The test parameters are given in Tables A.7.3.7.1-1, A.7.3.7.1-2, A.7.3.7.1-3 and A.7.3.7.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.7.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

Table A.7.3.7.1-1: General test parameters for E-UTRAN TDD out-of-sync tests in DRX

| Parameter  |                                | Unit | Value     |           | Comment  |
|--|--------------------------------|------|-----------|-----------|--|
|  |                                |      | Test 1    | Test 2    |  |
| PCFICH/PDCCH/PHICH parameters  |                                |      | R.7 TDD   | R.6 TDD   | As specified in clause A.3.1.2.2. None of the PDCCH are intended for the UE under test   |
| OCNG parameters  |                                |      | OP.2 TDD  | OP.2 TDD  | As specified in clause A.3.2.2.2.  |
| Active cell  |                                |      | Cell 1    | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| CP length  |                                |      | Normal    | Normal    |  |
| E-UTRA RF Channel Number   |                                |      | 1         | 1         | One E-UTRA TDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth (BWchannel)   |                                | MHz  | 10        | 10        |  |
| Correlation Matrix and Antenna Configuration   |                                |      | 2x2 Low   | 1x2       | Correlation Matrix and Antenna Configuration are defined in TS 36.101 [5] Annex B.2.3.2  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212  |
|  | Number of Control OFDM symbols |      | 2         | 2         | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         | 8         |  |
|  | $\rho_A, \rho_B$               |      | -3        | 0         |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 1         | 4         |  |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    | 4         |           |  |
| DRX cycle  |                                | ms   | 40        | 1280      | See Table A.7.3.7.1-3  |
| Layer 3 filtering  |                                |      | Enabled   | Enabled   | Counters: $N_{310} = 1$ ; $N_{311} = 1$  |
| T310 timer   |                                | ms   | 0         | 0         | T310 is disabled   |
| T311 timer   |                                | ms   | 1000      | 1000      | T311 is enabled  |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity  |                                | ms   | 1         | 1         | Minimum CQI reporting periodicity  |
| Propagation channel  |                                |      | ETU 70 Hz | AWGN      | .  |
| T1   |                                | s    | 4         | 32        |  |
| T2   |                                | s    | 1.6       | 12.8      |  |
| T3   |                                | s    | 1.8       | 13        |  |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |           |  |

**Table A.7.3.7.1-2: Cell specific test parameters for E-UTRAN TDD (cell # 1) for out-of-sync radio link monitoring tests # 1 and # 2 in DRX**

| Parameter  | Unit       | Test 1    |      |       | Test 2   |      |       |
|--|------------|-----------|------|-------|----------|------|-------|
|  |            | T1        | T2   | T3    | T1       | T2   | T3    |
| E-UTRA RF Channel Number   |            | 1         |      |       | 1        |      |       |

**Figure A.7.3.7.1-1 SNR variation for out-of-sync testing in DRX**

### A.7.3.7.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

In test 1 and test 2 during the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe according to the configured CQI reporting mode (PUCCH 1-0).

In test 1 the UE shall stop transmitting uplink signal no later than time point C ( $D_1 = 900$  ms after the start of time duration T3).

In test 2 the UE shall stop transmitting uplink signal no later than time point C (duration  $D_1 = 6500$  ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.8 E-UTRAN TDD Radio Link Monitoring Test for In-sync in DRX

### A.7.3.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.8.1-1, A.7.3.8.1-2, A.7.3.8.1-3 and A.7.3.8.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.8.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and

to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.8.1-1: General test parameters for E-UTRAN TDD in-sync test in DRX**

| Parameter  |                                | Unit | Value          | Comment  |
|--|--------------------------------|------|----------------|--|
| PCFICH/PDCCH/PHICH parameters  |                                |      | R.6 TDD        | As specified in clause A.3.1.2.2. None of the PDCCH are intended for the UE under test   |
| OCNG parameters  |                                |      | OP.2 TDD       | As specified in clause A.3.2.2.2.  |
| Active cell  |                                |      | Cell 1         | Cell 1 is on E-UTRA RF channel number 1  |
| CP length  |                                |      | Normal         |  |
| E-UTRA RF Channel Number   |                                |      | 1              | One E-UTRA TDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )  |                                | MHz  | 10             |  |
| Antenna Configuration  |                                |      | 1x2            |  |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C             | As defined in clause 5.3.3.1.4 in TS 36.212  |
|  | Number of Control OFDM symbols |      | 2              | In sync threshold $Q_{in}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause and Table 7.6.1-2 respectively.            |
|  | Aggregation level              | CCE  | 4              |  |
|  | $\rho_A, \rho_B$               |      | 0              |  |
|  | Ratio of PDCCH to RS EPRE      |      | 0              |  |
|  | Ratio of PCFICH to RS EPRE     |      | 4              |  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A             | As defined in clause 5.3.3.1.3 in TS 36.212  |
|  | Number of Control OFDM symbols |      | 2              | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
|  | Aggregation level              | CCE  | 8              |  |
|  | $\rho_A, \rho_B$               |      | 0              |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4              |  |
|  | Ratio of PCFICH to RS EPRE     | dB   | 4              |  |
| DRX cycle  |                                | ms   | 40             | See Table A.7.3.8.1-3  |
| Layer 3 filtering  |                                |      | <i>Enabled</i> | <i>Counters:</i><br>$N_{310} = 1; N_{311} = 1$   |
| T310 timer   |                                | ms   | 2000           | <i>T310 is enabled</i>   |
| T311 timer   |                                | ms   | 1000           | T311 is enabled  |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0      | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity  |                                | ms   | 1              | Minimum CQI reporting periodicity  |
| Propagation channel  |                                |      | AWGN           |  |
| T1   |                                | s    | 4              |  |
| T2   |                                | s    | 1.6            |  |
| T3   |                                | s    | 1.46           |  |
| T4   |                                | s    | 0.4            |  |
| T5   |                                | s    | 4              |  |
| Note 1: PDCCH/PCFICH corresponding to the in-sync and out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |                |  |

**Table A.7.3.8.1-2: Cell specific test parameters for E-UTRAN TDD (cell # 1) for in-sync radio link monitoring test # 1 in DRX**

| Parameter   | Unit       | Test 1   |    |    |    |    |      |      |       |      |      |

### A.7.3.8.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.9 E-UTRAN FDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction and Non-MBSFN ABS

### A.7.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.9.1-1 and A.7.3.9.1-2 below. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.9.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in the aggressor Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.9.1-1: General test parameters for E-UTRAN FDD out-of-sync testing under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter   | Unit                           | Value  | Comment   |  |
|---|--------------------------------|--|---|--|
| PCFICH/PDCCH/PHICH parameters   |                                | R.9.FDD                                      | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |  |
| OCNG parameters   |                                | OP.6 FDD                                     | As specified in clause A.3.2.1.6.   |  |

**Figure A.7.3.9.1-1 SNR variation for out-of-sync testing**

### A.7.3.9.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.10 E-UTRAN TDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.7.3.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.10.1-1 and A.7.3.10.1-2 below. There are two cells, cell 1 is the serving cell and cell 2 is the neighbor aggressor cell. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.10.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms.

Non-MBSFN ABS pattern is configured in Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.10.1-1: General test parameters for E-UTRAN TDD out-of-sync testing under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  |                                | Unit    | Value  | Comment   |
|--|--------------------------------|---------|--|---|
| PCFICH/PDCCH/PHICH parameters  |                                |         | R.9 TDD                                      | As specified in clause A.3.1.2.2. None of the PDCCH are intended for the UE under test  |
| OCNG parameters  |                                |         | OP.2 TDD                                     | As specified in clause A.3.2.2.2.   |
| Serving cell   |                                |         | Cell 1                                       | Cell 1 is on E-UTRA RF channel number 1   |
| Neighbor cell  |                                |         | Cell 2                                       | Cell 2 is the aggressor cell on E-UTRA RF channel number 1  |
| Neighbor cell ABS configuration  |                                |         | Non-MBSFN ABS                                | As defined in Table A.3.4.1.2-1   |

**Figure A.7.3.10.1-1 SNR variation in active cell for out-of-sync testing under time domain measurement resource restriction with non-MBSFN ABS**

### A.7.3.10.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.11 E-UTRAN FDD Radio Link Monitoring Test for In-sync for Non-MBSFN ABS

### A.7.3.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.11.1-1 and A.7.3.11.1-2 below. There are two cells in the test: Cell 1 is the Active cell and Cell 2 is the Neighbor cell. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.11.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.11.1-1: General test parameters for E-UTRAN FDD in-sync testing under time domain measurement resource restriction**

| Parameter  |                                | Unit    | Value         | Comment  |
|--|--------------------------------|---------|---------------|--|
| PCFICH/PDCCH/PHICH parameters                                |                                |         | R.9 FDD       | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test   |
| OCNG parameters  |                                |         | OP.6 FDD      | As specified in clause A.3.2.1.6.  |
| Active cell  |                                |         | Cell 1        | Cell 1 is on E-UTRA RF channel number 1  |
| Neighbor cell  |                                |         | Cell 2        | Cell 2 is on E-UTRA RF channel number 1; Cell 2 generates interference over restricted resources.  |
| Neighbor cell ABS configuration                              |                                |         | Non-MBSFN ABS | As defined in Table A.3.4.1.2-2  |
| CP length  |                                |         | Normal        |  |
| E-UTRA RF Channel Number                                     |                                |         | 1             | One E-UTRA FDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )            |                                | MHz     | 10            |  |
| Correlation Matrix and Antenna Configuration                 |                                |         | 2x2 Low       | Correlation Matrix and Antenna Configuration are defined in TS 36.101 [5] Annex B.2.3.2  |

**Figure A.7.3.11.1-1 SNR variation in the active cell for in-sync testing under time domain measurement resource restriction**

### A.7.3.11.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.12 E-UTRAN TDD Radio Link Monitoring Test for In-sync for Non-MBSFN ABS

### A.7.3.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.12.1-1 and A.7.3.12.1-2 below. There are two cells in the test: Cell 1 is the Active cell and Cell 2 is the Neighbor cell. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.12.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms.

Non-MBSFN ABS pattern is configured in the aggressor Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.12.1-1: General test parameters for E-UTRAN TDD in-sync testing under time domain measurement resource restriction**

| Parameter  |                                | Unit    | Value         | Comment  |
|--|--------------------------------|---------|---------------|--|
| PCFICH/PDCCH/PHICH parameters                                |                                |         | R.9 TDD       | As specified in clause A.3.1.2.2. None of the PDCCH are intended for the UE under test   |
| OCNG parameters  |                                |         | OP.2 TDD      | As specified in clause A.3.2.2.2.  |
| Active cell  |                                |         | Cell 1        | Cell 1 is on E-UTRA RF channel number 1  |
| Neighbor cell  |                                |         | Cell 2        | Cell 2 is on E-UTRA RF channel number 1; Cell 2 generates interference over restricted resources.  |
| Neighbor cell ABS configuration                              |                                |         | Non-MBSFN ABS | As defined in Table A.3.4.1.2-2  |
| CP length  |                                |         | Normal        |  |
| E-UTRA RF Channel Number                                     |                                |         | 1             | One E-UTRA TDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth (BWchannel)                         |                                | MHz     | 10            |  |

**Figure A.7.3.12.1-1 SNR variation in active cell for in-sync testing under time domain measurement resource restriction**

### A.7.3.12.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink subframes configured for CQI transmission according to the configured CQI mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.13 E-UTRAN FDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction with MBSFN ABS

### A.7.3.13.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.13.1-1 and A.7.3.13.1-2 below. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.13.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

MBSFN ABS pattern is configured in the aggressor Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.13.1-1: General test parameters for E-UTRAN FDD out-of-sync testing under time domain measurement resource restriction with MBSFN ABS**

| Parameter   |                                | Unit | Value  | Comment  |

| <p>Note 1: OCNG shall be used such that the resources in cell # 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.</p> <p>Note 3: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.</p> <p>Note 4: The signal contains PDCCH for UEs other than the device under test as part of OCNG.</p> <p>Note 5: SNR levels correspond to the signal quality, signal-to-interference-plus-noise ratio, on the CRS REs.</p> <p>Note 6: The SNR in the restricted measurement subframes during time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.3.13.1-1.</p> |            |           |      |       |   |    |    |

**Figure A.7.3.13.1-1 SNR variation for out-of-sync testing**

### A.7.3.13.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.14 E-UTRAN TDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction with MBSFN ABS

### A.7.3.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.14.1-1 and A.7.3.14.1-2 below. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.14.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

MBSFN ABS pattern is configured in the aggressor Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Table A.7.3.14.1-1: General test parameters for E-UTRAN TDD out-of-sync testing under time domain measurement resource restriction with MBSFN ABS**

| Parameter   |                                | Unit | Value  | Comment   |
|---|--------------------------------|------|--|---|
| PCFICH/PDCCH/PHICH parameters   |                                |      | R.9.TDD  | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |
| OCNG parameters   |                                |      | OP.2 TDD for the serving cell (Cell 1)<br>OP.6 TDD for the neighbour cell (Cell 2)   | As specified in clause A.3.2.2.2 and A.3.2.2.6 respectively   |
| Serving cell (PCell)  |                                |      | Cell 1   | Cell 1 is on E-UTRA RF channel number 1   |
| Neighbor cell   |                                |      | Cell 2   | Aggressor cell on E-UTRA RF channel number 1  |
| Neighbor cell ABS configuration   |                                |      | MBSFN ABS  | As defined in Table A.3.4.2.2-1   |
| CP length   |                                |      | Normal   |   |
| E-UTRA RF Channel Number  |                                |      | 1  | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )   |                                | MHz  | 10   |   |
| Correlation Matrix and Antenna Configuration  |                                |      | 2x2 Low  | Correlation Matrix and Antenna Configuration are defined in TS 36.101 [5] Annex B.2.3.2   |
| Out of sync transmission parameters (Note 1)  | DCI format                     |      | 1A   | As defined in clause 5.3.3.1.3 in TS 36.212   |
|   | Number of Control OFDM symbols |      | 3  | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively.  |
|   | Aggregation level              | CCE  | 8  |   |
|   | $\rho_A, \rho_B$               |      | -3   |   |

**Figure A.7.3.14.1-1 SNR variation for out-of-sync testing**

### A.7.3.14.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.15 E-UTRAN FDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with MBSFN ABS

### A.7.3.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.15.1-1 and A.7.3.15.1-2 below. There are two cells, cell 1 is the serving cell and cell 2 is the neighbour aggressor cell. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.15.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

MBSFN ABS pattern is configured in Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

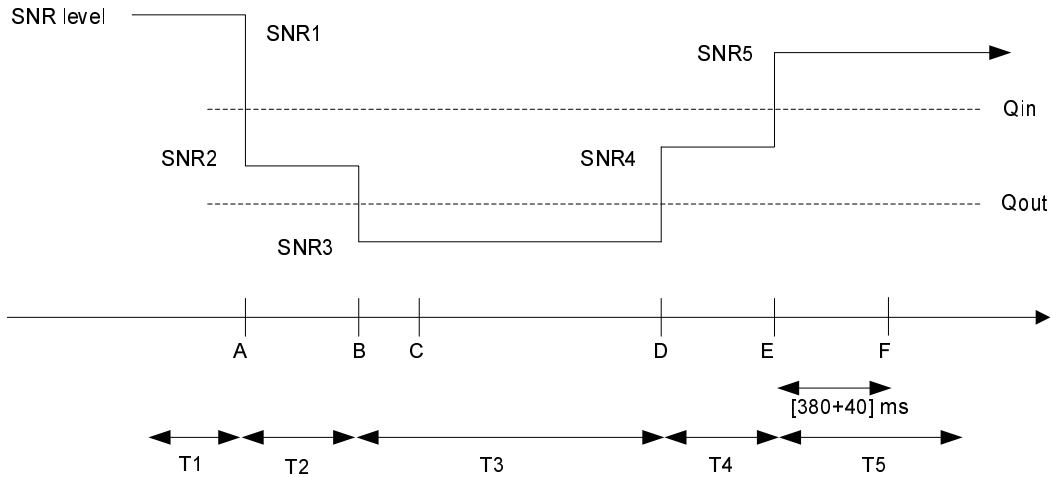

**Table A.7.3.15.1-1: General test parameters for E-UTRAN FDD in-sync testing under time domain measurement resource restriction with MBSFN ABS**

| Parameter                                    |                                | Unit | Value  | Comment   |
|--|--------------------------------|------|--|---|
| PCFICH/PDCCH/PHICH parameters                |                                |      | R.9 FDD  | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |
| Serving cell                                 |                                |      | Cell 1   | Cell 1 is on E-UTRA RF channel number 1   |
| Neighbour cell                               |                                |      | Cell 2   | Cell 2 is the aggressor cell on E-UTRA RF channel number 1  |
| Neighbour cell ABS configuration             |                                |      | MBSFN ABS  | As defined in Table A.3.4.2.2-2   |
| OCNG parameters for Cell 1                   |                                |      | OP.6 FDD   | As specified in clause A.3.2.1.6.   |
| OCNG parameters for Cell 2                   |                                |      | OP.9 FDD   | As specified in clause A.3.2.1.9.   |

### A.7.3.15.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.16 E-UTRAN TDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with MBSFN ABS

### A.7.3.16.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction when CRS assistance information is not provided. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.16.1-1 and A.7.3.16.1-2 below. There are two cells, cell 1 is the serving cell and cell 2 is the neighbour aggressor cell. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.15.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms.

MBSFN ABS pattern is configured in Cell 2 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing serving cell measurements. The patterns shall be configured prior to the start of T1.

**Figure A.7.3.16.1-1 SNR variation in the active cell for in-sync testing under time domain measurement resource restriction with MBSFN ABS**

### A.7.3.16.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.17 E-UTRAN FDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

#### A.7.3.17.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell under time domain measurement resource restriction with CRS assistance information. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.17.1-1 and A.7.3.17.1-2 below. There are three active cells in the test: Cell 1 is the PCell cell and Cell 2 and 3 are the neighbour cells. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.17.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing Pcell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2 and T3 in this test. The non-MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

**Table A.7.3.17.1-1: General test parameters for E-UTRAN FDD out-of-sync testing under time domain measurement resource restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter                                    | Unit                           | Value   | Comment   |  |
|--|--------------------------------|---|---|--|
| PCFICH/PDCCH/PHICH parameters                |                                | R.7 FDD   | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |  |
| OCNG parameters                              |                                | OP.6 FDD  | As specified in section A.3.2.1.6.  |  |
| PCell  |                                | Cell 1  | Cell 1 is on E-UTRA RF channel number 1   |  |
| Neighbor cells                               |                                | Cell 2 and Cell 3   | Both of aggressor cells on E-UTRA RF channel number 1   |  |
| Neighbor cell ABS configuration              |                                | Non-MBSFN ABS   | As defined in Table A.3.4.1.2-1   |  |
| CP length                                    |                                | Normal  |   |  |
| E-UTRA RF Channel Number                     |                                | 1   | One E-UTRA FDD carrier frequency is used.   |  |

**Figure A.7.3.17.1-1 SNR variation for out-of-sync testing**

### A.7.3.17.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.18 E-UTRAN TDD Radio Link Monitoring Test for Out-of-sync under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.7.3.18.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the serving cell under time domain measurement resource restriction with CRS assistance information. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.18.1-1 and A.7.3.18.1-2 below. There are three active cells in the test: Cell 1 is the PCell cell and Cell 2 and 3 are the neighbour cells. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.18.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing Pcell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2 and T3 in this test. The non-MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

**Table A.7.3.18.1-1: General test parameters for E-UTRAN TDD out-of-sync testing under time domain measurement resource restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter                                    | Unit                           | Value   | Comment  |  |
|--|--------------------------------|---|--|--|
| PCFICH/PDCCH/PHICH parameters                |                                | R.7.TDD   | As specified in clause A.3.1.2.2. None of the PDCCH are intended for the UE under test   |  |
| OCNG parameters                              |                                | OP.2 TDD  | As specified in clause A.3.2.2.2   |  |
| PCell  |                                | Cell 1  | Cell 1 is on E-UTRA RF channel number 1  |  |
| Neighbor cells                               |                                | Cell 2 and Cell 3   | Both of aggressor cells on E-UTRA RF channel number 1  |  |
| Neighbor cell ABS configuration              |                                | Non-MBSFN ABS   | As defined in Table A.3.4.1.2-1  |  |
| CP length                                    |                                | Normal  |  |  |
| E-UTRA RF Channel Number                     |                                | 1   | One E-UTRA TDD carrier frequency is used.  |  |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )  | MHz                            | 10  |  |  |
| Correlation Matrix and Antenna Configuration |                                | 2x2 Low   | Correlation Matrix and Antenna Configuration are defined in TS 36.101 [5] Annex B.2.3.2  |  |
| Out of sync transmission parameters (Note 1) | DCI format                     |   | 1A   | As defined in clause 5.3.3.1.3 in TS 36.212  |
|  | Number of Control OFDM symbols |   | 2  | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
|  | Aggregation level              | CCE   | 8  |  |
|  | $\rho_A, \rho_B$               |   | -3   |  |

- Note 1: For the special subframe configuration see table 4.2-1 in TS 36.211.
- Note 2: For the uplink-downlink subframe configuration see table 4.2-2 in TS 36.211.
- Note 3: OCNG shall be used such that the resources in cell # 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 4: The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.
- Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
- Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
- Note 7: SNR levels correspond to the signal quality, signal-to-interference-plus-noise ratio, on the CRS REs.
- Note 8: The SNR in the restricted measurement subframes during time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in Figure A.7.3.18.1-1.

**Figure A.7.3.18.1-1 SNR variation for out-of-sync testing**

### A.7.3.18.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.19 E-UTRAN FDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with CRS assistance information and Non-MBSFN ABS

### A.7.3.19.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell under time domain measurement resource restriction with CRS assistance information. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in section 7.6.

The test parameters are given in Tables A.7.3.19.1-1 and A.7.3.19.1-2 below. There are three active cells in the test: Cell 1 is the PCell cell and Cell 2 and 3 are the neighbour cells. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.19.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing PCell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2, T3, T4 and T5 in this test. The Non-MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

Figure A.7.3.19.1-1 SNR variation for in-sync testing

### A.7.3.19.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.20 E-UTRAN TDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with CRS assistance information and Non-MBSFN ABS

### A.7.3.20.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell under time domain measurement resource restriction with CRS assistance information. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in section 7.6.

The test parameters are given in Tables A.7.3.20.1-1 and A.7.3.20.1-2 below. There are three active cells in the test: Cell 1 is the PCell and Cell 2 and 3 are the Neighbor cells. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.20.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Non-MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing PCell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2, T3, T4 and T5 in this test. The Non-MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

Table A.7.3.20.1-1: General test parameters for E-UTRAN TDD in-sync radio link monitoring test

| Parameter  |                          | Unit | Value                          |  |  | Comment   |
|--|--------------------------|------|--------------------------------|--|--|---|
|  |                          |      | Test 1                         |  |  |   |
|  |                          |      | Cell 1                         | Cell 2   | Cell 3   |   |
| PCFICH/PDCCH/PHICH parameters                        |                          |      | R.9 TDD                        | R.9 TDD  | R.9 TDD  | As specified in section A.3.1.2.2. None of the PDCCH are intended for the UE under test   |
| OCNG parameters                                      |                          |      | OP.2 TDD                       | OP.2 TDD   | OP.2 TDD   | As specified in section A.3.2.2.2.  |

Figure A.7.3.20.1-1 SNR variation for in-sync testing

### A.7.3.20.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.21 E-UTRAN FDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with CRS assistance information and MBSFN ABS

#### A.7.3.21.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell under time domain measurement resource restriction with CRS assistance information and MBSFN ABS. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in section 7.6.

The test parameters are given in Tables A.7.3.21.1-1 and A.7.3.21.1-2 below. There are three active cells in the test: Cell 1 is the PCell cell and Cell 2 and 3 are the neighbour cells. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.21.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing PCell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2, T3, T4 and T5 in this test. The MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

Table A.7.3.21.1-1: General test parameters for E-UTRAN FDD in-sync radio link monitoring test

| Parameter  |                          | Unit | Value  |  |  | Comment  |
|--|--------------------------|------|--|--|--|--|
|  |                          |      | Test 1   |  |  |  |
|  |                          |      | Cell 1   | Cell 2   | Cell 3   |  |

| <p>Note 1: OCNG shall be used such that the resources in cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.</p> <p>Note 3: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.</p> <p>Note 4: The signal contains PDCCH for UEs other than the device under test as part of OCNG.</p> <p>Note 5: SNR levels correspond to the signal to noise ratio over the cell-specific reference signal REs.</p> <p>Note 6: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.7.3.21.1-1.</p> |            |          |    |    |    |    |   |          |      |      |       |      |      |

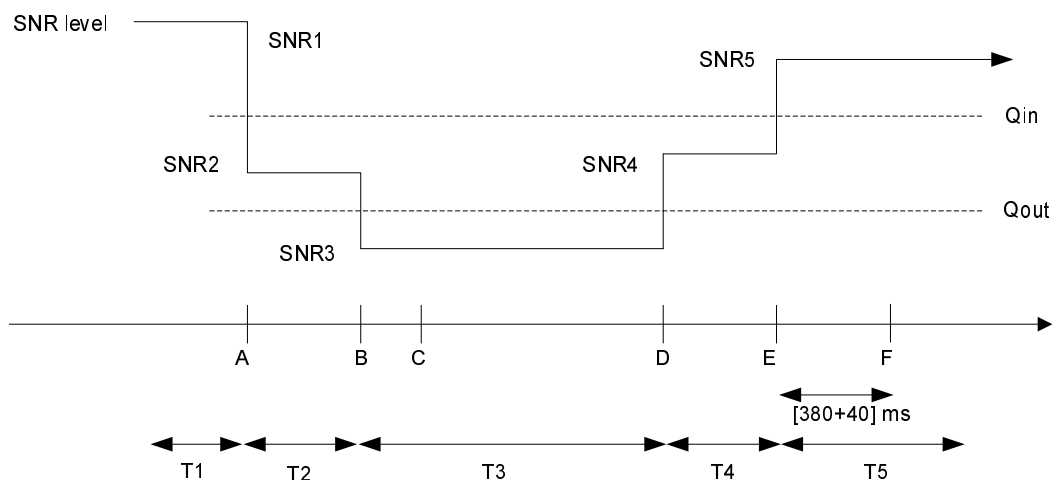

Figure A.7.3.21.1-1 SNR variation for in-sync testing

### A.7.3.21.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.22 E-UTRAN TDD Radio Link Monitoring Test for In-sync under Time Domain Measurement Resource Restriction with CRS assistance information and MBSFN ABS

#### A.7.3.22.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell under time domain measurement resource restriction with CRS assistance information. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in section 7.6.

The test parameters are given in Tables A.7.3.22.1-1 and A.7.3.22.1-2 below. There are three active cells in the test: Cell 1 is the PCell and Cell 2 and 3 are the Neighbor cells. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.22.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

MBSFN ABS pattern is configured in both Cell 2 and Cell 3 in this test. The UE is configured by higher layers with a time domain measurement restriction pattern for performing PCell measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2 and Cell 3, which shall be valid during T1, T2, T3, T4 and T5 in this test. The MBSFN ABS pattern, the time domain measurement resource restriction pattern and the CRS assistance information shall be configured prior to the start of T1.

Table A.7.3.22.1-1: General test parameters for E-UTRAN TDD in-sync radio link monitoring test

| Parameter  |                          | Unit | Value                          |   |   | Comment   |
|--|--------------------------|------|--------------------------------|---|---|---|
|  |                          |      | Test 1                         |   |   |   |
|  |                          |      | Cell 1                         | Cell 2  | Cell 3  |   |
| PCFICH/PDCCH/PHICH parameters                        |                          |      | R.9 TDD                        | R.9 TDD   | R.9 TDD   | As specified in section A.3.1.2.2. None of the PDCCH are intended for the UE under test   |
| OCNG parameters                                      |                          |      | OP.2 TDD                       | OP.6 TDD  | OP.6 TDD  | As specified in section A.3.2.2.  |
| Active cell  |                          |      | PCell                          | Neighbor Cell   | Neighbor Cell   | Cell 1, Cell 2 and Cell 3 are on E-UTRA RF channel number 1   |
| CP length  |                          |      | Normal                         | Normal  | Normal  |   |
| E-UTRA RF Channel Number                             |                          |      | 1                              | 1   | 1   | One E-UTRA TDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )    |                          | MHz  | 10                             | 10  | 10  |   |

Figure A.7.3.22.1-1 SNR variation for in-sync testing

### A.7.3.22.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.23 E-UTRAN FDD Radio Link Monitoring Test for Out-of-sync for 5MHz Bandwidth

#### A.7.3.23.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.7.3.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.7.3.23.1-1 and A.7.3.23.1-2 will replace the values of corresponding parameters in Test 4 in Tables A.7.3.1.1-1 and A.7.3.1.1-2. Only Test 4 is defined for the 5MHz bandwidth.

Table A.7.3.23.1-1: General test parameters for E-UTRAN FDD out-of-sync testing under 5MHz Bandwidth

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
|  |                                |      | Test 4    |   |
| PCFICH/PDCCH/PHICH parameters  |                                |      | R.12 FDD  | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |
| OCNG parameters  |                                |      | OP.16 FDD | As specified in clause A.3.2.1.16.  |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 5         |   |
| Out of sync transmission parameters (Note 1)   | Number of Control OFDM Symbols |      | 3         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |   |
| Note 2: See Table A.7.3.1.1-1 for other general test parameters.   |                                |      |           |   |
| Note 3: This test is according to the principle defined in section A.3.7.2.  |                                |      |           |   |

**Table A.7.3.23.1-2: Cell specific test parameters for E-UTRAN FDD for out-of-sync radio link monitoring test #4 under 5MHz Bandwidth**

| Parameter  | Unit | Test 4    |      |       |
|--|------|-----------|------|-------|
|  |      | T1        | T2   | T3    |
| $BW_{channel}$   | MHz  | 5         |      |       |
| OCNG Pattern defined in A.3.2.1.16 (FDD)                               |      | OP.16 FDD |      |       |
| SNR <sup>Note 6</sup>  | dB   | -2.3      | -5.7 | -12.2 |
| Note 1: See Table A.7.3.1.1-2 for other cell specific test parameters. |      |           |      |       |

### A.7.3.23.2 Test Requirements

The requirements defined in section A.7.3.1.2 shall apply to this test case.

## A.7.3.24 E-UTRAN FDD Radio Link Monitoring Test for In-sync for 5MHz Bandwidth

### A.7.3.24.1 Test Purpose and Environment

The purpose of this test case is the same as for the Test 2 defined in subclause A.7.3.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.7.3.24.1-1 and A.7.3.24.1-2 will replace the values of corresponding parameters in Tables A.7.3.2.1-1 and A.7.3.2.1-2.

**Table A.7.3.24.1-1: General test parameters for E-UTRAN FDD in-sync testing**

| Parameter  |                                | Unit | Value    | Comment  |
|--|--------------------------------|------|----------|--|
| PCFICH/PDCCH/PHICH parameters  |                                |      | R.12 FDD | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test   |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )  |                                | MHz  | 5        |  |
| In sync transmission parameters (Note 1)   | Number of Control OFDM symbols |      | 3        | In sync threshold $Q_{in}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause and Table 7.6.1-2 respectively.            |
| Out of sync transmission parameters (Note 1)   | Number of Control OFDM symbols |      | 3        | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
| Note 1: See Table A.7.3.2.1-1 for other general test parameters.                     |                                |      |          |  |
| Note 2: This test is performed according to the principle defined in section A.3.7.2 |                                |      |          |  |

**Table A.7.3.24.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for in-sync radio link monitoring test**

| Parameter  | Unit | T1        | T2   | T3    | T4   | T5   |
|--|------|-----------|------|-------|------|------|
| $BW_{\text{channel}}$  | MHz  | 5         |      |       |      |      |
| OCNG Pattern defined in A.3.2.1.16 (FDD)                         |      | OP.16 FDD |      |       |      |      |
| SNR  | dB   | -2.3      | -5.7 | -12.2 | -7.3 | -2.3 |
| Propagation condition  |      | ETU 70 Hz |      |       |      |      |
| Note 1: See Table A.7.3.2.1-2 for other general test parameters. |      |           |      |       |      |      |

### A.7.3.24.2 Test Requirements

The requirements defined in section A.7.3.2.2 shall apply to this test case.

## A.7.3.25 E-UTRAN FDD Radio Link Monitoring Test for In-sync in DRX for 5MHz Bandwidth

### A.7.3.25.1 Test Purpose and Environment

The purpose of this test case is the same as for the Test 2 defined in subclause A.7.3.6. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.7.3.25.1-1 and A.7.3.25.1-2 will replace the values of corresponding parameters in Tables A.7.3.6.1-1 and A.7.3.6.1-2.

**Table A.7.3.25.1-1: General test parameters for E-UTRAN FDD in-sync testing**

| Parameter  |                                | Unit | Value    | Comment   |
|--|--------------------------------|------|----------|---|
| PCFICH/PDCCH/PHICH parameters  |                                |      | R.12 FDD | As specified in clause A.3.1.2.1. None of the PDCCH are intended for the UE under test  |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ )                                   |                                | MHz  | 5        |   |
| In sync transmission parameters (Note 1)   | Number of Control OFDM symbols |      | 3        | In sync threshold $Q_{\text{in}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause and Table 7.6.1-2 respectively.            |
| Out of sync transmission parameters (Note 1)   | Number of Control OFDM symbols |      | 3        | Out of sync threshold $Q_{\text{out}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
| Note 1: See Table A.7.3.6.1-1 for other general test parameters.                     |                                |      |          |   |
| Note 2: This test is performed according to the principle defined in section A.3.7.2 |                                |      |          |   |

**Table A.7.3.25.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for in-sync radio link monitoring test**

| Parameter  | Unit | T1        | T2   | T3    | T4   | T5   |
|--|------|-----------|------|-------|------|------|
| $BW_{\text{channel}}$  | MHz  | 5         |      |       |      |      |
| OCNG Pattern defined in A.3.2.1.16 (FDD)                         |      | OP.16 FDD |      |       |      |      |
| SNR  | dB   | -2.3      | -5.7 | -12.2 | -7.3 | -2.3 |
| Propagation condition  |      | AWGN      |      |       |      |      |
| Note 1: See Table A.7.3.6.1-2 for other general test parameters. |      |           |      |       |      |      |

### A.7.3.25.2 Test Requirements

The requirements defined in section A.7.3.6.2 shall apply to this test case.

## A.7.3.26 E-UTRAN FD-FDD Radio Link Monitoring Test for Out-of-sync for UE Category 0

### A.7.3.26.1 Test Purpose and Environment

The purpose of this test is to verify that the FD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.26.1-1, A.7.3.26.1-2 and A.7.3.26.1-3 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.26.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

**Table A.7.3.26.1-1: General test parameters for E-UTRAN FD-FDD out-of-sync testing for UE Category 0**

| Parameter  |                                | Unit | Value     | Comment  |
|--|--------------------------------|------|-----------|--|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ )   |                                | MHz  | 10        |  |
| CP length  |                                |      | Normal    |  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in section 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold $Q_{\text{out}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in section 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |  |
|  | $\rho_A, \rho_B$               |      | -3        |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |  |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |  |
| DRX  |                                |      | OFF       |  |
| Layer 3 filtering  |                                |      | Enabled   | Counters: N310 = 1; N311 = 1   |
| T310 timer   |                                | ms   | 0         | T310 is disabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled  |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity  |                                | ms   | 2         | Minimum CQI reporting periodicity  |
| T1   |                                | s    | 1         |  |
| T2   |                                | s    | 0.4       |  |
| T3   |                                | s    | 0.5       |  |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |  |

**Table A.7.3.26.1-2: Cell specific test parameters for E-UTRAN FD-FDD (cell # 1) for out-of-sync radio link monitoring tests for UE Category 0**

| Parameter  | Unit       | Test 1   |      |       |
|--|------------|----------|------|-------|
|  |            | T1       | T2   | T3    |
| E-UTRA RF Channel Number   |            | 1        |      |       |
| $BW_{channel}$   | MHz        | 10       |      |       |
| PCFICH/PDCCH/PHICH parameters defined in A.3.1.2.1   |            | R.7 FDD  |      |       |
| OCNG Pattern defined in A.3.2.1 (FDD)  |            | OP.2 FDD |      |       |

**Figure A.7.3.26.1-1: SNR variation for out-of-sync testing**

### A.7.3.26.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.27 E-UTRAN FD-FDD Radio Link Monitoring Test for In-sync for UE Category 0

#### A.7.3.27.1 Test Purpose and Environment

The purpose of this test is to verify that the FD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN FD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.27.1-1 and A.7.3.27.1-2 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.27.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms.

Table A.7.3.27.1-1: General test parameters for E-UTRAN FD-FDD in-sync testing for UE Category 0

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ )   |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C        | As defined in clause 5.3.3.1.4 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | In sync threshold $Q_{\text{in}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-2 respectively.      |
|  | Aggregation level              | CCE  | 4         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 1         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold $Q_{\text{out}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| DRX  |                                |      | OFF       |   |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>N310 = 1; N311 = 1   |
| T310 timer   |                                | ms   | 2000      | T310 is enabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | 2         | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 0.5       |   |
| T2   |                                | s    | 0.4       |   |
| T3   |                                | s    | 1.46      |   |
| T4   |                                | s    | 0.4       |   |
| T5   |                                | s    | 1         |   |
| Note 1: PDCCH/PCFICH corresponding to the in-sync and out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |   |

**Table A.7.3.27.1-2: Cell specific test parameters for E-UTRAN FD-FDD (cell # 1) for in-sync radio link monitoring test for UE Category 0**

| Parameter   | Unit   | Test 1   |      |       |      |      |
|---|--|----------|------|-------|------|------|
|   |  | T1       | T2   | T3    | T4   | T5   |

| OCNG_RA <sup>Note 1</sup>                                 | dB   |          |      |       |      |      |
| OCNG_RB <sup>Note 1</sup>                                 | dB   |          |      |       |      |      |
| $N_{oc}$  | dBm/15 kHz   | -98      |      |       |      |      |
| SNR <sup>Note 6</sup>                                     | dB   | -2.1     | -6.9 | -12.9 | -7.1 | -2.1 |
| Propagation condition                                     |  | ETU 70Hz |      |       |      |      |
| Correlation Matrix and Antenna Configuration              |  | 2x1 Low  |      |       |      |      |
| Note 1:   | OCNG shall be used such that the resources in cell # 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |          |      |       |      |      |
| Note 2:   | The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.  |          |      |       |      |      |
| Note 3:   | The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.   |          |      |       |      |      |
| Note 4:   | The signal contains PDCCH for UEs other than the device under test as part of OCNG.  |          |      |       |      |      |
| Note 5:   | SNR levels correspond to the signal to noise ratio over the cell-specific reference signal REs.  |          |      |       |      |      |
| Note 6:   | The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.7.3.27.1-1.                                     |          |      |       |      |      |

**Figure A.7.3.27.1-1: SNR variation for in-sync testing**

### A.7.3.27.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.28 E-UTRAN FD-FDD Radio Link Monitoring Test for Out-of-sync in DRX for UE category 0

### A.7.3.28.1 Test Purpose and Environment

The purpose of this test is to verify that the FD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN FD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.28.1-1, A.7.3.28.1-2, A.7.3.28.1-3 and A.7.3.28.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.28.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.28.1-1: General test parameters for E-UTRAN FD-FDD out-of-sync tests in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment  |
|--|--------------------------------|------|-----------|--|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth (BWchannel)   |                                | MHz  | 10        |  |
| CP length  |                                |      | Normal    |  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212  |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |  |
|  | $\rho_A, \rho_B$               |      | -3        |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |  |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |  |
| DRX cycle  |                                | ms   | 1280      | See Table A.7.3.28.1-3   |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>$N_{310} = 1$ ; $N_{311} = 1$   |
| T310 timer   |                                | ms   | 0         | T310 is disabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled  |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity  |                                | ms   | 2         | Minimum CQI reporting periodicity  |
| T1   |                                | s    | 32        |  |
| T2   |                                | s    | 12.8      |  |
| T3   |                                | s    | 13        |  |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |  |

**Table A.7.3.28.1-2: Cell specific test parameters for E-UTRAN FD-FDD (cell # 1) for out-of-sync radio link monitoring tests in DRX for UE category 0**

| Parameter  | Unit       | Test 1   |       |       |

**Figure A.7.3.28.1-1: SNR variation for out-of-sync testing in DRX**

### A.7.3.28.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (duration  $D_1 = 6500$  ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.29 E-UTRAN FD-FDD Radio Link Monitoring Test for In-sync in DRX for UE Category 0

#### A.7.3.29.1 Test Purpose and Environment

The purpose of this test is to verify that the FD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN FD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.29.1-1, A.7.3.29.1-2, A.7.3.29.1-3 and A.7.3.29.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.29.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.29.1-1: General test parameters for E-UTRAN FD-FDD in-sync test in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C        | As defined in clause 5.3.3.1.4 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | In sync threshold Q <sub>in</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-2 respectively.      |
|  | Aggregation level              | CCE  | 4         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      |      | 1         |   |
| Ratio of PCFICH to RS EPRE   |                                | 1    |           |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| DRX cycle  |                                | ms   | 40        | See Table A.7.3.29.1-3  |
| Layer 3 filtering  |                                |      | Enabled   | Counters: N310 = 1; N311 = 1  |
| T310 timer   |                                | ms   | 2000      | T310 is enabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | 2         | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 4         |   |

### A.7.3.29.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.30 E-UTRAN HD-FDD Radio Link Monitoring Test for Out-of-sync for UE Category 0

### A.7.3.30.1 Test Purpose and Environment

The purpose of this test is to verify that the HD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN HD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.30.1-1, A.7.3.30.1-2 and A.7.3.30.1-3 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.30.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 10 ms.

**Table A.7.3.30.1-1: General test parameters for E-UTRAN HD-FDD out-of-sync testing for UE Category 0**

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |

| Correlation Matrix and Antenna Configuration               |  | 2x1 Low    |      |       |
| Note 1:  | OCNG shall be used such that the resources in cell # 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |      |       |
| Note 2:  | The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.  |            |      |       |
| Note 3:  | The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.   |            |      |       |
| Note 4:  | The signal contains PDCCH for UEs other than the device under test as part of OCNG.  |            |      |       |
| Note 5:  | SNR levels correspond to the signal to noise ratio over the cell-specific reference signal REs.  |            |      |       |
| Note 6:  | The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.3.30.1-1.   |            |      |       |

**Figure A.7.3.30.1-1: SNR variation for out-of-sync testing**

### A.7.3.30.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.31 E-UTRAN HD-FDD Radio Link Monitoring Test for In-sync for UE Category 0

### A.7.3.31.1 Test Purpose and Environment

The purpose of this test is to verify that the HD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN HD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.31.1-1 and A.7.3.31.1-2 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.31.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 10 ms.

Table A.7.3.31.1-1: General test parameters for E-UTRAN HD-FDD in-sync testing for UE category 0

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C        | As defined in clause 5.3.3.1.4 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | In sync threshold Q <sub>in</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-2 respectively.      |
|  | Aggregation level              | CCE  | 4         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 1         |   |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |   |
| DRX  |                                |      | OFF       |   |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>N310 = 1; N311 = 1   |
| T310 timer   |                                | ms   | 2000      | T310 is enabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | [10]      | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 0.5       |   |
| T2   |                                | s    | 0.4       |   |
| T3   |                                | s    | 1.46      |   |
| T4   |                                | s    | 0.4       |   |
| T5   |                                | s    | 1         |   |
| Note 1: PDCCH/PCFICH corresponding to the in-sync and out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |   |

**Table A.7.3.31.1-2: Cell specific test parameters for E-UTRAN HD-FDD (cell # 1) for in-sync radio link monitoring test for UE category 0**

| Parameter   | Unit       | Test 1     |      |       |      |      |

**Figure A.7.3.31.1-1: SNR variation for in-sync testing**

### A.7.3.31.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.32 E-UTRAN HD-FDD Radio Link Monitoring Test for Out-of-sync in DRX for UE category 0

#### A.7.3.32.1 Test Purpose and Environment

The purpose of this test is to verify that the HD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN HD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.32.1-1, A.7.3.32.1-2, A.7.3.32.1-3 and A.7.3.32.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.32.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 5ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.7.3.32.1-1: General test parameters for E-UTRAN HD-FDD out-of-sync tests in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment  |
|--|--------------------------------|------|-----------|--|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth (BWchannel)   |                                | MHz  | 10        |  |
| CP length  |                                |      | Normal    |  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212  |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |  |
|  | $\rho_A$ , $\rho_B$            |      | -3        |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |  |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |  |
| DRX cycle  |                                | ms   | 1280      | See Table A.7.3.32.1-3   |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>$N_{310} = 1$ ; $N_{311} = 1$   |
| T310 timer   |                                | ms   | 0         | T310 is disabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled  |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity  |                                | ms   | 5         | Minimum CQI reporting periodicity  |
| T1   |                                | s    | 32        |  |
| T2   |                                | s    | 12.8      |  |
| T3   |                                | s    | 13        |  |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |  |

**Table A.7.3.32.1-2: Cell specific test parameters for E-UTRAN HD-FDD (cell # 1) for out-of-sync radio link monitoring tests in DRX for UE category 0**

| Parameter   | Unit       | Test 1     |      |       |

### A.7.3.32.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (duration  $D_1 = 6500$  ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.33 E-UTRAN HD-FDD Radio Link Monitoring Test for In-sync in DRX for UE Category 0

#### A.7.3.33.1 Test Purpose and Environment

The purpose of this test is to verify that the HD-FDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN HD-FDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.33.1-1, A.7.3.33.1-2, A.7.3.33.1-3 and A.7.3.33.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.33.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.33.1-1: General test parameters for E-UTRAN HD-FDD in-sync test in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C        | As defined in clause 5.3.3.1.4 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | In sync threshold Q <sub>in</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-2 respectively.      |
|  | Aggregation level              | CCE  | 4         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 1         |   |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
|  | Ratio of PCFICH to RS EPRE     | dB   | 1         |   |
| DRX cycle  |                                | ms   | 40        | See Table A.7.3.33.1-3  |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>N310 = 1; N311 = 1   |
| T310 timer   |                                | ms   | 2000      | T310 is enabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | 5         | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 4         |   |

### A.7.3.33.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.34 E-UTRAN TDD Radio Link Monitoring Test for Out-of-sync for UE Category 0

### A.7.3.34.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.34.1-1, A.7.3.34.1-2 and A.7.3.34.1-3 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.34.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms.

Table A.7.3.34.1-1: General test parameters for E-UTRAN TDD out-of-sync testing for UE Category 0

| Parameter  |                                | Unit | Value     | Comment  |
|--|--------------------------------|------|-----------|--|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA TDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth ( $BW_{\text{channel}}$ )   |                                | MHz  | 10        |  |
| CP length  |                                |      | Normal    |  |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in section 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold $Q_{\text{out}}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in section 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |  |
|  | $\rho_A, \rho_B$               |      | -3        |  |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |  |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |  |

| OCNG_RA <sup>Note 2</sup>                                  | dB   |          |      |       |
| OCNG_RB <sup>Note 2</sup>                                  | dB   |          |      |       |
| $N_{oc}$   | dBm/15 kHz   | -98      |      |       |
| SNR <sup>Note 7</sup>                                      | dB   | -1.6     | -5.9 | -11.9 |
| Propagation condition                                      |  | ETU 70Hz |      |       |
| Correlation Matrix and Antenna Configuration               |  | 2x1 Low  |      |       |
| Note 1:  | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.   |          |      |       |
| Note 2:  | OCNG shall be used such that the resources in cell # 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |          |      |       |
| Note 3:  | The uplink resources for CQI reporting are assigned to the UE prior to the start of time period T1.  |          |      |       |
| Note 4:  | The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.   |          |      |       |
| Note 5:  | The signal contains PDCCH for UEs other than the device under test as part of OCNG.  |          |      |       |
| Note 6:  | SNR levels correspond to the signal to noise ratio over the cell-specific reference signal REs.  |          |      |       |
| Note 7:  | The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in figure A.7.3.34.1-1.   |          |      |       |

**Figure A.7.3.34.1-1: SNR variation for out-of-sync testing**

### A.7.3.34.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (240 ms after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.35 E-UTRAN TDD Radio Link Monitoring Test for In-sync for UE category 0

### A.7.3.35.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.35.1-1 and A.7.3.35.1-2 below. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.35.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms.

Table A.7.3.35.1-1: General test parameters for E-UTRAN TDD in-sync testing for UE category 0

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
|  |                                |      | Test 1    |   |
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA TDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| In sync transmission parameters (Note 1)   | DCI format                     |      | 1C        | As defined in clause 5.3.3.1.4 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | In sync threshold Q <sub>in</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-2 respectively.      |
|  | Aggregation level              | CCE  | 4         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 1         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| DRX  |                                |      | OFF       |   |
| Layer 3 filtering  |                                |      | Enabled   | Counters: N310 = 1; N311 = 1  |
| T310 timer   |                                | ms   | 2000      | T310 is enabled   |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | 1         | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 0.5       |   |
| T2   |                                | s    | 0.4       |   |

**Figure A.7.3.35.1-1: SNR variation for in-sync testing**

### A.7.3.35.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (420 ms after the start of time duration T5) the UE shall transmit uplink signal at least in all subframes configured for CQI transmission according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.36 E-UTRAN TDD Radio Link Monitoring Test for Out-of-sync in DRX for UE category 0

### A.7.3.36.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.36.1-1, A.7.3.36.1-2, A.7.3.36.1-3 and A.7.3.36.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.3.36.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.36.1-1: General test parameters for E-UTRAN TDD out-of-sync test in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment   |
|--|--------------------------------|------|-----------|---|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1   |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA TDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> )  |                                | MHz  | 10        |   |
| CP length  |                                |      | Normal    |   |
| Out of sync transmission parameters (Note 1)   | DCI format                     |      | 1A        | As defined in clause 5.3.3.1.3 in TS 36.212   |
|  | Number of Control OFDM symbols |      | 2         | Out of sync threshold Q <sub>out</sub> and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.11.1 and Table 7.11.1-1 respectively. |
|  | Aggregation level              | CCE  | 8         |   |
|  | $\rho_A, \rho_B$               |      | -3        |   |
|  | Ratio of PDCCH to RS EPRE      | dB   | 4         |   |
| Ratio of PCFICH to RS EPRE   | dB                             | 1    |           |   |
| DRX cycle  |                                | ms   | 1280      | See Table A.7.3.36.1-3  |
| Layer 3 filtering  |                                |      | Enabled   | Counters:<br>N310 = 1; N311 = 1   |
| T310 timer   |                                | ms   | 0         | T310 is disabled  |
| T311 timer   |                                | ms   | 1000      | T311 is enabled   |
| Periodic CQI reporting mode  |                                |      | PUCCH 1-0 | As defined in table 7.2.2-1 in TS 36.213.   |
| CQI reporting periodicity  |                                | ms   | 1         | Minimum CQI reporting periodicity   |
| T1   |                                | s    | 32        |   |
| T2   |                                | s    | 12.8      |   |
| T3   |                                | s    | 13        |   |
| Note 1: PDCCH/PCFICH corresponding to the out of sync transmission parameters need not be included in the Reference Measurement Channel. |                                |      |           |   |

**Figure A.7.3.36.1-1: SNR variation for out-of-sync testing in DRX**

### A.7.3.36.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe according to the configured CQI reporting mode (PUCCH 1-0).

The UE shall stop transmitting uplink signal no later than time point C (duration  $D_1 = 6500$  ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.37 E-UTRAN TDD Radio Link Monitoring Test for In-sync in DRX for UE category 0

#### A.7.3.37.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD category 0 UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.11.

The test parameters are given in Tables A.7.3.37.1-1, A.7.3.37.1-2, A.7.3.37.1-3 and A.7.3.37.1-4. There is one cell (cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.37.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode

PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.37.1-1: General test parameters for E-UTRAN TDD in-sync test in DRX for UE category 0**

| Parameter  |                                | Unit | Value     | Comment  |
|--|--------------------------------|------|-----------|--|
| Active cell  |                                |      | Cell 1    | Cell 1 is on E-UTRA RF channel number 1  |
| E-UTRA RF Channel Number   |                                |      | 1         | One E-UTRA TDD carrier frequency is used.  |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )  |                                | MHz  | 10        |  |
| CP length  |                                |      | Normal    |  |

**Figure A.7.3.37.1-1: SNR variation for in-sync testing in DRX**

### A.7.3.37.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.38 E-UTRAN FDD-FDD DC Radio Link Monitoring Test for Out-of-sync in DRX in synchronous DC

#### A.7.3.38.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink radio link quality of the PSCell when DRX is used. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.38.1-1, A.7.3.38.1-2, A.7.3.38.1-3, and A.7.3.38.1-4. There are two cells, cell 1 is PCell and cell 2 is PSCell, in the test. The test consists of three successive time periods with time duration of T1, T2 and T3 respectively. Figure A.7.3.38.1-1 shows the variation of the downlink SNR in the PCell and PSCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.38.1-1: General test parameters for E-UTRAN FDD out-of-sync tests in DRX in synchronous dual connectivity**

| Parameter  |                                | Unit    | Value                           | Comment  |
|--|--------------------------------|---------|---------------------------------|--|
| Active cell  |                                |         | Cell 1<br>Cell 2                | Cell 1 is PCell on E-UTRA RF channel number 1, and cell 2 is PSCell on E-UTRA RF channel number 2  |
| CP length  |                                |         | Normal                          |  |

**Figure A.7.3.38.1-1 SNR variation for out-of-sync testing in DRX**

### A.7.3.38.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CQI transmission on Cell1.

During the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe on Cell2.

The UE shall stop transmitting uplink signal no later than time point C (duration D1 = 900 ms after the start of time duration T3) on PSCell.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.39 E-UTRAN FDD-FDD DC Radio Link Monitoring Test for Out-of-sync in DRX in asynchronous DC

### A.7.3.39.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell when DRX is used in asynchronous dual connectivity. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in section 7.6.

The test parameters are given in Tables A.7.3.39.1-1, A.7.3.39.1-2, A.7.3.39.1-3 and A.7.3.39.1-4. There are two cells in the test. Cell 1 is PCell in MCG and cell 2 is PSCell in SCG. Before the test starts the UE is connected to cell 1 on radio channel 1 and to cell 2 on radio channel 2. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. The downlink SNR in cell 1 keeps constant in the test. Figure A.7.3.39.1-1 shows the variation of the downlink SNR in the cell 2 to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2 in asynchronous dual connectivity. For both cells, the UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH

and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.39.1-1: General test parameters for E-UTRAN FDD out-of-sync in DRX**

| Parameter  |                                | Unit | Value                           | Comment   |
|--|--------------------------------|------|---------------------------------|---|
| Active cells   |                                |      | Cell 1 and cell 2               | Cell 1 (PCell) is on E-UTRA RF channel number 1 and cell 2 (PSCell) is on E-UTRA RF channel number 2  |
| CP length  |                                |      | Normal                          |   |

**Figure A.7.3.39.1-1 SNR variation for out-of-sync test in DRX**

### A.7.3.39.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

In the test, during time durations T1, T2 and T3, the UE shall transmit uplink signal on cell 1 at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

In the test, during the period from time point A to time point B the UE shall transmit uplink signal on cell 2 at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

In the test, the UE shall stop transmitting uplink signal on cell 2 no later than time point C (duration D<sub>1</sub> = 900 ms after the start of time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.40 E-UTRAN TDD-TDD DC Radio Link Monitoring Test for Out-of-sync in DRX in synchronous DC

### A.7.3.40.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.40.1-1, A.7.3.40.1-2, A.7.3.40.1-3, and A.7.3.40.1-4. There are two cells, cell 1 is PCell and cell 2 is PSCell, in the test. The test consists of three successive time periods with time duration of T1, T2 and T3 respectively. Figure A.7.3.40.1-1 shows the variation of the downlink SNR in the PCell and PSCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.40.1-1: General test parameters for E-UTRAN TDD out-of-sync tests in DRX in synchronous dual connectivity**

| Parameter  |                                | Unit      | Value   | Comment  |
|--|--------------------------------|-----------|---|--|
| Active cell  |                                |           | Cell 1<br>Cell 2                                    | Cell 1 is PCell on E-UTRA RF channel number 1, and cell 2 is PSCell on E-UTRA RF channel number 2  |
| CP length  |                                |           | Normal  |  |

**Figure A.7.3.40.1-1 SNR variation for out-of-sync testing in DRX**

### A.7.3.40.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CQI transmission on Cell1.

During the period from time point A to time point B the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the uplink subframe on Cell2.

The UE shall stop transmitting uplink signal no later than time point C (duration D1 = 900 ms after the start of time duration T3) on PSCell.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.41 E-UTRAN FDD-FDD Radio Link Monitoring Test for In-sync in DRX in synchronous dual connectivity

### A.7.3.41.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell when DRX is used in dual connectivity. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.41.1-1, A.7.3.41.1-2, A.7.3.41.1-3 and A.7.3.41.1-4. There are two cells, cell 1 is PCell and cell 2 is PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.41.1-1 shows the variation of the downlink SNR in the PSCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration for PCell and PSCell is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Figure A.7.3.41.1-1 SNR variation of cell 2 (PSCell) for in-sync testing in DRX**

### A.7.3.41.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0) on PCell and PSCell.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.3.42 E-UTRAN FDD-FDD DC Radio Link Monitoring Test for In-sync in DRX in asynchronous DC

### A.7.3.42.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell when DRX is used in asynchronous dual connectivity. This test will partly verify the E-UTRAN FDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.42.1-1, A.7.3.42.1-2, A.7.3.42.1-3 and A.7.3.42.1-4. There are two cells in the test. Cell 1 is PCell in MCG and cell 2 is PSCell in SCG. Before the test starts the UE is connected to cell 1 on radio channel 1 and to cell 2 on radio channel 2. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. The downlink SNR in cell 1 keeps constant in the test. Figure A.7.3.42.1-1 shows the variation of the downlink SNR in cell 2 to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2 in asynchronous dual connectivity. For both cell 1 and cell 2, the UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 2 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.7.3.42.1-1: General test parameters for E-UTRAN FDD in-sync test in DRX**

| Parameter   |                                | Unit | Value                           | Comment  |

| Field              | Value    | Comment  |
|--------------------|----------|--|
| TimeAlignmentTimer | infinity | As specified in clause 6.3.2 in TS 36.331  |
| sr-ConfigIndex     | 0        | For further information see clause 6.3.2 in TS 36.331 and section 10.1 in TS 36.213. |

**Figure A.7.3.42.1-1 Cell 2 SNR variation for in-sync testing in DRX**

### A.7.3.42.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal on cell 2 at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.3.43 E-UTRAN TDD-TDD Radio Link Monitoring Test for In-sync in DRX in synchronous dual connectivity

#### A.7.3.43.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell when DRX is used in dual connectivity. This test will partly verify the E-UTRAN TDD radio link monitoring requirements in clause 7.6.

The test parameters are given in Tables A.7.3.43.1-1, A.7.3.43.1-2, A.7.3.43.1-3 and A.7.3.43.1-4. There are two cells, cell 1 is PCell and cell 2 is PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.3.43.1-1 shows the variation of the downlink SNR in the PSCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CQI reporting in PUCCH 1-0 mode with a reporting periodicity of 1 ms. In the test, DRX configuration for PCell and PSCell is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.3.43.1-1: General test parameters for E-UTRAN TDD-TDD Radio Link Monitoring Test for In-sync in DRX in synchronous dual connectivity**

| Parameter   |                                | Unit | Value          | Comment  |
|---|--------------------------------|------|----------------|--|
| E-UTRA RF Channel Number  |                                |      | 1, 2           | Two E-UTRA TDD carrier frequency are used.   |
| Active cell   |                                |      | Cell 1, Cell 2 | Cell 1 is PCell on E-UTRA RF channel number 1, and cell 2 is PSCell on E-UTRA RF channel number 2  |
| CP length   |                                |      | Normal         |  |
| In sync transmission parameters (Note 1)  | DCI format                     |      | 1C             | As defined in clause 5.3.3.1.4 in TS 36.212  |
|   | Number of Control OFDM symbols |      | 2              | For 10MHz and 20MHz channel BW   |
|   | Number of Control OFDM symbols |      | 3              | For 5MHz channel BW  |
|   | Aggregation level              | CCE  | 4              | In sync threshold $Q_{in}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-2 respectively.      |
|   | $\rho_A, \rho_B$               |      | 0              |  |
|   | Ratio of PDCCH to RS EPRE      |      | 0              |  |
| Ratio of PCFICH to RS EPRE  |                                | 4    |                |  |
| Out of sync transmission parameters (Note 1)  | DCI format                     |      | 1A             | As defined in clause 5.3.3.1.3 in TS 36.212  |
|   | Number of Control OFDM symbols |      | 2              | For 10MHz and 20MHz channel BW   |
|   | Number of Control OFDM symbols |      | 3              | For 5MHz channel BW  |
|   | Aggregation level              | CCE  | 8              | Out of sync threshold $Q_{out}$ and the corresponding hypothetical PDCCH/PCFICH transmission parameters are as specified in clause 7.6.1 and Table 7.6.1-1 respectively. |
|   | $\rho_A, \rho_B$               |      | 0              |  |
|   | Ratio of PDCCH to RS EPRE      | dB   | 4              |  |
| Ratio of PCFICH to RS EPRE  | dB                             | 4    |                |  |
| DRX cycle on Cell 1   |                                | ms   | 640            | See Table A.7.3.43.1-3   |
| DRX cycle on Cell 2   |                                | ms   | 40             | See Table A.7.3.43.1-3   |
| Layer 3 filtering   |                                |      | Enabled        | Counters:<br>N310 = 1; N311 = 1, N313 = 1, N314 = 1  |
| T310 timer  |                                | ms   | 2000           | T310 is enabled  |
| T311 timer  |                                | ms   | 1000           | T311 is enabled  |
| T313 timer  |                                | ms   | 2000           | T313 is enabled  |
| Periodic CQI reporting mode   |                                |      | PUCCH 1-0      | As defined in table 7.2.2-1 in TS 36.213.  |
| CQI reporting periodicity   |                                | ms   | 1              | Minimum CQI reporting periodicity  |
| T1  |                                | s    | 4              |  |
| T2  |                                | s    | 1.6            |  |
| T3  |                                | s    | 1.46           |  |
| T4  |                                | s    | 0.4            |  |
| T5  |                                | s    | 4              |  |
| Note 1: PDCCH/PCFICH corresponding to the in-sync and out of sync transmission parameters need not be included in the Reference Measurement Channel.                        |                                |      |                |  |
| Note 2: Even a UE capable of both synchronous and asynchronous DC operations is required to pass this test case in accordance with the principle defined in section A.3.11. |                                |      |                |  |

**Figure A.7.3.43.1-1 SNR variation of cell 2 (PSCell) for in-sync testing in DRX**

**A.7.3.43.2 Test Requirements**

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (1120 ms after the start of time duration T5) the UE shall transmit uplink signal at least once every DRX cycle, in the On-duration part of the cycle in the subframe according to the configured CQI reporting mode (PUCCH 1-0) on PCell and PSCell.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.4 Interruption for Dual Connectivity

### A.7.4.1 E-UTRAN FDD-FDD DC interruption at transitions between active and non-active during DRX in synchronous DC

#### A.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that when PCell is in non-DRX and PSCell is in DRX, PCell interruptions due to transitions from active to non-active and from non-active to active during PSCell DRX the UE missed ACK/NACK does not exceed the limits. This test will verify the missed ACK/NACK rate for FDD PCell in dual connectivity requirements in clause 7.12.2.

The test parameters are given in Table A.7.4.1.1-1, A.7.4.1.1-2 and A.7.4.1.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell and Cell2 is PSCell. PCell is continuously scheduled in DL while PSCell is not scheduled and has DRX configured. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. Cell1 shall be configured as PCell and Cell2 shall be configured as PSCell. Prior to start of T1 the DRX inactivity timer for the PSCell have already expired. During T1 the UE shall be continuously scheduled on PCell while not scheduled on PSCell.

**Table A.7.4.1.1-1: General test parameters for E-UTRAN FDD-FDD DC interruption at transitions between active and non-active during DRX in synchronous DC**

| Parameter                  | Unit  | Value  | Comment  |
|----------------------------|---|--------|--|
| E-UTRA RF Channel Number   |   | 1, 2   | Two radio channels are used for this test.               |
| Active PCell               |   | Cell1  | PCell on RF channel number 1.                            |
| Configured PSCell          |   | Cell2  | PSCell on RF channel number 2.                           |
| CP length                  |   | Normal |  |
| DRX                        |   | ON     | DRX related parameters are defined in Table A.8.23.4.1-3 |
| Measurement gap pattern Id |   | OFF    |  |
| T1                         | s   | 10     |  |
| Note 1:                    | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.            |        |  |
| Note 2:                    | A UE capable of both synchronous and asynchronous DC operations is only required to pass this test case in accordance with the principle defined in section A.3.11. |        |  |

| Note 1: UE is continuously scheduled in PCell |         |         |   |

### A.7.4.1.2 Test Requirements

The UE shall be continuously scheduled in PCell during the entire length of T1. UE shall not be scheduled in PSCell during T1. During the time duration T1 the UE shall transmit at least 99% of ACK/NACK on PCell.

The UE shall not miss transmitting two consecutive ACK/NACK.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.4.2 E-UTRAN TDD-TDD DC interruption at transitions between active and non-active during DRX in synchronous DC

### A.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that when PCell is in non-DRX and PSCell is in DRX, PCell interruptions due to transitions from active to non-active and from non-active to active during PSCell DRX the UE missed ACK/NACK does not exceed the limits. This test will verify the missed ACK/NACK rate for TDD PCell in dual connectivity requirements in clause 7.12.2.

The test parameters are given in Table A.7.4.2.1-1, A.7.4.2.1-2 and A.7.4.2.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell and Cell2 is PSCell. PCell is continuously scheduled in DL while PSCell is not scheduled and has DRX configured. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. Cell1 shall be configured as PCell and Cell2 shall be configured as PSCell. Prior to start of T1 the DRX inactivity timer for the PSCell have already expired. During T1 the UE shall be continuously scheduled on PCell while not scheduled on PSCell.

### A.7.4.2.2 Test Requirements

The UE shall be continuously scheduled in PCell during the entire length of T1. UE shall not be scheduled in PSCell during T1. During the time duration T1 the UE shall transmit at least 99% of ACK/NACK on PCell.

The UE shall not miss transmitting two consecutive ACK/NACK.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.4.3 E-UTRAN FDD-FDD Interruption at transitions between active and non-active during DRX in asynchronous dual connectivity

#### A.7.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE fulfils the requirement on interruptions on PCell at transitions between active and non-active during DRX in TS36.133 section 7.12.2.

The test parameters are given in Table A.7.4.3.1-1, Table A.7.4.3.1-2 and Table A.7.4.3.1-3 below. In the test there are two cells: Cell 1 and Cell 2. Cell 1 is PCell on the FDD primary component (RF channel 1). Cell 2 is PSCell on the FDD secondary component (RF channel 2). The test consists of 1 time period, with time duration of T1. PDCCH indicating a new transmission on PCell shall be sent continuously during the whole time duration to ensure UE would not enter DRX state on PCell. PSCell is in DRX state with 320ms DRX cycle.

**Table A.7.4.3.1-1: General test parameters for E-UTRAN FDD-FDD Interruption at transitions between active and non-active during DRX in asynchronous dual connectivity**

| Parameter   | Unit | Value          | Comment   |
|---|------|----------------|---|
| E-UTRA RF Channel Number  |      | 1, 2           | Two radio channels are used for this test   |
| Active Cell   |      | Cell 1, Cell 2 | Cell 1 is PCell on E-UTRA RF channel number 1, and cell 2 is PSCell on E-UTRA RF channel number 2 |
| CP length   |      | Normal         |   |
| DRX on Cell1  |      | OFF            |   |
| DRX on Cell2  | ms   | 320            |   |
| Filter coefficient  |      | 0              | L3 filtering is not used  |
| T1  | s    | 5              |   |
| Note 1: Even a UE capable of both synchronous and asynchronous DC operations is required to pass this test case in accordance with the principle defined in section A.3.11. |      |                |   |

### A.7.4.3.2 Test Requirements

The UE shall be scheduled on PCell continuously during the whole time duration T1. During time durations T1, at least 99% of all expected ACK/NACKs shall be transmitted on PCell by the UE.

Each interruption shall not exceed 1 subframe.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5 Proximity-based Services

### A.7.5.1 E-UTRAN FDD – UE ProSe Direct Discovery Transmission Timing Accuracy Test

#### A.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for ProSe Direct Discovery transmissions when PCell downlink timing is used as a reference with  $N_{TA,SL} = 0$ . This test will verify the requirements in clause 7.16.2.1.1.1

ProSe Direct Discovery transmissions. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to announce ProSe Direct Discovery.

The test parameters are given in Table A.7.5.1.1-1 below. There is one active cell (PCell) in this test. The transmit timing is verified using the transmission timing of PSDCH.

**Table A.7.5.1.1-1: Test parameters for ProSe Transmission Timing Accuracy test for E-UTRAN FDD**

| Parameter  | Unit       | Value   | Comment  |     |  |
|--|------------|---|--|-----|--|
| E-UTRA RF Channel Number   |            | 1   |  |     |  |
| Channel Bandwidth ( $BW_{\text{channel}}$ )  | MHz        | 5   |  |     |  |
| Active cell  |            | Cell 1  | E-UTRA FDD Cell1 on RF channel number 1            |     |  |

| PSS_RA   |            |   |  |     |  |
| SSS_RA   |            |   |  |     |  |
| PCFICH_RB  |            |   |  |     |  |
| PHICH_RA   |            |   |  |     |  |
| PHICH_RB   |            |   |  |     |  |
| PDCCH_RA   |            |   |  |     |  |
| PDCCH_RB   |            |   |  |     |  |
| OCNG_RA <sup>Note3</sup>   |            |   |  |     |  |
| OCNG_RB <sup>Note3</sup>   |            |   |  |     |  |
| $N_{oc}$   |            |   | dBm/15 kHz   | -98 |  |
| $\hat{E}_s/N_{oc}$   |            |   | dB   | 3   |  |
| RSRP <sup>Note4</sup>  | dBm/15 kHz | -95   |  |     |  |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz | -95   |  |     |  |
| Propagation condition  |            | AWGN  |  |     |  |
| <p>Note 1: For the reference measurement channels, see clause A.3.1.</p> <p>Note 2: For the OCNG pattern, see clause A.3.2.</p> <p>Note 3: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 4: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |   |  |     |  |

### A.7.5.1.2 Test Requirements

For parameters specified in Tables A.7.5.1.1-1, the timing accuracy for ProSe Direct Discovery transmissions shall be within the limits defined in clause 7.16.2.

The following sequence of events shall be used to verify that the requirements are met.

For the 5MHz channel bandwidth, the test sequence shall be carried out in RRC\_CONNECTED DRX with a cycle length of 320ms:

- After a connection is set up with the cell, the test system shall verify that the ProSe UE transmit timing offset is within  $\pm 12 \times T_s$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.
- The test system adjusts the downlink transmit timing for the cell by  $+32 \times T_s$  (approximately  $+1 \mu\text{s}$ ) compared to that in (a). The test system shall wait for at least one discovery period (320ms) before verifying the requirement again in (c).
- The test system shall verify that the UE transmit timing offset stays within  $\pm 12 \times T_s$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.

## A.7.5.2 E-UTRAN TDD – UE ProSe Direct Discovery Transmission Timing Accuracy Test

### A.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for ProSe Direct Discovery transmissions when PCell downlink timing is used as a reference with  $N_{TA,SL} = 0$ . This test will verify the requirements in clause 7.16.2.1.1.1 for ProSe Direct Discovery transmissions. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to announce ProSe Direct Discovery.

The test parameters are given in Table A.7.5.2.1-1 below. There is one active cell (PCell) in this test. The transmit timing is verified using the transmission timing of PSDCH.

**Table A.7.5.2.1-1: Test parameters for ProSe Transmission Timing Accuracy test for E-UTRAN TDD**

| Parameter   | Unit       | Value   | Comment  |     |  |
|---|------------|---|--|-----|--|
| E-UTRA RF Channel Number  |            | 1   |  |     |  |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz        | 5   |  |     |  |

| Propagation condition   |            | AWGN  |  |     |  |
| Note 1: For the reference measurement channels, see clause A.3.1.<br>Note 2: For the OCNG pattern, see clause A.3.2.<br>Note 3: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br>Note 4: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |            |   |  |     |  |

### A.7.5.1.2 Test Requirements

For parameters specified in Tables A.7.5.2.1-1, the timing accuracy for ProSe Direct Discovery transmissions shall be within the limits defined in clause 7.16.2.

The following sequence of events shall be used to verify that the requirements are met.

For the 5MHz channel bandwidth, the test sequence shall be carried out in RRC\_CONNECTED DRX with a cycle length of 320ms:

- a) After a connection is set up with the cell, the test system shall verify that the ProSe UE transmit timing offset is within  $624 \times T_S \pm 12 \times T_S$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.
- b) The test system adjusts the downlink transmit timing for the cell by  $+32 \times T_S$  (approximately  $+1 \mu\text{s}$ ) compared to that in (a). The test system shall wait for at least one discovery period (320ms) before verifying the requirement again in (c).
- c) The test system shall verify that the UE transmit timing offset stays within  $624 \times T_S \pm 12 \times T_S$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.

## A.7.5.3 E-UTRAN FDD - Interruptions due to ProSe Direct Discovery

### A.7.5.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the allowed PCell interruptions due to ProSe Direct Discovery defined in clause 7.16.3.1 and clause 7.16.3.3. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to monitor ProSe Direct Discovery.

The test parameters are given in Table A.7.5.3.1-1 and Table A.7.5.3.1-2 below. There is one active cell (PCell) in this test and 24 active Sidelink transmissions in this test (with 12 active Sidelink UEs per configured discovery subframe). Two tests (Test 1 and Test 2) are defined to verify interruptions due to synchronous (Test 1) and asynchronous (Test 2) ProSe Direct Discovery.

The tests consist of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC\_IDLE and monitoring the ProSe Direct Discovery announcements from other active Sidelink UEs on the ProSe Direct Discovery resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE during T2, and the UE is expected to transmit *SidelinkUEInformation* indicating *discRxInterest* during T2. On reception of *SidelinkUEInformation*, the test system shall RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformation* for up to [2] sec, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during ProSe Direct Discovery.

**Table A.7.5.3.1-1: Test parameters for interruption due to ProSe Direct Discovery tests**

| Parameter                                   | Unit | Value   |        | Comment                                 |
|---|------|---|--------|---|
|   |      | Test 1  | Test 2 |   |
| E-UTRA RF Channel Number                    |      | 1   |        |   |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 5   |        |   |
| Active cell                                 |      | Cell 1  |        | E-UTRA FDD Cell1 on RF channel number 1 |
| CP length of Cell 1                         |      | Normal  |        |   |
| T1  | s    | 5.12  |        |   |
| T2  | s    | Up to receiving RRC reconfiguration setup complete from the UE, or up to [2] sec if UE does not transmit <i>SidelinkUEInformation</i> during this period. |        |   |
| T3  | s    | 10.24   |        |   |

They are not settable parameters themselves.</p> |                    |            |           |           |         |

### A.7.5.3.2 Test Requirements

The UE shall be scheduled on PCell continuously during T3.

In Test 1, at least 98.75% of all expected ACK/NACKs during T3 shall be transmitted by the ProSe UE. The missed ACK/NACKs can occur only on subframe 'n', if either  $n \pm 1$  subframe is a discovery subframe, or if  $n-3$ , or  $n-5$  is a discovery subframe.

NOTE: For the test configuration in Table A.7.5.3.1-1 and Table A.7.5.3.1-2, the specific subframes where missed ACK/NACKs are allowed are when  $(\text{subframe mod } 320) = 159, 163, 162, 166$ , corresponding to allowed interruptions on subframe 159 and 162.

In Test 2, at least 97.5% of all expected ACK/NACKs during T3 shall be transmitted by the ProSe UE. The missed ACK/NACK can occur only on subframe 'n', if either  $n \pm 5$  subframe is a discovery or SLSS subframe, or if  $n+1$ , or  $n-9$  is a discovery or SLSS subframe.

NOTE: For the test configuration in Table A.7.5.3.1-1 and Table A.7.5.3.1-2, the specific subframes where missed ACK/NACKs are allowed are when  $(\text{subframe mod } 320) = 135, 139, 145, 149, 155, 159, 166, 170$ , corresponding to allowed interruptions on subframes 135, 145, 155 and 166.

## A.7.5.4 E-UTRAN FDD – UE ProSe Direct Communication Transmission Timing Accuracy Test

### A.7.5.4.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for ProSe Direct Communication transmissions when PCell downlink timing is used as a reference with  $N_{TA,SL} = 0$ . This test will verify the requirements in clause 7.16.2.1.1.1 for ProSe Direct Communication transmissions. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A.7.5.4.1-1 below. There is one active cell (PCell) in this test. The test system will configure the ProSe UE to transmit SLSS in each period (40ms) by configuring *networkControlledSyncTx* as ON via dedicated RRC signaling. The transmit timing is verified using the transmission timing of SLSS transmissions.

**Table A.7.5.4.1-1: Test parameters for ProSe Transmission Timing Accuracy test for E-UTRAN FDD**

| Parameter  | Unit       | Value   | Comment  |     |  |
|--|------------|---|--|-----|--|
| E-UTRA RF Channel Number   |            | 1   |  |     |  |

| <p>Note 1: For the reference measurement channels, see clause A.3.1.<br/>           Note 2: For the OCNG pattern, see clause A.3.2.<br/>           Note 3: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.<br/>           Note 4: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br/>           Note 5: This test is according to the principle defined in section A.3.12.3.</p> |            |   |  |     |  |

#### A.7.5.4.2 Test Requirements

For parameters specified in Tables A.7.5.4.1-1, the timing accuracy for ProSe Direct Communication transmissions shall be within the limits defined in clause 7.16.2. The timing accuracy is verified using SLSS transmissions.

The following sequence of events shall be used to verify that the requirements are met.

For 5MHz or 10MHz channel bandwidth, the test sequence shall be carried out in RRC\_CONNECTED DRX with a cycle length of 320ms:

- a) After a connection is set up with the cell, the test system shall verify that the ProSe UE SLSS transmission timing offset is within  $\pm 12 \times T_S$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.
- b) The test system adjusts the downlink transmit timing for the cell by  $+32 \times T_S$  (approximately  $+1 \mu\text{s}$ ) compared to that in (a). The test system shall wait for at least one SLSS period (40ms) before verifying the requirement again in (c).
- c) The test system shall verify that the UE SLSS transmission timing offset stays within  $\pm 12 \times T_S$  with respect to the first detected path (in time) of the corresponding downlink frame of cell 1.

### A.7.5.5 E-UTRAN FDD - Interruptions due to ProSe Direct Communication

#### A.7.5.5.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to PCell interruptions due to ProSe Direct Communication defined in clause 7.16.3. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to monitor ProSe Direct Communication.

The test parameters are given in Table A.7.5.5.1-1, Table A.7.5.5.1-2 and Table A.7.5.5.1-3 below. There is one active cell (PCell) in this test and 12 (5MHz) or 16 (10 MHz) active Sidelink UEs in this test transmitting ProSe Direct Communication.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC\_IDLE and monitoring the ProSe Direct Communication transmission from other active Sidelink UEs on the ProSe Direct Communication resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE during T2, and the UE is expected to transmit *SidelinkUEInformation* indicating *commRxInterestedFreq* during T2. On reception of *SidelinkUEInformation*, the test system shall RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformation* for up to [2] sec, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during ProSe Direct Communication (no missed ACK/NACKs are allowed).

**Table A.7.5.5.1-1: Test parameters for interruption due to ProSe Direct Communication tests**

| Parameter  | Unit | Value   | Comment   |
|--|------|---|---|
| E-UTRA RF Channel Number   |      | 1   |   |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                  | MHz  | 5 or 10   | According to principle defined in clause A.3.12.3 |
| Active cell  |      | Cell 1  | E-UTRA FDD Cell1 on RF channel number 1           |
| CP length of Cell 1  |      | Normal  |   |
| T1   | s    | 5.12  |   |
| T2   | s    | Up to receiving RRC reconfiguration setup complete from the UE, or up to [2] sec if UE does not transmit <i>SidelinkUEInformation</i> during this period. |   |
| T3   | s    | 10.24   |   |
| Note 1: This test is according to the principle defined in section A.3.12.3. |      |   |   |

**Table A.7.5.5.1-2: ProSe Direct Communication specific configuration for interruption due to ProSe Direct Communication tests**

| Parameter  | Unit | Value   | Comment   |
|--|------|---|---|
| E-UTRA RF Channel Number   |      | 1   | UL carrier frequency                                    |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                  | MHz  | 5 or 10   | According to principle defined in clause A.3.12.3       |
| ProSe Direct Communication configuration                                     |      | As specified in Table A.3.12.5-1 (Configuration #1) | IE values unless specified otherwise in this test.      |
| Active Sidelink UEs Configuration <sup>Note 1</sup>                          |      | PCP.1.FDD<br>As specified in Table A.3.12.8.1-1     | Transmitting ProSe Direct Communication (PSCCH + PSSCH) |
| Note 1: This test is according to the principle defined in section A.3.12.3. |      |   |   |

**Table A.7.5.5.1-2: Cell specific test parameters for interruption due to ProSe Direct Communication tests**

| Parameter   |                    | Unit | Cell 1                               |                                       |  |

They are not settable parameters themselves.</p> <p>Note 4: This test is according to the principle defined in section A.3.12.3.</p> <p>Note 5: The PDSCH scheduled subframes for R.7 FDD (5MHz) / R.3 FDD (10MHz) is changed as per the following bitmap that repeats every 40ms.<br/>PDSCH scheduled subframe bitmap: {01110111 11110111 11110111 11110111 11110110}.</p> |                    |      |                                      |                                       |  |

**A.7.5.3.2 Test Requirements**

The UE shall be scheduled on PCell continuously during T3. During T3, 100% of all expected ACK/NACKs shall be transmitted by the ProSe UE.

## A.8 UE Measurements Procedures

The reference channels in this clause assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

### A.8.1 E-UTRAN FDD Intra-frequency Measurements

#### A.8.1.1 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells

##### A.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.1.2.2.1.1.

The test parameters are given in Table A.8.1.1.1-1 and A.8.1.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.1.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells**

| Parameter                                  | Unit | Value                                    | Comment                            |
|--|------|--|------------------------------------|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1   |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1   |
| Active cell                                |      | Cell 1                                   |                                    |
| Neighbour cell                             |      | Cell 2                                   | Cell to be identified.             |
| E-UTRA RF Channel Number                   |      | 1  | One FDD carrier frequency is used. |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |                                    |
| A3-Offset                                  | dB   | -6                                       |                                    |
| CP length                                  |      | Normal                                   |                                    |
| Hysteresis                                 | dB   | 0  |                                    |
| Time To Trigger                            | s    | 0  |                                    |
| Filter coefficient                         |      | 0  | L3 filtering is not used           |
| DRX  |      |  | OFF                                |
| Time offset between cells                  |      | 3 ms                                     | Asynchronous cells                 |
| T1   | s    | 5  |                                    |

### A.8.1.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

**NOTE:** The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.2 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells

### A.8.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.1.2.2.1.1

The test parameters are given in Table A.8.1.2.1-1 and A.8.1.2.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. PDCCHs indicating new transmissions or retransmissions shall be sent continuously to ensure that the UE would not enter the DRX state. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.2.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells**

| Parameter                                  | Unit | Value                                    | Comment                            |

| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |           |     |
| Note 4:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |           |     |

### A.8.1.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.1.3 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells with DRX

#### A.8.1.3.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. The tests will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.1.2.2.1.2.

The test parameters are given in Tables A.8.1.3.1-1, A.8.1.3.1-2, A.8.1.3.1-3 and A.8.1.3.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.1.3.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used**

| Parameter                                  | Unit | Value                                    |        | Comment   |
|--|------|--|--------|---|
|  |      | Test 1                                   | Test 2 |   |
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD |        | As specified in clause A.3.1.1.1                        |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD |        | As specified in clause A.3.1.2.1                        |
| Active cell                                |      | Cell 1                                   |        |   |

### A.8.1.3.2 Test Requirements

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 25600 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.1.4 Void

## A.8.1.5 E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

### A.8.1.5.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.2.3.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.5.1-1 and A.8.1.5.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.1.5.1-1: General test parameters for E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                            | Unit | Value                                    | Comment                                      |

### A.8.1.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, intra}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 80 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 80 ACK/NACK number is caused by two parts. Firstly, at least 60 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.2.3.1. Secondly, given that continuous DL data allocation, additional 20 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.1.6 E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX

### A.8.1.6.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.2.3. The requirement is verified in a DRX configuration.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.6.1-1, A.8.1.6.1-2, A.8.1.6.1-3 and A.8.1.6.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.1.6.1-1: General test parameters for E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX**

| Parameter                            | Unit | Value                                    | Comment   |
|--------------------------------------|------|--|---|
| PDSCH parameters                     |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                        |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                        |
| Active cell                          |      | Cell 1                                   |   |
| Neighbour cell                       |      | Cell 2                                   | Cell to be identified.                                  |
| E-UTRA RF Channel Number             |      | 1  | Only one FDD carrier frequency is used.                 |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10                                       |   |
| CP length                            |      | Normal                                   |   |
| A3-Offset                            | dB   | -3                                       |   |
| Hysteresis                           | dB   | 0  |   |
| Time To Trigger                      | s    | 0  |   |
| Filter coefficient                   |      | 0  | L3 filtering is not used                                |
| DRX                                  |      | ON                                       | DRX related parameters are defined in Table A.8.1.6.1-3 |
| si-RequestForHO                      |      | TRUE                                     | As specified in clause 5.5.3.1 in TS 36.331.            |
| Time offset between cells            | ms   | 3  | Asynchronous cells                                      |
| T1                                   | s    | 5  |   |
| T2                                   | s    | ≤30                                      | UE shall report cell within 25.6s (20 DRX cycles)       |
| T3                                   | s    | 5  |   |

### A.8.1.6.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

$$\begin{aligned}
 \text{Test requirement} &= \text{RRC Procedure delay} + T_{\text{identify\_CGI, intra}} + \text{reporting delay} \\
 &= 15 + 150 + 2\text{ms from the start of T3} \\
 &= 167 \text{ ms, allow 170 ms.}
 \end{aligned}$$

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.1.7 E-UTRAN FDD-FDD Intra-Frequency Event-Triggered Reporting under Time Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.8.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects and reports Event A3 (Neighbour becomes offset better than PCell) defined in TS 36.331 [2] within the requirements specified in Clause 8.1.2.8.1.1 under a time domain measurement resource restriction and non-MBSFN ABS configured in the aggressor cell.

The test parameters are given in Tables A.8.1.7.1-1 and A.8.1.7.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A3 is used. In the test there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. Cell 1 is the PCell, and it is also the aggressor cell to Cell 2. Cell 2 is the cell to be identified. The test consists of two successive time periods with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information on Cell 2.

Non-MBSFN ABS pattern is configured for Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells. The UE is also configured with a time domain measurement resource restriction pattern for the PCell measurements. The information for both measurement patterns shall be provided to the UE via higher layers during T1.

**Table A.8.1.7.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value   | Comment  |
|--|------|---|--|

| Propagation Condition   |  | ETU30   |      |           |      |
| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |      |           |      |
| Note 2:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |   |      |           |      |
| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. Applies to all subframes. |   |      |           |      |
| Note 4:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |      |           |      |
| Note 5:   | RSPP is estimated for Cell 2 during the restricted measurement subframes for neighbour cells. RSPP is estimated for Cell 1 during the PCell restricted subframes.  |   |      |           |      |

### A.8.1.7.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 2, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event-triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for the tested Event A3.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.8 E-UTRAN FDD-FDD Intra-Frequency Event-Triggered Reporting under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.8.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects and reports Event A3 (neighbour becomes offset better than PCell) defined in TS 36.331 [2] within the requirements specified in Clause 8.1.2.8.3, when the UE is provided with a time-domain measurement resource restriction pattern and CRS assistance information, and when non-MBSFN ABS configured in the interfering cells.

The test parameters are given in Tables A.8.1.8.1-1 and A.8.1.8.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A3 is used. In the test, there are three synchronous cells, Cell 1, Cell 2, and Cell 3, on the same RF channel. Cell 1 is the PCell. Cell 3 is the cell to be identified. A non-MBSFN ABS pattern is configured in each of the Cell 1 and Cell 2 during the entire test. The test consists of two successive time periods with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information on Cell 3.

The UE is configured by higher layers with a time domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells, nsamely Cell 3 measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement patterns and the CRS assistance information shall be provided via RRC to the UE during T1.

**Table A.8.1.8.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under time domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  | Unit                     | Value   | Comment  |
|--|--------------------------|---|--|
| PDSCH parameters   |                          | DL Reference Measurement Channel R.0 FDD  | As specified in clause A.3.1.1.1   |

| <p>NOTE 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>NOTE 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>NOTE 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled. Applies to all subframes.</p> <p>NOTE 4: RSRP, SCH_RP, and <math>\hat{E}_s / I_{ot}</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>NOTE 5: Applies during the restricted measurement subframes configured for neighbour cell (Cell 3) measurements.</p> |            |   |       |   |       |           |          |

### A.8.1.8.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event-triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for the tested Event A3.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.9 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for 5MHz bandwidth

### A.8.1.9.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.1.1.1.

The parameters of this test are the same as defined in Subclause A.8.1.1.1 except that the values of the parameters in the Table A.8.1.9.1-1 will replace the values of the corresponding parameters in A.8.1.1.1-1, and the values of the parameters in the Table A.8.1.9.1-2 will replace the values of the corresponding parameters in A.8.1.1.1-2.

**Table A.8.1.9.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for 5MHz bandwidth**

| Parameter   | Unit | Value                                     | Comment                          |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |      |           |    |           |    |
| Note 2: See Table A.8.1.1.1-2 for the other parameters.   |      |           |    |           |    |

### A.8.1.9.2 Test Requirements

The test requirements defined in section A.8.1.1.2 shall apply to this test case.

## A.8.1.10 E-UTRAN FDD-FDD Intra-Frequency Event Triggered Reporting under Fading Propagation Conditions in Synchronous Cells with DRX for 5 MHz Bandwidth

### A.8.1.10.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. The tests will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.1.2.2.1.2.

The parameters of this test are the same as defined in Section A.8.1.3.1 except that the values of the parameters in the Table A.8.1.10.1-1 will replace the values of the corresponding parameters in A.8.1.3.1-1, and the values of the parameters in the Table A.8.1.10.1-2 will replace the values of the corresponding parameters in A.8.1.3.1-2.

**Table A.8.1.10.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used**

| Parameter   | Unit | Value                                     |        | Comment                          |
|---|------|---|--------|----------------------------------|

| Parameter   | Unit | Cell 1    |    | Cell 2    |    |
|---|------|-----------|----|-----------|----|
|   |      | T1        | T2 | T1        | T2 |
| $BW_{channel}$  | MHz  | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.1.15 (OP.15 FDD) and in A.3.2.1.16 (OP.16 FDD) |      | OP.15 FDD |    | OP.16 FDD |    |
| NOTE 1: See Table A.8.1.3.1-2 for the other parameters.                       |      |           |    |           |    |

## A.8.1.10.2 Test Requirements

The test requirements defined in Section A.8.1.3 shall apply to this test case.

## A.8.1.11 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category 0

### A.8.1.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.5.2.1.1.

The test parameters are given in Table A.8.1.11.1-1 and A.8.1.11.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.11.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category 0**

| Parameter                            | Unit | Value  | Comment                            |
|--------------------------------------|------|--------|------------------------------------|
| Active cell                          |      | Cell 1 |                                    |
| Neighbour cell                       |      | Cell 2 | Cell to be identified.             |
| E-UTRA RF Channel Number             |      | 1      | One FDD carrier frequency is used. |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10     |                                    |
| A3-Offset                            | dB   | -10    |                                    |
| CP length                            |      | Normal |                                    |
| Hysteresis                           | dB   | 0      |                                    |
| Time To Trigger                      | s    | 0      |                                    |
| Filter coefficient                   |      | 0      | L3 filtering is not used           |
| DRX                                  |      |        | OFF                                |
| Time offset between cells            |      | 3 ms   | Asynchronous cells                 |
| T1                                   | s    | 5      |                                    |
| T2                                   | s    | 5      |                                    |

### A.8.1.11.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.12 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0

### A.8.1.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.5.2.1.1

The test parameters are given in Table A.8.1.12.1-1 and A.8.1.12.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. PDCCHs indicating new transmissions or retransmissions should be sent continuously to ensure that the UE would not enter the DRX state. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.12.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0**

| Parameter                            | Unit | Value     | Comment                            |
|--------------------------------------|------|-----------|------------------------------------|
| Active cell                          |      | Cell 1    |                                    |
| Neighbour cell                       |      | Cell 2    | Cell to be identified.             |
| E-UTRA RF Channel Number             |      | 1         | One FDD carrier frequency is used. |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10        |                                    |
| A3-Offset                            | dB   | -10       |                                    |
| CP length                            |      | Normal    |                                    |
| Hysteresis                           | dB   | 0         |                                    |
| Time To Trigger                      | s    | 0         |                                    |
| Filter coefficient                   |      | 0         | L3 filtering is not used           |
| DRX                                  |      | DRX_L     | As specified in clause A.3.3       |
| Time offset between cells            |      | 3 $\mu$ s | Synchronous cells                  |
| T1                                   | s    | 5         |                                    |
| T2                                   | s    | 5         |                                    |

**Table A.8.1.12.1-2: Cell specific test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0**

| Parameter   | Unit       | Cell 1   |        | Cell 2                      |     |
|---|------------|----------|--------|-----------------------------|-----|

They are not settable parameters themselves.</p> |            |          |        |                             |     |

### A.8.1.12.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.1.13 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells with DRX for UE category 0

#### A.8.1.13.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. This test case is applicable to UE category 0 as defined in Section 3.1. The tests will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.5.2.1.1.2.

The test parameters are given in Tables A.8.1.13.1-1, A.8.1.13.1-2, A.8.1.13.1-3 and A.8.1.13.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.1.13.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used for UE category 0**

| Parameter                                  | Unit | Value  |        | Comment  |
|--|------|--------|--------|--|
|  |      | Test 1 | Test 2 |  |
| Active cell                                |      | Cell 1 |        |  |
| Neighbour cell                             |      | Cell 2 |        | Cell to be identified.                                   |
| E-UTRA RF Channel Number                   |      | 1      |        | One FDD carrier frequency is used.                       |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10     |        |  |

### A.8.1.13.2 Test Requirements

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 25600 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.1.14 E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category 0

#### A.8.1.14.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.5.2.1.2.1.

The test parameters are given in Table A.8.1.14.1-1 and A.8.1.14.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.14.1-1: General test parameters for E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category 0**

| Parameter                            | Unit | Value  | Comment                            |
|--------------------------------------|------|--------|------------------------------------|
| Active cell                          |      | Cell 1 |                                    |
| Neighbour cell                       |      | Cell 2 | Cell to be identified.             |
| E-UTRA RF Channel Number             |      | 1      | One FDD carrier frequency is used. |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10     |                                    |
| A3-Offset                            | dB   | -10    |                                    |
| CP length                            |      | Normal |                                    |
| Hysteresis                           | dB   | 0      |                                    |
| Time To Trigger                      | s    | 0      |                                    |
| Filter coefficient                   |      | 0      | L3 filtering is not used           |
| DRX                                  |      |        | OFF                                |
| Time offset between cells            |      | 3 ms   | Asynchronous cells                 |
| T1                                   | s    | 5      |                                    |
| T2                                   | s    | 5      |                                    |

**Table A.8.1.14.1-2: Cell specific test parameters for E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in asynchronous cells for UE category 0**

| Parameter   | Unit       | Cell 1     |        | Cell 2                      |     |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: <math>E_s/I_{ot}</math>, RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |            |        |                             |     |

### A.8.1.14.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.15 E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0

### A.8.1.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.5.2.1.2.1

The test parameters are given in Table A.8.1.15.1-1 and A.8.1.15.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. PDCCHs indicating new transmissions or retransmissions should be sent continuously to ensure that the UE would not enter the DRX state. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.1.15.1-1: General test parameters for E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0**

| Parameter                            | Unit | Value     | Comment                            |
|--------------------------------------|------|-----------|------------------------------------|
| Active cell                          |      | Cell 1    |                                    |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: <math>E_s/I_{ot}</math>, RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |            |        |                             |     |

### A.8.1.15.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.1.16 E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells with DRX for UE category 0

### A.8.1.16.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. This test case is applicable to UE category 0 as defined in Section 3.1. The tests will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.5.2.1.2.2.

The test parameters are given in Tables A.8.1.16.1-1, A.8.1.16.1-2, A.8.1.16.1-3 and A.8.1.16.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.1.16.1-1: General test parameters for E-UTRAN HD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used for UE category 0**

| Parameter                                  | Unit | Value  |        | Comment  |
|--|------|--------|--------|--|
|  |      | Test 1 | Test 2 |  |
| Active cell                                |      | Cell 1 |        |  |
| Neighbour cell                             |      | Cell 2 |        | Cell to be identified.                                   |
| E-UTRA RF Channel Number                   |      | 1      |        | One FDD carrier frequency is used.                       |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10     |        |  |
| A3-Offset                                  | dB   | -10    |        |  |
| CP length                                  |      | Normal |        |  |
| Hysteresis                                 | dB   | 0      |        |  |
| Time To Trigger                            | s    | 0      |        |  |
| Filter coefficient                         |      | 0      |        | L3 filtering is not used                                 |
| DRX  |      | ON     |        | DRX related parameters are defined in Table A.8.1.16.1-3 |
| Time offset between cells                  |      | 3 μs   |        | Synchronous cells  |
| T1   | s    | 5      |        |  |
| T2   | s    | 5      | 30     |  |

### A.8.1.16.2 Test Requirements

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 25600 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.1.17 Void

### A.8.1.18 Void

## A.8.1.19 E-UTRAN FDD-FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0

### A.8.1.19.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.4.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.19.1-1 and A.8.1.19.1-2. PDCCHs indicating new transmissions should be sent continuously to ensure that the UE would have ACK/NACK

sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.1.19.1-1: General test parameters for E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0**

| Parameter                            | Unit | Value                                     | Comment                                      |

| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |           |           |           |           |          |          |
| Note 3:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |           |           |           |           |          |          |

### A.8.1.19.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI\_LC-UE, intra}$  + reporting delay

= 15 + 190 + 2ms from the start of T3

= 207 ms, allow 210 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 210 ms at least 112 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 112 ACK/NACK number is caused by two parts. Firstly, at least 92 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.5.2.1.4. Secondly, given that continuous DL data allocation, additional 20 ACK/NACK shall be sent from the start of T3 until 210 ms excludes 190 ms for identifying the cell global identifier of cell 2.

## A.8.1.20 E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0

### A.8.1.20.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.4. The requirement is verified in a DRX configuration.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.20.1-1, A.8.1.20.1-2, A.8.1.20.1-3 and A.8.1.20.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.1.20.1-1: General test parameters for E-UTRAN FDD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0**

| Parameter                            | Unit | Value                                     | Comment   |
|--------------------------------------|------|---|---|
| PDSCH parameters                     |      | DL Reference Measurement Channel R.15 FDD | As specified in clause A.3.1.1.3                        |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.7 FDD  | As specified in clause A.3.1.2.1                        |
| Active cell                          |      | Cell 1                                    |   |
| Neighbour cell                       |      | Cell 2                                    | Cell to be identified.                                  |
| E-UTRA RF Channel Number             |      | 1   | Only one FDD carrier frequency is used.                 |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10  |   |
| CP length                            |      | Normal                                    |   |
| A3-Offset                            | dB   | -3  |   |
| Hysteresis                           | dB   | 0   |   |
| Time To Trigger                      | s    | 0   |   |
| Filter coefficient                   |      | 0   | L3 filtering is not used                                |
| DRX                                  |      | ON  | DRX related parameters are defined in Table A.8.1.6.1-3 |
| si-RequestForHO                      |      | TRUE                                      | As specified in clause 5.5.3.1 in TS 36.331.            |
| T1                                   | s    | 5   |   |
| T2                                   | s    | $\leq 30$                                 | UE should report cell within 25.6s (20 DRX cycles)      |
| T3                                   | s    | 5   |   |

### A.8.1.20.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

$$\begin{aligned}
 \text{Test requirement} &= \text{RRC Procedure delay} + T_{\text{identify\_CGI\_LC-UE, intra}} + \text{reporting delay} \\
 &= 15 + 190 + 2\text{ms from the start of T3} \\
 &= 207 \text{ ms, allow 210 ms.}
 \end{aligned}$$

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.1.21 E-UTRAN HD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0

#### A.8.1.21.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.5.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.21.1-1 and A.8.1.21.1-2. PDCCHs indicating new transmissions should be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.1.21.1-1: General test parameters for E-UTRAN HD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0**

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |           |           |           |           |          |          |

### A.8.1.21.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI\_LC-UE, intra}$  + reporting delay

= 15 + 190 + 2ms from the start of T3

= 207 ms, allow 210 ms.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.1.22 E-UTRAN HD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0

### A.8.1.22.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.5. The requirement is verified in a DRX configuration.

The test scenario comprises of one E-UTRA FDD carrier and two cells as given in tables A.8.1.22.1-1, A.8.1.22.1-2, A.8.1.22.1-3 and A.8.1.22.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.1.22.1-1: General test parameters for E-UTRAN HD - FDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0**

| Parameter                            | Unit | Value                                       | Comment   |
|--------------------------------------|------|---|---|
| PDSCH parameters                     |      | DL Reference Measurement Channel R.2 HD-FDD | As specified in clause A.3.1.1.4                        |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.4 HD-FDD | As specified in clause A.3.1.2.3                        |
| Active cell                          |      | Cell 1                                      |   |
| Neighbour cell                       |      | Cell 2                                      | Cell to be identified.                                  |
| E-UTRA RF Channel Number             |      | 1   | Only one FDD carrier frequency is used.                 |

### A.8.1.22.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

$$\begin{aligned}
 \text{Test requirement} &= \text{RRC Procedure delay} + T_{\text{identify\_CGI\_LC-UE, intra}} + \text{reporting delay} \\
 &= 15 + 190 + 2\text{ms from the start of T3} \\
 &= 207 \text{ ms, allow 210 ms.}
 \end{aligned}$$

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.2 E-UTRAN TDD Intra-frequency Measurements

### A.8.2.1 E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells

#### A.8.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 8.1.2.2.2.1.

The test parameters are given in Table A.8.2.1.1-1 and A.8.2.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. PDCCHs indicating new transmissions or retransmissions shall be sent continuously to ensure that the UE would not enter the DRX state. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.2.1.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells**

| Parameter                                   | Unit | Value                                    | Comment   |

| PDCCH_RB   | dB   |          |       |           |       |
| PDSCH_RA   | dB   |          |       |           |       |
| PDSCH_RB   | dB   |          |       |           |       |
| OCNG_RA <sup>Note 1</sup>  | dB   |          |       |           |       |
| OCNG_RB <sup>Note 1</sup>  | dB   |          |       |           |       |
| $N_{oc}$ <sup>Note 3</sup>   | dBm/15 kHz   |          |       |           |       |
| RSRP <sup>Note 4</sup>   | dBm/15 kHz   | -94      | -94   | -Infinity | -94   |
| $\hat{E}_s / I_{ot}$   | dB   | 4        | -1.46 | -Infinity | -1.46 |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz   | -94      | -94   | -Infinity | -94   |
| $\hat{E}_s / N_{oc}$   | dB   | 4        | 4     | -Infinity | 4     |
| Propagation Condition  |  | ETU70    |       |           |       |
| Note 1   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |       |           |       |
| Note 2:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |       |           |       |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |       |           |       |
| Note 4:  | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |       |           |       |

### A.8.2.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.2.2 E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells with DRX

### A.8.2.2.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. The tests will partly verify the TDD-TDD intra-frequency cell search in DRX requirements in clause 8.1.2.2.1.2.

The test parameters are given in Tables A.8.1.3.1-1, A.8.1.3.1-2, A.8.1.3.1-3 and A.8.1.3.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.2.2.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used**

| Parameter                                  | Unit | Value                                    |        | Comment  |
|--|------|--|--------|--|

### A.8.2.2.2 Test Requirements

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 25600 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.2.3 E-UTRAN TDD - TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

### A.8.2.3.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.2.4.

The test scenario comprises of one E-UTRA TDD carrier and two cells as given in tables A.8.2.3.1-1 and A.8.2.3.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.2.3.1-1: General test parameters for E-UTRAN TDD - TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                      | Unit    | Value                                    | Comment  |

They are not settable parameters themselves.</p> |            |          |          |          |           |          |          |

### A.8.2.3.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI, intra}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 47 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 47 ACK/NACK number is caused by two parts. Firstly, at least 35 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement for UL/DL configuration #1 in Table 8.1.2.2.4.1-1 of Clause 8.1.2.2.4.1. Secondly, given that continuous DL data allocation, additional 12 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.2.4 E-UTRAN TDD - TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX

### A.8.2.4.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.2.4. The requirement is verified in a DRX configuration.

The test scenario comprises of one E-UTRA TDD carrier and two cells as given in tables A.8.2.4.1-1, A.8.2.4.1-2, A.8.2.4.1-3 and A.8.2.4.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

#### A.8.2.4.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, intra}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.8.2.5 E-UTRAN TDD-TDD Intra-Frequency Event-Triggered Reporting under Time Domain Measurement Resource Restriction with Non-MBSFN ABS

##### A.8.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects and reports Event A3 (Neighbour becomes offset better than PCell) defined in TS 36.331 [2] within the requirements specified in Clause 8.1.2.8.2.1 under a time domain measurement resource restriction and non-MBSFN ABS configured in the aggressor cell.

The test parameters are given in Tables A.8.2.5.1-1 and A.8.2.5.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A3 is used. In the test there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. Cell 1 is the PCell, and it is also the aggressor cell to Cell 2. Cell 2 is the cell to be identified. The test consists of two successive time periods with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information on Cell 2.

Non-MBSFN ABS pattern is configured for Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells. The UE is also configured with a time domain measurement resource restriction pattern for the PCell measurements. The information for both measurement patterns shall be provided to the UE via higher layers during T1.

**Table A.8.2.5.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value  | Comment  |
|--|------|--|--|
| PDSCH parameters   |      | DL Reference Measurement Channel R.0 TDD     | As specified in clause A.3.1.1.2   |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.6 TDD     | As specified in clause A.3.1.2.2   |
| PCell  |      | Cell 1                                       | Also the aggressor cell. Active in T1 and T2   |
| Neighbour cell   |      | Cell 2                                       | Cell to be identified. Active only in T2.  |

### A.8.2.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 2, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event-triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for the tested Event A3.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.2.6 E-UTRAN TDD-TDD Intra-Frequency Event-Triggered Reporting under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.8.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects and reports Event A3 (neighbour becomes offset better than PCell) defined in TS 36.331 [2] within the requirements specified in Clause 8.1.2.8.4, when the UE is provided with a time-domain measurement resource restriction pattern and CRS assistance information, and when non-MBSFN ABS configured in the interfering cells.

The test parameters are given in Tables A.8.2.6.1-1 and A.8.2.6.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A3 is used. In the test, there are three synchronous cells, Cell 1, Cell 2, and Cell 3, on the same RF channel. Cell 1 is the PCell. Cell 3 is the cell to be identified. A non-MBSFN ABS pattern is configured in each of the Cell 1 and Cell 2 during the entire test. The test consists of two successive time periods with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information on Cell 3.

The UE is configured by higher layers with a time domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells, nsamely Cell 3 measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement patterns and the CRS assistance information shall be provided via RRC to the UE during T1.

**Table A.8.2.6.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under time domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  |                   | Unit          | Value   | Comment  |
|--|-------------------|---------------|---|--|
| PDSCH parameters   |                   |               | DL Reference Measurement Channel R.0 TDD  | As specified in clause A.3.1.1.2   |
| PCFICH/PDCCH/PHICH parameters  |                   |               | DL Reference Measurement Channel R.6 TDD  | As specified in clause A.3.1.2.2   |
| PCell  |                   |               | Cell 1  | Also a first interfering cell to Cell 3. Active in T1 and T2.  |
| Neighbour cells  |                   |               | Cell 2 and Cell 3   | Cell 2 is a second interfering cell; Cell 2 is active in T1 and T2. Cell 3 is the cell to be identified; Cell 3 is active only in T2.  |
| ABS transmission configuration   |                   |               | Non-MBSFN ABS   | As defined in Table A.3.4.1.1-1  |
| E-UTRA RF Channel Number   |                   |               | 1   | One TDD carrier frequency is used  |
| Channel Bandwidth ( $BW_{\text{channel}}$ )  |                   | MHz           | 10  | For all cells in the test  |
| A3-Offset  |                   | dB            | -14   |  |
| Event A3 measurement quantity  |                   |               | RSRP  |  |
| CP length  |                   |               | Normal  |  |
| Special subframe configuration   |                   |               | 6   | As specified in Table 4.2-1 in TS 36.211. The same configuration in both cells   |
| Uplink-downlink configuration  |                   |               | 1   | As specified in Table 4.2-2 in TS 36.211. The same configuration in both cells   |
| Hysteresis   |                   | dB            | 0   |  |
| Time To Trigger  |                   | s             | 0   |  |
| Filter coefficient   |                   |               | 0   | L3 filtering is not used   |
| DRX  |                   |               |   | OFF  |
| Time offset between cells  |                   | $\mu\text{s}$ | Cell 2 offset with respect to Cell 1: 0<br>Cell 3 offset with respect to Cell 1: -2.5   | Three synchronous cells  |
| T1   |                   | s             | 5   |  |
| T2   |                   | s             | 5   |  |
| Physical cell IDs  |                   |               | $(\text{PCI}_{\text{cell1}} - \text{PCI}_{\text{cell3}}) \bmod 6 = 0$<br>$(\text{PCI}_{\text{cell2}} - \text{PCI}_{\text{cell3}}) \bmod 6 \neq 0$<br>$\text{PCI}_{\text{cell1}}$ not equal to $\text{PCI}_{\text{cell3}}$ | Cell PCIs are selected so that all conditions are met  |
| ABS pattern  |                   |               | '00000000010000000001'  | TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. The first/leftmost bit corresponds to the Pcell subframe #0 of the radio frame satisfying $\text{SFN} \bmod x = 0$ , where $x$ is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes. Provided to the UE for Cell 1 and Cell 2 during T1. |
| Time domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |                   |               | '00000000010000000001'  | Time domain measurement resource restriction pattern for neighbor cell measurement signalled to the UE in measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331, clause 6.3.5. Provided to the UE during T1 for Cell 3 measurements. The cell list in measSubframeCellList IE shall contain Cell 3 but not Cell 2.                |
| Time domain measurement resource restriction pattern for PCell measurements                          |                   |               | '10000000001000000000'  | Configured during T1 for Cell 1 measurements   |

### A.8.2.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 3, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event-triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for the tested Event A3.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.2.7 E-UTRAN TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0

### A.8.2.7.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.6. This test case is applicable to UE category 0 as defined in Section 3.1.

The test scenario comprises of one E-UTRA TDD carrier and two cells as given in tables A.8.2.7.1-1 and A.8.2.7.1-2. PDCCHs indicating new transmissions should be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.2.7.1-1: General test parameters for E-UTRAN TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps for UE category 0**

| Parameter                      | Unit | Value                                     | Comment  |

| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |          |          |           |          |          |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |          |          |           |          |          |
| Note 3:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |          |          |           |          |          |

### A.8.2.7.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI\_LC-UE, intra}}$  + reporting delay

= 15 + 190 + 2ms from the start of T3

= 207 ms, allow 210 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 210 ms at least 66 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 66 ACK/NACK number is caused by two parts. Firstly, at least 54 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement for UL/DL configuration #1 in Table 8.1.2.2.4.1-1 of Clause 8.1.2.2.4.1. Secondly, given that continuous DL data allocation, additional 12 ACK/NACK shall be sent from the start of T3 until 210 ms excludes 190 ms for identifying the cell global identifier of cell 2.

## A.8.2.8 E-UTRAN TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0

### A.8.2.8.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.5.2.1.6. This test case is applicable to UE category 0 as defined in Section 3.1. The requirement is verified in a DRX configuration.

The test scenario comprises of one E-UTRA TDD carrier and two cells as given in tables A.8.2.8.1-1, A.8.2.8.1-2, A.8.2.8.1-3 and A.8.2.8.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.2.8.1-1: General test parameters for E-UTRAN TDD Intra-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX for UE category 0**

| Parameter                                  | Unit | Value                                     | Comment  |
|--|------|---|--|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.13 TDD | As specified in clause A.3.1.1.5   |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.7 TDD  | As specified in clause A.3.1.2.2   |
| Active cell                                |      | Cell 1                                    |  |
| Neighbour cell                             |      | Cell 2                                    | Cell to be identified.   |
| E-UTRA RF Channel Number                   |      | 1   | Only one TDD carrier frequency is used.  |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10  |  |
| CP length                                  |      | Normal                                    |  |
| Special subframe configuration             |      | 6   | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells |

### A.8.2.8.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 210 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI\_LC-UE, intra}}$  + reporting delay

= 15 + 190 + 2ms from the start of T3

= 207 ms, allow 210 ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.2.10 Void

### A.8.2.11 Void

## A.8.2.12 E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0

### A.8.2.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test case is applicable to UE category 0 as defined in Section 3.1. This test will partly verify the TDD intra-frequency cell search requirements in clause 8.5.2.1.3.1.

The test parameters are given in Table A.8.2.12.1-1 and A.8.2.12.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. PDCCHs indicating new transmissions or retransmissions should be sent continuously to ensure that the UE would not enter the DRX state. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.2.12.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0**

| Parameter                                   | Unit | Value     | Comment   |
|---|------|-----------|---|
| Active cell                                 |      | Cell 1    |   |
| Neighbour cell                              |      | Cell 2    | Cell to be identified.  |
| E-UTRA RF Channel Number                    |      | 1         | One TDD carrier frequency is used.  |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10        |   |
| A3-Offset                                   | dB   | -10       |   |
| CP length                                   |      | Normal    |   |
| Special subframe configuration              |      | 6         | As specified in table 4.2-1 in TS 36.211.<br>The same configuration in both cells |
| Uplink-downlink configuration               |      | 1         | As specified in table 4.2-2 in TS 36.211.<br>The same configuration in both cells |
| Hysteresis                                  | dB   | 0         |   |
| Time To Trigger                             | s    | 0         |   |
| Filter coefficient                          |      | 0         | L3 filtering is not used  |
| DRX   |      | DRX_L     | As specified in clause A.3.3  |
| Time offset between cells                   |      | 3 $\mu$ s | Synchronous cells   |
| T1  | s    | 5         |   |
| T2  | s    | 5         |   |

**Table A.8.2.12.1-2: Cell specific test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells for UE category 0**

| Parameter  | Unit   | Cell 1   |        | Cell 2                      |       |
|--|--|----------|--------|-----------------------------|-------|
|  |  | T1       | T2     | T1                          | T2    |
| E-UTRA RF Channel Number   |  | 1        |        | 1                           |       |

| PDCCH_RA   | dB   |          |        |                             |       |
| PDCCH_RB   | dB   |          |        |                             |       |
| PDSCH_RA   | dB   |          |        |                             |       |
| PDSCH_RB   | dB   |          |        |                             |       |
| OCNG_RA <sup>Note 1</sup>  | dB   |          |        |                             |       |
| OCNG_RB <sup>Note 1</sup>  | dB   |          |        |                             |       |
| $N_{oc}$ <sup>Note 3</sup>   | dBm/15 kHz   |          |        |                             |       |
| RSRP <sup>Note 4</sup>   | dBm/15 kHz   | -91      | -91    | -Infinity                   | -94   |
| $\hat{E}_s/I_{ot}$   | dB   | 7        | 1.54   | -Infinity                   | -3.79 |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz   | -91      | -91    | -Infinity                   | -94   |
| $\hat{E}_s/N_{oc}$   | dB   | 7        | 7      | -Infinity                   | 4     |
| $I_o$ <sup>Note 4</sup>  | dBm/9MHz   | -62.43   | -60.91 | Specified in Cell 1 columns |       |
| Propagation Condition  |  | ETU70    |        | ETU70                       |       |
| Note 1   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |        |                             |       |
| Note 2:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |        |                             |       |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |        |                             |       |
| Note 4:  | $E_s/I_{ot}$ , RSRP, SCH_RP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |        |                             |       |

### A.8.2.12.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.2.13 E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells with DRX for UE category 0

### A.8.2.13.1 Test Purpose and Environment

The purpose of the two tests is to verify that the UE makes correct reporting of an event in DRX. This test case is applicable to UE category 0 as defined in Section 3.1. The tests will partly verify the TDD-TDD intra-frequency cell search in DRX requirements in clause 8.5.2.1.3.2.

The test parameters are given in Tables A.8.2.13.1-1, A.8.2.13.1-2, A.8.2.13.1-3 and A.8.2.13.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.2.13.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells when DRX is used for UE category 0**

| Parameter                            | Unit | Value     |        | Comment   |
|--------------------------------------|------|-----------|--------|---|
|                                      |      | Test 1    | Test 2 |   |
| Active cell                          |      | Cell 1    |        |   |
| Neighbour cell                       |      | Cell 2    |        | Cell to be identified.  |
| E-UTRA RF Channel Number             |      | 1         |        | One TDD carrier frequency is used.  |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10        |        |   |

## A.8.2.13.2 Test Requirements

In Test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

In Test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 25600 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.3 E-UTRAN FDD - FDD Inter-frequency Measurements

### A.8.3.1 E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

#### A.8.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.3.1.1-1 and A.8.3.1.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.3.1.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment                                   |
|--|------|--|---|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1          |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1          |
| E-UTRA RF Channel Number                   |      | 1, 2                                     | Two FDD carrier frequencies are used.     |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1          |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2          |
| Gap Pattern Id                             |      | 0  | As specified in TS 36.133 clause 8.1.2.1. |
| A3-Offset                                  | dB   | -6                                       |   |

| Propagation Condition  |            | ETU70    |     |           |     |
| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |          |     |           |     |

### A.8.3.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

**NOTE:** The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.3.2 E-UTRAN FDD-FDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells

### A.8.3.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These test will partly verify the FDD-FDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The common test parameters are given in Tables A.8.3.2.1-1 and A.8.3.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.3.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.3.2.1-4. In this tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.3.2.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment   |
|--|------|--|--------|---|

### A.8.3.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report

### A.8.3.3 E-UTRAN FDD-FDD inter-frequency event triggered reporting under AWGN propagation conditions in asynchronous cells with DRX when L3 filtering is used

#### A.8.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX when L3 filtering is used. This test will partly verify the FDD-FDD inter-frequency cell search in DRX requirements in clause 8.1.2.3.1.2 and the UE behaviour with the *filterCoefficient* defined in TS 36.331 [2].

The test parameters are given in Tables A.8.3.3.1-1, A.8.3.3.1-2, A.8.3.3.1-3 and A.8.3.3.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and the filter coefficient is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 1 as defined in Table 8.1.2.1-1 is provided.

The uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.3.3.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting under AWGN propagation conditions in asynchronous cells with DRX when L3 filtering is used**

| Parameter                                  | Unit | Value                                    | Comment   |
|--|------|--|---|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                        |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                        |
| Active cell                                |      | Cell 1                                   |   |
| Neighbour cell                             |      | Cell 2                                   | Cell to be identified.                                  |
| E-UTRA RF Channel Number                   |      | 1, 2                                     | Two FDD carrier frequencies are used.                   |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Gap Pattern Id                             |      | 1  | As specified in TS 36.133 clause 8.1.2.1.               |
| Neighbour A3-Offset Ofn                    | dB   | -14                                      |   |
| CP length                                  |      | Normal                                   |   |
| Hysteresis                                 | dB   | 0  |   |
| Time To Trigger                            | s    | 0  |   |
| Filter coefficient                         |      | 9  | L3 filtering is used                                    |
| DRX  |      | ON                                       | DRX related parameters are defined in Table A.8.3.3.1-3 |
| Time offset between cells                  |      | 3 ms                                     | Asynchronous cells                                      |
| T1   | S    | 30                                       |   |
| T2   | S    | 9  |   |

**Table A.8.3.3.1-2: Cell specific test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting under AWGN propagation conditions in asynchronous cells with DRX when L3 filtering is used**

| Parameter   | Unit       | Cell 1   |     | Cell 2   |     |
|---|------------|----------|-----|----------|-----|
|   |            | T1       | T2  | T1       | T2  |
| E-UTRA RF Channel Number  |            | 1        |     | 2        |     |
| $BW_{channel}$  | MHz        | 10       |     | 10       |     |
| OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) and in A.3.2.1.2 (OP.2 FDD) |            | OP.1 FDD |     | OP.2 FDD |     |
| PBCH_RA   | dB         | 0        |     | 0        |     |
| PBCH_RB   | dB         |          |     |          |     |
| PSS_RA  | dB         |          |     |          |     |
| SSS_RA  | dB         |          |     |          |     |
| PCFICH_RB   | dB         |          |     |          |     |
| PHICH_RA  | dB         |          |     |          |     |
| PHICH_RB  | dB         |          |     |          |     |
| PDCCH_RA  | dB         |          |     |          |     |
| PDCCH_RB  | dB         |          |     |          |     |
| PDSCH_RA  | dB         |          |     |          |     |
| PDSCH_RB  | dB         |          |     |          |     |
| OCNG_RA <sup>Note 1</sup>   | dB         |          |     |          |     |
| OCNG_RB <sup>Note 1</sup>   | dB         |          |     |          |     |
| $\hat{E}_s / I_{ot}$  | dB         | 4        | 4   | 4        | 24  |
| $N_{oc}$ <sup>Note 2</sup>  | dBm/15 KHz | -98      |     |          |     |
| $\hat{E}_s / N_{oc}$  | dB         | 4        | 4   | 4        | 24  |
| RSRP <sup>Note 3</sup>  | dBm/15 KHz | -94      | -94 | -94      | -74 |
| SCH_RP <sup>Note 3</sup>  | dBm/15 KHz | -94      | -94 | -94      | -74 |
| Propagation Condition   |            | AWGN     |     |          |     |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.8.3.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.3.4 E-UTRAN FDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

#### A.8.3.4.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.5.

The test scenario comprises of two E-UTRA FDD carriers and one cell on each carrier as given in tables A.8.3.4.1-1 and A.8.3.4.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.3.4.1-1: General test parameters for E-UTRAN FDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                            | Unit | Value                                    | Comment                                      |

### A.8.3.4.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI,inter}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 80 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 80 ACK/NACK number is caused by two parts. Firstly, at least 60 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.5.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 20 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

### A.8.3.5 E-UTRAN FDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.5. The requirement is verified in a DRX configuration.

The test scenario comprises of two E-UTRA FDD carriers and one cell on each carrier as given in tables A.8.3.5.1-1, A.8.3.5.1-2, A.8.3.5.1-3 and A.8.3.5.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

**Table A.8.3.5.1-1: General test parameters for E-UTRAN FDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX**

| Parameter                            | Unit | Value                                    | Comment   |
|--------------------------------------|------|--|---|
| PDSCH parameters                     |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                        |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                        |
| E-UTRA RF channel number             |      | 1, 2                                     | Two FDD carrier frequencies are used.                   |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10                                       |   |

### A.8.3.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

$$\begin{aligned}
 \text{Test requirement} &= \text{RRC Procedure delay} + T_{\text{identify\_CGI,inter}} + \text{reporting delay} \\
 &= 15 + 150 + 2\text{ms from the start of T3} \\
 &= 167 \text{ ms, allow 170 ms.}
 \end{aligned}$$

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.3.6 E-UTRAN FDD-FDD Inter-frequency event triggered reporting without measurement gaps under AWGN propagation conditions in asynchronous cells

#### A.8.3.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event without measurement gaps. This test will partly verify the FDD-FDD inter-frequency cell search requirements in section 8.1.2.3.

The test parameters are given in Tables A.8.3.6.1-1 and A.8.3.6.1-2. In this test, there are two cells on different carrier frequencies and no gaps are configured in this test. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. PDCCH on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.3.6.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting without measurement gaps**

| Parameter                                  | Unit | Value                                    | Comment                               |

### A.8.3.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall send continuous ACK/NACK throughout the test, and from the start of T2 until Event A3 is reported, at least 85% ACK/NACK shall be detected.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.7 E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells for Increased Carrier Monitoring without Reduced Performance Group

#### A.8.3.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.3.1.1-1 and A.8.3.1.1-2. In this test, there are four cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cells 2, 3 or 4.

**Table A.8.3.7.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                | Unit | Value                  | Comment  |
|--|------|------------------------|--|
| UE configured E-UTRA RF Channel Number   |      | 1, 2,3,4,5,6,7,8,9     | Serving cell and eight FDD carrier frequencies are used in the UE neighbour cell list.                     |
| Active cell                              |      | Cell 1                 | Cell 1 is on RF channel number 1   |
| Neighbour cells                          |      | Cell 2, Cell 3, Cell 4 | Cells 2, 3, 4 are randomly selected to use different frequencies selected from frequencies 2,3,4,5,6,7,8,9 |
| Gap Pattern Id                           |      | 0                      | As specified in TS 36.133 clause 8.1.2.1.  |
| A3-Offset                                | dB   | -6                     |  |
| Hysteresis                               | dB   | 0                      |  |
| Reduced Performance Group Scaling factor | -    | 8                      |  |
| CP length                                |      | Normal                 |  |

### A.8.3.7.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 30.72s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.3.8 FDD-FDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.3.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell measurement requirements for increased UE carrier monitoring in clause 8.1.2.3.

The test parameters are given in Tables A.8.3.8.1-1, A.8.3.8.1-2 and A.8.3.8.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.3.8.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events A3 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.3.8.1-1: General test parameters for FDD-FDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                              | Unit | Value   | Comment  |
|--|------|---|--|
| UE configured E-UTRA RF Channel Number |      | 1,2,3,4,5,6,7,8,9   | Serving cell and 8 FDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6,7,8 and 9 are indicated to have reduced performance |
| Test equipment configuration           |      | Cell 1 uses E-UTRA RF channel number 1<br>Cell 2,3,4 are randomly selected to use different frequencies selected from frequencies 2,3,4,5,6,7,8,9 |  |
| Active cell                            |      | Cell 1  | Cell 1 is on RF channel number 1   |
| Gap Pattern Id                         |      | 0   | As specified in TS 36.133 clause 8.1.2.1.  |
| A3-Offset                              | dB   | -6  |  |
| Hysteresis                             | dB   | 0   |  |
| CP length                              |      | Normal  |  |
| TimeToTrigger                          | s    | 0   |  |
| Filter coefficient                     |      | 0   | L3 filtering is not used   |
| DRX                                    |      | OFF   | OFF  |
| Scaling factor configurations          |      | 8   | As specified in TS 36.133 clause 8.1.2.1.1a  |
| T1                                     | s    | 5   |  |
| T2                                     | s    | 155   |  |

**Table A.8.3.8.1-2: Cell specific test parameters for FDD-FDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX (cell #1, cell #2)**

| Parameter  | Unit   | Cell 1                                      |   | Cell 2   |   |

### A.8.3.8.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.17s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

### A.8.3.9 FDD-FDD Inter-frequency correct reporting of measurement events with reduced performance group configured, DRX

#### A.8.3.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX. This test will partly verify the FDD-FDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The test parameters are given in Tables A.8.3.9.1-1, A.8.3.9.1-2, A.8.3.9.1-3 and A.8.3.9.1-4. In this test, there are four cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle..

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells on different frequencies which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.3.9.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting for IncMon**

| Parameter                                    | Unit | Value              | Comment   |
|--|------|--------------------|---|
| UE configured E-UTRA RF Channel Number       |      | 1, 2,3,4,5,6,7,8,9 | Serving cell and eight FDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6,7,8 and 9 are indicated to have reduced performance  |
| Test equipment configuration                 |      | Cell 1,2,3,4       | Cell 1 uses E-UTRA RF channel number 1<br>Cells 2 are randomly selected to use different frequencies selected from E-UTRA frequencies 2, 3, 4.<br>Cells 3, 4 are randomly selected to use different frequencies selected from E-UTRA frequencies 5, 6, 7, 8, 9. |

| Time offset to cell1   | ms         | -                                  |                              | 3  |                              | 3   |                              | 3   |                              |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
- Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 4:  $E_s/I_{ot}$ , RSRP, SCH\_RP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.8.3.9.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.2s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

Where:

When DRX cycle is 160ms, the delay requirement of cell identification and measurement period are specified in section 8.1.2.3.1.2 and Non DRX Requirements in clause 8.1.2.3.1.1 are applicable.

The requirement of inter frequency cell identification delay are specified as

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},n} \cdot K_n \quad \text{ms (normal performance) and}$$

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},r} \cdot K_r \quad \text{ms (reduced performance)}$$

$T_{\text{Basic\_Identify\_inter}}$  480ms, See section 8.1.2.3.1.1

$T_{\text{Inter1}}$  60ms, See section 8.1.2.1

$N_{\text{freq},n}$  and  $N_{\text{freq},r}$  3 and 5 set in this test case.

$K_n$  and  $K_r$  8/7 and 8, See section 8.1.2.1.1a.

This gives 13165.7ms for cells 2 on normal carrier, and 153600ms for cell 3 and cell 4 on reduced carriers for Event A3 triggered measurement reporting delay. The test requirements allow 13.2s and 153.6s.

## A.8.4 E-UTRAN TDD - TDD Inter-frequency Measurements

### A.8.4.1 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells

#### A.8.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.1.1-1 and A.8.4.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.1.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                            | Unit | Value                                    | Comment  |
|--------------------------------------|------|--|--|
| PDSCH parameters                     |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2   |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2   |

| PSS_RA   | dB         |          |     |           |     |
| SSS_RA   | dB         |          |     |           |     |
| PCFICH_RB  | dB         |          |     |           |     |
| PHICH_RA   | dB         |          |     |           |     |
| PHICH_RB   | dB         |          |     |           |     |
| PDCCH_RA   | dB         |          |     |           |     |
| PDCCH_RB   | dB         |          |     |           |     |
| PDSCH_RA   | dB         |          |     |           |     |
| PDSCH_RB   | dB         |          |     |           |     |
| OCNG_RA <sup>Note 1</sup>  | dB         |          |     |           |     |
| OCNG_RB <sup>Note 1</sup>  | dB         |          |     |           |     |
| $\hat{E}_s / I_{ot}$   | dB         |          |     |           |     |
| $N_{oc}$ <sup>Note 3</sup>   | dBm/15 kHz | -98      |     |           |     |
| RSRP <sup>Note 4</sup>   | dBm/15 kHz | -94      | -94 | -Infinity | -91 |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz | -94      | -94 | -infinity | -91 |
| $\hat{E}_s / N_{oc}$   | dB         | 4        | 4   | -Infinity | 7   |
| Propagation Condition  |            | ETU70    |     |           |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |            |          |     |           |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |            |          |     |           |     |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |     |           |     |
| Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |            |          |     |           |     |

### A.8.4.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2 E-UTRAN TDD-TDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in synchronous cells

### A.8.4.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These test will partly verify the TDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The common test parameters are given in Tables A.8.4.2.1-1 and A.8.4.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.4.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.4.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.2.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                            | Unit | Test 1                                   | Test 2 | Comment  |
|--------------------------------------|------|--|--------|--|
|                                      |      | Value                                    |        |  |
| PDSCH parameters                     |      | DL Reference Measurement Channel R.0 TDD |        | As specified in clause A.3.1.1.2. Note that UE may only be allocated at <i>On Duration</i> |
| PCFICH/PDCCH/PHICH parameters        |      | DL Reference Measurement Channel R.6 TDD |        | As specified in clause A.3.1.2.2.  |
| E-UTRA RF Channel Number             |      | 1, 2                                     |        | Two TDD carrier frequencies are used.  |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10                                       |        |  |
| Active cell                          |      | Cell 1                                   |        | Cell 1 is on RF channel number 1   |
| Neighbour cell                       |      | Cell 2                                   |        | Cell 2 is on RF channel number 2   |
| Gap Pattern Id                       |      | 0  |        | As specified in TS 36.133 clause 8.1.2.1.  |
| Uplink-downlink configuration        |      | 1  |        | As specified in TS 36.211 clause 4.2 Table 4.2-2   |
| Special subframe configuration       |      | 6  |        | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells             |
| A3-Offset                            | dB   | -6                                       |        |  |
| Hysteresis                           | dB   | 0  |        |  |
| CP length                            |      | Normal                                   |        |  |
| TimeToTrigger                        | s    | 0  |        |  |
| Filter coefficient                   |      | 0  |        | L3 filtering is not used   |
| PRACH configuration                  |      | 4  |        | As specified in table 5.7.1-3 in TS 36.211   |
| Access Barring Information           | -    | Not Sent                                 |        | No additional delays in random access procedure.   |
| DRX                                  |      | ON                                       |        | DRX related parameters are defined in Table A.8.4.2.1-3                                    |
| Time offset between cells            |      | 3 $\mu$ s                                |        | Synchronous cells  |
| T1                                   | s    | 5  |        |  |
| T2                                   | s    | 5  | 30     |  |

**Table A.8.4.2.1-2: Cell specific test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in synchronous cells**

### A.8.4.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.4.3 E-UTRAN TDD-TDD inter-frequency event triggered reporting under AWGN propagation conditions in synchronous cells with DRX when L3 filtering is used

#### A.8.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX when L3 filtering is used. This test will partly verify the TDD-TDD inter-frequency cell search in DRX requirements in clause 8.1.2.3.2.2 and the UE behaviour with the filterCoefficient defined in TS 36.331 [2].

The test parameters are given in Tables A.8.4.3.1-1, A.8.4.3.1-2, A.8.4.3.1-3 and A.8.4.3.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and the filter coefficient is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 1 as defined in Table 8.1.2.1-1 is provided.

The uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

**Table A.8.4.3.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting under AWGN propagation conditions with DRX when L3 filtering is used**

| Parameter                                   | Unit          | Value                                    | Comment   |
|---|---------------|--|---|
| PDSCH parameters                            |               | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                        |
| PCFICH/PDCCH/PHICH parameters               |               | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                        |
| Active cell                                 |               | Cell 1                                   |   |
| Neighbour cell                              |               | Cell 2                                   | Cell to be identified.                                  |
| E-UTRA RF Channel Number                    |               | 1, 2                                     | Two TDD carrier frequencies are used.                   |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz           | 10                                       |   |
| Time offset between cells                   | $\mu\text{s}$ | 3  | synchronous cells                                       |

### A.8.4.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of

time period T2 to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

#### A.8.4.4 E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

##### A.8.4.4.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.7.

The test scenario comprises of two E-UTRA TDD carriers and one cell on each carrier as given in tables A.8.4.4.1-1 and A.8.4.4.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

#### A.8.4.4.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI,inter}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 42 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 42 ACK/NACK number is caused by two parts. Firstly, at least 30 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.7.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 12 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.4.5 E-UTRAN TDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps with DRX

### A.8.4.5.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.7. The requirement is verified in a DRX configuration.

The test scenario comprises of two E-UTRA TDD carriers and one cell on each carrier as given in tables A.8.4.5.1-1, A.8.4.5.1-2, A.8.4.5.1-3 and A.8.4.5.1-4. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

In the test UE needs to be provided at least once every 1280ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE sends scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

### A.8.4.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI,inter}}$  + reporting delay

= 15 + 150 + 2ms from the start of T3

= 167 ms, allow 170 ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.4.6 E-UTRAN TDD-TDD Inter-frequency event triggered reporting for TDD UL/DL configuration 0

#### A.8.4.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.6.1-1 and A.8.4.6.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.4.6.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting for TDD UL/DL configuration 0**

| Parameter                                   | Unit | Value                                    | Comment  |

| PHICH_RB                                     | dB         |          |     |           |     |
| PDCCH_RA                                     | dB         |          |     |           |     |
| PDCCH_RB                                     | dB         |          |     |           |     |
| PDSCH_RA                                     | dB         |          |     |           |     |
| PDSCH_RB                                     | dB         |          |     |           |     |
| OCNG_RA <sup>Note 1</sup>                    | dB         |          |     |           |     |
| OCNG_RB <sup>Note 1</sup>                    | dB         |          |     |           |     |
| $\hat{E}_s / I_{ot}$                         | dB         |          |     |           |     |
| $N_{oc}$ <sup>Note 3</sup>                   | dBm/15 kHz | -98      |     |           |     |
| RSRP <sup>Note 4</sup>                       | dBm/15 kHz | -94      | -94 | -Infinity | -91 |
| SCH_RP <sup>Note 4</sup>                     | dBm/15 kHz | -94      | -94 | -infinity | -91 |
| $\hat{E}_s / N_{oc}$                         | dB         | 4        | 4   | -Infinity | 7   |
| Propagation Condition                        |            | ETU70    |     |           |     |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

## A.8.4.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7920 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.7 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for Increased Carrier Monitoring without Reduced Performance Group

### A.8.4.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2.

The test parameters are given in Table A.8.4.1.1-1 and A.8.4.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cells 2, 3 or 4.

**Table A.8.4.7.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                              | Unit | Value  | Comment  |
|--|------|--|--|
| UE configured E-UTRA RF Channel Number |      | 1, 2,3,4,5,6,7,8,9   | Serving cell and eight TDD carrier frequencies are used in the UE neighbour cell list. |
| Test equipment configuration           |      | Cell 1 uses UTRA RF channel number 1<br>Cells 2,3,4 are randomly selected to use different frequencies selected from frequencies 2,3,4,5,6,7,8,9 |  |
| Gap Pattern Id                         |      | 1  | As specified in TS 36.133 clause 8.1.2.1.  |
| CP length                              |      | Normal   |  |
| E-UTRA RF Channel Number               |      | 1, 2   | Two TDD carrier frequencies are used.  |
| Active cell                            |      | Cell 1   | Cell 1 is on RF channel number 1   |
| Neighbour cell                         |      | Cell 2   | Cell 2 is on RF channel number 2   |
| A3-Offset                              | dB   | -6   |  |
| Hysteresis                             | dB   | 0  |  |
| TimeToTrigger                          | s    | 0  |  |
| Filter coefficient                     |      | 0  | L3 filtering is not used   |
| DRX                                    |      | OFF  |  |
| T1                                     | s    | 5  |  |
| T2                                     | s    | 80   |  |

**Table A.8.4.7.1-2: Cell specific test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in synchronous cells (Cell # 1 and Cell # 2)**

| Parameter  | Unit   | Cell 1                                      |                             | Cell 2   |                             |
|--|--|---|-----------------------------|--|-----------------------------|
|  |  | T1  | T2                          | T1   | T2                          |
| E-UTRA RF Channel Number   |  | 1   |                             | Randomly selected from 2,3,4,5,6,7,8 such that cell 2 is in the normal performance group |                             |

| Note 1:  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |  |                                  |  |                                  |
| Note 2:  | The resources for uplink transmission are assigned to the UE priori to the start of time period T2.  |  |                                  |  |                                  |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |  |                                  |  |                                  |
| Note 4:  | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |  |                                  |  |                                  |

### A.8.4.7.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 61.44s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.8.4.8 TDD-TDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.4.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell measurement requirements for increased UE carrier monitoring in clause 8.1.2.3.

The test parameters are given in Tables A.8.4.8.1-1, A.8.4.8.1-2 and A.8.4.8.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.4.8.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events A3 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.4.8.1-1: General test parameters for TDD-TDD Interfrequency correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                              | Unit | Value   | Comment  |
|--|------|---|--|
| UE configured E-UTRA RF Channel Number |      | 1,2,3,4,5,6,7,8,9   | Serving cell and 8 TDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6,7,8 and 9 are indicated to have reduced performance |
| Test equipment configuration           |      | Cell 1 uses E-UTRA RF channel number 1<br>Cell 2,3,4 are randomly selected to use different frequencies selected from frequencies 2,3,4,5,6,7,8,9 |  |
| Active cell                            |      | Cell 1  | Cell 1 is on RF channel number 1   |
| Gap Pattern Id                         |      | 0   | As specified in TS 36.133 clause 8.1.2.1.  |
| A3-Offset                              | dB   | -6  |  |
| Hysteresis                             | dB   | 0   |  |
| CP length                              |      | Normal  |  |
| TimeToTrigger                          | s    | 0   |  |
| Filter coefficient                     |      | 0   | L3 filtering is not used   |
| DRX                                    |      | OFF   | OFF  |
| Scaling factor configurations          |      | 8   | As specified in TS 36.133 clause 8.1.2.1.1a  |
| T1                                     | s    | 5   |  |
| T2                                     | s    | 155   |  |

### A.8.4.8.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.17s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

### A.8.4.9 TDD-TDD Inter-frequency correct reporting of measurement events with reduced performance group configured, DRX

#### A.8.4.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event in DRX. This test will partly verify the TDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The test parameters are given in Tables A.8.4.9.1-1, A.8.4.9.1-2, A.8.4.9.1-3 and A.8.4.9.1-4. In this test, there are four cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle..

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells on different frequencies which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.4.9.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting for IncMon**

| Parameter                                    | Unit | Value              | Comment   |
|--|------|--------------------|---|
| UE configured E-UTRA RF Channel Number       |      | 1, 2,3,4,5,6,7,8,9 | Serving cell and eight TDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6,7,8 and 9 are indicated to have reduced performance  |
| Test equipment configuration                 |      | Cell 1,2,3,4       | Cell 1 uses E-UTRA RF channel number 1<br>Cells 2 are randomly selected to use different frequencies selected from E-UTRA frequencies 2, 3, 4.<br>Cells 3, 4 are randomly selected to use different frequencies selected from E-UTRA frequencies 5, 6, 7, 8, 9. |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
- Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 4:  $E_s/I_{ot}$ , RSRP, SCH\_RP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.8.4.9.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 13.2s (cell 2) and 153.6s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

Where:

When DRX cycle is 160ms, the delay requirement of cell identification and measurement period are specified in section 8.1.2.3.1.2 and Non DRX Requirements in clause 8.1.2.3.1.1 are applicable.

The requirement of inter frequency cell identification delay are specified as

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},n} \cdot K_n \quad \text{ms (normal performance) and}$$

$$T_{\text{Identify\_Inter}} = T_{\text{Basic\_Identify\_Inter}} \cdot \frac{480}{T_{\text{Inter1}}} \cdot N_{\text{freq},r} \cdot K_r \quad \text{ms (reduced performance)}$$

$T_{\text{Basic\_Identify\_inter}}$  480ms, See section 8.1.2.3.1.1

$T_{\text{Inter1}}$  60ms, See section 8.1.2.1

$N_{\text{freq},n}$  and  $N_{\text{freq},r}$  3 and 5 set in this test case.

$K_n$  and  $K_r$  8/7 and 8, See section 8.1.2.1.1a.

This gives 13165.7ms for cells 2 on normal carrier, and 153600ms for cell 3 and cell 4 on reduced carriers for Event A3 triggered measurement reporting delay. The test requirements allow 13.2s and 153.6s.

## A.8.5 E-UTRAN FDD - UTRAN FDD Measurements

### A.8.5.1 E-UTRAN FDD - UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.1.1-1, A.8.5.1.1-2 and A.8.5.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.1.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment  |

| $I_{oc}$  | dBm/3.84 MHz | -70             |      |
| CPICH_Ec/I <sub>o</sub>   | dB           | -Infinity       | -14  |
| Propagation Condition   |              | Case 5 (Note 3) |      |
| Note 1: The DPCH level is controlled by the power control loop.   |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |                 |      |
| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.  |              |                 |      |

### A.8.5.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.5.2 E-UTRAN FDD - UTRAN FDD SON ANR cell search reporting under AWGN propagation conditions

### A.8.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of the strongest UTRAN cell for SON automatic neighbour relations. This test will partly verify the E-UTRAN FDD - UTRAN FDD cell search requirements for identification of a new UTRA FDD cell for SON given in clause 8.1.2.4.7.1.

The test parameters are given in Tables A.8.5.2.1-1, A.8.5.2.1-2 and A.8.5.2.1-3 below. In the measurement control information it is indicated to the UE that periodical reporting with the purpose 'reportStrongestCellsForSON' is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior to the start of time period T1, an interRATperiodic measurement reporting configuration with purpose reportStrongestCellsForSON is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.2.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD cell search reporting for SON ANR in AWGN propagation conditions**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.   |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.   |
| Gap Pattern Id                                    |      | 1  | As specified in TS 36.133 clause 8.1.2.1.   |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.  |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.  |
| CP length   |      | Normal                                   | Applicable to cell 1  |
| E-UTRA RF Channel Number                          |      | 1  | One E-UTRA FDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| UTRA RF Channel Number                            |      | 1  | One UTRA FDD carrier frequency is used.   |
| Inter-RAT (UTRA FDD) measurement quantity         |      | CPICH Ec/Io                              |   |
| Filter coefficient                                |      | 0  | L3 filtering is not used.   |
| DRX   |      | OFF                                      |   |
| Monitored UTRA FDD cell list size                 |      | None                                     | No explicit neighbour list is provided to the UE  |
| T1  | s    | >5                                       | During T1, cell 2 shall be powered off, and during the off time the primary scrambling code shall be changed, The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T2. |
| T2  | s    | 6  |   |

| <p>Note 1: The DPCH level is controlled by the power control loop.</p> <p>Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to <math>I_{or}</math>.</p> |              |           |       |

### A.8.5.2.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.5.3 E-UTRAN FDD-UTRAN FDD event triggered reporting when DRX is used under fading propagation conditions

#### A.8.5.3.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN FDD-UTRAN FDD cell search requirements when DRX is used in clause 8.1.2.4.1.2.

In these tests, there are two cells, one E-UTRAN cell and one UTRAN cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.5.3.1-1. Cell specific test parameters are given in Table A.8.5.3.1-2 for E-UTRAN and in Table A.8.5.3.1-5 for UTRAN. DRX configuration for Test1 and Test2 are given in Table A.8.5.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.5.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.5.3.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting when DRX is used in fading propagation conditions**

| Parameter   | Unit | Test 1                                   | Test 2 | Comment   |
|---|------|--|--------|---|
|   |      | Value                                    |        |   |

| Note 1:                   | The DPCH level is controlled by the power control loop.   |                 |      |
| Note 2:                   | The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |                 |      |
| Note 3:                   | Case 5 propagation conditions are defined in Annex A of TS 25.101.  |                 |      |

### A.8.5.3.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 2400 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE sends the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report.

### A.8.5.4 E-UTRAN FDD - UTRAN FDD enhanced cell identification under AWGN propagation conditions

#### A.8.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN cells. This test will partly verify the Enhanced UTRA FDD cell identification requirements in clause 8.1.2.4.1.1.1a.

The test parameters are given in Tables A.8.5.4.1-1, A.8.5.4.1-2 and A.8.5.4.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of the T2

**Table A.8.5.4.1-1: General test parameters for E-UTRAN FDD - UTRAN FDD enhanced cell identification under AWGN propagation conditions**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                         |

| <p>Note 1: The DPCH level is controlled by the power control loop.</p> <p>Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to <math>I_{\text{or}}</math>.</p> <p>Note 3: This gives an SCH Ec/I<sub>o</sub> of -15dB</p> |              |           |      |

### A.8.5.4.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 960 ms from the beginning of time period T2. The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH

### A.8.5.5 E-UTRAN FDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps

#### A.8.5.5.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of UTRA cell with autonomous gaps in clause 8.1.2.4.17.

The test parameters are given in Tables A.8.5.5.1-1, A.8.5.5.1-2 and A.8.5.5.1-3 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B1. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.5.5.1-1: General test parameters for E-UTRAN FDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps**

| Parameter   | Unit   | Value                                    | Comment  |

| <p>Note 1: The DPCH level is controlled by the power control loop.</p> <p>Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to <math>I_{\text{or}}</math>.</p> <p>Note 3: This gives an SCH Ec/I<sub>o</sub> of -15dB</p> |              |           |      |

### A.8.5.5.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within [1965] milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, UTRAN FDD}}$  + reporting delay

= 50 + [630]+40\*32 + 2ms from the start of T3

= [1962] ms, allow [1965] ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.5.6 E-UTRAN FDD - UTRAN FDD event triggered reporting without measurement gaps under AWGN propagation conditions

#### A.8.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event without measurement gaps. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.6.1-1, A.8.5.6.1-2 and A.8.5.6.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2. PDCCH on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.5.6.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting without measurement gaps under AWGN propagation conditions**

| Parameter  | Unit | Value                                    | Comment  |
|--|------|--|--|

| OCNS  |              | -0.941    |      |
| $\hat{I}_{or}/I_{oc}$   | dB           | -Infinity | -1.8 |
| $I_{oc}$  | dBm/3.84 MHz | -70       |      |
| CPICH_Ec/I <sub>o</sub>   | dB           | -Infinity | -14  |
| Propagation Condition   |              | AWGN      |      |
| Note 1: The DPCH level is controlled by the power control loop.   |              |           |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> |              |           |      |

### A.8.5.6.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall send continuous ACK/NACK throughout the test, and from the start of T2 until Event B1 is reported, at least 85% ACK/NACK shall be detected.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.8.5.7 E-UTRAN FDD - UTRAN FDD Event Triggered Reporting under Fading Propagation Conditions for 5 MHz Bandwidth

### A.8.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The parameters of this test are the same as defined in Section A.8.5.1.1 except that the values of the parameters in the Table A.8.5.7.1-1 will replace the values of the corresponding parameters in A.8.5.1.1-1, and the values of the parameters in the Table A.8.5.7.1-2 will replace the values of the corresponding parameters in A.8.5.1.1-2.

**Table A.8.5.7.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter   | Unit | Value                                     | Comment                           |
|---|------|---|-----------------------------------|
| PDSCH parameters (E-UTRAN FDD)  |      | DL Reference Measurement Channel R.5 FDD  | As specified in clause A.3.1.1.1. |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)                                 |      | DL Reference Measurement Channel R.11 FDD | As specified in clause A.3.1.2.1. |
| E-UTRA Channel Bandwidth ( $BW_{channel}$ )                                 | MHz  | 5   |                                   |
| NOTE 1: See Table A.8.5.1.1-1 for the other parameters.                     |      |   |                                   |
| NOTE 2: This test is according to the principle defined in Section A.3.7.2. |      |   |                                   |

**Table A.8.5.7.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for event triggered reporting of UTRAN FDD cell under fading propagation conditions**

| Parameter   | Unit | Cell 1    |    |
|---|------|-----------|----|
|   |      | T1        | T2 |
| $BW_{channel}$  | MHz  | 5         |    |
| OCNG Pattern defined in A.3.2.1.15                    |      | OP.15 FDD |    |
| NOTE: See Table A.8.1.3.1-2 for the other parameters. |      |           |    |

### A.8.5.7.2 Test Requirements

The test requirements defined in Section A.8.5.1 shall apply to this test case.

## A.8.5.8 E-UTRA FDD InterRAT UTRA FDD correct reporting of measurement events with reduced performance group configured, non DRX

### A.8.5.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA FDD-UTRA FDD inter-RAT cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.5.8.1-1 and A.8.5.8.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3

and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.5.8.1-1: General test parameters for E-UTRAN FDD-UTRAN FDD for correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                    | Unit | Value  | Comment   |
|--|------|--|---|
| UE configured E-UTRA RF Channel Number       |      | 1  | Serving cell and six UTRA FDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6 and 7 are indicated to have reduced performance         |
| UE is configured UTRA RF channel numbers     |      | 2, 3, 4, 5, 6, 7   |   |
| Test equipment configuration                 |      | Cell 1 uses E-UTRA RF channel number 1<br>Cells 2,3,4 are randomly selected to use different frequencies selected from UTRA RF channel numbers 2,3,4,5,6,7 | Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group |
| PDSCH parameters (E-UTRAN FDD)               |      | DL Reference Measurement Channel R.0 FDD   | As specified in clause A.3.1.1.1.   |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)  |      | DL Reference Measurement Channel R.6 FDD   | As specified in clause A.3.1.2.1.   |
| Correlation Matrix and Antenna Configuration |      | 1x2 low  |   |

### A.8.5.8.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 7.68s (cell 2) and 115,2s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.6 E-UTRAN TDD - UTRAN FDD Measurements

### A.8.6.1 E-UTRAN TDD - UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- UTRAN FDD cell search requirements in clause 8.1.2.4.2.

The test parameters are given in Tables A.8.6.1.1-1, A.8.6.1.1-2 and A.8.6.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.6.1.1-1: General test parameters for E-UTRAN TDD-UTRAN FDD event triggered reporting in fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN TDD)                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.                               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD)       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.                               |
| Gap Pattern Id                                    |      | 1  | As specified in TS 36.133 clause 8.1.2.1.                       |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                        |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                          |
| Special subframe configuration                    |      | 6  | As specified in table 4.2-1 in TS 36.211. Applicable to cell 1. |
| Uplink-downlink configuration                     |      | 1  | As specified in table 4.2-2 in TS 36.211. Applicable to cell 1. |
| CP length   |      | Normal                                   | Applicable to cell 1.   |
| E-UTRA RF Channel Number                          |      | 1  | One E-UTRA TDD carrier frequency is used.                       |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| UTRA RF Channel Number                            |      | 1  | One UTRA FDD carrier frequency is used.                         |
| Inter-RAT (UTRA FDD) measurement quantity         |      | CPICH Ec/Io                              |   |
| b1-Threshold-UTRA                                 | dB   | -18                                      | CPICH Ec/Io threshold for event B1.                             |
| Hysteresis  | dB   | 0  |   |
| Time To Trigger                                   | ms   | 0  |   |
| Filter coefficient                                |      | 0  | L3 filtering is not used.                                       |
| DRX   |      | OFF                                      |   |
| Monitored UTRA cell list size                     |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list.      |
| T1  | s    | 5  |   |
| T2  | s    | 6  |   |

| Propagation Condition   |              | Case 5 (Note 3) |      |
| Note 1: The DPCH level is controlled by the power control loop.   |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |                 |      |
| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.  |              |                 |      |

### A.8.6.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.6.2 E-UTRAN TDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps

### A.8.6.2.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of UTRA cell with autonomous gaps in clause 8.1.2.4.18.

The test parameters are given in Tables A.8.6.2.1-1, A.8.6.2.1-2 and A.8.6.2.1-3 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B1. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.8.6.2.1-1: General test parameters for E-UTRAN TDD - UTRAN FDD identification of a new CGI of UTRAN cell using autonomous gaps**

| <p>Note 1: The DPCH level is controlled by the power control loop.</p> <p>Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to <math>I_{\text{or}}</math>.</p> <p>Note 3: This gives an SCH Ec/I<sub>o</sub> of -15dB</p> |              |           |      |

### A.8.6.2.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within [1965] milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{\text{identify\_CGI, UTRAN FDD}}$  + reporting delay

= 50 + [630]+40\*32 + 2ms from the start of T3

= [1962] ms, allow [1965] ms.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.6.3 E-UTRA TDD InterRAT UTRA FDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA TDD-UTRA FDD inter-RAT cell search requirements in clause 8.1.2.4.2.

The test parameters are given in Tables A.8.6.3.1-1 and A.8.6.3.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2, 3 or 4. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 8 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.6.3.1-1: General test parameters for E-UTRAN TDD-UTRAN FDD for correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                    | Unit | Value  | Comment   |
|--|------|--|---|
| UE configured E-UTRA RF Channel Number       |      | 1  | Serving cell and seven UTRA FDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6 and 7 are indicated to have reduced performance       |
| UE is configured UTRA RF channel numbers     |      | 2, 3, 4, 5, 6, 7,8   |   |
| Test equipment configuration                 |      | Cell 1 uses E-UTRA RF channel number 1<br>Cells 2,3,4 are randomly selected to use different frequencies selected from UTRA RF channel numbers 2,3,4,5,6,7,8 | Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group |

### A.8.6.3.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 7.68s (cell 2) and 115,2s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

##### A.8.7.1.1.1 Void

##### A.8.7.1.1.2 1.28 Mcps TDD option

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA TDD to UTRA TDD cell search requirements in clause 8.1.2.4.3 under fading propagation conditions.

This test scenario comprised of 1 E-UTRA TDD PCell, and 1 UTRA TDD cell to be searched. Test parameters are given in Table A.8.7.1.1.2-1, A.8.7.1.1.2-2, and A.8.7.1.1.2-3. Gap pattern configuration #0 as defined in table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

A.8.7.1.1.3 Void

### A.8.7.1.2 Test Requirements

A.8.7.1.2.1 Void

A.8.7.1.2.2 1.28 Mcps TDD option

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.8.7.1.2.3 Void

## A.8.7.2 E-UTRAN TDD-UTRAN TDD cell search when DRX is used under fading propagation conditions

### A.8.7.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN TDD to UTRAN TDD inter-RAT cell search requirements when DRX is used in clause 8.1.2.4.3.2 under fading propagation conditions.

The common test parameters are given in Tables A.8.7.2.1-1, A.8.7.2.1-2 and A.8.7.2.1-3. DRX configuration for Test1 and Test2 are given in Table A.8.7.2.1-4 and time alignment timer and scheduling request related parameters in Table A.8.7.2.1-5. In these tests, there are two cells, 1 E-UTRAN TDD PCell and 1 UTRAN TDD cell to be searched, Gap pattern configuration # 0 as defined in table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.7.2.1-1: General test parameters for E-UTRAN TDD to UTRAN 1.28Mcps TDD cell search when DRX is used in fading propagation conditions**

| Parameter | Unit | Test 1 | Test 2 | Comment |
|-----------|------|--------|--------|---------|
|           |      | Value  |        |         |
|           |      |        |        |         |

### A.8.7.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 6400ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

### A.8.7.3 E-UTRAN TDD - UTRAN TDD SON ANR cell search reporting in AWGN propagation conditions

#### A.8.7.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of the strongest UTRAN TDD cell for SON automatic neighbour relations. This test will partly verify the E-UTRAN TDD - UTRAN TDD cell search requirements for identification of a new UTRA TDD cell for SON given in clause 8.1.2.4.13.

In the measurement control information it is indicated to the UE that periodical reporting with the purpose 'reportStrongestCellsForSON' is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior to the start of time period T1, an interRATperiodic measurement reporting configuration with purpose reportStrongestCellsForSON is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. During time duration T1, the UE shall not have any timing information of cell 2.

#### A.8.7.3.2 Test Parameters

The test parameters are given in Tables A.8.7.3.1-1, A.8.7.3.1-2 and A.8.7.3.1-3.

**Table A.8.7.3.1-1: General test parameters for E-UTRAN TDD-UTRAN TDD cell search reporting for SON ANR in AWGN propagation conditions**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN TDD)                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD)       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2  |
| Gap Pattern Id                                    |      | 1  | As specified in TS 36.133 clause 8.1.2.1.   |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.  |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.  |
| CP length   |      | Normal                                   | Applicable to cell 1  |
| E-UTRA RF Channel Number                          |      | 1  | One E-UTRA TDD carrier frequency is used.   |
| UTRA RF Channel Number                            |      | 1  | One UTRA TDD carrier frequency is used.   |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Uplink-downlink configuration of cell 1           |      | 1  | As specified in table 4.2.2 in TS 36.211  |
| Special subframe configuration of cell 1          |      | 6  | As specified in table 4.2.1 in TS 36.211  |
| Inter-RAT (UTRA TDD) measurement quantity         |      | P-CCPCH RSCP                             |   |
| Filter coefficient                                |      | 0  | L3 filtering is not used.   |
| DRX   |      | OFF                                      |   |
| Monitored UTRA TDD cell list size                 |      | None                                     | No explicit neighbour list is provided to the UE  |
| T1  | s    | >5                                       | During T1, cell 2 shall be powered off, and during the off time the primary scrambling code shall be changed, The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T2. |
| T2  | s    | 14                                       |   |

**Table A.8.7.3.1-2: Cell specific test parameters for E-UTRAN TDD (cell # 1) for UTRAN TDD cell search for SON ANR under AWGN propagation conditions**

| Parameter   | Unit       | Cell 1   |     |
|---|------------|----------|-----|

| <p>Note 1: PCCPCH RSCP and I<sub>o</sub> levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: In the case of multi-frequency network of 1.28 Mcps TDD, the UTRA RF Channel Number can be set for the primary frequency in this test.</p> |             |           |       |        |       |

### A.8.7.3.3 Test Requirements

The UE shall send the first measurement report containing the physical cell identity of cell 2, with a measurement reporting delay less than 12800 ms from the beginning of time period T2.

The rate of correct measurement reports observed with this delay during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.7.4 E-UTRAN TDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions

### A.8.7.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN TDD cells. This test will partly verify the Enhanced UTRA TDD cell identification requirements in clause 8.1.2.4.3.1.1a under AWGN propagation conditions.

The test parameters are given in Tables A.8.7.4.1-1, A.8.7.4.1-2 and A.8.7.4.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods of T1 and T2 respectively. During time period T1, measurement gaps are activated and an inter-RAT measurement reporting configuration is configured with linkage to a UTRA measurement object corresponding to UARFCN channel number 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of T2.

**Table A.8.7.4.1-1: General test parameters for E-UTRAN TDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions**

| Parameter                                   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN TDD)              |      | DL Reference Measurement Channel R.0 TDD | As specified in section A.3.1.1.2.                        |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD) |      | DL Reference Measurement Channel R.6 TDD | As specified in section A.3.1.2.2.                        |
| Gap Pattern Id                              |      | 0  | As specified in 3GPP TS 36.133 section 8.1.2.1.           |
| Active cell                                 |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.                  |
| Neighbour cell                              |      | Cell 2                                   | Cell 2 is on UTRA RF channel number 1.                    |
| Time offset between cells                   | ms   | 3  | Asynchronous cells  |
| E-UTRA RF Channel Number                    |      | 1  | One E-UTRA TDD carrier frequency is used.                 |

They are not settable parameters themselves.</p> |              |                   |        |       |       |

### A.8.7.4.2 Test Requirements

The UE shall send the first measurement report containing the primary scrambling code of cell 2, with a measurement reporting delay less than 1120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct measurement reports observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH

### A.8.7.5 E-UTRA TDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.7.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- UTRAN TDD measurement requirements for increased UE carrier monitoring in clause 8.1.2.4.3.

The test parameters are given in Tables A.8.7.5.1-1, A.8.7.5.1-2 and A.8.7.5.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.7.5.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events B1 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 7 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

**Table A.8.7.5.1-1: General test parameters for E-UTRA TDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX**

| Parameter                                | Unit | Value   | Comment   |
|--|------|---|---|
| UE configured E-UTRA RF Channel Number   |      | 1   | Serving cell  |
| UE is configured UTRA RF channel numbers |      | 2, 3, 4, 5, 6, 7, 8   | 7 UTRA TDD carrier frequencies are used in the UE neighbour cell list. Frequencies 5,6, 7,and 8 are indicated to have reduced performance |
| Test equipment configuration             |      | <b>Cell 1 uses E-UTRA RF channel number 1</b><br>Cell 2,3,4 are randomly selected to use different frequencies selected from frequencies 2,3,4,5,6,7, 8 |   |
| Active cell                              |      | Cell 1  | E-UTRA TDD cell   |
| Gap Pattern Id                           |      | 0   | As specified in TS 36.133 clause 8.1.2.1.   |
| CP length of cell 1                      |      | normal  |   |
| Inter-RAT measurement quantity           |      | UTRA TDD PCCPCH RSCP  |   |
| B1 Threshold                             | dBm  | -75   | UTRA TDD PCCPCH RSCP threshold for event B1   |
| Hysteresis                               | dB   | 0   |   |
| Ofn                                      | dB   | 0   |   |
| TimeToTrigger                            | s    | 0   |   |
| Filter coefficient                       |      | 0   | L3 filtering is not used  |
| DRX                                      |      | OFF   |   |
| Scaling factor configurations            |      | 8   |   |
| T1                                       | s    | 5   |   |
| T2                                       | s    | 205   |   |

## A.8.7.5.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 21.95s (cell 2) and 204.8s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.7A TBD

### A.8.7A.1 E-UTRA FDD InterRAT UTRA TDD correct reporting of measurement events with reduced performance group configured, non DRX

#### A.8.7A.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN TDD measurement requirements for increased UE carrier monitoring in clause 8.1.2.4.4.

The test parameters are given in Tables A.8.7A.1.1-1, A.8.7A.1.1-2 and A.8.7A.1.1-3. In this test, there are 4 cells on different carrier frequencies and gap pattern configuration #0 as defined in table A.8.7A.1.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Events B1 is used. The test consists of two successive time periods for every repetition, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of neighbour cells. At the start of each repetition of T1, the test equipment provides signals for cell 1 (serving cell), and cells 2, 3 and 4 which are selected from the 7 cells which are configured in the UE neighbour cell list. Cells 2, 3 and 4 are chosen randomly, such that one frequency belongs to the normal performance group and two frequencies belong to the reduced performance group.

NOTE1: The DPCH of the cell is located in a timeslot other than 0.

NOTE2: Case 3 propagation conditions are specified in TS25.102 Annex B

NOTE3: PCCPCH\_RSRP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves

## A.8.7A.1.2 Test Requirements

The UE shall send Event B1 triggered measurement reports for cells 2, 3 and 4, with a measurement reporting delay less than 21.95s (cell 2) and 204.8s (cell 3 and 4) from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report.

## A.8.8 E-UTRAN FDD – GSM Measurements

### A.8.8.1 E-UTRAN FDD – GSM event triggered reporting in AWGN

#### A.8.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements. This test will partly verify the E-UTRAN FDD - GSM cell search requirements in clause 8.1.2.4.5.

The test parameters are given in Tables A.8.8.1.1-1, A.8.8.1.1-2 and A.8.8.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.8.1.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting in AWGN**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                    |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.                    |
| Gap Pattern Id                                    |      | 0  | As specified in TS 36.133 clause 8.1.2.1.            |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.             |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on Absolute RF Channel Number 1 (GSM cell) |
| CP length   |      | Normal                                   | Applicable to cell 1                                 |
| E-UTRA RF Channel Number                          |      | 1  | One E-UTRA FDD carrier frequency is used.            |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |  |
| Inter-RAT (GSM) measurement quantity              |      | GSM Carrier RSSI                         |  |
| b1-Threshold-GERAN                                | dBm  | -80                                      | GSM Carrier RSSI threshold for event B1.             |
| Hysteresis  | dB   | 0  |  |
| Time To Trigger                                   | ms   | 0  |  |
| Filter coefficient                                |      | 0  | L3 filtering is not used.                            |
| DRX   |      | OFF                                      |  |
| Monitored GSM cell list size                      |      | 6 GSM neighbours including ARFCN 1       | List of GSM cells provided before T2 starts.         |
| T1  | s    | 5  |  |
| T2  | s    | 5  |  |

**Table A.8.8.1.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for event triggered reporting of GSM cell in AWGN**

| Parameter   | Unit       | Cell 1   |     |
|---|------------|----------|-----|
|   |            | T1       | T2  |
| E-UTRA RF Channel Number  |            | 1        |     |
| BW <sub>channel</sub>   | MHz        | 10       |     |
| OCNG Pattern defined in A.3.2.1.1 (OP.1 FDD)  |            | OP.1 FDD |     |
| PBCH_RA   | dB         | 0        |     |
| PBCH_RB   | dB         |          |     |

| PHICH_RB  | dB         |          |     |
| PDCCH_RA  | dB         |          |     |
| PDCCH_RB  | dB         |          |     |
| PDSCH_RA  | dB         |          |     |
| PDSCH_RB  | dB         |          |     |
| OCNG_RA <sup>Note 1</sup>   | dB         |          |     |
| OCNG_RB <sup>Note 1</sup>   | dB         |          |     |
| $\hat{E}_s/I_{ot}$  | dB         | 4        | 4   |
| $\hat{E}_s/N_{oc}$  | dB         | 4        | 4   |
| $N_{oc}$  | dBm/15 kHz | -98      |     |
| RSRP  | dBm/15 kHz | -94      | -94 |
| SCH_RP  | dBm/15 kHz | -94      | -94 |
| Propagation Condition   |            | AWGN     |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |          |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |            |          |     |

**Table A.8.8.1.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFNC 1   |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.8.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 3120 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times 480\text{ms} = 960\text{ms}$ .

Initial BSIC identification delay = 2160 ms.

## A.8.8.2 E-UTRAN FDD-GSM event triggered reporting when DRX is used in AWGN

### A.8.8.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN FDD-GSM cell search requirements when DRX is used in clause 8.1.2.4.5.2.

In these tests, there are two cells, one E-UTRAN cell and one GSM cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.8.2.1-1. Cell specific test parameters are given in Table A.8.8.2.1-2 for E-UTRAN and in Table A.8.8.2.1-5 for GSM. DRX configuration for Test1 and Test2 are given in Table A.8.8.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.8.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.8.2.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting when DRX is used in AWGN**

| Parameter                                   | Unit | Test 1                                   | Test 2 | Comment   |
|---|------|--|--------|---|

### A.8.8.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 42.8 seconds from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

### A.8.8.3 E-UTRAN FDD – GSM event triggered reporting in AWGN with enhanced BSIC identification

#### A.8.8.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements with enhanced BSIC identification. This test will partly verify the E-UTRAN FDD - GSM cell search requirements in clause 8.1.2.4.5.1.2a

The test parameters are given in Tables A.8.8.3.1-1, A.8.8.1.1-2 and A.8.8.3.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. Prior time duration T1, the UE shall not have any timing information of cell 2. . During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a GSM measurement object including channel ARFCN 1. Cell 2 is powered up at the beginning of T2.

**Table A.8.8.3.1-1: General test parameters for E-UTRAN FDD-GSM event triggered reporting in AWGN with enhanced BSIC identification**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.   |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.   |
| Gap Pattern Id                                    |      | 0  | As specified in TS 36.133 clause 8.1.2.1.                                       |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.  |
| Neighbour cell                                    |      | Cell 2                                   | Cell 2 is on Absolute RF Channel Number 1 (GSM cell)                            |
| CP length   |      | Normal                                   | Applicable to cell 1  |
| E-UTRA RF Channel Number                          |      | 1  | One E-UTRA FDD carrier frequency is used.                                       |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Inter-RAT (GSM) measurement quantity              |      | GSM Carrier RSSI                         |   |
| b1-Threshold-GERAN                                | dBm  | -80                                      | GSM Carrier RSSI threshold for event B1.  |
| Hysteresis  | dB   | 0  |   |
| Time To Trigger                                   | ms   | 0  |   |
| Filter coefficient                                |      | 0  | L3 filtering is not used.   |
| DRX   |      | OFF                                      |   |
| Monitored GSM cell list size                      |      | 6 GSM neighbours including ARFCN 1       | List of GSM cells provided before T2 starts.                                    |
| T1  | s    | 5  | T1 ends at the end of the last TTI where the measurement configuration is given |
| T2  | s    | 3  |   |

**Table A.8.8.3.1-2: Cell specific test parameters for E-UTRAN FDD (cell # 1) for event triggered reporting of GSM cell in AWGN with enhanced BSIC identification**

| Parameter   | Unit       | Cell 1   |     |
|---|------------|----------|-----|
|   |            | T1       | T2  |
| E-UTRA RF Channel Number  |            | 1        |     |
| $BW_{\text{channel}}$   | MHz        | 10       |     |

| $N_{\text{oc}}$   | dBm/15 kHz | -98      |     |
| RSRP  | dBm/15 kHz | -94      | -94 |
| SCH_RP  | dBm/15 kHz | -94      | -94 |
| Propagation Condition   |            | AWGN     |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |          |     |
| Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |            |          |     |

**Table A.8.8.3.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN with enhanced BSIC identification**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFCN 1   |       |
| RXLEV                      | dBm  | $-\infty$ | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.8.3.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 2280 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 2280 ms, which is the sum of the event triggered measurement reporting delay and the enhanced initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times 480 \text{ms} = 960 \text{ms}$ .

Initial BSIC identification delay = 1320 ms.

## A.8.9 E-UTRAN FDD - UTRAN TDD measurements

### A.8.9.1 E-UTRAN FDD - UTRAN TDD event triggered reporting in fading propagation conditions

#### A.8.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. The test will partly verify the E-UTRAN FDD - UTRAN TDD cell search requirements in clause 8.1.2.4.4 in fading environment.

The test parameters are given in Table A.8.9.1.1-1, A.8.9.1.1-2 and A.8.9.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.9.1.1-1: General test parameters for Event triggered reporting in fading propagation conditions**

| Parameter                      | Unit | Value                                    | Comment   |
|--------------------------------|------|--|---|

They are not settable parameters themselves |              |                |       |        |       |

### A.8.9.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 12800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.9.2 E-UTRAN FDD - UTRAN TDD enhanced cell identification under AWGN propagation conditions

### A.8.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct enhanced reporting of UTRAN cells. This test will partly verify the enhanced UTRA TDD cell identification requirements in clause 8.1.2.4.4 under AWGN propagation conditions.

This test scenario comprised of 1 E-UTRA FDD serving cell, and 1 UTRA TDD cell to be searched. Test parameters are given in Table A.8.9.2.1-1, A.8.9.2.1-2, and A.8.9.2.1-3. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time period T1, gaps are activated and an interRAT measurement reporting configuration is configured, and linked to a UTRA measurement object corresponding to channel UARFCN 1. Prior to time duration T2, the UE shall not have any timing information of cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.8.9.2.1-1: General test parameters for E-UTRAN FDD- UTRAN TDD enhanced cell search in AWGN propagation conditions**

| Parameter                                   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN FDD)              |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.                         |

### A.8.9.2.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 1120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.10 E-UTRAN TDD – GSM Measurements

### A.8.10.1 E-UTRAN TDD – GSM event triggered reporting in AWGN

#### A.8.10.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter-RAT (GSM) measurements. This test will partly verify the E-UTRAN TDD - GSM cell search requirements in clause 8.1.2.4.6.

The test parameters are given in Tables A.8.10.1.1-1, A.8.8.1.1-2 and A.8.10.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.10.1.1-1: General test parameters for E-UTRAN TDD-GSM event triggered reporting in AWGN**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters (E-UTRAN TDD)                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.                    |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD)       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.                    |

**Table A.8.10.1.1-3: Cell specific test parameters for GSM (cell # 2) for event triggered reporting of GSM cell in AWGN**

| Parameter                  | Unit | Cell 2    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFNC 1   |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |
| Propagation Condition      |      | AWGN      |       |

### A.8.10.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report including the valid BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 3120 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 * T_{\text{Measurement Period, GSM}} = 2 * 480\text{ms} = 960\text{ms}$ .

Initial BSIC identification delay = 2160 ms.

## A.8.10.2 E-UTRAN TDD-GSM event triggered reporting when DRX is used in AWGN

### A.8.10.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the E-UTRAN TDD-GSM cell search requirements when DRX is used in clause 8.1.2.4.6.

In these tests, there are two cells, one E-UTRAN cell and one GSM cell, and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

The common test parameters are given in Table A.8.10.2.1-1. Cell specific test parameters are given in Table A.8.10.2.1-2 for E-UTRAN and in Table A.8.10.2.1-5 for GSM. DRX configuration for Test1 and Test2 are given in Table A.8.10.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.10.2.1-4.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.10.2.1-1: General test parameters for E-UTRAN TDD-GSM event triggered reporting when DRX is used in AWGN**

| Parameter  | Unit | Test 1                                   | Test 2 | Comment  |
|--|------|--|--------|--|

### A.8.10.2.2 Test Requirements

In Test1 the UE shall send one Event B1 triggered measurement report including BSIC of cell # 2, with a measurement reporting delay less than 3120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 42.8 seconds from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event B1 measurement report

## A.8.11 Monitoring of Multiple Layers

### A.8.11.1 Multiple E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions

#### A.8.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.11.1.1.1-1 and A.8.11.1.1.1-2. In this test, there are three cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 or cell 3.

**Table A. 8.11.1.1-1: General test parameters for Inter-frequency E-UTRA FDD – E-UTRA FDD and E-UTRA FDD cell search under fading**

| Parameter                                  | Unit | Value                                    | Comment   |
|--|------|--|---|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                                      |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                                      |
| E-UTRA RF Channel Number                   |      | 1, 2, 3                                  | Three FDD carrier frequencies are used.                               |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |

| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |     |           |     |           |     |
| Note 2:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |           |     |           |     |
| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |           |     |           |     |
| Note 4:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |           |     |           |     |

### A.8.11.1.2 Test Requirements

The UE shall send Event A3 triggered measurement reports for both cell 2 and cell 3, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.11.2 E-UTRAN TDD – E-UTRAN TDD and E-UTRAN TDD Inter-frequency event triggered reporting under fading propagation conditions

### A.8.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of two events. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.11.2.1-1 and A.8.11.2.1-2. In this test, there are three cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

| SCH_RP <sup>Note 4</sup>  | dBm/15 kHz   | -98      | -98 | -inf     | -95 | -inf     | -95 |
| $\hat{E}_s/N_{oc}$  | dB   | 0        | 0   | -inf     | 3   | -inf     | 3   |
| Propagation Condition   |  | AWGN     |     | ETU70    |     | ETU70    |     |
| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |     |          |     |          |     |
| Note 2:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |          |     |          |     |
| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |          |     |          |     |
| Note 4:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |          |     |          |     |

### A.8.11.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2 with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event A3 triggered measurement report for cell 3 with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.11.3 E-UTRAN FDD-FDD Inter-frequency and UTRAN FDD event triggered reporting under fading propagation conditions

#### A.8.11.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when doing inter frequency and UTRAN FDD measurements. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3 and the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.11.3.1-1, A.8.11.3.1-2 and A.8.11.3.1-3. In this test, there are two cells on different carrier frequencies and one cell on UTRAN carrier frequency and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

**Table A.8.11.3.1-1: General test parameters for Combined inter-frequency and UTRAN event triggered reporting in fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters (E-UTRAN FDD)                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.  |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD)       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.  |
| Gap Pattern Id                                    |      | 0  | As specified in TS 36.133 clause 8.1.2.1.  |
| Active cell                                       |      | Cell 1                                   | Cell 1 is on E-UTRA RF channel number 1.   |
| Neighbour cells                                   |      | Cell 2, 3                                | Cell 2 is on E-UTRA RF channel number 2.<br>Cell 3 is on UTRA RF channel number 1. |
| CP length   |      | Normal                                   | Applicable to cell 1   |
| E-UTRA RF Channel Number                          |      | 1, 2                                     | Two FDD carrier frequencies are used.  |
| E-UTRA Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |  |
| UTRA RF Channel Number                            |      | 1  | One UTRA FDD carrier frequency is used.  |
| E-UTRAN FDD measurement quantity                  |      | RSRP                                     |  |
| Inter-RAT (UTRA FDD) measurement quantity         |      | CPICH Ec/N0                              |  |
| A3-Offset   | dB   | -6                                       |  |
| b2-Threshold-E-UTRA                               | dB   | -86                                      | RSRP threshold for event B2.   |
| b2-Threshold-UTRA                                 | dB   | -18                                      | CPICH Ec/N0 threshold for event B2.  |
| Hysteresis  | dB   | 0  |  |
| Time To Trigger                                   | ms   | 0  |  |
| Filter coefficient                                |      | 0  | L3 filtering is not used.  |
| DRX   |      | OFF                                      |  |
| Monitored UTRA FDD cell list size                 |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list.                         |
| Time offset between cells                         |      | 3 ms                                     | Asynchronous cells   |
| T1  | s    | 5  |  |
| T2  | s    | 8  |  |

| Propagation Condition   |  | AWGN     |     | ETU70     |     |
| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |     |           |     |
| Note 2:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |           |     |
| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |           |     |
| Note 4:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |           |     |

**Table A.8.11.3.1-3: Cell specific test parameters for UTRAN FDD (cell # 3) for event triggered reporting of UTRAN FDD cell under fading propagation conditions**

| Parameter   | Unit         | Cell 3          |      |
|---|--------------|-----------------|------|
|   |              | T1              | T2   |
| UTRA RF Channel Number  |              | 1               |      |
| CPICH_Ec/I <sub>or</sub>  | dB           | -10             |      |
| PCCPCH_Ec/I <sub>or</sub>   | dB           | -12             |      |
| SCH_Ec/I <sub>or</sub>  | dB           | -12             |      |
| PICH_Ec/I <sub>or</sub>   | dB           | -15             |      |
| DPCH_Ec/I <sub>or</sub>   | dB           | N/A             |      |
| OCNS  |              | -0.941          |      |
| $\hat{I}_{or}/I_{oc}$   | dB           | -Infinity       | -1.8 |
| $I_{oc}$  | dBm/3.84 MHz | -70             |      |
| CPICH_Ec/I <sub>o</sub>   | dB           | -Infinity       | -14  |
| Propagation Condition   |              | Case 5 (Note 3) |      |
| Note 1: The DPCH level is controlled by the power control loop.   |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |                 |      |
| Note 3: Case 5 propagation conditions are defined in Annex A of TS 25.101.  |              |                 |      |

### A.8.11.3.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.11.4 InterRAT E-UTRA TDD to E-UTRA TDD and UTRA TDD cell search test case

#### A.8.11.4.1 Test Purpose and Environment

This test is to verify that the UE makes correct reporting of an event when doing inter frequency measurements and UTRA TDD measurements. The test will partly verify the requirements in clause 8.1.2.3.2 combined 8.1.2.4.3 under fading propagation conditions.

This test scenario comprised of 2 E-UTRA TDD cells operating on different frequency, and 1 UTRA TDD cell. Test parameters are given in table A.8.11.4.1-1, A.8.11.4.1-2, and A.8.11.4.1-3. Gap pattern configuration #0 as defined in clause 8.1.2.1 is provided.

The test consists of 2 successive time periods, with time duration T1 and T2. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 and B2 shall be used.

**Table A.8.11.4.1-1: General test parameters for combined E-UTRA TDD inter-frequency and UTRA TDD cells search under fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters                                  |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters                     |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2  |
| Active cell                                       |      | Cell 1                                   | E-UTRA TDD cell is on RF channel number 1   |
| Neighbour cell                                    |      | Cell 2                                   | E-UTRA TDD cell is on RF channel number 2   |
|   |      | Cell 3                                   | 1.28Mcps TDD cell   |

They are not settable parameters themselves. |              |               |     |           |    |

#### A.8.11.4.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12.8s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.11.5 Combined E-UTRAN FDD – E-UTRA FDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions

##### A.8.11.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events when doing inter frequency and GSM measurements. This test will partly verify the E-UTRAN FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.1 and simultaneously the E-UTRAN FDD- GSM cell search requirements in clause 8.1.2.4.5.

The test parameters are given in Tables A.8.11.5.1-1, A.8.11.5.1-2 and A.8.11.5.1-3. In this test, there are two cells on different carrier frequencies and one GSM cell. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

They are not settable parameters themselves.</p> |            |          |     |           |     |

**Table A.8.11.5.1-3: Cell specific test parameters for GSM (cell # 3) for combined E-UTRAN FDD – E-UTRA FDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions**

| Parameter                  | Unit | Cell 3    |       |
|----------------------------|------|-----------|-------|
|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFCN3    |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.11.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report including BSIC of cell 3, with a measurement reporting delay less than 7200 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 7200 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times N_{\text{freq}} \times 480 \text{ms} = 1920 \text{ms}$ .

Initial BSIC identification delay = 5280 ms, when one carrier frequency other than GSM is monitored in the gaps.

## A.8.11.6 Combined E-UTRAN TDD – E-UTRA TDD and GSM cell search. E-UTRA cells in fading; GSM cell in static propagation conditions

### A.8.11.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of multiple events when doing inter frequency and GSM measurements. This test will partly verify the E-UTRAN TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.2 and simultaneously the E-UTRAN TDD- GSM cell search requirements in clause 8.1.2.4.6.

The test parameters are given in Tables A.8.11.6.1-1, A.8.11.6.1-2 and A.8.11.6.1-3. In this test, there are two cells on different carrier frequencies and one GSM cell. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 and B2 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2 and cell 3.

|                            |      | T1        | T2    |
| Absolute RF Channel Number |      | ARFCN3    |       |
| RXLEV                      | dBm  | -Infinity | -75   |
| GSM BSIC                   |      | N/A       | Valid |

### A.8.11.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for cell 2, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall send one Event B2 triggered measurement report including BSIC of cell 3, with a measurement reporting delay less than 7200 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The delay for GSM cell identification with BSIC verified is equal to 7200 ms, which is the sum of the event triggered measurement reporting delay and the initial BSIC identification delay.

The event triggered measurement reporting delay =  $2 \times T_{\text{Measurement Period, GSM}} = 2 \times N_{\text{freq}} \times 480 \text{ms} = 1920 \text{ms}$ .

Initial BSIC identification delay = 5280 ms, when one carrier frequency other than GSM is monitored in the gaps.

## A.8.12 RSTD Intra-frequency Measurements

### A.8.12.1 E-UTRAN FDD intra-frequency RSTD measurement reporting delay test case

#### A.8.12.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 8.1.2.5.1 in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.1.1-1, Table A.8.12.1.1-2, Table A.8.12.1.1-3 and Table A.8.12.1.1-4.

**Table A.8.12.1.1-1: General test parameters for E-UTRAN FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter   | Unit    | Value   | Comment   |
|---|---------|---|---|
| Reference cell  |         | Cell 1  | Reference cell is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case. |
| Neighbor cells  |         | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list.   |
| PCFICH/PDCCH/PHICH parameters   |         | DL Reference Measurement Channel R.6 FDD  | As specified in clause A.3.1.2.1  |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |   |
| PRS Transmission Bandwidth  | RB      | 50  | PRS are transmitted over the system bandwidth   |
| PRS configuration index $I_{PRS}$   |         | 171   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1   |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |         | 1   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion   |
| Physical cell ID PCI  |         | (PCI of Cell 1 – PCI of Cell 2) mod 6 = 0<br>and<br>(PCI of Cell 1 – PCI of Cell 3) mod 6 = 0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters  |
| CP length   |         | Normal  |   |
| DRX   |         | ON  | DRX parameters are further specified in Table A.8.12.1.1-3  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu s$ | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1   | PRS are transmitted from synchronous cells  |
| Expected RSTD   | $\mu s$ | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3                    | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator   |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu s$ | 5   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| Number of cells provided in OTDOA assistance data                             |         | 16  | Including the reference cell  |
| PRS muting info   |         | Cell 1: '11110000'<br>Cell 2: '00001111'<br>Cell 3: '11110000'                                | Corresponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1  | s       | 3   | The length of the time interval from the beginning of each test   |
| T2  | s       | 1.28  | The length of the time interval that follows immediately after time interval T1   |
| T3  | s       | 1.28  | The length of the time interval that follows immediately after time interval T2   |

**Table A.8.12.1.1-2: Cell-specific test parameters for E-UTRAN FDD intra-frequency RSTD measurement reporting delay under fading propagation conditions during T1**

| Parameter   | Unit           | Cell 1    | Cell 2    | Cell 3    |
|---|----------------|-----------|-----------|-----------|

### A.8.12.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.1.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 2560 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS}(M-1) + 160 \left\lceil \frac{n}{M} \right\rceil$ , where  $M=8$  and  $n=16$  are the parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1. This gives the total RSTD measurement time of 2560 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.12.2 E-UTRAN TDD intra-frequency RSTD measurement reporting delay test case

### A.8.12.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 8.1.2.5.2 in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel.

The test consists of three consecutive time intervals, with duration of T1 and T2. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.12.2.1-1, Table A.8.12.2.1-2, Table A.8.12.2.1-3, and Table A.8.12.2.1-4.

**Table A.8.12.2.1-1: General test parameters for E-UTRAN TDD intra-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter   | Unit          | Value   | Comment   |
|---|---------------|---|---|
| Reference cell  |               | Cell 1  | Reference is the cell in the OTDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4] and TS 36.355 [24]. The reference cell is the PCell in this test case.    |
| Neighbor cells  |               | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |
| PCFICH/PDCCH/PHICH parameters   |               | DL Reference Measurement Channel R.6 TDD  | As specified in clause A.3.1.2.2  |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                   | MHz           | 10  |   |
| PRS Transmission Bandwidth  | RB            | 50  | PRS are transmitted over the system bandwidth   |
| PRS configuration index $I_{\text{PRS}}$                                      |               | 174   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{\text{PRS}} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| Number of consecutive downlink positioning subframes $N_{\text{PRS}}$         |               | 1   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion   |
| Physical cell ID PCI  |               | (PCI of Cell 1 – PCI of Cell 2) mod 6 = 0<br>and<br>(PCI of Cell 1 – PCI of Cell 3) mod 6 = 0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters  |
| TDD uplink-downlink configuration   |               | 1   | As specified in TS 36.211 [16], Clause 4.2; corresponds to a configuration with 5 ms switch-point periodicity and two downlink consecutive subframes  |
| TDD special subframe configuration  |               | 6   | As specified in TS 36.211 [16], Clause 4.2; corresponds to DwPTS of $19760 \cdot T_s$ and UpPTS of $4384 \cdot T_s$   |
| CP length   |               | Normal  | The same CP length applies for DL and UL  |
| DRX   |               | ON  | DRX parameters are further specified in Table A.8.12.2.1-3  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1   | PRS are transmitted from synchronous cells  |
| Expected RSTD   | $\mu\text{s}$ | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3                    | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator   |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu\text{s}$ | 5   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| Number of cells provided in OTDOA assistance data                             |               | 16  | Including the reference cell  |
| PRS muting info   |               | Cell 1: '11110000'<br>Cell 2: '00001111'<br>Cell 3: '11110000'                                | Corresponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1  | s             | 3   | The length of the time interval from the beginning of each test   |
| T2  | s             | 1.28  | The length of the time interval that follows immediately after time interval T1   |
| T3  | s             | 1.28  | The length of the time interval that follows immediately after time interval T2   |

**Table A.8.12.2.1-2: Cell-specific test parameters for E-UTRAN TDD intra-frequency RSTD measurement reporting delay under fading propagation conditions during T1**

| Parameter   | Unit           | Cell 1    | Cell 2    | Cell 3    |

### A.8.12.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.5.2.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the OTDOA assistance data, Cell 1, within 2560 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil$ ,

where  $M = 8$  and  $n = 16$  are the parameters specified for this test case in Clause 8.1.2.5.2, Table 8.1.2.5.2-1, under Note 1. This gives the total RSTD measurement time of 2560 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13 RSTD Inter-frequency Measurements

### A.8.13.1 E-UTRAN FDD-FDD inter-frequency RSTD measurement reporting delay test case with the reference cell on the serving carrier frequency

#### A.8.13.1.1 Test Purpose and Environment

The purpose of the test is to verify that the FDD-FDD inter-frequency RSTD measurement meets the requirements specified in Clause 8.1.2.6.1, specifically for Note 2 in Table 8.1.2.6.1-1, in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on FDD RF channel 1. Cell 2 and Cell 3 are on a FDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the Cell 3, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 and Cell 3 transmit PRS only in T2. Cell 2 transmits PRS only in T3. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.1.1-1, Table A.8.13.1.1-2, Table A.8.13.1.1-3 and Table A.8.13.1.1-4.

**Table A.8.13.1.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter   | Unit    | Value   | Comment  |
|---|---------|---|--|
| Reference cell  |         | Cell 1  | Reference cell is the cell with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4]. The reference cell is the PCell on RF channel 1 in this test case.  |
| Neighbor cells  |         | Cell 2 and Cell 3   | Cells on RF channel 2. The cells appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |
| PCFICH/PDCCH/PHICH parameters   |         | DL Reference Measurement Channel<br>R.6 FDD   | As specified in clause A.3.1.2.1   |
| Channel Bandwidth<br>( $BW_{channel}$ )                                       | MHz     | 10  |  |
| PRS Bandwidth   | RB      | 50  | PRS bandwidth is as indicated in prs-Bandwidth in the OTDOA assistance data defined in [24]. Here, PRS are transmitted over the system bandwidth   |
| Gap pattern Id  |         | 0   | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3   |
| Gap offset  |         | 9   | As specified in TS 36.331 [2], Clause 6.3.5  |
| PRS configuration index<br>$I_{PRS}$  |         | Cell 1: 181,<br>Cell 2, Cell 3: 171   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |         | 1   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion  |
| Physical cell ID PCI  |         | (PCI of Cell 1 – PCI of Cell 2) mod 6 = 0<br>and<br>(PCI of Cell 1 – PCI of Cell 3) mod 6 = 0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters   |
| CP length   |         | Normal  |  |
| DRX   |         | ON  | DRX parameters are further specified in Table A.8.13.1.1-3.  |
| prs-SubframeOffset  |         | 310   | Number of subframes rounded to the closest integer. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset  |         | 0   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell specified in TS 36.355 [24]  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu$ s | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1   | PRS are transmitted from synchronous cells   |
| Expected RSTD   | $\mu$ s | Cell 2: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3                   | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator  |

|   |               |  |   |
|---|---------------|--|---|
| Expected RSTD uncertainty for all neighbour cells | $\mu\text{s}$ | 5  | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| Number of cells provided in OTDOA assistance data |               | 16   | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) on RF channel 1 and 15 other cells on RF channel 2, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. |
| PRS muting info                                   |               | Cell 1: '1111111100000000'<br>Cell 2: '0000000011111111'<br>Cell 3: '1111111100000000' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1  | s             | 3  | The length of the time interval from the beginning of each test   |
| T2  | s             | 2.48   | The length of the time interval that follows immediately after time interval T1   |
| T3  | s             | 2.48   | The length of the time interval that follows immediately after time interval T2   |

**Table A.8.13.1.1-2: Cell-specific test parameters for E-UTRAN FDD-FDD inter-frequency RSTD measurement reporting delay under fading propagation conditions during T1**

| Parameter   | Unit           | Cell 1    | Cell 2    | Cell 3    |
|---|----------------|-----------|-----------|-----------|

| shortDRX                 | Disable |   |

### A.8.13.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.1.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 16$  and  $n = 16$  are the parameters specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 2. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.13.2 E-UTRAN TDD-TDD inter-frequency RSTD measurement reporting delay test case with the reference cell on the serving carrier frequency

### A.8.13.2.1 Test Purpose and Environment

The purpose of the test is to verify that the TDD-TDD inter-frequency RSTD measurement meets the requirements specified in Clause 8.1.2.6.3, specifically for Note 2 in Table 8.1.2.6.3-1, in an environment with fading propagation conditions.

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 1 is on TDD RF channel 1. Cell 2 and Cell 3 are on TDD RF channel 2.

The UE requires measurement gaps to perform inter-frequency measurements. Gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided and configured to not overlap with PRS subframes of Cell 1.

The test consists of three consecutive time intervals, with duration of T1 and T2. Cell 1 is active in T1, T2 and T3, whilst Cell 2 and Cell 3 are activated only in the beginning of T2. Cell 2 is active until the end of T3, and Cell 3 is active until the end of T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the Cell 3, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 and Cell 3 transmit PRS only in T2. Cell 2 transmits PRS only in T3. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE at the start of T1. DRX is configured before T2.

The test parameters are as given in Table A.8.13.2.1-1, Table A.8.13.2.1-2, Table A.8.13.2.1-3, and Table A.8.13.2.1-4.

**Table A.8.13.2.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency RSTD measurement reporting delay under fading propagation conditions**

| Parameter   | Unit    | Value   | Comment  |
|---|---------|---|--|
| Reference cell  |         | Cell 1  | Reference cell is the cell with respect to which the RSTD measurement is defined, as specified in TS 36.214 [4]. The reference cell is the PCell on RF channel 1 in this test case.  |
| Neighbor cells  |         | Cell 2 and Cell 3   | Cells on RF channel 2. The cells appear at random places in the neighbour cell list in the OTDOA assistance data, but Cell 2 always appears in the first half of the list, whilst Cell 3 appears in the second half of the list. |
| PCFICH/PDCCH/PHICH parameters   |         | DL Reference Measurement Channel R.6 TDD  | As specified in clause A.3.1.2.2   |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |  |
| PRS Bandwidth   | RB      | 50  | PRS bandwidth is as indicated in prs-Bandwidth in the OTDOA assistance data defined in [24]. Here, PRS are transmitted over the system bandwidth   |
| Gap pattern Id  |         | 0   | As specified in Table 8.1.2.1-1. Applies for measurements on Cell 2 and Cell 3   |
| Gap offset  |         | 12  | As specified in TS 36.331 [2], Clause 6.3.5  |
| PRS configuration index $I_{PRS}$   |         | Cell 1: 184,<br>Cell 2, Cell 3: 174   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |         | 1   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion  |
| Physical cell ID PCI  |         | (PCI of Cell 1 – PCI of Cell 2) mod 6 = 0<br>and<br>(PCI of Cell 1 – PCI of Cell 3) mod 6 = 0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters   |
| TDD uplink-downlink configuration   |         | 1   | As specified in TS 36.211 [16], Clause 4.2; corresponds to a configuration with 5 ms switch-point periodicity and two downlink consecutive subframes   |
| TDD special subframe configuration  |         | 6   | As specified in TS 36.211 [16], Clause 4.2; corresponds to DwPTS of $19760 \cdot T_s$ and UpPTS of $4384 \cdot T_s$  |
| CP length   |         | Normal  | The same CP length for DL and UL   |
| DRX   |         | ON  | DRX parameters are further specified in Table A.8.13.2.1-3.  |
| prs-SubframeOffset  |         | 310   | Number of subframes rounded to the closest integer. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset  |         | 0   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell specified in TS 36.355 [24]  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu$ s | Cell 2 to Cell 1: 1<br>Cell 3 to Cell 1: -1   | PRS are transmitted from synchronous cells   |
| Expected RSTD   | $\mu$ s | Cell 2: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3                   | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator  |

|   |               |  |   |
|---|---------------|--|---|
| Expected RSTD uncertainty for all neighbour cells | $\mu\text{s}$ | 5  | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| Number of cells provided in OTDOA assistance data |               | 16   | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) on RF channel 1 and 15 other cells on RF channel 2, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. |
| PRS muting info                                   |               | Cell 1: '1111111100000000'<br>Cell 2: '0000000011111111'<br>Cell 3: '1111111100000000' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1  | s             | 3  | The length of the time interval from the beginning of each test   |
| T2  | s             | 2.48   | The length of the time interval that follows immediately after time interval T1   |
| T3  | s             | 2.48   | The length of the time interval that follows immediately after time interval T2   |

**Table A.8.13.2.1-2: Cell-specific test parameters for E-UTRAN TDD-TDD inter-frequency RSTD measurement reporting delay under fading propagation conditions during T1**

| Parameter   | Unit           | Cell 1    | Cell 2    | Cell 3    |
|---|----------------|-----------|-----------|-----------|

| drx-RetransmissionTimer  | sf1     |  |
| longDRX-CycleStartOffset | sf320   |  |
| shortDRX                 | disable |  |

### A.8.13.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.1.2.6.3.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell Cell 1 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement time in the test is derived from the following expression,  $T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil$ , where  $M = 16$  and  $n = 16$  are the parameters specified in Clause 8.1.2.6.3, Table 8.1.2.6.3-1, under Note 2. This gives the total RSTD measurement time of 4960 ms for Cell 2 and Cell 3 with respect to the reference cell Cell 1.

## A.8.14 E-UTRAN TDD - FDD Inter-frequency Measurements

### A.8.14.1 E-UTRAN TDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

#### A.8.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.3.

The test parameters are given in Tables A.8.14.1.1-1 and A.8.14.1.1-2. In this test, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.14.1.1-1: General test parameters for E-UTRAN TDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment   |
|--|------|--|---|
| Cell 1 PDSCH parameters                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                  |
| Cell 1 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                  |
| Cell1 Special subframe configuration       |      | 6  | As specified in table 4.2-1 in TS 36.211.         |
| Cell1 Uplink-downlink configuration        |      | 1  | As specified in TS 36.211 clause 4.2 Table 4.2-2. |
| Cell 2 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                  |
| Cell 1 E-UTRA TDD RF Channel Number        |      | 1  | One TDD carrier frequency is used.                |
| Cell 2 E-UTRA FDD RF Channel Number        |      | 2  | One FDD carrier frequency is used.                |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1                  |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2                  |
| Gap Pattern Id                             |      | 0  | As specified in TS 36.133 clause 8.1.2.1.         |
| A3-Offset                                  | dB   | -6                                       |   |
| Hysteresis                                 | dB   | 0  |   |
| CP length                                  |      | Normal                                   |   |
| TimeToTrigger                              | s    | 0  |   |
| Filter coefficient                         |      | 0  | L3 filtering is not used                          |
| DRX  |      | OFF                                      | OFF   |
| Time offset between cells                  |      | 3 ms                                     | Asynchronous cells                                |
| T1   | s    | 5  |   |
| T2   | s    | 5  |   |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |          |     |           |     |

### A.8.14.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.14.2 E-UTRAN TDD-FDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells

### A.8.14.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These test will partly verify the TDD-FDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.

The common test parameters are given in Tables A.8.14.2.1-1 and A.8.14.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.14.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.14.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.14.2.1-1: General test parameters for E-UTRAN TDD-FDD inter-frequency event triggered reporting when DRX is used in fading propagation conditions**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment  |
|--|------|--|--------|--|
|  |      | Value                                    |        |  |
| Cell1 PDSCH parameters                     |      | DL Reference Measurement Channel R.0 TDD |        | As specified in clause A.3.1.1.2. Note that UE may only be allocated at <i>On Duration</i> |
| Cell1PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 TDD |        | As specified in clause A.3.1.2.2.  |
| Cell2 PDSCH parameters                     |      | DL Reference Measurement Channel R.0 FDD |        | As specified in clause A.3.1.1.1. Note that UE may only be allocated at <i>On Duration</i> |
| Cell2PCFICH/PDCCH/PHICH parameters         |      | DL Reference Measurement Channel R.6 FDD |        | As specified in clause A.3.1.2.1.  |
| E-UTRA RF Channel Number                   |      | 1  |        | one TDD carrier frequencies is used.   |
| E-UTRA RF Channel Number                   |      | 2  |        | one FDD carrier frequencies is used.   |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |        |  |
| Active cell                                |      | Cell 1                                   |        | Cell 1 is on RF channel number 1   |
| Neighbour cell                             |      | Cell 2                                   |        | Cell 2 is on RF channel number 2   |
| Gap Pattern Id                             |      | 0  |        | As specified in TS 36.133 clause 8.1.2.1.  |

### A.8.14.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report

### A.8.14.3 E-UTRAN TDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

#### A.8.14.3.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.6.

The test scenario comprises of one E-UTRA FDD carriers and one cell on each carrier as given in tables A.8.14.3.1-1 and A.8.14.3.1-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.14.3.1-1: General test parameters for E-UTRAN TDD - FDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                                  | Unit | Value                                    | Comment   |

### A.8.14.3.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI,inter}$  + reporting delay

$$= 15 + 150 + 2\text{ms from the start of T3}$$

$$= 167 \text{ ms, allow 170 ms.}$$

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 42 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 42 ACK/NACK number is caused by two parts. Firstly, at least 30 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.7.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 12 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.15 E-UTRAN FDD - TDD Inter-frequency Measurements

### A.8.15.1 E-UTRAN FDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

#### A.8.15.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.4.

The test parameters are given in Table A.8.15.1.1-1 and A.8.15.1.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.15.1.1-1: General test parameters for E-UTRAN FDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                  | Unit | Value                                    | Comment   |
|--|------|--|---|
| Cell 1 PDSCH parameters                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1  |
| Cell 1 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1  |
| Cell 2 PCFICH/PDCCH/PHICH parameters       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2  |
| Gap Pattern Id                             |      | 1  | As specified in TS 36.133 clause 8.1.2.1.                               |
| Cell2 Special subframe configuration       |      | 6  | As specified in table 4.2-1 in TS 36.211. Applicable to Cell 2.         |
| Cell2 Uplink-downlink configuration        |      | 1  | As specified in TS 36.211 clause 4.2 Table 4.2-2. Applicable to Cell 2. |
| CP length                                  |      | Normal                                   |   |
| Cell 1 E-UTRA FDD RF Channel Number        |      | 1  | One TDD carrier frequency is used.                                      |
| Cell 2 E-UTRA TDD RF Channel Number        |      | 2  | One FDD carrier frequency is used.                                      |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10                                       |   |
| Active cell                                |      | Cell 1                                   | Cell 1 is on RF channel number 1  |
| Neighbour cell                             |      | Cell 2                                   | Cell 2 is on RF channel number 2  |
| A3-Offset                                  | dB   | -6                                       |   |
| Hysteresis                                 | dB   | 0  |   |
| TimeToTrigger                              | s    | 0  |   |
| Filter coefficient                         |      | 0  | L3 filtering is not used  |
| DRX  |      | OFF                                      |   |
| Time offset between cells                  |      | 3 ms                                     | Asynchronous cells  |
| T1   | s    | 5  |   |
| T2   | s    | 10                                       |   |

**Table A.8.15.1.1-2: Cell specific test parameters for E-UTRAN FDD-TDD inter-frequency event triggered reporting under fading propagation conditions in synchronous cells**

| Parameter  | Unit   | Cell 1   |     | Cell 2    |     |
|--|--|----------|-----|-----------|-----|
|  |  | T1       | T2  | T1        | T2  |

| $BW_{channel}$   | MHz  | 10       |     | 10        |     |
| Correlation Matrix and Antenna Configuration                             |  | 1x2 Low  |     | 1x2 Low   |     |
| OCNG Pattern defined in A.3.2.1.1 (OP.1 FDD) and in A.3.2.2.2 (OP.2 TDD) |  | OP.1 FDD |     | OP.2 TDD  |     |
| PBCH_RA  | dB   | 0        |     | 0         |     |
| PBCH_RB  | dB   |          |     |           |     |
| PSS_RA   | dB   |          |     |           |     |
| SSS_RA   | dB   |          |     |           |     |
| PCFICH_RB  | dB   |          |     |           |     |
| PHICH_RA   | dB   |          |     |           |     |
| PHICH_RB   | dB   |          |     |           |     |
| PDCCH_RA   | dB   |          |     |           |     |
| PDCCH_RB   | dB   |          |     |           |     |
| PDSCH_RA   | dB   |          |     |           |     |
| PDSCH_RB   | dB   |          |     |           |     |
| OCNG_RA <sup>Note 1</sup>  | dB   |          |     |           |     |
| OCNG_RB <sup>Note 1</sup>  | dB   |          |     |           |     |
| $\hat{E}_s / I_{ot}$   | dB   |          |     |           |     |
| $N_{oc}$ <sup>Note 3</sup>   | dBm/15 kHz   | -98      |     |           |     |
| RSRP <sup>Note 4</sup>   | dBm/15 kHz   | -94      | -94 | -Infinity | -91 |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz   | -94      | -94 | -infinity | -91 |
| $\hat{E}_s / N_{oc}$   | dB   | 4        | 4   | -Infinity | 7   |
| Propagation Condition  |  | ETU70    |     |           |     |
| Note 1:  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |     |           |     |
| Note 2:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |           |     |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |           |     |
| Note 4:  | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |           |     |

### A.8.15.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC

## A.8.15.2 E-UTRAN FDD-TDD Inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells

### A.8.15.2.1 Test Purpose and Environment

The purpose of these tests is to verify that the UE makes correct reporting of an event in DRX. These tests will partly verify the FDD-TDD inter-frequency cell search requirements when DRX is used in clause 8.1.2.3.4.

The common test parameters are given in Tables A.8.15.2.1-1 and A.8.15.2.1-2. DRX configuration for Test1 and Test2 are given in Table A.8.15.2.1-3 and time alignment timer and scheduling request related parameters in Table A.8.15.2.1-4. In these tests, there are two cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In Test 1 UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle. In Test 2 the uplink time alignment is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The tests consist of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.15.2.1-1: General test parameters for E-UTRAN FDD-TDD inter-frequency event triggered reporting when DRX is used under fading propagation conditions in asynchronous cells**

| Parameter                                  | Unit | Test 1                                   | Test 2 | Comment   |
|--|------|--|--------|---|
|  |      | Value                                    |        |   |

### A.8.15.2.2 Test Requirements

In Test1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

In Test2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 20\*1280ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.15.3 E-UTRAN FDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps

### A.8.15.3.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in clause 8.1.2.3.8.

The test scenario comprises of one E-UTRA FDD carrier and one E-UTRA TDD carrier and one cell on each carrier as given in tables A.8.15.3-1 and A.8.15.3-2. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *si-RequestForHO* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

**Table A.8.15.3-1: General test parameters for E-UTRAN FDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter                             | Unit | Value                                    | Comment   |
|---------------------------------------|------|--|---|
| Cell1 PDSCH parameters                |      | DL Reference Measurement Channel R.3 FDD | As specified in clause A.3.1.1.1                |
| Cell1 PCFICH/PDCCH/PHICH parameters   |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                |
| Cell2 PCFICH/PDCCH/PHICH parameters   |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                |
| E-UTRA RF channel number              |      | 1, 2                                     | One FDD and one TDD carrier frequency are used. |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz  | 10                                       |   |
| Active cell                           |      | Cell 1                                   | Cell 1 is on RF channel number 1.               |
| Neighbour cell                        |      | Cell 2                                   | Cell 1 is on RF channel number 2.               |
| CP length                             |      | Normal                                   |   |
| Cell 2 Special subframe configuration |      | 6  | As specified in table 4.2-1 in TS 36.211.       |
| Cell 2 Uplink-downlink configuration  |      | 1  | As specified in table 4.2-2 in TS 36.211.       |
| Gap Pattern Id                        |      | 0  | As specified in TS 36.133 clause 8.1.2.1.       |
| A3-Offset                             | dB   | -6                                       |   |
| Hysteresis                            | dB   | 0  |   |
| TimeToTrigger                         | s    | 0  |   |
| Filter coefficient                    |      | 0  | L3 filtering is not used                        |
| DRX                                   |      | OFF                                      |   |
| si-RequestForHO                       |      | TRUE                                     | As specified in clause 5.5.3.1 in TS 36.331.    |
| Time offset between cells             | ms   | 3  | Asynchronous cells                              |
| T1                                    | s    | 5  |   |
| T2                                    | s    | $\leq 10$                                |   |
| T3                                    | s    | 5  |   |

**Table A.8.15.3-2: Cell specific test parameters for E-UTRAN FDD - TDD Inter-frequency identification of a new CGI of E-UTRA cell using autonomous gaps**

| Parameter  | Unit       | Cell 1    |           |           | Cell 2    |          |          |

### A.8.15.3.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 170 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI,inter}$  + reporting delay

$$= 15 + 150 + 2\text{ms from the start of T3}$$

$$= 167 \text{ ms, allow 170 ms.}$$

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 170 ms at least 60 ACK/NACK shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The overall 80 ACK/NACK number is caused by two parts. Firstly, at least 60 ACK/NACK shall be sent during identifying the cell global identifier of cell 2 according to the requirement in Clause 8.1.2.3.5.1. Secondly, given that continuous DL data allocation, and the measurement gaps have been deconfigured before the start of T3, additional 20 ACK/NACK shall be sent from the start of T3 until 170 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.8.16 E-UTRAN Carrier Aggregation Measurements

### A.8.16.1 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX

#### A.8.16.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.1.1-1 and A.8.16.1.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.16.1.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter   | Unit   | Value   | Comment  |   |
|---|--|---|--|---|
| PDSCH parameters  |  | DL Reference Measurement Channel R.0 FDD                              | As specified in clause A.3.1.1.1   |   |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 FDD                              | As specified in clause A.3.1.2.1   |   |
| E-UTRA RF Channel Number                                |  | 1, 2  | Two radio channels are used for this test  |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |  | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                    |   |
| Neighbour cell  |  | Cell 3  | Neighbor cell to be identified on RF channel number 2.                           |   |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10  | Channel bandwidth for cells on primary and secondary component carriers          |   |
| CP length   |  | Normal  |  |   |
| DRX   |  | OFF   | Continuous monitoring of primary cell  |   |
| A2  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP   | dBm   | -93  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.          |
|   | Time To Trigger  | s   | 0  |   |
| A6  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB  | -6   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |   | False  |   |
|   | Time To Trigger  | s   | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0   | Individual offset for cells on primary component carrier.                        |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0   | Individual offset for cells on secondary component carrier.                      |   |
| Filter coefficient                                      |  | 0   | L3 filtering is not used   |   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320   |  |   |
| Cell2 timing offset to cell1                            | μs   | 0   |  |   |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.  |   |
| Cell3 timing offset to cell1                            | μs   | 3   | Synchronous cells  |   |
| T1  | s  | 5   | During this time the UE shall be aware of cells 1 and 2 but not cell 3.          |   |
| T2  | s  | ≤12   | UE shall report Event A6 within 6.4s (20xscellMeasCycle)                         |   |
| T3  | s  | 5   | UE shall report Event A2 within 200 ms and 1.6s for cells 1 and 2, respectively. |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |  |   |

**Table A.8.16.1.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter   | Unit   | Cell 1   |     |      | Cell 2   |       |       | Cell 3    |       |       |
|---|--|----------|-----|------|----------|-------|-------|-----------|-------|-------|
|   |  | T1       | T2  | T3   | T1       | T2    | T3    | T1        | T2    | T3    |
| E-UTRA RF Channel Number  |  | 1        |     |      | 2        |       |       | 2         |       |       |

| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |     |      |          |       |       |           |       |       |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |      |          |       |       |           |       |       |
| Note 3:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |      |          |       |       |           |       |       |
| Note 4:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |      |          |       |       |           |       |       |

### A.8.16.1.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.2 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX

### A.8.16.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.2.1-1 and A.8.16.2.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.16.2.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter   | Unit   | Value   | Comment  |   |
|---|--|---|--|---|
| PDSCH parameters  |  | DL Reference Measurement Channel R.0 TDD                              | As specified in clause A.3.1.1.2   |   |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 TDD                              | As specified in clause A.3.1.2.2   |   |
| E-UTRA RF Channel Number                                |  | 1, 2  | Two radio channels are used for this test  |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |  | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                          |   |
| Neighbour cell  |  | Cell 3  | Neighbor cell to be identified on RF channel number 2.                                 |   |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10  | Channel bandwidth for cells on primary and secondary component carriers                |   |
| CP length   |  | Normal  |  |   |
| Special subframe configuration                          |  | 6   | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |   |
| Uplink-downlink configuration                           |  | 1   |  |   |
| DRX   |  | OFF   | Continuous monitoring of primary cell  |   |
| A2  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP   | dBm   | -93  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.          |
|   | Time To Trigger  | s   | 0  |   |
| A6  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB  | -6   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |   | False  |   |
|   | Time To Trigger  | s   | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0   | Individual offset for cells on primary component carrier.                              |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0   | Individual offset for cells on secondary component carrier.                            |   |
| Filter coefficient                                      |  | 0   | L3 filtering is not used   |   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320   |  |   |
| Cell2 timing offset to cell1                            | μs   | 0   |  |   |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |   |
| Cell3 timing offset to cell1                            | μs   | 3   | Synchronous cells  |   |
| T1  | s  | 5   | During this time the UE shall be aware of cells 1 and 2 but not cell 3.                |   |
| T2  | s  | ≤12   | UE shall report Event A6 within 6.4s (20xscellMeasCycle)                               |   |
| T3  | s  | 5   | UE shall report Event A2 within 200 ms and 1.6s for cells 1 and 2, respectively.       |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |  |   |

| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |          |     |      |          |       |       |           |       |       |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{\text{oc}}$ to be fulfilled. |          |     |      |          |       |       |           |       |       |
| Note 3:   | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |          |     |      |          |       |       |           |       |       |
| Note 4:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |          |     |      |          |       |       |           |       |       |

### A.8.16.2.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.3 E-UTRAN FDD-FDD Event triggered reporting on deactivated SCell with PCell interruption in non-DRX

### A.8.16.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.3.1-1 and A.8.16.3.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.16.3.1-1: General test parameters for E-UTRAN FDD-FDD Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX**

| Parameter   | Unit   | Value   | Comment   |   |
|---|--|---|---|---|
| PDSCH parameters  |  | DL Reference Measurement Channel R.3 FDD                              | As specified in clause A.3.1.1.1  |   |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 FDD                              | As specified in clause A.3.1.2.1  |   |
| E-UTRA RF Channel Number                                |  | 1, 2  | Two radio channels are used for this test                                       |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.  |   |
| Configured deactivated SCell                            |  | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                   |   |
| Neighbour cell  |  | Cell 3  | Neighbor cell to be identified on RF channel number 2.                          |   |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10  | Channel bandwidth for cells on primary and secondary component carriers         |   |
| CP length   |  | Normal  |   |   |
| DRX   |  | OFF   | Continuous monitoring of primary cell   |   |
| A6  | Hysteresis   | dB  | 0   | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB  | -3  | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |   | False   |   |
|   | Time To Trigger  | s   | 0   |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0   | Individual offset for cells on primary component carrier.                       |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0   | Individual offset for cells on secondary component carrier.                     |   |
| Filter coefficient                                      |  | 0   | L3 filtering is not used  |   |
| SCell measurement cycle                                 | ms   | 1280  |   |   |
| Cell2 timing offset to cell1                            | μs   | 0   |   |   |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |   |
| Cell3 timing offset to cell1                            | μs   | 3   | Synchronous cells   |   |
| T1  | s  | 5   | During this time the UE shall be aware of cells 1 and 2 but not cell 3.         |   |
| T2  | s  | ≤30   | UE shall report Event A6 within 25.6s (20xscellMeasCycle)                       |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |   |   |

**Table A.8.16.3.1-2: Cell specific test parameters for E-UTRAN FDD-FDD Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX**

| Parameter  | Unit   | Cell 1    |     | Cell 2   |       | Cell 3    |       |
|--|--|-----------|-----|----------|-------|-----------|-------|
|  |  | T1        | T2  | T1       | T2    | T1        | T2    |
| E-UTRA RF Channel Number   |  | 1         |     | 2        |       | 2         |       |
| $BW_{\text{channel}}$  | MHz  | 10        |     | 10       |       | 10        |       |

| PSS_RA   | dB   |           |     |          |       |           |       |
| SSS_RA   | dB   |           |     |          |       |           |       |
| PCFICH_RB  | dB   |           |     |          |       |           |       |
| PHICH_RA   | dB   |           |     |          |       |           |       |
| PHICH_RB   | dB   |           |     |          |       |           |       |
| PDCCH_RA   | dB   |           |     |          |       |           |       |
| PDCCH_RB   | dB   |           |     |          |       |           |       |
| PDSCH_RA   | dB   |           |     |          |       |           |       |
| PDSCH_RB   | dB   |           |     |          |       |           |       |
| OCNG_RA <sup>Note 1</sup>  | dB   |           |     |          |       |           |       |
| OCNG_RB <sup>Note 1</sup>  | dB   |           |     |          |       |           |       |
| $N_{oc}$ <sup>Note 3</sup>   | dBm/15 kHz   |           |     |          |       |           |       |
| RSRP <sup>Note 4</sup>   | dBm/15 kHz   | -82       | -82 | -82      | -82   | -Infinity | -82   |
| $\hat{E}_s / I_{ot}$   | dB   | 16        | 16  | 16       | -0.11 | -Infinity | -0.11 |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz   | -82       | -82 | -82      | -82   | -Infinity | -82   |
| $\hat{E}_s / N_{oc}$   | dB   | 16        | 16  | 16       | 16    | -Infinity | 16    |
| Propagation Condition  |  | AWGN      |     |          |       |           |       |
| Note 1:  | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |           |     |          |       |           |       |
| Note 2:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |           |     |          |       |           |       |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |           |     |          |       |           |       |
| Note 4:  | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |           |     |          |       |           |       |

### A.8.16.3.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.4 E-UTRAN TDD-TDD Event triggered reporting on deactivated SCell with PCell interruption in non-DRX

### A.8.16.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.4.1-1 and A.8.16.4.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.16.4.1-1: General test parameters for E-UTRAN TDD-TDD Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX**

| Parameter   | Unit   | Value   | Comment  |   |
|---|--|---|--|---|
| PDSCH parameters  |  | DL Reference Measurement Channel R.0 TDD                              | As specified in clause A.3.1.1.2   |   |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 TDD                              | As specified in clause A.3.1.2.2   |   |
| E-UTRA RF Channel Number                                |  | 1, 2  | Two radio channels are used for this test  |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |  | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                          |   |
| Neighbour cell  |  | Cell 3  | Neighbor cell to be identified on RF channel number 2.                                 |   |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10  | Channel bandwidth for cells on primary and secondary component carriers                |   |
| CP length   |  | Normal  |  |   |
| Special subframe configuration                          |  | 6   | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |   |
| Uplink-downlink configuration                           |  | 1   |  |   |
| DRX   |  | OFF   | Continuous monitoring of primary cell  |   |
| A6  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB  | -3   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |   | False  |   |
|   | Time To Trigger  | s   | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0   | Individual offset for cells on primary component carrier.                              |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0   | Individual offset for cells on secondary component carrier.                            |   |
| Filter coefficient                                      |  | 0   | L3 filtering is not used   |   |
| SCell measurement cycle                                 | ms   | 1280  |  |   |
| Cell2 timing offset to cell1                            | μs   | 0   |  |   |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |   |
| Cell3 timing offset to cell1                            | μs   | 3   | Synchronous cells  |   |
| T1  | s  | 5   | During this time the UE shall be aware of cells 1 and 2 but not cell 3.                |   |
| T2  | s  | ≤30   | UE shall report Event A6 within 25.6s (20xscellMeasCycle)                              |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |  |   |

**Table A.8.16.4.1-2: Cell specific test parameters for E-UTRAN TDD-TDD Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX**

| Parameter  | Unit   | Cell 1   |     | Cell 2   |       | Cell 3    |       |
|--|--|----------|-----|----------|-------|-----------|-------|

| Note 1:  | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |     |          |       |           |       |
| Note 2:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |          |     |          |       |           |       |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |     |          |       |           |       |
| Note 4:  | RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |          |     |          |       |           |       |

### A.8.16.4.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.5 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 20 MHz bandwidth

### A.8.16.5.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.5.1-1 and A.8.16.5.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.5.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter  | Unit | Value                                     | Comment  |
|--|------|---|--|
| PDSCH parameters   |      | DL Reference Measurement Channel R.4 FDD  | As specified in section A.3.1.1.1  |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.10 FDD | As specified in section A.3.1.2.1  |
| Channel Bandwidth ( $BW_{\text{channel}}$ )  | MHz  | 20  | Channel bandwidth for cells on primary and secondary component carriers  |
| A2 Threshold RSRP  | dBm  | -96                                       | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
| Note 1: See Table A.8.16.1.1-1 for other general test parameters.  |      |   |  |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |  |

**Table A.8.16.5.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter   | Unit       | Cell 1    |     |      | Cell 2    |       |       | Cell 3    |       |       |

| Note: See Table A.8.16.1.1-2 for other cell-specific test parameters.         |            |           |     |      |           |       |       |           |       |       |

### A.8.16.5.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.6 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 20 MHz bandwidth

### A.8.16.6.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.6.1-1 and A.8.16.6.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.6.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter  |                | Unit | Value                                     | Comment  |
|--|----------------|------|---|--|
| PDSCH parameters   |                |      | DL Reference Measurement Channel R.3 TDD  | As specified in section A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters  |                |      | DL Reference Measurement Channel R.10 TDD | As specified in section A.3.1.2.2  |
| Channel Bandwidth ( $BW_{\text{channel}}$ )  |                | MHz  | 20  | Channel bandwidth for cells on primary and secondary component carriers  |
| A2   | Threshold RSRP | dBm  | -96                                       | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
| Note 1: See Table A.8.16.2.1-1 for other general test parameters.  |                |      |   |  |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |                |      |   |  |

**Table A.8.16.6.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 20 MHz**

| Parameter   | Unit       | Cell 1   |     |      | Cell 2   |       |       | Cell 3    |       |       |
|---|------------|----------|-----|------|----------|-------|-------|-----------|-------|-------|
|   |            | T1       | T2  | T3   | T1       | T2    | T3    | T1        | T2    | T3    |
| $BW_{\text{channel}}$   | MHz        | 20       |     |      | 20       |       |       | 20        |       |       |
| OCNG Patterns defined in A.3.2.2.7 (OP.7 TDD) and in A.3.2.2.8 (OP.8 TDD) |            | OP.7 TDD |     |      | OP.8 TDD |       |       | OP.8 TDD  |       |       |
| $N_{\text{oc}}$ <sup>Note 2</sup>   | dBm/15 kHz | -104     |     |      | -104     |       |       |           |       |       |
| RSRP <sup>Note 3</sup>  | dBm/15 kHz | -85      | -85 | -107 | -85      | -85   | -107  | -infinity | -85   | -107  |
| $\bar{E}_s/I_{\text{ot}}$   | dB         | 19       | 19  | -3   | 19       | -0.05 | -4.76 | -infinity | -0.05 | -4.76 |
| SCH_RP <sup>Note 3</sup>  | dBm/15 kHz | -85      | -85 | -107 | -85      | -85   | -107  | -infinity | -85   | -107  |
| $\bar{E}_s/N_{\text{oc}}$   | dB         | 19       | 19  | -3   | 19       | 19    | -3    | -infinity | 19    | -3    |
| Note: See Table A.8.16.2.1-2 for other cell-specific test parameters.     |            |          |     |      |          |       |       |           |       |       |

### A.8.16.6.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

## A.8.16.7 E-UTRA FDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 20 MHz bandwidth

### A.8.16.7.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.7.1-1 and A.8.16.7.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.7.1-1: General test parameters for E-UTRAN FDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter  | Unit | Value                                     | Comment   |
|--|------|---|---|
| PDSCH parameters   |      | DL Reference Measurement Channel R.6 FDD  | As specified in section A.3.1.1.1                                       |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.10 FDD | As specified in section A.3.1.2.1                                       |
| Channel Bandwidth ( $BW_{channel}$ )   | MHz  | 20  | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.3.1-1 for other general test parameters.  |      |   |   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |   |

**Table A.8.16.7.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter   | Unit       | Cell 1    |     | Cell 2    |       | Cell 3    |       |
|---|------------|-----------|-----|-----------|-------|-----------|-------|
|   |            | T1        | T2  | T1        | T2    | T1        | T2    |
| $BW_{channel}$  | MHz        | 20        |     | 20        |       | 20        |       |
| OCNG Patterns defined in A.3.2.1.17 (OP.17 FDD) and in A.3.2.1.12 (OP.12 FDD) |            | OP.17 FDD |     | OP.12 FDD |       | OP.12 FDD |       |
| $N_{oc}$ <sup>Note 3</sup>  | dBm/15 kHz | -101      |     | -101      |       |           |       |
| RSRP <sup>Note 4</sup>  | dBm/15 kHz | -85       | -85 | -85       | -85   | -Infinity | -85   |
| $\hat{E}_s / I_{ot}$  | dB         | 16        | 16  | 16        | -0.11 | -Infinity | -0.11 |
| SCH_RP <sup>Note 4</sup>  | dBm/15 kHz | -85       | -85 | -85       | -85   | -Infinity | -85   |
| $\hat{E}_s / N_{oc}$  | dB         | 16        | 16  | 16        | 16    | -Infinity | 16    |
| Note: See Table A.8.16.3.1-2 for other cell-specific test parameters.         |            |           |     |           |       |           |       |

## A.8.16.7.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.8 E-UTRA TDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 20 MHz bandwidth

### A.8.16.8.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.8.1-1 and A.8.16.8.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.8.1-1: General test parameters for E-UTRAN TDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter  | Unit | Value                                     | Comment   |
|--|------|---|---|
| PDSCH parameters   |      | DL Reference Measurement Channel R.3 TDD  | As specified in section A.3.1.1.2                                       |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.10 TDD | As specified in section A.3.1.2.2                                       |
| Channel Bandwidth ( $BW_{channel}$ )   | MHz  | 20  | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.4.1-1 for other general test parameters.  |      |   |   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |   |

**Table A.8.16.8.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 20 MHz**

| Parameter   | Unit  | Cell 1   |     | Cell 2   |       | Cell 3    |       |
|---|---|----------|-----|----------|-------|-----------|-------|
|   |   | T1       | T2  | T1       | T2    | T1        | T2    |
| $BW_{\text{channel}}$   | MHz   | 20       |     | 20       |       | 20        |       |
| OCNG Patterns defined in A.3.2.2.7 (OP.7 TDD) and in A.3.2.2.8 (OP.8 TDD) |   | OP.7 TDD |     | OP.8 TDD |       | OP.8 TDD  |       |
| $N_{oc}$ <sup>Note 3</sup>  | dBm/15 kHz  | -101     |     | -101     |       |           |       |
| RSRP <sup>Note 4</sup>  | dBm/15 kHz  | -85      | -85 | -85      | -85   | -Infinity | -85   |
| $\hat{E}_s / I_{ot}$  | dB  | 16       | 16  | 16       | -0.11 | -Infinity | -0.11 |
| SCH_RP <sup>Note 4</sup>  | dBm/15 kHz  | -85      | -85 | -85      | -85   | -Infinity | -85   |
| $\hat{E}_s / N_{oc}$  | dB  | 16       | 16  | 16       | 16    | -Infinity | 16    |
| Note:   | See Table A.8.16.4.1-2 for other cell-specific test parameters. |          |     |          |       |           |       |

### A.8.16.8.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

### A.8.16.9 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 10MHz+5MHz

#### A.8.16.9.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1.1.

The test parameters are the same as defined in Subclause A.8.16.1.1 except those described in the following section. The listed parameter values in Tables A.8.16.9.1-1 and A.8.16.9.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.9.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter   | Unit   | Value | Comment   |
|---|--|-------|---|
| Channel bandwidth for cells on primary carriers ( $BW_{\text{channel}}$ )   | MHz  | 10    | Channel bandwidth for cells on primary carriers   |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ ) | MHz  | 5     | Channel bandwidth for cells on secondary carriers |
| Note 1:   | See Table A.8.16.1.1-1 for the other general parameters.   |       |   |
| Note 2:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |       |   |

**Table A.8.16.9.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter   | Unit             | Cell 1   |    |    | Cell 2    |    |    | Cell 3    |    |    |
|---|------------------|----------|----|----|-----------|----|----|-----------|----|----|
|   |                  | T1       | T2 | T3 | T1        | T2 | T3 | T1        | T2 | T3 |
| $BW_{\text{channel}}$   | MHz              | 10       |    |    | 5         |    |    | 5         |    |    |
| PDSCH Reference measurement channel defined in A.3.1.1.1                    |                  | R.0 FDD  |    |    | N/A       |    |    | N/A       |    |    |
| PDSCH allocation  | $n_{\text{PRB}}$ | 13–36    |    |    | N/A       |    |    | N/A       |    |    |
| PCFICH/PDCCH/PHICH parameters defined in A.3.1.2.1                          |                  | R.6 FDD  |    |    | R.11 FDD  |    |    | R.11 FDD  |    |    |
| OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) and in A.3.2.1.16 (OP.16 FDD) |                  | OP.1 FDD |    |    | OP.16 FDD |    |    | OP.16 FDD |    |    |
| Note 1: See Table A.8.16.1.1-2 for the other specific parameters.           |                  |          |    |    |           |    |    |           |    |    |

### A.8.16.9.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.10 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 10MHz+5MHz

### A.8.16.10.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2.1.

The test parameters are the same as defined in Subclause A.8.16.2.1 except those described in the following section. The listed parameter values in Tables A.8.16.10.1-1 and A.8.16.10.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.10.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter  | Unit | Value | Comment   |
|--|------|-------|---|
| Channel bandwidth for cells on primary carriers ( $BW_{\text{channel}}$ )  | MHz  | 10    | Channel bandwidth for cells on primary carriers   |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ )  | MHz  | 5     | Channel bandwidth for cells on secondary carriers |
| Note 1: See Table A.8.16.2.1-1 for the other general parameters.   |      |       |   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |       |   |

**Table A.8.16.10.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for 10MHz+5MHz bandwidth**

| Parameter   | Unit      | Cell 1   |    |    | Cell 2    |    |    | Cell 3    |    |    |
|---|-----------|----------|----|----|-----------|----|----|-----------|----|----|
|   |           | T1       | T2 | T3 | T1        | T2 | T3 | T1        | T2 | T3 |
| $BW_{\text{channel}}$   | MHz       | 10       |    |    | 5         |    |    | 5         |    |    |
| PDSCH Reference measurement channel defined in A.3.1.1.2                    |           | R.0 TDD  |    |    | N/A       |    |    | N/A       |    |    |
| PDSCH allocation  | $n_{PRB}$ | 13–36    |    |    | N/A       |    |    | N/A       |    |    |
| PCFICH/PDCCH/PHICH parameters defined in A.3.1.2.2                          |           | R.6 TDD  |    |    | R.11 TDD  |    |    | R.11 TDD  |    |    |
| OCNG Patterns defined in A.3.2.2.1 (OP.1 TDD) and in A.3.2.2.10 (OP.10 TDD) |           | OP.1 TDD |    |    | OP.10 TDD |    |    | OP.10 TDD |    |    |
| Note 1: See Table A.8.16.2.1-2 for the other specific parameters.           |           |          |    |    |           |    |    |           |    |    |

### A.8.16.10.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

### A.8.16.11 E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz

#### A.8.16.11.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.11.1-1 and A.8.16.11.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.11.1-1: General test parameters for E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter  | Unit | Value                                     | Comment  |
|--|------|---|--|
| Channel bandwidth for cells on primary carrier ( $BW_{\text{channel}}$ )   | MHz  | 10  | Channel bandwidth for cells on primary component carrier   |
| PDSCH parameters for cells on primary carriers   |      | DL Reference Measurement Channel R.3 FDD  | As specified in section A.3.1.1.1                          |
| PCFICH/PDCCH/PHICH parameters for cells on primary carriers  |      | DL Reference Measurement Channel R.6 FDD  | As specified in section A.3.1.2.1                          |
| Channel bandwidth for cells on secondary carriers ( $BW_{\text{channel}}$ )  | MHz  | 5   | Channel bandwidth for cells on secondary component carrier |
| PCFICH/PDCCH/PHICH parameters for cells on secondary carrier   |      | DL Reference Measurement Channel R.11 FDD | As specified in section A.3.1.2.1                          |
| Note 1: See Table A.8.16.3.1-1 for other general test parameters.  |      |   |  |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |  |

**Table A.8.16.11.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                        | Unit  | Cell 1    |    | Cell 2    |    | Cell 3    |    |
|----------------------------------|---|-----------|----|-----------|----|-----------|----|
|                                  |   | T1        | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>            | MHz   | 10        |    | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.1 |   | OP.10 FDD |    | OP.16 FDD |    | OP.16 FDD |    |
| Note:                            | See Table A.8.16.3.1-2 for other cell-specific test parameters. |           |    |           |    |           |    |

### A.8.16.11.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.12 E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz

### A.8.16.12.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.12.1-1 and A.8.16.12.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.12.1-1: General test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter  | Unit   | Value                                     | Comment  |
|--|--|---|--|
| Channel bandwidth for cells on primary carrier (BW <sub>channel</sub> )    | MHz  | 10  | Channel bandwidth for cells on primary component carrier   |
| PDSCH parameters for cells on primary carriers                             |  | DL Reference Measurement Channel R.0 TDD  | As specified in section A.3.1.1.2                          |
| PCFICH/PDCCH/PHICH parameters for cells on primary carriers                |  | DL Reference Measurement Channel R.6 TDD  | As specified in section A.3.1.2.2                          |
| Channel bandwidth for cells on secondary carriers (BW <sub>channel</sub> ) | MHz  | 5   | Channel bandwidth for cells on secondary component carrier |
| PCFICH/PDCCH/PHICH parameters for cells on secondary carrier               |  | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                          |
| Note 1:  | See Table A.8.16.4.1-1 for other general test parameters.  |   |  |
| Note 2:  | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |  |

**Table A.8.16.12.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 10MHz+5MHz**

| Parameter                        | Unit  | Cell 1   |    | Cell 2    |    | Cell 3    |    |
|----------------------------------|---|----------|----|-----------|----|-----------|----|
|                                  |   | T1       | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>            | MHz   | 10       |    | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.2 |   | OP.1 TDD |    | OP.10 TDD |    | OP.10 TDD |    |
| Note:                            | See Table A.8.16.4.1-2 for other cell-specific test parameters. |          |    |           |    |           |    |

### A.8.16.12.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

## A.8.16.13 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX for 5MHz +5 MHz bandwidth

### A.8.16.13.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.13.1-1 and A.8.16.13.1-2 will replace the values of corresponding parameters in Tables A.8.16.1.1-1 and A.8.16.1.1-2.

**Table A.8.16.13.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5MHz +5 MHz bandwidth**

| Parameter  | Unit | Value                                     | Comment  |
|--|------|---|--|
| PDSCH parameters   |      | DL Reference Measurement Channel R.5 FDD  | As specified in section A.3.1.1.1                          |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.11 FDD | As specified in section A.3.1.2.1                          |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on primary component carrier   |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on secondary component carrier |
| Note 1: See Table A.8.16.1.1-1 for other general test parameters.  |      |   |  |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |  |

**Table A.8.16.13.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5MHz +5 MHz bandwidth**

| Parameter   | Unit | Cell 1    |    |    | Cell 2    |    |    | Cell 3    |    |    |
|---|------|-----------|----|----|-----------|----|----|-----------|----|----|
|   |      | T1        | T2 | T3 | T1        | T2 | T3 | T1        | T2 | T3 |
| BW <sub>channel</sub>   | MHz  | 5         |    |    | 5         |    |    | 5         |    |    |
| OCNG Patterns defined in A.3.2.1.15 (OP.15.FDD) and in A.3.2.1.16 (OP.16 FDD) |      | OP.15 FDD |    |    | OP.16 FDD |    |    | OP.16 FDD |    |    |
| Note: See Table A.8.16.1.1-2 for other cell-specific test parameters.         |      |           |    |    |           |    |    |           |    |    |

### A.8.16.13.2 Test Requirements

The test requirements defined in section A.8.16.1.2 shall apply to this test case.

## A.8.16.14 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 5 MHz +5 MHz bandwidth

### A.8.16.14.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.14.1-1 and A.8.16.14.1-2 will replace the values of corresponding parameters in Tables A.8.16.2.1-1 and A.8.16.2.1-2.

**Table A.8.16.14.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5 MHz +5 MHz bandwidth**

| Parameter  | Unit | Value                                     | Comment  |
|--|------|---|--|
| PDSCH parameters   |      | DL Reference Measurement Channel R.4.TDD  | As specified in section A.3.1.1.2                          |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                          |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on primary component carrier   |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on secondary component carrier |
| Note 1: See Table A.8.16.2.1-1 for other general test parameters.  |      |   |  |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |  |

**Table A.8.16.14.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions, 5 MHz +5 MHz bandwidth**

| Parameter   | Unit | Cell 1   |    |    | Cell 2    |    |    | Cell 3   |    |    |
|---|------|----------|----|----|-----------|----|----|----------|----|----|
|   |      | T1       | T2 | T3 | T1        | T2 | T3 | T1       | T2 | T3 |
| BW <sub>channel</sub>   | MHz  | 5        |    |    | 5         |    |    | 5        |    |    |
| OCNG Patterns defined in A.3.2.2.9 (OP.9 TDD) and in A.3.2.2.10 (OP.10 TDD) |      | OP.9 TDD |    |    | OP.10 TDD |    |    | OP10 TDD |    |    |
| Note: See Table A.8.16.2.1-2 for other cell-specific test parameters.       |      |          |    |    |           |    |    |          |    |    |

### A.8.16.14.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

## A.8.16.15 E-UTRA FDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 5 +5 MHz bandwidth

### A.8.16.15.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.3. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.15.1-1 and A.8.16.14.1-2 will replace the values of corresponding parameters in Tables A.8.16.3.1-1 and A.8.16.3.1-2.

**Table A.8.16.15.1-1: General test parameters for E-UTRAN FDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5 + 5 MHz bandwidth**

| Parameter  | Unit | Value   | Comment   |
|--|------|---|---|
| PDSCH parameters   |      | DL Reference Measurement Channel R.7 FDD (Cell 1) | As specified in section A.3.1.1.1                                       |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.11 FDD         | As specified in section A.3.1.2.1                                       |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.3.1-1 for other general test parameters.  |      |   |   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |   |

**Table A.8.16.15.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5+5 MHz bandwidth**

| Parameter   | Unit | Cell 1    |    | Cell 2    |    | Cell 3    |    |
|---|------|-----------|----|-----------|----|-----------|----|
|   |      | T1        | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>   | MHz  | 5         |    | 5         |    | 5         |    |

| Note: See Table A.8.16.3.1-2 for other cell-specific test parameters.         |      |           |    |           |    |           |    |

### A.8.16.7.2 Test Requirements

The test requirements defined in section A.8.16.3.2 shall apply to this test case.

## A.8.16.16 E-UTRA TDD event triggered reporting on deactivated SCell with PCell interruption in non-DRX for 5+5 MHz bandwidth

### A.8.16.16.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.16.1-1 and A.8.16.16.1-2 will replace the values of corresponding parameters in Tables A.8.16.4.1-1 and A.8.16.4.1-2.

**Table A.8.16.16.1-1: General test parameters for E-UTRAN TDD event-triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5+5 MHz bandwidth**

| Parameter  | Unit | Value                                     | Comment   |
|--|------|---|---|
| PDSCH parameters   |      | DL Reference Measurement Channel R.4 TDD  | As specified in section A.3.1.1.2                                       |
| PCFICH/PDCCH/PHICH parameters  |      | DL Reference Measurement Channel R.11 TDD | As specified in section A.3.1.2.2                                       |
| Channel Bandwidth (BW <sub>channel</sub> )   | MHz  | 5   | Channel bandwidth for cells on primary and secondary component carriers |
| Note 1: See Table A.8.16.4.1-1 for other general test parameters.  |      |   |   |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |   |   |

**Table A.8.16.16.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX, 5+5 MHz bandwidth**

| Parameter   | Unit | Cell 1   |    | Cell 2    |    | Cell 3    |    |
|---|------|----------|----|-----------|----|-----------|----|
|   |      | T1       | T2 | T1        | T2 | T1        | T2 |
| BW <sub>channel</sub>   | MHz  | 5        |    | 5         |    | 5         |    |
| OCNG Patterns defined in A.3.2.2.9 (OP.9 TDD) and in A.3.2.2.10 (OP.10 TDD) |      | OP.9 TDD |    | OP.10 TDD |    | OP.10 TDD |    |
| Note: See Table A.8.16.4.1-2 for other cell-specific test parameters.       |      |          |    |           |    |           |    |

### A.8.16.16.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

## A.8.16.17 E-UTRAN FDD activation and deactivation of known SCell in non-DRX

### A.8.16.17.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.17.1-1 and cell-specific parameters in A.8.16.17.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m which is an even number, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+24). The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.17.1-1: General test parameters for known SCell activation case**

| Parameter   | Unit   | Value  | Comment  |
|---|--|--|--|
| PDSCH parameters  |  | DL Reference Measurement Channel R.3 FDD (Cell 1)                          | As specified in section A.3.1.1.1  |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 FDD                                   | As specified in section A.3.1.2.1  |
| E-UTRA RF Channel Number                                |  | 1, 2   | Two radio channels are used for this test  |
| Active PCell  |  | Cell 1   | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                            |  | Cell 2   | Configured deactivated secondary cell on RF channel number 2.                    |
| CP length   |  | Normal   |  |
| DRX   |  | OFF  | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |  | 0  | CQI reporting for SCell every second subframe                                    |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0  | Individual offset for cells on primary component carrier.                        |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0  | Individual offset for cells on secondary component carrier.                      |
| SCell measurement cycle (measCycleSCell)                | ms   | 320  |  |
| Cell2 timing offset to cell1                            | μs   | 0  |  |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.  |
| T1  | s  | 7  | During this time the PCell shall be known and the SCell configured and detected. |
| T2  | s  | 1  | During this time the UE shall activate the SCell.                                |
| T3  | s  | 1  | During this time the UE shall deactivate the SCell.                              |
| Note:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |  |  |

Table A.8.16.17.1-2: Cell specific test parameters for E-UTRAN FDD known SCell activation

| Parameter   | Unit   | Cell 1    |    |    | Cell 2   |    |    |

| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |           |    |    |          |    |    |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |           |    |    |          |    |    |
| Note 3:   | $E_s/I_{ot}$ , RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |           |    |    |          |    |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |           |    |    |          |    |    |

### A.8.16.17.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.17A E-UTRAN FDD activation and deactivation of known SCell in non-DRX for 20MHz

### A.8.16.17A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.17. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.17A.1-1 and A.8.16.17A.1-2 will replace the values of corresponding parameters in Tables A.8.16.17.1-1 and A.8.16.17.1-2.

### A.8.16.17C.2 Test Requirements

The test requirements defined in section A.8.16.17.2 shall apply to this test case.

### A.8.16.18 E-UTRAN TDD activation and deactivation of known SCell in non-DRX

#### A.8.16.18.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.18.1-1 and cell-specific parameters in A.8.16.18.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC)

but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted  $m$  where  $m$  is 4 or 9, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe  $(m+24)$ . The UE shall start reporting CSI in subframe  $(m+8)$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes  $(m+5)$  to  $(m+11)$ .

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted  $n$  where  $n$  is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell and any PCell interruption due to the deactivation shall occur in the subframes  $(n+5)$  to  $(n+11)$ .

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.18.1-1: General test parameters for known SCell activation case**

| Parameter   | Unit   | Value  | Comment  |
|---|--|--|--|
| PDSCH parameters  |  | DL Reference Measurement Channel R.0 TDD                                   | As specified in section A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters                           |  | DL Reference Measurement Channel R.6 TDD                                   | As specified in section A.3.1.2.2  |
| E-UTRA RF Channel Number                                |  | 1, 2   | Two radio channels are used for this test  |
| Active PCell  |  | Cell 1   | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                            |  | Cell 2   | Configured deactivated secondary cell on RF channel number 2.                          |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10   | Channel bandwidth for cells on primary and secondary component carriers                |
| CP length   |  | Normal   |  |
| Special subframe configuration                          |  | 6  | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |
| Uplink-downlink configuration                           |  | 1  |  |
| DRX   |  | OFF  | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |  | 0  | CQI reporting for SCell every UL subframe  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0  | Individual offset for cells on primary component carrier.                              |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0  | Individual offset for cells on secondary component carrier.                            |
| SCell measurement cycle (measCycleSCell)                | ms   | 320  |  |
| Cell2 timing offset to cell1                            | μs   | 0  |  |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |
| Cell3 timing offset to cell1                            | μs   | 3  | Synchronous cells  |
| T1  | s  | 7  | During this time the PCell shall be known and the SCell configured and detected.       |
| T2  | s  | 1  | During this time the UE shall activate the SCell.                                      |
| T3  | s  | 1  | During this time the UE shall deactivate the SCell.                                    |
| Note:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |  |  |

Table A.8.16.18.1-2: Cell specific test parameters for E-UTRAN TDD known SCell activation

| Parameter   | Unit   | Cell 1   |    |    | Cell 2   |    |    |

| Propagation Condition   |  | AWGN     |    |    |          |    |    |
| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |    |    |          |    |    |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |    |    |          |    |    |
| Note 3:   | $E_s/I_{ot}$ , RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |          |    |    |          |    |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |          |    |    |          |    |    |

### A.8.16.18.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption, or in a subframe (m+13) if the subframes (m+8) and (m+9) were subject to interruption when an intra-band SCell is activated. Whether CSI report in subframe (m+8) and/or (m+9) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8) and/or (m+9).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+11).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+11).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.18A E-UTRAN TDD activation and deactivation of known SCell in non-DRX for 20MHz

### A.8.16.18A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.18. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.18A.1-1 and A.8.16.18A.1-2 will replace the values of corresponding parameters in Tables A.8.16.18.1-1 and A.8.16.18.1-2.

**Table A.8.16.18A.1-1: General test parameters for known SCell activation case, 20MHz bandwidth**

## A.8.16.18D.2 Test Requirements

The test requirements defined in section A.8.16.18.2 shall apply to this test case.

## A.8.16.19 E-UTRAN FDD activation and deactivation of unknown SCell in non-DRX

### A.8.16.19.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.19.1-1 and cell-specific parameters in A.8.16.19.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (cell2) becomes configured on radio channel 2 (SCC). During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m which is an even number. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in a subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.19.1-1: General test parameters for unknown SCell activation case**

| Parameter  | Unit   | Value  | Comment   |
|--|--|--|---|
| PDSCH parameters                                   |  | DL Reference Measurement Channel R.0 FDD                                   | As specified in section A.3.1.1.1   |
| PCFICH/PDCCH/PHICH parameters                      |  | DL Reference Measurement Channel R.6 FDD                                   | As specified in section A.3.1.2.1   |
| E-UTRA RF Channel Number                           |  | 1, 2   | Two radio channels are used for this test   |
| Active PCell                                       |  | Cell 1   | Primary cell on RF channel number 1.  |
| Configured deactivated SCell                       |  | Cell 2   | Configured deactivated secondary cell on RF channel number 2.                         |
| CP length  |  | Normal   |   |
| DRX  |  | OFF  | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index |  | 0  | CQI reporting for SCell every second subframe   |
| SCell measurement cycle (measCycleSCell)           | ms   | 320  |   |
| Cell2 timing offset to cell1                       | μs   | 0  |   |
| Time alignment error between cell2 and cell1       | μs   | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.       |
| T1   | ms   | 100  | During this time the PCell shall be known and the SCell configured, but not detected. |
| T2   | s  | 1  | During this time the UE shall activate the SCell.                                     |
| T3   | s  | 1  | During this time the UE shall deactivate the SCell.                                   |
| Note:  | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |  |   |

**Table A.8.16.19.1-2: Cell specific test parameters for E-UTRAN FDD unknown SCell activation**

| Parameter   | Unit | Cell 1   |    |    | Cell 2   |    |    |
|---|------|----------|----|----|----------|----|----|
|   |      | T1       | T2 | T3 | T1       | T2 | T3 |
| E-UTRA RF Channel Number  |      | 1        |    |    | 2        |    |    |
| BW <sub>channel</sub>   | MHz  | 10       |    |    | 10       |    |    |
| OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) and in A.3.2.1.2 (OP.2 FDD) |      | OP.1 FDD |    |    | OP.2 FDD |    |    |
| PBCH_RA   | dB   | 0        |    |    | 0        |    |    |
| PBCH_RB   | dB   |          |    |    |          |    |    |

| SSS_RA  | dB   |          |    |    |          |    |    |
| PCFICH_RB   | dB   |          |    |    |          |    |    |
| PHICH_RA  | dB   |          |    |    |          |    |    |
| PHICH_RB  | dB   |          |    |    |          |    |    |
| PDCCH_RA  | dB   |          |    |    |          |    |    |
| PDCCH_RB  | dB   |          |    |    |          |    |    |
| PDSCH_RA  | dB   |          |    |    |          |    |    |
| PDSCH_RB  | dB   |          |    |    |          |    |    |
| OCNG_RA <sup>Note 1</sup>   | dB   |          |    |    |          |    |    |
| OCNG_RB <sup>Note 1</sup>   | dB   |          |    |    |          |    |    |

|   |            |      |           |
|---|------------|------|-----------|
| $N_{oc}$ <sup>Note 2</sup>  | dBm/15 kHz | -104 | -104      |
| RSRP <sup>Note 3</sup>  | dBm/15 kHz | -87  | -infinity |
| $\bar{E}_s/I_{ot}$  | dB         | 17   | -infinity |
| SCH_RP <sup>Note 3</sup>  | dBm/15 kHz | -87  | -infinity |
| $\bar{E}_s/N_{oc}$  | dB         | 17   | -infinity |
| Propagation Condition   | AWGN       |      |           |
| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>E_s/I_{ot}</math>, RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.</p> |            |      |           |

### A.8.16.19.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+34).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 interruption of PCell during SCell1 deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation and deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+34) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.19A E-UTRAN FDD activation and deactivation of unknown SCell in non-DRX for 20MHz

### A.8.16.19A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.19. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.19A.1-1 and A.8.16.19A.1-2 will replace the values of corresponding parameters in Tables A.8.16.19.1-1 and A.8.16.19.1-2.

### A.8.16.19C.2 Test Requirements

The test requirements defined in section A.8.16.19.2 shall apply to this test case.

## A.8.16.20 E-UTRAN TDD activation and deactivation of unknown SCell in non-DRX

### A.8.16.20.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.20.1-1 and cell-specific parameters in A.8.16.20.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (cell2) becomes configured on radio channel 2 (SCC). During T1 the signal level of SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m, where m is 4 or 9. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+11).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+11).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.20.1-1: General test parameters for unknown SCell activation case**

| Parameter  | Unit   | Value  | Comment  |
|--|--|--|--|
| PDSCH parameters                                   |  | DL Reference Measurement Channel R.0 TDD                                   | As specified in section A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters                      |  | DL Reference Measurement Channel R.6 TDD                                   | As specified in section A.3.1.2.2  |
| E-UTRA RF Channel Number                           |  | 1, 2   | Two radio channels are used for this test  |
| Active PCell                                       |  | Cell 1   | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                       |  | Cell 2   | Configured deactivated secondary cell on RF channel number 2.                          |
| Channel Bandwidth (BW <sub>channel</sub> )         | MHz  | 10   | Channel bandwidth for cells on primary and secondary component carriers                |
| CP length  |  | Normal   |  |
| Special subframe configuration                     |  | 6  | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |
| Uplink-downlink configuration                      |  | 1  |  |
| DRX  |  | OFF  | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index |  | 0  | CQI reporting for SCell every UL subframe  |
| SCell measurement cycle (measCycleSCell)           | ms   | 320  |  |
| Cell2 timing offset to cell1                       | μs   | 0  |  |
| Time alignment error between cell2 and cell1       | μs   | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |
| Cell3 timing offset to cell1                       | μs   | 3  | Synchronous cells  |
| T1   | ms   | 100  | During this time the PCell shall be known and the SCell configured, but not detected.  |
| T2   | s  | 1  | During this time the UE shall activate the SCell.                                      |
| T3   | s  | 1  | During this time the UE shall deactivate the SCell.                                    |
| Note:  | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |  |  |

Table A.8.16.20.1-2: Cell specific test parameters for E-UTRAN TDD unknown SCell activation

| Parameter   | Unit   | Cell 1   |    |    | Cell 2    |     |    |
|---|--|----------|----|----|-----------|-----|----|
|   |  | T1       | T2 | T3 | T1        | T2  | T3 |
| E-UTRA RF Channel Number  |  | 1        |    |    | 2         |     |    |
| $BW_{channel}$  | MHz  | 10       |    |    | 10        |     |    |
| OCNG Patterns defined in A.3.2.2.1 (OP.1 TDD) and in A.3.2.2.2 (OP.2 TDD) |  | OP.1 TDD |    |    | OP.2 TDD  |     |    |
| PBCH_RA   | dB   | 0        |    |    | 0         |     |    |
| PBCH_RB   | dB   |          |    |    |           |     |    |
| PSS_RA  | dB   |          |    |    |           |     |    |
| SSS_RA  | dB   |          |    |    |           |     |    |
| PCFICH_RB   | dB   |          |    |    |           |     |    |
| PHICH_RA  | dB   |          |    |    |           |     |    |
| PHICH_RB  | dB   |          |    |    |           |     |    |
| PDCCH_RA  | dB   |          |    |    |           |     |    |
| PDCCH_RB  | dB   |          |    |    |           |     |    |
| PDSCH_RA  | dB   |          |    |    |           |     |    |
| PDSCH_RB  | dB   |          |    |    |           |     |    |
| OCNG_RA <sup>Note 1</sup>   | dB   |          |    |    |           |     |    |
| OCNG_RB <sup>Note 1</sup>   | dB   |          |    |    |           |     |    |
| $N_{oc}$ <sup>Note 2</sup>  | dBm/15 kHz   |          |    |    |           |     |    |
| RSRP <sup>Note 3</sup>  | dBm/15 kHz   | -87      |    |    | -infinity | -87 |    |
| $\bar{E}_s/I_{ot}$  | dB   | 17       |    |    | -infinity | 17  |    |
| SCH_RP <sup>Note 3</sup>  | dBm/15 kHz   | -87      |    |    | -infinity | -87 |    |
| $\bar{E}_s/N_{oc}$  | dB   | 17       |    |    | -infinity | 17  |    |
| Propagation Condition   |  | AWGN     |    |    |           |     |    |
| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |    |    |           |     |    |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |          |    |    |           |     |    |
| Note 3:   | $E_s/I_{ot}$ , RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |          |    |    |           |     |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |          |    |    |           |     |    |

## A.8.16.20.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption, or in a subframe (m+13) if the subframes (m+8) and (m+9) were subject to interruption when an intra-band SCell is activated. Whether CSI report in subframe (m+8) and/or (m+9) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8) and/or (m+9).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+34).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+11).

During T3 interruption of PCell during SCell1 deactivation shall not happen outside the subframes (n+5) to (n+11).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation and deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+34) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.20A E-UTRAN TDD activation and deactivation of unknown SCell in non-DRX for 20MHz

### A.8.16.20A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.20. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.16.20A.1-1 and A.8.16.20A.1-2 will replace the values of corresponding parameters in Tables A.8.16.20.1-1 and A.8.16.20.1-2.

## A.8.16.20D.2 Test Requirements

The test requirements defined in section A.8.16.20.2 shall apply to this test case.

## A.8.16.21 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 20MHz+10MHz

### A.8.16.21.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.2.

The test parameters are given in Tables A.8.16.21.1-1 and A.8.16.21.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.16.21.1-1: E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX for 20MHz+10MHz**

| Parameter   | Unit   | Value  | Comment  |   |
|---|--|--|--|---|
| E-UTRA RF Channel Number                                |  | 1, 2   | Two radio channels are used for this test  |   |
| Active PCell  |  | Cell 1   | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |  | Cell 2   | Configured deactivated secondary cell on RF channel number 2.                          |   |
| Neighbour cell  |  | Cell 3   | Neighbor cell to be identified on RF channel number 2.                                 |   |
| CP length   |  | Normal   |  |   |
| Special subframe configuration                          |  | 6  | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |   |
| Uplink-downlink configuration                           |  | 1  |  |   |
| DRX   |  | OFF  | Continuous monitoring of primary cell  |   |
| A2  | Hysteresis   | dB   | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP   | dBm  | -96  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.          |
|   | Time To Trigger  | s  | 0  |   |
| A6  | Hysteresis   | dB   | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB   | -6   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |  | False  |   |
|   | Time To Trigger  | s  | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0  | Individual offset for cells on primary component carrier.                              |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0  | Individual offset for cells on secondary component carrier.                            |   |
| Filter coefficient                                      |  | 0  | L3 filtering is not used   |   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320  |  |   |
| Cell2 timing offset to cell1                            | $\mu$ s  | 0  |  |   |
| Time alignment error between cell2 and cell1            | $\mu$ s  | $\leq$ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |   |
| Cell3 timing offset to cell1                            | $\mu$ s  | 3  | Synchronous cells  |   |
| T1  | s  | 5  | During this time the UE shall be aware of cells 1 and 2 but not cell 3.                |   |
| T2  | s  | $\leq$ 12  | UE shall report Event A6 within 6.4s (20 $\times$ sCellMeasCycle)                      |   |
| T3  | s  | 5  | UE shall report Event A2 within 200 ms and 1.6s for cells 1 and 2, respectively.       |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section C.3.3.1. |  |  |   |

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.</p> <p>Note 3: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> |            |             |                                |     |      |                                |     |      |                                |     |      |

## A.8.16.21.2 Test Requirements

The test requirements defined in section A.8.16.2.2 shall apply to this test case.

## A.8.16.22 E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 20MHz+10MHz

### A.8.16.22.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.16.4.

The test parameters are given in Tables A.8.16.22.1-1 and A.8.16.22.1-2 below. In the test there are three synchronous cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is deactivated SCell, and Cell3 is the neighbour cell. It is indicated to the UE in the

measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

**Table A.8.16.22.1-1: General test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 20MHz+10MHz**

| Parameter   | Unit   | Value   | Comment  |   |
|---|--|---|--|---|
| E-UTRA RF Channel Number                                |  | 1, 2  | Two radio channels are used for this test  |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |  | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                          |   |
| Neighbour cell  |  | Cell 3  | Neighbor cell to be identified on RF channel number 2.                                 |   |
| CP length   |  | Normal  |  |   |
| Special subframe configuration                          |  | 6   | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |   |
| Uplink-downlink configuration                           |  | 1   |  |   |
| DRX   |  | OFF   | Continuous monitoring of primary cell  |   |
| A6  | Hysteresis   | dB  | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB  | -3   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |   | False  |   |
|   | Time To Trigger  | s   | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0   | Individual offset for cells on primary component carrier.                              |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0   | Individual offset for cells on secondary component carrier.                            |   |
| Filter coefficient                                      |  | 0   | L3 filtering is not used   |   |
| SCell measurement cycle                                 | ms   | 1280  |  |   |
| Cell2 timing offset to cell1                            | μs   | 0   |  |   |
| Time alignment error between cell2 and cell1            | μs   | ≤ Time alignment error as specified in TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.        |   |
| Cell3 timing offset to cell1                            | μs   | 3   | Synchronous cells  |   |
| T1  | s  | 5   | During this time the UE shall be aware of cells 1 and 2 but not cell 3.                |   |
| T2  | s  | ≤30   | UE shall report Event A6 within 25.6s (20×scellMeasCycle)                              |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |   |  |   |

**Table A.8.16.22.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on deactivating SCell with PCell interruption in non-DRX for 20MHz+10MHz**

| Parameter   | Unit       | Combination | Cell 1                  |     | Cell 2                  |       | Cell 3                  |       |     |      |     |      |     |           |     |
|---|------------|-------------|-------------------------|-----|-------------------------|-------|-------------------------|-------|-----|------|-----|------|-----|-----------|-----|

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |             |                         |     |                         |       |                         |       |     |      |     |      |     |           |     |

### A.8.16.22.2 Test Requirements

The test requirements defined in section A.8.16.4.2 shall apply to this test case.

### A.8.16.23 E-UTRAN TDD-FDD CA Event Triggered Reporting Under Deactivated SCell in Non-DRX with PCell in FDD

#### A.8.16.23.1 Test Purpose and Environment

The purpose of this test is to verify that in TDD-FDD CA with PCell in FDD the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements for SCell stated in clause 8.3.3.2.1 and the requirements for PCell stated in clause 8.3.2.

In this test case there are 3 cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the PCell on the FDD primary component carrier, Cell 2 is the configured and deactivated SCell on the TDD secondary component carrier, and Cell 3 is the neighbor cell on the TDD secondary component carrier. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At the beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

The test parameters are given in Table A.8.16.23.1-1 and A.8.16.23.1-2 below.

**Table A.8.16.23.1-1: General test parameters for E-UTRAN TDD-FDD CA event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions with PCell in FDD**

| Parameter   |                 | Unit | Value  | Comment   |
|---|-----------------|------|--------|---|
| E-UTRA RF Channel Number                                |                 |      | 1, 2   | Two radio channels are used for this test   |
| Active PCell  |                 |      | Cell 1 | Primary cell on RF channel number 1.  |
| Configured deactivated SCell                            |                 |      | Cell 2 | Configured deactivated secondary cell on RF channel number 2.   |
| Neighbour cell  |                 |      | Cell 3 | Neighbor cell to be identified on RF channel number 2.  |
| CP length   |                 |      | Normal |   |
| Special subframe configuration                          |                 |      | 6      | As specified in table 4.2-1 in TS 36.211. The same configuration in TDD cells   |
| Uplink-downlink configuration                           |                 |      | 1      | As specified in table 4.2-2 in TS 36.211. The same configuration in TDD cells   |
| DRX   |                 |      | OFF    | Continuous monitoring of primary cell   |
| A2  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP  | dBm  | -98    | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.          |
|   | Time To Trigger | s    | 0      |   |
| A6  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB   | -6     | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |      | False  |   |
|   | Time To Trigger | s    | 0      |   |
| Cell-individual offset for cells on RF channel number 1 |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2 |                 | dB   | 0      | Individual offset for cells on secondary component carrier.   |
| Filter coefficient                                      |                 |      | 0      | L3 filtering is not used  |
| SCell measurement cycle (measCycleSCell)                |                 | ms   | 320    |   |
| T1  |                 | s    | 5      | During this time the UE shall be aware of cells 1 and 2 but not cell 3.   |
| T2  |                 | s    | ≤12    | UE shall report Event A6 within 6.4s (20xscellMeasCycle)  |
| T3  |                 | s    | 5      | UE shall report Event A2 within 200 ms and 1.6s for cells 1 and 2, respectively.  |

**Table A.8.16.23.1-2: Cell specific test parameters for E-UTRAN TDD-FDD CA event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions with PCell in FDD**

| Parameter  | Unit       | Cell 1  |  |  | Cell 2  |  |  | Cell 3  |       |       |

- Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3:  $E_s/lot$ , RSRP, SCH\_RP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.
- Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.

### A.8.16.23.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for Cell 3 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.24 E-UTRAN TDD-FDD CA Event Triggered Reporting Under Deactivated SCell in Non-DRX with PCell in TDD

### A.8.16.24.1 Test Purpose and Environment

The purpose of this test is to verify that in TDD-FDD CA with PCell in TDD the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements for SCell stated in clause 8.3.3.2.1 and the requirements for PCell stated in clause 8.3.2.

In this test case there are 3 cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the PCell on the TDD primary component carrier, Cell 2 is the configured and deactivated SCell on the FDD secondary component carrier, and Cell 3 is the neighbor cell on the FDD secondary component carrier. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At the beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

The test parameters are given in Table A.8.16.24.1-1 and Table A.8.16.24.1-2.

**Table A.8.16.24.1-1: General test parameters for E-UTRAN TDD-FDD CA event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions with PCell in TDD**

| Parameter   | Unit            | Value  | Comment  |   |
|---|-----------------|--------|--|---|
| E-UTRA RF Channel Number                                |                 | 1, 2   | Two radio channels are used for this test  |   |
| Active PCell  |                 | Cell 1 | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |                 | Cell 2 | Configured deactivated secondary cell on RF channel number 2.                    |   |
| Neighbour cell  |                 | Cell 3 | Neighbor cell to be identified on RF channel number 2.                           |   |
| CP length   |                 | Normal |  |   |
| Special subframe configuration                          |                 | 6      | As specified in table 4.2-1 in TS 36.211.  |   |
| Uplink-downlink configuration                           |                 | 1      | As specified in table 4.2-2 in TS 36.211.  |   |
| DRX   |                 | OFF    | Continuous monitoring of primary cell  |   |
| A2  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP  | dBm    | -98  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.          |
|   | Time To Trigger | s      | 0  |   |
| A6  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB     | -6   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |        | False  |   |
|   | Time To Trigger | s      | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0      | Individual offset for cells on primary component carrier.                        |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0      | Individual offset for cells on secondary component carrier.                      |   |
| Filter coefficient                                      |                 | 0      | L3 filtering is not used   |   |
| SCell measurement cycle (measCycleSCell)                | ms              | 320    |  |   |
| T1  | s               | 5      | During this time the UE shall be aware of cells 1 and 2 but not cell 3.          |   |
| T2  | s               | ≤12    | UE shall report Event A6 within 6.4s (20×scellMeasCycle)                         |   |
| T3  | s               | 5      | UE shall report Event A2 within 200 ms and 1.6s for cells 1 and 2, respectively. |   |

**Table A.8.16.24.1-2: Cell specific test parameters for E-UTRAN TDD-FDD CA event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions with PCell in TDD**

| Parameter   | Unit       | Cell 1  |                                      |                                      | Cell 2  |                                      |                                      | Cell 3   |       |       |
|---|------------|---|--------------------------------------|--------------------------------------|---|--------------------------------------|--------------------------------------|--|-------|-------|

## A.8.16.24.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 3 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.25 E-UTRAN TDD-FDD CA Event triggered reporting on deactivated SCell with PCell interruption in non-DRX with PCell in FDD

### A.8.16.25.1 Test Purpose and Environment

The purpose of this test is to verify that in TDD-FDD CA with PCell in FDD the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 and the requirements for PCell stated in clause 8.3.2 while at the same time fulfilling the requirement on interruption rate.

In this test case there are three cells: Cell1, Cell2 and Cell3. Cell 1 is the PCell on the FDD primary component carrier, Cell 2 is the configured and deactivated SCell on the TDD secondary component carrier, and Cell 3 is the neighbor cell on the TDD secondary component carrier. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

The test parameters are given in Table A.8.16.25.1-1 and A.8.16.25.1-2 below.

**Table A.8.16.25.1-1: General test parameters for E-UTRAN TDD-FDD CA Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX with PCell in FDD**

| Parameter   | Unit            | Value  | Comment   |   |
|---|-----------------|--------|---|---|
| E-UTRA RF Channel Number                                |                 | 1, 2   | Two radio channels are used for this test                                     |   |
| Active PCell  |                 | Cell 1 | Primary cell on RF channel number 1.  |   |
| Configured deactivated SCell                            |                 | Cell 2 | Configured deactivated secondary cell on RF channel number 2.                 |   |
| Neighbour cell  |                 | Cell 3 | Neighbor cell to be identified on RF channel number 2.                        |   |
| CP length   |                 | Normal |   |   |
| Special subframe configuration                          |                 | 6      | As specified in table 4.2-1 in TS 36.211. The same configuration in TDD cells |   |
| Uplink-downlink configuration                           |                 | 1      | As specified in table 4.2-2 in TS 36.211. The same configuration in TDD cells |   |
| DRX   |                 | OFF    | Continuous monitoring of primary cell   |   |
| A6  | Hysteresis      | dB     | 0   | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB     | -3  | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |        | False   |   |
|   | Time To Trigger | s      | 0   |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0      | Individual offset for cells on primary component carrier.                     |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0      | Individual offset for cells on secondary component carrier.                   |   |
| Filter coefficient                                      |                 | 0      | L3 filtering is not used  |   |
| SCell measurement cycle (measCycleSCell)                | ms              | 1280   |   |   |
| T1  | s               | 5      | During this time the UE shall be aware of cells 1 and 2 but not cell 3.       |   |
| T2  | s               | ≤30    | UE shall report Event A6 within 25.6s (20xscellMeasCycle)                     |   |

**Table A.8.16.25.1-2: Cell specific test parameters for E-UTRAN TDD-FDD CA Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX with PCell in FDD**

| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |   |   |   |   |   |       |
| Note 3:  | Es/I <sub>ot</sub> , RSRP, SCH_RP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |   |   |   |   |       |
| Note 4:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |   |   |   |   |   |       |
| Note 5:  | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |   |   |   |   |       |

### A.8.16.25.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 3, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.26 E-UTRAN TDD-FDD CA Event triggered reporting on deactivated SCell with PCell interruption in non-DRX with PCell in TDD

### A.8.16.26.1 Test Purpose and Environment

The purpose of this test is to verify that in TDD-FDD CA with PCell in TDD the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 and the requirements for PCell stated in clause 8.3.2 while at the same time fulfilling the requirement on interruption rate.

In this test case there are three cells: Cell1, Cell2 and Cell3. Cell 1 is the PCell on the TDD primary component carrier, Cell 2 is the configured and deactivated SCell on the FDD secondary component carrier, and Cell 3 is the neighbor cell on the FDD secondary component carrier. It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. During T1 the UE shall not have any information of cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. PDCCH indicating a new transmission on the PCell shall be sent continuously to ensure that the UE sends ACK/NACKs throughout the test.

The test parameters are given in Table A.8.16.26.1-1 and Table A.8.16.26.1-2 below.

**Table A.8.16.26.1-1: General test parameters for E-UTRAN TDD-FDD CA Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX with PCell in TDD**

| Parameter   | Unit            | Value  | Comment   |   |
|---|-----------------|--------|---|---|
| E-UTRA RF Channel Number                                |                 | 1, 2   | Two radio channels are used for this test                                     |   |
| Active PCell  |                 | Cell 1 | Primary cell on RF channel number 1.  |   |
| Configured deactivated SCell                            |                 | Cell 2 | Configured deactivated secondary cell on RF channel number 2.                 |   |
| Neighbour cell  |                 | Cell 3 | Neighbor cell to be identified on RF channel number 2.                        |   |
| CP length   |                 | Normal |   |   |
| Special subframe configuration                          |                 | 6      | As specified in table 4.2-1 in TS 36.211. The same configuration in TDD cells |   |
| Uplink-downlink configuration                           |                 | 1      | As specified in table 4.2-2 in TS 36.211. The same configuration in TDD cells |   |
| DRX   |                 | OFF    | Continuous monitoring of primary cell   |   |
| A6  | Hysteresis      | dB     | 0   | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB     | -3  | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |        | False   |   |
|   | Time To Trigger | s      | 0   |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0      | Individual offset for cells on primary component carrier.                     |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0      | Individual offset for cells on secondary component carrier.                   |   |
| Filter coefficient                                      |                 | 0      | L3 filtering is not used  |   |
| SCell measurement cycle (measCycleSCell)                | ms              | 1280   |   |   |
| T1  | s               | 5      | During this time the UE shall be aware of cells 1 and 2 but not cell 3.       |   |
| T2  | s               | ≤30    | UE shall report Event A6 within 25.6s (20xscellMeasCycle)                     |   |

**Table A.8.16.26.1-2: Cell specific test parameters for E-UTRAN TDD-FDD CA Event triggered reporting on configured but deactivated SCell with PCell interruption in non-DRX with PCell in TDD**

| Parameter  | Unit  | Cell 1  |   | Cell 2  |   | Cell 3   |       |

| Propagation Condition  |   | AWGN  |   | AWGN  |   | AWGN   |       |
| Correlation Matrix and Antenna Configuration                       |   | 1x2 Low   |   | 1x2 Low   |   | 1x2 Low  |       |
| Timing offset to Cell 1  | μs  | -   |   | 0   |   | 3  |       |
| Time alignment error relative to cell 1 <sup>Note 5</sup>          | μs  | -   |   | ≤ TAE   |   | N/A  |       |
| Note 1:  | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |   |   |   |  |       |
| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |   |   |   |   |  |       |
| Note 3:  | Es/I <sub>ot</sub> , RSRP, SCH_RP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |   |   |   |  |       |
| Note 4:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |   |   |   |   |  |       |
| Note 5:  | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |   |   |   |  |       |

### A.8.16.26.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 3, with a measurement reporting delay less than 25.6s from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.27 3 DL PCell in FDD CA Event Triggered Reporting with 2 Deactivated SCells in Non-DRX

### A.8.16.27.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A1 (Serving cell becomes better than threshold), A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.27.1-1 and A.8.16.27.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A1 (for only SCell1 i.e. cell2), A2 (PCell and SCells) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 4. At the beginning of T2 the transmission power of cell 4 is increased to the same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6. Also, at the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, which shall result in reporting of Event A1. At the beginning of T3 the transmission powers of cells 1, 2, 3 and 4 are reduced below a threshold value and this shall result in reporting of Event A2 for Cell 1, for Cell 2 and for Cell 3.

**Table A.8.16.27.1-1: General test parameters for E-UTRAN TDD-FDD 3 DL CA event triggered reporting under fading propagation conditions with 2 configured but deactivated SCells in non-DRX with PCell in FDD**

| Parameter   |                 | Unit | Value   | Comment  |
|---|-----------------|------|---------|--|
| E-UTRA RF Channel Number                                |                 |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |                 |      | Cell 1  | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                            |                 |      | Cell 2  | Configured deactivated secondary cell on RF channel number 2.  |
| Configured deactivated SCell                            |                 |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.  |
| Neighbour cell  |                 |      | Cell 4  | Neighbour cell to be identified on RF channel number 3.  |
| CP length   |                 |      | Normal  |  |
| DRX   |                 |      | OFF     | Continuous monitoring of primary cell  |
| Special subframe configuration                          |                 |      | 6       | As specified in table 4.2-1 in TS 36.211. The same configuration applies to all TDD cells (cell2, cell3 and cell4).                  |
| Uplink-downlink configuration                           |                 |      | 1       | As specified in table 4.2-2 in TS 36.211. The same configuration applies to all TDD cells (cell2, cell3 and cell4).                  |
| A1  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A1.   |
|   | Threshold RSRP  | dBm  | -98     | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin.          |
|   | Time To Trigger | s    | 0       |  |
| A2  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A2.   |
|   | Threshold RSRP  | dBm  | -98     | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin.          |
|   | Time To Trigger | s    | 0       |  |
| A6  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A6.   |
|   | Offset          | dB   | -6      | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in section 9.1.11.2 into account plus margin. |
|   | Report on leave |      | False   |  |
|   | Time To Trigger | s    | 0       |  |
| Cell-individual offset for cells on RF channel number 1 |                 | dB   | 0       | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.  |
| Cell-individual offset for cells on RF channel number 3 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.  |
| Filter coefficient                                      |                 |      | 0       | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell)                |                 | ms   | 320     |  |
| T1  |                 | s    | 5       | During this time the cell1 and cell3 shall be known to the UE; but cell2 and cell 4 shall be unknown to the UE.                      |
| T2  |                 | s    | ≤12     | UE should report Event A1 for cell2 and event A6 for cell4 within 6.4s (20xscellMeasCycle)   |
| T3  |                 | s    | 5       | UE should report Event A2 within 200 ms. 1.6s, and 1.6s for cells 1, 2 and 3, respectively.  |

## A.8.16.27.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 4 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 3 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.28 3 DL PCell in TDD CA Event Triggered Reporting with 2 Deactivated SCells in Non-DRX

### A.8.16.28.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A1 (Serving cell becomes better than threshold), A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.28.1-1 and A.8.16.28.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A1 (for only SCell1 i.e. cell2), A2 (PCell and SCells) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 4. At the beginning of T2 the transmission power of cell 4 is increased to the same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6. Also, at the beginning of T2 the transmission power of cell 2 is increased to the same level as for cell 1, which shall result in reporting of Event A1. At the beginning of T3 the transmission powers of cells 1, 2, 3 and 4 are reduced below a threshold value and this shall result in reporting of Event A2 for Cell 1, for Cell 2 and for Cell 3.

**Table A.8.16.28.1-1: General test parameters for E-UTRAN TDD-FDD 3 DL CA event triggered reporting under fading propagation conditions with 2 configured but deactivated SCells in non-DRX with PCell in TDD**

| Parameter   |                 | Unit | Value   | Comment  |
|---|-----------------|------|---------|--|
| E-UTRA RF Channel Number                                |                 |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |                 |      | Cell 1  | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                            |                 |      | Cell 2  | Configured deactivated secondary cell on RF channel number 2.  |
| Configured deactivated SCell                            |                 |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.  |
| Neighbour cell  |                 |      | Cell 4  | Neighbour cell to be identified on RF channel number 3.  |
| CP length   |                 |      | Normal  |  |
| DRX   |                 |      | OFF     | Continuous monitoring of primary cell  |
| Special subframe configuration                          |                 |      | 6       | As specified in table 4.2-1 in TS 36.211. The same configuration applies to TDD cell (cell1).  |
| Uplink-downlink configuration                           |                 |      | 1       | As specified in table 4.2-2 in TS 36.211. The same configuration applies to TDD cell (cell1).  |
| A1  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A1.   |
|   | Threshold RSRP  | dBm  | -98     | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin.          |
|   | Time To Trigger | s    | 0       |  |
| A2  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of events A1 A2.   |
|   | Threshold RSRP  | dBm  | -98     | Actual RSRP threshold for events A2. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin.         |
|   | Time To Trigger | s    | 0       |  |
| A6  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A6.   |
|   | Offset          | dB   | -6      | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in section 9.1.11.2 into account plus margin. |
|   | Report on leave |      | False   |  |
|   | Time To Trigger | s    | 0       |  |
| Cell-individual offset for cells on RF channel number 1 |                 | dB   | 0       | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.  |
| Cell-individual offset for cells on RF channel number 3 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.  |
| Filter coefficient                                      |                 |      | 0       | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell)                |                 | ms   | 320     |  |
| T1  |                 | s    | 5       | During this time the cell1 and cell3 shall be known to the UE; but cell2 and cell 4 shall be unknown to the UE.                      |
| T2  |                 | s    | ≤12     | UE should report Event A1 for cell2 and event A6 for cell4 within 6.4s (20xscellMeasCycle)   |
| T3  |                 | s    | 5       | UE should report Event A2 within 200 ms. 1.6s, and 1.6s for cells 1, 2 and 3, respectively.  |

### A.8.16.28.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 4 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 3 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.29 3 DL FDD CA Event Triggered Reporting under Deactivated SCells in Non-DRX

### A.8.16.29.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects Events A1 (Serving cell becomes better than threshold), A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.29.1-1 and A.8.16.29.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A1 (SCell 1), Events A2 (PCell and SCell 1/2) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 4. Immediately at beginning of T2 the transmission power of cell 2 is increased above a threshold value such that this shall result in reporting of Event A1 for SCell 1, and cell 4 is increased to the same level as for Cell 3. Due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2, 3 and 4 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell 1/2, respectively.

**Table A.8.16.29.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter  |                 | Unit | Value            | Comment  |
|--|-----------------|------|------------------|--|
| E-UTRA RF Channel Number                                   |                 |      | 1, 2, 3          | Three radio channels are used for this test  |
| Active PCell   |                 |      | Cell 1           | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                               |                 |      | Cell 2 (SCell 1) | Configured deactivated secondary cell 1 on RF channel number 2.  |
|  |                 |      | Cell 3 (SCell 2) | Configured deactivated secondary cell 2 on RF channel number 3.  |
| Neighbour cell   |                 |      | Cell 4           | Neighbor cell to be identified on RF channel number 3.   |
| CP length  |                 |      | Normal           |  |
| DRX  |                 |      | OFF              | Continuous monitoring of primary cell  |
| A1   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A1.   |
|  | Threshold RSRP  | dBm  | -98              | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. No event A1 reporting is configured for cell 1 and 3. |
|  | Time To Trigger | s    | 0                |  |
| A2   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A2.   |
|  | Threshold RSRP  | dBm  | -98              | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.   |
|  | Time To Trigger | s    | 0                |  |
| A6   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A6.   |
|  | Offset          | dB   | -6               | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin.  |
|  | Report on leave |      | False            |  |
|  | Time To Trigger | s    | 0                |  |
| Cell-individual offset for cells on RF channel number 1    |                 | dB   | 0                | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2    |                 | dB   | 0                | Individual offset for cells on secondary component carrier 1.  |
| Cell-individual offset for cells on RF channel number 3    |                 | dB   | 0                | Individual offset for cells on secondary component carrier 2.  |
| Filter coefficient   |                 |      | 0                | L3 filtering is not used   |

| Timing offset to Cell 1                                       | $\mu\text{s}$  | -    | 0                 | 0                 | 3       |
| Time alignment error relative to cell 1 <small>Note 5</small> | $\mu\text{s}$  | -    | $\leq \text{TAE}$ | $\leq \text{TAE}$ | N/A     |
| Time alignment error relative to cell 2 <small>Note 5</small> | $\mu\text{s}$  | -    | -                 | $\leq \text{TAE}$ | N/A     |
| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |      |                   |                   |         |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |                   |                   |         |
| Note 3:   | $E_s/I_{ot}$ , RSRP, SCH_RP and $I_o$ have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |                   |                   |         |
| Note 4:   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |      |                   |                   |         |
| Note 5:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.  |      |                   |                   |         |

### A.8.16.29.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 4 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 3 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.30 3 DL TDD CA Event Triggered Reporting under Deactivated SCells in Non-DRX

### A.8.16.30.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects Events A1 (Serving cell becomes better than threshold), A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1.

The test parameters are given in Tables A.8.16.30.1-1 and A.8.16.30.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A1 (SCell 1), Events A2 (PCell and SCell 1/2) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 4. Immediately at beginning of T2 the transmission power of cell 2 is increased above a threshold value such that this shall result in reporting of Event A1 for SCell 1, and cell 4 is increased to the same level as for Cell 3. Due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2, 3 and 4 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell 1/2, respectively.

**Table A.8.16.30.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions**

| Parameter  |                 | Unit | Value            | Comment  |
|--|-----------------|------|------------------|--|
| E-UTRA RF Channel Number                                   |                 |      | 1, 2, 3          | Three radio channels are used for this test  |
| Active PCell   |                 |      | Cell 1           | Primary cell on RF channel number 1.   |
| Configured deactivated SCell                               |                 |      | Cell 2 (SCell 1) | Configured deactivated secondary cell 1 on RF channel number 2.  |
|  |                 |      | Cell 3 (SCell 2) | Configured deactivated secondary cell 2 on RF channel number 3.  |
| Neighbour cell   |                 |      | Cell 4           | Neighbor cell to be identified on RF channel number 3.   |
| CP length  |                 |      | Normal           |  |
| DRX  |                 |      | OFF              | Continuous monitoring of primary cell  |
| A1   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A1.   |
|  | Threshold RSRP  | dBm  | -98              | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. No event A1 reporting is configured for cell 1 and 3. |
|  | Time To Trigger | s    | 0                |  |
| A2   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A2.   |
|  | Threshold RSRP  | dBm  | -98              | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.   |
|  | Time To Trigger | s    | 0                |  |
| A6   | Hysteresis      | dB   | 0                | Hysteresis for evaluation of event A6.   |
|  | Offset          | dB   | -6               | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin.  |
|  | Report on leave |      | False            |  |
|  | Time To Trigger | s    | 0                |  |
| Cell-individual offset for cells on RF channel number 1    |                 | dB   | 0                | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2    |                 | dB   | 0                | Individual offset for cells on secondary component carrier 1.  |
| Cell-individual offset for cells on RF channel number 3    |                 | dB   | 0                | Individual offset for cells on secondary component carrier 2.  |
| Filter coefficient   |                 |      | 0                | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell) for SCell 1 and 2 |                 | ms   | 320              |  |
| T1   |                 | s    | 5                | During this time cell1 and cell3 shall be known to the UE; but cell2 and cell 4 shall be unknown to the UE.  |
| T2   |                 | s    | ≤12              | UE should report Event A1 for cell2 and Event A6 for cell4 within 6.4s (20×scellMeasCycle)   |
| T3   |                 | s    | 5                | UE should report Event A2 within 200 ms, 1.6s and 1.6s for cells 1, 2 and 3, respectively.   |

### A.8.16.30.2 Test Requirements

The UE shall send one Event A6 triggered measurement report for cell 4 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from the beginning of time T2.

The UE shall send one Event A1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 6.4s ( $20 \times \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 200 ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 3 with a measurement reporting delay of less than 1.6s ( $5 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in PDCCH.

### A.8.16.31 E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in FDD

#### A.8.16.31.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.31.1-1 and A.8.16.31.1-2 below. In the test there are four cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the FDD primary component (RF Channel 1), Cell 2 is SCell on the TDD secondary component (RF Channel 2), and Cell 3 is SCell on the TDD secondary component (RF Channel 3) and Cell 4 is the neighbour cell on the TDD secondary component (RF Channel 3). It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. During T1 and T2, both Cell2 and Cell3 are deactivated. During T1 the UE shall not have any information of cell 4. Immediately at beginning of T2 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6.

At the beginning of T3, the transmission power of Cell 4 is turned off and the test equipment sends a MAC message for activation of Cell 2 to UE but Cell3 remains deactivated. Immediately at beginning of T4 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6. The UE shall be continuously scheduled in the PCell throughout the whole test and continuously scheduled in Cell 2 during T4.

**Table A.8.16.31.1-1: General test parameters for E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in FDD**

| Parameter   | Unit            | Value   | Comment   |   |
|---|-----------------|---------|---|---|
| E-UTRA RF Channel Number                                |                 | 1, 2, 3 | three radio channels are used for this test                                   |   |
| Active PCell  |                 | Cell 1  | Primary cell on RF channel number 1.  |   |
| Configured deactivated SCell                            |                 | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                 |   |
| Configured deactivated SCell                            |                 | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                 |   |
| Neighbour cell  |                 | Cell 4  | Neighbor cell to be identified on RF channel number 3.                        |   |
| CP length   |                 | Normal  |   |   |
| Special subframe configuration                          |                 | 6       | As specified in table 4.2-1 in TS 36.211. The same configuration in TDD cells |   |
| Uplink-downlink configuration                           |                 | 1       | As specified in table 4.2-2 in TS 36.211. The same configuration in TDD cells |   |
| DRX   |                 | OFF     | Continuous monitoring of primary cell   |   |
| A6  | Hysteresis      | dB      | 0   | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB      | -3  | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |         | False   |   |
|   | Time To Trigger | s       | 0   |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0       | Individual offset for cells on primary component carrier.                     |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0       | Individual offset for cells on secondary component carrier.                   |   |
| Cell-individual offset for cells on RF channel number 3 | dB              | 0       | Individual offset for cells on secondary component carrier.                   |   |
| Filter coefficient                                      |                 | 0       | L3 filtering is not used  |   |
| SCell measurement cycle                                 | ms              | 1280    |   |   |
| T1  | s               | 5       | During this time the UE shall be aware of cells 1, 2 and 3 but not cell 4.    |   |
| T2  | s               | ≤30     | UE should report Event A6 within 25.6s (20xscellMeasCycle)                    |   |
| T3  | s               | 1       | During this time the UE shall activate cell 2                                 |   |
| T4  | s               | ≤10     | UE should report Event A6 within 6.4s (5xscellMeasCycle)                      |   |

**Table A.8.16.31.1-2: Cell specific test parameters for E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in FDD**

| Time alignment error relative to cell 1 <sup>Note 5</sup> | $\mu$ s    | -  |  |  |  | $\leq$ TAE                               |  |  |  | $\leq$ TAE                               |  |  |  | N/A                                      |  |  |  |
| Time alignment error relative to cell 2 <sup>Note 5</sup> | $\mu$ s    | -  |  |  |  | -  |  |  |  | $\leq$ TAE                               |  |  |  | N/A                                      |  |  |  |

Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE on cell1 prior to the start of time period T2 and on cell2 prior to the start of time period T4.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.

### A.8.16.31.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s ( $20 \times \text{scellMeasCycle}$ ) from the beginning of time period T2.

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s ( $5 \times \text{scellMeasCycle}$ ) from the beginning of time period T4.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall be scheduled on Cell2 continuously from the start of T4 to the end. From the start of T4 until the measurement report is received during T4, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.16.32 E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in TDD

#### A.8.16.32.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.32.1-1 and A.8.16.32.1-2 below. In the test there are four cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the TDD primary component (RF Channel 1), Cell 2 is SCell on the FDD secondary component (RF Channel 2), and Cell 3 is SCell on the FDD secondary component (RF Channel 3) and Cell 4 is the neighbour cell on the FDD secondary component (RF Channel 3). It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. During T1 and T2, both Cell2 and Cell3 are deactivated. During T1 the UE shall not have any information of cell 4. Immediately at beginning of T2 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6.

At the beginning of T3, the transmission power of Cell 4 is turned off and the test equipment sends a MAC message for activation of Cell 2 to UE but Cell3 remains deactivated. Immediately at beginning of T4 the transmission power of Cell 4 is increased to same level as for Cell 3, and due to usage of an offset this shall result in reporting of Event A6. The UE shall be continuously scheduled in the PCell throughout the whole test and continuously scheduled in Cell2 during T4.

**Table A.8.16.32.1-1: General test parameters for E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in TDD**

| Parameter   | Unit   | Value   | Comment  |   |
|---|--|---------|--|---|
| E-UTRA RF Channel Number                                |  | 1, 2, 3 | Three radio channels are used for this test  |   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured SCell  |  | Cell 2  | Configured secondary cell on RF channel number 2.                                      |   |
| Configured SCell  |  | Cell 3  | Configured secondary cell on RF channel number 3.                                      |   |
| Neighbour cell  |  | Cell 4  | Neighbor cell to be identified on RF channel number 3.                                 |   |
| CP length   |  | Normal  |  |   |
| Special subframe configuration on PCell                 |  | 6       | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |   |
| Uplink-downlink configuration on PCell                  |  | 1       |  |   |
| DRX   |  | OFF     | Continuous monitoring of primary cell  |   |
| A6  | Hysteresis   | dB      | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset   | dB      | -3   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave  |         | False  |   |
|   | Time To Trigger  | s       | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on primary component carrier.                              |   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on secondary component carrier.                            |   |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on secondary component carrier.                            |   |
| Filter coefficient                                      |  | 0       | L3 filtering is not used   |   |
| SCell measurement cycle                                 | ms   | 1280    |  |   |
| T1  | s  | 5       | During this time the UE shall be aware of cells 1, 2 and 3 but not cell 4.             |   |
| T2  | s  | ≤30     | UE should report Event A6 within 25.6s (20×scellMeasCycle)                             |   |
| T3  | s  | 1       | During this time the UE shall activate cell 2  |   |
| T4  | s  | ≤10     | UE should report Event A6 within 6.4s (5×scellMeasCycle)                               |   |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |         |  |   |

**Table A.8.16.32.1-2: Cell specific test parameters for E-UTRAN TDD-FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX and with PCell in TDD**

| Parameter  | Unit | Cell 1  |    |    |    | Cell 2  |  |  |   | Cell 3  |    |    |    | Cell 4  |    |    |    |

| Timing offset to Cell 1                                      | $\mu$ s    | -  |  |  |  | 0  |  |  |  | 0  |  |  |  |  |  |  |  |
| Time alignment error relative to cell 1 <small>Note5</small> | $\mu$ s    | -  |  |  |  | $\leq$ TAE                               |  |  |  | $\leq$ TAE                               |  |  |  |  |  |  |  |
| Time alignment error relative to cell 2 <small>Note5</small> | $\mu$ s    | -  |  |  |  | -  |  |  |  | $\leq$ TAE                               |  |  |  |  |  |  |  |

Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE on cell1 prior to the start of time period T2 and on cell2 prior to the start of time period T4.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.

### A.8.16.32.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s ( $20 \times \text{scellMeasCycle}$ ) from the beginning of time period T2.

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s ( $5 \times \text{scellMeasCycle}$ ) from the beginning of time period T4.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall be scheduled on Cell2 continuously from the beginning of T4 to the end. From the start of T4 until the measurement report is received during T4, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.33 E-UTRAN FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX

### A.8.16.33.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.33.1-1 and A.8.16.33.1-2 below. In the test there are four cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the FDD primary component (RF Channel 1), Cell 2 is SCell on the FDD secondary component (RF Channel 2), and Cell 3 is SCell on the FDD secondary component (RF Channel 3) and Cell 4 is the neighbour cell on the FDD secondary component (RF Channel 3). It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. During T1 and T2, both Cell2 and Cell3 are deactivated. During T1 the UE shall not have any information of cell 4. Immediately at beginning of T2 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6.

At the beginning of T3, the transmission power of Cell 4 is turned off and the test equipment sends a MAC message for activation of Cell 2 to UE but Cell3 remains deactivated. Immediately at beginning of T4 the transmission power of Cell 4 is increased to same level as for Cell 3, and due to usage of an offset this shall result in reporting of Event A6. The UE shall be continuously scheduled in the PCell throughout the whole test and continuously scheduled in Cell2 during T4.

**Table A.8.16.33.1-1: General test parameters for E-UTRAN FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell interruptions in Non-DRX**

| Parameter   |                 | Unit | Value   | Comment   |
|---|-----------------|------|---------|---|
| E-UTRA RF Channel Number                                |                 |      | 1, 2, 3 | Three radio channels are used for this test   |
| Active PCell  |                 |      | Cell 1  | Primary cell on RF channel number 1.  |
| Configured deactivated SCell                            |                 |      | Cell 2  | Configured deactivated secondary cell on RF channel number 2.   |
| Configured deactivated SCell                            |                 |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.   |
| Neighbour cell  |                 |      | Cell 4  | Neighbor cell to be identified on RF channel number 3.  |
| CP length   |                 |      | Normal  |   |
| DRX   |                 |      | OFF     | Continuous monitoring of primary cell   |
| A6  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB   | -3      | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |      | False   |   |
|   | Time To Trigger | s    | 0       |   |
| Cell-individual offset for cells on RF channel number 1 |                 | dB   | 0       | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.   |
| Cell-individual offset for cells on RF channel number 3 |                 | dB   | 0       | Individual offset for cells on secondary component carrier.   |
| Filter coefficient                                      |                 |      | 0       | L3 filtering is not used  |
| SCell measurement cycle                                 |                 | ms   | 1280    |   |
| T1  |                 | s    | 5       | During this time the UE shall be aware of cells 1, 2 and 3 but not cell 4.  |
| T2  |                 | s    | ≤30     | UE should report Event A6 within 25.6s (20×sCellMeasCycle)  |
| T3  |                 | s    | 1       | During this time the UE shall activate cell 2   |
| T4  |                 | s    | ≤10     | UE should report Event A6 within 6.4s (5×sCellMeasCycle)  |

**Table A.8.16.33.1-2: Cell specific test parameters for E-UTRAN FDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell interruptions in Non-DRX (Cell #1 and Cell #2)**

| Parameter  | Unit | Cell 1  |    |    |    | Cell 2  |   |  |   | Cell 3  |    |    |    | Cell 4  |    |    |    |

Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE on cell1 from the start of time period T2 and on cell2 from the start of time period T4.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.

### A.8.16.33.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s ( $20 \times \text{scellMeasCycle}$ ) from the beginning of time period T2.

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s ( $5 \times \text{scellMeasCycle}$ ) from the beginning of time period T4.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall be scheduled on Cell2 continuously from the beginning of T4 to the end. From the start of T4 until the measurement report is received during T4, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.34 E-UTRAN TDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell Interruptions in Non-DRX

### A.8.16.34.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] within the requirements stated in clause 8.3.3.2.1 while at the same time fulfilling the requirement on interruption rate.

The test parameters are given in Table A.8.16.34.1-1 and A.8.16.34.1-2 below. In the test there are four cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the TDD primary component (RF Channel 1), Cell 2 is SCell on the TDD secondary component (RF Channel 2), and Cell 3 is SCell on the TDD secondary component (RF Channel 3) and Cell 4 is the neighbour cell on the TDD secondary component (RF Channel 3). It is indicated to the UE in the measurement control information that event-triggered reporting with Event A6 is used. The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. During T1 and T2, both Cell2 and Cell3 are deactivated. During T1 the UE shall not have any information of cell 4. Immediately at beginning of T2 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6.

At the beginning of T3, the transmission power of Cell 4 is turned off and the test equipment sends a MAC message for activation of Cell 2 to UE but Cell3 remains deactivated. Immediately at beginning of T4 the transmission power of cell 4 is increased to same level as for cell 3, and due to usage of an offset this shall result in reporting of Event A6. The UE shall be continuously scheduled in the PCell throughout the whole test and continuously scheduled in Cell 2 during T4.

**Table A.8.16.34.1-1: General test parameters for E-UTRAN TDD 3 DL CA Event Triggered Reporting on Deactivated SCell with PCell and SCell interruptions in Non-DRX**

| Parameter   | Unit            | Value   | Comment  |   |
|---|-----------------|---------|--|---|
| E-UTRA RF Channel Number                                |                 | 1, 2, 3 | three radio channels are used for this test                                    |   |
| Active PCell  |                 | Cell 1  | Primary cell on RF channel number 1.   |   |
| Configured deactivated SCell                            |                 | Cell 2  | Configured deactivated secondary cell on RF channel number 2.                  |   |
| Configured deactivated SCell                            |                 | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                  |   |
| Neighbour cell  |                 | Cell 4  | Neighbor cell to be identified on RF channel number 3.                         |   |
| CP length   |                 | Normal  |  |   |
| Special subframe configuration                          |                 | 6       | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells |   |
| Uplink-downlink configuration                           |                 | 1       | As specified in table 4.2-2 in TS 36.211. The same configuration in both cells |   |
| DRX   |                 | OFF     | Continuous monitoring of primary cell  |   |
| A6  | Hysteresis      | dB      | 0  | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB      | -3   | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.11.2 into account plus margin. |
|   | Report on leave |         | False  |   |
|   | Time To Trigger | s       | 0  |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0       | Individual offset for cells on primary component carrier.                      |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0       | Individual offset for cells on secondary component carrier.                    |   |
| Cell-individual offset for cells on RF channel number 3 | dB              | 0       | Individual offset for cells on secondary component carrier.                    |   |
| Filter coefficient                                      |                 | 0       | L3 filtering is not used   |   |
| SCell measurement cycle                                 | ms              | 1280    |  |   |
| T1  | s               | 5       | During this time the UE shall be aware of cells 1, 2 and 3 but not cell 4.     |   |
| T2  | s               | ≤30     | UE should report Event A6 within 25.6s (20xscellMeasCycle)                     |   |
| T3  | s               | 1       | During this time the UE shall activate cell 2                                  |   |
| T4  | s               | ≤10     | UE should report Event A6 within 6.4s (5xscellMeasCycle)                       |   |

| Timing offset to Cell 1                                   | $\mu$ s    | -  |  |  |  | 0  |  |  |  | 0  |  |  |  | 3  |  |  |  |
| Time alignment error relative to cell 1 <sup>Note 5</sup> | $\mu$ s    | -  |  |  |  | $\leq$ TAE                               |  |  |  | $\leq$ TAE                               |  |  |  | N/A                                      |  |  |  |
| Time alignment error relative to cell 2 <sup>Note 5</sup> | $\mu$ s    | -  |  |  |  | -  |  |  |  | $\leq$ TAE                               |  |  |  | N/A                                      |  |  |  |

Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: The resources for uplink transmission are assigned to the UE on cell1 prior to the start of time period T2 and on cell2 prior to the start of time period T4.

Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.

### A.8.16.34.2 Test Requirements

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 25.6s ( $20 \times \text{scellMeasCycle}$ ) from the beginning of time period T2.

The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 6.4s ( $5 \times \text{scellMeasCycle}$ ) from the beginning of time period T4.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The UE shall be scheduled on PCell continuously throughout the test. From the start of T1 until the measurement report is received during T2, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

The UE shall be scheduled on Cell2 continuously from the start of T4 to the end. From the start of T4 until the measurement report is received during T4, at least 99.5% of all expected ACK/NACKs shall be transmitted by the UE.

For a test to be considered successful requirements on both event detection and percentage of transmitted ACK/NACKs have to be fulfilled simultaneously.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.16.35 3 DL PCell in FDD CA Activation and Deactivation of Known SCell in Non-DRX

### A.8.16.35.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7 for UE configured with two downlink SCells, when the SCell is known by the UE at the time of activation and PCell is in FDD.

The test parameters are given in Tables A.8.16.35.1-1 and cell-specific parameters in A.8.16.35.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and deactivated Cell 3 (SCell2) on radio channel 3 (SCC2) but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell1 (Cell 2) becomes configured on radio channel 2 (SCC1). The UE now starts monitoring also the SCC1. The test equipment sends a MAC message for activation of the SCell1.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted  $m$  which is an even number, defines the start of time period T2. At the beginning of T2 the test equipment sends a MAC message for activation of the SCell1. The UE receives the SCell2 activation command in a subframe  $(m+10)$  during activation of the SCell1. The UE shall be able to report valid CSI for the activated SCell1 at latest in subframe  $(m+29)$ . The UE shall start reporting CSI for SCell1 in subframe  $(m+8)$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes  $(m+5)$  to  $(m+9)$  and  $(m+15)$  to  $(m+19)$ .

Time period T3 starts when a MAC message for deactivation of SCell1, sent from the test equipment to the UE in a subframe # denoted  $n$  which is an even number, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the SCell2 in subframe  $(n+10)$ . The UE shall carry out deactivation of the SCell1 at latest in subframe  $(n+8)$ , and any PCell interruption due to the deactivation of SCells shall occur in the subframes  $(n+5)$  to  $(n+9)$  and  $(n+15)$  to  $(n+19)$ .

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell1, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell1 activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.35.1-1: General test parameters for known SCell1 activation case**

| Parameter   | Unit | Value   | Comment  |
|---|------|---------|--|
| E-UTRA RF Channel Number                                |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |      | Cell 1  | Primary cell on RF channel number 1.   |
| Deconfigured deactivated SCell1                         |      | Cell 2  | Deconfigured deactivated secondary cell on RF channel number 2.                              |
| Configured deactivated SCell2                           |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                                |
| CP length   |      | Normal  |  |
| DRX   |      | OFF     | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0       | CQI reporting for SCell every second subframe  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.   |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC2.   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |  |
| T1  | s    | 7       | During this time the PCell and SCell2 shall be known and the SCell1 configured and detected. |
| T2  | s    | 1       | During this time the UE shall activate the SCell1.   |
| T3  | s    | 1       | During this time the UE shall deactivate the SCell1.   |

### A.8.16.35.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+29).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+9) and outside the subframes (m+15) to (m+19).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+9) and outside the subframes (n+15) to (n+19).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+29) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.8.16.36 3 DL PCell in TDD CA Activation and Deactivation of Known SCell in Non-DRX

#### A.8.16.36.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7 for UE configured with two downlink SCells, when the SCell is known by the UE at the time of activation and PCell is in TDD.

The test parameters are given in Tables A.8.16.36.1-1 and cell-specific parameters in A.8.16.36.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and deactivated Cell 3 (SCell2) on radio channel 3 (SCC2) but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell1 (Cell 2) becomes configured on radio channel 2 (SCC1). The UE now starts monitoring also the SCC1. The test equipment sends a MAC message for activation of the SCell1.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m where m is 4 or 9, defines the start of time period T2. At the beginning of T2 the test equipment sends a MAC message for activation of the SCell1. The UE receives the SCell2 activation command in a subframe (m+15) during activation of the SCell1. The UE shall be able to report valid CSI for the activated SCell1 at latest in a subframe (m+29). The UE shall start reporting CSI for SCell1 in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+11) and (m+20) to (m+26).

Time period T3 starts when a MAC message for deactivation of SCell1, sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the SCell2 in subframe (n+15). The UE shall carry out deactivation of the SCell1 at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+11) and (n+20) to (n+26).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell1, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell1 activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.36.1-1: General test parameters for known SCell1 activation case**

| Parameter   | Unit | Value   | Comment  |
|---|------|---------|--|
| E-UTRA RF Channel Number                                |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |      | Cell 1  | Primary cell on RF channel number 1.   |
| Deconfigured deactivated SCell                          |      | Cell 2  | Deconfigured deactivated secondary cell on RF channel number 2.                              |
| Configured deactivated SCell2                           |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                                |
| CP length   |      | Normal  |  |
| Special subframe configuration                          |      | 6       | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells.       |
| Uplink-downlink configuration                           |      | 1       |  |
| DRX   |      | OFF     | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0       | CQI reporting for SCell every UL subframe  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.   |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC1.   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |  |
| T1  | s    | 7       | During this time the PCell and SCell2 shall be known and the SCell1 configured and detected. |
| T2  | s    | 1       | During this time the UE shall activate the SCell1.   |
| T3  | s    | 1       | During this time the UE shall deactivate the SCell1.   |

| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |    |    |   |    |    |   |    |    |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |   |    |    |   |    |    |   |    |    |
| Note 3:   | Es/I <sub>ot</sub> , RSRP, SCH_RP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |    |    |   |    |    |   |    |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.   |   |    |    |   |    |    |   |    |    |
| Note 5:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |    |    |   |    |    |   |    |    |

### A.8.16.36.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+29).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+11) and outside the subframes (m+20) to (m+26).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+11) and outside the subframes (n+20) to (n+26).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+29) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.37 3 DL FDD CA activation and deactivation of known SCell in non-DRX

### A.8.16.37.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation times are within the requirements stated in clause 7.7 for 3DL FDD carrier aggregation, when the SCells are known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.37-1 and cell-specific parameters in A.8.16.37-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2), but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell1 (Cell 2) becomes configured on radio channel 2 (SCC1). The UE now starts monitoring also the SCC1. The test equipment sends a MAC message for activation of the SCell1.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m which is an even number, defines the start of time period T2. At the beginning of T2 the test equipment sends a MAC message for activation of the SCell1. The UE receives the SCell2 activation command in a subframe (m+10) during activation of the SCell1. The UE shall be able to report valid CSIs for the activated SCell1 at latest in a subframe (m+29). The UE shall start reporting CSI for SCell1 in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+9) and (m+15) to (m+19).

Time period T3 starts when a MAC message for deactivation of SCell1, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the SCell2 in subframe (n+10). The UE shall carry out deactivation of the SCell1 at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+9) and (n+15) to (n+19).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCells, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell1 activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.37-1: General test parameters for E-UTRAN FDD 3 DL CA activation and deactivation of known SCell in non-DRX**

| Parameter   | Unit | Value   | Comment  |
|---|------|---------|--|
| E-UTRA RF Channel Number                                |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |      | Cell 1  | Primary cell on RF channel number 1.   |
| Deconfigured SCell                                      |      | Cell 2  | Deconfigured secondary cell on RF channel number 2.  |
| Configured deactivated SCell                            |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                                |
| CP length   |      | Normal  |  |
| DRX   |      | OFF     | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0       | CQI reporting for SCells every second subframe   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.   |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC2.   |
| Filter coefficient                                      |      | 0       | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |  |
| T1  | s    | 7       | During this time the PCell and SCell2 shall be known and the SCell1 configured and detected. |
| T2  | s    | 1       | During this time the UE shall activate the SCell1 and SCell2.                                |
| T3  | s    | 1       | During this time the UE shall deactivate the SCell1 and SCell2.                              |

**Table A.8.16.37-2: Cell specific test parameters for E-UTRAN FDD 3 DL CA activation and deactivation of known SCell in non-DRX**

### A.8.16.37.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+29).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+9) and outside the subframes (m+15) to (m+19).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+9) and outside the subframes (n+15) to (n+19).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+29) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.38 3 DL TDD CA activation and deactivation of known SCell in non-DRX

### A.8.16.38.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation times are within the requirements stated in clause 7.7 for 3DL TDD carrier aggregation, when the SCells are known by the UE at the time of activation.

The test parameters are given in Tables A.8.16.38-1 and cell-specific parameters in A.8.16.38-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. All cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2), but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell1 (Cell 2) becomes configured on radio channel 2 (SCC1). The UE now starts monitoring also the SCC1. The test equipment sends a MAC message for activation of the SCell1.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m where m is 4 or 9, defines the start of time period T2. At the beginning of T2 the test equipment sends a MAC message for activation of the SCell1. The UE receives the SCell2 activation command in a subframe (m+15) during activation of the SCell1. The UE shall be able to report valid CSIs for the activated SCell1 at latest in a subframe (m+29). The UE shall start reporting CSI for SCell1 in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+11) and (m+20) to (m+26).

Time period T3 starts when a MAC message for deactivation of SCell1, sent from the test equipment to the UE, in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the SCell2 in subframe (n+15). The UE shall carry out deactivation of the SCell1 at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+11) and (n+20) to (n+26).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCells, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell1 activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.38-1: General test parameters for E-UTRAN TDD 3 DL CA activation and deactivation of known SCell in non-DRX**

| Parameter   | Unit | Value   | Comment  |
|---|------|---------|--|
| E-UTRA RF Channel Number                                |      | 1, 2, 3 | Three radio channels are used for this test  |
| Active PCell  |      | Cell 1  | Primary cell on RF channel number 1.   |
| Deconfigured SCell                                      |      | Cell 2  | Deconfigured secondary cell on RF channel number 2.  |
| Configured deactivated SCell                            |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                                |
| CP length   |      | Normal  |  |
| Special subframe configuration                          |      | 6       | As specified in table 4.2-1 in TS 36.211. The same configuration applies to all cells.       |
| Uplink-downlink configuration                           |      | 1       | As specified in table 4.2-2 in TS 36.211. The same configuration applies to all cells        |
| DRX   |      | OFF     | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0       | CQI reporting for SCells every UL subframe   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.   |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC2.   |
| Filter coefficient                                      |      | 0       | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |  |
| T1  | s    | 7       | During this time the PCell and SCell2 shall be known and the SCell1 configured and detected. |
| T2  | s    | 1       | During this time the UE shall activate the SCell1 and SCell2.                                |
| T3  | s    | 1       | During this time the UE shall deactivate the SCell1 and SCell2                               |

**Table A.8.16.38-2: Cell specific test parameters for E-UTRAN TDD 3 DL CA activation and deactivation of known SCell in non-DRX**

### A.8.16.38.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption, or in a subframe (m+13) if the subframe (m+8) and (m+9) were subject to interruption when an intra-band SCell is activated. Whether CSI report in subframe (m+8) and/or (m+9) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8) and/or (m+9).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+29).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+11) and outside the subframes (m+20) to (m+26).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+11) and outside the subframes (n+20) to (n+26).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+29) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.39 E-UTRA TDD-FDD 3DL CA Activation and Deactivation of Unknown SCell in Non-DRX with PCell in FDD

### A.8.16.39.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7 for UE configured with two downlink SCells, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.39.1-1 and cell-specific parameters in A.8.16.39.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. Cell 1 is FDD cell, and Cell 2 and Cell 3 are TDD cells. Cell 1 and Cell 3 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2) but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 (SCell1) becomes configured on radio channel 2 (SCC1). During T1 Cell 2 (SCell1) is powered off and UE is not aware of Cell 2 (SCell1).

A MAC message for activation of SCell1 is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m which is an even number. The point in time at which the MAC message for activation of Cell 2 (SCell1) is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 (SCell1) is increased to same level as for Cell 1 (PCell). The test equipment sends a MAC message for activation of the Cell 3 (SCell2) in subframe (m+10). Since UE received SCell2 activation command during activation of SCell1, the UE shall be able to report valid CSI for the activated SCell1 at latest in subframe (m+39) provided the SCell1 can be successfully detected on the first attempt. The UE shall start reporting CSI for SCell1 in subframe (m+8), and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+9) and (m+15) to (m+19).

Time period T3 starts when a MAC message for deactivation of Cell 2 (SCell1), sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the Cell 3 (SCell2) in subframe (n+10). The UE shall carry out deactivation of the Cell 2 (SCell1) at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+9) and (n+10) to (n+19).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell1, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the Cell 2 (SCell1) activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the Cell 2 (SCell1) deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.39.1-1: General test parameters for unknown SCell1 activation case**

| Parameter  | Unit | Value   | Comment   |
|--|------|---------|---|
| E-UTRA RF Channel Number   |      | 1, 2, 3 | Three radio channels are used for this test                                     |
| Active PCell   |      | Cell 1  | Primary cell on RF channel number 1.  |
| Deconfigured deactivated SCell1  |      | Cell 2  | Deconfigured deactivated secondary cell on RF channel number 2.                 |
| Configured deactivated SCell2  |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                   |
| CP length  |      | Normal  |   |
| DRX  |      | OFF     | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index   |      | 0       | CQI reporting for SCell every second subframe                                   |
| Cell-individual offset for cells on RF channel number 1  | dB   | 0       | Individual offset for cells on PCC.   |
| Cell-individual offset for cells on RF channel number 2  | dB   | 0       | Individual offset for cells on SCC1.  |
| Cell-individual offset for cells on RF channel number 3  | dB   | 0       | Individual offset for cells on SCC2.  |
| SCell measurement cycle (measCycleSCell)   | ms   | 320     |   |
| T1   | ms   | 100     | During this time the PCell and SCell2 shall be known and the SCell1 configured. |
| T2   | s    | 1       | During this time the UE shall activate the SCell1 and SCell2.                   |
| T3   | s    | 1       | During this time the UE shall deactivate the SCell1 and SCell2.                 |
| Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |         |   |

**Table A.8.16.39.1-2: Cell specific test parameters for E-UTRAN TDD known SCell1 activation with PCell in FDD**

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | $E_s/lot$ , RSRP, SCH_RP and $l_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |
| Note 5: | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.  |
| Note 6: | TDD special subframe configuration and uplink-downlink configuration are as specified in Table 4.2-1 and 4.2-2 in TS36.211 [16]. The same configuration applies to all TDD cells.                              |

### A.8.16.39.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 at latest in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+39).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside subframes (m+5) to (m+9) and outside the subframes (m+15) to (m+19).

During T3 interruption of PCell during SCells deactivation shall not happen outside subframes (n+5) to (n+9) and outside subframes (n+15) to (n+19).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+39) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.40 E-UTRA TDD-FDD 3DL CA Activation and Deactivation of Unknown SCell in Non-DRX with PCell in TDD

### A.8.16.40.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7 for UE configured with two downlink SCells, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.40.1-1 and cell-specific parameters in A.8.16.40.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. Cell 1 is TDD cell, and Cell 2 and Cell 3 are FDD cells. Cell 1 and Cell 3 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2) but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 (SCell1) becomes configured on radio channel 2 (SCC1). During T1 Cell 2 (SCell1) is powered off and UE is not aware of Cell 2 (SCell1).

A MAC message for activation of SCell1 is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m, where m is 4 or 9. The point in time at which the MAC message for activation of Cell 2 (SCell1) is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 (SCell1) is increased to same level as for Cell 1 (PCell). The test equipment sends a MAC message for activation of the Cell 3 (SCell2) in subframe (m+15). Since UE received SCell2 activation command during activation

of SCell1, the UE shall be able to report valid CSI for the activated SCell1 at latest in subframe (m+39) provided the SCell1 can be successfully detected on the first attempt. The UE shall start reporting CSI for SCell1 in subframe (m+8), and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+9) and (m+20) to (m+24).

Time period T3 starts when a MAC message for deactivation of Cell 2 (SCell1), sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the Cell 3 (SCell2) in subframe (n+15). The UE shall carry out deactivation of the Cell 2 (SCell1) at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9) and (n+20) to (n+24).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell1, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the Cell 2 (SCell1) activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the Cell 2 (SCell1) deactivation of SCells command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.40.1-1: General test parameters for unknown SCell1 activation case**

| Parameter  | Unit | Value   | Comment   |
|--|------|---------|---|
| E-UTRA RF Channel Number   |      | 1, 2, 3 | Three radio channels are used for this test                                     |
| Active PCell   |      | Cell 1  | Primary cell on RF channel number 1.  |
| Deconfigured deactivated SCell1  |      | Cell 2  | Deconfigured deactivated secondary cell on RF channel number 2.                 |
| Configured deactivated SCell2  |      | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                   |
| CP length  |      | Normal  |   |
| DRX  |      | OFF     | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index   |      | 0       | CQI reporting for SCell every second subframe                                   |
| Cell-individual offset for cells on RF channel number 1  | dB   | 0       | Individual offset for cells on PCC.   |
| Cell-individual offset for cells on RF channel number 2  | dB   | 0       | Individual offset for cells on SCC1.  |
| Cell-individual offset for cells on RF channel number 3  | dB   | 0       | Individual offset for cells on SCC2.  |
| SCell measurement cycle (measCycleSCell)   | ms   | 320     |   |
| T1   | ms   | 100     | During this time the PCell and SCell2 shall be known and the SCell1 configured. |
| T2   | s    | 1       | During this time the UE shall activate the SCell1 and SCell2.                   |
| T3   | s    | 1       | During this time the UE shall deactivate the SCell1 and SCell2.                 |
| Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |         |   |

| Propagation Condition   |            | AWGN  |    |    | AWGN  |   |    | AWGN  |    |    |
| Antenna Configuration   |            | 1x2   |    |    | 1x2   |   |    | 1x2   |    |    |
| Timing offset to Cell 1   | μs         | -   |    |    | 0   |   |    | 0   |    |    |
| Time alignment error relative to cell 1 <sup>Note 5</sup>             | μs         | -   |    |    | ≤ TAE   |   |    | ≤ TAE   |    |    |
| Time alignment error relative to cell 2 <sup>Note 5</sup>             | μs         | -   |    |    | -   |   |    | ≤ TAE   |    |    |

- Note 1: OCNB shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3:  $E_s/lot$ , RSRP, SCH\_RP and  $l_0$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.
- Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.
- Note 6: TDD special subframe configuration and uplink-downlink configuration are as specified in Table 4.2-1 and 4.2-2 in TS36.211 [16]. The same configuration applies to all TDD cells.

### A.8.16.40.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+39).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside subframes (m+5) and (m+9) and outside the subframes (m+20) to (m+24).

During T3 interruption of PCell during SCells deactivation shall not happen outside subframes (n+5) to (n+9) and outside subframes (n+20) to (n+24).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in subframe (m+39) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.41 3DL FDD CA activation and deactivation of unknown SCell in non-DRX

### A.8.16.41.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 7.7 for 3DL FDD carrier aggregation, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.41-1 and cell-specific parameters in A.8.16.41-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. Cell 1 and Cell 3 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2), but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 (SCell1) becomes configured on radio channel 2 (SCC1). During T1 the signal level of Cell 2 (SCell1) is powered off and UE is not aware of Cell 2 (SCell1).

A MAC message for activation of the SCell1 is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m which is an even number. The point in time at which the MAC message for activation of Cell 2 (SCell1) is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 (SCell1) is increased to same level as for Cell 1 (PCell). The test equipment sends a MAC

message for activation of Cell 3 (SCell2) in subframe (m+10). Since UE received SCell2 activation command during activation of SCell1, the UE shall be able to report valid CSIs for the activated SCell1 at latest in subframe (m+39) provided the SCell1 can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+9) and (m+15) to (m+19).

Time period T3 starts when a MAC message for deactivation of Cell 2 (SCell1), sent from the test equipment to the UE in a subframe # denoted n, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the Cell 3 (SCell2) in subframe (n+10). The UE shall carry out deactivation of Cell 2 (SCell1) at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+9) and (n+15) to (n+19).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCells, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the Cell 2 (SCell1) activation command is sent until a CSI reports with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the Cell 2 (SCell1) deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.41-1: General test parameters for E-UTRAN FDD 3 DL CA activation and deactivation of unknown SCell in non-DRX**

| Parameter   | Unit   | Value   | Comment   |
|---|--|---------|---|
| E-UTRA RF Channel Number                                |  | 1, 2, 3 | Three radio channels are used for this test                                     |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.  |
| Deconfigured SCell1                                     |  | Cell 2  | Deconfigured secondary cell on RF channel number 2.                             |
| Configured deactivated SCell2                           |  | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                   |
| CP length   |  | Normal  |   |
| DRX   |  | OFF     | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index      |  | 0       | CQI reporting for SCells every second subframe                                  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.  |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC2.  |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |   |
| T1  | ms   | 100     | During this time the PCell and SCell2 shall be known and the SCell1 configured. |
| T2  | s  | 1       | During this time the UE shall activate the SCell1 and SCell2.                   |
| T3  | s  | 1       | During this time the UE shall deactivate the SCell1 and SCell2.                 |
| Note:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |         |   |

**Table A.8.16.41-2: Cell specific test parameters for E-UTRAN FDD 3 DL CA activation and deactivation of unknown SCell in non-DRX**

### A.8.16.41.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+39).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+9) and outside the subframes (m+15) to (m+19).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+9) and outside the subframes (n+15) to (n+19).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+39) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.42 3DL TDD CA activation and deactivation of unknown SCell in non-DRX

### A.8.16.42.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 7.7 for 3DL TDD carrier aggregation, when the SCell is unknown by the UE at the time of activation.

The test parameters are given in Tables A.8.16.42-1 and cell-specific parameters in A.8.16.42-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell. Cell 1 and cell 3 have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and Cell 3 (deactivated SCell2) on radio channel 3 (SCC2), but is not aware of Cell 2 (SCell1) on radio channel 2 (SCC1). The UE is only monitoring the PCC and SCC2. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 (SCell 1) becomes configured on radio channel 2 (SCC1). During T1 the signal level of Cell 2 (SCell 1) is powered off and UE is not aware of Cell 2 (SCell1).

A MAC message for activation of the SCell1 is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m, where m is 4 or 9. The point in time at which the MAC message for activation of Cell 2 (SCell1) is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 (SCell1) is increased to same level as for Cell 1 (PCell). The test equipment sends a MAC message for activation of Cell 3 (SCell2) in subframe (m+15). Since UE received SCell2 activation command during activation of SCell1, the UE shall be able to report valid CSIs for the activated SCell1 at latest in subframe (m+39) provided the SCell1 can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCells shall occur in the subframes (m+5) to (m+11) and (m+20) to (m+26).

Time period T3 starts when a MAC message for deactivation of Cell 2 (SCell1), sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The test equipment sends a MAC message for deactivation of the Cell 3 (SCell2) in subframe (n+15). The UE shall carry out deactivation of Cell 2 (SCell1) at latest in subframe (n+8), and any PCell interruption due to the deactivation of SCells shall occur in the subframes (n+5) to (n+11) and (n+20) to (n+26).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCells, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the Cell 2 (SCell1) activation command is sent until a CSI reports with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the Cell 2 (SCell1) deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.42-1: General test parameters for E-UTRAN TDD 3 DL CA activation and deactivation of unknown SCell in non-DRX**

| Parameter   | Unit   | Value   | Comment   |
|---|--|---------|---|
| E-UTRA RF Channel Number                                |  | 1, 2, 3 | Three radio channels are used for this test   |
| Active PCell  |  | Cell 1  | Primary cell on RF channel number 1.  |
| Deconfigured SCell1                                     |  | Cell 2  | Deconfigured secondary cell on RF channel number 2.   |
| Configured deactivated SCell2                           |  | Cell 3  | Configured deactivated secondary cell on RF channel number 3.                               |
| CP length   |  | Normal  |   |
| Special subframe configuration                          |  | 6       | As specified in table 4.2-1 in TS 36.211 [16]. The same configuration applies to all cells. |
| Uplink-downlink configuration                           |  | 1       | As specified in table 4.2-2 in TS 36.211 [16]. The same configuration applies to all cells  |
| DRX   |  | OFF     | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index      |  | 0       | CQI reporting for SCells every UL subframe  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0       | Individual offset for cells on PCC.   |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0       | Individual offset for cells on SCC1.  |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0       | Individual offset for cells on SCC2.  |
| Filter coefficient                                      |  | 0       | L3 filtering is not used  |
| SCell measurement cycle (measCycleSCell)                | ms   | 320     |   |
| T1  | ms   | 100     | During this time the PCell and SCell2 shall be known and the SCell1 configured,             |
| T2  | s  | 1       | During this time the UE shall activate the SCell1 and SCell2.                               |
| T3  | s  | 1       | During this time the UE shall deactivate the SCell1 and SCell2                              |
| Note:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |         |   |

### A.8.16.42.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell1 in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption, or in a subframe (m+13) if the subframes (m+8) and (m+9) were subject to interruption when an intra-band SCell is activated. Whether CSI report in subframe (m+8) and/or (m+9) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8) and/or (m+9).

During T2 the UE shall start sending CSI reports for SCell1 with non-zero CQI index at latest in a subframe (m+39).

During T3 the UE shall stop sending CSI reports for SCell1 at latest in a subframe (n+8).

During T2 interruption of PCell during SCells activation shall not happen outside the subframes (m+5) to (m+11) and outside the subframes (m+20) to (m+26).

During T3 interruption of PCell during SCells deactivation shall not happen outside the subframes (n+5) to (n+11) and outside the subframes (n+20) to (n+26).

The interruption of PCell shall not be more than the values specified for intra-band CA and inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell1 activation delay and SCell1 deactivation delay to be counted as correct. The rate of correct observed SCell1 activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+39) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.43 E-UTRAN TDD-FDD CA activation and deactivation of known SCell in non-DRX with PCell in FDD

### A.8.16.43.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation and PCell is in FDD.

The test parameters are given in Tables A.8.16.43.1-1 and cell-specific parameters in A.8.16.43.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m which is an even number, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+24). The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.43.1-1: General test parameters for known SCell activation case**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1, 2   | Two radio channels are used for this test  |
| Active PCell  |      | Cell 1 | Primary cell on RF channel number 1.   |
| Deconfigured deactivated SCell                          |      | Cell 2 | Deconfigured deactivated secondary cell on RF channel number 2.                  |
| CP length   |      | Normal |  |
| DRX   |      | OFF    | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0      | CQI reporting for SCell every second subframe                                    |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on primary component carrier.                        |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on secondary component carrier.                      |
| SCell measurement cycle (measCycleSCell)                | ms   | 320    |  |
| T1  | s    | 7      | During this time the PCell shall be known and the SCell configured and detected. |
| T2  | s    | 1      | During this time the UE shall activate the SCell.                                |
| T3  | s    | 1      | During this time the UE shall deactivate the SCell.                              |

**Table A.8.16.43.1-2: Cell specific test parameters for E-UTRAN TDD known SCell activation with PCell in FDD**

| Parameter   | Unit  | Cell 1  |    |    | Cell 2  |    |    |

| Note 1:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |    |    |   |    |    |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |   |    |    |   |    |    |
| Note 3:   | Es/lot, RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |   |    |    |   |    |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.   |   |    |    |   |    |    |
| Note 5:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |    |    |   |    |    |

### A.8.16.43.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.8.16.44 E-UTRAN TDD-FDD CA activation and deactivation of unknown SCell in non-DRX with PCell in FDD

#### A.8.16.44.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation and PCell is in FDD.

The test parameters are given in Tables A.8.16.44.1-1 and cell-specific parameters in A.8.16.44.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m which is an even number. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+9).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n which is an even number, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+9).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.44.1-1: General test parameters for unknown SCell activation case**

| Parameter   | Unit | Value  | Comment   |
|---|------|--------|---|
| E-UTRA RF Channel Number                                |      | 1, 2   | Two radio channels are used for this test   |
| Active PCell  |      | Cell 1 | Primary cell on RF channel number 1.  |
| Deconfigured deactivated SCell                          |      | Cell 2 | Deconfigured deactivated secondary cell on RF channel number 2.                       |
| CP length   |      | Normal |   |
| DRX   |      | OFF    | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index      |      | 0      | CQI reporting for SCell every second subframe   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on primary component carrier.                             |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on secondary component carrier.                           |
| SCell measurement cycle (measCycleSCell)                | ms   | 320    |   |
| T1  | ms   | 100    | During this time the PCell shall be known and the SCell configured, but not detected. |
| T2  | s    | 1      | During this time the UE shall activate the SCell.                                     |
| T3  | s    | 1      | During this time the UE shall deactivate the SCell.                                   |

### A.8.16.44.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell (m+8), or in a subframe (m+10) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+34).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+9).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+9).

The interruption of PCell shall not be more than the values specified for inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation and deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+34) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.8.16.45 E-UTRAN TDD-FDD CA activation and deactivation of known SCell in non-DRX with PCell in TDD

#### A.8.16.45.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is known by the UE at the time of activation and PCell is in TDD.

The test parameters are given in Tables A.8.16.45.1-1 and cell-specific parameters in A.8.16.45.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). The UE now starts monitoring also the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a subframe # denoted m, where m is 4 or 9, defines the start of time period T2. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+24). The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+11).

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a subframe # denoted n where n is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+11).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.8.16.45.1-1: General test parameters for known SCell activation case**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1, 2   | Two radio channels are used for this test  |
| Active PCell  |      | Cell 1 | Primary cell on RF channel number 1.   |
| Deconfigured deactivated SCell                          |      | Cell 2 | Deconfigured deactivated secondary cell on RF channel number 2.                  |
| CP length   |      | Normal |  |
| DRX   |      | OFF    | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index      |      | 0      | CQI reporting for SCell every second subframe                                    |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on primary component carrier.                        |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on secondary component carrier.                      |
| SCell measurement cycle (measCycleSCell)                | ms   | 320    |  |
| T1  | s    | 7      | During this time the PCell shall be known and the SCell configured and detected. |
| T2  | s    | 1      | During this time the UE shall activate the SCell.                                |
| T3  | s    | 1      | During this time the UE shall deactivate the SCell.                              |

| Note 3:   | Es/lot, RSRP, SCH_RP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |   |    |    |   |    |    |
| Note 4:   | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.   |   |    |    |   |    |    |
| Note 5:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |    |    |   |    |    |

### A.8.16.45.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+24).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (m+8).

During T2 interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+11).

During T3 interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+11).

The interruption of PCell shall not be more than the values specified for inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+24) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.16.46 E-UTRAN TDD-FDD CA activation and deactivation of unknown SCell in non-DRX with PCell in TDD

### A.8.16.46.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in section 7.7, when the SCell is unknown by the UE at the time of activation and PCell is in FDD.

The test parameters are given in Tables A.8.16.46.1-1 and cell-specific parameters in A.8.16.46.1-2 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell. Cell 1 has constant signal level throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2 (SCC). During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a subframe # denoted m, where m is 4 or 9. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of cell 2 is increased to same level as for cell 1. The UE shall be able to report valid CSI for the activated SCell at latest in subframe (m+34) provided the SCell can be successfully detected on the first attempt. The UE shall start reporting CSI in subframe (m+8) and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the subframes (m+5) to (m+11).

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a subframe # denoted n, where n is 4 or 9, is received at the UE antenna connector. The UE shall carry out deactivation of the SCell at latest in subframe (n+8), and any PCell interruption due to the deactivation shall occur in the subframes (n+5) to (n+11).

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the subframes from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the subframes from the time when the SCell1 deactivation command is sent until CQI reporting for SCell1 is discontinued.

**Table A.8.16.46.1-1: General test parameters for unknown SCell activation case**

| Parameter   | Unit | Value  | Comment   |
|---|------|--------|---|
| E-UTRA RF Channel Number                                |      | 1, 2   | Two radio channels are used for this test   |
| Active PCell  |      | Cell 1 | Primary cell on RF channel number 1.  |
| Deconfigured deactivated SCell                          |      | Cell 2 | Deconfigured deactivated secondary cell on RF channel number 2.                       |
| CP length   |      | Normal |   |
| DRX   |      | OFF    | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index      |      | 0      | CQI reporting for SCell every second subframe   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on primary component carrier.                             |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on secondary component carrier.                           |
| SCell measurement cycle (measCycleSCell)                | ms   | 320    |   |
| T1  | s    | 100    | During this time the PCell shall be known and the SCell configured, but not detected. |
| T2  | s    | 1      | During this time the UE shall activate the SCell.                                     |
| T3  | s    | 1      | During this time the UE shall deactivate the SCell.                                   |

**Table A.8.16.46.1-2: Cell specific test parameters for E-UTRAN FDD unknown SCell activation with PCell in TDD**

| Note 5:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.   |   |    |    |   |   |    |

## A.8.16.46.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in a subframe (m+8), or in a subframe (m+9) if the subframe (m+8) was subject to interruption. Whether CSI report in subframe (m+8) was interrupted or not is checked by monitoring ACK/NACK sent in PCell in subframe (m+8).

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a subframe (m+34).

During T3 the UE shall stop sending CSI reports for SCell at latest in a subframe (n+8).

During T2 Interruption of PCell during SCell activation shall not happen outside the subframes (m+5) to (m+11).

During T3 Interruption of PCell during SCell deactivation shall not happen outside the subframes (n+5) to (n+11).

The interruption of PCell shall not be more than the values specified for inter-band CA in Section 7.8.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation and deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a subframe (m+34) then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

## A.8.17 RSTD Measurements for E-UTRAN Carrier Aggregation

### A.8.17.1 E-UTRAN FDD RSTD measurement reporting delay test case

#### A.8.17.1.1 Test Purpose and Environment

The purpose of the test case is to verify that the RSTD measurements meet the requirements specified in Clause 8.4 in a synchronized network environment with fading propagation conditions. This test case will verify the measurement period requirements specified in Clause 8.4.3 for RSTD measurements performed on the secondary component carrier and also the measurement period requirements for RSTD measurements performed on both the primary and secondary component carriers specified in Clause 8.4.4.

In the tests, there are two configured component carriers: PCC and SCC, and three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is PCell on the PCC, Cell 2 is an active SCell on the SCC, and Cell 3 is a neighbour cell on the SCC. In all tests, Cell 2 is the OTDOA assistance data reference cell.

The test case includes two tests. Test 1 is designed for the scenario where the UE receives OTDOA assistance data with cells on SCC, and the UE is expected to report RSTD measurements performed on SCC only. Test 2 is designed for the scenario where the UE receives OTDOA assistance data with cells on PCC and SCC, and the UE is expected to report RSTD measurements performed on PCC and on SCC.

Each test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 is active only in T2 and T3, and Cell 3 is active only during T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the OTDOA assistance data reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.17.1.1-1, Table A.8.17.1.1-2, Table A.8.17.1.1-3 and Table A.8.17.1.1-4.

**Table A.8.17.1.1-1: General test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter   | Unit    | Value   |   | Comment   |
|---|---------|---|---|---|
|   |         | Test 1  | Test 2  |   |
| PCell   |         | Cell 1  |   | PCell is on RF channel 1 (PCC).   |
| SCell   |         | Cell 2  |   | SCell on RF channel 2 (SCC). Cell 2 is the assistance data reference cell.  |
| Other neighbor cell   |         | Cell 3  |   | Neighbor cell on RF channel 2 (SCC).  |
| PCFICH/PDCCH/PHICH parameters   |         | DL Reference Measurement Channel R.6 FDD  |   | As specified in clause A.3.1.2.1  |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |   |   |
| PRS Transmission Bandwidth  | RB      | 50  |   | PRS are transmitted over the system bandwidth   |
| PRS configuration index $I_{PRS}$   |         | 171 for all cells on PCC<br>181 for all cells on SCC                            |   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1   |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |         | 1   |   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion   |
| Physical cell ID PCI  |         | (PCI of Cell 2 – PCI of Cell 3) mod 6 = 0                                       |   | The PCI of Cell 1 is selected randomly. PCIs of Cell 2 and Cell 3 are selected randomly such that the relative subcarrier shifts of PRS patterns among these cells are as given by the condition  |
| CP length   |         | Normal  |   |   |
| DRX   |         | ON  |   | DRX parameters are further specified in Table A.8.17.1.1-3  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu s$ | Cell 1 to Cell 2: 1<br>Cell 3 to Cell 2: -1                                     |   | PRS are transmitted from synchronous cells  |
| Time alignment error between cell2 and cell1                                  | $\mu s$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. |   | The value of time alignment error depends upon the type of carrier aggregation.   |
| Expected RSTD   | $\mu s$ | Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3                   | Cell 1: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3                       | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator   |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu s$ | 5   |   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| Cells in OTDOA assistance data  |         | 16 cells in total   |   | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. Cell 1 (when included) appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 3 always appears at random places in the second half of the list. |
|   |         | OTDOA neighbor cells include Cell 3 and other 14 cells on SCC                   | OTDOA neighbor cells include Cell 1 and other 7 cells on PCC, and Cell 3 and other 6 cells on SCC |   |

|                    |   |   |   |  |
|--------------------|---|---|---|--|
| prs-SubframeOffset |   | Cells on PCC: 310<br>Cells on SCC, except reference cell: 0             |   | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset   |   | Cells on PCC: 0<br>Cells on SCC, except reference cell: 0               |   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24]. |
| PRS muting info    |   | Cell 1:<br>'11110000'<br>Cell 2:<br>'00001111'<br>Cell 3:<br>'11110000' | Cell 1:<br>'1111111100000000'<br>Cell 2:<br>'0000000011111111'<br>Cell 3:<br>'1111111100000000' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]  |
| T1                 | s | 3   |   | The length of the time interval from the beginning of each test  |
| T2                 | s | 1.28  | 2.48  | The length of the time interval that follows immediately after time interval T1  |
| T3                 | s | 1.28  | 2.48  | The length of the time interval that follows immediately after time interval T2  |

**Table A.8.17.1.1-2: Cell-specific test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions during T1 for carrier aggregation**

| Parameter   | Unit       | Cell 1    | Cell 2    | Cell 3    |

| shortDRX                 | Disable |   |

### A.8.17.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.4.

In Test 1, the UE shall perform and report the RSTD measurements from Cell 2 and Cell 3 within 2560 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements from Cell 1 and Cell 2, and RSTD measurements from Cell 2 and Cell 3 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement times in the tests are derived from the following expression,

$$T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil,$$

where  $M = 8$  and  $n = 16$  for Test 1, and  $M = 16$  and  $n = 16$  for Test 2. For Test 1, the  $M$  and  $n$  parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1, which gives the total RSTD measurement time of 2560 ms for Cell 3 with respect to the reference cell Cell 2. For Test 2, the  $M$  and  $n$  parameters are specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 1, which gives the total RSTD measurement time of 4960 ms for reporting the RSTD measurements of Cell 1 and Cell 3 with respect to the reference cell Cell 2.

## A.8.17.2 E-UTRAN TDD RSTD measurement reporting delay test case

### A.8.17.2.1 Test Purpose and Environment

The purpose of the test case is to verify that the RSTD measurements meet the requirements specified in Clause 8.4 in a synchronized network environment with fading propagation conditions. This test case will verify the measurement period requirements specified in Clause 8.4.3 for RSTD measurements performed on the secondary component carrier and also the measurement period requirements for RSTD measurements performed on both the primary and secondary component carriers specified in Clause 8.4.4.

In the tests, there are two configured component carriers: PCC and SCC, and three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is PCell on the PCC, Cell 2 is an active SCell on the SCC, and Cell 3 is a neighbour cell on the SCC. In all tests, Cell 2 is the OTDOA assistance data reference cell.

The test case includes two tests. Test 1 is designed for the scenario where the UE receives OTDOA assistance data with cells on SCC, and the UE is expected to report RSTD measurements performed on SCC only. Test 2 is designed for the scenario where the UE receives OTDOA assistance data with cells on PCC and SCC, and the UE is expected to report RSTD measurements performed on PCC and on SCC.

Each test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, whilst Cell 2 is active only in T2 and T3, and Cell 3 is active only during T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the OTDOA assistance data reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, while Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.17.2.1-1, Table A.8.17.2.1-2, Table A.8.17.2.1-3 and Table A.8.17.2.1-4.

**Table A.8.17.2.1-1: General test parameters for E-UTRAN TDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter   | Unit    | Value   |   | Comment  |
|---|---------|---|---|--|
|   |         | Test 1  | Test 2  |  |
| PCell   |         | Cell 1  |   | PCell is on RF channel 1 (PCC).  |
| SCell   |         | Cell 2  |   | SCell on RF channel 2 (SCC). Cell 2 is the assistance data reference cell.   |
| Other neighbor cell   |         | Cell 3  |   | Neighbor cell on RF channel 2 (SCC).   |
| PCFICH/PDCCH/PHICH parameters   |         | DL Reference Measurement Channel R.6 TDD  |   | As specified in clause A.3.1.2.2   |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |   |  |
| PRS Transmission Bandwidth  | RB      | 50  |   | PRS are transmitted over the system bandwidth  |
| PRS configuration index $I_{PRS}$   |         | 174 for all cells on PCC<br>184 for all cells on SCC                            |   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| Number of consecutive downlink positioning subframes $N_{PRS}$                |         | 1   |   | As defined in TS 36.211 [16]. The number of subframes in a positioning occasion  |
| Physical cell ID PCI  |         | (PCI of Cell 2 – PCI of Cell 3)mod6=0   |   | The PCI of Cell 1 is selected randomly. PCIs of Cell 2 and Cell 3 are selected randomly such that the relative subcarrier shifts of PRS patterns among these cells are as given by the condition |
| TDD uplink-downlink configuration   |         | 1   |   | As specified in TS 36.211 [16], Clause 4.2; corresponds to a configuration with 5 ms switch-point periodicity and two downlink consecutive subframes   |
| TDD special subframe configuration  |         | 6   |   | As specified in TS 36.211 [16], Clause 4.2; corresponds to DwPTS of $19760 \cdot T_s$ and UpPTS of $4384 \cdot T_s$  |
| CP length   |         | Normal  |   |  |
| DRX   |         | ON  |   | DRX parameters are further specified in Table A.8.17.2.1-3   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu s$ | Cell 1 to Cell 2: 1<br>Cell 3 to Cell 2: -1                                     |   | PRS are transmitted from synchronous cells   |
| Time alignment error between cell2 and cell1                                  | $\mu s$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. |   | The value of time alignment error depends upon the type of carrier aggregation.  |
| Expected RSTD   | $\mu s$ | Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3                   | Cell 1: -2<br>Cell 3: 2<br>Other neighbour cells: randomly between -3 and 3 | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator                        |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu s$ | 5   |   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index   |
| Cells in OTDOA  |         | 16 cells in total   |   | The list includes the reference  |

|                    |   |   |   |  |
|--------------------|---|---|---|--|
| assistance data    |   | OTDOA neighbor cells include Cell 3 and other 14 cells on SCC           | OTDOA neighbor cells include Cell 1 and other 7 cells on PCC, and Cell 3 and other 6 cells on SCC | cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24].<br>Cell 1 (when included) appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 3 always appears at random places in the second half of the list. |
| prs-SubframeOffset |   | Cells on PCC: 310<br>Cells on SCC, except reference cell: 0             |   | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset   |   | Cells on PCC: 0<br>Cells on SCC, except reference cell: 0               |   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24].   |
| PRS muting info    |   | Cell 1:<br>'11110000'<br>Cell 2:<br>'00001111'<br>Cell 3:<br>'11110000' | Cell 1:<br>'1111111100000000'<br>Cell 2:<br>'0000000011111111'<br>Cell 3:<br>'1111111100000000'   | Correponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1                 | s | 3   |   | The length of the time interval from the beginning of each test  |
| T2                 | s | 1.28  | 2.48  | The length of the time interval that follows immediately after time interval T1  |
| T3                 | s | 1.28  | 2.48  | The length of the time interval that follows immediately after time interval T2  |

| Drx-InactivityTimer      | psf1    |   |
| drx-RetransmissionTimer  | sf1     |   |
| longDRX-CycleStartOffset | sf320   |   |
| shortDRX                 | Disable |   |

### A.8.17.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.4.

In Test 1, the UE shall perform and report the RSTD measurements from Cell 2 and Cell 3 within 2560 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements from Cell 1 and Cell 2, and RSTD measurements from Cell 2 and Cell 3 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement times in the tests are derived from the following expression,

$$T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil,$$

where  $M = 8$  and  $n = 16$  for Test 1, and  $M = 16$  and  $n = 16$  for Test 2. For Test 1, the  $M$  and  $n$  parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1, which gives the total RSTD measurement time of 2560 ms for Cell 3 with respect to the reference cell Cell 2. For Test 2, the  $M$  and  $n$  parameters are specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 1, which gives the total RSTD measurement time of 4960 ms for reporting the RSTD measurements of Cell 1 and Cell 3 with respect to the reference cell Cell 2.

### A.8.17.3 E-UTRAN FDD RSTD Measurement Reporting Test Case for 20 MHz

#### A.8.17.3.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.1.1.

The parameters of this test are the same as defined in Subclause A.8.17.1.1 except that the values of the parameters in Table A.8.17.3.1-1, Table A.8.17.3.1-2 and Table A.8.17.3.1-1 will replace the values of the corresponding parameters in Table A.8.17.1.1-1, Table A.8.17.1.1-2 and Table A.8.17.1.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

**Table A.8.17.3.1-1: General test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

### A.8.17.3.2 Test Requirements

The test requirements defined in section A.8.17.1.2 shall apply in this test case.

## A.8.17.4 E-UTRAN TDD RSTD Measurement Reporting Test Case for 20 MHz

### A.8.17.4.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.2.1.

The parameters of this test are the same as defined in Subclause A.8.17.2.1 except that the values of the parameters in Table A.8.17.4.1-1, Table A.8.17.4.1-2 and Table A.8.17.4.1-1 will replace the values of the corresponding parameters in Table A.8.17.2.1-1, Table A.8.17.2.1-2 and Table A.8.17.2.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

## A.8.17.4.2 Test Requirements

The test requirements defined in section A.8.17.2.2 shall apply in this test case.

## A.8.17.5 E-UTRAN FDD RSTD Measurement Reporting Test Case for 10MHz+5MHz

### A.8.17.5.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.1.1.

The parameters of this test are the same as defined in Subclause A.8.17.1.1 except that the values of the parameters in Table A.8.17.5.1-1, Table A.8.17.5.1-2 and Table A.8.17.5.1-1 will replace the values of the corresponding parameters in Table A.8.17.1.1-1, Table A.8.17.1.1-2 and Table A.8.17.1.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

## A.8.17.5.2 Test Requirements

The test requirements defined in section A.8.17.1.2 shall apply in this test case.

## A.8.17.6 E-UTRAN TDD RSTD Measurement Reporting Test Case for 10MHz+5MHz

### A.8.17.6.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.2.1.

The parameters of this test are the same as defined in Subclause A.8.17.2.1 except that the values of the parameters in Table A.8.17.6.1-1, Table A.8.17.6.1-2 and Table A.8.17.6.1-3 will replace the values of the corresponding parameters in Table A.8.17.2.1-1, Table A.8.17.2.1-2 and Table A.8.17.2.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

## A.8.17.6.2 Test Requirements

The test requirements defined in section A.8.17.2.2 shall apply in this test case.

## A.8.17.7 E-UTRAN FDD RSTD Measurement Reporting Test Case for 5 + 5 MHz Bandwidth

### A.8.17.7.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.1.1.

The parameters of this test are the same as defined in Subclause A.8.17.1.1 except that the values of the parameters in Table A.8.17.7.1-1, Table A.8.17.7.1-2 and Table A.8.17.7.1-3 will replace the values of the corresponding parameters in Table A.8.17.1.1-1, Table A.8.17.1.1-2 and Table A.8.17.1.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

**Table A.8.17.7.1-1: General test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter  | Unit | Value                                     |        | Comment                                       |
|--|------|---|--------|---|

### A.8.17.7.2 Test Requirements

The test requirements defined in section A.8.17.1.2 shall apply in this test case.

## A.8.17.8 E-UTRAN TDD RSTD Measurement Reporting Test Case for 5+5 MHz bandwidth

### A.8.17.8.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.2.1.

The parameters of this test are the same as defined in Subclause A.8.17.2.1 except that the values of the parameters in Table A.8.17.8.1-1, Table A.8.17.8.1-2 and Table A.8.17.8.1-3 will replace the values of the corresponding parameters in Table A.8.17.2.1-1, Table A.8.17.2.1-2 and Table A.8.17.2.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

**Table A.8.17.8.1-1: General test parameters for E-UTRAN TDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter  | Unit | Value                                     |        | Comment                                       |

### A.8.17.8.2 Test Requirements

The test requirements defined in section A.8.17.2.2 shall apply in this test case.

### A.8.17.9 E-UTRAN TDD RSTD Measurement Reporting Test Case for 20MHz+10MHz

#### A.8.17.9.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.8.17.2.1.

The parameters of this test are the same as defined in Subclause A.8.17.2.1 except that the values of the parameters in Table A.8.17.9.1-1, Table A.8.17.9.1-2 and Table A.8.17.9.1-1 will replace the values of the corresponding parameters in Table A.8.17.2.1-1, Table A.8.17.2.1-2 and Table A.8.17.2.1-3, respectively.

Note: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

## A.8.17.9.2 Test Requirements

The test requirements defined in section A.8.17.2.2 shall apply in this test case.

## A.8.17.10 E-UTRAN 3 DL FDD CA RSTD Measurement Reporting Delay Test Case

### A.8.17.10.1 Test Purpose and Environment

The purpose of the test case is to verify that the RSTD measurements meet the requirements specified in Clause 8.4 in a synchronized network environment with fading propagation conditions. This test case will verify the measurement period requirements specified in Clause 8.4.3 for RSTD measurements performed on the same secondary component carrier, the measurement period requirements for RSTD measurements performed on both the primary and secondary component carriers specified in Clause 8.4.4, and also the measurement period requirements for RSTD measurements performed on different secondary component carriers specified in Clause 8.4.5.

In the tests, there are three configured component carriers: PCC, SCC1 and SCC2, and four synchronous cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the PCC, Cell 2 is SCell on the SCC1, Cell 3 is SCell on the SCC2 and Cell 4 is a neighbour cell on the SCC2. In all tests, Cell 3 is the OTDOA assistance data reference cell.

The test case includes two tests. Test 1 is designed for the scenario where the UE receives OTDOA assistance data with cells only on SCC2, and the UE is expected to report RSTD measurements performed on SCC2 only. Test 2 is designed for the scenario where the UE receives OTDOA assistance data with cells on PCC, SCC1 and SCC2, and the UE is expected to report RSTD measurements performed on PCC, SCC1 and SCC2.

Each test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, Cell 2 is active only in T2 and T3, Cell 3 is active only during T2 and T3, and Cell 4 is active only during T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the OTDOA assistance data reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T3, and Cell 4 transmits PRS only in T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.17.10.1-1, Table A.8.17.10.1-2, Table A.8.17.10.1-3 and Table A.8.17.10.1-4.

**Table A.8.17.10.1-1: General test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter   | Unit          | Value  |   | Comment  |
|---|---------------|--|---|--|
|   |               | Test 1   | Test 2  |  |
| PCell   |               | Cell 1   |   | PCell is on RF channel 1 (PCC).  |
| SCell 1   |               | Cell 2   |   | SCell 1 on RF channel 2 (SCC1).  |
| SCell 2   |               | Cell 3   |   | SCell 2 on RF channel 3 (SCC2). Cell 3 is the assistance data reference cell.  |
| Other neighbor cell   |               | Cell 4   |   | Neighbor cell on RF channel 3 (SCC2).  |
| PRS configuration index $I_{PRS}$   |               | 171 for all cells on PCC<br>181 for all cells on SCC1<br>191 for all cells on SCC2 |   | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| Physical cell ID PCI  |               | $(\text{PCI of Cell 3} - \text{PCI of Cell 4}) \bmod 6 = 0$                        |   | The PCIs of Cell 1 and Cell 2 are selected randomly. PCIs of Cell 3 and Cell 4 are selected randomly such that the relative subcarrier shifts of PRS patterns among these cells are as given by the condition  |
| CP length   |               | Normal   |   |  |
| DRX   |               | ON   |   | DRX parameters are further specified in Table A.8.17.10.1-3  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 1 to Cell 3: 1<br>Cell 2 to Cell 3: -1<br>Cell 4 to Cell 3: 3                 |   | PRS are transmitted from synchronous cells   |
| Time alignment errors between cell1, cell2 and cell3                          | $\mu\text{s}$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1.    |   | The value of time alignment error depends upon the type of carrier aggregation.  |
| Expected RSTD   | $\mu\text{s}$ | Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3                      | Cell 1: -2<br>Cell 2: 0<br>Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3  | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator  |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu\text{s}$ | 5  |   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index   |
| Cells in OTDOA assistance data  |               | 16 cells in total  |   | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. Cell 1 and Cell 2 (when included) appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 4 always appears at random places in the second half of the list. |
|   |               | OTDOA neighbor cells include Cell 4 and other 14 cells on SCC2                     | OTDOA neighbor cells include Cell 1 and other 3 cells on PCC, Cell 2 and other 3 cells on SCC1 and Cell 4 and other 6 cells on SCC2 |  |
| prs-SubframeOffset  |               | Cells on PCC: 300<br>Cells on SCC1: 310<br>Cells on SCC2, except reference cell: 0 |   | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |

|                  |   |  |   |  |
|------------------|---|--|---|--|
| slotNumberOffset |   | Cells on PCC: 0<br>Cells on SCC1: 0<br>Cells on SCC2, except reference cell: 0                   |   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24]. |
| PRS muting info  |   | Cell 1:<br>'11110000'<br>Cell 2:<br>'00001111'<br>Cell 3:<br>'11110000'<br>Cell 4:<br>'00001111' | Cell 1:<br>'1111111100000000'<br>Cell 2:<br>'0000000011111111'<br>Cell 3:<br>'1111111100000000'<br>Cell 4:<br>0000000011111111' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]  |
| T1               | s | 3  |   | The length of the time interval from the beginning of each test  |
| T2               | s | 1.28   | 2.48  | The length of the time interval that follows immediately after time interval T1  |
| T3               | s | 1.28   | 2.48  | The length of the time interval that follows immediately after time interval T2  |

**Table A.8.17.10.1-2: Cell-specific test parameters for E-UTRAN FDD RSTD measurement reporting delay under fading propagation conditions during T1 for carrier aggregation**

| Parameter   | Unit           | Cell 1   | Cell 2    | Cell 3    | Cell 4    |
|---|----------------|--|-----------|-----------|-----------|

### A.8.17.10.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.4.

In Test 1, the UE shall perform and report the RSTD measurements from Cell 4 and Cell 3 within 2560 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements from Cell 1 and Cell 3, RSTD measurements from Cell 2 and Cell 3, and RSTD measurements from Cell 4 and Cell 3 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement times in the tests are derived from the following expression,

$$T_{PRS}(M-1) + 160 \left\lceil \frac{n}{M} \right\rceil,$$

where  $M=8$  and  $n=16$  for Test 1, and  $M=16$  and  $n=16$  for Test 2. For Test 1, the  $M$  and  $n$  parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1, which gives the total RSTD measurement time of 2560 ms for Cell 4 with respect to the reference cell Cell 3. For Test 2, the  $M$  and  $n$  parameters are specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 1, which gives the total RSTD measurement time of 4960 ms for reporting the RSTD measurements of Cell 1, Cell 2 and Cell 4 with respect to the reference cell Cell 3.

## A.8.17.11 E-UTRAN 3 DL TDD CA RSTD Measurement Reporting Delay Test Case

### A.8.17.11.1 Test Purpose and Environment

The purpose of the test case is to verify that the RSTD measurements meet the requirements specified in Clause 8.4 in a synchronized network environment with fading propagation conditions. This test case will verify the measurement period requirements specified in Clause 8.4.3 for RSTD measurements performed on the same secondary component carrier, the measurement period requirements for RSTD measurements performed on both the primary and secondary component carriers specified in Clause 8.4.4, and also the measurement period requirements for RSTD measurements performed on different secondary component carriers specified in Clause 8.4.5.

In the tests, there are three configured component carriers: PCC, SCC1 and SCC2, and four synchronous cells: Cell 1, Cell 2, Cell 3 and Cell 4. Cell 1 is PCell on the PCC, Cell 2 is SCell on the SCC1, Cell 3 is SCell on the SCC2 and Cell 4 is a neighbour cell on the SCC2. In all tests, Cell 3 is the OTDOA assistance data reference cell.

The test case includes two tests. Test 1 is designed for the scenario where the UE receives OTDOA assistance data with cells only on SCC2, and the UE is expected to report RSTD measurements performed on SCC2 only. Test 2 is designed for the scenario where the UE receives OTDOA assistance data with cells on PCC, SCC1 and SCC2, and the UE is expected to report RSTD measurements performed on PCC, SCC1 and SCC2.

Each test consists of three consecutive time intervals, with duration of T1, T2 and T3. Cell 1 is active in T1, T2 and T3, Cell 2 is active only in T2 and T3, Cell 3 is active only during T2 and T3, and Cell 4 is active only during T2. The beginning of the time interval T2 shall be aligned with the first PRS positioning subframe of a positioning occasion in the OTDOA assistance data reference cell, where the PRS positioning occasion is as defined in Clause 8.1.2.5.1. Cell 1 transmits PRS in T2, Cell 2 transmits PRS only in T3, and Cell 3 transmits PRS only in T3, and Cell 4 transmits PRS only in T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE during T1. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

The test parameters are as given in Table A.8.17.11.1-1, Table A.8.17.11.1-2, Table A.8.17.11.1-3 and Table A.8.17.11.1-4.

**Table A.8.17.11.1-1: General test parameters for E-UTRAN TDD RSTD measurement reporting delay under fading propagation conditions for carrier aggregation**

| Parameter | Unit | Value  |        | Comment |
|-----------|------|--------|--------|---------|
|           |      | Test 1 | Test 2 |         |
|           |      |        |        |         |

|   |               |  |   |   |
|---|---------------|--|---|---|
| PCell   |               | Cell 1   | PCell is on RF channel 1 (PCC).   |   |
| SCell 1   |               | Cell 2   | SCell 1 on RF channel 2 (SCC1).   |   |
| SCell 2   |               | Cell 3   | SCell 2 on RF channel 3 (SCC2).<br>Cell 3 is the assistance data reference cell.  |   |
| Other neighbor cell   |               | Cell 4   | Neighbor cell on RF channel 3 (SCC2).   |   |
| Channel Bandwidth (BW <sub>channel</sub> )                                    | MHz           | 5MHz or 10MHz or 20MHz   | All channels in a test have the same bandwidth.   |   |
| PRS configuration index $I_{PRS}$   |               | 174 for all cells on PCC<br>184 for all cells on SCC1<br>194 for all cells on SCC2 | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1   |   |
| Physical cell ID PCI  |               | (PCI of Cell 3 – PCI of Cell 4) mod 6 = 0  | The PCIs of Cell 1 and Cell 2 are selected randomly. PCIs of Cell 3 and Cell 4 are selected randomly such that the relative subcarrier shifts of PRS patterns among these cells are as given by the condition |   |
| TDD uplink-downlink configuration   |               | 1  | As specified in TS 36.211 [16], Clause 4.2; corresponds to a configuration with 5 ms switch-point periodicity and two downlink consecutive subframes  |   |
| TDD special subframe configuration  |               | 6  | As specified in TS 36.211 [16], Clause 4.2; corresponds to DwPTS of $19760 \cdot T_s$ and UpPTS of $4384 \cdot T_s$ .   |   |
| CP length   |               | Normal   |   |   |
| DRX   |               | ON   | DRX parameters are further specified in Table A.8.17.11.1-3   |   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 1 to Cell 3: 1<br>Cell 2 to Cell 3: -1<br>Cell 4 to Cell 3: 3                 | PRS are transmitted from synchronous cells  |   |
| Time alignment errors among cell1, cell2 and cell3                            | $\mu\text{s}$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1.    | The value of time alignment error depends upon the type of carrier aggregation.   |   |
| Expected RSTD   | $\mu\text{s}$ | Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3                      | Cell 1: -2<br>Cell 2: 0<br>Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3  | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator |
| Expected RSTD uncertainty for all neighbour cells                             | $\mu\text{s}$ | 5  | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |   |
| Cells in OTDOA  |               | 16 cells in total  | The list includes the reference cell  |   |

|                    |   |  |   |   |
|--------------------|---|--|---|---|
| assistance data    |   | OTDOA neighbor cells include Cell 4 and other 14 cells on SCC2                                   | OTDOA neighbor cells include Cell 1 and other 3 cells on PCC, Cell 2 and other 3 cells on SCC1 and Cell 4 and other 6 cells on SCC2           | (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. Cell 1 and Cell 2 (when included) appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 4 always appears at random places in the second half of the list. |
| prs-SubframeOffset |   | Cells on PCC: 300<br>Cells on SCC1: 310<br>Cells on SCC2, except reference cell: 0               |   | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]  |
| slotNumberOffset   |   | Cells on PCC: 0<br>Cells on SCC1: 0<br>Cells on SCC2, except reference cell: 0                   |   | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24].  |
| PRS muting info    |   | Cell 1:<br>'11110000'<br>Cell 2:<br>'00001111'<br>Cell 3:<br>'11110000'<br>Cell 4:<br>'00001111' | Cell 1:<br>'1111111000<br>00000'<br>Cell 2:<br>'00000000111<br>11111'<br>Cell 3:<br>'1111111000<br>00000'<br>Cell 4:<br>000000001111<br>1111' | Corresponds to prs-MutingInfo defined in TS 36.355 [24]   |
| T1                 | s | 3  |   | The length of the time interval from the beginning of each test   |
| T2                 | s | 1.28   | 2.48  | The length of the time interval that follows immediately after time interval T1   |
| T3                 | s | 1.28   | 2.48  | The length of the time interval that follows immediately after time interval T2   |

|--------------------------|---------|--|
| onDurationTimer          | psf1    | As specified in<br>TS 36.331 [2], Clause 6.3.2 |
| Drx-InactivityTimer      | psf1    |  |
| drx-RetransmissionTimer  | sf1     |  |
| longDRX-CycleStartOffset | sf320   |  |
| shortDRX                 | Disable |  |

### A.8.17.11.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 8.4.

In Test 1, the UE shall perform and report the RSTD measurements from Cell 4 and Cell 3 within 2560 ms starting from the beginning of time interval T2.

In Test 2, the UE shall perform and report the RSTD measurements from Cell 1 and Cell 3, RSTD measurements from Cell 2 and Cell 3, and RSTD measurements from Cell 4 and Cell 3 within 4960 ms starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 9.1.10.3, i.e., between RSTD\_0000 and RSTD\_12711.

NOTE: The RSTD measurement times in the tests are derived from the following expression,

$$T_{PRS} (M - 1) + 160 \left\lceil \frac{n}{M} \right\rceil,$$

where  $M=8$  and  $n=16$  for Test 1, and  $M=16$  and  $n=16$  for Test 2. For Test 1, the  $M$  and  $n$  parameters specified in Clause 8.1.2.5.1, Table 8.1.2.5.1-1, under Note 1, which gives the total RSTD measurement time of 2560 ms for Cell 4 with respect to the reference cell Cell 3. For Test 2, the  $M$  and  $n$  parameters are specified in Clause 8.1.2.6.1, Table 8.1.2.6.1-1, under Note 1, which gives the total RSTD measurement time of 4960 ms for reporting the RSTD measurements of Cell 1, Cell 2 and Cell 4 with respect to the reference cell Cell 3.

## A.8.18 E-UTRAN TDD – HRPD Measurements

### A.8.18.1 E-UTRAN TDD-HRPD event triggered reporting under fading propagation conditions

#### A.8.18.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- HRPD cell search requirements in clause 8.1.2.4.12.

The test parameters are given in Tables A.8.18.1.1-1, A.8.18.1.1-2 and A.8.18.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.18.1.1-1: General test parameters for E-UTRAN TDD to HRPD event triggered reporting under fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment  |

| Propagation Condition                         |                | ETU70         |    |

### A.8.18.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 2134 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.19 E-UTRAN TDD – CDMA2000 1X Measurements

### A.8.19.1 E-UTRAN TDD – CDMA2000 1X event triggered reporting under fading propagation conditions

#### A.8.19.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN TDD- CDMA2000 1X cell search requirements in clause 8.1.2.4.10.

The test parameters are given in Tables A.8.19.1.1-1, A.8.19.1.1-2 and A.8.19.1.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.19.1.1-1: General test parameters for E-UTRAN TDD-CDMA2000 1X event triggered reporting in fading propagation conditions**

| Parameter   | Unit | Value                                    | Comment  |

| Propagation Condition                          |                | ETU70                |     |

### A.8.19.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 2134 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{TTIDCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.20 Inter-frequency/RAT Measurements in CA mode

### A.8.20.1 E-UTRAN FDD-FDD Inter-frequency event triggered reporting under fading propagation conditions in asynchronous cells

It is not necessary for CA UEs to be tested in A.8.3.1 if this case is done.

#### A.8.20.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD-FDD inter-frequency cell search requirements in clause 8.1.2.3.

The test parameters are given in Tables A.8.20.1.1-1 and A.8.20.1.1-2. In this test, there are three cells on different carrier frequencies and gap pattern configuration # 0 as defined in Table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.20.1.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                    | Unit    | Value   | Comment   |
|--|---------|---|---|
| PDSCH parameters                             |         | DL Reference Measurement Channel R.0 FDD  | As specified in clause A.3.1.1.1  |
| PCFICH/PDCCH/PHICH parameters                |         | DL Reference Measurement Channel R.6 FDD  | As specified in clause A.3.1.2.1  |
| E-UTRA RF Channel Number                     |         | 1, 2  | Two FDD carrier frequencies are used.   |
| E-UTRA RF Channel Number for Scell           |         | 3   | One FDD carrier frequencies is used   |
| Channel Bandwidth (BW/channel)               | MHz     | 10  |   |
| Active cell                                  |         | Cell 1  | Cell 1 is on RF channel number 1  |
| Neighbour cell                               |         | Cell 2  | Cell 2 is on RF channel number 2  |
| Configured active Scell                      |         | Cell 3  | Cell 3 is on RF channel number 3  |
| Gap Pattern Id                               |         | 0   | As specified in TS 36.133 clause 8.1.2.1.                                       |
| A3-Offset                                    | dB      | -6  |   |
| Hysteresis                                   | dB      | 0   |   |
| CP length                                    |         | Normal  |   |
| TimeToTrigger                                | s       | 0   |   |
| Filter coefficient                           |         | 0   | L3 filtering is not used  |
| DRX  |         | OFF   | OFF   |
| Cell2 timing offset to cell1                 | ms      | 3   | Asynchronous cells  |
| Cell3 timing offset to cell1                 | $\mu$ s | 0   | Synchronous cells   |
| Time alignment error between cell3 and cell1 | $\mu$ s | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1   | s       | 5   |   |
| T2   | s       | 5   |   |

They are not settable parameters themselves.</p> |            |          |     |           |     |          |     |

### A.8.20.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 3840 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.20.2 E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells

It is not necessary for CA UEs to be tested in A.8.4.1 if this case is done.

### A.8.20.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD-TDD inter-frequency cell search requirements in clause 8.1.2.3.4.

The test parameters are given in Table A.8.20.2.1-1 and A.8.20.2.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.20.2.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting in fading propagation conditions**

| Parameter                                    | Unit    | Value   | Comment   |
|--|---------|---|---|
| PDSCH parameters                             |         | DL Reference Measurement Channel R.0 TDD  | As specified in clause A.3.1.1.2  |
| PCFICH/PDCCH/PHICH parameters                |         | DL Reference Measurement Channel R.6 TDD  | As specified in clause A.3.1.2.2  |
| Gap Pattern Id                               |         | 1   | As specified in TS 36.133 clause 8.1.2.1.                                       |
| Special subframe configuration               |         | 6   | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells  |
| Uplink-downlink configuration                |         | 1   | As specified in TS 36.211 clause 4.2 Table 4.2-2                                |
| CP length                                    |         | Normal  |   |
| E-UTRA RF Channel Number                     |         | 1, 2  | Two TDD carrier frequencies are used.   |
| E-UTRA RF Channel Number for Scell           |         | 3   | One TDD carrier frequencies is used   |
| Channel Bandwidth ( $BW_{channel}$ )         | MHz     | 10  |   |
| Active cell                                  |         | Cell 1  | Cell 1 is on RF channel number 1  |
| Neighbour cell                               |         | Cell 2  | Cell 2 is on RF channel number 2  |
| Configured active Scell                      |         | Cell 3  | Cell 3 is on RF channel number 3  |
| A3-Offset                                    | dB      | -6  |   |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{\text{oc}}</math> to be fulfilled.</p> <p>Note 4: RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |          |     |           |     |          |     |

### A.8.20.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 7680 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.20.2A E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for 20 MHz +20 MHz bandwidth.

### A.8.20.2A.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.20.2. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8.20.2A.1-1 and A.8.20.2A.1-2 will replace the values of corresponding parameters in Tables A.8.20.2.1-1 and A.8.20.2.1-2.

**Table A.8.20.2A.1-1: General test parameters for E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for 20 MHz +20 MHz bandwidth**

| Parameter  | Unit | Value                                     | Comment                          |
|--|------|---|----------------------------------|

| Note 1: See Table A.8.20.2.1-1 for other general test parameters. |      |          |    |          |    |          |    |

### A.8.20.2A.2 Test Requirements

The test requirements defined in section A.8.20.2.2 shall apply to this test case.

## A.8.20.2B E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for 20 MHz +10 MHz bandwidth.

### A.8.20.2B.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.8.20.2.

The test parameters are given in Tables A.8.20.2B.1-1 and A.8.20.2B.1-2 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.20.2B.1-1: General test parameters for E-UTRAN TDD-TDD Inter-frequency event triggered reporting under fading propagation conditions in synchronous cells for 20 MHz +10 MHz bandwidth**

| Parameter  | Unit | Value  | Comment   |
|--|------|--|---|
| Gap Pattern Id   |      | 1  | As specified in TS 36.133 clause 8.1.2.1.   |

## A.8.20.2B.2 Test Requirements

The test requirements defined in section A.8.20.2.2 shall apply to this test case.

## A.8.20.3 E-UTRAN FDD - UTRAN FDD event triggered reporting under fading propagation conditions

It is not necessary for CA UEs to be tested in A.8.5.1 if this case is done.

### A.8.20.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRAN FDD- UTRAN FDD cell search requirements in clause 8.1.2.4.1.

The test parameters are given in Tables A.8.20.3.1-1, A.8.20.3.1-2 and A.8.20.3.1-3 below. In the measurement control information it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

| Propagation Condition   |              | Case 5 (Note 3) |      |
| Note 1: The DPCH level is controlled by the power control loop.   |              |                 |      |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> |              |                 |      |
| Note3: Case 5 propagation conditions are defined in Annex A of 3GPP TS 25.101.  |              |                 |      |

### A.8.20.3.2 Test Requirements

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 4800 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.20.4 E-UTRAN TDD to UTRAN TDD cell search under fading propagation conditions

It is not necessary for CA UEs to be tested in A.8.7.1 if this case is done.

#### A.8.20.4.1 Test Purpose and Environment

##### A.8.20.4.1.1 1.28 Mcps TDD option

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the E-UTRA TDD to UTRA TDD cell search requirements in clause 8.1.2.4.3 under fading propagation conditions.

This test scenario comprised of 1 E-UTRA TDD PCell, 1 E-UTRA TDD SCell and 1 UTRA TDD cell to be searched. Test parameters are given in Table A.8.20.4.1.2-1, A.8.20.4.1.2-2, and A.8.20.4.1.2-3. Gap pattern configuration #0 as defined in table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.20.4.1.1-1: General test parameters for E-UTRA TDD to UTRA(1.28 Mcps TDD OPTION) cell search in fading propagation conditions**

| Parameter                                | Unit | Value                                    | Comment                                   |

## A.8.20.4.2 Test Requirements

### A.8.20.4.2.1 1.28 Mcps TDD option

The UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.8.20.4A E-UTRAN TDD with 20 MHz +20 MHz bandwidth to UTRAN TDD cell search under fading propagation conditions

### A.8.20.4A.1 Test Purpose and Environment

#### A.8.20.4A.1.1 1.28 Mcps TDD option

The purpose of this test case is the same as for the test defined in subclause A.8.20.4. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.8. 20.4A.1.1-1 and A.8. 20.4A.1.1-2 will replace the values of corresponding parameters in Tables A.8. 20.4.1.1-1 and A.8. 20.4.1.1-2.

| Note 1: See Table A.8.20.4.1.1-2 for other general test parameters.  |      |          |    |          |    |
| Note 2: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |      |          |    |          |    |

### A.8.20.4A.2 Test Requirements

#### A.8.20.4A.2.1 1.28 Mcps TDD option

The test requirements defined in section A.8.20.4.2.1 shall apply to this test case.

## A.8.20.4B E-UTRAN TDD with 20 MHz +10 MHz bandwidth to UTRAN TDD cell search under fading propagation conditions

### A.8.20.4B.1 Test Purpose and Environment

#### A.8.20.4B.1.1 1.28 Mcps TDD option

The purpose of this test case is the same as for the test defined in subclause A.8.20.4.

This test scenario comprised of 1 E-UTRA TDD PCell, 1 E-UTRA TDD SCell and 1 UTRA TDD cell to be searched. The test parameters are given in Tables A.8. 20.4B.1.1-1, A.8. 20.4B.1.1-2 and A.8.20.4B.1.1-3. Gap pattern configuration #0 as defined in table 8.1.2.1-1 is provided.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 is used. The test consists of two successive time periods, with time duration of T1 and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.20.4B.1.1-1: General test parameters for E-UTRA TDD with 20MHz +10MHz bandwidth to UTRA(1.28 Mcps TDD OPTION) cell search in fading propagation conditions**

| Parameter                                | Unit | Value  | Comment                                   |
|--|------|--------|---|
| E-UTRA RF Channel Number                 |      | 1      | One E-UTRA TDD carrier frequency is used. |
| E-UTRA RF Channel Number for Scell       |      | 2      | One E-UTRA TDD carrier frequency is used. |
| Active cell                              |      | Cell 1 | E-UTRA TDD cell                           |
| Neighbour cell                           |      | Cell 2 | UTRA 1.28Mcps TDD Cell                    |
| Configured active SCell                  |      | Cell 3 | E-UTRA TDD cell                           |
| Gap Pattern Id                           |      | 0      | As specified in TS 36.133 clause 8.1.2.1. |
| Uplink-downlink configuration of cell 1  |      | 1      | As specified in table 4.2.2 in TS 36.211  |
| Special subframe configuration of cell 1 |      | 6      | As specified in table 4.2.1 in TS 36.211  |
| CP length of cell 1                      |      | normal |   |
| Hysteresis                               | dB   | 0      |   |
| TimeToTrigger                            | s    | 0      |   |
| Filter coefficient                       |      | 0      | L3 filtering is not used                  |
| DRX                                      |      | OFF    |   |
| Time offset between cells                |      | 3 ms   | Asynchronous cells                        |
| Ofn                                      | dB   | 0      |   |
| Thresh                                   | dBm  | -87    |   |
| T1                                       | s    | 5      |   |
| T2                                       | s    | 10     |   |

**Table A.8.20.4B.1.1-2: Cell specific test parameters for cell search E-UTRA TDD with 20MHz +10MHz bandwidth to UTRA TDD test case (cell 1, cell3)**

## A.8.20.4B.2 Test Requirements

### A.8.20.4B.2.1 1.28 Mcps TDD option

The test requirements defined in section A.8.20.4.2.1 shall apply to this test case.

## A.8.21 CSG Proximity Indication Testing Case for E-UTRAN FDD – FDD Inter frequency

Note : The test case in this section forms the basis for a signalling test for CSG proximity detection.

### A.8.21.1 Test Purpose and Environment

The purpose of this test is to verify the UE has implemented properly the feature for indicating that the UE is entering or leaving the proximity of one or more CSG member cells based on proximity detection with an autonomous search function, as defined by the requirements in Section 6.4.

The test case consists of three successive segments: Test Preparation, Negative Test, and Positive Test. The test scenario comprises of three E-UTRAN FDD cells on different carriers. Cell 1 represents the serving cell in the proximity of the CSG cell, Cell 2 the CSG cell, and Cell 3 the serving cell not in the proximity of the CSG cell. The description of the test procedure is shown in Table A.8.21-1. The general test parameters and cell specific test parameters are presented in Table A.8.21-2 and Table A.8.21-3 respectively.

Table A.8.21-1: Description of the test procedures

| Parameter               | Cell Status                  | Comment  |
|-------------------------|------------------------------|--|
| <b>Test Preparation</b> |                              |  |
| Initial Condition       | Cell 1 is active             | Clean up the UE memory to be free from previously stored cell information for proximity detection.<br>Turn on the UE and allow sufficient time for the UE to select to Cell 1.   |
| Time duration T1        | Cell 1 and Cell 2 are active | Turn on Cell 2 at the start of T1.<br>Perform manual CSG selection towards Cell 2. The UE is expected to store necessary information for later proximity detection.  |
| End condition           |                              | Turn off the UE. Turn off Cell 1 and Cell 2.   |
| <b>Negative Test</b>    |                              |  |
| Initial Condition       | Cell 3 is active             | Turn on Cell 3.<br>Turn on the UE and set up the UE in connected mode with Cell 3..  |
| Time duration T2        | Cell 3 is active             | Configure the UE with proximity indication control by sending the Reconfiguration message with ReportProximityConfig at the start of T2. The UE is not expected to report "entering" proximity in the negative test.                               |
| End condition           |                              | Turn off the UE. Turn off Cell 3.  |
| <b>Positive Test</b>    |                              |  |
| Initial Condition       | Cell 1 is active             | Turn on Cell 1.<br>Turn on the UE and set up the UE in connected mode with Cell 1.   |
| Time duration T3        | Cell 1 and Cell 2 are active | Turn on Cell 2 at the start of T3.<br>Configure the UE with proximity indication control by sending the Reconfiguration message with reportProximityConfig at the start of T3. The UE is expected to report "entering" proximity before end of T3. |
| End condition           |                              | Turn off the UE. Turn off Cell 1 and Cell 2.   |

| PDSCH parameters                   |   | DL Reference Measurement Channel R.0 FDD | As specified in section A.3.1.1.1   |
| PDSCH allocation                   | $n_{PRB}$   | 2—3                                      | 13—36   |
| PCFICH/PDCCH/PHICH parameters      |   | DL Reference Measurement Channel R.6 FDD | As specified in section A.3.1.2.1   |
| A3-Offset                          | dB  | -4                                       |   |
| Hysteresis                         | dB  | 0  |   |
| TimeToTrigger                      | s   | 0  |   |
| Filter coefficient                 |   | 0  | L3 filtering is not used  |
| DRX                                |   | off                                      | As specified in section A.3.3   |
| PRACH configuration                |   | 4  | As specified in table 5.7.1-2 in 3GPP TS 36.211   |
| Access Barring Information         | -   | Not sent                                 | No additional delays in random access procedure   |
| Time offset between cells          |   | 3 ms                                     | Asynchronous cells  |
| Gap pattern configuration Id       |   | 0  | As specified in Table 8.1.2.1-1 started before T1 starts                                    |
| Time duration T1                   | s   | [10]                                     | Defined to give enough time for the UE to complete the manual reselection to Cell 2.        |
| Time duration T2                   | s   | [360]                                    | Defined to be longer enough to see whether the UE will report enter "proximity" indication. |
| Time duration T3 <sup>Note 1</sup> | s   | [<=360]                                  | The time duration for a UE to report enters "proximity" when the UE is near a CSG cell.     |
| Note 1:                            | The maximum allowed time duration for the UE to decide either entering or leaving "proximity" is 360s. To reduce test time, T3 may end once UE reports entering "proximity".  |  |   |
| Note 2:                            | The test case assumes an environment where CSG proximity detection results not being impact by non-3GPP signals, such as GPS and WiFi. When the test case is being executed, the UE may ignore any radio signals which are not provided by the test setup which it would otherwise use in proximity estimation. |  |   |

**Table A.8.21-3: Cell specific test parameters for E-UTRAN FDD-FDD inter frequency cell proximity detection test case**

| Parameter   | Unit       | Cell 1    |      |          | Cell 2    |      |          |
|---|------------|-----------|------|----------|-----------|------|----------|

## A.8.21.2 Test Requirements

The UE shall not send an "entering" proximity indication in T2 during Negative Test.

The UE shall send an "entering" proximity indication in T3 during Positive Test.

## A.8.22 E-UTRAN Discovery Signal Measurements

### A.8.22.1 E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal

#### A.8.22.1.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event when discovery signal is configured in DRX. The test will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.6.2.1.1.

The test parameters are given in Tables A.8.22.1.1-1, A.8.22.1.1-2, A.8.22.1.1-3 and A.8.22.1.1-4. In the measurement control information, it is indicated to the UE performing CRS based discovery signals measurement and event-triggered reporting with Event A3 is configured. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.1.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal**

| Parameter                          | Unit | Value  | Comment  |
|------------------------------------|------|--------|--|
| Active cell                        |      | Cell 1 |  |
| Neighbour cell                     |      | Cell 2 | Cell to be identified.                                   |
| E-UTRA RF Channel Number           |      | 1      | One FDD carrier frequency is used.                       |
| DMTC period                        | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331            |
| dmtc-PeriodOffset                  | ms   | 10     | As specified in IE MeasDS-Config in TS 36.331            |
| Discovery signal occasion duration | ms   | 1      | As specified in IE MeasDS-Config in TS 36.331            |
| A3-Offset                          | dB   | -6     |  |
| CP length                          |      | Normal |  |
| Hysteresis                         | dB   | 0      |  |
| Time To Trigger                    | s    | 0      |  |
| Filter coefficient                 |      | 0      | L3 filtering is not used                                 |
| DRX                                |      | ON     | DRX related parameters are defined in Table A.8.22.1.1-3 |
| T1                                 | s    | 5      |  |
| T2                                 | s    | 10     |  |

**Table A.8.22.1.1-2: Cell specific test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal**

| Parameter  | Unit       | Cell 1   |        | Cell 2                          |       |
|--|------------|----------|--------|---------------------------------|-------|
|  |            | T1       | T2     | T1                              | T2    |
| E-UTRA RF Channel Number   |            | 1        |        | 1                               |       |
| $BW_{channel}$   | MHz        | 10       |        | 10                              |       |
| Measurement bandwidth  | $n_{PRB}$  | 13-37    |        | 13-37                           |       |
| PDSCH parameters: DL Reference Measurement Channel   |            | R.0 FDD  |        | -                               |       |

### A.8.22.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 4864ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

## A.8.22.2 E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal

### A.8.22.2.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event when discovery signal is configured in DRX. The test will partly verify the TDD-TDD intra-frequency cell search in DRX requirements in clause 8.6.2.1.1.

The test parameters are given in Tables A.8.22.2.1-1, A.8.22.2.1-2, A.8.22.2.1-3 and A.8.22.2.1-4. In the measurement control information, it is indicated to the UE performing CRS based discovery signals measurement and event-triggered reporting with Event A3 is configured. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.2.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal**

| Parameter                          | Unit | Value  | Comment  |
|------------------------------------|------|--------|--|
| Active cell                        |      | Cell 1 |  |
| Neighbour cell                     |      | Cell 2 | Cell to be identified.   |
| E-UTRA RF Channel Number           |      | 1      | One TDD carrier frequency is used.   |
| Special subframe configuration     |      | 6      | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells |
| Uplink-downlink configuration      |      | 1      | As specified in table 4.2-2 in TS 36.211. The same configuration in both cells |
| DMTC period                        | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331                                  |
| dmtc-PeriodOffset                  | ms   | 10     | As specified in IE MeasDS-Config in TS 36.331                                  |
| Discovery signal occasion duration | ms   | 2      | As specified in IE MeasDS-Config in TS 36.331                                  |
| A3-Offset                          | dB   | -6     |  |
| CP length                          |      | Normal |  |
| Hysteresis                         | dB   | 0      |  |
| Time To Trigger                    | s    | 0      |  |
| Filter coefficient                 |      | 0      | L3 filtering is not used   |
| DRX                                |      | ON     | DRX related parameters are defined in Table A.8.22.2.1-3                       |
| T1                                 | s    | 5      |  |
| T2                                 | s    | 10     |  |

**Table A.8.22.2.1-2: Cell specific test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting under fading propagation conditions in synchronous cells in DRX based on CRS based discovery signal**

| Parameter  | Unit       | Cell 1   |        | Cell 2                          |       |

### A.8.22.2.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 4864ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.22.3 E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in DRX based on CRS based discovery signal

#### A.8.22.3.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event when discovery signal is configured in DRX. The test will partly verify the FDD-FDD inter-frequency measurement requirements in clause 8.6.2.2.1.

The test parameters are given in Tables A.8.22.3.1-1, A.8.22.3.1-2, A.8.22.3.1-3 and A.8.22.3.1-4. In the measurement control information, it is indicated to the UE performing CRS based discovery signals measurement and event-triggered reporting with Event A3 is configured. Entire discovery signal occasion should be contained in the measurement gap. The subframe contained discovery signal for the measurement is not overlapped with the first 0.5ms period and the last 0.5ms period in every gap.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.22.3.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting under fading propagation conditions in DRX based on CRS based discovery signal**

| Parameter                          | Unit | Value    | Comment  |
|------------------------------------|------|----------|--|
| E-UTRA RF Channel Number           |      | 1, 2     | Two FDD carrier frequencies are used.                    |
| Active cell                        |      | Cell 1   | Cell 1 is on RF channel number 1                         |
| Neighbour cell                     |      | Cell 2   | Cell 1 is on RF channel number 2                         |
| Gap Pattern Id                     |      | 0        | As specified in TS 36.133 clause 8.1.2.1.                |
| Gap Offset                         |      | 9        | As specified in TS 36.331 clause 6.3.5                   |
| DMTC period                        | ms   | 160      | As specified in IE MeasDS-Config in TS 36.331            |
| dmtc-PeriodOffset                  | ms   | 10       | As specified in IE MeasDS-Config in TS 36.331            |
| Discovery signal occasion duration | ms   | 1        | As specified in IE MeasDS-Config in TS 36.331            |

### A.8.22.3.2 Test Requirements

UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

### A.8.22.4 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in DRX based on CRS based discovery signal

#### A.8.22.4.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event when discovery signal is configured in DRX. The test will partly verify the FDD-FDD inter-frequency measurement requirements in clause 8.6.2.2.1.

The test parameters are given in Tables A.8.22.4.1-1, A.8.22.4.1-2, A.8.22.4.1-3 and A.8.22.4.1-4. In the measurement control information, it is indicated to the UE performing CRS based discovery signals measurement and event-triggered reporting with Event A3 is configured. Entire discovery signal occasion should be contained in the measurement gap. The subframe contained discovery signal for the measurement is not overlapped with the first 0.5ms period and the last 0.5ms period in every gap.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

**Table A.8.22.4.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation conditions in DRX based on CRS based discovery signal**

| Parameter                          | Unit | Value    | Comment   |
|------------------------------------|------|----------|---|
| E-UTRA RF Channel Number           |      | 1, 2     | Two TDD carrier frequencies are used.   |
| Active cell                        |      | Cell 1   | Cell 1 is on RF channel number 1  |
| Neighbour cell                     |      | Cell 2   | Cell 2 is on RF channel number 2  |
| Gap Pattern Id                     |      | 0        | As specified in TS 36.133 clause 8.1.2.1.   |
| Gap Offset                         |      | 9        | As specified in TS 36.331 clause 6.3.5  |
| Uplink-downlink configuration      |      | 1        | As specified in table 4.2-2 in TS 36.211.<br>The same configuration in both cells |
| Special subframe configuration     |      | 6        | As specified in table 4.2-1 in TS 36.211.<br>The same configuration in both cells |
| DMTC period                        | ms   | 160      | As specified in IE MeasDS-Config in TS 36.331                                     |
| dmtc-PeriodOffset                  | ms   | 10       | As specified in IE MeasDS-Config in TS 36.331                                     |
| Discovery signal occasion duration | ms   | 2        | As specified in IE MeasDS-Config in TS 36.331                                     |
| A3-Offset                          | dB   | -6       |   |
| Hysteresis                         | dB   | 0        |   |
| CP length                          |      | Normal   |   |
| Time To Trigger                    | s    | 0        |   |
| Filter coefficient                 |      | 0        | L3 filtering is not used  |
| PRACH configuration                |      | 4        | As specified in table 5.7.1-2 in TS 36.211  |
| Access Barring Information         | -    | Not Sent | No additional delays in random access procedure.                                  |
| DRX                                |      | ON       | DRX related parameters are defined in Table A.8.22.4.1-3                          |
| T1                                 | s    | 5        |   |
| T2                                 | s    | 10       |   |

#### A.8.22.4.2 Test Requirements

UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE starts to send preambles on the PRACH for scheduling request (SR) to obtain allocation to send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event A3 measurement report.

#### A.8.22.5 E-UTRAN FDD-FDD intra-frequency event triggered reporting in DRX based on CSI-RS based discovery signal

##### A.8.22.5.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event in DRX. The test will partly verify the FDD-FDD intra-frequency cell search in DRX requirements in clause 8.6.3.1.1.2.

The test parameters are given in Tables A.8.22.5.1-1, A.8.22.5.1-2, A.8.22.5.1-3 and A.8.22.5.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event C2 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.5.1-1: General test parameters for E-UTRAN FDD-FDD intra-frequency event triggered reporting for DRS measurement based on CSI-RS with DRX**

| Parameter                          | Unit | Value       | Comment  |
|------------------------------------|------|-------------|--|
|                                    |      | Test 1      |  |
| Active cell                        |      | Cell 1      |  |

### A.8.22.5.2 Test Requirements

In Test 1, the UE shall send one Event C2 triggered measurement report, with a measurement reporting delay less than 5632ms ( $T_{\text{identify\_intra\_SCE\_DRX}} + T_{\text{Measurement\_Period\_intra\_FDD\_CSI-RS\_DRX}} = 16 * \max\{T_{\text{DMTC\_periodicity}}, \text{DRX cycle length}\} + 3 * \max\{T_{\text{DMTC\_periodicity}}, \text{DRX cycle length}\} + 3 * \max\{T_{\text{DMTC\_periodicity}}, \text{DRX cycle length}\} = 22 * \max\{T_{\text{DMTC\_periodicity}}, \text{DRX cycle length}\}$ ) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event C2 measurement report.

### A.8.22.6 E-UTRAN TDD-TDD intra-frequency event triggered reporting in DRX based on CSI-RS based discovery signal

#### A.8.22.6.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event in DRX. The test will partly verify the TDD-TDD intra-frequency cell search in DRX requirements in clause 8.6.3.1.2.2.

The test parameters are given in Tables A.8.22.6.1-1, A.8.22.6.1-2, A.8.22.6.1-3 and A.8.22.6.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event C2 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.6.1-1: General test parameters for E-UTRAN TDD-TDD intra-frequency event triggered reporting for DRS measurement based on CSI-RS with DRX**

| Parameter                          | Unit | Value  | Comment  |
|------------------------------------|------|--------|--|

### A.8.22.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5632 ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event C2 measurement report.

## A.8.22.7 E-UTRAN FDD-FDD Inter-frequency event triggered reporting in DRX based on CSI-RS based discovery signal

### A.8.22.7.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event in DRX. The test will partly verify the FDD-FDD inter-frequency cell search in DRX requirements in clause 8.6.3.2.1.2.

The test parameters are given in Tables A.8.22.7.1-1, A.8.22.7.1-2, A.8.22.7.1-3 and A.8.22.7.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event C1 is used. Entire discovery signal occasion should be contained in the measurement gap. The subframe contained discovery signal for the measurement is not overlapped with the first 0.5ms period and the last 0.5ms period in every gap.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.7.1-1: General test parameters for E-UTRAN FDD-FDD inter-frequency event triggered reporting for DRS measurement based on CSI-RS with DRX**

| Parameter                          | Unit | Value  | Comment  |

### A.8.22.7.2 Test Requirements

The UE shall send one Event C1 triggered measurement report, with a measurement reporting delay less than 5888ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2, to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event C1 measurement report

### A.8.22.8 E-UTRAN TDD-TDD inter-frequency event triggered reporting under fading propagation condition in DRX based on CSI-RS based discovery signal

#### A.8.22.8.1 Test Purpose and Environment

The purpose of the test is to verify that the UE makes correct reporting of an event in DRX. The test will partly verify the TDD-TDD inter-frequency cell search in DRX requirements in clause 8.6.3.2.2.2.

The test parameters are given in Tables A.8.22.8.1-1, A.8.22.8.1-2, A.8.22.8.1-3 and A.8.22.8.1-4. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event C1 is used. Entire discovery

signal occasion should be contained in the measurement gap. The subframe contained discovery signal for the measurement is not overlapped with the first 0.5ms period and the last 0.5ms period in every gap.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 2.

The UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.22.8.1-1: General test parameters for E-UTRAN TDD-TDD inter-frequency event triggered reporting for DRS measurement based on CSI-RS with DRX**

| Parameter                                  | Unit | Test 1   | Comment  |
|--|------|----------|--|
|  |      | Value    |  |
| E-UTRA RF Channel Number                   |      | 1, 2     | Two TDD carrier frequencies are used.  |
| Channel Bandwidth (BW <sub>channel</sub> ) | MHz  | 10       |  |
| Active cell                                |      | Cell 1   | Cell 1 is on RF channel number 1   |

### A.8.22.8.2 Test Requirements

In Test 1, the UE shall send one Event C1 triggered measurement report, with a measurement reporting delay less than 5888ms from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE send the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to one DRX cycle higher than the measurement reporting delays above because UE is allowed to delay the initiation of the measurement reporting procedure to the next until the Active Time.

NOTE 2: In order to calculate the rate of correct events the system simulator shall verify that it has received correct Event C1 measurement report.

### A.8.22.9 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX based on CRS based discovery signal

#### A.8.22.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] when CRS based discovery signal is configured within the requirements stated in clause 8.7.2.4.1.

The test parameters are given in Tables A.8.22.9.1-1 and A.8.22.9.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.22.9.1-1: General test parameters for E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX based on CRS based discovery signal**

| Parameter   | Unit   | Value  | Comment   |   |
|---|--|--------|---|---|
| E-UTRA RF Channel Number                                |  | 1, 2   | Two radio channels are used for this test                     |   |
| Active PCell  |  | Cell 1 | Primary cell on RF channel number 1.                          |   |
| Configured deactivated SCell                            |  | Cell 2 | Configured deactivated secondary cell on RF channel number 2. |   |
| Neighbour cell  |  | Cell 3 | Neighbor cell to be identified on RF channel number 2.        |   |
| CP length   |  | Normal |   |   |
| DRX   |  | OFF    | Continuous monitoring of primary cell                         |   |
| DMTC period   | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331                 |   |

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.</p> <p>Note 3: Es/I<sub>ot</sub>, RSRP and SCH_RP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> |            |          |        |        |          |        |        |                                 |       |       |

### A.8.22.9.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 5.12s ( $13 \times \text{measCycleSCell} + T_{\text{measure\_scc\_crs}}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 480 ( $3 \times T_{\text{DMTC\_periodicity}}$ ) ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 960ms ( $3 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.22.10 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX based on CRS based discovery signal

### A.8.22.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects events A2 (Serving cell becomes worse than threshold) and A6 (Neighbour becomes better than SCell) defined in TS 36.331 [2] when CRS based discovery signal is configured within the requirements stated in clause 8.7.2.4.1.

The test parameters are given in Tables A.8.22.10.1-1 and A.8.22.10.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events A2 (PCell and SCell) and A6 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 the UE shall not have any information on cell 3. Immediately at beginning of T2 the transmission power of cell 3 is increased to same level as for cell 2, and due to usage of an offset this shall result in reporting of Event A6. At beginning of T3 the transmission powers of cells 1, 2 and 3 are reduced below a threshold value and this shall result in reporting of Event A2 for PCell and SCell, respectively.

**Table A.8.22.10.1-1: General test parameters for E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX based on CRS based discovery signal**

| Parameter   |                 | Unit | Value  | Comment   |
|---|-----------------|------|--------|---|
| E-UTRA RF Channel Number                                |                 |      | 1, 2   | Two radio channels are used for this test   |
| Active PCell  |                 |      | Cell 1 | Primary cell on RF channel number 1.  |
| Configured deactivated SCell                            |                 |      | Cell 2 | Configured deactivated secondary cell on RF channel number 2.   |
| Neighbour cell  |                 |      | Cell 3 | Neighbor cell to be identified on RF channel number 2.  |
| CP length   |                 |      | Normal |   |
| Special subframe configuration                          |                 |      | 6      | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells.  |
| Uplink-downlink configuration                           |                 |      | 1      |   |
| DRX   |                 |      | OFF    | Continuous monitoring of primary cell   |
| DMTC period   |                 | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331   |
| dmtc-PeriodOffset for cells 2 and 3                     |                 | ms   | 10     | As specified in IE MeasDS-Config in TS 36.331   |
| Discovery signal occasion duration                      |                 | ms   | 2      | As specified in IE MeasDS-Config in TS 36.331   |
| A2  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP  | dBm  | -93    | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.14.2 into account plus margin.          |
|   | Time To Trigger | s    | 0      |   |
| A6  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A6.  |
|   | Offset          | dB   | -6     | Offset parameter for evaluation of event A6. Needs to take relative accuracy tolerance in clause 9.1.14.2 into account plus margin. |
|   | Report on leave |      | False  |   |
|   | Time To Trigger | s    | 0      |   |
| Cell-individual offset for cells on RF channel number 1 |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2 |                 | dB   | 0      | Individual offset for cells on secondary component carrier.   |
| Filter coefficient                                      |                 |      | 0      | L3 filtering is not used  |
| SCell measurement cycle (measCycleSCell)                |                 | ms   | 320    |   |
| T1  |                 | s    | 10     |   |
| T2  |                 | s    | 10     |   |
| T3  |                 | s    | 5      |   |

NOTE: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.</p> <p>Note 3: Es/I<sub>ot</sub>, RSRP and SCH_RP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 5: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> |            |          |        |        |          |        |        |                                 |       |       |

### A.8.22.10.2 Test Requirements

The UE shall send one Event A6 triggered measurement report with a measurement reporting delay of less than 5.12s ( $13 \times \text{measCycleSCell} + T_{\text{measure\_scc\_crs}}$ ) from the beginning of time T2.

The UE shall send one Event A2 triggered measurement report for Cell 1 with a measurement reporting delay of less than 480 ( $3 \times T_{\text{DMTC\_periodicity}}$ ) ms from beginning of time T3.

The UE shall send one Event A2 triggered measurement report for Cell 2 with a measurement reporting delay of less than 960ms ( $3 \times \text{measCycleSCell}$ ) from beginning of time T3.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 \times \text{TTI}_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.22.11 E-UTRAN FDD event triggered reporting under deactivated SCell in non-DRX based on CSI-RS based discovery signal

### A.8.22.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event C1 (CSI-RS resource becomes better than threshold) defined in TS 36.331 [2] within the requirements stated in clause 8.7.3.4.1.

The test parameters are given in Tables A.8.22.11.1-1 and A.8.22.11.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events C1 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 and T2 the UE shall not have any information on cell 3. Immediately at beginning of T3 the transmission power of cell 3 is increased above a threshold value and this shall result in reporting of Event C1. At beginning of T2 the transmission powers of cells 1 and 2 are increased above a threshold value and this shall result in reporting of Event C1 for PCell and SCell, respectively.

**Table A.8.22.11.1-1: General test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for CSI-RS based measurements under discovery signal**

| Parameter  |                    | Unit | Value  | Comment  |
|--|--------------------|------|--------|--|
| E-UTRA RF Channel Number   |                    |      | 1, 2   | Two radio channels are used for this test  |
| Active PCell   |                    |      | Cell 1 | Primary cell on RF channel number 1.   |
| Configured deactivated SCell   |                    |      | Cell 2 | Configured deactivated secondary cell on RF channel number 2.  |
| Neighbour cell   |                    |      | Cell 3 | Neighbor cell to be identified on RF channel number 2.   |
| DMTC period  |                    | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331  |
| dmtc-PeriodOffset for cells 2 and 3  |                    | ms   | 10     | As specified in IE MeasDS-Config in TS 36.331  |
| Discovery signal occasion duration   |                    | ms   | 1      | As specified in IE MeasDS-Config in TS 36.331  |
| CP length  |                    |      | Normal |  |
| DRX  |                    |      | OFF    | Continuous monitoring of primary cell  |
| C1   | Hysteresis         | dB   | 0      | Hysteresis for evaluation of event C1.   |
|  | Threshold CSI-RSRP | dBm  | -90    | Actual RSRP threshold for event C1. Needs to take absolute accuracy tolerance in clause 9.1.14.3 into account plus margin. |
|  | Time To Trigger    | s    | 0      |  |
| Cell-individual offset for cells on RF channel number 1  |                    | dB   | 0      | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2  |                    | dB   | 0      | Individual offset for cells on secondary component carrier.  |
| Filter coefficient   |                    |      | 0      | L3 filtering is not used   |
| SCell measurement cycle (measCycleSCell)   |                    | ms   | 320    |  |
| T1   |                    | s    | 5      |  |
| T2   |                    | s    | 5      |  |
| T3   |                    | s    | 10     |  |
| NOTE: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |                    |      |        |  |

**Table A.8.22.11.1-2: Cell specific test parameters for E-UTRAN FDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for CSI-RS based measurements under discovery signal**

| Parameter   | Unit       | Cell 1   |     |     | Cell 2   |     |       | Cell 3   |           |       |
|---|------------|--|-----|-----|--|-----|-------|--|-----------|-------|

| Note 1:  | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |       |       |            |
| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |       |       |            |
| Note 3:  | RSRP, CSI-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |       |       |            |
| Note 4:  | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |       |       |            |
| Note 5:  | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.  |       |       |            |

### A.8.22.11.2 Test Requirements

The UE shall send one Event C1 triggered measurement report for Cell 3 with a measurement reporting delay of less than 6.08s ( $T_{\text{identify\_scc\_SCE}} + T_{\text{measure\_scc\_CSI-RS}} = 13 * \text{measCycleSCell} + T_{\text{measure\_scc\_CRS}} + T_{\text{measure\_scc\_CSI-RS}} = 13 * \text{measCycleSCell} + 3 * \text{measCycleSCell} + 3 * \text{measCycleSCell}$ ) from the beginning of time T3.

The UE shall send one Event C1 triggered measurement report for Cell 1 with a measurement reporting delay of less than 480 ms ( $3 * T_{\text{DMTC\_periodicity}}$ ) from beginning of time T2.

The UE shall send one Event C1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 960ms ( $3 * \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 * T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.8.22.12 E-UTRAN TDD event triggered reporting under deactivated SCell in non-DRX based on CSI-RS based discovery signal

#### A.8.22.12.1 Test Purpose and Environment

The purpose of this test is to verify that the UE correctly detects event C1 (CSI-RS resource becomes better than threshold) defined in TS 36.331 [2] within the requirements stated in clause 8.7.3.4.1.

The test parameters are given in Tables A.8.22.12.1-1 and A.8.22.12.1-2 below. It is indicated to the UE in the measurement control information that event-triggered reporting with Events C1 is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. During T1 and T2 the UE shall not have any information on cell 3. Immediately at beginning of T3 the transmission power of cell 3 is increased above a threshold value and this shall result in reporting of Event C1. At beginning of T2 the transmission powers of cells 1 and 2 are increased above a threshold value and this shall result in reporting of Event C1 for PCell and SCell, respectively.

**Table A.8.22.12.1-1: General test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for CSI-RS based measurements under discovery signal**

| Parameter   | Unit   | Value  | Comment  |  |
|---|--|--------|--|--|
| E-UTRA RF Channel Number                                |  | 1, 2   | Two radio channels are used for this test  |  |
| Active PCell  |  | Cell 1 | Primary cell on RF channel number 1.   |  |
| Configured deactivated SCell                            |  | Cell 2 | Configured deactivated secondary cell on RF channel number 2.                          |  |
| Neighbour cell  |  | Cell 3 | Neighbor cell to be identified on RF channel number 2.                                 |  |
| DMTC period   | ms   | 160    | As specified in IE MeasDS-Config in TS 36.331  |  |
| dmtc-PeriodOffset for cells 2 and 3                     | ms   | 10     | As specified in IE MeasDS-Config in TS 36.331  |  |
| Discovery signal occasion duration                      | ms   | 1      | As specified in IE MeasDS-Config in TS 36.331  |  |
| Channel Bandwidth (BW <sub>channel</sub> )              | MHz  | 10     | Channel bandwidth for cells on primary and secondary component carriers                |  |
| CP length   |  | Normal |  |  |
| Special subframe configuration                          |  | 6      | As specified in table 4.2.1 in TS 36.211. The same configuration applies to all cells. |  |
| Uplink-downlink configuration                           |  | 1      |  |  |
| DRX   |  | OFF    | Continuous monitoring of primary cell  |  |
| C1  | Hysteresis   | dB     | 0  | Hysteresis for evaluation of event C1.   |
|   | Threshold CSI-RSRP   | dBm    | -90  | Actual RSRP threshold for event C1. Needs to take absolute accuracy tolerance in clause 9.1.14.3 into account plus margin. |
|   | Time To Trigger  | s      | 0  |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on primary component carrier.                              |  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on secondary component carrier.                            |  |
| Filter coefficient                                      |  | 0      | L3 filtering is not used   |  |
| SCell measurement cycle (measCycleSCell)                | ms   | 320    |  |  |
| T1  | s  | 5      |  |  |
| T2  | s  | 5      |  |  |
| T3  | s  | 10     |  |  |
| NOTE:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |        |  |  |

**Table A.8.22.12.1-2: Cell specific test parameters for E-UTRAN TDD event triggered reporting on configured but deactivated SCell in non-DRX under fading propagation conditions for CSI-RS based measurements under discovery signal**

| Parameter   | Unit       | Cell 1   |     |     | Cell 2   |     |       | Cell 3   |           |       |

## A.8.22.12.2 Test Requirements

The UE shall send one Event C1 triggered measurement report for Cell 3 with a measurement reporting delay of less than 6.08s ( $T_{\text{identify\_scc\_SCE}} + T_{\text{measure\_scc\_CSI-RS}} = 13 * \text{measCycleSCell} + T_{\text{measure\_scc\_CRS}} + T_{\text{measure\_scc\_CSI-RS}} = 13 * \text{measCycleSCell} + 3 * \text{measCycleSCell} + 3 * \text{measCycleSCell}$ ) from the beginning of time T3.

The UE shall send one Event C1 triggered measurement report for Cell 1 with a measurement reporting delay of less than 480 ms ( $3 * T_{\text{DMTC\_periodicity}}$ ) from beginning of time T2.

The UE shall send one Event C1 triggered measurement report for Cell 2 with a measurement reporting delay of less than 960ms ( $3 * \text{measCycleSCell}$ ) from beginning of time T2.

The UE shall not send event triggered measurement reports as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90% for each of the events.

NOTE: The actual overall delays measured in the tests may be up to  $2 * T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.23 E-UTRAN Dual Connectivity Measurements

### A.8.23.1 E-UTRAN FDD-FDD DC intra-frequency event triggered reporting with DRX in synchronous DC

#### A.8.23.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of intra frequency measurement. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.8.2 and 8.8.3.

The test parameters are given in Table A.8.23.1.1-1, A.8.23.1.1-2, A.8.23.1.1-3 and A.8.23.1.1-4 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell and Cell2 is PSCell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A1 (PCell and PSCell) and A2 (PCell and PSCell) is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired. Immediately at beginning of T2 the transmission powers of Cell1 and Cell2 are reduced below a threshold value of event A2 and this shall result in reporting of Event A2 for PCell and PSCell, respectively. Immediately after receiving the reporting of event A2 for both PCell and PSCell, PDCCH indicating a new transmission on Cell1 shall be sent continuously to ensure that the UE would not enter the DRX state on MCG throughout T3. At beginning of T3 the transmission powers of Cell1 and Cell2 are increased above a threshold value of event A1 and this shall result in reporting of Event A1 for PCell and PSCell, respectively.

When MCG DRX is used, the uplink time alignment of Cell1 is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting in Cell1. When SCG DRX is used, the UE needs to be provided at least once

every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell2. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.23.1.1-1: General test parameters for E-UTRAN FDD-FDD DC intra-frequency event triggered reporting with DRX in synchronous DC**

| Parameter  |                 | Unit | Value  | Comment   |
|--|-----------------|------|--------|---|
| E-UTRA RF Channel Number   |                 |      | 1, 2   | Two radio channels are used for this test.  |
| Active PCell   |                 |      | Cell1  | PCell on RF channel number 1.   |
| Configured PSCell  |                 |      | Cell2  | PSCell on RF channel number 2.  |
| A1   | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A1.  |
|  | Threshold RSRP  | dBm  | -95    | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|  | Time To Trigger | s    | 0      |   |
| A2   | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A2.  |
|  | Threshold RSRP  | dBm  | -99    | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|  | Time To Trigger | s    | 0      |   |
| CP length  |                 |      | Normal |   |
| DRX  |                 |      | ON     | DRX related parameters are defined in Table A.8.23.1.1-3  |
| Cell-individual offset for cells on RF channel number 1  |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2  |                 | dB   | 0      | Individual offset for cells on carrier frequency of Cell2.  |
| Filter coefficient   |                 |      | 0      | L3 filtering is not used  |
| T1   |                 | s    | 2      |   |
| T2   |                 | s    | 10     |   |
| T3   |                 | s    | 1      |   |
| Note 1: A UE capable of both synchronous and asynchronous DC operations is not required to pass this test case in accordance with the principle defined in section A.3.11. |                 |      |        |   |

### A.8.23.1.2 Test Requirements

The UE shall send one Event A2 triggered report for PCell on PCell with a measurement reporting delay less than 6.4s ( $5 \cdot \text{MCG\_DRX}$  cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A2 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms ( $5 \cdot \text{SCG\_DRX}$  cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PCell on PCell with a measurement reporting delay less than 200ms from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms ( $5 \cdot \text{SCG\_DRX}$  cycle) from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.23.2 E-UTRAN FDD-FDD DC intra-frequency event triggered reporting with DRX in asynchronous DC

### A.8.23.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of intra frequency measurement. This test will partly verify the FDD intra-frequency cell search requirements in clause 8.8.2 and 8.8.3.

The test parameters are given in Table A.8.23.2.1-1, A.8.23.2.1-2, A.8.23.2.1-3 and A.8.23.2.1-4 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell and Cell2 is PSCell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A1 (PCell and PSCell) and A2 (PCell and PSCell) is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired.

Immediately at beginning of T2 the transmission powers of Cell1 and Cell2 are reduced below a threshold value of event A2 and this shall result in reporting of Event A2 for PCell and PSCell, respectively. Immediately after receiving the reporting of event A2 for both PCell and PSCell, PDCCH indicating a new transmission on Cell1 shall be sent continuously to ensure UE would not enter DRX state on MCG throughout T3. At beginning of T3 the transmission powers of Cell1 and Cell2 are increased above a threshold value of event A1 and this shall result in reporting of Event A1 for PCell and PSCell, respectively.

When MCG DRX is used, the uplink time alignment of Cell1 is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting in Cell1. When SCG DRX is used, the UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell2. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.23.2.1-1: General test parameters for E-UTRAN FDD-FDD DC intra-frequency event triggered reporting with DRX in asynchronous DC**

| Parameter   | Unit            | Value  | Comment  |   |
|---|-----------------|--------|--|---|
| E-UTRA RF Channel Number  |                 | 1, 2   | Two radio channels are used for this test.                 |   |
| Active PCell  |                 | Cell1  | PCell on RF channel number 1.                              |   |
| Configured PSCell   |                 | Cell2  | PSCell on RF channel number 2.                             |   |
| A1  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A1.  |
|   | Threshold RSRP  | dBm    | -95  | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|   | Time To Trigger | s      | 0  |   |
| A2  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP  | dBm    | -99  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|   | Time To Trigger | s      | 0  |   |
| CP length   |                 | Normal |  |   |
| DRX   |                 | ON     | DRX related parameters are defined in Table A.8.23.2.1-3   |   |
| Cell-individual offset for cells on RF channel number 1   | dB              | 0      | Individual offset for cells on primary component carrier.  |   |
| Cell-individual offset for cells on RF channel number 2   | dB              | 0      | Individual offset for cells on carrier frequency of Cell2. |   |
| Filter coefficient  |                 | 0      | L3 filtering is not used                                   |   |
| T1  | s               | 2      |  |   |
| T2  | s               | 10     |  |   |
| T3  | s               | 1      |  |   |
| Note 1: Even a UE capable of both synchronous and asynchronous DC operations is required to pass this test case in accordance with the principle defined in section A.3.11. |                 |        |  |   |

### A.8.23.2.2 Test Requirements

The UE shall send one Event A2 triggered report for PCell on PCell with a measurement reporting delay less than 6.4s (5\*MCG\_DRX cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A2 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms (5\*SCG\_DRX cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PCell on PCell with a measurement reporting delay less than 200ms from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms (5\*SCG\_DRX cycle) from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.23.3 E-UTRAN TDD-TDD DC intra-frequency event triggered reporting with DRX in synchronous DC

#### A.8.23.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of intra frequency measurement. This test will partly verify the TDD intra-frequency cell search requirements in clause 8.8.2 and 8.8.3.

The test parameters are given in Table A.8.23.3.1-1, A.8.23.3.1-2, A.8.23.3.1-3 and A.8.23.3.1-4 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell and Cell2 is PSCell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A1 (PCell and PSCell) and A2 (PCell and PSCell) is used. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired.

Immediately at beginning of T2 the transmission powers of Cell1 and Cell2 are reduced below a threshold value of event A2 and this shall result in reporting of Event A2 for PCell and PSCell, respectively. Immediately after receiving the reporting of event A2 for both PCell and PSCell, PDCCH indicating a new transmission on Cell1 shall be sent continuously to ensure UE would not enter DRX state on MCG throughout T3. At beginning of T3 the transmission powers of Cell1 and Cell2 are increased above a threshold value of event A1 and this shall result in reporting of Event A1 for PCell and PSCell, respectively.

When MCG DRX is used, the uplink time alignment of Cell1 is not maintained and UE needs to use RACH to obtain UL allocation for measurement reporting in Cell1. When SCG DRX is used, the UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell2. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.23.3.1-1: General test parameters for E-UTRAN TDD-TDD DC intra-frequency event triggered reporting with DRX in synchronous DC**

| Parameter   | Unit            | Value  | Comment  |   |
|---|-----------------|--------|--|---|
| E-UTRA RF Channel Number                                |                 | 1, 2   | Two radio channels are used for this test.                 |   |
| Active PCell  |                 | Cell1  | PCell on RF channel number 1.                              |   |
| Configured PSCell                                       |                 | Cell2  | PSCell on RF channel number 2.                             |   |
| A1  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A1.  |
|   | Threshold RSRP  | dBm    | -95  | Actual RSRP threshold for event A1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|   | Time To Trigger | s      | 0  |   |
| A2  | Hysteresis      | dB     | 0  | Hysteresis for evaluation of event A2.  |
|   | Threshold RSRP  | dBm    | -99  | Actual RSRP threshold for event A2. Needs to take absolute accuracy tolerance in clause 9.1.11.1 and 9.1.11.2 into account plus margin. |
|   | Time To Trigger | s      | 0  |   |
| CP length   |                 | Normal |  |   |
| DRX   |                 | ON     | DRX related parameters are defined in Table A.8.23.3.1-3   |   |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0      | Individual offset for cells on primary component carrier.  |   |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0      | Individual offset for cells on carrier frequency of Cell2. |   |
| Filter coefficient                                      |                 | 0      | L3 filtering is not used                                   |   |
| T1  | s               | 5      |  |   |
| T2  | s               | 10     |  |   |
| T3  | s               | 1      |  |   |

### A.8.23.3.2 Test Requirements

The UE shall send one Event A2 triggered report for PCell on PCell with a measurement reporting delay less than 6.4s (5\*MCG\_DRX cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A2 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms (5\*SCG\_DRX cycle) from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE starts to send preambles on the PRACH to obtain allocation to send the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PCell on PCell with a measurement reporting delay less than 200ms from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall send one Event A1 triggered report for PSCell on PCell with a measurement reporting delay less than 400ms (5\*SCG\_DRX cycle) from the beginning of time period T3. The measurement reporting delay is defined as the time from the beginning of time period T3 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.23.4 E-UTRAN FDD-FDD DC inter-frequency event triggered reporting with DRX in synchronous DC

#### A.8.23.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter frequency measurement. This test will partly verify the FDD inter-frequency cell search requirements in clause 8.8.4.

The test parameters are given in Table A.8.23.4.1-1, A.8.23.4.1-2, A.8.23.4.1-3 and A.8.23.4.1-4 below. In the test there are three cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is PSCell and Cell3 is a neighbour cell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A3 (PCell) is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. During T1 the UE shall not have any information on Cell3.

Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired.

In this test, UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell1. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.23.4.1-1: General test parameters for E-UTRAN FDD-FDD DC inter-frequency event triggered reporting with DRX in synchronous DC**

| Parameter  |                 | Unit | Value   | Comment  |
|--|-----------------|------|---------|--|
| E-UTRA RF Channel Number   |                 |      | 1, 2, 3 | Three radio channels are used for this test.               |
| Active PCell   |                 |      | Cell1   | PCell on RF channel number 1.                              |
| Configured PSCell  |                 |      | Cell2   | PSCell on RF channel number 2.                             |
| Neighbour cell   |                 |      | Cell3   | Neighbour cell on RF channel number 3.                     |
| A3   | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A3.                     |
|  | A3-offset       | dB   | -6      |  |
|  | Time To Trigger | s    | 0       |  |
| CP length  |                 |      | Normal  |  |
| DRX  |                 |      | ON      | DRX related parameters are defined in Table A.8.23.4.1-3   |
| Measurement gap pattern Id   |                 |      | 0       |  |
| Cell-individual offset for cells on RF channel number 1  |                 | dB   | 0       | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2  |                 | dB   | 0       | Individual offset for cells on carrier frequency of Cell2. |
| Cell-individual offset for cells on RF channel number 3  |                 | dB   | 0       | Individual offset for cells on carrier frequency of Cell3. |
| Filter coefficient   |                 |      | 0       | L3 filtering is not used                                   |
| T1   |                 | s    | 5       |  |
| T2   |                 | s    | 5       |  |
| Note 1: A UE capable of both synchronous and asynchronous DC operations is not required to pass this test case in accordance with the principle defined in section A.3.11. |                 |      |         |  |

#### A.8.23.4.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 3 on PCell, with a measurement reporting delay less than 3.84s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.8.23.5 E-UTRAN FDD-FDD DC inter-frequency event triggered reporting with DRX in asynchronous DC

##### A.8.23.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter frequency measurement. This test will partly verify the FDD inter-frequency cell search requirements in clause 8.8.4.

The test parameters are given in Table A.8.23.5.1-1, A.8.23.5.1-2, A.8.23.5.1-3 and A.8.23.5.1-4 below. In the test there are three cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is PSCell and Cell3 is a neighbour cell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A3 (PCell) is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. During T1 the UE shall not have any information on Cell3. Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired.

In this test, UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell1. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.8.23.5.1-1: General test parameters for E-UTRAN FDD-FDD DC inter-frequency event triggered reporting with DRX in asynchronous DC**

| Parameter   |                 | Unit | Value   | Comment  |
|---|-----------------|------|---------|--|
| E-UTRA RF Channel Number  |                 |      | 1, 2, 3 | Three radio channels are used for this test.               |
| Active PCell  |                 |      | Cell1   | PCell on RF channel number 1.                              |
| Configured PSCell   |                 |      | Cell2   | PSCell on RF channel number 2.                             |
| Neighbour cell  |                 |      | Cell3   | Neighbour cell on RF channel number 3.                     |
| A3  | Hysteresis      | dB   | 0       | Hysteresis for evaluation of event A3.                     |
|   | A3-offset       | dB   | -6      |  |
|   | Time To Trigger | s    | 0       |  |
| CP length   |                 |      | Normal  |  |
| DRX   |                 |      | ON      | DRX related parameters are defined in Table A.8.23.4.1-3   |
| Measurement gap pattern Id  |                 |      | 0       |  |
| Cell-individual offset for cells on RF channel number 1   |                 | dB   | 0       | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2   |                 | dB   | 0       | Individual offset for cells on carrier frequency of Cell2. |
| Cell-individual offset for cells on RF channel number 3   |                 | dB   | 0       | Individual offset for cells on carrier frequency of Cell3. |
| Filter coefficient  |                 |      | 0       | L3 filtering is not used                                   |
| T1  |                 | s    | 5       |  |
| T2  |                 | s    | 5       |  |
| Note 1: Even a UE capable of both synchronous and asynchronous DC operations is required to pass this test case in accordance with the principle defined in section A.3.11. |                 |      |         |  |

### A.8.23.5.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 3 on PCell, with a measurement reporting delay less than 3.84s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.8.23.6 E-UTRAN TDD-TDD DC inter-frequency event triggered reporting with DRX in synchronous DC

#### A.8.23.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of inter frequency measurement. This test will partly verify the TDD inter-frequency cell search requirements in clause 8.8.4.

The test parameters are given in Table A.8.23.6.1-1, A.8.23.6.1-2, A.8.23.6.1-3 and A.8.23.6.1-4 below. In the test there are three cells: Cell1, Cell2 and Cell3. Cell1 is PCell, Cell2 is PSCell and Cell3 is a neighbour cell. In the measurement control information it is indicated to the UE that event-triggered reporting with Events A3 (PCell) is used. The test consists of two successive time periods, with duration of T1 and T2, respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell1 and Cell2. During T1 the UE shall not have any information on Cell3. Prior to the start of the time duration T1, DRX configurations on MCG and SCG are enabled and DRX inactivity timers for MCG and SCG have already been expired.

In this test, UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment in Cell1. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

### A.8.23.6.2 Test Requirements

The UE shall send one Event A3 triggered measurement report for Cell 3 on PCell, with a measurement reporting delay less than 3.84s from the beginning of time period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.23.7 E-UTRAN FDD-FDD Addition and Release Delay of known PSCell in Synchronous DC

### A.8.23.7.1 Test Purpose and Environment

The purpose of this test is to verify that the PSCell addition and release delays under synchronous dual connectivity are within the requirements stated in section 7.14 for the case when the PSCell is known by the UE at the time of addition.

The test parameters are given in Tables A.8.23.7.1-1 and cell-specific parameters in A.8.23.7.1-2 below. The test consists of five successive time periods with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell1 is known to the UE.

Before the start of T2 it is indicated to the UE in the measurement control information that event-triggered reporting with Event A4 is configured for neighbour cell (Cell2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell2 becomes known to the UE during T2. Therefore during T2 the UE shall report Event A4. After receiving the Event A4, the test system shall send a RRC message to the UE to release the measurement gaps.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T2, after the measurement gaps are released by the test system. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of time period T3.

The test system shall observe the periodic reporting of CSI for PSCell during T4. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of time period T4.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during time period T4, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of time period T5.

**Table A.8.23.7.1-1: General test parameters for known PSCell addition and release case**

| Parameter  |                 | Unit | Value  | Comment   |
|--|-----------------|------|--------|---|
| E-UTRA RF Channel Number   |                 |      | 1, 2   | Two radio channels are used for this test   |
| Initial Condition  | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|  | Neighbour cell  |      | Cell2  | Neighbour cell on RF channel number 2.  |
| Final Condition  | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|  | PSCell          |      | Cell2  | PSCell on RF channel number 2.  |
| A4   | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A4.  |
|  | Threshold RSRP  | dBm  | -93    | Actual RSRP threshold for event A4. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin. |
|  | Time To Trigger | s    | 0      |   |
| CP length  |                 |      | Normal |   |
| DRX  |                 |      | OFF    | Continuous monitoring of primary cell   |
| Measurement gap pattern Id   |                 |      | 0      | Gaps are configured before T2 and released before T3.   |
| CQI/PMI periodicity and offset configuration index on cell2  |                 |      | 0      | CQI reporting for PSCell every second subframe  |
| Cell-individual offset for cells on RF channel number 1  |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2  |                 | dB   | 0      | Individual offset for cells on carrier frequency of cell2.  |
| T1   |                 | s    | 5      | During this time the PCell shall be known and cell2 shall be unknown.   |
| T2   |                 | s    | ≤ 5    | During this time the UE shall identify neighbour cell (cell2) and report event A4.  |
| T3   |                 | s    | 1      | During this time the UE adds the PSCell.  |
| T4   |                 | s    | 1      | During this time the UE sends CSI reports for PSCell.   |
| T5   |                 | s    | 1      | During this time the UE releases the PSCell.  |
| Note 1: A UE capable of both synchronous and asynchronous DC operations is not required to pass this test case in accordance with the principle defined in section A.3.11. |                 |      |        |   |

Table A.8.23.7.1-2: Cell specific test parameters for E-UTRAN FDD known PSCell addition and release

| Parameter  | Unit       | Cell 1  |                                      |                                      |                                      |                                      | Cell 2  |                                      |                                      |                                      |                                      |      |
|--|------------|---|--------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|---|--------------------------------------|--------------------------------------|--------------------------------------|--------------------------------------|------|

### A.8.23.7.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest 115 ms into T3.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4.

The UE shall stop sending CSI reports for PSCell in at latest 16ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90%.

NOTE: The PSCell addition delay can be expressed as follows as specified in Clause 7.14.2:

$$T_{\text{config\_PSCell}} = 15\text{ms} + T_{\text{activation\_time}} + 50\text{ms} + T_{\text{PCell\_DU}} + T_{\text{PSCell\_DU}}$$

Where:

$T_{\text{activation\_time}} = 20 \text{ ms}$  (cell2 is known to the UE);

$T_{\text{PCell\_DU}} = 0$  (due to PRACH configurations in cell1 and cell2 being orthogonal in time, i.e. non-overlapping in time);

$T_{\text{PSCell\_DU}} = 30 \text{ ms}$  (delay due to PRACH transmission to cell2).

This gives a total of 115 ms.

## A.8.23.8 E-UTRAN FDD-FDD Addition and Release Delay of known PSCell in Asynchronous DC

### A.8.23.8.1 Test Purpose and Environment

The purpose of this test is to verify that the PSCell addition and release delays under asynchronous dual connectivity are within the requirements stated in section 7.14 for the case when the PSCell is known by the UE at the time of addition.

The test parameters are given in Tables A.8.23.8.1-1 and cell-specific parameters in A.8.23.8.1-2 below. The test consists of five successive time periods with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell1 is known to the UE.

Before the start of T2 it is indicated to the UE in the measurement control information that event-triggered reporting with Event A4 is configured for neighbour cell (Cell2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell2 becomes known to the UE during T2. Therefore during T2 the UE shall report Event A4. After receiving the Event A4, the test system shall send a RRC message to the UE to release the measurement gaps.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T2, after the measurement gaps are released by the test system. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of time period T3.

The test system shall observe the periodic reporting of CSI for PSCell during T4. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of time period T4.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during time period T4, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of time period T5.

**Table A.8.23.8.1-1: General test parameters for known PSCell addition and release case**

| Parameter   |                 | Unit | Value  | Comment   |
|---|-----------------|------|--------|---|
| E-UTRA RF Channel Number  |                 |      | 1, 2   | Two radio channels are used for this test   |
| Initial Condition   | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|   | Neighbour cell  |      | Cell2  | Neighbour cell on RF channel number 2.  |
| Final Condition   | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|   | PSCell          |      | Cell2  | PSCell on RF channel number 2.  |
| A4  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A4.  |
|   | Threshold RSRP  | dBm  | -93    | Actual RSRP threshold for event A4. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin. |
|   | Time To Trigger | s    | 0      |   |
| CP length   |                 |      | Normal |   |
| DRX   |                 |      | OFF    | Continuous monitoring of primary cell   |
| Measurement gap pattern Id  |                 |      | 0      | Gaps are configured before T2 and released before T3.   |
| CQI/PMI periodicity and offset configuration index on cell2   |                 |      | 0      | CQI reporting for PSCell every second subframe  |
| Cell-individual offset for cells on RF channel number 1   |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2   |                 | dB   | 0      | Individual offset for cells on carrier frequency of cell2.  |
| T1  |                 | s    | 5      | During this time the PCell shall be known and cell2 shall be unknown.   |
| T2  |                 | s    | ≤ 5    | During this time the UE shall identify neighbour cell (cell2) and report event A4.  |
| T3  |                 | s    | 1      | During this time the UE adds the PSCell.  |
| T4  |                 | s    | 1      | During this time the UE sends CSI reports for PSCell.   |
| T5  |                 | s    | 1      | During this time the UE releases the PSCell.  |
| Note 1: Even a UE capable of both synchronous and asynchronous DC operations is required to pass this test case in accordance with the principle defined in section A.3.11. |                 |      |        |   |

Table A.8.22.8.1-2: Cell specific test parameters for E-UTRAN FDD known PSCell addition and release

### A.8.23.8.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest 115 ms into T3.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4.

The UE shall stop sending CSI reports for PSCell in at latest 16ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90%.

NOTE: The PSCell addition delay can be expressed as follows as specified in Clause 7.14.2:

$$T_{\text{config\_PSCell}} = 15\text{ms} + T_{\text{activation\_time}} + 50\text{ms} + T_{\text{PCell\_DU}} + T_{\text{PSCell\_DU}}$$

Where:

$T_{\text{activation\_time}} = 20 \text{ ms}$  (cell2 is known to the UE);

$T_{\text{PCell\_DU}} = 0$  (due to PRACH configurations in cell1 and cell2 being orthogonal in time, i.e. non-overlapping in time);

$T_{\text{PSCell\_DU}} = 30 \text{ ms}$  (delay due to PRACH transmission to cell2).

This gives a total of 115 ms.

## A.8.23.9 E-UTRAN TDD Addition and Release Delay of known PSCell in Synchronous DC

### A.8.23.9.1 Test Purpose and Environment

The purpose of this test is to verify that the PSCell addition and release delays under synchronous dual connectivity are within the requirements stated in section 7.14 for the case when the PSCell is known by the UE at the time of addition.

The test parameters are given in Tables A.8.23.9.1-1 and cell-specific parameters in A.8.23.9.1-2 below. The test consists of five successive time periods, with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) but is not aware of Cell 2 on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell1 is known to the UE.

Before the start of T2 it is indicated to the UE in the measurement control information that event-triggered reporting with Event A4 is configured for neighbour cell (Cell2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell2 becomes known to the UE during T2. Therefore during T2 the UE shall report Event A4. After receiving the Event A4, the test system shall send a RRC message to the UE to release the measurement gaps.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T2, after the measurement gaps are released by the test system. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of time period T3.

The test system shall observe the periodic reporting of CSI for PSCell during T4. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of time period T4.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during time period T4, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of time period T5.

Table A.8.23.9.1-1: General test parameters for known PSCell addition and release case

| Parameter   |                 | Unit | Value  | Comment   |
|---|-----------------|------|--------|---|
| E-UTRA RF Channel Number                                    |                 |      | 1, 2   | Two radio channels are used for this test   |
| Initial Condition   | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|   | Neighbour cell  |      | Cell2  | Neighbour cell on RF channel number 2.  |
| Final Condition   | Active PCell    |      | Cell1  | PCell on RF channel number 1.   |
|   | PSCell          |      | Cell2  | PSCell on RF channel number 2.  |
| A4  | Hysteresis      | dB   | 0      | Hysteresis for evaluation of event A4.  |
|   | Threshold RSRP  | dBm  | -93    | Actual RSRP threshold for event A4. Needs to take absolute accuracy tolerance in section 9.1.11.1 into account plus margin. |
|   | Time To Trigger | s    | 0      |   |
| CP length   |                 |      | Normal |   |
| DRX   |                 |      | OFF    | Continuous monitoring of primary cell   |
| Measurement gap pattern Id                                  |                 |      | 0      | Gaps are configured before T2 and released before T3.   |
| PRACH configuration on cell2                                |                 |      | 53     | As specified in table 5.7.1-3 in TS 36.211  |
| CQI/PMI periodicity and offset configuration index on cell2 |                 |      | 0      | CQI reporting for PSCell every uplink subframe  |
| Cell-individual offset for cells on RF channel number 1     |                 | dB   | 0      | Individual offset for cells on primary component carrier.   |
| Cell-individual offset for cells on RF channel number 2     |                 | dB   | 0      | Individual offset for cells on carrier frequency of cell2.  |
| T1  |                 | s    | 5      | During this time the PCell shall be known and cell2 shall be unknown.   |
| T2  |                 | s    | ≤ 5    | During this time the UE shall identify neighbour cell (cell2) and report event A4.  |
| T3  |                 | s    | 1      | During this time the UE adds the PSCell.  |
| T4  |                 | s    | 1      | During this time the UE sends CSI reports for PSCell.   |
| T5  |                 | s    | 1      | During this time the UE releases the PSCell.  |

Table A.8.23.9.1-2: Cell specific test parameters for E-UTRAN TDD known PSCell addition and release

| Parameter   | Unit       | Cell 1  |                                       |                                       |                                       |                                       | Cell 2  |                                       |                                       |                                       |                                       |      |

### A.8.23.9.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest 115 ms into T3.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4.

The UE shall stop sending CSI reports for PSCell in at latest 16ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90%.

NOTE: The PSCell addition delay can be expressed as follows as specified in Clause 7.14.2:

$$T_{\text{config\_PSCell}} = 15\text{ms} + T_{\text{activation\_time}} + 50\text{ms} + T_{\text{PCell\_DU}} + T_{\text{PSCell\_DU}}$$

Where:

$T_{\text{activation\_time}} = 20 \text{ ms}$  (cell2 is known to the UE);

$T_{\text{PCell\_DU}} = 0$  (due to PRACH configurations in cell1 and cell2 being orthogonal in time, i.e. non-overlapping in time);

$T_{\text{PSCell\_DU}} = 30 \text{ ms}$  (delay due to PRACH transmission to cell2).

This gives a total of 115 ms.

## A.8.24 Proximity-based Services

### A.8.24.1 E-UTRAN FDD - Initiation/Cease of SLSS Transmission with ProSe Direct Discovery

The purpose of this test is to verify the requirements related to the maximum evaluation time allowed to initiate and cease SLSS transmissions defined in clause 8.10.2.1. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN. This test is applicable for a UE capable of ProSe Direct Discovery and also SLSS transmission and reception (indicated using *disc-SLSS*).

For this test, the UE is triggered by the test loop function or the upper layers to announce ProSe Direct Discovery.

The test parameters are given in Table A.8.24.1.1-1, Table A.8.24.1.1-2 and Table A.8.24.1.1-3 below. There is one active cell (PCell) in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting SLSS. During T2, the RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate SLSS transmissions. During T3, the RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease SLSS transmissions.

#### A.8.24.1.1 Test Purpose and Environment

**Table A.8.24.1.1-1: Test parameters for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter                                   | Unit | Value    | Comment                                 |
|---|------|----------|---|
| E-UTRA RF Channel Number                    |      | 1        | Only one FDD carrier frequency is used. |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 5        |   |
| Active cell                                 |      | Cell 1   | E-UTRA FDD Cell1 on RF channel number 1 |
| CP length of Cell 1                         |      | Normal   |   |
| Layer 3 filtering                           |      | Disabled | L3 filtering is not used                |
| drx-Configuration                           |      | DRX_P1   | As specified in Table A.3.12.2-1        |
| T1  | s    | 3        |   |
| T2  | s    | 5.24     |   |
| T3  | s    | 5.24     |   |

**Table A.8.24.1.1-2: ProSe Direct Discovery configuration for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

They are not settable parameters themselves.</p> |            |           |       |       |

### A.8.24.1.2 Test Requirements

The SLSS transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the SLSS transmission.

The SLSS transmission initiation delay shall be less than 2.24 s.

The SLSS transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the SLSS transmission.

The SLSS transmission cease delay shall be less than 2.24 s.

The rate of correct initiation/cease delay of SLSS transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of SLSS transmissions can be expressed as:  $T_{\text{evaluate,SLSS}} + \text{discPeriod}$ ,

Where:

$T_{\text{evaluate,SLSS}}$  is the evaluation time for initiate/cease of SLSS, and is 1.92 sec (see Table 8.10.2.1-1 in clause 8.10.2.1) for the parameters in this test;

$\text{discPeriod}$  is the discovery period (set as 320ms in this test).

## A.8.24.2 E-UTRAN TDD - Initiation/Cease of SLSS Transmission with ProSe Direct Discovery

The purpose of this test is to verify the requirements related to the maximum evaluation time allowed to initiate and cease SLSS transmissions defined in clause 8.10.2.1. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN. This test is applicable for a UE capable of ProSe Direct Discovery and also SLSS transmission and reception (indicated using *disc-SLSS*).

For this test, the UE is triggered by the test loop function or the upper layers to announce ProSe Direct Discovery.

The test parameters are given in Table A.8.24.2.1-1, Table A.8.24.2.1-2 and Table A.8.24.2.1-3 below. There is one active cell (PCell) in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting SLSS. During T2, the RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate SLSS transmissions. During T3, the RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease SLSS transmissions.

| <p>Note 1: OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |            |           |       |       |

### A.8.24.2.2 Test Requirements

The SLSS transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the SLSS transmission.

The SLSS transmission initiation delay shall be less than 2.24 s.

The SLSS transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the SLSS transmission.

The SLSS transmission cease delay shall be less than 2.24 s.

The rate of correct initiation/cease delay of SLSS transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of SLSS transmissions can be expressed as:  $T_{\text{evaluate,SLSS}} + \text{discPeriod}$ ,

Where:

$T_{\text{evaluate,SLSS}}$  is the evaluation time for initiate/cease of SLSS, and is 1.92 sec (see Table 8.10.2.1-1 in clause 8.10.2.1) for the parameters in this test;

*discPeriod* is the discovery period (set as 320ms in this test).

### A.8.24.3 E-UTRAN FDD - Initiation/Cease of SLSS Transmission with ProSe Direct Communication

The purpose of this test is to verify that the ProSe UE meets the requirements related to the maximum evaluation time allowed to initiate and cease SLSS transmissions defined in clause 8.10.2.2. This test is applicable for a UE capable of ProSe Direct Communication. In the test the UE under test is configured for ProSe operation only on PCell and also the UE is configured only for PCell for WAN.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A.8.24.3.1-1, Table A.8.24.3.1-2 and Table A.8.24.3.1-3 below. There is one active cell (PCell) in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting SLSS. During T2, the RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate SLSS transmissions. During T3, the RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease SLSS transmissions.

#### A.8.24.3.1 Test Purpose and Environment

**Table A.8.24.3.1-1: Test parameters for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter                            | Unit | Value    | Comment   |
|--------------------------------------|------|----------|---|
| E-UTRA RF Channel Number             |      | 1        | Only one FDD carrier frequency is used.           |
| Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 5 or 10  | According to principle defined in clause A.3.12.3 |
| Active cell                          |      | Cell 1   | E-UTRA FDD Cell1 on RF channel number 1           |
| CP length of Cell 1                  |      | Normal   |   |
| Layer 3 filtering                    |      | Disabled | L3 filtering is not used                          |
| drx-Configuration                    |      | DRX_P1   | As specified in Table A.3.12.2-1                  |
| T1                                   | s    | 3        |   |
| T2                                   | s    | 5.24     |   |
| T3                                   | s    | 5.24     |   |

**Table A.8.24.3.1-2: ProSe Direct Communication configuration for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter                                | Unit       | Value   | Comment  |
|--|------------|---|--|
| E-UTRA RF Channel Number                 |            | 1   | UL carrier frequency                               |
| Channel Bandwidth ( $BW_{channel}$ )     | MHz        | 5 or 10   | According to principle defined in clause A.3.12.3  |
| ProSe Direct Communication configuration |            | As specified in Table A.3.12.5-1 (Configuration #1) | IE values unless specified otherwise in this test. |
| networkControlledSyncTx                  |            | Not configured                                      |  |
| syncTxThreshIC                           | dBm/15 kHz | -95   | In SIB18   |

**Table A.8.24.3.1-3: Cell specific test parameters for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter  | Unit   | Cell 1                              |       |       |
|--|--|-------------------------------------|-------|-------|
|  |  | T1                                  | T2    | T3    |
| E-UTRA RF Channel Number                             |  | 1                                   |       |       |
| $BW_{channel}$ <sup>Note 4</sup>                     | MHz  | 5 or 10                             |       |       |

| Note 1:  | OCNG shall be used such that cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |                                     |       |       |
| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                     |       |       |
| Note 3:  | RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                                     |       |       |
| Note 4:  | This test is according to the principle defined in section A.3.12.3.   |                                     |       |       |

### A.8.24.3.2 Test Requirements

The SLSS transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the SLSS transmission.

The SLSS transmission initiation delay shall be less than 1.96 s.

The SLSS transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the SLSS transmission.

The SLSS transmission cease delay shall be less than 1.96 s.

The rate of correct initiation/cease delay of SLSS transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of SLSS transmissions can be expressed as:  $T_{evaluate,SLSS} + \text{SLSS period}$ ,

Where:

$T_{evaluate,SLSS}$  is the evaluation time for initiate/cease of SLSS, and is 1.92 sec (see Table 8.10.2.1-1 in clause 8.10.2.1) for the parameters in this test;

SLSS period is set to 40ms.

---

## A.9 Measurement Performance Requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in Clause 9 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in Clause 9 for at least 90% of the reported cases.
- Cell 1 is the PCell.
- Measurements are performed in RRC\_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

### A.9.1 RSRP

#### A.9.1.1 FDD Intra frequency case

##### A.9.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.1 and 9.1.2.2 for FDD intra frequency measurements.

##### A.9.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.1.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.1.1.2-1: RSRP FDD Intra frequency test parameters

| Parameter  | Unit                                 | Test 1     |          | Test 2   |          | Test 3   |          |
|--|--------------------------------------|------------|----------|----------|----------|----------|----------|

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.  |
| Note 7: | Except Band 29 and Band 32.  |

### A.9.1.1.3 Test Requirements
