EPA5	EPA5	EPA5	4x1 Low	1	15.4
Note 1: The OCNG pattern applies for Cell 1, Cell 2 and Cell 3.									
Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.									
Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.									
Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.									

8.9.4.2 TDD

8.9.4.2.1 Enhanced Downlink Control Channel Performance Requirement Type A - 2 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 2 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1. For the parameters specified in Table 8.4.2-1 and Table 8.9.4.2.1-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.9.4.2.1-2. In Table 8.9.4.2.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes Cell 2 and Cell 3.

Table 8.9.4.2.1-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3	-3
	PHICH_RA	dB	-3	N/A	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3	-3
	PHICH_RB	dB	-3	N/A	N/A

Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port	dBm/15kHz	-98		
\hat{E}_s/N_{oc}	dB	As defined in Table 8.9.4.2.1- 2	13.91	3.34
$BW_{Channel}$	MHz	10	10	10
Cyclic Prefix		Normal	Normal	Normal
Cell Id		0	1	6
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols		1	1	1
CFI indicated in PCFICH		1	1	1
PHICH Ng (Note 1)		1/6	N/A	N/A
PHICH duration		Normal	N/A	N/A
PDSCH TM		4	N/A	N/A
Interference model		NA	As specified in clause B.7.1	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)		OCNG	OCNG	OCNG
Time Offset relative to Cell 1	μ s	N/A	2	3
Frequency shift relative to Cell 1	Hz	N/A	200	300
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 and Cell 3 unused RE-s and PRB-s do not include control region REs.				

Table 8.9.4.2.1-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	4 CCE	R.16-4 TDD	OP.1 TDD	EPA5	EPA5	EPA5	2x1 Low	1	16.9

Note 1: The OCNG pattern applies for Cell 1, Cell 2 and Cell 3.
 Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
 Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.
 Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.

8.9.4.2.2 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.4.2-1 and Table 8.9.4.2.2-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.9.4.2.2-2. In Table 8.9.4.2.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided and includes information on Cell 2 and Cell 3.

Table 8.9.4.2.2-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3	-3
	PHICH_RA	dB	-3	N/A	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3	-3
	PHICH_RB	dB	-3	N/A	N/A

Cell-specific reference signals		Antenna ports 0,1,2,3		
N_{oc} at antenna port	dBm/15kHz	-98		
\hat{E}_s/N_{oc}	dB	As defined in Table 8.9.4.2.2-2	13.91	3.34
$BW_{Channel}$	MHz	10	10	10
Cyclic Prefix		Normal	Normal	Normal
Cell ID		0	1	6
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols		2	2	2
CFI indicated in PCFICH		2	2	2
PHICH Ng (Note 1)		1/6	N/A	N/A
PHICH duration		Normal	N/A	N/A
PDSCH TM		4	N/A	N/A
Interference model		NA	As specified in clause B.7.1	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)		OCNG	OCNG	OCNG
Time Offset relative to Cell 1	μ s	N/A	2	3
Frequency shift relative to Cell 1	Hz	N/A	200	300
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 and Cell 3 unused RE-s and PRB-s do not include control region REs.				

Table 8.9.4.2.2-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	4 CCE	R.17-3 TDD	OP.1 TDD	EPA5	EPA5	EPA5	4x1 Low	1	15.6
Note 1: The OCNG pattern applies for Cell 1, Cell 2 and Cell 3.									
Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.									
Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.									
Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.									

8.10 Demodulation (4 receiver antenna ports)

The performance requirements specified in this clause are valid for 4Rx capable UEs.

8.10.1 PDSCH

8.10.1.1 FDD (Fixed Reference Channel)

The parameters specified in Table 8.10.1.1-1 are valid for all FDD tests unless otherwise stated.

Table 8.10.1.1-1: Common Test Parameters (FDD)

Parameter	Unit	Value
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	8
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM, 256QAM and 1024QAM

Number of OFDM symbols for PDCCH	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated
Precoder update granularity		Frequency domain: 1 PRG for Transmission modes 9 and 10 Time domain: 1 ms
Cyclic Prefix		Normal
Cell_ID		0
Cross carrier scheduling		Not configured

8.10.1.1.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.1-2, with the addition of the parameters in Table 8.10.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.10.1.1.1-1: Test Parameters for Transmit diversity Performance (FRC) with 4 RX Antenna Ports

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (NOTE 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
PDSCH transmission mode			2
NOTE 1: $P_B = 1$.			

Table 8.10.1.1.1-2: Minimum performance Transmit Diversity (FRC) with 4 RX Antenna Ports

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.11 FDD	OP.1 FDD	EVA5	2x4 Medium correlation A, ULA	70	3.9	≥ 2

8.10.1.1.1A Transmit diversity performance with Enhanced Performance Requirement Type A - 2 Tx Antenna Ports with TM3 interference model

The requirements are specified in Table 8.10.1.1.1A-2, with the addition of parameters in Table 8.10.1.1.1A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cells applying transmission mode 3 interference model defined in clause B.5.2. In Table 8.10.1.1.1A-1, Cell 1 is the serving cell, and Cell 2 is an interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

Table 8.10.1.1.1A-1: Test Parameters for Transmit diversity Performance (FRC) with TM3 interference model

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (NOTE 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1

N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (NOTE 2)		dB	N/A	-2.23
$BW_{Channel}$		MHz	10	10
Cyclic Prefix			Normal	Normal
Cell Id			0	1
Number of control OFDM symbols			2	2
PDSCH transmission mode			2	N/A
Interference model			N/A	As specified in clause B.5.2
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-0	N/A
Physical channel for CQI reporting			PUSCH(Note 5)	N/A
cqi-pmi-ConfigurationIndex			2	N/A
NOTE 1: $P_B = 1$				
NOTE 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.				
NOTE 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.				
NOTE 4: Cell 2 transmission is delayed with respect to Cell 1 by 0.33 ms.				
NOTE 5: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5 and #0.				

Table 8.10.1.1A-2: Enhanced Performance Requirement Type A, Transmit Diversity (FRC) with TM3 interference model

Test Number	Reference Channel	OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (NOTE 3)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SINR (dB) (NOTE 2)	
1	R.46 FDD	OP.1 FDD	N/A	EVA70	EVA70	2x4 Low	70	-4.4	≥1
NOTE 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.									
NOTE 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.									
NOTE 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.									

8.10.1.1.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.2-2, with the addition of the parameters in Table 8.10.1.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.1.2-1: Test Parameters for Large Delay CDD (FRC) with 4 RX Antenna Ports

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
PDSCH transmission mode		3
NOTE 1: $P_B = 1$.		

Table 8.10.1.1.2-2: Minimum performance Large Delay CDD (FRC) with 4 RX Antenna Ports

Test num	Bandwidth and MCS	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config.	Reference value		UE category
						Fraction of maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.11 FDD	OP.1 FDD	EVA70	2x4 Low	70	8.0	≥2

8.10.1.1.3 Closed-loop spatial multiplexing Enhanced Performance Requirements Type A - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.3-2, with the addition of the parameters in Table 8.10.1.1.3-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.10.1.1.3-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

Table 8.10.1.1.3-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model and 4 RX Antenna Ports

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
$BW_{Channel}$		MHz	10	10
Cell Id			0	1
PDSCH transmission mode			6	4
Interference model			N/A	As specified in clause B.5.3
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Precoding granularity		PRB	50	6
PMI delay (Note 4)		ms	8	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			1111	N/A
Note 1: $P_B = 1$				
Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.				
Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.				
Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).				
Note 5: All cells are time-synchronous.				

Table 8.10.1.1.3-2: Enhanced Performance Requirement Type A, Single-Layer Spatial Multiplexing (FRC) with TM4 interference model and 4 RX Antenna Ports

Test Number		OCNG Pattern	Propagation Conditions	Correlation Matrix and	Reference Value	
-------------	--	--------------	------------------------	------------------------	-----------------	--

	Reference Channel and MCS	Cell 1	Cell 2	Cell 1	Cell 2	Antenna Configuration (Note 3)	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	UE Category
1	R.47 FDD 16QAM	OP.1 FDD	N/A	EVA5	EVA5	2x4 Low	70	-2.3	≥1

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

8.10.1.1.4 Closed-loop spatial multiplexing performance, Dual-Layer Spatial Multiplexing 4 Tx Antenna Port (Cell-Specific Reference Symbols)

For single carrier, the requirements are specified in Table 8.10.1.1.4-2, with the addition of the parameters in Table 8.10.1.1.4-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.1.4-1: Test Parameters for Dual-Layer Spatial Multiplexing (FRC) with 4 RX Antenna Ports

Parameter	Unit	Test 1-2	Test 3
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	-98
Precoding granularity	PRB	6	50
PMI delay (Note 2)	ms	8	8

8.10.1.1.4A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing with 2Tx Antenna Ports

The requirements are specified in Table 8.10.1.1.4A-2, with the addition of the parameters in Table 8.10.1.1.4A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband precoding.

Table 8.10.1.1.4A-1: Test Parameters for Dual-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1
-----------	------	--------

Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
Precoding granularity		PRB	50
PMI delay (Note 2)		ms	8
Reporting interval		ms	1
Reporting mode			PUSCH 3-1
CodeBookSubsetRestriction bitmap			110000
PDSCH transmission mode			4
Note 1: $P_B = 1$.			
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			

Table 8.10.1.1.4A-2: Enhanced Performance Requirement Type C for Dual-Layer Spatial Multiplexing with TM4 (FRC)

Test number	Band-width	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz	R.11 FDD	OP.1 FDD	ETU70	2x4 Medium	70	16.8	≥ 2

8.10.1.1.5 Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.5-2, with the addition of the parameters in Table 8.10.1.1.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.10.1.1.5-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

Table 8.10.1.1.5-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model and 4 RX Antenna Ports

parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
CSI reference signals			Antenna ports 15,16	N/A
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 2	N/A
CSI reference signal configuration			0	N/A
N_{oc} at antenna port		dBm/15kHz	-98	N/A

Table 8.10.1.1.5-2: Enhanced Performance Requirement Type A, CDM-multiplexed DM RS with TM9 interference model and 4 RX Antenna Ports

Test Number	Reference Channel and MCS	OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
1	R. 76 FDD QPSK	OP.1 FDD	N/A	EVA5	EVA5	2x4 Low	70	-3.0	≥1
<p>Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.</p> <p>Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.</p> <p>Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.</p>									

8.10.1.1.5A Single-layer Spatial Multiplexing (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.5A-2, with the addition of the parameters in Table 8.10.1.1.5A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 with a simultaneous transmission on the other antenna port in the serving cell, and to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power.

Table 8.10.1.1.5A-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with multiple CSI-RS configurations

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Beamforming model			Annex B.4.1
Cell-specific reference signals			Antenna ports 0,1
CSI reference signals			Antenna ports 15,...,18
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$		Subframes	5 / 2
CSI reference signal configuration			3
Zero-power CSI-RS configuration $l_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS}$ bitmap		Subframes / bitmap	3 / 0001000000000000
N_{oc} at antenna port		dBm/15kHz	-98
Symbols for unused PRBs			OCNG (Note 4)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			Yes (Note 3, 5)
PDSCH transmission mode			9
Number of MBSFN subframes		Subframes	NA
Note 1: $P_B = 1$. Note 2: The modulation symbols of the signal under test are mapped onto antenna port 7 or 8. Note 3: Modulation symbols of an interference signal is mapped onto the antenna port (7 or 8) not used for the input signal under test. Note 4: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. Note 5: The two UEs' scrambling identities n_{SCID} are set to 0 for CDM-multiplexed DM RS with interfering simultaneous transmission test cases.			

Table 8.10.1.1.5A-2: Minimum performance for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.50 FDD	OP.1 FDD	EPA5	2x4 Low	70	15.8	≥ 2

Note 1: The reference channel applies to both the input signal under test and the interfering signal.

8.10.1.1.5B Single-layer Spatial Multiplexing (With Enhanced DMRS table configured)

For single-layer transmission on antenna port 7, 8, 11 or 13 upon detection of a PDCCH with DCI format 2C, the requirement is specified in Table 8.10.1.1.5B-2, with the addition of the parameters in Table 8.10.1.1.5B-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of the test is to verify rank-1 performance on antenna port 11 with a simultaneous transmission on the antenna port 7, 8 or 13 with DMRS enhancement table and 4 orthogonal DMRS ports (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]).

Table 8.10.1.1.5B-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations with Enhanced DMRS table

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Beamforming model			Annex B.4.1A
Cell-specific reference signals			Antenna ports 0,1
CSI reference signals			Antenna ports 15,...,18
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$		Subframes	5 / 2
CSI reference signal configuration			3
Zero-power CSI-RS configuration $I_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS}$ bitmap		Subframes / bitmap	3 / 0001000000000000
N_{oc} at antenna port		dBm/15kHz	-98
Symbols for unused PRBs			OCNG (Note 4)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			Yes (Note 3, 5)
dmrs-Enhancements-r13			Enable
PDSCH transmission mode			9
Note 1: $P_B = 1$. Note 2: The modulation symbols of the signal under test are mapped onto antenna port 11. Note 3: Modulation symbols of an interference signal are random mapped onto one antenna port among antenna port 7, 8 and 13. The update granularity for randomized mapping antenna port is 1 PRG in frequency domain and 1ms in time domain. Note 4: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. Note 5: The two UEs' scrambling identities n_{SCID} are set to 0 with OCC =4.			

Table 8.10.1.1.5B-2: Minimum performance for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations with Enhanced DMRS table

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.50 FDD	OP.1 FDD	EPA5	2x4 Low	70	15.8	≥2

Note 1: The reference channel applies to both the input signal under test and the interfering signal.

8.10.1.1.6 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

For dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.10.1.1.6-2, with the addition of the parameters in Table 8.10.1.1.6-1 where Cell 1 is the serving cell and Cell 2 is the interfering cell. The downlink physical channel setup is set according to Annex C.3.2. The purpose of these tests is to verify the rank-2 performance for full RB allocation, to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power, and to verify that the UE correctly estimate SNR.

Table 8.10.1.1.6-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer) with multiple CSI-RS configurations with 4 RX Antenna Ports

Parameter	Unit	Test 1	
		Cell 1	Cell 2

Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
	PDSCH_RA	dB	4	NA
	PDSCH_RB	dB	4	NA
Cell-specific reference signals			Antenna ports 0 and 1	Antenna ports 0 and 1
Cell ID			0	126
CSI reference signals			Antenna ports 15,16	NA
Beamforming model			Annex B.4.2	NA
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$	Subframes		5 / 2	NA
CSI reference signal configuration			8	NA
Zero-power CSI-RS configuration $l_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS}$ bitmap	Subframes / bitmap		3 / 0010000000000000	NA
N_{oc} at antenna port	dBm/15kHz		-98	NA
\hat{E}_s / N_{oc}			Reference Value in Table 8.10.1.1.6-2	7.25dB
Symbols for unused PRBs			OCNG (Note 2)	NA
Number of allocated resource blocks (Note 2)	PRB		50	NA
Simultaneous transmission			No	NA
PDSCH transmission mode			9	Blanked
Note 1: $P_B = 1$ Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.				

Table 8.10.1.1.6-2: Minimum performance for CDM-multiplexed DM RS (FRC) with multiple CSI-RS configurations and 4 RX Antenna Ports

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern		Propagation Condition		Correlation Matrix and Antenna Configuration	Reference value		UE Category
			Cell1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.51 FDD	OP.1 FDD	N/A	ETU5	ETU5	2x4 Low	70	9.2	≥2
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent. Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2. Note 3: SNR corresponds to \hat{E}_s / N_{oc} of Cell 1.										

8.10.1.1.6A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing

The requirements are specified in 8.10.1.1.6A-2, with the addition of the parameters in 8.10.1.1.6A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of this test is to verify rank-two performance for full RB allocation upon antenna ports 7 and 8.

8.10.1.1.6A-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer) with multiple CSI-RS configurations

parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals			Antenna ports 0 and 1
CSI reference signals			Antenna ports 15,16
Beamforming model			Annex B.4.3
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 2
CSI reference signal configuration			8
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap		Subframes / bitmap	3 / 0010000000000000
N_{oc} at antenna port		dBm/15kHz	-98
Symbols for unused PRBs			OCNG (Note 2)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			No
Reporting mode			PUSCH 3-1
PDSCH transmission mode			9
Note 1: $P_B = 1$			
Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.			

8.10.1.1.6A-2: Enhanced Performance Requirement Type C for CDM-multiplexed DM RS (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.51 FDD	OP.1 FDD	EPA5	2x4 Medium	70	16.2	≥2

8.10.1.1.6B Dual-Layer Spatial Multiplexing with altCQI-Table-1024QAM configured (User-Specific Reference Symbols)

The requirements are specified in 8.10.1.1.6B-2, with the addition of the parameters in 8.10.1.1.6B-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of this test is to verify rank-two performance for full RB allocation upon antenna ports 7 and 8.

8.10.1.1.6B-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer) with multiple CSI-RS configurations

parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3

Cell-specific reference signals		Antenna ports 0 and 1
CSI reference signals		Antenna ports 15,16, 17, 18
Beamforming model		Annex B.4.3
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 2
CSI reference signal configuration		3
Zero-power CSI-RS configuration $I_{CSI-RS} / \text{ZeroPowerCSI-RS}$ bitmap	Subframes / bitmap	N/A
N_{oc} at antenna port	dBm/15kHz	-98
Symbols for unused PRBs		OCNG (Note 2)
Number of allocated resource blocks (Note 2)	PRB	50
Simultaneous transmission		No
Reporting mode		PUSCH 3-1
PDSCH transmission mode		9
Note 1: $P_B = 1$ Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.		

8.10.1.1.6B-2: Minimum performance Dual-Layer Spatial Multiplexing with altCQI-Table-1024QAM

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE DL Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 1024QAM	R.102 FDD	OP.1 FDD	EPA5	4x4 Low	70	29.4	20, ≥ 22

8.10.1.1.7 Open-loop spatial multiplexing, 3 Layer Multiplexing with 4 Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.7-2, with the addition of the parameters in Table 8.10.1.1.7-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.1.7-1: Test parameters for Open Loop spatial multiplexing, 3 Layers with 4 Tx ports and 4 Rx ports

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	0
Cell-specific reference signals		Antenna ports 0,1,2,3	
N_{oc} at antenna port	dBm/15kHz	-98	
PDSCH transmission mode		3	
PDSCH rank		3	
CodeBookSubsetRestriction bitmap		0100	

Note 1: $P_B = 1$.

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.74 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.9	≥ 5

8.10.1.1.9 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.9-2, with the addition of the parameters in Table 8.10.1.1.9-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.1.9-1: Minimum performance for 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

Parameter		Unit	Test 1	Test 1a
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0 (Note 1)
	σ	dB	-3	-3
Beamforming model			4 layer precoding based on WB PMI feedback	4 layer precoding based on WB PMI feedback
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
CSI reference signals			Antenna ports 15,...,18	Antenna ports 15,...,18
Beamforming model			Annex B.4.3	Annex B.4.3
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes		5 / 2	5 / 2
CSI reference signal configuration			3	3
Zero-power CSI-RS configuration $I_{CSI-RS} /$ ZeroPowerCSI-RS bitmap	Subframes / bitmap		3 / 0001000000000000	3 / 0001000000000000
N_{oc} at antenna port		dBm/15kHz	-98	-98
Symbols for unused PRBs			OCNG (Note 3)	OCNG (Note 3)
Number of allocated resource blocks (Note 2)		PRB	50	50
Simultaneous transmission			No	No
PDSCH transmission mode			9	9
Precoding granularity			50	50
PMI delay			8	8
Reporting interval			1	1
Reporting mode			PUSCH 3-1	PUSCH 3-1
alternativeCodeBookEnabledFor4TX-r12			False	False

CodeBookSubsetRestriction bitmap		0xFFFF000000000000	0xFFFF000000000000
DMRS OCC length per port		2	4
Note 1: $P_B = 1$. Note 2: 50 resource blocks are allocated in sub-frames 1,2,3,4,6,7,8,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0. Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.			

Table 8.10.1.1.9-2: Minimum performance for for 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM	R.75 FDD	OP.1 FDD	EPA5	4x4 Low	70	18.4	≥5
1a	10MHz 16QAM	R.75A FDD	OP.1 FDD	EPA5	4x4 Low	70	[17.4]	≥5
NOTE: For a UE supporting TM9 rank3/4 transmission based on DMRS OCC length 4, Test 1a will be run and Test 1 will be skipped. Otherwise, Test 1a is not applicable and only Test 1 will be run.								

8.10.1.1.9A Enhanced Performance Requirement Type C - 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.9A-2, with the addition of the parameters in Table 8.10.1.1.9A-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.1.9A-1: Minimum performance for 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals		Antenna ports 0,1	
CSI reference signals		Antenna ports 15,...,18	
Beamforming model		Annex B.4.3(Note 4, 5)	
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 2	
CSI reference signal configuration		3	
Zero-power CSI-RS configuration $I_{CSI-RS} /$ ZeroPowerCSI-RS bitmap	Subframes / bitmap	3 / 0001000000000000	
N_{oc} at antenna port	dBm/15kHz	-98	
Symbols for unused PRBs		OCNG (Note 3)	
Number of allocated resource blocks (Note 2)	PRB	50	
Simultaneous transmission		No	
PDSCH transmission mode		9	
Precoding granularity		50	
PMI delay		8	
Reporting interval		1	
Reporting mode		PUSCH 3-1	
alternativeCodeBookEnabledFor4TX-r12		False	
CodeBookSubsetRestriction bitmap		0xFFFF000000000000	
Note 1: $P_B = 1$. Note 2: 50 resource blocks are allocated in sub-frames 1,2,3,4,6,7,8,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0.			

Note 3:	These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.
Note 4:	The precoder in clause B.4.3 follows UE recommended PMI.
Note 5:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Table 8.10.1.1.9A-2: Minimum performance for 4 Layer Spatial Multiplexing (User-Specific Reference Symbols)

						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM	R.75 FDD	OP.1 FDD	EPA5	4x4 Medium A Xpol	70	18.2	≥5

8.10.1.1.10 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.1.10-2, with the addition of parameters in Table 8.10.1.1.10-1. In Table 8.10.1.1.10-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.10.1.1.10-1: Test Parameters

Parameter		Unit	Cell 1	Cell 2	Cell 3
Downlink power allocation	ρ_A	dB	-3	-3	-3
	ρ_B	dB	-3 (Note 1)	-3 (Note 1)	-3 (Note 1)
	σ	dB	0	0	0
N_{oc} at antenna port		dBm/15kHz	-98	N/A	N/A
\hat{E}_s/N_{oc}		dB	Reference Value in Table 8.10.1.1.10-2	10.45	4.6
$BW_{Channel}$		MHz	10	10	10
Cyclic prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID			0	1	6

Table 8.10.1.1.12-2: Minimum Performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.X FDD	OP.1F DD	N/A	N/A	EVA5	EVA5	EVA5	2x4 low	70	12.3	≥2
Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.											

8.10.1.1.13 Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports

8.10.1.1.13.1 Minimum requirements for QCL Type C and 3 Layers Spatial Multiplexing

The requirements are specified in Table 8.10.1.1.13.1-3, with the additional parameters in Table 8.10.1.1.13.1-1 and Table 8.10.1.1.13.1-2. The purpose of this test is to verify the UE capability of supporting non quasi-co-located antenna ports when the UE receives DCI format 2D in a scenario with non-coherent joint transmission from two transmission points. The test verifies that the UE configured with quasi co-location type C performs correct tracking and compensation of the frequency and time difference between two transmission points, channel parameters estimation, channel estimation and rate matching behaviour according to the ‘PDSCH RE Mapping and Quasi-Co-Location Indicator’ signalling defined in [6]. In Table 8.10.1.1.13.1-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and PDSCH, and transmission point 2 (TP 2) has different Cell ID and transmits PDSCH. In the test the PDSCH is transmitted from TP 1 and TP 2. The downlink physical channel setup for TP 1 is according to Annex C.3.2 and for TP 2 according to Annex C.3.2.

Table 8.10.1.1.13.1-1: Test Parameters

Parameter	Unit	TP 1	TP 2
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Beamforming model		Random beamforming (rank 2)	Random beamforming (rank 1)
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1
CSI reference signals 0		Antenna ports {15,16,17,18}	N/A
CSI-RS 0 periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 2	
CSI reference signal 0 configuration		0	

CSI reference signals 1		N/A	Antenna ports {15,16,17,18}
CSI-RS 1 periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes		5 / 2
CSI reference signal 1 configuration			8
Zero-power CSI-RS 0 configuration $l_{CSI-RS} / \text{ZeroPower CSI-RS bitmap}$	Subframes/bitmap	2/ 0010000000000000	N/A
Zero-power CSI-RS1 configuration $l_{CSI-RS} / \text{ZeroPower CSI-RS bitmap}$	Subframes/bitmap	N/A	2/ 0010000000000000
\widehat{E}_s / N_{oc}	dB	SNR1	SNR2 = SNR1-3dB
N_{oc} at antenna port	dBm/15kHz	-98	-98
BW _{channel}	MHz	10	10
Cyclic Prefix		Normal	Normal
Cell ID		0	126
Number of control OFDM symbols / PDSCH start		2	2
Timing offset relative to TP 1	us	N/A	2
Frequency offset relative to TP 1	Hz	N/A	200
<i>qcl-Operation</i> , 'PDSCH RE Mapping and Quasi-Co-Location Indicator'		Type C, '00'	
PDSCH transmission mode (Note 2)		10	10
Number of allocated resource block		50	50
Note 1: $P_b = 1$			
Note 2: PDSCH transmission is done from both TPs (CW2 is transmitted from TP 1 and CW1 is transmitted from TP 2)			

Table 8.10.1.1.13.1-2: Configurations of PQI and DL transmission hypothesis for each PQI set

PQI set index	Parameters in each PQI set		DL transmission hypothesis for each PQI Set	
	NZP CSI-RS Index (For quasi co-location)	ZP CSI-RS configuration	TP 1	TP 2
PQI set 0	CSI-RS 0 for CW2 CSI-RS 1 for CW1	ZP CSI-RS 0	PDSCH	PDSCH

Table 8.10.1.1.13.1-3: Performance Requirements

Test Number	Reference Channel		OCNG Pattern		Propagation Conditions (Note1)		Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
	TP 1	TP 2	TP 1	TP 2	TP 1	TP 2		Fraction of Maximum Throughput (%)	SNR1 (dB) (Note 3)	
1	R.98 FDD	R.99 FDD	OP.1FD D	OP.1FD D	EPA5	EPA5	4x4 Low	70	11.0	≥2
Note 1: The propagation conditions for TP 1 and TP 2 are statistically independent.										
Note 2: Correlation matrix and antenna configuration parameters apply for each of TP 1 and TP 2.										
Note 3: SNR corresponds to \widehat{E}_s / N_{oc} of TP 1 and TP 2 as defined in clause 8.1.1.										

8.10.1.1.13.2 Minimum requirements for QCL Type C and 4 Layers Spatial Multiplexing

The requirements are specified in Table 8.10.1.1.13.2-3, with the additional parameters in Table 8.10.1.1.13.2-1 and Table 8.10.1.1.13.2-2. The purpose of this test is to verify the UE capability of supporting non quasi-co-located antenna ports when the UE receives DCI format 2D in a scenario with non-coherent joint transmission from two transmission points. The test verifies that the UE configured with quasi co-location type C performs correct tracking and compensation of the frequency and time difference between two transmission points, channel parameters estimation, channel estimation and rate matching behaviour according to the 'PDSCH RE Mapping and Quasi-Co-Location

Indicator' signalling defined in [6]. In Table 8.10.1.1.13.2-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and PDSCH, and transmission point 2 (TP 2) has different Cell ID and transmits PDSCH. In the test the PDSCH is transmitted from TP 1 and TP 2. The downlink physical channel setup for TP 1 is according to Annex C.3.2 and for TP 2 according to Annex C.3.2.

Table 8.10.1.1.13.2-1: Test Parameters

Parameter		Unit	TP 1	TP 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
Beamforming model			Random beamforming (rank 2)	Random beamforming (rank 2)
Cell-specific reference signals			Antenna ports 0,1,2,3	Antenna ports 0,1,2,3
CSI reference signals 0			Antenna ports {15,16,17,18}	N/A
CSI-RS 0 periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 2	
CSI reference signal 0 configuration			0	
CSI reference signals 1			N/A	Antenna ports {15,16,17,18}
CSI-RS 1 periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes		5 / 2
CSI reference signal 1 configuration				8
Zero-power CSI-RS 0 configuration $l_{CSI-RS} / \text{ZeroPower CSI-RS}$ bitmap		Subframes/bitmap	2/ 0010000000000000	N/A
Zero-power CSI-RS1 configuration $l_{CSI-RS} / \text{ZeroPower CSI-RS}$ bitmap		Subframes/bitmap	N/A	2/ 0010000000000000
\hat{E}_s / N_{oc}		dB	SNR1	SNR2 = SNR1
N_{oc} at antenna port		dBm/15kHz	-98	-98
$BW_{Channel}$		MHz	10	10
Cyclic Prefix			Normal	Normal
Cell ID			0	126
Number of control OFDM symbols / PDSCH start			2	2
Timing offset relative to TP 1		us	N/A	2
Frequency offset relative to TP 1		Hz	N/A	200
<i>qcl-Operation</i> , 'PDSCH RE Mapping and Quasi-Co-Location Indicator'			Type C, '00'	
PDSCH transmission mode (Note 2)			10	10
Number of allocated resource block			50	50
Note 1: $P_B = 1$				
Note 2: PDSCH transmission is done from both TPs (CW1 is transmitted from TP 1 and CW2 is transmitted from TP 2)				

Table 8.10.1.1.13.2-2: Configurations of PQI and DL transmission hypothesis for each PQI set

PQI set index	Parameters in each PQI set		DL transmission hypothesis for each PQI Set	
	NZP CSI-RS Index (For quasi co-location)	ZP CSI-RS configuration	TP 1	TP 2
PQI set 0	CSI-RS 0 for CW1 CSI-RS 1 for CW2	ZP CSI-RS 0	PDSCH	PDSCH

Table 8.10.1.1.13.2-3: Performance Requirements

Test Number	Reference Channel	OCNG Pattern	Propagation Conditions (Note1)	Correlation Matrix and Antenna	Reference Value	UE Category
-------------	-------------------	--------------	--------------------------------	--------------------------------	-----------------	-------------

	TP 1	TP 2	TP 1	TP 2	TP 1	TP 2	Configuration (Note 2)	Fraction of Maximum Throughput (%)	SNR1 (dB) (Note 3)	
1	R.100 FDD	R.100 FDD	OP.1FD D	OP.1FD D	EPA5	EPA5	4x4 Low	70	14.8	≥2
Note 1: The propagation conditions for TP 1 and TP 2 are statistically independent. Note 2: Correlation matrix and antenna configuration parameters apply for each of TP 1 and TP 2. Note 3: SNR corresponds to \widehat{E}_s/N_{oc} of TP 1 and TP 2 as defined in clause 8.1.1.										

8.10.1.1.14 HST-SFN performance

8.10.1.1.14.1 Minimum Requirement for Rel-16 further enhanced HST

The requirements are specified in Table 8.10.1.1.14.1-2, with the addition of the parameters in Table 8.10.1.1.14.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of this test is to verify UE performance in the HST-SFN-500 scenario. The test for HST-SFN-500 scenario defined in B.3B is applied when *highSpeedEnhDemodFlag2-r16* [7] is received.

Table 8.10.1.1.14.1-1: Test Parameters for UE performance in HST-SFN-500 scenario (FRC)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
PDSCH transmission mode		3
NOTE 1: $P_B = 1$.		

Table 8.10.1.1.14.1-2: Minimum performance UE in HST-SFN-500 scenario (FRC)

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1 NOTE 2	10 MHz	R.87-1 FDD	OP.1 FDD	HST-SFN-500	2x4	70	6.8	≥ 1
NOTE 1: Test case applicability is defined in 8.1.2.6. NOTE 2: The requirement defined is based on the normalized channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.								

8.10.1.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.10.1.2-1 are valid for all TDD tests unless otherwise stated.

Table 8.10.1.2-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Uplink downlink configuration (Note 1)		1
Special subframe configuration (Note 2)		4
Cyclic prefix		Normal
Cell ID		0
Inter-TTI Distance		1

Number of HARQ processes per component carrier	Processes	7
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM, 256QAM and 1024QAM
Number of OFDM symbols for PDCCH	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated
Cross carrier scheduling		Not configured
Precoder update granularity		Frequency domain: 1 PRG for Transmission modes 9 and 10 Time domain: 1 ms
ACK/NACK feedback mode		Multiplexing
Note 1: as specified in Table 4.2-2 in TS 36.211 [4].		
Note 2: as specified in Table 4.2-1 in TS 36.211 [4].		

8.10.1.2.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.1-2, with the addition of the parameters in Table 8.10.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.10.1.2.1-1: Test Parameters for Transmit diversity Performance (FRC) with 4Rx Antenna Ports

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
PDSCH transmission mode		2	
Note 1: $P_B = 1$			

Table 8.10.1.2.1-2: Minimum performance Transmit Diversity (FRC) with 4Rx Antenna Ports

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.11 TDD	OP.1 TDD	EVA5	2x4 Medium correlation A, ULA	70	3.9	≥ 2

8.10.1.2.1A Transmit diversity performance with Enhanced Performance Requirement Type A – 2 Tx Antenna Ports with TM3 interference model

The requirements are specified in Table 8.10.1.2.1A-2, with the addition of parameters in Table 8.10.1.2.1A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cells applying transmission mode 3 interference model defined in clause B.5.2. In Table 8.10.1.2.1A-1, Cell 1 is the serving cell, and Cell 2, 3 are interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively.

Table 8.10.1.2.1A-1: Test Parameters for Transmit diversity Performance (FRC) with TM3 interference model

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
$BW_{Channel}$		MHz	10	10
Cyclic Prefix			Normal	Normal
Cell Id			0	1
Number of control OFDM symbols			2	2
PDSCH transmission mode			2	N/A
Interference model			N/A	As specified in clause B.5.2
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-0	N/A
ACK/NACK feedback mode			Multiplexing	N/A
Physical channel for CQI reporting			PUSCH(Note 5)	N/A
cqi-pmi-ConfigurationIndex			4	N/A
Note 1: $P_B = 1$ Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1. Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell. Note 4: The cells are time-synchronous. Note 5: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.				

Table 8.10.1.2.1A-2: Enhanced Performance Requirement Type A, Transmit Diversity (FRC) with TM3 interference model

Test Number	Reference Channel	OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
1	R.46 TDD	OP.1 TDD	N/A	EVA70	EVA70	2x4 Low	70	-4.9	≥ 1
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent. Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1. Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.									

8.10.1.2.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.2-2, with the addition of the parameters in Table 8.10.1.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.2.2-1: Test Parameters for Large Delay CDD (FRC) with 4Rx Antenna Ports

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	-3
	ρ_B	-3 (Note 1)
	σ	0
N_{oc} at antenna port	dBm/15kHz	-98
ACK/NACK feedback mode		Bundling
PDSCH transmission mode		3
Note 1: $P_B = 1$		

Table 8.10.1.2.2-2: Minimum performance Large Delay CDD (FRC) with 4Rx Antenna Ports

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.11-1 TDD	OP.1 TDD	EVA70	2x4 Low	70	7.7	≥2

8.10.1.2.3 Closed-loop spatial multiplexing Enhanced Performance Requirements Type A - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.3-2, with the addition of the parameters in Table 8.10.1.2.3-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.10.1.2.3-1, Cell 1 is the serving cell, and Cell 2 is the interfering cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

Table 8.10.1.2.3-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model and 4Rx Antenna Ports

Parameter	Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port	dBm/15kHz	-98	N/A
DIP (Note 2)	dB	N/A	-1.73
$BW_{Channel}$	MHz	10	10
Cell Id		0	1
PDSCH transmission mode		6	N/A
Interference model		N/A	As specified in clause B.5.3
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A
	Rank 2	%	N/A
Precoding granularity	PRB	50	6
PMI delay (Note 4)	ms	10 or 11	N/A
Reporting interval	ms	5	N/A
Reporting mode		PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap		1111	N/A

Note 1: $P_B = 1$
 Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.
 Note 3: Cell 1 is the serving cell. Cell 2, 3 are the interfering cells.
 Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).
 Note 5: All cells are time-synchronous.

Table 8.10.1.2.3-2: Enhanced Performance Requirement Type A, Single-Layer Spatial Multiplexing (FRC) with TM4 interference model and 4Rx Antenna Ports

Test Number	Reference Channel and MCS	OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
1	R.47 TDD 16QAM	OP.1 TDD	N/A	EVA5	EVA5	2x4 Low	70	-1.9	≥1

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.
 Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.
 Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

8.10.1.2.4 Closed-loop spatial multiplexing performance, Dual-Layer Spatial Multiplexing 4 Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.4-2, with the addition of the parameters in Table 8.10.1.2.4-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.10.1.2.4-1: Test Parameters for Dual-Layer Spatial Multiplexing (FRC) with 4Rx Antenna Ports

Parameter	Unit	Test 1-2	Test 3
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	-98
Precoding granularity	PRB	6	6
PMI delay (Note 2)	ms	10 or 11	10 or 11
Reporting interval	ms	1 or 4 (Note 3)	1 or 4 (Note 3)
Reporting mode		PUSCH 1-2	PUSCH 3-1
ACK/NACK feedback mode		Bundling	Bundling
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 00011111111111111111100000000000 000000	00000000000000000000000000000000 00011111111111111111100000000000 000000
PDSCH transmission mode		4	4

Note 1: $P_B = 1$.
 Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)
 Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.

Table 8.10.1.2.4-2: Minimum performance Dual-Layer Spatial Multiplexing (FRC) with 4Rx Antenna Ports

Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category	DL UE category
					Fraction of Maximum Throughput (%)	SNR (dB)		

1	10 MHz 64 QAM	R.36 TDD	OP.1 TDD	EPA5	4x4 Low	70	10.4	≥ 2	≥ 6
2	10 MHz 256QAM	R.72 TDD	OP.1 TDD	EPA5	4x4 Low	70	17.5	11-12	≥ 11
3	10MHz 1024QAM	R.102 TDD	OP.1 TDD	EPA5	4x4 Low	70	28.6	TBD	20, ≥ 22

8.10.1.2.4A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing with 2Tx Antenna Ports

The requirements are specified in Table 8.10.1.2.4A-2, with the addition of the parameters in Table 8.10.1.2.4A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband precoding.

Table 8.10.1.2.4A-1: Test Parameters for Dual-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	50
PMI delay (Note 2)	ms	10 or 11
Reporting interval	ms	1 or 4 (Note 3)
Reporting mode		PUSCH 3-1
ACK/NACK feedback mode		Bundling
CodeBookSubsetRestriction bitmap		110000
PDSCH transmission mode		4
Note 1: $P_B = 1$.		
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).		
Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.		

Table 8.10.1.2.4A-2: Enhanced Performance Requirement Type C for Dual-Layer Spatial Multiplexing (FRC)

Test number	Band-width	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz	R.11-1 TDD	OP.1 TDD	ETU70	2x4 Medium	70	16.9	≥ 2

8.10.1.2.5 Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.5-2, with the addition of the parameters in Table 8.10.1.2.5-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify closed-loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.10.1.2.5-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

Table 8.10.1.2.5-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model and 4Rx Antenna Ports

parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
CSI reference signals			Antenna ports 15,16	N/A
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$		Subframes	5 / 4	N/A
CSI reference signal configuration			0	N/A

Beamforming model			As specified in clause B.4.3 (Note 4, 5)	N/A
Interference model			N/A	As specified in clause B.5.4
Probability of occurrence of transmission rank in interfering cells	Rank 1		N/A	70
	Rank 2		N/A	30
Precoder update granularity		PRB	50	6
PMI delay (Note 5)		ms	10 or 11	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			001111	N/A
Symbols for unused PRBs			OCNG (Note 6)	N/A
Simultaneous transmission			No simultaneous transmission on the other antenna port in (7 or 8) not used for the input signal under test	N/A
Physical channel for CQI reporting			PUSCH(Note 8)	N/A
cqi-pmi-ConfigurationIndex			4	N/A
<p>Note 1: $P_B = 1$</p> <p>Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.</p> <p>Note 3: The modulation symbols of the signal under test in Cell 1 are mapped onto antenna port 7 or 8.</p> <p>Note 4: The precoder in clause B.4.3 follows UE recommended PMI.</p> <p>Note 5: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 6: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.</p> <p>Note 7: All cells are time-synchronous.</p> <p>Note 8: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.</p>				

Table 8.10.1.2.5-2: Enhanced Performance Requirement Type A, CDM-multiplexed DM RS with TM9 interference model and 4Rx Antenna Ports

Test Number	Reference Channel and MCS	OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
1	R.76 TDD QPSK	OP.1 TDD	N/A	EVA5	EVA5	2x4 Low	70	-3.3	≥1

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \widehat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

8.10.1.2.5A Single-layer Spatial Multiplexing (with multiple CSI-RS configurations)

The requirements are specified in Table 8.10.1.2.5A-2, with the addition of the parameters in Table 8.10.1.2.5A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 with a simultaneous transmission on the other antenna port in the serving cell, and to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power.

Table 8.10.1.2.5A-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with multiple CSI-RS configurations

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals		Antenna ports 0,1	
CSI reference signals		Antenna ports 15,...,18	
Beamforming model		Annex B.4.1	
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 4	
CSI reference signal configuration		3	
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap	Subframes / bitmap	4 / 0010000000000000	
N_{oc} at antenna port	dBm/15kHz	-98	
Symbols for unused PRBs		OCNG (Note 4)	
Number of allocated resource blocks (Note 2)	PRB	50	
Simultaneous transmission		Yes (Note 3, 5)	
PDSCH transmission mode		9	
Number of MBSFN subframes	Subframes	NA	

Note 1: $P_B = 1$.

Note 2: The modulation symbols of the signal under test are mapped onto antenna port 7 or 8.

Note 3: Modulation symbols of an interference signal is mapped onto the antenna port (7 or 8) not used for the input signal under test.

Note 4: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.

Note 5: The two UEs' scrambling identities n_{SCID} are set to 0 for CDM-multiplexed DM RS with interfering simultaneous transmission test cases.

Table 8.10.1.2.5A-2: Minimum performance for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.44 TDD	OP.1 TDD	EPA5	2x4 Low	70	15.8	≥2

Note 1: The reference channel applies to both the input signal under test and the interfering signal.

Table 8.10.1.2.5A-3: Void

8.10.1.2.5B Single-layer Spatial Multiplexing (With Enhanced DMRS table configured)

For single-layer transmission on antenna port 7, 8, 11 or 13 upon detection of a PDCCH with DCI format 2C, the requirement is specified in Table 8.10.1.2.5B -2, with the addition of the parameters in Table 8.10.1.2.5B -1 and the downlink physical channel setup according to Annex C.3.2. The purpose of the test is to verify rank-1 performance on antenna port 11 with a simultaneous transmission on the antenna port 7, 8 or 13 with DMRS enhancement table and 4 orthogonal DMRS ports (dmrs-Enhancements-r13 UE-EUTRA-Capability [7]).

Table 8.10.1.2.5B-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations with Enhanced DMRS table

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Beamforming model		Annex B.4.1A	
Cell-specific reference signals		Antenna ports 0,1	
CSI reference signals		Antenna ports 15,...,18	
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 4	
CSI reference signal configuration		3	
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap	Subframes / bitmap	4 / 0010000000000000	
N_{oc} at antenna port	dBm/15kHz	-98	
Symbols for unused PRBs		OCNG (Note 4)	
Number of allocated resource blocks (Note 2)	PRB	50	
Simultaneous transmission		Yes (Note 3, 5)	
dmrs-Enhancements-r13		Enable	
PDSCH transmission mode		9	
Note 1: $P_B = 1$. Note 2: The modulation symbols of the signal under test are mapped onto antenna port 11. Note 3: Modulation symbols of an interference signal are random mapped onto one antenna port among antenna port 7, 8 and 13. The update granularity for randomized mapping antenna port is 1 PRG in frequency domain and 1ms in time domain. Note 4: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted			

over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.

Note 5: The two UEs' scrambling identities n_{SCID} are set to 0 with OCC =4.

Table 8.10.1.2.5B-2: Minimum performance for CDM-multiplexed DM RS with interfering simultaneous transmission (FRC) with multiple CSI-RS configurations with Enhanced DMRS table

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 64QAM 1/2	R.44 TDD	OP.1 TDD	EPA5	2x4 Low	70	15.8	≥2

Note 1: The reference channel applies to both the input signal under test and the interfering signal.

8.10.1.2.6 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

For dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.10.1.2.6-2, with the addition of the parameters in Table 8.10.1.2.6-1 where Cell 1 is the serving cell and Cell 2 is the interfering cell. The downlink physical channel setup is set according to Annex C.3.2. The purpose of these tests is to verify the rank-2 performance for full RB allocation, to verify rate matching with multiple CSI reference symbol configurations with non-zero and zero transmission power, and to verify that the UE correctly estimate SNR.

Table 8.10.1.2.6-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer) with multiple CSI-RS configurations and 4Rx Antenna Ports

Parameter		Unit	Test 1	
			Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
	PDSCH_RA	dB	4	NA
	PDSCH_RB	dB	4	NA
Cell-specific reference signals			Antenna ports 0 and 1	Antenna ports 0 and 1
Cell ID			0	126
CSI reference signals			Antenna ports 15,16	NA
Beamforming model			Annex B.4.2	NA
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 4	NA
CSI reference signal configuration			8	NA
Zero-power CSI-RS configuration $l_{CSI-RS} / ZeroPowerCSI-RS$ bitmap		Subframes / bitmap	4 / 0010000000000000	NA
N_{oc} at antenna port		dBm/15kHz	-98	NA
\hat{E}_s / N_{oc}			Reference Value in Table 8.10.1.2.6-2	7.25dB
Symbols for unused PRBs			OCNG (Note 2)	NA
Number of allocated resource blocks (Note 2)		PRB	50	NA
Simultaneous transmission			No	NA
PDSCH transmission mode			9	Blanked

Note 1: $P_B = 1$
 Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.

Table 8.10.1.2.6-2: Minimum performance for CDM-multiplexed DM RS (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern		Propagation Condition		Correlation Matrix and Antenna Configuration	Reference value		UE Category
			Cell 1	Cell 2	Cell 1	Cell 2		Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.51 TDD	OP.1 TDD	N/A	ETU5	ETU5	2x4 Low	70	9.5	≥2

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.
 Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.
 Note 3: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1.

8.10.1.2.6A Enhanced Performance Requirement Type C - Dual-Layer Spatial Multiplexing

The requirements are specified in Table 8.10.1.2.6A-2, with the addition of the parameters in Table 8.10.1.2.6A-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the rank-two performance for full RB allocation upon antenna ports 7 and 8.

Table 8.10.1.2.6A-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer)

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
Cell-specific reference symbols		Antenna port 0 and antenna port 1
Beamforming model		Annex B.4.3
N_{oc} at antenna port	dBm/15kHz	-98
Symbols for unused PRBs		OCNG (Note 2)
Number of allocated resource blocks	PRB	50
Reporting mode		PUSCH 3-1
PDSCH transmission mode		9
Note 1: $P_B = 1$. Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.		

Table 8.10.1.2.6A-2: Enhanced Performance Requirement Type C for CDM-multiplexed DM RS (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and	Reference value		UE Category
						Fraction of Maximum	SNR (dB)	

					Antenna Configuration	Throughput (%)		
1	10 MHz 16QAM 1/2	R.32 TDD	OP.1 TDD	EPA5	2x4 Medium	70	15.8	≥2

8.10.1.2.6B Dual-Layer Spatial Multiplexing with altCQI-Table-1024QAM configured (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.6B-2, with the addition of the parameters in Table 8.10.1.2.6B-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the rank-two performance for full RB allocation upon antenna ports 7 and 8.

Table 8.10.1.2.6B-1: Test Parameters for Testing CDM-multiplexed DM RS (dual layer) with multiple CSI-RS configurations

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3

8.10.1.2.10 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.10-2, with the addition of parameters in Table 8.10.1.2.10-1. In Table 8.10.1.2.10-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.10.1.2.10-1: Test Parameters

Parameter	Unit	Cell 1	Cell 2	Cell 3
-----------	------	--------	--------	--------

Uplink downlink configuration			1	1	1
Special subframe configuration			4	4	4
Downlink power allocation	ρ_A	dB	-3	-3	-3

Interference model			N/A	As specified in clause B.5.3	As specified in clause B.5.3
Probability of occurrence of transmission in interference cells		%	N/A	20	20
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF #(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.					

Table 8.10.1.2.10-2: Minimum Performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.35 TDD	OP.1T DD	N/A	N/A	EVA5	EVA5	EVA5	2x4 low	70	11.2	≥ 2

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.

Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.

Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.

8.10.1.2.11 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.11-2, with the addition of parameters in Table 8.10.1.2.11-1. In Table 8.10.1.2.11-1, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup is

according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2.

The purpose of the test is to verify the closed loop single layer TM4 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cell.

Table 8.10.1.2.11-1: Test Parameters

Parameter		Unit	Cell 1	Cell 2

Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.									

8.10.1.2.12 Closed loop spatial multiplexing performance - Single-Layer Spatial Multiplexing with CRS assistance information (User-Specific Reference Symbols)

The requirements are specified in Table 8.10.1.2.12-2, with the addition of parameters in Table 8.10.1.2.12-1. In Table 8.10.1.2.12-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single layer TM9 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

8.10.1.2.13 Performance requirements for DCI format 2D and non Quasi Co-located Antenna Ports

8.10.1.2.13.1 Minimum requirements for QCL Type C and 3 Layers Spatial Multiplexing

The requirements are specified in Table 8.10.1.2.13.1-3, with the additional parameters in Table 8.10.1.2.13.1-1 and Table 8.10.1.2.13.1-2. The purpose of this test is to verify the UE capability of supporting non quasi-co-located antenna ports when the UE receives DCI format 2D in a scenario with non-coherent joint transmission from two transmission points. The test verifies that the UE configured with quasi co-location type C performs correct tracking and compensation of the frequency and time difference between two transmission points, channel parameters estimation, channel estimation and rate matching behaviour according to the ‘PDSCH RE Mapping and Quasi-Co-Location Indicator’ signalling defined in [6]. In Table 8.10.1.2.13.1-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and PDSCH, and transmission point 2 (TP 2) has different Cell ID and transmits PDSCH. In the test the PDSCH is transmitted from TP 1 and TP 2. The downlink physical channel setup for TP 1 is according to Annex C.3.2 and for TP 2 according to Annex C.3.2.

Table 8.10.1.2.13.1-1: Test Parameters

Parameter	Unit	TP 1	TP 2
Uplink downlink configuration		1	1
Special subframe configuration		4	4

8.10.1.2.14 HST-SFN performance

8.10.1.2.14.1 Minimum Requirement for Rel-16 further enhanced HST

The requirements are specified in Table 8.10.1.2.14-2, with the addition of the parameters in Table 8.10.1.2.14-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of this test is to verify UE performance in the HST-SFN-500 scenario. The test for HST-SFN-500 scenario defined in B.3B is applied when *highSpeedEnhDemodFlag2-r16* [7] is received.

Table 8.10.1.2.14-1: Void**Table 8.10.1.2.14-2: Void**

NOTE: Table 8.10.1.2.14-1 and Table 8.10.1.2.14-2 are moved to subclause 8.10.1.2.14.1 as Table 8.10.1.2.14.1-1 and Table 8.10.1.2.14.1-2.

Table 8.10.1.2.14.1-1: Test Parameters for UE performance in HST-SFN-500 scenario (FRC)

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (NOTE 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
ACK/NACK feedback mode			Multiplexing
PDSCH transmission mode			3
NOTE 1: $P_B = 1$.			

Table 8.10.1.2.14.1-2: Minimum performance UE in HST-SFN-500 scenario (FRC)

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1 NOTE 2	10 MHz	R.87-1 TDD	OP.1 TDD	HST-SFN-500	2x4	70	6.8	≥ 1
NOTE 1: Test case applicability is defined in 8.1.2.1 and 8.1.2.6.								
NOTE 2: The requirement defined is based on the normalized channel model, i.e.the power of each tap is normalized to the instantaneous total received power from four taps.								

8.10.2 PDCCH/PCFICH

8.10.2.1 FDD

The parameters specified in Table 8.10.2.1-1 are valid for all FDD tests unless otherwise stated.

Table 8.10.2.1-1: Test Parameters for PDCCH/PCFICH with 4 Rx Antenna Ports

Parameter		Unit	Single antenna port	Transmit diversity

8.10.2.1.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.10.2.1.4-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.1.4-2. In Table 8.10.2.1.4-1, Cell 1 is the serving cell, and Cell 2

is the aggressor cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell, respectively.

Table 8.10.2.1.4-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3
	PHICH_RA	dB	-3	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3
	PHICH_RB	dB	-3	N/A
Cell-specific reference signals			Antenna ports 0,1,2,3	
N_{oc} at antenna port		dBm/15kHz	-98	
\hat{E}_s/N_{oc}		dB	As defined in Table 8.10.2.1.4-2	13.91
$BW_{Channel}$		MHz	10	10
Cyclic Prefix			Normal	Normal
Cell ID			0	1
Subframe Configuration			Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols			2	2
CFI indicated in PCFICH			2	2
PHICH Ng (Note 1)			1/6	N/A
PHICH duration			Normal	N/A
PDSCH TM			4	N/A
Interference model			NA	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)			OCNG	OCNG
Time Offset relative to Cell 1		μ s	N/A	2
Frequency shift relative to Cell 1		Hz	N/A	200
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 unused RE-s and PRB-s do not include control region REs.				

Table 8.10.2.1.4-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)		Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2		Pm-dsg (%)	SNR (dB) (Note 4)
1	1 CCE	R.17-2 FDD	OP.1 FDD	EPA5	EPA5	4x4 Low	1	16.5

Note 1: The OCNG pattern applies for Cell 1 and Cell 2.

Note 2: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.

Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.

8.10.2.2.1 Single-antenna port performance

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.10.2.2.1-1: Minimum performance PDCCH/PCFICH

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value	
							Pm-dsg (%)	SNR (dB)
1	10 MHz	8 CCE	R.15 TDD	OP.1 TDD	ETU70	1x4 Low	1	-4.7

8.10.2.2.2 Transmit diversity performance with 2 Tx Antenna Ports

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.2-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.10.2.2.2-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports

							Pm-dsg (%)	SNR (dB)
1	10 MHz	4 CCE	R.16 TDD	OP.1 TDD	EVA70	2 x 4 Low	1	-3.2

8.10.2.2.3 Transmit diversity performance with 4 Tx Antenna Ports

For the parameters specified in Table 8.10.2.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.3-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.10.2.2.3-1: Minimum performance PDCCH/PCFICH with 4Rx Antenna ports

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value	
							Pm-dsg (%)	SNR (dB)
1	5 MHz	2 CCE	R.17 TDD	OP.1 TDD	EPA5	4 x 4 Medium A Xpol	1	0.0

8.10.2.2.4 Enhanced Downlink Control Channel Performance Requirement Type A - 4 Tx Antenna Port with Non-Colliding CRS Dominant Interferer

The purpose of this test is to verify the Enhanced Downlink Control Channel Performance Requirement Type A for PDCCH/PCFICH with 4 transmit antennas for the case of dominant interferer with the non-colliding CRS pattern and applying interference model defined in clause B.7.1.

For the parameters specified in Table 8.10.2.2.4-1, the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.10.2.2.4-2. In Table 8.10.2.2.4-1, Cell 1 is the serving cell, and Cell 2 is the aggressor cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell, respectively.

Table 8.10.2.2.4-1: Test Parameters for PDCCH/PCFICH

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	PDCCH_RA OCNG_RA	dB	-3	-3
	PHICH_RA	dB	-3	N/A
	PCFICH_RB PDCCH_RB OCNG_RB	dB	-3	-3
	PHICH_RB	dB	-3	N/A
Cell-specific reference signals			Antenna ports 0,1,2,3	
N_{oc} at antenna port		dBm/15kHz	-98	
\hat{E}_s/N_{oc}		dB	As defined in Table 8.10.2.1.4-2	13.91
BW _{Channel}		MHz	10	10
Cyclic Prefix			Normal	Normal
Cell ID			0	1
UL/DL Configuration			0	0
Special Subframe Configuration			4	4
Subframe Configuration			Non-MBSFN	Non-MBSFN
Number of DL control region OFDM symbols			2	
CFI indicated in PCFICH			2	
PHICH Ng (Note 1)			1/6	N/A
PHICH duration			Normal	N/A
PDSCH TM			4	N/A
Interference model			NA	As specified in clause B.7.1
Unused RE-s and PRB-s (Note 2)			OCNG	OCNG
Time Offset relative to Cell 1		μs	N/A	2
Frequency shift relative to Cell 1		Hz	N/A	200
Note 1: According to Clause 6.9 in TS 36.211 [4].				
Note 2: For Cell 2 unused RE-s and PRB-s do not include control region REs.				

Table 8.10.2.1.4-2: Minimum Performance for PDCCH/PCFICH for Enhanced Downlink Control Channel Performance Requirement Type A

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)		Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2		Pm-dsg (%)	SNR (dB) (Note 4)
1	1 CCE	R.17-2 TDD	OP.1 TDD	EPA5	EPA5	4x4 Low	1	17.9
Note 1: The OCNG pattern applies for Cell 1 and Cell 2.								
Note 2: The propagation conditions for Cell 1 and Cell 2 are statistically independent.								
Note 3: The correlation matrix and antenna configuration apply for Cell 1 and Cell 2.								
Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.								

8.10.3 PHICH

The receiver characteristics of the PHICH are determined by the probability of miss-detecting an ACK for a NACK (P_{m-an}). It is assumed that there is no bias applied to the detection of ACK and NACK (zero-threshold detection).

8.10.3.1 FDD

The parameters specified in Table 8.10.3.1-1 are valid for all FDD tests with 4Rx unless otherwise stated.

Table 8.10.3.1-1: Test Parameters for PHICH with 4 Rx Antenna Ports

Parameter		Unit	Single antenna port	Transmit diversity

1	5 MHz	R.20	OP.1 TDD	EPA5	4 x 4 Medium cotrrelation A, Cross polarized	0.1	0.3

8.10.4 ePDCCH

The receiver characteristics of the EPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (P_{m-dsg}). For the distributed transmission tests in 8.10.4.1, EPDCCH and PCFICH are tested jointly, i.e. a miss detection of PCFICH implies a miss detection of EPDCCH. For other tests, EPDCCH and PCFICH are not tested jointly.

8.10.4.1 Distributed Transmission with 4Rx

8.10.4.1.1 FDD

The parameters specified in Table 8.10.4.1.1-1 are valid for all FDD distributed EPDCCH test with 4Rx unless otherwise stated.

Table 8.10.4.1.1-1: Test Parameters for Distributed EPDCCH with 4Rx

Parameter		Unit	Value
Number of PDCCH symbols		symbols	2 (Note 1)
PHICH duration			Normal

Beamforming Precoder for MPDCCH		Annex B.4.4	Annex B.4.4
Precoder update granularity for MPDCCH		Frequency domain: 1 PRB Time domain: identical during the hopping period (interval-FDD for CE Mode A)	Frequency domain: 1 PRB Time domain: identical during the hopping period (interval-FDD for CE Mode B)
BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR)		1111111111	1111111111
HARQ bundling(ce-HARQ-AckBundling)		For test 7 in clause 8.11.1.1.3.1, enabled,otherwise, disabled	Disabled
Note 1: r_{Vidx} is defined in TS 36.213 [6] Table 7.1.7.1-2. Note 2: For the tests except test 7 in clause 8.11.1.1.3.1, for UE supporting ce-pdsch-tenProcesses-r13, the number of HARQ processes are set to 10, otherwise, it is set to 8.For the test 7 in clause 8.11.1.1.3.1, the number of HARQ processes is set to 14.			

8.11.1.1.1 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

8.11.1.1.1.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.11.1.1.1-2, with the addition of the parameters in Table 8.11.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.11.1.1.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
	δ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	
Precoding granularity	PRB	6	
PMI delay (Note 2)	ms	10	
Reporting interval	ms	10	
Reporting mode		PUCCH 1-1	
Physical channel for CQI reporting		PUSCH(Note4)	
cqi-pmi-ConfigIndex		12	
CodeBookSubsetRestriction bitmap		001111	
PDSCH transmission mode		6	
Coverage enhancement mode		CE Mode A	
OFDM starting symbol (startSymbolBR)		2	
Maximum number of repetitions (mpdcch-NumRepetition)		1	
Frequency hopping (mpdcch-pdsch-HoppingConfig)		Disabled	

MPDCCH transmission duration	ms	1
Starting subframe configuration for MPDCCH (mpdcch_startSF_UESS)		1
Narrowband for MPDCCH (mpdcch_Narrowband)		1
<p>Note 1: $P_B = 1$.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), This reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: For each test, DC subcarrier puncturing shall be considered.</p> <p>Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.</p> <p>Note 5: If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate.</p>		

Table 8.11.1.1.1-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value	
						Fraction of Maximum Throughput (%)	SNR (dB)
1	10MHz 16QAM 1/2	R.79 FDD	OP.2 FDD	EPA5	2x1 Low	70%	8.6

8.11.1.1.1.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.1.1.2-2, with the addition of parameters in Table 8.11.1.1.1.2-1. In Table 8.11.1.1.1.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.1.1.1.2-1: Test Parameters

Parameter	Unit	Cell 1	Cell 2	Cell 3	
Downlink power allocation	ρ_A	dB	-3	-3	-3
	ρ_B	dB	-3 (Note 1)	-3 (Note 1)	-3 (Note 1)
	σ	dB	0	0	0
N_{oc} at antenna port	dBm/15kHz	-98	N/A	N/A	
\bar{E}_s/N_{oc}	dB	N/A	11.75	5.69	
$BW_{Channel}$	MHz	10	10	10	
Cyclic prefix		Normal	Normal	Normal	
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN	
Cell ID		0	1	6	
Cell-specific reference signals		Antenna ports 0,1			
Number of control OFDM symbols (CFI)		2	2	2	
PDSCH transmission mode		6	N/A	N/A	
Coverage enhancement mode		CE Mode A	N/A	N/A	
OFDM starting symbol (startSymbolBR)		2	N/A	N/A	

Maximum number of repetitions (mpdcch-NumRepetition)		1	N/A	N/A
Frequency hopping (mpdcch-pdsch-HoppingConfig)		Disabled	N/A	N/A
MPDCCH transmission duration	ms	1	N/A	N/A
Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)		1	N/A	N/A
Precoding granularity	PRB	6	N/A	N/A
PMI delay (Note 2)	ms	10	N/A	N/A
Reporting interval	ms	10	N/A	N/A
Reporting mode		PUCCH 1-1	N/A	N/A
Physical channel for CQI reporting		PUSCH(Note4)		
CodeBookSubsetRestriction bitmap		001111	N/A	N/A
Time offset relative to Cell 1	μs	N/A	3	-1
Frequency shift relative to Cell 1	Hz	N/A	300	-100
Interference model		N/A	As specified in clause B.5.3	As specified in clause B.5.3
Probability of occurrence of transmission in interference cells	%	N/A	10	10
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4). This reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: For each test, DC subcarrier puncturing shall be considered. Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.				

Table 8.11.1.1.2-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.79 FDD	OP.1F DD	N/A	N/A	EPA5	EPA5	EPA5	2x1 Low	70	12.5	M2
Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 3: SNR corresponds to \bar{E}_s/N_{oc} of cell 1.											

8.11.1.1.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.1.3-2, with the addition of parameters in Table 8.11.1.1.3-1. In Table 8.11.1.1.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.11.1.1.3-1: Test Parameters

Parameter	Unit	Cell 1	Cell 2	Cell 3
-----------	------	--------	--------	--------

Downlink power allocation	ρ_A	dB	-6	-6	-6
	ρ_B	dB	-6 (Note 1)	-6 (Note 1)	-6 (Note 1)
	σ	dB	3	3	3
N_{oc} at antenna port		dBm/15kHz	-98	N/A	N/A
\bar{E}_s/N_{oc}		dB	N/A	10.45	4.6
$BW_{Channel}$		MHz	10	10	10
Cyclic prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID			0	1	6
Cell-specific reference signals			Antenna ports 0,1,2,3		
Number of control OFDM symbols (CFI)			2	2	2
PDSCH transmission mode			6	N/A	N/A

OFDM starting symbol (startSymbolBR)			2	N/A	N/A
Maximum number of repetitions (mpdcch-NumRepetition)			1	N/A	N/A
Frequency hopping (mpdcch-pdsch-HoppingConfig)			Disabled	N/A	N/A
MPDCCH transmission duration		ms	1	N/A	N/A
Starting subframe configuration for MPDCCH (mpdcch_startSF_UESS)			1	N/A	N/A
Precoding granularity		PRB	6	N/A	N/A
PMI delay (Note 2)		ms	10	N/A	N/A
Reporting interval		ms	10	N/A	N/A
Reporting mode			PUCCH 1-1	N/A	N/A
Physical channel for CQI reporting			PUSCH(Note4)		
CodeBookSubsetRestriction bitmap			001111	N/A	N/A
Time offset relative to Cell 1		μ s	N/A	3	-1
Frequency shift relative to Cell 1		Hz	N/A	300	-100
Interference model			N/A	As specified in clause B.5.3	As specified in clause B.5.3
Probability of occurrence of transmission in interference cells		%	N/A	20	20
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
<p>Note 1: $P_B = 1$.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4). This reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: For each test, DC subcarrier puncturing shall be considered.</p> <p>Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.</p>					

Table 8.11.1.1.3-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.95 FDD	OP.1F DD	N/A	N/A	EPA5	EPA5	EPA5	4x1 Low	70	11.4	M2

Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.

Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.

Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.

8.11.1.1.2 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

8.11.1.1.2.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a MPDCCH with DCI format 6-1A, the requirements are specified in Table 8.11.1.1.2.1-2 with the addition of the parameters in Table 8.11.1.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8.

Table 8.11.1.1.2.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer)

parameter	Unit	Test 1	Test 2	Test 3
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0 (Note 1)
	σ	dB	-3	-3
	δ	dB	0	0
Beamforming model		Annex B.4.1	Annex B.4.1	Annex B.4.1
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port	dBm/15kHz	-98 (Note 6)	-98 (Note 6)	-98 (Note 6)
Symbols for unused PRBs		OCNG (Note 3)	OCNG (Note 3)	OCNG (Note 3)
Number of allocated resource blocks (Note 2)	PRB	6	6	6
Simultaneous transmission		No	No	No
PDSCH transmission mode		9	9	9
Coverage enhancement mode		CE Mode A	CE Mode A	CE Mode A
OFDM starting symbol (startSymbolBR)		2	2	2
Maximum number of repetitions for PDSCH (<i>pdsch-maxNumRepetitionCEmodeA</i>)		16	16	Not configured
PDSCH repetition number		8	4	2
Frequency hopping (mpdcch-pdsch-HoppingConfig)		Enabled	Enabled	Enabled
Frequency hopping offset (mpdcch-pdsch-HoppingOffset)		1	1	1
Frequency hopping interval (interval-FDD)	ms	8	2	1
MPDCCH transmission duration (mPDCCH-NumRepetition)	ms	8	2	1
MPDCCH repetition number		8	2	1
Number of narrowbands for frequency hopping (mpdcch-pdsch-HoppingNB)		2	2	2
Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)		4	8	10
Narrowband for MPDCCH (mpdcch_Narrowband)		7	7	7
MPDCCH aggregation level		24	24	24
Note 1: $P_B = 1$.				
Note 2: The modulation symbols of the signal under test are mapped onto antenna port 7 or 8.				
Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.				
Note 4: For each test, DC subcarrier puncturing shall be considered.				
Note 5: If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate.				

Table 8.11.1.1.2.1-2: Minimum performance for CDM-multiplexed DM RS (FRC)

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10MHz QPSK 1/3	R.80 FDD	OP.2 FDD	EPA5	2x1 Low	70	-2.0	M1
2	10MHz QPSK 1/3	R.80-1 FDD	OP.2 FDD	EPA5	2x2 Low	70	-4.0	≥1

8.11.1.2.1 Closed-loop spatial multiplexing performance (Cell-Specific Reference Symbols)

8.11.1.2.1.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port

The requirements are specified in Table 8.11.1.2.1.1-2, with the addition of the parameters in Table 8.11.1.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-one performance with frequency selective precoding.

Table 8.11.1.2.1.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC)

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
	δ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	
Precoding granularity	PRB	6	
PMI delay (Note 2)	ms	10 or 11	
Reporting interval	ms	5	
Reporting mode		PUCCH 1-1	
cqi-pmi-ConfigIndex		4	
CodeBookSubsetRestriction bitmap		001111	
ACK/NACK feedback mode		Multiplexing	
Physical channel for CQI reporting		PUSCH (Note 3)	
PDSCH transmission mode		6	
Coverage enhancement mode		CE Mode A	
OFDM starting symbol (startSymbolBR)		2	
Maximum number of repetitions (mpdcch-NumRepetition)		1	
Frequency hopping (mpdcch-pdsch-HoppingConfig)		Disabled	
MPDCCH transmission duration	ms	1	
Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)		1	
Narrowband for MPDCCH (mpdcch_Narrowband)		1	

Note 1:	$P_B = 1$.
Note 2:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.
Note 4:	For each test, DC subcarrier puncturing shall be considered.
Note 5:	If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate.

Table 8.11.1.2.1-2: Minimum performance Single-Layer Spatial Multiplexing (FRC)

Test number	Bandwidth h and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value	
						Fraction of Maximum Throughput (%)	SNR (dB)
1	10MHz 16QAM 1/2	R.79 TDD	OP.2 TDD	EPA5	2x1 Low	70%	11.4

8.11.1.2.1.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.2.1.2-2, with the addition of parameters in Table 8.11.1.2.1.2-1. In Table 8.11.1.2.1.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.1.2.1.2-1: Test Parameters

Parameter	Unit	Cell 1 (Option 1)	Cell 2	Cell 3
Uplink downlink Configuration		1	1	1
Special subframe configuration		4	4	4
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3 (Note 1)
	σ	dB	0	0
N_{oc} at antenna port	dBm/15kHz	-98	N/A	N/A

$BW_{Channel}$	MHz	10	10	10
Cyclic prefix		Normal	Normal	Normal
Subframe Configuration		Non-MBSFN	Non-MBSFN	Non-MBSFN
Cell ID		0	1	6
Cell-specific reference signals		Antenna ports 0,1		
Number of control OFDM symbols (CFI)		2	2	2
PDSCH transmission mode		6	N/A	N/A
Coverage enhancement mode		CE Mode A	N/A	N/A
OFDM starting symbol (startSymbolBR)		2	N/A	N/A
Maximum number of repetitions (mpdcch-NumRepetition)		1	N/A	N/A

Frequency hopping (mpdcch-pdsch-HoppingConfig)		Disabled	N/A	N/A	
Frequency hopping offset (mpdcch-pdsch-HoppingOffset)		N/A	N/A	N/A	
Frequency hopping interval (interval-TDD)	ms	N/A	N/A	N/A	
MPDCCH transmission duration	ms	1	N/A	N/A	
Starting subframe configuration for MPDCCH (mpdcch_startSF_U ESS)		1	N/A	N/A	
Precoding granularity	PRB	6	N/A	N/A	
PMI delay (Note 2)	ms	10 or 11	N/A	N/A	
Reporting interval	ms	5	N/A	N/A	
Reporting mode		PUCCH 1-1	N/A	N/A	
Physical channel for CQI reporting		PUSCH(Note4)			
CodeBookSubsetRestriction bitmap		001111	N/A	N/A	
Time Offset relative to Cell 1	μs	N/A	3	-1	
Frequency shift relative to Cell 1	Hz	N/A	300	-100	
Interference model		N/A	As specified in clause B.5.3	As specified in clause B.5.3	
Probability of occurrence of transmission in interference cells	%	N/A	10	10	
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80	80
	Rank 2	%	N/A	20	20
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF #(n-4). This reported PMI cannot be applied at the eNB downlink before SF #(n+4). Note 3: For each test, DC subcarrier puncturing shall be considered. Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQACK on PUSCH in uplink subframe SF#8 and #3.					

Table 8.11.1.2.1.2-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern			Propagation Conditions (Note1)			Correlation Matrix and Antenna Configuration (Note 2)	Reference Value		UE Category
		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3		Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	
1	R.79 TDD	OP.1T DD	N/A	N/A	EPA5	EPA5	EPA5	2x1 Low	70	11.5	M2
Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.											

8.11.1.2.1.3 Minimum Requirement Single-Layer Spatial Multiplexing 4 Tx Antenna Port with CRS assistance information

The requirements are specified in Table 8.11.1.2.1.3-2, with the addition of parameters in Table 8.11.1.2.1.3-1. In Table 8.11.1.2.1.3-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the closed loop single-layer spatial multiplexing TM6 performance under assumption that UE applies CRS interference mitigation in the scenario with 4 CRS antenna ports in the serving and aggressor cells.

Table 8.11.1.2.1.3-1: Test Parameters

Parameter	Unit	Cell 1	Cell 2	Cell 3
Uplink downlink Configuration		1	1	1
Special subframe configuration		4	4	4
Downlink power allocation	ρ_A	dB	-6	-6
	ρ_B	dB	-6 (Note 1)	-6 (Note 1)
	σ	dB	3	3

Probability of occurrence of transmission in interference cells	%	N/A	20	20
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Note 1: $P_B = 1$.				
Note 2: If the UE reports in an available uplink reporting instance at subframe SF #n based on PMI estimation at a downlink SF not later than SF#(n-4). This reported PMI cannot be applied at the eNB downlink before SF#(n+4).				
Note 3: For each test, DC subcarrier puncturing shall be considered.				
Note 4: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQACK on PUSCH in uplink subframe SF#8 and #3.				

Table 8.11.1.2.1.3-2: Minimum performance for PDSCH

Test Number	Reference Channel	OCNG Pattern	Propagation Conditions (Note1)	Correlation Matrix and	Reference Value
-------------	-------------------	--------------	--------------------------------	------------------------	-----------------

		Cell 1	Cell 2	Cell 3	Cell 1	Cell 2	Cell 3	Antenna Configuration (Note 2)	Fraction of Maximum Throughput (%)	SNR (dB) (Note 3)	UE Category
1	R.95 TDD	OP.1T DD	N/A	N/A	EPA5	EPA5	EPA5	4x1 Low	70	11.1	M2
Note 1: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 2: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 3: SNR corresponds to \hat{E}_s/N_{oc} of cell 1.											

8.11.1.2.2 Closed-loop spatial multiplexing performance (User-Specific Reference Symbols)

8.11.1.2.2.1 Single-layer Spatial Multiplexing

For single-layer transmission on antenna ports 7 or 8 upon detection of a PDCCH with DCI format 6-1A, the requirements are specified in Table 8.11.1.2.2.1-2 with the addition of the parameters in Table 8.11.1.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify rank-1 performance on one of the antenna ports 7 or 8.

Table 8.11.1.2.2.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer)

Parameter	Unit	Test 1	Test 2	Test 3	
Downlink power allocation	ρ_A	dB	0	0	0
	ρ_B	dB	0 (Note 1)	0 (Note 1)	0 (Note 1)
	σ	dB	-3	-3	-3
	δ	dB	0	0	0
Cell-specific reference signals		Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1	
Beamforming model		Annex B.4.1	Annex B.4.1	Annex B.4.1	
N_{oc} at antenna port	dBm/15kHz	-98	-98	-98	
Symbols for unused PRBs		OCNG (Note 3)	OCNG (Note 3)	OCNG (Note 3)	
Number of allocated resource blocks (Note 2)	PRB	6	6	6	
Simultaneous transmission		No	No	No	
PDSCH transmission mode		9	9	9	
Coverage enhancement mode		CE Mode A	CE Mode A	CE Mode A	
OFDM starting symbol (startSymbolBR)		2	2	2	
Maximum number of repetitions for PDSCH ($pdsch\text{-}maxNumRepetitionCEmodeA$)		Not configured	Not configured	Not configured	
Frequency hopping (mpdcch-pdsch-HoppingConfig)		Enabled	Enabled	Enabled	
PDSCH repetition number		8	4	2	
Frequency hopping offset (mpdcch-pdsch-HoppingOffset)		1	1	1	
Frequency hopping interval (interval-TDD)	ms	10	1	1	
MPDCCH transmission duration (mPDCCH-NumRepetition)	ms	8	2	1	
MPDCCH repetition number		8	2	1	
Number of narrowbands for frequency hopping (mpdcch-pdsch-HoppingNB)		2	2	2	
Starting subframe configuration for MPDCCH (mpdcch_startSF_UESS)		10	20	20	
Narrowband for MPDCCH (mpdcch_Narrowband)		7	7	7	
MPDCCH aggregation level		24	24	24	

Note 1:	$P_B = 1$.
Note 2:	The modulation symbols of the signal under test are mapped onto antenna port 7 or 8.
Note 3:	These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.
Note 4:	For each test, DC subcarrier puncturing shall be considered.
Note 5:	If not otherwise stated, the values in this table refer to parameters in TS 36.211 [4] or/and TS 36.213 [6] as appropriate.

Table 8.11.1.2.2.1-2: Minimum performance for CDM-multiplexed DM RS without simultaneous transmission (FRC) with multiple CSI-RS configurations

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10MHz QPSK 1/3	R.80 TDD	OP.2 TDD	EPA5	2x1 Low	70	-2.5	M1
2	10MHz QPSK 1/3	R.80-1 TDD	OP.2 TDD	EPA5	2x2 Low	70	-3.6	≥1
3	10MHz QPSK 1/3	R.80-2 TDD	OP.2 TDD	EPA5	2x4 Low	70	-3.7	≥1

8.11.1.2.3 Transmit diversity performance (Cell-Specific Reference Symbols)

8.11.1.2.3.1 Minimum Requirement 2 Tx Antenna Port supporting narrowband transmission

The requirements are specified in Table 8.11.1.2.3.1-2, with the addition of the parameters in Table 8.11.1.2.3.1-1 and Table 8.11.1.2.3.1-1a, and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.11.1.2.3.1-1: Test Parameters for Transmit diversity performance (FRC)

Parameter		Unit	Test 1 (Note 3)	Test 2 (Note 3)	Test 2a (Note 3)	Test 3 (Note 3)	Test 4 (Note 3)
Downlink power allocation	ρ_A	dB	-3	-3	-3	-3	-3
	ρ_B	dB	-3 (Note 1)	-3 (Note 1)	-3 (Note 1)	-3 (Note 1)	-3 (Note 1)
	σ	dB	0	0	0	0	0
	δ	dB	3	3	3	3	3
N_{oc} at antenna port		dBm/15kHz	-98	-98	-98	-98	-98

8.11.2.1.1 CE Mode A

For the parameters specified in Table 8.11.2.1-1 and 8.11.2.1-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.2.1.1-1: Minimum performance CE Mode A MPDCCH

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
							Pm-dsg (%)	SNR (dB)	
1	10 MHz	16 ECCE	R.82 FDD	OP.2 FDD	EPA5	2 x 1 Low	1	-4.8	M1
2	10 MHz	16 ECCE	R.82 FDD	OP.2 FDD	EPA5	2 x 2 Low	1	-6.5	≥1
3	10 MHz	16 ECCE	R.82 FDD	OP.2 FDD	EPA5	2 x 4 Low	1	-6.5	≥1

8.11.2.1.2 CE Mode B

For the parameters specified in Table 8.11.2.1-1 and 8.11.2.1-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.1.2-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.2.1.2-1: Minimum performance CE Mode B MPDCCH

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
							Pm-dsg (%)	SNR (dB)	
1	10 MHz	24 ECCE	R.83 FDD	OP.2 FDD	ETU1	2 x 1 Low	1	-12	M1
2	10 MHz	24 ECCE	R.83 FDD	OP.2 FDD	ETU1	2 x 2 Low	1	-13.2	≥1
3	10 MHz	24 ECCE	R.83 FDD	OP.2 FDD	ETU1	2 x 4 Low	1	-12.8	≥1

8.11.2.1.3 CE Mode A with TM9 interference model

The requirements are specified in Table 8.11.2.1.3-2, with the addition of parameters in Table 8.11.2.1.3-1. In Table 8.11.2.1.3-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.1.3-1: Test Parameters for MPDCCH

Parameter		Unit	Cell 1	Cell 2	Cell 3
OFDM starting symbol (startSymbolLC)		symbols	2	2	2
Unused RE-s and PRB-s			OCNG	N/A	N/A

fdd-DownlinkOrTddSubframeBitmapBR			1111111111	N/A	N/A
Interference model			N/A	As specified in clause B.5.4	As specified in clause B.5.4
Probability of occurrence of transmission in interference cells		%	N/A	10	10
Probability of occurrence of PDSCH transmission rank in interfering cells	Rank 1	%	N/A	70	70
	Rank 2	%	N/A	30	30
Time offset relative to Cell 1		μ s	N/A	2	3
Frequency shift relative to Cell 1		Hz	N/A	200	300
Note 1: For each test, DC subcarrier puncturing shall be considered.					
Note 2: Same precoding matrix is used for a PRB across subframes during the frequency hopping interval					
Note 3: For MPDCCH UE-specific search space the formula for the start subframe k_0 is given in TS 36.213 [6] clause 9.1.5.					

Table 8.11.2.1.3-2: Minimum performance CE Mode A MPDCCH

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	16 ECCE	R.82 FDD	OP.2 FDD	EPA5	EPA5	EPA5	2x1 Low	1	15.4
Note 1: The OCNG pattern applies for Cell 1.									
Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.									
Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.									
Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1.									

8.11.2.1.4 CE Mode A with CRS interference model

The requirements are specified in Table 8.11.2.1.4-2, with the addition of parameters in Table 8.11.2.1.4-1. In Table 8.11.2.1.4-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

8.11.2.2.1 CE Mode A

For the parameters specified in Table 8.11.2.2-1 and 8.11.2.2-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.2.2.1-1: Minimum performance CE Mode A MPDCCH

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
							Pm-dsg (%)	SNR (dB)	
1	10 MHz	16 ECCE	R.82 TDD	OP.2 TDD	EPA5	2 x 1 Low	1	-5.3	M1
2	10 MHz	16 ECCE	R.82 TDD	OP.2 TDD	EPA5	2 x 2 Low	1	-5.3	≥1
3	10 MHz	16 ECCE	R.82 TDD	OP.2 TDD	EPA5	2 x 4 Low	1	-6.8	≥1

8.11.2.2.2 CE Mode B

For the parameters specified in Table 8.11.2.2-1 and 8.11.2.2-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.11.2.2.2-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.2.2.2-1: Minimum performance CE Mode B MPDCCH

Test number	Bandwidth	Aggregation level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
							Pm-dsg (%)	SNR (dB)	
1	10 MHz	24 ECCE	R.83 TDD	OP.2 TDD	ETU1	2 x 1 Low	1	-10.1	M1
2	10 MHz	24 ECCE	R.83 TDD	OP.2 TDD	ETU1	2 x 2 Low	1	-12.3	≥1
3	10 MHz	24 ECCE	R.83 TDD	OP.2 TDD	ETU1	2 x 4 Low	1	-12.8	≥1

8.11.2.2.3 CE Mode A with TM9 interference model

The requirements are specified in Table 8.11.2.2.3-2, with the addition of parameters in Table 8.11.2.2.3-1. In Table 8.11.2.2.3-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.2.3-1: Test Parameters for MPDCCH (TM9 interference model)

Parameter		Unit	Cell 1	Cell 2	Cell 3
OFDM starting symbol (startSymbolLC)		symbols	2	2	2
Unused RE-s and PRB-s			OCNG	N/A	N/A
Cell ID			0	1	6
Downlink power allocation	ρ_A	dB	-3	-3	-3
	ρ_B	dB	-3	-3	-3
	σ	dB	0	0	0
	δ	dB	3	3	3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1

N_{oc} at antenna port		dBm/15kHz	-98	
\widehat{E}_s/N_{oc}		dB	N/A	11.75
$BW_{Channel}$		MHz	10	10
Cyclic Prefix			Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN
Precoder Update Granularity	PRB		1	N/A
	ms		4 (Note 2)	N/A
Beamforming Pre-Coder			Annex B. 4.4	N/A
Number of PRB per MPDCCH Set			4	N/A
Transmission type			Distributed	N/A
Frequency hopping			Disabled	N/A
Number of frequency hopping narrowbands			N/A	N/A
Frequency hopping offset			N/A	N/A
Frequency hopping interval	ms		4	N/A
Value of G in MPDCCH start subframe (<i>mpdcch-startSF-U ESS</i>) (Note 3)			1.5	N/A
Maximum number of repetitions			1	N/A
MPDCCH narrowband (<i>mpdcch-Narrowband</i>)			1	N/A
PDSCH TM			TM2	N/A
DCI Format			6-1A	N/A
fdd-DownlinkOrTddSubframeBitmapBR			1000010000	N/A
Interference model			N/A	As specified in clause B.5.4
Probability of occurrence of transmission in interference cells		%	N/A	10
Probability of occurrence of PDSCH transmission rank in interfering cells	Rank 1	%	N/A	70
	Rank 2	%	N/A	30
Time offset relative to Cell 1		μ s	N/A	2
Frequency shift relative to Cell 1		Hz	N/A	200
Note 1: For each test, DC subcarrier puncturing shall be considered. Note 2: Same precoding matrix is used for a PRB across subframes during the frequency hopping interval Note 3: For MPDCCH UE-specific search space the formula for the start subframe k_0 is given in TS 36.213 [6] clause 9.1.5.				

Table 8.11.2.2.3-2: Minimum performance CE Mode A MPDCCH

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	16 ECCE	R.82 TDD	OP.2 TDD	EPA5	EPA5	EPA5	2x1 Low	1	15.5
Note 1: The OCNG pattern applies for Cell 1. Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent. Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3. Note 4: SNR corresponds to \widehat{E}_s/N_{oc} of Cell 1.									

8.11.2.2.4 CE Mode A with CRS interference model

The requirements are specified in Table 8.11.2.2.4-2, with the addition of parameters in Table 8.11.2.2.4-1. In Table 8.11.2.2.4-2, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1, Cell 2 and Cell 3, respectively. The CRS assistance information [7] is provided to the UE and includes information on Cell 2 and Cell 3.

The purpose of the test is to verify the MPDCCH performance under assumption that UE applies CRS interference mitigation in the scenario with 2 CRS antenna ports in the serving and aggressor cells.

Table 8.11.2.2.4-1: Test Parameters for MPDCCH (CRS interference model)

Parameter	Unit	Cell 1	Cell 2	Cell 3
-----------	------	--------	--------	--------

OFDM starting symbol (startSymbolLC)		symbols	2	2	2
Unused RE-s and PRB-s			OCNG	N/A	N/A
Cell ID			0	1	6
Downlink power allocation	ρ_A	dB	-3	-3	-3
	ρ_B	dB	-3	-3	-3
	σ	dB	0	0	0
	δ	dB	3	3	3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98		
\hat{E}_s/N_{oc}		dB	N/A	15.81	10.5
BW _{Channel}		MHz	10	10	10
Cyclic Prefix			Normal	Normal	Normal
Subframe Configuration			Non-MBSFN	Non-MBSFN	Non-MBSFN
Precoder Update Granularity	PRB		1	N/A	N/A
	ms		4	N/A	N/A
Beamforming Pre-Coder			Annex B. 4.4	N/A	N/A
Number of PRB per MPDCCH Set			4	N/A	N/A
Transmission type			Distributed	N/A	N/A
Frequency hopping			Disabled	N/A	N/A
Number of frequency hopping narrowbands			N/A	N/A	N/A
Frequency hopping offset			N/A	N/A	N/A
Frequency hopping interval		ms	4	N/A	N/A
Value of G in MPDCCH start subframe (<i>mpdcch-startSF-UESS</i>) (Note 3)			1.5	N/A	N/A
Maximum number of repetitions			1	N/A	N/A
MPDCCH narrowband (<i>mpdcch-Narrowband</i>)			1	N/A	N/A
PDSCH TM			TM2	N/A	N/A
DCI Format			6-1A	N/A	N/A
fdd-DownlinkOrTddSubframeBitmapBR			1000010000	N/A	N/A
Interference model			N/A	As specified in clause B.6.5	As specified in clause B.6.5
Time offset relative to Cell 1		μ s	N/A	2	3
Frequency shift relative to Cell 1		Hz	N/A	200	300
Note 1: For each test, DC subcarrier puncturing shall be considered.					
Note 2: Same precoding matrix is used for a PRB across subframes during the frequency hopping interval					
Note 3: For MPDCCH UE-specific search space the formula for the start subframe k0 is given in TS 36.213 [6] clause 9.1.5.					

Table 8.11.2.2.4-2: Minimum performance CE Mode A MPDCCH

Test Number	Aggregation level	Reference Channel	OCNG Pattern (Note 1)	Propagation Conditions (Note 2)			Antenna Configuration and Correlation Matrix (Note 3)	Reference Value	
				Cell 1	Cell 2	Cell 3		Pm-dsg (%)	SNR (dB) (Note 4)
1	4 ECCE	R.96 TDD	OP.2 FDD	EPA5	EPA5	EPA5	2x1 Low	1	16.2
Note 1: The OCNG pattern applies for Cell 1, Cell 2 and Cell 3.									
Note 2: The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.									
Note 3: The correlation matrix and antenna configuration apply for Cell 1, Cell 2 and Cell 3.									
Note 4: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1.									

8.11.3 PBCH

The receiver characteristics of the PBCH are determined by the probability of miss-detection of the PBCH for single decoding interval (Pm-bch-s) and the probability of miss-detection of the PBCH for multiple decoding intervals (Pm-bch-m), which are defined as

$$Pm - bch - s = 1 - \frac{A_s}{B_s}$$

$$P_{m-bch-m} = 1 - \frac{A_m}{B_m}$$

The probability of miss-detection of the PBCH for single decoding interval ($P_{m-bch-s}$) is calculated under assumption of single PBCH TTI interval decoding. A_s is the number of correctly decoded MIB PDUs and B_s is the number of transmitted MIB PDUs (redundancy versions for the same MIB are not counted separately).

The probability of miss-detection of the PBCH for multiple decoding intervals ($P_{m-bch-m}$) is calculated over multiple PBCH TTI intervals under assumption of independent PBCH decoding over these intervals. A_m is the number of PBCH decoding intervals with at least one correctly decoded MIB PDU and B_m is the total number of PBCH decoding intervals. A multiple PBCH decoding interval has 1120 ms duration consisting of continuous PBCH TTIs during the test.

8.11.3.1 FDD and half-duplex FDD

Table 8.11.3.1-1: Test Parameters for PBCH

Parameter		Unit	Transmit diversity
Downlink power allocation	PBCH_RA	dB	-3
	PBCH_RB	dB	-3
N_{oc} at antenna port		dBm/15kHz	-98
Cyclic prefix			Normal
Cell ID			0
Repetition of the physical broadcast channel (Note 1)			Enabled
Cyclic prefix			Normal

Note 1: as specified in Table 6.6.4-1 in TS 36.211 [4].

8.11.3.1.1 Transmit diversity performance

For the parameters specified in Table 8.11.3.1-1 and Table 8.11.3.1.1-1, the averaged probability of a miss-detected PBCH ($P_{m-bch-s}$ and $P_{m-bch-m}$) shall be below the specified value in Table 8.11.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.3.1.1-1: Minimum performance PBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value for single PBCH TTI		Reference value for multiple PBCH TTI	
					$P_{m-bch-s}$ (%)	SNR (dB)	$P_{m-bch-m}$ (%)	SNR (dB)
1	10 MHz	R.22	EPA1	2 x 1 Low	1	-1.9	1	-12.6

8.11.3.2 TDD

Table 8.11.3.2-1: Test Parameters for PBCH

Parameter		Unit	Transmit diversity
Uplink downlink configuration (Note 1)			1
Special subframe configuration (Note 2)			4
Downlink power allocation	PBCH_RA	dB	-3
	PBCH_RB	dB	-3
N_{oc} at antenna port		dBm/15kHz	-98
Cyclic prefix			Normal
Cell ID			0
Repetition of the physical broadcast channel (Note 3)			Enabled
Cyclic prefix			Normal

Note 1: as specified in Table 4.2-2 in TS 36.211 [4].
Note 2: as specified in Table 4.2-1 in TS 36.211 [4].

Note 3: as specified in Table 6.6.4-2 in TS 36.211 [4].

8.11.3.2.1 Transmit diversity performance

For the parameters specified in Table 8.11.3.2-1 and Table 8.11.3.2.1-1, the averaged probability of a miss-detected PBCH (Pm-bchs and Pm-bch-m) shall be below the specified value in Table 8.11.3.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.11.3.2.1-1: Minimum performance PBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value for single PBCH TTI		Reference value for multiple PBCH TTI	
					Pm-bch-s (%)	SNR (dB)	Pm-bch-m (%)	SNR (dB)
1	10 MHz	R.22	EPA1	2 x 1 Low	1	-2.8	1	-12.9

8.12 Demodulation of Narrowband IoT

8.12.1 NPDSCH

8.12.1.1 Half-duplex FDD The parameters specified in Table 8.12.1.1-1 are valid for all half-duplex FDD tests unless otherwise stated.

Table 8.12.1.1-1: Common Test Parameters

Parameter	Unit	Value
Number of HARQ processes per component carrier (Note 2)	Processes	1 or 2
Maximum number of HARQ transmission		4
Cyclic Prefix		Normal
extraControlRegionSize-r13		3 for In-band and N/A for Standalone/Guard-band unless otherwise stated
downlinkBitmap-r13 and dl-Gap-r13		Not configured
dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13		Not configured
Unused REs or RB (Note 1)		OCNG
OCNG pattern		NB.OP.1
Note 1: For in-band mode, the REs for transmission of LTE signals including PDCCH, CRS should be filled by OCNG.		
Note 2: 1 is applicable for both UE Category NB1 and NB2; 2 is only applicable for UE Category NB2 if UE supports it.		

Table 8.12.1.1-2: Test Parameters of related NPDCCH and NPUSCH format 2 configurations

Parameter	Unit	Value
DCI format		DCI format N1
scheduling delay field (I_{Delay})		For tests in 8.12.1.1.4: 1 For others: 1 for the first HARQ process; 2 for the second HARQ process if configured
$N_{\text{Rep}}^{\text{AV}}$ (ack-NACK-NumRepetitions-r13)		1

ACK/NACK resource field		0
Reference channel for NPDCCH		R.NB.3 FDD for one NRS antenna port; R.NB.4 FDD for two NRS antenna ports
α_{offset} (<i>npdcch-Offset-USS-r13</i>)		0

8.12.1.1.1 Minimum Requirements for In-band

The requirements are specified in Table 8.12.1.1.1-2, with the addition of the parameters in Table 8.12.1.1.1 -1 and the downlink physical channel setup according to Annex C.3.2 and C.3.6. The purpose of these tests is to verify the performance.

Table 8.12.1.1.1-1: Test Parameters for NPDSCH under In-band

Parameter	Unit	Test 1, 2
Downlink power allocation of LTE signal	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	N_{oc1}	dBm/15kHz
	N_{oc2}	dBm/15kHz
LTE CRS port number (<i>utra-NumCRS-Ports-r13</i>)		4
NPDCCH repetition number	subframe	8 for Test 1; 16 for Test 2; 128 for Test 3.
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe	8 for Test 1; 16 for Test 2; 128 for Test 3.
G (<i>npdcch-startSF-USS-r13</i>)		4 for Test 1; 2 for Test 2; 1.5 for Test 3
Note 1: $P_B = 1$.		
Note 2: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;		
Note 3: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.		

Table 8.12.1.1.1-2: Minimum performance under In-band with 2 NRS ports

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
							Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Anchor	R.NB.5 FDD	1	EPA5	2x1 Low	70%	6.9	NB1, NB2
2	200kHz	Anchor	R.NB.5 FDD	32	EPA5	2x1 Low	70%	-4.8	NB1, NB2
3	200kHz	Non-anchor	R.NB.5-1 FDD	256	ETU1	2x1 Low	70%	-9.8	NB1, NB2

8.12.1.1.2 Minimum Requirements for Standalone/Guard-band

The requirements are specified in Table 8.12.1.1.2-2, with the addition of the parameters in Table 8.12.1.1.2 -1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the performance.

Table 8.12.1.1.2-1: Test Parameters for NPDSCH under Standalone/Guard-band

Parameter	Unit	Test 1, 2
	N_{oc1}	dBm/15kHz
		-93 (Note 1)

N_{oc} at antenna port	N_{oc2}	dBm/15kHz	-99 (Note 2)
NPDCCH repetition number		subframe	32 for Test 1; 256 for Test 2.
R_{max} (<i>npdcch-NumRepetitions-r13</i>)		subframe	64 for Test 1; 512 for Test 2.
G (<i>npdcch-startSF-USS-r13</i>)			1.5
Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;			
Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.			

Table 8.12.1.1.2-2: Minimum performance for NPDSCH under Standalone/Guard-band with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Anchored	R.NB.6 FDD	32	EPA5	1	1x1	70%	-3.4	NB1, NB2
2	200kHz	Non-anchored	R.NB.6-1 FDD	256	ETU1	1	1x1	70%	-10.2	NB1, NB2

8.12.1.1.3 Minimum Requirements for Standalone for UE Category NB2

The requirements are specified in Table 8.12.1.1.3-2, with the addition of the parameters in Table 8.12.1.1.3-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance.

Table 8.12.1.1.3-1: Test Parameters for NPDSCH under Standalone

Parameter	Unit		Test 1
N_{oc} at antenna port	N_{oc1}	dBm/15kHz	-93 (Note 1)
	N_{oc2}	dBm/15kHz	-96 (Note 2)
NPDCCH repetition number		subframe	4 for Test 1
R_{max} (<i>npdcch-NumRepetitions-r13</i>)		subframe	8 for Test 1
G (<i>npdcch-startSF-USS-r13</i>)			1.5
Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;			
Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.			

Table 8.12.1.1.3-2: Minimum performance for NPDSCH under Standalone with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Non-anchored	R.NB.7 FDD	1	EPA5	1	1x1	70%	9.4	NB2

8.12.1.1.4 Minimum Requirements for Standalone for UE with multiple TBs interleaved transmission

The requirements are specified in Table 8.12.1.1.4-2, with the addition of the parameters in Table 8.12.1.1.4-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify NPDSCH performance when multiple TBs with interleaved transmission are scheduled by one DCI as specified in TS 36.213[6].

These requirements are applicable for UE of UE-Category-NB NB2 supporting multiple TBs scheduling with interleaved transmission when multiple TBs are scheduled.

Table 8.12.1.1.4-1: Test Parameters for NPDSCH under Standalone

Parameter	Unit		Test 1
N_{oc} at antenna port	N_{oc1}	dBm/15kHz	-93 (Note 1)
	N_{oc2}	dBm/15kHz	-99 (Note 2)
NPDCCH repetition number	subframe		128 for Test 1
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe		128 for Test 1
G (<i>npdcch-startSF-USS-r13</i>)			1.5
Two HARQ processes (<i>twoHARQ-ProcessesConfig-r14</i>)			true
Multiple TBs scheduling (<i>multiTB-Config-r16</i>)			interleaved
Note 1:	This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;		
Note 2:	This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.		

Table 8.12.1.1.4-2: Minimum performance for NPDSCH under Standalone with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Non-anchored	R.NB.8 FDD	32	ETU1	1	1x1	70%	-6.0	NB2

8.12.1.1.5 Minimum Requirements for Standalone for UE with 16-QAM

The requirements are specified in Table 8.12.1.1.5-2, with the addition of the parameters in Table 8.12.1.1.5-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance with 16-QAM.

Table 8.12.1.1.5-1: Test Parameters for 16-QAM NPDSCH under Standalone

Parameter	Unit		Test 1
N_{oc} at antenna port	N_{oc1}	dBm/15kHz	-93 (Note 1)
	N_{oc2}	dBm/15kHz	-96 (Note 2)
NPDCCH repetition number	subframe		1 for Test 1
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe		4 for Test 1
G (<i>npdcch-startSF-USS-r13</i>)			2
Note 1:	This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;		
Note 2:	This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.		

Table 8.12.1.1.5-2: Minimum performance for 16-QAM NPDSCH under Standalone with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Non-anchored	R.NB.9 FDD	1	EPA5	1	1x1	70%	19.5	NB2

8.12.1.2 TDD

Table 8.12.1.2-1: Common Test Parameters

Parameter	Unit	Value
Uplink downlink configuration (Note 1)		4
Special subframe configuration (Note 2)		4
Number of HARQ processes per component carrier (Note 4)	Processes	1 or 2
Maximum number of HARQ transmission		4
Cyclic Prefix		Normal
extraControlRegionSize-r13		2 for In-band, N/A for Standalone/Guard-band unless otherwise stated
downlinkBitmap-r13 and dl-Gap-r13		Not configured
dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13		Not configured
Unused REs or RB (Note 3)		OCNG
OCNG pattern		NB.OP.1
Note 1: As specified in Table 4.2-2 in TS 36.211 [4] Note 2: As specified in Table 4.2-1 in TS 36.211 [4] Note 3: For in-band mode, the REs for transmission of LTE signals including PDCCH, CRS should be filled by OCNG. Note 4: 1 is applicable for both UE Category NB1 and NB2; 2 is only applicable for UE Category NB2 if UE supports it.		

Table 8.12.1.2-2: Test Parameters of related NPDCCH and NPUSCH format 2 configurations

Parameter	Unit	Value

8.12.1.2.1 Minimum Requirements for In-band

The requirements are specified in Table 8.12.1.2.1-2, with the addition of the parameters in Table 8.12.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2 and C.3.6. The purpose of these tests is to verify the performance.

Table 8.12.1.2.1-1: Test Parameters for NPDSCH under In-band

Parameter	Unit	Test 1, 2
Downlink power allocation of LTE signal	ρ_A	-3
	ρ_B	-3(Note 1)
	σ	0
N_{oc} at antenna port	N_{oc1}	-93 (Note 2)
	N_{oc2}	-99 (Note 3)
LTE CRS port number (<i>utra-NumCRS-Ports-r13</i>)		4
NPDCCH repetition number	subframe	8 for Test 1; 16 for Test 2; 128 for Test 3.
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe	8 for Test 1; 16 for Test 2; 128 for Test 3.
G (<i>npDCCH-startSF-USS-r13</i>)		4
Note 1: $P_B = 1$.		
Note 2: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;		
Note 3: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.		

Table 8.12.1.2.1-2: Minimum performance under In-band with 2 NRS ports

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
							Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Anchor	R.NB.5 TDD	1	EPA5	2x1 Low	70%	6.9	NB1, NB2
2	200kHz	Anchor	R.NB.5 TDD	32	EPA5	2x1 Low	70%	-4.8	NB1, NB2
3	200kHz	Non-anchor	R.NB.5-1 TDD	256	ETU1	2x1 Low	70%	-9.8	NB1, NB2

8.12.1.2.2 Minimum Requirements for Standalone/Guard-band

The requirements are specified in Table 8.12.1.2.2-2, with the addition of the parameters in Table 8.12.1.2.2-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the performance.

Table 8.12.1.2.2-1: Test Parameters for NPDSCH under Standalone/Guard-band

Parameter	Unit	Test 1, 2
N_{oc} at antenna port	N_{oc1}	-93 (Note 1)
	N_{oc2}	-99 (Note 2)
NPDCCH repetition number	subframe	32 for Test 1; 256 for Test 2.
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe	32 for Test 1; 256 for Test 2.
G (<i>npDCCH-startSF-USS-r13</i>)		4

Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;
 Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.

Table 8.12.1.2.2-2: Minimum performance for NPDSCH under Standalone/Guard-band with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Anchor	R.NB.6 TDD	32	EPA5	1	1x1	70%	-3.4	NB1, NB2
2	200kHz	Non-anchor	R.NB.6-1 TDD	256	ETU1	1	1x1	70%	-10.2	NB1, NB2

8.12.1.2.3 Minimum Requirements for Standalone for UE Category NB2

The requirements are specified in Table 8.12.1.2.3-2, with the addition of the parameters in Table 8.12.1.2.3-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance.

Table 8.12.1.2.3-1: Test Parameters for NPDSCH under Standalone

Parameter	Unit	Test 1
N_{oc} at antenna port	N_{oc1}	-93 (Note 1)
	N_{oc2}	-96 (Note 2)
NPDCCH repetition number	subframe	4 for Test 1
R_{max} (<i>npdcch-NumRepetitions-r13</i>)	subframe	8 for Test 1
G (<i>npdcch-startSF-USS-r13</i>)		4
Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;		
Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.		

Table 8.12.1.2.3-2: Minimum performance for NPDSCH under Standalone with 1 NRS port

Test number	Bandwidth	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200kHz	Non-anchor	R.NB.7 TDD	1	EPA5	1	1x1	70%	9.4	NB2

8.12.1.2.4 Minimum Requirements for Standalone for UE with 16-QAM

The requirements are specified in Table 8.12.1.2.4-2, with the addition of the parameters in Table 8.12.1.2.4-1 and the downlink physical channel setup according to Annex C.3.6. The purpose of these tests is to verify the NPDSCH performance with 16-QAM.

Table 8.12.1.2.4-1: Test Parameters for 16-QAM NPDSCH under Standalone

Parameter	Unit	Test 1
	N_{oc1}	-93 (Note 1)

N_{oc} at antenna port	N_{oc2}	dBm/15kHz	-96 (Note 2)
NPDCCH repetition number		Subframe	1 for Test 1
R_{max} (<i>npdcch-NumRepetitions-r13</i>)		Subframe	8 for Test 1
G (<i>npdcch-startSF-USS-r13</i>)			4
Note 1: This noise is applied to all subframes from the end of the NPDCCH to the end of the following NPDSCH transmission;			
Note 2: This noise is applied to all subframes from the end of the NPDSCH to the end of the following NPDCCH transmission.			

Table 8.12.1.2.4-2: Minimum performance for 16-QAM NPDSCH under Standalone with 1 NRS port

Test number	Band width	Carrier Type	Reference Channel	Repetition number	Propagation condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Fraction of Maximum Throughput (%)	SNR (dB)	
1	200k Hz	Non-anchor	R.NB. 8 TDD	1	EPA5	1	1x1	70%	19.5	NB2

8.12.2 NPDCCH

The receiver characteristics of the NPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg).

8.12.2.1 Half-duplex FDD

The parameters specified in Table 8.12.2.1-1 and Table 8.12.2.1-2 are valid for all half-duplex FDD tests unless otherwise stated.

Table 8.12.2.1-1: Test Parameters for NPDCCH

Parameter	Unit	Single antenna port	Transmit diversity
Narrowband physical layer Cell ID		0	0
N_{oc} at antenna port	dBm/15kHz	-98	-98
Cyclic prefix		Normal	Normal
Number of CRS ports for in-band deployment mode		4	4
NPDCCH starting position (<i>extraControlRegionSize-r13</i>) (Note 1)		3	3
Maximum number of repetitions R_{max} (<i>npdcch-NumRepetitions-r13</i>)		128 for Test 1; 1024 for Test 2.	64 for Test 1; 512 for Test 2.
NPDCCH start subframe G (<i>npdcch-startSF-USS-r13</i>)		2 for test 1, 1.5 for test 2	2 for test 1, 1.5 for test 2
NPDCCH fractional period offset of starting subframe α_{offset} (<i>npdcch-Offset-USS-r13</i>)		0	0
NB-IoT downlink subframe bitmap for anchor carrier (<i>downlinkBitmap-r13</i>)		Not configured	Not configured
NB-IoT downlink subframe bitmap for non-anchor carrier (<i>downlinkBitmapNonAnchor-r13</i>)		Not configured	Not configured
Downlink gap configuration for anchor carrier (<i>dl-Gap-r13</i>)		Not configured	Not configured

Downlink gap configuration for non-anchor carrier (<i>dl-GapNonAnchor-r13</i>)		Not configured	Not configured
Unused REs or RBs (Note 1)		OCNG	OCNG
OCNG pattern		NB.OP.1	NB.OP.1
NOTE 1: Applicable only for in-band deployment mode.			

Table 8.12.2.1-2: Test Parameters of related NPDSCH and NPUSCH format 2 configurations

Parameter	Unit	Value
Scheduling delay field (I_{Delay})		0
NPDSCH Repetition number		1
N_{oc} at antenna port for NPDSCH	dBm/15kHz	-98
$N_{\text{Rep}}^{\text{AN}}$ (<i>ack-NACK-NumRepetitions-r13</i>)		1
ACK/NACK resource field		0
Reference channel for NPDSCH		R.NB.6 FDD and R.NB.6-1 FDD for one NRS antenna port; R.NB.5 FDD and R.NB.5-1 FDD for two NRS antenna ports

8.12.2.1.1 Single-antenna performance

For the parameters specified in Table 8.12.2.1.1-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.12.2.1.1-1. The downlink physical channel setup is in accordance with Annex C.3.6.

Table 8.12.2.1.1-1: Minimum performance NPDCCH

Test number	Deployment mode	Repetition number (R)	Carrier Type	Reference Channel	Propagation Condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								Pm-dsg (%)	SNR (dB)	
1	Stand-alone/Guard-band	128	Anchor	R.NB.3 FDD	EPA5	1	1x1	1	-4.9	NB1, NB2
2	Stand-alone/Guard-band	1024	Non-anchor	R.NB.3 FDD	ETU1	1	1x1	1	-11.4	NB1, NB2

8.12.2.1.2 Transmit diversity performance

For the parameters specified in Table 8.12.2.1.2-1 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.12.2.1.2-1. The downlink physical channel setup is in accordance with Annex C.3.6.

Table 8.12.2.1.2-1: Minimum performance NPDCCH

Test number	Deployment mode	Repetition number (R)	Carrier Type	Reference Channel	Propagation Condition	Number of NRS ports	Antenna Configuration and correlation matrix	Reference value		UE Category
								Pm-dsg (%)	SNR (dB)	

1	In-band	64	Anchor	R.NB.4 FDD	EPA5	2	2x1 Low	1	-3.9	NB1, NB2
2	In-band	512	Non-anchor	R.NB.4 FDD	ETU1	2	2x1 Low	1	-10.0	NB1, NB2

8.12.2.2 TDD

The parameters specified in Table 8.12.2.2-1 and Table 8.12.2.2-2 are valid for all TDD tests unless otherwise stated.

Table 8.12.2.2-1: Test Parameters for NPDCCH

Parameter	Unit	Single antenna port	Transmit diversity
Uplink downlink configuration (Note 1)		4	4
Special subframe configuration (Note 2)		4	4
Narrowband physical layer Cell ID		0	0
N_{oc} at antenna port	dBm/15kHz	-98	-98
Cyclic prefix		Normal	Normal
Number of CRS ports for in-band deployment mode		4	4
NPDCCH starting position ($eutraControlRegionSize-r13$) (Note 1)		2	2
Maximum number of repetitions R_{max} ($npdcch-NumRepetitions-r13$)		128 for Test 1; 1024 for Test 2.	64 for Test 1; 512 for Test 2.
NPDCCH start subframe G ($npdcch-startSF-USS-r13$)		4	4
NPDCCH fractional period offset of starting subframe α_{offset} ($npdcch-Offset-USS-r13$)		0	0
NB-IoT downlink subframe bitmap for anchor carrier ($downlinkBitmap-r13$)		Not configured	Not configured
NB-IoT downlink subframe bitmap for non-anchor carrier ($downlinkBitmapNonAnchor-r13$)		Not configured	Not configured
Downlink gap configuration for anchor carrier ($dl-Gap-r13$)		Not configured	Not configured
Downlink gap configuration for non-anchor carrier ($dl-GapNonAnchor-r13$)		Not configured	Not configured
Unused REs or RBs (Note 1)		OCNG	OCNG
OCNG pattern		NB.OP.1	NB.OP.1

NOTE 1: Applicable only for in-band deployment mode.

Table 8.12.2.2-2: Test Parameters of related NPDSCH and NPUSCH format 2 configurations

Parameter	Unit	Value
Scheduling delay field (I_{Delay})		0
NPDSCH Repetition number		1
N_{oc} at antenna port for NPDSCH	dBm/15kHz	-98
N_{Rep}^{AN} ($ack-NACK-NumRepetitions-r13$)		1

ACK/NACK resource field		0
Reference channel for NPDSCH		R.NB.6 TDD and R.NB.6-1 TDD for one NRS antenna port; R.NB.5 TDD and R.NB.5-1 TDD for two NRS antenna ports

8.12.2.2.1 Single-antenna performance

For the parameters specified in Table 8.12.2.2.1-1 the average probability of a missed downlink scheduling grant (P_{m-dsg}) shall be below the specified value in Table 8.12.2.2.1-1. The downlink physical channel setup is in accordance with Annex C.3.6.

Table 8.12.2.2.1-1: Minimum performance NPDCCH

Test number	Deployment mode	Repetition number (R)	Carrier Type	Reference Channel	Propagation Condition	Number of NRS ports	Antenna Configuration	Reference value		UE Category
								P_{m-dsg} (%)	SNR (dB)	
1	Stand-alone/Guard-band	128	Anchor	R.NB.3 TDD	EPA5	1	1x1	1	-4.9	NB1, NB2
2	Stand-alone/Guard-band	1024	Non-anchor	R.NB.3 TDD	ETU1	1	1x1	1	-11.4	NB1, NB2

8.12.2.2.2 Transmit diversity performance

For the parameters specified in Table 8.12.2.2.2-1 the average probability of a missed downlink scheduling grant (P_{m-dsg}) shall be below the specified value in Table 8.12.2.2.2-1. The downlink physical channel setup is in accordance with Annex C.3.6.

Table 8.12.2.2.2-1: Minimum performance NPDCCH

Test number	Deployment mode	Repetition number (R)	Carrier Type	Reference Channel	Propagation Condition	Number of NRS ports	Antenna Configuration and correlation matrix	Reference value		UE Category
								P_{m-dsg} (%)	SNR (dB)	
1	In-band	64	Anchor	R.NB.4 TDD	EPA5	2	2x1 Low	1	-3.9	NB1, NB2
2	In-band	512	Non-anchor	R.NB.4 TDD	ETU1	2	2x1 Low	1	-10.0	NB1, NB2

8.12.3 Demodulation of NPBCH

The receiver characteristics of the NPBCH are determined by the probability of miss-detection of the NPBCH (P_{m-bch}), which is defined as

$$P_{m-bch} = 1 - \frac{A}{B}$$

For the performance with single a NPBCH TTI decoding, A is the number of correctly decoded MIB-NB PDUs and B is the number of transmitted MIB-NB PDUs.

For the performance with multiple NPBCH TTIs decoding, A is the number of 5120ms durations consisting of contiguous NPBCH TTIs where there is at least one correctly decoded MIB-NB PDU, and B is the number of 5120ms durations consisting of contiguous NPBCH TTIs during the test.

8.12.3.1 HD-FDD

Table 8.12.3.1-1: Test Parameters for NPBCH

Parameter		Unit	Single antenna port	Transmit diversity
Downlink power allocation	NPBCH_RA	dB	0	-3
	NPBCH_RB	dB	0	-3
N_{oc} at antenna port		dBm/15kHz	-98	-98
Cyclic prefix			Normal	Normal
Cell ID			0	0

8.12.3.1.1 Single-antenna port performance with single NPBCH TTI

For the parameters specified in Table 8.12.3.1-1 the average probability of a miss-detecting NPBCH (P_{m-bch}) shall be below the specified value in Table 8.12.3.1.1-1. The downlink physical setup is in accordance with Annex C.3.6.

Table 8.12.3.1.1-1: Minimum performance NPBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration	Reference value		UE Category
					P _{m-bch} (%)	SNR (dB)	
1	200 KHz	R.NB1.1	EPA1	1 x 1	1	-2.0	NB1, NB2

8.12.3.1.2 Transmit diversity performance

8.12.3.1.2.1 Minimum Requirement 2 Tx Antenna Port with multiple NPBCH TTIs

For the parameters specified in Table 8.12.3.1-1 the average probability of a miss-detected NPBCH (P_{m-bch}) shall be below the specified value in Table 8.12.3.1.2.1-1. The downlink physical setup is in accordance with Annex C.3.6.

Table 8.12.3.1.2.1-1: Minimum performance NPBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
					P _{m-bch} (%)	SNR (dB)	
1	200 KHz	R.NB1.2	EPA1	2 x 1 Low	1	-11.5	NB1, NB2

8.12.3.2 TDD

8.12.3.2.2 Transmit diversity performance

8.12.3.2.2.1 Minimum Requirement 2 Tx Antenna Port with multiple NPBCH TTIs

For the parameters specified in Table 8.12.3.2-1 the average probability of a miss-detected NPBCH (P_{m-bch}) shall be below the specified value in Table 8.12.3.2.2.1-1. The downlink physical setup is in accordance with Annex C.3.6.

Table 8.12.3.2.2.1-1: Minimum performance NPBCH

Test number	Bandwidth	Reference Channel	Propagation Condition	Antenna configuration and correlation Matrix	Reference value		UE Category
					P _{m-bch} (%)	SNR (dB)	
1	200 KHz	R.NB1.2	EPA1	2 x 1 Low	1	-11.5	NB1, NB2

8.13 Demodulation of PDSCH CA and DC(4 receiver antenna ports)

8.13.1 FDD (CA and DC)

The parameters specified in Table 8.13.1-1 are valid for all FDD CA and DC tests unless otherwise stated.

Table 8.13.1-1: Common Test Parameters (FDD)

Parameter	Unit	Value
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	8
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM and 256QAM
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated
Cyclic Prefix		Normal
Cell_ID		0
Cross carrier scheduling		Not configured

8.13.1.1 Closed-loop spatial multiplexing performance

8.13.1.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.1-3, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.13.1.1.1-4, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.13.1.1.1-5, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.13.1.1.1-6, based on single carrier requirement specified in Table 8.13.1.1.1-2, with the addition of the parameters in Table 8.13.1.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.1.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Value
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port		dBm/15kHz	-98
Precoding granularity		PRB	4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 2)		ms	8
Reporting interval		ms	1
Reporting mode			PUSCH 1-2
CodeBookSubsetRestriction bitmap			00000000000000000000000000000000 0111111111111111111100000000000000 00
CSI request field (Note 3)			'10'
PDSCH transmission mode			4
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers. Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for Tests in Table 8.13.1.1.1-3, and with PUCCH format 3 for Tests in Table 8.13.1.1.1-4, Table 8.13.1.1.1-5 and Table 8.13.1.1.1-6. Note 5: The same PDSCH transmission mode is applied to each component carrier.			

Table 8.13.1.1.1-2: Single carrier performance for multiple CA configurations

Bandwidth	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
1.4MHz	R.14-4 FDD	R.14-4 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	10.4	7.5
3MHz	R.14-5 FDD	R.14-5 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	9.5	5.1
5MHz	R.14-6 FDD	R.14-6 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	9.5	5.2
10 MHz	R.14 FDD	R.14 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	10.1	5.7

15MHz z	R.14-7 FDD	R.14-7 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	10.1	5.6
20MHz z	R.14-3 FDD	R.14-3 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	10.3	5.6

Table 8.13.1.1.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x10 MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	2x20 MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
3	2x5 MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
4	15MHz+5MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
5	10MHz+5MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

Table 8.13.1.1.1-4: Minimum performance (FRC) based on single carrier performance for CA with 3 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	3x20MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

6	3x10MHz+2x20MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	8, ≥11
7	4x10MHz+20MHz	As specified in Table 8.13.1.1.1-2 per CC depending on either 2Rx CC or 4Rx CC	8, ≥11
NOTE 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.1.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.13.1.1.2-3 for 2DL CCs and Table 8.13.1.1.2-4 for 3DL CCs, based on single carrier requirement specified in Table 8.13.1.1.2-2, with the addition of the parameters in Table 8.13.1.1.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity transmission.

Table 8.13.1.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity

Parameter	Unit	Values	
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	

Precoding granularity	PRB	6 for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, and 8 for 15MHz CCs and 20MHz CCs
PMI delay (Note 2)	ms	8
Reporting interval	ms	1
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 00011111111111111111100000000000 000000
PDSCH transmission mode		4
ACK/NACK transmission		Separate ACK/NACK feedbacks with PUCCH format 1b on the MCG and SCG
CSI feedback		Separate PUSCH feedbacks on the MCG and SCG
Time offset between MCG CC and SCG CC	μs	0 for UE under test supporting synchronous dual connectivity; 334 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 4)
<p>Note 1: $P_B = 1$.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 3: The same PDSCH transmission mode is applied to each component carrier.</p> <p>Note 4: As defined in TS36.300 [11].</p> <p>Note 5: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured.</p>		

Table 8.13.1.1.2-2: Single carrier performance for multiple DC configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
1.4MHz z	R.14-4 FDD	R.14-4 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	10.4	7.5
3MHz	R.14-5 FDD	R.14-5 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	9.5	5.1
5MHz	R.14-6 FDD	R.14-6 FDD	OP.1 FDD	EVA5	4x2 Low	4x4 Low	70	9.5	5.2

5	20+15+10 MHz	As specified in Table 8.13.1.1.2-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
6	20+10+10 MHz	As specified in Table 8.13.1.1.2-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
7	15+15+10 MHz	As specified in Table 8.13.1.1.2-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
Note 1: The OCNG pattern applies for each CC. Note 2: The applicability of requirements for different dual connectivity configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.1.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding with 256QAM under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.3-3, based on single carrier requirement specified in Table 8.13.1.1.3-2, with the addition of the parameters in Table 8.13.1.1.3-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.1.1.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 2)	ms	8
Reporting interval	ms	1
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 0111111111111111111100000000000000 00
CSI request field (Note 3)		'10'
PDSCH transmission mode		4

Note 1:	$P_B = 1$.
Note 2:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).
Note 3:	Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers.
Note 4:	ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for Tests in Table 8.13.1.1.3-3.
Note 5:	The same PDSCH transmission mode is applied to each component carrier.

Table 8.13.1.1.3-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.72-1 FDD	R.72-1 FDD	OP.1 FDD	EPA5	4x2 Low	4x4 Low	70	23.4	19.3
10 MHz	R.72 FDD	R.72 FDD	OP.1 FDD	EPA5	4x2 Low	4x4 Low	70	21.6	18.0
15MHz _z	R.72-2 FDD	R.72-2 FDD	OP.1 FDD	EPA5	4x2 Low	4x4 Low	70	21.7	17.4
20MHz _z	R.72-3 FDD	R.72-3 FDD	OP.1 FDD	EPA5	4x2 Low	4x4 Low	70	21.8	17.5

Table 8.13.1.1.3-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x10 MHz	As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	2x20 MHz	As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
3	2x5 MHz	As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
4	15MHz+5MHz	As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
5	10MHz+5MHz	As specified in Table 8.13.1.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.1.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.1.4-3, based on single carrier requirement specified in Table 8.13.1.1.4-2, with the addition of the parameters in Table 8.13.1.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.1.1.4-1: Test Parameters for Four-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98

Cell-specific reference signals		Antenna Ports 0,1,2,3
Precoding granularity	PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs
PMI delay (Note 2)	ms	8
Reporting interval	ms	1
Reporting mode		PUSCH 3-1
CodeBookSubsetRestriction bitmap		0xFFFF000000000000
CSI request field (Note 3)		'10'
PDSCH transmission mode		4
PDSCH rank		4
Note 1: $P_B = 1$.		
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).		
Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers.		
Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection		
Note 5: The same PDSCH transmission mode is applied to each component carrier.		

Table 8.13.1.1.4-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel	OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.1
10MHz	R.74 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.9
15MHz	R.74-2 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.3
20MHz	R.74-3 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.4

Table 8.13.1.1.4-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x10 MHz	As specified in Table 8.13.1.1.4-2 per CC	≥5
2	2x20 MHz	As specified in Table 8.13.1.1.4-2 per CC	≥5
3	2x5 MHz	As specified in Table 8.13.1.1.4-2 per CC	≥5
4	15MHz+5MHz	As specified in Table 8.13.1.1.4-2 per CC	≥5
5	10MHz+5MHz	As specified in Table 8.13.1.1.4-2 per CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.1.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.1.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port

For CA with 2 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-3, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-4, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-5, based on single carrier requirement specified in Table

8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.1.2.1-6, based on single carrier requirement specified in Table 8.13.1.2.1-2, with the addition of the parameters in Table 8.13.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.1.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Values	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals		Antenna ports 0 and 1	
Cell ID		0	
CSI reference signals		Antenna ports 15,16	
Beamforming model		Annex B.4.2	
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	Subframes	5 / 2	
CSI reference signal configuration		8	
Zero-power CSI-RS configuration $l_{CSI-RS} / \text{ZeroPowerCSI-RS bitmap}$	Subframes / bitmap	3 / 0010000000000000	
N_{oc} at antenna port	dBm/15kHz	-98	
\hat{E}_s / N_{oc}		Reference Value in Table 8.13.1.2.1-2	
Symbols for unused PRBs		OCNG (Note 2)	
Number of allocated resource blocks (Note 2)	PRB	50	
Simultaneous transmission		No	
PDSCH transmission mode		9	
Note 1: $P_B = 1$			
Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.			

Table 8.13.1.2.1-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.51-2 FDD	R.51-2 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.2	9.0
10 MHz	R.51 FDD	R.51 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.7	8.8
15MHz _z	R.51-3 FDD	R.51-3 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.6	8.7
20MHz _z	R.51-4 FDD	R.51-4 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.3	8.8
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.									
Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.									
Note 3: SNR corresponds to \hat{E}_s / N_{oc} of Cell 1.									

Table 8.13.1.2. 1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
-----------	---------------------------	-------------	-------------

8.13.1.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

8.13.1.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.1.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.3.1-3, based on single carrier requirement specified in Table 8.13.1.3.1-2, with the addition of the parameters in Table 8.13.1.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.1.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1

N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
Cell Id			0	1
PDSCH transmission mode			6	4
Interference model			N/A	As specified in clause B.5.3
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Precoding granularity		PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs	4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 4)		ms	8	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			1111	N/A
Physical channel for CQI reporting			PUSCH (Note 7)	N/A
cqi-pmi-ConfigurationIndex	FDD PCC		2	N/A
	FDD SCC		3	N/A
<p>Note 1: $P_B = 1$</p> <p>Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.</p> <p>Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.</p> <p>Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 5: All cells are time-synchronous.</p> <p>Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.</p> <p>Note 7: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, SF#2, SF#6 and #7 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5 SF#6 SF#0 and SF#1.</p>				

Table 8.13.1.3.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A

Band-width	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)		Reference Value		
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2	2Rx CC	4Rx CC	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
										2Rx CC	4Rx CC
5MHz	R.47-1 FDD	R.47-1 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-3.0
10 MHz	R.47 FDD	R.47 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.0	-2.7
15MHz	R.47-2 FDD	R.47-2 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-2.9
20MHz	R.47-3 FDD	R.47-3 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.1	-2.8

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.1.3.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
-----------	---------------------------	-------------	-------------

1	2x10 MHz	As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	2x20 MHz	As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
3	2x5 MHz	As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
4	15MHz+5MHz	As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
5	10MHz+5MHz	As specified in Table 8.13.1.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.1.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.1.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.1.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.1.4.1-3, based on single carrier requirement specified in Table 8.13.1.4.1-2, with the addition of the parameters in Table 8.13.1.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.1.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA

parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
CSI reference signals			Antenna ports 15,16	N/A
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$		Subframes	5 / 2	N/A
CSI reference signal configuration			0	N/A
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
BW_{Channel}		MHz	10	10
Cell Id			0	126
PDSCH transmission mode			9	9
Beamforming model			As specified in clause B.4.3 (Note 4, 5)	N/A
Interference model			N/A	As specified in clause B.5.4
Probability of occurrence of transmission rank in interfering cells	Rank 1		N/A	70
	Rank 2		N/A	30
Precoder update granularity		PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs	4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 5)		Ms	8	N/A

Reporting interval		Ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			001111	N/A
Symbols for unused PRBs			OCNG (Note 6)	N/A
Simultaneous transmission			No simultaneous transmission on the other antenna port in (7 or 8) used for the input signal under test	N/A
Physical channel for CQI reporting			PUSCH(Note 8)	N/A
cqi-pmi-ConfigurationIndex	FDD PCC		4	N/A
	FDD SCC		5	N/A

Note 1: $P_B = 1$

Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.

Note 3: The modulation symbols of the signal under test in Cell 1 are mapped onto antenna port 7 or 8.

Note 4: The precoder in clause B.4.3 follows UE recommended PMI.

Note 5: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Note 6: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.

Note 7: All cells are time-synchronous.

Note 8: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3, SF#4, SF#8 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7, SF#8, SF#2 and #3.

Note 9: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.

Table 8.13.1.4.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A, CDM-multiplexed DM RS

Band-width	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)		Reference Value		
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2	2Rx CC	4Rx CC	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
										2Rx CC	4Rx CC
5MHz	R.76-1 FDD	R.76-4 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.4	-2.0
10 MHz	R.76 FDD	R.76-5 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.1	-1.8
15MHz	R.76-2 FDD	R.76-6 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.2	-1.9
20MHz	R.76-3 FDD	R.76-7 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.4	-1.7

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.1.4.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
-----------	---------------------------	-------------	-------------

1	2x10 MHz	As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	2x20 MHz	As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
3	2x5 MHz	As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
4	15MHz+5MHz	As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
5	10MHz+5MHz	As specified in Table 8.13.1.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.2 TDD (CA and DC)

The parameters specified in Table 8.13.2-1 are valid for all TDD CA and DC tests unless otherwise stated.

Table 8.13.2-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Uplink downlink configuration (Note 1)		1
Special subframe configuration (Note 2)		4
Cyclic prefix		Normal
Cell ID		0
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	7
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM and 256QAM
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated
Cross carrier scheduling		Not configured
Note 1: as specified in Table 4.2-2 in TS 36.211 [4].		
Note 2: as specified in Table 4.2-1 in TS 36.211 [4].		

8.13.2.1 Closed-loop spatial multiplexing performance

8.13.2.1.1 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.1-2A, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, the requirements are specified in Table 8.13.2.1.1-3, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, the requirements are specified in Table 8.13.2.1.1-4, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, the requirements are specified in Table 8.13.2.1.1-5, based on single carrier requirement specified in Table 8.13.2.1.1-2, with the addition of the parameters in Table 8.13.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.2.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value	
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	
Precoding granularity	PRB	8	
PMI delay (Note 2)	ms	10 or 11	
Reporting interval	ms	1 or 4 (Note 3)	
Reporting mode		PUSCH 1-2	
ACK/NACK feedback mode		PUCCH format 1b with channel selection for Tests with 2CCs; PUCCH format 3 for Tests with more than 2 CCs	
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 00011111111111111111100000000000 000000	
CSI request field (Note 4)		'10'	
PDSCH transmission mode		4	
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4) Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms. Note 4: Multiple CC-s under test are configured as the 1 st set of serving cells by high layers. Note 5: The same PDSCH transmission mode is applied to each component carrier.			

Table 8.13.2.1.1-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.2.1.2 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port for dual connectivity

For dual connectivity the requirements are specified in Table 8.13.2.1.2-3, for 2DL CCs, in Table 8.13.2.1.2-4 for 3DL CCs, and Table 8.13.2.1.2-5 for 4DL CCs, based on single carrier requirement specified in Table 8.13.2.1.2-2, with the addition of the parameters in Table 8.13.2.1.2-1 and the downlink physical channel setup according to Annex C.3.2. The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding by using dual connectivity.

Table 8.13.2.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for dual connectivity

Parameter	Unit	Value
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Precoding granularity	PRB	6 for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, and 8 for 15MHz CCs and 20MHz CCs
PMI delay (Note 2)	ms	10 or 11
Reporting interval	ms	1 or 4 (Note 3)
Reporting mode		PUSCH 1-2
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 00011111111111111111100000000000 000000
PDSCH transmission mode		4

ACK/NACK transmission		Separate ACK/NACK feedbacks with PUCCH format 1b on the MCG and SCG
CSI feedback		Separate PUSCH feedbacks on the MCG and SCG
Time offset between MCG CC and SCG CC	μs	0 for UE under test supporting synchronous dual connectivity; 334 for UE under test supporting both asynchronous and synchronous dual connectivity (Note 5)
<p>Note 1: $P_B = 1$.</p> <p>Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)</p> <p>Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.</p> <p>Note 4: The same PDSCH transmission mode is applied to each component carrier.</p> <p>Note 5: As defined in TS36.300 [11].</p> <p>Note 6: If the UE supports both SCG bearer and Split bearer, the SCG bearer is configured.</p>		

Table 8.13.2.1.1-2: Single carrier performance for multiple DC configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)

Test num.	Band-width combination	Requirement	UE category
1	4x20 MHz	As specified in Table 8.13.2.1.2-2 per CC depending on either 2Rx CC or 4Rx CC	≥8
2	15+20+20+20MHz	As specified in Table 8.13.2.1.2-2 per CC depending on either 2Rx CC or 4Rx CC	≥8
Note 1: The OCNG pattern applies for each CC. Note 2: The applicability of requirements for different dual connectivity configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.2.1.3 Minimum Requirement Multi-Layer Spatial Multiplexing 4 Tx Antenna Port with 256QAM

The purpose of these tests is to verify the closed loop rank-two performance with frequency selective precoding with 256QAM under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.3-3, based on single carrier requirement specified in Table 8.13.2.1.3-2, with the addition of the parameters in Table 8.13.2.1.3-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.2.1.3-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value	
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port	dBm/15kHz	-98	
Precoding granularity	PRB	4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs	
PMI delay (Note 2)	ms	10 or 11	
Reporting interval	ms	1 or 4 (Note 3)	
Reporting mode		PUSCH 1-2	
ACK/NACK feedback mode		PUCCH format 1b with channel selection for Tests with 2CCs	
CodeBookSubsetRestriction bitmap		00000000000000000000000000000000 00011111111111111111111111110000000000 000000	
CSI request field (Note 4)		'10'	
PDSCH transmission mode		4	
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4) Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms. Note 4: Multiple CC-s under test are configured as the 1 st set of serving cells by high layers. Note 5: The same PDSCH transmission mode is applied to each component carrier.			

Table 8.13.2.1.3-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
							2Rx CC	4Rx CC	
5MHz	R.72-1 TDD	R.72-1 TDD	OP.1 TDD	EPA5	4x2 Low	4x4 Low	70	22.4	18.0

10 MHz	R.72 TDD	R.72 TDD	OP.1 TDD	EPA5	4x2 Low	4x4 Low	70	21.4	17.5
15MHz z	R.72-2 TDD	R.72-2 TDD	OP.1 TDD	EPA5	4x2 Low	4x4 Low	70	21.5	17.1
20MHz z	R.72-3 TDD	R.72-3 TDD	OP.1 TDD	EPA5	4x2 Low	4x4 Low	70	21.6	17.2

Table 8.13.2.1.3-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x20MHz	As specified in Table 8.13.2.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	20MHz+15MHz	As specified in Table 8.13.2.1.3-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.2.1.4 Minimum Requirement Four-Layer Spatial Multiplexing 4 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.1.4-3, based on single carrier requirement specified in Table 8.13.2.1.4-2, with the addition of the parameters in Table 8.13.2.1.4-1 and the downlink physical channel setup according to Annex C.3.2. The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.2.1.4-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value	
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
Cell-specific reference signals		Antenna ports 0,1,2,3	
PDSCH transmission mode		4	
PDSCH rank		4	
Precoding granularity	PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs	
PMI delay	ms	10 or 11	
Reporting interval	ms	1 or 4	
Reporting mode		PUSCH 3-1	
CodeBookSubsetRestriction bitmap		0xFFFF000000000000	
ACK/NACK feedback mode		PUCCH format 1b with channel selection for Tests with 2CCs	
CSI request field (Note 4)		'10'	
PDSCH transmission mode		4	
Uplink-Downlink Configuration		1	
Special subframe configuration		4	

Note 1: $P_B = 1$.

Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4)

Note 3: For Uplink - downlink configuration 1 the reporting interval will alternate between 1ms and 4ms.

Note 4: Multiple CC-s under test are configured as the 1st set of serving cells by high layers.

Note 5: The same PDSCH transmission mode is applied to each component carrier.

Table 8.13.2.1.4-2: Single carrier performance for multiple CA configurations

Bandwidth	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.5
10MHz	R.74 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.4
15MHz	R.74-2 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.6
20MHz	R.74-3 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.8

Table 8.13.2.1.4-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x20MHz	As specified in Table 8.13.2.1.4-2 per CC	≥5
2	20MHz+15MHz	As specified in Table 8.13.2.1.4-2 per CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

8.13.2.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.2.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port

For CA with 2 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-2A, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 3 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-3, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 4 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-4, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For CA with 5 DL CCs, for dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C, the requirements are specified in Table 8.13.2.2.1-5, based on single carrier requirement specified in Table 8.13.2.2.1-2, with the addition of the parameters in Table 8.13.2.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.2.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Values	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals		Antenna ports 0 and 1	
Cell ID		0	
CSI reference signals		Antenna ports 15,16	
Beamforming model		Annex B.4.2	
CSI-RS periodicity and subframe offset $T_{\text{CSI-RS}} / \Delta_{\text{CSI-RS}}$	Subframes	5 / 4	
CSI reference signal configuration		8	
Zero-power CSI-RS configuration $I_{\text{CSI-RS}} / \text{ZeroPowerCSI-RS bitmap}$	Subframes / bitmap	4 / 0010000000000000	

N_{oc} at antenna port	dBm/15kHz	-98
\widehat{E}_s/N_{oc}		Reference Value in Table 8.13.2.2.1-2
Symbols for unused PRBs		OCNG (Note 2)
Number of allocated resource blocks (Note 2)	PRB	50
Simultaneous transmission		No
PDSCH transmission mode		9
Note 1: $P_B = 1$ Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.		

Table 8.13.2.2.1-2: Single carrier performance for multiple CA configurations

Band-width	Reference channel		OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.51-2 TDD	R.51-2 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	14.0	9.0
10 MHz	R.51 TDD	R.51 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	13.9	9.1
15MHz _z	R.51-3 TDD	R.51-3 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	13.9	9.2
20MHz _z	R.51-4 TDD	R.51-4 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	14.1	9.3
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent. Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2. Note 3: SNR corresponds to \widehat{E}_s/N_{oc} of Cell 1.									

Table 8.13.2.2.1-2A: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x20MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	20MHz+15MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

Test num.	CA Band-width combination	Requirement	UE category
1	3x20MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	20MHz+20MHz+15MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

Table 8.13.2.2.1-4: Minimum performance (FRC) based on single carrier performance for CA with 4 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	4x20MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥8

2	20MHz+20MHz+20MHz+15MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥ 8
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.			

Table 8.13.2.1.1-5: Minimum performance (FRC) based on single carrier performance for CA with 5 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	5x20MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	8, ≥ 11
2	15MHz+4x20MHz	As specified in Table 8.13.2.2.1-2 per CC depending on either 2Rx CC or 4Rx CC	8, ≥ 11
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6			

8.13.2.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

8.13.2.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols)

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.2.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.3.1-3, based on single carrier requirement specified in Table 8.13.2.3.1-2, with the addition of the parameters in Table 8.13.2.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.2.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
$BW_{Channel}$		MHz	10	10
Cell Id			0	1
PDSCH transmission mode			6	N/A
Interference model			N/A	As specified in clause B.5.3
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Precoding granularity		PRB	50	6
PMI delay (Note 4)		ms	10 or 11	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			1111	N/A
Physical channel for CQI reporting			PUSCH (Note 7)	N/A
cqi-pmi-ConfigurationIndex	TDD PCC		3	N/A
	TDD SCC		4	N/A

Note 1:	$P_B = 1$
Note 2:	The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.
Note 3:	Cell 1 is the serving cell. Cell 2, 3 are the interfering cells.
Note 4:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).
Note 5:	All cells are time-synchronous.
Note 6:	ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.
Note 7:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, SF#4, SF#6 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 SF#8 SF#2 and SF#3.

Table 8.13.2.3.1-2: Single carrier performance for multiple CA configurations Enhanced Performance Requirement Type A

Band-width	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)		Reference Value		
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2	2Rx CC	4Rx CC	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
										2Rx CC	4Rx CC
5MHz	R.47-1 TDD	R.47-1 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-2.8
10 MHz	R.47 TDD	R.47 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.3	-2.5
15MHz	R.47-2 TDD	R.47-2 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.0	-2.7
20MHz	R.47-3 TDD	R.47-3 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.3	-2.3

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.2.3.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x20MHz	As specified in Table 8.13.2.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	20MHz+15MHz	As specified in Table 8.13.2.3.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.2.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.2.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols)

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined

in clause B.5.4. In 8.13.2.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For CA with 2 DL CCs, the requirements are specified in Table 8.13.2.4.1-3, based on single carrier requirement specified in Table 8.13.2.4.1-2, with the addition of the parameters in Table 8.13.2.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.2.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA

parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0	0
	ρ_B	dB	0 (Note 1)	0
	σ	dB	-3	-3
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
CSI reference signals			Antenna ports 15,16	N/A

10 MHz	R.76 TDD	R.76-5 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.1	-2.1
15MHz	R.76-2 TDD	R.76-6 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.2	-2.1
20MHz	R.76-3 TDD	R.76-7 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.4	-2.1

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.2.4.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Band-width combination	Requirement	UE category
1	2x20MHz	As specified in Table 8.13.2.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5
2	20MHz+15MHz	As specified in Table 8.13.2.4.1-2 per CC depending on either 2Rx CC or 4Rx CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3 TDD-FDD (CA and DC)

The parameters specified in Table 8.13.3-1 are valid for all the TDD FDD CA tests unless otherwise stated.

Table 8.13.3-1: Common Test Parameters

Parameter	Unit	Value	
Uplink downlink configuration (Note 1) for TDD CC only		1	
Special subframe configuration (Note 2) for TDD CC only		4	
Inter-TTI Distance		1	
Maximum number of HARQ processes per component carrier	FDD PCell	Processes	8 for FDD and TDD CCs
	TDD PCell	Processes	11 for FDD CC; 7 for TDD CC
Maximum number of HARQ transmission		4	
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM	
Number of OFDM symbols for PDCCH per component carrier	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths	
Cyclic Prefix		Normal	
Cell_ID		0	
Cross carrier scheduling		Not configured	
ACK/NACK feedback mode		PUCCH format 3	
	FDD PCell		As specified in Clause 7.3.3 in TS36.213 [6]

Downlink HARQ-ACK timing	TDD PCell		As specified in Clause 7.3.4 in TS36.213 [6]
Note 1:	as specified in Table 4.2-2 in TS 36.211 [4].		
Note 2:	as specified in Table 4.2-1 in TS 36.211 [4].		

The applicability of ther requirements are specified in Clause 8.1.2.6. The single carrier performance with different bandwidths for multiple CA configurations specified in Clause 8.13.3 cannot be applied for UE single carrier test.

8.13.3.1 Closed-loop spatial multiplexing performance 4Tx Antenna Port

8.13.3.1.1 Minimum Requirement for FDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.1.1-4 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.1.1-5 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.1.1-6 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.1.1-7 based on single carrier requirement specified in Table 8.13.3.1.1-2 and Table 8.13.3.1.1-3, with the addition of the parameters in Table 8.13.3.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.3.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Value
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port		dBm/15kHz	-98
Precoding granularity		PRB	Wideband precoding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 2)	FDD CC	ms	8
	TDD CC	ms	10 or 11
Reporting interval	FDD CC	ms	1
	TDD CC	ms	1 or 4 (Note 3)
Reporting mode			PUSCH 1-2
CodeBookSubsetRestriction bitmap			00000000000000000000000000000000 000111111111111111111000000000 000000
CSI request field (Note 3)			'10'
PDSCH transmission mode			4
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers. Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3. Note 5: The same PDSCH transmission mode is applied to each component carrier.			

Table 8.13.3.1.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

Bandwidth	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3.1.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.1.2-4 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.1.2-5 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.1.2-6 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.1.2-7 based on single carrier requirement specified in Table 8.13.3.1.2-2 and Table 8.13.3.1.2-3, with the addition of the parameters in Table 8.13.3.1.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.3.1.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Value
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6 (Note 1)
	σ	dB	3
N_{oc} at antenna port		dBm/15kHz	-98
Precoding granularity		PRB	Widelband pre-coding for 1.4MHz, 4 for 3MHz and 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 2)	FDD CC	ms	8
	TDD CC	ms	10 or 11
Reporting interval	FDD CC	ms	1
	TDD CC	ms	1 or 4 (Note 3)
Reporting mode			PUSCH 1-2
CodeBookSubsetRestriction bitmap			00000000000000000000000000000000 00011111111111111111110000000000 000000
CSI request field (Note 3)			'10'
PDSCH transmission mode			TM4
Note 1: $P_B = 1$.			
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			
Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers.			
Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.			
Note 5: The same PDSCH transmission mode is applied to each component carrier.

8.13.3.2 Dual-Layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.3.2.1 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for FDD PCell

The purpose of these tests is to verify dual-layer transmission on antenna ports 7 and 8 upon detection of a PDCCH with DCI format 2C.

For TDD FDD CA with FDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.2.1-4 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.2.1-5 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2

For TDD FDD CA with FDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.2.1-6 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with FDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.2.1-7 based on single carrier requirement specified in Table 8.13.3.2.1-2 and Table 8.13.3.2.1-3, with the addition of the parameters in Table 8.13.3.2.1-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.3.2.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Values
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals			Antenna ports 0 and 1
Cell ID			0
CSI reference signals			Antenna ports 15,16
Beamforming model			Annex B.4.2
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	FDD CC	Subframes	5 / 2
	TDD CC		5 / 4
CSI reference signal configuration			8
Zero-power CSI-RS configuration $I_{CSI-RS} / ZeroPowerCSI-RS$ bitmap	FDD CC	Subframes / bitmap	3 / 0010000000000000
	TDD CC		4 / 0010000000000000
N_{oc} at antenna port		dBm/15kHz	-98
\hat{E}_s / N_{oc}	FDD CC		Reference Value in Table 8.13.3.2.1-2
	TDD CC		Reference Value in Table 8.13.3.2.1-3
Symbols for unused PRBs			OCNG (Note 2)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			No
PDSCH transmission mode			9
Note 1: $P_B = 1$			
Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.			
Note 3: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.			

Table 8.13.3.2.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

Bandwidth	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.51-2 FDD	R.51-2 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.2	9.0
10 MHz	R.51 FDD	R.51 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.7	8.8
15MHz _z	R.51-3 FDD	R.51-3 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.6	8.7
20MHz _z	R.51-4 FDD	R.51-4 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.3	8.8
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.									
Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.									

Note 3: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1.

Table 8.13.3.2.1-3: Single carrier performance with different bandwidths for multiple CA configurations for TDD SCell (FRC)

Bandwidth	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.51-2 TDD	R.51-2 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	14.0	9.0
10 MHz	R.51 TDD	R.51 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	13.9	9.1
15MHz _z	R.51-3 TDD	R.51-3 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	13.9	9.2
20MHz _z	R.51-4 TDD	R.51-4 TDD	OP.1 TDD	ETU5	2x2 Low	2x4 Low	70	14.1	9.3

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.
 Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.
 Note 3: SNR corresponds to \hat{E}_s/N_{oc} of Cell 1.

Table 8.13.3.2.1-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)

8.13.3.2.2 Minimum Requirement Dual-Layer Spatial Multiplexing 2 Tx Antenna Port for TDD PCell

The purpose of these tests is to verify the closed loop rank-two performance with wideband and frequency selective precoding.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.2.2-4 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 3DL CCs, the requirements are specified in Table 8.13.3.2.2-5 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 4DL CCs, the requirements are specified in Table 8.13.3.2.2-6 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

For TDD FDD CA with TDD PCell and 5DL CCs, the requirements are specified in Table 8.13.3.2.2-7 based on single carrier requirement specified in Table 8.13.3.2.2-2 and Table 8.13.3.2.2-3, with the addition of the parameters in Table 8.13.3.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.3.2.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Values
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals			Antenna ports 0 and 1
Cell ID			0
CSI reference signals			Antenna ports 15,16
Beamforming model			Annex B.4.2
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$	FDD CC	Subframes	5 / 2
	TDD CC		5 / 4
CSI reference signal configuration			8
Zero-power CSI-RS configuration $I_{CSI-RS} / \text{ZeroPowerCSI-RS}$ bitmap	FDD CC	Subframes / bitmap	3 / 0010000000000000
	TDD CC		4 / 0010000000000000
N_{oc} at antenna port		dBm/15kHz	-98
\hat{E}_s / N_{oc}	FDD CC		Reference Value in Table 8.13.3.2.2-2
	TDD CC		Reference Value in Table 8.13.3.2.2-3
Symbols for unused PRBs			OCNG (Note 2)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			No
PDSCH transmission mode			9
Note 1: $P_B = 1$			
Note 2: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated.			
Note 3: ACK/NACK bits are transmitted using PUSCH with PUCCH format 3.			

Table 8.13.3.2.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)

Bandwidth	Reference channel		OCNG pattern	Propagation condition	Correlation matrix and antenna config.		Reference value		
	2Rx CC	4Rx CC			2Rx CC	4Rx CC	Fraction of maximum throughput (%)	SNR (dB)	
								2Rx CC	4Rx CC
5MHz	R.51-2 FDD	R.51-2 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.2	9.0
10 MHz	R.51 FDD	R.51 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.7	8.8
15MHz	R.51-3 FDD	R.51-3 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	13.6	8.7
20MHz	R.51-4 FDD	R.51-4 FDD	OP.1 FDD	ETU5	2x2 Low	2x4 Low	70	14.3	8.8
Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.									
Note 2: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.									
Note 3: SNR corresponds to \hat{E}_s / N_{oc} of Cell 1.

8.13.3.3 Enhanced Performance Requirements Type A Closed-loop spatial multiplexing

8.13.3.3.1 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for FDD PCell

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.3.3.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with FDD PCell and with 2 DL CCs, the requirements are specified in Table 8.13.3.3.1-4, based on single carrier requirement specified in Table 8.13.3.3.1-2 and Table 8.13.3.3.1-3, with the addition of the parameters in Table 8.13.3.3.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.3.3.1-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
Cell Id			0	1
PDSCH transmission mode			6	4
Interference model			N/A	As specified in clause B.5.3

Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20
Precoding granularity		PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs	4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 4)	FDD CC	ms	8	N/A
	TDD CC	ms	10 or 11	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			1111	N/A
Physical channel for CQI reporting			PUSCH (Note 7)	N/A
cqi-pmi-ConfigurationIndex	FDD PCC		4	N/A
	TDD SCC		5	N/A
<p>Note 1: $P_B = 1$</p> <p>Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.</p> <p>Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.</p> <p>Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).</p> <p>Note 5: All cells are time-synchronous.</p> <p>Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.</p> <p>Note 7: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3 for TDD CCs, and PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2 for FDD CCs.</p>				

Table 8.13.3.3.1-2: Single carrier performance for Enhanced Performance Requirement Type A for FDD PCell and SCell (FRC)

Bandwidth	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)		Reference Value		
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2	2Rx CC	4Rx CC	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
										2Rx CC	4Rx CC
5MHz	R.47-1 FDD	R.47-1 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-3.0
10 MHz	R.47 FDD	R.47 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.0	-2.7
15MHz	R.47-2 FDD	R.47-2 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-2.9
20MHz	R.47-3 FDD	R.47-3 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.1	-2.8

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.3.3.1-3: Single carrier performance for Enhanced Performance Requirement Type A for TDD SCell (FRC)

Bandwidth	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)	Reference Value	
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2		Fraction of	SINR (dB) (Note 2)

							2Rx CC	4Rx CC	Maximum Throughput (%)	2Rx CC	4Rx CC
5MHz	R.47-1 TDD	R.47-1 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-2.8
10 MHz	R.47 TDD	R.47 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.3	-2.5
15MHz	R.47-2 TDD	R.47-2 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.0	-2.7
20MHz	R.47-3 TDD	R.47-3 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	1.3	-2.3

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \widehat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.3.3.1-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)

Test number	Aggregated Bandwidth (MHz)			Minimum performance requirement	UE Category
	Total	FDD CC	TDD CC		
1	2x20	20	20	As defined in Table 8.13.3.3.1-2 and Table 8.13.3.3.1-3 per CC	≥5
2	20+10	10	20	As defined in Table 8.13.3.3.1-2 and Table 8.13.3.3.1-3 per CC	≥5
3	20+15	15	20	As defined in Table 8.13.3.3.1-2 and Table 8.13.3.3.1-3 per CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3.3.2 Minimum Requirement Single-Layer Spatial Multiplexing 2 Tx Antenna Port with TM4 interference model (Cell-Specific Reference Symbols) for TDD PCell

The purpose of these tests is to verify the closed loop rank-one performance with wideband precoding with two transmit antennas when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 4 interference model defined in clause B.5.3. In Table 8.13.3.3.2-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with TDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.3.2-4, based on single carrier requirement specified in Table 8.13.3.3.2-2 and Table 8.13.3.3.2-3, with the addition of the parameters in Table 8.13.3.3.2-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.3.3.2-1: Test Parameters for Single-Layer Spatial Multiplexing (FRC) with TM4 interference model for CA

Parameter		Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3 (Note 1)	-3
	σ	dB	0	0
Cell-specific reference signals			Antenna ports 0,1	Antenna ports 0,1
N_{oc} at antenna port		dBm/15kHz	-98	N/A
DIP (Note 2)		dB	N/A	-1.73
Cell Id			0	1
PDSCH transmission mode			6	4
Interference model			N/A	As specified in clause B.5.3
Probability of occurrence of transmission rank in interfering cells	Rank 1	%	N/A	80
	Rank 2	%	N/A	20

Precoding granularity		PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs	4 for 5MHz CCs, 6 for 10MHz CCs, 8 for 15MHz and 20MHz CCs
PMI delay (Note 4)	FDD CC	ms	8	N/A
	TDD CC	ms	10 or 11	N/A
Reporting interval		ms	5	N/A
Reporting mode			PUCCH 1-1	N/A
CodeBookSubsetRestriction bitmap			1111	N/A
Note 1: $P_B = 1$				
Note 2: The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.				
Note 3: Cell 1 is the serving cell. Cell 2 is the interfering cell.				
Note 4: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).				
Note 5: All cells are time-synchronous.				
Note 6: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection configured for tests with 2 CCs.				

Table 8.13.3.3.2-2: Single carrier performance for Enhanced Performance Requirement Type A for FDD SCell (FRC)

Bandwidth	Reference Channel		OCNG Pattern		Propagation Conditions		Correlation Matrix and Antenna Configuration (Note 3)		Reference Value		
	2Rx CC	4Rx CC	Cell 1	Cell 2	Cell 1	Cell 2	2Rx CC	4Rx CC	Fraction of Maximum Throughput (%)	SINR (dB) (Note 2)	
										2Rx CC	4Rx CC
5MHz	R.47-1 FDD	R.47-1 FDD	OP.1 FDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	0.8	-3.0

8.13.3.4 Enhanced Performance Requirement Type A - Single-layer Spatial Multiplexing (User-Specific Reference Symbols)

8.13.3.4.1 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for FDD PCell

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.3.4.1-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with FDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.4.1-4, based on single carrier requirement specified in Table 8.13.3.4.1-2 and Table 8.13.3.4.1-3, with the addition of the parameters in Table 8.13.3.4.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.3.4.1-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA

parameter		Unit	Cell 1	Cell 2	
Downlink power allocation	ρ_A	dB	0	0

20MHz	R.76-3 TDD	R.76-7 TDD	OP.1 TDD	N/A	EVA5	EVA5	2x2 Low	2x4 Low	70	-0.4	-2.1

Note 1: The propagation conditions for Cell 1 and Cell 2 are statistically independent.

Note 2: SINR corresponds to \hat{E}_s/N_{oc} of Cell 1 as defined in clause 8.1.1.

Note 3: Correlation matrix and antenna configuration parameters apply for each of Cell 1 and Cell 2.

Table 8.13.3.4.1-4: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test number	Aggregated Bandwidth (MHz)			Minimum performance requirement	UE Category
	Total	FDD CC	TDD CC		
1	2x20	20	20	As defined in Table 8.13.3.4.1-2 and Table 8.13.3.4.1-3 per CC	≥5
2	20+10	10	20	As defined in Table 8.13.3.4.1-2 and Table 8.13.3.4.1-3 per CC	≥5
3	20+15	15	20	As defined in Table 8.13.3.4.1-2 and Table 8.13.3.4.1-3 per CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3.4.2 Minimum Requirement Enhanced Performance Requirement Type A – Single-layer Spatial Multiplexing with TM9 interference model (User-Specific Reference Symbols) for TDD PCell

The purpose of these tests is to verify closed loop rank one performance on one of the antenna ports 7 or 8 without a simultaneous transmission on the other antenna port in the serving cell when the PDSCH transmission in the serving cell is interfered by PDSCH of one dominant interfering cell applying transmission mode 9 interference model defined in clause B.5.4. In 8.13.3.4.2-1, Cell 1 is the serving cell, and Cell 2 is the interfering cell. The downlink physical channel setup is according to Annex C.3.2 for each of Cell 1 and Cell 2, respectively.

For TDD FDD CA with TDD PCell with 2 DL CCs, the requirements are specified in Table 8.13.3.4.2-4, based on single carrier requirement specified in Table 8.13.3.4.2-2 and Table 8.13.3.4.2-3, with the addition of the parameters in Table 8.13.3.4.2-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.13.3.4.2-1: Test Parameters for Testing CDM-multiplexed DM RS (single layer) with TM9 interference model for CA

parameter	Unit	Cell 1	Cell 2
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3

	TDD CC	ms	1 or 4 (Note 3)
Reporting mode			PUSCH 3-1
CodeBookSubsetRestriction bitmap			0xFFFF000000000000
CSI request field (Note 3)			'10'
PDSCH transmission mode			4
PDSCH rank			4
Note 1: $P_b = 1$.			
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			
Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers.			
Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection			
Note 5: The same PDSCH transmission mode is applied to each component carrier.			

Table 8.13.3.7.1-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD PCell and SCell (FRC)

					Reference value
--	--	--	--	--	-----------------

Bandwidth	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config	Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.1
10MHz	R.74 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.9
15MHz	R.74-2 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.3
20MHz	R.74-3 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.4

Table 8.13.3.7.1-3: Single carrier performance with different bandwidths for multiple CA configurations for TDD SCell (FRC)

Bandwidth	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.5
10MHz	R.74 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.4
15MHz	R.74-2 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.6
20MHz	R.74-3 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.8

Table 8.13.3.7.1-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)

Test number	Aggregated Bandwidth (MHz)			Minimum performance requirement	UE Category
	Total	FDD CC	TDD CC		
1	2x20	20	20	As defined in Table 8.13.3.7.1-2 and Table 8.13.3.7.1-3 per CC	≥5
2	20+10	10	20	As defined in Table 8.13.3.7.1-2 and Table 8.13.3.7.1-3 per CC	≥5
3	20+15	15	20	As defined in Table 8.13.3.7.1-2 and Table 8.13.3.7.1-3 per CC	≥5

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.

8.13.3.7.2 Minimum Requirement for TDD PCell

The purpose of these tests is to verify the closed loop rank-four performance with wideband precoding with 4Tx and 4Rx under CA.

For TDD FDD CA with TDD PCell and 2DL CCs, the requirements are specified in Table 8.13.3.7.2-4 based on single carrier requirement specified in Table 8.13.3.7.2-2 and Table 8.13.3.7.2-3, with the addition of the parameters in Table 8.13.3.7.2-1 and the downlink physical channel setup according to Annex C.3.2.

The test coverage for different number of component carriers is defined in 8.1.2.4.

Table 8.13.3.7.2-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter	Unit	Value
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
Cell-specific reference signals		Antenna Ports 0,1,2,3
Precoding granularity	PRB	25 for 5MHz CCs, 50 for 10MHz CCs, 75 for 15MHz and 100 for 20MHz CCs
PMI delay (Note 2)	FDD CC	ms
	TDD CC	ms
Reporting interval	FDD CC	ms
	TDD CC	ms
Reporting mode		PUSCH 3-1
CodeBookSubsetRestriction bitmap		0xFFFF000000000000
CSI request field (Note 3)		'10'

PDSCH transmission mode		4
PDSCH rank		4
Note 1: $P_B = 1$. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4). Note 3: Multiple CC-s under test are configured as the 1 st set of serving cells by higher layers. Note 4: ACK/NACK bits are transmitted using PUSCH with PUCCH format 1b with channel selection Note 5: The same PDSCH transmission mode is applied to each component carrier.		

Table 8.13.3.7.2-2: Single carrier performance with different bandwidths for multiple CA configurations for FDD SCell (FRC)

Band-width	Reference channel	OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.1
10MHz	R.74 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.9
15MHz	R.74-2 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.3
20MHz	R.74-3 FDD	OP.1 FDD	EPA5	4x4 Low	70	14.4

Table 8.13.3.7.2-3: Single carrier performance with different bandwidths for multiple CA configurations for TDD PCell and SCell (FRC)

Band-width	Reference channel	OCNG pattern	Propa-gation condi-tion	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.74-1 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.5
10MHz	R.74 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.4
15MHz	R.74-2 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.6
20MHz	R.74-3 TDD	OP.1 TDD	EPA5	4x4 Low	70	14.8

Table 8.13.3.7.2-4: Minimum performance for multiple CA configurations with 2DL CCs (FRC)

Test number	Aggregated Bandwidth (MHz)			Minimum performance requirement	UE Category
	Total	FDD CC	TDD CC		
1	2x20	20	20	As defined in Table 8.13.3.7.2-2 and Table 8.13.3.7.2-3 per CC	≥5
2	20+10	10	20	As defined in Table 8.13.3.7.2-2 and Table 8.13.3.7.2-3 per CC	≥5
3	20+15	15	20	As defined in Table 8.13.3.7.2-2 and Table 8.13.3.7.2-3 per CC	≥5
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.6.					

8.14 Demodulation (UE supporting Short TTI)

The performance requirements specified in this clause are valid for UEs capable of short TTI.

8.14.1 Slot-PDSCH and Subslot-PDSCH

8.14.1.1 FDD (Fixed Reference Channel)

The parameters specified in Table 8.14.1.1-1 are valid for FDD unless otherwise stated.

Table 8.14.1.1-1: Common Test Parameters

Parameter	Unit	Value
Cyclic prefix		Normal
Cell ID		0
Number of HARQ processes	Processes	8 for Slot-PDSCH 8 for subslot-PDSCH with proc-Timeline=set1 (Note 1) 12 for subslot-PDSCH with proc-Timeline=set2 (Note 1)
Minimum Processing Time (Note 2)		$X_p=4$ (proc-Timeline=set1) $X_p=6$ (proc-Timeline=set2)
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3}
Number of OFDM symbols for PDCCH	OFDM symbols	2
Note 1: As specified in TS36.211 Table 8.1-2.		
Note 2: Subslot-PDSCH only. As specified in TS36.213 7.3.		

8.14.1.1.1 Open-loop spatial multiplexing performance

The requirements are specified in Table 8.14.1.1.1-3, with the addition of the parameters in Table 8.14.1.1.1-1 and Table 8.14.1.1.1-2, and the downlink physical channel setup according to Annex C.3.2.

Table 8.14.1.1.1-1: Test Parameters for PDSCH

Parameter		Unit	Test 1	Test 2
Unused RE-s and PRB-s			OCNG	OCNG
Cell ID			0	0
Downlink power allocation	ρ_A	dB	-6	-6
	ρ_B	dB	-6	-6
	σ	dB	0	0
N_{oc} at antenna port		dBm/15kHz	-98	-98
Subframe configuration			Non-MBSFN	Non-MBSFN
Cell specific reference signal			Antenna ports 0,1,2,3	Antenna ports 0,1,2,3
DL TTI length			Slot	Subslot
Configured SPDCCH-PRB sets			{Set 1, Set 2}	{Set 1, Set 2}
SPDCCH-PRB set used for DCI transmission			Set 1	Set 2
Used/Unused SPDCCH resource indication			N/A	'10'
PDSCH transmission mode			TM3	TM3
DCI format			7-1B	7-1B

Table 8.14.1.1.1-2: SPDCCH-PRB set parameters

Parameter	Unit	Set 1	Set 2
Reference symbol		CRS	CRS
Transmission type		Localized	Localized
Number of OFDM symbols		1	1
Number of PRBs per SPDCCH-PRB set (Note 1)		16	16
Rate Matching mode		Mode 1	Not configured
SPDCCH L1 Reuse Indication		Not configured	{2, 0}
Aggregation level	SCCE	2	2
Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1, and PRB = {35, 36, ..., 49} for Set 2			

Table 8.14.1.1.1-3: Minimum performance Large Delay CDD (FRC)

Test num	Bandwidth and MCS	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config.	Reference value		UE category
						Fraction of maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 0.5	R.sTTI.1 FDD	OP.1 FDD	EVA30	4x2 Low	70	13.6	≥2
2	10 MHz 16QAM 0.45	R.sTTI.2 FDD	OP.1 FDD	EVA30	4x2 Low	70	11.6	≥2

8.14.1.1.2 Closed-loop spatial multiplexing performance (User-Specific Reference Signals)

The requirements are specified in Table 8.14.1.1.2-3, with the addition of the parameters in Table 8.14.1.1.2-1 and Table 8.14.1.1.2-2, and the downlink physical channel setup according to Annex C.3.2.

Table 8.14.1.1.2-1: Test Parameters for PDSCH

Parameter		Unit	Test 1	Test 2
Unused RE-s and PRB-s			OCNG	OCNG
Cell ID			0	0
Downlink power allocation	ρ_A	dB	-3	-3
	ρ_B	dB	-3	-3
	σ	dB	0	0
N_{oc} at antenna port		dBm/15kHz	-98	-98
CSI-RS signals			Antenna ports 15, 16	Antenna ports 15, 16
CSI-RS periodicity and subframe offset			5 / 2	5 / 2
CSI-RS configuration			0	0
Zero-power CSI-RS configuration			Not configured	Not configured
Subframe configuration			Non-MBSFN	Non-MBSFN
Precoder update granularity	SREG		2	2
	ms		1	1
Beamforming precoder			Annex B.4.2	Annex B.4.2
Cell specific reference signal			0, 1	0, 1
DL TTI length			Slot	Subslot
DMRS position indicator			N/A	0 for subslots 1,3, and 5 1 for subslots 2 and 4
Configured SPDCCH-PRB sets			{Set 1, Set 2}	{Set 1, Set 2}
SPDCCH-PRB set used for DCI transmission			Set 1	Set 2
Used/Unused SPDCCH resource indication			'10'	N/A
PDSCH transmission mode			TM9	TM9
DCI format			7-1F	7-1F

						Fraction of maximum Throughput (%)	SNR (dB)	
1	10 MHz QPSK 1/3	R.sTTI.2 TDD	OP.1 TDD	EPA5	2x2 Low	70	6.8	≥2

8.14.2 SPDCCH

The receiver characteristics of the SPDCCH are determined by the probability of miss-detection of the Downlink Scheduling Grant (Pm-dsg).

8.14.2.1 FDD

The parameters specified in Table 8.14.2.1-1 and Table 8.14.2.1-2 are valid for all FDD tests unless otherwise stated.

Table 8.14.2.1-1: Test Parameters for SPDCCH

Parameter		Unit	Test 1 Test 3	Test 2 Test 4
Number of PDCCH symbols		symbols	2	2
Unused RE-s and PRB-s			OCNG	OCNG
Cell ID			0	0
Downlink power allocation	ρ_A	dB	-6	-3
	ρ_B	dB	-6	-3
	σ	dB	0	0
	δ	dB	N/A	3
N_{oc} at antenna port		dBm/15kHz	-98	-98
Cyclic prefix			Normal	Normal
Subframe configuration			Non-MBSFN	Non-MBSFN
Precoder update granularity	SREG		N/A	2
	ms		N/A	1
Beamforming precoder			N/A	Annex B.4.4
Cell specific reference signal			Antenna ports 0,1,2,3	Antenna ports 0,1
Configured SPDCCH-PRB sets			{Set 1}	{Set 2}

SPDCCH-PRB set used for DCI transmission		Set 1	Set 2
PDSCH transmission mode		TM4	TM9
DCI format		7-1C	7-1F
Note 1: For slot-based transmission, DCI 7-1C and 7-1F are transmitted only on SPDCCH in slot 1. For subslot-based transmission, DCI 7-1C and 7-1F are transmitted on SPDCCH in all the subslots.			

Table 8.14.2.1-2: SPDCCH-PRB set parameters

Parameter	Unit	Set 1	Set 2
Reference symbol		CRS	DMRS
Transmission type		Localized	Distributed
Number of OFDM symbols		1	Note 2
Number of PRBs per SPDCCH-PRB set (Note 1)		16	16
Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1 and PRB = {0, 1, 6, 7, 12, 13, 18, 19, 28, 29, 34, 35, 40, 41, 46, 47} for Set 2.			
Note 2: 2 OFDM symbols for slot-based SPDCCH. 2 OFDM symbols for subslot indices 2, 3, and 4, and 3 OFDM symbols for subslot indices 1 and 5 for subslot-based SPDCCH.			

8.14.2.1.1 Minimum requirement

For the parameters specified in Table 8.14.2.1-1 and Table 8.14.2.1-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.14.2.1.1-1. The metric Pm-dsg is calculated across all the slots for slot-based SPDCCH and across all the subslots for subslot-based SPDCCH. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.14.2.1.1-1: Minimum performance SPDCCH

Test number	Bandwidth	DL TTI length	Aggregation Level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value	
								Pm-dsg (%)	SNR (dB)
1	10 MHz	Slot	2 SCCE	R.sTTI.10 FDD	OP.7 FDD	EVA30	4 x 2 Low	1	2.9
2	10 MHz	Slot	8 SCCE	R.sTTI.11 FDD	OP.7 FDD	EPA5	2 x 2 Low	1	1.3
3	10 MHz	Subslot	2 SCCE	R.sTTI.10 FDD	OP.7 FDD	EVA30	4 x 2 Low	1	2.3
4	10 MHz	Subslot	8 SCCE	R.sTTI.11 FDD	OP.7 FDD	EPA5	2 x 2 Low	1	0.9

8.14.2.2 TDD

The parameters specified in Table 8.14.2.2-1 and Table 8.14.2.2-2 are valid for all TDD tests unless otherwise stated.

Table 8.14.2.2-1: Test Parameters for SPDCCH

Parameter	Unit	Test 1	Test 2	
Number of PDCCH symbols	symbols	2	2	
Unused RE-s and PRB-s		OCNG	OCNG	
Cell ID		0	0	
Downlink power allocation	ρ_A	dB	-6	-3
	ρ_B	dB	-6	-3
	σ	dB	0	0
	δ	dB	N/A	3
N_{oc} at antenna port	dBm/15kHz	-98	-98	

Cyclic prefix		Normal	Normal
Subframe configuration		Non-MBSFN	Non-MBSFN
Precoder update granularity	SREG	N/A	2
	ms	N/A	1
Beamforming precoder		N/A	Annex B.4.4
Cell specific reference signal		Antenna ports 0,1,2,3	Antenna ports 0,1
Configured SPDCCH-PRB sets		{Set 1}	{Set 2}
SPDCCH-PRB set used for DCI transmission		Set 1	Set 2
PDSCH transmission mode		TM4	TM9
DCI format		7-1C	7-1F
TDD UL/DL Configuration		0	0
TDD Special Subframe		1	1
Note 1: For slot-based transmission, DCI 7-1C and 7-1F are transmitted only on SPDCCH in slot 1. For subslot-based transmission, DCI 7-1C and 7-1F are transmitted on SPDCCH in all the subslots.			

Table 8.14.2.2-2: SPDCCH-PRB set parameters

Parameter	Unit	Set 1	Set 2
Reference symbol		CRS	DMRS
Transmission type		Localized	Distributed
Number of OFDM symbols		1	Note 2
Number of PRBs per SPDCCH-PRB set (Note 1)		16	16
Note 1: The two SPDCCH-PRB sets are non-overlapping with PRB = {0, 1, ..., 15} for Set 1 and PRB = {0, 1, 6, 7, 12, 13, 18, 19, 28, 29, 34, 35, 40, 41, 46, 47} for Set 2.			
Note 2: 2 OFDM symbols for slot-based SPDCCH. 2 OFDM symbols for subslot indices 2, 3, and 4, and 3 OFDM symbols for subslot indices 1 and 5 for subslot-based SPDCCH.			

8.14.2.2.1 Minimum requirement

For the parameters specified in Table 8.14.2.2-1 and Table 8.14.2.2-2 the average probability of a missed downlink scheduling grant (Pm-dsg) shall be below the specified value in Table 8.14.2.2.1-1. The metric Pm-dsg is calculated across all the slots. The downlink physical setup is in accordance with Annex C.3.2.

Table 8.14.2.2.1-1: Minimum performance SPDCCH

Test number	Bandwidth	DL TTI length	Aggregation Level	Reference Channel	OCNG Pattern	Propagation Condition	Antenna configuration and correlation Matrix	Reference value	
								Pm-dsg (%)	SNR (dB)
1	10 MHz	Slot	2 SCCE	R.sTTI.10TDD	OP.7 TDD	EVA30	4 x 2 Low	1	2.7
2	10 MHz	Slot	8 SCCE	R.sTTI.11TDD	OP.7 TDD	EPA5	2 x 2 Low	1	1.2

8.15 Demodulation (8 receiver antenna ports)

8.15.1 PDSCH

8.15.1.1 Void

8.15.1.2 TDD (Fixed Reference Channel)

The parameters specified in Table 8.15.1.2-1 are valid for all TDD tests unless otherwise stated.

Table 8.15.1.2-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Uplink downlink configuration (Note 1)		1
Special subframe configuration (Note 2)		4
Cyclic prefix		Normal
Cell ID		0
Inter-TTI Distance		1
Number of HARQ processes per component carrier	Processes	7
Maximum number of HARQ transmission		4
Redundancy version coding sequence		{0,1,2,3} for QPSK and 16QAM {0,0,1,2} for 64QAM and 256QAM
Number of OFDM symbols for PDCCH	OFDM symbols	4 for 1.4 MHz bandwidth, 3 for 3 MHz and 5 MHz bandwidths, 2 for 10 MHz, 15 MHz and 20 MHz bandwidths unless otherwise stated
Cross carrier scheduling		Not configured
Precoder update granularity		Frequency domain: 1 PRG for Transmission modes 9 and 10 unless stated otherwise Time domain: 1 ms
ACK/NACK feedback mode		Multiplexing

Note 2: as specified in Table 4.2-1 in TS 36.211 [4].		

8.15.1.2.1 Transmit diversity performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.15.1.2.1-2, with the addition of the parameters in Table 8.15.1.2.1-1 and the downlink physical channel setup according to Annex C.3.2. The purpose is to verify the performance of transmit diversity (SFBC) with 2 transmitter antennas.

Table 8.15.1.2.1-1: Test Parameters for Transmit diversity Performance (FRC) with 8Rx Antenna Ports

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/15kHz	-98
PDSCH transmission mode		2
Note 1: $P_B = 1$		

Table 8.15.1.2.1-2: Minimum performance Transmit Diversity (FRC) with 8Rx Antenna Ports

Test number	Bandwidth and MCS	Reference Channel	OCNG Pattern	Propagation Condition	Correlation Matrix and Antenna Configuration	Reference value		UE Category
						Fraction of Maximum Throughput (%)	SNR (dB)	
1	10 MHz 16QAM 1/2	R.11 TDD	OP.1 TDD	EVA5	2x8 Medium correlation B, ULA	70	1.4	≥ 2

8.15.1.2.2 Open-loop spatial multiplexing performance with 2Tx Antenna Ports (Cell-Specific Reference Symbols)

The requirements are specified in Table 8.15.1.2.2-2, with the addition of the parameters in Table 8.15.1.2.2-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.15.1.2.2-1: Test Parameters for Large Delay CDD (FRC) with 8Rx Antenna Ports

Parameter		Unit	Test 1
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
ACK/NACK feedback mode			Bundling
PDSCH transmission mode			3
Note 1: $P_B = 1$

Cross carrier scheduling		Not configured
Note 1: as specified in Table 4.2-2 in TS 36.211 [4]. Note 2: as specified in Table 4.2-1 in TS 36.211 [4].		

8.15.2.2.1 Eight Layer Spatial Multiplexing (User-Specific Reference Symbols)

8.15.2.2.1.1 Minimum Requirement Eight-Layer Spatial Multiplexing 8 Tx Antenna Port

The purpose of these tests is to verify the closed loop rank-eight performance with frequency selective precoding with 8Tx and 8Rx under CA.

For CA with 2 DL CCs, the requirements are specified in Table 8.15.2.2.1.1-3, based on single carrier requirement specified in Table 8.15.2.2.1.1-2, with the addition of the parameters in Table 8.15.2.2.1.1-1 and the downlink physical channel setup according to Annex C.3.2.

Table 8.15.2.2.1.1-1: Test Parameters for Multi-Layer Spatial Multiplexing (FRC) for CA

Parameter		Unit	Test 1
downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	-3
Cell-specific reference signals			Antenna ports 0,1
CSI reference signals			Antenna ports 15,...,22
Beamforming model			Annex B.4.3(Note 4, 5)
CSI-RS periodicity and subframe offset $T_{CSI-RS} / \Delta_{CSI-RS}$		Subframes	5 / 2
CSI reference signal configuration			3
Zero-power CSI-RS configuration $l_{CSI-RS} /$ ZeroPowerCSI-RS bitmap		Subframes / bitmap	3 / 0001000000000000
N_{oc} at antenna port		dBm/15kHz	-98
Symbols for unused PRBs			OCNG (Note 3)
Number of allocated resource blocks (Note 2)		PRB	50
Simultaneous transmission			No
PDSCH transmission mode			9
Precoding granularity			50
PMI delay			8
Reporting interval			5
Reporting mode			PUSCH 3-1
alternativeCodeBookEnabledFor4TX-r12			False
CodeBookSubsetRestriction bitmap			0x0000 0000 0000 0010 0000 0000 0000
Note 1: $P_B = 1$. Note 2: 50 resource blocks are allocated in sub-frames 1,2,3,4,6,7,8,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0. Note 3: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. Note 4: The precoder in clause B.4.3 follows UE recommended PMI. Note 5: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			

Table 8.15.2.2.1.1-2: Single carrier performance for multiple CA configurations

Bandwidth	Reference channel	OCNG pattern	Propagation condition	Correlation matrix and antenna config	Reference value	
					Fraction of maximum throughput (%)	SNR (dB)
5MHz	R.50-3 TDD	OP.1 TDD	EPA5	8x8 Low	70	17.6
10MHz	R.50-4 TDD	OP.1 TDD	EPA5	8x8 Low	70	18.5
15MHz	R.50-5 TDD	OP.1 TDD	EPA5	8x8 Low	70	18.9
20MHz	R.50-6 TDD	OP.1 TDD	EPA5	8x8 Low	70	18.9

Table 8.15.2.2.1.1-3: Minimum performance (FRC) based on single carrier performance for CA with 2 DL CCs

Test num.	CA Bandwidth combination	Requirement	UE category	DL UE category
1	2x20 MHz	As specified in Table 8.15.2.2.1.1-2 per CC	8	14, 17, 18, 19, 20, 22, 23, 24, 25, 26
Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 8.1.2.12.3.				

9 Reporting of Channel State Information

9.1 General

This section includes requirements for the reporting of channel state information (CSI). For all test cases in this section, the definition of SNR and SINR are in accordance with the one given in clause 8.1.1.

For the performance requirements specified in this clause, it is assumed that $N_{RX}=2$ unless otherwise stated.

Unless otherwise stated, 4-bit CQI Table in Table 7.2.3-1 in TS 36.213 [6], and Modulation and TBS index table in Table 7.1.7.1-1 for PDSCH in TS 36.213 [6] are applied in all the CSI requirements.

9.1.1 Applicability of requirements

9.1.1.1 Applicability of requirements for different channel bandwidths

In Clause 9 the test cases may be defined with different channel bandwidth to verify the same CSI requirement.

Test cases defined for 5MHz channel bandwidth that reference this clause are applicable to UEs that support only Band 31, 72, 73, 87 and/or 88.

9.1.1.2 Applicability and test rules for different CA configurations and bandwidth combination sets

The performance requirement for CA CQI tests in Clause 9 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL CCs in Table 9.1.1.2-1 and 3 or more DL CCs in Table 9.1.1.2-2. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 9.1.1.2-1: Applicability and test rules for CA UE CQI tests with 2 DL CCs

Tests	CA capability where the tests apply	CA configuration from the selected CA capability where the tests apply	CA Bandwidth combination to be tested in priority order
CA tests with 2CCs in Clause 9.6.1.1	Any of one of the supported CA capabilities	Any one of the supported FDD CA configurations	10+10 MHz, 20+20 MHz, 5+5 MHz, 10MHz+5MHz, 15MHz+5MHz
CA tests with 2CCs in Clause 9.6.1.2	Any of one of the supported CA capabilities with largest aggregated CA bandwidth combination	Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination

Note 1:	The applicability and test rules are specified in this table, unless otherwise stated.
Note 2:	Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1.
Note 3:	A single Uplink CC is configured for all tests

Table 9.1.1.2-2: Applicability and test rules for CA UE CQI tests with 3 or more DL CCs

Tests	CA capability where the tests apply	CA configuration from the selected CA capability where the tests apply	CA Bandwidth combination to be tested in priority order
CA tests with 3 or more CCs in Clause 9.6.1.1	Any of one of the supported CA capabilities with largest aggregated CA bandwidth combination	Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
CA tests with 3 or more CCs in Clause 9.6.1.2	Any of one of the supported CA capabilities with largest aggregated CA bandwidth combination	Any one of the supported TDD CA configurations with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
Note 1:	The applicability and test rules are specified in this table, unless otherwise stated.		
Note 2:	Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1.		
Note 3:	A single Uplink CC is configured for all tests		

9.1.1.2A Applicability and test rules for different TDD-FDD CA configurations and bandwidth combination sets

The performance requirement for TDD-FDD CA CQI tests in Clause 9 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined for the tests for 2 DL TDD-FDD CA in Table 9.1.1.2A-1 and for 3 or more DL TDD-FDD CA in Table 9.1.1.2A-2. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 9.1.1.2A-1: Applicability and test rules for CA UE CQI tests for TDD-FDD CA with 2 DL CCs

Tests	CA capability where the tests apply	CA configuration from the selected CA capability where the tests apply	CA Bandwidth combination to be tested in priority order
CA tests with 2CCs in Clause 9.6.1.3	Any of one of the supported CA capabilities	Any one of the supported TDD-FDD CA configurations with FDD PCell with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
CA tests with 2CCs in Clause 9.6.1.4	Any of one of the supported CA capabilities	Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
Note 1:	The applicability and test rules are specified in this table, unless otherwise stated.		
Note 2:	Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1.		
Note 3:	A single Uplink CC is configured for all tests		

Table 9.1.1.2A-2: Applicability and test rules for CA UE CQI tests for TDD-FDD CA with 3 or more DL CCs

Tests	CA capability where the tests apply	CA configuration from the selected CA capability where the tests apply	CA Bandwidth combination to be tested in priority order
-------	-------------------------------------	--	---

CA tests with 3CCs in Clause 9.6.1.3	Any of one of the supported CA capabilities	Any one of the supported TDD-FDD CA configurations with FDD PCell with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
CA tests with 3CCs in Clause 9.6.1.4	Any of one of the supported CA capabilities	Any one of the supported TDD-FDD CA configurations with TDD PCell with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination
<p>Note 1: The applicability and test rules are specified in this table, unless otherwise stated.</p> <p>Note 2: Number of the supported bandwidth combinations to be tested from each selected CA configuration is 1.</p> <p>Note 3: A single Uplink CC is configured for all tests</p>			

9.1.1.3 Test coverage for different number of component carriers

For FDD CA tests specified in 9.6.1.1, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD CA tests specified in 9.6.1.2, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the CA tests with less than the largest number of CCs supported by the UE.

For TDD FDD CA tests specified in 9.6.1.3 and 9.6.1.4, among all supported CA capabilities, if corresponding CA tests with the largest number of CCs supported by the UE are tested, the test coverage can be considered fulfilled without executing the TDD FDD CA tests with less than the largest number of CCs supported by the UE.

9.1.1.4 Applicability of performance requirements for 4Rx capable UEs

9.1.1.4.1 Applicability rule and antenna connection for single carrier tests with 2Rx

For 4Rx capable UEs all single carrier tests specified in 9.2 to 9.5 with 2Rx are tested on any of the 2Rx supported RF bands by connecting 2 out of the 4Rx with data source from system simulator, and the other 2 Rx are connected with zero input, depending on UE's declaration and AP configuration. Same requirements specified with 2Rx should be applied.

For 4Rx capable UEs without any 2Rx supported RF bands, all single carrier tests specified in 9.2 to 9.5 with 2Rx are tested on any of the 4Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent noise for each Rx antenna where applicable. Figure 9.1.1.4.1-1 shows an example of antenna connection for 4Rx UE in any one 4Rx supported RF band to perform a 2Rx performance test with antenna configuration as 2x2 without interference for information. The SNR requirements should be applied with 3 dB less than the number specified with 2Rx, unless there is no SNR requirements specified.

For 4Rx capable UEs without any 2Rx supported RF bands, all single carrier tests specified in 9.3.3 with 2Rx are tested on any of the 4Rx supported RF bands by duplicating the fading channel from each Tx antenna and add independent interference for each Rx antenna.

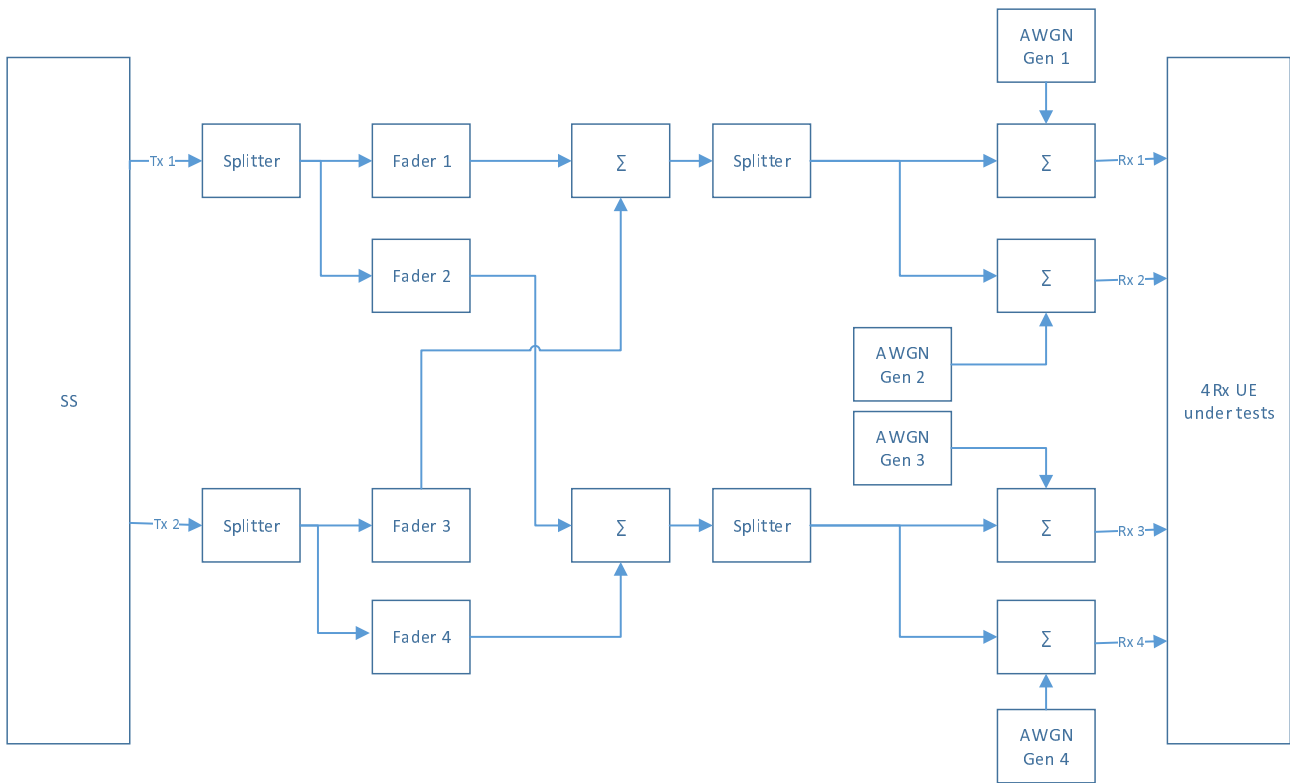

Figure 9.1.1.4.1-1 Antenna connection example for 2Rx tests with antenna configuration as 2x2 without interference (informative)

For 4Rx capable UEs without any 2Rx supported RF bands, for all single carrier tests listed in Table 9.1.1.4.1-1 specified from 9.2 to 9.5 with 2Rx can be skipped.

Table 9.1.1.4.1-1 Requirement lists for 4Rx capable UEs

Requirement lists
Enhanced performance requirements type B
Requirements with demodulation subframe overlaps with aggressor cell ABS
Requirements with demodulation subframe overlaps with aggressor cell ABS and CRS assistance information are configured

For 4Rx capable UEs, if corresponding tests listed from the 4Rx test lists from Table 9.1.1.4.1-2 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed from the 2Rx test lists from Table 9.1.1.4.1-2.

9.1.1.4.2 Applicability rule and antenna connection for CA tests with 2Rx

All tests specified in 9.6 with 2Rx with CA and TDD-FDD CA are tested with 4 Rx capable UEs by connecting all 4Rx with data source from system simulator with the following change on the power level in the test configurations listed in Table 9.1.1.4.2-1 and by scheduling the PDSCH for user data based on the Reference measurement channel RC.1 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1 for FDD cells and Reference measurement channel RC.1 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1 for TDD cells.

Table 9.1.1.4.2-1: Power level for 4Rx capable UE to verify CA tests with 2Rx

Number of CCs		$\hat{I}_{or}^{(j)}$ dB[mW/15kHz]
2	PCell	-88
	SCell	-95
3,4	PCell	-85
	SCell1	-92
	SCell2, SCell3	-99
5	PCell	-85
	SCell1	-92
	SCell2, SCell3, SCell4	-99

Within the CA configuration if any of the PCell and/or the SCells is a 2Rx supported RF band, keep the same power level listed in Table 9.1.1.4.2-1. Within the CA configuration if any of the PCell and/or the SCells is a 4Rx supported RF band, configure the power level 3 dB smaller than the number listed in Table 9.1.1.4.2-1. Same requirements specified with 2Rx should be applied.

Same applicability rules defined in 9.1.1.2, 9.1.1.2A for CA and TDD-FDD CA applied for different CA configurations and bandwidth combination sets should be applied for 4 Rx capable UEs.

9.1.1.4.3 Applicability rule and antenna connection for single carrier tests with 4Rx

For 4Rx capable UEs all single carrier tests specified in 9.9 with 4Rx are tested on any of the 4 Rx supported RF bands by connecting all 4Rx with data source from system simulator.

9.1.1.5 Applicability of requirements for UEs supporting coverage enhancement

For 2Rx capable UEs supporting coverage enhancement mode A (ce-ModeA in UE-EUTRA-Capability [7]), all the tests for CE Mode A specified in 9.8.1 and 9.8.2 are tested on any of the 2Rx supported RF bands by connecting all 2Rx with data source from system simulator. The SNR requirements should be applied with 3dB less than the number specified with UE DL Category M1.

For 4Rx capable UEs supporting coverage enhancement mode A (ce-ModeA in UE-EUTRA-Capability [7]), all the tests for CE Mode A specified in 9.8.1 and 9.8.2 are tested on any of the 4Rx supported RF bands by connecting all 4Rx with data source from system simulator. The SNR requirements should be applied with 6dB less than the number specified with UE DL Category M1.

9.2 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbols)

9.2.1.1 FDD

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.1.1-1 and Table 9.2.1.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 FDD / RC.14 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

The applicability of the requirement with 5MHz bandwidth as specified in Table 9.2.1.1-2 is defined in 9.1.1.1.

Table 9.2.1.1-1: PUCCH 1-0 static test (FDD)

Parameter		Unit	Test 1		Test 2

Physical channel for CQI reporting		PUCCH Format 2			
PUCCH Report Type		4			
Reporting periodicity	ms	$N_{pd} = 5$			
<i>cqi-pmi-ConfigurationIndex</i>		6			
Note 1:	Reference measurement channel RC.14 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1, except for category 1 UE use RC.15 FDD with two sided dynamic OCNG Pattern OP.2 FDD as described in Annex A.5.1.2.				
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.				

9.2.1.2 TDD

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.1.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.2.1.2-1: PUCCH 1-0 static test (TDD)

Parameter		Unit	Test 1		Test 2	
Bandwidth		MHz	10			
PDSCH transmission mode			1			
Uplink downlink configuration			2			
Special subframe configuration			4			
Downlink power allocation	ρ_A	dB	0			
	ρ_B	dB	0			
	σ	dB	0			
Propagation condition and antenna configuration			AWGN (1 x 2)			
SNR (Note 2)		dB	0	1	6	7
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]		-98	-97	-92	-91
$N_{oc}^{(j)}$	dB[mW/15kHz]		-98		-98	
Max number of HARQ transmissions			1			
Physical channel for CQI reporting			PUSCH (Note 3)			
PUCCH Report Type			4			
Reporting periodicity		ms	$N_{pd} = 5$			
<i>cqi-pmi-ConfigurationIndex</i>			3			
ACK/NACK feedback mode			Multiplexing			

Note 1: Reference measurement channel RC.1 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1, except for category 1 UE use RC.4 TDD with two sided dynamic OCNG Pattern OP.2 TDD as described in Annex A.5.2.2.

Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.

Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.

9.2.1.3 FDD (CSI measurements in case two CSI subframe sets are configured)

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.1.3-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-1 for Cell 2 and C.3.2-2, the reported CQI value according to RC.2 FDD / RC.6 FDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1. The value of the median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ minus the median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ shall be larger than or equal to 2 and less than or equal to 5 in Test 1 and shall be larger than or equal to 0 and less than or equal to 1 in Test 2.

Table 9.2.1.3-1: PUCCH 1-0 static test (FDD)

9.2.1.4 TDD (CSI measurements in case two CSI subframe sets are configured)

The following requirements apply to UE Category ≥1. For the parameters specified in Table 9.2.1.4-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C3.3-1 for Cell 2 and C.3.2-2, the reported CQI value according to RC.2 TDD / RC.6 TDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ±1 of the reported median more than 90% of the time. If the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets C_{CSI,1} is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1. The value of the median CQI obtained by reports in CSI subframe sets C_{CSI,0} minus the median CQI obtained by reports in CSI subframe sets C_{CSI,1} shall be larger than or equal to 2 and less than or equal to 5 in Test 1 and shall be larger than or equal to 0 and less than or equal to 1 in Test 2.

9.2.1.5 FDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

The following requirements apply to UE Category ≥2. For the parameters specified in Table 9.2.1.5-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-2 for Cell 2 and Cell 3, and C.3.2-2, the reported CQI value according to RC.2 FDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ±1 of the reported median more than 90% of the time.

For test 1 and test 2, if the PDSCH BLER in ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ is less than or equal to 0.1, the BLER in ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

For test 2, if the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 2) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.				
Note 2:	ABS pattern as defined in [9].				
Note 3:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]				
Note 4:	As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7]				
Note 5:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]				
Note 6:	Cell 1 is the serving cell. Cell 2 and Cell 3 are the aggressor cells. The number of the CRS ports in Cell1, Cell2, and Cell3 are the same.				
Note 7:	This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.				
Note 8:	This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.				
Note 9:	This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.				
Note 10:	Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.1.5				
Note 11:	Reference measurement channel in Cell 1 RC.2 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.				
Note 12:	To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.				
Note 13:	<i>cqi-pmi-ConfigurationIndex</i> is applied for $C_{CSI,0}$.				
Note 14:	<i>cqi-pmi-ConfigurationIndex2</i> is applied for $C_{CSI,1}$.				

9.2.1.6 TDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

The following requirements apply to UE Category ≥ 2 . For the parameters specified in Table 9.2.1.6-1, and using the downlink physical channels specified in tables C.3.2-1 for Cell 1, C.3.3-2 for Cell 2 and Cell 3, and C.3.2-2, the reported CQI value according to RC.2 TDD in Table A.4-1 in subframes overlapping with aggressor cell ABS and non-ABS subframes shall be in the range of ± 1 of the reported median more than 90% of the time.

For test 1 and test 2, if the PDSCH BLER in ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ is less than or equal to 0.1, the BLER in ABS subframes using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER in ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

For test 2, if the PDSCH BLER in non-ABS subframes using the transport format indicated by median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ is less than or equal to 0.1, the BLER in non-ABS subframes using the transport format indicated by the (median CQI + 2) shall be greater than 0.1. If the PDSCH BLER in non-ABS subframes using the transport format indicated by the median CQI is greater than 0.1, the BLER in non-ABS subframes using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 2:	ABS pattern as defined in [9].
Note 3:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
Note 4:	As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].
Note 5:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
Note 6:	Cell 1 is the serving cell. Cell 2 and Cell 3 are the aggressor cells. The number of the CRS ports in Cell1, Cell2, and Cell3 is the same.
Note 7:	This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10,#12, #13 of a subframe overlapping with the aggressor ABS.
Note 8:	This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS
Note 9:	This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS.
Note 10:	Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNG pattern as defined in Annex A.5.2.5
Note 11:	Reference measurement channel in Cell 1 RC.2 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.
Note 12:	To avoid collisions between HARQ-ACK and wideband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.
Note 13:	<i>cqi-pmi-ConfigurationIndex</i> is applied for $C_{CSI,0}$.
Note 14:	<i>cqi-pmi-ConfigurationIndex2</i> is applied for $C_{CSI,1}$.

9.2.1.7 FDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

The following requirements apply to UE Category 11-12 and DL Category ≥ 11 . For the parameters specified in Table 9.2.1.7-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1A FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1, or the BLER using the transport format indicated by the (median CQI + 1) shall be less than or equal to 0.1 when the highest MCS value of the test case has reached. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

Table 9.2.1.7-1: PUCCH 1-0 static test (FDD)

Note 1:	Reference measurement channel RC.1A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.				
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.				

9.2.1.8 TDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

The following requirements apply to UE Category 11-12 and UE DL Category ≥ 11 . For the parameters specified in Table 9.2.1.8-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1A TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1, or the BLER using the transport format indicated by the (median CQI + 1) shall be less than or equal to 0.1 when the highest MCS value of the test case has reached. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

Table 9.2.1.8-1: PUCCH 1-0 static test (TDD)

Note 1: Reference measurement channel RC.1A TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.						
Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.						
Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.						

9.2.1.9 FDD (Modulation and TBS index Table 3 and 4-bit CQI Table 4 are used)

The following requirements apply to UE DL Category 20 and DL Category ≥ 22 . For the parameters specified in Table 9.2.1.9-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.X FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 4 in Table 7.2.3-4 in TS 36.213 [6], and Modulation and TBS index table 3 in Table 7.1.7.1-1B for PDSCH in TS 36.213 [6] are applied.

Table 9.2.1.9-1: PUCCH 1-0 static test (FDD)

Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.			

9.2.1.10 TDD (Modulation and TBS index Table 3 and 4-bit CQI Table 4 are used)

The following requirements apply to UE DL Category 20 and DL Category ≥ 22 . For the parameters specified in Table 9.2.1.10-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.X TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI - 1) shall be less than or equal to 0.1.

In this test, 4-bit CQI Table 3 in Table 7.2.3-4 in TS 36.213 [6], and Modulation and TBS index table 3 in Table 7.1.7.1-1B for PDSCH in TS 36.213 [6] are applied.

Table 9.2.1.10-1: PUCCH 1-0 static test (TDD)

<i>cqi-pmi-ConfigurationIndex</i>		3
ACK/NACK feedback mode		Multiplexing
Note 1:	Reference measurement channel RC.30 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.	

9.2.2 Minimum requirement PUCCH 1-1 (Cell-Specific Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.2.2.1 FDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.2.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ -1, median CQI₁, median CQI₁ +1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

Table 9.2.2.1-1: PUCCH 1-1 static test (FDD)

<i>ri-ConfigIndex</i>		1 (Note 3)
Note 1:	Reference measurement channel RC.2 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	It is intended to have UL collisions between RI reports and HARQ-ACK, since the RI reports shall not be used by the eNB in this test.	

9.2.2.2 TDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.2.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$ for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

Table 9.2.2.2-1: PUCCH 1-1 static test (TDD)

Parameter		Unit	Test 1		Test 2	
Bandwidth		MHz	10

Reporting periodicity		ms	$N_{pd} = 5$			
<i>cqi-pmi-ConfigurationIndex</i>			3			
<i>ri-ConfigIndex</i>			805 (Note 4)			
ACK/NACK feedback mode			Multiplexing			

Note 1:	Reference measurement channel RC.2 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.
Note 4:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.

9.2.3 Minimum requirement PUCCH 1-1 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.2.3.1 FDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$ for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

Note 1:	Reference measurement channel RC.7 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5.	

9.2.3.1A FDD (With *channelMeasRestriction* configured)

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.3.1A-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ -1, median CQI₁, median CQI₁ +1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

NOTE 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.		
NOTE 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink #5.		
NOTE 4: In sub-frame 6, transmission power of CSI-RS REs is 9dB lower than CRS REs, in sub-frame 1, there is no power offset between CSI-RS REs and CRS REs.		

9.2.3.2 TDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set {median $\text{CQI}_1 - 1$, median CQI_1 , median $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

Table 9.2.3.2-1: PUCCH 1-1 submode 1 static test (TDD)

Note 1:	Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.	
Note 4:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.	

9.2.3.2A TDD (With *channelMeasRestriction* configured)

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.3.2A-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$ for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

NOTE 1: Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.					
NOTE 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.					
NOTE 3: To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7.					
NOTE 4: RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.					
NOTE 5: In sub-frame 8, transmission power of CSI-RS REs is 9dB lower than CRS REs, in sub-frame 3, there is no power offset between CSI-RS REs and CRS REs.					

9.2.4 Minimum requirement PUCCH 1-1 (With Single CSI Process)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

If UE supporting *interferenceMeasRestriction*, test cases specified in 9.2.4.1A and 9.2.4.2A are applicable for such UE otherwise test cases specified in 9.2.4.1 and 9.2.4.2 are applied.

9.2.4.1 FDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.4.1-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ -1, median CQI₁, median CQI₁ +1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

Note 4:	N/A.					
Note 5:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.					
Note 6:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.					

9.2.4.2A TDD (With *interferenceMeasRestriction* configured)

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.2.4.2A-1, and using the downlink physical channels specified in Tables C.3.4-1 and C.3.4-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$ for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

NOTE 1:	Reference measurement channel RC.10 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.
NOTE 2:	REs for antenna ports 0 and 1 CRS have zero transmission power.
NOTE 3:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
NOTE 4:	N/A.
NOTE 5:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7.
NOTE 6:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.

9.2.5 Minimum requirement PUCCH 1-1 (when *csi-SubframeSet-r12* and *eIMTA-MainConfigServCell-r12* are configured)

The following requirements apply to UE Category ≥ 2 which supports eIMTA TDD UL-DL reconfiguration for TDD serving cell(s) via monitoring PDCCH with eIMTA-RNTI and Rel-12 CSI subframe sets. For the parameters specified in table 9.2.5-1, and using the downlink physical channels specified in Tables C.3.2-1 and C.3.2-2, for each CSI subframe set, the reported CQI value shall be in the range of ± 1 of the reported median more than 90% of the time. For each CSI subframe set, if the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1. The difference of the median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ and the median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ shall be larger than or equal to 3.

<i>cqi-pmi-ConfigurationIndex</i>		8 for set 0 13 for set 1	
<i>ri-ConfigIndex</i>		805 for both set 0 and set 1 (Note 7)	
ACK/NACK feedback mode		Multiplexing	
Note 1:	Reference measurement channel RC.19 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and dynamic OCNG Pattern with multiple non-contiguous blocks OP.7 TDD as described in Annex A.5.2.1/7 for CSI subframe set 0.		
Note 2:	Reference measurement channel RC.20 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1 for CSI subframe set 1.		
Note 3:	In the test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level for each CSI subframe set separately.		
Note 4:	As specified in Table 4.2-2 in TS 36.211.		
Note 5:	UL/DL configuration in PDCCH with eIMTA-RNTI is cyclically selected from the given set on a per-DCI basis.		
Note 6:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2. CQI/PMI reports for CSI subframe set 0 is transmitted in SF#2 and CQI/PMI reports for CSI subframe set 1 is transmitted in SF#7.		
Note 7:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.		

9.2.6 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbols)

9.2.6.1 Frame structure type 3 with FDD Pcell

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.6.1-1, Table 9.2.6.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of ± 1 of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of ± 1 of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

The value of the wideband CQI median for first set of CQI reports minus the wideband CQI median for second set of CQI reports shall be larger than or equal to 2 in Test 1 and Test 2.

Table 9.2.6.1-1: Parameters for PUSCH 3-0 static test on FDD Pcell

Parameter	Unit	Value	
Bandwidth	MHz	20	
PDSCH transmission mode		3

	Number of occupied symbols per subframe	14	
	The number of subframes set (S_1) per burst	{3,8}	
	Random variable ρ defined in B.8	0.5	
	Power configuration for each burst	$\hat{I}_{or}^{(j)}$ is randomly selected from 6 dB power boosting or 0 dB power boosting with equal probability	
Note 1:	Reference measurement channel RC.2A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FS3 as described in Annex A.5.4.1, except for category 1 UE use RC.4A FDD with two sided dynamic OCNG Pattern OP.2 FS3 as described in Annex A.5.4.2.		
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.		

9.2.6.2 Frame structure type 3 with TDD Pcell

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.6.2-1, Table 9.2.6.2-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of ± 1 of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of ± 1 of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

The value of the wideband CQI median for first set of CQI reports minus the wideband CQI median for second set of CQI reports shall be larger than or equal to 2 in Test 1 and Test 2.

Table 9.2.6.2-1: Parameters for PUSCH 3-0 static test on TDD Pcell

Parameter	Unit	Value

Note 1:	Reference measurement channel RC.2A FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FS3 as described in Annex A.5.4.1, except for category 1 UE use RC.4A FDD with two sided dynamic OCNG Pattern OP.2 FS3 as described in Annex A.5.4.2.		
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.		

9.2.7 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

9.2.7.1 Frame structure type 3 with FDD Pcell

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.7.1-1, Table 9.2.7.1-2 and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of ± 1 of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of ± 1 of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median – 1) shall be less than or equal to 0.1.

The value of the wideband CQI for the first set of CQI report minus the wideband CQI median for second set of CQI shall be larger than or equal to 2 in Test 1 and Test 2.

Table 9.2.7.1-1: Parameters for PUSCH 3-1 static test on FDD Pcell

Parameter	Unit	Value	
Bandwidth	MHz	20	
PDSCH transmission mode		9

PDSCH transmission model	Basic model	As specified in Section B.8
	subframeStartPosition	s0
	Number of occupied symbols per subframe	14
	The number of subframes set (S_1) per burst	{3, 8}
	Random variable p defined in B.8	0.5
	Power configuration for each burst	$\hat{I}_{or}^{(j)}$ is randomly selected from 6 dB power boosting or 0 dB power boosting with equal probability
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4)	
Note 2:	Reference measurement channel RC.9A FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 FS3 as described in Annex A.5.4.1/2.	
Note 3:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	

9.2.7.2 Frame structure type 3 with TDD Pcell

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.2.7.2-1, Table 9.2.7.2-2 and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, two sets of CQI reports are obtained for LAA Scell. The first one is obtained by reports whose reference resource is in the downlink subframes with 6 dB transmission power boost, i.e., high power subframes. The second one is obtained by reports whose reference resource is in the downlink subframe with 0 dB transmission power boost, i.e., low power subframe. In the test, PDSCH transport format in high power subframe is determined by first set of CQI reports and PDSCH transport format in low power subframe is determined by second set of CQI reports.

The reported CQI value in the first set of reports shall be in the range of ± 1 of the reported median more than 90% of the first set of reports. The reported CQI value in the second set of reports shall be in the range of ± 1 of the reported median more than 90% of the second set of reports.

If the PDSCH BLER in the high power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in high power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in high power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in high power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

If the PDSCH BLER in the low power subframes using the transport format indicated by wideband CQI median is less than or equal to 0.1, the BLER in low power subframes using the transport format indicated by the (wideband CQI median + 1) shall be greater than 0.1. If the PDSCH BLER in the low power subframes using the transport format indicated by the wideband CQI median is greater than 0.1, the BLER in low power subframes using transport format indicated by (wideband CQI median - 1) shall be less than or equal to 0.1.

The value of the wideband CQI for the first set of CQI report minus the wideband CQI median for second set of CQI shall be larger than or equal to 2 in Test 1 and Test 2.

Note 1: If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4)		
Note 2: Reference measurement channel RC.9A FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 FS3 as described in Annex A.5.4.1/2.		
Note 3: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.		

9.3 CQI reporting under fading conditions

9.3.1 Frequency-selective scheduling mode

The accuracy of sub-band channel quality indicator (CQI) reporting under frequency selective fading conditions is determined by a double-sided percentile of the reported differential CQI offset level 0 per sub-band, and the relative increase of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest reported differential CQI offset level the corresponding transport format compared to the case for which a fixed format is transmitted on any sub-band in set S of TS 36.213 [6]. The purpose is to verify that preferred sub-bands can be used for frequently-selective scheduling. To account for sensitivity of the input SNR the sub-band CQI reporting under frequency selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.3.1.1 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbols)

9.3.1.1.1 FDD

For the parameters specified in Table 9.3.1.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least $\alpha\%$ of the time but less than $\beta\%$ for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

9.3.1.1.4 TDD (CSI measurements in case two CSI subframe sets are configured and with CRS assistance information)

For the parameters specified in Table 9.3.1.1.4-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.4-2 and by the following

- a) a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band;
- b) the ratio of the throughput in ABS subframes obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- c) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER in ABS subframes for the indicated transport formats shall be greater than or equal to ϵ .

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD.

9.3.1.1.5 TDD (when *csi-SubframeSet-r12* is configured)

The following requirements apply to UE Category ≥ 1 which supports Rel-12 CSI subframe sets. For the parameters specified in Table 9.3.1.1.5-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.1.5-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band for each CSI subframe set;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$ for each CSI subframe set;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05 and less than 0.60 for each CSI subframe set.
- the difference of the wide-band median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ and the wide-band median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ shall be larger than or equal to 3.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance. Sub-bands of a size smaller than full size are excluded from the test.

Number of PRB per EPDCCH Set		4
EPDCCH Subframe Monitoring		NA
EPDCCH Aggregation level		8ECCE
EPDCCH beamforming model		Annex B.4.4
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported subband or wideband CQI cannot be applied at the eNB downlink before SF#(n+4)	
Note 2:	Reference measurement channel RC.17 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/2 TDD as described in Annex A.5.2.1/2.	
Note 3:	In the test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level for each subframe set separately..	
Note 4:	For CSI subframe set 0, PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF #7. For CSI subframe set 1, PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#8 to allow aperiodic CQI/PMI/RI to be transmitted on uplink SF#2.	
Note 5:	In case UE supports EPDCCH, the PDSCH scheduling grants are transmitted via EPDCCH, otherwise PDCCH is used.	
Note 6:	The two sets are distributed EPDCCH sets and non-overlapping with PRB = {0, 3, 6, 9} for the first set and PRB = {40, 43, 46, 49} for the second set. EPDCCH set is selected after scheduling decision for PDSCH to avoid collision between PDSCH and EPDCCH PRBs, respectively. EPDCCH is only transmitted from one set. The starting symbol for EPDCCH is derived from the PCFICH. RRC signalling epdcch-StartSymbol-r11 is not configured

9.3.1.2 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

9.3.1.2.1 FDD

For the parameters specified in Table 9.3.1.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

9.3.1.2.2 TDD

For the parameters specified in Table 9.3.1.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.2-2 and by the following

- a) a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band;

- b) the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- c) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

9.3.1.2.3 FDD (Modulation and TBS index Table 2 and 4-bit CQI Table 2 are used)

For the parameters specified in Table 9.3.1.2.3-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.3-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least $\alpha\%$ of the time but less than $\beta\%$ for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

In this test, 4-bit CQI Table 2 in Table 7.2.3-2 in TS 36.213 [6], and Modulation and TBS index table 2 in Table 7.1.7.1-1A for PDSCH in TS 36.213 [6] are applied.

9.3.1.2.6 TDD (when *csi-SubframeSet* –r12 is configured with one CSI process)

The following requirements apply to UE Category ≥ 1 which supports Rel-12 CSI subframe sets and TM10. For the parameters specified in Table 9.3.1.2.6-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.1.2.6-2 and by the following

- a) a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band for each CSI subframe set;
- b) the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set *S* shall be $\geq \gamma$ for each CSI subframe set;
- c) when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.01 for each CSI subframe set.
- d) The difference of the wide-band median CQI obtained by reports in CSI subframe sets $C_{CSI,0}$ and the wide-band median CQI obtained by reports in CSI subframe sets $C_{CSI,1}$ shall be larger than or equal to 3.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each available downlink transmission instance. Sub-bands of a size smaller than full size are excluded from the test.

9.3.2 Frequency non-selective scheduling mode

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective fading conditions is determined by the reporting variance, and the relative increase of the throughput obtained when the transport format transmitted is that indicated by the reported CQI compared to the case for which a fixed transport format configured according to the reported median CQI is transmitted. In addition, the reporting accuracy is determined by a minimum BLER using the transport formats indicated by the reported CQI. The purpose is to verify that the UE is tracking the channel variations and selecting the largest transport format possible according to the prevailing channel state for frequently non-selective scheduling. To account for sensitivity of the input SNR the CQI reporting under frequency non-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.3.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol)

9.3.2.1.1 FDD

For the parameters specified in Table 9.3.2.1.1-1 and Table 9.3.2.1.1-3, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.2.1.1-2 and Table 9.3.2.1.1-4 and by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least α % of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be $\geq \gamma$;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02

The applicability of the requirement with 5MHz bandwidth as specified in Table 9.3.2.1.1-3 and Table 9.3.2.1.1-4 is defined in 9.1.1.1.

Table 9.3.2.1.1-1 Fading test for single antenna (FDD)

Parameter		Unit	Test 1		Test 2

9.3.3 Frequency-selective interference

The accuracy of sub-band channel quality indicator (CQI) reporting under frequency selective interference conditions is determined by a percentile of the reported differential CQI offset level +2 for a preferred sub-band, and the relative increase of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest reported differential CQI offset level the corresponding transport format compared to the case for which a fixed format is transmitted on any sub-band in set S of TS 36.213 [6]. The purpose is to verify that preferred sub-bands are used for frequently-selective scheduling under frequency-selective interference conditions.

9.3.3.1 Minimum requirement PUSCH 3-0 (Cell-Specific Reference Symbol)

9.3.3.1.1 FDD

For the parameters specified in Table 9.3.3.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.3.1.1-2 and by the following

- a sub-band differential CQI offset level of +2 shall be reported at least $\alpha\%$ for at least one of the sub-bands of full size at the channel edges;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

Table 9.3.3.1.1-1 Sub-band test for single antenna transmission (FDD)

UE Category	≥ 1	≥ 1

9.3.3.2 Void

9.3.3.2.1 Void

9.3.3.2.2 Void

9.3.4 UE-selected subband CQI

The accuracy of UE-selected subband channel quality indicator (CQI) reporting under frequency-selective fading conditions is determined by the relative increase of the throughput obtained when transmitting on the UE-selected subbands with the corresponding transport format compared to the case for which a fixed format is transmitted on any subband in set S of TS 36.213 [6]. The purpose is to verify that correct subbands are accurately reported for frequency-selective scheduling. To account for sensitivity of the input SNR the subband CQI reporting under frequency-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.3.4.1 Minimum requirement PUSCH 2-0 (Cell-Specific Reference Symbols)

9.3.4.1.1 FDD

For the parameters specified in Table 9.3.4.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.1.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on a randomly selected subband among the best M subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set S shall be $\geq \gamma$;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each TTI for FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the N_{PRB} entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

γ	1.2	1.2
UE Category	≥ 1	≥ 1

9.3.4.2 Minimum requirement PUCCH 2-0 (Cell-Specific Reference Symbols)

9.3.4.2.1 FDD

For the parameters specified in Table 9.3.4.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.4.2.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on subbands reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected subband in set S shall be $\geq \gamma$;

The requirements only apply for subbands of full size and the random scheduling across the subbands is done by selecting a new subband in each TTI for FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the N_{PRB} entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the subband size.

Table 9.3.4.2.1-1 Subband test for single antenna transmission (FDD)

Parameter		Unit	Test 1		Test 2	
Bandwidth		MHz	10 MHz			
Transmission mode			1 (port 0)

9.3.5 Additional requirements for enhanced receiver Type A

The purpose of the test is to verify that the reporting of the channel quality is based on the receiver of the enhanced Type A. Performance requirements are specified in terms of the relative increase of the throughput obtained when the transport format is that indicated by the reported CQI subject to an interference model compared to the case with a white Gaussian noise model, and a requirement on the minimum BLER of the transmitted transport formats indicated by the reported CQI subject to an interference model.

9.3.5.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol)

9.3.5.1.1 FDD

For the parameters specified in Table 9.3.5.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.5.1.1-2 and by the following

- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be $\geq \gamma$;

- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

<i>cqi-pmi-ConfigurationIndex</i>		3	N/A
<i>ri-ConfigIndex</i>		805 (Note 9)	N/A
Max number of HARQ transmissions		1	N/A
ACK/NACK feedback mode		Multiplexing	N/A
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)		
Note 2:	Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.		
Note 3:	To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.		
Note 4:	The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.		
Note 5:	Two cells are considered in which Cell 1 is the serving cell and Cell 2 is the interfering cell. Interfering cell is fully loaded.		
Note 6:	Both cells are time-synchronous.		
Note 7:	Static channel is used for the interference model. In case for white Gaussian noise model Cell 2 is not present.		
Note 8:	SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.		

Note 9:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available.
Note 10:	N/A.
Note 11:	The precoder in clause B.4.3 follows UE recommended PMI.
Note 12:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Table 9.3.5.2.2-2 Minimum requirement (TDD)

γ	1.8
UE Category	≥ 2

9.3.6 Minimum requirement (With multiple CSI processes)

The purpose of the test is to verify the reporting accuracy of the CQI and the UE processing capability for multiple CSI processes. Each CSI process is associated with a CSI-RS resource and a CSI-IM resource as shown in Table 9.3.6-1. For UE supports one CSI process, CSI process 2 is configured and the corresponding requirements shall be fulfilled. For UE supports three CSI processes, CSI processes 0, 1 and 2 are configured and the corresponding requirements shall be fulfilled. For UE supports four CSI processes, CSI processes 0, 1, 2 and 3 are configured and the corresponding requirements shall be fulfilled.

Table 9.3.6-1: Configuration of CSI processes

	CSI process 0	CSI process 1	CSI process 2	CSI process 3
CSI-RS resource	CSI-RS signal 0	CSI-RS signal 1	CSI-RS signal 0	CSI-RS signal 1
CSI-IM resource	CSI-IM resource 0	CSI-IM resource 0	CSI-IM resource 1	CSI-IM resource 2

9.3.6.1 FDD

For the parameters specified in Table 9.3.6.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.6.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band for CSI process 1, 2, or 3;
- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least δ % of the time for CSI process 0;
- the difference of the median CQIs of the reported wideband CQI for configured CSI processes shall be greater or equal to the values as in Table 9.3.6.1-3;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

Table 9.3.6.1-1: Fading test for FDD

9.3.6.2 TDD

For the parameters specified in Table 9.3.6.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.6.2-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least α % of the time but less than β % for each sub-band for CSI process 1, 2, or 3;
- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least δ % of the time for CSI process 0;
- the difference of the median CQIs of the reported wideband CQI for configured CSI processes shall be greater or equal to the values as in Table 9.3.6.2-3;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD, each available downlink transmission instance for TDD. Sub-bands of a size smaller than full size are excluded from the test.

PMI for subframe 3 and 8			0x0000 0000 0001 0000	100000	0x0000 0000 0001 0000	100000
Max number of HARQ transmissions			1	N/A	1	N/A
ACK/NACK feedback mode			Multiplexing	N/A	Multiplexing	N/A
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)					
Note 2:	3 symbols allocated to PDCCH					
Note 3:	Reference measurement channel RC.12 TDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 4 and 9 from TP1.					
Note 4:	TM10 OCNG OP.8 TDD is transmitted as specified in A.5.2.8 on subframe 3 and 8 from TP1.					
Note 5:	TM10 OCNG OP.8 TDD is transmitted as specified in A.5.2.8 on subframe 3, 4, 8 and 9 from TP2					
Note 6:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.					
Note 7:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.					
Note 8:	PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 and #8 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#7 and #2.					
Note 9:	For these sub-bands which are not selected for PDSCH transmission, TM10 OCNG should be transmitted.					
Note 10:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available.

9.3.7 Minimum requirement PUSCH 3-2

9.3.7.1 FDD

For the parameters specified in Table 9.3.7.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.3.7.1-2 and by the following.

- a) the ratio of the throughput obtained when transmitting based on UE PUSCH 3-2 reported wideband CQI and subband PMI and that obtained when transmitting based on PUSCH 3-1 reported wideband CQI and wideband PMI shall be $\geq \alpha$;
- b) The ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS based on UE PUSCH3-2 reported subband CQI and subband PMI and that obtained when transmitting on a randomly selected sub-band in set S based on PUSCH 1-2 reported wideband CQI and subband PMI shall be $\geq \beta$;

The transport block sizes TBS for wideband CQI and subband CQI are selected according to RC.17 FDD for test 1 and according to RC.18 FDD for test 2.

9.3.8 Additional requirements for enhanced receiver Type B

The purpose of the test is to verify that the reporting of the channel quality based on the receiver of the enhanced Type B meets a minimum performance. Performance requirements are specified in terms of the relative throughput obtained when the transport format is that indicated by the reported CQI with NeighCellsInfo-r12 configured compared to the case without NeighCellsInfo-r12 configured. Cell 1 is the serving cell, and Cell 2 and Cell 3 are the interference cells.

9.3.8.1 Minimum requirement PUCCH 1-1 (Cell-Specific Reference Symbols)

9.3.8.1.1 FDD

For the parameters specified in Table 9.3.8.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.3.8.1.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources with NeighCellsInfo-r12 configured and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to interference sources without NeighCellsInfo-r12 configured shall be $\geq \gamma$;

-------------	----------

9.4 Reporting of Precoding Matrix Indicator (PMI)

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements for transmission mode 6, transmission mode 9 with 4 TX and transmission mode 9 with 8 TX *alternativeCodebookEnabledCLASSB_KI=TRUE* configured are specified in terms of the ratio

$$\gamma = \frac{t_{ue}}{t_{rnd}}$$

In the definition of γ , for PUSCH 3-1 single PMI and PUSCH 1-2 multiple PMI requirements, t_{rnd} is 60% of the maximum throughput obtained at SNR_{rnd} using random precoding, and t_{ue} the throughput measured at SNR_{rnd} with precoders configured according to the UE reports;

For the PUCCH 2-1 single PMI requirement, t_{rnd} is 60% of the maximum throughput obtained at SNR_{rnd} using random precoding on a randomly selected full-size subband in set S subbands, and t_{ue} the throughput measured at SNR_{rnd} with both the precoder and the preferred full-size subband applied according to the UE reports;

For PUSCH 2-2 multiple PMI requirements, t_{rnd} is 60% of the maximum throughput obtained at SNR_{rnd} using random precoding on a randomly selected full-size subband in set S subbands, and t_{ue} the throughput measured at SNR_{rnd} with both the subband precoder and a randomly selected full-size subband (within the preferred subbands) applied according to the UE reports.

For PUCCH 1-1 single PMI requirement under transmission mode 9 with 4Tx and 8 TX when *alternativeCodebookEnabledCLASSB_KI=TRUE* configured, t_{ue} is 70% of the maximum throughput obtained at SNR_{follow} using the precoders configured according to the UE reports, and t_{rnd} is the throughput measured at SNR_{follow} with random precoding.

The requirements for transmission mode 9 with 8 TX and transmission mode 9 with 4TX enhanced codebook are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, follow 2}}{t_{rnd1, rnd 2}}$$

In the definition of γ , for PUSCH 3-1 single PMI, PUCCH 1-1 single PMI and PUSCH 1-2 multiple PMI requirements, $t_{follow1, follow 2}$ is 70% of the maximum throughput obtained at $SNR_{follow1, follow 2}$ using the precoders configured according to the UE reports, and $t_{rnd1, rnd 2}$ is the throughput measured at $SNR_{follow1, follow 2}$ with random precoding.

The requirements for transmission mode 9 with 12 TX, 16 TX, 24TX and 32 TX Class A codebook are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow1,1, follow1,2, follow 2}}{t_{rnd1,1, rnd1,2, rnd 2}}$$

In the definition of γ , for PUSCH 3-1 single PMI and PUSCH 1-2 multiple PMI requirements, $t_{ue, follow1,1, follow1,2, follow2}$ is 90% of the maximum throughput obtained at $SNR_{follow1,1, follow1,2, follow2}$ using the precoders configured according to the UE reports, and $t_{rnd,1, rnd,2, rnd2}$ is the throughput measured at $SNR_{follow1,1, follow1,2, follow2}$ with random precoding.

The requirements for transmission mode 9 with 16 TX Class A *advancedCodebookEnabled=TRUE* configured are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow1,1, follow1,2, follow1,3, follow2, follow_RPI}}{t_{follow1,1, follow1,2, follow1,3, follow2, fixed_RPI}}$$

In the definition of γ , $t_{ue, follow1,1, follow1,2, follow1,3, follow2, follow_RPI}$ is [70%] of the maximum throughput obtained at $SNR_{follow1,1, follow1,2, follow1,3, follow2, follow_RPI}$ using the precoders configured according to both the PMI and relative power indicator (RPI) reported by the UE, and $t_{follow1,1, follow1,2, follow1,3, follow2, fixed_RPI}$ is the throughput measured at $SNR_{follow1,1, follow1,2, follow1,3, follow2, follow_RPI}$ using the precoders configured according to the UE reports PMI and fixed RPI equal to 0.

9.4.1 Single PMI

9.4.1.1 Minimum requirement PUSCH 3-1 (Cell-Specific Reference Symbols)

9.4.1.1.1 FDD

For the parameters specified in Table 9.4.1.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.1.1-2.

Table 9.4.1.1.1-1: PMI test for single-layer (FDD)

Parameter	Unit	Test 1	
Bandwidth	MHz	10	
Transmission mode		6	
Propagation channel		EVA5	
Precoding granularity	PRB	50	
Correlation and antenna configuration		Low 2 x 2	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	
Reporting mode		PUSCH 3-1	
Reporting interval	ms	1	
PMI delay (Note 2)	ms	8	
Measurement channel		R. 10 FDD	
OCNG Pattern		OP.1 FDD	
Max number of HARQ transmissions		4	
Redundancy version coding sequence		{0,1,2,3}	
Note 1:	For random precoder selection, the precoder shall be updated in each TTI (1 ms granularity).		
Note 2:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-		

4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Table 9.4.1.1.1-2 Minimum requirement (FDD)

Parameter	Test 1
γ	1.1
UE Category	≥ 1

9.4.1.1.2 TDD

For the parameters specified in Table 9.4.1.1.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in 9.4.1.1.2-2.

Table 9.4.1.1.2-1: PMI test for single-layer (TDD)

Parameter	Unit	Test 1	
Bandwidth	MHz	10	
Transmission mode		6	
Uplink downlink configuration		1	
Special subframe configuration		4	
Propagation channel		EVA5	
Precoding granularity	PRB	50	
Correlation and antenna configuration		Low 2 x 2	
Downlink power allocation	ρ_A	dB	-3
	ρ_B	dB	-3
	σ	dB	0
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	
Reporting mode		PUSCH 3-1	
Reporting interval	ms	1	
PMI delay (Note 2)	ms	10 or 11	
Measurement channel		R.10 TDD	
OCNG Pattern		OP.1 TDD	
Max number of HARQ transmissions		4	
Redundancy version coding sequence		{0,1,2,3}	
ACK/NACK feedback mode		Multiplexing	
Note 1: For random precoder selection, the precoder shall be updated in each available downlink transmission instance. Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			

Table 9.4.1.1.2-2: Minimum requirement (TDD)

Parameter	Test 1
γ	1.1
UE Category	≥ 1

9.4.1.2 Minimum requirement PUCCH 2-1 (Cell-Specific Reference Symbols)

9.4.1.2.1 FDD

For the parameters specified in Table 9.4.1.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.2.1-2.

Table 9.4.1.2.1-1: PMI test for single-layer (FDD)

Parameter		Unit	Test 1
Bandwidth		MHz	10
Transmission mode			6
Propagation channel			EVA5
Correlation and antenna configuration			Low 4 x 2
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6
	σ	dB	3
$N_{oc}^{(j)}$		dB[mW/15kHz]	-98
PMI delay		ms	8 or 9
Reporting mode			PUCCH 2-1 (Note 6)
Reporting periodicity		ms	$N_{pd} = 2$
Physical channel for CQI reporting			PUSCH (Note 3)
PUCCH Report Type for wideband CQI/PMI			2
PUCCH Report Type for subband CQI			1
Measurement channel			R.14-1 FDD
OCNG Pattern			OP.1/2 FDD
Precoding granularity		PRB	6 (full size)
Number of bandwidth parts (J)			3
K			1
<i>cqi-pmi-ConfigIndex</i>			1
Max number of HARQ transmissions			4
Redundancy version coding sequence			{0,1,2,3}
Note 1: For random precoder selection, the precoder shall be updated every two TTI (2 ms granularity).			
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			
Note 3: To avoid collisions between HARQ-ACK and wideband CQI/PMI or subband CQI, it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1, #3, #7 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5, #7, #1 and #3.			
Note 4: Reports for the short subband (having 2RBs in the last bandwidth part) are to be disregarded and instead data is to be transmitted on the most recently used subband for bandwidth part with j=1.			
Note 5: In the case where wideband PMI is reported, data is to be transmitted on the most recently used subband.			
Note 6: The bit field for PMI confirmation in DCI format 1B shall be mapped to "0" and TPMI information shall indicate the codebook index used in Table 6.3.4.2.3-2 of TS36.211 [4] according to the latest PMI report on PUCCH.			

Table 9.4.1.2.1-2: Minimum requirement (FDD)

	Test 1

γ	1.2
UE Category	≥ 1

9.4.1.2.2 TDD

For the parameters specified in Table 9.4.1.2.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.4.1.2.2-2.

Table 9.4.1.2.2-1: PMI test for single-layer (TDD)

Parameter		Unit	Test 1
Bandwidth		MHz	10
Transmission mode			6
Uplink downlink configuration			1
Special subframe configuration			4
Propagation channel			EVA5
Correlation and antenna configuration			Low 4 x 2
Downlink power allocation	ρ_A	dB	-6
	ρ_B	dB	-6
	σ	dB	3
$N_{oc}^{(j)}$		dB[mW/15kHz]	-98
PMI delay		ms	10
Reporting mode			PUCCH 2-1 (Note 6)
Reporting periodicity		ms	$N_p = 5$
Physical channel for CQI reporting			PUSCH (Note 3)
PUCCH Report Type for wideband CQI/PMI			2
PUCCH Report Type for subband CQI			1
Measurement channel			R.14-1 TDD
OCNG Pattern			OP.1/2 TDD
Precoding granularity		PRB	6 (full size)
Number of bandwidth parts (J)			3
K			1
<i>cqi-pmi-ConfigIndex</i>			4
Max number of HARQ transmissions			4
Redundancy version coding sequence			{0,1,2,3}
ACK/NACK feedback mode			Multiplexing
Note 1: For random precoder selection, the precoder shall be updated in each available downlink transmission instance.			
Note 2: If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).			
Note 3: To avoid collisions between HARQ-ACK and wideband CQI/PMI or subband CQI it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.			
Note 4: Reports for the short subband (having 2RBs in the last bandwidth part) are to be disregarded and instead data is to be transmitted on the most recently used subband for bandwidth part with $j=1$.			
Note 5: In the case where wideband PMI is reported, data is to be transmitted on the most recently used subband.			

Note 6: The bit field for PMI confirmation in DCI format 1B shall be mapped to "0" and TPMI information shall indicate the codebook index used in Table 6.3.4.2.3-2 of TS36.211 [4] according to the latest PMI report on PUCCH.

9.5 Reporting of Rank Indicator (RI)

The purpose of this test is to verify that the reported rank indicator accurately represents the channel rank. The accuracy of RI (CQI) reporting is determined by the relative increase of the throughput obtained when transmitting based on the reported rank compared to the case for which a fixed rank is used for transmission. Transmission mode 4 is used with the specified CodebookSubSetRestriction in section 9.5.1, transmission mode 9 is used with the specified CodebookSubSetRestriction in section 9.5.2 and transmission mode 3 is used with the specified CodebookSubSetRestriction in section 9.5.3, and transmission mode 10 is used with the specified CodebookSubSetRestriction in section 9.5.5.

For fixed rank 1 transmission in sections 9.5.1, 9.5.2 and 9.5.5, the RI and PMI reporting is restricted to two single-layer precoders, For fixed rank 2 transmission in sections 9.5.1, 9.5.2 and 9.5.5, the RI and PMI reporting is restricted to one two-layer precoder, For follow RI transmission in sections 9.5.1 and 9.5.2, the RI and PMI reporting is restricted to select the union of these precoders. Channels with low and high correlation are used to ensure that RI reporting reflects the channel condition.

For fixed rank 1 transmission in section 9.5.3, the RI reporting is restricted to single-layer, for fixed rank 2 transmission in section 9.5.3, the RI reporting is restricted to two-layers. For follow RI transmission in section 9.5.3, the RI reporting is either one or two layers.

9.5.1 Minimum requirement (Cell-Specific Reference Symbols)

9.5.1.1 FDD

The minimum performance requirement in Table 9.5.1.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;

For the parameters specified in Table 9.5.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.1.1-2.

Table 9.5.1.1-1: RI Test (FDD)

9.5.4 Minimum requirement (CSI measurements in case two CSI subframe sets are configured and CRS assistance information are configured)

9.5.4.1 FDD

For the parameters specified in Table 9.5.4.1-1, the minimum performance requirement in Table 9.5.4.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;

In Table 9.5.4.1-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] including Cell 2 and Cell 3 is provided.

Table 9.5.4.1-1: RI Test (FDD)

Parameter		Unit	Cell 1	Cell 2	Cell 3

Note 1:	Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNB pattern OP.5 FDD as defined in Annex A.5.1.5.
Note 2:	The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 3:	This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10, #12, #13 of a subframe overlapping with the aggressor ABS.
Note 4:	This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.
Note 5:	This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS
Note 6:	ABS pattern as defined in [9]. PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 7:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
Note 8:	As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].
Note 9:	The number of control OFDM symbols is not available for ABS and is 3 for the subframe indicated by "0" of ABS pattern.
Note 10:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4).
Note 11:	Reference measurement channel in Cell 1 RC.2 FDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1.
Note 12:	The number of the CRS ports in Cell1, Cell2 and Cell 3 is the same.
Note 13:	SIB-1 will not be transmitted in Cell2 and Cell 3 in this test.

Table 9.5.4.1-2: Minimum requirement (FDD)

	Test 1	Test 2	Test 3

9.5.4.2 TDD

For the parameters specified in Table 9.5.4.2-1, the minimum performance requirement in Table 9.5.4.2-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;

In Table 9.5.4.2-1, Cell 1 is the serving cell, and Cell 2 and Cell 3 are the aggressor cells. The downlink physical channel setup for Cell 1 is according to Annex C.3.2 and for Cell 2 and Cell 3 is according to Annex C.3.3, respectively. The CRS assistance information [7] including Cell 2 and Cell 3 is provided.

Table 9.5.4.2-1: RI Test (TDD)

Parameter	Unit	Cell 1	Cell 2	Cell 3

$ri-ConfigurationInd2$			0	N/A	N/A
Cyclic prefix			Normal	Normal	Normal

Note 1:	Downlink physical channel setup in Cell 2 and Cell 3 in accordance with Annex C.3.3 applying OCNB pattern OP.5 TDD as defined in Annex A.5.2.5.
Note 2:	The propagation conditions for Cell 1, Cell 2 and Cell 3 are statistically independent.
Note 3:	This noise is applied in OFDM symbols #1, #2, #3, #5, #6, #8, #9, #10, #12, #13 of a subframe overlapping with the aggressor ABS.
Note 4:	This noise is applied in OFDM symbols #0, #4, #7, #11 of a subframe overlapping with the aggressor ABS.
Note 5:	This noise is applied in all OFDM symbols of a subframe overlapping with aggressor non-ABS
Note 6:	ABS pattern as defined in [9]. PDSCH other than SIB1/paging and its associated PDCCH/PCFICH are transmitted in the serving cell subframe when the subframe is overlapped with the ABS subframe of aggressor cell and the subframe is available in the definition of the reference channel.
Note 7:	Time-domain measurement resource restriction pattern for PCell measurements as defined in [7]
Note 8:	As configured according to the time-domain measurement resource restriction pattern for CSI measurements defined in [7].
Note 9:	The number of control OFDM symbols is not available for ABS and is 3 for the subframe indicated by "0" of ABS pattern.
Note 10:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink subframe not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4).
Note 11:	Reference measurement channel in Cell 1 RC.2 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.
Note 12:	The number of the CRS ports in Cell1, Cell2 and Cell 3 is the same.
Note 13:	SIB-1 will not be transmitted in Cell2 and Cell 3 in this test.
Note 14:	To avoid collisions between RI/CQI reports and HARQ-ACK it is necessary to report them on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#4 and #9 to allow periodic RI/CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#8 and #3.

Table 9.5.4-2: Minimum requirement (TDD)

	Test 1	Test 2	Test 3

γ_2	1.05	N/A	N/A
UE Category	≥ 2	≥ 2	≥ 2

9.5.5 Minimum requirement (with CSI process)

Each CSI process is associated with a CSI-RS resource and a CSI-IM resource as shown in Table 9.5.5-1.

For UE supports one CSI process, CSI process 0 is configured for Test 1 and Test 2, but CSI process 1 is not configured for Test 2. The corresponding γ requirements for Test 1 and Test 2 shall be fulfilled. The requirement on reported RI for CSI process 1 in Test 2 is not applicable.

For UE supports multiple CSI processes, CSI process 0 is configured for Test 1 and CSI processes 0 and 1 are configured for Test 2. The corresponding γ requirements for Test 1 and Test 2 shall be fulfilled, and also the requirement on reported RI for CSI process 1 in Test 2.

Table 9.5.5-1: Configuration of CSI processes

	CSI process 0	CSI process 1
CSI-RS resource	CSI-RS signal 0	CSI-RS signal 1
CSI-IM resource	CSI-IM resource 0	CSI-IM resource 1

9.5.5.1 FDD

The minimum performance requirement in Table 9.5.5.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;
- For Test 2, the RI reported for CSI process 1 shall be the same as the most recent RI reported for CSI process 0 if UE is configured with multiple CSI processes.

For the parameters specified in Table 9.5.5.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.5.1-2.

Table 9.5.5.1-1: RI Test (FDD)

Parameter		Unit	Test 1		Test 2	
			TP1	TP2	TP1	TP2

Cell ID		0	6	0	6
Quasi-co-located CSI-RS		CSI-RS 0	CSI-RS 1	CSI-RS 0	CSI-RS 1
Quasi-co-located CRS		Same Cell ID as Cell 1	Same Cell ID as Cell 2	Same Cell ID as Cell 1	Same Cell ID as Cell 2
PMI for subframe 2, 3, 4, 7, 8 and 9		010000 for fixed RI = 2 010011 for UE reported RI	100000	000011 for fixed RI = 1 010011 for UE reported RI	N/A
PMI for subframe 1 and 6		100000	100000	100000	N/A
Max number of HARQ transmissions		1	N/A	1	N/A
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)				
Note 2:	3 symbols allocated to PDCCH				
Note 3:	Reference measurement channel RC.13 FDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 2, 3, 4, 7, 8 and 9 from TP1.				
Note 4:	TM10 OCNG as specified in A.5.1.8 is transmitted on subframe 1 and 6 from TP1.				
Note 5:	TM10 OCNG as specified in A.5.1.8 is transmitted on subframe 1, 2, 3, 4, 6, 7, 8 and 9 from TP2 for Test 1; TP2 is blanked for Test 2.				
Note 6:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#0 and #5.				
Note 7:	If UE supports multiple CSI processes, CSI process 0 is configured as 'RI-reference CSI process' for CSI process 1.				
Note 8:	PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#1 and #6 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#0 and #5.				
Note 9:	If UE supports one CSI process, CSI process 1 is not configured in Test 2.				

Table 9.5.5.1-2: Minimum requirement (FDD)

	Test 1	Test 2
γ_1	N/A	1.0
γ_2	1.0	N/A
UE Category	≥ 2	≥ 2

9.5.5.2 TDD

The minimum performance requirement in Table 9.5.5.2-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;

c) For Test 2, the RI reported for CSI process 1 shall be the same as the most recent RI reported for CSI process 0 if UE is configured with multiple CSI processes.

For the parameters specified in Table 9.5.5.2-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.5.5.2-2.

Max number of HARQ transmissions			1	N/A	1	N/A
ACK/NACK feedback mode			Multiplexing	N/A	Multiplexing	N/A
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)					
Note 2:	3 symbols allocated to PDCCH					
Note 3:	Reference measurement channel RC.13 TDD according to Table A.4-1. PDSCH transmission is scheduled on subframe 4 and 9 from TP1.					
Note 4:	TM10 OCNG as specified in A.5.2.8 is transmitted on subframe 3 and 8 from TP1.					
Note 5:	TM10 OCNG as specified in A.5.2.8 is transmitted on subframe 3, 4, 8 and 9 from TP2 for Test 1; TP2 is blanked for Test 2.					
Note 6:	Reported wideband CQI and PMI are used and sub-band CQI is discarded.					
Note 7:	If UE supports multiple CSI processes, CSI process 0 is configured as 'RI-reference CSI process' for CSI process 1.					
Note 8:	If UE supports one CSI process, CSI process 1 is not configured in Test 2.					
Note 9:	PDCCH DCI format 0 with a trigger for aperiodic CQI shall be transmitted in downlink SF#3 and #8 to allow aperiodic CQI/PMI/RI to be transmitted in uplink SF#7 and #2.					

Table 9.5.5.2-2: Minimum requirement (TDD)

	Test 1	Test 2
γ_1	N/A	1.0
γ_2	1.0	N/A
UE Category	≥ 2	≥ 2

9.6 Additional requirements for carrier aggregation

This clause includes requirements for the reporting of channel state information (CSI) with the UE configured for carrier aggregation. The purpose is to verify that the channel state for each cell is correctly reported with multiple cells configured for periodic reporting.

9.6.1 Periodic reporting on multiple cells (Cell-Specific Reference Symbols)

9.6.1.1 FDD

The following requirements apply to UE Category ≥ 3 . For CA with 2 DL CC, for the parameters specified in Table 9.6.1.1-1 and Table 9.6.1.1-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of Pcell and Scell reported shall be such that

$$\text{wideband CQI}_{\text{Pcell}} - \text{wideband CQI}_{\text{Scell}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.1-1: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 2 DL CA)

Parameter	Unit	Pcell	Scell
PDSCH transmission mode			1
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0

Propagation condition and antenna configuration		AWGN (1 x 2)	
SNR	dB	10	4
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-88	-94
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98
Physical channel for CQI reporting		PUCCH Format 2	
PUCCH Report Type		4	
Reporting periodicity	ms	$N_{pd} = 10$	
<i>cqi-pmi-ConfigurationIndex</i>		11	16 (shift of 5 ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.		
Note 2:	Void		

Table 9.6.1.1-2: PUCCH 1-0 static test (FDD, 2 DL CA)

Test number	Bandwidth combination
1	10MHz for both cells
2	20MHz for both cells
3	5MHz for both cells
4	5MHz for PCell and 10MHz for SCell
5	5MHz for PCell and 15MHz for SCell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	Mapping of PCell and SCell to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 3DL CA apply to UE Category ≥ 5 . For CA with 3 DL CC, for the parameters specified in Table 9.6.1.1-3 and Table 9.6.1.1-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category ≥ 8 . For CA with 4 DL CC, for the parameters specified in Table 9.6.1.1-3 and Table 9.6.1.1-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, and SCell 1 and SCell 3 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell3} \geq 2$$

for more than 90% of the time.

Table 9.6.1.1-3: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 3 and 4 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3
PDSCH transmission mode				1
Downlink power allocation	ρ_A	dB		0
	ρ_B	dB		0
Propagation condition and antenna configuration		AWGN (1 x 2)		

SNR	dB	12	6	0
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-86	-92	-98
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98	-98
Physical channel for CQI reporting		PUCCH Format 2		
PUCCH Report Type		4		
Reporting periodicity	ms	$N_{pd} = 20$		
<i>cqi-pmi-ConfigurationIndex</i>		21	26 (shift of 5 ms relative to Pcell)	31 for Scell2 (shift of 10 ms relative to Pcell) , 36 for Scell3 (shift of 15ms relative to Pcell)
Note 1: 3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1.				
Note 2: Void				

Table 9.6.1.1-4: PUCCH 1-0 static test (FDD, 3 DL CA)

Test number	Bandwidth combination (MHz)
1	3x20
2	20+20+15
3	20+20+10
4	20+15+15
5	20+15+10
6	20+10+10
7	15+15+10
8	20+10+5
9	20+15+5
10	10+10+5
11	5+5+20
12	3x10
13	5+5+10

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.

Note 2: If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

Table 9.6.1.1-5: PUCCH 1-0 static test (FDD, 4 DL CA)

Test number	Bandwidth combination (MHz)
1	4x20
2	20+20+20+10
3	20+20+10+10
4	20+20+10+5
5	20+10+10+5
6	15+3x20
7	2x15+2x20
8	10+15+2x20
9	3x10+20
10	2x5+2x20
11	2x5+10+20
12	4x10

Note 1: The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.

Note 2: If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth

as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 5DL CA apply to UE Category 8 and ≥ 11 . For CA with 5 DL CC, for the parameters specified in Table 9.6.1.1-6 and Table 9.6.1.1-7, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, and SCell 1 and SCell 4 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.1-6: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 5 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3, 4
PDSCH transmission mode		1		
Downlink power allocation	ρ_A	dB		
	ρ_B	dB		
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-86	-92	-98
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98	-98
Physical channel for CQI reporting		PUCCH Format 2		
PUCCH Report Type		4		
Reporting periodicity	ms	$N_{pd} = 40$		
<i>cqi-pmi-ConfigurationIndex</i>		41	46 (shift of 5 ms relative to Pcell)	51 for Scell 2 (shift of 10 ms relative to Pcell), 56 for Scell 3 (shift of 15ms relative to Pcell), 61 for Scell4 (shift of 20ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1.			
Note 2:	Void			

Table 9.6.1.1-7: PUCCH 1-0 static test (FDD, 5 DL CA)

Test number	Bandwidth combination (MHz)
1	5x20
2	15+4x20
3	10+4x20
4	2x10+3x20
5	5+10+3x20
6	3x10+2x20
7	4x10+20
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs

shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 6DL CA apply to UE Category 8 and ≥ 11 . For CA with 6 DL CC, for the parameters specified in Table 9.6.1.1-8 and Table 9.6.1.1-9, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, and SCell 1 and SCell 5 reported shall be such that

$$\begin{aligned} \text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} &\geq 2 \\ \text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} &\geq 2 \\ \text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} &\geq 2 \\ \text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} &\geq 2 \\ \text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} &\geq 2 \end{aligned}$$

for more than 90% of the time.

Table 9.6.1.1-8: Parameters for PUCCH 1-0 static test on multiple cells (FDD, 6 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3, 4, 5

Note 2:	Void			

Table 9.6.1.1-11: PUCCH 1-0 static test (FDD, 7 DL CA)

Test number	Bandwidth combination (MHz)
1	7x20
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

9.6.1.2 TDD

The following requirements apply to UE Category ≥ 3 . For CA with 2 DL CC, for the parameters specified in Table 9.6.1.2-1 and Table 9.6.1.2-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of Pcell and Scell reported shall be such that

$$\text{wideband CQI}_{\text{Pcell}} - \text{wideband CQI}_{\text{Scell}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.2-1: PUCCH 1-0 static test on multiple cells (TDD, 2 DL CA)

Parameter	Unit	Pcell	Scell
PDSCH transmission mode			1
Uplink downlink configuration			2
Special subframe configuration			4
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0
Propagation condition and antenna configuration		AWGN (1 x 2)	
SNR	dB	10	4
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-88	-94
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98
Physical channel for CQI reporting		PUCCH Format 2	
PUCCH Report Type		4	
Reporting periodicity	ms	$N_{pd} = 10$	
<i>cqi-pmi-ConfigurationIndex</i>		8	13 (shift of 5 ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.		
Note 2:	Void		

Table 9.6.1.2-2: PUCCH 1-0 static test (TDD, 2 DL CA)

Test number	Bandwidth combination
1	20MHz for both cells
2	15MHz for PCell and 20MHz for SCell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	Mapping of PCell and Scell to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 3DL CA apply to UE Category ≥ 5 . For CA with 3 DL CC, for the parameters specified in Table 9.6.1.2-3 and Table 9.6.1.2-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category ≥ 8 . For CA with 4 DL CC, for the parameters specified in Table 9.6.1.2-3 and Table 9.6.1.2-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, and SCell 1 and SCell 3 reported shall be such that

$$\text{wideband } CQI_{PCell} - \text{wideband } CQI_{Scell1} \geq 2$$

$$\text{wideband } CQI_{Scell1} - \text{wideband } CQI_{Scell2} \geq 2$$

$$\text{wideband } CQI_{Scell1} - \text{wideband } CQI_{Scell3} \geq 2$$

for more than 90% of the time.

Table 9.6.1.2-3: PUCCH 1-0 static test on multiple cells (TDD, 3 and 4 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3
PDSCH transmission mode			1	
Uplink downlink configuration			2	
Special subframe configuration			4	
Downlink power allocation	ρ_A	dB	0	
	ρ_B	dB	0	
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0

Test number	Bandwidth combination (MHz)
1	5x20
2	15+4x20
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 6DL CA apply to UE Category 8 and ≥ 11 . For CA with 6 DL CC, for the parameters specified in Table 9.6.1.2-8 and Table 9.6.1.2-9, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, and SCell 1 and SCell 5 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} \geq [2]$$

for more than 90% of the time.

Table 9.6.1.2-8: Parameters for PUCCH 1-0 static test on multiple cells (TDD, 6 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3, 4, 5
PDSCH transmission mode				1
Uplink downlink configuration				2
Special subframe configuration				4
Downlink power allocation	ρ_A	dB		0
	ρ_B	dB		0
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-86	-92	-98
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98	-98
Physical channel for CQI reporting		PUCCH Format 2		
PUCCH Report Type		4		
Reporting periodicity	ms	$N_{pd} = 40$		
<i>cqi-pmi-ConfigurationIndex</i>		38	43 (shift of 5 ms relative to Pcell)	48 (shift of 10 ms relative to Pcell), 53 for Scell3 (shift of 15ms relative to Pcell), 58 for Scell4 (shift of 20ms relative to Pcell), 63 for Scell5 (shift of 25ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.			
Note 2:	Void			

Table 9.6.1.2-9: PUCCH 1-0 static test (TDD, 6 DL CA)

Test number	Bandwidth combination (MHz)
1	6x20
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 7DL CA apply to UE Category 8 and ≥ 11 . For CA with 7 DL CC, for the parameters specified in Table 9.6.1.2-10 and Table 9.6.1.2-11, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell 1 and SCell2, SCell 1 and SCell 3, SCell 1 and SCell 4, SCell 1 and SCell 5, SCell 1 and SCell 6 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell5}} \geq [2]$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell6}} \geq [2]$$

for more than 90% of the time.

Table 9.6.1.2-10: Parameters for PUCCH 1-0 static test on multiple cells (TDD, 7 DL CA)

Parameter	Unit	Pcell	Scell1	Scell2, 3, 4, 5, 6
PDSCH transmission mode				1
Uplink downlink configuration				2
Special subframe configuration				4
Downlink power allocation	ρ_A	dB		0
	ρ_B	dB		0
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-86	-92	-98
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98	-98
Physical channel for CQI reporting		PUCCH Format 2		
PUCCH Report Type		4		
Reporting periodicity	ms	$N_{pd} = 40$		
<i>cqi-pmi-ConfigurationIndex</i>		38	43 (shift of 5 ms relative to Pcell)	48 (shift of 10 ms relative to Pcell), 53 for Scell3 (shift of 15ms relative to Pcell), 58 for Scell4 (shift of 20ms relative to Pcell), 63 for Scell5 (shift of 25ms relative to Pcell), 68 for Scell6 (shift of 30ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.			
Note 2:	Void			

Table 9.6.1.2-11: PUCCH 1-0 static test (TDD, 7 DL CA)

Test number	Bandwidth combination (MHz)
1	7x20
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

9.6.1.3 TDD-FDD CA with FDD PCell

The following requirements apply to UE Category ≥ 5 . For TDD-FDD CA with FDD PCell with 2 DL CC, for the parameters specified in Table 9.6.1.3-1 and Table 9.6.1.3-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.3-1: Parameters for PUCCH 1-0 static test on multiple cells (TDD-FDD CA with FDD PCell, 2 DL CA)

Parameter	Unit	PCell	SCell
PDSCH transmission mode			1
Uplink downlink configuration		N/A	2
Special subframe configuration		N/A	4
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0
Propagation condition and antenna configuration		AWGN (1 x 2)	
SNR	dB	10	4
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-88	-94
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98
Physical channel for CQI reporting		PUCCH Format 2	
PUCCH Report Type		4	
Reporting periodicity	ms	$N_{pd} = 10$	
<i>cqi-pmi-ConfigurationIndex</i>		9	14 (shift of 5 ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNB Pattern OP.1 FDD and OP.1 TDD as described in Annex A.5.1.1 and A.5.2.1.		
Note 2:	Void		
Note 3:	Void		

Table 9.6.1.3-2: PUCCH 1-0 static test (TDD-FDD CA with FDD PCell, 2 DL CA)

Test number	Bandwidth combination
1	20MHz for FDD cell and 20MHz for TDD cell
2	10MHz for FDD cell and 20MHz for TDD cell
3	15MHz for FDD cell and 20MHz for TDD cell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.

The following requirements for 3DL CA apply to UE Category ≥ 5 . For TDD-FDD CA with FDD PCell with 3 DL CC, for the parameters specified in Table 9.6.1.3-3 and Table 9.6.1.3-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category ≥ 8 . For TDD-FDD CA with FDD PCell with 4 DL CC, for the parameters specified in Table 9.6.1.3-3 and Table 9.6.1.3-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2, and SCell1 and SCell3 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.3-3: PUCCH 1-0 static test on multiple cells (TDD-FDD CA with FDD PCell, 3 and 4 DL CA)

Parameter		Unit	PCell	SCell1	SCell2, SCell3
PDSCH transmission mode				1	
Uplink downlink configuration			N/A	2 for TDD Cell N/A for FDD Cell

Test number	Bandwidth combination (MHz)
1	1x20(FDD)+6x20(TDD)
2	2x20(FDD)+5x20(TDD)
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and SCells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

9.6.1.4 TDD-FDD CA with TDD PCell

The following requirements apply to UE Category ≥ 5 . For TDD-FDD CA with TDD PCell with 2 DL CC, for the parameters specified in Table 9.6.1.4-1 and Table 9.6.1.4-2, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.4-1: Parameters for PUCCH 1-0 static test on multiple cells (TDD-FDD CA with TDD PCell, 2 DL CA)

Parameter	Unit	PCell	SCell
PDSCH transmission mode			1
Uplink downlink configuration		2	N/A
Special subframe configuration		4	N/A
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0
Propagation condition and antenna configuration		AWGN (1 x 2)	
SNR	dB	10	4
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-88	-94

$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98
Physical channel for CQI reporting		PUCCH Format 2	
PUCCH Report Type		4	
Reporting periodicity	ms	$N_{pd} = 10$	
<i>cqi-pmi-ConfigurationIndex</i>		8	13 (shift of 5 ms relative to Pcell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCN Pattern OP.1 FDD and OP.1 TDD as described in Annex A.5.1.1 and A.5.2.1.		
Note 2:	Void		
Note 3:	Void		

Table 9.6.1.4-2: PUCCH 1-0 static test (TDD-FDD CA with TDD PCell, 2 DL CA)

Test number	Bandwidth combination
1	20MHz for TDD cell and 20MHz for FDD cell
2	20MHz for TDD cell and 10MHz for FDD cell
3	20MHz for TDD cell and 15MHz for FDD cell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.

The following requirements for 3DL CA apply to UE Category ≥ 5 . For TDD-FDD CA with TDD PCell with 3 DL CC, for the parameters specified in Table 9.6.1.4-3 and Table 9.6.1.4-4, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

for more than 90% of the time.

The following requirements for 4DL CA apply to UE Category ≥ 8 . For TDD-FDD CA with TDD PCell with 4 DL CC, for the parameters specified in Table 9.6.1.4-3 and Table 9.6.1.4-5, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2, and SCell1 and SCell3 reported shall be such that

$$\text{wideband CQI}_{PCell} - \text{wideband CQI}_{SCell1} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell2} \geq 2$$

$$\text{wideband CQI}_{SCell1} - \text{wideband CQI}_{SCell3} \geq 2$$

for more than 90% of the time.

Table 9.6.1.4-3: PUCCH 1-0 static test on multiple cells (TDD-FDD CA with TDD PCell, 3 and 4 DL CA)

Parameter	Unit	PCell	SCell1	SCell2, SCell3
PDSCH transmission mode		1		
Uplink downlink configuration		2	2 for TDD Cell N/A for FDD Cell	
Special subframe configuration		4	4 for TDD Cell N/A for FDD Cell	
Downlink power allocation	ρ_A	dB		
	ρ_B	dB		
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-86	-92	-98

$N_{oc}^{(j)}$	dB[mW/15kHz]	-98	-98	-98
Physical channel for CQI reporting		PUCCH Format 2		
PUCCH Report Type		4		
Reporting periodicity	ms	$N_{pd} = 20$		
<i>cqi-pmi-ConfigurationIndex</i>		18	23 (shift of 5 ms relative to Pcell)	28 for SCell 2 (shift of 10 ms relative to Pcell) , 33 for SCell 3 (shift of 15ms relative to PCell)
Note 1:	3 symbols are allocated to PDCCH. No PDSCH for user data is scheduled for the UE with one sided dynamic OCNG Pattern OP.1 FDD and OP.1 TDD as described in Annex A.5.1.1 and A.5.2.1.			
Note 2:	Void			
Note 3:	Void			

Table 9.6.1.4-4: PUCCH 1-0 static test (TDD-FDD CA with TDD PCell, 3 DL CA)

Test number	Bandwidth combination (MHz)
1	2x20MHz for TDD cell and 20MHz for FDD cell
2	2x20MHz for TDD cell and 15MHz for FDD cell
3	2x20MHz for TDD cell and 10MHz for FDD cell
4	2x20MHz for FDD cell and 20MHz for TDD cell
5	20+15MHz for FDD cell and 20MHz for TDD cell
6	20+10MHz for FDD cell and 20MHz for TDD cell
7	2x10MHz for FDD cell and 20MHz for TDD cell
8	10MHz for FDD cell and 15+20MHz for TDD cell
9	10+15MHz for FDD cell and 20MHz for TDD cell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

Table 9.6.1.4-5: PUCCH 1-0 static test (TDD-FDD CA with TDD PCell, 4 DL CA)

Test number	Bandwidth combination (MHz)
1	3x20MHz for TDD cell and 20MHz for FDD cell
2	2x20MHz for FDD cell and 2x20MHz for TDD cell
3	20+15MHz for FDD cell and 2x20MHz for TDD cell
4	2x15MHz for FDD cell and 2x20MHz for TDD cell
5	2x20+15MHz for FDD cell and 20MHz for TDD cell
6	2x15+20MHz for FDD cell and 20MHz for TDD cell
7	2x20+10MHz for FDD cell and 20MHz for TDD cell
8	3x20MHz for FDD cell and 20MHz for TDD cell
9	10MHz for FDD cell and 3x20MHz for TDD cell
10	2x10MHz for FDD cell and 2x20MHz for TDD cell
11	2x10MHz for FDD cell and 20+15MHz for TDD cell
12	10+20MHz for FDD cell and 2x20MHz for TDD cell
13	10+15MHz for FDD cell and 2x20MHz for TDD cell
14	10+15+20MHz for FDD cell and 20MHz for TDD cell
Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and Scells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

The following requirements for 5DL CA apply to UE Category 8 and ≥11. For TDD-FDD CA with TDD PCell with 5 DL CC, for the parameters specified in Table 9.6.1.4-6 and Table 9.6.1.4-7, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2 on each cell, the difference between the wideband CQI indices of PCell and

SCell1 reported, and the difference between the wideband CQI indices of SCell1 and SCell2, SCell1 and SCell3 and SCell 1 and SCell 4 reported shall be such that

$$\text{wideband CQI}_{\text{PCell}} - \text{wideband CQI}_{\text{SCell1}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell2}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell3}} \geq 2$$

$$\text{wideband CQI}_{\text{SCell1}} - \text{wideband CQI}_{\text{SCell4}} \geq 2$$

for more than 90% of the time.

Table 9.6.1.4-6: PUCCH 1-0 static test on multiple cells (TDD-FDD CA with TDD PCell, 5 DL CA)

Parameter	Unit	PCell	SCell1	SCell2, SCell3, SCell4
PDSCH transmission mode		1		
Uplink downlink configuration		2	2 if SCell1 is TDD Cell N/A if SCell1 is FDD Cell	
Special subframe configuration		4	4 if SCell1 is TDD Cell N/A if SCell1 is FDD Cell	
Downlink power allocation	ρ_A	dB	0	
	ρ_B	dB	0	
Propagation condition and antenna configuration		AWGN (1 x 2)		
SNR	dB	12	6	0

Note 3:	Void			

Table 9.6.1.4-11: PUCCH 1-0 static test (TDD-FDD CA with TDD PCell, 7 DL CA)

Test number	Bandwidth combination (MHz)
1	1x20(FDD)+ 6x20(TDD)MHz
2	2x20(FDD)+5x20(TDD)MHz

Note 1:	The applicability of requirements for different CA configurations and bandwidth combination sets is defined in 9.1.1.2A. The test coverage for different number of component carriers is defined in 9.1.1.3.
Note 2:	If more than one cell can be configured as PCell, choose one of the cells with the smallest bandwidth as PCell. Mapping of PCell and SCells to the CCs shall be constant for all the iterations during the test. Each execution of the test shall use the same mapping.

9.7 CSI reporting (Single receiver antenna)

The number of receiver antennas N_{RX} assumed for the minimum performance requirement in this clause is 1.

9.7.1 CQI reporting definition under AWGN conditions

9.7.1.1 FDD and half-duplex FDD

The following requirements apply to UE DL Category 0. For the parameters specified in Table 9.7.1.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.16 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.7.1.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)

Parameter	Unit	Test 1		Test 2	
Bandwidth	MHz	10			
PDSCH transmission mode		1			
Downlink power allocation	ρ_A	dB	0		
	ρ_B	dB	0		
	σ	dB	0		
Propagation condition and antenna configuration		AWGN (1 x 1)			
SNR (Note 2)	dB	0	1	6	7
$\hat{I}_{or}^{(j)}$	dB[mW/15kHz]	-98	-97	-92	-91
$N_{oc}^{(j)}$	dB[mW/15kHz]	-98		-98	
Max number of HARQ transmissions		1			
Physical channel for CQI reporting		PUCCH Format 2			
PUCCH Report Type		4			
Reporting periodicity	ms	$N_{pd} = 40$			
<i>cqi-pmi-ConfigurationIndex</i>		41			
Note 1:	Reference measurement channel RC.16 FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/OP.2 FDD as described in Annex A.5.1.1/A.5.1.2.				
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.				

9.7.1.2 TDD

The following requirements apply to UE DL Category 0. For the parameters specified in Table 9.7.1.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.16 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the

median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.7.1.2-1: PUCCH 1-0 static test (TDD)

Parameter		Unit	Test 1		Test 2	
Bandwidth		MHz	10			
PDSCH transmission mode			1			
Uplink downlink configuration			2			
Special subframe configuration			4			
Downlink power allocation	ρ_A	dB	0			
	ρ_B	dB	0			
	σ	dB	0			
Propagation condition and antenna configuration			AWGN (1 x 1)			
SNR (Note 2)		dB	0	1	6	7
$\hat{I}_{or}^{(j)}$		dB[mW/15kHz]	-98	-97	-92	-91
$N_{oc}^{(j)}$		dB[mW/15kHz]	-98		-98	
Max number of HARQ transmissions			1			
Physical channel for CQI reporting			PUSCH (Note 3)			
PUCCH Report Type			4			
Reporting periodicity		ms	$N_{pd} = 5$			
<i>cqi-pmi-ConfigurationIndex</i>			3			
ACK/NACK feedback mode			Multiplexing			
<p>Note 1: Reference measurement channel RC.16 TDD according to Table A.4-1 with one/two sided dynamic OCN Pattern OP.1/OP.2 TDD as described in Annex A.5.2.1/A.5.2.2.</p> <p>Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.</p> <p>Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.</p>						

9.7.1.3 FDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.1.3-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.4 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.7.1.3-1: PUCCH 1-0 static test (FDD)

Parameter		Unit	Test 1		Test 2	
Bandwidth		MHz	10			
PDSCH transmission mode			1			
Downlink power allocation	ρ_A	dB	0			
	ρ_B	dB	0			
	σ	dB	0			
Propagation condition and antenna configuration			AWGN (1 x 1)			
SNR (Note 2)		dB	0	1	6	7
$\hat{I}_{or}^{(j)}$		dB[mW/15kHz]	-98	-97	-92	-91
$N_{oc}^{(j)}$		dB[mW/15kHz]	-98		-98	

Max number of HARQ transmissions		1
Physical channel for CQI reporting		PUCCH Format 2
PUCCH Report Type		4
Reporting periodicity	ms	$N_{pd} = 5$
<i>cqi-pmi-ConfigurationIndex</i>		6
Note 1: Reference measurement channel RC.4 FDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.2 FDD as described in Annex A.5.1.2.		
Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.		

9.7.1.4 TDD (Category 1bis UE)

The following requirements apply to UE DL Category 1bis. For the parameters specified in Table 9.7.1.4-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.4 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1: Reference measurement channel RC.4 TDD according to Table A.4-1 with one/two sided dynamic OCNG Pattern OP.1/OP.2 TDD as described in Annex A.5.2.1/A.5.2.2.					
Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.					
Note 3: To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.					

9.7.2 CQI reporting under fading conditions

9.7.2.1 FDD and half-duplex FDD

For the parameters specified in Table 9.7.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.7.2.1-2 and by the following

- a sub-band differential CQI offset level of 0 shall be reported at least $\alpha\%$ of the time but less than $\beta\%$ for each sub-band;
- the ratio of the throughput obtained when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected sub-band in set S shall be $\geq \gamma$;
- when transmitting on a randomly selected sub-band among the sub-bands with the highest differential CQI offset level the corresponding TBS, the average BLER for the indicated transport formats shall be greater or equal to 0.05.

The requirements only apply for sub-bands of full size and the random scheduling across the sub-bands is done by selecting a new sub-band in each TTI for FDD and in each available downlink transmission instance for half-duplex FDD.

9.8 CSI reporting (UE supporting coverage enhancement)

The requirements in this sub-clause are defined based on the simulation results with UE DL Category M1 unless otherwise stated.

The requirements of UE DL Category M1 in 9.8.1 and 9.8.2 are applicable for UE DL Category M2 and UE DL Category 0.

The requirements of UE DL Category M1 in 9.8.3 and 9.8.4 are applicable for UE DL Category M2.

The requirements in 9.8.5 are defined based on the simulation results with Non-BL UEs, and they are applicable for non-BL UEs supporting coverage enhancement.

9.8.1 CQI reporting definition under AWGN conditions

9.8.1.1 FDD and half-duplex FDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.8.1.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.23 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.8.1.1-1: PUCCH 1-0 static test (FDD and half-duplex FDD)

Note 1:	Reference measurement channel RC.23 FDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 FDD and two sided dynamic OCNB pattern OP.2 FDD as described in Annex A.5.1.1 and A.5.1.2.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	DC subcarrier puncturing shall be considered.
Note 4:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.

9.8.1.2 TDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.7.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.23 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1:	Reference measurement channel RC.23 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.
Note 4:	DC subcarrier puncturing shall be considered.

9.8.2 UE-selected subband CQI

9.8.2.1 FDD and half-duplex FDD

The following requirements apply to UE supporting coverage enhancement. For the parameters specified in Table 9.8.2.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.8.2.1-2 and by the following

- a) the ratio of the throughput obtained when transmitting on the best narrowband reported by the UE the corresponding TBS and that obtained when transmitting the TBS indicated by the reported wideband CQI median on a randomly selected narrowband within the set of narrowbands in which MPDCCH is monitored shall be $\geq \gamma$;

The requirements only apply for narrowbands of full size and the random scheduling across the narrowbands is done by selecting a new narrowband in each TTI for FDD and half-duplex FDD. The transport block size TBS (wideband CQI median) is that resulting from the code rate which is closest to that indicated by the wideband CQI median and the N_{PRB} entry in Table 7.1.7.2.1-1 of TS 36.213 [6] that corresponds to the narrowband size.

9.8.3 CQI reporting definition for UE supporting 64QAM under AWGN

9.8.3.1 FDD and half-duplex FDD

The following requirements apply to UE supporting *ce-ModeA-r13* and *ce-PDSCH-64QAM-r15*. For the parameters specified in Table 9.8.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.31 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1:	Reference measurement channel RC.31 FDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 FDD and two sided dynamic OCNB pattern OP.2 FDD as described in Annex A.5.1.1 and A.5.1.2.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	DC subcarrier puncturing shall be considered.
Note 4:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#1 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#5.

9.8.3.2 TDD

The following requirements apply to UE supporting supporting *ce-ModeA-r13* and *ce-PDSCH-64QAM-r15*. For the parameters specified in Table 9.8.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.31 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Note 1:	Reference measurement channel RC.31 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.
Note 4:	DC subcarrier puncturing shall be considered.

9.8.4 CQI reporting definition for UE supporting alternative table under AWGN

9.8.4.1 FDD and half-duplex FDD

The following requirements apply to UE supporting *ce-ModeA-r13* and *ce-CQI-AlternativeTable-r15*. For the parameters specified in Table 9.8.4.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.32 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

BL/CE DL subframe configuration (fdd-DownlinkOrTddSubframeBitmapBR)		101110111	

Note 1:	Reference measurement channel RC.32 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD and two sided dynamic OCNG pattern OP.2 TDD as described in Annex A.5.2.1 and A.5.2.2.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. MPDCCH DCI format 6-0A shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.
Note 4:	DC subcarrier puncturing shall be considered.

9.8.5 PMI reporting with PUCCH 1-1 (CSI Reference Symbol)

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements are specified in terms of the ratio

$$\gamma = \frac{t_{ue}}{t_{rnd}}$$

In the definition of γ , t_{ue} is 70% of the maximum throughput obtained at SNR_{follow} using the precoders configured according to the UE reports, and t_{rnd} is the throughput measured at SNR_{follow} with random precoding.

9.8.5.1 FDD

For the parameters specified in Table 9.8.5.1-1 and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.8.5.1-2.

Table 9.8.5.1-1 PMI test for single-layer (FDD)

Parameter	Unit	Test 1

9.9 CSI reporting for 4Rx UE

9.9.1 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.9.1.1 Minimum requirement PUCCH 1-0 with Rank 1 (Cell-Specific Reference Symbols)

9.9.1.1.1 FDD

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.9.1.1.1-1, using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1 FDD / RC.4 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport

format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

Table 9.9.1.1.1-1: PUCCH 1-0 static test (FDD)

Parameter		Unit	Test 1		Test 2

PUCCH Report Type			4			
Reporting periodicity		ms	$N_{pd} = 5$			
<i>cqi-pmi-ConfigurationIndex</i>			6			
Note 1: Reference measurement channel RC.1 FDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 FDD as described in Annex A.5.1.1, except for category 1 UE use RC.4 FDD with two sided dynamic OCNB Pattern OP.2 FDD as described in Annex A.5.1.2.						
Note 2: For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.						

9.9.1.1.2 TDD

The following requirements apply to UE Category ≥ 1 . For the parameters specified in Table 9.9.1.1.2-1, using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported CQI value according to RC.1/RC.4 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the PDSCH BLER using the transport format indicated by median CQI is less than or equal to 0.1, the BLER using the transport format indicated by the (median CQI + 1) shall be greater than 0.1. If the PDSCH BLER using the transport format indicated by the median CQI is greater than 0.1, the BLER using transport format indicated by (median CQI – 1) shall be less than or equal to 0.1.

PUCCH Report Type		4
Reporting periodicity	ms	$N_{pd} = 5$
<i>cqi-pmi-ConfigurationIndex</i>		3
ACK/NACK feedback mode		Multiplexing
Note 1:	Reference measurement channel RC.1 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1, except for category 1 UE use RC.4 TDD with two sided dynamic OCNG Pattern OP.2 TDD as described in Annex A.5.2.2.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.	

9.9.1.2 Minimum requirement PUCCH 1-1 with Rank 2 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.9.1.2.1 FDD

The following requirements apply to UE Category ≥ 2 . For the parameters specified in table 9.9.1.2.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ - 1, median CQI₁, median CQI₁ + 1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

ACK/NACK feedback mode		Multiplexing
Note 1:	Reference measurement channel RC.7 TDD according to Table A.4-1 with one sided dynamic OCNB Pattern OP.1 TDD as described in Annex A.5.2.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.	
Note 4:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.	

9.9.1.3 Minimum requirement PUCCH 1-1 with Rank 4 (Cell-Specific Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.9.1.3.1 FDD

The following requirements apply to UE Category ≥ 5 . For the parameters specified in table 9.9.1.3.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set $\{\text{median CQI}_1 - 1, \text{median CQI}_1, \text{median CQI}_1 + 1\}$ for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

Table 9.9.1.3.1-1: PUCCH 1-1 static test (FDD)

Note 3:	It is intended to have UL collisions between RI reports and HARQ-ACK, since the RI reports shall not be used by the eNB in this test.				

9.9.1.3.2 TDD

The following requirements apply to UE Category ≥ 5 . For the parameters specified in table 9.9.1.3.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI_1 shall be within the set {median $\text{CQI}_1 - 1$, median CQI_1 , median $\text{CQI}_1 + 1$ } for more than 90% of the time, where the resulting wideband values CQI_1 shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 - 1$ and median $\text{CQI}_1 - 1$ shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median $\text{CQI}_0 + 1$ and median $\text{CQI}_1 + 1$ shall be greater than or equal to 0.1.

Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#7 and #2.	
Note 4:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.	

9.9.1.4 Minimum requirement PUCCH 1-1 with Rank 3 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.9.1.4.1 FDD

The following requirements apply to UE Category ≥ 5 . For the parameters specified in table 9.9.1.4.1-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ -1, median CQI₁, median CQI₁ +1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

At eNB, CQI report collection shall be skipped every 160ms during performance verification.	

9.9.2 CQI reporting definition under fading conditions

9.9.2.1 Minimum requirement PUCCH 1-0 (Cell-Specific Reference Symbol) for enhanced receiver Type A

The purpose of the test is to verify that the reporting of the channel quality is based on the receiver of the enhanced Type A. Performance requirements are specified in terms of the relative increase of the throughput obtained when the transport format is that indicated by the reported CQI subject to an interference model compared to the case with a white Gaussian noise model, and a requirement on the minimum BLER of the transmitted transport formats indicated by the reported CQI subject to an interference model.

9.9.2.1.1 FDD

For the parameters specified in Table 9.9.2.1.1-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in Table 9.9.2.1.1-2 and by the following

- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be $\geq \gamma$;
- when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)		
Note 2:	Reference measurement channel RC.11 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 FDD as described in Annex A.5.1.1.		
Note 3:	To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#1 and #6 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#0 and #5.		
Note 4:	The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.		
Note 5:	Two cells are considered in which Cell 1 is the serving cell and Cell 2 is the interfering cell. Interfering cell is fully loaded.		
Note 6:	Both cells are time-synchronous.		
Note 7:	Static channel is used for the interference model. In case for white Gaussian noise model Cell 2 is not present.		
Note 8:	SINR corresponds to \hat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.		
Note 9:	The precoder in clause B.4.3 follows UE recommended PMI.		
Note 10:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).		

Table 9.9.2.2.1-2 Minimum requirement (FDD)

γ	1.8
UE Category	≥ 2

9.9.2.2.2 TDD

For the parameters specified in Table 9.9.2.2.2-1, and using the downlink physical channels specified in Annex C, the minimum requirements are specified in 9.9.2.2.2-2 and by the following

- a) the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP and that obtained when transmitting the transport format indicated by each reported wideband CQI index subject to a white Gaussian noise source shall be $\geq \gamma$;
- b) when transmitting the transport format indicated by each reported wideband CQI index subject to an interference source with specified DIP, the average BLER for the indicated transport formats shall be greater than or equal to 2%.

Table 9.9.2.2.2-1 Fading test for single antenna (TDD)

Parameter	Unit	Cell 1	Cell 2
Bandwidth	MHz	10 MHz	
Transmission mode		9	
Uplink downlink configuration		2	
Special subframe configuration		4	

Cyclic Prefix		Normal	Normal
Cell ID		0	1

Correlation and antenna configuration		Low (2 x 4)	(1 x 4)
Beamforming Model		As specified in Section B.4.3 (Note 10, 11)	N/A
DIP (Note 4)	dB	N/A	-0.41
Cell-specific reference signals		Antenna ports 0,1	Antenna port 0
CSI reference signals		Antenna ports 15,16	N/A
CSI-RS periodicity and subframe offset		5/3	N/A
CSI-RS reference signal configuration		2	N/A
Zero-power CSI-RS configuration l_{CSI-RS} / <i>ZeroPowerCSI-RS</i> bitmap	Subframes / bitmap	N/A	3 / 001000000000 0000
CodeBookSubsetRestriction bitmap		001111	N/A
Reference measurement channel		Note 2	R.2A TDD
Reporting mode		PUCCH 1-1	N/A
Reporting periodicity	ms	$N_{pd} = 5$	N/A
CQI delay	ms	10	N/A
Physical channel for CQI/PMI reporting		PUSCH (Note 3)	N/A
PUCCH Report Type for CQI/PMI		2	N/A
Physical channel for RI reporting		PUCCH Format 2	N/A
PUCCH Report Type for RI		3	N/A
<i>cqi-pmi-ConfigurationIndex</i>		3	N/A
<i>ri-ConfigIndex</i>		805 (Note 9)	N/A
Max number of HARQ transmissions		1	N/A
ACK/NACK feedback mode		Multiplexing	N/A
Note 1:	If the UE reports in an available uplink reporting instance at subframe SF#n based on CQI estimation at a downlink SF not later than SF#(n-4), this reported wideband CQI cannot be applied at the eNB downlink before SF#(n+4)		
Note 2:	Reference measurement channel RC.11 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.		
Note 3:	To avoid collisions between CQI/ PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/ PMI to multiplex with the HARQ-ACK on PUSCH in uplink subframe SF#2 and #7.		
Note 4:	The respective received power spectral density of each interfering cell relative to N_{oc} is defined by its associated DIP value as specified in clause B.5.1.		
Note 5:	Two cells are considered in which Cell 1 is the serving cell and Cell 2 is the interfering cell. Interfering cell is fully loaded.		
Note 6:	Both cells are time-synchronous.		
Note 7:	Static channel is used for the interference model. In case for white Gaussian noise model Cell 2 is not present.		

Note 8:	SINR corresponds to \widehat{E}_s / N_{oc} of Cell 1 as defined in clause 8.1.1.
Note 9:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification and the reported CQI in subframe SF#7 of the previous frame is applied in downlink subframes until a new CQI (after CQI/PMI dropping) is available.
Note 10:	The precoder in clause B.4.3 follows UE recommended PMI.
Note 11:	If the UE reports in an available uplink reporting instance at subframe SF#n based on PMI estimation at a downlink SF not later than SF#(n-4), this reported PMI cannot be applied at the eNB downlink before SF#(n+4).

Table 9.9.2.2-2 Minimum requirement (TDD)

γ	1.8
UE Category	≥ 2

9.9.3 Reporting of Precoding Matrix Indicator (PMI) for 4Rx UE

The minimum performance requirements of PMI reporting are defined based on the precoding gain, expressed as the relative increase in throughput when the transmitter is configured according to the UE reports compared to the case when the transmitter is using random precoding, respectively. When the transmitter uses random precoding, for each PDSCH allocation a precoder is randomly generated and applied to the PDSCH. A fixed transport format (FRC) is configured for all requirements.

The requirements for transmission mode 9 with 8 TX are specified in terms of the ratio

$$\gamma = \frac{t_{ue, follow 1, follow 2}}{t_{rnd 1, rnd 2}}$$

In the definition of γ , for PUSCH 3-1 single PMI $t_{follow 1, follow 2}$ is 70% of the maximum throughput obtained at

$SNR_{follow 1, follow 2}$ using the precoders configured according to the UE reports, and $t_{rnd 1, rnd 2}$ is the throughput measured at $SNR_{follow 1, follow 2}$ with random precoding.

9.9.3.1 Minimum requirement PUSCH 3-1 (CSI Reference Symbol)

9.9.3.1.1 TDD

For the parameters specified in Table 9.9.3.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.3.1.1-2.

Table 9.9.3.1.1-1: PMI test for single-layer (TDD)

Parameter	Test 1
γ	2.5
UE Category	≥ 2

9.9.4 Reporting of Rank Indicator (RI)

The purpose of this test for 4Rx UEs is to verify that the reported rank indicator accurately represents the channel rank. The accuracy of RI (CQI) reporting is determined by the relative increase of the throughput obtained when transmitting based on the reported rank compared to the case for which a fixed rank is used for transmission. Transmission mode 4 is used with the specified CodebookSubSetRestriction in section 9.9.4.1, transmission mode 9 is used with the specified CodebookSubSetRestriction in section 9.9.4.2.

For the fixed rank 1 transmission with 2 Tx ports the RI and PMI reporting is restricted to two single-layer precoders, For fixed rank 2 transmission with 2 Tx ports the RI and PMI reporting is restricted to one two-layer precoder. For the follow RI transmission for rank 1 and 2 and 2 Tx ports the RI and PMI reporting is restricted to select the union of these precoders.

For the fixed rank 2 transmission with 4 Tx ports the RI and PMI reporting is restricted to any 2 Layer precoder, for the follow RI transmission the RI and PMI reporting is not restricted at all.

Channels with low and high correlation are used to ensure that RI reporting reflects the channel condition.

9.9.4.1 Minimum requirement (Cell-Specific Reference Symbols)

9.9.4.1.1 FDD

The minimum performance requirement in Table 9.9.4.1.1-2 is defined as

- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 1 shall be $\geq \gamma_1$;
- The ratio of the throughput obtained when transmitting based on UE reported RI and that obtained when transmitting with fixed rank 2 shall be $\geq \gamma_2$;

For the parameters specified in Table 9.9.4.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.9.4.1.1-2.

Table 9.9.4.1.1-1: RI Test (FDD)

Parameter		Unit	Test 1	Test 2	Test 3	Test 4
Bandwidth		MHz	10

9.10 Reporting of CSI-RS Resource Indicator (CRI)

The purpose of this test is to verify that the reported CSI-RS Resource Indicator is accurate. The accuracy of CRI reporting for Tests in Section 9.10.1 is determined by:

- a) The ratio of the throughput obtained when transmitting based on the reported CRI and fixed precoder with multiple CSI-RS resources configured compared to that obtained when transmitting based on the fixed precoder with one CSI-RS resource configured: $\gamma = \frac{t_{ue, follow_CRI, fixed_PMI}}{t_{fixed_CRI, fixed_PMI}}$
- $t_{ue, follow_CRI, fixed_PMI}$ is [70%] of the maximum throughput obtained at $SNR_{ue, follow_CRI, fixed_PMI}$ using fixed precoder and power scaling factor according to UE reported CRI value with multiple CSI-RS resources configured
 - $t_{fixed_CRI, fixed_PMI}$ is throughput obtained at $SNR_{ue, follow_CRI, fixed_PMI}$ using fixed precoder and power scaling factor according to the one configured CSI-RS resource
 - $SNR_{ue, follow_CRI, fixed_PMI}$ is specified based on CRS RE power
- b) Each candidate CRI value among 0, 1, ..., K-1 shall be reported at least $\alpha\%$ of the time at $SNR_{ue, follow_CRI, fixed_PMI}$ with multiple CSI-RS resources configured
- The number of configured CSI-RS resources K is specific to a test.

The accuracy of CRI reporting for Tests in Section 9.10.2 is determined by:

- a) The ratio of the throughput obtained when transmitting based on the reported CRI and fixed precoder with multiple CSI-RS resources configured compared to that obtained when transmitting based on the fixed precoder with one CSI-RS resource configured: $\gamma = \frac{t_{ue, follow_CRI}}{t_{fixed_TP1}}$
- $t_{ue, follow_CRI}$ is [70%] of the maximum throughput obtained at $SNR_{ue, follow_CRI}$ using the CRI configured according to the CSI UE report
 - t_{fixed_TP1} is throughput obtained at $SNR_{ue, follow_CRI}$ under assumption of single TP1 transmission
- b) CRI 2 value among 0, 1 and 2 shall be reported at least $\alpha\%$ of the time at $SNR_{ue, follow_CRI}$ with 2 CSI-RS resources configured
- c) CRI 0 value among 0, 1 and 2 shall be reported at least $\beta\%$ of the time at SNR_{fixed_TP1} with 2 CSI-RS resources configured
- SNR_{fixed_TP1} corresponds to [70%] of the maximum throughput under assumption of single TP1 transmission

9.10.1 Minimum requirement (PUSCH 3-1)

9.10.1.1 FDD

For the parameters specified in Table 9.10.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.10.1.1-2.

Table 9.10.1.1-1: CRI Test (FDD)

9.10.2 Minimum requirement (PUSCH 3-1, QCL Type C)

9.10.2.1 FDD

The requirements are specified in Table 9.10.2.1-4, with the additional parameters in Table 9.10.2.1-1, Table 9.10.2.1-2 and Table 9.10.2.1-3. In Table 9.10.2.1-1, transmission point 1 (TP 1) is the serving cell transmitting PDCCH, synchronization signals, PBCH and can transmit PDSCH, and transmission point 2 (TP 2) has different Cell ID and can transmit PDSCH. The downlink physical channel setup for TP 1 is according to Table C.3.2 and for TP 2 according to Table C.3.2.

Table 9.10.2.1-1: Test Parameters

9.11 Reporting of Hybrid Channel state information

9.11.1 Minimum requirement (with eMIMO-Type configured as Class B with more than one CSI-RS resource configured and eMIMO-Type2 as Class B with one CSI-RS resource configured)

The purpose of this test is to verify that the reported CRI⁽¹⁾ from eMIMO-Type and PMI⁽²⁾ from eMIMO-Type2 are accurate.

The accuracy of CRI and PMI reporting are determined by the ratio of the throughput obtained when transmitting based on UE reported CRI⁽¹⁾ and PMI⁽²⁾ compared to that obtained when transmitting based on the random precoding and fixed CRI:

$$\gamma = \frac{t_{ue, followCRI^{(1)}, followPMI^{(2)}}}{t_{fixedCRI^{(1)}, rndPMI^{(2)}}}$$

- $t_{ue, followCRI^{(1)}, followPMI^{(2)}}$ is [70%] of the maximum throughput obtained at $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$ using following precoder according to UE reported PMI⁽²⁾ for eMIMO-Type2 and power scaling factor according to UE reported CRI⁽¹⁾ for eMIMO-Type
- $t_{fixedCRI^{(1)}, rndPMI^{(2)}}$ is throughput obtained at $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$ using random precoder and power scaling factor according to the one configured CSI-RS resource
- $SNR_{ue, followCRI^{(1)}, followPMI^{(2)}}$ is specified based on CRS RE power

9.11.1.1 FDD

For the parameters specified in Table 9.11.1.1-1, and using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.11.1.1-2.

Table 9.11.1.1-1: CRI/PMI test for single layer (FDD)

9.12 CSI reporting (UE supporting Short TTI)

The requirements in this sub-clause are valid for UEs capable of short TTI.

9.12.1 CQI reporting under fading conditions (Cell-Specific Reference Symbol)

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective fading conditions is determined by the reporting variance, and the relative increase of the throughput obtained when the transport format transmitted is that indicated by the reported CQI compared to the case for which a fixed transport format configured according to the reported median CQI is transmitted. In addition, the reporting accuracy is determined by a minimum BLER using the transport formats indicated by the reported CQI. The purpose is to verify that the UE is tracking the channel variations and selecting the largest transport format possible according to the prevailing channel state for frequently non-selective scheduling. To account for sensitivity of the input SNR the CQI reporting under frequency

non-selective fading conditions is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.12.1.1 FDD

For the parameters specified in Table 9.12.1.1-1, Table 9.12.1.1-2 and Table 9.12.1.1-3 using the downlink physical channels specified in Annex C.3.2, the minimum requirements are specified in Table 9.12.1.1-4 by the following

- a CQI index not in the set {median CQI -1, median CQI, median CQI +1} shall be reported at least $\alpha\%$ of the time;
- the ratio of the throughput obtained when transmitting the transport format indicated by each reported wideband CQI index and that obtained when transmitting a fixed transport format configured according to the wideband CQI median shall be $\geq \gamma$;
- when transmitting the transport format indicated by each reported wideband CQI index, the average BLER for the indicated transport formats shall be greater or equal to 0.02.

9.13 CSI reporting for 8Rx UE

9.13.1 CQI reporting definition under AWGN conditions

The reporting accuracy of the channel quality indicator (CQI) under frequency non-selective conditions is determined by the reporting variance and the BLER performance using the transport format indicated by the reported CQI median. The purpose is to verify that the reported CQI values are in accordance with the CQI definition given in TS 36.213 [6]. To account for sensitivity of the input SNR the reporting definition is considered to be verified if the reporting accuracy is met for at least one of two SNR levels separated by an offset of 1 dB.

9.13.1.1 Minimum requirement PUCCH 1-1 with Rank 4 (CSI Reference Symbols)

The minimum requirements for dual codeword transmission are defined in terms of a reporting spread of the wideband CQI value for codeword #1, and their BLER performance using the transport format indicated by the reported CQI median of codeword #0 and codeword #1. The precoding used at the transmitter is a fixed precoding matrix specified by the bitmap parameter *codebookSubsetRestriction*. The propagation condition assumed for the minimum performance requirement is defined in subclause B.1.

9.13.1.2.1 Void

9.13.1.2.2 TDD

The following requirements apply to UE Category 8 and DL Category 14, 17~20, ≥ 22 . For the parameters specified in table 9.13.1.2.2-1, and using the downlink physical channels specified in tables C.3.2-1 and C.3.2-2, the reported offset level of the wideband spatial differential CQI for codeword #1 (Table 7.2-2 in TS 36.213 [6]) shall be used to determine the wideband CQI index for codeword #1 as

$$\text{wideband CQI}_1 = \text{wideband CQI}_0 - \text{Codeword 1 offset level}$$

The wideband CQI₁ shall be within the set {median CQI₁ -1, median CQI₁, median CQI₁ +1} for more than 90% of the time, where the resulting wideband values CQI₁ shall be used to determine the median CQI values for codeword #1. For both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ - 1 and median CQI₁ - 1 shall be less than or equal to 0.1. Furthermore, for both codewords #0 and #1, the PDSCH BLER using the transport format indicated by the respective median CQI₀ + 1 and median CQI₁ + 1 shall be greater than or equal to 0.1.

Table 9.13.1.2.2-1: PUCCH 1-1 static test 4x8 (TDD)

Physical channel for RI reporting			PUSCH			
PUCCH Report Type for RI			3			
Reporting periodicity		ms	$N_{pd} = 5$			
CQI delay		ms	10 or 11			
<i>cqi-pmi-ConfigurationIndex</i>			3			
<i>ri-ConfigIndex</i>			805 (Note 4)			

ACK/NACK feedback mode		Multiplexing
Note 1:	Reference measurement channel RC.23 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern OP.1 TDD as described in Annex A.5.2.1.	
Note 2:	For each test, the minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	To avoid collisions between CQI/PMI reports and HARQ-ACK it is necessary to report both on PUSCH instead of PUCCH. PDCCH DCI format 0 shall be transmitted in downlink SF#3 and #8 to allow periodic CQI/PMI to multiplex with the HARQ-ACK on PUSCH in uplink SF#7 and #2.	
Note 4:	RI reporting interval is set to the maximum allowable length of 160ms to minimise collisions between RI, CQI/PMI and HARQ-ACK reports. In the case when all three reports collide, it is expected that CQI/PMI reports will be dropped, while RI and HARQ-ACK will be multiplexed. At eNB, CQI report collection shall be skipped every 160ms during performance verification.	

9.14 CSI reporting of Narrowband IoT

The requirements in this sub-clause are defined based on the simulation results with UE DL Category NB2 unless otherwise stated.

9.14.1 CQI reporting definition under AWGN conditions

9.14.1.1 Half-duplex FDD

The following requirements apply to UE Category NB2 capable of *npdsch-16QAM-r17*. For the parameters specified in Table 9.14.1.1-1, and using the downlink physical channels specified in C.3.6, the reported candidateRep value according to RC.33 FDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the NPDSCH BLER using the transport format indicated by median candidateRep value is less than or equal to 0.1, the BLER using the transport format indicated by the (median candidateRep value + 1) shall be greater than 0.1. If the NPDSCH BLER using the transport format indicated by the median candidateRep value is greater than 0.1, the BLER using transport format indicated by (median candidateRep value - 1) shall be less than or equal to 0.1.

Table 9.14.1.1-1: Half-duplex FDD

Parameter	Unit	Test 1	
Bandwidth	kHz	200	
Operation mode		Stand-alone	
Carrier type		Non-anchor	
Number of NRS ports		1	
Propagation condition and antenna configuration		AWGN (1 x 1)

dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13		Not configured
OCNG pattern		NB.OP.1
Note 1:	Reference measurement channel RC.33 FDD according to Table A.4-1 with one sided dynamic OCNG Pattern NB.OP.1 FDD as described in Annex A.5.3.1. For the subframes the reference measurement channel is not scheduled, NRS is transmitted with OCNG pattern NB.OP.1 FDD.	
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.	
Note 3:	MAC CE Downlink Channel Quality Report Command is triggered every 40 subframes, where NPDCCH scheduling MAC CE (NPDSCH) is transmitted in subframe n . UL grant is transmitted in subframe $n+24$.	
Note 4:	Set the number of subframes (N_{SF}) for NPDSCH to 4 for NPDSCH transmitting MAC CE Downlink Channel Quality Report Command.	

9.14.1.2 TDD

The following requirements apply to UE Category NB2 capable of *npdsch-16QAM-r17*. For the parameters specified in Table 9.14.1.2-1, and using the downlink physical channels specified in C.3.6, the reported candidateRep value according to RC.33 TDD in Table A.4-1 shall be in the range of ± 1 of the reported median more than 90% of the time. If the NPDSCH BLER using the transport format indicated by median candidateRep value is less than or equal to 0.1, the BLER using the transport format indicated by the (median candidateRep value + 1) shall be greater than 0.1. If the NPDSCH BLER using the transport format indicated by the median candidateRep value is greater than 0.1, the BLER using transport format indicated by (median candidateRep value - 1) shall be less than or equal to 0.1.

N_{Rep}^{AN} (ack-NACK- NumRepetitions-r13)		1	
ACK/NACK resource field		0	
NPDCCH reference channel		R.NB.3 TDD	
α_{offset} (npdcch-Offset-USS- r13)		0	
CQI reporting period	ms	80	
NPDSCH repetition number	subframe	1	
Resource assignment field (l_{SF}) (Note 6)		3	
downlinkBitmap-r13 and dl- Gap-r13		Not configured	
dl-GapNonAnchor-r13 and downlinkBitmapNonAnchor-r13		Not configured	
OCNG pattern		NB.OP.1	

Note 1:	Reference measurement channel RC.33 TDD according to Table A.4-1 with one sided dynamic OCNG Pattern NB.OP.1 TDD as described in Annex A.5.3.1. For the subframes the reference measurement channel is not scheduled, NRS is transmitted with OCNG pattern NB.OP.1 TDD.
Note 2:	The minimum requirements shall be fulfilled for at least one of the two SNR(s) and the respective wanted signal input level.
Note 3:	MAC CE Downlink Channel Quality Report Command is triggered every 80 subframes, where NPDCCH scheduling MAC CE (NPDSCH) is transmitted in subframe n . UL grant is transmitted in subframe $n+40$.
Note 4:	As specified in Table 4.2-2 in TS 36.211 [4].
Note 5:	As specified in Table 4.2-1 in TS 36.211 [4].
Note 6:	Set the number of subframes (N_{SF}) for NPDSCH to 4 for NPDSCH transmitting MAC CE Downlink Channel Quality Report Command.

10 Performance requirement (MBMS)

10.1 FDD (Fixed Reference Channel)

The parameters specified in Table 10.1-1 are valid for all FDD tests unless otherwise stated. For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB as the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

Table 10.1-1: Common Test Parameters (FDD)

Parameter	Unit	Value
Number of HARQ processes	Processes	None
Subcarrier spacing	kHz	15 kHz
Allocated subframes per Radio Frame (Note 1)		6 subframes
Number of OFDM symbols for PDCCH		2
Cyclic Prefix		Extended
Note1:	For FDD mode, up to 6 subframes (#1/2/3/6/7/8) are available for MBMS, in line with TS 36.331.	

All tests specified in 10.1 and 10.3 the applicability rules are defined as the following. The requirements in clause 10.3 are applicable to UEs that support FeMBMS. The test case applicability is in according to Table 10.1-2 depending on set of supported UE capabilities.

Table 10.1-2: FeMBMS PMCH tests applicability

Tests / clause	Applicable if UE indicates at least the following capability
10.3.1	FeMBMS support of <i>fembmsMixedCell</i> and <i>unicast-fembmsMixedSCell</i> with corresponding subcarrier spacing
10.3.2	FeMBMS support of <i>fembmsMixedCell</i> with corresponding subcarrier spacing
10.3.3	FeMBMS support of <i>fembmsDedicatedCell</i> with corresponding subcarrier spacing

For FeMBMS capable UEs, if corresponding tests listed in clause 10.1 or 10.3.1 or 10.3.2 are tested, the test coverage can be considered fulfilled without executing the corresponding tests listed in clause 10.3.3.

10.1.1 Minimum requirement

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS.

For the parameters specified in Table 10.1-1 and Table 10.1.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.1.1-2.

Table 10.1.1-1: Test Parameters for Testing

Parameter	Unit	Test 1-4	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
Note 1: $P_B = 0$.			

Table 10.1.1-2: Minimum performance

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
						BLER (%)	SNR(dB)	
1	10 MHz	R.37 FDD	OP.4 FDD	MBSFN channel model (Table B.2.6-1)	1x2 low	1	4.1	≥ 1
2	10 MHz	R.38 FDD	OP.4 FDD				11.0	≥ 1
3	10 MHz	R.39 FDD	OP.4 FDD				20.1	≥ 2
	5.0MHz	R.39-1 FDD	OP.4 FDD				20.5	1
4	1.4 MHz	R.40 FDD	OP.4 FDD				6.6	≥ 1

10.2 TDD (Fixed Reference Channel)

The parameters specified in Table 10.2-1 are valid for all TDD tests unless otherwise stated. For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB as the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

Table 10.2-1: Common Test Parameters (TDD)

Parameter	Unit	Value
Number of HARQ processes	Processes	None
Subcarrier spacing	kHz	15 kHz
Allocated subframes per Radio Frame (Note 1)		5 subframes
Number of OFDM symbols for PDCCH		2
Cyclic Prefix		Extended
Note1: For TDD mode, in line with TS 36.331, Uplink-Downlink Configuration 5 is proposed, up to 5 subframes (#3/4/7/8/9) are available for MBMS.		

10.2.1 Minimum requirement

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS.

For the parameters specified in Table 10.2-1 and Table 10.2.1-1 and Annex A.3.8.2, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.2.1-2.

Table 10.2.1-1: Test Parameters for Testing

Parameter	Unit	Test 1-4	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0

N_{oc} at antenna port	dBm/15kHz	-98
Note 1: $P_B = 0$.		

Table 10.2.1-2: Minimum performance

Test number	Bandwidth	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
						BLER (%)	SNR(dB)	
1	10 MHz	R.37 TDD	OP.4 TDD	MBSFN channel model (Table B.2.6-1)	1x2 low	1	3.4	≥1
2	10 MHz	R.38 TDD	OP.4 TDD				11.1	≥1
3a	10 MHz	R.39 TDD	OP.4 TDD				20.1	≥2
3b	5MHz	R.39-1 TDD	OP.4 TDD				20.5	1
4	1.4 MHz	R.40 TDD	OP.4 TDD				5.8	≥1

10.3 FDD (Fixed Reference Channel) with FeMBMS

For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 0 dB for subcarrier spacing as 15kHz, 3dB for for subcarrier spacing as 7.5kHz and 10.8dB for for subcarrier spacing as 1.25kHz because the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

10.3.1 Minimum requirement for FeMBMS Unicast-mixed Cell under CA

10.3.1.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell under CA.

For the parameters specified in Table 10.3.1.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.1.1-2.

Table 10.3.1.1-1: Test Parameters for Testing

Parameter	Unit	Test 1-2	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
PDSCH transmission mode in PCell and SCell		1	
Subcarrier spacing for SCell	kHz	1.25 kHz	
Allocated subframes per Radio Frame for SCell (Note 2)		8 subframes	
Number of OFDM symbols for PDCCH for SCell		0 (MBSFN subframes) 2 (non-MBSFN subframes)	
Cyclic Prefix for SCell in non-MBSFN subframes		Extended	
Note 1: $P_B = 0$.			
Note 2: For SCell with FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331.			

Table 10.3.1.1-2: Minimum performance

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							BLER (%)	SNR(dB)	
1	PCell	10	NA	OP.1 FDD	AWGN	1x2 low	NA	NA	NA
	SCell	10	R.81-1 FDD	OP.4A FDD	MBSFN channel model (Table B.2.6.2-1)	1x2 low	1	14.1	≥2
2	PCell	10	NA	OP.1 FDD	AWGN	1x2 low	NA	NA	NA

10.3.1.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell under CA.

For the parameters specified in Table 10.3.1.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.1.2-2.

Table 10.3.1.2-1: Test Parameters for Testing

Parameter	Unit	Test 1	
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz	-98	
PDSCH transmission mode in PCell and SCell		1	
Subcarrier spacing for SCell	kHz	7.5 kHz	
Allocated subframes per Radio Frame for SCell (Note 2)		8 subframes	
Number of OFDM symbols for PDCCH for SCell		0 (MBSFN subframes) 2 (non-MBSFN subframes)	
Cyclic Prefix for SCell in non-MBSFN subframes		Extended	
Note 1: $P_B = 0$.			
Note 2: For SCell with FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331.			

Table 10.3.1.2-2: Minimum performance

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							BLER (%)	SNR(dB)

	SCell	10	R.82-1 FDD	OP.4A FDD	MBSFN channel model (Table B.2.6.1-1)	1x2 low	1	13.9	≥2

10.3.2 Minimum requirement for FeMBMS Unicast-mixed Cell as Non-Serving Cell

10.3.2.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for FeMBMS Unicast-mixed Cell as non-serving cell.

For the parameters specified in Table 10.3.2.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.2.1-2.

Table 10.3.2.1-1: Test Parameters for Testing

Parameter		Unit	Test 1-4
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
Subcarrier spacing		kHz	1.25 kHz
Allocated subframes per Radio Frame (Note 2)			8 subframes
Number of OFDM symbols for PDCCH			0 (MBSFN subframes) 2 (non-MBSFN subframes)
Cyclic Prefix in non-MBSFN subframes			Extended
Note 1: $P_B = 0$.			
Note 2: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331.			

Table 10.3.2.1-2: Minimum performance

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							BLER (%)	SNR(dB)	
1	PCell	10	NA	OP.1 FDD	AWGN	1x2 low	NA	NA	NA
	FeMBMS Unicast-mixed Cell as non-serving cell	10	R.81-1 FDD	OP.4A FDD	MBSFN channel model (Table B.2.6.2-1)	1x2 low	1	14.1	≥ 2

	FeMBMS Unicast-mixed Cell as non-serving cell	10	R.81-2 FDD	OP.4A FDD	MBSFN channel model (Table B.2.6.2-1)	1x2 low	1	26.0	≥ 2

10.3.2.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for enhanced FeMBMS Unicast-mixed Cell as non-serving cell.

For the parameters specified in Table 10.3.2.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.2.2-2.

Table 10.3.2.2-1: Test Parameters for Testing

Parameter		Unit	Test 1-4
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/15kHz	-98
Subcarrier spacing		kHz	7.5 kHz
Allocated subframes per Radio Frame (Note 2)			8 subframes
Number of OFDM symbols for PDCCH			0 (MBSFN subframes) 2 (non-MBSFN subframes)
Cyclic Prefix in non-MBSFN subframes			Extended
Note 1: $P_B = 0$.			
Note 2: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331.			

Table 10.3.2.2-2: Minimum performance

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							BLER (%)	SNR(dB)	
1	PCell	10	NA	OP.1 FDD	AWGN	1x2 low	NA	NA	NA
	FeMBMS Unicast-mixed Cell as non-serving cell	10	R.82-1 FDD	OP.4A FDD	MBSFN channel model (Table B.2.6.1-1)	1x2 low	1	13.9	≥ 2

10.3.3 Minimum requirement for MBMS Dedicated cell

10.3.3.1 Minimum requirement with 1.25kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.1-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.1-2.

Table 10.3.3.1-1: Test Parameters for Testing MBMS Dedicated Cell

Parameter		Unit	Test 1-2
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0

N_{oc} at antenna port	dBm/1.25kHz	-98
PDSCH transmission mode in PCell		1
Subcarrier spacing for MBMS Dedicated Cell	kHz	1.25 kHz
Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2)		10 subframes
Number of OFDM symbols for PDCCH for MBMS Dedicated Cell		0 (MBSFN subframes) 2 (non-MBSFN subframes)
Cyclic Prefix for CAS in MBMS Dedicated Cell		Extended
Note 1: $P_B = 0$.		
Note 2: All subframes are MBSFN subframes except CAS		

Table 10.3.3.1-2: Minimum performance for MBMS dedicated Cell

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							BLER (%)	SNR(dB)	
1	PCell	10	NA	OP.1 FDD	AWGN	1x2 low	NA	NA	NA
	MBMS Dedicated Cell	10	R.83-1 FDD	NA	MBSFN channel model (Table B.2.6.2-1)	1x2 low	1	14.1	≥ 2

10.3.3.2 Minimum requirement with 7.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.2-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.2-2.

Table 10.3.3.2-1: Test Parameters for Testing MBMS Dedicated Cell

Parameter	Unit	Test 1
Downlink power allocation	ρ_A	dB
	ρ_B	dB
	σ	dB
N_{oc} at antenna port	dBm/1.25kHz	-98
PDSCH transmission mode in PCell		1
Subcarrier spacing for MBMS Dedicated Cell	kHz	7.5 kHz
Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2)		10 subframes

Number of OFDM symbols for PDCCH for MBMS Dedicated Cell		0 (MBSFN subframes) 2 (non-MBSFN subframes)
Cyclic Prefix for CAS in MBMS Dedicated Cell		Extended
Note 1: $P_B = 0$.		
Note 2: All subframes are MBSFN subframes except CAS		

Table 10.3.3.2-2: Minimum performance for MBMS dedicated Cell

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category

10.3.3.3 Minimum requirement with 15kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER. The requirement is valid for all RRC states for which the UE has capabilities for MBMS Dedicated Cell.

For the parameters specified in Table 10.3.3.3-1 and Annex A.3.8.1, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.3.3.3-2.

Table 10.3.3.3-1: Test Parameters for Testing MBMS Dedicated Cell

Parameter		Unit	Test 1-3
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port		dBm/1.25kHz	-98
PDSCH transmission mode in PCell			1
Subcarrier spacing for MBMS Dedicated Cell		kHz	15 kHz
Allocated subframes per Radio Frame for MBMS Dedicated Cell (Note 2)			10 subframes
Number of OFDM symbols for PDCCH for MBMS Dedicated Cell			0 (MBSFN subframes) 2 (non-MBSFN subframes)
Cyclic Prefix for MBMS Dedicated Cell			Extended
Note 1: $P_B = 0$.			
Note 2: All subframes are MBSFN subframes			

Table 10.3.3.3-2: Minimum performance for MBMS dedicated Cell

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category

10.4 FDD with 5G terrestrial broadcast

For all tests in section 10.4 the applicability rules are defined in Table 10.4-1 depending on the capabilities of the UE. The requirements in clause 10.4 are applicable to UEs that support 5G terrestrial broadcast.

Table 10.4-1: 5G terrestrial broadcast tests applicability

Tests	Applicable if UE supports at least the following capability
Table 10.4.1.1-2 test 1	5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and <i>timeSeparationSlot4-r16</i>
Table 10.4.1.1-2 test 2	5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and <i>timeSeparationSlot2-r16</i>
Table 10.4.1.2-2 test 1	5G terrestrial broadcast support of <i>mbms-ScalingFactor2dot5-r16</i>
Table 10.4.2.1-1 test 1	5G terrestrial broadcast support of <i>mbms-ScalingFactor0dot37-r16</i> and 5G terrestrial broadcast support of PBCH repetition in CAS
Table 10.4.2.1-1 test 2	5G terrestrial broadcast support of <i>mbms-ScalingFactor2dot5-r16</i> and 5G terrestrial broadcast support of PBCH repetition in CAS

For the requirements defined in this section, the difference between CRS EPRE and the MBSFN RS EPRE should be set to 16dB for subcarrier spacing as 0.37kHz, 7.8 dB for subcarrier spacing as 2.5kHz because the UE demodulation performance might be different when this condition is not met (e.g. in scenarios where power offsets are present, such as scenarios when reserved cells are present).

10.4.1 Minimum requirement for PMCH decoding

10.4.1.1 Minimum requirement with 0.37kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER.

For the parameters specified in Table 10.4.1.1-1 and Table A.3.8.1-9, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.4.1.1-2.

Table 10.4.1.1-1: Test Parameters for Testing

Parameter	Unit		
Downlink power allocation	ρ_A	dB	0
	ρ_B	dB	0 (Note 1)
	σ	dB	0
N_{oc} at antenna port	dBm/15kHz		-98
PDSCH transmission mode in PCell			1
Subcarrier spacing for MBSFN cell	kHz		0.37 kHz
Bandwidth	MHz		10(Note 2)
Note 1: $P_B = 0$.			
Note 2: For both Pcell and Scell.

10.4.1.2 Minimum requirement with 2.5kHz subcarrier spacing

The receive characteristic of MBMS is determined by the BLER.

For the parameters specified in Table 10.4.1.2-1 and Tables A.3.8.1-10, the average downlink SNR shall be below the specified value for the BLER shown in Table 10.4.1.2-2.

Table 10.4.1.2-1: Test Parameters for Testing

Parameter	Unit	
Downlink power allocation	ρ_A	dB
	ρ_B	dB
		0 (Note 1)

	σ	dB	0

10.4.2 Minimum requirement for CAS detection

10.4.2.1 Minimum requirement for PBCH detection

For the parameters specified in Table 8.6.1-1, the average probability of a miss-detected PBCH (P_{m-bch}) shall be below the specified value in Table 10.4.2.1-1. The downlink physical setup is in accordance with Annex C.3.2.

Table 10.4.2.1-1: Minimum performance

Test number	Cell	Bandwidth (MHz)	Reference Channel	OCNG Pattern	Propagation condition	Correlation Matrix and antenna	Reference value		MBMS UE Category
							P_{m-bch} (%)	SNR(dB)	
1	PCell	10	N/A	OP.1 FDD	AWGN	1x1 low	N/A	N/A	N/A
	MBMS Dedicated Cell	10	R.23-1	N/A	AWGN	1x1 low	1	-7.2	≥ 2
2	PCell	10	N/A	OP.1 FDD	AWGN	1x2 low	N/A	N/A	N/A
	MBMS Dedicated Cell	10	R.23-1	N/A	EVA 162Hz	1x2 low	1	-6.7	≥ 2

11 Performance requirement (ProSe Direct Discovery)

This clause contains the performance requirements for the Sidelink physical channels specified for ProSe Direct Discovery.

11.1 General

11.1.1 Applicability of requirements

The requirements in this clause are applicable to UEs that support ProSe Direct Discovery. The test case applicability is in according to table 11.1.1-1 depending on set of supported UE capabilities.

Table 11.1.1-1: ProSe Direct Discovery test applicability

FDD/TDD	Tests / clause	Applicable if UE indicates at least the following capability
FDD	11.2.1	ProSe Direct Discovery without support of <i>disc-SLSS-r12</i>
	11.2.3	ProSe Direct Discovery with support of <i>discPeriodicSLSS-r13</i> and ProSe Direct Communication
	11.3.1	ProSe Direct Discovery
	11.4.1	ProSe Direct Discovery with support of <i>disc-SLSS-r12</i>
	11.5.1	ProSe Direct Discovery
TDD	11.2.2	ProSe Direct Discovery
	11.3.2	ProSe Direct Discovery
	11.5.2	ProSe Direct Discovery

For maximum Sidelink Processes test specified in clause 11.5, the UE is required to only meet the test for the maximum channel bandwidth over the ProSe operating bands supported by the UE. Test case 11.2.3 for 5MHz channel bandwidth is applicable to UEs that support ProSe Direct Communication on Band 31 only.

11.1.2 Reference DRX configuration

Table 11.1.2-1: Reference DRX configuration

Parameter	Value	Comments
onDurationTimer	psf1	
drx-InactivityTimer	psf1	
drx-RetransmissionTimer	psf1	
longDRX-CycleStartOffset	sf2560, 0	
shortDRX	disabled	
NOTE 1: For further information see clause 6.3.2 in TS 36.331.		

11.2 Demodulation of PSDCH (single link performance)

The purpose of the requirements in this subclause is to verify the PSDCH demodulation performance with a single active PSDCH link under different operating scenarios and channel conditions.

The active cell(s), when present, are specified in the test parameters specific to the test.

11.2.1 FDD (in-coverage)

The minimum requirements are specified in Table 11.2.1-2 with the test parameters specified in Table 11.2.1-1. The receiver UE under test is associated with Cell 1.

Table 11.2.1-1: Test Parameters

Parameter	Unit	Test 1
Discovery resource pool configuration		As specified in Table A.7.1.1-1

				(Configuration #1-FDD)	
DRX configuration				As specified in Table 11.1.2-1	
N_{oc} at antenna port (NOTE 3)		dBm/15kHz		-98	
Active cell(s)				Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal		
	Cell ID		0		
	Downlink power allocation	ρ_A	dB	0	
		ρ_B	dB	0 (NOTE 1)	
		σ	dB	0	
	OCNG Pattern (NOTE 2)		OP.1 FDD		
	Propagation channel		AWGN		
Antenna configuration		1x2			
RSRP		dBm/15kHz		-92	
Active Sidelink UE(s)				Sidelink UE 1	
Sidelink UE 1	Sidelink Transmissions		PSDCH		
	PSDCH RB allocation		PRB pairs $\{2i..2i+1\}$, where i is chosen randomly uniformly from $[0,11]$ in each discovery period.		
	Time offset (NOTE 4)		μ s		+1
	Frequency offset (NOTE 5)		Hz		+200
	Propagation Channel		EPA5		
Antenna configuration				1x2 Low	
NOTE 1: $P_B = 0$.					
NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.					
NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.					
NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.					
NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.					

Table 11.2.1-2: Minimum performance

Test num.	Sidelink UE	Band-width	Reference channel	Reference value	
				BLER of PSDCH (%)	SNR (dB)
1	1	5 MHz	D.1 FDD	30	4.6

11.2.2 TDD (in-coverage)

The minimum requirements are specified in Table 11.2.2-2 with the test parameters specified in Table 11.2.2-1. The receiver UE under test is associated with Cell 1.

Table 11.2.2-1: Test Parameters

Parameter		Unit	Test 1	
Discovery resource pool configuration			As specified in Table A.7.1.2-1 (Configuration #1-TDD)	
DRX configuration			As specified in Table 11.1.2-1	
N_{oc} at antenna port (NOTE 5)		dBm/15kHz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Uplink downlink configuration (NOTE 3)		0	
	Special subframe configuration (NOTE 4)		4	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern ^{NOTE 2}			OP.1 TDD
	Propagation channel			AWGN
Antenna configuration			1x2	
RSRP		dBm/15kHz	-92	

Active Sidelink UE(s)		Sidelink UE 1	
Sidelink UE 1	Sidelink Transmissions		PSDCH
	RB allocation		PRB pairs $\{2i..2i+1\}$, where i is chosen randomly uniformly from $[0,11]$ in each discovery period.
	Time offset (NOTE 6)	μs	+1
	Frequency offset (NOTE 7)	Hz	+200
	Propagation Channel		EPA5
	Antenna configuration		1x2 Low
NOTE 1: $P_B = 0$.			
NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.			
NOTE 3: As specified in Table 4.2-2 in TS 36.211 [4].			
NOTE 4: As specified in Table 4.2-1 in TS 36.211 [4].			
NOTE 5: Applicable to both DL subframes and UL subframes configured for ProSe Direct Discovery.			
NOTE 6: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.			
NOTE 7: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.			

Table 11.2.2-2: Minimum performance

Test num.	Sidelink UE	Band-width	Reference channel	Reference value	
				BLER of PSDCH (%)	SNR (dB)
1	1	5 MHz	D.1 TDD	30	4.6

11.2.3 FDD (out-of-coverage)

The minimum requirements are specified in Table 11.2.3-2 with the test parameters specified in Table 11.2.3-1. The receiver UE under test is out of network coverage.

Table 11.2.3-1: Test Parameters

Parameter		Unit	Test 1
Resource pool configuration			As specified in Table A.7.1.1-4 (Configuration #4-FDD)
DRX configuration			As specified in Table 11.1.2-1
N_{oc} at antenna port		dBm/15kHz	-98
Active cell(s)			None
Active Sidelink UE(s)			Sidelink UEs 1, 2
Sidelink UE 1	Sidelink Transmissions		SLSS + PSBCH
	networkControlledSyncTx		ON
	slssid		30
	inCoverage (in MIB-SL)		TRUE
	syncOffsetIndicator		Set same as syncOffsetIndicator1 in Configuration #4-FDD
	Propagation channel		EPA5
	Antenna configuration		1x2 Low
	\widehat{E}_s at antenna port	dBm/15kHz	-82
Sidelink UE 2	Sidelink Transmissions		PSDCH
	PSDCH RB allocation		PRB pairs $\{2i..2i+1\}$, where i is chosen randomly uniformly from $[0,11]$ (for 5MHz) or $[0,24]$ (for 10MHz) in each discovery period.
	Time offset (Note 1)	μs	+1
	Frequency offset (Note 2)	Hz	+200
	Propagation Channel		EPA5
	Antenna configuration		1x2 Low
NOTE 1: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE.			
NOTE 2: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.			

Table 11.2.3-2: Minimum performance

Test number	Sidelink UE	Band-width	Reference channel	Reference value
-------------	-------------	------------	-------------------	-----------------

				BLER of PSDCH (%)	SNR (dB)
1	1	5 MHz	D.1 FDD	30	4.6
		10 MHz			

11.3 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSDCH transmissions from two Sidelink UEs with power imbalance in one subframe.

11.3.1 FDD

The minimum requirements are specified in Table 11.3.1-2 with the test parameters specified in Table 11.3.1-1. The receiver UE under test is associated with Cell 1. The Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSDCH on adjacent RBs.

Table 11.3.1-1: Test Parameters

Parameter		Unit	Test 1	
Discovery resource pool configuration			As specified in Table A.7.1.1-1 (Configuration #1-FDD)	
DRX configuration			As specified in Table 11.1.2-1	
N_{oc} at antenna port (NOTE 3)		dBm/15kHz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern (NOTE 2)			OP.1 FDD
	Propagation channel			AWGN
	Antenna configuration			1x2
RSRP		dBm/15kHz	-92	
Active Sidelink UE(s)			Sidelink UE 1, Sidelink UE 2	
Sidelink UE 1	Sidelink Transmissions		PSDCH	
	PSDCH RB allocation		PRB pairs {4..5}	
	Time offset (NOTE 3)	μ s	0	
	Frequency offset (NOTE 4)	Hz	0	
	Propagation Channel		AWGN	
	Antenna configuration		1x2 Low	
Sidelink UE 2	Sidelink Transmissions		PSDCH	
	PSDCH RB allocation		PRB pairs {6..7}	
	Time offset (w.r.t. Cell 1 DL)	μ s	0	
	Frequency offset (w.r.t. Cell 1 UL)	Hz	0	
	Propagation Channel		AWGN	
	Antenna configuration		1x2 Low	

NOTE 1: $P_B = 0$.

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.

NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 11.3.1-2: Minimum performance

Test num.	Band-width	Sidelink UE	Reference channel	Reference value	
				BLER of PSDCH (%)	SNR (dB)
1	5 MHz	1	D.1 FDD	(NOTE 1)	24.3
		2	D.1 FDD	30	6.9

NOTE 1: There is no BLER requirement for Sidelink UE 1.

11.3.2 TDD

The minimum requirements are specified in Table 11.3.2-2 with the test parameters specified in Table 11.3.2-1. The receiver UE under test is associated with Cell 1. The Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSDCH on adjacent RBs.

Table 11.3.2-1: Test Parameters

Parameter		Unit	Test 1	
Discovery resource pool configuration			As specified in Table A.7.1.2-1 (Configuration #1-TDD)	
DRX configuration			As specified in Table 11.1.2-1	
N_{oc} at antenna port (NOTE 5)		dBm/15kHz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Uplink downlink configuration (NOTE 3)		0	
	Special subframe configuration (NOTE 4)		4	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern ^{NOTE 2}			OP.1 TDD
	Propagation channel			AWGN
Antenna configuration			1x2	
RSRP		dBm/15kHz	-92	
Active Sidelink UE(s)			Sidelink UE 1, Sidelink UE 2	
Sidelink UE 1	Sidelink Transmissions		PSDCH	
	PSDCH RB allocation		PRB pairs {4..5}	
	Time offset (NOTE 6)		μ s	0
	Frequency offset (NOTE 7)		Hz	0
	Propagation Channel			AWGN
Sidelink UE 2	Sidelink Transmissions		PSDCH	
	RB allocation		PRB pairs {6..7}	
	Time offset (NOTE 6)		μ s	0
	Frequency offset (NOTE 7)		Hz	0
	Propagation Channel			AWGN
Antenna configuration			1x2 Low	

NOTE 1: $P_B = 0$.

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: As specified in Table 4.2-2 in TS 36.211 [4].

NOTE 4: As specified in Table 4.2-1 in TS 36.211 [4].

NOTE 5: Applicable to both DL subframes and UL subframes configured for ProSe Direct Discovery.

NOTE 6: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 7: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 11.3.2-2: Minimum performance

Test num.	Band-width	Sidelink UE	Reference channel	Reference value	
				BLER of PSDCH (%)	SNR (dB)
1	5 MHz	1	D.1 TDD	(NOTE 1)	24.3
		2	D.1 TDD	30	6.9

NOTE 1: There is no BLER requirement for Sidelink UE 1.

11.4 Multiple timing reference test

The purpose of this test is to check the demodulation performance when receiving from two Sidelink UEs that follow different timing references and transmitting on different resources (non-overlapping in time).

11.4.1 FDD

The test parameters are specified in Table 11.4.1-1. Sidelink UE 2 and the receiver UE under test are associated with Cell 1. Sidelink UE 1 and 3 are associated with another cell and use a different timing, and UE 1 acts as a synchronization reference. The minimum requirements are specified in Table 11.4.1-2.

Table 11.4.1-1: Test Parameters

Parameter		Unit	Test 1	
Discovery resource pool configuration			As specified in Table A.7.1.1-2 (Configuration #2-FDD)	
DRX configuration			As specified in Table 11.1.2-1	
N_{oc} at antenna port (NOTE 3)		dBm/15kHz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern <small>NOTE 2</small>		OP.1 FDD	
	Propagation channel		AWGN	
	Antenna configuration		1x2	
RSRP	dBm/15kHz	-92		
Active Sidelink UE(s)			Sidelink UEs 1, 2, 3	
Sidelink UE 1	Sidelink Transmissions		SLSS	
	networkControlledSyncTx		ON	
	slssid		30	
	Time offset (NOTE 4)	μ s	3511	
	Frequency offset (NOTE 5)	Hz	-100	
	Propagation channel		EPA5	
	Antenna configuration		1x2 Low	
	\widehat{E}_s of SLSS at antenna port	dBm/15kHz	-82	
Sidelink UE 2	Sidelink Transmissions		PSDCH	
	Resource pool used for transmissions		<i>discRxPool(0)</i>	
	RB allocation		PRB pairs $\{2i..2i+1\}$, where i is chosen randomly uniformly from $[0,11]$ in each discovery period.	
	Time offset (NOTE 4)	μ s	+1	
	Frequency offset (NOTE 5)	Hz	+200	
	Propagation Channel		EPA5	
	Antenna configuration		1x2 Low	
Sidelink UE 3	Sidelink Transmissions		PSDCH	
	Resource pool used for transmissions		<i>discRxPool(1)</i>	
	RB allocation		PRB pairs $\{2i..2i+1\}$, where i is chosen randomly uniformly from $[0,11]$ in each discovery period.	
	Time offset (NOTE 4)	μ s	3511	
	Frequency offset (NOTE 5)	Hz	+300	
	Propagation Channel		EPA5	
Antenna configuration		1x2 Low		
NOTE 1: $P_B = 0$.				
NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.				

NOTE 3: Applicable to both DL channel and ProSe Direct Discovery Subframes on UL.
 NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.
 NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 11.4.1-2: Minimum performance

Test num.	Band-width	Sidelink UE	Reference channel	Reference value	
				BLER of PSDCH (%) ^{NOTE 1}	SNR (dB)
1	5 MHz	2	D.1 FDD	30	4.6
		3	D.1 FDD	30	4.6

NOTE 1: The BLER is measured after 5 D2D Discovery periods (1600 frames) of lead time during which the test UE detects and synchronizes to Sidelink UE 1 SLSS.

11.5 Maximum Sidelink processes test

The purpose of this test is to verify the maximum number of Sidelink processes supported by the UE as reported using UE capability signalling (*discSupportedProc*).

The UE is required to meet only the test for the maximum channel bandwidth over the ProSe operating bands supported by the UE.

11.5.1 FDD

The test parameters are specified in Table 11.5.1-1. Multiple discovery resource pools are interleaved. Each Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 11.5.1-2.

Table 11.5.1-1: Test Parameters

Parameter		Unit	Test 1-7	
Discovery resource pool configuration			As specified in Table A.7.1.1-3 (Configuration #3-FDD) with parameters BW_{Channel} , N_{Pools} = Number of configured resource pools (as specified in Table 11.5.1-2), and $N = \text{discSupportedProc}$	
DRX configuration			As specified in Table 11.1.2-1	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern ^{NOTE 2}		OP.1 FDD	
	Propagation channel		Static propagation condition No external noise sources are applied	
Antenna configuration		1x2		
RSRP	dBm/15kHz	-85		
Active Sidelink UE(s)			Sidelink UE $i, i = 0, \dots, \text{discSupportedProc}-1$	
Sidelink UE i	Sidelink Transmissions		PSDCH (D.1 FDD)	
	Resource pool index (NOTE 3)		$\left\lfloor \frac{i}{N_{\text{MAX_SF}}} \right\rfloor$	
	PSDCH RB allocation (NOTE 3)		PRB pairs $\{2^*(i \% N_{\text{MAX_SF}}), 2^*(i \% N_{\text{MAX_SF}})+1\}$	
	Time offset (NOTE 4)	μs	0	
	Frequency offset (NOTE 4)	Hz	0	
	Propagation Channel		Static propagation condition No external noise sources are applied	

Antenna configuration	1x2 Low
<p>NOTE 1: $P_B = 0$.</p> <p>NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs..</p> <p>NOTE 3: N_{MAX_SF} represents the maximum number of Sidelink UEs transmitting in one subframe. $N_{MAX_SF} = 12$ (5 MHz), 25 (10MHz), 37 (15MHz), 50 (10MHz).</p> <p>NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.</p> <p>NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.</p>	

Table 11.5.1-2: Minimum performance

Test num.	Bandwidth	discSupportedProc	Number of configured resource pools	\hat{E}_s at antenna port (dBm/15kHz)	Reference value for Sidelink UE $i=0\dots discSupportedProc-1$
					Fraction of maximum throughput (%)
1	5 MHz	50	5	-85	95
2	10 MHz	50	2	-85	95
3	15 MHz	50	2	-85	95
4	20 MHz	50	1	-85	95
5	10 MHz	400	16	-85	95
6	15 MHz	400	11	-85	95
7	20 MHz	400	8	-85	95

11.5.2 TDD

The test parameters are specified in Table 11.5.2-1. Multiple discovery resource pools are interleaved. Each Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 11.5.2-2.

Table 11.5.2-1: Test Parameters

Parameter		Unit	Test 1-7	
Discovery resource pool configuration			As specified in Table A.7.1.2-2 (Configuration #2-TDD) with parameters $BW_{Channel}$, $N_{Pools} =$ Number of configured resource pools (as specified in Table 11.5.2-2), and $N = discSupportedProc$	
DRX configuration			As specified in Table 11.1.2-1	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Uplink downlink configuration (NOTE 3)		0	
	Special subframe configuration (NOTE 4)		4	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern ^{NOTE 2}		OP.1 TDD	
	Propagation channel		Static propagation condition No external noise sources are applied	
Antenna configuration		1x2		
RSRP	dBm/15kHz	-85		
Active Sidelink UE(s)			Sidelink UE $i, i = 0, \dots, discSupportedProc-1$	
Sidelink UE i	Sidelink Transmissions		PSDCH (D.1 TDD)	
	PSDCH Resource pool (NOTE 5)		$\left\lfloor \frac{i}{N_{MAX_SF}} \right\rfloor$	

	PSDCH RB allocation (NOTE 5)		PRB pairs $\{2*(i \% N_{MAX_SF}), 2*(i \% N_{MAX_SF})+1\}$
	Time offset (NOTE 6)	μs	0
	Frequency offset (NOTE 7)	Hz	0
	Propagation Channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2 Low

NOTE 1: $P_B = 0$.

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: As specified in Table 4.2-2 in TS 36.211 [4].

NOTE 4: As specified in Table 4.2-1 in TS 36.211 [4].

NOTE 5: N_{MAX_SF} represents the maximum number of Sidelink UEs transmitting in one subframe. $N_{MAX_SF} = 12$ (5 MHz), 25 (10MHz), 37 (15MHz), 50 (10MHz).

NOTE 6: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 7: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 11.5.2-2: Minimum performance

Test num.	Bandwidth	discSupportedProc	Number of configured resource pools	\hat{E}_s at antenna port (dBm/15kHz)	Reference value
					Fraction of maximum throughput (%) for Sidelink UE $i=0\dots\text{discSupportedProc}-1$
1	5 MHz	50	5	-85	95
2	10 MHz	50	2	-85	95
3	15 MHz	50	2	-85	95
4	20 MHz	50	1	-85	95
5	10 MHz	400	16	-85	95
6	15 MHz	400	11	-85	95
7	20 MHz	400	8	-85	95

12 Performance requirement (ProSe Direct Communication)

This clause contains the performance requirements for the Sidelink physical channels specified for ProSe Direct Communication in TS 36.211 [4].

12.1 General

12.1.1 Applicability of requirements

12.1.1.1 Applicability of requirements for different channel bandwidths

The requirements in this clause are applicable to UEs that support ProSe Direct Communication. Test cases defined for 5MHz channel bandwidth are applicable to UEs that support ProSe Direct Communication on only Band 31.

12.1.1.2 Test coverage for different number of component carriers

For FDD tests specified in 12.8, if corresponding CA tests are tested, the test coverage can be considered fulfilled without executing single carrier tests.

12.1.1.3 Applicability and test rules for different CA configurations and bandwidth combination sets

The performance requirement for CA UE demodulation tests with active Sidelink in Clause 12 are defined independent of CA configurations and bandwidth combination sets specified in Clause 5.6A.1. For UEs supporting different CA configurations and bandwidth combination sets, the applicability and test rules are defined in Table 12.1.1.3-1. For simplicity, CA configuration below refers to combination of CA configuration and bandwidth combination set.

Table 12.1.1.3-1: Applicability and test rules for CA UE demodulation tests with active Sidelink

Tests	CA capability where the tests apply	CA configuration from the selected CA capability where the tests apply	CA Bandwidth combination to be tested in priority order
CA tests with 2CCs in Clause 12.8	Any one of the supported CA capabilities with largest aggregated CA bandwidth combination	Any one of the supported FDD CA configurations with largest aggregated CA bandwidth combination	Largest aggregated CA bandwidth combination

12.1.2 Reference DRX configuration

Table 12.1.2-1: Reference DRX configuration

Parameter	Value	Comments
onDurationTimer	psf1	
drx-InactivityTimer	psf1	
drx-RetransmissionTimer	psf1	
longDRX-CycleStartOffset	sf2560, 0	
shortDRX	disabled	

NOTE 1: For further information see clause 6.3.2 in TS 36.331.

12.2 Demodulation of PSSCH

The purpose of the requirements in this subclause is to verify the PSSCH demodulation performance with a single active PSSCH link.

12.2.1 FDD

The minimum requirements are specified in Table 12.2.1-2 with the test parameters specified in Table 12.2.1-1. This test specifies an out-of-coverage scenario where Sidelink UE 1 is the synchronization reference only and Sidelink UE 2 transmits PSSCH and PSSCH.

Table 12.2.1-1: Test Parameters

Parameter	Unit	Test 1
Communication resource pool configuration		As specified in Table A.7.2.1-1 (Configuration #1-FDD)
N_{oc} at antenna port (NOTE 1)	dBm/15k Hz	-98
Active cell(s)		None
Sidelink UE 1	Sidelink Transmissions	SLSS + PSBCH
	networkControlledSyncTx	ON
	slssid	30
	inCoverage (in MIB-SL)	FALSE
	syncOffsetIndicator	Set same as syncOffsetIndicator1 in Configuration #1-FDD
Propagation channel		EPA5

	Antenna configuration		1x2 Low
	\widehat{E}_s at antenna port	dBm/15k Hz	-85
Sidelink UE 2	Sidelink Transmissions		PSCCH + PSSCH
	PSCCH RMC		5MHz: CC.3 FDD 10 MHz: CC.4 FDD
	PSCCH subframe allocation		As defined by TS 36.213 with n_{PSCCH} chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSCCH-RP} / 2 \rfloor L_{PSCCH} - 1]$ every sc-period
	PSCCH RB allocation		
	\widehat{E}_s of PSCCH at antenna port	dBm/15k Hz	-85
	PSSCH RMC		As specified in Table 12.2.1-2
	PSSCH subframe allocation		As per time repetition pattern specified in PSCCH
	PSSCH RB allocation		First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213 HARQ retransmission: As per frequency hopping indicated in PSCCH and specified in TS36.213
	Time offset (NOTE 2)	μ s	+1
	Frequency offset (NOTE 3)	Hz	+200
	Propagation Channel		EVA70
	Antenna configuration		1x2 Low
NOTE 1: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.			
NOTE 2: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE.			
NOTE 3: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.			

Table 12.2.1-2: Minimum performance

Test num.	Sidelink UE	Band-width	PSSCH Reference channel	Reference value	
				Fraction of maximum throughput (%) (NOTE 1)	SNR (dB) of PSSCH
1	2	10 MHz	CD.1 FDD	70	-3.4
		5 MHz		70	-3.3

NOTE 1: The throughput is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

12.3 Demodulation of PSCCH

The purpose of the requirements in this subclause is to verify the PSCCH demodulation performance with a single active PSSCH link.

12.3.1 FDD

The minimum requirements are specified in Table 12.3.1-2 with the test parameters specified in Table 12.3.1-1. This test specifies an out-of-coverage scenario where Sidelink UE 1 is the synchronization reference only and Sidelink UE 2 transmits PSCCH and PSSCH.

Table 12.3.1-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.7.2.1-1 (Configuration #1-FDD)
N_{oc} at antenna port (NOTE 1)		dBm/15k Hz	-98
Active cell(s)			None
Sidelink UE 1	Sidelink Transmissions		SLSS + PSBCH
	networkControlledSyncTx		ON

	slssid		30
	inCoverage (in MIB-SL)		FALSE
	syncOffsetIndicator		Set same as syncOffsetIndicator1 in Configuration #1-FDD
	Propagation channel		EPA5
	Antenna configuration		1x2 Low
	\widehat{E}_s at antenna port	dBm/15k Hz	-85
Sidelink UE 2	Sidelink Transmissions		PSCCH + PSSCH
	PSCCH RMC		As specified in Table 12.3.1-2
	PSCCH subframe allocation		As defined by TS 36.213 with n_{PSCCH} chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSCCH-RP} / 2 \rfloor L_{PSCCH} - 1]$ every sc-period
	PSCCH RB allocation		
	PSSCH RMC		CD.1 FDD
	PSSCH subframe allocation		As per time repetition pattern specified in PSCCH
	PSSCH RB allocation		First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213 HARQ retransmission: As per frequency hopping indicated in PSCCH and specified in TS36.213
	Time offset (NOTE 2)	μ s	+1
	Frequency offset (NOTE 3)	Hz	+200
	Propagation Channel		EVA70
	Antenna configuration		1x2 Low
NOTE 1: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.			
NOTE 2: Time offset of Sidelink UE 2 receive signal timing with respect to Sidelink UE 1 receive signal timing at the tested UE.			
NOTE 3: Frequency offset of Sidelink UE 2 with respect to Sidelink UE 1 transmit frequency.			

Table 12.3.1-2: Minimum performance

Test num.	Sidelink UE	Band-width	PSCCH Reference channel	Reference value	
				Probability of missed PSCCH (%) (NOTE 1)	SNR (dB) of PSCCH
1	2	10 MHz	CC.4 FDD	1	4.7
		5 MHz	CC.3 FDD	1	4.8
NOTE 1: The probability is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.					

12.4 Demodulation of PSBCH

The purpose of the requirements in this subclause is to verify the PSBCH demodulation performance with a single active link.

12.4.1 FDD

The minimum requirements are specified in Table 12.4.1-2 with the test parameters specified in Table 12.4.1-1.

Table 12.4.1-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.7.2.1-1 (Configuration #1-FDD)
N_{oc} at antenna port		dBm/15kHz	-98
Active cell(s)			None
Sidelink UE 1	Sidelink Transmissions		SLSS + PSBCH (CP.1 FDD)
	networkControlledSyncTx		ON
	slssid		30
	inCoverage (in MIB-SL)		FALSE

	syncOffsetIndicator		Set same as syncOffsetIndicator1 in Configuration #1-FDD
	Propagation channel		EPA5
	Antenna configuration		1x2 Low

Table 12.4.1-2: Minimum performance

Test num.	Sidelink UE	Reference value	Probability of missed PSBCH (%) (NOTE 1)	SNR (dB)

NOTE 1: The probability is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

12.5 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSSCH transmissions from two Sidelink UEs with power imbalance in one subframe.

12.5.1 FDD

The test parameters in Table 12.5.1-1 specifies an in-coverage scenario where Sidelink UE 1 and 2 are synchronized to Cell 1 and transmit PSSCH on adjacent RBs. The minimum requirements are specified in Table 12.5.1-2.

Table 12.5.1-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.7.2.1-2 (Configuration #2-FDD)
DRX configuration			As specified in Table 12.1.2-1
N_{oc} at antenna port (Note 3)		dBm/15kHz	-98
Active cell(s)			Cell 1 (Serving cell)
Cell 1	Cyclic prefix		Normal
	Cell ID		0
	ρ_A	dB	0

	Downlink power allocation	ρ_B	dB	0 (NOTE 1)	
		σ	dB	0	
	OCNG Pattern (Note 2)			OP.1 FDD	
	Propagation channel			AWGN	
	Antenna configuration			1x2	
RSRP			dBm/15kHz	-92	
Active Sidelink UE(s)				Sidelink UE 1, Sidelink UE 2	
Sidelink UE 1	Sidelink Transmissions			PSCCH + PSSCH	
	PSCCH RMC			5 MHz: CC.1 FDD 10 MHz: CC.2 FDD	
	PSCCH subframe allocation			$n_{PSCCH} = 0$ (as defined in TS 36.213)	
	PSCCH RB allocation				
	\widehat{E}_s of PSCCH at antenna port			dBm/15kHz	-85
	PSSCH RMC			As specified in Table 12.5.1-2	
	PSSCH subframe allocation			As per time repetition pattern specified in PSCCH	
	PSSCH RB allocation			PRB pairs {4, 5}	
	Time offset (NOTE 4)			μs	0
	Frequency offset (NOTE 5)			Hz	0
	Propagation Channel			AWGN	
	Antenna configuration			1x2	
Sidelink UE 2	Sidelink Transmissions			PSCCH + PSSCH	
	PSCCH RMC			5 MHz: CC.1 FDD 10 MHz: CC.2 FDD	
	PSCCH subframe allocation			$n_{PSCCH} = 2$ (as defined in TS 36.213)	
	PSCCH RB allocation				
	\widehat{E}_s of PSCCH at antenna port			dBm/15kHz	-85
	PSSCH RMC			As specified in Table 12.5.1-2	
	PSSCH subframe allocation			As per time repetition pattern specified in PSCCH	
	PSSCH RB allocation			PRB pairs {6, 7}	
	Time offset (NOTE 4)			μs	0
	Frequency offset (NOTE 5)			Hz	0
	Propagation Channel			AWGN	
	Antenna configuration			1x2	

NOTE 1: $P_B = 0$.
 NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.
 NOTE 3: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.
 NOTE 4: The power of PSCCH is set high to ensure reliable reception of PSCCH.
 NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.
 NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 12.5.1-2: Minimum performance

Test num.	Band-width	Sidelink UE	PSSCH Reference channel	Reference value	
				Fraction of maximum throughput (%)	SNR (dB) of PSSCH
1	5 / 10 MHz	1	CD.5 FDD	(NOTE 1)	24.35
		2	CD.5 FDD	70	2.4

NOTE 1: There is no throughput requirement for Sidelink UE 1.

12.6 Multiple timing reference test

The purpose of this test is to check the PSSCH demodulation performance when receiving from two Sidelink UEs that follow different timing references and transmitting on different resources (non-overlapping in time).

12.6.1 FDD

The test parameters are specified in Table 12.6.1-1. Sidelink UE 2 and the receiver UE under test are associated with Cell 1. Sidelink UE 1 and Sidelink UE 3 are associated with another cell and use a different timing, and Sidelink UE 1 acts as a synchronization reference only. The minimum requirements are specified in Table 12.6.1-2.

Table 12.6.1-1: Test Parameters

Parameter		Unit	Test 1	
Communication resource pool configuration			As specified in Table A.7.2.1-3 (Configuration #3-FDD)	
DRX configuration			As specified in Table 12.1.2-1	
N_{oc} at antenna port (Note 3)		dBm/15kHz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)
		σ	dB	0
	OCNG Pattern ^{NOTE 2}		OP.1 FDD	
	Propagation channel		AWGN	
	Antenna configuration		1x2	
RSRP	dBm/15kHz	-92		
Active Sidelink UE(s)			Sidelink UE 1, Sidelink UE 2, Sidelink UE 3	
Sidelink UE 1	Sidelink Transmissions		SLSS + PSBCH	
	networkControlledSyncTx		ON	
	slssid		30	
	inCoverage (in MIB-SL)		TRUE	
	syncOffsetIndicator		Set same as syncOffsetIndicator in Configuration #3-FDD	
	Time offset (NOTE 5)	ms	+12.51 ms	
	Frequency offset (NOTE 6)	Hz	-100 Hz	
	Propagation channel		EPA5	
	Antenna configuration		1x2 Low	
	\widehat{E}_s at antenna port	dBm/15kHz	-85	
Sidelink UE 2	Sidelink Transmissions		PSCCH + PSSCH	
	Resource pool		<i>commRxPool(0)</i>	
	PSCCH RMC		5MHz: CC.1 FDD 10 MHz: CC.2 FDD (NOTE 5)	
	PSCCH subframe allocation		As defined by TS 36.213 with n_{PSCCH} chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSCCH} - RP / 2 \rfloor \lfloor L_{PSCCH} - 1 \rfloor]$ every sc-period	
	PSCCH RB allocation			
	\widehat{E}_s of PSCCH at antenna port	dBm/15kHz	-85	
	PSSCH RMC		As specified in Table 12.6.1-2	
	PSSCH subframe allocation		As per time repetition pattern specified in PSCCH	
	PSSCH RB allocation		First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213 HARQ retransmission: As per frequency hopping indicated in PSCCH and specified in TS36.213	
	Time offset (NOTE 4, 5)		PSCCH: +1 μ s PSSCH: +1 μ s – 288T _s	
	Frequency offset (NOTE 6)	Hz	+200	
	Propagation Channel		EVA70	
Antenna configuration		1x2 Low		
Sidelink UE 3	Sidelink Transmissions		PSCCH + PSSCH	
	Resource pool		<i>commRxPool(1)</i>	
	PSCCH RMC		5MHz: CC.5 FDD 10 MHz: CC.6 FDD	
	PSCCH subframe allocation			

	PSSCH RB allocation		As defined by TS 36.213 with n_{PSSCH} chosen randomly (uniformly) in $[0, \lfloor M_{RB}^{PSSCH} - RP / 2 \rfloor L_{PSSCH} - 1]$ every sc-period
	\widehat{E}_s of PSSCH at antenna port	dBm/15kHz	-85
	PSSCH RMC		As specified in Table 12.6.1-2
	PSSCH subframe allocation		As per time repetition pattern specified in PSSCH
	PSSCH RB allocation		First transmission: Chosen randomly (uniformly) among the allowed RBs as per TS36.213 HARQ retransmission: As per frequency hopping indicated in PSSCH and specified in TS36.213
	Time offset (NOTE 5)	ms	+12.509
	Frequency offset (NOTE 6)	Hz	+300
	Propagation Channel		EVA70
	Antenna configuration		1x2 Low

NOTE 1: $P_B = 0$.

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: Applicable to both DL channel and ProSe Direct Communication Subframes on UL.

NOTE 4: Timing advance indication in PSSCH is set as 18 (=288T_s) in this test. PSSCH timing is advanced with respect to PSSCH timing by the quantity (i.e., PSSCH timing shall be +1μs – 288T_s in this test).

NOTE 5: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 6: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 12.6.1-2: Minimum performance

Test num.	Bandwidth	Sidelink UE	PSSCH Reference channel	Reference value	
				Fraction of maximum throughput (%) (NOTE 1)	SNR (dB)
1	10 MHz	2	CD.4 FDD	70	3.0
		3	CD.2 FDD	70	2.8
	5 MHz	2	CD.3 FDD	70	2.9
		3	CD.2 FDD	70	2.8

NOTE 1: The throughput is measured after 40 radio frames of lead time during which the test UE detects and synchronizes to Sidelink UE 1.

12.7 Maximum Sidelink processes test

The purpose of this test is to verify the maximum number of Sidelink processes and the maximum number of bits per TTI supported by the UE.

12.7.1 FDD

The test parameters are specified in Table 12.7.1-1. Multiple communication resource pools are interleaved. Each active Sidelink UE transmits in one of the resource pools with 3 retransmissions. The minimum requirements are specified in Table 12.7.1-2.

Table 12.7.1-1: Test Parameters

Parameter		Unit	Test 1	
Communication resource pool configuration			As specified in Table A.7.2.1-4 (Configuration #4-FDD)	
DRX configuration			As specified in Table 12.1.2-1	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (NOTE 1)

	σ	dB	0
	OCNG Pattern (Note 2)		OP.1 FDD
	Propagation channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2
	RSRP	dBm/15kHz	-85
Active Sidelink UE(s)			Sidelink UE i , $0 \leq i \leq 15$
Sidelink UE i , $0 \leq i \leq 15$	Sidelink Transmissions		PSCCH + PSSCH
	Resource pool		$commRxPool(\lfloor \frac{i}{8} \rfloor)$
	PSCCH RMC		5MHz: CC.1 FDD with $I_{TRP}=i\%8$ (NOTE 3) 10 MHz: CC.2 FDD with $I_{TRP}=i\%8$ (NOTE 3)
	PSCCH subframe allocation		As defined by TS 36.213 with $n_{PSCCH} = i$
	PSCCH RB allocation		
	PSSCH RMC		As specified in Table 12.7.1-2
	PSSCH subframe allocation		As per time repetition pattern specified in PSCCH
	PSSCH RB allocation		Fully allocated
	Time offset (NOTE 4)	μs	0
	Frequency offset (NOTE 5)	Hz	0
	Propagation Channel		Static propagation condition No external noise sources are applied
Antenna configuration		1x2 Low	

NOTE 1: $P_B = 0$.

NOTE 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.

NOTE 3: For $N_{TRP} = 8$ (FDD) and $trpt-Subset = 001$, $I_{TRP} = 0$ corresponds to a time repetition pattern of (1,0,0,0,0,0,0,0), $I_{TRP} = 1$ corresponds to a time repetition pattern of (0,1,0,0,0,0,0,0), etc.

NOTE 4: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 5: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

Table 12.7.1-2: Minimum performance

Test num.	Bandwidth	PSCCH Reference channel	\hat{E}_s at antenna port (dBm/15kHz)	Reference value for Sidelink UE $i=0...15$
				Fraction of maximum throughput (%)
1	10 MHz	CD.7 FDD	-85	95
	5 MHz	CD.6 FDD	-85	95

12.8 Sustained downlink data rate with active Sidelink

The purpose of this test is to verify the downlink data rate is not impacted when Sidelink resource are also configured. The test parameters are in Table 12.8.1-1. Cell 1 is the serving cell and UE 1 and UE 2 are transmitters of Prose Direct Communication. The test UE is expected to receive all PDSCH transmissions, and prioritize the transmission of ACK/NACK over the reception of UE 2's PSSCH.

The test cases apply to UE categories and bandwidth combinations with maximum aggregated bandwidth as specified in Table 12.8.1-2. The minimum requirements are specified in Table 12.8.1-3. The TB success rate in the cellular link shall be sustained during at least 300 frames.

Table 12.8.1-1: Test parameters for sustained downlink data rate (FDD 64QAM) with active Sidelink

Parameter		Unit	Test 1, 2, 3A, 3B, 4A, 6C
Communication resource pool configuration ^{Note 5}			As specified in Table A.7.2.1-5 (Configuration #5-FDD)
Active cell(s)			Cell 1 (PCell) Cell 2 (SCell) for Test 3B, 4A, 6C
Cell 1	Test parameters		As specified in clause 8.7.1: Table 8.7.1-1 and Test 1, 2, 3A, 3B, 4A, 6C in Table 8.7.1-2
Active Sidelink UE(s)			Sidelink UE 1, Sidelink UE 2
Sidelink UE 1	Sidelink Transmissions		PSCCH + PSSCH

	PSCCH RMC		10 MHz: CC.2 FDD with $I_{TRP}=0$ (NOTE 1)
	PSCCH subframe allocation		As defined by TS 36.213 with $n_{PSCCH} = 0$
	PSCCH RB allocation		
	PSSCH RMC		10 MHz: CD.7 FDD
	PSSCH subframe allocation		As per time repetition pattern specified in PSCCH
	PSSCH RB allocation		Fully allocated
	Time offset (NOTE 3)	μs	0
	Frequency offset (NOTE 4)	Hz	0
	Propagation Channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2 Low
	\widehat{E}_s at antenna port	dBm/15kHz	-85
Sidelink UE 2	Sidelink Transmissions		PSCCH (NOTE 2)
	PSCCH RMC		10 MHz: CC.2 FDD with $I_{TRP}=1$ (NOTE 1)
	PSCCH subframe allocation		As defined by TS 36.213 with $n_{PSCCH} = 1$
	PSCCH RB allocation		
	Time offset (NOTE 3)	μs	0
	Frequency offset (NOTE 4)	Hz	0
	Propagation Channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2 Low
\widehat{E}_s at antenna port	dBm/15kHz	-85	

NOTE 1: For $N_{TRP} = 8$ (FDD) and $trpt\text{-Subset} = 001$, $I_{TRP} = 0$ corresponds to a time repetition pattern of (1,0,0,0,0,0,0,0), $I_{TRP} = 1$ corresponds to a time repetition pattern of (0,1,0,0,0,0,0,0).

NOTE 2: Sidelink UE 2 transmits PSCCH but not PSSCH.

NOTE 3: Time offset of Sidelink UE receive signal with respect to Cell 1 downlink timing at the tested UE.

NOTE 4: Frequency offset of Sidelink UE with respect to Cell 1 uplink frequency.

NOTE 5: Sidelink Communication resources are configured on the primary serving cell.

Table 12.8.1-2: Test cases for sustained data rate

CA config	Maximum supported Bandwidth/ Bandwidth combination (MHz)	Cat. 1	Cat. 2	Cat. 3	Cat. 4	Cat. 6,7	Cat. 9,10	Cat 11, 12	
								DL Cat. 11,12	DL Cat. 15
Single carrier	10	1	2	3A	3A	3A	3A	3A	3A
CA with 2CCs (Note1)	10+10	-	-	3B	4A	4A	4A	4A	4A
	10+20	-	-	3B	4A	6C	6C	6C	6C

NOTE 1: Sidelink operation is configured on PCC

Table 12.8.1-3: Minimum requirements (FDD 64QAM) with active Sidelink

Test	Bandwidth (MHz)	Number of bits of a DL-SCH transport block received within a TTI	Measurement channel	Reference value
				PDSCH TB success rate (%)
1	10	10296	R.31-1 FDD (NOTE 2)	95
2	10	25456	R.31-2 FDD (NOTE 2)	95
3A	10	36696 (NOTE 1)	R.31-3A FDD (NOTE 2)	85
3B	10+10	25456	R.31-2 FDD (NOTE 2)	95
4A	10+10	75376 (NOTE 3)	R.31-4 FDD (NOTE 2)	85
6C	10+20	36696 (NOTE 1) for 10MHz CC 75376 (NOTE 3) for 20MHz CC	R.31-3A FDD for 10MHz CC R.31-4 FDD for 20MHz CC	85

NOTE 1: 35160 bits for sub-frame 5.

NOTE 2: PDSCH scheduling pattern is changed as per the following bitmap that repeats every 40ms, and applies to all the serving cells..
PDSCH scheduling subframe bitmap = {01110111 11110111 11110111 11110111 11111110}.

NOTE 3: 71112 bits for sub-frame 5.

13 Void

14 Performance requirement (V2X Sidelink Communication)

This clause contains the performance requirements for the sidelink physical channels specified for V2X Sidelink Communication.

14.1 General

14.1.1 Applicability of requirements

The requirements in this clause are applicable to UEs that support V2X sidelink communication using Band 47.

When GNSS or GNSS-equivalent synchronization source is used, the reference GNSS signal power is as specified in Table B.6.1-1 in TS 36.133.

The test case applicability is in according to Table 14.1.1-1.

Table 14.1.1-1: V2X test applicability

Tests / clause	Applicable if UE supports the following capability
14.2 14.3 14.4 14.8 Test 1	UE supporting V2X sidelink If the SL-C-RX Category 4 UE passes 14.11 Test 1 or 2, then the test coverage can be considered fulfilled without executing 14.8 Test 1.
14.5	UE with support of <i>sIsS-TxRx-r14</i> [7]
14.6 14.9	UE supporting concurrent operation band for V2X and E-UTRA
14.7	UE not supporting concurrent operation band for V2X and E-UTRA
14.8 Test 2	UE with support of <i>v2x-HighReception-r14</i> [7]. If the SL-C-RX Category 4 UE passes 14.11 Test 3 or 4, then the test coverage can be considered fulfilled without executing 14.8 Test 2.
14.10 Test 1 14.11 Test 1	UE with support of CA with 2 SL CCs and without support of CA with 3 SL CCs
14.10 Test 2 14.11 Test 2	UE with support of CA with 3 SL CCs
14.11 Test 3	UE with support of <i>v2x-EnhancedHighReception-r15</i> [7] and CA with 2 SL CCs and without support of CA with 3 SL CCs
14.11 Test 4	UE with support of <i>v2x-EnhancedHighReception-r15</i> [7] and CA with 3 SL CCs

14.2 Demodulation of PSSCH

The purpose of the requirements in this subclause is to verify the PSSCH for V2X demodulation performance with a single active PSSCH link.

The minimum requirements are specified in Table 14.2-2 with the test parameters specified in Table 14.2-1. In this test scenario, GNSS or GNSS-equivalent synchronization source is used and Sidelink UE 1 transmits PSSCH and PSSCH.

Table 14.2-1: Test Parameters

Parameter		Unit	Test 1, 2	Test 3, 4
Communication resource pool configuration			As specified in Table A.9-1 (Configuration #1-V2X)	
N_{oc} at antenna port		dBm/15k Hz	-98	
Active cell(s)			None	
V2X Tx format (SL-V2X-TxProfileList-r15)			N/A	SL-V2X-TxProfile-r15 = rel15
Sidelink UE 1	Sidelink Transmissions		PSCCH+PSSCH	
	Timing offset (Note 1)		CP/2-12Ts	
	Frequency offset (Note 2)	Hz	+600	
	Synchronization		GNSS or GNSS-equivalent	
	Antenna configuration		1x2 Low	
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.				
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.				

Table 14.2-2: Minimum performance

Test num.	Bandwidth	PSSCH Reference channel	Propagation condition	Reference value	
				PSSCH BLER (%)	SNR (dB) of PSSCH
1	20 MHz	CD.8	EVA180	10	14.2
2	10 MHz	CD.9	EVA2700		5.4
3	20 MHz	CD.13	EVA180		12.5
4	10 MHz	CD.14	EVA2700		2.8

14.3 Demodulation of PSCCH

The purpose of the requirements in this subclause is to verify the PSCCH for V2X demodulation performance with a single active PSSCH link.

The minimum requirements are specified in Table 14.3-2 with the test parameters specified in Table 14.3-1. In this test scenario, GNSS or GNSS-equivalent synchronization source is used and Sidelink UE 1 transmits PSCCH and PSSCH.

Table 14.3-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.9-1 (Configuration #1-V2X)
N_{oc} at antenna port		dBm/15k Hz	-98
Active cell(s)			None
Sidelink UE 1	Sidelink Transmissions		PSCCH+PSSCH
	Timing offset (Note 1)		CP/2-12Ts
	Frequency offset (Note 2)	Hz	+600
	Synchronization		GNSS or GNSS-equivalent
	Antenna configuration		1x2 Low
	PSSCH RMC		CD.9
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			
Note 3: Cyclic shift for PSCCH DMRS is randomly selected between {0, 3, 6, 9} for each PSCCH transmission.			

Table 14.3-2: Minimum performance

Test number	Bandwidth	PSSCH Reference channel	Propagation condition	Reference value	
				Probability of missed PSCCH (%)	SNR (dB) of PSCCH

1	10 MHz	CC.8	EVA1500	1	2.6
---	--------	------	---------	---	-----

14.4 Power imbalance performance with two links

The purpose of this test is to check the demodulation performance when receiving PSSCH transmissions from two Sidelink UEs with power imbalance in one subframe.

The minimum requirements are specified in Table 14.4-2 with the test parameters specified in Table 14.4-1. The Sidelink UE 1 and 2 are synchronized to GNSS or GNSS-equivalent synchronization reference.

Table 14.4-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.9-2 (Configuration #2-V2X)
N_{oc} at antenna port		dBm/15kHz	-98
Active cell(s)			None
Active Sidelink UE(s)			Sidelink UE 1, Sidelink UE 2
Sidelink UE 1	Sidelink Transmissions		PSCCH + PSSCH
	PSCCH RB allocation		PRB pairs {5, 6}
	PSSCH RMC		As specified in Table 14.4-2
	PSSCH RB allocation		PRB pairs {7, 8, 9}
	Time offset (Note 1)	μs	0
	Frequency offset (Note 2)	Hz	0
	Propagation Channel		AWGN
	Antenna configuration		1x2
Sidelink UE 2	Sidelink Transmissions		PSCCH + PSSCH
	PSCCH RB allocation		PRB pairs {20, 21}
	PSSCH RMC		As specified in Table 14.4-2
	PSSCH RB allocation		PRB pairs {22, 23, 24}
	Time offset (Note 1)	μs	0
	Frequency offset (Note 2)	Hz	0
	Propagation Channel		AWGN
	Antenna configuration		1x2
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			

Table 14.4-2: Minimum performance

Test number	Bandwidth	Sidelink UE	PSSCH Reference channel	Reference value	
				PSSCH BLER (%)	SNR (dB) of PSSCH
1	20MHz	1	CD.10	(Note 1)	30.35
		2	CD.10	10	13.3
Note 1: There is no throughput requirement for Sidelink UE 1.					

14.5 Demodulation of PSBCH

The purpose of the requirements in this subclause is to verify the PSBCH demodulation performance with a single active link.

The minimum requirements are specified in Table 14.5-2 with the test parameters specified in Table 14.5-1. The Sidelink UE 1 transmit PSBCH to tested UE and tested UE is synchronized to SLSS of Sidelink UE 1

Table 14.5-1: Test Parameters

Parameter	Unit	Test 1
Communication resource pool configuration		As specified in Table A.9-1 (Configuration #1-V2X)

N_{oc} at antenna port		dBm/15kHz	-98
Active cell(s)			None
Sidelink UE 1	Sidelink Transmissions		SLSS+PSBCH (Note 3)
	slssid		169
	Time offset (Note 1)	μ s	0
	Frequency offset (Note 2)	Hz	0
	Synchronization source		GNSS
Antenna configuration			1x2 Low
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			
Note 3: PSBCH transmits together with corresponding SLSS in the same subframe.			

Table 14.5-2: Minimum performance

Test number	Bandwidth	PSBCH Reference channel	Propagation condition	Reference value	
				Probability of missed PSBCH (%)	SNR (dB) of PSBCH
1	20 MHz	CP.2	EVA180	1	2.5

14.6 Demodulation of PSSCH with eNB based synchronization

The purpose of the requirements in this subclause is to verify the PSSCH for V2X demodulation performance with a single active PSSCH link under eNB based synchronization.

The minimum requirement is specified in Table 14.6-2 with the test parameters specified in Table 14.6-1. In this test scenario, eNB based synchronization source is used and Sidelink UE 1 transmits PSCCH and PSSCH.

Table 14.6-1: Test Parameters

Parameter		Unit	Test 1	
Communication resource pool configuration			As specified in Table A.9-3 (Configuration #3-V2X)	
N_{oc} at antenna port		dBm/15k Hz	-98	
Active cell(s)			Cell 1 (Serving cell)	
Cell 1	Cyclic prefix		Normal	
	Cell ID		0	
	Downlink power allocation	ρ_A	dB	0
		ρ_B	dB	0 (Note 1)
		σ	dB	0
	OCNG Pattern (Note 2)			OP.1 FDD
	Propagation channel			AWGN
	Antenna configuration			1x2 Low
RSRP		dBm/15k Hz	-92	
Sidelink UE 1	Sidelink Transmissions		PSCCH+PSSCH	
	Timing offset (Note 3)		CP/2-24Ts	
	Frequency offset (Note 4)	Hz	+1300	
	Synchronization source		Cell 1	
	Antenna configuration		1x2 Low	
Note 1: $P_B = 0$.				
Note 2: OCNG is used to fully allocate the available resource blocks to virtual UEs.				
Note 3: Time offset of Sidelink UE receive signal with respect to Cell1 reference timing.				
Note 4: Frequency offset of Sidelink UE with respect to Cell 1 reference frequency.				

Table 14.6-2: Minimum performance

	Bandwidth		Reference value
--	-----------	--	-----------------

Test num.		PSSCH Reference channel	Propagation condition	PSSCH BLER (%)	SNR (dB) of PSSCH
1	20 MHz	CD.12	EVA180	10	4.9

14.7 Soft buffer test

The purpose of this test is to verify the maximum number of bits per TTI supported by the V2X UE.

The minimum requirement is specified in Table 14.7-2 with the test parameters specified in Table 14.7-1.

Table 14.7-1: Test Parameters

Parameter		Unit	Test 1	Test 2
Communication resource pool configuration			As specified in Table A.9-4 (Configuration #4-V2X)	
N_{oc} at antenna port		dBm/15kHz	-98	
Active cell(s)			None	
V2X Tx format (SL-V2X-TxProfileList-r15)			N/A	SL-V2X-TxProfile-r15 = rel15
Active Sidelink UE(s)			Sidelink UE i , $0 \leq i \leq 14$	
Sidelink UE i , $0 \leq i \leq 14$	Sidelink Transmissions		PSCCH + PSSCH	
	Time gap between initial transmission and retransmission	Subframe	15	
	Timing offset (Note 1)	μ s	0	
	Frequency offset (Note 2)	Hz	0	
	Synchronization source		GNSS or GNSS-equivalent	
	Antenna configuration		1x2	
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.				
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.				
Note 3: 15 sidelink UEs should transmit one by one circularly for every subframe.				

Table 14.7-2: Minimum performance

Test num.	Bandwidth	PSSCH Reference channel	Propagation condition	Reference value		ue-CategorySL-C-RX
				PSSCH BLER (%)	SNR (dB) of PSSCH	
1	20 MHz	CD.11	AWGN	5	8.0	SL-C-RX Category 2
2	20 MHz	CD.15	AWGN	5	12.0	SL-C-RX Category 3

14.8 PSCCH/PSSCH decoding capability test

The purpose of this test is to verify the maximum number of Sidelink processes supported by the V2X UE.

The minimum requirements are specified in Table 14.8-3 with the test parameters specified in Table 14.8-1 and Table 14.8-2 according to UE capability.

Table 14.8-1: Test Parameters

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.9-5 (Configuration #5-V2X)
Active cell(s)			None
Sidelink UE i , $0 \leq i \leq 9$	Sidelink Transmissions		PSCCH + PSSCH
	Timing offset (Note 1)	μ s	0
	Frequency offset (Note 2)	Hz	0
	Synchronization source		GNSS or GNSS-equivalent

	Propagation Channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2
	PSSCH RMC		CD.12
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			
Note 3: Cyclic shift for PSSCH DMRS is randomly selected between {0, 3, 6, 9} for each PSSCH transmission.			

Table 14.8-2: Test Parameters

Parameter		Unit	Test 2
Communication resource pool configuration			As specified in Table A.9-5 (Configuration #5-V2X)
Active cell(s)			None
Sidelink UE i , $0 \leq i \leq 19$	Sidelink Transmissions		PSSCH + PSSCH
	Timing offset (Note 1)	μs	0
	Frequency offset (Note 2)	Hz	0
	Synchronization source		GNSS or GNSS-equivalent
	Propagation Channel		Static propagation condition No external noise sources are applied
	Antenna configuration		1x2
	PSSCH RMC		CD.10
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			
Note 3: Cyclic shift for PSSCH DMRS is randomly selected between {0, 3, 6, 9} for each PSSCH transmission.			

Table 14.8-3: Minimum performance

Test number	Bandwidth	PSSCH Reference channel	\hat{E}_S at antenna port (dBm/15kHz)	Reference value
				Probability of missed PSSCH (%)
1	20 MHz	CC.8	-85	1
2	20 MHz	CC.8	-85	1

14.9 Sustained downlink data rate with active sidelink

The purpose of this test is to verify the WAN and V2X operation is not impacted with each other when UE is under concurrent operation. This test case applies to UEs support concurrent operation of V2X communication with E-UTRA uplink/downlink on the operating bands combinations listed in Table 5.5G-2.

The test parameters are in Table 14.9-1, and the test UE is expected to receive all PSSCH and PDSCH transmissions simultaneously.

For PDSCH, the test cases apply to UE categories and bandwidth as specified in Table 14.9-2. The minimum requirements for PSSCH are specified in Table 14.7-2, Table 14.10-3 and Table 14.10-4 with corresponding test applicability and the minimum requirements for PDSCH downlink data rate are specified in Table 14.9-3. Both PDSCH and PSSCH performance will be verified simultaneously. The TB success rate in the cellular link shall be sustained during at least 300 frames.

Table 14.9-1: Test parameters for sustained downlink data rate (FDD 64QAM) and maximum PSSCH processing capability

Parameter		Unit	Test 1
Communication resource pool configuration			As specified in Table A.9-4 (Configuration #4-V2X)
N_{oc} at antenna port		dBm/15kHz	-98
Active cell(s)			Cell 1 (PCell)
Cell 1	Test parameters		As specified in Table 8.7.1-1 and Table 14.9-2
Active Sidelink UE(s)			Sidelink UE i , $0 \leq i \leq 14$

Sidelink UE i , $0 \leq i \leq 14$	Sidelink Transmissions		PSCCH + PSSCH
	Time gap between initial transmission and retransmission	Subframe	15
	Timing offset (Note 1)	μs	0
	Frequency offset (Note 2)	Hz	0
	Synchronization		GNSS or GNSS-equivalent
	Antenna configuration		1x2
Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.			
Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.			
Note 3: 15 sidelink UEs should transmit one by one circularly for every subframe.			

Table 14.9-2: Test cases for sustained data rate

CA config	Maximum supported Bandwidth/ Bandwidth combination (MHz)	Cat. 1	Cat. 2	Cat. 3	Cat. 4	Cat. 6,7	Cat. 9,10	Cat 11, 12	DL Cat. 15
								DL Cat. 11,12	
Single carrier	10	1	2	3A	3A	3A	3A	3A	3A
	20	-	-	3	4	6	6	6	6

Table 14.9-3: Minimum requirements (FDD 64QAM) for PDSCH

Test	Bandwidth (MHz)	Number of bits of a DL-SCH transport block received within a TTI	Measurement channel	Reference value
				PDSCH TB success rate (%)
1	10	10296	R.31-1 FDD (NOTE 2)	95
2	10	25456	R.31-2 FDD (NOTE 2)	95
3	20	51024	R.31-3 FDD	95
3A	10	36696 (NOTE 1)	R.31-3A FDD (NOTE 2)	85

6	20	75376 (Note 2)	R.31-4 FDD	85
NOTE 1: 35160 bits for sub-frame 5.				
NOTE 2: 71112 bits for sub-frame 5.				

14.10 Soft buffer test (CA)

The purpose of this test is to verify the maximum number of bits per TTI supported by the V2X UE with UE SL-C-RX Category 4 for UEs supporting V2X CA.

For CA with 2 SL CCs, the requirements are specified in Table 14.10-3, based on single carrier requirement specified in Table 14.10-2, with the test parameters specified in Table 14.10-1.

For CA with 3 SL CCs, the requirements are specified in Table 14.10-4, based on single carrier requirement specified in Table 14.10-2, with the test parameters specified in Table 14.10-1.

Table 14.10-1: Test Parameters

Parameter	Unit	Test 1, 2
Communication resource pool configuration		As specified in Table A.9-4 (Configuration #4-V2X)
N_{oc} at antenna port	dBm/15kHz	-98
Active cell(s)		None
V2X Tx format (SL-V2X-TxProfileList-r15)		SL-V2X-TxProfile-r15 = rel15
Active Sidelink UE(s)		Sidelink UE i , $0 \leq i \leq 14$
Sidelink UE i , Sidelink Transmissions		PSCCH + PSSCH

0 ≤ i ≤ 14	Time gap between initial transmission and retransmission	Subframe	15
	Timing offset (Note 1)	μs	0
	Frequency offset (Note 2)	Hz	0
	Synchronization source		GNSS or GNSS-equivalent
	Antenna configuration		1x2

Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.
 Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.
 Note 3: 15 sidelink UEs should transmit one by one circularly for every subframe.

Table 14.10-2: Single carrier performance with different bandwidths for multiple CA configurations

Bandwidth	PSSCH Reference channel	Propagation condition	Reference value	
			PSSCH BLER (%)	SNR (dB) of PSSCH
10 MHz	CD.16	AWGN	5	12.0
20 MHz	CD.15	AWGN	5	12.0

Table 14.10-3: Minimum performance for CA with 2 SL CCs

Test num.	CA Bandwidth combination	Requirement	ue-CategorySL-C-RX
1	10+20 MHz	As specified in 14.10-2 per CC	SL-C-RX Category 4

Table 14.10-4: Minimum performance for CA with 3 SL CCs

Test num.	CA Bandwidth combination	Requirement	ue-CategorySL-C-RX
2	3x10 MHz	As specified in 14.10-2 per CC	SL-C-RX Category 4

14.11 PSCCH/PSSCH decoding capability test (CA)

The purpose of this test is to verify the maximum number of Sidelink processes and the maximum number of bits per TTI supported by the UE with UE SL-C-RX Category 4 for UEs supporting V2X CA.

For CA with 2 SL CCs, the requirements are specified in Table 14.11-4 based on single carrier requirement specified in Table 14.11-3, with the test parameters specified in Table 14.11-1 and Table 14.11-2 according to UE capability.

For CA with 3 SL CCs, the requirements are specified in Table 14.11-5 based on single carrier requirement specified in Table 14.11-3, with test parameters specified in Table 14.11-1 and Table 14.11-2 according to UE capability.

Table 14.11-1: Test Parameters

Parameter		Unit	Test 1	Test 2
Communication resource pool configuration			As specified in Table A.9-5 and A.9-6 (Configuration #5-V2X and #6-V2X)	As specified in Table A.9-6 (Configuration #6-V2X)
V2X Tx format (SL-V2X-TxProfileList-r15)			SL-V2X-TxProfile-r15 = rel15	
Active cell(s)			None	
Sidelink UE i, 0 ≤ i ≤ 14	Sidelink Transmissions		PSCCH + PSSCH	
	Timing offset (Note 1)	μs	0	
	Frequency offset (Note 2)	Hz	0	
	Synchronization source		GNSS or GNSS-equivalent	
	Propagation Channel		Static propagation condition No external noise sources are applied	
	Antenna configuration		1x2	
PSSCH RMC			CD.17 and CD.18	CD.18

Note 1: Time offset of Sidelink UE receive signal with respect to GNSS reference timing.

Note 2: Frequency offset of Sidelink UE with respect to GNSS reference frequency.
 Note 3: Cyclic shift for PSCCH DMRS is randomly selected between {0, 3, 6, 9} for each PSCCH transmission.

Table 14.11-2: Test Parameters

Parameter		Unit	Test 3	Test 4
Communication resource pool configuration			As specified in Table A.9-5 and A.9-6 (Configuration #5-V2X and #6-V2X)	As specified in Table A.9-6 (Configuration #6-V2X)
V2X Tx format (SL-V2X-TxProfileList-r15)			SL-V2X-TxProfile-r15 = rel15	
Active cell(s)			None	
Sidelink UE i , $0 \leq i \leq 29$	Sidelink Transmissions		PSCCH + PSSCH

4	3x10	As defined in Table 14.11-3 per CC

Annex A (normative): Measurement channels

A.1 General

The throughput values defined in the measurement channels specified in Annex A, are calculated and are valid per datastream (codeword). For multi-stream (more than one codeword) transmissions, the throughput referenced in the minimum requirements is the sum of throughputs of all datastreams (codewords).

The UE category entry in the definition of the reference measurement channel in Annex A is only informative and reveals the UE categories, which can support the corresponding measurement channel. Whether the measurement channel is used for testing a certain UE category or not is specified in the individual minimum requirements.

A.2 UL reference measurement channels

A.2.1 General

The measurement channels in the following subclauses are defined to derive the requirements in clause 6 (Transmitter Characteristics) and clause 7 (Receiver Characteristics). The measurement channels represent example configurations of physical channels for different data rates.

A.2.1.1 Applicability and common parameters

The UL reference measurement channels comprise transmission of PUSCH and Demodulation Reference signals only. The following conditions apply:

- 1 HARQ transmission
- Cyclic Prefix normal
- PUSCH hopping off
- Link adaptation off
- Demodulation Reference signal as per TS 36.211 [4] subclause 5.5.2.1.2.

Where ACK/NACK is transmitted, it is assumed to be multiplexed on PUSCH as per TS 36.212 [5] subclause 5.2.2.6.

- ACK/NACK 1 bit
- ACK/NACK mapping adjacent to Demodulation Reference symbol
- ACK/NACK resources punctured into data
- Max number of resources for ACK/NACK: 4 SC-FDMA symbols per subframe
- No CQI transmitted, no RI transmitted

A.2.1.2 Determination of payload size

The algorithm for determining the payload size A is as follows; given a desired coding rate R and radio block allocation N_{RB}

1. Calculate the number of channel bits N_{ch} that can be transmitted during the first transmission of a given sub-frame.
2. Find A such that the resulting coding rate is as close to R as possible, that is,

$$\min \left| R - (A + 24 * (N_{CB} + 1)) / N_{ch} \right|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- a) A is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of N_{RB} resource blocks.
- b) C is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
- c) For RMC-s, which at the nominal target coding rate do not cover all the possible UE categories for the given modulation, reduce the target coding rate gradually (within the same modulation), until the maximal possible number of UE categories is covered.

3. If there is more than one A that minimises the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.

A.2.1.3 Overview of UL reference measurement channels

In Table A.2.1.3-1 to A.2.1.3-1K are listed the UL reference measurement channels specified in annexes A.2.2 and A.2.3 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.2.2 and A.2.3 as appropriate.

Table A.2.1.3-1: Overview of UL reference measurement channels (FDD, Full RB allocation, QPSK)

Duplex	Table	Name	BW	Mod	TCR	RB	RB Offset	UE Category	Notes
FDD	Table A.2.2.1.1-1		1.4	QPSK	1/3	6		≥ 1

A.2.2 Reference measurement channels for FDD

A.2.2.1 Full RB allocation

A.2.2.1.1 QPSK

Table A.2.2.1.1-1: Reference Channels for QPSK with full RB allocation

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	15	25	50	75	100
DFT-OFDM Symbols per Sub-Frame		12	12	12	12	12	12
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3	1/3	1/5	1/6
Payload size	Bits	600	1544	2216	5160	4392	4584
Transport block CRC	Bits	24	24	24	24	24	24
Number of code blocks per Sub-Frame (Note 1)		1	1	1	1	1	1
Total number of bits per Sub-Frame	Bits	1728	4320	7200	14400	21600	28800
Total symbols per Sub-Frame		864	2160	3600	7200	10800	14400
UE Category		≥ 1	≥ 1	≥ 1	≥ 1	≥ 1	≥ 1

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Table A.2.2.1.1-1a: Reference Channels for QPSK with full/maximum RB allocation for UE UL category 0

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	15	25	36	36	36
DFT-OFDM Symbols per Sub-Frame		12	12	12	12	12	12
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding rate		1/3	1/5	1/8	1/10	1/10	1/10
Payload size	Bits	600	872	904	1000	1000	1000
Transport block CRC	Bits	24	24	24	24	24	24

Number of code blocks per Sub-Frame (NOTE 1)		1	1	1	1	1	1
Total number of bits per Sub-Frame	Bits	1728	4320	7200	10368	10368	10368
Total symbols per Sub-Frame		864	2160	3600	5184	5184	5184
UE UL Category		0	0	0	0	0	0
NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)							
NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th, 6th, 12th, 13th, 14th, 20th, 21st, 22nd, 28th, 29th, 30th, 36th, 37th, and 38th subframes every 40ms. Information bit payload is available if uplink subframe is scheduled.							

Table A.2.2.1.1-b: Reference Channels for QPSK with full/maximum RB allocation for UE UL category M1

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	6	6	6	6	6
DFT-OFDM Symbols per Sub-Frame		12	12	12	12	12	12
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3	1/3	1/3	1/3
Payload size	Bits	600	600	600	600	600	600
Transport block CRC	Bits	24	24	24	24	24	24
Number of code blocks per Sub-Frame (NOTE 1)		1	1	1	1	1	1
Total number of bits per Sub-Frame	Bits	1728	1728	1728	1728	1728	1728
Total symbols per Sub-Frame		864	864	864	864	864	864
UE UL Category		M1	M1	M1	M1	M1	M1
NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)							
NOTE 2: For HD-FDD UE with $N_{abs}^{PUSCH} = 1$, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled. N_{abs}^{PUSCH} is total number of absolute subframes a PUSCH with repetition spans [4].							
NOTE 3: For HD-FDD UE with $N_{abs}^{PUSCH} > 1$, MPDCCH are scheduled at 0th DL subframe every $N_{abs}^{PUSCH} + 5$ subframes (starting from the 0th subframe). The associated PUSCH is scheduled at the 4th to $(N_{abs}^{PUSCH} + 3)$ -th UL subframes every $N_{abs}^{PUSCH} + 5$ subframes. Information bit payload is available if uplink subframe is scheduled.							

Table A.2.2.1.1-c: Reference Channels for QPSK with full/maximum RB allocation for UE UL category M2

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	12	24	24	24	24
DFT-OFDM Symbols per Sub-Frame		12	12	12	12	12	12
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3	1/3	1/3	1/3
Payload size	Bits	600	1224	2472	2472	2472	2472
Transport block CRC	Bits	24	24	24	24	24	24
Number of code blocks per Sub-Frame (NOTE 1)		1	1	1	1	1	1
Total number of bits per Sub-Frame	Bits	1728	3456	6912	6912	6912	6912
Total symbols per Sub-Frame		864	1728	3456	3456	3456	3456
UE UL Category		M2	M2	M2	M2	M2	M2
NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)							
NOTE 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For HD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled.							

A.2.2.1.2 16-QAM

Table A.2.2.1.2-1: Reference Channels for 16-QAM with full RB allocation

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20

Total number of bits per Sub-Frame	Bits	6912	17280	28800	57600	86400	115200
Total symbols per Sub-Frame		864	2160	3600	7200	10800	14400
UE UL Category		≥ 15	≥ 15	≥ 15	≥ 15	≥ 15	≥ 15
Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)							

A.2.2.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements. The single allocated RB case is included.

The allocated RBs are contiguous and start from one end of the channel bandwidth. A single allocated RB is at one end of the channel bandwidth.

A.2.2.2.1 QPSK

Table A.2.2.2.1-1: Reference Channels for QPSK with partial RB allocation

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category
Unit	MHz					Bits	Bits		Bits		
	1.4 - 20	1	12	QPSK	1/3	72	24	1	288	144	≥ 1
	1.4 - 20	2	12	QPSK	1/3	176	24	1	576	288	≥ 1

	10-20	25	12	QPSK	1/8	904	24	1	7200	3600	0
	10-20	27	12	QPSK	1/8	968	24	1	7776	3888	0
	10-20	30	12	QPSK	1/10	808	24	1	8640	4320	0

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th, 6th, 12th, 13th, 14th, 20th, 21st, 22nd, 28th, 29th, 30th, 36th, 37th, and 38th subframes every 40ms. Information bit payload is available if uplink subframe is scheduled.

Table A.2.2.1-1b: Reference Channels for QPSK with partial RB allocation for UE UL category M1

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category
Unit	MHz					Bits	Bits		Bits		
	1.4 - 20	1	12	QPSK	1/3	72	24	1	288	144	M1
	1.4 - 20	2	12	QPSK	1/3	176	24	1	576	288	M1
	1.4 - 20	3	12	QPSK	1/3	256	24	1	864	432	M1
	1.4 - 20	4	12	QPSK	1/3	392	24	1	1152	576	M1
	1.4 - 20	5	12	QPSK	1/3	424	24	1	1440	720	M1
	3-20	6	12	QPSK	1/3	600	24	1	1728	864	M1

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Note 2: For HD-FDD UE, the uplink subframes are scheduled at the 4th, 5th and 6th subframes every 10ms for the channel bandwidth 5MHz/10MHz/15MHz/20MHz. For FD-FDD UE, the uplink subframes are scheduled at the 5th, 6th and 7th subframes every 10ms for the channel bandwidth 1.4MHz/3MHz. Information bit payload is available if uplink subframe is scheduled.

Table A.2.2.1-1c: Reference Channels for QPSK with partial RB allocation for UE UL category M2

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category
Unit	MHz					Bits	Bits		Bits		
	1.4 - 20	1	12	QPSK	1/3	72	24	1	288	144	M2
	1.4 - 20	2	12	QPSK	1/3	176	24	1	576	288	M2
	1.4 - 20	3	12	QPSK	1/3	256	24	1	864	432	M2
	1.4 - 20	4	12	QPSK	1/3	392	24	1	1152	576	M2
	1.4 - 20	5	12	QPSK	1/3	424	24	1	1440	720	M2
	3-20	6	12	QPSK	1/3	600	24	1	1728	864	M2

	3-20	9	12	QPSK	1/3	776	24	1	2592	1296	M2

	20	96	12	256QAM	3/4	81176	24	14	110592	13824	≥ 15

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

A.2.2.3 Void

Table A.2.2.3-1: Void

A.2.2.4 subPRB allocation

The location of allocated RB for subPRB allocation is chosen according to values specified in the Tx requirements.

Table A.2.2.4-1: Reference Channels for SubPRB allocation

Parameter	Unit	Value		
Channel bandwidth	MHz	1.4 – 20	1.4 – 20	1.4 – 20
Allocated resource blocks		1	1	1
Number of subcarriers		2 out of 3	3	6
DFT-OFDM Symbols per Sub-Frame		12	12	12
Modulation		$\pi/2$ BPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3
Payload size	Bits	32	72	72
Transport block CRC	Bits	24	24	24
Number of code blocks		1	1	1
Total number of bits per resource unit	Bits	192	288	288
Total symbols per resource unit		192	144	144
Tx time	ms	8	4	2
UE UL Category		M1/M2	M1/M2	M1/M2

NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

A.2.3 Reference measurement channels for TDD

For TDD, the measurement channel is based on DL/UL configuration ratio of 2DL:2UL, or 1DL:4UL. 2DL:2UL is the default and used unless explicitly specified in the test case

A.2.3.1 Full RB allocation

A.2.3.1.1 QPSK

Table A.2.3.1.1-1: Reference Channels for QPSK with full RB allocation

Parameter	Unit	Value					
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	15	25	50	75	100
Uplink-Downlink Configuration (Note 2)		1	1	1	1	1	1
DFT-OFDM Symbols per Sub-Frame		12	12	12	12	12	12
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3	1/3	1/5	1/6
Payload size							

For Sub-Frame 2,3,7,8	Bits	600	1544	2216	5160	4392	4584
Transport block CRC	Bits	24	24	24	24	24	24
Number of code blocks per Sub-Frame (Note 1)							
For Sub-Frame 2,3,7,8		1	1	1	1	1	1
Total number of bits per Sub-Frame							
For Sub-Frame 2,3,7,8	Bits	1728	4320	7200	14400	21600	28800

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) Note 2: As per Table 4.2-2 in TS 36.211 [4]							

A.2.3.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements. The single allocated RB case is included.

The allocated RBs are contiguous and start from one end of the channel bandwidth. A single allocated RB is at one end of the channel bandwidth.

A.2.3.2.1 QPSK

Table A.2.3.2.1-1: Reference Channels for QPSK with partial RB allocation

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: As per Table 4.2-2 in TS 36.211 [4]

A.2.3.3 Void

Table A.2.3.3-1: Void

A.2.3.4 subPRB allocation

The location of allocated RB for subPRB allocation is chosen according to values specified in the Tx requirements.

Table A.2.3.4-1: Reference Channels for SubPRB allocation

Parameter	Unit	Value		
		1.4 – 20	1.4 – 20	1.4 – 20
Channel bandwidth	MHz	1.4 – 20	1.4 – 20	1.4 – 20
Allocated resource blocks		1	1	1
Number of subcarriers		2 out of 3	3	6
DFT-OFDM Symbols per Sub-Frame		12	12	12
Modulation		$\pi/2$ BPSK	QPSK	QPSK
Target Coding rate		1/3	1/3	1/3
Payload size	Bits	32	72	72
Transport block CRC	Bits	24	24	24
Number of code blocks		1	1	1
Total number of bits per resource unit	Bits	192	288	288
Total symbols per resource unit		192	144	144
Tx time	ms	8	4	2
UE UL Category		M1/M2	M1/M2	M1/M2
NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)				

A.2.4 Reference measurement channels for UE category NB1

Table A.2.4-1 Reference Channels for UE category NB1

Parameter	Value						
	3.75	3.75	15	15	15	15	15
Sub-carrier spacing (kHz)	3.75	3.75	15	15	15	15	15
Number of tone	1	1	1	1	3	6	12
Modulation	$\pi/2$ BPSK	$\pi/4$ QPSK	$\pi/2$ BPSK	$\pi/4$ QPSK	QPSK	QPSK	QPSK
Number of NPUSCH repetition (NOTE 5)	1	1	1	1	1	1	1
IMCS / ITBS	0 / 0	3 / 3	0 / 0	3 / 3	5 / 5	5 / 5	5 / 5
Payload size (bits)	32	40	32	40	72	72	72
Allocated resource unit	2	1	2	1	1	1	1
Code rate (target)	1/3	1/3	1/3	1/3	1/3	1/3	1/3
Code rate (effective)	0.29	0.33	0.29	0.33	0.33	0.33	0.33
Transport block CRC (bits)	24	24	24	24	24	24	24
Code block CRC size (bits)	0	0	0	0	0	0	0
Number of code blocks – C	1	1	1	1	1	1	1
Total number of bits per resource unit	96	192	96	192	288	288	288
Total symbols per resource unit	96	96	96	96	144	144	144
Tx time (ms)	64	32	16	8	4	2	1
NOTE 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)							
NOTE 2: Parameters related to NPUSCH format 1 scheduling are defined in Table A.2.4-2.							
NOTE 3: NPDCCH is not transmitted in the subframes used for transmission of SI messages.							
NOTE 4: SI messages transmission should be prioritized over NPDCCH transmission in case of collision. NPDCCH transmission is postponed until the next NB-IoT downlink subframe in case NPDCCH transmission occurs in a non NB-IoT downlink subframe, where an NB-IoT downlink subframe is a subframe that does not contain NPSS/NSSS/NPBCH/SIB1-NB transmission.							
NOTE 5: Number of repetition N_{Rep} as defined in table 16.5.1.1-3 in TS 36.213 [6].							

Table A.2.4-2: NPDCCH configuration for NPUSCH format 1 scheduling

Parameter	Unit	Value
DCI format		DCI format N0
NPDCCH format		1
Scheduling delay (I_{Delay})		0
DCI subframe repetition number		00

R_{\max} (<i>npdcch-NumRepetitions</i>)		1
G (<i>NPDCCH-startSF-USS</i>)		8
α_{offset} (<i>npdcch-Offset-USS</i>)		1/4

A.2.5 Reference measurement channels for LAA

A.2.5.1 Full RB allocation

A.2.5.1.1 QPSK

Table A.2.5.1.1-1: Reference Channels for QPSK with full RB allocation

Parameter	Unit	Value	
Channel bandwidth	MHz	10	20
Allocated resource blocks		50	100
DFT-OFDM Symbols per Sub-Frame		12	12
Modulation		QPSK	QPSK
Target Coding rate		1/3	1/6
Payload size	Bits	5160	4584
Transport block CRC	Bits	24	24
Number of code blocks per Sub-Frame (Note 1)		1	1
Total number of bits per Sub-Frame	Bits	14400	28800
Total symbols per Sub-Frame		7200	14400
UE Category		≥ 1	≥ 1
Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)			

A.2.5.1.2 16QAM

Table A.2.5.1.2-1: Reference Channels for 16QAM with full RB allocation

Parameter	Unit	Value	
Channel bandwidth	MHz	10	20
Allocated resource blocks		50	100
DFT-OFDM Symbols per Sub-Frame		12	12
Modulation		16QAM	16QAM
Target Coding rate		3/4	1/3
Payload size	Bits	21384	19848
Transport block CRC	Bits	24	24
Number of code blocks per Sub-Frame (Note 1)		4	4
Total number of bits per Sub-Frame	Bits	28800	57600
Total symbols per Sub-Frame		7200	14400
UE Category		≥ 2	≥ 2
Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)			

A.2.5.1.3 64QAM

Table A.2.5.1.3-1: Reference Channels for 64QAM with full RB allocation

Parameter	Unit	Value	
Channel bandwidth	MHz	10	20
Allocated resource blocks		50	100
DFT-OFDM Symbols per Sub-Frame		12	12
Modulation		64QAM	64QAM
Target Coding rate		3/4	3/4
Payload size	Bits	31704	63776
Transport block CRC	Bits	24	24
Number of code blocks per Sub-Frame (Note 1)		8	11
Total number of bits per Sub-Frame	Bits	43200	86400
Total symbols per Sub-Frame		7200	14400
UE Category (Note 2)		5,8	5,8
UE UL Category (Note 2)		5,8,13, 14	5,8,13, 14
Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) Note 2: If UE does not report UE UL category, then the applicability of reference channel is determined by UE category. If UE reports UE UL category, then the applicability of reference channel is determined by UE UL category.			

A.2.5.2 Partial RB allocation

For each channel bandwidth, various partial RB allocations are specified. The number of allocated RBs is chosen according to values specified in the Tx and Rx requirements.

A.2.5.2.1 QPSK

Table A.2.5.2.1-1: Reference Channels for QPSK with partial RB allocation

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category
Unit	MHz					Bits	Bits		Bits		
	10 - 20	10	12	QPSK	1/3	872	24	1	2880	1440	≥ 1
	10 - 20	20	12	QPSK	1/3	1736	24	1	5760	2880	≥ 1
	10 - 20	30	12	QPSK	1/3	2664	24	1	8640	4320	≥ 1
	10 - 20	40	12	QPSK	1/3	4136	24	1	11520	5760	≥ 1
	20	50	12	QPSK	1/3	5160	24	1	14400	7200	≥ 1
	20	60	12	QPSK	1/4	4264	24	1	17280	8640	≥ 1
	20	70	12	QPSK	1/4	4968	24	1	20160	10080	≥ 1
	20	80	12	QPSK	1/5	4776	24	1	23040	11520	≥ 1
	20	90	12	QPSK	1/6	4008	24	1	25920	12960	≥ 1
Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit) Note 2: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N _{Interlace} -1 } where N _{Interlace} is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively. Note 3: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N _{Interlace} -1 } where N _{Interlace} is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively.											

A.2.5.2.2 16QAM

Table A.2.5.2.2-1: Reference Channels for 16QAM with partial RB allocation

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category
Unit	MHz					Bits	Bits		Bits		
	10 - 20	10	12	16QAM	3/4	4264	24	1	5760	1440	≥ 2
	10 - 20	20	12	16QAM	1/3	4008	24	1	11520	2880	≥ 2
	10 - 20	30	12	16QAM	3/4	12960	24	3	17280	4320	≥ 2
	10 - 20	40	12	16QAM	3/4	16992	24	3	23040	5760	≥ 2
	20	50	12	16QAM	3/4	21384	24	4	28800	7200	≥ 2
	20	60	12	16QAM	2/3	23688	24	4	34560	8640	≥ 2
	20	70	12	16QAM	1/2	19848	24	4	40320	10080	≥ 2
	20	80	12	16QAM	1/2	22920	24	4	46080	11520	≥ 2
	20	90	12	16QAM	2/5	20616	24	4	51840	12960	≥ 2

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N_{Interface}-1 } where N_{Interface} is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively.

Note 3: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N_{Interface}-1 } where N_{Interface} is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively.

A.2.5.2.3 64QAM

Table A.2.5.2.3-1: Reference Channels for 64QAM with partial RB allocation

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame	UE Category (Note 2)	UE UL Category (Note 2)
Unit	MHz					Bits	Bits		Bits			
	10 - 20	10	12	64QAM	3/4	6200	24	2	8640	1440	5,8	5, 8, 13, 14
	10 - 20	20	12	64QAM	3/4	12576	24	3	17280	2880	5,8	5, 8, 13, 14
	10 - 20	30	12	64QAM	3/4	19080	24	4	25920	4320	5,8	5, 8, 13, 14
	10 - 20	40	12	64QAM	3/4	25456	24	5	34560	5760	5,8	5, 8, 13, 14
	20	50	12	64QAM	3/4	31704	24	6	43200	7200	5,8	5, 8, 13, 14
	20	60	12	64QAM	3/4	37888	24	7	51840	8640	5,8	5, 8, 13, 14
	20	70	12	64QAM	3/4	43816	24	4	60480	10080	5,8	5, 8, 13, 14
	20	80	12	64QAM	3/4	51024	24	9	69120	11520	5,8	5, 8, 13, 14
	20	90	12	64QAM	2/3	51024	24	9	77760	12960	5,8	5, 8, 13, 14

Note 1: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)

Note 2: If UE does not report UE UL category, then the applicability of reference channel is determined by UE category. If UE reports UE UL category, then the applicability of reference channel is determined by UE UL category

Note 3: For the channel bandwidth of 10Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+5, N+10, ..., N+45 for N = 0, ..., N_{Interface}-1 } where N_{Interface} is 1, ..., 4 for the allocated RBs of 10, ..., 40, respectively.

Note 4: For the channel bandwidth of 20Mhz, the allocated RBs are distributed over the channel bandwidth at the RB index = {N, N+10, N+20, ..., N+90 for N = 0, ..., N_{Interface}-1 } where N_{Interface} is 1, ..., 9 for the allocated RBs of 10, ..., 90, respectively.

A.3 DL reference measurement channels

A.3.1 General

The number of available channel bits varies across the sub-frames due to PBCH and PSS/SSS overhead. The payload size per sub-frame is varied in order to keep the code rate constant throughout a frame.

Unless otherwise stated, no user data is scheduled on subframes #5 in order to facilitate the transmission of system information blocks (SIB).

The algorithm for determining the payload size A is as follows; given a desired coding rate R and radio block allocation N_{RB}

1. Calculate the number of channel bits N_{ch} that can be transmitted during the first transmission of a given sub-frame.
2. Find A such that the resulting coding rate is as close to R as possible, that is,

$$\min |R - (A + 24 * (N_{CB} + 1)) / N_{ch}|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- a) A is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of N_{RB} resource blocks.
 - b) C is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
3. If there is more than one A that minimizes the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.
 4. For TDD, the measurement channel is based on DL/UL configuration ratio of 2DL+DwPTS (12 OFDM symbol): 2UL

A.3.1.1 Overview of DL reference measurement channels

In Table A.3.1.1-1 to A.3.1.1-1V are listed the DL reference measurement channels specified in annexes A.3.2 to A.3.15 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.3.2 to A.3.15 as appropriate.

A.3.2 Reference measurement channel for receiver characteristics

Unless otherwise stated, Tables A.3.2-1, A.3.2-1a, A.3.2-1b, A.3.2-2, A.3.2-2a and A.3.2-2b are applicable for measurements on the Receiver Characteristics (clause 7) with the exception of subclause 7.4 (Maximum input level).

Unless otherwise stated, Tables A.3.2-3, A.3.2-3a, A.3.2-3b, A.3.2-4, A.3.2-4a and A.3.2-4b are applicable for subclause 7.4 (Maximum input level).

Unless otherwise stated, Tables A.3.2-1, A.3.2-1a, A.3.2-1b, A.3.2-2, A.3.2-2a and A.3.2-2b also apply for the modulated interferer used in Clauses 7.5, 7.6 and 7.8 with test specific bandwidths.

For transmissions in TDD Band 46, Table A.3.2-2c is applicable for measurements of Receiver Characteristics (clause 7) except for the Maximum Input Level (clause 7.4A) for which Table A.3.2-4d and Table A.3.2-7 apply. For these measurements, the discovery signals measurement timing configuration (DMTC) periodicity shall be set at $dm\text{tc-Periodicity} = 40$ ms with an offset $dm\text{tc-Offset} = 0$ for the channel and the DRS shall be transmitted in the first subframe of each DMTC occasion. Furthermore, no PBCH is transmitted and the PDSCH is also scheduled in subframe #5.

Table A.3.2-1 Fixed Reference Channel for Receiver Requirements (FDD)

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6	15	25	50	75	100
Subcarriers per resource block		12	12	12	12	12	12
Allocated subframes per Radio Frame		9	9	9	9	9	9
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target Coding Rate		1/3	1/3	1/3	1/3	1/3	1/3
Number of HARQ Processes	Processes	8	8	8	8	8	8
Maximum number of HARQ transmissions		1	1	1	1	1	1
Information Bit Payload per Sub-Frame							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits	408	1320	2216	4392	6712	8760
For Sub-Frame 5	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0	Bits	152	872	1800	4392	6712	8760
Transport block CRC	Bits	24	24	24	24	24	24
Number of Code Blocks per Sub-Frame (Note 3)							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits	1	1	1	1	2	2
For Sub-Frame 5	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0	Bits	1	1	1	1	2	2
Binary Channel Bits Per Sub-Frame

Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).			

Table A.3.2-2d: Fixed Reference Channel for Receiver Requirements (TDD) – for CAT-M2

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel Bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks (Note 8)		4	8	16	16	16	16
Uplink-Downlink Configuration (Note 5)		1	1	1	1	1	1
Allocated subframes per Radio Frame (D)		3	3	3	3	3	3
Number of HARQ Processes	Processes	7	7	7	7	7	7
Maximum number of HARQ transmission		1	1	1	1	1	1
Modulation		QPSK	QPSK	QPSK	QPSK	QPSK	QPSK
Target coding rate		1/3	1/3	1/3	1/3	1/3	1/3
Information Bit Payload per Sub-Frame	Bits						
For Sub-Frame 4, 9		256	680	1384	1384	1384	1384
For Sub-Frame 1, 6		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 5		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0		256	680	1384	1384	1384	1384
Transport block CRC	Bits	24	24	24	24	24	24
Number of Code Blocks per Sub-Frame (Note 4)							
For Sub-Frame 4, 9		1	1	1	1	1	1
For Sub-Frame 1, 6		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 5		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0		1	1	1	1	1	1
Binary Channel Bits Per Sub-Frame	Bits						
For Sub-Frame 4, 9		912	2016	4032	4416	4416	4416
For Sub-Frame 1, 6		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 5		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0		912	2016	4032	4416	4416	4416
Max. Throughput averaged over 1 frame	kbps	76.8	204.0	415.2	415.2	415.2	415.2
UE DL Category		M2	M2	M2	M2	M2	M2
Note 1: For normal subframes(0,4,5,9), 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For special subframe (1&6), only 2 OFDM symbols are allocated to PDCCH for all BWs.							
Note 2: No data shall be scheduled on special subframes(1&6) to avoid problems with insufficient PDCCH performance							
Note 3: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [4]							
Note 4: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							
Note 5: As per Table 4.2-2 in TS 36.211 [4]							
Note 6: For Sub-Frame 0, the scheduled narrowband avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.							
Note 7: 2 resource blocks allocated to MPDCCH							
Note 8: 4 resource blocks in each narrowband allocated to PDSCH.							

Table A.3.2-2e Fixed Reference Channel for Receiver Requirements (TDD) – for CAT-NB1 and CAT-NB2

Parameter	Unit	Value
Channel bandwidth	MHz	0.2
Number of subcarriers		12
Uplink-Downlink Configuration (Note 7)		1
Modulation		QPSK
Target Coding Rate		1/3
Number of HARQ Processes	Processes	1
Maximum number of HARQ transmissions		1
Transport block size	Bits	88
Number of Sub-Frames per transport block		1
Transport block CRC	Bits	24
Binary Channel Bits Per Sub-Frame	Bits	320
LTE CRS port		N/A
Number of NRS ports		1
Number of NPDSCH repetitions		1
UE DL Category		NB1 or NB2
<p>Note 1: Category NB1 or NB2 in stand-alone mode has been considered here.</p> <p>Note 2: Reference signal, Synchronization signals and NPBCH allocated as per TS 36.211.</p> <p>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)</p> <p>Note 4: Parameters related to NPDSCH scheduling are defined in Table A.3.2-1e to Table A.3.2-1g.</p> <p>Note 5: NPDCCH and information bit payload are not transmitted in the subframes used for transmission of SI messages.</p> <p>Note 6: SI messages transmission should be prioritized over NPDCCH transmission in case of collision. NPDCCH transmission is postponed until the next NB-IoT downlink subframe in case NPDCCH transmission occurs in a non NB-IoT downlink subframe, where an NB-IoT downlink subframe is a subframe that does not contain NPSS/NSSS/NPBCH/SIB1-NB transmission.</p> <p>Note 7: As per Table 4.2-2 in TS 36.211 [4]</p> <p>Note 8: Number of repetition N_{Rep} as defined in table 16.4.1.3-2 in TS 36.213 [6].</p>

Number of HARQ Processes	Processes	8	8	8	8	8	8
Maximum number of HARQ transmissions		1	1	1	1	1	1
Information Bit Payload							
For Sub-Frames 3, 8	Bits	552	552	552	552	552	552
For Sub-Frames 0,1,2,5,7,9	Bits	N/A	N/A	552	552	552	552
For Sub-Frame 4	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6	Bits	N/A	N/A	N/A	N/A	N/A	N/A
Transport block CRC	Bits	24	24	24	24	24	24

Number of Code Blocks per Sub-Frame							
For Sub-Frames 3, 8		1	1	1	1	1	1
For Sub-Frames 0,1,2,5,7,9		N/A	N/A	1	1	1	1
For Sub-Frame 4		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6		N/A	N/A	N/A	N/A	N/A	N/A
Binary Channel Bits Per Sub-Frame							
For Sub-Frames 3, 8	Bits	912	1008	1008	1008	1008	1008
For Sub-Frames 0,1,2,5,7,9		N/A	N/A	1008	1008	1008	1008
For Sub-Frame 4	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6	Bits	N/A	N/A	N/A	N/A	N/A	N/A
Max. Throughput averaged over 1 frame for FDD	kbps	110.4	110.4	441.6	441.6	441.6	441.6
Max. Throughput averaged over 1 frame for HD-FDD		55.2	55.2	165.6	165.6	165.6	165.6
Note 1:	4 symbols allocated to PDCCH for 1.4MHz channel bandwidth. 3 symbols allocated to PDCCH for all other channel bandwidths.						
Note 2:	Reference signal, Synchronization signals and PBCH allocated as per TS 36.211.						
Note 3:	The scheduled narrowband other than 1.4MHz and 3MHz channel bandwidth avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.						
Note 4:	For HD-FDD UE, PDSCH are scheduled at the 3rd subframe every 1 radio frame for 1.4MHz and 3MHz channel bandwidth. For other channel bandwidth, PDSCH are scheduled at the 0th, 1st, and 2nd subframes every 1 radio frame. Information bit payload is available if downlink subframe is scheduled. The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmission.						
Note 5:	2 resource blocks allocated to MPDCCH.						

Table A.3.2-3e: Fixed Reference Channel for Maximum input level for UE DL Category M2 (FDD and HD-FDD)

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks (Note 6)		2	8	15	15	15	15
Subcarriers per resource block		12	12	12	12	12	12
Allocated subframes per Radio Frame (Note 4)		2	2	8	8	8	8
Modulation		16QAM	16QAM	16QAM	16QAM	16QAM	16QAM
Target Coding Rate		3/5	3/5	1/2	1/2	1/2	1/2
Number of HARQ Processes	Processes	8	8	8	8	8	8
Maximum number of HARQ transmissions		1	1	1	1	1	1
Information Bit Payload							
For Sub-Frames 3, 8	Bits	552	2280	4008	4008	4008	4008
For Sub-Frames 0,1,2,5,7,9	Bits	N/A	N/A	N/A	N/A	4008	4008
For Sub-Frame 4	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6	Bits	N/A	N/A	N/A	N/A	N/A	N/A
Transport block CRC	Bits	24	24	24	24	24	24
Number of Code Blocks per Sub-Frame							
For Sub-Frames 3, 8		1	1	1	1	1	1
For Sub-Frames 0,1,2,5,7,9		N/A	N/A	1	1	1	1
For Sub-Frame 4		N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6		N/A	N/A	N/A	N/A	N/A	N/A
Binary Channel Bits Per Sub-Frame							
For Sub-Frames 3, 8	Bits	912	4032	7560	7560	7560	7560
For Sub-Frames 0,1,2,5,7,9		N/A	N/A	N/A	N/A	7560	7560
For Sub-Frame 4	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 6	Bits	N/A	N/A	N/A	N/A	N/A	N/A
Max. Throughput averaged over 1 frame for FDD	kbps	110.4	456.0	801.6	801.6	3206.4	3206.4
Max. Throughput averaged over 1 frame for HD-FDD		55.2	228.0	400.8	400.8	1202.4	1202.4
Note 1:	4 symbols allocated to PDCCH for 1.4MHz channel bandwidth. 3 symbols allocated to all other channel bandwidths.						
Note 2:	Reference signal, Synchronization signals and PBCH allocated as per TS 36.211.						
Note 3:	The scheduled wideband other than 1.4MHz/3MHz/5MHz/10MHz/ channel bandwidth avoids the centre of the channel where some REs of the same PRBs are occupied by PBCH and synchronization signals.						
Note 4:	For HD-FDD UE, PDSCH are scheduled at the 3rd subframe every 1 radio frame for 1.4MHz/3MHz/5MHz/10MHz channel bandwidth. For other channel bandwidth, PDSCH are scheduled at the						

0th, 1st, and 2nd subframes every 1 radio frame. Information bit payload is available if downlink subframe is scheduled. The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmission.

Note 5: 2 resource blocks allocated to MPDCCH.

Note 6: 2 resource blocks allocated to PDSCH for 1.4MHz channel bandwidth. 2 narrowbands and 4 resource blocks in each narrowband allocated to PDSCH for 3MHz channel bandwidth. For 5MHz/10MHz/15MHz/20MHz channel bandwidth, configure 3 narrowbands and 5 resource blocks in each narrowband allocated to PDSCH.

Table A.3.2-4 Fixed Reference Channel for Maximum input level for UE Categories ≥ 3 (TDD)

Note 1:	For normal subframes(0,4,5,9), 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For special subframe (1&6), only 2 OFDM symbols are allocated to PDCCH for all BWs.						
Note 2:	For 1.4MHz, no data shall be scheduled on special subframes(1&6) to avoid problems with insufficient PDCCH performance.						
Note 3:	Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [4].						
Note 4:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).						
Note 5:	As per Table 4.2-2 in TS 36.211 [4].						

Table A.3.2-7 Fixed Reference Channel for Maximum input level for UE Categories 11/12 and UE DL categories ≥ 11 (TDD Band 46)

Parameter	Unit	Value
Channel bandwidth	MHz	20
Allocated resource blocks		100
Uplink-Downlink Configuration		N/A
Subcarriers per resource block		12
Allocated subframes per Radio Frame (D)		8
Modulation		256QAM
Target Coding Rate		4/5
Number of HARQ Processes	Processes	N/A
Maximum number of HARQ transmissions		N/A
Information Bit Payload per Sub-Frame		
For Sub-Frames 3,4,6,7,8,9	Bits	84760
For Sub-Frame 1,2	Bits	N/A
For Sub-Frame 0,5	Bits	84760
Transport block CRC	Bits	24
Number of Code Blocks per Sub-Frame (Note 3)		
For Sub-Frames 3,4,6,7,8,9		14
For Sub-Frame 1,2		N/A
For Sub-Frame 0,5		14
Binary Channel Bits Per Sub-Frame		

For Sub-Frames 3,4,6,7,8,9	Bits	110400
For Sub-Frame 1,2	Bits	N/A
For Sub-Frame 0,5	Bits	109248
Max. Throughput averaged over 1 frame	kbps	67808
Note 1:	2 symbols allocated to PDCCH for 20 MHz.	
Note 2:	Reference signal, Synchronization signals allocated as per TS 36.211 [4].	
Note 3:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Table A.3.3.2.1-3: Fixed Reference Channel two antenna ports

Parameter	Unit	Value	
Reference channel		R.62 FDD	R.63 FDD
Channel bandwidth	MHz	10	10
Allocated resource blocks (Note 4)		3	1
Allocated DL subframes per 4 Radio Frames (Note 3)		15	15
Modulation		16QAM	64QAM
Target Coding Rate		1/2	1/2
Information Bit Payload			
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	744	408
Number of Code Blocks			
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Code blocks	1	1
Binary Channel Bits			
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	1584	792
Max. Throughput averaged over 4 frames	Mbps	0.279	0.153
UE DL Category		0	0
Note 1:	2 symbols allocated to PDCCH		
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]		
Note 3:	The downlink subframes are scheduled at the 0th, 1st, 2nd, 8th, 9th, 10th, 16th, 17th, 18th, 24th, 25th, 26th, 32nd, 33rd, 34th subframes every 40ms. Information bit payload is available if downlink subframe is scheduled.		
Note 4:	Allocated PRB positions start from {9, 10, ..., 9+N-1}, where N is the number of allocated resource blocks.		

Table A.3.3.2.1-4: Fixed Reference Channel two antenna ports

Parameter	Unit	Values		
Reference channel		R.79 FDD	R.103 FDD	R.104 FDD
Channel bandwidth	MHz	10	10	10
Allocated DL subframes per Radio Frame		Note 3	Note 5	Note 3 Note 6
Allocated DL subframes per Radio Frame		Note 3	Note 5	Note 3
Modulation		16QAM	QPSK	64QAM
Target Coding Rate		1/2	1/3	0.4
Information Bit Payload				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	744	224	968
Number of Code Blocks				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Code blocks	1	1	1
Binary Channel Bits				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	1584	792	2376
Max. Throughput averaged over 1 frame	Mbps	0.149	0.0187	0.194
UE DL Category		M1, M2 ≥ 0	M1, M2	M1, M2
Note 1:	2 symbols allocated to PDCCH.			
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].			
Note 3:	The downlink subframes are scheduled at the 0th and 1st subframes every 10ms. Information bit payload is available if downlink subframe is scheduled (starting from 0th subframe). The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmissions.			
Note 4:	Allocated PRB positions for PDSCH are {3, 4, 5} within the assigned narrowband. Allocated PRB positions for MPDCCH are {0, 1} within the assigned narrowband.			
Note 5:	The downlink subframes are scheduled at the 0th subframes every 12ms. Information bit payload is available if downlink subframe is scheduled (starting from 5th subframe). The corresponding MPDCCH is scheduled 5 subframes before the corresponding PDSCH transmissions.			
Note 6:	For case with 14 HARQ processes, scheduling pattern is 17ms. In every scheduling period, subframes from 0 to 11 are used for MPDCCH and MPDSCH transmission, the corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmissions which are scheduled in subframes from 2 to 11. The corresponding MPDCCH is scheduled 7 subframes before the corresponding PDSCH transmissions which are scheduled in subframes 0 and 1. Subframe 13 is used for ACK/NACK			

feedback corresponding to MPDSCH transmitted in subframe from 0 to 3; Subframe 14 is used for ACK/NACK feedback corresponding to MPDSCH transmitted in subframe from 4 to 7; Subframe 15 is used for ACK/NACK feedback corresponding to MPDSCH transmitted in subframe from 8 to 11. Subframes 12 and 16 are used for gaps.

UE Category		≥ 5	≥ 5	≥ 5	TBD
UE DL Category					20, ≥ 22
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. 1 symbol allocated to PDCCH for reference channel with 1024QAM.				
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].				
Note 3:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).				
Note 4:	Given per component carrier per codeword.				

Table A.3.3.2.2-4: Fixed Reference Channel four antenna ports

Parameter	Unit	Values
Reference channel		R.95 FDD
Channel bandwidth	MHz	10
Allocated resource blocks (Note 4)		3

Allocated DL subframes per Radio Frame (Note 3)		2
Modulation		16QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	744
Number of Code Blocks		
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Code blocks	1
Binary Channel Bits		
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	1536
Max. Throughput averaged over 1 frame	Mbps	0.149
UE DL Category		M2
Note 1:	2 symbols allocated to PDCCH.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	The downlink subframes are scheduled at the 0th and 1st subframes every 10ms. Information bit payload is available if downlink subframe is scheduled (starting from 0th subframe). The corresponding MPDCCH is scheduled 2 subframes before the corresponding PDSCH transmissions.	
Note 4:	Allocated PRB positions for PDSCH are {3, 4, 5} within the assigned narrowband. Allocated PRB positions for MPDCCH are {0, 1} within the assigned narrowband.	

A.3.3.3 Reference Measurement Channel for UE-Specific Reference Symbols

A.3.3.3.0 Two antenna ports (no CSI-RS)

The reference measurement channels in Table A.3.3.3.0-1 apply with two CRS antenna ports and without CSI-RS.

Table A.3.3.3.0-1: Fixed Reference Channel without CSI-RS

Parameter	Unit	Value	
		R.70 FDD	R.71 FDD
Reference channel		R.70 FDD	R.71 FDD
Channel bandwidth	MHz	10	10
Allocated resource blocks		50	50
Allocated subframes per Radio Frame		10	10
Modulation		QPSK	16QAM
Target Coding Rate		0.65	0.6
Information Bit Payload			
For Sub-Frames 1,2,3,4,6,7,8,9	Bits	6968	12960
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	N/A	N/A
Number of Code Blocks per Sub-Frame (Note 4)			
For Sub-Frames 1,2,3,4,6,7,8,9		2	3
For Sub-Frame 5		N/A	N/A
For Sub-Frame 0		N/A	N/A
Binary Channel Bits Per Sub-Frame			
For Sub-Frames 1,2,3,4,6,7,8,9	Bits	10800	21600
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	N/A	N/A
Max. Throughput averaged over 1 frame	Mbps	5.5744	10.368
UE Category		≥ 1	≥ 2
Note 1: 3 symbols allocated to PDCCH.			
Note 2: Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]			
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)			

The reference measurement channels in Table A.3.3.3.0-2 apply for verifying demodulation performance for UE-specific reference symbols without CSI-RS.

Table A.3.3.3.0-2: Fixed Reference Channel without CSI-RS

Parameter	Unit	Value		
		R.80 FDD	R.80-1 FDD	R.80-2 FDD
Reference channel		R.80 FDD	R.80-1 FDD	R.80-2 FDD
Channel bandwidth	MHz	10	10	10
Allocated resource blocks (Note 4)		6	6	6
Allocated PDSCH subframes		Note 3	Note 6	Note 7
Modulation		QPSK	QPSK	QPSK
Target Coding Rate		1/3	1/3	1/3
Information Bit Payload				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	504	504	504
Number of Code Blocks				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Code blocks	1	1	1
Binary Channel Bits				
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	1440	1440	1440

Max. Throughput averaged over one period	kbps	15.75	31.5	50.4
UE DL Category		M1, ≥ 0	≥ 1	≥ 1
Note 1:	2 symbols allocated to PDCCH			
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]			
Note 3:	PDSCH subframes are scheduled at the 9th to 16th subframes every period=32 ms. Information bit payload is available from the 9-th to 16th subframes with repetition. (Starting from the 0th subframe)			
Note 4:	Allocated PRB positions are {0, 1, 2, 3, 4, 5} within the assigned narrowband.			
Note 5:	MPDCCH are scheduled at the 0th to 7th subframes with repetition. The allocated PRB positions are {0, 1, 2, 3, 4, 5} within the assigned narrowband. (Starting from the 0th subframe)			
Note 6:	PDSCH subframes are scheduled at the 3th to 6th subframes every period=16 ms. Information bit payload is available from the 3th to 6th subframes with repetition. (Starting from the 0th subframe)			
Note 7:	PDSCH subframes are scheduled at the 2th to 3th subframes every period=10 ms. Information bit payload is available from the 2th to 3th subframes with repetition. (Starting from the 0th subframe)			

A.3.3.3.1 Two antenna port (CSI-RS)

The reference measurement channels in Table A.3.3.3.1-1 apply for verifying demodulation performance for UE-specific reference symbols with two cell-specific antenna ports and two CSI-RS antenna ports.

Table A.3.3.3.1-1: Fixed Reference Channel for CDM-multiplexed DM RS with two CSI-RS antenna ports

Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames (Non CSI-RS subframe)	Bits	18336
For Sub-Frames (CSI-RS subframe)	Bits	16416
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0		14688
Number of Code Blocks per Sub-Frame	Code blocks	
For Sub-Frames (Non CSI-RS subframe)	Code blocks	3
For Sub-Frames (CSI-RS subframe)	Bits	3
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5		N/A
For Sub-Frame 0	Bits	3
Binary Channel Bits Per Sub-Frame		
For Sub-Frames (Non CSI-RS subframe)		36000
For Sub-Frames (CSI-RS subframe)	Bits	32400
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	29520
Max. Throughput averaged over 1 frame	Mbps	15.7536
UE Category		≥ 2

Note 1:	2 symbols allocated to PDCCH.
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].
Note 3:	50 resource blocks are allocated in sub-frames 1, 2, 3, 4, 6, 7, 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0.
Note 4:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

A.3.3.3.4 Sixteen antenna port (CSI-RS)

The reference measurement channels in Table A.3.3.3.4-1 apply for verifying PMI accuracy performance for UE-specific reference symbols with two cell-specific antenna ports and sixteen CSI-RS antenna ports.

Table A.3.3.3.4-1: Fixed Reference Channel for CDM-multiplexed DM RS with sixteen CSI-RS antenna ports

Parameter	Unit	Value
Reference channel		R.78 FDD
Channel bandwidth	MHz	10
Allocated resource blocks		50 (Note 3)
Allocated subframes per Radio Frame		9
Modulation		16QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames (Non CSI-RS subframe)	Bits	11448
For Sub-Frames (CSI-RS subframe)	Bits	9912
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0		9528
Number of Code Blocks per Sub-Frame	Code blocks	
For Sub-Frames (Non CSI-RS subframe)	Code blocks	2
For Sub-Frames (CSI-RS subframe)	Bits	2
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5		N/A
For Sub-Frame 0	Bits	2
Binary Channel Bits Per Sub-Frame		
For Sub-Frames (Non CSI-RS subframe)		24000
For Sub-Frames (CSI-RS subframe)	Bits	20800
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	19680
Max. Throughput averaged over 1 frame	Mbps	9.804
UE Category		≥ 2
Note 1:	2 symbols allocated to PDCCH.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	50 resource blocks are allocated in sub-frames 1, 2, 3, 4, 6, 7, 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0.	
Note 4:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).	

A.3.3.3.5 Twenty-four antenna port (CSI-RS)

The reference measurement channels in Table A.3.3.3.5-1 apply for verifying PMI accuracy performance for UE-specific reference symbols with two cell-specific antenna ports and twenty-four CSI-RS antenna ports.

Table A.3.3.3.5-1: Fixed Reference Channel for CDM-multiplexed DM RS with twenty-four CSI-RS antenna ports

Parameter	Unit	Value	
		R.88 FDD	R.88A FDD
Reference channel		R.88 FDD	R.88A FDD
Channel bandwidth	MHz	10	10
Allocated resource blocks		50 (Note 3)	50 (Note 3)
Allocated subframes per Radio Frame		9	9
Modulation		16QAM	16QAM
Target Coding Rate		1/2	1/2
Information Bit Payload			
For Sub-Frames (Non CSI-RS subframe)	Bits	11448	11448
For Sub-Frames (CSI-RS subframe)	Bits	9912	11448
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A	N/A
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0		9528	9528
Number of Code Blocks per Sub-Frame	Code blocks		
For Sub-Frames (Non CSI-RS subframe)	Code blocks	2	2
For Sub-Frames (CSI-RS subframe)	Bits	2	2
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A	N/A
For Sub-Frame 5		N/A	N/A
For Sub-Frame 0	Bits	2	2
Binary Channel Bits Per Sub-Frame			
For Sub-Frames (Non CSI-RS subframe)		24000	24000
For Sub-Frames (CSI-RS subframe)	Bits	19200	22400
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A	N/A
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	19680	19680
Max. Throughput averaged over 1 frame	Mbps	9.804	10.1112
UE Category		≥ 2	≥ 2
Note 1:	2 symbols allocated to PDCCH.		
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].		
Note 3:	50 resource blocks are allocated in sub-frames 1, 2, 3, 4, 6, 7, 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0.		
Note 4:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).		

A.3.3.3.6 Thirty-two antenna port (CSI-RS)

The reference measurement channels in Table A.3.3.3.6-1 apply for verifying PMI accuracy performance for UE-specific reference symbols with two cell-specific antenna ports and thirty-two CSI-RS antenna ports.

Table A.3.3.3.6-1: Fixed Reference Channel for CDM-multiplexed DM RS with thirty-two CSI-RS antenna ports

Parameter	Unit	Value
Reference channel		R.89 FDD
Channel bandwidth	MHz	10
Allocated resource blocks		50 (Note 3)
Allocated subframes per Radio Frame		9
Modulation		64QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames (Non CSI-RS subframe)	Bits	18336

For Sub-Frames (CSI-RS subframe)	Bits	15264
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0		14688
Number of Code Blocks per Sub-Frame	Code blocks	
For Sub-Frames (Non CSI-RS subframe)	Code blocks	3
For Sub-Frames (CSI-RS subframe)	Bits	3
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5		N/A
For Sub-Frame 0	Bits	3
Binary Channel Bits Per Sub-Frame		
For Sub-Frames (Non CSI-RS subframe)		36000
For Sub-Frames (CSI-RS subframe)	Bits	26400
For Sub-Frames (ZeroPowerCSI-RS subframe)	Bits	N/A
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	29520
Max. Throughput averaged over 1 frame	Mbps	15.5232
UE Category		≥ 2
Note 1: 2 symbols allocated to PDCCH.		
Note 2: Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].		
Note 3: 50 resource blocks are allocated in sub-frames 1, 2, 3, 4, 6, 7, 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0.		
Note 4: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).		

A.3.4 Reference measurement channels for PDSCH performance requirements (TDD)

A.3.4.1 Single-antenna transmission (Common Reference Symbols)

Table A.3.4.1-1: Fixed Reference Channel QPSK R=1/3

Parameter	Unit	Value						
		R.4 TDD	R.42 TDD	R.2A TDD	R.2 TDD	R.42-1 TDD	R.42-2 TDD	R.42-3 TDD
Reference channel								
Channel bandwidth	MHz	1.4	20	10	10	3	5	15

UE Category					≥ 1		
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.						
Note 2:	For BW=1.4 MHz, the information bit payloads of special subframes are set to zero (no scheduling) to avoid problems with insufficient PDCCH performance at the test point.						
Note 3:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]						
Note 4:	As per Table 4.2-2 in TS 36.211 [4].						
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).						

Table A.3.4.1-7: Fixed Reference Channel for CA demodulation with power imbalance

Parameter	Unit	Value	
		R.49 TDD	R.49-1 TDD
Reference channel		R.49 TDD	R.49-1 TDD
Channel bandwidth	MHz	20	15
Allocated resource blocks		100	75
Uplink-Downlink Configuration (Note 1)		1	1
Allocated subframes per Radio Frame (D+S)		3+2	3+2

Modulation		64QAM	64QAM
Number of OFDM symbols for PDCCH per component carrier			
For Sub-Frames 0,4,5,9	OFDM symbols	3	3
For Sub-Frames 1,6	OFDM symbols	2	2
Target Coding Rate			
For Sub-Frames 4,9		0.84	0.83
For Sub-Frames 1,6		0.81	0.80
For Sub-Frames 5		N/A	N/A
For Sub-Frames 0		0.87	0.86
Information Bit Payload			
For Sub-Frames 0, 4, 9	Bits	63776	46888
For Sub-Frame 1,6	Bits	55056	40576
For Sub-Frame 5	Bits	N/A	N/A
Number of Code Blocks per Sub-Frame (Note 2)			
For Sub-Frames 0, 4, 9	Code Blocks	11	8
For Sub-Frame 1,6	Code Blocks	9	7
For Sub-Frame 5	Code Blocks	N/A	N/A
Binary Channel Bits Per Sub-Frame			
For Sub-Frames 4,9	Bits	75600	56700
For Sub-Frame 1,6	Bits	67968	50868
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	73512	54612
Max. Throughput averaged over 1 frame	Mbps	30.144	22.182
UE Category		≥5	≥3
Note 1:	Reference signal, synchronization signals and PBC allocated as per TS 36.211 [4].		
Note 2:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).		

A.3.4.2 Multi-antenna transmission (Common Reference Signals)

A.3.4.2.1 Two antenna ports

For Sub-Frame 5	Bits	N/A	N/A	N/A	N/A	N/A	N/A
For Sub-Frame 0	Bits	10332	20664	7752	30996	13608	504
Max. Throughput averaged over 1 frame	Mbps	1.825	5.450	2.452	12.466	4.738	0.102
UE Category		≥ 1	≥ 2	≥ 1	≥ 2	≥ 1	≥ 1
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.						
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].						
Note 3:	as per Table 4.2-2 in TS 36.211 [4].						
Note 4:	For R.25, R.26 and R.27, 50 resource blocks are allocated in sub-frames 1, 4, 6, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0. For R.26-1, 25 resource blocks are allocated in sub-frames 1, 4, 6, 9 and 17 resource blocks (RB0–RB7 and RB16–RB24) are allocated in sub-frame 0.						
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).						
Note 6:	Localized allocation started from RB #0 is applied.						

The reference measurement channels in Table A.3.4.3.1-2 apply for verifying demodulation performance for UE-specific reference symbols with one cell-specific antenna port.

Table A.3.4.3.1-2: Fixed Reference Channel for DRS

Parameter	Unit	Value		
		R.80 TDD	R.80-1 TDD	R.80-2 TDD
Reference channel				
Channel bandwidth	MHz	10	10	10
Allocated resource blocks (Note 4)		6	6	6
Uplink-Downlink Configuration (Note 3)		1	1	1

Allocated PDSCH subframes		Note 6	Note 7	Note 8
Modulation		QPSK	QPSK	QPSK
Target Coding Rate		1/3	1/3	1/3
Information Bit Payload				
For Sub-Frames 4,9	Bits	504	504	504
For Sub-Frames 1,6		N/A	N/A	N/A
For Sub-Frames 0,5	Bits	504	504	504
Number of Code Blocks per Sub-Frame				
For Sub-Frames 4,9	Code blocks	1	1	1

For Sub-Frames 0,5	Code blocks	1	1	1
Binary Channel Bits Per Sub-Frame				
For Sub-Frames 4,9	Bits	1440	1440	1440
For Sub-Frames 1,6		N/A	N/A	N/A
For Sub-Frames 0,5	Bits	1440	1440	1440
Max. Throughput averaged over one period	kbps	6.3	12.6	25.2
UE DL Category		M1, ≥ 0	≥ 1	≥ 1
Note 1:	2 symbols allocated to PDCCH.			
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].			
Note 3:	as per Table 4.2-2 in TS 36.211 [4].			
Note 4:	Allocated PRB positions are {0, 1, 2, 3, 4, 5} within the assigned narrowband.			
Note 5:	The allocated PRB positions are {0, 1, 2, 3, 4, 5} within the assigned narrowband. If it is not BL/CE DL subframes, MPDCCH/PDSCH transmission is postponed until the next BL/CE DL subframe. Note the DL subframes in the TDD uplink-downlink configuration are considered as the BL/CE DL subframes.			
Note 6:	MPDCCH are scheduled at the 0th to 7th BL/CE DL subframes with repetition every period=80ms. The associated PDSCH is scheduled at the 9th to 16th BL/CE DL subframes every 80ms (starting from the 0th subframe).			
Note 7:	MPDCCH are scheduled at the 0th to 1th BL/CE DL subframes with repetition every period=40ms. The associated PDSCH is scheduled at the 3th to 6th BL/CE DL subframes every 40ms (starting from the 0th subframe).			
Note 8:	MPDCCH are scheduled at the 0th BL/CE DL subframes with repetition every period=20ms. The associated PDSCH is scheduled at the 1th to 2th BL/CE DL subframes every 20ms (starting from the 0th subframe).			

A.3.4.3.2 Two antenna ports (Cell Specific)

The reference measurement channels in Table A.3.4.3.2-1 apply for verifying demodulation performance for CDM-multiplexed UE specific reference symbols with two cell-specific antenna ports.

Table A.3.4.3.2-1: Fixed Reference Channel for CDM-multiplexed DM RS

Parameter	Unit	Value

For Sub-Frame 0	Bits	9840	19680	7344	29520	12960	29520	9840
Max. Throughput averaged over 1 frame	Mbps	1.556	4.79	2.119	11.089	4.354	7.502	1.7736
UE Category		≥ 1	≥ 2	≥ 1	≥ 2	≥ 1	≥ 2	1bis
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.							
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].							
Note 3:	as per Table 4.2-2 in TS 36.211 [4].							
Note 4:	For R.31, R.32, R.33, R.34 and R.86, 50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6. For R.32-1, 25 resource blocks are allocated in sub-frames 4,9 and 17 resource blocks (RB0–RB7 and RB16–RB24) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1, 6.							
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							
Note 6:	Localized allocation started from RB #0 is applied.							

The reference measurement channels in Table A.3.4.3.2-2 apply with two CRS antenna ports.

Table A.3.4.3.2-2: Fixed Reference Channel for CDM-multiplexed DM RS

Parameter	Unit	Value	
Reference channel		R.70 TDD	R.71 TDD
Channel bandwidth	MHz	10	10
Allocated resource blocks		50 (Note 4)	50 (Note 4)
Uplink-Downlink Configuration (Note 3)		1	1
Allocated subframes per Radio Frame (D+S)		2+2	2+2
Modulation		QPSK	16QAM
Target Coding Rate			
For Sub-Frames 4,9		0.65	0.6
For Sub-Frames 1,6		0.54	0.5
Information Bit Payload			
For Sub-Frames 4,9	Bits	6968	12960
For Sub-Frames 1,6	Bits	4264	7736
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	N/A	N/A
Number of Code Blocks per Sub-Frame (Note 5)			
For Sub-Frames 4,9		2	3
For Sub-Frames 1,6		1	2
For Sub-Frame 5		N/A	N/A
For Sub-Frame 0		N/A	N/A
Binary Channel Bits Per Sub-Frame			
For Sub-Frames 4,9	Bits	10800	21600
For Sub-Frames 1,6	Bits	7872	15744
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	N/A	N/A
Max. Throughput averaged over 1 frame	Mbps	2.2464	4.1392
UE Category		≥ 1	≥ 2
Note 1:	3 symbols allocated to PDCCH in normal subframes and 2 symbols allocated to PDCCH in special subframes		
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].		
Note 3:	As per Table 4.2-2 in TS 36.211 [4].		

- Note 4: For R.63, and R.64, 50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in the DwPTS portion of sub-frames 1,6.
- Note 5: If more than one Code Block is present, an additional CRC sequence of $L = 24$ Bits is attached to each Code Block (otherwise $L = 0$ Bit).

A.3.4.3.3 Two antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.3-1 apply for verifying demodulation performance for CDM-multiplexed UE specific reference symbols with two cell-specific antenna ports and two CSI-RS antenna ports.

Table A.3.4.3.3-1: Fixed Reference Channel for CDM-multiplexed DM RS with two CSI-RS antenna ports

Parameter	Unit	Value

Note 4:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							
Note 5:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 6:	25 resource blocks are allocated in sub-frames 4,9 and 17 resource blocks (RB0–RB9 and RB18–RB24) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 7:	75 resource blocks are allocated in sub-frames 4,9 and 63 resource blocks (RB0–R31 and RB44–RB74) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 8:	100 resource blocks are allocated in sub-frames 4,9 and 88 resource blocks (RB0–RB43 and RB56–RB99) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 9:	Given per component carrier per codeword.							

A.3.4.3.4 Four antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.4-1 apply for verifying demodulation performance for CDM-multiplexed UE specific reference symbols with two cell-specific antenna ports and four CSI-RS antenna ports.

Table A.3.4.3.4-1: Fixed Reference Channel for CDM-multiplexed DM RS with four CSI-RS antenna ports

Parameter	Unit	Value							
		R.44 TDD	R.48 TDD	R.66 TDD	R.75 TDD	R.75A TDD	R.cc TDD	R.61A TDD	R.102 TDD

Note 1:	2 symbols allocated to PDCCH.							
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].							
Note 3:	as per Table 4.2-2 in TS 36.211 [4].							
Note 4:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							
Note 6:	50 resource blocks are allocated in sub-frames 4,9 and 47 resource blocks (RB0–RB23 and RB27–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6. In sub-frame 0 and the DwPTS portion of sub-frames 1, 6, PDSCH is rate matched around RB22, RB23 and RB27.							
Note 7:	25 resource blocks are allocated in sub-frames 4,9 and 17 resource blocks (RB0–RB9 and RB18–RB24) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 8:	75 resource blocks are allocated in sub-frames 4,9 and 63 resource blocks (RB0–R31 and RB44–RB74) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 9:	100 resource blocks are allocated in sub-frames 4,9 and 88 resource blocks (RB0–RB43 and RB56–RB99) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.							
Note 10:	Given per component carrier per codeword.							

The reference measurement channels in Table A.3.4.3.5-2 apply for verifying TDD PMI accuracy measurement with two CRS antenna ports and eight CSI-RS antenna ports.

Table A.3.4.3.5-2: Fixed Reference Channel for eight antenna ports (CSI-RS)

Parameter	Unit	Value			
		R.45 TDD	R.45-1 TDD	R.45-2 TDD	R.45A TDD
Reference channel					
Channel bandwidth	MHz	10	10	10	10
Allocated resource blocks		50 ⁴	39	50 ⁴	50 ⁴
Uplink-Downlink Configuration (Note 3)		1	1	1	1
Allocated subframes per Radio Frame (D+S)		4+2	4+2	4+2	4+2
Allocated subframes per Radio Frame		5	5	10	5
Modulation		16QAM	16QAM	64QAM	16QAM
Target Coding Rate		1/2	1/2		1/2
Information Bit Payload					
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A	N/A	N/A	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	11448	8760	[18336]	11448
For Sub-Frames 1,6	Bits	7736	7480	[11832]	7736
For Sub-Frame 5	Bits	N/A	N/A	N/A	N/A
For Sub-Frame 0	Bits	9528	8760	[14688]	9528
Number of Code Blocks per Sub-Frame (Note 5)					
For Sub-Frames 4 and 9 (Non CSI-RS subframe)		N/A	N/A	N/A	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)		2	2		2
For Sub-Frames 1,6		2	2		2
For Sub-Frame 5		N/A	N/A		N/A
For Sub-Frame 0		2	2		2
Binary Channel Bits Per Sub-Frame					
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A	N/A		N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	22400	17472	[33600]	23200
For Sub-Frames 1,6	Bits	15744	14976	[23616]	15744
For Sub-Frame 5	Bits	N/A	N/A	N/A	N/A
For Sub-Frame 0	Bits	19680	18720	[29520]	19680
Max. Throughput averaged over 1 frame	Mbps	4.7896	4.1240	7.3296	4.7896
UE Category		≥ 2	≥ 1	≥ 2	≥ 2
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.				
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].				
Note 3:	As per Table 4.2-2 in TS 36.211 [4].				
Note 4:	For R.45 and R.45-2, 50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6. For R.45-1, 39 resource blocks are allocated in sub-frames 0,4,9 and the DwPTS portion of sub-frames 1,6 (RB0–RB20 and RB30–RB47).				
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).				
Note 6:	Localized allocation started from RB #0 is applied.				

The reference measurement channels in Table A.3.4.3.5-3 apply for verifying CRI reporting accuracy with two cell-specific antenna ports and four CSI-RS antenna ports.

Table A.3.4.3.5-3: Fixed Reference Channel for eight antenna ports (CSI-RS)

Parameter	Unit	Value	
		R.44A-2 TDD	R.44A-3 TDD
Reference channel			
Channel bandwidth	MHz	10	10
Uplink-Downlink Configuration (Note 3)		2	2
Allocated resource blocks		50 ⁴	50 ⁴

Allocated subframes per Radio Frame		4+2	3+2
Modulation		64QAM	64QAM
Target Coding Rate		1/2	1/2
Information Bit Payload			
For Sub-Frames (Non CSI-RS subframe)	Bits	18336	18336
For Sub-Frames (CSI-RS subframe)	Bits	N/A	N/A
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frames 1,6		11832	11832
For Sub-Frame 0	Bits	14688	14688
Number of Code Blocks per Sub-Frame (Note 5)			
For Sub-Frames (Non CSI-RS subframe)		3	3

For Sub-Frames (Non CSI-RS subframe)	Bits	36000	36000
For Sub-Frames (CSI-RS subframe)	Bits	N/A	N/A
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frames 1,6	Bits	23616	23616
For Sub-Frame 0	Bits	29520	29520
Max. Throughput averaged over 1 frame	Mbps	9.336	7.5024
UE Category		≥ 2	≥ 2
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz		
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]		
Note 3:	As per Table 4.2-2 in TS 36.211 [4].		
Note 4:	For R.44A-2, 50 resource blocks are allocated in sub-frames 3, 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and and the DwPTS portion of sub-frames 1,6. For R.44A-3, 50 resource blocks are allocated in sub-frames 8, 9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and and the DwPTS portion of sub-frames 1,6.		
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)		

Table A.3.4.3.5-4: Fixed Reference Channel for eight antenna ports (CSI-RS)

Parameter	Unit	Value
Reference channel		R.108 TDD
Channel bandwidth	MHz	10
Uplink-Downlink Configuration (Note 3)		2
Allocated resource blocks		4 ⁴
Allocated subframes per Radio Frame		4

Modulation		QPSK
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 0,5 (Non CSI-RS subframe)	Bits	472
For Sub-Frames 4,9 (CSI-RS subframe)	Bits	472
For Sub-Frames 1,6		N/A
Number of Code Blocks per Sub-Frame (Note 5)		
For Sub-Frames 0,5 (Non CSI-RS subframe)		1
For Sub-Frames 4,9 (CSI-RS subframe)		1
For Sub-Frames 1,6		N/A
Binary Channel Bits Per Sub-Frame		
For Sub-Frames 0,5 (Non CSI-RS subframe)	Bits	960
For Sub-Frames 4,9 (CSI-RS subframe)	Bits	896
For Sub-Frames 1,6		N/A
Max. Throughput averaged over 1 frame	Mbps	0.1888
UE Category		≥ 1
Note 1:	2 symbols allocated to PDCCH.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4]	
Note 3:	As per Table 4.2-2 in TS 36.211 [4].	
Note 4:	Allocated PRB positions for PDSCH are {2, 3, 4, 5} within the assigned narrowband. Allocated PRB positions for MPDCCH are {0, 1} within the assigned narrowband.	
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)	

A.3.4.3.6 Twelve antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.6-1 apply for verifying TDD PMI accuracy measurement with two CRS antenna ports and twelve CSI-RS antenna ports.

Table A.3.4.3.6-1: Fixed Reference Channel for twelve antenna ports (CSI-RS)

Parameter	Unit	Value
Reference channel		R.77 TDD
Channel bandwidth	MHz	10
Allocated resource blocks		50 ⁴
Uplink-Downlink Configuration (Note 3)		1
Allocated subframes per Radio Frame (D+S)		3+2
Allocated subframes per Radio Frame		10
Modulation		64QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	16416
For Sub-Frames 1,6	Bits	11832
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	14688
Number of Code Blocks per Sub-Frame (Note 5)		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)		N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)		3
For Sub-Frames 1,6		2
For Sub-Frame 5		N/A
For Sub-Frame 0		3
Binary Channel Bits Per Sub-Frame		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9	Bits	32400

(CSI-RS subframe)		
For Sub-Frames 1,6	Bits	23616
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	29520
Max. Throughput averaged over 1 frame	Mbps	7.1184
UE Category		≥ 2
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	As per Table 4.2-2 in TS 36.211 [4].	
Note 4:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.	
Note 5:	If more than one Code Block is present, an additional CRC sequence of $L = 24$ Bits is attached to each Code Block (otherwise $L = 0$ Bit).	
Note 6:	Localized allocation started from RB #0 is applied.	

A.3.4.3.7 Sixteen antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.7-1 apply for verifying TDD PMI accuracy measurement with two CRS antenna ports and sixteen CSI-RS antenna ports.

Table A.3.4.3.7-1: Fixed Reference Channel for sixteen antenna ports (CSI-RS)

Parameter	Unit	Value
Reference channel		R.78 TDD
Channel bandwidth	MHz	10
Allocated resource blocks		50 ⁴
Uplink-Downlink Configuration (Note 3)		1
Allocated subframes per Radio Frame (D+S)		3+2
Allocated subframes per Radio Frame		10
Modulation		16QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	9912
For Sub-Frames 1,6	Bits	7736
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	9528
Number of Code Blocks per Sub-Frame (Note 5)		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)		N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)		2
For Sub-Frames 1,6		2
For Sub-Frame 5		N/A
For Sub-Frame 0		2
Binary Channel Bits Per Sub-Frame		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	20800
For Sub-Frames 1,6	Bits	15744
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	19680
Max. Throughput averaged over 1 frame	Mbps	4.4824
UE Category		≥ 2

Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].
Note 3:	As per Table 4.2-2 in TS 36.211 [4].
Note 4:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).
Note 6:	Localized allocation started from RB #0 is applied.

A.3.4.3.8 Twenty-four antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.8-1 apply for verifying TDD PMI accuracy measurement with two CRS antenna ports and twenty-four CSI-RS antenna ports.

Table A.3.4.3.8-1: Fixed Reference Channel for twenty-four antenna ports (CSI-RS)

Parameter	Unit	Value	
		R.88 TDD	R.88A TDD
Reference channel		R.88 TDD	R.88A TDD
Channel bandwidth	MHz	10	10
Allocated resource blocks		50 ⁴	50 ⁴
Uplink-Downlink Configuration (Note 3)		1	1
Allocated subframes per Radio Frame (D+S)		3+2	3+2
Allocated subframes per Radio Frame		10	10
Modulation		16QAM	16QAM
Target Coding Rate		1/2	1/2
Information Bit Payload			
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	9912	11448
For Sub-Frames 1,6	Bits	7736	7736
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	9528	9528
Number of Code Blocks per Sub-Frame (Note 5)			
For Sub-Frames 4 and 9 (Non CSI-RS subframe)		N/A	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)		2	2
For Sub-Frames 1,6		2	2
For Sub-Frame 5		N/A	N/A
For Sub-Frame 0		2	2
Binary Channel Bits Per Sub-Frame			
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	19200	22400
For Sub-Frames 1,6	Bits	15744	15744
For Sub-Frame 5	Bits	N/A	N/A
For Sub-Frame 0	Bits	19680	19680
Max. Throughput averaged over 1 frame	Mbps	4.4824	4.7896
UE Category		≥ 2	≥ 2
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.		
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].		

Note 3:	As per Table 4.2-2 in TS 36.211 [4].
Note 4:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).
Note 6:	Localized allocation started from RB #0 is applied.

A.3.4.3.9 Thirty-two antenna ports (CSI-RS)

The reference measurement channels in Table A.3.4.3.9-1 apply for verifying TDD PMI accuracy measurement with two CRS antenna ports and thirty-two CSI-RS antenna ports.

Table A.3.4.3.9-1: Fixed Reference Channel for thirty-two antenna ports (CSI-RS)

Parameter	Unit	Value
Reference channel		R.89 TDD
Channel bandwidth	MHz	10
Allocated resource blocks		50 ⁴
Uplink-Downlink Configuration (Note 3)		1
Allocated subframes per Radio Frame (D+S)		3+2
Allocated subframes per Radio Frame		10
Modulation		64QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	15264
For Sub-Frames 1,6	Bits	11832
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	14688
Number of Code Blocks per Sub-Frame (Note 5)		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)		N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)		3
For Sub-Frames 1,6		2
For Sub-Frame 5		N/A
For Sub-Frame 0		3
Binary Channel Bits Per Sub-Frame		
For Sub-Frames 4 and 9 (Non CSI-RS subframe)	Bits	N/A
For Sub-Frames 4 and 9 (CSI-RS subframe)	Bits	26400
For Sub-Frames 1,6	Bits	23616
For Sub-Frame 5	Bits	N/A
For Sub-Frame 0	Bits	29520
Max. Throughput averaged over 1 frame	Mbps	6.888
UE Category		≥ 2
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For subframe 1&6, only 2 OFDM symbols are allocated to PDCCH.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	As per Table 4.2-2 in TS 36.211 [4].	
Note 4:	50 resource blocks are allocated in sub-frames 4,9 and 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in sub-frame 0 and the DwPTS portion of sub-frames 1,6.	
Note 5:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).	

Note 6: Localized allocation started from RB #0 is applied.

A.3.5 Reference measurement channels for PDCCH/PCFICH performance requirements

A.3.5.1 FDD

Table A.3.5.1-1: Reference Channel FDD

For Sub-Frames 0,4,5,9	Bits	N/A			N/A		
MBMS UE Category		≥ 1			≥ 1		
Note 1: For FDD mode, up to 6 subframes (#1/2/3/6/7/8) are available for MBMS, in line with TS 36.331.							
Note 2: 2 OFDM symbols are reserved for PDCCH; and reference signal allocated as per TS 36.211.							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.1-2: Fixed Reference Channel 16QAM R=1/2

Parameter	Unit	PMCH					
		Value					
Reference channel					R.38 FDD		
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks					50		
Allocated subframes per Radio Frame (Note 1)					6		
Modulation					16QAM		
Target Coding Rate					1/2		
Information Bit Payload (Note 2)							
For Sub-Frames 1,2,3,6,7,8	Bits				9912		
For Sub-Frames 0,4,5,9	Bits				N/A		
Number of Code Blocks per Subframe (Note 3)					2		
Binary Channel Bits Per Subframe							
For Sub-Frames 1,2,3,6,7,8	Bits				20400		
For Sub-Frames 0,4,5,9	Bits				N/A		
MBMS UE Category					≥ 1		

Note 1: For FDD mode, up to 6 subframes (#1/2/3/6/7/8) are available for MBMS, in line with TS 36.331.
 Note 2: 2 OFDM symbols are reserved for PDCCH; and reference signal allocated as per TS 36.211.
 Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Table A.3.8.1-3: Fixed Reference Channel 64QAM R=2/3

Parameter	PMCH						
	Unit	Value					
Reference channel				R.39-1 FDD	R.39 FDD		
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks				25	50		
Allocated subframes per Radio Frame(Note1)				6	6		
Modulation				64QAM	64QAM		
Target Coding Rate				2/3	2/3		
Information Bit Payload (Note 2)							
For Sub-Frames 1,2,3,6,7,8	Bits			9912	19848		
For Sub-Frames 0,4,5,9	Bits			N/A	N/A		
Number of Code Blocks per Sub-Frame (Note 3)				2	4		
Binary Channel Bits Per Subframe							
For Sub-Frames 1,2,3,6,7,8	Bits			15300	30600		
For Sub-Frames 0,4,5,9	Bits			N/A	N/A		
MBMS UE Category				≥ 1	≥ 2		
Note 1: For FDD mode, up to 6 subframes (#1/2/3/6/7/8) are available for MBMS, in line with TS 36.331. Note 2: 2 OFDM symbols are reserved for PDCCH; and reference signal allocated as per TS 36.211. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.1-4: Fixed Reference Channel for subcarrier spacing 1.25kHz with FeMBMS MBMS/Unicast-mixed cell

Parameter	PMCH						
	Unit	Value					
Reference channel			R.81-1 FDD	R.81-2 FDD			
Channel bandwidth	MHz		10	10			
Allocated resource blocks			50	50			
Allocated subframes per Radio Frame(Note1)			8	8			
Modulation			16QAM	64QAM			
Target Coding Rate			1/2	2/3			
Information Bit Payload (Note 2)							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits		11448	25456			
For Sub-Frames 0,5			N/A	N/A			
Number of Code Blocks per Sub-Frame (Note 3)			3	5			
Binary Channel Bits Per Subframe							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits		24000	36000			
For Sub-Frames 0,5			N/A	N/A			
MBMS UE Category			≥ 2	≥ 2			
Note 1: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331 [7]. Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.1-5: Fixed Reference Channel for subcarrier spacing 7.5kHz with FeMBMS MBMS/Unicast-mixed cell

Parameter	PMCH						
	Unit	Value					

Reference channel				R.82-1 FDD			
Channel bandwidth	MHz			10			
Allocated resource blocks				50			
Allocated subframes per Radio Frame(Note1)				8			
Modulation				16QAM			
Target Coding Rate				1/2			
Information Bit Payload (Note 2)							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits			12960			
For Sub-Frames 0,5	Bits			N/A			
Number of Code Blocks per Sub-Frame (Note 3)				3			
Binary Channel Bits Per Subframe							
For Sub-Frames 1,2,3,4,6,7,8,9	Bits			25200			
For Sub-Frames 0,5	Bits			N/A			
MBMS UE Category				≥ 2			
Note 1: For FDD mode, up to 8 subframes (#1/2/3/4/6/7/8/9) are available for MBMS, in line with TS 36.331 [7]. Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.1-6: Fixed Reference Channel for subcarrier spacing 1.25kHz with MBMS dedicated cell

Parameter	Unit	PMCH					
		Value					
Reference channel			R.83-1 FDD	R.83-2 FDD			
Channel bandwidth	MHz		10	10			
Allocated resource blocks			50	50			
Allocated subframes per Radio Frame(Note1)			10	10			
Modulation			16QAM	64QAM			
Target Coding Rate			1/2	2/3			
Information Bit Payload (Note 2)							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits		11448	25456			
Number of Code Blocks per Sub-Frame (Note 3)			3	5			
Binary Channel Bits Per Subframe							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits		24000	36000			
MBMS UE Category			≥ 2	≥ 2			
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7]. Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.1-7: Fixed Reference Channel for subcarrier spacing 7.5kHz with with MBMS dedicated cell

Parameter	Unit	PMCH					
		Value					
Reference channel			R.84-1 FDD				
Channel bandwidth	MHz		10				
Allocated resource blocks			50				
Allocated subframes per Radio Frame(Note1)			10				
Modulation			16QAM				
Target Coding Rate			1/2				
Information Bit Payload (Note 2)							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits		12960				
Number of Code Blocks per Sub-Frame (Note 3)			3				
Binary Channel Bits Per Subframe							

For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	25200			
MBMS UE Category		≥ 2			
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7]. Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).					

Table A.3.8.1-8: Fixed Reference Channel for subcarrier spacing 15kHz with with MBMS dedicated cell

Parameter	PMCH					
	Unit	Value				
Reference channel		R.85-1 FDD	R.85-2 FDD	R.85-3 FDD		
Channel bandwidth	MHz	3	5	10		
Allocated resource blocks		15	25	50		
Allocated subframes per Radio Frame(Note1)		10	10	10		
Modulation		QPSK	16QAM	64QAM		
Target Coding Rate		1/3	1/2	2/3		
Information Bit Payload (Note 2)						
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	1064	4968	19848		
Number of Code Blocks per Sub-Frame (Note 3)		1	1	4		
Binary Channel Bits Per Subframe						
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	3060	10200	30600		
MBMS UE Category		≥ 1	≥ 1	≥ 2		
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7]. Note 2: 2 OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).						

Table A.3.8.1-9: Fixed Reference Channel for subcarrier spacing 0.37 kHz with 5G terrestrial broadcast MBMS dedicated cell

Parameter	PMCH								
	Unit	Value							
Reference channel		R.106-1 FDD	R.106-2 FDD	R.106-3 FDD	R.106-4 FDD	R.106-5 FDD	R.106-6 FDD	R.106-7 FDD	R.106-8 FDD
Channel bandwidth	MHz	10	10	6	7	8	6	7	8
Allocated resource blocks		50	50	30	35	40	30	35	40
Allocated slots per 40ms(Note1)		13	13	13	13	13	13	13	13
Modulation		64QAM	64QAM	64QAM	64QAM	64QAM	64QAM	64QAM	64QAM
Target Coding Rate		0.48	0.52	0.49	0.48	0.48	0.54	0.53	0.52
Information Bit Payload (Note 2)									
For each slot	Bits	63776	63776	39232	45532	51024	39232	45532	51024
Number of Code Blocks per Sub-Frame (Note 3)		11	11	7	8	9	7	8	9
Binary Channel Bits Per Subframe									
For each slot	Bits	133650	121500	80190	93555	106920	72900	85050	97200
MBMS UE Category		≥ 2	≥ 2	≥ 2	≥ 2	≥ 2	≥ 2	≥ 2	≥ 2
Note 1: First subframe of every 40ms is allocated for non-MBMS transmission. Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).									

Table A.3.8.1-10: Fixed Reference Channel for subcarrier spacing 2.5 kHz with 5G terrestrial broadcast MBMS dedicated cell

Parameter	PMCH						
	Unit	Value					
Reference channel			R.107 FDD	R.107-1 FDD	R.107-2 FDD	R.107-3 FDD	
Channel bandwidth	MHz		10	6	7	8	
Allocated resource blocks			50	30	35	40	
Allocated subframes per 40ms(Note1)			39	39	39	39	
Modulation			16QAM	16QAM	16QAM	16QAM	
Target Coding Rate			0.46	0.46	0.46	0.46	
Information Bit Payload (Note 2)							
For each subframes	Bits		9912	5992	6968	7992	
Number of Code Blocks per Sub-Frame (Note 3)			2	1	2	2	
Binary Channel Bits Per Subframe							
For each subframes	Bits		21600	12960	15120	172800	
MBMS UE Category			≥ 2	≥ 2	≥ 2	≥ 2	
Note 1: First subframe of every 40ms is allocated for non-MBMS transmission.							
Note 2: Zero OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4].							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

A.3.8.2 TDD

Table A.3.8.2-1: Fixed Reference Channel QPSK R=1/3

Parameter	PMCH						
	Unit	Value					
Reference channel		R.40 TDD			R.37 TDD		
Channel bandwidth	MHz	1.4	3	5	10	15	20
Allocated resource blocks		6			50		
Uplink-Downlink Configuration(Note 1)		5			5		
Allocated subframes per Radio Frame		5			5		
Modulation		QPSK			QPSK		
Target Coding Rate		1/3			1/3		
Information Bit Payload (Note 2)							
For Sub-Frames 3,4,7,8,9	Bits	408			3624		
For Sub-Frames 0,1,2,5,6	Bits	N/A			N/A		
Number of Code Blocks per Subframe (Note 3)		1			1		
Binary Channel Bits Per Subframe							
For Sub-Frames 3,4,7,8,9	Bits	1224			10200		
For Sub-Frames 0,1,2,5,6	Bits	N/A			N/A		
MBMS UE Category		≥ 1			≥ 1		
Note 1: For TDD mode, in line with TS 36.331, Uplink-Downlink Configuration 5 is proposed, up to 5 subframes (#3/4/7/8/9) are available for MBMS.							
Note 2: 2 OFDM symbols are reserved for PDCCH; reference signal allocated as per TS 36.211.							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.8.2-2: Fixed Reference Channel 16QAM R=1/2

Parameter	PMCH						
	Unit	Value

- Note 1: 1 symbol allocated to PDCCH for all tests.
- Note 2: Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].
- Note 3: As per Table 4.2-2 in TS 36.211 [4].
- Note 4: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).
- Note 5: The first RBG, i.e. resource blocks $n_{PRB} = 0..2$ for 10MHz channel bandwidth, $n_{PRB} = 0..3$ for 15MHz and 20MHz channel bandwidths are allocated for SIB transmissions in sub-frame 5.
- Note 6: Void
- Note 7: Resource blocks $n_{PRB} = 3..49$ are allocated for the user data in sub-frame 5, and resource blocks $n_{PRB} = 0..49$ in other available downlink sub-frames according to uplink downlink configurations used .
- Note 8: Void
- Note 9: Void
- Note 10: Given per component carrier per codeword.
- Note 11: Resource blocks $n_{PRB} = 4..74$ are allocated for the user data in sub-frame 5, and resource blocks $n_{PRB} = 0..74$ in other downlink sub-frames.
- Note 12: Resource blocks $n_{PRB} = 4..99$ are allocated for the user data in sub-frame 5, and resource blocks $n_{PRB} = 0..99$ in other downlink sub-frames.
- Note 13: Resource blocks $n_{PRB} = 8..35$ are allocated for the user data in all sub-frames.

Note 14: 84 resource blocks $n_{PRB} = 4..43$ and $n_{PRB} = 56..99$ are allocated for the user data in sub-frame 5, and 88 resource blocks $n_{PRB} = 0..43$ and $n_{PRB} = 56..99$ are allocated for the user data in sub-frame 0, and 100 resource blocks $n_{PRB} = 0..99$ in other downlink sub-frames.

Note 15: 59 resource blocks $n_{PRB} = 4..31$ and $n_{PRB} = 44..74$ are allocated for the user data in sub-frame 5, and 63 resource blocks $n_{PRB} = 0..31$ and $n_{PRB} = 44..74$ are allocated for the user data in sub-frame 0, and 75 resource blocks $n_{PRB} = 0..74$ in other downlink sub-frames.

Note 16: 38 resource blocks $n_{PRB} = 3..20$ and $n_{PRB} = 30..49$ are allocated for the user data in sub-frame 5, and 41 resource blocks $n_{PRB} = 0..20$ and $n_{PRB} = 30..49$ are allocated for the user data in sub-frame 0, and 50 resource blocks $n_{PRB} = 0..49$ in other available downlink sub-frames according to uplink downlink configurations used.

Table A.3.9.2-2: Fixed Reference Channel for sustained data-rate test (TDD 256QAM)

Aggregation level	CCE	4	16	2	8	2	4
DCI Format		2A	2A	2C	2C	2D	2C

A.3.11 Reference Measurement Channels for MPDCCH performance requirements

A.3.11.1 FDD and half-duplex FDD

Table A.3.11.1-1: Reference Channel FDD and half-duplex FDD

Parameter	Unit	Value	Value	Value
Reference channel		R.82 FDD	R.83 FDD	R.96 FDD
Number of transmitter antennas		2	2	2
Channel bandwidth	MHz	10	10	10
OFDM starting symbol (startSymbolLC)	symbols	2	2	2
Aggregation level	ECCE	16	24	4
DCI Format		6-1A	6-1B	6-1A
Payload (without CRC)	Bits	29	18	29
PRB allocation		8-th ~11-th PRB	As specified in Test	8-th ~11-th PRB

A.3.11.2 TDD

Table A.3.11.2-1: Reference Channel TDD

Parameter	Unit	Value	Value	Value
Reference channel		R.82 TDD	R.83 TDD	R.96 TDD
Number of transmitter antennas		2	2	2
Channel bandwidth	MHz	10	10	10
OFDM starting symbol (startSymbolLC)	symbols	2	2	2
Aggregation level	ECCE	16	24	4
DCI Format		6-1A	6-1B	6-1A
Payload (without CRC)	Bits	32	18	32
PRB allocation		8-th ~11-th PRB	As specified in Test	8-th ~11-th PRB

A.3.12 Reference measurement channels for NPDSCH performance requirements

A.3.12.1 In-band

A.3.12.1.2 Two-antenna transmission

Table A.3.12.1.2-1: NPDSCH Reference Channel with 2 TX Antennas for FDD

Parameter	Unit	Value	Value
Reference channel		R.NB.5 FDD	R.NB.5-1 FDD
Carrier Type		Anchor	Non-anchor
Channel bandwidth	KHz	200	200
Allocated subframes per Radio Frame		Note 2	Note 2
Modulation		QPSK	QPSK
I_{TBS}/I_{SF}		4/0	4/0
Target Coding Rate		1/3	1/3
Coding Rate		0.4	0.4
Information Bit Payload			
For Sub-Frames 1,2,3,6,7,8	Bits	56	56

For Sub-Frame 0,5	Bits	N/A	56
For Sub-Frame 4,9	Bits	Note 3	56
Number of Code Blocks			
For Sub-Frames 1,2,3,6,7,8		1	1
For Sub-Frame 0,5	Bits	N/A	1
For Sub-Frame 4,9	Bits	Note 4	1
Binary Channel Bits			
For Sub-Frames 1,2,3,6,7,8	Bits	200	200
For Sub-Frame 0,5	Bits	N/A	200
For Sub-Frame 4,9	Bits	Note 5	200
Max. Averaged Throughput	Bps	Note 6	Note 6
UE Category		NB1,NB2	NB1,NB2
Note 1: For in-band, the first 3 symbols are used for LTE PDCCH and the number of LTE CRS ports is 4.			
Note 2: It shall depend on the specific NPDSCH scheduling.			
Note 3: N/A when $n_f \bmod 2 = 0$, otherwise 56.			
Note 4: N/A when $n_f \bmod 2 = 0$, otherwise 1.			
Note 5: N/A when $n_f \bmod 2 = 0$, otherwise 200.			
Note 6: Maximum Average Throughput equals to sum of TB(i) divided by sum of T(i), where TB(i) is the TB size of NPDSCH over i^{th} NPDSCH scheduling period, and T(i) is the total time consisting of NPDCCH transmission duration, NPDCCH to NPDSCH scheduling delay, NPDSCH transmission duration, NPDSCH to NPUSCH format 2 scheduling delay, NPUSCH format 2 transmission duration, possible delay between NPUSCH format 2 and NPDCCH for next NPDSCH scheduling and subframes used for NPSS/NSSS/NPBCH/NB-SIB1/NB-SIB2 transmission during the i^{th} NPDSCH scheduling period.			

Table A.3.12.1.2-2: NPDSCH Reference Channel with 2 TX Antennas for TDD

Parameter	Unit	Value	Value

Note 2:	N/A when $n_f \bmod 2 = 0$, otherwise 936 for R.NB.7 TDD and 4968 for R.NB.8 TDD.		
Note 3:	N/A when $n_f \bmod 2 = 0$, otherwise 1.		
Note 4:	N/A when $n_f \bmod 2 = 0$, otherwise 320 for R.NB.7 TDD and 640 for R.NB.8 TDD.		
Note 5:	Maximum Average Throughput equals to sum of TB(i) divided by sum of T(i), where TB(i) is the TB size of NPDSCH over i^{th} NPDSCH scheduling period, and T(i) is the total time consisting of NPDCCH transmission duration, NPDCCH to NPDSCH scheduling delay, NPDSCH transmission duration, NPDSCH to NPUSCH format 2 scheduling delay, NPUSCH format 2 transmission duration, possible delay between NPUSCH format 2 and NPDCCH for next NPDSCH scheduling and subframes used for NPSS/NSSS/NPBCH/NB-SIB1/NB-SIB2 transmission during the i^{th} NPDSCH scheduling period.		

A.3.13 Reference measurement channels for NPDCCH performance requirements

A.3.13.1 Half-duplex FDD

Table A.3.13.1-1: NPDCCH Reference Channel for Category NB1 UE

Parameter	Unit	Value	
		R.NB.3 FDD	R.NB.4 FDD
Reference channel		R.NB.3 FDD	R.NB.4 FDD
Number of NRS ports		1	2
Channel bandwidth	MHz	0.2	0.2
Aggregation level	NCCE	2	2
DCI Format		N1	N1
Payload (without CRC)	Bits	23	23

A.3.13.2 TDD

Table A.3.13.2-1: NPDCCH Reference Channel for Category NB1 UE

Parameter	Unit	Value	
		R.NB.3 TDD	R.NB.4 TDD
Reference channel		R.NB.3 TDD	R.NB.4 TDD
Number of NRS ports		1	2
Channel bandwidth	MHz	0.2	0.2
Aggregation level	NCCE	2	2
DCI Format		N1	N1
Payload (without CRC)	Bits	23	23

A.3.14 Reference measurement channels for NPBCH performance requirements for Cat NB1 UEs

Table A.3.14-1: NPBCH Reference Channel for Category NB1 UE

Parameter	Unit	Value	
		R.NB.1	R.NB.2
Reference channel		R.NB.1	R.NB.2
Number of transmitter antennas		1	2
Channel bandwidth	KHz	200	200
Modulation		QPSK	QPSK
Target coding rate		50/1600	50/1600
Payload (without CRC)	Bits	34	34

A.3.15 Reference Measurement Channels for LAA SCell with frame structure Type-3

A.3.15.1 Multi-antenna transmission (Common Reference Symbols)

A.3.15.1.1 Four antenna ports

Table A.3.15.1.1-2: Reference Channel with four CRS ports

Parameter	Unit	Value
Reference channel		R.1 FS3
Channel bandwidth	MHz	20
Allocated resource blocks (Note 4)		100

Allocated subframes per Radio Frame		10
Modulation		64QAM
Target Coding Rate		0.6
Information Bit Payload (Note 4)		
For Sub-Frames 1,4,6,9	Bits	{46888,15840,24496,37888,19848}
For Sub-Frames 2, 7		{46888,15840,24496,37888,19848}
For Sub-Frames 3, 8		{46888,15840,24496,37888,19848}
For Sub-Frame 5	Bits	{46888,15840,24496,37888,19848}
For Sub-Frame 0	Bits	{46888,15840,24496,37888,19848}
Number of Code Blocks (Notes 3 and 4)		
For Sub-Frames 1,4,6,,9		{8,3,4,7,4}
For Sub-Frames 2,7		{8,3,4,7,4}
For Sub-Frames 3, 8		{8,3,4,7,4}
For Sub-Frame 5		{8,3,4,7,4}
For Sub-Frame 0		{8,3,4,7,4}
Binary Channel Bits (Note 4)		
For Sub-Frames 1,4,6,9	Bits	{76800,26400,43200,62400,33600}
For Sub-Frames 2, 7		{76800,26400,43200,62400,33600}
For Sub-Frames 3, 8		{76800,26400,43200,62400,33600}
For Sub-Frame 5	Bits	{75936,26400,43200,61536,33600}
For Sub-Frame 0 (Note 5)	Bits	{75936,26400,43200,61536,33600}
UE Category		≥ 5
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).	
Note 4:	Given per component carrier per codeword.	
Note 5:	For {a1,a2,a3,a4,a5}, a1, a2, a3, a4 and a5 stand for the setup when the number of OFDM sybmols is 14, 6, 9, 12, 7, respectively.	

A.3.15.2 Reference Measurement Channel for UE-Specific Reference Symbols

A.3.15.2.1 Two antenna ports (CSI-RS)

The reference measurement channels in Table A.3.15.2.1-1 apply for verifying demodulation performance for UE-specific reference symbols with two cell-specific antenna ports and two CSI-RS antenna ports for LAA SCell.

Table A.3.15.2.1-1: Reference Channel with two CRS ports

Parameter	Unit	Value
Reference channel		R.2 FS3
Channel bandwidth	MHz	20
Allocated resource blocks (Note 4)		100
Allocated subframes per Radio Frame		10
Modulation		16QAM
Target Coding Rate		1/2
Information Bit Payload (Note 4)		
For Sub-Frames 1,4,6,9	Bits	{22920,7480,12960,19080,10296}
For Sub-Frames 2, 7		{22920,7480,12960,19080,10296}
For Sub-Frames 3, 8		{22920,7480,12960,19080,10296}
For Sub-Frame 5	Bits	{19848, 6712, 11448, 16992, 9144}
For Sub-Frame 0	Bits	{19848, 6712, 11448, 16992, 9144}
Number of Code Blocks (Notes 3 and 4)		
For Sub-Frames 1,4,6,9		{4,2,3,4,2}
For Sub-Frames 2,7		{4,2,3,4,2}
For Sub-Frames 3, 8		{4, 2, 3, 4, 2}
For Sub-Frame 5		{4, 2, 2, 3, 2}
For Sub-Frame 0		{4, 2, 2, 3, 2}
Binary Channel Bits (Note 4)		

For Sub-Frames 1,4,6,9	Bits	{48000,15200,25600,38400,20000}
For Sub-Frames 2, 7		{47200,15200,25600,38400,20000}
For Sub-Frames 3, 8		{46400,15200,25600,38400,20000}
For Sub-Frame 5	Bits	{42240,13376,22528,33792,17600}
For Sub-Frame 0 (Note 5) (Note 6)	Bits	{42240,13376,22528,33792,17600}
UE Category		≥ 5
Note 1:	2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz.	
Note 2:	Reference signal, synchronization signals and PBCH allocated as per TS 36.211 [4].	
Note 3:	If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).	
Note 4:	Given per component carrier per codeword.	
Note 5:	For TM9, 100 resource blocks are allocated in sub-frames 1, 2, 3, 4, 6, 7, 8, 9 and 88 resource blocks (RB0-RB43,RB56-RB99) are allocated in subframe 0 and subframe 5	
Note 6:	For {a1,a2,a3,a4,a5}, a1, a2, a3, a4 and a5 stand for the setup when the number of OFDM symbols is 14, 6, 9, 12, 7, respectively

Allocated resource blocks		50
Uplink-Downlink Configuration		1
Allocated subframes per Radio Frame (D)		2
Modulation		16QAM
Target Coding Rate		1/2
Information Bit Payload		
For Sub-Frames 4,9		
Slot index 0	Bits	11448
Slot index 1	Bits	14112
For Sub-Frames 0,1,5,6		N/A
Number of Code Blocks		
For Sub-Frames 4,9		
Slot index 0		2
Slot index 1		4
For Sub-Frames 0,1,5,6		N/A
Binary Channel Bits		
For Sub-Frames 4,9		
Slot index 0	Bits	22400
Slot index 1	Bits	28288
For Sub-Frame 0,1,5,6		N/A
Max. Throughput averaged over 1 frame	Mbps	5.112
UE Category		≥ 2
Note 1:	For an information bit payload first transmitted at slot 0, any retransmission happens only on slot 0. For an information bit payload first transmitted at slot 1, any retransmission happens only on slot 1.	

Table A.3.16.2-2: Fixed Reference Channel Slot-PDSCH (User-Specific Reference Signals)

Parameter	Unit	
Reference channel		R.sTTI.2 TDD
Channel bandwidth	MHz	10

Allocated resource blocks		50
Uplink-Downlink Configuration		1
Allocated subframes per Radio Frame (D)		2
Modulation		QPSK
Target Coding Rate		1/3
Information Bit Payload		
For Sub-Frames 4,9		
Slot index 0	Bits	2856
Slot index 1	Bits	4392
For Sub-Frames 0,1,5,6		N/A
Number of Code Blocks		
For Sub-Frames 4,9		
Slot index 0		1
Slot index 1		1
For Sub-Frames 0,1,5,9		N/A
Binary Channel Bits		
For Sub-Frames 4,9		
Slot index 0	Bits	9600
Slot index 1	Bits	13360
For Sub-Frame 0,1,5,6		N/A
Max. Throughput averaged over 1 frame	Mbps	1.4496
UE Category		≥2
Note 1: For an information bit payload first transmitted at slot 0, any retransmission happens only on slot 0. For an information bit payload first transmitted at slot 1, any retransmission happens only on slot 1.		

A.3.17 Reference measurement channels for SPDCCH performance requirements

A.3.17.1 FDD

Table A.3.17.1-1: Reference Channel FDD

Parameter	Unit	R.sTTI.10 FDD	R.sTTI.11 FDD
Reference channel		R.sTTI.10 FDD	R.sTTI.11 FDD
Number of transmitter antennas		4	2
Channel bandwidth	MHz	10	10
Aggregation level	SCCE	2	8
DCI Format		7-1C	7-1F
Cell ID		0	0
Payload (without CRC)	Bits	32	28

A.3.17.2 TDD

Table A.3.17.2-1: Reference Channel TDD

Parameter	Unit	R.sTTI.10 TDD	R.sTTI.11 TDD
Reference channel		R.sTTI.10 TDD	R.sTTI.11 TDD
Number of transmitter antennas		4	2
Channel bandwidth	MHz	10	10
Aggregation level	SCCE	2	8
DCI Format		7-1C	7-1F
Cell ID		0	0
Payload (without CRC)	Bits	34	30

A.3.18 Reference Measurement Channels for LTE based 5G broadcast PMCH receiver requirements

A.3.18.1 SDO

Table A.3.18.1-1 Fixed Reference Channel for PMCH Receiver Requirements (15 kHz SCS)

Parameter	PMCH (15 kHz SCS)						
	Unit	Value					
Reference channel		R.PMCH.1	R.PMCH.2	R.PMCH.3	R.PMCH.4	R.PMCH.5	R.PMCH.6
PMCH bandwidth	MHz	6	7	8	6	7	8
Allocated resource blocks		30	35	40	30	35	40
Allocated subframes per Radio Frame(Note1)		10	10	10	10	10	10
Modulation		QPSK	QPSK	QPSK	64QAM	64QAM	64QAM
Target Coding Rate		1/3	1/3	1/3	3/4	3/4	3/4
Information Bit Payload (Note 2)							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	2152	2472	2856	14112	17568	18336
Number of Code Blocks per Sub-Frame (Note 3)		1	1	1	3	3	3
Binary Channel Bits Per Subframe							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	6120	7140	8160	18360	21420	24480
MBMS UE Category		≥ 1	≥ 1	≥ 1	≥ 2	≥ 2	≥ 2
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7]. Note 2: 2 OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.18.1-2 Fixed Reference Channel for PMCH Receiver Requirements (2.5 kHz SCS)

Parameter	PMCH (2.5 kHz SCS)						
	Unit	Value					
Reference channel		R.PMCH.7	R.PMCH.8	R.PMCH.9	R.PMCH.10	R.PMCH.11	R.PMCH.12
PMCH bandwidth	MHz	6	7	8	6	7	8
Allocated resource blocks		30	35	40	30	35	40
Allocated subframes per Radio Frame(Note1)		10	10	10	10	10	10
Modulation		QPSK	QPSK	QPSK	64QAM	64QAM	64QAM
Target Coding Rate		1/3	1/3	1/3	3/4	3/4	3/4
Information Bit Payload (Note 2)							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	2152	2472	2856	14112	17568	19848
Number of Code Blocks per Sub-Frame (Note 3)		1	1	1	4	4	5
Binary Channel Bits Per Subframe							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	6480	7560	8640	19440	22680	25920
MBMS UE Category		≥ 1	≥ 1	≥ 1	≥ 2	≥ 2	≥ 2
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7]. Note 2: 2 OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4]. Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.18.1-3 Fixed Reference Channel for PMCH Receiver Requirements (1.25 kHz SCS)

Parameter	PMCH (1.25 kHz SCS)						
	Unit	Value					
Reference channel		R.PMCH.13	R.PMCH.14	R.PMCH.15	R.PMCH.16	R.PMCH.17	R.PMCH.18

PMCH bandwidth	MHz	6	7	8	6	7	8
Allocated resource blocks		30	35	40	30	35	40
Allocated subframes per Radio Frame(Note1)		10	10	10	10	10	10
Modulation		QPSK	QPSK	QPSK	64QAM	64QAM	64QAM
Target Coding Rate		1/3	1/3	1/3	3/4	3/4	3/4
Information Bit Payload (Note 2)							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	2152	3112	3496	16416	19080	21384
Number of Code Blocks per Sub-Frame (Note 3)		1	1	1	4	5	5
Binary Channel Bits Per Subframe							
For Sub-Frames 0,1,2,3,4,5,6,7,8,9	Bits	7200	8400	9600	21600	25200	28800
MBMS UE Category		≥ 1	≥ 1	≥ 1	≥ 2	≥ 2	≥ 2
Note 1: For FDD mode, all 10 subframes are available for MBMS, in line with TS 36.331 [7].							
Note 2: 2 OFDM symbols are reserved for PDCCH; and no CRS allocated as per TS 36.211 [4].							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.3.18.1-4 Fixed Reference Channel for PMCH Receiver Requirements (0.37 kHz SCS)

Parameter	PMCH (0.37 kHz SCS)						
	Unit	Value					
Reference channel		R.PMCH.19	R.PMCH.20	R.PMCH.21	R.PMCH.22	R.PMCH.23	R.PMCH.24
PMCH bandwidth	MHz	6	7	8	6	7	8
Allocated resource blocks		30	35	40	30	35	40
Allocated subframes per 40ms (Note 1)		13	13	13	13	13	13
Modulation		QPSK	QPSK	QPSK	64QAM	64QAM	64QAM
Target Coding Rate		1/3	1/3	1/3	3/4	3/4	3/4
Information Bit Payload							
For each slot	Bits	9258 (MCS 6)	11064 (MCS6)	12576 (MCS6)	57336 (MCS25)	66592 (MCS25)	78704 (MCS25)
Number of Code Blocks per Sub-Frame (Note 2)		5	6	6	14	16	18
Binary Channel Bits Per Subframe							
For each slot	Bits	26760	31220	35680	80280	93660	107040
MBMS UE Category		≥ 1	≥ 1	≥ 1	≥ 2	≥ 2	≥ 2
Note 1: First subframe of every 40ms is allocated for non-MBMS transmission.							
Note 2: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

A.4 CSI reference measurement channels

This section defines the DL signal applicable to the reporting of channel status information (Clause 9.2, 9.3 and 9.5).

In Table A.4-1 are specified the reference channels. Table A.4-13 specifies the mapping of CQI index to modulation coding scheme, which complies with the CQI definition specified in Section 7.2.3 of [6].

Table A.4-0: Void

Table A.4-1: CSI reference measurement channels

Narrowband IoT

RC.33 FDD	HD-FDD	200kHz	1	-	-	MCS.42	1	1	
RC.33 TDD	TDD	200kHz	1	Note 3	-	MCS.42	1	1	

- Note 1: 3 symbols allocated to PDCCH.
- Note 2: For FDD only subframes 1, 2, 3, 4, 6, 7, 8 and 9 are allocated to avoid PBCH and synchronization signal overhead.
- Note 3: TDD UL-DL configuration as specified in the individual tests.
- Note 4: For TDD when UL-DL configuration 1 is used only subframes 4 and 9 are allocated to avoid PBCH and synchronization signal overhead.
- Note 5: For TDD when UL-DL configuration 2 is used only subframes 3, 4, 8, and 9 are allocated to avoid PBCH and synchronization signal overhead.
- Note 6: Centered within the Transmission Bandwidth Configuration (Figure 5.6-1).
- Note 7: Only subframes 2, 3, 4, 7, 8 and 9 are allocated to avoid PBCH and synchronization signal overhead.
- Note 8: Allocate PDSCH on 5th and 6th PRBs within a subband.
- Note 9: The number of HARQ processes is 10 for TDD UL/DL configuration 2 and 7 for TDD UL/DL configuration 1.
- Note 10: The downlink subframes are scheduled at the 1st, 2nd, 8th, 9th, 16th, 17th, 18th, 24th, 26th, 32nd, 33rd, 34th subframes every 40ms. Information bit payload is available if downlink subframe is scheduled.(starting from 0th subframe)
- Note 11: 41 resource blocks (RB0–RB20 and RB30–RB49) are allocated in subframe 0 and 5 in RC.19 TDD.
- Note 12: Allocate PDSCH on 3th, 4th and 5th PRBs within a narrowband. Allocate MPDCCH on the 0th and 1st PRBs within a narrowband.
- Note 13: The PDSCH subframes are scheduled at the 0th and 1st subframes every 10ms. Information bit payload is available if downlink subframe is scheduled (starting from 0th subframe). MPDCCH subframes are scheduled at the 8th and 9th subframes every 10ms.
- Note 14: The downlink subframes are scheduled at the 0th to 4th subframes every 20ms. Information bit payload is scheduled at the 4th subframe (starting from 0th subframe). MPDCCH and Information bit payload are not scheduled in the radio frames where systemInformation1-BR is scheduled and $N_{PDSCH}^{SIB1-BR} = 4$ with the set of frames and subframes for SIB1-BR defined in TS 36.211 [16] Table 6.4.1-2.
- Note 15: Information bit payload is scheduled at the 8th subframe every 20ms (starting from 0th subframe).
- Note 16: 2 symbols allocated for PDCCH.
- Note 17: No PDSCH is scheduled in subslot index 0.
- Note 18: Subslot-PDSCH is scheduled in subslots 2, 3, and 4.
- Note 19: Subslot-PDSCH is scheduled in subslots 1 and 5.
- Note 20: Allocate PDSCH on 3th, 4th and 5th PRBs within a narrowband. Allocate MPDCCH on the 0th, 1st, 2nd and 3rd PRBs within a narrowband.

A.5 OFDMA Channel Noise Generator (OCNG)

A.5.1 OCNG Patterns for FDD

The following OCNG patterns are used for modelling allocations to virtual UEs (which are not under test) and/or allocations used for MBSFN. The OCNG pattern for each sub frame specifies the allocations that shall be filled with OCNG, and furthermore, the relative power level of each such allocation.

In each test case the OCNG is expressed by parameters OCNG_RA and OCNG_RB which together with a relative power level (γ) specifies the PDSCH EPRE-to-RS EPRE ratios in OFDM symbols with and without reference symbols, respectively. The relative power, which is used for modelling boosting per virtual UE allocation, is expressed by:

$$\gamma_i = PDSCH_i_RA / OCNG_RA = PDSCH_i_RB / OCNG_RB,$$

where γ_i denotes the relative power level of the i :th virtual UE. The parameter settings of OCNG_RA, OCNG_RB, and the set of relative power levels γ are chosen such that when also taking allocations to the UE under test into account, as given by a PDSCH reference channel, a constant transmitted power spectral density that is constant on an OFDM symbol basis is targeted.

Moreover the OCNG pattern is accompanied by a PCFICH/PDCCH/PHICH reference channel which specifies the control region. For any aggregation and PHICH allocation, the PDCCH and any unused PHICH groups are padded with resource element groups with a power level given respectively by PDCCH_RA/RB and PHICH_RA/RB as specified in the test case such that a total power spectral density in the control region that is constant on an OFDM symbol basis is targeted.

For the performance requirements of UE with the CA capability, the OCNG patterns apply for each CC.

A.5.1.1 OCNG FDD pattern 1: One sided dynamic OCNG FDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is continuous in frequency domain (one sided).

Table A.5.1.1-1: OP.1 FDD: One sided dynamic OCNG FDD Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
First unallocated PRB –	First unallocated PRB –	First unallocated PRB –	
Last unallocated PRB	Last unallocated PRB	Last unallocated PRB	
0	0	0	Note 1
Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.			
Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.			

A.5.1.2 OCNG FDD pattern 2: Two sided dynamic OCNG FDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain (divided in two parts by the allocated area – two sided), starts with PRB 0 and ends with PRB $N_{RB} - 1$.

Table A.5.1.2-1: OP.2 FDD: Two sided dynamic OCNG FDD Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	
0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>			

A.5.1.3 OCNG FDD pattern 3: 49 RB OCNG allocation with MBSFN in 10 MHz

Table A.5.1.3-1: OP.3 FDD: OCNG FDD Pattern 3

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]				PDSCH Data	PMCH Data
	Subframe					
	0	5	4, 9	1 – 3, 6 – 8		
1 – 49	0	0 (Allocation: all empty PRB-s)	0	N/A	Note 1	N/A
0 – 49	N/A	N/A	N/A	0	N/A	Note 2
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated. PMCH subframes shall contain cell-specific Reference Signals only in the first symbol of the first time slot. The parameter γ_{PRB} is used to scale the power of PMCH.</p> <p>Note 3: If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>N/A: Not Applicable</p>						

A.5.1.3A OCNG FDD pattern 3A: 49 RB OCNG allocation with MBSFN enhancement in 10 MHz

Table A.5.1.3A-1: OP.3A FDD: OCNG FDD Pattern 3A

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]			PDSCH Data	PMCH Data
	Subframe				
	0	5	1 – 4, 6 – 9		
1 – 49	0	0 (Allocation: all empty PRB-s)	N/A	Note 1	N/A
0 – 49	N/A	N/A	0	N/A	Note 2
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated and transmitted using 1.25kHz numerology. PMCH subframes shall not contain any cell-specific Reference Signals. The parameter γ_{PRB} is used to scale the power of PMCH.</p> <p>Note 3: If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>N/A: Not Applicable</p>					

A.5.1.4 OCNG FDD pattern 4: One sided dynamic OCNG FDD pattern for MBMS transmission

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is continuous in frequency domain (one sided) and MBMS performance is tested.

Table A.5.1.4-1: OP.4 FDD: One sided dynamic OCNG FDD Pattern for MBMS transmission

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]			PDSCH Data	PMCH Data
	Subframe				
	0, 4, 9	5	1 – 3, 6 – 8		
First unallocated PRB – Last unallocated PRB	0	0 (Allocation: all empty PRB-s)	N/A	Note 1	N/A
First unallocated PRB – Last unallocated PRB	N/A	N/A	N/A	N/A	Note 2
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated. PMCH subframes shall contain cell-specific Reference Signals only in the first symbol of the first time slot. The parameter γ_{PRB} is used to scale the power of PMCH.</p>					

Note 3: If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.

N/A: Not Applicable

A.5.1.4A OCNG FDD pattern 4A: One sided dynamic OCNG FDD pattern for enhanced MBMS transmission

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is continuous in frequency domain (one sided) and MBMS performance is tested.

Table A.5.1.4A-1: OP.4A FDD: One sided dynamic OCNG FDD Pattern for MBMS transmission

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]			PDSCH Data	PMCH Data
	Subframe				
	0	5	1 – 4, 6 – 9		
First unallocated PRB – Last unallocated PRB	0	0 (Allocation: all empty PRB-s)	N/A	Note 1	N/A
First unallocated PRB – Last unallocated PRB	N/A	N/A	N/A	N/A	Note 2
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated. PMCH subframes shall not contain any cell-specific Reference Signals. The parameter γ_{PRB} is used to scale the power of PMCH.</p> <p>Note 3: If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>					
N/A: Not Applicable					

A.5.1.5 OCNG FDD pattern 5: One sided dynamic 16QAM modulated OCNG FDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of DL sub-frames, when the unallocated area is continuous in the frequency domain (one sided).

Table A.5.1.5-1: OP.5 FDD: One sided dynamic 16QAM modulated OCNG FDD Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	
0	0	0	Note 1

Note 1:	These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is 16QAM modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.
Note 2:	If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 3 (Large Delay CDD). The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.

A.5.1.6 OCNG FDD pattern 6: dynamic OCNG FDD pattern when user data is in 2 non-contiguous blocks

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain (divided in two parts by the first allocated block). The second allocated block ends with PRB $N_{RB} - 1$.

Table A.5.1.6-1: OP.6 FDD: OCNG FDD Pattern when user data is in 2 non-contiguous blocks

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	
0	0	0	Note 1
Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.			
Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.			

A.5.1.7 OCNG FDD pattern 7: dynamic OCNG FDD pattern when user data is in multiple non-contiguous blocks

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data, EPDCCH or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain (divided in multiple parts by the M allocated blocks for data transmission). The m -th allocated block starts with RPB $N_{Start,m}$ and ends with PRB $N_{End,m} - 1$, where $m = 1, \dots, M$. The system bandwidth starts with RPB 0 and ends with $N_{RB} - 1$.

Table A.5.1.7-1: OP.7 FDD: OCNG FDD Pattern when user data is in multiple non-contiguous blocks

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$)	0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$)	0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$)	

$(\text{PRB } N_{End,M} - \text{PRB } N_{RB} - 1)$ 0	$(\text{PRB } N_{End,M} - \text{PRB } N_{RB} - 1)$ 0	$(\text{PRB } N_{End,M} - \text{PRB } N_{RB} - 1)$ 0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>			

A.5.1.8 OCNG FDD pattern 8: Dynamic OCNG FDD pattern for TM10 transmission

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain where there are M unallocated PRB blocks labeled from 1-st block to M -th block ($M > 1$) and the m -th block starts with PRB $N_{Start,m}$ and end with PRB $N_{End,m}$, or when the unallocated area is continuous in frequency domain where $M = 1$ (one sided). The system bandwidth starts with PRB 0 and ends with PRB $N_{RB} - 1$. $N_{End,M}$ should be equal to or less than $N_{RB} - 1$.

Table A.5.1.8-1: OP.8 FDD: Dynamic OCNG FDD Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
1-st unallocated PRB (PRB $N_{Start,1} \sim \text{PRB } N_{End,1}$) ...	1-st unallocated PRB (PRB $N_{Start,1} \sim \text{PRB } N_{End,1}$) ...	1-st unallocated PRB (PRB $N_{Start,1} \sim \text{PRB } N_{End,1}$) ...	
m -th unallocated PRB (PRB $N_{Start,m} \sim \text{PRB } N_{End,m}$) ...	m -th unallocated PRB (PRB $N_{Start,m} \sim \text{PRB } N_{End,m}$) ...	m -th unallocated PRB (PRB $N_{Start,m} \sim \text{PRB } N_{End,m}$) ...	
M -th unallocated PRB (PRB $N_{Start,M} \sim \text{PRB } N_{End,M}$)	M -th unallocated PRB (PRB $N_{Start,M} \sim \text{PRB } N_{End,M}$)	M -th unallocated PRB (PRB $N_{Start,M} \sim \text{PRB } N_{End,M}$)	
0	0	0	Note 1,2,3
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is 16QAM modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: The OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 10. The the transmit power is equal between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>Note 3: The detailed test set-up for TM10 transmission i.e PMI configuration is specified to each test case.</p>			

A.5.2 OCNG Patterns for TDD

The following OCNG patterns are used for modelling allocations to virtual UEs (which are not under test). The OCNG pattern for each sub frame specifies the allocations that shall be filled with OCNG, and furthermore, the relative power level of each such allocation.

In each test case the OCNG is expressed by parameters OCNG_RA and OCNG_RB which together with a relative power level (γ) specifies the PDSCH EPRE-to-RS EPRE ratios in OFDM symbols with and without reference symbols, respectively. The relative power, which is used for modelling boosting per virtual UE allocation, is expressed by:

$$\gamma_i = PDSCH_i_RA/OCNG_RA = PDSCH_i_RB/OCNG_RB,$$

where γ_i denotes the relative power level of the i :th virtual UE. The parameter settings of OCNG_RA, OCNG_RB, and the set of relative power levels γ are chosen such that when also taking allocations to the UE under test into account, as given by a PDSCH reference channel, a transmitted power spectral density that is constant on an OFDM symbol basis is targeted.

Moreover the OCNG pattern is accompanied by a PCFICH/PDCCH/PHICH reference channel which specifies the control region. For any aggregation and PHICH allocation, the PDCCH and any unused PHICH groups are padded with resource element groups with a power level given respectively by PDCCH_RA/RB and PHICH_RA/RB as specified in the test case such that a total power spectral density in the control region that is constant on an OFDM symbol basis is targeted.

A.5.2.1 OCNG TDD pattern 1: One sided dynamic OCNG TDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the subframes available for DL transmission (depending on TDD UL/DL configuration), when the unallocated area is continuous in frequency domain (one sided).

Table A.5.2.1-1: OP.1 TDD: One sided dynamic OCNG TDD Pattern

Relative power level γ_{PRB} [dB]				PDSCH Data
Subframe (only if available for DL)				
0	5	3, 4, 7, 8, 9 and 6 (as normal subframe) <small>Note 2</small>	1 and 6 (as special subframe) <small>Note 2</small>	
Allocation				
First unallocated PRB –	First unallocated PRB –	First unallocated PRB –	First unallocated PRB –	
Last unallocated PRB 0	Last unallocated PRB 0	Last unallocated PRB 0	Last unallocated PRB 0	
				Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211</p> <p>Note 3: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>				

A.5.2.2 OCNG TDD pattern 2: Two sided dynamic OCNG TDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the subframes available for DL transmission (depending on TDD UL/DL configuration), when the unallocated area is discontinuous in frequency domain (divided in two parts by the allocated area – two sided), starts with PRB 0 and ends with PRB $N_{RB} - 1$.

Table A.5.2.2-1: OP.2 TDD: Two sided dynamic OCNG TDD Pattern

Relative power level γ_{PRB} [dB]				PDSCH Data
Subframe (only if available for DL)				
0	5	3, 4, 6, 7, 8, 9 (6 as normal subframe) <small>Note 2</small>	1,6 (6 as special subframe) <small>Note 2</small>	
Allocation				
0 – (First allocated PRB-1)	0 – (First allocated PRB-1)	0 – (First allocated PRB-1)	0 – (First allocated PRB-1)	

and (Last allocated PRB+1) – $(N_{RB} - 1)$	and (Last allocated PRB+1) – $(N_{RB} - 1)$	and (Last allocated PRB+1) – $(N_{RB} - 1)$	and (Last allocated PRB+1) – $(N_{RB} - 1)$	
0	0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211</p> <p>Note 3: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>				

A.5.2.3 OCNG TDD pattern 3: 49 RB OCNG allocation with MBSFN in 10 MHz

Table A.5.2.3-1: OP.3 TDD: OCNG TDD Pattern 3 for 5ms downlink-to-uplink switch-point periodicity

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]				PDSCH Data	PMCH Data
	Subframe					
	0	5	4, 9 ^{Note 2}	1, 6		
1 – 49	0	0 (Allocation: all empty PRB-s)	N/A	0	Note 1	N/A
0 – 49	N/A	N/A	0	N/A	N/A	Note 3
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211.</p> <p>Note 3: Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated. PMCH symbols shall not contain cell-specific Reference Signals.</p> <p>Note 4: If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>						
N/A	Not Applicable					

A.5.2.4 OCNG TDD pattern 4: One sided dynamic OCNG TDD pattern for MBMS transmission

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is continuous in frequency domain (one sided) and MBMS performance is tested.

Table A.5.2.4-1: OP.4 TDD: One sided dynamic OCNG TDD Pattern for MBMS transmission

Allocation n_{PRB}	Relative power level γ_{PRB} [dB]				PDSCH Data	PMCH Data
	Subframe (only for DL)					
	0 and 6 (as normal subframe)	1 (as special subframe)	5	3, 4, 7 – 9		
First unallocated PRB	0	0	0 (Allocation: all empty PRB-s)	N/A	Note 1	N/A

– Last unallocated PRB		(Allocation: all empty PRB-s of DwPTS)				
First unallocated PRB – Last unallocated PRB	N/A	N/A	N/A	N/A	N/A	Note2
Note 1:	These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.					
Note 2:	Each physical resource block (PRB) is assigned to MBSFN transmission. The data in each PRB shall be uncorrelated with data in other PRBs over the period of any measurement. The MBSFN data shall be QPSK modulated. PMCH symbols shall not contain cell-specific Reference Signals.					
Note 3:	If two or more transmit antennas are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 2. The transmit power shall be equally split between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.					
N/A	Not Applicable					

A.5.2.5 OCNG TDD pattern 5: One sided dynamic 16QAM modulated OCNG TDD pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the sub-frames available for DL transmission (depending on TDD UL/DL configuration), when the unallocated area is continuous in frequency domain (one sided).

Table A.5.2.5-1: OP.5 TDD: One sided dynamic 16QAM modulated OCNG TDD Pattern

Relative power level γ_{PRB} [dB]				PDSCH Data
Subframe (only if available for DL)				
0	5	3, 4, 7, 8, 9 and 6 (as normal subframe) ^{Note 2}	1 and 6 (as special subframe) ^{Note 2}	
Allocation				
First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	
0	0	0	0	Note 1
Note 1:	These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is 16QAM modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.			
Note 2:	Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211			
Note 3:	If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 3 (Large Delay CDD). The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.			

A.5.2.6 OCNG TDD pattern 6: dynamic OCNG TDD pattern when user data is in 2 non-contiguous blocks

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the subframes available for DL transmission (depending on TDD UL/DL configuration), when the unallocated area is

discontinuous in frequency domain (divided in two parts by the first allocated block). The second allocated block ends with PRB $N_{RB} - 1$.

Table A.5.2.6-1: OP.6 TDD: OCNG TDD Pattern when user data is in 2 non-contiguous blocks

Relative power level γ_{PRB} [dB]				PDSCH Data
Subframe (only if available for DL)				
0	5	3, 4, 6, 7, 8, 9 (6 as normal subframe) <small>Note 2</small>	1,6 (6 as special subframe) <small>Note 2</small>	
Allocation				
0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	0 – (First allocated PRB of first block -1) and (Last allocated PRB of first block +1) – (First allocated PRB of second block -1)	
0	0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211</p> <p>Note 3: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p>				

A.5.2.7 OCNG TDD pattern 7: dynamic OCNG TDD pattern when user data is in multiple non-contiguous blocks

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data, EPDCCH or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain (divided in multiple parts by the M allocated blocks for data transmission). The m -th allocated block starts with RPB $N_{Start,m}$ and ends with PRB $N_{End,m} - 1$, where $m = 1, \dots, M$. The system bandwidth starts with RPB 0 and ends with $N_{RB} - 1$.

Table A.5.2.7-1: OP.7 TDD: OCNG TDD Pattern when user data is in multiple non-contiguous blocks

Relative power level γ_{PRB} [dB]				PDSCH Data
Subframe (only if available for DL)				
0	5	3, 4, 6, 7, 8, 9 (6 as normal subframe) <small>Note 2</small>	1,6 (6 as special subframe) <small>Note 2</small>	
Allocation				
0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) ... (PRB $N_{End,M} - 1$) – (PRB $N_{RB} - 1$)	0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$) ... (PRB $N_{End,M} - 1$) – (PRB $N_{RB} - 1$)	0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$) ... (PRB $N_{End,M} - 1$) – (PRB $N_{RB} - 1$)	0 – (PRB $N_{Start,1} - 1$) ... (PRB $N_{End,(m-1)} - 1$) – (PRB $N_{Start,m} - 1$) ... (PRB $N_{End,M} - 1$) – (PRB $N_{RB} - 1$)	
0	0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p>				

Note 2: Subframes available for DL transmission depends on the Uplink-Downlink configuration in Table 4.2-2 in 3GPP TS 36.211

Note 3: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.

A.5.2.8 OCNG TDD pattern 8: Dynamic OCNG TDD pattern for TM10 transmission

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain where there are M unallocated PRB blocks labeled from 1-st block to M -th block ($M > 1$) and the m -th block starts with PRB $N_{Start,m}$ and end with PRB $N_{End,m}$, or when the unallocated area is continuous in frequency domain where $M = 1$ (one sided). The system bandwidth starts with PRB 0 and ends with $N_{RB} - 1$. $N_{End,M}$ should be equal to or less than $N_{RB} - 1$.

Table A.5.2.8-1: OP.8 TDD: Dynamic OCNG TDD Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
1-st unallocated PRB (PRB $N_{Start,1} \sim$ PRB $N_{End,1}$) ...	1-st unallocated PRB (PRB $N_{Start,1} \sim$ PRB $N_{End,1}$) ...	1-st unallocated PRB (PRB $N_{Start,1} \sim$ PRB $N_{End,1}$) ...	
m -th unallocated PRB (PRB $N_{Start,m} \sim$ PRB $N_{End,m}$) ...	m -th unallocated PRB (PRB $N_{Start,m} \sim$ PRB $N_{End,m}$) ...	m -th unallocated PRB (PRB $N_{Start,m} \sim$ PRB $N_{End,m}$) ...	
M -th unallocated PRB (PRB $N_{Start,M} \sim$ PRB $N_{End,M}$)	M -th unallocated PRB (PRB $N_{Start,M} \sim$ PRB $N_{End,M}$)	M -th unallocated PRB (PRB $N_{Start,M} \sim$ PRB $N_{End,M}$)	
0	0	0	Note 1,2,3
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is 16QAM modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: The OCNG shall be transmitted to the virtual users by all the transmit antennas according to transmission mode 10. The transmit power is equal between all the transmit antennas used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>Note 3: The detailed test set-up for TM10 transmission i.e PMI configuration is specified to each test case.</p>			

A.5.3 OCNG Patterns for Narrowband IoT

The following OCNG patterns are used for modelling allocations to virtual narrowband IoT UEs (which are not under test). The OCNG pattern for each sub frame specifies the allocations that shall be filled with OCNG, and furthermore, the relative power level of each such allocation.

In each test case the OCNG is expressed by parameters OCNG_RA and OCNG_RB which together with a relative power level (γ) specifies the NPDSCH EPRE-to-NRS EPRE ratios in OFDM symbols with and without Narrowband reference symbols, respectively. The relative power, which is used for modelling boosting per virtual UE allocation, is expressed by:

$$\gamma_i = NPDSCH_i_RA / OCNG_RA = NPDSCH_i_RB / OCNG_RB,$$

where γ_i denotes the relative power level of the i :th virtual UE. The parameter settings of OCNG_RA, OCNG_RB, and the set of relative power levels γ are chosen such that when also taking allocations to the UE under test into account, as given by a NPDSCH or NPDCCH reference channel, a transmitted power spectral density that is constant on an OFDM symbol basis is targeted.

A.5.3.1 Narrowband IoT OCNG pattern 1

Table A.5.3.1-1: NB.OP.1 FDD: OCNG FDD Pattern 1

Bandwidth	Relative power level γ [dB]		NPDCCH and corresponding NPDSCH Data
	Subframe		
	Unused subframes		
200KHz	0		Note 2
<p>Note 1: These subframes are assigned to an arbitrary number of virtual UEs with one NPDSCH per virtual UE with corresponding NPDCCH; the data transmitted over the OCNG NPDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ is used to scale the power of NPDSCH and NPDCCH.</p> <p>Note 2: Subframes and/or REs available for narrowband IOT DL transmission depend on the in-band, guard band or standalone mode indicated in MIB, and scheduling delay between NPDCCH, NPDSCH, NPUSCH format 2 and NPDCCH specified in test cases.</p> <p>Note 3: If two or more transmit antennas with NRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with NRS according to transmit diversity scheme. The parameter γ applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with NRS used in the test.</p>			

A.5.4 OCNG Patterns for frame structure type 3

The following OCNG patterns are used for modelling allocations to virtual UEs (which are not under test). The OCNG pattern for each sub frame specifies the allocations that shall be filled with OCNG, and furthermore, the relative power level of each such allocation.

In each test case the OCNG is expressed by parameters OCNG_RA and OCNG_RB which together with a relative power level (γ) specifies the PDSCH EPRE-to-RS EPRE ratios in OFDM symbols with and without reference symbols, respectively. The relative power, which is used for modelling boosting per virtual UE allocation, is expressed by:

$$\gamma_i = PDSCH_i_RA / OCNG_RA = PDSCH_i_RB / OCNG_RB,$$

where γ_i denotes the relative power level of the i :th virtual UE. The parameter settings of OCNG_RA, OCNG_RB, and the set of relative power levels γ are chosen such that when also taking allocations to the UE under test into account, as given by a PDSCH reference channel, a constant transmitted power spectral density that is constant on an OFDM symbol basis is targeted.

Moreover the OCNG pattern is accompanied by a PDCCH reference channel which specifies the control region. For any aggregation the PDCCH are padded with resource element groups with a power level given respectively by PDCCH_RA/RB as specified in the test case such that a total power spectral density in the control region that is constant on an OFDM symbol basis is targeted.

For the performance requirements of UE with the CA capability, the OCNG patterns apply for each LAA Scell.

A.5.4.1 OCNG FS3 pattern 1: One sided dynamic OCNG frame structure type 3 pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is continuous in frequency domain (one sided).

Table A.5.4.1-1: OP.1 FS3: One sided dynamic OCNG frame structure type 3 Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			

First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	First unallocated PRB – Last unallocated PRB	
0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>Note 3: Subframes available for DL transmission and Occupied OFDM symbols in each subframe depend on the downlink burst transmission pattern and its corresponding configuration</p>			

A.5.4.2 OCNG FS3 pattern 2: Two sided dynamic OCNG frame structure 3 pattern

This OCNG Pattern fills with OCNG all empty PRB-s (PRB-s with no allocation of data or system information) of the DL sub-frames, when the unallocated area is discontinuous in frequency domain (divided in two parts by the allocated area – two sided), starts with PRB 0 and ends with PRB $N_{RB} - 1$.

Table A.5.4.2-1: OP.2 FS3: Two sided dynamic OCNG frame structure type 3 Pattern

Relative power level γ_{PRB} [dB]			PDSCH Data
Subframe			
0	5	1 – 4, 6 – 9	
Allocation			
0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	0 – (First allocated PRB-1) and (Last allocated PRB+1) – ($N_{RB} - 1$)	
0	0	0	Note 1
<p>Note 1: These physical resource blocks are assigned to an arbitrary number of virtual UEs with one PDSCH per virtual UE; the data transmitted over the OCNG PDSCHs shall be uncorrelated pseudo random data, which is QPSK modulated. The parameter γ_{PRB} is used to scale the power of PDSCH.</p> <p>Note 2: If two or more transmit antennas with CRS are used in the test, the OCNG shall be transmitted to the virtual users by all the transmit antennas with CRS according to transmission mode 2. The parameter γ_{PRB} applies to each antenna port separately, so the transmit power is equal between all the transmit antennas with CRS used in the test. The antenna transmission modes are specified in section 7.1 in 3GPP TS 36.213.</p> <p>Note 3: Subframes available for DL transmission and Occupied OFDM symbols in each subframe depend on the downlink burst transmission pattern and its corresponding configuration.</p>			

A.6 Sidelink reference measurement channels

A.6.1 General

The algorithm for determining the payload size A is as follows; given a desired coding rate R and radio block allocation N_{RB}

1. Calculate the number of channel bits N_{ch} that can be transmitted during the first transmission of a given sub-frame.
2. Find A such that the resulting coding rate is as close to R as possible, that is,

$$\min \left| R - (A + 24 * (N_{CB} + 1)) / N_{ch} \right|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- a) A is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of N_{RB} resource blocks.
 - b) C is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
3. If there is more than one A that minimizes the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.

A.6.1.1 Overview of ProSe reference measurement channels

In Table A.6.1.1-1 are listed the ProSe reference measurement channels specified in annexes A.6.2 to A.6.6 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.6.2 to A.6.6 as appropriate.

A.6.2 Reference measurement channel for receiver characteristics

For ProSe Direct Discovery, Table A.6.2-1 is applicable for measurements on the Receiver Characteristics (clause 7) including the requirements of subclause 7.4D (Maximum input level).

For ProSe Direct Communication, Table A.6.2-2 is applicable for measurements on the Receiver Characteristics (clause 7) with the exception of subclause 7.4D (Maximum input level). Tables A.6.2-3, A.6.2-4, are applicable for subclause 7.4D (Maximum input level).

Table A.6.2-1: Fixed Reference measurement channel for ProSe Direct Discovery receiver requirements and maximum input level

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz						
Allocated resource blocks				2	2	2	2
Subcarriers per resource block				12	12	12	12
Allocated subframes per Discovery period				1	1	1	1
DFT-OFDM Symbols per subframe (see note)				11	11	11	11
Modulation				QPSK	QPSK	QPSK	QPSK
Transport Block Size				232	232	232	232
Transport block CRC	Bits			24	24	24	24
Maximum number of HARQ transmissions				1	1	1	1
Binary Channel Bits (see note)	Bits			528	528	528	528
Max. Throughput averaged over 1 Discovery period of 320ms	kbps			0.725	0.725	0.725	0.725
UE Category				≥ 1	≥ 1	≥ 1	≥ 1

NOTE1: PSDCH transmissions are rate-matched for 12 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.

NOTE2: Throughput is 232 bits per Discovery period. The discovery period is configured as 320ms in the test.

Table A.6.2-2: Fixed Reference measurement channel for ProSe Direct Communication receiver requirements

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz

A.8 V2X reference measurement channels

A.8.1 General

The algorithm for determining the payload size A is as follows; given a desired coding rate R and radio block allocation N_{RB}

1. Calculate the number of channel bits N_{ch} that can be transmitted during the first transmission of a given sub-frame.
2. Find A such that the resulting coding rate is as close to R as possible, that is,

$$\min |R - (A + 24 * (N_{CB} + 1)) / N_{ch}|, \text{ where } N_{CB} = \begin{cases} 0, & \text{if } C = 1 \\ C, & \text{if } C > 1 \end{cases}$$

subject to

- a) A is a valid TB size according to section 7.1.7 of TS 36.213 [6] assuming an allocation of N_{RB} resource blocks.
 - b) C is the number of Code Blocks calculated according to section 5.1.2 of TS 36.212 [5].
3. If there is more than one A that minimizes the equation above, then the larger value is chosen per default and the chosen code rate should not exceed 0.93.

A.8.1.1 Overview of V2X reference measurement channels

In Table A.8.1.1-1 are listed the Sidelink reference measurement channels specified in annexes A.8.2 to A.8.6 of this release of TS 36.101. This table is informative and serves only to a better overview. The reference for the concrete reference measurement channels and corresponding implementation's parameters as to be used for requirements are annexes A.8.2 to A.8.6 as appropriate.

Table A.8.1.1-1: Overview of Sidelink reference measurement channels

A.8.2 Reference measurement channel for receiver characteristics

For V2X side link transmission over PC5, Table A.8.2-1 is applicable for measurements on the Receiver Characteristics (clause 7) with the exception of Maximum input level (subclause 7.4G). Table A.8.2-2 and Table A.8.2-3, are applicable for Maximum input level (subclause 7.4G).

Table A.8.2-1 Fixed Reference measurement channel for V2X receiver requirements

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz						
Allocated resource blocks					48		96
Subcarriers per resource block					12		12
Packets per period					1		1
Modulation					QPSK		QPSK
Target Coding Rate					1/3		1/3
Transport Block Size					3496		6968
Transport block CRC	Bits				24		24
Number of Code Blocks per Sub-Frame					1		2
Maximum number of HARQ transmissions					1		1
Binary Channel Bits per subframe	Bits				11520		23040
Max. Throughput averaged over 1 period of 100ms	kbps				34.96		69.68
UE Category					≥ 1		≥ 1
Note 1: 2RBs allocated to SA transmission and 4 symbols allocated to RS.							
Note 2: Throughput (in kbps) will depend on SA period configuration.							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

Table A.8.2-2 Fixed Reference measurement channel for V2X maximum input level requirements for 16QAM

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz						
Allocated resource blocks					48		96
Subcarriers per resource block					12		12
Packets per period					1		1
Modulation					16QAM		16QAM
Target Coding Rate					2/3		2/3
Transport Block Size					15840		29296
Transport block CRC	Bits				24		24
Number of Code Blocks per Sub-Frame					3		5
Maximum number of HARQ transmissions					1		1
Binary Channel Bits per subframe	Bits				23040		46080
Max. Throughput averaged over 1 period of 100ms	kbps				158.4		292.96
Note 1: 2RBs allocated to SA transmission and 4 symbols allocated to RS.							
Note 2: Throughput (in kbps) will depend on SA period configuration.							

Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Table A.8.2-3 (Void)

Table A.8.2-4 Fixed Reference measurement channel for V2X maximum input level for 64QAM

Parameter	Unit	Value					
		1.4	3	5	10	15	20
Channel bandwidth	MHz						
Allocated resource blocks					48		96
Subcarriers per resource block					12		12
Packets per period					1		1
Modulation					64QAM		64QAM
Target Coding Rate					3/4		3/4
Transport Block Size					22920		46888
Transport block CRC	Bits				24		24
Number of Code Blocks per Sub-Frame					4		8
Maximum number of HARQ transmissions					1		1
Binary Channel Bits per subframe	Bits				31104		62208
Max. Throughput averaged over 1 period of 100ms	kbps				229.2		468.88
Note 1: 2RBs allocated to SA transmission, 4 symbols allocated to RS and the last symbol within a subframe is not considered in the mapping process							
Note 2: Throughput (in kbps) will depend on SA period configuration.							
Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).							

A.8.3 Reference measurement channel for transmitter characteristics

For V2X side link transmission over PC5, Table A.8.3-1 and Table A.8.3-2 are applicable for measurements on the Transmitter Characteristics (clause 6).

Table A.8.3-1 Fixed Reference measurement channel for V2X Transmitter requirements for QPSK

Parameter	Ch BW	Allocated RBs	DFT-OFDM Symbols per Sub-Frame	Mod'n	Target Coding rate	Payload size	Transport block CRC	Number of code blocks per Sub-Frame (Note 1)	Total number of bits per Sub-Frame	Total symbols per Sub-Frame
Unit	MHz					Bits	Bits		Bits

A.8.4 Reference measurement for PSCCH performance requirements

Table A.8.4-1: Fixed reference measurement channel for PSCCH performance requirement

Parameter	Unit	Value
Reference channel		CC.8
Allocated resource blocks		2
DFT-OFDM Symbols per subframe (see Note 1)		9
Modulation		QPSK
Payload (without CRC)	Bits	32
CRC	Bits	16
SCI Format		1
Number of PSCCH transmissions		1
Binary Channel Bits (see Note 2)	Bits	432
Note 1: PSCCH transmissions are rate-matched for 10 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.		
Note 2: Binary Channel Bits are calculated under assumption of 9 symbols.		
Note 3: Un-used or redundant bits/code-points in SCI format 1 are randomized.		

A.8.5 Reference measurement for PSSCH performance requirements

Table A.8.5-1: Fixed reference measurement channel for PSSCH performance requirement

Parameter	Unit	Value				
		CD.8	CD.9	CD.10	CD.11	CD.12
Reference channel						
Channel bandwidth	MHz	20	10	20	20	20
Allocated resource blocks		8	3	3	96	8
DFT-OFDM Symbols per subframe (see Note 1)		9	9	9	9	9
Modulation		16QAM	QPSK	QPSK	16QAM	QPSK
Transport Block Size	Bits	1800	208	504	31704	552
Transport block CRC	Bits	24	24	24	24	24
Number of PSSCH transmissions		1	2	1	2	1
Binary Channel Bits (see Note 2)	Bits	3456	648	648	41472	1728
Note 1: PSSCH transmissions are rate-matched for 10 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.						
Note 2: Binary Channel Bits are calculated under assumption of 9 symbols.						

Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

Table A.8.5-2: Fixed reference measurement channel for PSSCH performance requirement

Parameter	Unit	Value							
		CD.13	CD.14	CD.15	CD.16	CD.17	CD.18	CD.19	CD.20
Reference channel									
Channel bandwidth	MHz	20	10	20	10	20	10	20	10
Allocated resource blocks		8	3	96	48	8	8	3	3
DFT-OFDM Symbols per subframe (see Note 1)		9	9	9	9	9	9	9	9
Modulation		64QAM	QPSK	64QAM	64QAM	QPSK	QPSK	QPSK	QPSK
Transport Block Size	Bits	2600	120	48936	24496	408	408	120	120
Transport block CRC	Bits	24	24	24	24	24	24	24	24
Number of PSSCH transmissions		2	2	2	2	1	1	1	1
Binary Channel Bits (see Note 2)	Bits	5184	648	62208	31104	1728	1728	648	648

Note 1: PSSCH transmissions are rate-matched for 9 DFT-OFDM symbols per subframe.
 Note 2: Binary Channel Bits are calculated under assumption of 9 symbols.
 Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit).

A.8.6 Reference measurement for PSBCH performance requirements

Table A.8.6-1: Fixed reference measurement channel for PSBCH performance requirement

Parameter	Unit	Value
Reference channel		CP.2
Channel bandwidth	MHz	20
Allocated resource blocks		6
DFT-OFDM Symbols per subframe (see Note 1)		6
Modulation		QPSK
Transport Block Size	Bits	48
Transport block CRC	Bits	16
Binary Channel Bits (see Note 2)	Bits	864

Note 1: PSBCH transmissions are rate-matched for 7 DFT-OFDM symbols per subframe, and the last symbol shall be punctured as per TS 36.211.
 Note 2: Binary Channel Bits are calculated under assumption of 6 symbols.

A.9 V2X reference resource pool configurations

Table A.9-1: V2X sidelink communication pre-configuration for PSSCH/PSCCH tests (Configuration #1-V2X)

Annex B (normative): Propagation conditions

B.1 Static propagation condition

B.1.1 UE Receiver with 2Rx

For 1 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{pmatrix} 1 \\ 1 \end{pmatrix}.$$

For 2 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}.$$

For 4 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & j & j \\ 1 & 1 & -j & -j \end{bmatrix}$$

For 8 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 1 & j & j & j & j \\ 1 & 1 & 1 & 1 & -j & -j & -j & -j \end{bmatrix}$$

B.1.2 UE Receiver with 4Rx

For 1 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \end{bmatrix}.$$

For 2 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & j \\ 1 & -j \\ 1 & j \\ 1 & -j \end{bmatrix}.$$

For 4 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & j & j \\ 1 & 1 & -j & -j \\ 1 & -1 & j & -j \\ 1 & -1 & -j & j \end{bmatrix}.$$

For 8 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 1 & j & j & j & j \\ 1 & 1 & 1 & 1 & -j & -j & -j & -j \\ 1 & 1 & -1 & -1 & j & j & -j & -j \\ 1 & 1 & -1 & -1 & -j & -j & j & j \end{bmatrix}$$

B.1.3 UE Receiver with 8Rx

For 1 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \\ 1 \end{bmatrix}.$$

For 2 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & j \\ 1 & -j \\ 1 & j \\ 1 & -j \\ -1 & j \\ -1 & -j \\ -1 & j \\ -1 & -j \end{bmatrix}.$$

For 4 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & j & j \\ 1 & 1 & -j & -j \\ 1 & 1 & j & -j \\ 1 & 1 & -j & j \\ 1 & -1 & j & j \\ 1 & -1 & -j & -j \\ 1 & -1 & j & -j \\ 1 & -1 & -j & j \end{bmatrix}.$$

For 8 port transmission the channel matrix is defined in the frequency domain by

$$\mathbf{H} = \begin{bmatrix} 1 & 1 & 1 & 1 & j & j & j & j \\ 1 & 1 & 1 & 1 & -j & -j & -j & -j \\ 1 & 1 & -1 & -1 & j & j & -j & -j \\ 1 & 1 & -1 & -1 & -j & -j & j & j \\ 1 & -1 & 1 & -1 & j & -j & j & -j \\ 1 & -1 & 1 & -1 & -j & j & -j & j \\ 1 & -1 & -1 & 1 & j & -j & -j & j \\ 1 & -1 & -1 & 1 & -j & j & j & -j \end{bmatrix}$$

B.2 Multi-path fading propagation conditions

The multipath propagation conditions consist of several parts:

- A delay profile in the form of a "tapped delay-line", characterized by a number of taps at fixed positions on a sampling grid. The profile can be further characterized by the r.m.s. delay spread and the maximum delay spanned by the taps.
- A combination of channel model parameters that include the Delay profile and the Doppler spectrum, that is characterized by a classical spectrum shape and a maximum Doppler frequency
- A set of correlation matrices defining the correlation between the UE and eNodeB antennas in case of multi-antenna systems.
- Additional multi-path models used for CQI (Channel Quality Indication) tests

B.2.1 Delay profiles

The delay profiles are selected to be representative of low, medium and high delay spread environments. The resulting model parameters are defined in Table B.2.1-1 and the tapped delay line models are defined in Tables B.2.1-2, B.2.1-3 and B.2.1-4.

Table B.2.1-1 Delay profiles for E-UTRA channel models

Model	Number of channel taps	Delay spread (r.m.s.)	Maximum excess tap delay (span)
Extended Pedestrian A (EPA)	7	43 ns	410 ns
Extended Vehicular A model (EVA)	9	357 ns	2510 ns
Extended Typical Urban model (ETU)	9	991 ns	5000 ns

Table B.2.1-2 Extended Pedestrian A model (EPA)

Excess tap delay [ns]	Relative power [dB]
0	0.0
30	-1.0
70	-2.0
90	-3.0
110	-8.0
190	-17.2
410	-20.8

Table B.2.1-3 Extended Vehicular A model (EVA)

Excess tap delay [ns]	Relative power [dB]
0	0.0
30	-1.5
150	-1.4
310	-3.6
370	-0.6
710	-9.1
1090	-7.0
1730	-12.0
2510	-16.9

Table B.2.1-4 Extended Typical Urban model (ETU)

Excess tap delay [ns]	Relative power [dB]
0	-1.0
50	-1.0
120	-1.0
200	0.0
230	0.0
500	0.0
1600	-3.0
2300	-5.0
5000	-7.0

B.2.2 Combinations of channel model parameters

The propagation conditions used for the performance measurements in multi-path fading environment are indicated as EVA[number], EPA[number] or ETU[number] where 'number' indicates the maximum Doppler frequency (Hz).

Table B.2.2-1 Void

B.2.3 MIMO Channel Correlation Matrices

The MIMO channel correlation matrices defined in B.2.3 apply for the antenna configuration using uniform linear arrays at both eNodeB and UE.

B.2.3.1 Definition of MIMO Correlation Matrices

Table B.2.3.1-1 defines the correlation matrix for the eNodeB

Table B.2.3.1-1 eNodeB correlation matrix

	One antenna	Two antennas	Four antennas	Eight antennas
eNode B Correlation	$R_{eNB} = 1$	$R_{eNB} = \begin{pmatrix} 1 & \alpha \\ \alpha^* & 1 \end{pmatrix}$	$R_{eNB} = \begin{pmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^* & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{pmatrix}$	$R_{eNB} = \begin{pmatrix} 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} & \alpha^{36/49} & \alpha^{49/49} \\ \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} & \alpha^{36/49} \\ \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} \\ \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} \\ \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} \\ \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} \\ \alpha^{36/49*} & \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} \\ \alpha^* & \alpha^{36/49*} & \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 \end{pmatrix}$

Table B.2.3.1-2 defines the correlation matrix for the UE:

Table B.2.3.1-2 UE correlation matrix

	One antenna	Two antennas	Four antennas	Eight antennas

UE Correlation	$R_{UE} = 1$	$R_{UE} = \begin{pmatrix} 1 & \beta \\ \beta^* & 1 \end{pmatrix}$	$R_{UE} = \begin{pmatrix} 1 & \beta^{1/9} & \beta^{4/9} & \beta \\ \beta^{1/9*} & 1 & \beta^{1/9} & \beta^{4/9} \\ \beta^{4/9*} & \beta^{1/9*} & 1 & \beta^{1/9} \\ \beta^* & \beta^{4/9*} & \beta^{1/9*} & 1 \end{pmatrix}$	$R_{UE} = \begin{pmatrix} 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} & \beta^{25/49} & \beta^{36/49} & \beta \\ \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} & \beta^{25/49} & \beta^{36/49} \\ \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} & \beta^{25/49} \\ \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} \\ \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} \\ \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} \\ \beta^{36/49*} & \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} \\ \beta^* & \beta^{36/49*} & \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 \end{pmatrix}$
-------------------	--------------	---	--	--

Table B.2.3.1-3 defines the channel spatial correlation matrix R_{spat} . The parameters, α and β in Table B.2.3.1-3 defines the spatial correlation between the antennas at the eNodeB and UE.

Table B.2.3.1-3: R_{spat} correlation matrices

1x2 case	$R_{spat} = R_{UE} = \begin{bmatrix} 1 & \beta \\ \beta^* & 1 \end{bmatrix}$
1x4 case	$R_{spat} = R_{UE} = \begin{pmatrix} 1 & \beta^{1/9} & \beta^{4/9} & \beta \\ \beta^{1/9*} & 1 & \beta^{1/9} & \beta^{4/9} \\ \beta^{4/9*} & \beta^{1/9*} & 1 & \beta^{1/9} \\ \beta^* & \beta^{4/9*} & \beta^{1/9*} & 1 \end{pmatrix}$

8x8 case	$R_{spat} = R_{eNB} \otimes R_{UE} =$	$\begin{pmatrix} 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} & \alpha^{36/49} & \alpha \\ \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} & \alpha^{36/49} \\ \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} & \alpha^{25/49} \\ \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} & \alpha^{16/49} \\ \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} & \alpha^{9/49} \\ \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} & \alpha^{4/49} \\ \alpha^{36/49*} & \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 & \alpha^{1/49} \\ \alpha^* & \alpha^{36/49*} & \alpha^{25/49*} & \alpha^{16/49*} & \alpha^{9/49*} & \alpha^{4/49*} & \alpha^{1/49*} & 1 \end{pmatrix}$	\otimes	$\begin{pmatrix} 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} & \beta^{25/49} & \beta^{36/49} \\ \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} & \beta^{25/49} \\ \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} & \beta^{16/49} \\ \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} & \beta^{9/49} \\ \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} & \beta^{4/49} \\ \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 & \beta^{1/49} \\ \beta^{36/49*} & \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} & 1 \\ \beta^* & \beta^{36/49*} & \beta^{25/49*} & \beta^{16/49*} & \beta^{9/49*} & \beta^{4/49*} & \beta^{1/49*} \end{pmatrix}$
-----------------	---------------------------------------	---	-----------	--

For cases with more antennas at either eNodeB or UE or both, the channel spatial correlation matrix can still be expressed as the Kronecker product of R_{eNB} and R_{UE} according to $R_{spat} = R_{eNB} \otimes R_{UE}$.

B.2.3.2 MIMO Correlation Matrices at High, Medium and Low Level

The α and β for different correlation types are given in Table B.2.3.2-1.

Table B.2.3.2-1: The α and β parameters for ULA MIMO correlation matrices

Correlation Model	α	β
Low correlation	0	0
Medium Correlation	0.3	0.9
Medium Correlation A	0.3	0.3874
Medium Correlation B	0.3	0.005154
High Correlation	0.9	0.9

The correlation matrices for high, medium, low and medium A correlation are defined in Table B.2.3.1-2, B.2.3.2-3, B.2.3.2-4 and B.2.3.2-5 as below.

The values in Table B.2.3.2-2 have been adjusted for the 4x2 and 4x4 high correlation cases to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision. This is done using the equation:

$$\mathbf{R}_{high} = [\mathbf{R}_{spatial} + a\mathbf{I}_n] / (1 + a)$$

Where the value “a” is a scaling factor such that the smallest value is used to obtain a positive semi-definite result. For the 4x2 high correlation case, a=0.00010. For the 4x4 high correlation case, a=0.00012.

The same method is used to adjust the 2x4 and 4x4 medium correlation matrix in Table B.2.3.2-3 to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision with a = 0.00010 and a = 0.00012.

Table B.2.3.2-2: MIMO correlation matrices for high correlation

1x2 case	$R_{high} = \begin{pmatrix} 1 & 0.9 \\ 0.9 & 1 \end{pmatrix}$							
2x1 case	$R_{high} = \begin{pmatrix} 1 & 0.9 \\ 0.9 & 1 \end{pmatrix}$

Table B.2.3.2-4: MIMO correlation matrices for low correlation

1x2 case	$R_{\text{low}} = \mathbf{I}_2$
1x4 case	$R_{\text{low}} = \mathbf{I}_4$
2x1 case	$R_{\text{low}} = \mathbf{I}_2$
2x2 case	$R_{\text{low}} = \mathbf{I}_4$
2x4 case	$R_{\text{low}} = \mathbf{I}_8$
4x1 case	$R_{\text{low}} = \mathbf{I}_4$
4x2 case	$R_{\text{low}} = \mathbf{I}_8$
4x4 case	$R_{\text{low}} = \mathbf{I}_{16}$

In Table B.2.3.2-4, \mathbf{I}_d is the $d \times d$ identity matrix.

Table B.2.3.2-5: MIMO correlation matrices for medium correlation A

2x4 case	$R_{\text{Medium A}} =$	1.0000 0.9000 0.6561 0.3874 0.3000 0.2700 0.1968 0.1162
		0.9000 1.0000 0.9000 0.6561 0.2700 0.3000 0.2700 0.1968
		0.6561 0.9000 1.0000 0.9000 0.1968 0.2700 0.3000 0.2700
		0.3874 0.6561 0.9000 1.0000 0.1162 0.1968 0.2700 0.3000
		0.3000 0.2700 0.1968 0.1162 1.0000 0.9000 0.6561 0.3874
		0.2700 0.3000 0.2700 0.1968 0.9000 1.0000 0.9000 0.6561
		0.1968 0.2700 0.3000 0.2700 0.6561 0.9000 1.0000 0.9000
		0.1162 0.1968 0.2700 0.3000 0.3874 0.6561 0.9000 1.0000

$$P(a,b) = \begin{cases} 1 & \text{for } a = (j-1)N_r + i \text{ and } b = 2(j-1)N_r + i, \quad i = 1, \dots, N_r, j = 1, \dots, N_t/2 \\ 1 & \text{for } a = (j-1)N_r + i \text{ and } b = 2(j - N_t/2)N_r - N_r + i, \quad i = 1, \dots, N_r, j = N_t/2 + 1, \dots, N_t \\ 0 & \text{otherwise} \end{cases}$$

where N_t and N_r is the number of transmitter and receiver respectively. This is used to map the spatial correlation coefficients in accordance with the antenna element labelling system described in B.2.3A.

B.2.3A.2 Spatial Correlation Matrices using cross polarized antennas at eNB and UE sides

B.2.3A.2.1 Spatial Correlation Matrices at eNB side

For 2-antenna transmitter using one pair of cross-polarized antenna elements, $R_{eNB} = 1$.

For 4-antenna transmitter using two pairs of cross-polarized antenna elements, $R_{eNB} = \begin{pmatrix} 1 & \alpha \\ \alpha^* & 1 \end{pmatrix}$.

For 8-antenna transmitter using four pairs of cross-polarized antenna elements, $R_{eNB} = \begin{pmatrix} 1 & \alpha^{1/9} & \alpha^{4/9} & \alpha \\ \alpha^{1/9*} & 1 & \alpha^{1/9} & \alpha^{4/9} \\ \alpha^{4/9*} & \alpha^{1/9*} & 1 & \alpha^{1/9} \\ \alpha^* & \alpha^{4/9*} & \alpha^{1/9*} & 1 \end{pmatrix}$.

B.2.3A.2.2 Spatial Correlation Matrices at UE side

For 2-antenna receiver using one pair of cross-polarized antenna elements, $R_{UE} = 1$.

For 4-antenna receiver using two pairs of cross-polarized antenna elements, $R_{UE} = \begin{pmatrix} 1 & \beta \\ \beta^* & 1 \end{pmatrix}$.

B.2.3A.3 MIMO Correlation Matrices using cross polarized antennas

The values for parameters α , β and γ for the cross polarized antenna models are given in Table B.2.3A.3-1.

Table B.2.3A.3-1: : The α and β parameters for cross-polarized MIMO correlation matrices

Correlation Model	α	β	γ
Medium Correlation A	0.3	0.6	0.2
High Correlation	0.9	0.9	0.3
Note 1:	Value of α applies when more than one pair of cross-polarized antenna elements at eNB side.		
Note 2:	Value of β applies when more than one pair of cross-polarized antenna elements at UE side.		

The correlation matrices for high spatial correlation and medium correlation A are defined in Table B.2.3A.3-2 and Table B.2.3A.3-3 as below.

The values in Table B.2.3A.3-2 have been adjusted to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision. This is done using the equation:

$$\mathbf{R}_{high} = [\mathbf{R}_{spat} + a\mathbf{I}_n] / (1 + a)$$

Where the value “a” is a scaling factor such that the smallest value is used to obtain a positive semi-definite result. For the 8x2 high spatial correlation case, a=0.00010.

Table B.2.3A.3-2: MIMO correlation matrices for high spatial correlation

B.2.3A.4 Beam steering approach

Given the channel spatial correlation matrix in B.2.3A.1, the corresponding random channel matrix \mathbf{H} can be calculated. The signal model for the k -th subframe is denoted as

$$y = \mathbf{H}D_{\theta_k}Wx + n$$

Where

- \mathbf{H} is the $N_r \times N_t$ channel matrix per subcarrier.
- D_{θ_k} is the steering matrix,

For 8 transmission antennas, $D_{\theta_k} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & e^{j\theta_k} & 0 & 0 \\ 0 & 0 & e^{j2\theta_k} & 0 \\ 0 & 0 & 0 & e^{j3\theta_k} \end{bmatrix};$

For 4 transmission antennas, $D_{\theta_k} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes \begin{bmatrix} 1 & 0 \\ 0 & e^{j3\theta_k} \end{bmatrix}.$

- θ_k controls the phase variation, and the phase for k -th subframe is denoted by $\theta_k = \theta_0 + \Delta\theta \cdot k$, where θ_0 is the random start value with the uniform distribution, i.e., $\theta_0 \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation, which is defined in Table B.2.3A.4-1, and k is the linear increment of 1 for every subframe throughout the simulation,
- W is the precoding matrix for N_t transmission antennas,
- y is the received signal, x is the transmitted signal, and n is AWGN.

Table B.2.3A.4-1: The step of phase variation

Variation Step	Value (rad/subframe)
$\Delta\theta$	1.2566×10^{-3}

B.2.3B MIMO Channel Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE

The MIMO channel correlation matrices defined in B.2.3B apply for the antenna configuration using two-dimension (2D) cross polarized antennas at eNodeB and the antenna configuration using cross polarized antennas at UE. The cross-polarized antenna elements with ± 45 degrees polarization slant angles are deployed at eNB and cross-polarized antenna elements with $+90/0$ degrees polarization slant angles are deployed at UE.

For 2D cross-polarized antenna array at eNodeB, the N antennas are indexed by (N_1, N_2, P) , and total number of antennas is $N = P \cdot N_1 \cdot N_2$, where

- N_1 is the number of antenna elements in first dimension (i.e. vertical direction) with same polarization,
- N_2 is the number of antenna elements in second dimension (i.e. horizontal direction) with same polarization, and
- P is the number of polarization groups.

For the 2D cross-polarized antennas at eNB, the N antennas are labelled such that antennas shall be in increasing order of the second dimension firstly, then the first dimension, and finally the polarization group. For a specific antenna

element at p -th polarization, n_1 -th row, and n_2 -th column within the 2D antenna array, the following index number is used for antenna labelling:

$$\text{Index}(p, n_1, n_2) = p \cdot N_1 \cdot N_2 + n_1 \cdot N_2 + n_2 + 1, \quad p = 0, 1, \quad n_1 = 0, \dots, N_1 - 1, \quad n_2 = 0, \dots, N_2 - 1.$$

where N is the number of transmit antennas, p is the polarization group index, n_1 is the row index, and n_2 is the column index of the antenna element.

For the cross-polarized antennas at UE, the N antennas are labelled such that antennas for one polarization are listed from 1 to $N/2$ and antennas for the other polarization are listed from $N/2+1$ to N , where N is the number of receive antennas.

B.2.3B.1 Definition of MIMO Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE

For the channel spatial correlation matrix, the following is used:

$$R_{\text{spat}} = P(R_{\text{eNB}} \otimes \Gamma \otimes R_{\text{UE}})P^T$$

where

- R_{UE} is the spatial correlation matrix at the UE with same polarization,
- R_{eNB} is the spatial correlation matrix at the eNB with same polarization,
- Γ is a polarization correlation matrix, and
- $(\bullet)^T$ denotes transpose.

The spatial correlation matrix at the eNB is further expressed as following:

$$R_{\text{eNB}} = R_{\text{eNB_Dim,1}} \otimes R_{\text{eNB_Dim,2}}$$

where

- $R_{\text{eNB_Dim,1}}$ is the correlation matrix of antenna elements in first dimension with same polarization, and
- $R_{\text{eNB_Dim,2}}$ is the correlation matrix of antenna elements in second dimension with same polarization.

The matrix Γ is defined as

$$\Gamma = \begin{bmatrix} 1 & 0 & -\gamma & 0 \\ 0 & 1 & 0 & \gamma \\ -\gamma & 0 & 1 & 0 \\ 0 & \gamma & 0 & 1 \end{bmatrix}$$

A permutation matrix P elements are defined as

$$P(a,b) = \begin{cases} 1 & \text{for } a = (j-1)Nr + i \text{ and } b = 2(j-1)Nr + i, \quad i = 1, \dots, Nr, j = 1, \dots, Nt/2 \\ 1 & \text{for } a = (j-1)Nr + i \text{ and } b = 2(j - Nt/2)Nr - Nr + i, \quad i = 1, \dots, Nr, j = Nt/2 + 1, \dots, Nt \\ 0 & \text{otherwise} \end{cases}$$

where N_t and N_r is the number of transmitter and receiver respectively. This is used to map the spatial correlation coefficients in accordance with the antenna element labelling system described in B.2.3B.

B.2.3B.2 Spatial Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE

B.2.3B.2.1 Spatial Correlation Matrices at eNB side

For one direction of the 2D antenna array at the eNB side, the followings are used to construct the spatial correlation matrix:

For 1 antenna element of the same polarization in one direction, $R_{eNB_Dim,i} = 1$.

For 2 antenna elements of the same polarization in one direction, $R_{eNB_Dim,i} = \begin{pmatrix} 1 & \alpha_i \\ \alpha_i^* & 1 \end{pmatrix}$.

For 3 antenna elements of the same polarization in one direction, $R_{eNB_Dim,i} = \begin{pmatrix} 1 & \alpha_i^{1/4} & \alpha_i \\ \alpha_i^{1/4*} & 1 & \alpha_i^{1/4} \\ \alpha_i^* & \alpha_i^{1/4*} & 1 \end{pmatrix}$.

For 4 antenna elements of the same polarization in one direction, $R_{eNB_Dim,i} = \begin{pmatrix} 1 & \alpha_i^{1/9} & \alpha_i^{4/9} & \alpha_i \\ \alpha_i^{1/9*} & 1 & \alpha_i^{1/9} & \alpha_i^{4/9} \\ \alpha_i^{4/9*} & \alpha_i^{1/9*} & 1 & \alpha_i^{1/9} \\ \alpha_i^* & \alpha_i^{4/9*} & \alpha_i^{1/9*} & 1 \end{pmatrix}$.

where the index $i=1,2$ stands for first dimension and second dimension respectively.

B.2.3B.2.2 Spatial Correlation Matrices at UE side

For 2-antenna receiver using one pair of cross-polarized antenna elements, $R_{UE} = 1$.

For 4-antenna receiver using two pairs of cross-polarized antenna elements, $R_{UE} = \begin{pmatrix} 1 & \beta \\ \beta^* & 1 \end{pmatrix}$.

B.2.3B.3 MIMO Correlation Matrices using two-dimension cross polarized antennas at eNB and cross polarized antennas at UE

The values for parameters α_1 , α_2 , β and γ for high and medium spatial correlation are given in Table B.2.3B.3-1.

Table B.2.3B.3-1

Correlation type	α_1	α_2	β	γ
High	0.9	0.9	0.9	0.3
Medium	0.3	0.3	0.6	0.2
Note 1:	Value of α_1 applies when more than one pair of cross-polarized antenna elements in first dimension at eNB side.			
Note 2:	Value of α_2 applies when more than one pair of cross-polarized antenna elements in second dimension at eNB side.			
Note 3:	Value of β applies when more than one pair of cross-polarized antenna elements at UE side.			

The correlation matrices for high spatial correlation with 12(2,3,2)x2 case and 16(2,4,2)x2 case are defined in Table B.2.3B.3-2 as below.

The values in Table B.2.3B.3-2 have been adjusted to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision. This is done using the equation:

$$\mathbf{R}_{high} = [\mathbf{R}_{spat} + a\mathbf{I}_n]/(1 + a)$$

where the value “a” is a scaling factor such that the smallest value is used to obtain a positive semi-definite result. For the 16(2,4,2)x2 high spatial correlation case, a=0.00012.

The same method is used to adjust the the 24(3,4,2)x2 and 32(4,4,2)x2 high correlation matrix to insure the correlation matrix is positive semi-definite after round-off to 4 digit precision with a =0.00012 and a=0.00022.

Table B.2.3B.3-2: MIMO correlation matrices for high spatial correlation

B.2.3B.4 Beam steering approach

Given the channel spatial correlation matrix in B.2.3B.1, the corresponding random channel matrix \mathbf{H} can be calculated. The signal model for the k -th subframe is denoted as

$$y = \mathbf{H} \mathbf{D}_{\theta_{k,1}, \theta_{k,2}} \mathbf{W}x + n$$

And the steering matrix is further expressed as following:

$$\mathbf{D}_{\theta_{k,1}, \theta_{k,2}} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes (\mathbf{D}_{\theta_{k,1}}(N_1) \otimes \mathbf{D}_{\theta_{k,2}}(N_2))$$

where

- \mathbf{H} is the $N_r \times N_t$ channel matrix per subcarrier.
- $\mathbf{D}_{\theta_{k,1}, \theta_{k,2}}$ is the steering matrix,
- $\mathbf{D}_{\theta_{k,1}}(N_1)$ is the steering matrix in first dimension with same polarization,
- $\mathbf{D}_{\theta_{k,2}}(N_2)$ is the steering matrix in second dimension with same polarization,
- N_1 is the number of antenna elements in first dimension with same polarization,
- N_2 is the number of antenna elements in second dimension with same polarization,

For 1 antenna element of the same polarization in one direction, $\mathbf{D}_{\theta_{k,i}}(1) = 1$.

For 2 antenna elements of the same polarization in one direction, $\mathbf{D}_{\theta_{k,i}}(2) = \begin{bmatrix} 1 & 0 \\ 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

For 3 antenna elements of the same polarization in one direction, $\mathbf{D}_{\theta_{k,i}}(3) = \begin{bmatrix} 1 & 0 & 0 \\ 0 & e^{j1.5\theta_{k,i}} & 0 \\ 0 & 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

For 4 antenna elements of the same polarization in one direction, $\mathbf{D}_{\theta_{k,i}}(4) = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & e^{j\theta_{k,i}} & 0 & 0 \\ 0 & 0 & e^{j2\theta_{k,i}} & 0 \\ 0 & 0 & 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

where the index $i=1,2$ stands for first dimension and second dimension respectively.

- $\theta_{k,i}$ controls the phase variation in first dimension and second dimension respectively, and the phase for k-th subframe is denoted by $\theta_{k,i} = \theta_{0,i} + \Delta\theta \cdot k$, where $\theta_{0,i}$ is the random start value with the uniform distribution, i.e., $\theta_{0,i} \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation, which is defined in Table B.2.3B.4-1, and k is the linear increment of 1 for every subframe throughout the simulation, the index $i=1,2$ stands for first dimension and second dimension respectively.
- W is the precoding matrix for Nt transmission antennas,
- y is the received signal, x is the transmitted signal, and n is AWGN.

Table B.2.3B.4-1: The step of phase variation

Variation Step	Value (rad/subframe)
$\Delta\theta$	1.2566×10^{-3}

B.2.3B.4A Beam steering approach with dual cluster beams

Given the channel spatial correlation matrix in B.2.3B.1, the corresponding random channel matrix H can be calculated. The signal model for the k-th subframe is denoted as

$$y = \left[\sqrt{\frac{1}{1+p^2}} H_m D_{\theta_{k,1}, \theta_{k,2}}^{(m)} + \sqrt{\frac{p^2}{1+p^2}} H_s D_{\theta_{k,1}, \theta_{k,2}}^{(s)} \right] Wx + n$$

And the steering matrix is further expressed as following:

$$D_{\theta_{k,1}, \theta_{k,2}} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \otimes (D_{\theta_{k,1}}(N_1) \otimes D_{\theta_{k,2}}(N_2))$$

where

- H_m, H_s are independent channels for the first beam and second beam with the $N_r \times N_t$ channel matrix per subcarrier.
- $D_{\theta_{k,1}, \theta_{k,2}}^{(m)}, D_{\theta_{k,1}, \theta_{k,2}}^{(s)}$ are the steering matrix for first beam and second beam
- $D_{\theta_{k,1}}(N_1)$ is the steering matrix in first dimension with same polarization,
- $D_{\theta_{k,2}}(N_2)$ is the steering matrix in second dimension with same polarization,
- N_1 is the number of antenna elements in first dimension with same polarization,
- N_2 is the number of antenna elements in second dimension with same polarization,
- p is the relative power ratio of the second beam to the first beam, the value of p is specific to a test case,

For 1 antenna element of the same polarization in one direction, $D_{\theta_{k,i}}(1) = 1$.

For 2 antenna elements of the same polarization in one direction, $D_{\theta_{k,i}}(2) = \begin{bmatrix} 1 & 0 \\ 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

For 3 antenna elements of the same polarization in one direction, $D_{\theta_{k,i}}(3) = \begin{bmatrix} 1 & 0 & 0 \\ 0 & e^{j1.5\theta_{k,i}} & 0 \\ 0 & 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

For 4 antenna elements of the same polarization in one direction, $D_{\theta_{k,i}}(4) = \begin{bmatrix} 1 & 0 & 0 & 0 \\ 0 & e^{j\theta_{k,i}} & 0 & 0 \\ 0 & 0 & e^{j2\theta_{k,i}} & 0 \\ 0 & 0 & 0 & e^{j3\theta_{k,i}} \end{bmatrix}$.

where the index $i = 1,2$ stands for first dimension and second dimension respectively.

- $\theta_{k,i}$ controls the phase variation in first dimension and second dimension respectively, and the phase for k-th subframe is denoted by $\theta_{k,i} = \theta_{0,i} + \Delta\theta \cdot k$, where $\theta_{0,i}$ is the random start value with the uniform distribution, i.e., $\theta_{0,i} \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation, which is defined in Table B.2.3B.4-1, and k is the linear increment of 1 for every subframe throughout the simulation, the index $i=1,2$ stands for first dimension and second dimension respectively.
- W is the precoding matrix for Nt transmission antennas,
- y is the received signal, x is the transmitted signal, and n is AWGN.

Table B.2.3B.4A-1: The step of phase variation

Variation Step	Value (rad/subframe)
$\Delta\theta^{(a)}$	1.2566×10^{-3}
$\Delta\theta^{(s)}$	2.5132×10^{-3}

B.2.4 Propagation conditions for CQI tests

For Channel Quality Indication (CQI) tests, the following additional multi-path profile is used:

$$h(t, \tau) = \delta(\tau) + a \exp(-i2\pi f_D t) \delta(\tau - \tau_d),$$

in continuous time (t, τ) representation, with τ_d the delay, a a constant and f_D the Doppler frequency. The same $h(t, \tau)$ is used to describe the fading channel between every pair of Tx and Rx.

B.2.4.1 Propagation conditions for CQI tests with multiple CSI processes

For CQI tests with multiple CSI processes, the following additional multi-path profile is used for 2 port transmission:

$$H = \begin{bmatrix} 1 & j \\ 1 & -j \end{bmatrix} \circ H_{MP}$$

Where \circ represents Hadamard product, H_{MP} indicates the 2x2 propagation channel generated in the manner defined in Clause B.2.4.

B.2.5 Void

B.2.6 MBSFN Propagation Channel Profile

B.2.6.1 Subcarrier spacing 15kHz or 7.5kHz

Table B.2.6.1-1 shows propagation conditions that are used for the MBSFN performance requirements in multi-path fading environment in an extended delay spread environment.

Table B.2.6.1-1: Propagation Conditions for Multi-Path Fading Environments for MBSFN Performance Requirements in an extended delay spread environment with subcarrier spacing 15kHz or 7.5kHz

B.3 High speed train scenario

The high speed train condition for the test of the baseband performance is a non fading propagation channel with one tap. Doppler shift is given by

$$f_s(t) = f_d \cos\theta(t) \tag{B.3.1}$$

where $f_s(t)$ is the Doppler shift and f_d is the maximum Doppler frequency. The cosine of angle $\theta(t)$ is given by

$$\cos\theta(t) = \frac{D_s/2 - vt}{\sqrt{D_{\min}^2 + (D_s/2 - vt)^2}}, \quad 0 \leq t \leq D_s/v \tag{B.3.2}$$

$$\cos\theta(t) = \frac{-1.5D_s + vt}{\sqrt{D_{\min}^2 + (-1.5D_s + vt)^2}}, \quad D_s/v < t \leq 2D_s/v \tag{B.3.3}$$

$$\cos\theta(t) = \cos\theta(t \bmod (2D_s/v)), \quad t > 2D_s/v \tag{B.3.4}$$

where $D_s/2$ is the initial distance of the train from eNodeB, and D_{\min} is eNodeB Railway track distance, both in meters; v is the velocity of the train in m/s, t is time in seconds.

Doppler shift and cosine angle are given by equation B.3.1 and B.3.2-B.3.4 respectively, where the required input parameters listed in table B.3-1 and the resulting Doppler shift shown in Figure B.3-1 are applied for all frequency bands.

Table B.3-1: High speed train scenario

Parameter	Value
D_s	300 m
D_{\min}	2 m
v	300 km/h
f_d	750 Hz

NOTE 1: Parameters for HST conditions in table B.3-1 including f_d and Doppler shift trajectories presented on figure B.3-1 were derived from Band 7 and are applied for performance verification in all frequency bands.

Figure B.3-1: Doppler shift trajectory

For 1x2 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx.

For 2x2 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx with phase shift according to $\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}$.

B.3A HST-SFN scenario

There is an infinite number of RRHs distributed equidistantly along the track with the same Cell ID as depicted in figure B.3A-1.

Figure B.3A-1: Deployment of HST-SFN

The location of RRH k is given as:

$$x_k = k * D_s + j * D_{\min} \quad (\text{B.3A.1})$$

where: $k \in [-\infty, \infty]$, $j = \text{sqr}t(-1)$ and D_{\min} is the distance between the RRHs and railway track, while D_s is the distance of two RRHs, both in meters.

The train location is denoted as:

$$y = a + j * 0 \quad (\text{B.3A.2})$$

where: $a \in [0, \infty]$ and a means distance in meters, which means the train is right on the track.

The HST-SFN scenario for the test of the baseband performance is a non fading propagation channel with four taps, namely the four nearest RRHs. Thus RRH k is visible for the train only in the range:

$$k * D_s - 2 * D_s \leq a < k * D_s + 2 * D_s \quad (\text{B.3A.3})$$

Power level P_k (dB) for the signal from k th RRH, normalized to the total power received from all visible RRHs, is given by:

$$P_k = -20 \lg(|y - x_k|) - 10 \lg \left(\sum_{i \in \{i | i * D_s - 2 * D_s \leq a < i * D_s + 2 * D_s\}} \frac{1}{|y - x_i|^2} \right) \text{ for } k * D_s - 2 * D_s \leq a < k * D_s + 2 * D_s \quad (\text{B.3A.4})$$

Doppler shift $F_{D,k}$ (Hz) from k th RRH is given by:

$$F_{D,k} = f_c \times \text{real} \left[-v \times \frac{y - x_k}{|y - x_k| \times C} \right] \text{ for } k * D_s - 2 * D_s \leq a < k * D_s + 2 * D_s \quad (\text{B.3A.5})$$

The relative delay T_k (s) for the signal from k th RRH can be derived as:

$$T_k = \frac{|y - x_k|}{C} \text{ for } k * D_s - 2 * D_s \leq a < k * D_s + 2 * D_s \tag{B.3A.6}$$

In the above v (m/s) is the moving speed of the train, f_c (Hz) is the center frequency, and C (m/s) is the velocity of light.

Power level, Doppler shift and relative delay are given by equations B.3A.4 ~ B.3A.6 respectively, where the required input parameters listed in table B.3A-1 and the resulting Doppler shift shown in Figure B.3A-3 are applied for all frequency bands.

Table B.3A-1: HST-SFN scenario

Parameter	Value
D_s	1000 m
D_{min}	50m
v	350 km/h
f_d	872 Hz

NOTE 1: Parameters for HST-SFN scenario in Table B.3A-1 including f_d and Doppler shift trajectories presented in Figure B.3A-2 were derived from Band 7 and are applied for performance verification in all frequency bands. And the trajectories of relative power, Doppler shifts and relative delay presented in Figures B.3A-2 ~ B.3A-4 are derived from the equations B.3A.4 ~ B.3A.6 respectively.

Figure B.3A-2 Relative power level trajectories

Figure B.3A-3 Doppler shifts trajectories

Figure B.3A-4 Relative delay trajectories

For 2x2 antenna configuration, the same $h(t, \tau)$ is used to describe the channel between every pair of Tx and Rx with phase shift according to $\mathbf{H} = \begin{pmatrix} 1 & j \\ 1 & -j \end{pmatrix}$.

For 2x4 antenna configuration, the same $h(t,\tau)$ is used to describe the channel between every pair of Tx and Rx with

$$\mathbf{H} = \begin{bmatrix} 1 & j \\ 1 & -j \\ 1 & j \\ 1 & -j \end{bmatrix}$$

phase shift according to

B.3B HST-SFN scenario for 500 km/h speed

The channel model for this scenario is the same as B.3A, with the following parameters replacing Table B.3A-1:

Table B.3B-1-500: HST-SFN scenario for higher speed

Parameter	Value
D_s	1000 m
D_{\min}	50 m
v	500 km/h
f_d	972 Hz

B.3C HST scenario for 500 km/h speed

The channel model for this scenario is the same as B.3, with the following parameters replacing Table B.3-1:

Table B.3C-1: HST-500 scenario for higher speed

Parameter	Value
D_s	300 m
D_{\min}	2 m
v	500 km/h
f_d	972 Hz

B.4 Beamforming Model

B.4.1 Single-layer random beamforming (Antenna port 5, 7, or 8)

Single-layer transmission on antenna port 5 or on antenna port 7 or 8 without a simultaneous transmission on the other antenna port, is defined by using a precoder vector $W(i)$ of size 2×1 or 4×1 randomly selected with the number of layers $\nu = 1$ from Table 6.3.4.2.3-1 or Table 6.3.4.2.3-2 in [4] as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0, 1, \dots, M_{\text{symp}}^{\text{ap}} - 1$, for antenna port $p \in \{5, 7, 8\}$, with $M_{\text{symp}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DRS), and generates a block of signals $y_{\text{bf}}(i) = [y_{\text{bf}}(i) \ \tilde{y}_{\text{bf}}(i)]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{\text{bf}}(i) \\ \tilde{y}_{\text{bf}}(i) \end{bmatrix} = W(i)y^{(p)}(i)$$

Single-layer transmission on antenna port 7 or 8 with a simultaneous transmission on the other antenna port, is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size 2×1 or 4×1 , which are not identical and randomly

selected with the number of layers $\nu = 1$ from Table 6.3.4.2.3-1 or Table 6.3.4.2.3-2 in [4], as beamforming weights, and normalizing the transmit power as follows:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = \frac{1}{\sqrt{2}} (W_1(i)y^{(7)}(i) + W_2(i)y^{(8)}(i))$$

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

B.4.1A Single-layer random beamforming (Antenna port 7, 8, 11 or 13 with enhanced DMRS table configured)

Single-layer transmission on antenna port 11 with a simultaneous transmission on one antenna port from antenna port 7,8 or 13, is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size 2×1 , which are not identical and randomly selected with the number of layers $\nu = 1$ from Table 6.3.4.2.3-1 in [4], as beamforming weights, and normalizing the transmit power as follows:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = \frac{1}{\sqrt{2}} (W_1(i)y^{(11)}(i) + W_2(i)y^{(p_1)}(i))$$

The precoders takes $y^{(11)}(i)$ and $y^{(p_1)}(i)$ as the input the signals, $i = 0,1,\dots, M_{\text{symp}}^{\text{ap}} - 1$, with $M_{\text{symp}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DM-RS), and generates a block of signals $y_{bf}(i) = [y_{bf}(i) \ \tilde{y}_{bf}(i)]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements.

The antenna port $p_1 \in \{7,8,13\}$ update granularity is specific to a test case.

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

B.4.2 Dual-layer random beamforming (antenna ports 7 and 8)

Dual-layer transmission on antenna ports 7 and 8 is defined by using a precoder matrix $W(i)$ of size 2×2 randomly selected with the number of layers $\nu = 2$ from Table 6.3.4.2.3-1 in [4] as beamforming weights. This precoder takes as an input a block of signals for antenna ports 7 and 8, $y(i) = [y^{(7)}(i) \ y^{(8)}(i)]^T$, $i = 0,1,\dots, M_{\text{symp}}^{\text{ap}} - 1$, with $M_{\text{symp}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols, and generates a block of signals $y_{bf}(i) = [y_{bf}(i) \ \tilde{y}_{bf}(i)]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \end{bmatrix},$$

The precoder update granularity is specific to a test case.

The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 1$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $y_{bf}(i)$. The CSI reference symbols $a_{k,l}^{(p)}$ satisfying $p \bmod 2 = 0$, $p \in \{15,16,\dots,22\}$, are transmitted on the same physical antenna element as the modulation symbols $\tilde{y}_{bf}(i)$.

B.4.3 Generic beamforming model (antenna ports 7-14)

The transmission on antenna port(s) $p = 7,8,\dots,\nu + 6$ is defined by using a precoder matrix $W(i)$ of size $N_{CSI} \times \nu$, where N_{CSI} is the number of CSI reference signals configured per test and ν is the number of spatial layers. This precoder takes as an input a block of signals for antenna port(s) $p = 7,8,\dots,\nu + 6$,

$y^{(p)}(i) = [y^{(7)}(i) \ y^{(8)}(i) \ \dots \ y^{(6+\nu)}(i)]$, $i = 0,1,\dots,M_{\text{symb}}^{\text{ap}} - 1$, with $M_{\text{symb}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols (DM-RS), and generates a block of signals $y_{bf}^{(q)}(i) = [y_{bf}^{(0)}(i) \ y_{bf}^{(1)}(i) \ \dots \ y_{bf}^{(N_{CSI}-1)}(i)]^T$ the elements of which are to be mapped onto the same time-frequency index pair (k,l) but transmitted on different physical antenna elements:

$$\begin{bmatrix} y_{bf}^{(0)}(i) \\ y_{bf}^{(1)}(i) \\ \vdots \\ y_{bf}^{(N_{CSI}-1)}(i) \end{bmatrix} = W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \\ \vdots \\ y^{(6+\nu)}(i) \end{bmatrix}$$

The precoder matrix $W(i)$ is specific to a test case.

The physical antenna elements are identified by indices $j = 0,1,\dots,N_{ANT} - 1$, where $N_{ANT} = N_{CSI}$ is the number of physical antenna elements configured per test.

Modulation symbols $y_{bf}^{(q)}(i)$ with $q \in \{0,1,\dots,N_{CSI} - 1\}$ (i.e. beamformed PDSCH and DM-RS) are mapped to the physical antenna index $j = q$.

Modulation symbols $y^{(p)}(i)$ with $p \in \{0,1,\dots,P - 1\}$ (i.e. PBCH, PDCCH, PHICH, PCFICH) are mapped to the physical antenna index $j = p$, where P is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{0,1,\dots,P - 1\}$ (i.e. CRS) are mapped to the physical antenna index $j = p$, where P is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{15,16,\dots,14 + N_{CSI}\}$ (i.e. CSI-RS) are mapped to the physical antenna index $j = p - 15$, where N_{CSI} is the number of CSI reference signals configured per test.

B.4.4 Random beamforming for EPDCCH distributed transmission (Antenna port 107 and 109)

EPDCCH distributed transmission on antenna port 107 and antenna port 109 is defined by using a pair of precoder vectors $W_1(i)$ and $W_2(i)$ each of size 2×1 , which are not identical and randomly selected per EPDCCH PRB pair with the number of layers $\nu = 1$ from Table 6.3.4.2.3-1 in [4], as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0,1,\dots, M_{\text{symb}}^{\text{ap}} - 1$, for antenna port $p \in \{107,109\}$, with $M_{\text{symb}}^{\text{ap}}$ the number of modulation

symbols including the user-specific reference symbols (DMRS), and generates a block of signals $y_{bf}(i) = [y_{bf}(i) \ \tilde{y}_{bf}(i)]^T$. When EPDCCH is associated with port 107, the transmitted block of signals is denoted as

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W_1(i)y^{(107)}(i).$$

When EPDCCH is associated with port 109, the transmitted block of signals is denoted as

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W_2(i)y^{(109)}(i).$$

B.4.5 Random beamforming for EPDCCH localized transmission (Antenna port 107, 108, 109 or 110)

EPDCCH localized transmission on antenna port 107, 108, 109 or 110 is defined by using a precoder vector $W(i)$ of size 2×1 randomly selected with the number of layers $\nu = 1$ from Table 6.3.4.2.3-1 in [4] as beamforming weights. This precoder takes as an input the signal $y^{(p)}(i)$, $i = 0, 1, \dots, M_{\text{symp}}^{\text{ap}} - 1$, for antenna port $p \in \{107, 108, 109, 110\}$, with $M_{\text{symp}}^{\text{ap}}$ the number of modulation symbols including the user-specific reference symbols (DMRS), and generates a block of signals $y_{bf}(i) = [y_{bf}(i) \ \tilde{y}_{bf}(i)]^T$ the elements of which are to be mapped onto the same physical RE but transmitted on different antenna elements:

$$\begin{bmatrix} y_{bf}(i) \\ \tilde{y}_{bf}(i) \end{bmatrix} = W(i)y^{(p)}(i).$$

B.4.6 Beamforming model for CRI test

The transmission on antenna port(s) $p = 7, 8, \dots, \nu + 6$ is defined by using a precoder matrix $W(i)$ of size $N_{\text{CSI}} \times \nu$, where N_{CSI} is the number of CSI reference signals configured per test and ν is the number of spatial layers. This precoder takes as an input a block of signals for antenna port(s) $p = 7, 8, \dots, \nu + 6$, $y^{(p)}(i) = [y^{(7)}(i) \ y^{(8)}(i) \ \dots \ y^{(6+\nu)}(i)]$, $i = 0, 1, \dots, M_{\text{symp}}^{\text{ap}} - 1$, with $M_{\text{symp}}^{\text{ap}}$ being the number of modulation symbols per antenna port including the user-specific reference symbols (DM-RS), and generates a block of signals $y_{bf}^{(q)}(i) = [y_{bf}^{(0)}(i) \ y_{bf}^{(1)}(i) \ \dots \ y_{bf}^{(N_{\text{CSI}}-1)}(i)]^T$ the elements of which are to be mapped onto the same time-frequency index pair (k, l) but transmitted on different physical antenna elements:

$$\begin{bmatrix} y_{bf}^{(0)}(i) \\ y_{bf}^{(1)}(i) \\ \vdots \\ y_{bf}^{(N_{\text{CSI}}-1)}(i) \end{bmatrix} = \alpha(n)W(i) \begin{bmatrix} y^{(7)}(i) \\ y^{(8)}(i) \\ \vdots \\ y^{(6+\nu)}(i) \end{bmatrix}$$

- $W(i)$ is precoder matrix
- $\alpha(n)$ is amplitude scaling factor for CRI test, $\alpha(n) = 10^{P_{\theta_m}(n)/20}$
- $P_{\theta_m}(n)$ is power scaling factor as following definition:
 - $P_{\theta_m}(n) = A \cos\left(\theta_m + \frac{2\pi n}{K}\right) + B$, $A = 5$ dB, $B = -1.3351$ dB.

- θ_m controls the phase variation, and the phase for m-th subframe is denoted by $\theta_m = \theta_0 + \Delta\theta \cdot m$, where θ_0 is the random start value with the uniform distribution, i.e., $\theta_0 \in [0, 2\pi]$, $\Delta\theta$ is the step of phase variation which is defined in Table B.4.6-1, and m is the linear increment of 1 for every sub-frame throughout the simulation.
 - K is the number of configured CSI-RS resources
 - $n \in \{0, 1, \dots, K - 1\}$
- For following CRI with multiple CSI-RS resources configured, n equals to CRI value reported by UE
 - For fixed CRI with single CSI-RS resource configure, n equals to 0.

Table B.4.6-1: The step of phase variation

Variation Step	Value (rad/subframe)
$\Delta\theta$	1.2566×10^{-3}

The physical antenna elements are identified by indices $j = 0, 1, \dots, N_{ANT} - 1$, where $N_{ANT} = N_{CSI}$ is the number of physical antenna elements configured per test.

Modulation symbols $y_{bf}^{(q)}(i)$ with $q \in \{0, 1, \dots, N_{CSI} - 1\}$ (i.e. beamformed PDSCH and DM-RS) are mapped to the physical antenna index $j = q$.

For the k-th configured CSI-RS resource, modulation symbols $a_{k,l}^{(p)}$ with $p \in \{15, 16, \dots, 14 + N_{CSI}\}$ (i.e. CSI-RS) are firstly multiplied by amplitude scaling factor $\alpha(n)$ to generate power scaled symbols $y_{k,l}^{(p)}$:

$$y_{k,l}^{(p)} = \alpha(n) a_{k,l}^{(p)}$$

- n equals to CSI-RS resource index (k-th)

And power scaled symbols $y_{k,l}^{(p)}$ with $p \in \{15, 16, \dots, 14 + N_{CSI}\}$ (i.e. power scaled CSI-RS) are mapped to the physical antenna index $j = p - 15$, where N_{CSI} is the number of CSI reference signals configured per test.

Modulation symbols $y^{(p)}(i)$ with $p \in \{0, 1, \dots, P - 1\}$ (i.e. PBCH, PDCCH, PHICH, PCFICH) are mapped to the physical antenna index $j = p$, where P is the number of cell-specific reference signals configured per test.

Modulation symbols $a_{k,l}^{(p)}$ with $p \in \{0, 1, \dots, P - 1\}$ (i.e. CRS) are mapped to the physical antenna index $j = p$, where P is the number of cell-specific reference signals configured per test.

B.5 Interference models for enhanced performance requirements Type-A

This clause provides a description for the modelling of interfering cell transmissions for enhanced performance requirements Type-A including: definition of dominant interferer proportion, transmission mode 3, 4 and 9 type of interference modelling.

B.5.1 Dominant interferer proportion

Each interfering cell involved in enhanced performance requirements Type-A is characterized by its associated dominant interferer proportion (DIP) value:

$$DIP_i = \frac{\hat{I}_{or(i+1)}}{N_{oc}'}$$

where $\hat{I}_{or(i+1)}$ is the average received power spectral density from the i -th strongest interfering cell involved in the requirement scenario ($\hat{I}_{or(1)}$ is assumed to be the power spectral density associated with the serving cell) and

$N_{oc}' = \sum_{j=2}^N \hat{I}_{or(j)} + N_{oc}$ where N_{oc} is the average power spectral density of a white noise source consistent with the definition provided in subclause 3.2 and N is the total number of cells involved in a given requirement scenario.

B.5.2 Transmission mode 3 interference model

This subclause provides transmission mode 3 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth. Transmitted physical channels shall include PSS, SSS and PBCH.

For each subframe and each CQI subband as defined in subclause 7.2 of [6], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For rank-1 transmission over a subband, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4].

For rank-2 transmission over a subband, precoding for spatial multiplexing with large delay CDD over two layers for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.2.2 of [4].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.5.3 Transmission mode 4 interference model

This subclause provides transmission mode 4 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth according to the probabilities of occurrence. Transmitted physical channels shall include PSS, SSS and PBCH. Probabilities of occurrence in each subframe are as specified in the requirement scenario. If the probabilities of occurrence in each subframe are not specified in the requirement scenario, as default, they are equal to 1.

For each subframe and each CQI subband as defined in subclause 7.2 of [6], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For each subframe and CQI subband, a precoding matrix for the number of layers ν associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [4]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\nu = 2$.

Precoding for spatial multiplexing with cell-specific reference signals for the number of antenna ports in the requirement scenario shall be applied to 16QAM randomly modulated layer symbols, as specified in subclause 6.3.4.2.1 of [4] with the selected precoding matrices for each subframe and each CQI subband.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.5.4 Transmission mode 9 interference model

This subclause provides transmission mode 9 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the entire PDSCH region and the full transmission bandwidth according to the probabilities of occurrence. Transmitted physical channels shall include PSS, SSS and PBCH. Probabilities of occurrence in each subframe are as specified in the requirement scenario. If the probabilities of occurrence in each subframe are not specified in the requirement scenario, as default, they are equal to 1.

For each subframe and each CQI subband as defined in subclause 7.2 of [6], a transmission rank shall be randomly determined independently from other CQI subbands as well as other interfering cells. Probabilities of occurrence of each possible transmission rank are as specified in the requirement scenario.

For each subframe and each CQI subband, a precoding matrix for the number of layers ν associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-2 of [4].

The generic beamforming model in subclause B.4.3 shall be applied assuming cell-specific reference signals and CSI reference signals as specified in the requirement scenario. Random precoding with selected rank and precoding matrices for each subframe and each CQI subband shall be applied to 16QAM randomly modulated layer symbols including the user-specific reference symbols over antenna port 7 when the rank is one and antenna ports 7, 8 when the rank is two.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6 Interference models for enhanced performance requirements Type-B

This clause provides a description for the modelling of interfering cell transmissions for enhanced performance requirements Type-B including: transmission mode 2, 3, 4 and 9 type of interference modelling and a definition of the random interference model.

B.6.1 Transmission mode 2 interference model

This subclause provides transmission mode 2 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

Precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6.2 Transmission mode 3 interference model

This subclause provides transmission mode 3 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined for each user defined in section B.6.6 with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For rank-1 transmission, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4].

For rank-2 transmission, precoding for spatial multiplexing with large delay CDD over two layers for the number of antenna ports in the requirement scenario shall be applied to the randomly modulated layer symbols, as specified in subclause 6.3.4.2.2 of [4].

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6.3 Transmission mode 4 interference model

This subclause provides transmission mode 4 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For each TTI, for each user defined in B.6.6, a single precoding matrix for the number of layers ν associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [4]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\nu = 2$.

Precoding for spatial multiplexing with cell-specific reference signals for the number of antenna ports in the requirement scenario shall be applied to randomly modulated layer symbols, as specified in subclause 6.3.4.2.1 of [4] with the selected precoding matrices as specified in subclause B.6.6.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6.4 Transmission mode 9 interference model

This subclause provides transmission mode 9 interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe, each interfering cell shall transmit randomly modulated data over the PDSCH region as specified in subclause B.6.6. Transmitted physical channels shall include PSS, SSS and PBCH.

The transmission rank shall be randomly determined with probabilities of occurrence of each possible transmission rank as specified in subclause B.6.6.

The MCS shall be randomly determined with probabilities of occurrence of each possible MCS as specified in subclause B.6.6.

For each TTI, for each user defined in B.6.6, a single precoding matrix for the number of layers ν associated to the selected rank shall be selected randomly from Table 6.3.4.2.3-1 of [4]. Note that codebook index 0 shall be excluded from random precoder selection when the number of layers is $\nu = 2$.

The generic beamforming model in subclause B.4.3 shall be applied assuming cell-specific reference signals and CSI reference signals as specified in the requirement scenario. Random precoding with selected rank and precoding matrices for each subframe shall be applied to randomly modulated layer symbols including the user-specific reference symbols over antenna port 7 when the rank is one and antenna ports 7, 8 when the rank is two.

For each TTI, for each user defined in B.6.6, the scrambling ID value n_{SCID} is randomly assigned from the set of $\{0,1\}$.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6.5 CRS interference model

This subclause provides for the CRS interference modelling for each explicitly modelled interfering cell in the requirement scenario. In each subframe there is no PDSCH transmitted. Transmitted physical channels shall include PSS, SSS and PBCH.

For unallocated REs in the control region, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio for these REs shall be as defined for PDCCH in Annex C.3.2.

B.6.6 Random interference model

This subclause presents the interference model which defines the resource allocation, MCS and rank for the two interference cells. The model includes approximately 10% DTX on these interference cells. Table B.6.6-1 shows the resource allocation for four users in two different configurations for each of the two interferers. Table B.6.6-2 shows the resource allocation to be used for special subframes with TM9 interference. Table B.6.6-3 shows the probabilities for the MCS and rank for these users.

Table B.6.6-1: Resource allocation for the random interference model

Resource allocation configurations Indexes	User Index	Resource allocation for random interference model				Probability
		Resource allocation type	Bitmap for resource allocation (Note 1)			
			1st field bitmap	2nd field bitmap	3rd field bitmap	
Configuration 1	User 0	1	00	0	10101000101010	50%
	User 1	1	00	0	01010101010101	
	User 2	0	01001001001001001			
	User 3	0	00100100100100100			
Configuration 2	User 0	1	00	0	10101010101010	50%
	User 1	1	00	1	01010100010101	
	User 2	0	01001001001001001			
	User 3	0	00100100100100100			

Note 1: The 1st, 2nd, and 3rd field bitmaps are only valid for resource allocation type 1 which was defined in [6].
 Note 2: The resource allocation model is used for both 1st and 2nd interfering cells and the resource allocation is independent for each interfering cell.

Table B.6.6-2: Resource allocation for the random interference model for TM9 special subframes

Resource allocation configurations Indexes	User Index	Resource allocation for random interference model				Probability
		Resource allocation type	Bitmap for resource allocation (Note 1)			
			1st field bitmap	2nd field bitmap	3rd field bitmap	
Configuration 1	User 0	1	00	0	10101000101010	50%
	User 1	1	00	0	01010101000001	
	User 2	0	01001000001001001			
	User 3	0	00100100000100100			
Configuration 2	User 0	1	00	0	10101000101010	50%
	User 1	1	00	1	01010000010101	
	User 2	0	01001000001001001			
	User 3	0	00100100000100100			

Note 1: The 1st, 2nd, and 3rd field bitmaps are only valid for resource allocation type 1 which was defined in [6].
 Note 2: The resource allocation model is used for both 1st and 2nd interfering cells and the resource allocation is independent for each interfering cell.

Table B.6.6-3 MCS and rank configuration for the random interference model

MCS probability			Rank probability	
MCS5	MCS14	MCS25	Rank 1	Rank 2
50%	25%	25%	80%	20%

Note 1: The MCS and rank should follow the probability indicated in the table randomly per UE per TTI.

Note 2: The probabilities for MCS and rank configuration are used for both 1st and 2nd interfering cells. The MCS and rank configurations are independent for each interfering cell.

B.7 Interference models for enhanced downlink control channel performance requirements Type A and B

This clause provides a description for the modelling of interfering cell transmissions for the enhanced downlink control channel performance requirements Type A and B.

B.7.1 PDCCH, PCFICH and PHICH interference model

This subclause provides a description of the interfering cell transmissions model for the enhanced PDCCH/PCFICH and PHICH downlink control channel performance requirements Type A and B under synchronous network scenarios.

The transmitted physical signals and channels shall include CRS, PSS, SSS, PBCH and PCFICH. The PDCCH and PHICH transmit signals are emulated as virtual PDCCH signals described further in the clause.

The PDCCH signals are modelled with a per control channel element (CCE) level granularity and have guaranteed 50% CCE resource loading in each subframe. For each subframe the set of active and inactive CCEs is derived in accordance to the following procedure:

- 1) All available CCEs for the PDCCH and PHICH are marked as $CCE_0, CCE_1, \dots, CCE_{N-1}$.
- 2) For the given partial loading ratio $X = 50\%$ the numbers of active CCEs M_{Active} and inactive CCEs $M_{Inactive}$ are derived

$$M_{Inactive} = \lfloor N * (100 - X\%) \rfloor$$

$$M_{Active} = N - M_{Inactive}$$

- 3) The indexes of $M_{Inactive}$ inactive CCEs are randomly selected out of the full set of CCEs.
- 4) The remaining M_{Active} CCEs are assigned to be active.

No signals are transmitted in the REs corresponding to the inactive CCEs. The PDCCH signals are transmitted in the REs corresponding to the active CCEs. For PDCCH REs, precoding for transmit diversity for the number of antenna ports in the requirement scenario shall be applied to QPSK randomly modulated layer symbols, as specified in subclause 6.3.4.3 of [4]. The EPRE ratio of the PDCCH REs in the active CCEs shall be derived in accordance to the following procedure:

- 1) For each generated active i -th CCE the PDCCH power boosting level $P(i)$ shall be randomly generated using the uniform distribution in the $[P_{min}, P_{max}]$ range. The P_{min} is equal to -6 dB, the P_{max} is equal to 6 dB. The random values should be derived in the dB scale.
- 2) Additional power normalization is applied for each generated i -th PDCCH power boosting level:

$$P_{norm}(i) = P(i) - \alpha$$

where $P(i)$ and $P_{norm}(i)$ are the PDCCH power boosting coefficients before and after normalization in the dB scale; the power normalization factor α is equal to 1.3 dB.

- 3) The normalized PDCCH power boosting coefficients $P_{norm}(i)$ are further applied to the PDCCH_RA and PDCCH_RB values to derive the EPRE ratio of the PDCCH signals transmitted in the REs corresponding the i -th CCE in each subframe.

B.8 Burst transmission models for Frame structure type 3

This clause provides a description for burst transmission models for Frame structure type 3.

B.8.1 Burst transmission model for one LAA SCell

One burst is defined as downlink transmissions which occupy one or more consecutive subframes. The burst transmission format is determined according to the steps below:

- 1) Select the number of subframes N randomly from a given set of the number of subframes S_1 with equal probability as the total length of burst transmission format. The length includes both occupied OFDM symbols and non-occupied OFDM symbols within the burst format. S_1 is given per test case.
- 2) If N is equal to 1, the subframe is set as fully occupied, otherwise:
 - For demodulation test, the starting position for the first subframe is randomly selected from OFDM symbol 0 and OFDM symbol 7 with equal probability. For CSI test, the starting position for the first subframe is OFDM symbol 0.
 - The configuration of occupied OFDM symbols in the last subframe is randomly selected from configuration set S_2 . S_2 is given per test case.

A uniform random variable from $[0, 1]$ is generated. If the random variable is less than p which is given per test case,

- If both the last subframe of previous burst and first subframe of new burst format are fully occupied, start burst transmission after deferring one subframe from the last subframe of previous burst. Otherwise, start burst transmission at the end of last subframe of previous burst.

Otherwise, the burst transmission is muted and the muting duration is the same as the number of subframes for determined burst format.

B.8.2 Burst transmission model for multiple LAA SCell(s)

This clause provides a description for burst transmission models for Frame structure type 3 when there are multiple LAA SCell(s) in the test.

One burst is defined as downlink transmissions which occupy one or more consecutive subframes. Assuming M carriers are configured, the burst transmission format is determined according to the steps below:

- 1) For each carrier c_m ($m=0, \dots, M-1$), select the number of subframes N_m randomly from a given set of the number of subframes S_1 with equal probability as the total length of burst transmission format used for carrier c_m . The length includes both occupied OFDM symbols and non-occupied OFDM symbols within the burst format. S_1 is given per test case.
- 2) If any N_m is equal to 1, the first subframe is set as fully occupied for all carriers, otherwise:
 - For demodulation test, the starting position for the first subframe is randomly selected from OFDM symbol 0 and OFDM symbol 7 with equal probability. For CSI test, the starting position for the first subframe is OFDM symbol 0. The starting position is common for all carriers.
 - The configuration of occupied OFDM symbols in the last subframe is randomly selected from configuration set S_2 for each carrier c_m . S_2 is given per test case.

A uniform random variable p_m from $[0, 1]$ is generated for each carrier c_m to determine whether the burst is transmitted or not on each carrier.

For each carrier c_m , if p_m is less than p which is given per test case,

- If both the last subframe of previous longest transmitted burst over M carriers and first subframe of new burst format are fully occupied, start burst transmission according to the determined burst transmission format for this carrier after deferring one subframe from the last subframe of previous longest transmitted burst.

Otherwise, start burst transmission for this carrier at the end of last subframe of previous longest transmitted burst.

Otherwise, the burst transmission is muted and the muting duration is N_{max} and N_{max} is the maximum of N_j wherein $j \in \{0, 1, \dots, M-1\}$ and p_j is less than p .

Annex C (normative): Downlink Physical Channels

C.1 General

This annex specifies the downlink physical channels that are needed for setting a connection and channels that are needed during a connection.

C.2 Set-up

Table C.2-1 describes the downlink Physical Channels that are required for connection set up.

Table C.2-1: Downlink Physical Channels required for connection set-up

Physical Channel
PBCH
SSS
PSS
PCFICH
PDCCH
EPDCCH
PHICH
PDSCH

C.3 Connection

The following clauses, describes the downlink Physical Channels that are transmitted during a connection i.e., when measurements are done.

C.3.1 Measurement of Receiver Characteristics

Unless otherwise stated, Table C.3.1-1 is applicable for measurements on the Receiver Characteristics (clause 7).

Table C.3.1-1: Downlink Physical Channels transmitted during a connection (FDD and TDD)

Physical Channel	EPRE Ratio
PBCH	PBCH_RA = 0 dB
	PBCH_RB = 0 dB
PSS	PSS_RA = 0 dB
SSS	SSS_RA = 0 dB
PCFICH	PCFICH_RB = 0 dB
PDCCH	PDCCH_RA = 0 dB
	PDCCH_RB = 0 dB
PDSCH	PDSCH_RA = 0 dB
	PDSCH_RB = 0 dB
OCNG	OCNG_RA = 0 dB
	OCNG_RB = 0 dB

NOTE 1: No boosting is applied.

For measurements on cells in TDD Band 46, Table C.3.1-1a is applicable for measurements of Receiver Characteristics (clause 7).

Table C.3.1-1a: Downlink Physical Channels transmitted during a connection (TDD Band 46)

Physical Channel	EPRE Ratio
DRS	NOTE 1
PSS	PSS_RA = 0 dB
SSS	SSS_RA = 0 dB
PCFICH	PCFICH_RB = 0 dB
PDCCH	PDCCH_RA = 0 dB
	PDCCH_RB = 0 dB
PDSCH	PDSCH_RA = 0 dB
	PDSCH_RB = 0 dB
OCNG	OCNG_RA = 0 dB
	OCNG_RB = 0 dB
NOTE 1: No boosting is applied.	

Table C.3.1-2: Power allocation for OFDM symbols and reference signals

Parameter	Unit	Value	Note
Transmitted power spectral density I_{or}	dBm/15 kHz	Test specific	1. I_{or} shall be kept constant throughout all OFDM symbols
Cell-specific reference signal power ratio E_{RS} / I_{or}		0 dB	

C.3.2 Measurement of Performance requirements

Table C.3.2-1 is applicable for measurements in which uniform RS-to-EPRE boosting for all downlink physical channels, unless otherwise stated.

Table C.3.2-1: Downlink Physical Channels transmitted during a connection (FDD and TDD and Frame structure Type 3)

Physical Channel	EPRE Ratio
PBCH	PBCH_RA = $\rho_A + \sigma$
	PBCH_RB = $\rho_B + \sigma$
PSS	PSS_RA = 0 (Note 3)
SSS	SSS_RA = 0 (Note 3)
PCFICH	PCFICH_RB = $\rho_B + \sigma$
PDCCH	PDCCH_RA = $\rho_A + \sigma$
	PDCCH_RB = $\rho_B + \sigma$
EPDCCH	EPDCCH_RA = $\rho_A + \delta$
	EPDCCH_RB = $\rho_B + \delta$
MPDCCH	MPDCCH_RA = $\rho_A + \delta$
	MPDCCH_RB = $\rho_B + \delta$
SPDCCH (CRS-based)	SPDCCH_RA = $\rho_A + \sigma$
	SPDCCH_RB = $\rho_B + \sigma$
SPDCCH (DMRS-based)	SPDCCH_RA = $\rho_A + \delta$
	SPDCCH_RB = $\rho_B + \delta$
PDSCH	PDSCH_RA = ρ_A
	PDSCH_RB = ρ_B
PMCH	PMCH_RA = ρ_A
	PMCH_RB = ρ_B
MBSFN RS	MBSFN_RS_RA = ρ_A
	MBSFN_RS_RB = ρ_B
OCNG	OCNG_RA = $\rho_A + \sigma$
	OCNG_RB = $\rho_B + \sigma$

NOTE 1: $\rho_A = \rho_B = 0$ dB means no RS boosting.

NOTE 2: MBSFN RS and OCNG are not defined downlink physical channels in [4].

NOTE 3: Assuming PSS and SSS transmitted on a single antenna port.

NOTE 4: ρ_A , ρ_B , σ , and δ are test specific.

NOTE 5: Void.

NOTE 6: For Frame Structure Type 3, PBCH are not defined.

Table C.3.2-2: Power allocation for OFDM symbols and reference signals

Parameter	Unit	Value	Note
Total transmitted power spectral density I_{or}	dBm/15 kHz	Test specific	1. I_{or} shall be kept constant throughout all OFDM symbols
Cell-specific reference signal power ratio E_{RS} / I_{or}		Test specific	1. Applies for antenna port p
Energy per resource element EPRE		Test specific	1. The complex-valued symbols $y^{(p)}(i)$ and $a_{k,l}^{(p)}$ defined in [4] shall conform to the given EPRE value. 2. For TM8, TM9 and TM10 the reference point for EPRE is before the precoder in Annex B.4.

C.3.3 Aggressor cell power allocation for Measurement of Performance Requirements when ABS is Configured

For the performance requirements and channel state information reporting when ABS is configured, the power allocation for the physical channels of the aggressor cell in non-ABS and ABS is listed in Table C.3.3-1.

Table C.3.3-1: Downlink physical channels transmitted in aggressor cell when ABS is configured in this cell

Physical Channel	Parameters	Unit	EPRE Ratio	
			Non-ABS	ABS
PBCH	PBCH_RA	dB	ρ_A	Note 1
	PBCH_RB	dB	ρ_B	Note 1
PSS	PSS_RA	dB	ρ_A	Note 1
SSS	SSS_RA	dB	ρ_A	Note 1
PCFICH	PCFICH_RB	dB	ρ_B	Note 1
PHICH	PHICH_RA	dB	ρ_A	Note 1
	PHICH_RB	dB	ρ_B	Note 1
PDCCH	PDCCH_RA	dB	ρ_A	Note 1
	PDCCH_RB	dB	ρ_B	Note 1
PDSCH	PDSCH_RA	dB	N/A	Note 1
	PDSCH_RB	dB	N/A	Note 1
OCNG	OCNG_RA	dB	ρ_A	Note 1
	OCNG_RB	dB	ρ_B	Note 1

Note 1: $-\infty$ dB is allocated for this channel in this test.

Table C.3.3-2: Downlink physical channels transmitted in aggressor cell when ABS is configured in this cell when the CRS assistance information is provided

Physical Channel	Parameters	Unit	EPRE Ratio
------------------	------------	------	------------

			Non-ABS	ABS
PBCH	PBCH_RA	dB	ρ_A	ρ_A
	PBCH_RB	dB	ρ_B	ρ_B
PSS	PSS_RA	dB	ρ_A	ρ_A
SSS	SSS_RA	dB	ρ_A	ρ_A
PCFICH	PCFICH_RB	dB	ρ_B	Note 1
PHICH	PHICH_RA	dB	ρ_A	Note 1
	PHICH_RB	dB	ρ_B	Note 1
PDCCH	PDCCH_RA	dB	ρ_A	Note 1
	PDCCH_RB	dB	ρ_B	Note 1
PDSCH	PDSCH_RA	dB	N/A	Note 1
	PDSCH_RB	dB	N/A	Note 1
OCNG	OCNG_RA	dB	ρ_A	Note 1
	OCNG_RB	dB	ρ_B	Note 1

Note 1: $-\infty$ dB is allocated for this channel in this test.

C.3.4 Power Allocation for Measurement of Performance Requirements when Quasi Co-location Type B: same Cell ID

For the performance requirements related to quasi-colocation type B behaviour when transmission points share the same Cell ID, the power allocation for the physical channels of the serving cell is listed in Table C.3.4-1 and the power allocation for the physical channels of the cell transmitting PDSCH is listed in Table C.3.4-2

Table C.3.4-1: Downlink physical channels transmitted in the serving cell (TP1)

Physical Channel	EPRE Ratio
PBCH	PBCH_RA = $\rho_A + \sigma$
	PBCH_RB = $\rho_B + \sigma$
PSS	PSS_RA = 0 (Note 2)
SSS	SSS_RA = 0 (Note 2)
PDSCH	PDSCH_RA = ρ_A
	PDSCH_RB = ρ_B
PCFICH	PCFICH_RB = $\rho_B + \sigma$
PDCCH	PDCCH_RA = $\rho_A + \sigma$
	PDCCH_RB = $\rho_B + \sigma$

NOTE 1: $\rho_A = \rho_B = 0$ dB means no RS boosting.

NOTE 2: Assuming PSS and SSS transmitted on a single antenna port.

NOTE 3: ρ_A , ρ_B and σ are test specific.

Table C.3.4-2: Downlink physical channels for the transmission point transmitting PDSCH (TP2)

Physical Channel	Value
PDSCH	Test Specific

C.3.5 Simplified CA testing method

For CA tests which require more than 16 independent faders, if a test system cannot support a throughput measurement with fading on all carriers simultaneously, the simplified CA testing method shall be used.

In the simplified CA testing method, the resulting propagation channel(s) shall be generated by considering a number of independent faders needed for one carrier and connecting them to the signal of randomly chosen carrier(s). The maximum number of channel faders on the test will be less than or equal to 16. The remaining carrier(s) shall be

connected without a channel fader but with AWGN. The throughput is then collected only for the carrier(s) connected to channel faders.

In the simplified CA testing method, the test shall be repeated by choosing carrier(s) excluding already chosen carrier(s) until all the carrier(s) are tested under fading conditions. All the collected throughputs from each carrier shall be compared against the reference value of the requirements.

All supported carriers shall be configured and activated during the test.

C.3.6 Measurement of Receiver Characteristics for Narrowband IoT

For the performance requirements for Narrowband IoT, the power allocation for the physical channels is listed in Table C.3.6-1

Table C.3.6-1: Downlink Physical Channels transmitted during a connection

Physical Channel	EPRE Ratio for one NRS antenna port	EPRE Ratio for two NRS antenna ports
NPBCH	0 dB	-3 dB
NPDCCH	0 dB	-3 dB
NPDSCH	0 dB	-3 dB
NPSS	0 dB	0 dB
NSSS	0 dB	0 dB

NOTE 1: Assuming NPSS and NSSS transmitted on one NRS antenna port.

Table C.3.6-2: Power allocation for OFDM symbols and reference signals

Parameter	Unit	Value	Note
Transmitted power spectral density I_{or}	dBm/15 kHz	Test specific	I_{or} shall be kept constant throughout all OFDM symbols
Cell-specific reference signal power ratio E_{CRS} / I_{or}		0 dB	Applicable for In-band operation
Narrowband reference signal power ratio E_{NRS} / I_{or}		0 dB	Applicable for Stand-alone and Guard-band operation
Narrowband reference signal power over cell-specific reference signal power E_{NRS} / E_{RS}		0 dB	Applicable for In-band operation

Annex D (normative): Characteristics of the interfering signal

D.1 General

Unless otherwise stated, when the channel bandwidth is wider or equal to 5MHz, a modulated 5MHz full bandwidth E-UTRA downlink signal and CW signal are used as interfering signals when RF performance requirements for E-UTRA UE receiver are defined. For channel bandwidths below 5MHz, the bandwidth of modulated interferer should be equal to bandwidth of the received signal.

For Band 46, the bandwidth of interfering signal is 20MHz when RF performance requirements for E-UTRA UE receiver are defined.

D.2 Interference signals

Table D.2-1 describes the modulated interferer for different channel bandwidth options.

Table D.2-1: Description of modulated E-UTRA interferer

	Channel bandwidth					
	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
BW _{Interferer}	1.4 MHz	3 MHz	5 MHz	5 MHz	5 MHz	5 MHz
RB	6	15	25	25	25	25

Table D.2-2 describes the modulated interferer setting 2 for different channel bandwidth options for Band 46.

Table D.2-2: Description of modulated E-UTRA interferer for Band 46

	Channel bandwidth					
	1.4 MHz	3 MHz	5 MHz	10 MHz	15 MHz	20 MHz
BW _{Interferer}						20 MHz
RB						100

Annex E (normative): Environmental conditions

E.1 General

This normative annex specifies the environmental requirements of the UE. Within these limits the requirements of the present documents shall be fulfilled.

E.2 Environmental

The requirements in this clause apply to all types of UE(s).

E.2.1 Temperature

The UE shall fulfil all the requirements in the full temperature range of:

Table E.2.1-1

+15°C to +35°C	for normal conditions (with relative humidity up to 75 %)
-10°C to +55°C	for extreme conditions (see IEC publications 68-2-1 and 68-2-2)

Outside this temperature range the UE, if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in clause 6.2 for extreme operation.

E.2.2 Voltage

The UE shall fulfil all the requirements in the full voltage range, i.e. the voltage range between the extreme voltages.

The manufacturer shall declare the lower and higher extreme voltages and the approximate shutdown voltage. For the equipment that can be operated from one or more of the power sources listed below, the lower extreme voltage shall not be higher, and the higher extreme voltage shall not be lower than that specified below.

Table E.2.2-1

Power source	Lower extreme voltage	Higher extreme voltage	Normal conditions voltage
AC mains	0,9 * nominal	1,1 * nominal	nominal
Regulated lead acid battery	0,9 * nominal	1,3 * nominal	1,1 * nominal
Non regulated batteries:			
Leclanché	0,85 * nominal	Nominal	Nominal
Lithium	0,95 * nominal	1,1 * Nominal	1,1 * Nominal
Mercury/nickel & cadmium	0,90 * nominal		Nominal

Outside this voltage range the UE if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in clause 6.2 for extreme operation. In particular, the UE shall inhibit all RF transmissions when the power supply voltage is below the manufacturer declared shutdown voltage.

E.2.3 Vibration

The UE shall fulfil all the requirements when vibrated at the following frequency/amplitudes.

Table E.2.3-1

Frequency	ASD (Acceleration Spectral Density) random vibration
5 Hz to 20 Hz	0,96 m ² /s ³
20 Hz to 500 Hz	0,96 m ² /s ³ at 20 Hz, thereafter –3 dB/Octave

Outside the specified frequency range the UE, if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 36.101 for extreme operation.

Annex F (normative): Transmit modulation

F.1 Measurement Point

Figure F.1-1 shows the measurement point for the unwanted emission falling into non-allocated RB(s) and the EVM for the allocated RB(s).

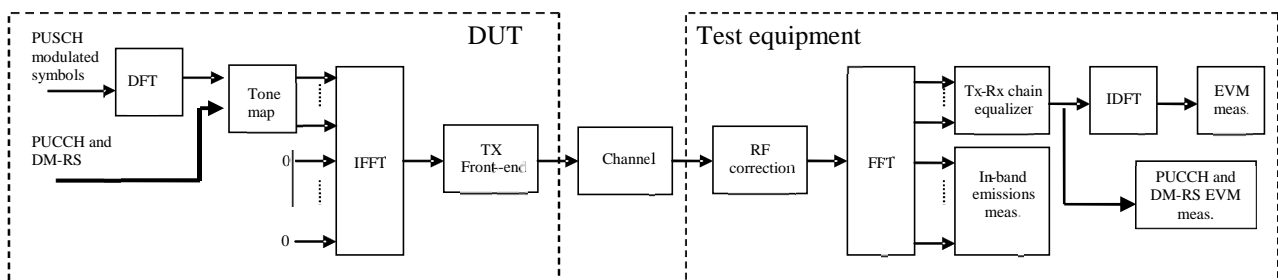

Figure F.1-1: EVM measurement points

F.2 Basic Error Vector Magnitude measurement

The EVM is the difference between the ideal waveform and the measured waveform for the allocated RB(s)

$$EVM = \sqrt{\frac{\sum_{v \in T_m} |z'(v) - i(v)|^2}{|T_m| \cdot P_0}},$$

where

T_m is a set of $|T_m|$ modulation symbols with the considered modulation scheme being active within the measurement period,

$z'(v)$ are the samples of the signal evaluated for the EVM,

$i(v)$ is the ideal signal reconstructed by the measurement equipment, and

P_0 is the average power of the ideal signal. For normalized modulation symbols P_0 is equal to 1.

The basic EVM measurement interval is defined over one slot in the time domain for PUCCH and PUSCH and over one preamble sequence for the PRACH.

F.3 Basic in-band emissions measurement

The in-band emissions are a measure of the interference falling into the non-allocated resources blocks. The in-band emission requirement is evaluated for PUCCH and PUSCH transmissions. The in-band emission requirement is not evaluated for PRACH transmissions.

The in-band emissions are measured as follows

$$Emissions_{absolute}(\Delta_{RB}) = \begin{cases} \frac{1}{|T_s|} \sum_{t \in T_s} \sum_{f_i + (12 \cdot \Delta_{RB} + 11) \cdot \Delta f}^{\max(f_{\min}, f_i + 12 \cdot \Delta_{RB} \cdot \Delta f)} |Y(t, f)|^2, \Delta_{RB} < 0 \\ \frac{1}{|T_s|} \sum_{t \in T_s} \sum_{f_h + (12 \cdot \Delta_{RB} - 11) \cdot \Delta f}^{\min(f_{\max}, f_h + 12 \cdot \Delta_{RB} \cdot \Delta f)} |Y(t, f)|^2, \Delta_{RB} > 0 \end{cases},$$

where

T_s is a set of $|T_s|$ SC-FDMA symbols with the considered modulation scheme being active within the measurement period,

Δ_{RB} is the starting frequency offset between the allocated RB and the measured non-allocated RB (e.g. $\Delta_{RB} = 1$ or $\Delta_{RB} = -1$ for the first adjacent RB),

f_{\min} (resp. f_{\max}) is the lower (resp. upper) edge of the UL system BW,

f_l and f_h are the lower and upper edge of the allocated BW, and

$Y(t, f)$ is the frequency domain signal evaluated for in-band emissions as defined in the subsection (ii)

The relative in-band emissions are, given by

$$Emissions_{relative}(\Delta_{RB}) = \frac{Emissions_{absolute}(\Delta_{RB})}{\frac{1}{|T_s| \cdot N_{RB}} \sum_{t \in T_s} \sum_{f_i}^{f_i + (12 \cdot N_{RB} - 1) \Delta f} |Y(t, f)|^2}$$

where

N_{RB} is the number of allocated RBs

The basic in-band emissions measurement interval is defined over one slot in the time domain. When the PUSCH or PUCCH transmission slot is shortened due to multiplexing with SRS, the in-band emissions measurement interval is reduced by one SC-FDMA symbol, accordingly.

In the evaluation of in-band emissions, the timing is set according to $\Delta \tilde{t} = \Delta \tilde{c}$, where sample time offsets $\Delta \tilde{t}$ and $\Delta \tilde{c}$ are defined in subclause F.4.

F.4 Modified signal under test

Implicit in the definition of EVM is an assumption that the receiver is able to compensate a number of transmitter impairments.

The PUSCH data or PRACH or Physical Sidelink Channel signal under test is modified and, in the case of PUSCH or Physical Sidelink Channel data signal, decoded according to:

$$Z'(t, f) = IDFT \left\{ \frac{FFT \left\{ z(v - \Delta\tilde{t}) \cdot e^{-j2\pi\Delta\tilde{f}v} \right\} e^{j2\pi f \Delta\tilde{t}}}{\tilde{a}(t, f) \cdot e^{j\tilde{\varphi}(t, f)}} \right\}$$

where

$z(v)$ is the time domain samples of the signal under test.

The PUCCH or PUSCH or Physical Sidelink Channel demodulation reference signal or PUCCH data signal under test is equalised and, in the case of PUCCH data signal decoded according to:

$$Z'(t, f) = \frac{FFT \left\{ z(v - \Delta\tilde{t}) \cdot e^{-j2\pi\Delta\tilde{f}v} \right\} e^{j2\pi f \Delta\tilde{t}}}{\tilde{a}(t, f) \cdot e^{j\tilde{\varphi}(t, f)}}$$

where

$z(v)$ is the time domain samples of the signal under test.

To minimize the error, the signal under test should be modified with respect to a set of parameters following the procedure explained below.

Notation:

$\Delta\tilde{t}$ is the sample timing difference between the FFT processing window in relation to nominal timing of the ideal signal.

$\Delta\tilde{f}$ is the RF frequency offset.

$\tilde{\varphi}(t, f)$ is the phase response of the TX chain.

$\tilde{a}(t, f)$ is the amplitude response of the TX chain.

In the following $\Delta\tilde{c}$ represents the middle sample of the EVM window of length W (defined in the next subsections) or the last sample of the first window half if W is even.

The EVM analyser shall

- detect the start of each slot and estimate $\Delta\tilde{t}$ and $\Delta\tilde{f}$,
- determine $\Delta\tilde{c}$ so that the EVM window of length W is centred
 - on the time interval determined by the measured cyclic prefix minus 16 samples of the considered OFDM symbol for symbol 0 for normal CP, i.e. the first 16 samples of the CP should not be taken into account for this step. In the determination of the number of excluded samples, a sampling rate of 30.72MHz was assumed. If a different sampling rate is used, the number of excluded samples is scaled linearly.
 - on the measured cyclic prefix of the considered OFDM symbol symbol for symbol 1 to 6 for normal CP and for symbol 0 to 5 for extended CP.
 - on the measured preamble cyclic prefix for the PRACH

To determine the other parameters a sample timing offset equal to $\Delta\tilde{c}$ is corrected from the signal under test. The EVM analyser shall then

- correct the RF frequency offset $\Delta\tilde{f}$ for each time slot, and
- apply an FFT of appropriate size. The chosen FFT size shall ensure that in the case of an ideal signal under test, there is no measured inter-subcarrier interference.

The carrier leakage shall be removed from the evaluated signal before calculating the EVM and the in-band emissions; however, the removed relative carrier leakage power also has to satisfy the applicable requirement.

At this stage the allocated RBs shall be separated from the non-allocated RBs. In the case of PUCCH and PUSCH EVM, the signal on the non-allocated RB(s), $Y(t, f)$, is used to evaluate the in-band emissions.

Moreover, the following procedure applies only to the signal on the allocated RB(s).

- In the case of PUCCH and PUSCH and Physical Sidelink Channel, the UL EVM analyzer shall estimate the TX chain equalizer coefficients $\tilde{a}(t, f)$ and $\tilde{\varphi}(t, f)$ used by the ZF equalizer for all subcarriers by time averaging at each signal subcarrier of the amplitude and phase of the reference and data symbols. The time-averaging length is 1 slot. This process creates an average amplitude and phase for each signal subcarrier used by the ZF equalizer. The knowledge of data modulation symbols may be required in this step because the determination of symbols by demodulation is not reliable before signal equalization.
- In the case of PRACH, the UL EVM analyzer shall estimate the TX chain coefficients $\tilde{a}(t)$ and $\tilde{\varphi}(t)$ used for phase and amplitude correction and are selected so as to minimize the resulting EVM. The TX chain coefficients are not dependent on frequency, i.e. $\tilde{a}(t, f) = \tilde{a}(t)$ and $\tilde{\varphi}(t, f) = \tilde{\varphi}(t)$. The TX chain coefficient are chosen independently for each preamble transmission and for each $\Delta\tilde{t}$.

At this stage estimates of $\Delta\tilde{f}$, $\tilde{a}(t, f)$, $\tilde{\varphi}(t, f)$ and $\Delta\tilde{c}$ are available. $\Delta\tilde{t}$ is one of the extremities of the window W , i.e. $\Delta\tilde{t}$ can be $\Delta\tilde{c} + \alpha - \left\lfloor \frac{W}{2} \right\rfloor$ or $\Delta\tilde{c} + \left\lfloor \frac{W}{2} \right\rfloor$, where $\alpha = 0$ if W is odd and $\alpha = 1$ if W is even. The EVM analyser shall then

- calculate EVM_l with $\Delta\tilde{t}$ set to $\Delta\tilde{c} + \alpha - \left\lfloor \frac{W}{2} \right\rfloor$,
- calculate EVM_h with $\Delta\tilde{t}$ set to $\Delta\tilde{c} + \left\lfloor \frac{W}{2} \right\rfloor$.

F.5 Window length

F.5.1 Timing offset

As a result of using a cyclic prefix, there is a range of $\Delta\tilde{t}$, which, at least in the case of perfect Tx signal quality, would give close to minimum error vector magnitude. As a first order approximation, that range should be equal to the length of the cyclic prefix. Any time domain windowing or FIR pulse shaping applied by the transmitter reduces the $\Delta\tilde{t}$ range within which the error vector is close to its minimum.

F.5.2 Window length

The window length W affects the measured EVM, and is expressed as a function of the configured cyclic prefix length. In the case where equalization is present, as with frequency domain EVM computation, the effect of FIR is reduced. This is because the equalization can correct most of the linear distortion introduced by the FIR. However, the time domain windowing effect can't be removed.

F.5.3 Window length for normal CP

The table below specifies the EVM window length at channel bandwidths 1.4, 3, 5, 10, 15, 20 MHz, for normal CP. The nominal window length for 3 MHz is rounded down one sample to allow the window to be centered on the symbol.

Table F.5.3-1 EVM window length for normal CP

Channel Bandwidth MHz	Cyclic prefix length ¹ N_{cp} for symbol 0	Cyclic prefix length ¹ N_{cp} for symbols 1 to 6	Nominal FFT size	Cyclic prefix for symbols 1 to 6 in FFT samples	EVM window length W in FFT samples	Ratio of W to CP for symbols 1 to 6 ²
1.4	160	144	128	9	5	55.6
3			256	18	12	66.7
5			512	36	32	88.9
10			1024	72	66	91.7
15			1536	108	102	94.4
20			2048	144	136	94.4

Note 1: The unit is number of samples, sampling rate of 30.72MHz is assumed.
Note 2: These percentages are informative and apply to symbols 1 through 6. Symbol 0 has a longer CP and therefore a lower percentage.

F.5.4 Window length for Extended CP

The table below specifies the EVM window length at channel bandwidths 1.4, 3, 5, 10, 15, 20 MHz, for extended CP. The nominal window lengths for 3 MHz and 15 MHz are rounded down one sample to allow the window to be centered on the symbol.

Table F.5.4-1 EVM window length for extended CP

Channel Bandwidth MHz	Cyclic prefix length ¹ N_{cp}	Nominal FFT size	Cyclic prefix in FFT samples	EVM window length W in FFT samples	Ratio of W to CP ²
1.4	512	128	32	28	87.5
3		256	64	58	90.6
5		512	128	124	96.9
10		1024	256	250	97.4
15		1536	384	374	97.4
20		2048	512	504	98.4

Note 1: The unit is number of samples, sampling rate of 30.72MHz is assumed.
Note 2: These percentages are informative

F.5.5 Window length for PRACH

The table below specifies the EVM window length for PRACH preamble formats 0-4.

Table F.5.5-1 EVM window length for PRACH

Preamble format	Cyclic prefix length ¹ N_{cp}	Nominal FFT size ²	EVM window length W in FFT samples	Ratio of W to CP*
0	3168	24576	3072	96.7%
1	21024	24576	20928	99.5%
2	6240	49152	6144	98.5%
3	21024	49152	20928	99.5%
4	448	4096	432	96.4%

Note 1: The unit is number of samples, sampling rate of 30.72MHz is assumed
Note 2: The use of other FFT sizes is possible as long as appropriate scaling of the window length is applied
Note 3: These percentages are informative

F.5.F Window length for category NB1

The EVM window length, W , for NPUSCH is set to 1 (in FFT samples where the nominal FFT size is 128 for 15 kHz sub-carrier spacing and 512 for 3.75 kHz sub-carrier spacing).

The EVM window length, W , for NPRACH is set to 110 for preamble format 0 and to 494 for preamble format 1 (both in FFT samples where the nominal FFT size is 512).

F.6 Averaged EVM

The general EVM is averaged over basic EVM measurements for n slots in the time domain.

$$\overline{EVM} = \sqrt{\frac{1}{n} \sum_{i=1}^n EVM_i^2},$$

where n is

$n = 20$ for PUCCH, PUSCH, PSDCH, PSCCH, and PSSCH,

$n = 48$ for PBSCH.

The EVM requirements shall be tested against the maximum of the RMS average at the window W extremities of the EVM measurements:

Thus \overline{EVM}_l is calculated using $\Delta\tilde{t} = \Delta\tilde{t}_l$ in the expressions above and \overline{EVM}_h is calculated using $\Delta\tilde{t} = \Delta\tilde{t}_h$.

Thus we get:

$$\overline{EVM} = \max(\overline{EVM}_l, \overline{EVM}_h)$$

The calculation of the EVM for the demodulation reference signal, EVM_{DMRS} , follows the same procedure as calculating the general EVM, with the exception that the modulation symbol set T_m defined in clause F.2 is restricted to symbols containing uplink demodulation reference signals.

The basic EVM_{DMRS} measurements are first averaged over 20 slots in the time domain to obtain an intermediate average \overline{EVM}_{DMRS} .

$$\overline{EVM}_{DMRS} = \sqrt{\frac{1}{20} \sum_{i=1}^{20} EVM_{DMRS,i}^2}$$

In the determination of each $EVM_{DMRS,i}$, the timing is set to $\Delta\tilde{t} = \Delta\tilde{t}_l$ if $\overline{EVM}_l > \overline{EVM}_h$, and it is set to $\Delta\tilde{t} = \Delta\tilde{t}_h$ otherwise, where \overline{EVM}_l and \overline{EVM}_h are the general average EVM values calculated in the same 20 slots over which the intermediate average \overline{EVM}_{DMRS} is calculated. Note that in some cases, the general average EVM may be calculated only for the purpose of timing selection for the demodulation reference signal EVM.

Then the results are further averaged to get the EVM for the demodulation reference signal, EVM_{DMRS} ,

$$EVM_{DMRS} = \sqrt{\frac{1}{6} \sum_{j=1}^6 \overline{EVM}_{DMRS,j}^2}$$

The PRACH EVM, EVM_{PRACH} , is averaged over two preamble sequence measurements for preamble formats 0, 1, 2, 3, and it is averaged over 10 preamble sequence measurements for preamble format 4.

The EVM requirements shall be tested against the maximum of the RMS average at the window W extremities of the EVM measurements:

Thus $\overline{EVM}_{\text{PRACH}}$ is calculated using $\Delta\tilde{f} = \Delta\tilde{f}_l$ and $\overline{EVM}_{\text{PRACH}}$ is calculated using $\Delta\tilde{f} = \Delta\tilde{f}_h$.

Thus we get:

$$EVM_{\text{PRACH}} = \max(\overline{EVM}_{\text{PRACH}_l}, \overline{EVM}_{\text{PRACH}_h})$$

F.6.F Averaged EVM for category NB1

The general EVM for category NB1 is calculated using the procedure defined in Annex F.6 with the exception that the general EVM is averaged over basic EVM measurements for $240/L_{\text{Ctone}}$ slots in the time domain, where $L_{\text{Ctone}} = \{1, 3, 6, 12\}$ is the number of subcarriers for the transmission.

The calculation of the EVM for the demodulation reference symbols for category NB1 follows the procedure defined for DMRS in Annex F.6 with the exception that the basic EVM_{DMRS} measurements are first averaged over $240/L_{\text{Ctone}}$ slots to obtain the intermediate average EVM.

The calculation of the NPRACH EVM for both formats follows the procedure defined for PRACH in Annex F.6 with the exception that EVM_{PRACH} is averaged over 64 preamble measurements.

F.7 Spectrum Flatness

The data shall be taken from FFT coded data symbols and the demodulation reference symbols of the allocated resource block.

Annex G (informative): Reference sensitivity level in lower SNR

This annex contains information on typical receiver sensitivity when HARQ transmission is enabled allowing operation in lower SNR regions (HARQ is disabled in conformance testing), thus representing the configuration normally used in live network operation under noise-limited conditions.

G.1 General

The reference sensitivity power level P_{SENS} with HARQ retransmission enabled (operation in lower SNR) is the minimum mean power applied to both the UE antenna ports at which the residual BLER after HARQ shall meet the requirements for the specified reference measurement channel. The residual BLER after HARQ transmission is defined as follows:

$$BLER_{\text{residual}} = 1 - \frac{A}{B}$$

A : Number of correctly decoded MAC PDUs

B : Number of transmitted MAC PDUs (Retransmitted MAC PDUs are not counted)

G.2 Typical receiver sensitivity performance (QPSK)

The residual BLER after HARQ shall be lower than 1% for the reference measurement channels as specified in Annexes G.3 (with one sided dynamic OCNG Pattern OP.1 FDD/TDD for the DL-signal as described in Annex A.5.1.1/A.5.2.1) with parameters specified in Table G.2-1 and Table G.2-2

Table G.2-1: Reference sensitivity QPSK P_{SENS}

Note 1:	The UL resource blocks shall be located as close as possible to the downlink operating band but confined within the transmission bandwidth configuration for the channel bandwidth (Table 5.6-1).						
Note 2:	For the UE which supports both Band 11 and Band 21 the minimum uplink configuration for reference sensitivity is FFS.						
Note 3:	For Band 20; in the case of 15MHz channel bandwidth, the UL resource blocks shall be located at RBstart _11 and in the case of 20MHz channel bandwidth, the UL resource blocks shall be located at RBstart _16						
Note 4:	For Band 31, 87, 88; in the case of 5MHz channel bandwidth, the UL resource blocks shall be located at RBstart _10						

Unless given by Table G.2-3, the minimum requirements specified in Tables G.2-1 and G.2-2 shall be verified with the network signalling value NS_01 (Table 6.2.4-1) configured.

Table G.2-3: Network Signalling Value for reference sensitivity

Network Signalling value	E-UTRA Band
NS_03	2, 4, 10, 23, 35, 36, 70
NS_06	12,13,14,17
NS_08	19
NS_09	21
NS_21	30
NS_35	71
NS_56	24
NS_62	54

G.3 Reference measurement channel for REFSENSE in lower SNR

Tables G.3-1 and G.3-2 are applicable for Annex G.2 (Reference sensitivity level in lower SNR).

Table G.3-1 Fixed Reference Channel for Receiver Requirements (FDD)

Parameter	Unit	Value			
Channel bandwidth	MHz	5	10		

Allocated resource blocks			25	50		
Subcarriers per resource block			12	12		
Allocated subframes per Radio Frame			9	9		
Modulation			QPSK	QPSK		
Target Coding Rate			1/3	1/3		
Number of HARQ Processes	Processes		8	8		
Maximum number of HARQ transmissions			[4]	[4]		
Information Bit Payload per Sub-Frame						
For Sub-Frames 1,2,3,4,6,7,8,9	Bits		2216	4392		
For Sub-Frame 5	Bits		N/A	N/A		
For Sub-Frame 0	Bits		1800	4392		
Transport block CRC	Bits		24	24		
Number of Code Blocks per Sub-Frame (Note 4)						
For Sub-Frames 1,2,3,4,6,7,8,9	Bits		1	1		
For Sub-Frame 5	Bits		N/A	N/A		
For Sub-Frame 0	Bits		1	1		
Binary Channel Bits Per Sub-Frame						
For Sub-Frames 1,2,3,4,6,7,8,9	Bits		6300	13800		
For Sub-Frame 5	Bits		N/A	N/A		
For Sub-Frame 0	Bits		5460	12960		
Max. Throughput averaged over 1 frame	kbps		1952.8	3952.8		
UE Category			1-8	1-8		
<p>Note 1: 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10MHz channel BW. 3 symbols allocated to PDCCH for 5 MHz and 3 MHz. 4 symbols allocated to PDCCH for 1.4 MHz</p> <p>Note 2: Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [4]</p> <p>Note 3: If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit)</p> <p>Note 4: Redundancy version coding sequence is {0, 1, 2, 3} for QPSK.</p>						

Table G.3-2 Fixed Reference Channel for Receiver Requirements (TDD)

Parameter	Unit	Value				
Channel Bandwidth	MHz				10	
Allocated resource blocks					50	
Uplink-Downlink Configuration (Note 5)					1	
Allocated subframes per Radio Frame (D+S)					4+2	
Number of HARQ Processes	Processes				7	
Maximum number of HARQ transmission					[4]	
Modulation					QPSK	
Target coding rate					1/3	
Information Bit Payload per Sub-Frame	Bits					
For Sub-Frame 4, 9					4392	
For Sub-Frame 1, 6					3240	
For Sub-Frame 5					N/A	
For Sub-Frame 0					4392	
Transport block CRC	Bits				24	
Number of Code Blocks per Sub-Frame (Note 5)						
For Sub-Frame 4, 9					1	
For Sub-Frame 1, 6					1	
For Sub-Frame 5					N/A	
For Sub-Frame 0					1	
Binary Channel Bits Per Sub-Frame	Bits					
For Sub-Frame 4, 9					13800	
For Sub-Frame 1, 6					11256	
For Sub-Frame 5					N/A	
For Sub-Frame 0					13104	
Max. Throughput averaged over 1 frame	kbps				1965.6	
UE Category					1-5	
<p>Note 1: For normal subframes(0,4,5,9), 2 symbols allocated to PDCCH for 20 MHz, 15 MHz and 10 MHz channel BW; 3 symbols allocated to PDCCH for 5 MHz and 3 MHz; 4 symbols allocated to PDCCH for 1.4 MHz. For special subframe (1&6), only 2 OFDM symbols are allocated to PDCCH for all BWs.</p>						

- | | |
|---------|---|
| Note 2: | For 1.4MHz, no data shall be scheduled on special subframes(1&6) to avoid problems with insufficient PDCCH performance |
| Note 3: | Reference signal, Synchronization signals and PBCH allocated as per TS 36.211 [4] |
| Note 4: | If more than one Code Block is present, an additional CRC sequence of L = 24 Bits is attached to each Code Block (otherwise L = 0 Bit). |
| Note 5: | As per Table 4.2-2 in TS 36.211 [4] |
| Note 6: | Redundancy version coding sequence is {0, 1, 2, 3} for QPSK. |

Annex H (normative): Modified MPR behavior

H.1 Indication of modified MPR behavior

This annex contains the definitions of the bits in the field *modifiedMPRbehavior* indicated in the IE UE Radio Access Capability [7] by a UE supporting an MPR or A-MPR modified in a later release of this specification.

Table H.1-1: Definitions of the bits in the field *modifiedMPRbehavior*

Index of field (bit number)	Definition (description of the supported functionality if indicator set to one)	Notes
0 (leftmost bit)	- The MPR for intra-band contiguous carrier aggregation bandwidth class C with non-contiguous resource allocation specified in Clause 6.2.3A in version 12.5.0 of this specification	- This bit shall be set to 1 by a UE supporting intra-band contiguous CA bandwidth class C
1	- The A-MPR associated with NS_05 for Band 1 in Clause 6.2.4 in version 12.10.0 of this specification.	- This bit shall be set to 1 by a UE supporting A-MPR associated to NS_05 for Band 1.
2	The A-MPR associated with NS_04 for Band 41 in Table 6.2.4-4 in version 14.1.0 of this specification.	- This bit shall be set to 1 by a power class 3 UE supporting A-MPR associated to NS_04 for Band 41.
3	The A-MPR associated with NS_31 for Band 46 in Table 6.2.4-26 in version 15.3.0 of this specification.	- This bit shall be set to 1 by a UE supporting A-MPR associated to NS_31 for Band 46.

Annex I (normative): Supported Post Antenna Gain

I.1 Declared Supported Post Antenna Gain for UE

For V2X service at band 47, some regional requirements (region 1) are defined per effective isotropic radiated power (EIRP), which is a combination of the transmitted power (or in some cases spectral density) and the effective antenna gain.

Due to large form factor, V2X UE can have external antenna placed far away from the chipset unit. In this case, the effective antenna gain is a UE specific condition. This effective antenna gain includes the feeding loss of all components after the chipset unit antenna connector and the peak directional gain of the external antenna and hence will be call the post connector gain $G_{\text{post connector}}$.

The 3GPP specifications mandate UE manufacturer declarations of at least one supported value of the post connector gain $G_{\text{post connector}}$ as a way to accommodate the refered regional requirement without putting requirements on the UE specific condion.

The possible values of declared supported post connector gains are: 0, 1, 2, 3, 4, 5, 6, 7 dBi. If no value is declared, or if external antenna is not used, the default value of 0dBi will be used.

The regional requirements in P_{EIRP} in Subclauses 6.2.2G, 6.2.5G, 6.6.2.2.4, 6.6.3.2 and 7.9.1 will be converted to conducted requirements by subtracting $G_{\text{post connector}}$ as.

$$P_{\text{Conducted}} = P_{\text{EIRP}} - G_{\text{post connector}}$$

Annex J (informative): Change history

05-2009	RP#44	RP-090542	166		Update of performance requirement for TDD PDSCH with MBSFN configuration. (Technically Endorsed CR in R4-50bis - R4-091180)	8.6.0
05-2009	RP#44	RP-090542	175		Adding AWGN levels for some TDD DL performance requirements. (Technically Endorsed CR in R4-50bis - R4-091406)	8.6.0
05-2009	RP#44	RP-090542	182		OCNG Patterns for Single Resource Block FRC Requirements. (Technically Endorsed CR in R4-50bis - R4-091504)	8.6.0
05-2009	RP#44	RP-090542	170r1		Update of Clause 8: PHICH and PMI delay. (Technically Endorsed CR in R4-50bis - R4-091275)	8.6.0
05-2009	RP#44	RP-090543	183		Requirements for frequency-selective fading test. (Technically Endorsed CR in R4-50bis - R4-091505)	8.6.0
05-2009	RP#44	RP-090543	199		CQI requirements under AWGN conditions	8.6.0
05-2009	RP#44	RP-090543	188r1		Adaptation of UL-RMC-s for supporting more UE categories	8.6.0
05-2009	RP#44	RP-090543	193r1		Correction of the LTE UE downlink reference measurement channels	8.6.0
05-2009	RP#44	RP-090543	184r1		Requirements for frequency non-selective fading tests. (Technically Endorsed CR in R4-50bis - R4-091506)	8.6.0
05-2009	RP#44	RP-090543	185r1		Requirements for PMI reporting. (Technically Endorsed CR in R4-50bis - R4-091510)	8.6.0
05-2009	RP#44	RP-090543	221r1		Correction to DL RMC-s for Maximum input level for supporting more UE-Categories	8.6.0
05-2009	RP#44	RP-090543	216		Addition of 15 MHz and 20 MHz bandwidths into band 38	8.6.0
05-2009	RP#44	RP-090559	180		Introduction of Extended LTE800 requirements. (Technically Endorsed CR in R4-50bis - R4-091432)	9.0.0
09-2009	RP#45	RP-090826	239		A-MPR for Band 19	9.1.0
09-2009	RP#45	RP-090822	225		LTE UTRA ACLR1 centre frequency definition for 1.4 and 3 MHz BW	9.1.0
09-2009	RP#45	RP-090822	227		Harmonization of text for LTE Carrier leakage	9.1.0
09-2009	RP#45	RP-090822	229		Sensitivity requirements for Band 38 15 MHz and 20 MHz bandwidths	9.1.0
09-2009	RP#45	RP-090822	236		Operating band edge relaxation of maximum output power for Band 18 and 19	9.1.0
09-2009	RP#45	RP-090822	238		Addition of 5MHz channel bandwidth for Band 40	9.1.0
09-2009	RP#45	RP-090822	245		Removal of unnecessary requirements for 1.4 and 3 MHz bandwidths on bands 13 and 17	9.1.0
09-2009	RP#45	RP-090877	261		Correction of LTE UE ACS test parameter	9.1.0

09-2009	RP#45	RP-090877	263R1		Correction of LTE UE ACLR test parameter	9.1.0
09-2009	RP#45	RP-090877	286		Uplink power and RB allocation for receiver tests	9.1.0
09-2009	RP#45	RP-090877	320		CR Sensitivity relaxation for small BW	9.1.0
09-2009	RP#45	RP-090877	324		Correction of Band 3 spurious emission band UE co-existence	9.1.0
09-2009	RP#45	RP-090877	249R1		CR P _{cm} definition (working assumption)	9.1.0
09-2009	RP#45	RP-090877	330		Spectrum flatness clarification	9.1.0
09-2009	RP#45	RP-090877	332		Transmit power: removal of TC and modification of REFSSENS note	9.1.0
09-2009	RP#45	RP-090877	282R1		Additional SRS relative power requirement and update of measurement definition	9.1.0
09-2009	RP#45	RP-090877	284R1		Power range applicable for relative tolerance	9.1.0
09-2009	RP#45	RP-090878	233		TDD UL/DL configurations for CQI reporting	9.1.0
09-2009	RP#45	RP-090878	235		Further clarification on CQI test configurations	9.1.0
09-2009	RP#45	RP-090878	243		Corrections to UL- and DL-RMC-s	9.1.0
09-2009	RP#45	RP-090878	247		Reference measurement channel for multiple PMI requirements	9.1.0
09-2009	RP#45	RP-090878	290		CQI reporting test for a scenario with frequency-selective interference	9.1.0
09-2009	RP#45	RP-090878	265R2		CQI reference measurement channels	9.1.0
09-2009	RP#45	RP-090878	321R1		CR RI Test	9.1.0
09-2009	RP#45	RP-090875	231		Correction of parameters for demodulation performance requirement	9.1.0
09-2009	RP#45	RP-090875	241R1		UE categories for performance tests and correction to RMC references	9.1.0
09-2009	RP#45	RP-090875	333		Clarification of \hat{E}_s definition in the demodulation requirement	9.1.0
09-2009	RP#45	RP-090875	326		Editorial corrections and updates to PHICH PBCH test cases.	9.1.0
09-2009	RP#45	RP-090875	259R3		Test case numbering in section 8 Performance tests	9.1.0
12-2009	RP-46	RP-091264	335		Test case numbering in TDD PDSCH performance test (Technically endorsed at RAN 4 52bis in R4-093523)	9.2.0
12-2009	RP-46	RP-091261	337		Adding beamforming model for user-specific reference signal (Technically endorsed at RAN 4 52bis in R4-093525)	9.2.0
12-2009	RP-46	RP-091263	339R1		Adding redundancy sequences to PMI test (Technically endorsed at RAN 4 52bis in R4-093581)	9.2.0
12-2009	RP-46	RP-091264	341		Throughput value correction at FRC for Maximum input level (Technically endorsed at RAN 4 52bis in R4-093660)	9.2.0
12-2009	RP-46	RP-091261	343		Correction to the modulated E-UTRA interferer (Technically endorsed at RAN 4 52bis in R4-093662)	9.2.0
12-2009	RP-46	RP-091264	345R1		OCNG: Patterns and present use in tests (Technically endorsed at RAN 4 52bis in R4-093664)	9.2.0
12-2009	RP-46	RP-091264	347		OCNG: Use in receiver and performance tests (Technically endorsed at RAN 4 52bis in R4-093666)	9.2.0
12-2009	RP-46	RP-091263	349		Miscellaneous corrections on CSI requirements (Technically endorsed at RAN 4 52bis in R4-093676)	9.2.0
12-2009	RP-46	RP-091261	351		Removal of RLC modes (Technically endorsed at RAN 4 52bis in R4-093677)	9.2.0
12-2009	RP-46	RP-091261	353		CR Rx diversity requirement (Technically endorsed at RAN 4 52bis in R4-093703)	9.2.0
12-2009	RP-46	RP-091261	355		A-MPR notation in NS_07 (Technically endorsed at RAN 4 52bis in R4-093706)	9.2.0

12-2015	RP-70	RP-152158	3172r1		Introduction of UE RF requirements for CA_42E	13.2.0
12-2015	RP-70	RP-152137	3173		Correction on UL 64QAM measurement channels	13.2.0
12-2015	RP-70	RP-152131	3175		Release 13 CAT A CR to align NS_04 values to meet FCC OBE requirements	13.2.0
12-2015	RP-70	RP-152136	3178		Maintenance of eIMTA PDSCH demodulation test	13.2.0
12-2015	RP-70	RP-152136	3180r1		Correction for eIMTA CQI tests	13.2.0
12-2015	RP-70	RP-152133	3186		Simplified CA fading Test method becomes optional	13.2.0

12-2015	RP-70	RP-152133	3191		Correction of the applicable UE categories for 256QAM UE demodulation performance requirements (Rel-13)	13.2.0
12-2015	RP-70	RP-152133	3193r1		Correction of TDD-FDD CA performance requirements (Rel-13)	13.2.0
12-2015	RP-70	RP-152133	3195r1		Correction on FDD CA and TDD CA performance requirements (Rel-13)	13.2.0
12-2015	RP-70	RP-152163	3196		CR on introduction of 5CC FDD/TDD CA demodulation performance requirements	13.2.0
12-2015	RP-70	RP-152163	3197		CR on introduction of 5CC TDD FDD CA demodulation performance requirements	13.2.0
12-2015	RP-70	RP-152132	3205		Correction of the AMPR table for NS_14 in TS 36.101 R13	13.2.0
12-2015	RP-70	RP-152134	3206		Correction of the 2UL CA co-existence table for CA_18A-28A	13.2.0
12-2015	RP-70	RP-152152	3209		Introduction of 3DL/2UL DC	13.2.0
12-2015	RP-70	RP-152139	3210r1		Correction of uplink configuration for CA_42D	13.2.0
12-2015	RP-70	RP-152133	3212		Introduction of dual uplink CA into 36.101	13.2.0
12-2015	RP-70	RP-152133	3214		Corrections to the CSI minimum requirement for PUSCH 3-2 (Rel-13)	13.2.0
12-2015	RP-70	RP-152133	3216		Corrections to MIMO Correlation Matrices using cross polarized antennas (Rel-12)	13.2.0
12-2015	RP-70	RP-152157	3221r1		Introducing B20 + B67 CA into TS 36.101	13.2.0
12-2015	RP-70	RP-152136	3225		CR for UE performance tests for intra-band contiguous CA with minimum channel spacing on Band 41	13.2.0
12-2015	RP-70	RP-152136	3227r1		Correction in SNR definition for CSI test	13.2.0
12-2015	RP-70	RP-152130	3232		Correction to reference channel for CQI requirements	13.2.0
12-2015	RP-70	RP-152168	3233r1		CR 36.101 BW combination for CA_8B	13.2.0
12-2015	RP-70	RP-152164	3241		Correction to mandatory 2UL support for 3DL interband CA	13.2.0
12-2015	RP-70	RP-152164	3242		Introduction of 2 UL and 3 DL interband cases with MSD	13.2.0
12-2015	RP-70	RP-152132	3246		CR on FRC for CDM-multiplexed DM RS	13.2.0
12-2015	RP-70	RP-152132	3249		Correction to physical channel for CQI reporting in type A test case	13.2.0
12-2015	RP-70	RP-152133	3255		CR for Rel-12 NAICS - Demodulation Test	13.2.0
12-2015	RP-70	RP-152133	3263		Correction on CA_4A-4A-5A table reference	13.2.0
12-2015	RP-70	RP-152134	3269r1		Clarification of Pcell support in 36.101 in CA scenarios	13.2.0
12-2015	RP-70	RP-152132	3273		A-MPR correction for CA_NS_06 CA-7C non-contiguous RB allocation	13.2.0
12-2015	RP-70	RP-152136	3276		Clarification on relative power tolerance for CA	13.2.0
12-2015	RP-70	RP-152133	3278		Correction of uplink configuration for CA_18-28	13.2.0
12-2015	RP-70	RP-152135	3280		CR on corrections for ProSe Direct Discovery demodulation requirements	13.2.0
12-2015	RP-70	RP-152135	3281		CR to finalize demodulation performance requirements for D2D Communication	13.2.0
12-2015	RP-70	RP-152131	3285		Missing RB allocation and OCNG Pattern for Cat 1 UEs in Multiple PMI CSI Reference Symbol tests	13.2.0
12-2015	RP-70	RP-152167	3286r1		Introduction of CA_5B to TS 36.101	13.2.0
12-2015	RP-70	RP-152169	3287		Introduction of CA_5A-5A to TS 36.101	13.2.0
12-2015	RP-70	RP-152133	3288		Introduction of dual uplink CA into 36.101	13.2.0
12-2015	RP-70	RP-152150	3291r1		CR on eD2D RF core requirements	13.2.0
12-2015	RP-70	RP-152171	3292r3		Introduction of B65 in Region 1	13.2.0
12-2015	RP-70	RP-152131	3294		Correction of supported sub-block frequency arrangement for CA_41-41	13.2.0
12-2015	RP-70	RP-152131	3296		Correction of test configuration for combinations of inter-band and intra-band CA	13.2.0
12-2015	RP-70	RP-152147	3299r2		RF receiver requirements for UE(s) supporting four antenna ports	13.2.0
12-2015	RP-70	RP-152148	3300r2		Introduction of RF requirements for LAA operation	13.2.0
12-2015	RP-70	RP-152172	3309r2		Introduction of Band 66	13.2.0
12-2015	RP-70	RP-152136	3311		Correction on CQI test 1A for TDD eIMTA	13.2.0
12-2015	RP-70	RP-152166	3312r1		Introduction of 3DL/3UL Inter-band CA of CA_39A-41C and CA_39C-41A	13.2.0
12-2015	RP-70	RP-152133	3314		Correction of the resource allocation in FRC for CAT0 UE demodulation tests	13.2.0
12-2015	RP-70	RP-152151	3318		Introduce TM4 performance requirements when CRS assistance information is provided	13.2.0
12-2015	RP-70	RP-152151	3319r1		Introduce TM10 performance requirements when CRS assistance information is provided for multiple-CSI-process capable UE	13.2.0
12-2015	RP-70	RP-152151	3320r1		Introduce TM10 performance requirements when CRS assistance information is provided for one-CSI-process capable UE	13.2.0
12-2015	RP-70	RP-152163	3325		Introduction of 5DL/1UL CA combinations into TS 36.101	13.2.0
12-2015	RP-70	RP-152175	3326r1		Introduction of Region 3 requirement in Band 65	13.2.0
12-2015	RP-70	RP-152138	3327		Correction of CA_8A-41C bandwidth combination set	13.2.0
12-2015	RP-70	RP-152133	3329		Removal of DC channel bandwidth combination set table	13.2.0
12-2015	RP-70	RP-152136	3331		CR on demodulation requirements of Dual Connectivity	13.2.0

12-2015	RP-70	RP-152131	3332r1			Modification and correction of CA_3A-3A BCS1 in Rel.13 36.101	13.2.0
12-2015	RP-70	RP-152133	3334			Correction of MSD levels for 2UL inter-band CA in TS 36.101 Rel-13	13.2.0
12-2015	RP-70	RP-152162	3338			Introduction of finished 4DL inter-band CAs to TS 36.101	13.2.0
12-2015	RP-70	RP-152170	3339			Introduction of CA_7A-7A BCS1 to TS 36.101	13.2.0
12-2015	RP-70	RP-152164	3340r1			Introduction of additional 2 UL and 3 DL interband cases with MSD	13.2.0
12-2015	RP-70	RP-152158	3341r1			Addition of Class E into CA BW Class table.	13.2.0
12-2015	RP-70	RP-152131	3343			Table 6.2.4A-1 note 1 correction	13.2.0
12-2015	RP-70	RP-152164	3345			Removal of (NOTE 4) from Table 5.6A.1-2a	13.2.0
12-2015	RP-70	RP-152160	3347			Introduction of 4DL NC CA in band42 in 36.101	13.2.0
12-2015	RP-70	RP-152173	3348			Introduction of 1447-1467MHz Band into 36.101	13.2.0
12-2015	RP-70	RP-152136	3352			CR: PDSCH ETU600 performance requirements	13.2.0
12-2015	RP-70	RP-152156	3357			Introduction of additional band combinations for 2DL inter-band CA	13.2.0
12-2015	RP-70	RP-151972	3358r2			Revision of the RAN4 approved R4-158446 (big CR 3DL 36.101)	13.2.0
12-2015	RP-70	RP-152147	3359r1			Introduction of the Medium Correlation A model	13.2.0
12-2015	RP-70	RP-152147	3360r1			Requirements for ePDCCH with 4Rx	13.2.0
12-2015	RP-70	RP-152147	3361r1			Requirements for PDCCH with 4Rx	13.2.0
12-2015	RP-70	RP-152147	3362r1			Requirements for PDSCH with 4Rx	13.2.0

09/2016	RP-73	RP-161639	3845		A	Corrections for Rel-14 cat M1 UE	14.1.0
09/2016	RP-73	RP-161780	3832	1	A	CR on NPBCH Reference Measurement Channel for NB-IoT	14.1.0
09/2016	RP-73	RP-161637	3846		A	Corrections in 36.101 for NB-IoT UE	14.1.0
09/2016	RP-73	RP-161609	3713	1	A	Introduction of NPDCCH demodulation requirements	14.1.0
09/2016	RP-73	RP-161623	3773	2	B	Introduction of CA_2A-46A-46A, CA_4A-46A-46A and CA_46A-46A-66A	14.1.0
09/2016	RP-73	RP-161627	3741	1	B	Introduction of additional 3DL/2UL CA band combinations in Rel-14	14.1.0
09/2016	RP-73	RP-161627	3742	1	B	Introduction of new 4DL/2UL CA band combination in Rel-14	14.1.0
09/2016	RP-73	RP-161617	3730	2	B	Introduction of V2V Tx requirements in Rel-14	14.1.0
09/2016	RP-73	RP-161617	3740	3	B	Introduction of V2X Rx requirements to 36.101	14.1.0
09/2016	RP-73	RP-161782	3676	1	A	CR for eMTC M-PDCCH demodulation requirement for CE Mode A (Rel-14)	14.1.0
12/2016	RP-74	RP-162428	3868	2	F	Improvement of REFSENS requirement specification for band 46 CA combos	14.2.0
12/2016	RP-74	RP-162435	3876	1	A	Clarification on UE maximum output power	14.2.0
12/2016	RP-74	RP-162386	3879	1	A	CR: Updates to LAA PDSCH demodulation performance requirements (Rel-14)	14.2.0
12/2016	RP-74	RP-162386	3881		A	CR: Updates to the reference channel for LAA demodulation performance requirements (Rel-14)	14.2.0
12/2016	RP-74	RP-162382	3885	1	A	CR for Rel-14 eMTC MPDCCH demodulation requirements	14.2.0
12/2016	RP-74	RP-162435	3887	2	A	CR for correction on OCNB pattern (Rel-14)	14.2.0
12/2016	RP-74	RP-162431	3891		A	RMC for maximum input level in category M1 UE	14.2.0
12/2016	RP-74	RP-162459	3901		A	CR for updating applicability rule for UE cat 9 Ues and DL Cat. 13 UEs in Rel-14	14.2.0
12/2016	RP-74	RP-162423	3903	2	A	CR for IRC TM2/3/3 tests with 4Rx in Rel-14	14.2.0
12/2016	RP-74	RP-162423	3905	1	A	CR for removing square brackets for 4Rx tests in Rel-14	14.2.0

12/2016	RP-74	RP-162394	3923	1	B	Introduction of REFSSENS requirements for UL CA and 4RX AP	14.2.0
12/2016	RP-74	RP-162412	3927		A	UE to UE co-existence for B42 with 2ULs	14.2.0
12/2016	RP-74	RP-162382	3929	1	A	Correction of PDCSH demodulation requirements for eMTC	14.2.0
12/2016	RP-74	RP-162433	3943	2	B	Addition of new operating bands for NB-IoT	14.2.0
12/2016	RP-74	RP-162404	3946	3	F	Clarification of note6 for 3DL/2UL and 4DL/2UL CA	14.2.0
12/2016	RP-74	RP-162423	3948		A	CR for SDR CA tests with 4Rx for DL category 18 and 19	14.2.0
12/2016	RP-74	RP-162403	3949	1	F	Addition of missing source of IMD for 2UL-2DL CA	14.2.0
12/2016	RP-74	RP-162434	3952		A	Clarification on TX-RX frequency separation for Cat.NB1 (Rel-14)	14.2.0
12/2016	RP-74	RP-162423	3957	1	A	CR for fixing errors for 4Rx tests in Rel-14	14.2.0
12/2016	RP-74	RP-162408	3960	1	F	B70 TX RX Default Spacing	14.2.0
12/2016	RP-74	RP-162408	3961		F	B70 Carrier Frequency and EARFCN Correction	14.2.0
12/2016	RP-74	RP-162406	3965	1	B	Introduction of power class 2 HPUE in Band 41	14.2.0
12/2016	RP-74	RP-161989	3969	1	B	Addition of 1.4 and 3 MHz channel bandwidths for BAND 65 in TS36.101 (Rel-14)	14.2.0
12/2016	RP-74	RP-162423	3971	2	A	CR on 4-RX TM9 MU test	14.2.0
12/2016	RP-74	RP-162430	3978		A	Correction of power control for category M1	14.2.0
12/2016	RP-74	RP-162386	3981	1	A	Clean up and clarification for LAA CSI requirements	14.2.0
12/2016	RP-74	RP-162386	3983		A	Add PDCCH performance requirements for LAA demodulation	14.2.0
12/2016	RP-74	RP-162457	3986		B	Introduction of additional band combinations for 4DL inter-band CA	14.2.0
12/2016	RP-74	RP-162398	3987		B	Introduction of additional band combinations for Intra-band CA	14.2.0
12/2016	RP-74	RP-162415	3996		A	Correction to cell mapping for periodic CQI reporting on multiple cells	14.2.0
12/2016	RP-74	RP-162425	3999		A	Remove square brackets for FD-MIMO performance requirements	14.2.0
12/2016	RP-74	RP-162409	4000	1	F	Correction on FRC for V2V in TS 36.101	14.2.0
12/2016	RP-74	RP-162431	4002		A	CR for 36.101: frequency error for eMTC	14.2.0
12/2016	RP-74	RP-162403	4003		B	Introduction of completed R14 2DL2UL band combinations to TS 36.101	14.2.0
12/2016	RP-74	RP-162379	4005		A	CR: Updates to NPDSCH demodulation requirements for NB-IoT (Rel-14)	14.2.0
12/2016	RP-74	RP-162382	4009		A	CR for Rel-14 eMTC PBCH demodulation requirement for enhanced coverage	14.2.0
12/2016	RP-74	RP-162388	4010	1	B	CR for UE enhancement in SFN scenario	14.2.0
12/2016	RP-74	RP-162408	4012		A	CR: Corrections for bandwidth combination sets defined for inter-band DC (Rel-14)	14.2.0
12/2016	RP-74	RP-162411	4022		A	RMCs and applicability of core RF requirements	14.2.0
12/2016	RP-74	RP-162411	4031		A	Correction of spurious emissions requirements for Band 9 range and intra-band CA	14.2.0
12/2016	RP-74	RP-162408	4033		F	Correction to Band 70 reference to notes in 5.7.3	14.2.0
12/2016	RP-74	RP-162399	4037		B	Introduction of completed R14 2DL band combinations to TS 36.101	14.2.0
12/2016	RP-74	RP-162435	4040		A	Optional PCell indication	14.2.0
12/2016	RP-74	RP-162379	4042		A	Correction of NPDCCH demodulation requirements	14.2.0
12/2016	RP-74	RP-162382	4044		A	Finalizing CQI definition test for eMTC	14.2.0
12/2016	RP-74	RP-162384	4046	1	A	Finalizing UE-selected subband CQI test for eMTC	14.2.0
12/2016	RP-74	RP-162430	4048		A	Correction of REFSSENS RMC table for Cat-M1 UE	14.2.0
12/2016	RP-74	RP-162400	4050		B	Introduction of completed R14 3DL band combinations to TS 36.101	14.2.0
12/2016	RP-74	RP-162404	4051		B	Introduction of additional 3DL/2UL CA band combinations in Rel-14	14.2.0
12/2016	RP-74	RP-162404	4052		B	Introduction of new 4DL/2UL CA band combination in Rel-14	14.2.0
12/2016	RP-74	RP-162404	4053		B	Introduction of new 5DL/2UL CA band combination in Rel-14	14.2.0
12/2016	RP-74	RP-162409	4054		F	CR for correction of V2X UE RF requirements	14.2.0
12/2016	RP-74	RP-162405	4057	1	B	UE CR for CBRS Band	14.2.0
12/2016	RP-74	RP-162433	4059		A	NB-IoT aggregate power control Rel-14	14.2.0
12/2016	RP-74	RP-162433	4061		A	Correction to NB-IoT ON/OFF power measurement perio Rel-14	14.2.0
12/2016	RP-74	RP-162408	4065		A	Corrections to CA table reference and header and CA REFSSENS table	14.2.0
12/2016	RP-74	RP-162433	4068	1	A	A-MPR for NB-IoT	14.2.0
12/2016	RP-74	RP-162402	4074		B	Introduction of Rel-14 5DL inter-band combinations in 36.101	14.2.0
12/2016	RP-74	RP-162435	4078	1	F	Corrections of CA Refsens exceptions in 7.3.1A (Rel-14)	14.2.0
12/2016	RP-74	RP-162435	4081		A	DeltaRIB for SDL and LAA CA	14.2.0
12/2016	RP-74	RP-162388	4082	2	B	CR for introducing definition of Type-D receiver	14.2.0
12/2016	RP-74	RP-162459	4085	1	A	CR for fixing soft buffer management test for TDD-FDD CA in Rel-14	14.2.0
12/2016	RP-74	RP-162435	4087	1	A	CR for fixing editorial errors in Rel-14	14.2.0
12/2016	RP-74	RP-162394	4088	1	B	CR for introducing new demod tests for 4Rx CA	14.2.0

12/2016	RP-74	RP-162404	4091		A	Introduction of MSD requirement for IMD5 on band3 of CA_3A-8A 2UL CA	14.2.0
12/2016	RP-74	RP-162386	4093		A	CR: Updates to burst transmission model for LAA performance requirements (Rel-14)	14.2.0
12/2016	RP-74	RP-162430	4094		A	UE cat M1 out of band blocking, Removal of Range 4	14.2.0
12/2016	RP-74	RP-162406	4102	1	F	Versioning indicator bit for NS_04 A-MPR table	14.2.0
12/2016	RP-74	RP-162427	4104		A	Band 68 NS_26 A-MPR correction	14.2.0
12/2016	RP-74	RP-162406	4105		D	Addition of □PowerClass to list of symbols	14.2.0
12/2016	RP-74	RP-162420	4111		A	RF: Pb setting in power imbalance TCs (Rel-14)	14.2.0
12/2016	RP-74	RP-162420	4114		A	RF: Correction to RMC for UE Category 1 in CSI tests (Rel-14)	14.2.0
12/2016	RP-74	RP-162413	4118		A	RF: Beamforming model missing in chapter 9 TM9 receiver Type A tests (Rel-14)	14.2.0
12/2016	RP-74	RP-162459	4124		A	RF: Incorrect Number of EREGs per ECCE for special subframe mentioned for TC 8.7.4 (Rel-14)	14.2.0
12/2016	RP-74	RP-162428	4126	1	F	MSD and exclusion region specification for 10MHz LAA channels	14.2.0
12/2016	RP-74	RP-162392	4128	1	B	PC accuracy in SRS carrier based switching in UE core spec	14.2.0
12/2016	RP-74	RP-162387	4129		B	UL LBT core requirements in UE spec	14.2.0
12/2016	RP-74	RP-162431	4131		A	Missing requirements for eMTC/NB IoT UE	14.2.0
12/2016	RP-74	RP-162406	4135	1	F	Addition of TDD RMC for UL-DL configuration 0	14.2.0
12/2016	RP-74	RP-162380	4137	1	A	CR on NPBCH Fixed Reference Channel for NB-IoT	14.2.0
01/2017	RP-74					Paga header information update	14.2.1
03/2017	RP-75	RP-170594	4139		A	Correction to carrier leakage and in-band emission for Cat. M1 UE	14.3.0
03/2017	RP-75	RP-170594	4141		A	Correction to Transmission Gap of Aggregate Power Control for Cat. M1 HD-FDD UE	14.3.0
03/2017	RP-75	RP-170566	4142	1	F	Corrections of Table 8.7.5.1-2 and Table 8.7.5.2-2	14.3.0
03/2017	RP-75	RP-170592	4144	1	B	Introduction of SDR test for LAA Scell	14.3.0
03/2017	RP-75	RP-170592	4146		A	Correction for LAA TM9 CQI test (R14)	14.3.0
03/2017	RP-75	RP-170562	4147		F	CR for rank 4 CA SDR tests	14.3.0
03/2017	RP-75	RP-170563	4148	1	B	CR for CQI test for Cat.1 UE with single Rx antenna	14.3.0
03/2017	RP-75	RP-170563	4149	1	B	CR for PDSCH demodulation test for Cat.1 UE with single Rx antenna	14.3.0
03/2017	RP-75	RP-170563	4150		B	CR for PHICH and PBCH demodulation test for Cat.1 UE with single Rx antenna	14.3.0
03/2017	RP-75	RP-170563	4151		B	CR for SDR test for Cat.1 UE with single Rx antenna	14.3.0
03/2017	RP-75	RP-170603	4153	1	A	Correction for FD-MIMO CRI test (R14)	14.3.0
03/2017	RP-75	RP-170577	4156		D	Split RMC overview table (R14)	14.3.0
03/2017	RP-75	RP-170587	4158		A	4Rx lot connections for 2Rx CQI requirement with frequency-selective interference	14.3.0
03/2017	RP-75	RP-170588	4163		A	Correction to UL/DL configuration & Special subframe configuration for CA CQI tests	14.3.0
03/2017	RP-75	RP-170597	4165		A	Remove [] from UE Cat M1 MPDCCH demodulation SNR values	14.3.0
03/2017	RP-75	RP-170576	4168	4	B	36.101 CR: Addition of Band 25 and Band 40 to M1 bands	14.3.0
03/2017	RP-75	RP-170575	4169		B	Release 14 CR to 36.101 to add Bands 25 and 26 to Category 0	14.3.0
03/2017	RP-75	RP-170563	4170	1	B	Introduction of Category 1bis requirements to 36.101	14.3.0
03/2017	RP-75	RP-170589	4172		A	Missing harmonic reference sensitivity exception for CA_20A-42A and CA_20A-42A-42A	14.3.0
03/2017	RP-75	RP-170589	4175		A	Correction to MPR table for intra-band 2UL CA	14.3.0
03/2017	RP-75	RP-170566	4176		F	Correction of notes on harmonic exception in 2DL CA 11A-28A	14.3.0
03/2017	RP-75	RP-170566	4177		F	Correction on uplink limitation of 2DL CA 8A-28A	14.3.0
03/2017	RP-75	RP-170570	4178		F	Correction of TIB and RIB on 2UL CA 41A-42A	14.3.0
03/2017	RP-75	RP-170568	4179		B	Introduction of additional band combinations for 4DL inter-band CA	14.3.0
03/2017	RP-75	RP-170565	4180		B	Introduction of additional band combinations for Intra-band CA	14.3.0
03/2017	RP-75	RP-170569	4181		B	Introduction of Rel-14 5DL inter-band combinations in 36.101	14.3.0
03/2017	RP-75	RP-170566	4182		F	Correction of Rel-14 CA configurations and relaxation values	14.3.0
03/2017	RP-75	RP-170566	4183	1	F	Correction of Rel-14 CA REFSENS exceptions	14.3.0
03/2017	RP-75	RP-170603	4185		A	Correction of Rel-13 CA REFSENS exceptions	14.3.0
03/2017	RP-75	RP-170553	4190	2	B	Introduction of UE requirements for LAA Scell uplink operation in Band 46	14.3.0
03/2017	RP-75	RP-170597	4192		A	Finalize eMTC PDSCH demodulation requirements	14.3.0
03/2017	RP-75	RP-170597	4194		A	Finalize eMTC CQI test requirements	14.3.0
03/2017	RP-75	RP-170594	4198		A	Correction of FRC table for eMTC RF test	14.3.0
03/2017	RP-75	RP-170590	4201		F	CR on correction of enhanced ePDCCH performance requirements for DL control channel IM	14.3.0
03/2017	RP-75	RP-170592	4204		A	Clean up and correction for LAA PDCCH demodulation requirements	14.3.0
03/2017	RP-75	RP-170599	4208	1	A	PCMAX tolerance for UE Cat NB1 power class 5	14.3.0

03/2017	RP-75	RP-170558	4209	1	B	Addition of uplink 256 QAM feature to TS 36.101	14.3.0
03/2017	RP-75	RP-170580	4213		A	Addition of missing note for bands 7 and 39 UE to UE co-ex	14.3.0
03/2017	RP-75	RP-170580	4217		A	Correction of CA_NS_06 non-contiguous resource allocation MPR formula	14.3.0
03/2017	RP-75	RP-170598	4218	1	A	Corrections in TS 36.101 for NB-IoT UE	14.3.0

2023-03	RAN#99	RP-230499	5936		A	Output power for NS_38, NS_40, and NS_41	18.1.0
2023-03	RAN#99	RP-230533	5937		B	Introduction of Band n105 in coexistence table	18.1.0
2023-03	RAN#99	RP-230521	5938		B	CR on MPR for LTE Intra-band CA with CC gap larger than 35 MHz	18.1.0
2023-03	RAN#99	RP-230499	5941		A	CR: Updates to applicability rules for LTE 8Rx requirements in TS 36.101(Rel-18)	18.1.0
2023-03	RAN#99	RP-230499	5942		A	CR: Corrections on FRC for LTE SDR test for cases with 6DL_7DL CCs in TS 36.101 (Rel-18)	18.1.0
2023-03	RAN#99	RP-230525	5943		B	Big CR on Introduction of completed R18 x(x<=6) DL y(y<=2) UL CA band combinations to TS 36.101	18.1.0
2023-06	RAN#100	RP-231340	5951		A	CR TS 36.101: Correction to point the Void Tables in Rel-18	18.2.0
2023-06	RAN#100	RP-231362	5955	2	B	CR to TS36.101: the introduction of 900 MHz LTE new band	18.2.0
2023-06	RAN#100	RP-231341	5966		A	CR to TS 36.101 on relative humidity condition for normal temperature (R18_CAT_A)	18.2.0
2023-06	RAN#100	RP-231363	5972		A	CR for corrections on Rel-18 band combinations in TS36.101	18.2.0
2023-06	RAN#100	RP-231365	5973	1	F	CR for TS 36.101-1 Rel-18 CAT-F: Corrections on band combinations for UE co-existence	18.2.0
2023-06	RAN#100	RP-231341	5979		A	Correction of RMCs for power imbalance TC	18.2.0
2023-06	RAN#100	RP-231363	5980		B	Big CR on Introduction of completed R18 x(x<=6) DL y(y<=2) UL CA band combinations to TS 36.101	18.2.0
2023-09	RAN#101	RP-232500	5983		A	CR to TS 36.101 Rel-18 Removal of Cat-M2 REFSENS in B71	18.3.0
2023-09	RAN#101	RP-232520	5987	1	F	CR for 36.101 18.2.0 Bug fixes for CA tables	18.3.0
2023-09	RAN#101	RP-232511	5993		B	CA 36.101: Addition of CAT-M operation for B106	18.3.0
2023-09	RAN#101	RP-232486	5994		A	CR 36.101: uplink inter-band carrier aggregation UEtoUE co-ex table cell border correction R18	18.3.0
2023-09	RAN#101	RP-232485	6001		A	[LTE_CA_R14_intra-Core] CR for adding Band46 downlink RMC definition	18.3.0
2023-09	RAN#101	RP-232508	6002		F	[LTE_bands_R18_M1_M2_NB1-NB2-Core] CR to update NB1, NB2 ASE requirements for Band 54	18.3.0
2023-09	RAN#101	RP-232521	6003	1	B	CR on addition of PC1 operation for band 12	18.3.0
2023-09	RAN#101	RP-232509	6004		B	Big CR on Introduction of completed R18 x(x<=6) DL y(y<=2) UL CA band combinations to TS 36.101	18.3.0
2023-09	RAN#101	RP-232500	6008		A	[TEI15] CR TS 36.101: Band 28 3 MHz operation for Japan [Japan_3MHz_n28]	18.3.0
2023-09	RAN#101	RP-232486	6011		A	CR for TS 36.101 [LTE_CA_R16_2BDL_2BUL] Addition of missing CA operating bands (R18_CAT_A)	18.3.0
2023-09	RAN#101	RP-232524	6015	1	F	[Ext_B12_LTE-Core] CR for 36.101: Correction for Band 85 UE coexistence	18.3.0
2023-09	RAN#101	RP-232507	6016	1	B	Introduction of 5G broadcast UHF bands	18.3.0
2023-12	RAN#102	RP-233336	6021		A	CR on TS36.101 for simplification of LTE V2X UE co-existence in Rel-18 (Cat. A)	18.4.0
2023-12	RAN#102	RP-233356	6024		A	CR for 36.101 UE to UE coex R18	18.4.0
2023-12	RAN#102	RP-233366	6026		B	CR to TS36.101: introduction of NR bands n31 and n72	18.4.0
2023-12	RAN#102	RP-233356	6027	1	B	Draft BigCr to TS 36.101: Introduction of completed new LTE-A CA combinations	18.4.0
2023-12	RAN#102	RP-233353	6029		B	CR to TS 36.101: Additional OOBE requirements for Aerial Ues	18.4.0
2024-03	RAN#103	RP-240577	6031	1	C	CR to remove brackets	18.5.0
2024-03	RAN#103	RP-240555	6034		A	CR to 36.101 on table referencing corrections for spurious emission band UE co-existence for CA	18.5.0
2024-03	RAN#103	RP-240580	6035		B	Big CR on High Power UE (Power Class 2) for LTE FDD Band 14	18.5.0
2024-03	RAN#103	RP-240555	6038		A	(LTE_CA_R17_xBDL_2BUL-Core) CR for TS 36.101 on inter-band CA operating bands (R18_CAT_A)	18.5.0
2024-03	RAN#103	RP-240584	6039		F	(LTE_terr_bcst_bands_part2-Core) CR to 36.101: Correction of EARFCN for bands 107 and 108	18.5.0
2024-03	RAN#103	RP-240577	6040		F	bigCR to 36.101 Corrections for aerial LTE UEs	18.5.0
2024-03	RAN#103	RP-240583	6044		F	(LTE_CA-Core, LTE_UAV_enh-Core) CR to TS 36.101: feature-agnostic approach implementation, Rel-18	18.5.0
2024-03	RAN#103	RP-240581	6045		B	Draft BigCr to TS 36.101: Introduction of completed new LTE-A CA combinations	18.5.0
2024-06	RAN#104	RP-241410	6047	1	F	CR Bug Fixes 36101-i50_s00-07	18.6.0
2024-06	RAN#104	RP-241413	6048	1	F	CR to 36.101 on Aerial Specific Pmax Values	18.6.0
2024-06	RAN#104	RP-241410	6049		F	CR into 36.101 Correction to band combination tables	18.6.0
2024-06	RAN#104	RP-241410	6050		F	CR for 36.101 removal of illegal chacarters from CA acronymns	18.6.0
2024-06	RAN#104	RP-241410	6051		B	(LTE_CA_R18_xBDL_yBUL) BigCr to TS 36.101: Introduction of completed new LTE-A CA combinations	18.6.0
2024-06	RAN#104	RP-241455	6052		B	Big CR TS 36.101 High-power UE operation for fixed-wireless/vehicle-mounted use cases in LTE bands	18.6.0
2024-09	RAN#105	RP-242153	6055		A	LTE Band 88 REFSENS UL allocation is missing R18	18.7.0
2024-09	RAN#105	RP-242151	6066		A	(LTE_CA_R16_intra-Core) CR to TS 36.101: B41 emissions	18.7.0
2024-12	RAN#106	RP-243029	6067	1	F	Adding missing performance requirements for 6/7/8 MHz channel bandwidths for LTE-based 5G terrestrial broadcast	18.8.0

2024-12	RAN#106	RP-243027	6070	1	F	CR 36.101 editorial changes for CA	18.8.0
2024-12	RAN#106	RP-243029	6076		A	(LTE_V2X-Core) CR to correct the name of the feature "V2X concurrent operation" to "V2X concurrent operation" - TS36.101	18.8.0
