The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.2.1 and 9.1.2.2.

## A.9.1.2 TDD Intra frequency case

### A.9.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.1 and 9.1.2.2 for TDD intra frequency measurements.

### A.9.1.2.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.2.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.1.2.2-1: RSRP TDD Intra frequency test parameters**

| Parameter  | Unit        | Test 1     |          | Test 2   |          | Test 3   |          |             |
|--|-------------|------------|----------|----------|----------|----------|----------|-------------|
|  |             | Cell 1     | Cell 2   | Cell 1   | Cell 2   | Cell 1   | Cell 2   |             |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: E-UTRA operating band groups are as defined in Section 3.5.</p> |             |            |          |          |          |          |          |             |

**A.9.1.2.3 Test Requirements**

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.2.1 and 9.1.2.2.

### A.9.1.3 FDD—FDD Inter frequency case

#### A.9.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.3.1 and 9.1.3.2 for FDD—FDD inter frequency measurements.

#### A.9.1.3.2 Test parameters

In this set of test cases the cells are on different carrier frequencies. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.3.2-1 In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap.

**Table A.9.1.3.2-1: RSRP FDD—FDD Inter frequency test parameters**

| Parameter   | Unit                      | Test 1     |          | Test 2   |   |             |            |        |        |                               |      |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> |                           |            |          |          |   |             |            |        |        |                               |      |

|         |   |
|---------|---|
| Note 3: | RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.                |
| Note 5: | For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz.     |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.   |
| Note 7: | Except Band 29 and Band 32.   |

### A.9.1.3.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.3.1 and 9.1.3.2.

### A.9.1.4 TDD—TDD Inter frequency case

#### A.9.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.3.1 and 9.1.3.2 for TDD—TDD inter frequency measurements.

#### A.9.1.4.2 Test parameters

In this set of test cases the cells are on different carrier frequencies. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.4.2-1 for TDD configuration 1 and in Table A.9.1.4.2-2 for TDD configuration 0. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap.

Table A.9.1.4.2-1: RSRP TDD—TDD Inter frequency test parameters for TDD configuration 1

| Parameter  | Unit   | Test 1     |          | Test 2   |                                 |             |            |        |        |                                |      |

|  | Bands TDD_C  |            |          |          | -86.76                          |             |            |        |        |                                |      |
|  | Bands TDD_E  |            |          |          | -85.76                          |             |            |        |        |                                |      |
| $\hat{E}_s / N_{oc}$   | dB   | 10         | 10       | 13       | -4                              |             |            |        |        |                                |      |
| Propagation condition  | -  | AWGN       |          | AWGN     |                                 |             |            |        |        |                                |      |
| Note 1:  | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.   |            |          |          |                                 |             |            |        |        |                                |      |
| Note 2:  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |            |          |          |                                 |             |            |        |        |                                |      |
| Note 3:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |          |          |                                 |             |            |        |        |                                |      |
| Note 4:  | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |            |          |          |                                 |             |            |        |        |                                |      |
| Note 5:  | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |            |          |          |                                 |             |            |        |        |                                |      |
| Note 6:  | E-UTRA operating band groups are as defined in Section 3.5.  |            |          |          |                                 |             |            |        |        |                                |      |

**A.9.1.4.3 Test Requirements**

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.3.1 and 9.1.3.2.

## A.9.1.5 FDD—TDD Inter frequency case

### A.9.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.3.1 and 9.1.3.2 for FDD—TDD inter frequency measurements.

### A.9.1.5.2 Test parameters

In this set of test cases the cells are on different carrier frequencies. Both absolute and relative accuracy of RSRP inter frequency measurements are tested by using the parameters in Table A.9.1.5.2-1 and Table A.9.1.5.2-2. In all test cases, Cell 1 is the serving cell and Cell 2 the target cell. Cell 1 is FDD cell and Cell 2 is TDD cell. The inter frequency measurements are supported by a measurement gap.

**Table A.9.1.5.2-1: RSRP FDD—TDD Inter frequency test parameters (FDD Cell1)**

| Parameter  | Unit   | Test 1   |   | Test 2   |   |
|--|--|----------|---|----------|---|
|  |  | Cell 1   |   | Cell 1   |   |
| E-UTRA RF Channel Number   |  | 1        |   | 1        |   |
| BW <sub>channel</sub>  | MHz  | 10       |   | 10       |   |

### A.9.1.5.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.3.1 and 9.1.3.2.

## A.9.1.6 FDD RSRP for E-UTRAN Carrier Aggregation

### A.9.1.6.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRP absolute and relative accuracy requirements in carrier aggregation are within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2, and the relative RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2. The test will also verify the primary and secondary component carrier relative RSRP accuracy requirement defined in Clause 9.1.11.3.

### A.9.1.6.2 Test parameters

In this set of cases cell1 is PCell on the primary component carrier, cell2 is SCell on the secondary component carrier and activated, and cell3 is the neighboring cell on the secondary component carrier. The test parameters are given in Table A.9.1.6.2-1.

Table A.9.1.6.2-1: RSRP FDD carrier aggregation test parameters

| Parameter  | Unit                      | Test 1   |  |                        |
|--|---------------------------|----------|--|------------------------|
|  |                           | Cell 1   | Cell 2   | Cell3                  |
| E-UTRA RF Channel Number   |                           | 1        | 2  | 2                      |
| BW <sub>channel</sub>  | MHz                       | 10       | 10   | 10                     |

|         |  |
|---------|--|
|         | transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |
| Note 6: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |
| Note 7: | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.  |

### A.9.1.6.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.1.7 TDD RSRP for E-UTRAN Carrier Aggregation

The test case in this clause are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the absolute RSRP accuracy on PCell defined in clause 9.1.11.1, the absolute RSRP accuracy on Scell defined in clause 9.1.11.2, the relative RSRP accuracy between SCell and Cell 3 defined in clause 9.1.11.2, and the relative RSRP accuracy between PCell and SCell defined in clause 9.1.11.3.

#### A.9.1.7.2 Test parameters

In this set of test cases there are three cells on two carrier frequencies. Cell 1 is PCell on channel 1, Cell 2 is activated SCell on channel 2, and Cell 3 is neighbour cell which is also on channel 2. The parameters for the test are listed in Table A.9.1.7.2-1.

Table A.9.1.7.2-1: Carrier aggregation RSRP test parameters for TDD

| Parameter  | Unit   | Test 1   |  |                        |             |      |                               |  |
|--|--|----------|--|------------------------|-------------|------|-------------------------------|--|
|  |  | Cell 1   | Cell 2   | Cell 3                 |             |      |                               |  |
| E-UTRA RF Channel Number   |  | 1        | 2  |                        |             |      |                               |  |

| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.  |

### A.9.1.7.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3

## A.9.1.8 FDD RSRP under Time-Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.9.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.3 and 9.1.2.4 for FDD intra-frequency RSRP measurements under time-domain measurement resource restriction with non-MBSFN ABS configured in the aggressor cell.

### A.9.1.8.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.8.2-1 and A.9.1.8.2-2.

In the tests there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 2. Cell 2 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 2 are measured for RSRP relative accuracy. Non-MBSFN ABS pattern is configured for Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.1.8.2-1: General test parameters for E-UTRAN FDD RSRP intra frequency test parameters under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value   | Comment   |
|--|------|---|---|
| Serving cell (PCell)   |      | Cell 1  | The aggressor cell to Cell 2  |
| Neighbour cell   |      | Cell 2  | Cell to be measured   |
| PCell ABS configuration  |      | Non-MBSFN ABS                                     | As defined in Table A.3.4.1.1-1   |
| CP length  |      | Normal  | For both cells in the test  |
| DRX  |      |   | OFF   |
| Time offset between cells  |      | 3 $\mu$ s   | Synchronous cells   |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6$<br>$\neq 0$ | Cell PCIs for Cell 1 and Cell 2 are selected randomly so that the condition is met  |
| ABS pattern  |      | '10000000100000001000<br>00001000000010000000'    | Non-MBSFN ABS. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. No MBSFN subframes are configured in the ABS subframes in Cell 1. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '10000000100000001000<br>00001000000010000000'    | Configured for Cell 2 measurements by measSubframePattern-Neigh IE in measSubframePatternConfig-Neigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.   |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '01000000010000000100<br>00000100000001000000'    | Configured for measurements on Cell 1.  |

**Table A.9.1.8.2-2: Cell-specific test parameters for E-UTRAN FDD RSRP intra-frequency test parameters under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  |                                      | Unit       | Test 1   |          | Test 2   |          | Test 3   |          |

|         |   |
|---------|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Applies to all subframes. |
| Note 3: | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_0$ levels are calculated in CRS symbols of measurement restricted subframes.                        |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | Applies to restricted measurement subframes of the respective cell.   |
| Note 6: | Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.   |
| Note 7: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.   |
| Note 9: | Except Band 29 and Band 32.   |

### A.9.1.8.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.3 and 9.1.2.4, respectively.

## A.9.1.9 TDD RSRP under Time-Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.9.1.9.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.3 and 9.1.2.4 for TDD intra-frequency RSRP measurements under time-domain measurement resource restriction with non-MBSFN ABS configured in the aggressor cell.

### A.9.1.9.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.9.2-1 and A.9.1.9.2-2.

In the tests there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 2. Cell 2 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 2 are measured for RSRP relative accuracy. Non-MBSFN ABS pattern is configured for Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.1.9.2-1: General test parameters for E-UTRAN TDD RSRP intra frequency test parameters under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value  | Comment   |
|--|------|--|---|
| Serving cell (PCell)   |      | Cell 1                                       | Also the aggressor cell.  |
| Neighbour cell   |      | Cell 2                                       | Cell to be measured   |
| PCell ABS configuration  |      | Non-MBSFN ABS                                | As defined in Table A.3.4.1.1-1   |
| Special subframe configuration   |      | 6  | For Cell 1 and Cell 2. For special subframe configurations see Table 4.2-1 in [16].   |
| Uplink/downlink subframe configuration   |      | 1  | For Cell 1 and Cell 2. For uplink-downlink subframe configurations see Table 4.2-2 in [16].   |
| CP length  |      | Normal                                       | For both cells in the test  |
| DRX  |      |  | OFF   |
| Time offset between cells  |      | 3 $\mu$ s                                    | Synchronous cells   |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 \neq 0$ | Cell PCIs for Cell 1 and Cell 2 are randomly selected so that the condition is met  |
| ABS pattern  |      | '00000000010000000001'                       | Non-MBSFN ABS. TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where $x$ is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes in Cell 1. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '00000000010000000001'                       | Configured for Cell 2 measurements by measSubframePattern-Neigh IE in measSubframePatternConfig-Neigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.   |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '10000000001000000000'                       | Configured for Cell 1 measurements.   |

**Table A.9.1.9.2-2: Cell-specific test parameters for E-UTRAN TDD RSRP intra-frequency test parameters under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter   | Unit        | Test 1     |          | Test 2   |          | Test 3   |          |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Applies to all subframes.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> levels are calculated in CRS symbols of measurement restricted subframes.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Applies to restricted measurement subframes of the respective cell.</p> <p>Note 6: Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.</p> <p>Note 7: E-UTRA operating band groups are as defined in Section 3.5.</p> |             |            |          |          |          |          |          |

### A.9.1.9.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.3 and 9.1.2.4, respectively.

## A.9.1.10 FDD RSRP under Time-Domain Measurement Resource Restriction with MBSFN ABS

### A.9.1.10.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.3 and 9.1.2.4 for FDD intra-frequency RSRP measurements under time-domain measurement resource restriction with MBSFN ABS configured in the aggressor cell.

### A.9.1.10.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.10.2-1 and A.9.1.10.2-2.

In the tests there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 2. Cell 2 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 2 are measured for RSRP relative accuracy. MBSFN ABS pattern is configured in Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.1.10.2-1: General test parameters for E-UTRAN FDD RSRP intra-frequency test parameters under time-domain measurement resource restriction with MBSFN ABS**

| Parameter  | Unit | Value  | Comment  |
|--|------|--|--|
| Serving cell (PCell)   |      | Cell 1   | The aggressor cell to Cell 2   |
| Neighbour cell   |      | Cell 2   | Cell to be measured  |
| PCell ABS configuration  |      | MBSFN ABS  | As defined in Table A.3.4.2.1-1  |
| CP length  |      | Normal   | For both cells in the test   |
| DRX  |      |  | OFF  |
| Time offset between cells  |      | 3 $\mu$ s  | Synchronous cells  |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 = 0$ , $PCI_{cell1}$ not equal to $PCI_{cell2}$ | Cell PCIs for Cell 1 and Cell 2 are selected randomly so that the condition is met   |
| ABS pattern  |      | '01000000100000001000000010000000010000001000000'                                    | MBSFN ABS pattern. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. All ABS subframes are MBSFN subframes. |

### A.9.1.10.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.3 and 9.1.2.4, respectively.

## A.9.1.11 TDD RSRP under Time-Domain Measurement Resource Restriction with MBSFN ABS

### A.9.1.11.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.3 and 9.1.2.4 for TDD intra-frequency RSRP measurements under time-domain measurement resource restriction with MBSFN ABS configured in the aggressor cell.

### A.9.1.11.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.11.2-1 and A.9.1.11.2-2.

In the tests there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 2. Cell 2 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 2 are measured for RSRP relative accuracy. MBSFN ABS pattern is configured in Cell 1 during the test. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.1.11.2-1: General test parameters for E-UTRAN TDD RSRP intra-frequency test parameters under time-domain measurement resource restriction with MBSFN ABS**

| Parameter  | Unit | Value  | Comment   |
|--|------|--|---|
| Serving cell (PCell)   |      | Cell 1   | The aggressor cell to Cell 2  |
| Neighbour cell   |      | Cell 2   | Cell to be measured   |
| PCell ABS configuration  |      | MBSFN ABS  | As defined in Table A.3.4.2.1-1   |
| Special subframe configuration   |      | 6  | For Cell 1 and Cell 2. For special subframe configurations see Table 4.2-1 in [16].   |
| Uplink/downlink subframe configuration   |      | 1  | For Cell 1 and Cell 2. For uplink-downlink subframe configurations see Table 4.2-2 in [16].   |
| CP length  |      | Normal   | For both cells in the test  |
| DRX  |      |  | OFF   |
| Time offset between cells  |      | 3 $\mu$ s  | Synchronous cells   |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 = 0$ , $PCI_{cell1}$ not equal to $PCI_{cell2}$ | Cell PCIs for Cell 1 and Cell 2 are selected randomly so that the condition is met  |
| ABS pattern  |      | '00001000000000100000'   | MBSFN ABS pattern. TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1. The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (20) divided by 10. All ABS subframes are MBSFN subframes. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '00001000000000100000'   | Configured for Cell 2 measurements by measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.   |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '10000000001000000000'   | Configured for measurements on Cell 1.  |

**Table A.9.1.11.2-2: Cell-specific test parameters for E-UTRAN TDD RSRP intra-frequency test parameters under time-domain measurement resource restriction with MBSFN ABS**

| Parameter   | Unit        | Test 1     |          | Test 2   |          | Test 3   |          |        |
|---|-------------|------------|----------|----------|----------|----------|----------|--------|
|   |             | Cell 1     | Cell 2   | Cell 1   | Cell 2   | Cell 1   | Cell 2   |        |
| E-UTRA RF Channel Number  |             | 1          |          | 1        |          | 1        |          |        |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.  
Applies to all subframes.
- Note 3: RSRP and  $I_0$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  $I_0$  levels are calculated in CRS symbols of measurement restricted subframes.
- Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port
- Note 5: Applies to restricted measurement subframes of the respective cell.
- Note 6: Non-ABS and ABS subframe channel powers defined in Table A.3.4.2.1-1.
- Note 7: In the 1<sup>st</sup> OFDM symbol, Cell 2 is not expected to meet the  $E_s/I_{ot}$  side condition in 9.1.2.3 and 9.1.2.4.
- Note 8: E-UTRA operating band groups are as defined in Section 3.5.

### A.9.1.11.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.3 and 9.1.2.4, respectively.

### A.9.1.12 FDD RSRP for E-UTRAN Carrier Aggregation for 20MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.12.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.6.1.

#### A.9.1.12.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.12.2-1 will replace the values of corresponding parameters in Tables A.9.1.6.2-1.

**Table A.9.1.12.2-1: RSRP FDD carrier aggregation test parameters**

| Parameter   | Unit                          | Test 1     |           |                            |
|---|-------------------------------|------------|-----------|----------------------------|
|   |                               | Cell 1     | Cell 2    | Cell 3                     |
| $BW_{\text{channel}}$ <sup>Note 1</sup>   | MHz                           | 20         | 20        | 20                         |
| Measurement bandwidth   | $n_{PRB}$                     | 47—52      |           |                            |
| PDSCH Reference measurement channel defined in A.3.1.1.1  |                               | R.4 FDD    | R.4 FDD   | N/A                        |
| PDSCH allocation  | $n_{PRB}$                     | 38—61      | 38—61     | N/A                        |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.1   |                               | R.10 FDD   |           |                            |
| OCNG Patterns defined in A.3.2.1.11 (OP.11 FDD) and A.3.2.1.12 (OP.12 FDD)  |                               | OP.11 FDD  | OP.11 FDD | OP.12 FDD                  |
| $Io$ <sup>Note 2</sup>  | Bands FDD_A <sup>Note 5</sup> | dBm/18 MHz | -84.75    | (Io for Channel 1 +5.33dB) |
|   | Bands FDD_C <sup>Note 5</sup> |            | -83.75    |                            |
|   | Bands FDD_D <sup>Note 5</sup> |            | -83.25    |                            |
|   | Bands FDD_E <sup>Note 5</sup> |            | -82.75    |                            |
|   | Bands FDD_G <sup>Note 5</sup> |            | -81.75    |                            |
|   | Bands FDD_H <sup>Note 5</sup> |            | -81.25    |                            |
| <p>Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 2: <math>Io</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: See Table A.9.1.6.2-1 for the other parameters.</p> <p>Note 4: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 5: The test applies for E-UTRA operating bands in this band group which are supporting 20 MHz channel bandwidth.</p> |                               |            |           |                            |

### A.9.1.12.3 Test Requirements

The test requirements defined in section A.9.1.6.3 shall apply to this test case.

### A.9.1.13 TDD RSRP for E-UTRAN Carrier Aggregation for 20MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.13.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.7.1.

#### A.9.1.13.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.13.2-1 will replace the values of corresponding parameters in Tables A.9.1.7.2-1.

**Table A.9.1.13.2-1: Carrier aggregation RSRP test parameters for TDD**

| Parameter   | Unit                          | Test 1        |          |   |
|---|-------------------------------|---------------|----------|---|
|   |                               | Cell 1        | Cell 2   | Cell 3                                    |
| $BW_{\text{channel}}$ <sup>Note 1</sup>   | MHz                           | 20            |          |   |
| Measurement bandwidth   | $n_{PRB}$                     | 47—52         |          |   |
| PDSCH Reference measurement channel defined in A.3.1.1.2  |                               | R.3 TDD       | R.3 TDD  | N/A                                       |
| PDSCH allocation  | $n_{PRB}$                     | 38—61         | 38—61    | N/A                                       |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.2   |                               | R.10 TDD      |          |   |
| OCNG Patterns defined in A.3.2.2.7 (OP.7 TDD) and A.3.2.2.8 (OP.8 TDD)  |                               | OP.7 TDD      | OP.7 TDD | OP.8 TDD                                  |
| $I_o$ <sup>Note 2</sup>   | Bands TDD_A <sup>Note 5</sup> | dBm/18<br>MHz | -84.75   | (I <sub>o</sub> for Channel 1<br>+5.33dB) |
|   | Bands TDD_C <sup>Note 5</sup> |               | -83.75   |   |
|   | Bands TDD_E <sup>Note 5</sup> |               | -82.75   |   |
| <p>Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 2: I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: See Table A.9.1.7.2-1 for the other parameters.</p> <p>Note 4: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 5: The test applies for E-UTRA operating bands in this band group which are supporting 20 MHz channel bandwidth.</p> |                               |               |          |   |

### A.9.1.13.3 Test Requirements

The test requirements defined in section A.9.1.7.3 shall apply to this test case.

## A.9.1.14 FDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.1.14.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.5 and 9.1.2.6 for FDD intra-frequency RSRP measurements under time-domain measurement resource restriction with CRS Assistance Information and non-MBSFN ABS configured in the aggressor cells.

### A.9.1.14.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.14.2-1 and A.9.1.14.2-2.

In the tests there are three synchronous cells, Cell 1, Cell2 and Cell 3, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 3. Cell 2 is the neighbour aggressor cell without CRS colliding to Cell 3. Cell 3 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 3 are measured for RSRP relative accuracy. Non-MBSFN ABS pattern is configured for Cell 1 and Cell 2 during the test.

The UE is configured by higher layers with a time domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells, namely Cell 3 measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement pattern and the CRS assistance information shall be provided via RRC to the UE before the measurements start.

Note: It's up to eNB's implementation whether the time domain measurement resource restriction pattern for PCell measurements is configured or not.

**Table A.9.1.14.2-1: General test parameters for FDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter  |                          | Unit | Value  | Comment   |
|--|--------------------------|------|--|---|
| Serving cell (PCell)   |                          |      | Cell 1   | The aggressor cell to Cell 3  |
| Neighbour cell   |                          |      | Cell 2   | The aggressor cell to Cell 3  |
| Neighbour cell   |                          |      | Cell 3   | Cell to be measured   |
| PCell ABS configuration  |                          |      | Non-MBSFN ABS  | As defined in Table A.3.4.1.1-1   |
| CP length  |                          |      | Normal   | For three cells in the test   |
| DRX  |                          |      |  | OFF   |
| Cell 2 time offset with respect to Cell 1  |                          |      | 0µs  | Synchronous cells   |
| Cell 3 time offset with respect to Cell 1  |                          |      | -2.5 µs  | Synchronous cells   |
| Physical cell ID PCI   |                          |      | Colliding CRS: $(PCI_{cell1} - PCI_{cell3}) \bmod 6 = 0$ ,<br>$PCI_{cell1}$ not equal to $PCI_{cell3}$<br>Non-colliding CRS:<br>$(PCI_{cell2} - PCI_{cell3}) \bmod 6 \neq 0$ | Cell PCIs for three cells are selected randomly so that all conditions are met  |
| ABS pattern  |                          |      | '10000000100000001000<br>00001000000010000000'   | Non-MBSFN ABS. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the Pcell subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. No MBSFN subframes are configured in the ABS subframes in Cell 1. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |                          |      | '10000000100000001000<br>00001000000010000000'   | Time domain measurement resource restriction pattern for neighbor cell measurement signalled to the UE in measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331, clause 6.3.5. Configured before the measurements start. The cell list in measSubframeCellList IE shall contain Cell 3 but not Cell 2.               |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |                          |      | '01000000010000000100<br>00000100000001000000'   | Configured for measurements on Cell 1.  |
| CRS assistance information   | physCellId               |      | see PCI conditions above   | The CRS assistance information is provided for Cell 2 only in CRS-AssistanceInfo. It includes a single MBSFN-SubframeConfig element with subframe allocation <i>one Frame</i> ='000000'.  |
|  | antennaPortsCount        |      | 1  |   |
|  | mbsfn-SubframeConfigList |      | <i>oneFrame</i> = '000000'   |   |

**Table A.9.1.14.2-2: Cell-specific test parameters for FDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter  | Unit                                 | Test 1   |          |          | Test 2   |          |          | Test 3   |          |          |
|--|--------------------------------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|
|  |                                      | Cell 1   | Cell 2   | Cell 3   | Cell 1   | Cell 2   | Cell 3   | Cell 1   | Cell 2   | Cell 3   |
| E-UTRA RF Channel Number   |                                      | 1        |          |          | 1        |          |          | 1        |          |          |
| BW <sub>channel</sub>  | MHz                                  | 10       |          |          | 10       |          |          | 10       |          |          |

|         |   |
|---------|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. Applies to all subframes.  |
| Note 3: | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_o$ levels are calculated in CRS symbols of measurement restricted subframes.  |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | Applies to restricted measurement subframes for only Cell 2 and Cell 3. For Cell 1, the corresponding value is derived from the normal subframes other than the subframes indicated in the time domain measurement resource restriction pattern for intra-frequency measurements. |
| Note 6: | Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.   |
| Note 7: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.   |
| Note 9: | Except Band 29 and Band 32.   |

### A.9.1.14.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.5 and 9.1.2.6, respectively.

## A.9.1.15 TDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.1.15.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.5 and 9.1.2.6 for TDD intra-frequency RSRP measurements under time-domain measurement resource restriction with CRS Assistance Information and non-MBSFN ABS configured in the aggressor cells.

### A.9.1.15.2 Test parameters

In this set of test cases all cells are on the same carrier frequency as PCell. Both absolute and relative accuracy of RSRP intra-frequency measurements are tested, with test parameters specified in Tables A.9.1.15.2-1 and A.9.1.15.2-2.

In the tests there are three synchronous cells, Cell 1, Cell2 and Cell 3, on the same RF channel. In all test cases, Cell 1 is the serving cell (PCell) and also the aggressor cell to Cell 3. Cell 2 is the neighbour aggressor cell without CRS colliding to Cell 3. Cell 3 is the cell to be measured for RSRP absolute accuracy, whilst both Cell 1 and Cell 3 are measured for RSRP relative accuracy. Non-MBSFN ABS pattern is configured for Cell 1 and Cell 2 during the test.

The UE is configured by higher layers with a time domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells, namely Cell 3 measurements. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement pattern and the CRS assistance information shall be provided via RRC to the UE before the measurements start.

Note: It's up to eNB's implementation whether the time domain measurement resource restriction pattern for PCell measurements is configured or not.

**Table A.9.1.15.2-1: General test parameters for TDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter  |                          | Unit | Value  | Comment   |
|--|--------------------------|------|--|---|
| Serving cell (PCell)   |                          |      | Cell 1   | The aggressor cell to Cell 3  |
| Neighbour cell   |                          |      | Cell 2   | The aggressor cell to Cell 3  |
| Neighbour cell   |                          |      | Cell 3   | Cell to be measured   |
| PCell ABS configuration  |                          |      | Non-MBSFN ABS  | As defined in Table A.3.4.1.1-1   |
| CP length  |                          |      | Normal   | For three cells in the test   |
| Special subframe configuration   |                          |      | 6  | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells  |
| Uplink-downlink configuration  |                          |      | 1  | As specified in table 4.2-2 in TS 36.211. The same configuration in both cells  |
| DRX  |                          |      |  | OFF   |
| Cell 2 time offset with respect to Cell 1  |                          |      | 0 $\mu$ s  | Synchronous cells   |
| Cell 3 time offset with respect to Cell 1  |                          |      | -2.5 $\mu$ s   | Synchronous cells   |
| Physical cell ID PCI   |                          |      | Colliding CRS: $(PCI_{cell1} - PCI_{cell3}) \bmod 6 = 0$ ,<br>$PCI_{cell1}$ not equal to $PCI_{cell3}$<br>Non-colliding CRS:<br>$(PCI_{cell2} - PCI_{cell3}) \bmod 6 \neq 0$ | Cell PCIs for three cells are selected randomly so that all conditions are met  |
| ABS pattern  |                          |      | '00000000010000000001'   | TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54.<br>The first/leftmost bit corresponds to the Pcell subframe #0 of the radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes.<br>Provided to the UE for Cell 1 and Cell 2 before the measurements start. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |                          |      | '00000000010000000001'   | Time domain measurement resource restriction pattern for neighbor cell measurement signalled to the UE in measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331, clause 6.3.5.<br>Configured before the measurements start. The cell list in measSubframeCellList IE shall contain Cell 3 but not Cell 2.  |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |                          |      | '10000000001000000000'   | Configured for Cell 1 measurements.   |
| CRS assistance information   | physCellId               |      | see PCI conditions above   | The CRS assistance information is provided for Cell 2 only in CRS-AssistanceInfo. It includes a single MBSFN-SubframeConfig element with subframe allocation <i>one Frame</i> ='000000'.  |
|  | antennaPortsCount        |      | 1  |   |
|  | mbsfn-SubframeConfigList |      | <i>oneFrame</i> = '000000'   |   |

**Table A.9.1.15.2-2: Cell-specific test parameters for TDD RSRP under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS**

| Parameter  | Unit        | Test 1     |          |          | Test 2   |          |          | Test 3   |          |          |             |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled. Applies to all subframes.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> levels are calculated in CRS symbols of measurement restricted subframes.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Applies to restricted measurement subframes for only Cell 2 and Cell 3. For Cell 1, the corresponding value is derived from the normal subframes other than the subframes indicated in the time domain measurement resource restriction pattern for intra-frequency measurements.</p> <p>Note 6: Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.</p> <p>Note 7: E-UTRA operating band groups are as defined in Section 3.5.</p> |             |            |          |          |          |          |          |          |          |          |             |

### A.9.1.15.3 Test Requirements

The absolute RSRP measurement accuracy and relative RSRP measurement accuracy shall fulfill the requirements in Sections 9.1.2.5 and 9.1.2.6, respectively.

## A.9.1.16 FDD Intra frequency case for 5MHz Bandwidth

### A.9.1.16.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.2.1 and 9.1.2.2 for FDD intra frequency measurements.

### A.9.1.16.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.16.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.1.16.2-1: RSRP FDD Intra frequency test parameters for 5MHz Bandwidth**

| Parameter  | Unit        | Test 1      |           | Test 2    |           | Test 3    |           |             |            |

### A.9.1.16.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.2.1 and 9.1.2.2.

## A.9.1.17 FDD—FDD Inter frequency case for 5MHz Bandwidth

### A.9.1.17.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.3.1 and 9.1.3.2 for FDD—FDD inter frequency measurements.

### A.9.1.17.2 Test parameters

In this set of test cases the cells are on different carrier frequencies. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.17.2-1 In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap.

Table A.9.1.17.2-1: RSRP FDD—FDD Inter frequency test parameters for 5MHz Bandwidth

| Parameter   | Unit                | Test 1      |           | Test 2    |           |                     |            |        |        |        |        |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: For Band 26, the tests shall be performed with the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 6: This test is only applicable for testing inter-frequency requirements for Bands FDD_N. Cell 2 is on the Band under test, and Cell 1 is on another band supported by the UE.</p> |                     |             |           |           |           |                     |            |        |        |        |        |

Table A.9.1.17.2-1: Void

### A.9.1.17.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.3.1 and 9.1.3.2.

## A.9.1.18 FDD RSRP for E-UTRAN Carrier Aggregation for 10MHz + 5MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

### A.9.1.18.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.6.1.

### A.9.1.18.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.18.2-1 will replace the values of corresponding parameters in Tables A.9.1.6.2-1.

**Table A.9.1.18.2-1: RSRP FDD carrier aggregation test parameters**

| Parameter   |   | Unit        | Test 1   |  |           |  |
|---|---|-------------|----------|--|-----------|--|
|   |   |             | Cell 1   | Cell 2                                 | Cell 3    |  |
| BW <sub>channel</sub> <sup>Note 1</sup>                               |   | MHz         | 10       | 5                                      |           |  |
| Measurement bandwidth   |   | $n_{PRB}$   | 22-27    | 10-15                                  |           |  |
| PDSCH Reference measurement channel defined in A.3.1.1.1              |   |             | R.0 FDD  | R.5 FDD                                | N/A       |  |
| PDSCH allocation  |   | $n_{PRB}$   | 13-36    | 7-17                                   | N/A       |  |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.1 |   |             | R.6 FDD  | R.11 FDD                               |           |  |
| OCNG Patterns defined in A.3.2.1 (FDD)                                |   |             | OP.1 FDD | OP.15 FDD                              | OP.16 FDD |  |
| I <sub>o</sub> <sup>Note2</sup>                                       | Bands FDD_A   | dBm/9 MHz   | -87.76   | N/A                                    |           |  |
|   | Bands FDD_C   |             | -86.76   |  |           |  |
|   | Bands FDD_D   |             | -86.26   |  |           |  |
|   | Bands FDD_E, FDD_F  |             | -85.76   |  |           |  |
|   | Bands FDD_G   |             | -84.76   |  |           |  |
|   | Bands FDD_H   |             | -84.26   |  |           |  |
|   | Bands FDD_A   | dBm/4.5 MHz | N/A      | (I <sub>o</sub> for Channel 1 +2.32dB) |           |  |
|   | Bands FDD_C   |             |          |  |           |  |
|   | Bands FDD_D   |             |          |  |           |  |
|   | Bands FDD_E, FDD_F  |             |          |  |           |  |
|   | Bands FDD_G   |             |          |  |           |  |
|   | Bands FDD_H   |             |          |  |           |  |
|   | <p>Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 2: I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: See Table A.9.1.6.2-1 for the other parameters.</p> |             |          |  |           |  |

### A.9.1.18.3 Test Requirements

The test requirements defined in section A.9.1.6.3 shall apply to this test case.

## A.9.1.19 TDD RSRP for E-UTRAN Carrier Aggregation for 10MHz + 5MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

### A.9.1.19.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.7.1.

### A.9.1.19.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.19.2-1 will replace the values of corresponding parameters in Tables A.9.1.7.2-1.

**Table A.9.1.19.2-1: Carrier aggregation RSRP test parameters for TDD**

| Parameter  |             | Unit       | Test 1   |  |           |
|--|-------------|------------|----------|--|-----------|
|  |             |            | Cell 1   | Cell 2                                 | Cell 3    |
| BW <sub>channel</sub> <sup>Note 1</sup>  |             | MHz        | 10       | 5                                      |           |
| Measurement bandwidth  |             | $n_{PRB}$  | 22-27    | 10-15                                  |           |
| PDSCH Reference measurement channel defined in A.3.1.1.2   |             |            | R.0 TDD  | R.4 TDD                                | N/A       |
| PDSCH allocation   |             | $n_{PRB}$  | 13-36    | 7-17                                   | N/A       |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.2  |             |            | R.6 TDD  | R.11 TDD                               |           |
| OCNG Patterns defined in A.3.2.2 (TDD)   |             |            | OP.1 TDD | OP.9 TDD                               | OP.10 TDD |
| I <sub>o</sub> <sup>Note2</sup>  | Bands TDD_A | dBm/9 MHz  | -87.76   | N/A                                    |           |
|  | Bands TDD_C |            | -86.76   |  |           |
|  | Bands TDD_E |            | -85.76   |  |           |
|  | Bands TDD_A | dBm/4.5MHz | N/A      | (I <sub>o</sub> for Channel 1 +2.32dB) |           |
|  | Bands TDD_C |            |          |  |           |
|  | Bands TDD_E |            |          |  |           |
| Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |             |            |          |  |           |
| Note 2: I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                     |             |            |          |  |           |
| Note 3: See Table A.9.1.7.2-1 for the other parameters.  |             |            |          |  |           |

### A.9.1.19.3 Test Requirements

The test requirements defined in section A.9.1.7.3 shall apply to this test case.

### A.9.1.20 FDD RSRP for E-UTRAN Carrier Aggregation for 5MHz + 5MHz bandwidth

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.20.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.6.1.

#### A.9.1.20.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.20.2-1 will replace the values of corresponding parameters in Tables A.9.1.6.2-1.

**Table A.9.1.20.2-1: RSRP FDD carrier aggregation test parameters**

| Parameter   | Unit                                 | Test 1      |           |                            |
|---|--------------------------------------|-------------|-----------|----------------------------|
|   |                                      | Cell 1      | Cell 2    | Cell 3                     |
| $BW_{\text{channel}}$ <sup>Note 1</sup>   | MHz                                  | 5           | 5         | 5                          |
| Measurement bandwidth   | $n_{PRB}$                            | 10-15       | 10-15     | 10-15                      |
| PDSCH Reference measurement channel defined in A.3.1.1.1  |                                      | R.5 FDD     | R.5 FDD   | N/A                        |
| PDSCH allocation  | $n_{PRB}$                            | 7-17        | 7-17      | -                          |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.1   |                                      | R.11 FDD    | R.11 FDD  | R.11 FDD                   |
| OCNG Patterns defined in A.3.2.1.15 (OP.15 FDD) and A.3.2.1.26 (OP.16 FDD)  |                                      | OP.15 FDD   | OP.15 FDD | OP.16 FDD                  |
| $Io$ <sup>Note 2</sup>  | Bands FDD_A <sup>Note 5</sup>        | dBm/4.5 MHz | -90.76    | (Io for Channel 1 +5.33dB) |
|   | Bands FDD_C <sup>Note 5</sup>        |             | -89.76    |                            |
|   | Bands FDD_D <sup>Note 5</sup>        |             | -89.26    |                            |
|   | Bands FDD_E, FDD_F <sup>Note 5</sup> |             | -88.76    |                            |
|   | Bands FDD_G <sup>Note 5</sup>        |             | -87.76    |                            |
|   | Bands FDD_H <sup>Note 5</sup>        |             | -87.26    |                            |
| <p>Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 2: Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: See Table A.9.1.6.2-1 for the other parameters.</p> <p>Note 4: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 5: The test applies for E-UTRA operating bands in this band group which are supporting 5MHz + 5MHz channel bandwidth.</p> |                                      |             |           |                            |

### A.9.1.20.3 Test Requirements

The test requirements defined in section A.9.1.6.3 shall apply to this test case.

### A.9.1.21 TDD RSRP for E-UTRAN Carrier Aggregation for 5MHz + 5MHz bandwidth

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.21.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.7.1.

#### A.9.1.21.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.21.2-1 will replace the values of corresponding parameters in Tables A.9.1.7.2-1.

**Table A.9.1.21.2-1: Carrier aggregation RSRP test parameters for TDD**

| Parameter  | Unit                          | Test 1   |  |           |
|--|-------------------------------|----------|--|-----------|
|  |                               | Cell 1   | Cell 2                                 | Cell 3    |
| $BW_{\text{channel}}$ <sup>Note 1</sup>  | MHz                           | 5        | 5                                      | 5         |
| Measurement bandwidth  | $n_{PRB}$                     | 10-15    | 10-15                                  | 10-15     |
| PDSCH Reference measurement channel defined in A.3.1.1.2   |                               | R.4 TDD  | R.4 TDD                                | N/A       |
| PDSCH allocation   | $n_{PRB}$                     | 7-17     | 7-17                                   | N/A       |

| <p>Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 2: I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: See Table A.9.1.7.2-1 for the other parameters.</p> <p>Note 4: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 5: The test applies for E-UTRA operating bands in this band group which are supporting 5MHz + 5MHz channel bandwidth.</p> |                               |          |  |           |

### A.9.1.21.3 Test Requirements

The test requirements defined in section A.9.1.7.3 shall apply to this test case.

## A.9.1.22 RSRP for E-UTRAN TDD-FDD Carrier Aggregation with PCell in FDD

### A.9.1.22.1 Test Purpose and Environment

The test case is applicable for TDD-FDD carrier aggregation capable UEs which have been configured with a downlink PCell in FDD and a downlink SCell in TDD.

The purpose of this test is to verify that the RSRP absolute and relative measurements accuracy in TDD-FDD carrier aggregation is within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2, the relative RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2 between the SCell and a neighbour cell, and the relative RSRP accuracy requirements of the PCell compared to the SCell defined in Clause 9.1.11.3.

### A.9.1.22.2 Test parameters

In this test case, Cell 1 is the PCell on the FDD primary component carrier, Cell 2 is the configured and activated SCell on the TDD secondary component carrier, and Cell 3 is the neighboring cell on the TDD secondary component carrier. The test parameters are given in Table A.9.1.22.2-1.

**Table A.9.1.22.2-1: RSRP TDD-FDD carrier aggregation test parameters**

| Parameter   | Unit                                 | Test 1  |   |  |
|---|--------------------------------------|---|---|--|
|   |                                      | Cell 1  | Cell 2  | Cell3  |
| E-UTRA RF Channel Number  |                                      | 1   | 2   | 2  |

### A.9.1.22.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.1.23 RSRP for E-UTRAN TDD-FDD Carrier Aggregation with PCell in TDD

#### A.9.1.23.1 Test Purpose and Environment

The test case is applicable for TDD-FDD carrier aggregation capable UEs which have been configured with a downlink PCell in TDD and a downlink SCell in FDD.

The purpose of this test is to verify that the RSRP absolute and relative measurements accuracy in TDD-FDD carrier aggregation is within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2, the relative RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.11.2 between the SCell and a neighbour cell, and the relative RSRP accuracy requirements of the PCell compared to the SCell defined in Clause 9.1.11.3.

#### A.9.1.23.2 Test parameters

In this test case, Cell 1 is the PCell on the TDD primary component carrier, Cell 2 is the configured and activated SCell on the FDD secondary component carrier, and Cell 3 is the neighboring cell on the FDD secondary component carrier. The test parameters are given in Table A.9.1.23.2-1.

**Table A.9.1.23.2-1: RSRP TDD-FDD carrier aggregation test parameters**

| Parameter   | Unit        | Test 1  |   |  |
|---|-------------|---|---|--|
|   |             | Cell 1  | Cell 2  | Cell3  |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: Es/Iot, RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 7: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 8: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> <p>Note 9: E-UTRA operating band groups are as defined in Section 3.5.</p> |                                      |                            |                                      |   |                        |

### A.9.1.23.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.1.24 TDD RSRP for E-UTRAN Carrier Aggregation for 20MHz + 10MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink Scell.

#### A.9.1.24.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.1.7.1.

#### A.9.1.24.2 Test parameters

The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.1.24.2-1 will replace the values of corresponding parameters in Tables A.9.1.7.2-1.

**Table A.9.1.24.2-1: Carrier aggregation RSRP test parameters for TDD**

| Parameter   | Unit   | Combination                | Test 1                         |   |                                |

|   | Bands TDD_C  |                            |                                | (I <sub>o</sub> for Channel 1 +5.33dB) +10log (N <sub>RB channel2</sub> / N <sub>RB channel 1</sub> ) |                                |
|   | Bands TDD_E  |                            |                                |   |                                |
| Note 1:   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |                            |                                |   |                                |
| Note 2:   | I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                     |                            |                                |   |                                |
| Note 3:   | See Table A.9.1.7.2-1 for the other parameters.  |                            |                                |   |                                |
| Note 4:   | For each parameter, the allowed combinations are shown in separate rows.   |                            |                                |   |                                |

### A.9.1.24.3 Test Requirements

The test requirements defined in section A.9.1.7.3 shall apply to this test case.

## A.9.1.25 FDD intra-frequency absolute and relative RSRP accuracies in CRS based discovery signal

### A.9.1.25.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRP absolute and relative measurement accuracies in CRS based discovery signal are within the specified limits. This test will verify the requirements in Sections 9.1.14.2.

### A.9.1.25.2 Test parameters

In this test case, all cells are on the same carrier frequency. Both absolute and relative accuracies of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.25.2-1. In this test case, Cell 1 is the PCell and Cell 2 is the target cell. The Cell 2 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.1.25.2-1: RSRP FDD Intra frequency test parameters

| Parameter  | Unit                                 | Test 1     |          |
|--|--------------------------------------|------------|----------|
|  |                                      | Cell 1     | Cell 2   |
| E-UTRA RF Channel Number   |                                      | 1          |          |
| $BW_{\text{channel}}$  | MHz                                  | 10         |          |
| Measurement bandwidth  | $n_{PRB}$                            | 22—27      |          |
| DTMC period  | ms                                   | N/A        | 160      |
| DTMC period offset   |                                      | N/A        | 10       |
| Discovery signal occasion duration                                     | ms                                   | N/A        | 1        |
| Time offset between cells  | $\mu\text{s}$                        | 2.3        |          |
| PDSCH Reference measurement channel defined in A.3.1.1.1               |                                      | R.0 FDD    | -        |
| PDSCH allocation   | $n_{PRB}$                            | 13—36      | -        |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.1  |                                      | R.6 FDD    |          |
| OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) and A.3.2.1.2 (OP.2 FDD) |                                      | OP.1 FDD   | OP.2 FDD |
| PBCH_RA  | dB                                   | 0          | 0        |

|  | Bands FDD_H                          |            |          |
| $\hat{E}_s/N_{oc}$   | dB                                   | 6          | 1        |
| Propagation condition  | -                                    | AWGN       |          |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.  |
| Note 7: | Except Band 29 and Band 32.  |

### A.9.1.25.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.2.

## A.9.1.26 TDD intra-frequency absolute and relative RSRP accuracies in CRS based discovery signal

### A.9.1.26.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP absolute and relative measurement accuracies in CRS based discovery signal are within the specified limits. This test will verify the requirements in Sections 9.1.14.2.

### A.9.1.26.2 Test parameters

In this test case all cells are on the same carrier frequency. Both absolute and relative accuracies of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.26.2-1. In this test case, Cell 1 is the PCell and Cell 2 is the target cell. The Cell 2 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

**Table A.9.1.26.2-1: RSRP TDD Intra frequency test parameters**

| Parameter  | Unit        | Test 1     |          |
|--|-------------|------------|----------|
|  |             | Cell 1     | Cell 2   |
| E-UTRA RF Channel Number   |             | 1          |          |
| $BW_{channel}$   | MHz         | 10         |          |
| Special subframe configuration <sup>Note1</sup>                        |             | 6          |          |

|  | Bands TDD_E |            |          |
| $\hat{E}_s / N_{oc}$   | dB          | 6          | 1        |
| Propagation condition  | -           | AWGN       |          |

|         |   |
|---------|---|
| Note 1: | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.  |
| Note 2: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 3: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time<br><br>and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 4: | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 5: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.   |

### A.9.1.26.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14. 2.

## A.9.1.27 FDD—FDD inter-frequency absolute and relative RSRP accuracies in CRS based discovery signal

### A.9.1.27.1 Test Purpose and Environment

The purpose of this test is to verify that the CRS RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.2 for FDD—FDD inter frequency measurements.

### A.9.1.27.2 Test parameters

In this set of test case the cells are on different carrier frequencies. Both absolute and relative accuracy of CRS RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.27.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap and a DMTC configuration.

Table A.9.1.27.2-1: CRS RSRP FDD—FDD Inter frequency test parameters

| Parameter   | Unit                                 | Test 1     |   |             |
|---|--------------------------------------|------------|---|-------------|
|   |                                      | Cell 1     | Cell 2                                  |             |
| E-UTRA RF Channel Number  |                                      | 1          | 2                                       |             |
| $BW_{channel}$  | MHz                                  | 10         | 10                                      |             |
| Gap Pattern Id  |                                      | 0          | -                                       |             |
| gapOffset   | ms                                   | 9          |   |             |
| DMTC period   | ms                                   | -          | 160                                     |             |
| DMTC period offset  | ms                                   | -          | 10                                      |             |
| Discovery signal occasion duration  | ms                                   | -          | 1                                       |             |

|         |  |
|---------|--|
|         | constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz.  |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.  |
| Note 7: | Except Band 29 and Band 32.  |
| Note 8: | DMTC is provided to the UE in the <i>measDS-Config</i> (in TS36.331) before the beginning of the test  |

### A.9.1.27.3 Test Requirements

The CRS RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.2.

## A.9.1.28 TDD—TDD inter-frequency absolute and relative RSRP accuracies in CRS based discovery signal

### A.9.1.28.1 Test Purpose and Environment

The purpose of this test is to verify that the CRS RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.2 for TDD—TDD inter frequency measurements.

### A.9.1.28.2 Test parameters

In this set of test case the cells are on different carrier frequencies. Both absolute and relative accuracy of CRS RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.28.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap and a DMTC configuration.

Table A.9.1.28.2-1: CRS RSRP TDD—TDD Inter frequency test parameters

| Parameter   | Unit        | Test 1                         |          |
|---|-------------|--------------------------------|----------|
|   |             | Cell 1                         | Cell 2   |
| E-UTRA RF Channel Number  |             | 1                              | 2        |

| Note 7: | DMTC is provided to the UE in the measDS-Config (in TS36.331) before the beginning of test   |

### A.9.1.28.3 Test Requirements

The CRS RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.2.

## A.9.1.29 FDD intra frequency absolute and relative CSI-RSRP accuracies in CSI-RS based discovery signal

### A.9.1.29.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI- RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.3 for FDD intra frequency measurements.

### A.9.1.29.2 Test parameters

In this set of test case all cells are on the same carrier frequencies. Both absolute and relative accuracy of CSI- RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.29.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The intra frequency measurements are supported by a DMTC configuration.

**Table A.9.1.29.2-1: CSI-RSRP FDD Intra frequency test parameters**

| Parameter  |                                      | Unit       | Test 1                 |                        |
|--|--------------------------------------|------------|------------------------|------------------------|
|  |                                      |            | Cell 1                 | Cell 2                 |

### A.9.1.29.3 Test Requirements

The CSI- RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.3.

## A.9.1.30 TDD intra frequency absolute and relative CSI-RSRP accuracies in CSI-RS based discovery signal

### A.9.1.30.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI- RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.3 for TDD intra frequency measurements.

### A.9.1.30.2 Test parameters

In this set of test case all cells are on the same carrier frequencies. Both absolute and relative accuracy of CSI- RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.30.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The intra frequency measurements are supported by a DMTC configuration.

**Table A.9.1.30.2-1: CSI-RSRP TDD Intra frequency test parameters**

| Parameter  | Unit        | Test 1                 |                        |
|--|-------------|------------------------|------------------------|

|         |  |
|---------|--|
|         | constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 3: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.     |
| Note 4: | RSRP, CSI-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_0$ levels are calculated in CRS symbols of measurement subframe. |
| Note 5: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 6: | E-UTRA operating band groups are as defined in Section 3.5.  |
| Note 7: | DMTC is provided to the UE in the <i>measDS-Config</i> (in TS36.331) before the beginning of the test.   |

### A.9.1.30.3 Test Requirements

The CSI- RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.3.

## A.9.1.31 FDD—FDD inter-frequency absolute and relative CSI-RSRP accuracies in CSI-RS based discovery signal

### A.9.1.31.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.3 for FDD—FDD inter frequency measurements.

### A.9.1.31.2 Test parameters

In this set of test case the cells are on different carrier frequencies. Both absolute and relative accuracy of CSI-RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.31.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap and two DMTC configurations which one is for cell1 and the other is for cell2.

Table A.9.1.31.2-1: CSI-RSRP FDD—FDD Inter frequency test parameters

| Parameter  | Unit                                 | Test 1     |                               |                        |
|--|--------------------------------------|------------|-------------------------------|------------------------|

|                                     | Bands FDD_H  |           |   | -82.75 |
| CRS $\hat{E}_s / N_{oc}$            |  | dB        | 13  | -6     |
| CSI-RS $\hat{E}_s / N_{oc}$         |  | dB        | 13  | 0      |
| Propagation condition               |  | -         | AWGN  |        |
| Note 1:                             | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |           |   |        |
| Note 2:                             | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.                       |           |   |        |
| Note 3:                             | RSRP, CSI-RSRP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. I <sub>o</sub> levels are calculated in CRS symbols of measurement subframe. |           |   |        |
| Note 4:                             | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |           |   |        |
| Note 5:                             | For Band 26, the tests shall be performed with the carrier frequency of assigned E-UTRA channel bandwidth within 865-894 MHz.  |           |   |        |
| Note 6:                             | E-UTRA operating band groups are as defined in Section 3.5.  |           |   |        |
| Note 7:                             | Except Band 29 and Band 32.  |           |   |        |
| Note 8:                             | DMTC is provided to the UE in the <i>measDS-Config</i> (in TS36.331) before the beginning of the test.   |           |   |        |

### A.9.1.31.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.3.

## A.9.1.32 TDD—TDD inter-frequency absolute and relative CSI-RSRP accuracies in CSI-RS based discovery signal

### A.9.1.32.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.14.3 for TDD—TDD inter frequency measurements.

### A.9.1.32.2 Test parameters

In this set of test case the cells are on different carrier frequencies. Both absolute and relative accuracy of CSI-RSRP inter-frequency measurements are tested by using the parameters in Table A.9.1.32.2-1. In this test case, Cell 1 is the PCell and Cell 2 the target cell. The inter frequency measurements are supported by a measurement gap and two DMTC configurations which one is for cell 1 and the other is for cell2.

Table A.9.1.32.2-1: CSI-RSRP TDD—TDD Inter frequency test parameters

| Parameter  | Unit        | Test 1     |   |                        |            |                                |
|--|-------------|------------|---|------------------------|------------|--------------------------------|
|  |             | Cell 1     | Cell 2                                  |                        |            |                                |

|  | Bands TDD_C |            |   |                        |            |                                |
|  | Bands TDD_E |            |   |                        |            |                                |
| $I_o$ <sup>Note4</sup>   | Bands TDD_A | dBm/9 MHz  | (I <sub>o</sub> for Channel 2 +18.24dB) | -86.25                 |            |                                |
|  | Bands TDD_C |            |   | -85.25                 |            |                                |
|  | Bands TDD_E |            |   | -84.25                 |            |                                |

|                             |  |      |    |
|-----------------------------|--|------|----|
| CRS $\hat{E}_s / N_{oc}$    | dB   | 13   | -6 |
| CSI-RS $\hat{E}_s / N_{oc}$ | dB   | 13   | 0  |
| Propagation condition       | -  | AWGN |    |
| Note 1:                     | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.   |      |    |
| Note 2:                     | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |    |
| Note 3:                     | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |    |
| Note 4:                     | RSRP, CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels are calculated in CRS symbols of measurement subframe.   |      |    |
| Note 5:                     | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |      |    |
| Note 6:                     | E-UTRA operating band groups are as defined in Section 3.5.  |      |    |
| Note 7:                     | DMTC is provided to the UE in the measDS-Config (in TS36.331) before the beginning of test.  |      |    |

### A.9.1.32.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the requirements in sections 9.1.14.3.

## A.9.1.33 FDD absolute and relative RSRP accuracies for E-UTRAN Carrier Aggregation in CRS based discovery signal

### A.9.1.33.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRP absolute and relative measurement accuracies in carrier aggregation in CRS based discovery signal are within the specified limits. This test will verify the absolute RSRP accuracy requirement of the secondary component carrier defined in clause 9.1.15.1.2, and the relative RSRP accuracy requirement of the secondary component carrier defined in clause 9.1.15.1.2. The test will also verify the primary and secondary component carrier relative RSRP accuracy requirement defined in Clause 9.1.15.1.3.

### A.9.1.33.2 Test parameters

In this test case, Cell1 is PCell on the primary component carrier, Cell2 is SCell on the secondary component carrier and activated, and Cell3 is the neighboring cell on the secondary component carrier. The test parameters are given in Table A.9.1.33.2-1. The Cell 3 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

**Table A.9.1.33.2-1: RSRP FDD carrier aggregation test parameters**

| Parameter  | Unit                      | Test 1   |  |                        |
|--|---------------------------|----------|--|------------------------|
|  |                           | Cell 1   | Cell 2   | Cell3                  |

| $\hat{E}_s / N_{oc}$  | dB   | -4   | 3 | -1 |
|-----------------------|--|------|---|----|
| Propagation condition | -  | AWGN |   |    |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |   |    |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |   |    |
| Note 3:               | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |   |    |
| Note 4:               | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |      |   |    |
| Note 5:               | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |      |   |    |
| Note 6:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |   |    |
| Note 7:               | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |      |   |    |
| Note 8:               | E-UTRA operating band groups are as defined in Section 3.5.  |      |   |    |

### A.9.1.33.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following three perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 3 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.1.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.1.2
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 3 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.15.1.3.

### A.9.1.34 TDD absolute and relative RSRP accuracies for E-UTRAN Carrier Aggregation in CRS based discovery signal

#### A.9.1.34.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD RSRP absolute and relative measurement accuracies in carrier aggregation in CRS based discovery signal are within the specified limits. This test will verify the absolute RSRP accuracy requirement of the secondary component carrier defined in clause 9.1.15.1.2, and the relative RSRP accuracy requirement of the secondary component carrier defined in clause 9.1.15.1.2. The test will also verify the primary and secondary component carrier relative RSRP accuracy requirement defined in Clause 9.1.15.1.3.

#### A.9.1.34.2 Test parameters

In this test case, Cell1 is PCell on the primary component carrier, Cell2 is SCell on the secondary component carrier and activated, and Cell3 is the neighboring cell on the secondary component carrier. The test parameters are given in Table A.9.1.34.2-1. The Cell 3 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

**Table A.9.1.34.2-1: Carrier aggregation RSRP test parameters for TDD**

| Parameter  | Unit        | Test 1   |   |                        |
|--|-------------|----------|---|------------------------|

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes.</p> |             |          |   |                        |

|         |  |
|---------|--|
|         | They are not settable parameters themselves.   |
| Note 5: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.                                       |
| Note 6: | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.                                     |
| Note 7: | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.  |

### A.9.1.34.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following three perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 3 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.1.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.1.2
- The relative accuracy of inter-frequency RSRP measurements between the primary and secondary component carriers for Cell 3 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.15.1.3.

### A.9.1.35 FDD absolute and relative CSI-RSRP accuracies for E-UTRAN Carrier Aggregation in CSI-RS based discovery signal

#### A.9.1.35.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD CSI-RSRP absolute and relative accuracy requirements in carrier aggregation are within the specified limits. This test will verify the absolute CSI-RSRP accuracy requirements of the primary component carrier defined in clause 9.1.15.2.1, the absolute CSI-RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.15.2.2, and the relative CSI-RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.15.2.2. The test will also verify the primary and secondary component carrier relative CSI-RSRP accuracy requirement defined in Clause 9.1.15.2.3.

#### A.9.1.35.2 Test parameters

In this set of cases cell1 is PCell on the primary component carrier, cell2 is SCell on the secondary component carrier and activated, and cell3 is the neighboring cell on the secondary component carrier. The test parameters are given in Table A.9.1.35.2-1. This set is supported by two DMTC configurations which one is for cell1 and the other is for cell2 and cell3.

**Table A.9.1.35.2-1: CSI-RSRP FDD carrier aggregation test parameters**

| Parameter  | Unit                      | Test 1     |  |                                |                        |
|--|---------------------------|------------|--|--------------------------------|------------------------|
|  |                           | Cell 1     | Cell 2   | Cell3                          |                        |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP, CSI-RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. I<sub>o</sub> levels are calculated in CRS symbols of measurement subframe.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 7: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 8: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 9: DMTC configurations are provided to the UE in the <i>measDS-Config</i> (in TS36.331) before the beginning of the test.</p> |                                      |            |        |  |                            |

### A.9.1.35.3 Test Requirements

In the test, the performance of CSI-RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency CSI-RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.15.2.1.
- The absolute accuracy of intra-frequency CSI-RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.2.2.
- The relative accuracy of intra-frequency CSI-RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.2.2.
- The relative accuracy of inter-frequency CSI-RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.15.2.3.

### A.9.1.36 TDD absolute and relative CSI-RSRP accuracies for E-UTRAN Carrier Aggregation in CSI-RS based discovery signal

#### A.9.1.36.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD CSI-RSRP absolute and relative accuracy requirements in carrier aggregation are within the specified limits. This test will verify the absolute CSI-RSRP accuracy requirements of the primary component carrier defined in clause 9.1.15.2.1, the absolute CSI-RSRP accuracy requirements of the secondary

component carrier defined in clause 9.1.15.2.2, and the relative CSI-RSRP accuracy requirements of the secondary component carrier defined in clause 9.1.15.2.2. The test will also verify the primary and secondary component carrier relative CSI-RSRP accuracy requirement defined in Clause 9.1.15.2.3.

#### A.9.1.36.2 Test parameters

In this set of cases cell1 is PCell on the primary component carrier, cell2 is SCell on the secondary component carrier and activated, and cell3 is the neighboring cell on the secondary component carrier. The test parameters are given in Table A.9.1.36.2-1. This set is supported by two DMTC configurations which one is for cell1 and the other is for cell2 and cell3.

**Table A.9.1.36.2-1: CSI-RSRP TDD carrier aggregation test parameters**

| Parameter  | Unit        | Test 1   |   |                            |             |      |                               |    |
|--|-------------|----------|---|----------------------------|-------------|------|-------------------------------|----|
|  |             | Cell 1   | Cell 2  | Cell 3                     |             |      |                               |    |
| E-UTRA RF Channel Number   |             | 1        | 2   |                            |             |      |                               |    |
| BW <sub>channel</sub>  | MHz         | 10       |   |                            |             |      |                               |    |
| Special subframe configuration <sup>Note1</sup>                        |             | 6        |   |                            |             |      |                               |    |
| Uplink/downlink configuration <sup>Note1</sup>                         |             | 1        |   |                            |             |      |                               |    |
| Timing offset to Cell 1  | μs          | -        | 0   | 3                          |             |      |                               |    |
| Time alignment error between cell 2 and cell 1                         |             | -        | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1 | -                          |             |      |                               |    |
| DMTC period  | ms          | 160      | 160   |                            |             |      |                               |    |
| DMTC period offset   | ms          | 0        | 10  |                            |             |      |                               |    |
| Discovery signal occasion duration                                     | ms          | 2        | 2   |                            |             |      |                               |    |

|  | Bands TDD_E | -113     |   |                            |             |      |                               |    |
| $I_o$ <sup>Note4</sup>   | Bands TDD_A | -87.76   | $(I_o$ for Channel 1 +5.33dB)   |                            |             |      |                               |    |
|  | Bands TDD_C | -86.76   |   |                            |             |      |                               |    |
|  | Bands TDD_E | -85.76   |   |                            |             |      |                               |    |

|                             |  |      |   |    |
|-----------------------------|--|------|---|----|
| CRS $\hat{E}_s / N_{oc}$    | dB   | -4   | 3 | -1 |
| CSI-RS $\hat{E}_s / N_{oc}$ | dB   | 2    | 9 | 5  |
| Propagation condition       | -  | AWGN |   |    |
| Note 1:                     | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.   |      |   |    |
| Note 2:                     | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |   |    |
| Note 3:                     | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |   |    |
| Note 4:                     | RSRP, CSI-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves. Io levels are calculated in CRS symbols of measurement subframe.   |      |   |    |
| Note 5:                     | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |      |   |    |
| Note 6:                     | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |      |   |    |
| Note 7:                     | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |      |   |    |
| Note 8:                     | E-UTRA operating band groups are as defined in Section 3.5.  |      |   |    |
| Note 9:                     | DMTC configurations are provided to the UE in the <i>measDS-Config</i> (in TS36.331) before the beginning of the test  |      |   |    |

### A.9.1.36.3 Test Requirements

In the test, the performance of CSI-RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency CSI-RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.15.2.1.
- The absolute accuracy of intra-frequency CSI-RSRP measurements for Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.2.2.
- The relative accuracy of intra-frequency CSI-RSRP measurements for Cell 3 relative to Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.15.2.2.
- The relative accuracy of inter-frequency CSI-RSRP measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.15.2.3.

### A.9.1.37 3 DL PCell in FDD RSRP for E-UTRAN in Carrier Aggregation

#### A.9.1.37.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD-FDD RSRP absolute and relative accuracy requirements in carrier aggregation with PCell in FDD are within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2, and the relative RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2. The test will also verify the primary and secondary component carriers' relative RSRP accuracy requirement defined in Clause 9.1.11.3.

#### A.9.1.37.2 Test parameters

In this set of cases cell 1 is PCell on the primary component carrier, and cell 2 and cell 4 are activated SCells on secondary component carriers SCC1 and SCC2 respectively. Cell 3 and cell 5 are neighbouring cells on secondary component carriers SCC1 and SCC2 respectively. The test parameters are given in Table A.9.1.37.2-1.

**Table A.9.1.37.2-1: 3 Downlink PCell in FDD RSRP carrier aggregation test parameters**

| Parameter  |                                      | Unit             | Cell 1   | Cell 2  | Cell 3   | Cell 4  | Cell 5   |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 7: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 8: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> <p>Note 9: E-UTRA operating band groups are as defined in Section 3.5.</p> |                                      |                               |                                      |   |   |       |       |

### A.9.1.37.3 Test Requirements

In the test, the performance of RSRP measurements is verified from the following 7 perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 5 relative to Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between SCC1 and the primary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRP measurements between SCC2 and the primary component carriers for Cell 4 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

## A.9.1.38 3 DL PCell in TDD RSRP for E-UTRAN in Carrier Aggregation

### A.9.1.38.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD-FDD RSRP absolute and relative accuracy requirements in carrier aggregation with PCell in TDD are within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2, and the relative RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2. The test will also verify the primary and secondary component carriers' relative RSRP accuracy requirement defined in Clause 9.1.11.3.

### A.9.1.38.2 Test parameters

In this set of cases cell 1 is PCell on the primary component carrier, and cell 2 and cell 4 are activated SCells on secondary component carriers SCC1 and SCC2 respectively. Cell 3 and cell 5 are neighbouring cells on secondary component carriers SCC1 and SCC2 respectively. The test parameters are given in Table A.9.1.38.2-1.

**Table A.9.1.38.2-1: 3 Downlink PCell in TDD RSRP carrier aggregation test parameters**

| Parameter  | Unit                                    | Cell 1   | Cell 2  | Cell 3  | Cell 4  | Cell 5  |             |   |                                      |                                      |  |  |

### A.9.1.38.3 Test Requirements

In the test, the performance of RSRP measurements is verified from the following 7 perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 5 relative to Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between SCC1 and the primary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3. The relative accuracy of inter-frequency RSRP measurements between SCC2 and the primary component carriers for Cell 4 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

## A.9.1.39 3 DL FDD RSRP for E-UTRAN in Carrier Aggregation

### A.9.1.39.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRP absolute and relative accuracy requirements in carrier aggregation are within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2, and the relative RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2. The test will also verify the primary and secondary component carriers' relative RSRP accuracy requirement defined in Clause 9.1.11.3.

### A.9.1.39.2 Test parameters

In this set of test cases there are five cells on three carrier frequencies. Cell 1 is PCell on channel 1, and cell 2 and cell 4 are activated SCells on secondary component carriers SCC1 and SCC2 respectively. Cell 3 and cell 5 are neighbouring cells on secondary component carriers SCC1 and SCC2 respectively. The parameters for the test are listed in Table A.9.1.39.2-1.

**Table A.9.1.39.2-1: 3 DL FDD RSRP test parameters for E-UTRAN Carrier aggregation (cell #1, cell #2 and cell #3)**

| Parameter   | Unit                                 | Cell 1   | Cell 2  | Cell 3   |
|---|--------------------------------------|--|---|--|
| E-UTRA RF Channel Number  |                                      | 1  | 2   |  |

| Timing offset to Cell 1   | $\mu s$                                 | 0  | 3   |                        |

|   |  |       |   |
|---|--|-------|---|
| Time alignment error relative to cell 1 <sup>Note 7</sup> |  | ≤ TAE | - |
| Time alignment error relative to cell 2 <sup>Note 7</sup> |  | ≤ TAE | - |
| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |       |   |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |       |   |
| Note 3:   | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |       |   |
| Note 4:   | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |       |   |
| Note 5:   | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |       |   |
| Note 6:   | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |       |   |
| Note 7:   | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.  |       |   |
| Note 8:   | E-UTRA operating band groups are as defined in Section 3.5.  |       |   |

### A.9.1.39.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 5 relative to Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between SCC1 and the primary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRP measurements between SCC2 and the primary component carriers for Cell 4 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

## A.9.1.40 3 DL TDD RSRP for E-UTRAN in Carrier Aggregation

### A.9.1.40.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRP absolute and relative accuracy requirements in carrier aggregation are within the specified limits. This test will verify the absolute RSRP accuracy requirements of the primary component carrier defined in clause 9.1.11.1, the absolute RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2, and the relative RSRP accuracy requirements of the secondary component carriers defined in clause 9.1.11.2. The test will also verify the primary and secondary component carriers' relative RSRP accuracy requirement defined in Clause 9.1.11.3.

### A.9.1.40.2 Test parameters

In this set of test cases there are five cells on three carrier frequencies. Cell 1 is PCell on channel 1, and cell 2 and cell 4 are activated SCells on secondary component carriers SCC1 and SCC2 respectively. Cell 3 and cell 5 are neighbouring

cells on secondary component carriers SCC1 and SCC2 respectively. The parameters for the test are listed in Table A.9.1.40.2-1.

**Table A.9.1.40.2-1: 3 DL TDD RSRP test parameters for E-UTRAN Carrier aggregation (cell #1, cell #2 and cell #3)**

| Parameter   |             | Unit                          | Cell 1  | Cell 2  | Cell 3  |
|---|-------------|-------------------------------|---|---|---|
| E-UTRA RF Channel Number  |             |                               | 1   | 2   |   |

| Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.  |             |                               |   |   |
| Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |             |                               |   |   |
| Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled   |             |                               |   |   |

|         |   |
|---------|---|
|         | as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |
| Note 4: | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 5: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.                    |
| Note 6: | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.                  |
| Note 7: | Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation. |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.   |

### A.9.1.40.3 Test Requirements

In the test, the performance of RSRP measurements is verified from following four perspectives:

- The absolute accuracy of intra-frequency RSRP measurements for Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRP measurements for Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 3 relative to Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of intra-frequency RSRP measurements for Cell 5 relative to Cell 4 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRP measurements between SCC1 and the primary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRP measurements between SCC2 and the primary component carriers for Cell 4 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

## A.9.1.41 FD-FDD RSRP Intra frequency case for UE category 0

### A.9.1.41.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.13.1 and 9.1.13.2 for FD-FDD intra frequency RSRP measurements for UE category 0.

### A.9.1.41.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.41.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.1.41.2-1: FD-FDD RSRP Intra frequency test parameters for UE category 0

| Parameter   | Unit                                     | Test 1     |          | Test 2   |          | Test 3   |          |               |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |  |            |          |          |          |          |          |               |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over  |  |            |          |          |          |          |          |               |

subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: Es/lot, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.

Note 5: E-UTRA operating band groups are as defined in Section 3.5.

Note 6: Except Band 29 and Band 32.

### A.9.1.41.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.13.1 and 9.1.13.2.

## A.9.1.42 HD-FDD RSRP Intra frequency case for UE category 0

### A.9.1.42.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.13.1 and 9.1.13.2 for HD-FDD intra frequency RSRP measurements for UE category 0.

### A.9.1.42.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.42.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.1.42.2-1: HD-FDD RSRP Intra frequency test parameters for UE category 0**

| Parameter   | Unit                                     | Test 1     |          | Test 2     |          | Test 3     |          |               |            |      |     |  |  |        |
|---|--|------------|----------|------------|----------|------------|----------|---------------|------------|------|-----|--|--|--------|
|   |  | Cell 1     | Cell 2   | Cell 1     | Cell 2   | Cell 1     | Cell 2   |               |            |      |     |  |  |        |

| Propagation condition   | -  | AWGN       |          | AWGN       |          | AWGN       |          |               |            |      |     |  |  |        |
| Correlation Matrix and Antenna Configuration  |  | 1x1        |          | 1x1        |          | 1x1        |          |               |            |      |     |  |  |        |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |  |            |          |            |          |            |          |               |            |      |     |  |  |        |

|         |  |
|---------|--|
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | Es/lot, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |
| Note 5: | E-UTRA operating band groups are as defined in Section 3.5.  |
| Note 6: | Except Band 29 and Band 32.  |

### A.9.1.42.3 Test Requirements

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.13.1 and 9.1.13.2.

## A.9.1.43 TDD RSRP Intra frequency case for UE category 0

### A.9.1.43.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.13.1 and 9.1.13.2 for TDD intra frequency RSRP measurements for UE category 0.

### A.9.1.43.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Both absolute and relative accuracy of RSRP intra frequency measurements are tested by using the parameters in Table A.9.1.43.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.1.43.2-1: TDD RSRP Intra frequency test parameters for UE category 0**

| Parameter  | Unit          | Test 1     |          | Test 2   |          | Test 3   |          |            |
|--|---------------|------------|----------|----------|----------|----------|----------|------------|
|  |               | Cell 1     | Cell 2   | Cell 1   | Cell 2   | Cell 1   | Cell 2   |            |
| E-UTRA RF Channel Number   |               | 1          |          | 1        |          | 1        |          |            |
| BW <sub>channel</sub>  | MHz           | 10         |          | 10       |          | 10       |          |            |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: <math>E_s/I_{ot}</math>, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: E-UTRA operating band groups are as defined in Section 3.5.</p> |               |            |          |          |          |          |          |            |

**A.9.1.43.3 Test Requirements**

The RSRP measurement accuracy shall fulfil the requirements in sections 9.1.13.1 and 9.1.13.2.

## A.9.2 RSRQ

### A.9.2.1 FDD Intra frequency case

#### A.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.5.1.

#### A.9.2.1.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.1.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.1.2-1: RSRQ FDD Intra frequency test parameters

| Parameter  | Unit                                 | Test 1     |          | Test 2   |          | Test 3   |          |             |            |        |        |         |         |      |

| $\hat{E}_s / N_{oc}$   | dB                                   | 3          | 3        | -2.9     | -2.9     | -4       | -4       |             |            |        |        |         |         |      |

| Propagation condition | -  | AWGN | AWGN | AWGN |
|-----------------------|--|------|------|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |      |
| Note 3:               | RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |      |      |      |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |      |      |      |
| Note 5:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |      |      |
| Note 6:               | E-UTRA operating band groups are as defined in Section 3.5.  |      |      |      |
| Note 7:               | Except Band 29 and Band 32.  |      |      |      |

### A.9.2.1.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.1.

## A.9.2.2 TDD Intra frequency case

### A.9.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.5.1.

### A.9.2.2.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.2.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.2.2-1: RSRQ TDD Intra frequency test parameters**

| Parameter  | Unit                      | Test 1   |          | Test 2   |          | Test 3   |          |             |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRQ, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: E-UTRA operating band groups are as defined in Section 3.5.</p> |                           |          |          |          |          |          |          |             |

### A.9.2.2.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.5.1.

## A.9.2.3 FDD—FDD Inter frequency case

### A.9.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.6.1 and 9.1.6.2.

### A.9.2.3.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.3.2-1. In all tests, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.3.2-1: RSRQ FDD—FDD Inter frequency test parameters

| Parameter  | Unit                                 | Test 1     |          | Test 2   |          | Test 3   |          |             |            |     |     |         |         |        |        |

| $\hat{E}_s / N_{oc}$  | dB   | -1.75 | -1.75 | -4.0 | -4.0 | -4.0 | -4.0 |
|-----------------------|--|-------|-------|------|------|------|------|
| Propagation condition | -  | AWGN  |       | AWGN |      | AWGN |      |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |       |       |      |      |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |       |       |      |      |      |      |
| Note 3:               | RSRQ, RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |       |       |      |      |      |      |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |       |       |      |      |      |      |
| Note 5:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |       |       |      |      |      |      |
| Note 6:               | E-UTRA operating band groups are as defined in Section 3.5.  |       |       |      |      |      |      |
| Note 7:               | Except Band 29 and Band 32.  |       |       |      |      |      |      |

### A.9.2.3.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.6.1 and 9.1.6.2.

## A.9.2.4 TDD—TDD Inter frequency case

### A.9.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.6.1 and 9.1.6.2.

### A.9.2.4.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.4.2-1 for TDD configuration 1 and in Table A.9.2.4.2-2 for TDD configuration 0. In all tests, Cell 1 is the PCell and Cell 2 the target cell.

**Table A 9.2.4.2-1: RSRQ TDD—TDD Inter frequency test parameters for TDD configuration 1**

| Parameter  | Unit                      | Test 1     |          | Test 2   |          | Test 3   |          |             |
|--|---------------------------|------------|----------|----------|----------|----------|----------|-------------|

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRQ, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: E-UTRA operating band groups are as defined in Section 3.5.</p> |                           |            |          |          |          |          |          |             |            |     |     |         |         |         |         |

**A.9.2.4.3 Test Requirements**

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.6.1 and 9.1.6.2.

## A.9.2.4A FDD—TDD Inter frequency case

### A.9.2.4A.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.6.1 and 9.1.6.2 for FDD—TDD inter frequency measurements.

### A.9.2.4A.2 Test parameters

In this set of test cases the two cells are on different carrier frequencies. Both absolute and relative accuracy of RSRQ inter frequency measurements are tested by using the parameters in Table A.9.2.4A.2-1 and Table A.9.2.4A.2-2. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. Cell 1 is FDD cell and Cell 2 is TDD cell. The inter frequency measurements are supported by a measurement gap.

They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |            |          |          |          |

### A.9.2.4A.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in sections 9.1.6.1 and 9.1.6.2.

## A.9.2.5 FDD RSRQ for E-UTRA Carrier Aggregation

### A.9.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRQ measurement accuracy in carrier aggregation is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency

RSRQ measurements for the primary component carrier specified in clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier specified in clause 9.1.11.2 and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers specified in clause 9.1.11.3.

#### A.9.2.5.2 Test parameters

In this test case the PCell and the SCell are on different carrier frequencies. There are three cells used in this test case. Both RSRQ absolute and relative accuracy requirements of the primary and secondary component carrier are tested by using test parameters specified in Table A.9.2.5.2-1. In the test, Cell 1 is the PCell, Cell 2 is the SCell on the Secondary Component Carrier (SCC) and Cell 3 is the neighbouring cell on the SCC. The SCC is configured and activated.

**Table A.9.2.5.2-1: FDD RSRQ Carrier Aggregation test parameters**

| Parameters   |                                      | Test 1     |          |   |          |

|                       | Bands FDD_G  |    | -87.26 | -82.67 | -82.67 |
|                       | Bands FDD_H  |    | -86.76 | -82.17 | -82.17 |
| $\hat{E}_s / N_{oc}$  |  | dB | -4.0   | -4.0   | -4.0   |
| Propagation condition |  | -  | AWGN   |        |        |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |    |        |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |    |        |        |        |
| Note 3:               | RSRQ, RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |    |        |        |        |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |    |        |        |        |
| Note 5:               | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs  |    |        |        |        |
| Note 6:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |    |        |        |        |
| Note 7:               | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |    |        |        |        |
| Note 8:               | E-UTRA operating band groups are as defined in Section 3.5.  |    |        |        |        |

### A.9.2.5.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements specified in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.

### A.9.2.6 TDD RSRQ for E-UTRA Carrier Aggregation

The test case in this clause are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD RSRQ measurement accuracy in carrier aggregation is within the specified limits in a synchronized network environment with AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the primary component carrier defined in Clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier defined in Clause 9.1.11.2, and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers defined in Clause 9.1.11.3.

#### A.9.2.6.2 Test parameters

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is PCell, Cell 2 is SCell, and Cell 3 is the target cell. PCell and SCell are in different RF channels. Cell 3 is in the same RF channel as Cell 2. The parameters for the test are listed in Table A.9.2.6.2-1.

Table A.9.2.6.2-1: TDD RSRQ test parameters

| Parameter  | Unit                      | Test 1   |   |          |
|--|---------------------------|----------|---|----------|
|  |                           | Cell 1   | Cell 2  | Cell 3   |
| E-UTRA RF Channel Number   |                           | 1        | 2   | 2        |
| BW <sub>channel</sub>  | MHz                       | 10       |   |          |
| Timing offset to cell 1  | μs                        | -        | 0   | 3        |
| Time alignment error between cell 2 and cell 1                         |                           | -        | ≤ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1 | -        |
| Special subframe configuration <sup>Note1</sup>                        |                           | 6        |   |          |

|         |  |
|---------|--|
| Note 1: | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.   |
| Note 2: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 3: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 4: | RSRQ, RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 5: | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 6: | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |
| Note 7: | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.  |

### A.9.2.6.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in section 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.2.7 FDD RSRQ under Time Domain Measurement Resource Restriction with Non-MBSFN ABS

#### A.9.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction is within the specified limits. This test will verify the requirements in Clause 9.1.5.2 for FDD intra frequency measurements under time domain measurement resource restriction.

#### A.9.2.7.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurements under time domain measurement resource restriction is tested by using the parameters in Table A.9.2.7.2-1 and Table A.9.2.7.2-2 for non-MBSFN ABS with non-colliding CRS. In all test cases, Cell 1 is the serving cell and also the aggressor cell to Cell 2. Cell 2 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.2.7.2-1: General test parameters for E-UTRAN FDD RSRQ intra frequency test parameters under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value  | Comment   |
|--|------|--|---|
| Serving cell (PCell)   |      | Cell 1   | The aggressor cell to Cell 2  |
| Neighbour cell   |      | Cell 2   | Cell to be measured   |
| PCell ABS configuration  |      | Non-MBSFN ABS                                  | As defined in Table A.3.4.1.1-1   |
| CP length  |      | Normal   | For both cells in the test  |
| DRX  |      |  | OFF   |
| Time offset between cells  |      | 3 $\mu$ s                                      | Synchronous cells   |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 \neq 0$   | Cell PCIs for Cell 1 and Cell 2 are selected randomly so that the condition is met.   |
| ABS pattern  |      | '10000000100000001000<br>00001000000010000000' | Non-MBSFN ABS. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. No MBSFN subframes are configured in the ABS subframes in Cell 1. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '10000000100000001000<br>00001000000010000000' | Configured for Cell 2 measurements by measSubframePattern-Neigh IE in measSubframePatternConfig-Neigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.   |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '01000000010000000100<br>00000100000001000000' | Configured for measurements on Cell 1.  |

**Table A.9.2.7.2-2: Cell-specific test parameters for E-UTRAN FDD RSRQ intra frequency test parameters under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  |  | Unit       | Test 1   |          | Test 2   |          | Test 3   |          |    |    |   |    |   |    |   |
|--|--|------------|----------|----------|----------|----------|----------|----------|----|----|---|----|---|----|---|
|  |  |            | Cell 1   | Cell 2   | Cell 1   | Cell 2   | Cell 1   | Cell 2   |    |    |   |    |   |    |   |

| Propagation condition |   | - | AWGN |  | AWGN |  | AWGN   |        |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |   |      |  |      |  |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Applies to all subframes. |   |      |  |      |  |        |        |
| Note 3:               | RSRQ, RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_0$ levels are calculated in CRS symbols of measurement restricted subframes.                  |   |      |  |      |  |        |        |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |   |      |  |      |  |        |        |
| Note 5:               | Applies to restricted measurement subframes of the respective cell.   |   |      |  |      |  |        |        |
| Note 6:               | Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.   |   |      |  |      |  |        |        |
| Note 7:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.   |   |      |  |      |  |        |        |
| Note 8:               | E-UTRA operating band groups are as defined in Section 3.5.   |   |      |  |      |  |        |        |
| Note 9:               | Except Band 29 and Band 32.   |   |      |  |      |  |        |        |

### A.9.2.7.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.2.

## A.9.2.8 TDD RSRQ under Time Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.9.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction is within the specified limits. This test will verify the requirements in Clause 9.1.5.2 for TDD intra frequency measurements under time domain measurement resource restriction.

### A.9.2.8.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurements under time domain measurement resource restriction is tested by using the parameters in Table A.9.2.8.2-1 and Table A.9.2.8.2-2 for non-MBSFN ABS with non-colliding CRS. In all test cases, Cell 1 is the serving cell and also the aggressor cell to Cell 2. Cell 2 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.2.8.2-1: General test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit | Value  | Comment   |
|--|------|--|---|
| Serving cell (PCell)   |      | Cell 1                                       | Also the aggressor cell.  |
| Neighbour cell   |      | Cell 2                                       | Cell to be measured   |
| PCell ABS configuration  |      | Non-MBSFN ABS                                | As defined in Table A.3.4.1.1-1   |
| Special subframe configuration   |      | 6  | For Cell 1 and Cell 2. For special subframe configurations see Table 4.2-1 in [16].   |
| Uplink/downlink subframe configuration   |      | 1  | For Cell 1 and Cell 2. For uplink-downlink subframe configurations see Table 4.2-2 in [16].   |
| CP length  |      | Normal                                       | For both cells in the test  |
| DRX  |      |  | OFF   |
| Time offset between cells  |      | 3 $\mu$ s                                    | Synchronous cells   |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 \neq 0$ | Cell PCIs for Cell 1 and Cell 2 are randomly selected so that the condition is met  |
| ABS pattern  |      | '00000000010000000001'                       | Non-MBSFN ABS. TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1.<br>The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where $x$ is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes in Cell 1. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '00000000010000000001'                       | Configured for Cell 2 measurements by measSubframePattern-Neigh IE in measSubframePatternConfig-Neigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.   |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '10000000001000000000'                       | Configured for Cell 1 measurements.   |

**Table A.9.2.8.2-2: Cell-specific test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit                      | Test 1     |          | Test 2   |          | Test 3   |          |        |

### A.9.2.8.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.2.

## A.9.2.9 FDD RSRQ under Time Domain Measurement Resource Restriction with MBSFN ABS

### A.9.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction is within the specified limits under AWGN propagation conditions. This test will verify the absolute FDD RSRQ accuracy under time domain measurement resource restriction specified in Clause 9.1.5.2.

### A.9.2.9.2 Test parameters

The test parameters are given in Tables A.9.2.9.2-1 and A.9.2.9.2-2 below. In this test case there are two cells on the same frequency used in this test case. In the test, Cell 1 is the serving cell and also the aggressor cell to Cell 2. Cell 2 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured by higher layers with a time domain measurement restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.2.9.2-1: General test parameters for FDD RSRQ under time domain measurement resource restriction with MBSFN ABS**

| Parameter   | Unit | Value  | Comment  |
|---|------|--|--|
| PDSCH parameters  |      | DL Reference Measurement Channel R.0 FDD   | As specified in clause A.3.1.1.1   |
| PCFICH/PDCCH/PHICH parameters   |      | DL Reference Measurement Channel R.6 FDD   | As specified in clause A.3.1.2.1   |
| Serving cell (PCell)  |      | Cell 1   | Also the aggressor cell on E-UTRA RF channel number 1  |
| Neighbour cell  |      | Cell 2   | Cell to be identified on E-UTRA RF channel number 1  |
| PCell ABS configuration   |      | MBSFN ABS  | As defined in Table A.3.4.2.1-1  |
| CP length   |      | Normal   |  |
| DRX   |      | OFF  |  |
| Time offset between cells   |      | 3 $\mu$ s  | Synchronous cells  |
| Physical cell ID PCI  |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 = 0$ , $PCI_{cell1}$ not equal to $PCI_{cell2}$ | Cell PCIs are selected so that the condition is met (colliding CRS)  |
| Cell 1 MBSFN ABS pattern  |      | '0100000010000000100000001000000010000000100000001000000'                            | ABS subframe is only MBSFN subframe. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. The first/leftmost bit corresponds to the subframe #0 of the radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. Configured in Cell 1.                 |
| Time domain measurement resource restriction pattern for PCell (Cell 1) measurements on RF Channel 1          |      | '00010000000100000001000000010000000100000001000000'                                 | Time domain measurement resource restriction pattern for PCell measurement signalled to the UE in measSubframePatternPCell. The IE MeasSubframePattern is used to specify the time domain measurement resource restriction as defined in TS 36.331 [2], clause 6.3.6. Configured for Cell 1 measurements.          |
| Time domain measurement resource restriction pattern for neighbour cell (Cell 2) measurements on RF Channel 1 |      | '0100000010000000100000001000000010000000100000001000000'                            | Time domain measurement resource restriction pattern for neighbour cell measurement signalled to the UE in measSubframePatternNeigh. The IE MeasSubframePattern is used to specify the time domain measurement resource restriction as defined in TS 36.331 [2], clause 6.3.6. Configured for Cell 2 measurements. |

**Table A.9.2.9.2-2: Cell specific test parameters for FDD RSRQ under time domain measurement resource restriction with MBSFN ABS**

| Parameter   |                                      | Unit       | Test 1   |          | Test 2   |          | Test 3   |          |            |        |         |      |   |    |   |

### A.9.2.9.3 Test Requirements

In the test, the RSRQ measurement accuracy under time domain measurement resource restriction shall fulfil the requirements in Clause 9.1.5.2

## A.9.2.10 TDD Intra frequency case under time domain measurement resource restriction with MBSFN ABS

### A.9.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction is within the specified limits. This test will verify the requirements in Clause 9.1.5.2 for TDD intra frequency measurements under time domain measurement resource restriction.

### A.9.2.10.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurements under time domain measurement resource restriction is tested by using the parameters in Table A.9.2.10.2-1 and Table A.9.2.10.2-2 for MBSFN ABS with colliding CRS. In all test cases, Cell 1 is the serving cell and also the aggressor cell to Cell 2. Cell 2 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells and provided with a neighbour cell list associated with the pattern, where the cell list includes Cell 2. The UE is also configured with a time-domain measurement resource restriction pattern for the serving cell measurements. The information for both patterns shall be provided to the UE before the measurements start.

**Table A.9.2.10.2-1: General test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time-domain measurement resource restriction with MBSFN ABS**

| Parameter  | Unit | Value  | Comment  |
|--|------|--|--|
| Serving cell (PCell)   |      | Cell 1   | The aggressor cell to Cell 2   |
| Neighbour cell   |      | Cell 2   | Cell to be measured  |
| PCell ABS configuration  |      | MBSFN ABS  | As defined in Table A.3.4.2.1-1  |
| Special subframe configuration   |      | 6  | For Cell 1 and Cell 2. For special subframe configurations see Table 4.2-1 in [16].  |
| Uplink/downlink subframe configuration   |      | 1  | For Cell 1 and Cell 2. For uplink-downlink subframe configurations see Table 4.2-2 in [16].  |
| CP length  |      | Normal   | For both cells in the test   |
| DRX  |      |  | OFF  |
| Time offset between cells  |      | 3 $\mu$ s  | Synchronous cells  |
| Physical cell ID PCI   |      | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 \neq 0$<br>PCI <sub>cell1</sub> not equal to PCI <sub>cell2</sub> | Cell PCIs for Cell 1 and Cell 2 are selected randomly so that the condition is met   |
| ABS pattern  |      | '00001000000000100000'   | MBSFN ABS pattern. TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. Configured in Cell 1. The first/leftmost bit corresponds to the subframe #0 of a radio frame satisfying SFN mod x = 0, where x is the size of the bit string (20) divided by 10. All ABS subframes are MBSFN subframes. |
| Time-domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |      | '00001000000000100000'   | Configured for Cell 2 measurements by measSubframePattern-Neigh IE in measSubframePatternConfig-Neigh, as defined in TS 36.331 [2], clause 6.3.5. measSubframeCellList contains Cell 2.  |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |      | '10000000001000000000'   | Configured for measurements on Cell 1.   |

**Table A.9.2.10.2-2: Cell-specific test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time domain measurement resource restriction with MBSFN ABS**

| Parameter  | Unit                      | Test 1     |          | Test 2   |          | Test 3   |          |        |
|--|---------------------------|------------|----------|----------|----------|----------|----------|--------|

|         |   |
|---------|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.<br>Applies to all subframes. |
| Note 3: | RSRQ, RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_0$ levels are calculated in CRS symbols of measurement restricted subframes.                  |
| Note 4: | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | Applies to restricted measurement subframes of the respective cell.   |
| Note 6: | Non-ABS and ABS subframe channel powers defined in Table A.3.4.2.1-1.   |
| Note 7: | In the 1 <sup>st</sup> OFDM symbol, Cell 2 is not expected to meet the $E_s/I_0$ side condition in 9.1.5.2.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.   |

### A.9.2.10.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in clause 9.1.5.2.

### A.9.2.11 FDD RSRQ for E-UTRA Carrier Aggregation (20MHz bandwidth)

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.11.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.5.1.

#### A.9.2.11.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.5.2 except that the values of the parameters in the Table A.9.2.11.2-1 will replace the values of the corresponding parameters in A.9.2.5.2-1.

Table A.9.2.11.2-1: FDD RSRQ Carrier Aggregation test parameters

|  | Bands FDD_H <small>Note 5</small> |  | -83.76    | -79.17    |           |
| Note 1:  |                                   | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |           |           |           |
| Note 2:  |                                   | I <sub>0</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves                      |           |           |           |
| Note 3:  |                                   | See Table A.9.2.5.2-1 for the other parameters   |           |           |           |
| Note 4:  |                                   | E-UTRA operating band groups are as defined in Section 3.5.  |           |           |           |
| Note 5:  |                                   | The test applies for E-UTRA operating bands in this band group which are supporting 20 MHz channel bandwidth.  |           |           |           |

### A.9.2.11.3 Test Requirements

The test requirements defined in section A.9.2.5.3 shall apply in this test case.

### A.9.2.12 TDD RSRQ for E-UTRA Carrier Aggregation (20MHz bandwidth)

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.12.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.6.1.

#### A.9.2.12.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.6.2 except that the values of the parameters in the Table A.9.2.12.2-1 will replace the values of the corresponding parameters in A.9.2.6.2-1.

Table A.9.2.12.2-1: TDD RSRQ Carrier Aggregation test parameters

| Parameters   |                               | Test 1   |          |          |          |
|--|-------------------------------|--|----------|----------|----------|

A.9.2.14.3 Void

## A.9.2.15 FDD RSRQ under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.2.15.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction with CRS assistance information is within the specified limits. This test will verify the requirements in Clause 9.1.5.3 for FDD intra frequency measurements under time domain measurement resource restriction with CRS assistance information.

### A.9.2.15.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurements under time domain measurement resource restriction with CRS assistance information is tested by using the parameters in Table A.9.2.15.2-1 and Table A.9.2.15.2-2 for non-MBSFN ABS with colliding CRS between Cell1 and Cell3 and non-colliding CRS between Cell1 and Cell2. In all test cases, Cell 1 is the serving/aggressor cell, Cell2 is the neighbour/aggressor cell and Cell3 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell 1 with a time domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on neighbour cells, namely Cell 3 measurements with a neighbour cell list, where the cell list includes Cell 3. The UE is also provided via higher layers with the CRS assistance information of Cell 2. The information for both measurement pattern and the CRS assistance information shall be provided to the UE before the measurements start.

Note: It's up to eNB's implementation whether the time domain measurement resource restriction pattern for PCell measurements is configured or not.

**Table A.9.2.15.2-1: General test parameters for E-UTRAN FDD RSRQ intra frequency test parameters under time-domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  |                          | Unit | Value   | Comment   |
|--|--------------------------|------|---|---|
| PCell  |                          |      | Cell 1  | Serving/aggressor cell  |
| Neighbour cells  |                          |      | Cell 2  | Neighbour/aggressor cell  |
|  |                          |      | Cell3   | Cell to be measured   |
| ABS transmission configuration   |                          |      | Non-MBSFN ABS   | As defined in Table A.3.4.1.1-1   |
| CP length  |                          |      | Normal  | For all cells in the test   |
| DRX  |                          |      |   | OFF   |
| Time offset between cells  |                          | μs   | Cell 2 offset with respect to Cell 1: 0<br>Cell 3 offset with respect to Cell 1: -2.5   | Three synchronous cells   |
| Physical cell IDs  |                          |      | $(PCI_{cell1} - PCI_{cell3}) \bmod 6 = 0$<br>$(PCI_{cell2} - PCI_{cell3}) \bmod 6 \neq 0$<br>$PCI_{cell1}$ not equal to $PCI_{cell3}$ | Cell PCIs are selected so that all conditions are met   |
| ABS pattern  |                          |      | '1000000010000000100000<br>001000000010000000'  | FDD ABS Pattern Info IE, as defined in TS 36.423[28], clause 9.2.54.<br>The first/leftmost bit corresponds to the Pcell subframe #0 of the radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. No MBSFN subframes are configured in the ABS subframes.<br>Configured in Cell 1 and Cell 2. |
| Time domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |                          |      | '1000000010000000100000<br>001000000010000000'  | Time domain measurement resource restriction pattern for neighbor cell measurement signalled to the UE in measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331, clause 6.3.5.<br>Configured for Cell 3 measurements. The cell list in measSubframeCellList IE shall contain Cell 3 but not Cell 2.        |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |                          |      | '0100000001000000010000<br>000100000001000000'  | Configured for measurements on Cell 1.  |
| CRS assistance information   | physCellId               |      | see PCI conditions above  | Only the CRS information of cell 2 is provided in CRS-AssistanceInfo. It includes a single MBSFN-SubframeConfig element with subframe allocation <i>oneFrame</i> ='000000'.   |
|  | antennaPortsCount        |      | 1   |   |
|  | mbsfn-SubframeConfigList |      | <i>oneFrame</i> = '000000'  |   |

**Table A.9.2.15.2-2: Cell-specific test parameters for E-UTRAN FDD RSRQ intra frequency test parameters under time domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  | Unit  | Test 1     |          |          | Test 2   |          |          | Test 3   |          |          |       |

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled. Applies to all subframes.</p> <p>Note 3: RSRQ, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> levels are calculated in CRS symbols of measurement restricted subframes.</p> <p>Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Applies to restricted measurement subframes for only Cell 2 and Cell 3. For Cell 1, the corresponding value is derived from the normal subframes other than the subframes indicated in the time domain measurement resource restriction pattern for intra-frequency measurements.</p> <p>Note 6: Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.</p> <p>Note 7: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 8: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 9: Except Band 29 and Band 32.</p> |   |                  |      |           |        |   |           |        |           |        |        |

### A.9.2.15.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.3.

## A.9.2.16 TDD RSRQ under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.2.16.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy under time domain measurement resource restriction with CRS assistance information is within the specified limits. This test will verify the requirements in Clause 9.1.5.3 for TDD intra frequency measurements under time domain measurement resource restriction with CRS assistance information.

### A.9.2.16.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurements under time domain measurement resource restriction with CRS assistance information is tested by using the parameters in Table A.9.2.16.2-1 and Table A.9.2.16.2-2 for non-MBSFN ABS with colliding CRS between Cell1 and Cell3 and non-colliding CRS between Cell1 and Cell2. In all test cases, Cell 1 is the serving/aggressor cell, Cell2 is the neighbour/aggressor cell and Cell3 is the target cell to be measured for RSRQ.

The UE is configured by higher layers via Cell1 with a time domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on neighbour cells, namely Cell 3 measurements with a

neighbour cell list, where the cell list includes Cell 3. The UE is also provided via higher layers with the CRS assistance information of Cell 2. The information for both measurement pattern and the CRS assistance information shall be provided to the UE before the measurements start.

Note: It's up to eNB's implementation whether the time domain measurement resource restriction pattern for PCell measurements is configured or not.

**Table A.9.2.16.2-1: General test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time-domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  | Unit                     | Value   | Comment   |
|--|--------------------------|---|---|
| PCell  |                          | Cell 1  | Serving/aggressor cell  |
| Neighbour cells  |                          | Cell 2  | Neighbour/aggressor cell  |
|  |                          | Cell 3  | Cell to be measured   |
| Special subframe configuration   |                          | 6   | For Cell 1, Cell 2 and Cell 3. For special subframe configurations see Table 4.2-1 in [16].   |
| Uplink/downlink subframe configuration   |                          | 1   | For Cell 1, Cell 2 and Cell 2. For uplink-downlink subframe configurations see Table 4.2-2 in [16].   |
| ABS transmission configuration   |                          | Non-MBSFN ABS   | As defined in Table A.3.4.1.1-1   |
| CP length  |                          | Normal  | For all cells in the test   |
| DRX  |                          |   | OFF   |
| Time offset between cells  | μs                       | Cell 2 offset with respect to Cell 1: 0<br>Cell 3 offset with respect to Cell 1: -2.5   | Three synchronous cells   |
| Physical cell IDs  |                          | $(PCI_{cell1} - PCI_{cell3}) \bmod 6 = 0$<br>$(PCI_{cell2} - PCI_{cell3}) \bmod 6 \neq 0$<br>$PCI_{cell1}$ not equal to $PCI_{cell3}$ | Cell PCIs are selected so that all conditions are met   |
| ABS pattern  |                          | '00000000010000000001'  | TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54.<br>The first/leftmost bit corresponds to the Pcell subframe #0 of the radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes.<br>Provided to the UE for Cell 1 and Cell 2. |
| Time domain measurement resource restriction pattern for neighbour cell measurements on RF Channel 1 |                          | '00000000010000000001'  | Time domain measurement resource restriction pattern for neighbor cell measurement signalled to the UE in measSubframePatternNeigh IE in measSubframePatternConfigNeigh, as defined in TS 36.331, clause 6.3.5.<br>Provided to the UE for Cell 3 measurements. The cell list in measSubframeCellList IE shall contain Cell 3 but not Cell 2.          |
| Time-domain measurement resource restriction pattern for serving cell measurements                   |                          | '10000000001000000000'  | Configured for Cell 1 measurements.   |
| CRS assistance information   | physCellId               | see PCI conditions above  | Only the CRS assistance information of cell 2 is provided for Cell 2 only in CRS-AssistanceInfo. It includes a single MBSFN-SubframeConfig element with subframe allocation <i>one Frame</i> ='000000'.   |
|  | antennaPortsCount        | 1   |   |
|  | mbsfn-SubframeConfigList | <i>oneFrame</i> = '000000'  |   |

**Table A.9.2.16.2-2: Cell-specific test parameters for E-UTRAN TDD RSRQ intra frequency test parameters under time domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  | Unit                      | Test 1     |           |           | Test 2     |           |           | Test 3     |           |           |           |            |  |        |  |

|         |   |
|---------|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. Applies to all subframes.  |
| Note 3: | RSRQ, RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_0$ levels are calculated in CRS symbols of measurement restricted subframes.  |
| Note 4: | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | Applies to restricted measurement subframes for only Cell 2 and Cell 3. For Cell 1, the corresponding value is derived from the normal subframes other than the subframes indicated in the time domain measurement resource restriction pattern for intra-frequency measurements. |
| Note 6: | Non-ABS and ABS subframe channel powers defined in Table A.3.4.1.1-1.   |
| Note 7: | E-UTRA operating band groups are as defined in Section 3.5.   |

### A.9.2.16.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.3.

## A.9.2.17 FDD Intra frequency case for 5 MHz bandwidth

### A.9.2.17.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.5.1.

### A.9.2.17.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.17.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.17.2-1: RSRQ FDD Intra frequency test parameters, 5MHz

| Parameter   | Unit        | Test 1      |           | Test 2    |           | Test 3    |           |             |            |  |        |       |         |       |        |       |

| Propagation condition   | -           | AWGN        |           | AWGN      |           | AWGN      |           | AWGN        |            |  |        |       |         |       |        |       |
| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRQ, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |             |             |           |           |           |           |           |             |            |  |        |       |         |       |        |       |

### A.9.2.17.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.5.1.

## A.9.2.18 FDD—FDD Inter frequency case for 5MHz bandwidth

### A.9.2.18.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Sections 9.1.6.1 and 9.1.6.2.

### A.9.2.18.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.18.2-1. In all tests, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.2.18.2-1: RSRQ FDD—FDD Inter frequency test parameters, 5MHz**

| Parameter  | Unit                                 | Test 1      |           | Test 2    |           | Test 3    |           |             |            |     |     |         |         |        |     |
|--|--------------------------------------|-------------|-----------|-----------|-----------|-----------|-----------|-------------|------------|-----|-----|---------|---------|--------|-----|
|  |                                      | Cell 1      | Cell 2    | Cell 1    | Cell 2    | Cell 1    | Cell 2    |             |            |     |     |         |         |        |     |

| $\hat{E}_s / N_{oc}$  | dB   | -1.75 | -1.75 | -4.0 | -4.0 | -4.0 | -4.0 |
|-----------------------|--|-------|-------|------|------|------|------|
| Propagation condition | -  | AWGN  |       | AWGN |      | AWGN |      |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |       |       |      |      |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |       |       |      |      |      |      |
| Note 3:               | RSRQ, RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |       |       |      |      |      |      |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |       |       |      |      |      |      |
| Note 5:               | For Band 26, the tests shall be performed with the assigned E-UTRA channel bandwidth within 865-894 MHz.   |       |       |      |      |      |      |
| Note 6:               | This test is only applicable for testing inter-frequency requirements for Bands FDD_N. Cell 2 is on the Band under test, and Cell 1 is on another band supported by the UE.                                    |       |       |      |      |      |      |
| Note 7:               | E-UTRA operating band groups are as defined in Section 3.5.  |       |       |      |      |      |      |

### A.9.2.18.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.6.1 and 9.1.6.2.

## A.9.2.19 FDD-FDD Inter Frequency WB-RSRQ

### A.9.2.19.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits when the measurement configuration message received by the UE contains *widebandRSRQ-Meas* parameter in TS 36.331 [2]. In the test the UE shall also be configured with the *AllowedMeasBandwidth* parameter defined in TS 36.331 [2]. The test shall verify the WB-RSRQ inter frequency absolute accuracy requirements defined in Section 9.1.6.3.

### A.9.2.19.2 Test parameters

In this test case the two cells are on two different carrier frequencies and measurement gaps are provided. The WB-RSRQ inter frequency absolute accuracy requirement is tested by using test parameters in Table A.9.2.19.2-1. In the test, Cell 1 is the PCell and Cell 2 the target cell on which the UE shall be ordered to measure WB-RSRQ.

Table A.9.2.19.2-1: WB-RSRQ FDD-FDD Inter frequency test parameters

| Parameter   | Unit       | Test 1     |        |               |       |
|---|------------|------------|--------|---------------|-------|

| <p>Note 1: OCNG shall be used such that Cell 1 is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells not specified in the test, assumed to be constant over time and modelled as noise.</p> <p>Note 3: RSRQ, RSRP, WB-RSRQ and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The stated values represent the weighted average over the allowed measurement bandwidth, and the WB-RSRQ values assume averaging over symbols 0, 4, 7 and 11 of the subframe.</p> <p>Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: This test case is applicable to all FDD frequency bands except band 31.</p> |            |            |        |               |       |

### A.9.2.19.3 Test Requirements

The WB-RSRQ measurement accuracy for cell 2 shall fulfil the requirements in Section 9.1.6.3, compared with WB-RSRQ<sub>0</sub> or WB-RSRQ<sub>1</sub>.

## A.9.2.20 TDD—TDD Inter Frequency WB-RSRQ

### A.9.2.20.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits when the measurement configuration message received by the UE contains *widebandRSRQ-Meas* parameter in TS 36.331 [2]. In the test the UE shall also be configured with the *AllowedMeasBandwidth* parameter defined in TS 36.331 [2]. The test shall verify the WB-RSRQ inter frequency absolute accuracy requirements defined in Section 9.1.6.3.

### A.9.2.20.2 Test parameters

In this test case the two cells are on two different carrier frequencies and measurement gaps are provided. The WB-RSRQ inter frequency absolute accuracy requirement is tested by using test parameters in Table A.9.2.20.2-1. In the test, Cell 1 is the PCell and Cell 2 the target cell on which the UE shall be ordered to measure WB-RSRQ.

Table A.9.2.20.2-1: WB-RSRQ TDD-TDD Inter frequency test parameters

| Parameter  |           | Unit       | Test 1   |               |       |
|--|-----------|------------|----------|---------------|-------|

| RSRQ <sup>Note4</sup>  |           | dB         | -16.25   | -             |       |
| WB-RSRQ <sub>0</sub> <sup>Note4</sup> in subframe 0  |           | dB         | -        | -13.68        |       |
| WB-RSRQ <sub>1</sub> <sup>Note4</sup> in subframe ≠ 0  |           | dB         | -        | -13.63        |       |
| I <sub>o</sub> <sup>Note4</sup>  |           | dBm/ 9 MHz | -64.76   | -             |       |
| I <sub>o</sub> <sup>Note4</sup> in symbol 0, 4, 11 of subframe 0   |           | dBm/ 9 MHz | -        | -82.38        |       |
| I <sub>o</sub> <sup>Note4</sup> in symbol 7 of subframe 0  |           | dBm/ 9 MHz | -        | -82.20        |       |
| I <sub>o</sub> <sup>Note4</sup> in symbol 0, 4, 7, 11 of subframes ≠ 0   |           | dBm/ 9 MHz | -        | -82.38        |       |
| Propagation condition  |           | -          | AWGN     | AWGN          |       |
| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that Cell 1 is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells not specified in the test, assumed to be constant over time and modelled as noise.</p> <p>Note 4: RSRQ, RSRP, WB-RSRQ and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The stated values represent the weighted average over the allowed measurement bandwidth, and the WB-RSRQ values assume averaging over symbols 0, 4, 7 and 11 of the subframe.</p> |           |            |          |               |       |

Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

### A.9.2.20.3 Test Requirements

The WB-RSRQ measurement accuracy for cell 2 shall fulfil the requirements in Section 9.1.6.3, compared with WB-RSRQ<sub>0</sub> or WB-RSRQ<sub>1</sub>.

### A.9.2.21 FDD RSRQ for E-UTRAN Carrier Aggregation for 10MHz+5MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.21.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.5.1.

#### A.9.2.21.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.5.2 except that the values of the parameters in the Table A.9.2.21.2-1 will replace the values of the corresponding parameters in A.9.2.5.2-1.

**Table A.9.2.21.2-1: FDD RSRQ Carrier Aggregation test parameters**

| Parameters   |  | Test 1     |          |           |           |
|--|--|------------|----------|-----------|-----------|

|  | Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |            |          |           |           |
| Note 2: I <sub>0</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |  |            |          |           |           |
| Note 3: See Table A.9.2.5.2-1 for the other parameters   |  |            |          |           |           |

### A.9.2.21.3 Test Requirements

The test requirements defined in section A.9.2.5.3 shall apply in this test case.

## A.9.2.22 TDD RSRQ for E-UTRAN Carrier Aggregation for 10MHz+5MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

### A.9.2.22.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.6.1.

### A.9.2.22.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.6.2 except that the values of the parameters in the Table A.9.2.22.2-1 will replace the values of the corresponding parameters in A.9.2.6.2-1.

**Table A.9.2.22.2-1: TDD RSRQ Carrier Aggregation test parameters**

| Parameters   |             | Test 1     |          |          |           |
|--|-------------|------------|----------|----------|-----------|
|  |             | Units      | Cell 1   | Cell 2   | Cell 3    |
| $BW_{\text{channel\_CA}}$ <small>Note1</small>   |             | MHz        | 10       | 5        |           |

|  | Bands TDD_E |            |          | -86.67   |           |
| Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.<br>Note 2: $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves<br>Note 3: See Table A.9.2.6.2-1 for the other parameters |             |            |          |          |           |

### A.9.2.22.3 Test Requirements

The test requirements defined in section A.9.2.6.3 shall apply in this test case.

## A.9.2.23 FDD RSRQ for E-UTRA Carrier Aggregation (5MHz + 5MHz bandwidth)

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

### A.9.2.23.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.5.1.

### A.9.2.23.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.5.2 except that the values of the parameters in the Table A.9.2.23.2-1 will replace the values of the corresponding parameters in A.9.2.5.2-1.

**Table A.9.2.23.2-1: FDD RSRQ Carrier Aggregation test parameters**

| Parameters   |                                      | Test 1   |           |           |           |

|  | Bands FDD_H <sup>Note 5</sup>        |  | -89.76    | -85.17    |           |
| Note 1:  |                                      | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |           |           |           |
| Note 2:  |                                      | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                                 |           |           |           |
| Note 3:  |                                      | See Table A.9.2.5.2-1 for the other parameters   |           |           |           |
| Note 4:  |                                      | E-UTRA operating band groups are as defined in Section 3.5.  |           |           |           |
| Note 5:  |                                      | The test applies for E-UTRA operating bands in this band group which are supporting 5MHz + 5MHz channel bandwidth.                                       |           |           |           |

### A.9.2.23.3 Test Requirements

The test requirements defined in section A.9.2.5.3 shall apply in this test case.

### A.9.2.24 TDD RSRQ for E-UTRA Carrier Aggregation (5MHz + 5MHz bandwidth)

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

### A.9.2.24.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.6.1.

### A.9.2.24.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.6.2 except that the values of the parameters in the Table A.9.2.24.2-1 will replace the values of the corresponding parameters in A.9.2.6.2-1.

**Table A.9.2.24.2-1: TDD RSRQ Carrier Aggregation test parameters**

| Parameters   |                               | Test 1    |          |          |           |
|--|-------------------------------|-----------|----------|----------|-----------|
|  |                               | Units     | Cell 1   | Cell 2   | Cell 3    |

| Measurement bandwidth  |                               | $n_{PRB}$ | 10-15    | 10-15    | 10-15     |
| PDSCH Reference measurement channel defined in A.3.1.1.1   |                               |           | R.0 TDD  | R.4 TDD  | N/A       |
| PDSCH allocation   |                               | $n_{PRB}$ | 13-36    | 7-17     | N/A       |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.2  |                               |           | R.6 TDD  | R.11 TDD | R.11 TDD  |
| OCNG Patterns defined in A.3.2.2.9 (OP.9 TDD) and A.3.2.2.10 (OP.10 TDD)   |                               |           | OP.1 TDD | OP.9 TDD | OP.10 TDD |
| $I_o$ <sup>Note2</sup>   | Bands TDD_A <sup>Note 5</sup> | dBm4.5MHz | -93.26   | -88.67   |           |
|  | Bands TDD_C <sup>Note 5</sup> |           | -92.26   | -87.67   |           |
|  | Bands TDD_E <sup>Note 5</sup> |           | -91.26   | -86.67   |           |
| Note 1: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |                               |           |          |          |           |
| Note 2: $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                              |                               |           |          |          |           |
| Note 3: See Table A.9.2.6.2-1 for the other parameters   |                               |           |          |          |           |
| Note 4: E-UTRA operating band groups are as defined in Section 3.5.  |                               |           |          |          |           |
| Note 5: The test applies for E-UTRA operating bands in this band group which are supporting 5MHz + 5MHz channel bandwidth.                                       |                               |           |          |          |           |

### A.9.2.24.3 Test Requirements

The test requirements defined in section A.9.2.6.3 shall apply in this test case.

## A.9.2.25 RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in FDD

The test case in this section are applicable to TDD-FDD carrier aggregation capable UEs which have been configured with a downlink SCell.

### A.9.2.25.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in FDD measurement accuracy in carrier aggregation is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of RSRQ measurements for the primary component carrier defined in

clause 9.1.11.1, the absolute accuracy of RSRQ measurements for the secondary component carrier defined in clause 9.1.11.2, and also the relative RSRQ accuracy requirement between primary and secondary component carriers defined in clause 9.1.11.3.

#### A.9.2.25.2 Test parameters

In this test case the PCell is FDD and SCell is TDD. Both RSRQ absolute and relative accuracy requirements of the primary and secondary component carrier are tested by using test parameters specified in Table A.9.2.25.2-1. In the test, Cell 1 is the PCell, Cell 2 is the SCell on the Secondary Component Carrier (SCC). The SCC is configured and activated.

The parameters of this test are given in Table A.9.2.25.2-1.

**Table A.9.2.25.2-1: RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in FDD test parameters**

| Parameter   |  | Unit                   | Cell 1  | Cell 2  |            |   |      |
|---|--|------------------------|---|---|------------|---|------|

### A.9.2.25.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements specified in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.

### A.9.2.26 RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in TDD

The test case in this section are applicable to TDD-FDD carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.26.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in TDD measurement accuracy in carrier aggregation is within the specified limits. This test will verify the absolute accuracy of RSRQ measurements for the primary component carrier defined in Clause 9.1.11.1, the absolute accuracy of RSRQ measurements for the secondary component carrier defined in Clause 9.1.11.2, and also the relative RSRQ accuracy requirement between primary and secondary component carriers defined in Clause 9.1.11.3.

#### A.9.2.26.2 Test parameters

In this test case the PCell is TDD and SCell is FDD. Both RSRQ absolute and relative accuracy requirements of the primary and secondary component carrier are tested by using test parameters specified in Table A.9.2.26.2-1. In the test, Cell 1 is the PCell, Cell 2 is the SCell on the Secondary Component Carrier (SCC). The SCC is configured and activated.

The parameters of this test are given in Table A.9.2.26.2-1.

**Table A.9.2.26.2-1: RSRQ for E-UTRAN TDD-FDD Carrier Aggregation with PCell in TDD test parameters**

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: Es/I<sub>ot</sub>, RSRP, RSRQ and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 7: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 8: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 9: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 10: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> |                                       |                           |  |  |

### A.9.2.26.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in section 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.2.27 TDD RSRQ for E-UTRAN Carrier Aggregation for 20MHz+10MHz

The test case in this section are applicable to carrier aggregation capable UEs which have been configured with a downlink SCell.

#### A.9.2.27.1 Test Purpose and Environment

The purpose of this test is the same as defined in Subclause A.9.2.6.1.

#### A.9.2.27.2 Test parameters

The parameters of this test are the same as defined in Subclause A.9.2.6.2 except that the values of the parameters in the Table A.9.2.27.2-1 will replace the values of the corresponding parameters in A.9.2.6.2-1.

Table A.9.2.27.2-1: TDD RSRQ Carrier Aggregation test parameters

| Parameters  |             | Units  | Combination | Test 1                                |                                       |          |

|   | Bands TDD_C |  |             | -89.26 + 10log(N <sub>RB,c</sub> /50) |                                       |          |
|   | Bands TDD_E |  |             | -88.26 + 10log(N <sub>RB,c</sub> /50) |                                       |          |
|   | Bands TDD_A | dBm/BW <sub>channel</sub>  | All         | N/A                                   | -85.67 + 10log(N <sub>RB,c</sub> /50) |          |
|   | Bands TDD_C |  |             |                                       | -84.67 + 10log(N <sub>RB,c</sub> /50) |          |
|   | Bands TDD_E |  |             |                                       | -83.67 + 10log(N <sub>RB,c</sub> /50) |          |
| Note 1:   |             | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1. |             |                                       |                                       |          |
| Note 2:   |             | I <sub>0</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                     |             |                                       |                                       |          |
| Note 3:   |             | See Table A.9.2.6.2-1 for the other parameters.  |             |                                       |                                       |          |

### A.9.2.27.3 Test Requirements

The test requirements defined in section A.9.2.6.3 shall apply in this test case.

## A.9.2.28 FDD intra-frequency absolute RSRQ accuracy with CRS based discovery signal

### A.9.2.28.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.14.4.

### A.9.2.28.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement for Cell 2 is tested by using the parameters in Table A.9.2.28.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. Cell 2 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.2.28.2-1: RSRQ FDD Intra frequency test parameters

| Parameter   |                                      | Unit       | Test 1   |          |
|---|--------------------------------------|------------|----------|----------|
|   |                                      |            | Cell 1   | Cell 2   |
| E-UTRA RF Channel Number  |                                      |            | 1        |          |
| $BW_{channel}$  |                                      | MHz        | 10       |          |
| Measurement bandwidth   |                                      | $n_{PRB}$  | 22—27    |          |
| DMTC period   |                                      | ms         | N/A      | 160      |
| DMTC period offset  |                                      | ms         | N/A      | 10       |
| Discovery signal occasion duration  |                                      | ms         | N/A      | 1        |
| Time offset between cell 1 and cell 2   |                                      | $\mu s$    | 0        | 2.3      |

|   | Bands FDD_C                          |            | -84.67   |          |
|   | Bands FDD_D                          |            | -84.17   |          |
|   | Bands FDD_E, FDD_F <sup>Note 5</sup> |            | -83.67   |          |
|   | Bands FDD_G <sup>Note 7</sup>        |            | -82.67   |          |
|   | Bands FDD_H                          |            | -82.17   |          |
| $\hat{E}_s / N_{oc}$  |                                      | dB         | -4       | -4       |
| Propagation condition   |                                      | -          | AWGN     |          |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |                                      |            |          |          |
| Note 2: Interference from other cells and noise sources not specified in the test is  |                                      |            |          |          |

assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: RSRQ, RSRP and  $I_0$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.

Note 5: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.

Note 6: E-UTRA operating band groups are as defined in Section 3.5.

Note 7: Except Band 29 and Band 32.

### A.9.2.28.3 Test Requirements

The absolute accuracy of RSRQ intra frequency measurement for Cell 2 shall fulfil the requirements in Clause 9.1.14.4.

## A.9.2.29 TDD intra-frequency absolute RSRQ accuracy with CRS based discovery signal

### A.9.2.29.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.14.4.

### A.9.2.29.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement for Cell 2 is tested by using the parameters in Table A.9.2.29.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. Cell 2 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.2.29.2-1: RSRQ TDD Intra frequency test parameters

| Parameter  | Unit          | Test 1   |          |
|--|---------------|----------|----------|
|  |               | Cell 1   | Cell 2   |
| E-UTRA RF Channel Number   |               | 1        |          |
| $BW_{\text{channel}}$  | MHz           | 10       |          |

### A.9.2.29.3 Test Requirements

The absolute accuracy of RSRQ intra frequency measurement for Cell 2 shall fulfil the requirements in Clause 9.1.14.4.

## A.9.2.30 FDD-FDD inter-frequency absolute and relative RSRQ accuracies with CRS based discovery signal

### A.9.2.30.1 Test Purpose and Environment

The purpose of this test is to verify that the absolute and relative accuracy of RSRQ measurement in discovery signal occasions is within the specified limits. This test will verify the requirements in Sections 9.1.14.4.

### A.9.2.30.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.30.2-1. In all tests, Cell 1 is the PCell and Cell 2 the target cell. For measurement of the carrier frequency of Cell 2, DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.2.30.2-1: RSRQ in discovery signal occasions FDD—FDD Inter frequency test parameters

| Parameter  | Unit                                 | Test 1   |          |
|--|--------------------------------------|----------|----------|
|  |                                      | Cell 1   | Cell 2   |
| E-UTRA RF Channel Number   |                                      | 1        | 2        |
| BW <sub>channel</sub>  | MHz                                  | 10       | 10       |
| Gap Pattern Id   |                                      | 0        | -        |
| Gap Offset   | ms                                   | 9        | -        |
| DMTC period  | ms                                   | -        | 160      |
| DMTC period offset   | ms                                   | -        | 10       |
| Discovery signal occasion duration                                     | ms                                   | -        | 1        |
| Time offset between cell 2 and cell 1                                  | μs                                   | 3        |          |

| $\hat{E}_s / N_{oc}$   | dB                                   | -6       | -6       |

| Propagation condition | -  | AWGN |
|-----------------------|--|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |
| Note 3:               | RSRQ, RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |
| Note 4:               | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |      |
| Note 5:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |
| Note 6:               | E-UTRA operating band groups are as defined in Section 3.5.  |      |
| Note 7:               | Except Band 29 and Band 32.  |      |

### A.9.2.30.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.14.4.

## A.9.2.31 TDD-TDD inter-frequency absolute and relative RSRQ accuracies with CRS based discovery signal

### A.9.2.31.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy in discovery signal occasions is within the specified limits. This test will verify the requirements in Sections 9.1.14.4.

### A.9.2.31.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.31.2-1 for TDD configuration 1. In all tests, Cell 1 is the PCell and Cell 2 the target cell. DMTC configuration for Cell 2 is provided to UE in the *measDS-Config* before the start of the test.

Table A 9.2.31.2-1: RSRQ TDD—TDD Inter frequency test parameters for TDD configuration 1

| Parameter  | Unit        | Test 1     |          |
|--|-------------|------------|----------|
|  |             | Cell 1     | Cell 2   |
| E-UTRA RF Channel Number   |             | 1          | 2        |

### A.9.2.31.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Sections 9.1.14.4.

## A.9.2.32 FDD absolute and relative RSRQ accuracy for E-UTRAN Carrier Aggregation in CRS based discovery signal

### A.9.2.32.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRQ measurement accuracy for carrier aggregation in CRS based discovery signal is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier specified in clause 9.1.15.1.2, and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers specified in clause 9.1.15.1.3.

### A.9.2.32.2 Test parameters

In this test case the PCell and the SCell are on different carrier frequencies. There are three cells used in this test case. RSRQ absolute and relative accuracy requirements of the primary and secondary component carrier are tested by using test parameters specified in Table A.9.2.32.2-1. In the test, Cell 1 is the PCell, Cell 2 is the SCell on the Secondary Component Carrier (SCC) and Cell 3 is the neighbouring cell on the SCC. Cell 2 on SCC is configured and activated. Cell 3 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.2.32.2-1: FDD RSRQ Carrier Aggregation Test Parameters

| Parameters   |                                      | Test 1     |          |   |          |
|--|--------------------------------------|------------|----------|---|----------|
|  |                                      | Units      | Cell 1   | Cell 2  | Cell 3   |
| E-UTRA RF Channel Number   |                                      |            | 1        | 2   | 2        |

| Propagation condition  |   | -   | AWGN   |        |        |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |     |        |        |        |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |     |        |        |        |
| Note 3: RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |     |        |        |        |
| Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |   |     |        |        |        |
| Note 5: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs  |   |     |        |        |        |
| Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |   |     |        |        |        |
| Note 7: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |   |     |        |        |        |
| Note 8: E-UTRA operating band groups are as defined in Section 3.5.  |   |     |        |        |        |

### A.9.2.32.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.15.1.1, 9.1.15.1.2, and 9.1.15.1.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.15.1.2.
- The relative accuracy of inter-frequency RSRQ measurements between Cell 1 on primary component carriers and Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.15.1.3.

### A.9.2.33 TDD absolute and relative RSRQ accuracy for E-UTRAN Carrier Aggregation in CRS based discovery signal

#### A.9.2.33.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD RSRQ measurement accuracy for carrier aggregation in CRS based discovery signal is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier specified in clause 9.1.15.1.2, and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers specified in clause 9.1.15.1.3.

#### A.9.2.33.2 Test parameters

In this test case the PCell and the SCell are on different carrier frequencies. There are three cells used in this test case. RSRQ absolute and relative accuracy requirements of the primary and secondary component carrier are tested by using test parameters specified in Table A.9.2.33.2-1. In the test, Cell 1 is the PCell, Cell 2 is the SCell on the Secondary Component Carrier (SCC) and Cell 3 is the neighbouring cell on the SCC. Cell 2 on SCC is configured and activated. Cell 3 DMTC configuration is provided to the UE in the *measDS-Config* before the start of the test.

Table A.9.2.33.2-1: TDD RSRQ Carrier Aggregation Test Parameters

| Parameter  | Unit                      | Test 1     |   |          |       |
|--|---------------------------|------------|---|----------|-------|
|  |                           | Cell 1     | Cell 2  | Cell 3   |       |

| Note 5: | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 6: | The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.   |
| Note 7: | This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.   |
| Note 8: | E-UTRA operating band groups are as defined in Section 3.5.  |

### A.9.2.33.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.15.1.1, 9.1.15.1.2, and 9.1.15.1.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.15.1.2.
- The relative accuracy of inter-frequency RSRQ measurements between Cell 1 on primary component carriers and Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.15.1.3.

### A.9.2.34 FDD—FDD Inter frequency new RSRQ

#### A.9.2.34.1 Test Purpose and Environment

The purpose of this test is to verify that the absolute accuracy of RSRQ measurement is within the specified limits when measurement configuration message received by the UE contains *measRSRQ-OnAllSymbols-r12* parameter in TS 36.331 [2]. This test will verify the requirements in Sections 9.1.16.

#### A.9.2.34.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. The new RSRQ inter frequency absolute accuracy requirement is tested by using test parameters in Table A.9.2.34.2-1. In the test, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.2.34.2-1: New RSRQ FDD—FDD Inter frequency test parameters**

| Parameter   |                                    | Unit       | Test 1   |            |         |         |
|---|------------------------------------|------------|----------|------------|---------|---------|
|   |                                    |            | Cell 1   | Cell 2     |         |         |
| E-UTRA RF Channel Number  |                                    |            | 1        | 2          |         |         |
| BW <sub>channel</sub>   |                                    | MHz        | 10       | 10         |         |         |
| Gap Pattern Id  |                                    |            | 0        | -          |         |         |
| Antenna Configuration   |                                    |            | 1x2      | 1x2        |         |         |
| Time offset between cell 2 and cell 1   |                                    | μs         | 3        |            |         |         |
| Measurement bandwidth   |                                    | $n_{PRB}$  | 22-27    |            |         |         |

### A.9.2.34.3 Test Requirements

The new RSRQ measurement accuracy for cell 2 shall fulfil the requirements in Section 9.1.16, compared with any nominal new RSRQ value in subframe 0, 5 or others.

## A.9.2.35 TDD—TDD Inter frequency new RSRQ

### A.9.2.35.1 Test Purpose and Environment

The purpose of this test is to verify that the absolute accuracy of RSRQ measurement is within the specified limits when measurement configuration message received by the UE contains *measRSRQ-OnAllSymbols-r12* parameter in TS 36.331 [2]. This test will verify the requirements in Sections 9.1.16.

### A.9.2.35.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. The new RSRQ inter frequency absolute accuracy requirement is tested by using test parameters in Table A.9.2.35.2-1. In the test, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.35.2-1: New RSRQ TDD—TDD Inter frequency test parameters

| Parameter   |                                    | Unit       | Test 1   |            |         |         |
|---|------------------------------------|------------|----------|------------|---------|---------|
|   |                                    |            | Cell 1   | Cell 2     |         |         |
| E-UTRA RF Channel Number  |                                    |            | 1        | 2          |         |         |
| BW <sub>channel</sub>   |                                    | MHz        | 10       | 10         |         |         |
| Special subframe configuration <sup>Note1</sup>                       |                                    |            | 6        | 6          |         |         |
| Uplink-downlink configuration <sup>Note1</sup>                        |                                    |            | 1        | 1          |         |         |
| Gap Pattern Id  |                                    |            | 0        | -          |         |         |

|         |   |
|---------|---|
| Note 1: | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.  |
| Note 2: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 3: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.                        |
| Note 4: | RSRQ, RSRP, new RSRQ and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The new RSRQ values assume RSSI averaging over all OFDM symbols of the subframe. |
| Note 5: | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |

### A.9.2.35.3 Test Requirements

The new RSRQ measurement accuracy for cell 2 shall fulfil the requirements in Section 9.1.16, compared with any nominal new RSRQ value in subframe 0, 5, 1, 6 or others.

## A.9.2.36 FDD—FDD Inter frequency RSRQ measured on all OFDM symbols

### A.9.2.36.1 Test Purpose and Environment

The purpose of this test is to verify that the absolute accuracy of RSRQ measurement is within the specified limits when measurement configuration message received by the UE contains *measRSRQ-OnAllSymbols-r12* parameter in TS 36.331 [2]. This test will verify the requirements in Section 9.1.16.

A.9.2.3 is also conducted even if UE is capable of measuring RSRQ on all OFDM symbols.

### A.9.2.36.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ measured on all OFDM symbols inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.36.2-1. In all tests, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.36.2-1: FDD—FDD Inter frequency test parameters

| Parameter  | Unit  | Test 1   |          |
|--|---|----------|----------|
|  |   | Cell 1   | Cell 2   |
| E-UTRA RF Channel Number   |   | 1        | 2        |
| BW <sub>channel</sub>  | MHz   | 10       | 10       |
| Gap Pattern Id   |   | 0        | -        |
| Antenna Configuration  |   | 1x2      | 1x2      |
| Time offset between cell 2 and cell 1                                  | μs  | 3        |          |
| Measurement bandwidth  | $n_{PRB}$   | 22-27    |          |
| PDSCH Reference measurement channel defined in A.3.1.1.1               |   | R.0 FDD  | -        |
| PDSCH allocation   | $n_{PRB}$   | 13—36    | -        |
| PDCCH/PCFICH/PHICH Reference measurement channel defined in A.3.1.2.1  |   | R.6 FDD  |          |

| RSRQ <sup>Note3</sup>  | dB  | -14.76   | -14.76   |
| $I_o$ <sup>Note3</sup>   | dBm/ 9 MHz  | -50      | -50      |
| $\hat{E}_s/N_{oc}$   | dBm/ 9 MHz  | -1.75    | -1.75    |
| Propagation condition  | -   | AWGN     |          |
| Note 1:  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |          |
| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |          |          |
| Note 3:  | RSRP, RSRQ and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The RSRQ values assume RSSI averaging over all OFDM symbols of the subframe. |          |          |
| Note 4:  | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |          |          |

### A.9.2.36.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Section 9.1.16.

## A.9.2.37 TDD—TDD Inter frequency RSRQ measurement on all OFDM symbols

### A.9.2.37.1 Test Purpose and Environment

The purpose of this test is to verify that the absolute accuracy of RSRQ measurement is within the specified limits when measurement configuration message received by the UE contains *measRSRQ-OnAllSymbols-r12* parameter in TS 36.331 [2]. This test will verify the requirements in Section 9.1.16.

A.9.2.4 is also conducted even if UE is capable of measuring RSRQ on all OFDM symbols..

### A.9.2.37.2 Test parameters

In this test case the two cells are on different carrier frequencies and measurement gaps are provided. Both RSRQ measured on all OFDM symbols inter frequency absolute and relative accuracy requirements are tested by using test parameters in Table A.9.2.37.2-1. In all tests, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.37.2-1: TDD-TDD Inter frequency test parameters

| Parameter   | Unit  | Test 1   |          |
|---|---|----------|----------|
|   |   | Cell 1   | Cell 2   |
| E-UTRA RF Channel Number  |   | 1        | 2        |
| BW <sub>channel</sub>   | MHz   | 10       | 10       |
| Special subframe configuration <sup>Note1</sup>                       |   | 6        | 6        |

| Propagation condition   | -   | AWGN     |          |
| Note 1:   | For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.  |          |          |
| Note 2:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |          |          |
| Note 3:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |          |          |
| Note 4:   | RSRP, RSRQ and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. The RSRQ values assume RSSI averaging over all OFDM symbols of the subframe. |          |          |
| Note 5:   | RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |          |          |

### A.9.2.37.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Section 9.1.16.

## A.9.2.38 3 DL PCell in FDD RSRQ for E-UTRAN in Carrier Aggregation

The test case in this clause is applicable to carrier aggregation capable UEs which have been configured with two downlink SCells.

### A.9.2.38.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy in carrier aggregation is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the primary component carrier specified in clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier specified in clause 9.1.11.2 and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers specified in clause 9.1.11.3.

### A.9.2.38.2 Test parameters

In this set of test cases there are three cells on three carrier frequencies. Cell 1 is PCell on channel 1, Cell 2 is activated SCell on channel 2, and Cell 3 is activated SCell on channel 3. The parameters for the test are listed in Table A.9.2.38.2-1.

**Table A.9.2.38.2-1: 3 DL PCell in FDD RSRQ for E-UTRAN in Carrier Aggregation test parameters (cell #1, cell #2 and cell #3)**

| Parameter   | Unit   | Cell 1  | Cell 2  | Cell 3  |               |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP, RSRQ and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 7: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 8: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 9: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 10: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> |                                       |                               |  |  |  |

### A.9.2.38.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements specified in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 3 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.

### A.9.2.39 3 DL PCell in TDD RSRQ for E-UTRAN in Carrier Aggregation

The test case in this clause is applicable to carrier aggregation capable UEs which have been configured with two downlink SCells.

#### A.9.2.39.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD-FDD RSRQ measurement accuracy in carrier aggregation is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the primary component carrier defined in Clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carrier defined in Clause 9.1.11.2, and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers defined in Clause 9.1.11.3.

#### A.9.2.39.2 Test parameters

In this set of cases cell 1 is PCell on the primary component carrier, and cell 2 and cell 3 are activated SCells on secondary component carriers SCC1 and SCC2 respectively. The test parameters for the test are listed in Table A.9.2.39.2-1.

**Table A.9.2.39.2-1: 3 Downlink TDD-FDD RSRQ carrier aggregation test parameters with PCell in TDD (cell #1, cell #2 and cell #3)**

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP, RSRQ and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 7: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 8: This test verifies the RRM requirement which is independent of channel bandwidth and is performed according to the principle defined in section A.3.6.1.</p> <p>Note 9: E-UTRA operating band groups are as defined in Section 3.5.</p> <p>Note 10: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> |                                       |                               |  |  |  |

### A.9.2.39.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements specified in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on the secondary component carrier shall fulfil the requirements specified in clause 9.1.11.2
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 2 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRQ measurements between the primary and secondary component carriers for Cell 3 relative to Cell 1 shall fulfil the requirements specified in clause 9.1.11.3.

## A.9.2.40 3 DL FDD RSRQ for E-UTRAN in Carrier Aggregation

### A.9.2.40.1 Test Purpose and Environment

The purpose of this test is to verify that the FDD RSRQ measurement accuracy in carrier aggregation is within the specified limits under AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the primary component carrier specified in clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carriers specified in clause 9.1.11.2 and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers specified in clause 9.1.11.3.

### A.9.2.40.2 Test parameters

In this test case the PCell and the SCells are on different carrier frequencies. There are three cells used in this test case. Both RSRQ absolute and relative accuracy requirements of the primary and secondary component carriers are tested by using test parameters specified in Table A.9.2.40.2-1. In the test, Cell 1 is the PCell, Cell 2 and Cell 3 are the SCells on secondary component carrier SCC1 and SCC2 respectively. The SCC1 and SCC2 are configured and activated.

Table A.9.2.40.2-1: 3 DL FDD RSRQ carrier aggregation test parameters

| Parameter   |                                      | Unit                          | Cell 1  | Cell 2  | Cell 3  |

| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: Es/Iot, RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 6: For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.</p> <p>Note 7: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> <p>Note 8: E-UTRA operating band groups are as defined in Section 3.5.</p> |   |  |   |   |   |

### A.9.2.40.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in clause 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRQ measurements between the primary component carrier and SCC1 for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRQ measurements between the primary component carrier and SCC2 for Cell 3 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.2.41 3 DL TDD RSRQ for E-UTRAN in Carrier Aggregation

#### A.9.2.41.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD RSRQ measurement accuracy in carrier aggregation is within the specified limits in a synchronized network environment with AWGN propagation conditions. This test will verify the absolute accuracy of intra-frequency RSRQ measurements for the primary component carrier defined in Clause 9.1.11.1, the absolute accuracy of intra-frequency RSRQ measurements for the secondary component carriers defined in Clause 9.1.11.2, and also the relative inter-frequency RSRQ accuracy requirement between primary and secondary component carriers defined in Clause 9.1.11.3.

### A.9.2.41.2 Test parameters

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is PCell, Cell 2 and Cell 3 are the SCells on secondary component carrier SCC1 and SCC2 respectively. PCell and SCells are in different RF channels. The parameters for the test are listed in Table A.9.2.41.2-1.

**Table A.9.2.41.2-1: 3 DL TDD RSRQ carrier aggregation test parameters**

| Parameter   |                           | Unit                          | Cell 1  | Cell2   | Cell3   |            |             |        |      |      |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: Es/lot, RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: The selection of the bands for testing depends on the configuration of the carrier aggregation supported by the UEs.</p> <p>Note 7: Time alignment error (TAE) as specified in TS 36.104 [30] clause 6.5.3.1. The TAE value depends upon the type of carrier aggregation.</p> <p>Note 8: E-UTRA operating band groups are as defined in Section 3.5.</p> |               |   |                   |                   |

### A.9.2.41.3 Test Requirements

In the test, the RSRQ measurement accuracy in carrier aggregation shall fulfil the requirements in section 9.1.11.1, 9.1.11.2, and 9.1.11.3.

- The absolute accuracy of intra-frequency RSRQ measurements of Cell 1 on the primary component carrier shall fulfil the requirements defined in clause 9.1.11.1.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 2 on SCC1 shall fulfil the requirements defined in clause 9.1.11.2.
- The absolute accuracy of intra-frequency RSRQ measurements of Cell 3 on SCC2 shall fulfil the requirements defined in clause 9.1.11.2.
- The relative accuracy of inter-frequency RSRQ measurements between the primary component carrier and SCC1 for Cell 2 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.
- The relative accuracy of inter-frequency RSRQ measurements between the primary component carrier and SCC2 for Cell 3 relative to Cell 1 shall fulfil the requirements defined in clause 9.1.11.3.

### A.9.2.42 FD-FDD RSRQ Intra frequency case for UE category 0

#### A.9.2.42.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.13.3 for FD-FDD intra frequency RSRQ measurements for UE category 0.

#### A.9.2.42.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.42.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

Table A.9.2.42.2-1: FD-FDD RSRQ Intra frequency test parameters for UE category 0

| Parameter  | Unit                                      | Test 1     |          | Test 2   |          | Test 3   |          |               |            |        |         |  |  |      |

|  |  |      |      |      |
|--|--|------|------|------|
| Propagation condition                        | -  | AWGN | AWGN | AWGN |
| Correlation Matrix and Antenna Configuration |  | 1x1  | 1x1  | 1x1  |
| Note 1:                                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |      |
| Note 2:                                      | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |      |
| Note 3:                                      | Es/Iot, RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |      |      |      |
| Note 4:                                      | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |      |      |
| Note 5:                                      | E-UTRA operating band groups are as defined in Section 3.5.  |      |      |      |
| Note 6:                                      | Except Band 29 and Band 32.  |      |      |      |

### A.9.2.42.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.13.3.

## A.9.2.43 HD-FDD RSRQ Intra frequency case for UE category 0

### A.9.2.43.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.13.3 for HD-FDD intra frequency RSRQ measurements for UE category 0.

### A.9.2.43.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.43.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.2.43.2-1: HD-FDD RSRQ Intra frequency test parameters for UE category 0**

| Parameter  | Unit                                     | Test 1     |          | Test 2     |          | Test 3     |          |               |            |        |         |  |  |      |

|  |  |      |      |      |
|--|--|------|------|------|
| Propagation condition                        | -  | AWGN | AWGN | AWGN |
| Correlation Matrix and Antenna Configuration |  | 1x1  | 1x1  | 1x1  |
| Note 1:                                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |      |
| Note 2:                                      | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |      |
| Note 3:                                      | Es/Iot, RSRQ, RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |      |      |      |
| Note 4:                                      | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |      |      |
| Note 5:                                      | E-UTRA operating band groups are as defined in Section 3.5.  |      |      |      |
| Note 6:                                      | Except Band 29 and Band 32.  |      |      |      |

### A.9.2.43.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.13.3.

## A.9.2.44 TDD RSRQ Intra frequency case for UE category 0

### A.9.2.44.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.13.3 for TDD intra frequency RSRQ measurements for UE category 0.

### A.9.2.44.2 Test parameters

In this test case all cells are on the same carrier frequency. The absolute accuracy of RSRQ intra frequency measurement is tested by using the parameters in Table A.9.2.44.2-1. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.9.2.44.2-1: TDD RSRQ Intra frequency test parameters for UE category 0**

| Parameter  | Unit       | Test 1   |          | Test 2   |          | Test 3   |          |            |        |         |      |  |      |  |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRQ, RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP and RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: E-UTRA operating band groups are as defined in Section 3.5.</p> |            |          |          |          |          |          |          |            |        |         |      |  |      |  |

### A.9.2.44.3 Test Requirements

The RSRQ measurement accuracy shall fulfil the requirements in Clause 9.1.13.3.

## A.9.3 UTRAN FDD CPICH RSCP

### A.9.3.1 E-UTRAN FDD

#### A.9.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CPICH RSCP absolute measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.2.1. There are two different test setups with different UTRAN parameters.

#### A.9.3.1.2 Parameters

The test parameters are given in Tables A.9.3.1.2-1, A.9.3.1.2-2 and A.9.3.1.2-3 below.

**Table A.9.3.1.2-1: General test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN FDD**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters                                    |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                           |
| PCFICH/PDCCH/PHICH parameters                       |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                           |
| E-UTRAN RF Channel Number                           |      | 1  | One E-UTRAN FDD carrier frequency is used.                 |
| UTRAN RF Channel Number                             |      | 1  | One UTRAN FDD carrier frequency is used.                   |
| E-UTRAN Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |  |
| Active cell   |      | Cell 1                                   | E-UTRAN cell 1 on RF channel number 1                      |
| Neighbor cells                                      |      | Cell 2                                   | UTRAN cell 2 on RF channel number 1                        |
| Gap Pattern Id                                      |      | 0  | As specified in TS 36.133 clause 8.1.2.1.                  |
| Inter-RAT (UTRAN FDD) measurement quantity          |      | CPICH RSCP                               |  |
| Monitored UTRA FDD cell list size                   |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |
| CP length   |      | Normal                                   |  |
| Filter coefficient                                  |      | 0  | L3 filtering is not used                                   |
| DRX   |      | OFF                                      | OFF  |

**Table A.9.3.1.2-2: E-UTRAN FDD cell specific test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN FDD**

| Parameter                                     | Unit | Test 1 | Test 2   |
|---|------|--------|----------|
| E-UTRAN RF Channel Number                     |      |        | 1        |
| $BW_{\text{channel}}$                         | MHz  |        | 10       |

| CPICH RSCP, Note 1   | Band I, IV, VI, X, XI, XIX, XXI          | dBm          | -60.46 | -114.0          |
|  | Band II, V, VII                          |              |        | -112.0          |
|  | Band XXV, XXVI                           |              |        | -110.5 (Note 3) |
|  | Band III, VIII, XII, XIII, XIV, XX, XXII |              |        | -111.0          |
|  | Band IX (Note 2)                         |              |        | -113.0          |
| Io, Note 1   | Band I, IV, VI, X, XI, XIX, XXI          | dBm/3.84 MHz | -50.00 | -94.0           |
|  | Band II, V, VII                          |              |        | -92.0           |
|  | Band XXV, XXVI                           |              |        | -90.5 (Note 3)  |
|  | Band III, VIII, XII, XIII, XIV, XX, XXII |              |        | -91.0           |
|  | Band IX (Note 2)                         |              |        | -93.0           |
| Propagation condition  |  | -            | AWGN   | AWGN            |
| NOTE 1: CPICH RSCP and Io levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.   |  |              |        |                 |
| NOTE 2: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.                                       |  |              |        |                 |
| NOTE 3: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies.       |  |              |        |                 |
| Tests shall be done sequentially. Test 1 shall be done first. After test 1 has been executed test parameters for test 2 shall be set within 5 seconds so that UE does not loose the Cell 2 in between the tests. |  |              |        |                 |

### A.9.3.1.3 Test Requirements

The CPICH RSCP measurement absolute accuracy shall meet the requirements in Clause 9.2.1.

## A.9.3.2 E-UTRAN TDD

### A.9.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CPICH RSCP absolute measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.2.1. There are three different test setups with different UTRAN parameters.

### A.9.3.2.2 Parameters

The test parameters are given in Tables A.9.3.2.2-1, A.9.3.2.2-2 and A.9.3.2.2-3 below.

**Table A.9.3.2.2-1: General test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN TDD**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters                                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                           |
| PCFICH/PDCCH/PHICH parameters                       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                           |
| E-UTRAN RF Channel Number                           |      | 1  | One E-UTRAN TDD carrier frequency is used.                 |
| UTRAN RF Channel Number                             |      | 1  | One UTRAN FDD carrier frequency is used.                   |
| E-UTRAN Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |  |
| Active cell   |      | Cell 1                                   | E-UTRAN cell 1 on RF channel number 1                      |
| Neighbor cells                                      |      | Cell 2                                   | UTRAN cell 2 on RF channel number 1                        |
| Gap Pattern Id                                      |      | 1  | As specified in TS 36.133 clause 8.1.2.1.                  |
| Inter-RAT (UTRAN FDD) measurement quantity          |      | CPICH RSCP                               |  |
| Monitored UTRA FDD cell list size                   |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |
| CP length   |      | Normal                                   |  |
| Filter coefficient                                  |      | 0  | L3 filtering is not used                                   |
| DRX   |      | OFF                                      | OFF  |

**Table A.9.3.2.2-2: E-UTRAN TDD cell specific test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN TDD**

| Parameter                                       | Unit | Test 1 | Test 2   |
|---|------|--------|----------|

| $\hat{E}_s/I_{ot}$         | dB         | 4   |
| SCH_RP <sup>Note 4</sup>   | dBm/15 kHz | -94 |
| $\hat{E}_s/N_{oc}$         | dB         | 4   |

Propagation Condition

AWGN

- Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.
- Note 2: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 4: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table A.9.3.2.2-3: UTRAN FDD cell specific test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN TDD**

| Parameter  |  | Unit         | Test 1 | Test 2          |

| Propagation condition  |  | -            | AWGN   | AWGN            |
| NOTE 1: CPICH RSCP and lo levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.   |  |              |        |                 |
| NOTE 2: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.                                       |  |              |        |                 |
| NOTE 3: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies.       |  |              |        |                 |
| Tests shall be done sequentially. Test 1 shall be done first. After test 1 has been executed test parameters for test 2 shall be set within 5 seconds so that UE does not loose the Cell 2 in between the tests. |  |              |        |                 |

### A.9.3.2.3 Test Requirements

The CPICH RSCP measurement absolute accuracy shall meet the requirements in Clause 9.2.1.

### A.9.3.3 E-UTRAN FDD for 5MHz Bandwidth

#### A.9.3.3.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.3.1.1.

#### A.9.3.3.2 Parameters

The parameters of this test are the same as defined in Subclause A.9.3.1.2 except that the values of the parameters in the Table A.9.3.3.2-1 will replace the values of the corresponding parameters in A.9.3.1.2-1, and the values of E-UTRAN FDD cell specific parameters in the Table A.9.3.3.2-2 shall be adopted, and the values of UTRA FDD cell specific parameters shall be reused as defined in Table A.9.3.1.2-3 of Subclause A.9.3.1.2.

**Table A.9.3.3.2-1: General test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN FDD for 5MHz bandwidth**

| Parameter                                    | Unit | Value                                     | Comment                          |
|--|------|---|----------------------------------|
| PDSCH parameters                             |      | DL Reference Measurement Channel R.5 FDD  | As specified in clause A.3.1.1.1 |
| PCFICH/PDCCH/PHICH parameters                |      | DL Reference Measurement Channel R.11 FDD | As specified in clause A.3.1.2.1 |
| E-UTRAN Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 5   |                                  |

Note 1: See Table A.9.3.1.2-1 for other general test parameters.

**Table A.9.3.3.2-2: E-UTRAN FDD cell specific test parameters for UTRAN FDD CPICH RSCP absolute measurement accuracy test in E-UTRAN FDD for 5MHz bandwidth**

| Parameter  | Unit    | Test 1      | Test 2 |
|--|---------|-------------|--------|
| E-UTRAN RF Channel Number  |         | 1           |        |
| $BW_{channel}$   | MHz     | 5           |        |
| OCNG Patterns defined in A.3.2.1.15 (OP.15 FDD)  |         | OP.15 FDD   |        |
| PBCH_RA  | dB      | 0           |        |
| PBCH_RB  | dB      |             |        |
| PSS_RA   | dB      |             |        |
| SSS_RA   | dB      |             |        |
| PCFICH_RB  | dB      |             |        |
| PHICH_RA   | dB      |             |        |
| PHICH_RB   | dB      |             |        |
| PDCCH_RA   | dB      |             |        |
| PDCCH_RB   | dB      |             |        |
| PDSCH_RA   | dB      |             |        |
| PDSCH_RB   | dB      |             |        |
| OCNG_RA <sup>Note 1</sup>  | dB      |             |        |
| OCNG_RB <sup>Note 1</sup>  | dB      |             |        |
| $N_{oc}$ <sup>Note 2</sup>   | Band 31 |             |        |
| RSRP <sup>Note 3</sup>   | Band 31 | dBm/15 kHz  | -94    |
| $\hat{E}_s/I_{ot}$   |         | dB          | 4      |
| SCH_RP <sup>Note 3</sup>   | Band 31 | dBm/15 kHz  | -94    |
| $\hat{E}_s/N_{oc}$   |         | dB          | 4      |
| $I_o$ <sup>Note 3</sup>  | Band 31 | dBm/4.5 MHz | -67.8  |
| Propagation Condition  |         | AWGN        |        |
| <p>Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP, SCH_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |         |             |        |

### A.9.3.3.3 Test Requirements

The test requirements defined in section A.9.3.1.3 shall apply to this test case.

## A.9.4 UTRAN FDD CPICH $E_c/N_0$

### A.9.4.1 E-UTRAN FDD

#### A.9.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CPICH  $E_c/N_0$  absolute measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.2.3. There are three different test setups with different UTRAN parameters.

#### A.9.4.1.2 Parameters

The test parameters are given in Tables A.9.4.1.2-1, A.9.4.1.2-2 and A.9.4.1.2-3 below.

**Table A.9.4.1.2-1: General test parameters for UTRAN FDD CPICH  $E_c/N_0$  absolute measurement accuracy test in E-UTRAN FDD**

| Parameter                                    | Unit | Value                                    | Comment  |
|--|------|--|--|
| PDSCH parameters                             |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                           |
| PCFICH/PDCCH/PHICH parameters                |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                           |
| E-UTRAN RF Channel Number                    |      | 1  | One E-UTRAN FDD carrier frequency is used.                 |
| UTRAN RF Channel Number                      |      | 1  | One UTRAN FDD carrier frequency is used.                   |
| E-UTRAN Channel Bandwidth ( $BW_{channel}$ ) | MHz  | 10                                       |  |
| Active cell                                  |      | Cell 1                                   | E-UTRAN cell 1 on RF channel number 1                      |
| Neighbor cells                               |      | Cell 2                                   | UTRAN cell 2 on RF channel number 1                        |
| Gap Pattern Id                               |      | 0  | As specified in TS 36.133 clause 8.1.2.1.                  |
| Inter-RAT (UTRAN FDD) measurement quantity   |      | CPICH $E_c/N_0$                          |  |
| Monitored UTRA FDD cell list size            |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |
| CP length                                    |      | Normal                                   |  |
| Filter coefficient                           |      | 0  | L3 filtering is not used                                   |
| DRX  |      | OFF                                      | OFF  |

**Table A.9.4.1.2-2: E-UTRAN FDD cell specific test parameters for UTRAN FDD CPICH Ec/No absolute measurement accuracy test in E-UTRAN FDD**

| Parameter  | Unit       | Test 1 | Test 2   | Test 3 |
|--|------------|--------|----------|--------|

| Propagation condition   |  | -                   | AWGN   | AWGN   | AWGN            |
| NOTE 1: CPICH Ec/lo and lo levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.   |  |                     |        |        |                 |
| NOTE 2: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.  |  |                     |        |        |                 |
| NOTE 3: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies.              |  |                     |        |        |                 |
| Tests shall be done sequentially. Test 1 shall be done first. After test 1 has been executed test parameters for tests 2 and 3 shall be set within 5 seconds so that UE does not loose the Cell 2 in between the tests. |  |                     |        |        |                 |

**A.9.4.1.3 Test Requirements**

The CPICH Ec/No measurement absolute accuracy shall meet the requirements in Clause 9.2.3.

The effect of assumed thermal noise and noise generated in the receiver (-99 dBm for frequency bands I, IV, VI, X, XI, XIX and XXI; -98 dBm for frequency band IX, -97dBm for frequency bands II, V and VII; -95.5dBm for frequency band XXV and XXVI; and -96dBm for frequency band III) shall be added into the required accuracy. The test requirements for the absolute CPICH\_Ec/lo measurement are shown in Table A.9.4.1.3-1.

**Table A.9.4.1.3-1: CPICH\_Ec/lo absolute accuracy**

| Parameter | Unit | Accuracy [dB]    |                   | Conditions        |
|-----------|------|------------------|-------------------|-------------------|
|           |      | Normal condition | Extreme condition | lo [dBm/3,84 MHz] |
|           |      |                  |                   |                   |

|  |    |  |          |   |
|--|----|--|----------|---|
| CPICH_Ec/lo  | dB | -2.7...1.5 for $-14 \leq \text{CPICH Ec/lo}$<br>-3.2...2 for $-16 \leq \text{CPICH Ec/lo} < -14$<br>-4.2...3 for $-20 \leq \text{CPICH Ec/lo} < -16$ | -4.2...3 | -94...-87(Band I, IV, VI, X, XI, XIX, XXI)<br>-92...-85 (Band II, V, VII)<br>-90.5...-83.5 (Band XXV, XXVI (Note 2))<br>-91...-84 (Band III, VIII, XII, XIII, XIV, XX, XXII)<br>93...-86 (Band IX (Note 1)) |
|  |    | $\pm 1.5$ for $-14 \leq \text{CPICH Ec/lo}$<br>$\pm 2$ for $-16 \leq \text{CPICH Ec/lo} < -14$<br>$\pm 3$ for $-20 \leq \text{CPICH Ec/lo} < -16$    | $\pm 3$  | -87...-50(Band I, IV, VI, X, XI, XIX, XXI)<br>-85...-50 (Band II, V, VII)<br>-83.5...-50 (Band XXV, XXVI (Note 2))<br>-84...-50 (Band III, VIII, XII, XIII, XIV, XX, XXII)<br>-86...-50 (Band IX (Note 1))  |
| NOTE1: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.                                  |    |  |          |   |
| NOTE 2: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies. |    |  |          |   |

## A.9.4.2 E-UTRAN TDD

### A.9.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CPICH Ec/No absolute measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.2.3. There are three different test setups with different UTRAN parameters.

### A.9.4.2.2 Parameters

The test parameters are given in Tables A.9.4.2.2-1, A.9.4.2.2-2 and A.9.4.2.2-3 below.

**Table A.9.4.2.2-1: General test parameters for UTRAN FDD CPICH Ec/No absolute measurement accuracy test in E-UTRAN TDD**

| Parameter   | Unit | Value                                    | Comment  |
|---|------|--|--|
| PDSCH parameters                                    |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2                           |
| PCFICH/PDCCH/PHICH parameters                       |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2                           |
| E-UTRAN RF Channel Number                           |      | 1  | One E-UTRAN TDD carrier frequency is used.                 |
| UTRAN RF Channel Number                             |      | 1  | One UTRAN FDD carrier frequency is used.                   |
| E-UTRAN Channel Bandwidth ( $BW_{\text{channel}}$ ) | MHz  | 10                                       |  |
| Active cell   |      | Cell 1                                   | E-UTRAN cell 1 on RF channel number 1                      |
| Neighbor cells                                      |      | Cell 2                                   | UTRAN cell 2 on RF channel number 1                        |
| Gap Pattern Id                                      |      | 0  | As specified in TS 36.133 clause 8.1.2.1.                  |
| Inter-RAT (UTRAN FDD) measurement quantity          |      | CPICH Ec/No                              |  |
| Monitored UTRA FDD cell list size                   |      | 12                                       | UTRA cells on UTRA RF channel 1 provided in the cell list. |
| CP length   |      | Normal                                   |  |
| Filter coefficient                                  |      | 0  | L3 filtering is not used                                   |
| DRX   |      | OFF                                      | OFF  |

**Table A.9.4.2.2-2: E-UTRAN TDD cell specific test parameters for UTRAN FDD CPICH Ec/No absolute measurement accuracy test in E-UTRAN TDD**

| Parameter  | Unit       | Test 1   | Test 2 | Test 3 |
|--|------------|----------|--------|--------|
| E-UTRAN RF Channel Number  |            |          | 1      |        |

| OCNS_Ec/lor   |  | dB                  | -0.94  | -0.94  | -0.94           |
| loc   | Band I, IV, VI, X, XI, XIX, XXI          | dBm/<br>3.84<br>MHz | -52.22 | -87.27 | -94.46          |
|   | Band II, V, VII                          |                     |        |        | -92.46          |
|   | Band XXV, XXVI                           |                     |        |        | -90.96 (Note 3) |
|   | Band III, VIII, XII, XIII, XIV, XX, XXII |                     |        |        | -91.46          |
|   | Band IX (Note 2)                         |                     |        |        | -93.46          |
| lor/loc   |  | dB                  | -1.75  | -4.7   | -9.54           |
| CPICH Ec/lo, Note 1   |  | dBm                 | -14.0  | -16.0  | -20.0           |
| lo,<br>Note 1   | Band I, IV, VI, X, XI, XIX, XXI          | dBm/<br>3.84<br>MHz | -50    | -86    | -94             |
|   | Band II, V, VII                          |                     |        |        | -92.0           |
|   | Band XXV, XXVI                           |                     |        |        | -90.5 (Note 3)  |
|   | Band III, VIII, XII, XIII, XIV, XX, XXII |                     |        |        | -91.0           |
|   | Band IX (Note 2)                         |                     |        |        | -93             |
| Propagation condition   |  | -                   | AWGN   | AWGN   | AWGN            |
| NOTE 1: CPICH Ec/lo and lo levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.   |  |                     |        |        |                 |
| NOTE 2: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.  |  |                     |        |        |                 |
| NOTE 3: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies.              |  |                     |        |        |                 |
| Tests shall be done sequentially. Test 1 shall be done first. After test 1 has been executed test parameters for tests 2 and 3 shall be set within 5 seconds so that UE does not loose the Cell 2 in between the tests. |  |                     |        |        |                 |

### A.9.4.2.3 Test Requirements

The CPICH Ec/No measurement absolute accuracy shall meet the requirements in Clause 9.2.3.

The effect of assumed thermal noise and noise generated in the receiver (-99 dBm for frequency bands I, IV, VI, X, XI, XIX and XXI; -98 dBm for frequency band IX, -97dBm for frequency bands II, V and VII; -95.5dBm for frequency band XXV and XXVI; and -96dBm for frequency band III) shall be added into the required accuracy. The test requirements for the absolute CPICH\_Ec/lo measurement are shown in Table A.9.4.2.3-1.

**Table A.9.4.2.3-1: CPICH\_Ec/lo absolute accuracy**

| Parameter | Unit | Accuracy [dB]    |                   | Conditions        |
|-----------|------|------------------|-------------------|-------------------|
|           |      | Normal condition | Extreme condition | lo [dBm/3,84 MHz] |
|           |      |                  |                   |                   |

|  |    |  |          |   |
|--|----|--|----------|---|
| CPICH_Ec/Io  | dB | -2.7...1.5 for $-14 \leq \text{CPICH Ec/Io}$<br>-3.2...2 for $-16 \leq \text{CPICH Ec/Io} < -14$<br>-4.2...3 for $-20 \leq \text{CPICH Ec/Io} < -16$ | -4.2...3 | -94...-87(Band I, IV, VI, X, XI, XIX, XXI)<br>-92...-85 (Band II, V, VII)<br>-90.5...-83.5 (Band XXV, XXVI (Note 2))<br>-91...-84 (Band III, VIII, XII, XIII, XIV, XX, XXII)<br>93...-86 (Band IX (Note 1)) |
|  |    | $\pm 1.5$ for $-14 \leq \text{CPICH Ec/Io}$<br>$\pm 2$ for $-16 \leq \text{CPICH Ec/Io} < -14$<br>$\pm 3$ for $-20 \leq \text{CPICH Ec/Io} < -16$    | $\pm 3$  | -87...-50(Band I, IV, VI, X, XI, XIX, XXI)<br>-85...-50 (Band II, V, VII)<br>-83.5...-50 (Band XXV, XXVI (Note 2))<br>-84...-50 (Band III, VIII, XII, XIII, XIV, XX, XXII)<br>-86...-50 (Band IX (Note 1))  |
| NOTE1: For the UE which supports both Band III and Band IX operating frequencies, the measurement performance requirements for Band III shall apply to the multi-band UE.                                  |    |  |          |   |
| NOTE 2: The test parameter is modified by -1.5 dB when the carrier frequency of the assigned UTRA channel is within 869-894 MHz for the UE which supports both Band V and Band XXVI operating frequencies. |    |  |          |   |

### A.9.4.3 E-UTRAN FDD for 5MHz Bandwidth

#### A.9.4.3.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.4.1.1.

#### A.9.4.3.2 Parameters

The parameters of this test are the same as defined in Subclause A.9.4.1.2 except that the values of the parameters in the Table A.9.4.3.2-1 will replace the values of the corresponding parameters in A.9.4.1.2-1, and the values of E-UTRAN FDD cell specific parameters in the Table A.9.4.3.2-2 shall be adopted, and the values of UTRA FDD cell specific parameters shall be reused as defined in Table A.9.4.1.2-3 of Subclause A.9.4.1.2.

**Table A.9.4.3.2-1: General test parameters for UTRAN FDD CPICH Ec/No absolute measurement accuracy test in E-UTRAN FDD for 5MHz bandwidth**

| Parameter  | Unit | Value                                     | Comment                          |
|--|------|---|----------------------------------|
| PDSCH parameters   |      | DL Reference Measurement Channel R.5 FDD  | As specified in clause A.3.1.1.1 |
| PCFICH/PDCCH/PHICH parameters                                    |      | DL Reference Measurement Channel R.11 FDD | As specified in clause A.3.1.2.1 |
| E-UTRAN Channel Bandwidth ( $BW_{\text{channel}}$ )              | MHz  | 5   |                                  |
| Note 1: See Table A.9.4.1.2-1 for other general test parameters. |      |   |                                  |

**Table A.9.4.3.2-2: E-UTRAN FDD cell specific test parameters for UTRAN FDD CPICH Ec/No absolute measurement accuracy test in E-UTRAN FDD for 5MHz bandwidth**

They are not settable parameters themselves.</p> |         |             |        |           |        |

### A.9.4.3.3 Test Requirements

The test requirements defined in section A.9.4.1.3 shall apply to this test case.

## A.9.5 UTRAN TDD measurement

### A.9.5.1 P-CCPCH RSCP absolute accuracy for E-UTRAN FDD

#### A.9.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UTRAN TDD P-CCPCH RSCP measurement absolute accuracy is within the specified limits. This test will verify the requirements in clause 9.3.1 and applies to UE supporting this capability.

Gap pattern configuration with id #1 as specified in Table 8.1.2.1-1 is provided. In the measurement control information it is indicated to the UE that periodic reporting of the UTRA TDD P-CCPCH RSCP measurement is used.

### A.9.5.1.2 Test parameters

In this set of test cases there are two cells. Cell 1 is a E-UTRA FDD cell and cell 2 is a UTRA TDD cell. The absolute accuracy of P-CCPCH RSCP measurements are tested by using test parameters in Table A.9.5.1-1, Table A.9.5.1-2, and Table A.9.5.1-3. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.9.5.1-1: General test parameters for UTRA TDD P-CCPCH RSCP measurement absolute accuracy in E-UTRAN FDD**

| Parameter                                  | Unit | Value                                    | Comment   |
|--|------|--|---|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1                |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1                |
| E-UTRAN RF Channel Number                  |      | 1  | One E-UTRAN FDD carrier frequency is used.      |
| UTRAN RF Channel Number                    |      | 2  | One UTRAN TDD carrier frequency is used.        |
| E-UTRAN Channel Bandwidth (BWchannel)      | MHz  | 10                                       |   |
| Active cell                                |      | Cell 1                                   | E-UTRAN FDD cell 1 on RF channel number 1       |
| Neighbor cells                             |      | Cell 2                                   | 1.28Mcps UTRA TDD cell 2 on RF channel number 2 |
| Gap Pattern Id                             |      | 1  | As specified in TS 36.133 clause 8.1.2.1.       |
| CP length of cell 1                        |      | Normal                                   |   |
| Filter coefficient                         |      | 0  | L3 filtering is not used                        |
| DRX  |      | OFF                                      | OFF   |
| Inter-RAT (UTRAN TDD) measurement quantity |      | P-CCPCH RSRP                             |   |

**Table A.9.5.1-2: UTRA TDD P-CCPCH RSCP measurement tests parameters (cell 1)**

| Parameter  | Unit       | Test 1   | Test 2 | Test 3 |
|--|------------|----------|--------|--------|

| <p>Note 1: PCCPCH RSCP and <math>I_o</math> levels have been calculated from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: In the case of multi-frequency network of 1.28 Mcps TDD, the UTRA RF Channel Number can be set for the primary frequency in this test.</p> |             |           |   |           |   |           |       |

**A.9.5.1.3 Test Requirements**

The UTRA TDD P-CCPCH RSCP measurement accuracy shall meet the requirements in clause 9.3.1.

## A.9.5.2 P-CCPCH RSCP absolute accuracy for E-UTRAN TDD

### A.9.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UTRAN TDD P-CCPCH RSCP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.3.1 and applies to UE supporting this capability.

Gap pattern configuration with id #1 as specified in Table 8.1.2.1-1 is provided. In the measurement control information it is indicated to the UE that periodic reporting of the UTRA TDD P-CCPCH RSRP measurement is used.

### A.9.5.2.2 Test parameters

In this set of test cases there are two cells. Cell 1 is a E-UTRA TDD cell and cell 2 is a UTRA TDD cell. The absolute accuracy of P-CCPCH RSCP measurements are tested by using test parameters in Table A.9.5.2-1, Table A.9.5.2-2, and Table A.9.5.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.9.5.2-1: General test parameters for UTRA TDD P-CCPCH RSCP measurement**

| Parameter                                  | Unit | Value                                    | Comment  |
|--|------|--|--|
| PDSCH parameters                           |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2               |
| PCFICH/PDCCH/PHICH parameters              |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2               |
| E-UTRAN RF Channel Number                  |      | 1  | One E-UTRAN TDD carrier frequency is used.     |
| UTRAN RF Channel Number                    |      | 2  | One UTRAN TDD carrier frequency is used.       |
| E-UTRAN Channel Bandwidth (BWchannel)      | MHz  | 10                                       |  |
| Active cell                                |      | Cell 1                                   | E-UTRA TDD cell1 on RF channel number 1        |
| Neighbour cell                             |      | Cell 2                                   | 1.28Mcps UTRA TDD Cell2 on RF channel number 2 |
| Gap Pattern Id                             |      | 1  | As specified in TS 36.133 clause 8.1.2.1.      |
| Uplink-downlink configuration of cell 1    |      | 1  | As specified in table 4.2.2 in TS 36.211       |
| Special subframe configuration of cell 1   |      | 6  | As specified in table 4.2.1 in TS 36.211       |
| CP length of cell 1                        |      | Normal                                   |  |
| Filter coefficient                         |      | 0  | L3 filtering is not used                       |
| DRX  |      | OFF                                      |  |
| Time offset between cells                  | ms   | 3  | Asynchronous cells                             |
| Inter-RAT (UTRAN TDD) measurement quantity |      | P-CCPCH RSCP                             |  |

### A.9.5.2.3 Test Requirements

The UTRA TDD P-CCPCH RSCP measurement accuracy shall meet the requirements in clause 9.3.1.

## A.9.6 GSM Carrier RSSI

### A.9.6.1 E-UTRAN FDD

#### A.9.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the GSM Carrier RSSI measurement accuracy is within the specified limits when the active cell is E-UTRAN FDD. This test will verify the requirements in clause 9.4.1. There are 12 different test setups with different signal levels for the GSM cells.

Measurement gaps are configured to measure on the GSM cells. Table A.9.6.1.1-2 defines the cell specific test parameters for the E-UTRAN FDD cell. In the measurement control information it is indicated to the UE that periodic reporting of the GSM RSSI measurement is used. The limits of the GSM test parameters in terms of GSM BCCH received level at the receiver inputs are defined in Table A.9.6.1.1-3.

**Table A.9.6.1.1-1: General GSM Carrier RSSI test parameters**

| Parameter                                   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN FDD)              |      | DL Reference Measurement Channel R.0 FDD | As specified in clause A.3.1.1.1.               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN FDD) |      | DL Reference Measurement Channel R.6 FDD | As specified in clause A.3.1.2.1.               |
| Active cell                                 | -    | Cell 1                                   |   |
| DRX   | -    | OFF                                      |   |
| Gap pattern Id                              |      | 1  | As specified in TS 36.133 clause 8.1.2.1.       |
| Filtering coefficient                       | -    | 0  | L3 filtering is not used.                       |
| Inter-RAT measurement quantity              |      | GSM Carrier RSSI                         |   |
| Monitored cell list size                    |      | 6 GSM neighbours including ARFCN 1       | Included in the Measurement control information |

**Table A.9.6.1.1-2: E-UTRAN FDD Cell specific test parameters for GSM Carrier RSSI accuracy test in E-UTRAN FDD**

| Parameter                                     | Unit | Tests 1-12 |
|---|------|------------|
| E-UTRAN RF Channel Number                     |      | 1          |
| BW <sub>channel</sub>                         | MHz  | 10         |
| OCNG Patterns defined in A.3.2.1.1 (OP.1 FDD) |      | OP.1 FDD   |

|                            |            |      |
|----------------------------|------------|------|
| PBCH_RA                    | dB         |      |
| PBCH_RB                    | dB         |      |
| PSS_RA                     | dB         |      |
| SSS_RA                     | dB         |      |
| PCFICH_RB                  | dB         |      |
| PHICH_RA                   | dB         |      |
| PHICH_RB                   | dB         | 0    |
| PDCCH_RA                   | dB         |      |
| PDCCH_RB                   | dB         |      |
| PDSCH_RA                   | dB         |      |
| PDSCH_RB                   | dB         |      |
| OCNG_RA <sup>Note 1</sup>  | dB         |      |
| OCNG_RB <sup>Note 1</sup>  | dB         |      |
| $N_{oc}$ <sup>Note 2</sup> | dBm/15 kHz | -98  |
| RSRP <sup>Note 3</sup>     | dBm/15 kHz | -94  |
| $\hat{E}_s / I_{ot}$       | dB         | 4    |
| SCH_RP <sup>Note 3</sup>   | dBm/15 kHz | -94  |
| $\hat{E}_s / N_{oc}$       | dB         | 4    |
| Propagation Condition      |            | AWGN |

Note 1: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: RSRP and SCH\_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table A.9.6.1.1-3: BCCH signal levels at receiver input in dBm**

| Step | BCCH1  | BCCH2  | BCCH3 | BCCH4 | BCCH5 | BCCH6 |

| 8    | -78.5  | NA     | NA    | -69.5 | NA    | NA    |
| 9    | -85.5  | NA     | NA    | NA    | -74.5 | NA    |
| 10   | -92.5  | NA     | NA    | NA    | -79.5 | NA    |
| 11   | -99.5  | NA     | NA    | NA    | NA    | -84.5 |
| 12   | -106.5 | NA     | NA    | NA    | NA    | -89.5 |

### A.9.6.1.2 Test Requirements

The GSM Carrier RSSI measurement accuracy shall meet the requirements in clause 9.4.1.

## A.9.6.2 E-UTRAN TDD

### A.9.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the GSM Carrier RSSI measurement accuracy is within the specified limits when the active cell is E-UTRAN TDD. This test will verify the requirements in clause 9.4.1. There are 12 different test setups with different signal levels for the GSM cells.

Measurement gaps are configured to measure on the GSM cells. Table A.9.6.2.1-2 defines the cell specific test parameters for the E-UTRAN TDD cell. In the measurement control information it is indicated to the UE that periodic reporting of the GSM RSSI measurement is used. The limits of the GSM test parameters in terms of GSM BCCH received level at the receiver inputs are defined in Table A.9.6.2.1-3.

**Table A.9.6.2.1-1: General GSM Carrier RSSI test parameters**

| Parameter                                   | Unit | Value                                    | Comment   |
|---|------|--|---|
| PDSCH parameters (E-UTRAN TDD)              |      | DL Reference Measurement Channel R.0 TDD | As specified in clause A.3.1.1.2.               |
| PCFICH/PDCCH/PHICH parameters (E-UTRAN TDD) |      | DL Reference Measurement Channel R.6 TDD | As specified in clause A.3.1.2.2.               |
| Active cell                                 | -    | Cell 1                                   |   |

### A.9.6.2.2 Test Requirements

The GSM Carrier RSSI measurement accuracy shall meet the requirements in clause 9.4.1.

## A.9.7 UE Rx – Tx Time Difference

### A.9.7.1 E-UTRAN FDD UE Rx – Tx time difference case

#### A.9.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN FDD UE Rx – Tx time difference measurement accuracy is within the specified limits in Clause 9.1.9.

There is only one active cell in the test. The tested UE is connected with the PCell, configured to transmit SRS signals periodically, and signaled to report UE Rx – Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE.

#### A.9.7.1.2 Test parameters

The parameters for this test case are defined in Table A.9.7.1.2-1, and the SRS configuration used is defined in Table A.9.7.1.2-2.

Table A.9.7.1.2-1: FDD UE Rx – Tx time difference test parameters

| Parameter   | Unit         | Test 1   | Test 2   |
|---|--------------|----------|----------|
| E-UTRAN RF Channel Number   |              | 1        | 1        |
| $BW_{\text{channel}}$   | MHz          | 1.4      | 10       |

| SRS-AntennaPort                    | an1  |        | Number of antenna ports used for SRS transmission |
| Note:                              | For further information see clause 6.3.2 in TS 36.331. |        |   |

### A.9.7.1.3 Test Requirements

The UE Rx – Tx time difference measurement accuracy shall fulfill the requirements in Clause 9.1.9.1.

## A.9.7.2 E-UTRA TDD

### A.9.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN TDD UE Rx-Tx time difference measurement accuracy is within the specified limits in clause 9.1.9.

There is only one cell in the test. The tested UE is connected with the PCell, configured to transmit SRS signals periodically, and signaled to report UE Rx – Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx – Tx measurement reported by the UE.

### A.9.7.2.2 Test parameters

The parameters for this test case are defined in Table A.9.7.2.2-1, and the SRS configuration used is defined in Table A.9.7.2.2-2.

Table A.9.7.2.2-1: Cell specific test parameters for UE Rx-Tx time difference measurement

| Parameter  | Unit         | Tests 1  | Tests 2  |
|--|--------------|----------|----------|

### A.9.7.2.3 Test Requirements

The UE Rx – Tx time difference measurement accuracy shall fulfill the requirements in clause 9.1.9.1.

## A.9.7.3 E-UTRAN FDD UE Rx–Tx Time Difference under Time-Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.9.7.3.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN FDD UE Rx–Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in Section 9.1.9.3 when time-domain measurement resource restriction is configured for PCell measurements via higher-layer signalling [2] and non-MBSFN ABS are configured in the interfering cell.

### A.9.7.3.2 Test parameters

In this test case, there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. Cell 1 is the PCell on which UE Rx-Tx is measured, and Cell 2 is the interfering cell. Non-MBSFN ABS pattern is configured in Cell 2 during the entire test.

The tested UE is connected to the PCell and configured to transmit SRS signals periodically. The SRS configuration is provided to the UE before the measurement starts. The UE is configured to report UE Rx–Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on PCell. The information for both patterns shall be provided to the UE before the measurement starts.

The general and cell-specific parameters for this test case are defined in Table A.9.7.3.2-1 and Table A.9.7.3.2-2, respectively, and the SRS configuration used is specified in Table A.9.7.3.2-3.

**Table A.9.7.3.2-1: General test parameters for FDD UE Rx–Tx time difference measurement under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit          | Value  | Comment  |
|--|---------------|--|--|

### A.9.7.3.3 Test Requirements

The UE Rx–Tx time difference measurement accuracy shall fulfill the requirements in Section 9.1.9.3.

## A.9.7.4 E-UTRAN TDD UE Rx-Tx Time Difference under Time-Domain Measurement Resource Restriction with Non-MBSFN ABS

### A.9.7.4.1 Test Purpose and Environment

The purpose of this test is to verify that the TDD UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in Section 9.1.9.3 when time-domain measurement resource restriction is configured for PCell measurements via higher-layer signalling [2] and non-MBSFN ABS are configured in the interfering cell.

### A.9.7.4.2 Test Parameters

In the test, there are two synchronous cells, Cell 1 and Cell 2, on the same RF channel. Cell 1 is the PCell on which UE Rx-Tx is measured, and Cell 2 is the interfering cell. Non-MBSFN ABS pattern is configured in Cell 2 during the entire test.

The tested UE is connected to the PCell and configured to transmit SRS signals periodically. The SRS configuration is provided to the UE before the measurement starts. The UE is configured to report UE Rx–Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD UE Rx-Tx time difference measurements on PCell. The information for both patterns shall be provided to the UE before the measurement starts.

The general and cell-specific parameters for this test case are defined in Table A.9.7.4.2-1 and Table A.9.7.4.2-2, respectively, and the SRS configuration used is defined in Table A.9.7.4.2-3.

**Table A.9.7.4.2-1: General test parameters for E-UTRAN TDD UE Rx-Tx time difference measurement under time-domain measurement resource restriction with non-MBSFN ABS**

| Parameter  | Unit    | Value  | Comment  |

### A.9.7.4.3 Test Requirements

The UE Rx–Tx time difference measurement accuracy shall fulfill the requirements in Section 9.1.9.3.

## A.9.7.5 E-UTRAN FDD UE Rx–Tx time difference under Time Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.7.5.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN FDD UE Rx–Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in Section 9.1.9.4 when the UE is provided with a time-domain measurement resource restriction pattern and CRS assistance information, and when non-MBSFN ABS configured in the interfering cells.

### A.9.7.5.2 Test parameters

In this test case, there are three synchronous cells, Cell 1, Cell 2 and Cell 3, on the same RF channel. Cell 1 is the PCell on which UE Rx-Tx is measured. Cell 2 and Cell 3 are the interfering cells. A non-MBSFN ABS pattern is configured in each of the Cell 2 and Cell 3 during the entire test.

The tested UE is connected to the PCell and configured to transmit SRS signals periodically. The SRS configuration is provided to the UE before the measurement starts. The UE is configured to report UE Rx–Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN FDD intra-frequency measurements on PCell. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement patterns and the CRS assistance information shall be provided via RRC to the UE before the measurement starts.

The general and cell-specific parameters for this test case are defined in Table A.9.7.5.2-1 and Table A.9.7.5.2-2, respectively, and the SRS configuration used is specified in Table A.9.7.5.2-3.

**Table A.9.7.5.2-1: General test parameters for FDD UE Rx–Tx time difference measurement under time-domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter   | Unit                     | Value   | Comment  |
|---|--------------------------|---|--|
| Serving cell (PCell)  |                          | Cell 1  | The measured cell  |
| Neighbour cell  |                          | Cell 2 and Cell 3   | Cell 2 is the first interfering cell to Cell 1, whilst Cell 3 is the second interfering cell to Cell 1.  |
| ABS transmission configuration  |                          | Non-MBSFN ABS   | As defined in Table A.3.4.1.1-1  |
| E-UTRA RF Channel Number  |                          | 1   | One FDD carrier frequency is used  |
| Downlink Channel Bandwidth (BW <sub>channel</sub> )                         | MHz                      | 10  | For all cells in the test  |
| CP length   |                          | Normal  | For all cells in the test  |
| DRX   |                          |   | OFF  |
| Time offset between cells   | μs                       | Cell 2 offset with respect to Cell 1: 3<br>Cell 3 offset with respect to Cell 1: 2        | Three synchronous cells  |
| Physical cell ID PCI  |                          | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 = 0$<br>$(PCI_{cell1} - PCI_{cell3}) \bmod 6 \neq 0$ | Cell PCIs are selected so that both conditions are met   |
| ABS pattern   |                          | '10000000100000001000<br>00001000000010000000'  | Non-MBSFN ABS. FDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. The first/leftmost bit corresponds to the Pcell subframe #0 of a radio frame satisfying $SFN \bmod x = 0$ , where x is the size of the bit string (40) divided by 10. No MBSFN subframes are configured in the ABS subframes. Configured in Cell 2 and Cell 3 during the testing. |
| Time-domain measurement resource restriction pattern for PCell measurements |                          | '10000000100000001000<br>00001000000010000000'  | Configured for measurements on Cell 1.   |
| CRS assistance information  | physCellId               | see PCI conditions above  | The CRS assistance information is provided for Cell 2 and Cell 3 in CRS-AssistanceInfo. It includes a single MBSFN-SubframeConfig element with subframe allocation one Frame='000000'.   |
|   | antennaPortsCount        | 1   |  |
|   | mbsfn-SubframeConfigList | <i>oneFrame</i> = '000000'  |  |

### A.9.7.5.3 Test Requirements

The UE Rx–Tx time difference measurement accuracy shall fulfill the requirements in Section 9.1.9.4.

## A.9.7.6 E-UTRAN TDD UE Rx-Tx Time Difference under Time-Domain Measurement Resource Restriction with CRS Assistance Information and Non-MBSFN ABS

### A.9.7.6.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN TDD UE Rx–Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in Section 9.1.9.4 when the UE is provided with a time-domain measurement resource restriction pattern and CRS assistance information, and when non-MBSFN ABS configured in the interfering cells.

### A.9.7.6.2 Test Parameters

In this test case, there are three synchronous cells, Cell 1, Cell 2 and Cell 3, on the same RF channel. Cell 1 is the PCell on which UE Rx-Tx is measured. Cell 2 and Cell 3 are the interfering cells. A non-MBSFN ABS pattern is configured in each of the Cell 2 and Cell 3 during the entire test.

The tested UE is connected to the PCell and configured to transmit SRS signals periodically. The SRS configuration is provided to the UE before the measurement starts. The UE is configured to report UE Rx–Tx time difference measurement. The test equipment measures the transmit timing of the UE using the transmitted SRS, and measures the receive timing using the downlink CRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE. The UE is configured by higher layers via Cell 1 with a time-domain measurement resource restriction pattern for performing E-UTRAN TDD intra-frequency measurements on PCell. The UE is also provided via higher layers with the CRS assistance information for Cell 2. The information for both measurement patterns and the CRS assistance information shall be provided via RRC to the UE before the measurement starts.

The general and cell-specific parameters for this test case are defined in Table A.9.7.6.2-1 and Table A.9.7.6.2-2, respectively, and the SRS configuration used is specified in Table A.9.7.6.2-3.

**Table A.9.7.6.2-1: General test parameters for E-UTRAN TDD UE Rx-Tx time difference measurement under time-domain measurement resource restriction with CRS assistance information and non-MBSFN ABS**

| Parameter  | Unit                     | Value   | Comment   |
|--|--------------------------|---|---|
| Serving cell (PCell)   |                          | Cell 1  | Cell to be measured   |
| Neighbour cell   |                          | Cell 2 and Cell 3   | Cell 2 is the first interfering cell to Cell 1, whilst Cell 3 is the second interfering cell to Cell 1.   |
| ABS transmission configuration   |                          | Non-MBSFN ABS   | As defined in Table A.3.4.1.1-1   |
| E-UTRA RF Channel Number   |                          | 1   | One TDD carrier frequency is used   |
| Downlink Channel Bandwidth (BW <sub>channel</sub> )                                | MHz                      | 10  | For all cells in the test   |
| CP length  |                          | Normal  | For all cells in the test   |
| Special subframe configuration   |                          | 6   | For all cells in the test. For special subframe configurations see Table 4.2-1 in [16].   |
| Uplink/downlink subframe configuration   |                          | 1   | For all cells in the test. For uplink-downlink subframe configurations see Table 4.2-2 in [16].   |
| DRX  |                          |   | OFF   |
| Time offset between cells  | μs                       | Cell 2 offset with respect to Cell 1: 3<br>Cell 3 offset with respect to Cell 1: 2        | Three synchronous cells   |
| Physical cell ID PCI   |                          | $(PCI_{cell1} - PCI_{cell2}) \bmod 6 = 0$<br>$(PCI_{cell1} - PCI_{cell3}) \bmod 6 \neq 0$ | Cell PCIs are selected so that both conditions are met  |
| ABS pattern  |                          | '00000000010000000001'  | Non-MBSFN ABS. TDD ABS Pattern Info IE, as defined in TS 36.423 [28], clause 9.2.54. The first/leftmost bit corresponds to the Pcell subframe #0 of a radio frame satisfying SFN mod x = 0, where x is the size of the bit string (20) divided by 10. No MBSFN subframes are configured in the ABS subframes. Configured in Cell 2 and Cell 3 during the testing. |
| Time-domain measurement resource restriction pattern for serving cell measurements |                          | '00000000010000000001'  | Configured for measurements on Cell 1.  |

### A.9.7.6.3 Test Requirements

The UE Rx–Tx time difference measurement accuracy shall fulfill the requirements in Section 9.1.9.4.

## A.9.8 RSTD

### A.9.8.1 E-UTRAN FDD RSTD intra frequency case

#### A.9.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSTD intra-frequency measurement accuracy is within the specified limits in clause 9.1.10.1 in AWGN channels.

In the test, there are two synchronous cells, Cell 1 as the reference cell and Cell 2 as the neighbour cell on the same frequency.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

A time span of  $T_{\text{RSTD IntraFreqFDD,E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Tables A.9.8.1.1-1 and A.9.8.1.1-2 during this time.

The test parameters are given in Table A.9.8.1.1-1 and Table A.9.8.1.1-2.

### A.9.8.1.2 Test Requirements

The RSTD measurement accuracy shall fulfill the requirements in clause 9.1.10.1.

## A.9.8.2 E-UTRAN TDD RSTD intra frequency case

### A.9.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSTD intra-frequency measurement accuracy is within the specified limits in clause 9.1.10.1 in AWGN channels.

In the test, there are two synchronous cells, Cell 1 as the reference cell and Cell 2 as the neighbour cell on the same frequency.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data.

A time span of  $T_{\text{RSTD IntraFreqTDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Tables A.9.8.2.1-1 and A.9.8.2.1-2 during this time.

The test parameters are given in Table A.9.8.2.1-1 and Table A.9.8.2.1-2.

### A.9.8.2.2 Test Requirements

The RSTD measurement accuracy shall fulfill the requirements in clause 9.1.10.1.

### A.9.8.3 E-UTRAN FDD-FDD RSTD inter frequency case

#### A.9.8.3.1 Test Purpose and Environment

The purpose of these tests is to verify that the RSTD inter-frequency measurement accuracy is within the specified limits in clause 9.1.10.2 in AWGN channels.

There are two synchronous cells on different carrier frequencies in the test. In all test cases, Cell 1 is the reference cell as well as the PCell and Cell 2 the neighbor cell. The inter frequency measurements on Cell 2 are supported by measurement gaps. PCIs of the two cells are selected randomly.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE before the measurements start.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD InterFreqFDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.3.1-1 and Table A.9.8.3.1-2 for each of the two cells during this time.

The test parameters are given in Table A.9.8.3.1-1 and Table A.9.8.3.1-2.

**Table A.9.8.3.1-1: General Test Parameters for inter frequency RSTD Tests for E-UTRAN FDD**

| Parameter   | Unit          | Value  |                         | Comment   |
|---|---------------|--|-------------------------|---|
|   |               | Test1  | Test2                   |   |
| PCFICH/PDCCH/PHICH parameters   |               | R.14 FDD   | R.6 FDD                 | As specified in clause A.3.1.2.1  |
| OCNG Patterns defined in A.3.2.1  |               | OP.7 FDD   | OP.6 FDD                | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).       |
| Reference cell  |               | Cell 1   |                         | Cell 1 on RF channel number 1   |
| Neighbour cell  |               | Cell 2   |                         | Cell 2 on RF channel number 2   |
| E-UTRA RF Channel Number  |               | 1,2  |                         | Two FDD carrier frequencies are used.   |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                   | MHz           | 1.4  | 10                      |   |
| PRS Bandwidth   | RB            | 6  | 50                      | PRS bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Number of consecutive positioning downlink subframes $N_{\text{PRS}}$         |               | 6  | 1                       | As defined in TS 36.211   |
| prs-MutingInfo  |               | Cell1:'11110000'<br>Cell2:'11110000'                               |                         | See clause 6.5.1.2 in TS 36.355 for more information  |
| expectedRSTD  | $\mu\text{s}$ | Cell 2:1<br>Other neighbour cells:<br>randomly between -3<br>and 3 |                         | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator                           |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu\text{s}$ | 5  |                         | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| CP length   |               | Normal   |                         |   |
| DRX   |               | OFF  |                         |   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 2 to<br>Cell 1: 3   | Cell 2 to<br>Cell 1: -3 | PRS are transmitted from synchronous cells  |
| Number of cells provided in OTDOA assistance data                             |               | 16   |                         | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) on RF channel 1 and 15 other cells on RF channel 2, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. |
| $T_{\text{RSTD InterFreqFDD, E-UTRAN}}$                                       | ms            | 5120   |                         | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.6.1  |

Table A.9.8.3.1-2: Cell Specific Test Parameters for inter frequency RSTD Tests for E-UTRAN FDD

| Parameter   | Unit         | Test1  |        | Test2  |        |            |     |     |    |     |
|---|--------------|--------|--------|--------|--------|------------|-----|-----|----|-----|
|   |              | Cell1  | Cell2  | Cell1  | Cell2  |            |     |     |    |     |
| E-UTRA RF Channel Number  |              | 1      | 2      | 1      | 2      |            |     |     |    |     |
| GapOffset   |              | 18     | N/A    | 11     | N/A    |            |     |     |    |     |
| Gap Pattern ID  |              | 0      | N/A    | 0      | N/A    |            |     |     |    |     |
| PRS configuration Index $I_{PRS}$   |              | 12     | 19     | 2      | 12     |            |     |     |    |     |

| Propagation condition   |              | AWGN   |        |        |        |            |     |     |    |     |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).   |              |        |        |        |        |            |     |     |    |     |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |              |        |        |        |        |            |     |     |    |     |
| Note 3: $\hat{E}_s/N_{oc}$ , PRS $\hat{E}_s/I_{ot}$ , $I_o$ , RSRP and PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_o$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS. |              |        |        |        |        |            |     |     |    |     |

### A.9.8.3.2 Test Requirements

The RSTD measurement accuracy shall fulfill the requirements in clause 9.1.10.2.

### A.9.8.4 E-UTRAN TDD-TDD RSTD inter frequency case

#### A.9.8.4.1 Test Purpose and Environment

The purpose of this test is to verify that the RSTD inter-frequency measurement accuracy is within the specified limits in clause 9.1.10.2 in AWGN channels.

There are two synchronous cells on different carrier frequencies in the test. In all test cases, Cell 1 is the reference cell as well as the PCell and Cell 2 is the neighbour cell. The inter frequency measurements on Cell 2 are supported by a measurement gap. PCIs of the two cells are selected randomly.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap configuration is known and configured in the UE before the measurements start.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD InterFreqTDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.4.1-1 and Table A.9.8.4.1-2 for each of the two cells during this time.

The test parameters are given in Table A.9.8.4.1-1 and Table A.9.8.4.1-2.

**Table A.9.8.4.1-1: General Test Parameters for inter frequency RSTD Tests for E-UTRAN TDD**

| Parameter   | Unit          | Value   |                      | Comment   |
|---|---------------|---|----------------------|---|
|   |               | Test1   | Test2                |   |
| PCFICH/PDCCH/PHICH parameters   |               | R.14 TDD  | R.6 TDD              | As specified in clause A.3.1.2.2  |
| OCNG Patterns defined in A.3.2.2  |               | OP.4 TDD  | OP.2 TDD             | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).       |
| Reference cell  |               | Cell 1  |                      | Cell 1 on RF channel number 1   |
| Neighbour cell  |               | Cell 2  |                      | Cell 2 on RF channel number 2   |
| E-UTRA RF Channel Number  |               | 1,2   |                      | Two TDD carrier frequencies are used.   |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                                   | MHz           | 1.4   | 10                   |   |
| PRS Bandwidth   | RB            | 6   | 50                   | PRS bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Special subframe configuration  |               | 6   |                      | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells.   |
| Uplink-downlink configuration   |               | 3   | 1                    | As specified in table 4.2-2 in TS 36.211 and table 8.1.2.5.2-2.   |
| Number of consecutive positioning downlink subframes $N_{\text{PRS}}$         |               | 6   | 1                    | As defined in TS 36.211   |
| prs-MutingInfo  |               | Cell1:'11110000'<br>Cell2:'11110000'                          |                      | PRS muting is not used. See clause 6.5.1.2 in TS 36.355 for more information  |
| expectedRSTD  | $\mu\text{s}$ | Cell 2: 1<br>Other neighbour cells: randomly between -3 and 3 |                      | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator                           |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu\text{s}$ | 5   | 5                    | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| CP length   |               | Normal  |                      |   |
| DRX   |               | OFF   |                      |   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 2 to Cell 1: 3   | Cell 2 to Cell 1: -3 | PRS are transmitted from synchronous cells  |
| Number of cells provided in OTDOA assistance data                             |               | 16  |                      | The list includes the reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) on RF channel 1 and 15 other cells on RF channel 2, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. |
| $T_{\text{RSTD InterFreqTDD, E-UTRAN}}$                                       | ms            | 5120  |                      | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.6.3  |

Table A.9.8.4.1-2: Cell Specific Test Parameters for inter frequency RSTD Tests for E-UTRAN TDD

| Parameter   | Unit         | Test1  |        | Test2  |        |            |     |   |    |   |
|---|--------------|--------|--------|--------|--------|------------|-----|---|----|---|

They are not settable parameters themselves. $I_o$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS. |              |        |        |        |        |            |     |   |    |   |

### A.9.8.4.2 Test Requirements

The RSTD measurement accuracy shall fulfill the requirements in clause 9.1.10.2.

## A.9.8.5 E-UTRAN FDD RSTD Measurement Accuracy in Carrier Aggregation

### A.9.8.5.1 Test Purpose and Environment

The purpose of these tests is to verify that the E-UTRAN FDD RSTD measurement accuracy in carrier aggregation is within the specified limits in clause 9.1.12.

There are three synchronous cells on two different carrier frequencies in the test. Cell 1 is the PCell on primary component carrier F1 (RF channel number 1), Cell 2 is the SCell and reference cell on secondary component carrier F2 (RF channel number 2), and Cell 3 is the neighbor cell on F2.

Cell2 and Cell3 are included in the OTDOA assistance data, whilst Cell1 is not included in the OTDOA assistance data. The RSTD measurements are performed between Cell 2 and Cell 3 to verify that when both the reference cell and

neighbouring cell belong to the secondary component carrier the RSTD measurement accuracy can meet the intra-frequency RSTD accuracy requirements defined in clause 9.1.10.1.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap is not configured in the test because of UE carrier aggregation capability.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD IntraFreqFDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.5.1-1 and Table A.9.8.5.1-2 for each of the three cells during this time.

The test parameters are given in Table A.9.8.5.1-1 and Table A.9.8.5.1-2.

Table A.9.8.5.1-1: General Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation

| Parameter   | Unit    | Value   | Comment   |
|---|---------|---|---|
| PCFICH/PDCCH/PHICH parameters   |         | R.6 FDD   | As specified in clause A.3.1.2.1  |
| OCNG Patterns defined in A.3.2.1  |         | OP.6 FDD  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Assistance data reference cell  |         | Cell 2  | Cell 2 is the SCell on RF channel number 2  |
| PCell   |         | Cell 1  | Cell 1 on RF channel number 1   |
| Neighbour cell  |         | Cell 3  | Cell 3 on RF channel number 2   |
| E-UTRA RF Channel Number  |         | 1,2   | Two FDD carrier frequencies are used.   |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |   |
| PRS Bandwidth   | RB      | 50  | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Number of consecutive positioning downlink subframes $N_{PRS}$                |         | 1   | As defined in TS 36.211   |
| prs-MutingInfo  |         | Cell1:'11110000'<br>Cell2:'11110000'<br>Cell3:'11110000'                        | See clause 6.5.1.2 in TS 36.355 for more information  |
| Cell ID   |         | (Cell ID of cell 2 – Cell ID of cell 3) mod 6 = 3                               | PCI of cell 1 is selected randomly.   |
| expectedRSTD  | $\mu$ s | Cell 3:-2<br>Other neighbour cells: randomly between -3 and 3                   | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator   |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu$ s | 5   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| CP length   |         | Normal  |   |
| DRX   |         | OFF   |   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu$ s | Cell 1 to Cell 2: -1<br>Cell 3 to Cell 2:1                                      | PRS are transmitted from synchronous cells  |
| Time alignment error between cell2 and cell1                                  | $\mu$ s | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.   |
| Number of cells provided in OTDOA assistance data                             |         | 16  | The list includes the assistance-data-reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. All cells provided in OTDOA assistance data are on RF channel 2.        |
| $T_{RSTD}$ IntraFreqFDD, E-UTRAN  | ms      | 2560  | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.5.1  |

**Table A.9.8.5.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation**

| Parameter   | Unit       | Cell1  | Cell2  | Cell3  |
|---|------------|--------|--------|--------|
| E-UTRA RF Channel Number  |            | 1      | 2      | 2      |

| Propagation condition   |            | AWGN   |        |        |
| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>\hat{E}_s/N_{oc}</math>, PRS <math>\hat{E}_s/I_{ot}</math>, RSRP, <math>I_o</math> and PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS.</p> |            |        |        |        |

### A.9.8.5.2 Test Requirements

The measurement accuracy of RSTD between Cell2 and Cell3 shall fulfill the requirements in clause 9.1.12.

## A.9.8.6 E-UTRAN TDD RSTD Measurement Accuracy in Carrier Aggregation

### A.9.8.6.1 Test Purpose and Environment

The purpose of these tests is to verify that the E-UTRAN TDD RSTD measurement accuracy in carrier aggregation is within the specified limits in clause 9.1.12.

There are three synchronous cells on two different carrier frequencies in the test. Cell 1 is the PCell on primary component carrier F1 (RF channel number 1), Cell 2 is the SCell and reference cell on secondary component carrier F2 (RF channel number 2), and Cell 3 is the neighbor cell on F2.

Cell2 and Cell3 are included in the OTDOA assistance data, whilst Cell1 is not included in the OTDOA assistance data. The RSTD measurements are performed between Cell 2 and Cell 3 to verify that when both the reference cell and neighbouring cell belong to the secondary component carrier the RSTD measurement accuracy can meet the intra-frequency RSTD accuracy requirements defined in clause 9.1.10.1.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap is not configured in the test because of UE carrier aggregation capability.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD IntraFreqTDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.6.1-1 and Table A.9.8.6.1-2 for each of the three cells during this time.

The test parameters are given in Table A.9.8.6.1-1 and Table A.9.8.6.1-2.

**Table A.9.8.6.1-1: General Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation**

| Parameter   | Unit    | Value   | Comment   |
|---|---------|---|---|
| PCFICH/PDCCH/PHICH parameters   |         | R.6 TDD   | As specified in clause A.3.1.2.2  |
| OCNG Patterns defined in A.3.2.2  |         | OP.2 TDD  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Assistance data reference cell  |         | Cell 2  | Cell 2 is the SCell on RF channel number 2  |
| PCell   |         | Cell 1  | Cell 1 on RF channel number 1   |
| Neighbour cell  |         | Cell 3  | Cell 3 on RF channel number 2   |
| E-UTRA RF Channel Number  |         | 1,2   | Two TDD carrier frequencies are used.   |
| Channel Bandwidth ( $BW_{channel}$ )  | MHz     | 10  |   |
| PRS Bandwidth   | RB      | 50  | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Number of consecutive positioning downlink subframes $N_{PRS}$                |         | 1   | As defined in TS 36.211   |
| Special subframe configuration  |         | 6   | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells.   |
| Uplink-downlink configuration   |         | 1   | As specified in table 4.2-2 in TS 36.211 and table 8.1.2.5.2-2. The same configuration in both cells.   |
| prs-MutingInfo  |         | Cell1:'11110000'<br>Cell2:'11110000'<br>Cell3:'11110000'                        | See clause 6.5.1.2 in TS 36.355 for more information  |
| Cell ID   |         | (Cell ID of cell 2 – Cell ID of cell 3) mod 6 = 3                               | PCI of cell 1 is selected randomly.   |
| expectedRSTD  | $\mu$ s | Cell 3:-2<br>Other neighbour cells: randomly between -3 and 3                   | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator   |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu$ s | 5   | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index  |
| CP length   |         | Normal  |   |
| DRX   |         | OFF   |   |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu$ s | Cell 1 to Cell 2: -1<br>Cell 3 to Cell 2:1                                      | PRS are transmitted from synchronous cells  |
| Time alignment error between cell2 and cell1                                  | $\mu$ s | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.   |
| Number of cells provided in OTDOA assistance data                             |         | 16  | The list includes the assistance-data-reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. All cells provided in OTDOA assistance data are on RF channel 2.        |
| $T_{RSTD}$ IntraFreqTDD, E-UTRAN  | ms      | 2560  | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.5.2  |

**Table A.9.8.6.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation**

| Parameter   | Unit       | Cell1  | Cell2  | Cell3  |
|---|------------|--------|--------|--------|
| E-UTRA RF Channel Number  |            | 1      | 2      | 2      |
| PRS configuration Index $I_{PRS}$   |            | 14     | 14     | 14     |
| PBCH_RA   | dB         | 0      | 0      | 0      |
| PBCH_RB   |            |        |        |        |
| PSS_RA  |            |        |        |        |
| SSS_RA  |            |        |        |        |
| PCFICH_RB   |            |        |        |        |
| PHICH_RA  |            |        |        |        |
| PHICH_RB  |            |        |        |        |
| PDCCH_RA  |            |        |        |        |
| PDCCH_RB  |            |        |        |        |
| OCNG_RA <sup>Note1</sup>  |            |        |        |        |
| OCNG_RB <sup>Note1</sup>  |            |        |        |        |
| PRS_RA  | dB         | -3     | 0      | 0      |
| $N_{oc}$ <sup>Note2</sup>   | dBm/15 kHz | -98    |        |        |
| PRS $\hat{E}_s/N_{oc}$  | dB         | -6     | -6     | -13    |
| PRS $\hat{E}_s/I_{ot}$  | dB         | -6     | -6     | -13    |
| $I_o$ <sup>Note3</sup>  | dBm/9 MHz  | -70.04 | -70.01 | -70.01 |
| PRP <sup>Note3</sup>  | dBm/15kHz  | -104   | -104   | -111   |
| RSRP <sup>Note3</sup>   | dBm/15kHz  | -101   | -104   | -111   |
| $\hat{E}_s/N_{oc}$ <sup>Note3</sup>   | dB         | -3     | -6     | -13    |
| Propagation condition   |            | AWGN   |        |        |
| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>\hat{E}_s/N_{oc}</math>, PRS <math>\hat{E}_s/I_{ot}</math>, RSRP, <math>I_o</math> and PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS.</p> |            |        |        |        |

### A.9.8.6.2 Test Requirements

The measurement accuracy of RSTD between Cell2 and Cell3 shall fulfill the requirements in clause 9.1.12.

### A.9.8.7 E-UTRAN FDD RSTD Measurement Accuracy in Carrier Aggregation for 20MHz bandwidth

#### A.9.8.7.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.8.5.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.8.7.1-1 and A.9.8.7.1-2 will replace the values of corresponding parameters in Tables A.9.8.5.1-1 and A.9.8.5.1-2.

**Table A.9.8.7.1-1: General Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation for 20MHz bandwidth**

| Parameter  | Unit | Value     | Comment   |
|--|------|-----------|---|
| PCFICH/PDCCH/PHICH parameters                                    |      | R.10 FDD  | As specified in clause A.3.1.2.1  |
| OCNG Patterns defined in A.3.2.1.14                              |      | OP.14 FDD | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Channel Bandwidth ( $BW_{channel}$ )                             | MHz  | 20        |   |
| PRS Bandwidth  | RB   | 100       | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Note 1: See Table A.9.8.5.1-1 for other general test parameters. |      |           |   |
| Note 2: N/A  |      |           |   |

**Table A.9.8.7.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation for 20MHz bandwidth**

| Parameter   | Unit       | Cell1  | Cell2  | Cell3  |
|---|------------|--------|--------|--------|
| $I_0$ <sup>Note1</sup>  | dBm/18 MHz | -67.03 | -67.00 | -67.00 |
| Note 1: $I_0$ level has been derived from other parameters for information purposes. It is not settable parameter itself. $I_0$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS |            |        |        |        |
| Note 2: See Table A.9.8.5.1-2 for other cell specific test parameters.  |            |        |        |        |

### A.9.8.7.2 Test Requirements

The test requirements defined in section A.9.8.5.2 shall apply to this test case.

## A.9.8.8 E-UTRAN TDD RSTD Measurement Accuracy in Carrier Aggregation for 20MHz bandwidth

### A.9.8.8.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.8.6.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.8.8.1-1 and A.9.8.8.1-2 will replace the values of corresponding parameters in Tables A.9.8.6.1-1 and A.9.8.6.1-2.

**Table A.9.8.8.1-1: General Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation for 20MHz bandwidth**

| Parameter  | Unit | Value    | Comment   |
|--|------|----------|---|
| PCFICH/PDCCH/PHICH parameters                                    |      | R.10 TDD | As specified in clause A.3.1.2.2  |
| OCNG Patterns defined in A.3.2.2.8                               |      | OP.8 TDD | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Channel Bandwidth ( $BW_{channel}$ )                             | MHz  | 20       |   |
| PRS Bandwidth  | RB   | 100      | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Note 1: See Table A.9.8.6.1-1 for other general test parameters. |      |          |   |
| Note 2: N/A  |      |          |   |

**Table A.9.8.8.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation for 20MHz bandwidth**

| Parameter   | Unit       | Cell1  | Cell2  | Cell3  |
|---|------------|--------|--------|--------|
| $I_0$ <sup>Note1</sup>  | dBm/18 MHz | -67.03 | -67.00 | -67.00 |
| Note 1: $I_0$ level has been derived from other parameters for information purposes. It is not settable parameter itself. $I_0$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS |            |        |        |        |
| Note 2: See Table A.9.8.6.1-2 for other cell specific test parameters.  |            |        |        |        |

### A.9.8.8.2 Test Requirements

The test requirements defined in section A.9.8.6.2 shall apply to this test case.

### A.9.8.9 E-UTRAN FDD RSTD Measurement Accuracy in Carrier Aggregation for 10MHz+5MHz

#### A.9.8.9.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.8.5.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.8.9.1-1 and A.9.8.9.1-2 will replace the values of corresponding parameters in Tables A.9.8.5.1-1 and A.9.8.5.1-2.

**Table A.9.8.9.1-1: General Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation for 10MHz+5MHz**

| Parameter   | Unit | Value   | Comment   |
|---|------|---|---|
| PCFICH/PDCCH/PHICH parameters   |      | Cell1: R.6 FDD<br>Cell2: R.11 FDD<br>Cell3: R.11 FDD    | As specified in clause A.3.1.2.1  |
| OCNG Patterns defined in A.3.2.1                                      |      | Cell1: OP.6 FDD<br>Cell2: OP.19 FDD<br>Cell3: OP.19 FDD | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                           | MHz  | Cell1: 10<br>Cell2: 5<br>Cell3: 5                       |   |
| PRS Bandwidth   | RB   | Cell1: 50<br>Cell2: 25<br>Cell3: 25                     | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Number of consecutive positioning downlink subframes $N_{\text{PRS}}$ |      | 2   | As defined in TS 36.211   |
| Note 1: See Table A.9.8.5.1-1 for other general test parameters.      |      |   |   |
| Note 2: N/A   |      |   |   |

**Table A.9.8.9.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation for 10MHz+5MHz**

| Note 1: $I_0$ level has been derived from other parameters for information purposes. It is not settable parameter itself. $I_0$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS |             |        |        |        |
| Note 2: See Table A.9.8.6.1-2 for other cell specific test parameters.  |             |        |        |        |

## A.9.8.10.2 Test Requirements

The test requirements defined in section A.9.8.6.2 shall apply to this test case.

## A.9.8.11 E-UTRAN FDD RSTD Measurement Accuracy in Carrier Aggregation for 5 + 5MHz bandwidth

### A.9.8.11.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.8.5.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.8.11.1-1 and A.9.8.11.1-2 will replace the values of corresponding parameters in Tables A.9.8.5.1-1 and A.9.8.5.1-2.

**Table A.9.8.11.1-1: General Test Parameters for RSTD Tests for E-UTRAN FDD for Carrier Aggregation for 5+5MHz bandwidth**

| Parameter  | Unit | Value     | Comment   |
|--|------|-----------|---|
| PCFICH/PDCCH/PHICH parameters                                    |      | R.11 FDD  | As specified in clause A.3.1.2.1  |
| OCNG Patterns defined in A.3.2.1.19                              |      | OP.19 FDD | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |

| Note 1: $I_0$ level has been derived from other parameters for information purposes. It is not settable parameter itself. $I_0$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS |             |        |        |        |
| Note 2: See Table A.9.8.5.1-2 for other cell specific test parameters.  |             |        |        |        |

### A.9.8.11.2 Test Requirements

The test requirements defined in section A.9.8.5.2 shall apply to this test case.

## A.9.8.12 E-UTRAN TDD RSTD Measurement Accuracy in Carrier Aggregation for 5+5MHz bandwidth

### A.9.8.12.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in subclause A.9.8.6.1. The test parameters are the same except those described in the following section. The listed parameter values in Tables A.9.8.12.1-1 and A.9.8.12.1-2 will replace the values of corresponding parameters in Tables A.9.8.6.1-1 and A.9.8.6.1-2.

**Table A.9.8.12.1-1: General Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation for 5+5MHz bandwidth**

| Parameter   | Unit | Value     | Comment   |
|---|------|-----------|---|
| PCFICH/PDCCH/PHICH parameters   |      | R.11 TDD  | As specified in clause A.3.1.2.2  |
| OCNG Patterns defined in A.3.2.2.10                                   |      | OP.10 TDD | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes). There is no PDSCH allocated in the subframe transmitting PRS. |
| Channel Bandwidth ( $BW_{\text{channel}}$ )                           | MHz  | 5         |   |
| PRS Bandwidth   | RB   | 25        | PRS Bandwidth bandwidth is as indicated in <i>prs-Bandwidth</i> in the OTDOA assistance data defined in [24].   |
| Number of consecutive positioning downlink subframes $N_{\text{PRS}}$ |      | 2         | As defined in TS 36.211   |
| Note 1: See Table A.9.8.6.1-1 for other general test parameters.      |      |           |   |
| Note 2: N/A   |      |           |   |

**Table A.9.8.12.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation for 5+5MHz bandwidth**

| Note 1: $I_0$ level has been derived from other parameters for information purposes. It is not settable parameter itself. $I_0$ values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS |               |        |        |        |
| Note 2: See Table A.9.8.6.1-2 for other cell specific test parameters.  |               |        |        |        |

### A.9.8.13.2 Test Requirements

The test requirements defined in section A.9.8.6.2 shall apply to this test case.

## A.9.8.14 E-UTRAN FDD RSTD Measurement Accuracy in 3DL Carrier Aggregation

### A.9.8.14.1 Test Purpose and Environment

The purpose of these tests is to verify that the E-UTRAN FDD RSTD measurement accuracy in carrier aggregation is within the specified limits in clause 9.1.12.

There are four synchronous cells on three different carrier frequencies in the test. Cell 1 is the PCell on primary component carrier F1 (RF channel number 1), Cell 2 is an SCell on secondary component carrier F2 (RF channel number 2), Cell 3 is an SCell and reference cell on secondary component carrier F3 (RF channel number 3), and Cell 4 is the neighbor cell on F3.

Cell 1, Cell2, Cell3, and Cell 4 are included in the OTDOA assistance data. The RSTD measurements are performed

- between Cell 4 and Cell 3 to verify the accuracy of RSTD measurement when the reference cell and neighbouring cell belong to the same secondary component carrier can meet the intra-frequency RSTD accuracy requirements defined in clause 9.1.10.1.
- between Cell 1 and Cell 3 to verify the accuracy of RSTD measurement between the PCell and an SCell can meet the inter-frequency RSTD accuracy requirements defined in clause 9.1.10.2.

- between Cell 2 and Cell 3 to verify the accuracy of RSTD measurement between two SCells can meet the inter-frequency RSTD accuracy requirements defined in clause 9.1.10.2.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap is not configured in the test because of UE carrier aggregation capability.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD InterFreqFDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.14.1-1 and Table A.9.8.14.1-2 for each of the three cells during this time.

The test parameters are given in Table A.9.8.14.1-1 and Table A.9.8.14.1-2.

**Table A.9.8.14.1-1: General Test Parameters for RSTD Tests for E-UTRAN FDD for 3DL Carrier Aggregation**

| Parameter   | Unit          | Value  | Comment  |
|---|---------------|--|--|
| PCell   |               | Cell 1   | Cell 1 on RF channel number 1  |
| SCell 1   |               | Cell 2   | Cell 2 is an SCell on RF channel number 2  |
| SCell 2 (Assistance data reference cell)                                      |               | Cell 3   | Cell 3 is an SCell on RF channel number 3  |
| Neighbour cell  |               | Cell 4   | Cell 4 on RF channel number 3  |
| PRS configuration index $I_{PRS}$   |               | 171 for all cells on PCC<br>181 for all cells on SCC1<br>191 for all cells on SCC2       | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| prs-MutingInfo  |               | Cell1:'11110000'<br>Cell2:'11110000'<br>Cell3:'11110000'<br>Cell4:'11110000'             | See clause 6.5.1.2 in TS 36.355 for more information   |
| prs-SubframeOffset  |               | Cells on PCC: 300<br>Cells on SCC1: 310<br>Cells on SCC2, except reference cell: 0       | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset  |               | Cells on PCC: 0<br>Cells on SCC1: 0<br>Cells on SCC2, except reference cell: 0           | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24]. |
| Cell ID   |               | (Cell ID of cell 4 – Cell ID of cell 3) mod 6 = 3  | PCIs of cell 1 and cell 2 are selected randomly.   |
| expectedRSTD  | $\mu\text{s}$ | Cell 1: -2<br>Cell 2: 0<br>Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3 | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator  |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu\text{s}$ | 5  | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index   |
| CP length   |               | Normal   |  |
| DRX   |               | OFF  |  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 1 to Cell 3: 1<br>Cell 2 to Cell 3: -1<br>Cell 4 to Cell 3: 3                       | PRS are transmitted from synchronous cells   |
| Time alignment errors between Cell 1, Cell 2, and Cell 3                      | $\mu\text{s}$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1.          | The value of time alignment error depends upon the type of carrier aggregation.  |

|   |    |      |  |
|---|----|------|--|
| Number of cells provided in OTDOA assistance data |    | 16   | The list includes the assistance-data-reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. Cell 1 and Cell 2 appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 4 always appears at random places in the second half of the list. |
| $T_{\text{RSTD InterFreqFDD, E-UTRAN}}$           | ms | 4960 | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.6.1   |

### A.9.8.14.2 Test Requirements

The measurement accuracy of RSTD between Cell1 and Cell3 shall fulfill the requirements in clause 9.1.12.2

The measurement accuracy of RSTD between Cell2 and Cell3 shall fulfill the requirements in clause 9.1.12.2

The measurement accuracy of RSTD between Cell4 and Cell3 shall fulfill the requirements in clause 9.1.12.1.

## A.9.8.15 E-UTRAN TDD RSTD Measurement Accuracy in 3DL Carrier Aggregation

### A.9.8.15.1 Test Purpose and Environment

The purpose of these tests is to verify that the E-UTRAN TDD RSTD measurement accuracy in carrier aggregation is within the specified limits in clause 9.1.12.

There are four synchronous cells on three different carrier frequencies in the test. Cell 1 is the PCell on primary component carrier F1 (RF channel number 1), Cell 2 is an SCell on secondary component carrier F2 (RF channel number 2), Cell 3 is an SCell and reference cell on secondary component carrier F3 (RF channel number 3), and Cell 4 is the neighbor cell on F3.

Cell 1, Cell2, Cell3, and Cell 4 are included in the OTDOA assistance data. The RSTD measurements are performed

- between Cell 4 and Cell 3 to verify the accuracy of RSTD measurement when the reference cell and neighbouring cell belong to the same secondary component carrier can meet the intra-frequency RSTD accuracy requirements defined in clause 9.1.10.1.
- between Cell 1 and Cell 3 to verify the accuracy of RSTD measurement between the PCell and an SCell can meet the inter-frequency RSTD accuracy requirements defined in clause 9.1.10.2.
- between Cell 2 and Cell 3 to verify the accuracy of RSTD measurement between two SCells can meet the inter-frequency RSTD accuracy requirements defined in clause 9.1.10.2.

The OTDOA assistance data as defined in TS 36.355, Clause 6.5.1.1, shall be provided to the UE before the measurement period. The last TTI containing the OTDOA assistance data shall be provided to the UE  $\Delta T$  ms before the start of measurement period, where  $\Delta T = 150$  ms is the maximum processing time of the OTDOA assistance data. The measurement gap is not configured in the test because of UE carrier aggregation capability.

There is no PDSCH allocated in the subframe transmitting PRS. A time span of  $T_{\text{RSTD InterFreqTDD, E-UTRAN}}$  is provided for the measurement period, and PRS are configured according to  $I_{\text{PRS}}$  in Table A.9.8.15.1-1 and Table A.9.8.15.1-2 for each of the three cells during this time.

The test parameters are given in Table A.9.8.15.1-1 and Table A.9.8.15.1-2.

**Table A.9.8.15.1-1: General Test Parameters for RSTD Tests for E-UTRAN TDD for 3DL Carrier Aggregation**

| Parameter   | Unit          | Value  | Comment  |
|---|---------------|--|--|
| PCell   |               | Cell 1   | Cell 1 on RF channel number 1  |
| SCell 1   |               | Cell 2   | Cell 2 is an SCell on RF channel number 2  |
| SCell 2 (Assistance data reference cell)                                      |               | Cell 3   | Cell 3 is an SCell on RF channel number 3  |
| Neighbour cell  |               | Cell 4   | Cell 4 on RF channel number 3  |
| E-UTRA RF Channel Number  |               | 1,2,3  | Three TDD carrier frequencies are used.  |
| PRS configuration index $I_{PRS}$   |               | 171 for all cells on PCC<br>181 for all cells on SCC1<br>191 for all cells on SCC2       | This corresponds to periodicity of 320 ms and PRS subframe offset of $I_{PRS} - 160$ DL subframes, as defined in TS 36.211 [16], Table 6.10.4.3-1  |
| prs-MutingInfo  |               | Cell1:'11110000'<br>Cell2:'11110000'<br>Cell3:'11110000'<br>Cell4:'11110000'             | See clause 6.5.1.2 in TS 36.355 for more information   |
| prs-SubframeOffset  |               | Cells on PCC: 300<br>Cells on SCC1: 310<br>Cells on SCC2, except reference cell: 0       | Subframe offset, counted in full subframes. The corresponding parameter in the OTDOA assistance data is prs-SubframeOffset specified in TS 36.355 [24]   |
| slotNumberOffset  |               | Cells on PCC: 0<br>Cells on SCC1: 0<br>Cells on SCC2, except reference cell: 0           | The slot number offset at the transmitter between a neighbour cell and the assistance data reference cell. The corresponding parameter in the OTDOA assistance data is slotNumberOffset specified in TS 36.355 [24]. |
| Special subframe configuration  |               | 6  | As specified in table 4.2-1 in TS 36.211. The same configuration in both cells.  |
| Uplink-downlink configuration   |               | 1  | As specified in table 4.2-2 in TS 36.211 and table 8.1.2.5.2-2. The same configuration in both cells.  |
| Cell ID   |               | (Cell ID of cell 4 – Cell ID of cell 3) mod 6 = 3  | PCIs of cell 1 and cell 2 are selected randomly.   |
| expectedRSTD  | $\mu\text{s}$ | Cell 1: -2<br>Cell 2: 0<br>Cell 4: 2<br>Other neighbour cells: randomly between -3 and 3 | The expected RSTD is what is expected at the receiver. The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD indicator  |
| expectedRSTDUncertainty for all neighbour cells                               | $\mu\text{s}$ | 5  | The corresponding parameter in the OTDOA assistance data specified in TS 36.355 [24] is the expectedRSTD-Uncertainty index   |
| CP length   |               | Normal   |  |
| DRX   |               | OFF  |  |
| Radio frame receive time offset between the cells at the UE antenna connector | $\mu\text{s}$ | Cell 1 to Cell 3: 1<br>Cell 2 to Cell 3: -1<br>Cell 4 to Cell 3: 3                       | PRS are transmitted from synchronous cells   |
| Time alignment errors between Cell 1, Cell 2, and Cell 3                      | $\mu\text{s}$ | $\leq$ Time alignment error as specified in 3GPP TS 36.104 [30] clause 6.5.3.1.          | The value of time alignment error depends upon the type of carrier aggregation.  |

|   |    |      |  |
|---|----|------|--|
| Number of cells provided in OTDOA assistance data |    | 16   | The list includes the assistance-data-reference cell (received in <i>OTDOA-ReferenceCellInfo</i> [24]) and 15 other cells, all received in <i>OTDOA-ProvideAssistanceData</i> [24]. Cell 1 and Cell 2 appears at random places in the first half of the neighbour cell list in the OTDOA assistance data. Cell 4 always appears at random places in the second half of the list. |
| $T_{\text{RSTD InterFreqTDD, E-UTRAN}}$           | ms | 4960 | Derived according to the RSTD measurement requirements specified in Clause 8.1.2.6.3   |

**Table A.9.8.15.1-2: Cell Specific Test Parameters for RSTD Tests for E-UTRAN TDD for Carrier Aggregation**

| Parameter   | Unit       | Cell1   | Cell2   | Cell3   | Cell 4  |

| Propagation condition   |            | AWGN  |   |   |   |
| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols (other than those in the PRS subframes).</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>\hat{E}_s/N_{oc}</math>, PRS <math>\hat{E}_s/I_{ot}</math>, RSRP, <math>I_o</math> and PRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. <math>I_o</math> values are derived in the case that there is no PBCH, PSS or SSS in the OFDM symbols carrying PRS.</p> |            |   |   |   |   |

### A.9.8.15.2 Test Requirements

The measurement accuracy of RSTD between Cell1 and Cell3 shall fulfill the requirements in clause 9.1.12.2

The measurement accuracy of RSTD between Cell2 and Cell3 shall fulfill the requirements in clause 9.1.12.2

The measurement accuracy of RSTD between Cell4 and Cell3 shall fulfill the requirements in clause 9.1.12.1.

## A.9.9 RSRP and RSRQ on the serving cell

### A.9.9.1 FDD Intra frequency serving cell case

#### A.9.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP/ RSRQ absolute measurement accuracy is within the specified limits. This test will verify the requirements in Clause 9.1.2.1 and 9.1. 5.1 for FDD intra frequency measurements.

#### A.9.9.1.2 Test parameters

In this set of test case there is only the serving cell. Absolute accuracy of RSRP/ RSRQ intra frequency measurements for the serving cell is tested by using the parameters in Table A.9.9.1.2-1. In the test case, Cell 1 is the serving cell.

**Table A.9.9.1.2-1: RSRP FDD Intra frequency test parameters**

| Parameter   |                                      | Unit       | Test     |            |      |
|---|--------------------------------------|------------|----------|------------|------|
|   |                                      |            | Cell 1   |            |      |
| E-UTRA RF Channel Number  |                                      |            | 1        |            |      |
| $BW_{channel}$  |                                      | MHz        | 10       |            |      |
| Measurement bandwidth   |                                      | $n_{PRB}$  | 22—27    |            |      |
| PDSCH Reference measurement channel defined in A.3.1.1.1              |                                      |            | R.0 FDD  |            |      |
| PDSCH allocation  |                                      | $n_{PRB}$  | 13—36    |            |      |

| Propagation condition | -  | AWGN |
|-----------------------|--|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |
| Note 3:               | RSRP, RSRQ and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |
| Note 4:               | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |      |
| Note 5:               | For Band 26, the tests shall be performed with the carrier frequency of the assigned E-UTRA channel bandwidth within 865-894 MHz.  |      |
| Note 6:               | E-UTRA operating band groups are as defined in Section 3.5.  |      |
| Note 7:               | Except Band 29 and Band 32.  |      |

### A.9.9.1.3 Test Requirements

The absolute RSRP and RSRQ measurement accuracy shall fulfil the requirements in clause 9.1.2.1 and 9.1.5.1 respectively.

## A.9.9.2 TDD Intra frequency serving cell case

### A.9.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSRP/ RSRQ absolute measurement accuracy is within the specified limits. This test will verify the requirements in Section 9.1.2.1 and 9.1.5.1 for TDD intra frequency measurements.

### A.9.9.2.2 Test parameters

In this set of test case there is only the serving cell. Absolute accuracy of RSRP/ RSRQ intra frequency measurements for the serving cell is tested by using the parameters in Table A.9.9.2.2-1. In the test case, Cell 1 is the serving cell.

**Table A.9.9.2.2-1: RSRP TDD Intra frequency test parameters**

| Parameter   |             | Unit       | Test     |            |      |
|---|-------------|------------|----------|------------|------|
|   |             |            | Cell 1   |            |      |
| E-UTRA RF Channel Number  |             |            | 1        |            |      |
| $BW_{channel}$  |             | MHz        | 10       |            |      |
| Special subframe configuration <sup>Note1</sup>   |             |            | 6        |            |      |

| <p>Note 1: For special subframe and uplink-downlink configurations see Tables 4.2-1 and 4.2-2 in TS 36.211.</p> <p>Note 2: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 3: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 4: RSRP, RSRQ and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 5: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 6: E-UTRA operating band groups are as defined in Section 3.5.</p> |             |            |          |            |      |

### A.9.9.2.3 Test Requirements

The absolute RSRP and RSRQ measurement accuracy shall fulfil the requirements in section 9.1.2.1 and 9.1.5.1 respectively.

## A.10 Proximity-based Services in Any Cell Selection State

### A.10.1 E-UTRAN FDD – UE ProSe Direct Communication Transmission Timing Accuracy Test

#### A.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for ProSe Direct Communication transmissions in Any Cell Selection state defined in clause 11.2.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A.10.1.1-1 below. There is no serving cell and one active SyncRef UE in this test. The test system shall emulate the SyncRef UE to transmit SLSS and MIB-SL every synchronization period.

The test system will configure the ProSe UE to transmit SLSS in each period (40ms) by configuring *syncTxThreshOoC* as +infinity in the pre-configured parameters. The ProSe UE is expected to synchronize to the SyncRef UE and transmit its own SLSS and SL-MIB in accordance to the procedure specified in clause 5.10.7.3 of TS 36.331.

The transmit timing is verified using the transmission timing of SLSS transmissions.

Table A.10.1.1-1: Test parameters for ProSe Transmission Timig Accuracy test for E-UTRAN FDD

| Parameter  |  | Unit       | Value  | Comment   |
|--|--|------------|--|---|
| E-UTRA RF Channel Number   |  |            | 1  |   |
| Channel Bandwidth ( $BW_{\text{channel}}$ )  |  | MHz        | 5 or 10  | According to principle defined in clause A.3.12.3   |
| Active cell  |  |            | None   |   |
| Active SyncRef UE  |  |            | SyncRef UE 1   | Transmitting SLSS+MIB-SL on uplink of RF channel number 1   |
| ProSe Direct Communication preconfiguration  |  |            | As specified in Table A.3.12.5-2 (Configuration #2)                                    | IE values unless specified otherwise in this test.  |
| syncTxThreshOoC  |  |            | 11 (+infinity)   |   |
| $N_{oc}$   |  | dBm/15 kHz | -98  |   |
| SyncRef UE 1   | syncCP-Len   |            | Normal   |   |
|  | syncOffsetIndicator                                    |            | Set same as <i>syncOffsetIndicator1</i> in ProSe Direct Communication preconfiguration |   |
|  | sllsid   |            | 30   |   |
|  | inCoverage   |            | TRUE   | In MIB-SL   |
|  | networkControlledSyncTx                                |            | ON   |   |
|  | ProSe Direct Communication resource pool configuration |            | As specified in Table A.3.12.5-1 (Configuration #1)                                    | IE values unless specified otherwise in this test; Note resource pool is same as Configuration #2 used by ProSe UE. |
|  | $\hat{E}_s/N_{oc}$                                     |            | 3  |   |
| S-RSRP <small>Note1, Note 2</small>  |  |            | -95  |   |
| Propagation condition  |  |            | AWGN   |   |
| Note 1: RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |  |            |  |   |
| Note 2: SSSS Es/lot is set the same as PSSS/PSBCH Es/lot.  |  |            |  |   |

### A.10.1.2 Test Requirements

For parameters specified in Tables A.10.1.1-1, the timing accuracy for ProSe Direct Communication transmissions shall be within the limits defined in clause 11.2.2. The timing accuracy is verified using SLSS transmissions.

Prior to start of test, test system is required to ensure that the ProSe UE is synchronised to the SyncRef UE 1 and is transmitting SLSS + MIB-SL as derived from the SLSS + MIB-SL of SyncRef UE 1 as per clause 5.10.7.3 of TS 36.331. For the test configuration, the SLSSID used by the ProSe UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE.

The following sequence of events shall be used to verify that the requirements are met.

For 5MHz or 10MHz channel bandwidth, the test sequence shall be carried out in Any Cell Selection state.

- After the ProSe UE is synchronized to SyncRef UE 1, the test system shall verify that the ProSe UE SLSS transmission timing offset is within  $\pm 24 \times T_s$  with respect to the first detected path (in time) of the corresponding frame of SyncRef UE 1.
- The test system adjusts the transmit timing of SyncRef UE 1 by  $+24 \times T_s$  compared to that in (a). The test system shall wait for at least one SLSS period (40ms) before verifying the requirement again in (c).
- The test system shall verify that the UE SLSS transmission timing offset stays within  $\pm 24 \times T_s$  with respect to the first detected path (in time) of the corresponding frame of SyncRef UE 1.

## A.10.2 E-UTRAN FDD – Initiation/Cease of SLSS Transmission with ProSe Direct Communication

### A.10.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease SLSS transmissions in Any Cell Selection state defined in clause 11.3.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A. X.2.1-1 and Table A.10.2.1-2 below. There are no active cells in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit SLSS and MIB-SL every synchronization period.

Prior to start of test, test system is required to ensure that the ProSe UE is synchronised to the SyncRef UE 1 and is transmitting SLSS + MIB-SL as derived from the SLSS + MIB-SL of SyncRef UE 1 as per clause 5.10.7.3 of TS 36.331. For the test configuration, the SLSSID used by the ProSe UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the S-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting SLSS. During T2, the S-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate SLSS transmissions. During T3, the S-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease SLSS transmissions.

**Table A.10.2.1-1: Test parameters for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter                                   | Unit       | Value   | Comment   |
|---|------------|---|---|
| E-UTRA RF Channel Number                    |            | 1   |   |
| Channel Bandwidth ( $BW_{channel}$ )        | MHz        | 5 or 10   | According to principle defined in clause A.3.12.3         |
| Active cell                                 |            | None  |   |
| Active SyncRef UE                           |            | SyncRef UE 1  | Transmitting SLSS+MIB-SL on uplink of RF channel number 1 |
| ProSe Direct Communication preconfiguration |            | As specified in Table A.3.12.5-2 (Configuration #2) | IE values unless specified otherwise in this test.        |
| <i>syncTxThreshOoC</i>                      | dBm/15 kHz | -95   |   |
| T1  | s          | 3   |   |
| T2  | s          | 5.24  |   |
| T3  | s          | 5.24  |   |

**Table A.10.2.1-2: SyncRef UE specific test parameters for initiation/cease of SLSS transmissions test for E-UTRAN FDD**

| Parameter  | Unit | SyncRef UE 1  |    |    |
|--|------|---|----|----|
|  |      | T1  | T2 | T3 |
| E-UTRA RF Channel Number                               |      | 1   |    |    |
| $BW_{channel}$ <sup>Note 4</sup>                       | MHz  | 5 or 10   |    |    |
| ProSe Direct Communication resource pool configuration |      | As specified in Table A.3.12.5-1 (Configuration #1)<br>Note resource pool is same as Configuration #2 used by ProSe UE. |    |    |
| <i>syncOffsetIndicator</i>                             |      | Set same as <i>syncOffsetIndicator1</i> in ProSe Direct Communication preconfiguration                                  |    |    |
| <i>slssid</i>  |      | 30  |    |    |
| <i>inCoverage</i>                                      |      | TRUE  |    |    |
| <i>networkControlledSyncTx</i>                         |      | ON  |    |    |

|                                    |  |       |       |       |
|------------------------------------|--|-------|-------|-------|
| $N_{oc}$ <small>Note1</small>      | dBm/15 kHz   | -96   |       |       |
| $\hat{E}_s / N_{oc}$               | dB   | 5.5   | -3.5  | 5.5   |
| S-RSRP <small>Note2, Note3</small> | dBm/15 kHz   | -90.5 | -99.5 | -90.5 |
| Propagation Condition              |  | AWGN  |       |       |
| Note 1:                            | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |       |       |       |
| Note 2:                            | RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |       |       |       |
| Note 3:                            | SSSS Es/lot is set the same as PSSS/PSBCH Es/lot.  |       |       |       |
| Note 4:                            | This test is according to the principle defined in section A.3.12.3.   |       |       |       |

## A.10.2.2 Test Requirements

The SLSS transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the SLSS transmission.

The SLSS transmission initiation delay shall be less than 0.84 s.

The SLSS transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the SLSS transmission.

The SLSS transmission cease delay shall be less than 0.84 s.

The rate of correct initiation/cease delay of SLSS transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of SLSS transmissions can be expressed as:  $T_{\text{evaluate,SLSS}} + \text{SLSS period}$ ,

Where:

$T_{\text{evaluate,SLSS}}$  is the evaluation time for initiate/cease of SLSS, and is 0.8 sec (clause 11.3.2) for the parameters in this test;

SLSS period is set as 40ms in this test.

## A.10.3 E-UTRAN FDD – SyncRef UE Selection / Reselection Test

### A.10.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection in Any Cell Selection state defined in clause 11.5.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A. X.3.1-1 and Table A.10.3.1-2 below. There are no active cells in this test. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit SLSS and MIB-SL every SLSS period (40ms).

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the ProSe UE for its SLSS+MIB-SL transmissions. When the ProSe UE is not synchronized to any SyncRef UE, then the ProSe UE shall use the SLSS ID pre-configured in the ProSe UE. When the ProSe UE is synchronized to a SyncRef UE, the ProSe UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.10.7.3 of TS 36.331

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the ProSe UE is expected to transmit SLSS as an independent synchronization source. During T1, SyncRef UE 1 is powered ON and the ProSe UE will select SyncRef UE 1 as the synchronization source. During T2, a higher priority SyncRef UE 2 is additionally powered ON and the ProSe UE will reselect to the higher priority SyncRef UE 2 as the synchronization source.

**Table A.10.3.1-1: Test parameters for SyncRef UE selection/reselection test for E-UTRAN FDD**

| Parameter   |                               | Unit | Value   | Comment  |
|---|-------------------------------|------|---|--|
| Initial condition                                   | Active synchronization source |      | Independent synchronization source                  | UE transmits for ProSe Direct Communication and SLSS+MIB-SL with some random SLSS ID and in-coverage set as FALSE in MIB-SL. |
| T2 end condition                                    | Active synchronization source |      | SyncRef UE 1  | UE transmits for ProSe Direct Communication and SLSS+MIB-SL with SLSS ID = 168+59 and in-coverage set as FALSE in MIB-SL.    |
| Final condition                                     | Active synchronization source |      | Sync Ref UE 2                                       | UE transmits for ProSe Direct Communication and SLSS+MIB-SL with SLSS ID = 30 and in-coverage set as FALSE in MIB-SL.        |
| E-UTRA RF Channel Number                            |                               |      | 1   |  |

### A.10.3.2 Test Requirements

SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its SLSS transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 168+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 20.84sec.

SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its SLSS transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 20.84sec.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90%.

The test system will verify that the ProSe UE does not drop or delay more than 2% of its SLSS transmissions during the duration of T1, T2, and T3.

The SyncRef UE selection/reselection delay can be expressed as:

$$\text{SyncRef UE selection/reselection delay} = T_{\text{detect, SyncRef UE}} + T_{\text{evaluate, SLSS}} + \text{SLSS period}$$

Where

- $T_{\text{detect, SyncRef UE}} = 20\text{sec}$  (as specified in sub-clause 11.5.2.2)
- $T_{\text{evaluate, SLSS}} = 0.8$  (as specified in sub-clause 11.3.2)
- SLSS period = 40ms

This gives a total of 20.84 seconds.

## A.10.4 E-UTRAN FDD – Cell Identification on downlink frequency associated with ProSe frequency (when UE is transmitting for ProSe)

### A.10.4.1 Test Purpose and Environment

The purpose of this test is to verify cell identification delay requirement for a newly detectable cell on the downlink frequency associated with the pre-configured ProSe carrier frequency in Any Cell Selection state. This test will verify the requirements in clause 11.4 when the UE is transmitting for ProSe.

For this test, the UE is triggered by the test loop function or the upper layers to transmit for ProSe Direct Communication.

The test parameters are given in Table A. X.4.1-1, Table A. X.4.1-2, and Table A.10.4.1-2 below. There is one active cell (Cell 1) and active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit SLSS and MIB-SL every SLSS period (40ms).

The test consists of two successive time periods, with time duration of T1 and T2 respectively. During T1, the cell is powered OFF and the ProSe UE is synchronized to SyncRef UE 1. During T2, the cell is powered ON and the ProSe UE will detect the cell and attempt to camp on the cell.

Prior to start of test, test system is required to ensure that the ProSe UE is synchronized to the SyncRef UE 1 and is transmitting SLSS + MIB-SL as derived from the SLSS + MIB-SL of SyncRef UE 1 as per clause 5.10.7.3 of TS 36.331. For the test configuration, the SLSSID used by the ProSe UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE.

**Table A.10.4.1-1: Test parameters for cell identification test on on downlink frequency associated with ProSe frequency for E-UTRAN FDD (when UE is transmitting for ProSe)**

| Parameter                                   |                               | Unit | Value   | Comment   |
|---|-------------------------------|------|---|---|
| Initial condition                           | Active synchronization source |      | SyncRef UE 1  |   |
| Final condition                             | Active synchronization source |      | Cell 1  |   |

#### A.10.4.2 Test Requirements

The cell selection delay to a newly detectable cell on the downlink associated with the preconfigured ProSe carrier is defined as the time from the beginning of T2 to the time UE camps on the cell and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST.

The cell selection delay to a newly detectable cell on the downlink associated with the preconfigured ProSe carrier shall be less than 7.68 s.

The cell selection delay can be expressed as  $T_{\text{basic\_identify\_OoC\_ProSe Tx\_ON}} + T_{\text{SI}}$ , where

- $T_{\text{basic\_identify\_OoC\_ProSe Tx\_ON}} = 6.4\text{sec}$  as specified in sub-clause 11.4.2.2
- $T_{\text{SI}} = \text{Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case}$

This gives a total of 7.68 sec.

## Annex B (normative):

### Conditions for RRM requirements applicability for operating bands

#### B.1 Conditions for E-UTRAN RRC\_IDLE state mobility

##### B.1.1 Conditions for measurements of intra-frequency E-UTRAN cells for cell re-selection

This clause defines the E-UTRAN intra-frequency RSRP, RSRP  $\hat{E}_s/Iot$ , SCH\_RP and SCH  $\hat{E}_s/Iot$  applicable for a corresponding operating band.

The conditions for measurements of intra-frequency E-UTRAN cells for cell re-selection are defined in Table B.1.1-1.

**Table B.1.1-1: Conditions for measurements of intra-frequency E-UTRAN cells for cell re-selection**

| Parameter         | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sup>Note 1</sup> | Minimum SCH_RP <sup>Note 1</sup> | RSRP $\hat{E}_s/Iot$ | SCH $\hat{E}_s/Iot$ |

|                   | FDD_E, TDD_E                                   | -122                           | -122                             |                      |                     |
|                   | FDD_F  | -121.5 <sup>Note 2</sup>       | -121.5 <sup>Note 2</sup>         |                      |                     |
|                   | FDD_G  | -121                           | -121                             |                      |                     |
|                   | FDD_H  | -120.5                         | -120.5                           |                      |                     |
|                   | FDD_N  | -117.5                         | -117.5                           |                      |                     |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Section B.4.2.  
NOTE 2: The condition is -122 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

##### B.1.2 Conditions for measurements of inter-frequency E-UTRAN cells for cell re-selection

This clause defines the E-UTRAN inter-frequency RSRP, RSRP  $\hat{E}_s/Iot$ , SCH\_RP and SCH  $\hat{E}_s/Iot$  applicable for a corresponding operating band.

The conditions for measurements of intra-frequency E-UTRAN cells for cell re-selection defined in Table B.1.1-1 also apply for inter-frequency E-UTRAN cells in this section.

## B.2 Conditions for UE Measurements Procedures in RRC\_CONNECTED State

### B.2.1 Conditions for E-UTRAN intra-frequency measurements

This clause defines the E-UTRAN intra-frequency SCH\_RP and SCH  $\hat{E}_s/Iot$  applicable for a corresponding operating band.

The conditions for intra-frequency E-UTRAN measurements are defined in Table B.2.1-1.

Table B.2.1-1: E-UTRAN intra-frequency measurements

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum SCH_RP <sup>Note 1</sup> | SCH Ês/lot |
|------------|--|----------------------------------|------------|
|            |  | dBm/15kHz                        | dB         |
| Conditions | FDD_A, TDD_A                                   | -127                             | ≥ -6       |
|            | FDD_C, TDD_C                                   | -126                             |            |
|            | FDD_D  | -125.5                           |            |
|            | FDD_E, TDD_E                                   | -125                             |            |
|            | FDD_F  | -124.5 <sup>Note 2</sup>         |            |
|            | FDD_G  | -124                             |            |
|            | FDD_H  | -123.5                           |            |
|            | FDD_N  | -120.5                           |            |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2.  
NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

## B.2.2 Conditions for E-UTRAN intra-frequency measurements with autonomous gaps

This clause defines the E-UTRAN intra-frequency SCH\_RP and SCH Ês/lot applicable for a corresponding operating band.

The conditions for intra-frequency E-UTRAN measurements with autonomous gap are as in Table B.2.1-1.

Table B.2.2-1: Void

## B.2.3 Conditions for E-UTRAN inter-frequency measurements

This clause defines the E-UTRAN inter-frequency SCH\_RP, SCH Ês/lot, RSRP and RSRP Ês/lot applicable for a corresponding operating band.

The conditions for inter-frequency E-UTRAN measurements with autonomous gap are defined in Table B.2.3-1.

Table B.2.3-1: E-UTRAN inter-frequency measurements

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sup>Note 1</sup> | Minimum SCH_RP <sup>Note 1</sup> | RSRP Ês/lot | SCH Ês/lot |
|------------|--|--------------------------------|----------------------------------|-------------|------------|
|            |  | dBm/15kHz                      | dBm/15kHz                        | dB          | dB         |
| Conditions | FDD_A, TDD_A                                   | -125                           | -125                             | ≥ -4        | ≥ -4       |
|            | FDD_C, TDD_C                                   | -124                           | -124                             |             |            |
|            | FDD_D  | -123.5                         | -123.5                           |             |            |
|            | FDD_E, TDD_E                                   | -123                           | -123                             |             |            |
|            | FDD_F  | -122.5 <sup>Note 2</sup>       | -122.5 <sup>Note 2</sup>         |             |            |
|            | FDD_G  | -122                           | -122                             |             |            |
|            | FDD_H  | -121.5                         | -121.5                           |             |            |
|            | FDD_N  | -118.5                         | -118.5                           |             |            |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -123 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

## B.2.4 Conditions for E-UTRAN inter-frequency measurements with autonomous gaps

This clause defines the E-UTRAN inter-frequency SCH<sub>RP</sub> and SCH Ês/lot applicable for a corresponding operating band.

The conditions for inter-frequency E-UTRAN measurements with autonomous gap are defined in Table B.2.4-1.

**Table B.2.4-1: E-UTRAN inter-frequency measurements with autonomous gaps**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum SCH <sub>RP</sub> <sup>Note 1</sup> | SCH Ês/lot |
|--|--|---|------------|
|  |  | dBm/15kHz                                   | dB         |
| Conditions   | FDD_A, TDD_A                                   | -125  | ≥ -4       |
|  | FDD_C, TDD_C                                   | -124  |            |
|  | FDD_D  | -123.5                                      |            |
|  | FDD_E, TDD_E                                   | -123  |            |
|  | FDD_F  | -122.5 <sup>Note 2</sup>                    |            |
|  | FDD_G  | -122  |            |
|  | FDD_H  | -121.5                                      |            |
|  | FDD_N  | -118.5                                      |            |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |   |            |
| NOTE 2: The condition is -123 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |   |            |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |   |            |

## B.2.5 Conditions for E-UTRAN OTDOA intra-frequency RSTD Measurements

This clause defines the E-UTRAN intra-frequency PRP<sub>1,2</sub> applicable for a corresponding operating band

The conditions for E-UTRAN OTDOA intra-frequency RSTD measurements are defined in Table B.2.5-1

**Table B.2.5-1: E-UTRAN OTDOA intra-frequency RSTD measurements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum PRP <sub>1,2</sub> <sup>Note 1</sup> |
|--|--|--|
|  |  | dBm/15kHz                                    |
| Conditions   | FDD_A, TDD_A                                   | -127   |
|  | FDD_C, TDD_C                                   | -126   |
|  | FDD_D  | -125.5                                       |
|  | FDD_E, TDD_E                                   | -125   |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                     |
|  | FDD_G  | -124   |
|  | FDD_H  | -123.5                                       |
|  | FDD_N  | -120.5                                       |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |  |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |  |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |  |

## B.2.6 Conditions for E-UTRAN OTDOA inter-frequency RSTD Measurements

This clause defines the E-UTRAN inter-frequency PRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for E-UTRAN OTDOA inter-frequency RSTD measurements are defined in Table B.2.5-1.

## B.2.7 Conditions for Measurements of the secondary component carrier with deactivated SCell

This clause defines the SCH<sub>RP</sub> and SCH Ês/lot for measurements in the secondary component carrier applicable for a corresponding operating band.

The conditions for measurements of the secondary component carrier with deactivated SCell are defined in Table B.2.7-1.

**Table B.2.7-1: Measurements of the secondary component carrier with deactivated SCell**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum SCH <sub>RP</sub> <sup>Note 1</sup> | SCH Ês/lot |
|--|--|---|------------|
|  |  | dBm/15kHz                                   | dB         |
| Conditions   | FDD_A, TDD_A                                   | -127  | ≥ -6       |
|  | FDD_C, TDD_C                                   | -126  |            |
|  | FDD_D  | -125.5                                      |            |
|  | FDD_E, TDD_E                                   | -125  |            |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                    |            |
|  | FDD_G  | -124  |            |
|  | FDD_H  | -123.5                                      |            |
|  | FDD_N  | -120.5                                      |            |
| NOTE 1: This condition level is increased by Δ>0, when applicable, as described in Sections B.4.2 and B.4.3.                       |  |   |            |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |   |            |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |   |            |

## B.2.8 Conditions for E-UTRAN Intra-Frequency Measurements under Time Domain Measurement Resource Restriction

This clause defines the E-UTRAN intra-frequency SCH<sub>RP</sub> and SCH Ês/lot applicable for a corresponding operating band.

The conditions for intra-frequency E-UTRAN measurements under time domain measurement resource restriction are defined in Table B.2.8-1.

**Table B.2.8-1: E-UTRAN intra-frequency measurements under time domain measurement resource restriction**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum SCH <sub>RP</sub> <sup>Note 1</sup> | SCH Ês/lot |
|--|--|---|------------|
|  |  | dBm/15kHz                                   | dB         |
| Conditions   | FDD_A, TDD_A                                   | -127  | ≥ -7.5     |
|  | FDD_C, TDD_C                                   | -126  |            |
|  | FDD_D  | -125.5                                      |            |
|  | FDD_E, TDD_E                                   | -125  |            |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                    |            |
|  | FDD_G  | -124  |            |
|  | FDD_H  | -123.5                                      |            |
|  | FDD_N  | -120.5                                      |            |
| NOTE 1: This condition level is increased by Δ>0, when applicable, as described in Sections B.4.2 and B.4.3.                       |  |   |            |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |   |            |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |   |            |

## B.2.9 Conditions for E-UTRAN Intra-Frequency Measurements under Time Domain Measurement Resource Restriction with CRS Assistance Information

This clause defines the E-UTRAN intra-frequency SCH<sub>RP</sub> and SCH Ês/Iot applicable for a corresponding operating band.

The conditions for intra-frequency E-UTRAN measurements under time domain measurement resource restriction with CRS assistance information are defined in Table B.2.9-1.

**Table B.2.9-1: E-UTRAN intra-frequency measurements under time domain measurement resource restriction with CRS assistance information**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum SCH <sub>RP</sub> <sup>Note 1</sup> | SCH Ês/Iot |
|--|--|---|------------|
|  |  | dBm/15kHz                                   | dB         |
| Conditions   | FDD_A, TDD_A                                   | -127  | ≥ -11.07   |
|  | FDD_C, TDD_C                                   | -126  |            |
|  | FDD_D  | -125.5                                      |            |
|  | FDD_E, TDD_E                                   | -125  |            |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                    |            |
|  | FDD_G  | -124  |            |
|  | FDD_H  | -123.5                                      |            |
|  | FDD_N  | -120.5                                      |            |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |   |            |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |   |            |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |   |            |

## B.2.10 Conditions for E-UTRAN intra-frequency discovery signal measurements

### B.2.10.1 Conditions for E-UTRAN intra-frequency CRS-based measurements

This clause defines the E-UTRAN intra-frequency SCH<sub>RP</sub>, SCH Ês/Iot in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements

The conditions for E-UTRAN intra-frequency CRS based discovery signal measurements are as in Table B.2.1-1.

### B.2.10.2 Conditions for E-UTRAN intra-frequency CSI-RS based measurements

This clause defines the E-UTRAN intra-frequency SCH<sub>RP</sub>, SCH Ês/Iot, CSI-RSRP, and CSI-RS Ês/Iot in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for E-UTRAN intra-frequency CSI-RS based discovery signal measurements in discovery signal occasions are specified in Table B.2.10.2-1.

**Table B.2.10.2-1: E-UTRAN intra-frequency discovery signal measurements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum CSI-RSRP <sup>Note 1</sup> | Minimum SCH_RP <sup>Note 1</sup> | CSI-RS $\hat{E}_s/\text{lot}$ | SCH $\hat{E}_s/\text{lot}$ |
|------------|--|------------------------------------|----------------------------------|-------------------------------|----------------------------|
|            |  | dBm/15kHz                          | dBm/15kHz                        | dB                            | dB                         |
| Conditions | FDD_A, TDD_A                                   | -121                               | -127                             | ≥ 0                           | ≥ -6                       |
|            | FDD_B  | -120.5                             | -126.5                           |                               |                            |
|            | FDD_C, TDD_C                                   | -120                               | -126                             |                               |                            |
|            | FDD_D  | -119.5                             | -125.5                           |                               |                            |
|            | FDD_E, TDD_E                                   | -119                               | -125                             |                               |                            |
|            | FDD_F  | -118.5 <sup>Note 2</sup>           | -124.5 <sup>Note 2</sup>         |                               |                            |
|            | FDD_G  | -118                               | -124                             |                               |                            |
|            | FDD_H  | -117.5                             | -123.5                           |                               |                            |
|            | FDD_N  | -114.5                             | -120.5                           |                               |                            |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -123 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

## B.2.11 Conditions for E-UTRAN inter-frequency discovery signal measurements

### B.2.11.1 Conditions for E-UTRAN inter-frequency CRS-based measurements

This clause defines the E-UTRAN inter-frequency SCH\_RP, SCH  $\hat{E}_s/\text{lot}$ , RSRP, and  $\hat{E}_s/\text{lot}$  in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements.

The conditions for E-UTRAN inter-frequency CRS-based discovery signal measurements in discovery signal occasions are specified in Table B.2.11.1-1.

**Table B.2.11.1-1: E-UTRAN inter-frequency discovery signal measurements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sup>Note 1</sup> | Minimum SCH_RP <sup>Note 1</sup> | RSRP $\hat{E}_s/\text{lot}$ | SCH $\hat{E}_s/\text{lot}$ |
|------------|--|--------------------------------|----------------------------------|-----------------------------|----------------------------|
|            |  | dBm/15kHz                      | dBm/15kHz                        | dB                          | dB                         |
| Conditions | FDD_A, TDD_A                                   | -125                           | -125                             | ≥ -6                        | ≥ -6                       |
|            | FDD_C, TDD_C                                   | -124                           | -124                             |                             |                            |
|            | FDD_D  | -123.5                         | -123.5                           |                             |                            |
|            | FDD_E, TDD_E                                   | -123                           | -123                             |                             |                            |
|            | FDD_F  | -122.5 <sup>Note 2</sup>       | -122.5 <sup>Note 2</sup>         |                             |                            |
|            | FDD_G  | -122                           | -122                             |                             |                            |
|            | FDD_H  | -121.5                         | -121.5                           |                             |                            |
|            |  | FDD_N                          | -118.5                           |                             |                            |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -123 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

### B.2.11.2 Conditions for E-UTRAN inter-frequency CSI-RS based measurements

This clause defines the E-UTRAN inter-frequency SCH\_RP, SCH  $\hat{E}_s/\text{lot}$ , CSI-RSRP, and CSI-RS  $\hat{E}_s/\text{lot}$  in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for E-UTRAN inter-frequency CRS-based discovery signal measurements in discovery signal occasions are specified in Table B.2.11.2-1.

Table B.2.11.2-1: E-UTRAN inter-frequency discovery signal measurements

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum CSI-RSRP <sup>Note 1</sup> | Minimum SCH_RP <sup>Note 1</sup> | CSI-RS $\bar{E}_s/\text{lot}$ | SCH $\bar{E}_s/\text{lot}$ |
|------------|--|------------------------------------|----------------------------------|-------------------------------|----------------------------|
|            |  | dBm/15kHz                          | dBm/15kHz                        | dB                            | dB                         |
| Conditions | FDD_A, TDD_A                                   | -119                               | -125                             | $\geq 0$                      | $\geq -6$                  |
|            | FDD_C, TDD_C                                   | -118                               | -124                             |                               |                            |
|            | FDD_D  | -117.5                             | -123.5                           |                               |                            |
|            | FDD_E, TDD_E                                   | -117                               | -123                             |                               |                            |
|            | FDD_F  | -116.5 <sup>Note 2</sup>           | -122.5 <sup>Note 2</sup>         |                               |                            |
|            | FDD_G  | -116                               | -122                             |                               |                            |
|            | FDD_H  | -115.5                             | -121.5                           |                               |                            |
|            | FDD_N  | -112.5                             | -118.5                           |                               |                            |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -123 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

## B.3 Conditions for measurements performance requirements for UE

### B.3.1 Conditions for intra-frequency RSRP and RSRQ Accuracy Requirements

This clause defines the E-UTRAN intra-frequency RSRP applicable for a corresponding operating band.

The conditions for intra-frequency absolute RSRP and RSRQ accuracy requirements are defined in Table B.3.1-1.

Table B.3.1-1: Intra-frequency absolute RSRP and RSRQ Accuracy Requirements

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sup>Note 1</sup> |
|------------|--|--------------------------------|
|            |  | dBm/15kHz                      |
| Conditions | FDD_A, TDD_A                                   | -127                           |
|            | FDD_C, TDD_C                                   | -126                           |
|            | FDD_D  | -125.5                         |
|            | FDD_E, TDD_E                                   | -125                           |
|            | FDD_F  | -124.5 <sup>Note 2</sup>       |
|            | FDD_G  | -124                           |
|            | FDD_H  | -123.5                         |
|            | FDD_N  | -120.5                         |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.

### B.3.2 Void

### B.3.3 Conditions for inter-frequency RSRP and RSRQ Accuracy Requirements

This clause defines the E-UTRAN inter-frequency RSRP applicable for a corresponding operating band.

The conditions for inter-frequency absolute RSRP and RSRQ accuracy requirements are defined in Table B.3.1-1.

### B.3.4 Conditions for inter-frequency relative RSRP and RSRQ Accuracy Requirements

This clause defines the E-UTRAN inter-frequency RSRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for inter-frequency relative RSRP and RSRQ accuracy requirements are defined in Table B.3.8-1.

### B.3.5 Conditions for UE Rx – Tx time difference

This clause defines the E-UTRAN RSRP applicable for a corresponding operating band.

The conditions for UE Rx-Tx time difference are defined in Table B.3.1-1.

### B.3.6 Conditions for intra-frequency Reference Signal Time Difference (RSTD) measurements

This sections defines the E-UTRAN intra-frequency PRP applicable for a corresponding operating band.

The conditions for intra-frequency RSTD measurements are defined in Table B.2.5-1.

### B.3.7 Conditions for inter-frequency RSTD measurements

This sections defines the E-UTRAN inter-frequency PRP applicable for a corresponding operating band.

The conditions for inter-frequency RSTD measurements are defined in Table B.2.5-1.

### B.3.8 Conditions for Intra-Frequency Relative RSRP Accuracy Requirements

This clause defines the E-UTRAN intra-frequency RSRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for intra-frequency relative RSRP accuracy requirements are specified in Table B.3.8-1.

**Table B.3.8-1: Intra-frequency relative RSRP accuracy requirements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sub>1,2</sub> <sup>Note 1</sup> |
|--|--|---|
|  |  | <b>dBm/15kHz</b>                              |
| Conditions   | FDD_A, TDD_A                                   | -127  |
|  | FDD_C, TDD_C                                   | -126  |
|  | FDD_D  | -125.5  |
|  | FDD_E, TDD_E                                   | -125  |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                      |
|  | FDD_G  | -124  |
|  | FDD_H  | -123.5  |
|  | FDD_N  | -120.5  |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |   |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |   |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |   |

### **B.3.9 Conditions for Intra-Frequency Absolute RSRP and RSRQ Accuracy Requirements under Time Domain Measurement Resource Restriction**

This clause defines the E-UTRAN intra-frequency RSRP applicable for a corresponding operating band.

The conditions for intra-frequency absolute RSRP and RSRQ accuracy requirements under time domain measurement resource restriction are as specified in Table B.3.1-1.

### **B.3.10 Conditions for Intra-Frequency Relative RSRP Accuracy Requirements under Time Domain Measurement Resource Restriction**

This clause defines the E-UTRAN intra-frequency RSRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for intra-frequency relative RSRP accuracy requirements under time domain measurement resource restriction are defined in Table B.3.8-1.

### **B.3.11 Conditions for Intra-Frequency Absolute RSRP and RSRQ Accuracy Requirements under Time Domain Measurement Resource Restriction with CRS Assistance Information**

This clause defines the E-UTRAN intra-frequency RSRP applicable for a corresponding operating band.

The conditions for intra-frequency absolute RSRP and RSRQ accuracy requirements under time domain measurement resource restriction with CRS assistance information are as specified in Table B.3.1-1.

### **B.3.12 Conditions for Intra-Frequency Relative RSRP Accuracy Requirements under Time Domain Measurement Resource Restriction with CRS Assistance Information**

This clause defines the E-UTRAN intra-frequency RSRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for intra-frequency relative RSRP accuracy requirements under time domain measurement resource restriction with CRS assistance information are as specified in Table B.3.8-1.

### **B.3.13 Conditions for UE Rx–Tx Time Difference Measurement under Time Domain Measurement Resource Restriction with CRS Assistance Information**

This clause defines the E-UTRAN RSRP applicable for a corresponding operating band.

The conditions for UE Rx-Tx time difference measurements, when time domain measurement resource restriction pattern and CRS assistance information are provided, are as defined in Table B.3.1-1.

## B.3.14 Conditions for Intra-Frequency Absolute Discovery Signal Measurement Accuracy Requirements

### B.3.14.1 Conditions for Intra-frequency CRS-based measurements

This clause defines the intra-frequency RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements.

The conditions for intra-frequency absolute RSRP and RSRQ accuracy requirements for CRS-based discovery signal measurements in discovery signal occasions are as in Table B.3.1-1

### B.3.14.2 Conditions for Intra-frequency CSI-RS-based measurements

This clause defines the intra-frequency CSI-RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for intra-frequency absolute CSI-RSRP accuracy requirements for CSI-RS-based discovery signal measurements in discovery signal occasions are specified in Table B.3.14.2-1

**Table B.3.14.2-1: Intra-frequency Absolute CSI-RSRP Accuracy Requirements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum CSI-RSRP <sup>Note 1</sup> |
|--|--|------------------------------------|
|  |  | dBm/15kHz                          |
| Conditions   | FDD_A, TDD_A                                   | -127                               |
|  | FDD_C, TDD_C                                   | -126                               |
|  | FDD_D  | -125.5                             |
|  | FDD_E, TDD_E                                   | -125                               |
|  | FDD_F  | -124.5 <sup>Note 2</sup>           |
|  | FDD_G  | -124                               |
|  | FDD_H  | -123.5                             |
|  | FDD_N  | -120.5                             |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |                                    |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |                                    |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |                                    |

## B.3.15 Conditions for Intra-Frequency Relative Discovery Signal Measurement Accuracy Requirements

### B.3.15.1 Conditions for Intra-frequency CRS-based measurements

This clause defines the intra-frequency RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements.

The conditions for intra-frequency relative RSRP accuracy requirements for CRS-based discovery signal measurements in discovery signal occasions are as in Table B.3.8-1

### B.3.15.2 Conditions for Intra-frequency CSI-RS-based measurements

This clause defines the intra-frequency CSI-RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for intra-frequency relative CSI-RSRP accuracy requirements for CSI-RS-based discovery signal measurements in discovery signal occasions are specified in Table B.3.15.2-1

**Table B.3.15.2-1: Intra-frequency Relative CSI-RSRP Accuracy Requirements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum CSI-RSRP <sub>1,2</sub> <sup>Note 1</sup><br>dBm/15kHz |
|--|--|--|
| Conditions   | FDD_A, TDD_A                                   | -127   |
|  | FDD_C, TDD_C                                   | -126   |
|  | FDD_D  | -125.5   |
|  | FDD_E, TDD_E                                   | -125   |
|  | FDD_F  | -124.5 <sup>Note 2</sup>                                       |
|  | FDD_G  | -124   |
|  | FDD_H  | -123.5   |
|  | FDD_N  | -120.5   |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.             |  |  |
| NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz. |  |  |
| NOTE 3: E-UTRA operating band groups are as defined in Section 3.5.  |  |  |

## B.3.16 Conditions for Inter-Frequency Absolute Discovery Signal Measurement Accuracy Requirements

### B.3.16.1 Conditions for Inter-frequency CRS-based measurements

This clause defines the inter-frequency RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements.

The conditions for inter-frequency absolute RSRP and RSRQ accuracy requirements for CRS-based discovery signal measurements in discovery signal occasions are as in Table B.3.1-1

### B.3.16.2 Conditions for Inter-frequency CSI-RS-based measurements

This clause defines the inter-frequency CSI-RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for inter-frequency absolute CSI-RSRP accuracy requirements for CSI-RS-based discovery signal measurements in discovery signal occasions are as in Table B.3.14.2-1.

## B.3.17 Conditions for Inter-Frequency Relative Discovery Signal Measurement Accuracy Requirements

### B.3.17.1 Conditions for Inter-frequency CRS-based measurements

This clause defines the inter-frequency RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CRS based discovery signal measurements.

The conditions for inter-frequency relative RSRP and RSRQ accuracy requirements for CRS-based discovery signal measurements in discovery signal occasions are as in Table B.3.8-1

### B.3.17.2 Conditions for Inter-frequency CSI-RS-based measurements

This clause defines the inter-frequency CSI-RSRP in discovery signal occasions [16], applicable for a corresponding operating band for CSI-RS based discovery signal measurements.

The conditions for inter-frequency relative CSI-RSRP accuracy requirements for CSI-RS-based discovery signal measurements in discovery signal occasions are as in Table B.3.15.2-1.

## B.3.18 Conditions for intra-frequency RSRP and RSRQ Accuracy Requirements for Category 0

This clause defines the E-UTRAN intra-frequency RSRP applicable for a corresponding operating band. The UE category 0 applicability of the conditions in Appendix B.3.18 is defined in Section 3.1.

The conditions for intra-frequency absolute RSRP and RSRQ accuracy requirements are defined in Table B.3.18-1.

**Table B.3.18-1: Intra-frequency absolute RSRP and RSRQ Accuracy Requirements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sup>Note 1</sup> |
|------------|--|--------------------------------|
|            |  | dBm/15kHz                      |
| Conditions | FDD-0_A, TDD-0_A                               | -127                           |
|            | FDD-0_E, TDD-0_E                               | -125                           |
|            | FDD-0_G  | -124                           |

## B.3.19 Conditions for Intra-Frequency Relative RSRP Accuracy Requirements for Category 0

This clause defines the E-UTRAN intra-frequency RSRP<sub>1,2</sub> applicable for a corresponding operating band. The UE category 0 applicability of the conditions in Appendix B.3.19 is defined in Section 3.1.

The conditions for intra-frequency relative RSRP accuracy requirements are specified in Table B.3.19-1.

**Table B.3.19-1: Intra-frequency relative RSRP accuracy requirements**

| Parameter  | E-UTRA operating band groups <sup>Note 3</sup> | Minimum RSRP <sub>1,2</sub> <sup>Note 1</sup> |
|------------|--|---|
|            |  | dBm/15kHz                                     |
| Conditions | FDD-0_A, TDD-0_A                               | -127  |
|            | FDD-0_E, TDD-0_E                               | -125  |
|            | FDD-0_G  | -124  |

---

## B.4 RRM Requirements Exceptions

### B.4.1 General

### B.4.2 Receiver sensitivity relaxation for UE supporting CA

For a UE supporting inter-band carrier aggregation configuration with uplink in one E-UTRA band, if there is a relaxation of receiver sensitivity  $\Delta R_{IB,c} > 0$  dB as defined in TS 36.101 [5], Table 7.3.1-1A, the relevant side conditions specifying received power levels (E-UTRA RSRP, SCH\_RP, PRP, CSI-RSRP, and  $I_o$ ) shall be increased by the amount  $\Delta = \Delta R_{IB,c}$  defined for each of the downlink E-UTRA bands.

**NOTE:** This side condition adjustment applies only for a UE supporting a single inter-band LTE CA band combination. For a UE supporting additional inter-band LTE CA band combinations, the  $\Delta R_{IB,c}$  for all bands supported by the UE, need to be studied [5].

## B.4.3 Receiver sensitivity relaxation for UE configured with CA

### B.4.3.1 Inter-band carrier aggregation

In this section, requirements exceptions are described for the UE configured with inter-band carrier aggregation with one uplink active in low operating band.

A relevant side condition (e.g., E-UTRA RSRP, SCH\_RP, PRP, CSI-RSRP, and Io) in a requirement shall be increased by the amount  $\Delta=L2-L1$ , where L1 is the reference sensitivity level specified in 36.101, Table 7.3.1-1, and L2 is the reference sensitivity level specified in 36.101, Table 7.3.1A-0a, when the following conditions are fulfilled,

- both downlink component carriers on different bands are configured with CA and active,
- the single uplink is active in the low operating band,
- the exception requirements specified in TS36.101, Table 7.3.1A-0a, apply.

If the relaxation  $\Delta$  specified in this section applies, then the relaxation specified in Section B.4.2 should not be applied.

### B.4.3.2 Intra-band non-contiguous carrier aggregation

For a UE configured with intra-band non-contiguous carrier aggregation configuration with uplink in one E-UTRA band, if there is a relaxation of receiver sensitivity  $\Delta R_{IBNC}>0$  as defined in TS 36.101 [5], Table 7.3.1A-3, the relevant side conditions specifying received power levels (E-UTRA RSRP, SCH\_RP, PRP, CSI-RSRP, and Io) shall be increased by the amount  $\Delta=\Delta R_{IBNC}$  defined for the downlink SCC, when the following conditions are fulfilled,

- both downlink component carriers are configured with CA and active,
- one uplink carrier is active,
- the exception requirements specified in TS36.101, Table 7.3.1A-3, apply.

If the relaxation  $\Delta$  specified in this section applies, then the relaxation specified in Section B.4.2 should not be applied.

### B.4.3.3 Inter-band carrier aggregation with operating bands without uplink band

In this section, requirements are described for the UE configured with inter-band carrier aggregation involving one operating band without uplink band.

There is no relaxation in relevant side condition (e.g., E-UTRA RSRP, SCH\_RP, PRP, CSI-RSRP, and Io) in a requirement, i.e.,  $\Delta=0$ , when the following conditions are fulfilled,

- both downlink component carriers on different bands are configured with CA and active,
- the single uplink is active in the high operating band,
- conditions specified in TS36.101, Table 7.3.1A-0d, apply.

If  $\Delta$  specified in this section applies, then no other additional relaxation to REFSSENS shall be applied.

---

## B.5 Conditions for Measurement Performance Requirements for ProSe UE in Any Cell Selection State State

### B.5.1 Conditions for S-RSRP Accuracy Requirements

This clause defines the S-RSRP applicable for a corresponding operating band.

The conditions for absolute S-RSRP accuracy requirements are defined in Table B.5.1-1.

**Table B.5.1-1: Absolute S-RSRP Requirements**

| Parameter | E-UTRA ProSe operating band groups <sup>Note 3</sup> | Minimum S-RSRP <sup>Note 1</sup> |
|-----------|--|----------------------------------|
|           |  | dBm/15kHz                        |
|           | FDD_D  | -125.5                           |
|           | FDD_E  | -125                             |
|           | FDD_F  | -124.5 <sup>Note 2</sup>         |
|           | FDD_G  | -124                             |
|           | FDD_N  | -120.5                           |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA ProSe operating band groups are as defined in Section 3.5 for the corresponding E-UTRA operating bands.

## B.5.2 Conditions for Relative S-RSRP Accuracy Requirements

This clause defines the S-RSRP<sub>1,2</sub> applicable for a corresponding operating band.

The conditions for relative S-RSRP accuracy requirements are specified in Table B.5.2-1.

**Table B.5.2-1: Relative S-RSRP accuracy requirements**

| Parameter | E-UTRA ProSe operating band groups <sup>Note 3</sup> | Minimum S-RSRP <sub>1,2</sub> <sup>Note 1</sup> |
|-----------|--|---|
|           |  | dBm/15kHz                                       |
|           | FDD_D  | -125.5  |
|           | FDD_E  | -125  |
|           | FDD_F  | -124.5 <sup>Note 2</sup>                        |
|           | FDD_G  | -124  |
|           | FDD_N  | -120.5  |

NOTE 1: This condition level is increased by  $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.  
NOTE 2: The condition is -125 dBm/15kHz when the carrier frequency of the assigned E-UTRA channel bandwidth is within 865-894 MHz.  
NOTE 3: E-UTRA ProSe operating band groups are as defined in Section 3.5 for the corresponding E-UTRA operating bands.

## B.5.3 Conditions for Selection/Reselection to Intra-frequency SyncRef UE

This clause defines the ProSe SCH<sub>RP</sub> and SCH<sub>Ês/Iot</sub> applicable for a corresponding operating band.

The conditions for selection/reselection to intra-frequency SyncRef UE are defined in Table B.5.3-1.

Table B.5.3-1: ProSe synchronization measurements

| Parameter   | E-UTRA ProSe operating band groups <sup>Note 2</sup> | Minimum ProSe SCH_RP <sub>Note 1</sub> | ProSe SCH $\hat{E}_s/\text{lot}$ <sup>Note 3</sup> |
|---|--|--|--|
|   |  | dBm/15kHz                              | dB   |
|   | FDD_D  | -125.5                                 | ≥ -4   |
|   | FDD_E  | -125                                   |  |
|   | FDD_F  | -124.5                                 |  |
|   | FDD_G  | -124                                   |  |
|   | FDD_N  | -120.5                                 |  |
| NOTE 1: This condition level is increased by $\Delta > 0$ , when applicable, as described in Sections B.4.2 and B.4.3.                                      |  |  |  |
| NOTE 2: E-UTRA ProSe operating band groups are as defined in Section 3.5 for the corresponding E-UTRA operating bands.                                      |  |  |  |
| NOTE 3: ProSe SCH $\hat{E}_s/\text{lot}$ for a SyncRef UE is the minimum of the $\hat{E}_s/\text{lot}$ of PSSS/PSBCH and the $\hat{E}_s/\text{lot}$ of SSSS |  |  |  |

## Annex C (informative): Change history:

| Date    | Meeting | TDoc      | CR  | Rev | Cat | Subject/Comment  | New version |
