

# ETSI TS 136 523-3 V13.1.0 (2017-03)

**LTE;  
Evolved Universal Terrestrial Radio Access (E-UTRA) and  
Evolved Packet Core (EPC);  
User Equipment (UE) conformance specification;  
Part 3: Test suites  
(3GPP TS 36.523-3 version 13.1.0 Release 13)**

## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

---

## Foreword

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

---

## Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

7	E-UTRAN/SAE Test Methods and Design Considerations .....	96

7.1	Channel Mapping .....	96
7.1.1	PDCCH Candidate Selection .....	96
7.1.1.1	FDD candidates selection.....	97
7.1.1.2	TDD candidates selection .....	101
7.1.1.2.1	TDD candidates selection in special subframes .....	104
7.1.2	ePDCCH Candidate Selection .....	104
7.1.2.1	FDD candidates selection.....	104
7.1.2.2	TDD candidates selection .....	105
7.1.3	MPDCCH Candidate Selection.....	105
7.2	Uplink Grant.....	106
7.2.1	Exception TC list.....	109
7.3	Downlink Resource Allocation .....	109
7.3.1	PDCCH DCI default formats.....	110
7.3.1.1	Default DCI Format to be used in test cases configuring MIMO.....	110
7.3.2	Radio parameters configured .....	110
7.3.2.1	HARQ Retransmission when MIMO is configured.....	111
7.3.3	General DL scheduling scheme .....	111
7.3.3.1	Additional rules for BCCH scheduling scheme .....	111
7.3.3.1.1	BCCH with DCI combination 1 .....	112
7.3.3.1.2	BCCH with DCI combination 2 .....	112
7.3.3.2	Additional rules for PCCH specific scheduling scheme .....	112
7.3.3.2.1	PCCH with DCI combination 1.....	112
7.3.3.2.2	PCCH with DCI combination 2.....	112
7.3.3.3	Additional rules for RAR specific scheduling scheme.....	113
7.3.3.3.1	RAR with DCI combination 1 .....	113
7.3.3.3.2	RAR with DCI combination 2 .....	113
7.3.3.4	Additional rules for UE-dedicated scheduling scheme in normal mode .....	113
7.3.3.5	DL Resource allocation bitmaps .....	115
7.3.3.5.1	DCI combination 1 .....	115
7.3.3.5.2	DCI combination 2 .....	117
7.3.3.6	UE-dedicated scheduling scheme in explicit mode.....	120
7.3.3.6.1	DL Scheduling in Transport Block Size Selection Test Cases .....	121
7.3.3.7	Resource allocation sheets .....	121
7.3.3.8	MPDCCH DL DCI formats .....	122
7.3.3.8.1	BCCH .....	122
7.3.3.8.2	PCCH .....	123
7.3.3.8.3	RAR.....	123
7.3.3.8.4	UE-dedicated scheduling.....	123
7.3.3.9	DL Resource allocation bitmaps for BL/CE UE .....	124
7.3.3.9.1	DCI combination 1 .....	124
7.4	Cell Configurations .....	125
7.4.1	Cell Configuration Types.....	125
7.4.2	Cell Power Change .....	126
7.4.3	E-UTRAN cell identity .....	126
7.4.3.1	Timing parameters of cells.....	126
7.4.4	Cell configurations for NAS test cases .....	128
7.4.5	Configuration of Multi-Cell Environment .....	128
7.5	TDD Considerations.....	129
7.5.1	FDD vs. TDD implementation.....	129
7.5.2	Guideline for FDD vs. TDD verification .....	129
7.6	Special RLC Modes.....	129
7.6.1	Suppression of RLC Acknowledgements .....	129
7.6.2	Modification of VT(S).....	129
7.7	System information .....	130
7.7.1	System information broadcasting .....	130
7.7.2	Scheduling information.....	130
7.7.2a	Scheduling information for BR System information .....	133
7.7.3	System information modification .....	138
7.7.3.1	Non-PWS System Information modification .....	138
7.7.3.1.1	UE in Idle_mode.....	138
7.7.3.1.2	UE in connected mode.....	139
7.7.3.2	PWS System Information modification .....	140

7.8	Timers and Timing Restrictions .....	140
7.8.1	Auxiliary timers .....	140
7.8.2	RRC timers reconfiguration .....	141
7.8.3	MAC TA timer reconfiguration .....	141
7.8.4	Non-protocol timers .....	141
7.9	Error Indication .....	141
7.10	Race Conditions .....	141
7.11	Radio Link Failure .....	142
7.12	Test method for RRC signalling latency .....	142
7.12.1	Procedure delays in PUCCH synchronized state .....	142
7.12.2	Procedure delays when RACH procedure required .....	143
7.13	RLC test method for scheduled data .....	144
7.14	IP packets for Loopback Mode .....	145
7.14.1	IP packets used for Loopback Mode A .....	145
7.14.2	IP packets used for Loopback Mode B .....	145
7.15	Connected Mode DRX .....	145
7.16	Handover Sequences .....	147
7.16.1	Sequence of inter-cell handover .....	147
7.16.1a	Sequence of inter-cell CA handover (more than one CC before and after handover) .....	148
7.16.2	Sequence of intra-cell handover .....	149
7.16.3	UL Grants used in RA procedure during handover .....	150
7.17	Simulation of PDCP MAC-I Failure in UE .....	150
7.17.1	Integrity and ciphering not yet activated .....	150
7.17.2	Integrity and/or ciphering already activated .....	151
7.18	RRC Connection Release Sequence .....	151
7.19	DL CCCH Message and Contention Resolution MAC Control Element transmission in one MAC PDU or in separate MAC PDUs .....	151
7.20	RRC Connection Reconfiguration Sequence (Measurement Control) .....	152
7.21	Inter-RAT - GERAN special issues .....	152
7.21.1	Timeslot assigned for GERAN CS traffic .....	152
7.21.2	Subchannel used in GERAN L2 access message .....	152
7.21.3	Paging in GERAN .....	152
7.22	EUTRAN RSRQ Calculations .....	153
7.22.1	Assumptions .....	153
7.22.2	The Ideal Calculation .....	153
7.22.3	Additional RSRQ Calculations For Fixing Boundary Values .....	153
7.23	Test method for eICIC and feICIC .....	154
7.24	Carrier Aggregation Signalling Sequences .....	154
7.24.1	Initial configuration of Pcell .....	154
7.24.2	Initial configuration of SCell .....	155
7.24.3	Scell Addition and/or release .....	156
7.25	Test method for MBMS .....	156
7.25.1	Schedule transmission of MCCH messages .....	156
7.25.2	MCCH change notification .....	157
7.25.3	MTCH data scheduling .....	157
7.26	Type B FDD Half-Duplex Considerations .....	157
7.27	Test method for Device-to-Device Proximity Services .....	158
7.27.1	Direct Discovery test method .....	158
7.27.2	Direct Communication test method .....	158
7.27.2.1	Synchronisation and SBCCCH transmission .....	158
7.27.2.2	Sidelink data transmission/reception .....	159
7.28	Test method for SC-PTM .....	159
7.28.1	Schedule transmission of SC-MCCH messages .....	159
7.28.2	SC-MCCH information change .....	160
7.28.3	SC-MTCH data scheduling .....	160

# Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# Introduction

The present document is part 3 of a multi-part conformance test specification for the 3GPP evolved User Equipment (UE). The specification contains a TTCN-3 design frame work and the detailed test specifications in TTCN-3 for evolved UE at the UE-E-UTRAN radio interface.

- 3GPP TS 36.523-1 [1]: "User Equipment (UE) conformance specification; Part 1: Protocol conformance specification".
- 3GPP TS 36.523-2 [2]: "User Equipment (UE) conformance specification; Part 2: Implementation Conformance Statement (ICS) proforma specification".
- **3GPP TS 36.523-3: "Test Suites"** (the present document).

---

# 1 Scope

The present document specifies the protocol and signalling conformance testing in TTCN-3 for the 3GPP UE at the UE-E-UTRAN radio interface.

The following TTCN test specification and design considerations can be found in the present document:

- the test system architecture;
- the overall test suite structure;
- the test models and ASP definitions;
- the test methods and usage of communication ports definitions;
- the test configurations;
- the design principles and assumptions;
- TTCN styles and conventions;
- the partial PIXIT proforma;
- the test suites.

The Abstract Test Suites designed in the document are based on the test cases specified in prose (3GPP TS 36.523-1 [1]). The applicability of the individual test cases is specified in the test ICS proforma specification (3GPP TS 36.523-2 [1]).

The present document is valid for TTCN development for LTE, LTE-Advanced and LTE-Advanced Pro (including NB-IoT) UE conformance test according to 3GPP Releases starting from Release 8 up to the Release indicated on the cover page of the present document.

In the remainder of the present document, unless explicitly stated otherwise, the term E-UTRA(N) implicitly refers to the Wideband part of E-UTRA(N) known as WB-E-UTRA(N). The Narrowband part of E-UTRA(N) is always explicitly referred to as NB-IoT.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document unless the context in which the reference is made suggests a different Release is relevant (information on the applicable release in a particular context can be found in e.g. test case title, description or applicability, message description or content).

## 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [26] apply.

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [26] apply.

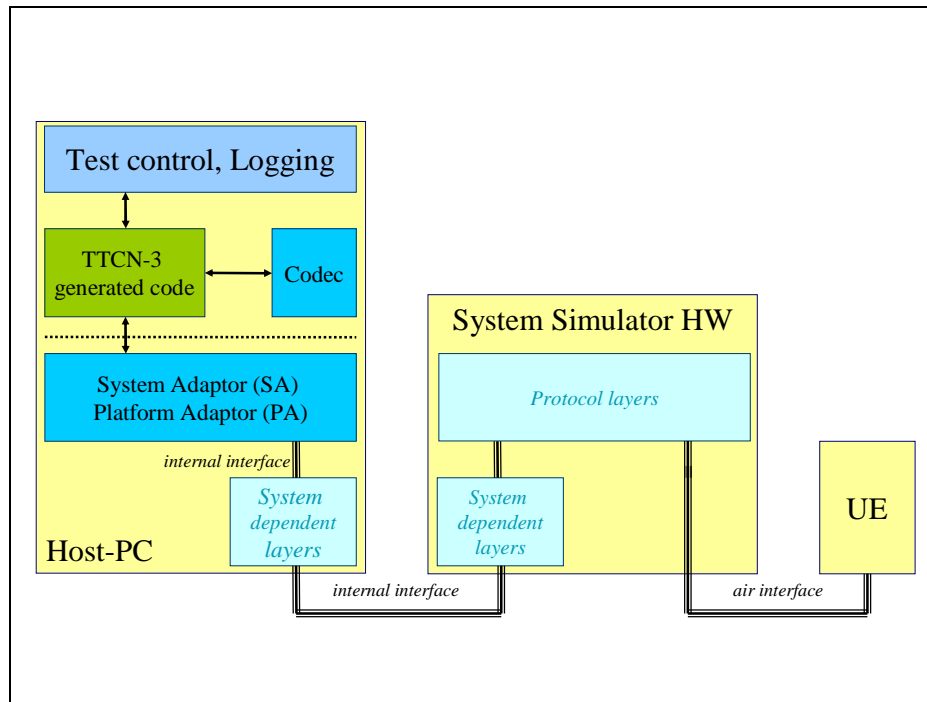

---

## 4 E-UTRAN/SAE system architecture and test models

### 4.1 Test system architecture

#### 4.1.1 General system architecture

The general system architecture is shown in figure 4.1.1-1.

**Figure 4.1.1-1: Architecture of system simulator**

The scope of the present document is the TTCN-3 implementation of conformance tests. Specifications and definitions of the present document affect the codec and the system adaptor (SA). Test control and logging are out of scope as well as the interface between the TTCN-3 generated code and the system adaptor which can be either standardised TRI or proprietary.

The main assumptions regarding the system architecture are:

- TTCN-3 code runs on the host system only:
- No TTCN-3 components are downloaded to system simulator HW.
- Layer 2 tests (MAC, RLC) are controlled by appropriate configuration primitives in TTCN-3 but neither layer 2 nor parts of it are implemented in TTCN-3; the system simulator performs low layer procedure autonomously but all system simulator implementations shall result in the same test pattern at the air interface.
- Proprietary interfaces e.g. instead of the TRI are not considered in the test model.
- The timing considerations of the conformance tests shall be supported by appropriate timing information (e.g. system frame number) provided from/to the system simulator rather than by timing measurements in TTCN-3.

#### 4.1.2 Component architecture

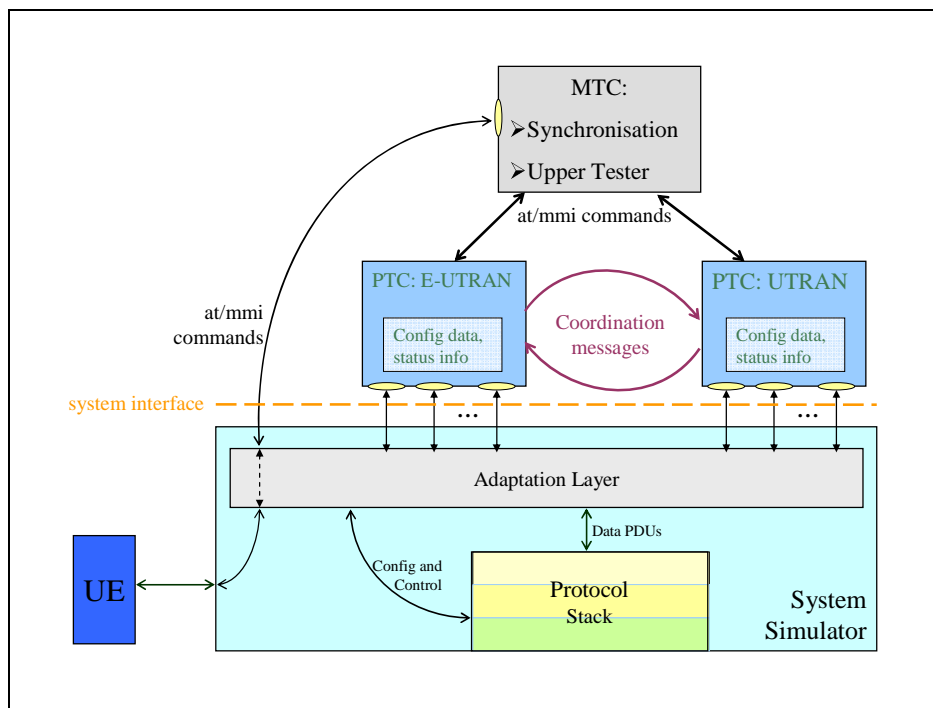

For E-UTRAN conformance tests each access technology (RAT) is hosted by a separate TTCN-3 parallel component (PTC):

- E-UTRAN.
- UTRAN.
- GERAN.
- Other technologies like 3GPP2 UTRAN.

The PTCs are controlled by the TTCN-3 master test component (MTC) which:

- is independent from the RAT;
- may host the upper tester for MMI and AT commands;
- creates, synchronises and terminates the PTCs;
- starts and terminates test cases.

Figure 4.1.2-1 shows this component architecture for a E-UTRAN and UTRAN scenario.

**Figure 4.1.2-1: E-UTRAN-UTRAN component model**

According to this model there are different interfaces to be considered:

**MTC - PTC:**

- common synchronisation of PTCs;
- upper tester primitives.

**MTC - System Interface:**

- upper tester primitives.

**PTC - PTC:**

- primitives containing information for IRAT handover.

**PTC - System Interface:**

- primitives containing peer-to-peer message;
- configuration primitives.

## 4.2 E-UTRAN test models

### 4.2.1 Layer 2 test models

When test loop mode is used for the Layer 2 tests the DRB ports at the SS side is referred to the raw DRB ones. At the SS side, DRBs are initially configured with default modes and parameters. For the purpose of L2-testing the DRBs may be reconfigured later on as indicated in the subsequent test models (see below).

#### 4.2.1.1 MAC test model

Figure 4.2.1.1-1: Test model for MAC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since Mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side, Layer 1 is configured in the normal way. MAC is configured in a special mode, where it does not add any MAC headers in DL and /or not remove any MAC headers in UL directions respectively at DRB port. In this case, the TTCN shall provide the final PDU, including padding. Except for this, the MAC layer shall perform all of its other functions.

On DRBs the RLC is configured in transparent mode. Hence with this configuration PDU's out of SS RLC are same as the SDU's in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

There are two different test modes in which MAC header addition/removal can be configured:

DL/UL header-transparent mode: no header addition in DL and no header removal in UL.

DL only header-transparent mode: no header addition in DL; UL MAC is configured in normal mode to remove MAC header and dispatch the MAC SDUs according to the logical channel Ids.

If SS MAC is configured in DL/UL header-transparent mode, the PDU's exchanged at the DRB port between TTCN and SS, shall be the final MAC PDU's consisting of MAC, RLC and PDCP headers. TTCN code shall take care in DL of building MAC header, RLC headers and PDCP headers and in UL handle MAC, RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. During testing of multiple DRBs at the UE side, it shall still be possible to configure only one DRB on SS side with configuration in the figure 4.2.1.1-1. Other DRBs will not be configured, to facilitate routing UL TBSs. Multiplexing/de-multiplexing of PDUs meant/from different DRBs shall be performed in TTCN. Since the MAC layer does not evaluate the MAC headers in UL it cannot distinguish between SRB and DRB data in UL. Therefore there shall be no SRB traffic while MAC is configured in this test mode. The SS MAC shall take care of automatic repetitions in UL and DL, based on normal MAC HARQ behaviour.

If SS MAC is configured in DL only header-transparent mode, the UL PDUs exchanged at the DRB port between TTCN and SS, shall be final RLC PDUs consisting of RLC and PDCP headers. SS shall route these PDUs based on logical channel IDs. In DL, TTCN sends fully encoded MAC PDUs at the DRB port (consisting of MAC, RLC and PDCP headers). In this case TTCN needs to take care of maintaining sequence numbers and state variables for RLC and PDCP layers. Furthermore in UL and DL the SS MAC layer shall be capable of dealing with SRB data (i.e. it shall handle DL RLC PDUs coming from SRBs RLC layer or dispatch UL RLC PDUs to SRBs) as in normal mode. The SS MAC shall take care of automatic repetitions in UL and DL, based on normal MAC HARQ behaviour.

NOTE: TTCN shall ensure that no DL MAC SDUs in normal mode and DL MAC PDUs in test mode are mixed for the same TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured. In a similar way the reception of RACH preambles is reported by SS over the same port.

## 4.2.1.2 RLC test model

Figure 4.2.1.2.3-1: Test model for RLC AM/UM testing

This model is suitable for testing both UM/AM mode of operation of DRBs on UE side.

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side, L1 and MAC are configured in the normal way. The RLC is configured in transparent mode. Hence with this configuration PDUs out of SS RLC are same as the SDUs in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

The PDUs exchanged between TTCN and SS, shall be the final RLC PDUs consisting of RLC and PDCP headers. TTCN code shall take care in DL of building RLC headers and PDCP headers and in UL handle RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. If RLC on UE side is in AM mode, TTCN shall take care of generating polls in DL and responding with RLC control PDUs on reception of UL Poll.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port.

4.2.1.3 PDCP test model

4.2.1.3.1 PDCP ROHC test model

Figure 4.2.1.3.1-1: Test model for PDCP ROHC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled and ROHC is configured.

On the SS Side L1, MAC and RLC are configured in normal way. They shall perform all of their functions. The ports are above PDCP.

The PDCP is configured in special mode, with no header manipulation. Ciphering is configured in both directions. ROHC is configured in DL direction only. UL ROHC feedback can be injected by control ASP. It shall be possible to configure 'no header manipulation' mode independently in UL and DL directions. When configured in special mode, SS shall not add PDCP header (DL) and remove PDCP Header (UL). PDCP state variables shall be maintained by SS PDCP layer. It shall be possible for SS PDCP to update state variables based on the PDU's in both directions, even though headers are not added/removed. Also, it shall be possible to read or set the PDCP internal state variables, by control primitives.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

4.2.1.3.2 PDCP test model (Non ROHC)

Figure 4.2.1.3.2-1: Test model for PDCP (Non ROHC) testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Cipherring is enabled and ROHC is not configured.

On the SS Side L1, MAC and RLC are configured in normal way. They shall perform all of their functions. The ports are above PDCP.

The PDCP is configured in a special mode, named transparent mode. In this mode, SS shall not add PDCP header (DL) and remove PDCP Header (UL). The TTCN maintains sequence numbers and state variables for the PDCP layer. The TTCN makes use of the AS cipherring functionality in both directions, employing the dummy cipherring algorithm. Cipherring/decipherring are performed using TTCN external functions. ROHC is not configured.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

### 4.2.2 RRC test model

**Figure 4.2.2-1: Test model for RRC testing**

The UE is configured in normal mode. On UE side Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured.

On the SS Side L1, MAC, RLC and PDCP are configured in normal way. They shall perform all of their functions. For SRB0 the DL and UL port is above RLC. For SRB1 and SRB2 the port is above/below the RRC and NAS emulator, which may be implemented as a parallel test component. For DRB, the port is above PDCP. PDCP Ciphering/Integrity is enabled. NAS integrity/Ciphering is enabled.

The RRC/NAS emulator for SRB1 and SRB2 shall provide the Ciphering and integrity functionality for the NAS messages. In UL direction, SS shall report RRC messages, still containing (where appropriate) the secure and encoded NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

### 4.2.3 DRB test model

Figure 4.2.3-1: Test model for DRB testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. Ciphering is optionally configured on UE side. In TTCN the DRB data is considered as raw data and there is no IP handling while the UE is in loopback mode.

On the SS Side L1, MAC, RLC and PDCP are configured in normal way. They shall perform all of their functions. The ports are above PDCP. When test loop mode is used for the DRB, the ports at the SS side refer to the raw DRB ones. Ciphering is enabled and ROHC is not configured on SS Side.

SS shall send in DL all PDU's received from different RB's but with same timing control information in one MAC PDU and in one TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception over system indication port, if configured.

### 4.2.4 IP Test Model

Depending on different test scenarios user plane data can be distinguished in:

- Raw user data upon EUTRA PDCP (Raw mode);

- IP user data (IP mode).

The raw user data are applied for L2 or DRB tests, no IP protocols are involved. The UL user data is directly routed to the EUTRA\_PTC.

The IP user data are applied when IP packets data are discarded, looped back or handled in TTCN. A DRB can have one or more Transport and Internet protocols configured.

Whether a DRB is in IP or in raw mode depends on the configuration of the routing table in the DRB-Mux. This is controlled by the IP\_CTRL port and independent from the configuration of the IP connections (IP\_SOCKET).

#### 4.2.4.1 IP user data

To allow the usage of common protocol implementations at the system adaptor the related interfaces in TTCN-3 are based on the Sockets API.

There can be one or several sockets (server or client) for each DRB: TCP, UDP and ICMP.

Each socket can be clearly identified by the IP address, port number and the protocol (tcp|udp|icmp). It implies that a TCP socket can be either server or client.

It is assumed that:

- Different DRBs are not using the same sockets.
- The UE behaviour of a single IP-based protocol on a specific socket like DHCP can be included in conformance tests.
- Other protocols like ESP are not considered but can easily be introduced later, if necessary, by using the same socket approach.

The routing of IP packets from the IP stack to the DRBs in DL, and from the DRBs either to the DRB port (E\_DRB in case of EUTRA) or to the IP stack or discard/loopback in UL is done by the DRB-Mux. This behaviour is controlled by the DRB-Mux's routing table.

The general architecture of the IP test model is shown in figure 4.2.4.1-1 (with a DHCP server as example for IP handling).

- NOTE: In figure 4.2.4.1-1 DHCP is one example for a protocol above the IP stack; other protocols like DNS can also be implemented but this a pure TTCN implementation issue and independent from the system interface.

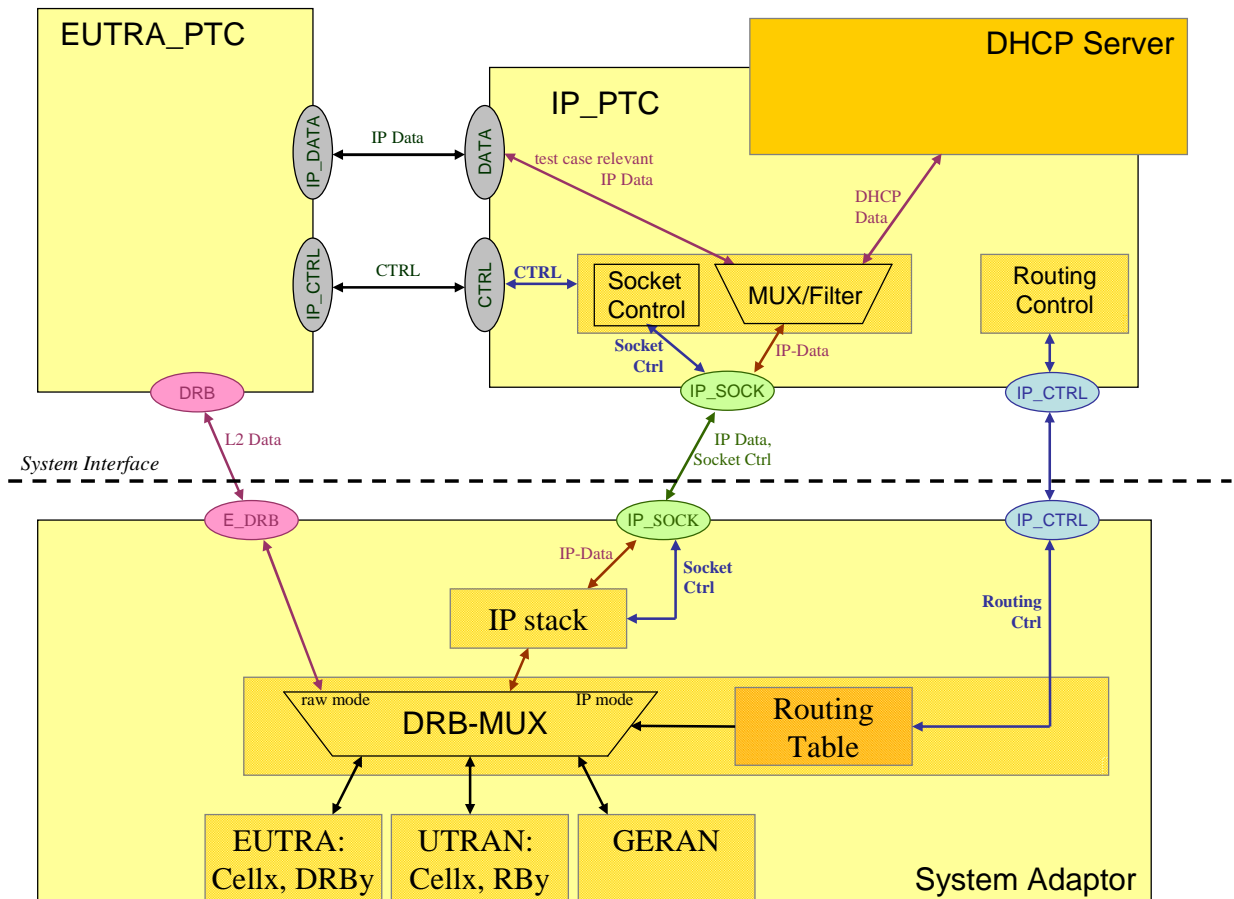

Figure 4.2.4.1-1: Example of EUTRA IP test model with a DHCP server

#### 4.2.4.2 Configuration of Sockets

The following configurations are controlled by the IP\_PTC (IP\_SOCKET\_REQ). The socket configuration and the sending/receiving of data are done with the same ASP on the system port IP\_SOCK.

##### 4.2.4.2.1 Socket Establishment

###### TCP server

TCP socket configured as server: the socket 'listens' to a 'connect' from the UE. The socket can be configured by using the following system calls of the Berkeley Sockets API:

- socket (AF\_INET | AF\_INET6, SOCK\_STREAM, 0);
- setsockopt;
- bind (local IP address Port);
- listen.

NOTE: Currently the only socket option being defined is SO\_BROADCAST

When the UE connects to the server the connection is accepted with the 'accept' system call.

## TCP client

A TCP connection is established to an existing TCP server at the UE side. This can be done with the following system calls:

- socket (AF\_INET|AF\_INET6, SOCK\_STREAM, 0);
- setsockopt;
- connect (remote Server Addr of the UE = IP-Addr + Port).

## UDP socket

A UDP socket can be established with the system calls

- socket (AF\_INET|AF\_INET6, SOCK\_DGRAM, 0);
- setsockopt;
- bind (local IP address, Port);
- connect.

NOTE 1: 'setsockopt' can be used to set the option SO\_BROADCAST to allow broadcast messages (e.g. for DHCP).

NOTE 2: Usage of 'connect' depends on implementation of the system adaptor.

### 4.2.4.2.2 Socket Release

A socket is released:

- in case of TCP when the remote entity closes the connection;
- when it is closed explicitly by the IP\_PTC (system call 'close').

NOTE 1: In general the sockets are independent from the configuration of the DRBs. Especially in case of UDP or ICMP the sockets can exist even without any DRB being configured.

NOTE 2: For IMS, TCP close happens for unprotected ports after initial registration and for protected ports after deregistration or re-registration: Any protected TCP connections are kept as long as the UE is registered independent of whether the RRC connection is released in between. In general TCP close is expected to be done from the client's end.

In detail

- after initial registration TTCN waits  $\Delta T$  seconds for the UE to close any TCP connection on the unprotected port
- after de-registration TTCN waits  $\Delta T$  seconds for the UE to close its client TCP connection; after this is done the TTCN closes any remaining TCP connection (independently of the server/client role)
- after re-registration when there is a new security context TTCN waits  $\Delta T$  seconds for the UE to close its client TCP connection of the old security context.
- as special case after an emergency call the same procedure is applied as for de-registration  $\Delta T$  is 3s.

### 4.2.4.3 Handling of IP data

Sending and receiving of IP data is done by the same ASPs as the socket establishment on IP\_SOCKET. In TTCN the IP data are handled by a separate TTCN component: IP\_PTC. This PTC can deal with the data according to the respective protocol, e.g. DHCP. In general, this is out of scope for the (signalling conformance) test case in terms of pass/fail assignment.

The IP\_PTC will receive data from sockets being configured for the corresponding IP protocols. Any unrecognised IP packets are discarded by the IP stack in the system adaptor.

When the IP data is relevant for the test purpose, e.g. the test purpose is to test DHCP, the IP data are routed to the EUTRA\_PTC. This allows generic protocol implementations for the common case, i.e. IP\_PTC and DHCP server are independent from test case specific implementations.

The interface between EUTRA\_PTC and IP\_PTC is a pure TTCN implementation issue and independent of the system interface. Furthermore it is irrelevant for the system interface whether e.g. the DHCP server is part of the IP\_PTC or implemented as a separate PTC.

- For TCP, the primitives to send and receive data correspond to the 'send' and 'recv' system calls.
- For UDP and ICMP, the primitives correspond to the 'sendto' and 'recvfrom' system calls.
- For both UDP and TCP the system adaptor may send ("in-band") error indications in case of system errors. That results in an assignment of inconc by the IP\_PTC.

#### 4.2.4.4 Routing of IP Data

The routing of IP data is done in the DRB-Mux which gets a routing table configured. This table associates the address and protocol information of IP packets (protocol, local IP address, local port, remote IP address, remote port) with the radio bearer (RAT, cell, DRB id).

In UL a DRB is considered being in raw mode when there is no entry found in the routing table. It is considered being in IP mode when there is any entry regardless of the protocol and address information being stored, i.e. in UL, the SS does not need to evaluate the IP header to route the data (in raw mode this would cause problems in the case of loopback data). In addition for the IP mode, specific entries of the routing table can be flagged to discard or loopback IP packets matching this entry.

The discard mode can be used e.g. for rSRVCC to suppress RTP/RTCP data on the default AM DRB during HO. The major purpose is to discard the data silently (i.e. to suppress any error reporting like ICMP error messages).

NOTE: It is up to system implementation how packets are discarded (explicitly or implicitly by the IP stack) as long as it done silently.

The loopback mode can be configured for RTP and/or RTCP, and depending on the protocol the SS shall manipulate the packets as follows :

- swapping of source and destination address and port .

NOTE: Further manipulation of the RTP header and/or RTCP header is not considered in the present document. Beyond the aforementioned requirements, it is up to system implementation how packets are looped back.

In DL the IP packets of the IP stack are routed to the DRBs acc. to the routing information in the routing table (see annex D for details).

NOTE: Only the IP PTC can re-configure the Routing Table; if that needs to be triggered by a RAT specific PTC, this is done by appropriate coordination messages but the RAT specific PTCs don't have a direct access to the routing tables.

#### 4.2.4.5 Multiple PDNs

In case multiple PDNs broadcast, or multicast datagrams sent by the UE, need to assigned to the respective PDN:

IPv4

When the UE does not get a valid IPv4 address assigned via NAS signalling it will request the IP address via DHCP. In this case there are DHCP broadcast messages in UL.

In the case of multiple PDNs, it cannot be distinguished by evaluating the IP address to which PDN the message belongs but additional information is necessary:

The network side needs to know which interface (i.e. network) the broadcast comes from; in case of LTE this is associated with the default bearer of the particular PDN.

NOTE: In principle the 'chaddr' field or the 'client identifier' option of the DHCP messages may be used to distinguish different interfaces (e.g. for Ethernet this would be the MAC address) but it is not specified how these fields are to be used by the UE (or how to configure them at the UE); RFCs (e.g. RFC 2131) only require the client identifier to be unique in a given subnet.

#### IPv6

The UE gets an interface identifier assigned via NAS signalling (TS 24.301 [21] clause 6.2.2) which is used as link-local address during stateless address auto configuration (TS 23.060 [43] clause 9.2.1.1 and TS 29.061 [44] clause 11.2):

The UE may send a ROUTER SOLICITATION message (multicast) to which the network responds with a ROUTER ADVERTISEMENT.

Since the ROUTER SOLICITATION message contains the interface identifier as assigned via NAS signalling, even in the case of multiple PDNs it can distinguish which PDN is concerned, as long as the interface identifiers are different for different PDNs (for UE side as well as for network side).

NOTE: According to TS 23.060 [43] clause 9.2.1.1 and RFC 3314 a real network (PDN-GW) itself shall send an (unsolicited) ROUTER ADVERTISEMENT after it has assigned the interface identifier.

#### Conclusions and Requirements:

In the case of broadcast or multicast messages TTCN needs additional information about the PDN being addressed.

When a socket connection is configured to allow broadcasts and there is a broadcast or multicast message in UL the SS shall provide information about on which bearer the datagram has been sent (RAT, cell, DRB id).

NOTE: From the socket programming point of view multiple PDNs for the SS are like a multi-homed host: Servers for different interfaces are bound to different interfaces (e.g. using the 'bind' system call with a specific IP address instead of IPADDR\_ANY) or a server may retrieve the interface id for a received datagram from the IP stack with an appropriate system call.

Even though the details are implementation dependent, the SS shall be capable of:

determining RAT, cell, DRB id for any broadcast or multicast datagram in UL

avoiding any duplication of messages in UL even when multiple servers are listening to broadcast/multicast messages (what is a possible SS implementation)

### 4.2.4.6 IP Addresses Guidelines

#### 4.2.4.6.1 Common Structure of IP Addresses

##### IPv4:

Network prefix (subnet address)	n bits
Host part	32-n bits

with 'n' e.g. depending on the network class

##### IPv6:

Network prefix	
Global routing prefix	64 – n bits
Subnet ID	n bits
Interface ID	64 bits

Addresses within one network (PDN) have all the same subnet address (IPv4) or global routing prefix (IPv6)

NOTE: As a consequence at the system simulator, routing can be done based on appropriate network masks, but that is dependent on SS implementation and therefore is out of scope for this document.

#### 4.2.4.6.2 Common Requirements regarding IP Addresses

IP addresses are configured via PIXIT parameters as defined in clause 9.1.

These PIXIT parameters shall fulfil the following requirements:

Network and UE addresses shall be different from each other

Network entities (DHCP server, DNS server, P-CSCF etc.) of a given PDN shall all have the same global routing prefix (IPv6) or subnet address (IPv4).

The IP address assigned to the UE shall have the same global routing prefix (IPv6) or subnet address (IPv4) as the corresponding network.

Requirements for IPv6: according to TS 23.401, cl. 5.3.1.2.2

The 64 bit network prefix of a UE's IPv6 address is unique

The UE may change its interface id during auto configuration

The UE must use the given interface id in the link local address for router solicitation but may use any other interface id in the global address

NOTE: As a consequence, the SS implementation needs to cope with the changing of the UE address and cannot rely on static IP address assignment to the UE.

Global routing prefix (IPv6) and subnet address (IPv4) shall be different for different PDNs

Home agent address:

The home agent is located in the UE's home network (which shall be considered to find an appropriate network prefix for the home agent's IP address)

In order to simplify implementations, the following rules shall be applied:

The IPv6 interface identifier as assigned to the UE via NAS signalling shall be unique, i.e.

It shall be different for different PDNs

It shall differ from the interface ids of the other entities on the link (in general the interface id of the PDN-GW)

Multiple PDNs shall have different IPv6 interface identifier for the PDN-GW

NOTE: Consistency checks for addresses of different PDNs can be done based on an appropriate network mask (IPv4, e.g. 255.255.255.0) and global routing prefix (IPv6, e.g. 2001:db8:1234::/48).

#### 4.2.4.6.3 Network Entities and their IP addresses

In general and in accordance of IMS test cases in TS 36.523-1 [1] and TS 34.229-1 [40] the simulated network architecture can be illustrated as in Figure 4.2.4.6.3-1.

Figure 4.2.4.6.3-1: Simulated Network Architecture

For simplification and to keep the number of PIXITs small , several network entities share the same PIXIT:

- px\_IPv4\_AddressXX\_NW: P-CSCF 1 (IPv4 address), DNS Server (IPv4 address), DHCP Server
  - px\_IPv6\_AddressXX\_NW: P-CSCF 1 (IPv6 address), DNS Server (IPv6 address), ICMPv6 Server
- (“XX” refers to the respective PDN)

In general , in test cases according to TS 36.523-1 [1] and TS 34.229-1 [40] no IP addresses are needed for S-CSCF 1, S-CSCF 2 or P-CSCF 2.

#### 4.2.4.7 User Plane Signalling for Address Allocation

For IPv4, the UE gets assigned the IP address via NAS signalling unless it explicitly requests to use DHCP.

For IPv6, the UE gets assigned a unique interface identifier to be used until it has successfully performed the auto-configuration procedure (Ref. to RFC 2462).

NOTE: This clause specifies behaviour of the SS (TTCN) to achieve successful IP signalling; but in general, IP signalling is out of scope for conformance tests as defined in TS 36.523-1 [1].

##### 4.2.4.7.1 DHCP

When the UE supports IPv4 and does not get an IPv4 address via NAS signalling it will request the address via DHCP (Ref. to RFC2131).

The UE may send a **DHCPDISCOVER** with or without Rapid Commit Option (Ref. to RFC 4039):

UE sends **DHCPDISCOVER** according to table 4.2.4.7.1-1 with Rapid Commit Option.

TTCN sends **DHCPACK** according to table 4.2.4.7.1-4

UE sends **DHCPDISCOVER** according to table 4.2.4.7.1-1 without Rapid Commit Option.

TTCN sends **DHCPOFFER** according to table 4.2.4.7.1-2

When the Rapid Commit option is not used the UE sends a DHCPREQUEST as response to the DHCPOFFER:

UE sends **DHCPREQUEST** according to table 4.2.4.7.1-3

TTCN sends **DHCPACK** according to table 4.2.4.7.1-4

Any other DHCP messages shall be ignored by TTCN.

**Table 4.2.4.7.1-1: DHCPDISCOVER**

server identifier	server address	server address as used in the UDP header
NOTE: According to table 3 in RFC 2131		

#### 4.2.4.7.2 DHCPv6

DHCPv6 is not needed for E-UTRA conformance tests as defined in 36.523-1[1]

#### 4.2.4.7.3 ICMPv6

When the UE supports IPv6 it will perform IPv6 Stateless Address Auto configuration according to RFC 4862. The UE sends an **ICMPv6 Router Solicitation** message according to table 4.2.4.7.3-1; as response the TTCN sends an **ICMPv6 Router Advertisement** message according to table 4.2.4.7.3-2.

NOTE: The TTCN does not send any (periodic) unsolicited Router Advertisement, i.e. the UE is expected to ask for an immediate advertisement whenever it is needed.

Any other ICMPv6 messages are ignored by the TTCN (especially in accordance to TS 23.060, clause 9.2.1.1, the TTCN silently discards Neighbour Solicitation).

Table 4.2.4.7.3-1: ICMPv6 Router Solicitation

IPv6		
SRC ADDR	link local address	NOTE 1
DEST ADDR	multicast address	NOTE 2
ICMPv6 (Ref. to RFC 4861)		
type	133	Router Solicitation
code	0	
checksum	not checked	
reserved	ignored	
options		
source link-layer address	ignored if present	
other options	ignored	
NOTE 1: The UE shall use the interface identifier as assigned via NAS signalling (but this is not checked in TTCN).		
NOTE 2: TTCN detects the multicast address by checking it to start with FF02 but accepts any of these addresses.		

Table 4.2.4.7.3-2: ICMPv6 Router Advertisement

IPv6		
SRC ADDR	link local address (NW)	NOTE 1
DEST ADDR	link local address (UE)	NOTE 2

prefix	globally unique /64 IPv6 prefix to be assigned to the UE	NOTE 4, 5
NOTE 1: The server's link local address is derived from the server's global IPV6 address (PIXIT parameter)		
NOTE 2: As received as SRC address of the corresponding Router Solicitation		
NOTE 3: Acc. to TS 29.062 clause 11.2.1.3.2		
NOTE 4: The routing prefix of the UE's global IPv6 address is derived from the respective PIXIT parameter		
NOTE 5: Since the UE may change its interface identifier after successful auto configuration to any value in general the IPv6 address used by the UE differs from the PIXIT		

#### 4.2.4.7.4 DNS

In general DNS is not needed for E-UTRA conformance tests as defined in 36.523-1[1].

Nevertheless as the IP test model is also applicable for test suites other than 36.523-1[1] handling of certain DNS queries (according to RFC 1035 [58]) is supported over UDP:

**Table 4.2.4.7.4-1: Supported DNS Queries**

DNS Header		
id	any value	2 octets; id to be used in response
qr	'0'B	query
opcode	'0000'B	standard query
aa	'?'B	Authoritative Answer: any value in query
tc	'0'B	no truncation
rd	'?'B	Recursion Desired: any value
ra	'?'B	Recursion Available: any value in query
z	'000'B	must be '000'B according to RFC 1035 [58]
rcode	'????'B	Response code: na for query
qdcnt	1	unsigned 16 bit integer: number of questions
ancnt	0	unsigned 16 bit integer: number of answers
nscount	0	unsigned 16 bit integer: number of authority records
arcount	0	unsigned 16 bit integer: number of additional records
Questions		
DNS Question: only one question per query is supported		
qname	any value	octetstring with encoded domain name according to RFC 1035 clause 4.1.2 [58]
qtype	'0001'O or '001C'O	Type A (IPv4 Address according to RFC 1035 clause 3.2.2 [58]) or Type AAAA (IPv6 Address according to RFC 3596 clause 2.1 [59])
qclass	'0001'O	IN (internet)

Table 4.2.4.7.4-2: Corresponding DNS Responses

DNS Header		
id	same value as in corresponding query	
qr	'1'B	response

aa	'1'B	Authoritative Answer
tc	'0'B	no truncation
rd	'0'B	no recursion
ra	'0'B	no recursion
z	'000'B	
rcode	'0000'B	no error
qdcount	1	unsigned 16 bit integer: number of questions
ancount	1	unsigned 16 bit integer: number of answers
nscount	0	unsigned 16 bit integer: number of authority records
arcount	0	unsigned 16 bit integer: number of additional records
Questions		
DNS Question	same value as in corresponding query	
Answers		
DNS Answer		
qname	same value as in corresponding query/question	
qtype	same value as in corresponding query/question	
qclass	'0001'O	IN (internet)
ttd	86400	one day
rddlength	4 for IPv4 16 for IPv6	
rddata	octetstring containing IPv4 or IPv6 address	

## 4.2.4A LTE-Carrier Aggregation test Models

### 4.2.4A.1 CA-MAC test model

**Figure 4.2.4A.1-1: Test model for CA-MAC testing**

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since Mandatory) but with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side,

Pcell only: On DRBs the RLC is configured in transparent mode. Hence with this configuration PDU's out of SS RLC are same as the SDU's in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

Pcell/Scell: Layer 1 is configured in the normal way. MAC is configured in a special mode, where it does not add any MAC headers in DL and /or not remove any MAC headers in UL directions respectively at DRB port. In this case, the TTCN shall provide the final PDU, including padding. Except for this, the MAC layer shall perform all of its other functions. For SRB's/BCCH/PCCH the configuration is same as in CA-RRC test model.

There are two different test modes in which MAC header addition/removal can be configured:

DL/UL header-transparent mode: no header addition in DL and no header removal in UL.

DL only header-transparent mode: no header addition in DL; UL MAC is configured in normal mode to remove MAC header and dispatch the MAC SDUs according to the logical channel Ids.

If SS MAC is configured in DL/UL header-transparent mode, the PDU's exchanged at the DRB port between TTCN and SS, shall be the final MAC PDU's consisting of MAC, RLC and PDCP headers. TTCN code shall take care in DL of building MAC header, RLC headers and PDCP headers and in UL handle MAC, RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. During testing of multiple DRBs at the UE side, it shall still be possible to configure only one DRB on SS side with configuration in the

figure 4.2.4A.1-1. Other DRBs will not be configured, to facilitate routing UL TBs. Multiplexing/de-multiplexing of PDUs meant/from different DRBs shall be performed in TTCN. Since the MAC layer does not evaluate the MAC headers in UL it cannot distinguish between SRB and DRB data in UL. Therefore there shall be no SRB traffic while MAC is configured in this test mode.

If SS MAC is configured in DL only header-transparent mode, the UL PDUs exchanged at the DRB port between TTCN and SS, shall be final RLC PDUs consisting of RLC and PDCP headers. SS shall route these PDUs based on logical channel IDs. In DL, TTCN sends fully encoded MAC PDUs at the DRB port (consisting of MAC, RLC and PDCP headers). In this case TTCN needs to take care of maintaining sequence numbers and state variables for RLC and PDCP layers. Furthermore in UL and DL the SS MAC layer shall be capable of dealing with SRB data (i.e. it shall handle DL RLC PDUs coming from SRBs RLC layer or dispatch UL RLC PDUs to SRBs) as in normal mode.

NOTE: TTCN shall ensure that no DL MAC SDUs in normal mode and DL MAC PDUs in test mode are mixed for the same TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception in Pcell over system indication port, if configured. In a similar way the reception of RACH preambles in Pcell/Scell is reported by SS over the same port, if configured.

The RACH Procedure configured in active Scell controls the RACH procedure in Scell. The PDCCH order is sent on PDCCH controlling the Scell. PRACH preamble is received in the Scell. RAR is transmitted in the associated Pcell as per RACH procedure in active Scell.

4.2.4A.2 CA-RRC test model

Figure 4.2.4A.2-1: Test model for CA-RRC testing

The UE is configured in normal mode. On UE side Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured.

On the SS Side L1 (Pcell/Scell), MAC (Pcell/Scell), RLC (Pcell) and PDCP (Pcell) are configured in normal way. They shall perform all of their functions. For SRB0 the DL and UL port is above RLC. For SRB1 and SRB2 the port is above/below the RRC and NAS emulator, which may be implemented as a parallel test component. For DRB, the port is above PDCP. PDCP Ciphering/Integrity is enabled. NAS integrity/Ciphering is enabled.

Note: RLC for BCCH/ PCCH/CCH are configured per serving cell; RLC and PDCP for DCCH/DTCH are configured only in Pcell and are additionally multiplexed on MAC of associated Scells.

The RRC/NAS emulator for SRB1 and SRB2 shall provide the Ciphering and integrity functionality for the NAS messages. In UL direction, SS shall report RRC messages, still containing (where appropriate) the secure and encoded NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception in Pcell over system indication port, if configured. In a similar way the reception of RACH preambles in Pcell/Scell is reported by SS over the same port, if configured.

The RACH Procedure configured in active Scell controls the RACH procedure in Scell. The PDCCH order is sent on PDCCH controlling the Scell. PRACH preamble is received in the Scell. RAR is transmitted in the associated Pcell as per RACH procedure in active Scell.

## 4.2.4B Dual Connectivity test models

### 4.2.4B.1 DC MAC test model

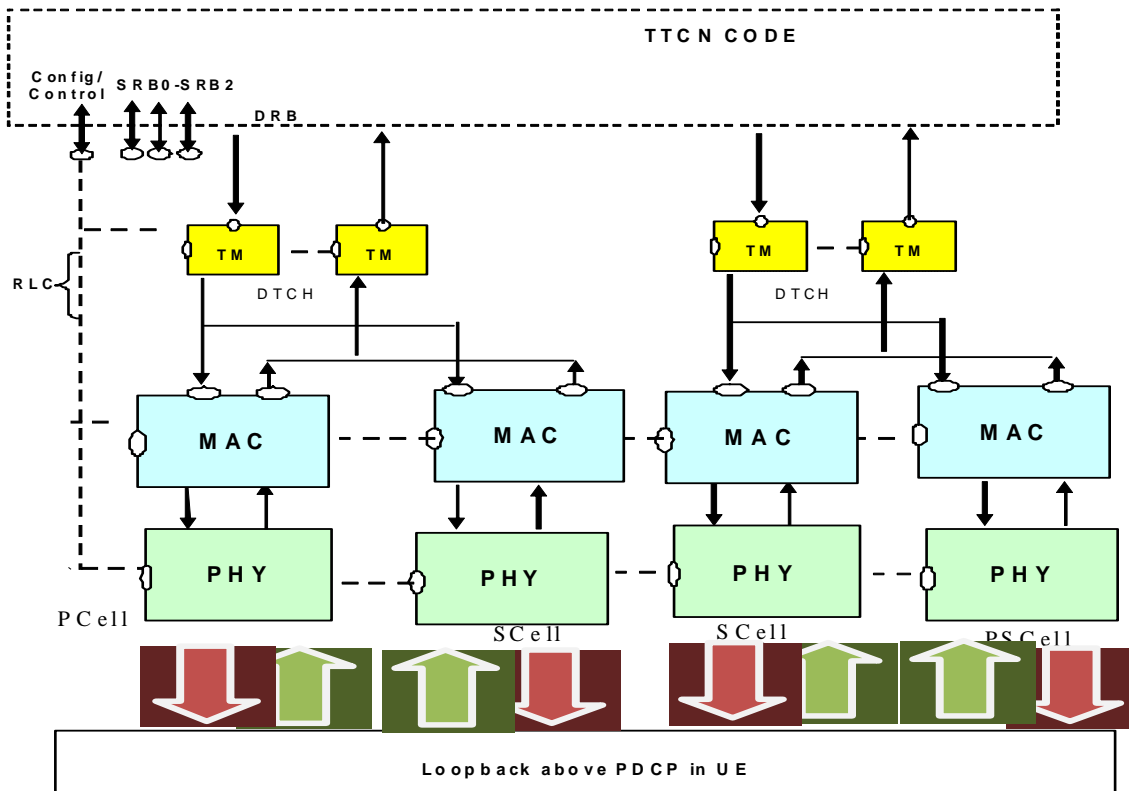

Figure 4.2.4B.1-1: Test model for DC MAC testing

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled (since mandatory) with dummy ciphering algorithm, which is equivalent to not using ciphering. ROHC is not configured on UE Side.

On the SS Side, zero or more SCell's associated with PCell/PSCell may be configured.

PCell/PSCell only: On DRBs the RLC is configured in transparent mode. Hence with this configuration PDU's out of SS RLC are same as the SDU's in it. There is no PDCP configured on SS Side. The ports are directly above RLC.

PCell/PSCell/SCell: Layer 1 is configured in the normal way. MAC is configured in a special mode, where it does not add any MAC headers in DL and /or not remove any MAC headers in UL directions respectively at DRB port. In this case, the TTCN shall provide the final PDU, including padding. Except for this, the MAC layer shall perform all of its other functions. For SRB's/BCCH/PCCH the configuration is same as in Dual connectivity-RRC test model.

For Split DRB's the TM DRB from the CG will be used to send/receive PDU's in that CG.

There are two different test modes in which MAC header addition/removal can be configured:

- DL/UL header-transparent mode: no header addition in DL and no header removal in UL.
- DL only header-transparent mode: no header addition in DL; UL MAC is configured in normal mode to remove MAC header and dispatch the MAC SDUs according to the logical channel Ids.

If SS MAC is configured in DL/UL header-transparent mode, the PDU's exchanged at the DRB port between TTCN and SS, shall be the final MAC PDU's consisting of MAC, RLC and PDCP headers. TTCN code shall take care in DL of building MAC header, RLC headers and PDCP headers and in UL handle MAC, RLC and PDCP headers. TTCN code shall take care of maintaining sequence numbers and state variables for RLC and PDCP layers. During testing of multiple DRBs at the UE side, it shall still be possible to configure only one DRB on SS side per CG with configuration in the figure 4.2.4B.1-1. Other DRBs will not be configured, to facilitate routing UL TBs. Multiplexing/de-multiplexing of PDUs meant/from different DRBs shall be performed in TTCN. Since the MAC layer does not evaluate the MAC headers in UL it cannot distinguish between SRB and DRB data in UL. Therefore there shall be no SRB traffic while MAC is configured in this test mode.

If SS MAC is configured in DL only header-transparent mode, the UL PDUs exchanged at the DRB port between TTCN and SS, shall be final RLC PDUs consisting of RLC and PDCP headers. SS shall route these PDUs based on logical channel IDs. In DL, TTCN sends fully encoded MAC PDUs at the DRB port (consisting of MAC, RLC and PDCP headers). In this case TTCN needs to take care of maintaining sequence numbers and state variables for RLC and PDCP layers. Furthermore in UL and DL the SS MAC layer shall be capable of dealing with SRB data (i.e. it shall handle DL RLC PDUs coming from SRBs RLC layer or dispatch UL RLC PDUs to SRBs) as in normal mode.

NOTE: TTCN ensures that no DL MAC SDUs in normal mode and DL MAC PDUs in test mode are mixed for the same TTI.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception in PCell over system indication port, if configured. In a similar way the reception of RACH preambles in PCell/SCell is reported by SS over the same port, if configured.

The RACH Procedure configured in active SCell controls the RACH procedure in SCell. The PDCCH order is sent on PDCCH controlling the SCell. PRACH preamble is received in the SCell. RAR is transmitted in the associated PCell as per RACH procedure in active SCell.

#### 4.2.4B.2 DC PDCP test model

The PDCP test model is based on DC RRC test model except for the following.

The UE is configured in Test Loop Mode, to loop back the user domain data above PDCP layer. On UE side Ciphering is enabled and ROHC is not configured.

The PDCP is configured in a special mode, named transparent mode. In this mode, SS shall not add PDCP header (DL) and remove PDCP Header (UL). The TTCN maintains sequence numbers and state variables for the PDCP layer. The TTCN makes use of the AS ciphering functionality in both directions, employing the dummy ciphering algorithm. Ciphering/deciphering are performed using TTCN external functions. ROHC is not configured.

4.2.4B.3 DC RRC test model

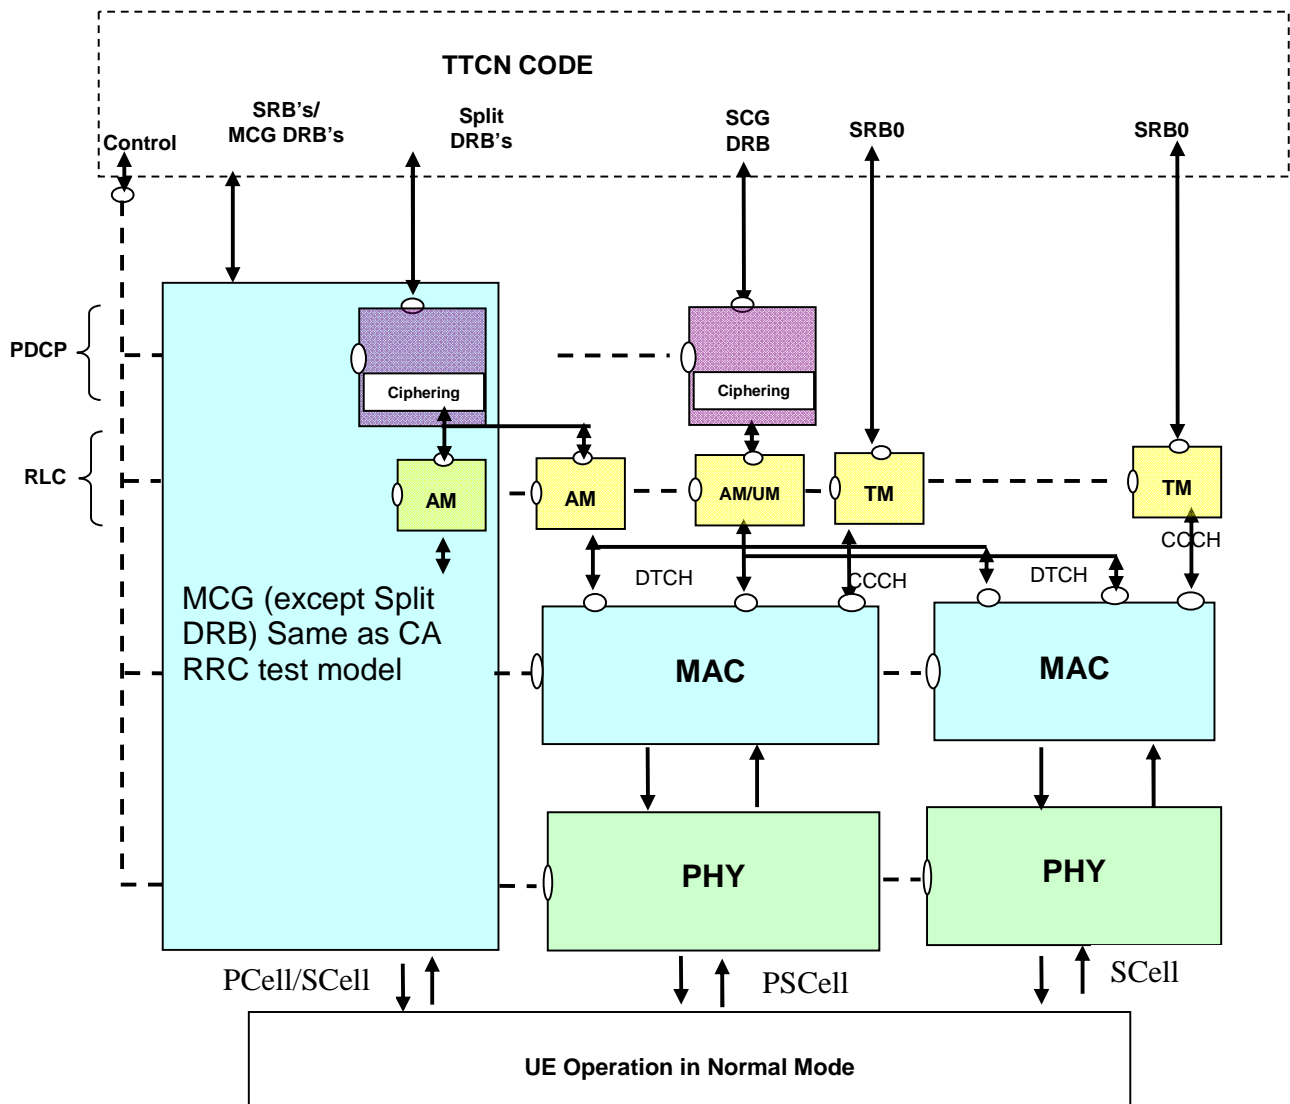

Figure 4.2.4B.3-1: Test model for DC RRC testing

The UE is configured in normal mode. On UE side Ciphering/Integrity (PDCP and NAS) is enabled and ROHC is not configured. Zero or more SCell's associated with PCell/PSCell may be configured.

On the SS Side L1 (PCell/PSCell/SCell), MAC (PCell/PSCell/SCell), RLC (PCell/PSCell) and PDCP (PCell/PSCell) are configured in normal way. They shall perform all of their functions. SRB's are configured only in PCell. For SRB0 the DL and UL port is above RLC. For SRB1 and SRB2 the port is above/below the RRC and NAS emulator, which may be implemented as a parallel test component. For DRB, the port is above PDCP. PDCP Ciphering/Integrity is enabled. NAS integrity/Ciphering is enabled.

NOTE: RLC for BCCH/PCCH/CCCH are configured per serving cell; RLC and PDCP for DCCH/DTCH are configured only in PCell/PSCell and are additionally multiplexed on MAC of associated SCells in the CG (carrier group).

For Split DRB's PDCP is not configured in PSCell. If UL traffic on split DRB will be steered through SCG (i.e. *ul-DataSplitDRB-ViaSCG* is true), the IE *ul-DataSplitDRB-ViaSCG* will only be provided in PDCP-Info in PSCell.

The PCell and SCell (associated with either PCell or PSCell) is same as in CA RRC test model in clause 4.2.4A.2.

The RRC/NAS emulator for SRB1 and SRB2 shall provide the Ciphering and Integrity functionality for the NAS messages. In UL direction, SS shall report RRC messages, still containing (where appropriate) the secure and encoded

NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling assignments are configured from TTCN over system control port. SS reports PUCCH scheduling information reception in PCell/PSCell over system indication port, if configured. In a similar way the reception of RACH preambles in PCell/PSCell/SCell is reported by SS over the same port, if configured.

### 4.2.5 IP model extension for IMS

The IMS test model is based on the IP Test Model with extensions to support IPsec. Support of Signalling Compression (SigComp) may be added in the future if needed.

IMS in general may use TCP, UDP or alternated TCP/UDP as transport layer for signalling messages.

At TTCN-3 system interface level there are no IMS specific ports or ASPs, i.e. IMS specific issues are purely handled in TTCN and therefore out of scope for this document.

NOTE: Even though the main intention to introduce the IMS test model is to support the initial IMS registration procedure, the IMS test model is independent of any specific IMS procedures.

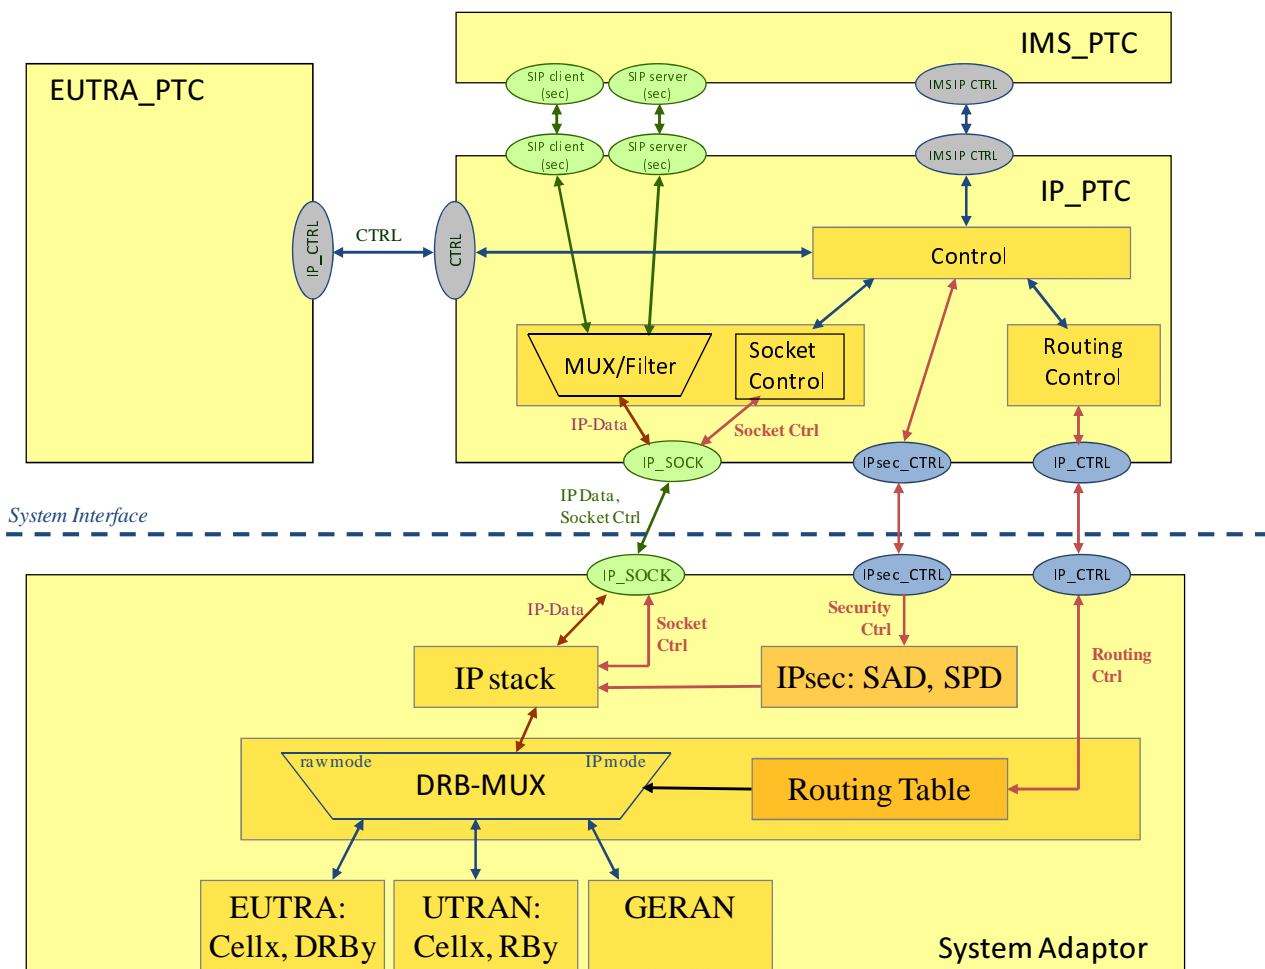

Figure 4.2.5-1: Example for IP model supporting IMS

NOTE 1: At the system interface IPsec is the only difference compared to the IP model of clause 4.2.4

NOTE 2: It is a working assumption to have a separate PTC for IMS as shown in figure 4.2.5-1

NOTE 3: Ports between the IP\_PTC and the IMS\_PTC are for illustration only

### 4.2.5.1 IPsec

IPsec involves security policy database (SPD) and security association database (SAD) (Ref. RFC4301). The entries in the databases are configured with security parameters by ASPs at the IPsec\_CTRL port.

NOTE: IPsec is not directly associated to a given socket but IPsec is applied to IP packets matching a configured security association. ⇒ configuration of IPsec in general is independent of the existence of sockets but typically the IPsec configuration is done just before establishment of a corresponding socket.

The SS shall cleanup all IPsec database entries which has been setup by TTCN during a test case at the end of the test case independent of how the test case terminates (normal termination, run-time error etc.)

#### 4.2.5.1.1 Security Association

NOTE: Within this clause SA is used as abbreviation of 'Security Association' (i.e. not as abbreviation for 'System Adaptor' as usual)

During the IMS signalling handling two pairs of SAs consisting of four unidirectional SAs will be used, one pair of SAs (SA2 and SA4) is between the server port of UE and the client port of the SS, another pair of SAs (SA1 and SA3) is between the client port of UE and the server port of the SS, see figure 4.2.5.2.3.1-1.

Figure 4.2.5.2.3.1-1 Two pairs of SAs

SA1 used for data flow from port\_uc to port\_ps is an inbound SA for protected server port of P-CSCF, its Security Parameter Index spi\_ps is selected by P-CSCF (IMS Registration/Authentication function in IP\_PTC) and presented in 401 Unauthorised; SA2 used for data flow from port\_pc to port\_us is an inbound SA for protected server port of UE, its Security Parameter Index spi\_us is selected by UE and presented in initial REGISTER message; SA3 used for data flow from port\_ps to port\_uc is an inbound SA for protected client port of UE, its Security Parameter Index spi\_uc is selected by UE and presented in initial REGISTER message; SA4 used for data flow from port\_us to port\_pc via an inbound SA for client port of P-CSCF, its Security Parameter Index spi\_pc is selected by P-CSCF (IMS Registration/Authentication function in IP\_PTC) and presented in 401 Unauthorised message. The pair of SA1 and SA3 is for bidirectional traffic between port\_uc and port\_ps. The pair of SA2 and SA4 is for bidirectional traffic between port\_pc and port\_us. Those four spi\_xx and other security parameters are negotiated during security association set up procedure and shall be passed to IPsec protocol layer in the SS. See "SAD and SPD" and clause 7.2 of TS 33.203 [41].

These four unidirectional SA and relevant ports are shared by TCP and UDP. TCP transport will use all four SAs, UDP transport uses only two SAs, because there is no traffic from port\_ps to port\_uc, nor from port\_us to port\_pc. Figure 4.2.5.2.3.1-2 shows the usage of ports and SAs under UDP and TCP transport in a generic registration procedure (see clause C.2 of TS 34.229-1 [40]).

Figure 4.2.5.2.3.1-2: Usage of ports and SAs in UDP and TCP transport

4.2.5.1.2 SAD and SPD

SAD and SPD are used by IPsec to store various security parameters (per Security Association). During IMS AKA, the UE and the IMS Registration/Authentication function in IP\_PTC negotiates the negotiable parameters for security association setup, this negotiation is carried out at the SIP level in TTCN-3, and the resulting security association parameters are maintained in TTCN-3. The involved parameters are:

- spi\_uc; spi\_us; spi\_pc; spi\_ps
- encryption algorithm
- integrity algorithm

The IMS AKA will generate key  $IK_{IM}$ , the security parameters  $IK_{ESP}$  and  $CK_{ESP}$  are derived from  $IK_{IM}$  and  $CK_{IM}$  in TTCN-3 (Ref. Annex I of TS 33.203[41]). ASPs are used to pass these parameters (per security association and with its selectors) from TTCN-3 to SAD and SPD of IPsec layer in the SS.

The same  $IK_{ESP}$  and  $CK_{ESP}$  will be used for the four unidirectional SAs. All of the four unidirectional SAs will use the same negotiated encryption algorithm and integrity algorithm.

In addition to those negotiable security parameters, other security parameters are fixed in IMS environment (see clause 7.1 of TS 33.203 [41]):

- Life type: second
- SA duration:  $2^{32}-1$
- Mode: transport
- IPsec protocol: ESP, ESP integrity applied
- Key length: 192 bits for DES-EDES\_CBC, 128 bits for AES-CBC and HMAC-MD5-96; 160 bits for HMAC-SHA-1-96

These parameters are hard coded with IPsec implementation in the SS, not passed from TTCN-3.

An SA have to be bound to selectors (specific parameters) of the data flows between UE and P-CSCF (IMS Registration/Authentication function in IP\_PTC), the selectors are:

- source IP address
- destination IP address
- source port

destination port

transport protocols that share the SA

IP addresses bound to the two pairs of SAs are:

For inbound SAs at the P-CSCF (the SS side):

- The source and destination IP addresses associated with the SA are identical to those in the header of the IP packet in which the initial SIP REGISTER message was received by the P-CSCF.

For outbound SAs at the P-CSCF (the SS side):

- The source IP address bound to the outbound SA equals the destination IP address bound to the inbound SA; the destination IP address bound to the outbound SA equals the source IP address bound to the inbound SA.

Ports bound to the two pairs of SAs are depicted in figure 4.2.5.2.3.1-1, port\_ps and port\_pc shall be different from the default SIP ports 5060 and 5061. The number of the ports port\_ps and port\_pc are communicated to the UE during the security association setup procedure.

The transport protocol selector shall allow UDP and TCP.

The selectors are passed to the SS IPsec layer together with the security parameters related to an SA bound to the selectors.

#### 4.2.5.2 Signalling Compression (SigComp)

Signalling compression is mandatory (see clause 8 of TS 24.229 [42]) and Signalling compression (RFC 3320 [43], RFC 3485 [44], RFC 3486 [45], RFC 4896 [46], RFC 5049 [47]) protocol is used for SIP compression. SigComp entity in the model is used to carry out the compression/decompression functions. In receiving direction of the SS the SigComp entity will detect whether the incoming SIP message is compressed, and decompress the message if it is compressed. In the SS transmitting direction, the TTCN, via ASP, controls when the compression of outgoing SIP message is started. Stateless compression is not used in the SIP environment. For state full operation of SigComp the ASP passing compartment ID to SigComp is applied. The SS shall clean all states related to a connection in SigComp when an ASP for closing the connection is received. The SS shall also clean all states in the SigComp when abortion of a test case is detected or after the system reboots. If decompression failure occurs while decompressing a message, the message shall be discarded. The SigComp entity in the SS shall automatically find if a secure port or un-secure port is being used for transmission or reception of messages. If an un-secure port is used for transmission, it shall not include state creation instructions. If the state creation command is received in a compressed message on an un-secured port, a decompression failure shall be generated.

#### 4.2.5.3 SIP TTCN-3 Codec

SIP is a text-based protocol, the messages exchanged between the UE and the SS are character strings. In TTCN-3 the messages are structured to take the advantages of TTCN-3 functionalities, and to make the debugging and maintenance easier.

Even though there is no encoding/decoding of SIP messages at the TTCN-3 system interface, the IMS\_PTC uses the SIP codec by means of the TTCN-3 build-in functions encvalue and decvalue.

The SIP codec is specified in TS 34.229-3 [45] clause 7.

#### 4.2.6 Support of DSMIPv6

For testing of DSMIPv6 IP packets being relevant for the test cases may be routed by the IP\_PTC to the PTCs with specific test case implementation. There are not specific requirements for the system interface.

The functions of HA and ePDG are FFS.

## 4.2.7 MBMS test model

Figure 4.2.7-1: Test model for MBMS testing

The UE is configured in Test Loop Mode C to count the successfully received MBMS Packets. On the UE side, Ciphering/Integrity (PDCP and NAS) are enabled on SRBs/DRB. No security is configured on MCCH/MTCH.

On the SS side, the cell is configured as a normal cell, the MBMS parameters are configured by using an additional call of `SYSTEM_CTRL_REQ.L1`, MAC and RLC are configured for MCCH/MTCH in normal mode; they shall perform all of their functions. The MRB ports are above RLC. For MTCH data transmission, the SS shall set the MCH Scheduling Information (MSI) in the MAC PDU in the first subframe allocated to the MCH within the MCH scheduling period to indicate the position of each MTCH and unused subframes on the MCH according to TS 36.321[16] clause 6.1.3.7 The SS will be explicitly configured by the TTCN for MSI MAC control element. SS shall repeat the same configured MSI in the first subframe allocated to the MCH within each new MCH scheduling period.

The MRB data is considered as raw data and is scheduled with explicit timing control information from TTCN on MTCH.

## 4.2.8 OCNG test model

The OCNG generator is a logical block in the SS MAC layer, activated/deactivated by TTCN. There is one OCNG generator per cell, and OCNG may be activated by TTCN in any cell (i.e. serving or neighbour).

When OCNG is activated in a cell, the SS shall automatically transmit uncorrelated pseudo random data in an arbitrary number of DL MAC TB's on PDSCH's, in each non-ABS (Almost Blank Subframe) identified by *MeasSubFramePattern*, identified by an arbitrary number of virtual (non existing) UE's with C-RNTI's set different

from the C-RNTI of the UE under test. The SS shall treat these MAC TB's in a special way, i.e. shall not expect any HARQ feedback and shall not make any HARQ retransmissions. The SS shall select the number of virtual UE's to achieve the following conditions in each non-ABS subframe:

- Load all CCE's unused by any scheduled RNTI (SI-RNTI, C-RNTI, P-RNTI, RA-RNTI, Temp C-RNTI, SPS C-RNTI, M-RNTI) transmissions.
- Utilize all PRB's un-assigned by any scheduled RNTI.
- The modulation is restricted to QPSK.

The DCI combination 1 defined in clause 7.3.3.5.1 is used to facilitate maximum utilization of un-assigned PRB's.

While activating OCNG on a non-PCell, TTCN shall take care of timing information for the cell such that the SFN and subframe number should result in the corresponding PCell  $SFN \bmod x = 0$ , where  $x$  is the size of the subframePattern bit string divided by 10 and the corresponding subframe number of Pcell =0.

Figure 4.2.8-1: Test model for testing with OCNG

### 4.2.9 Device-to-Device Proximity Services test model

Figure 4.2.9-1: D2D ProSe test model

For testing of Device-to-Device Proximity Services (D2D ProSe), the system simulator (SS) shall implement, in addition to one or several simulated E-UTRA cells (L1/L2), one or several simulated UEs (L1/L2), called hereafter SS-UE. An SS-UE is used to send/receive data with the UE under test over the PC5 interface. This is depicted in the D2D ProSe test model of Figure 4.2.9-1.

From a TTCN architecture point of view Figure 4.2.9-2 depicts the TTCN component model used for D2D ProSe.

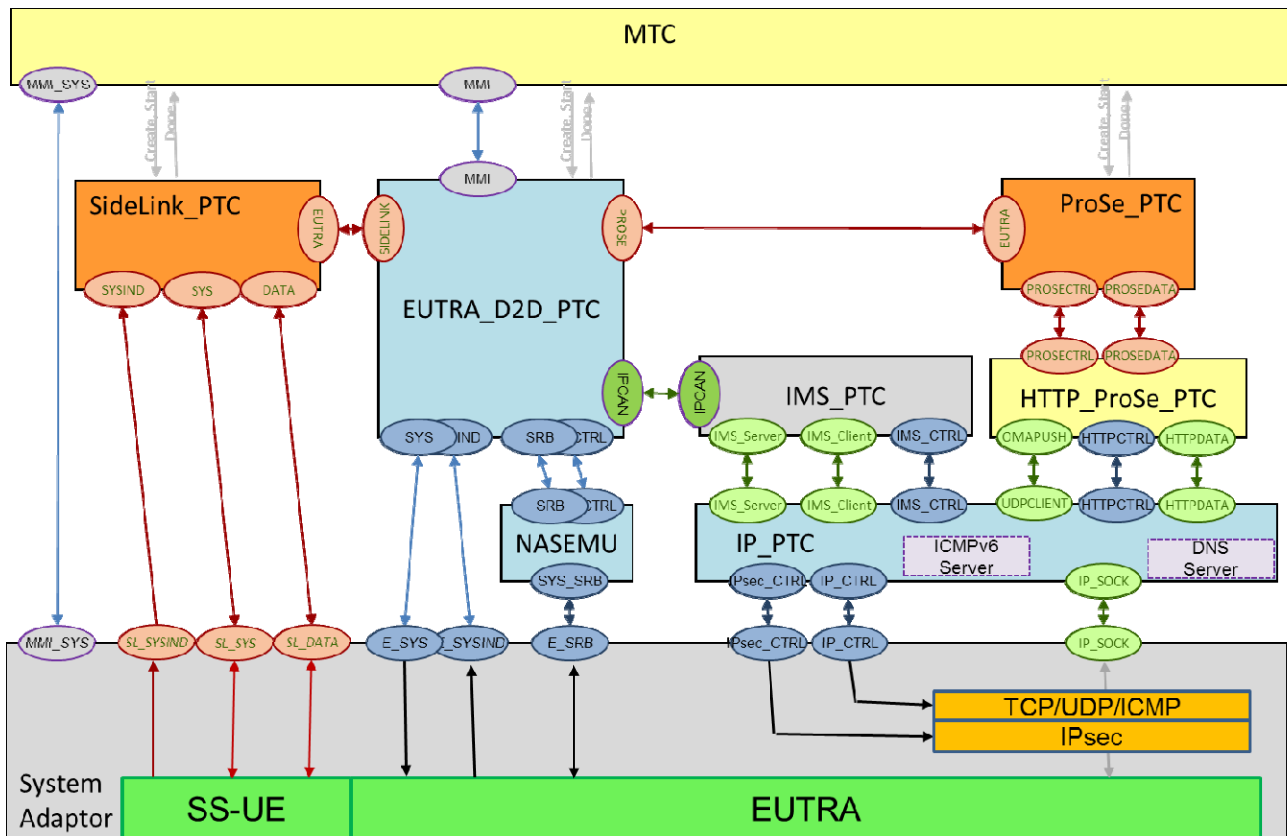

Figure 4.2.9-2: D2D ProSe component model

An SS-UE is controlled by TTCN in the SideLink PTC and is configured for Direct Discovery or Direct Communication by TTCN over sidelink system control SL\_SYS port.

The ProSe Function is simulated in the ProSe\_PTC. The HTTP\_ProSe\_PTC takes care about extracting and embedding PC3 messages from/into HTTP requests and responses and to generate the trigger for network-initiated procedures (OMA PUSH). There are no PC3 interface specific system ports, i.e. PC3 messages are IP user data in terms of clause 4.2.4.

#### 4.2.9.1 ProSe Function test model

The PC3 Control Protocol procedures between the UE and the ProSe Function can be tested by TTCN at the ProSe\_PTC. The ProSe\_PTC handles ProSe discovery messages and procedures as defined in TS 24.334 [61].

The purpose of the HTTP\_ProSe\_PTC is to emulate the transport protocol for PC3 Control Protocol messages. It is responsible to receive HTTP requests addressing the ProSe function in UL, for encoding and decoding of the ProSe discovery messages and to provide the HTTP responses with all relevant headers in DL.

In addition the HTTP\_ProSe\_PTC provides means to trigger network-initiated procedures (e.g. OMA PUSH) and is used for HTTP based authentication (e.g. GBA).

#### 4.2.9.2 Direct Discovery test model

The UE under test is configured in normal mode.

The SS-UE is configured in coverage. L1 and MAC are configured in normal way, they shall perform all of their functions. The SL\_DATA port for transmission and reception of SL-DCH message, i.e. PC5\_DISCOVERY messages, is above MAC.

On UE side integrity in SL-DCH message is applied. TTCN in SL\_UE PTC provides the integrity functionality for the SL-DCH messages:

- In reception, SS-UE shall report to TTCN the SL-DCH message, containing the Message Code Integrity (MIC), with the SFN/Subframe at which the message was received. TTCN shall check the MIC field.
- In transmission, TTCN computes the MIC before sending the SL-DCH messages to SS-UE.

The SS-UE is configured by TTCN over sidelink system control port to receive/transmit SLSS. The SS-UE shall report SLSS reception over the sidelink system indication port.

#### 4.2.9.3 Direct Communication test model

The UE under test is configured in normal mode or in Test loop mode E, ciphering (PDCP on STCH) is not enabled unless specified otherwise in the test case and ROHC is not configured.

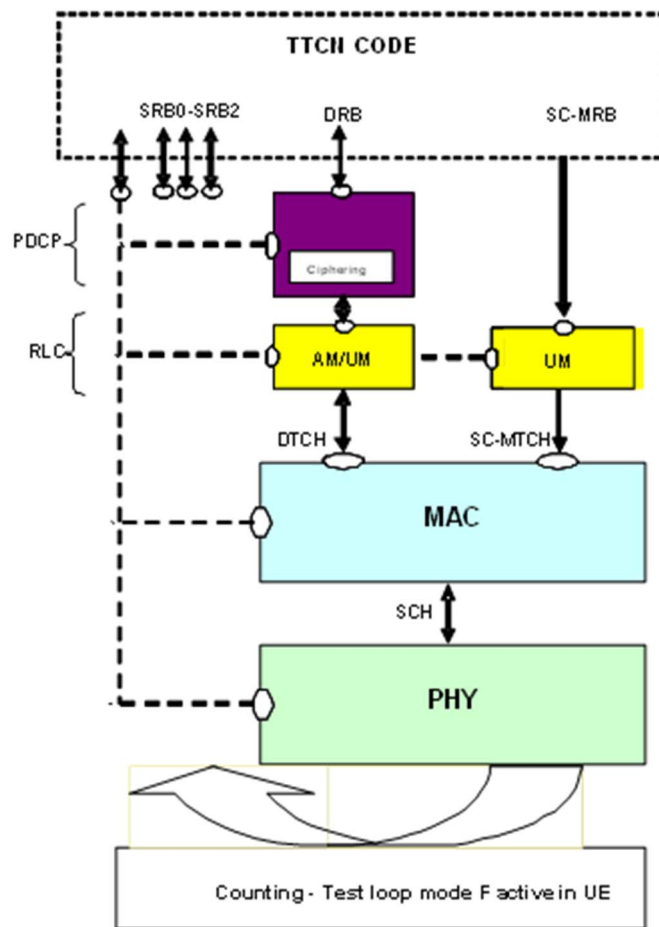

The SS-UE is configured in coverage or out of coverage. L1, MAC and RLC are configured in normal way, they shall perform all of their functions. PDCP is configured in normal mode or in 'no header manipulation' special mode in STCH security test cases:

- When configured in normal mode, PDCP shall perform all of its functions. PDCP ciphering is not enabled unless specified otherwise in the test case and ROHC is not configured.
- When configured in 'no header manipulation' mode, no header manipulation shall be performed in PDCP layer in both directions: the SS-UE shall not add PDCP header (in transmission) and remove PDCP Header (in reception). PDCP state variables shall be maintained by SS-UE PDCP layer. PDCP ciphering is enabled when specified in the test and ROHC is not configured.

The SL\_DATA port for transmission and reception of STCH data is above PDCP. The STCH data is considered as raw data.

### 4.2.10 SC-PTM test model

**Figure 4.2.10-1: Test model for SC-PTM testing**

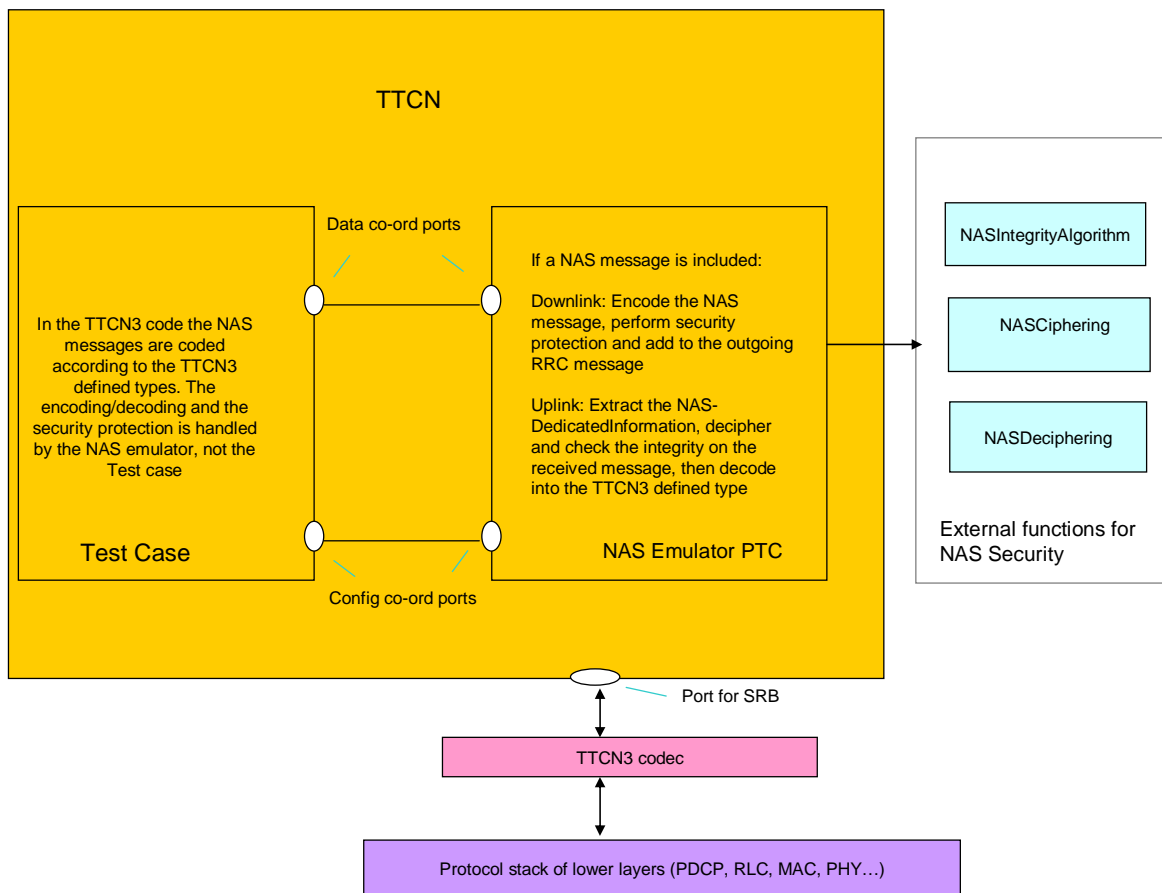

The UE is configured in Test Loop Mode F to count the successfully received MBMS Packets. On the UE side, Ciphering/Integrity (PDCP and NAS) are enabled on SRBs/DRB. No security is configured on SC-MCCH/SC-MTCH.

On the SS side, the cell is configured as a normal cell, the SC-PTM parameters are configured by using an additional call of SYSTEM\_CTRL\_REQ. L1, MAC and RLC are configured for SC-MCCH/SC-MTCH in normal mode; they shall perform all of their functions. Existing MRB port will be reused for routing SC-MRB data.

The SC-MRB data is considered as raw data that shall not be multiplexed with the data from other RBs and shall be sent in one MAC PDU and in one TTI. DL Scheduling assignments are configured from TTCN over system control port.

## 4.3 SAE Test Model

### 4.3.1 NAS Test Model

**Figure 4.3.1-1: NAS Test Model**

The NAS emulator is a parallel test component which handles NAS security, with the help of external functions to perform the integrity and (de)cipherring.

The interface between the emulator and the TTCN (co-ordination messages) handle data as TTCN-3 values. The interface between the emulator and the SS handles the RRC messages as TTCN-3 values, containing (where applicable) secure, encoded NAS messages.

The NAS emulator is not part of the test case in terms of verdict assignment (i.e. it does not check the correctness of any protocol message). Nevertheless, in case of fatal errors such as encode/decode errors, the NAS emulator sets the verdict to inconclusive and terminates immediately - which causes the test case to terminate. I.e. the NAS emulator does not resolve error situations.

## 4.4 Inter RAT Test Model

### 4.4.1 E-UTRAN-UTRAN Inter RAT Test Model

Figure 4.4.1-1: Test model for Inter RAT E-UTRAN-UTRAN testing

The model consists of dual protocol stack one for E-UTRAN and one for UTRAN. The TTCN implementation for E-UTRAN and UTRAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The SS UTRAN part consisting of PHY, MAC, RLC and PDCP (optionally) (IF PS user RB established only), are configured in normal mode. They shall perform all of their functions normally. Ciphering is enabled and shall be performed in RLC (AM/UM) and MAC (TM RLC). Integrity is enabled, and SS shall provide RRC emulator for integrity protection calculation and checking and 'Direct transfer' adaptation. Ports are above RLC (CS RAB and SRB0), PDCP (PS RAB) and RRC Emulator (SRB1 to SRB4).

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Ciphering is enabled in UTRAN.

#### 4.4.1.1 User data over UTRAN

User data transferred over UTRAN is distinguished between:

Raw user data (raw mode),

IP data (IP mode).

Depending upon whether the user data is relevant for the purpose of test, several scenarios are listed:

Raw user data relevant for the purpose of test,

IP data relevant for the purpose of test,

IP data, considered as IP signalling, not directly relevant for the purpose of test.

#### 4.4.1.1.1 Raw user data over UTRAN

The raw user data can be as RLC SDUs and PDCP SDUs. The DL and UL user data are routed to UTRAN\_PTC (Fig. 4.4.1.1.2-1). The IP stack in SS is not involved for all raw user data applications.

RLC SDUs is applied if the test loop mode 1 with loopback of RLC SDUs in TS 34.109 [9] is activated. PDCP in SS is not configured in this case; the DL and UL user data are routed to UTRAN\_PTC via the RLC port.

The raw user data as PDCP SDUs is applied in the following cases:

the test loop mode 4 (TS 34.109 [9]) is activated,

the test loop mode 1 is activated with loopback of PDCP SDUs (TS 34.109 [9]),

the test loop mode B (TS 36.509 [4]) is activated and raw data is looped back on UTRAN,

IP raw data is another type of raw user data. The test loop mode is not activated. This case is applied when sending uplink data is triggered by the upper tester.

PDCP and optional RoHC are configured in SS, the DL and UL user data are routed to UTRAN\_PTC via the PDCP port.

Feeding raw user data is largely used in the pure UTRAN test in TS 34.123-3 [7].

#### 4.4.1.1.2 IP data over UTRAN

The IP data over UTRAN is applied to E-UTRA-UTRAN I-RAT and UTRAN test cases. The IP stack in SS is involved. IP data is considered as:

IP packets data (IP mode) relevant for the purpose of test,

IP signalling (IP mode), to be handled in TTCN at IP Layer

One of the IP signalling handling is the stateless address auto configuration for IPv6, illustrated in Fig. 4.4.1.1.2-1.

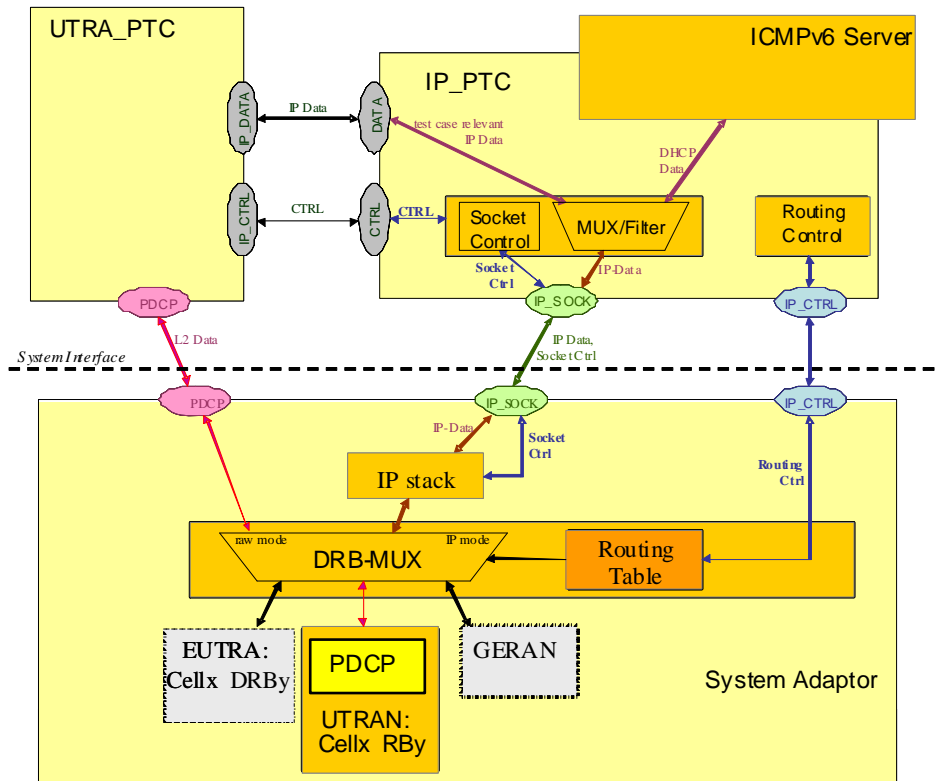

Figure 4.4.1.1.2-1: UTRAN IP test model with an ICMPv6 server

#### 4.4.1.1.3 Routing IP data

The routing of user data is the function of DRB-Mux and controlled by a routing table.

If there is no entry in the routing table for a given RB, it is considered being in raw mode, raw user data is routed to or from the UTRAN PDCP port.

If there is an entry in the routing table for a given RB, it is considered being in IP mode, IP data is routed to or from the IP stack.

For EUTRA-UTRAN or UTRAN test, the routing entry parameters in the DRB-Mux's routing table are specified as (RAT=Utran, cell-id=-1, RB id). SS PDCP entity does not belong to a particular cell; the cellId shall be assigned to the value -1. Consequently, the UTRAN cell id provided in DRB-Mux is set to cell-id=-1.

IP protocol information of IP data (protocol, local IP address, local port, remote IP address, and remote port) is also provided in the routing table. More information can be found in 4.2.4.

### 4.4.2 E-UTRAN-GERAN Inter RAT Test Model

Figure 4.4.2-1: Test model for Inter RAT E-UTRAN-GERAN testing

The model consists of dual protocol stack one for E-UTRAN and one for GERAN. The TTCN implementation for E-UTRAN and GERAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is the same as the model defined in clause 4.2.2 for RRC testing.

The SS GERAN model for GPRS consists of L1, MAC/ RLC and LLC, configured in normal mode. SNDCP may also be configured. If SNDCP is configured, this shall reference the LL Entity by the LLMEId. They shall perform all of their functions normally. Cipherring is enabled and shall be performed in LLC. XIDs shall be sent/received by the TTCN and the TTCN will then send the XID information to the SS using the G\_CLLC\_XID\_Config\_REQ ASP. Ports are above RLC (GRR messages), LLC (NAS and Data) and SNDCP (User Data).

The SS GERAN model for GSM consists of L1, L2 (MAC/ RLC), configured in normal mode. They shall perform all of their functions normally. Cipherring is enabled and shall be performed in L1. Ports are above L2.

The UE is configured in normal mode. Cipherring/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Cipherring is enabled in GERAN.

#### 4.4.2.1 User data over GERAN

User data transferred over GERAN is distinguished between:

Raw user data (raw mode),

IP data (IP mode).

Depending upon whether the user data is relevant for the purpose of test, several scenarios are listed:

Raw user data relevant for the purpose of test,

IP data relevant for the purpose of test,

IP data, considered as IP signalling, not directly relevant for the purpose of test.

#### 4.4.2.1.1 Raw user data over GERAN

The raw user data can be as RLC blocks and SDCP SDUs. The DL and UL user data are routed to GERAN PTC (Fig. 4.4.2.1.2-1). The IP stack in the SS is not involved for all raw user data applications.

RLC blocks are applied if testloop mode B (TS 36.509 [4]) is activated and raw data is looped back on GERAN.

IP raw data is another type of raw data. The testloop mode is not activated. This case is applied when sending uplink data is triggered by the upper tester.

SDCP and optionally RoHC are configured in the SS, DL and UL user data are routed to GERAN\_PTC via the SDCP port.

#### 4.4.2.1.2 IP data over GERAN

The IP data over GERAN is applied to EUTRA – GERAN I-RAT test cases. The IP stack in the SS is involved. IP data is considered as:

- IP packets data (IP mode) relevant for the purpose of the test,
- IP signalling (IP mode), to be handled in the TTCN at IP layer.

One of the IP signalling handling is the stateless address auto configuration for IPv6, illustrated in Figure 4.4.2.1.2-1.

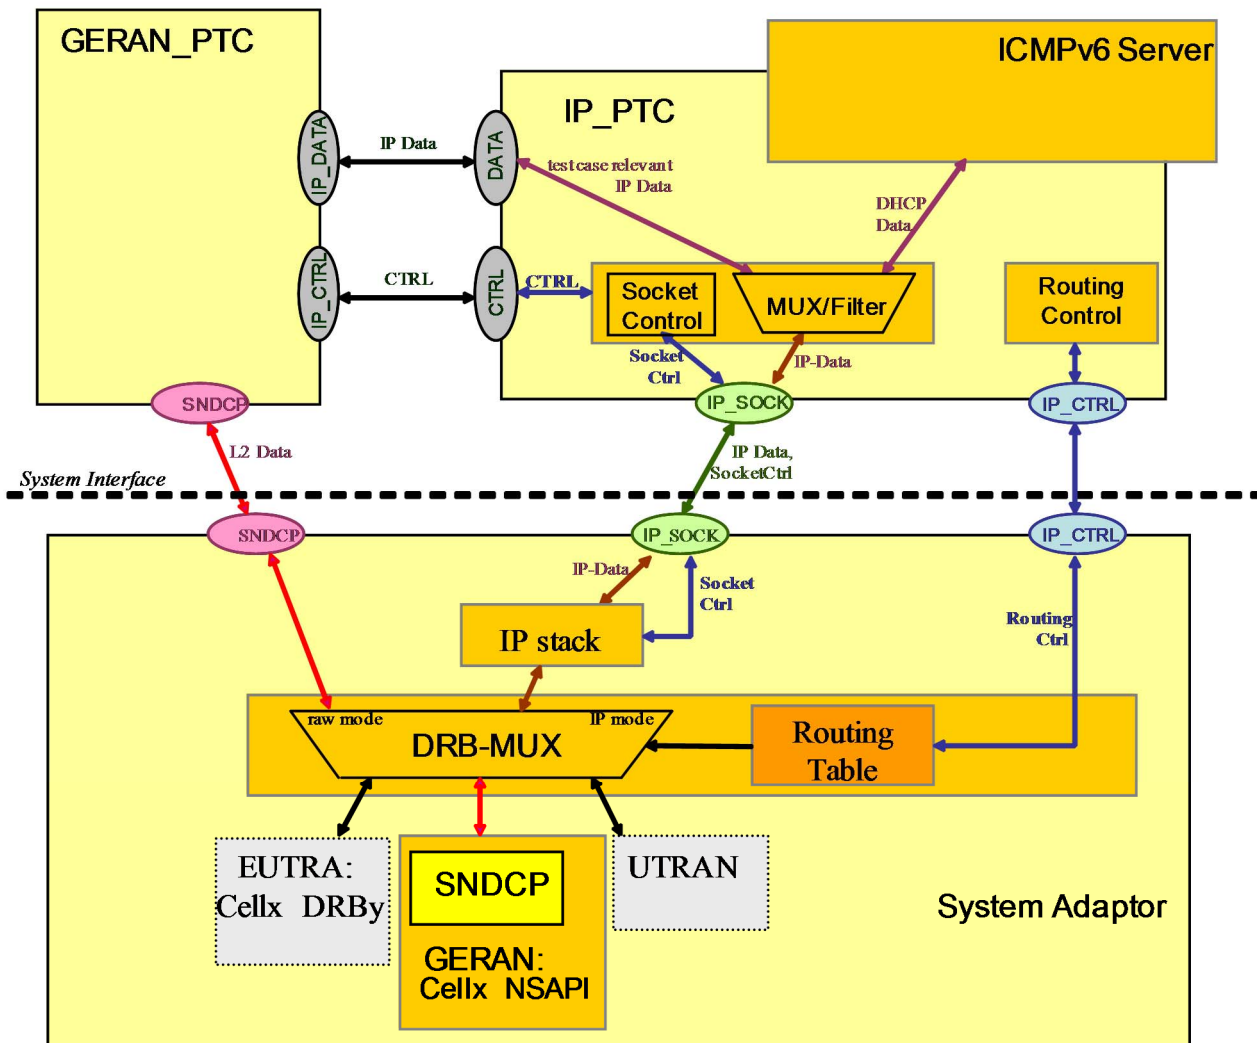

Figure 4.4.2.1.2-1: GERAN IP test model with an ICMPv6 server

#### 4.4.2.1.3 Routing IP data

The routing of user data is the function of the DRB-Mux and is controlled by a routing table.

If there is no entry in the routing table for a given NSAPI, it is considered to be in raw mode, raw user data is routed to or from the GERAN SNDSCP port.

If there is an entry in the routing table for a given NSAPI, it is considered to be in IP mode, IP data is routed to or from the IP stack.

For EUTRA-GERAN, the routing entry parameters in the DRB-Mux's routing table are specified as (RAT = GERAN, cell-id, NSAPI). IP protocol information of IP data (protocol, local IP address, local port, remote IP address, and remote port) is also provided in the routing table. More information can be found in clause 4.2.4.

### 4.4.3 E-UTRAN-CDMA2000 Inter RAT Test Model

#### 4.4.3.1 E-UTRAN-CDMA2000 HRPD Inter RAT Test Model

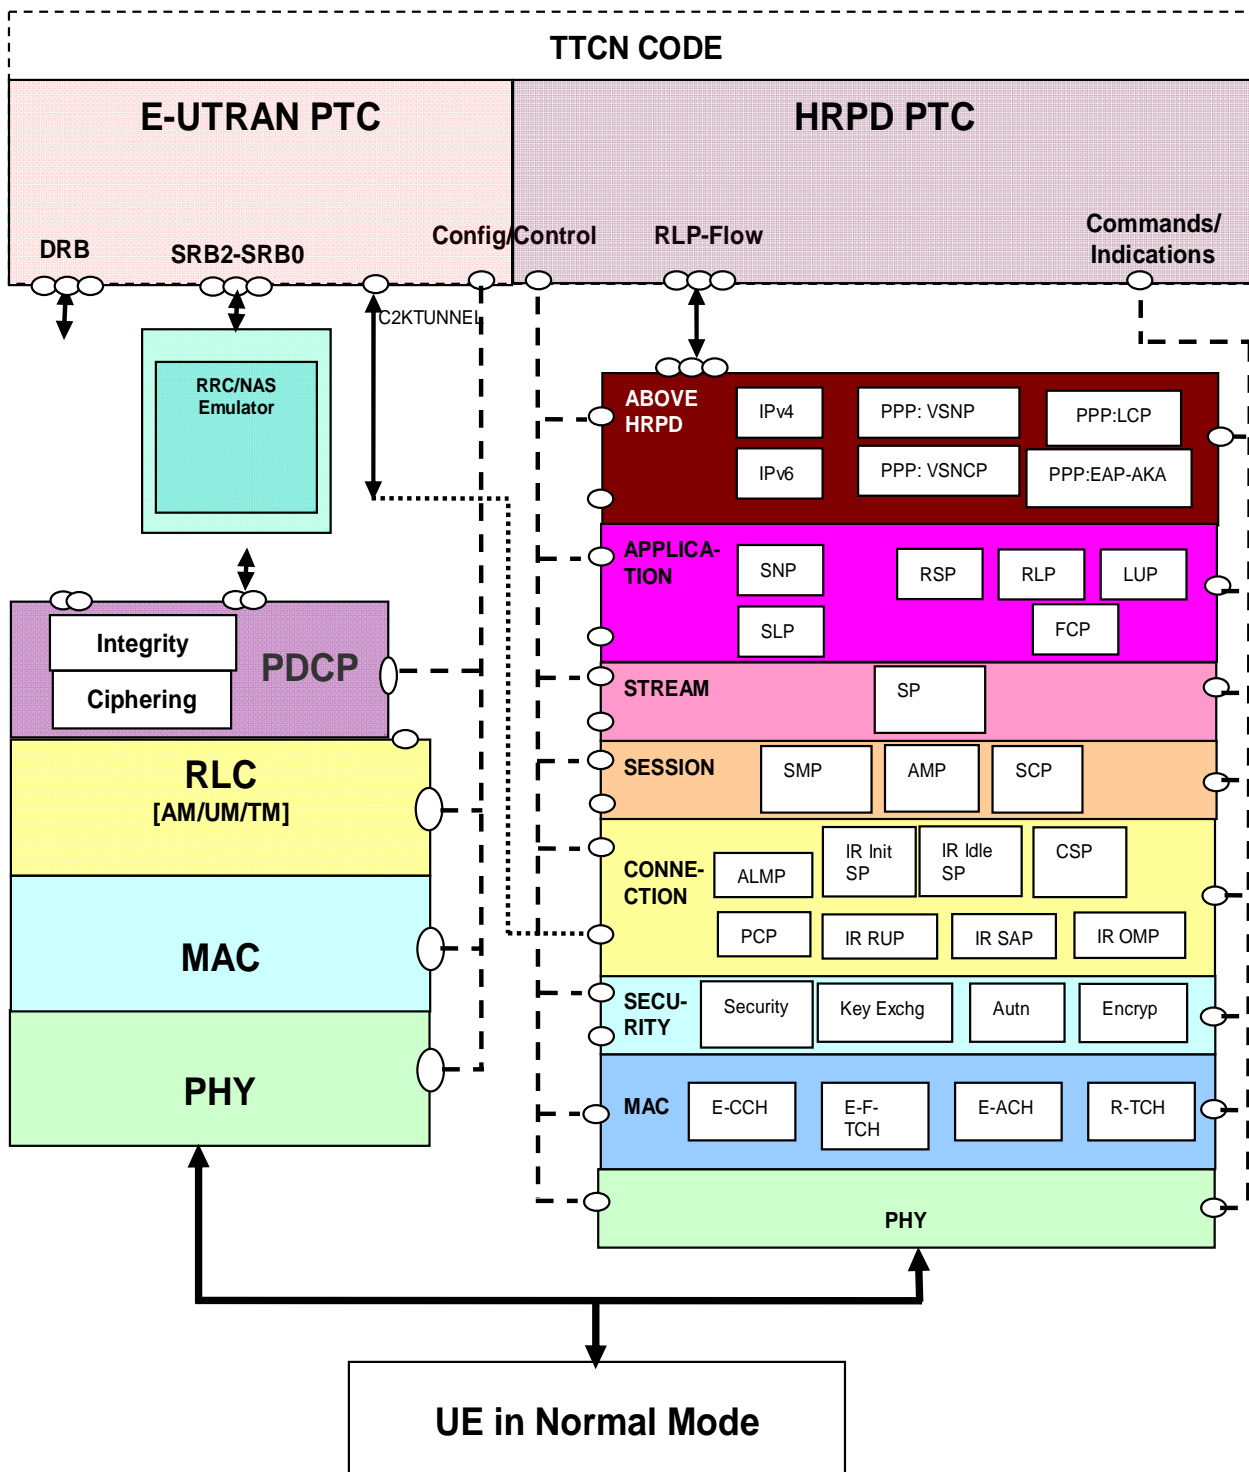

Figure 4.4.3-1: Test model for InterRAT E-UTRAN-CDMA2000 HRPD testing

The model consists of a dual protocol stack, one for E-UTRAN and one for eHRPD. The TTCN implementation for E-UTRAN and eHRPD functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The eHRPD part emulation in SS is considered as a black box. The commands/Indications port is used for commanding the SS to bring the UE into the desired state and monitoring the progress. The System commands and indications are designed with principle of having minimum command/indication per eHRPD procedure hence avoid racing conditions and timing issues. By default, the execution order of sub procedures (e.g. protocol negotiations) cannot be monitored by TTCN. The SS emulations shall be compliant with respective 3GPP/3GPP2 core specifications and guarantee execution order of respective eHRPD procedures as per relevant 3GPP/3GPP2 test/core specifications.

The C2KTUNNEL port is used for routing encapsulated

1. pre-registration messages (i.e. messages encapsulated in *ULInformationTransfer* and *DLInformationTransfer*) in the EUTRAN cell to the eHRPD and
2. handover related eHRPD messages (i.e. messages encapsulated in *HandoverFromEUTRAPreparationRequest/ULHandoverPreparationTransfer/MobilityFromEUTRACommand*).

The SS eHRPD part consists of Physical, MAC, Security, Connection, Session, Stream, Application and Layers for PPP and IP configured in normal mode. They shall perform all of their functions normally. Encryption may be enabled and performed in security layer.

The CDMA2000 eHRPD emulation in the SS supports the following layers and protocols:

- Physical layer (Subtype 2).
- MAC layer:
  - Enhanced (Subtype 0, Subtype 1) Control Channel MAC Protocol (ECH).
  - Enhanced (Subtype 1) Forward Traffic Channel MAC Protocol (E-F-TCH).
  - Enhanced (Subtype 1) Access Channel MAC Protocol (E-ACH).
  - Subtype 3 Reverse Traffic Channel MAC Protocol (R-TCH).
- Security Layer:
  - Default Security Protocol (Security).
- Connection Layer:
  - Default Air Link Management Protocol (ALMP).
  - Default Connected State Protocol (CSP).
  - Default Packet Consolidation Protocol (PCP).
  - Inter-RAT Signalling Adaptation Protocol (IR-SAP) (required only for optimized handover).
  - Inter-RAT Initialization State Protocol (IR-Init SP) (required only for optimized handover).
  - Inter-RAT Idle State Protocol (IR-Idle SP) (required only for optimized handover).
  - Inter-RAT Route Update Protocol (IR-RUP) (required only for optimized handover).
  - Inter-RAT Overhead Messages Protocol (IR-OMP) (required only for optimized handover).
- Session Layer:
  - Default Session Management Protocol (SMP).
  - Default Address Management Protocol (AMP).
  - Default Session Configuration Protocol (SCP).
- Stream Layer:

- Default Stream Protocol (DSP).
- Application Layer:
  - Default Signalling Application:
    - Signalling Network Protocol (SNP).
    - Signalling Link Protocol (SLP).
  - Enhanced Multi-Flow Packet Application:
    - Route Selection Protocol (RSP).
    - Radio Link Protocol (RLP).
    - Location Update Protocol (LUP).
    - Flow Control Protocol (FCP).
  - Alternate Enhanced Multi-Flow Packet Application (to be listed along with EMPA during SCP negotiation)
- Above eHRPD:
  - PPP: Vendor Specific Network Control Protocol (PPP:VSNCP).
  - PPP: Vendor Specific Network Protocol (PPP:VSNP).
  - PPP: Link Control Protocol (PPP:LCP).
  - PPP: Extensible Authentication protocol-Authentication and Key Agreement' (PPP:EAP-AKA').
  - IPv4.
  - IPv6.

During pre-registration phase, one cell per preRegistrationZoneID (ColorCode) to be simulated will be configured by TTCN with power level as 'off', or as specified by the test case. The SS will be issued System commands for pre-registration and expect the appropriate system indications.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Encryption is enabled in HRPD.

#### 4.4.3.2 E-UTRAN-CDMA2000 1xRTT Inter RAT test model

Figure 4.4.3.2-1: Test model for InterRAT E-UTRAN-CDMA2000 1xRTT testing

The 1xRTT test model consists of a dual protocol stack, one for E-UTRAN and one for 1xRTT. The TTCN implementation for E-UTRAN and 1xRTT functionalities are in separate Parallel Test Components. The SS E-UTRAN part is same as the model defined in clause 4.2.2 for RRC testing.

The 1xRTT part emulation in SS is considered as a black box. The commands/Indications port is used for commanding the SS to bring the UE into the desired state and monitoring the progress. The System commands and indications are designed with principle of having minimum command/indication per 1xRTT procedures hence avoid racing conditions and timing issues. By default, the execution order of sub procedures(e.g. protocol negotiations) cannot be monitored by TTCN. The SS emulations shall be compliant with respective 3GPP/3GPP2 core specifications and guarantee execution order of respective 1xRTT procedures as per relevant 3GPP/3GPP2 test/core specifications.

The C2KTUNNEL port is used for routing encapsulated

1. pre-registration messages (i.e. messages encapsulated in *CSFBParametersResponseCDMA2000*, *ULInformationTransfer* and *DLInformationTransfer*) in the EUTRAN cell to the 1xRTT and
2. handover, e-CSFB related 1xRTT messages (i.e. messages encapsulated in *HandoverFromEUTRAPreparationRequest*/*ULHandoverPreparationTransfer*/*MobilityFromEUTRACCommand*).

The SS 1xRTT part consists of Physical, MAC, LAC, Session, Stream, Application and Layers for PPP and IP configured in normal mode. They shall perform all of their functions normally. Encryption may be enabled and performed in security layer.

The CDMA2000 1xRTT emulation in the SS supports the following layers and protocols:

- Physical layer.
- MAC layer:
  - Signalling Radio Burst protocol.
  - Radio Link Protocol for Data services.
  - Forward and Reverse Packet Data Channel functions.
  - Multiplexing and QoS Delivery.
- Link Access Control:
  - Authentication and Message Integrity sublayer [optional].
  - ARQ sublayer.
  - Addressing.
  - Utility.
  - Segmentation and Reassembly.
- Layer 3:
  - Supervision and Configuration Management.
  - Signalling Protocol.

During pre-registration phase, one cell per *preRegistrationZoneID* (*ColourCode*) to be simulated will be configured by TTCN with power level as 'off', or as specified by the test case. The SS will be issued System commands for pre-registration and expect the appropriate system indications.

The UE is configured in normal mode or loop back mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Encryption may be enabled in 1xRTT.

### 4.4.4 E-UTRAN FDD-TDD Inter RAT Test Model

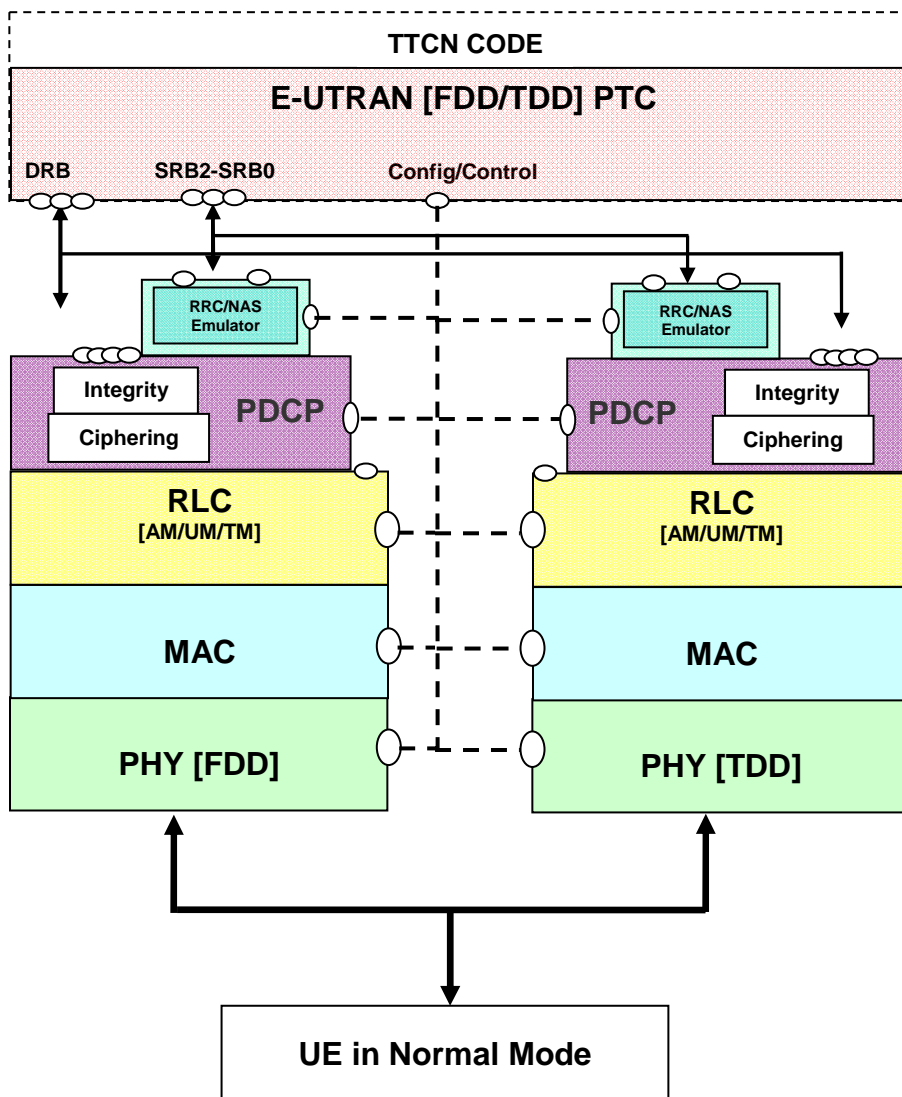

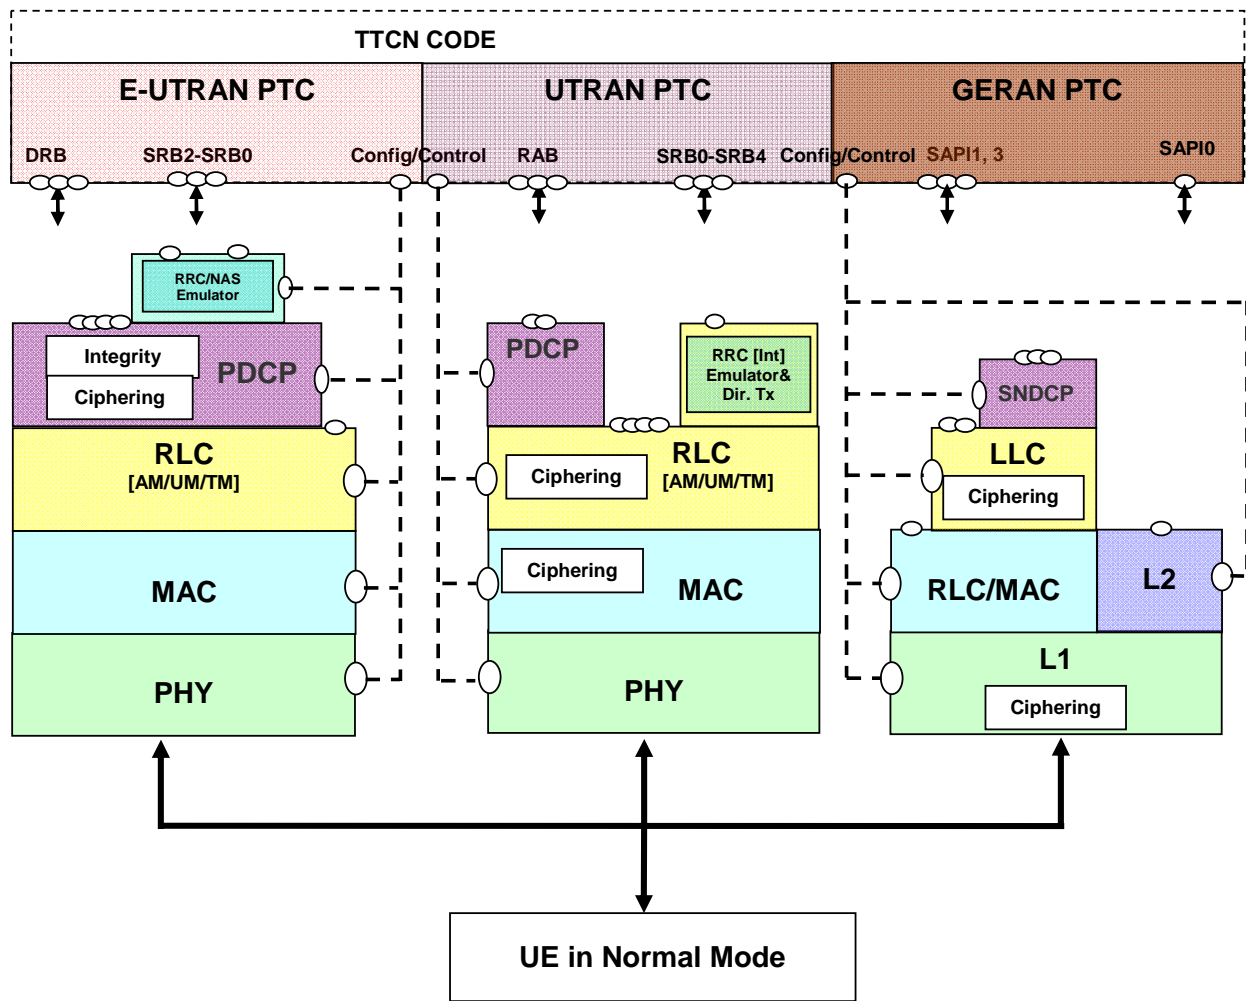

Figure 4.4.4-1: Test model for Inter RAT E-UTRANFDD-TDD testing

The model consists of dual protocol stack one for E-UTRANFDD and one for E-UTRANTDD. The TTCN implementation for E-UTRANFDD and TDD functionalities will be in the same Parallel Test Component. The SS E-UTRAN (both FDD and TDD) part is the same as the model defined in clause 4.2.2 for RRC testing. SS E-UTRANFDD and TDD shall be configured as separate cells.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured for both FDD and TDD.

### 4.4.5 E-UTRAN-UTRAN-GERAN Inter RAT Test Model

**Figure 4.4.5-1: Test model for Inter RAT E-UTRANFDD-TDD testing**

The model consists of integrated protocol stack supporting E-UTRAN, UTRAN and GERAN. The TTCN implementation for E-UTRAN, UTRAN and GERAN functionalities will be in separate Parallel Test Components. The SS E-UTRAN part is the same as the model defined in clause 4.2.2 for RRC testing. The SS UTRAN part is the same as the model defined in clause 4.4.1. The SS GERAN part is same as the model defined in clause 4.4.2.

The UE is configured in normal mode. Cipherring/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN. Cipherring/Integrity are enabled in UTRAN. Cipherring is enabled in GERAN.

### 4.4.6 3GPP-WLAN Inter working Test Model

#### 4.4.6.1 E-UTRAN-WLAN Inter working Test Model

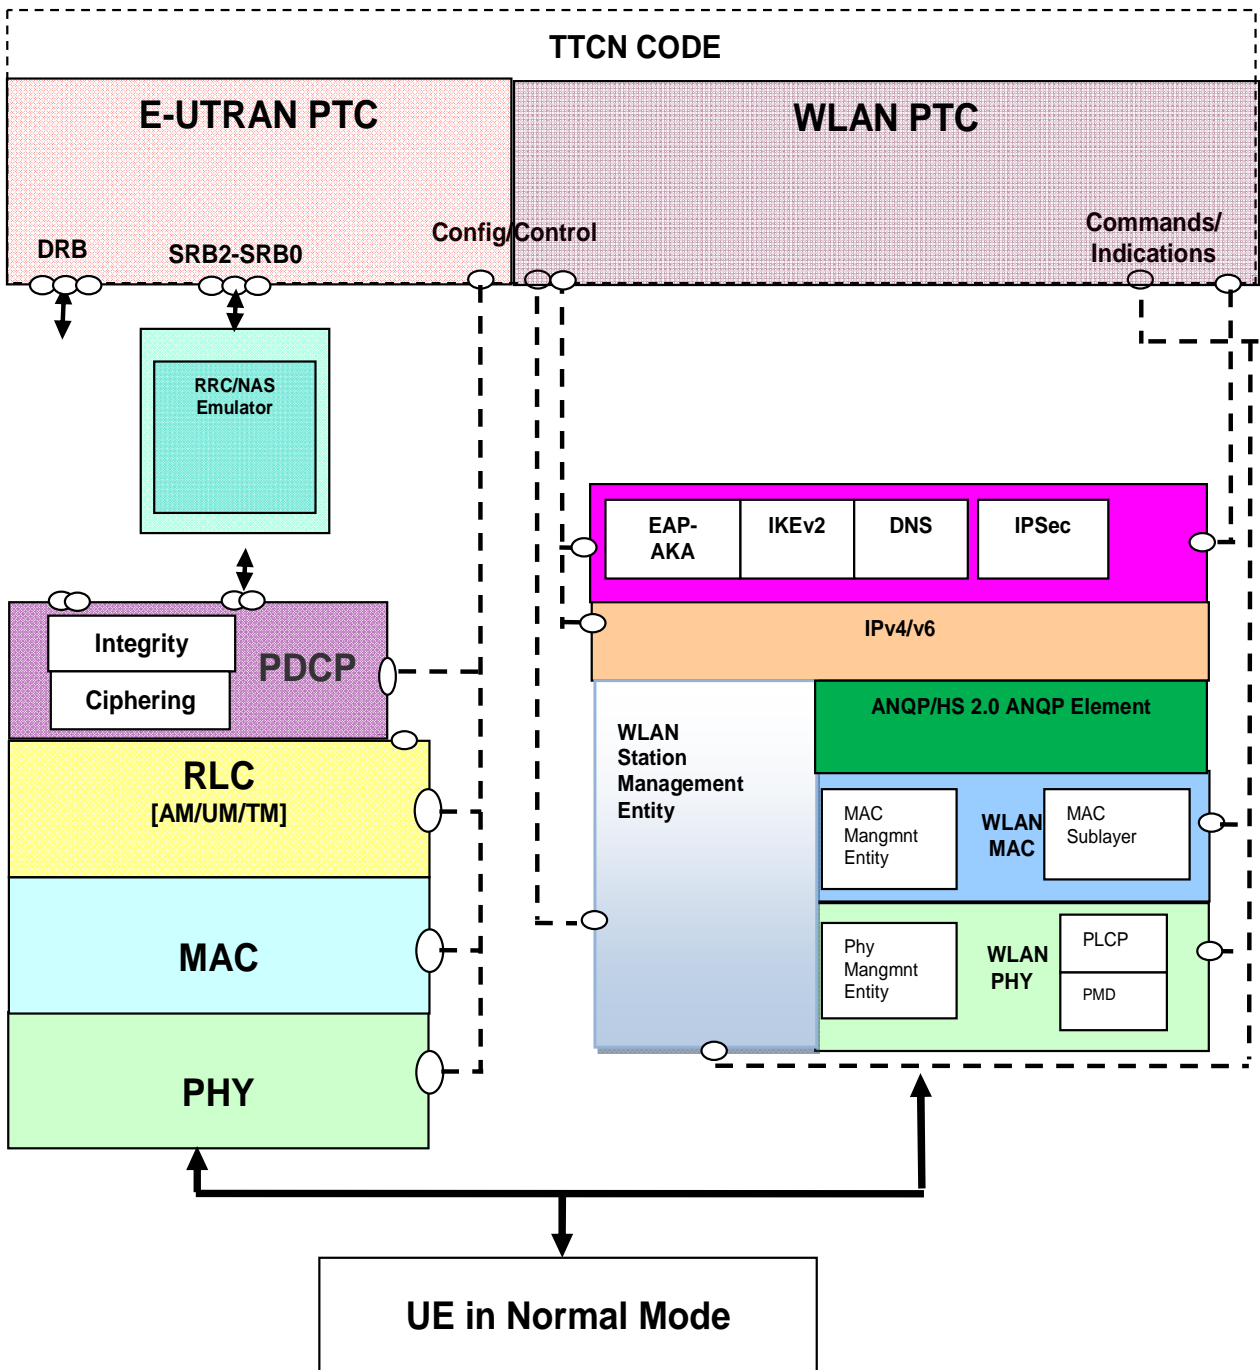

Figure 4.4.6.1-1: Test model for E-UTRAN-WLAN interworking testing

The model consists of a dual protocol stack, one for E-UTRAN and one for WLAN. E-UTRAN and WLAN functionalities are implemented in separate Parallel Test Components in the TTCN. The SS E-UTRAN part is the same as the model defined in clause 4.2.2 for RRC testing. The WLAN part is specified in clause 4.5.

The UE is configured in normal mode. Ciphering/Integrity (PDCP and NAS) are enabled and ROHC is not configured in E-UTRAN.

NOTE: The working assumption is that the UE supports IP address preservation. Therefore the UE includes INTERNAL\_IP4\_ADDRESS or the INTERNAL\_IP6\_ADDRESS attribute or both in the CFG\_REQUEST Configuration Payload within the IKE\_AUTH request message. The ePDG then relays in the IKEv2 Configuration Payload (CFG\_REPLY) of the final IKE\_AUTH response message the remote IP address information to the UE. Reference 24.302 [67] clause 7.2.2(UE) and 7.3.1(ePDG).

4.4.6.2 UTRAN-WLAN Inter working Test Model

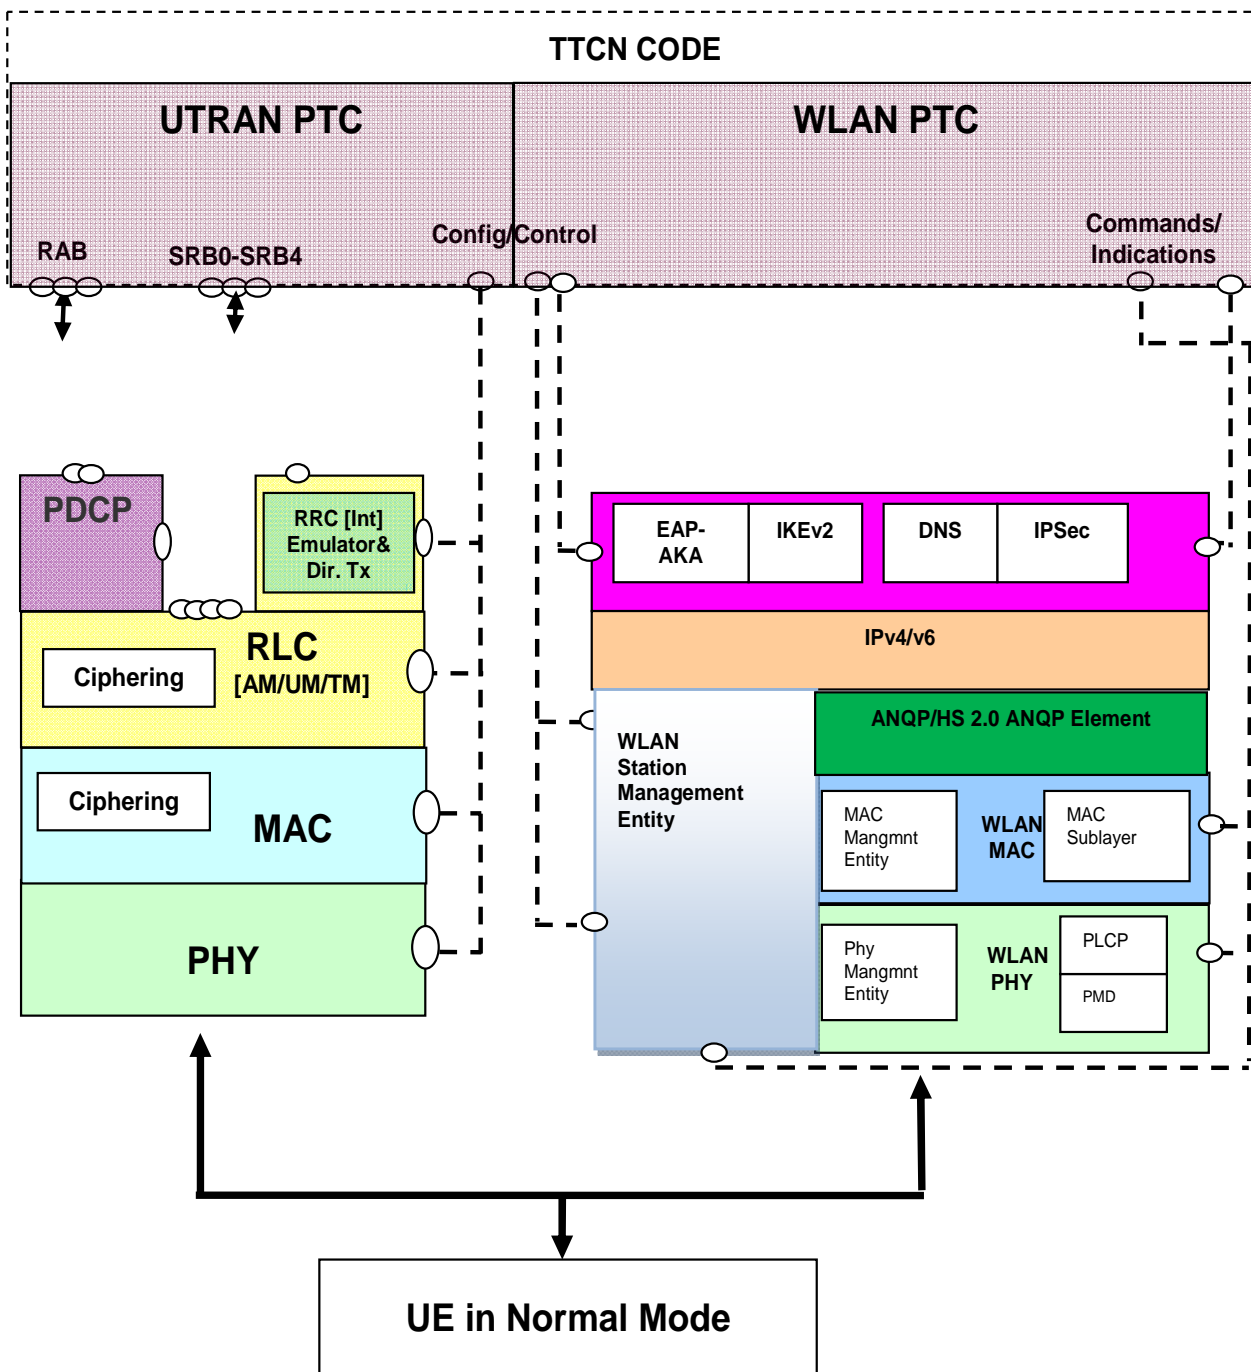

Figure 4.4.6.2-1: Test model for UTRAN-WLAN interworking testing

The model consists of a dual protocol stack, one for UTRAN and one for WLAN. UTRAN and WLAN functionalities are implemented in separate Parallel Test Components in the TTCN. The SS UTRAN part is the same as the model defined in clause 4.4.1. The SS WLAN part is defined in clause 4.5.

## 4.5 Generic WLAN Test Model

The generic WLAN test model is applicable for IMS over WLAN testing, as well as for E-UTRAN/UTRAN-WLAN interworking testing. The TTCN and SS implementations emulate an untrusted Non-3GPP IP Access as specified in TS 23.402 [63]: There is the WLAN access point (WLAN AP) and the emulation of ePDG and AAA-server.

### 4.5.1 WLAN Access Point

The WLAN access point emulation is done at the SS with a few configuration parameters provided by TTCN. The following layers need to be supported:

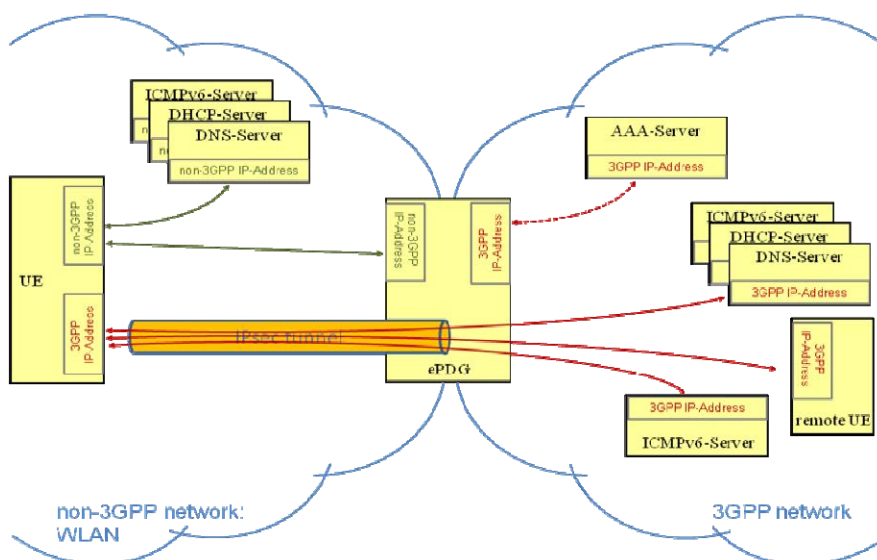

- Station Management Entity
- Physical layer:
  - Physical Sublayer Management Entity
  - Physical layer Convergence procedure
  - Physical Medium Dependent
- MAC layer:
  - MAC Management Entity
  - MAC sublayer
  - Also contains security services
- ANQP element and HS 2.0 ANQP Network elements

WLAN security protocol using WPA/WPA2 algorithms shall be supported.

### 4.5.2 ePDG/AAA-Server Emulation

An IPsec tunnel is established between the UE being in the untrusted network and the ePDG: Establishment, maintenance and release of the IPsec tunnel requires IP signalling between the tunnel end-points (UE, ePDG) according to RFC 5996 [64] and TS 33.402 [25]. IP data between the UE and the emulated 3GPP network is transferred through the IPsec tunnel by using UDP Encapsulation of IPsec ESP Packets according to RFC 3948 [65].

Figure 4.5.2-1 shows the principle of the IPsec tunnel. Note that the IP addresses of 3GPP and non-3GPP network shall be different.

**Figure 4.5.2-1: IPsec tunnel for untrusted Non-3GPP IP Access to 3GPP network**

During establishment of the IPsec tunnel, parameters for authentication and authorization (EAP AKA) are exchanged between the ePDG and the AAA-server (see TS 33.402 [25] clause 8).

The means for establishment, maintenance and release of the IPsec tunnel shall be provided by the SS. The TTCN does not deal with IKE messages as such. In addition to the IP test model of clause 4.2.4 there are the following requirements for SS implementation:

- IPsec tunnelling according to RFC 5996 [64] (IKEv2) and RFC 3948 [65]
- Emulation of EAP AKA according to RFC 4187 [66] i.e. interworking between IPsec (ePDG) and emulated AAA-server

The enhancement of the common IP test model of clause 4.2.4 is shown in figure 4.5.2-2.

Figure 4.5.2-2: Generic WLAN Test Model

Further implementation requirements:

IPsec tunnel handling is controlled by the TTCN with static parameters

- DNS for dynamic selection of the ePDG is handled in the TTCN according to the common IP test model
- DHCP and ICMPv6 can be handled in the TTCN when needed (as for E-UTRA or UTRAN)
- IMS SIP/SDP signalling is handled in the TTCN as for E-UTRA or UTRAN
- RTP/RTCP loopback model can be configured in the same way as for E-UTRA
- Routing of IP packets from and to WLAN is controlled by the DRB-Mux in the same way as for E-UTRA or UTRAN

In the context of the IPsec tunnel, logically two instances of the DRB-Mux can be considered:

- Uplink
  - lower DRB-Mux to distinguish whether a UDP packet is IKE or ESP data
    - an IKE or ESP packet needs to be routed to the IPsec tunnel
  - upper DRB-Mux to handle IP packets coming out of the IPsec tunnel
- Downlink
  - upper DRB-Mux to distinguish whether an IP packet shall be sent into the IPsec tunnel

- lower DRB-Mux to determine routing of IKE/ESP packets (i.e. the packets inside the tunnel)

---

## 4A NB-IoT system architecture and test models

### 4A.1 Test system architecture

The principles outlined in clause 4.1 apply also to the case of NB-IoT.

For NB-IoT conformance tests, NB-IoT is considered as a separate radio access technology (RAT) and is hosted by a separate TTCN-3 parallel component (PTC).

### 4A.2 NB-IoT test models

#### 4A.2.1 Layer 2 test models

FFS

### 4A.2.2 RRC / NAS test model

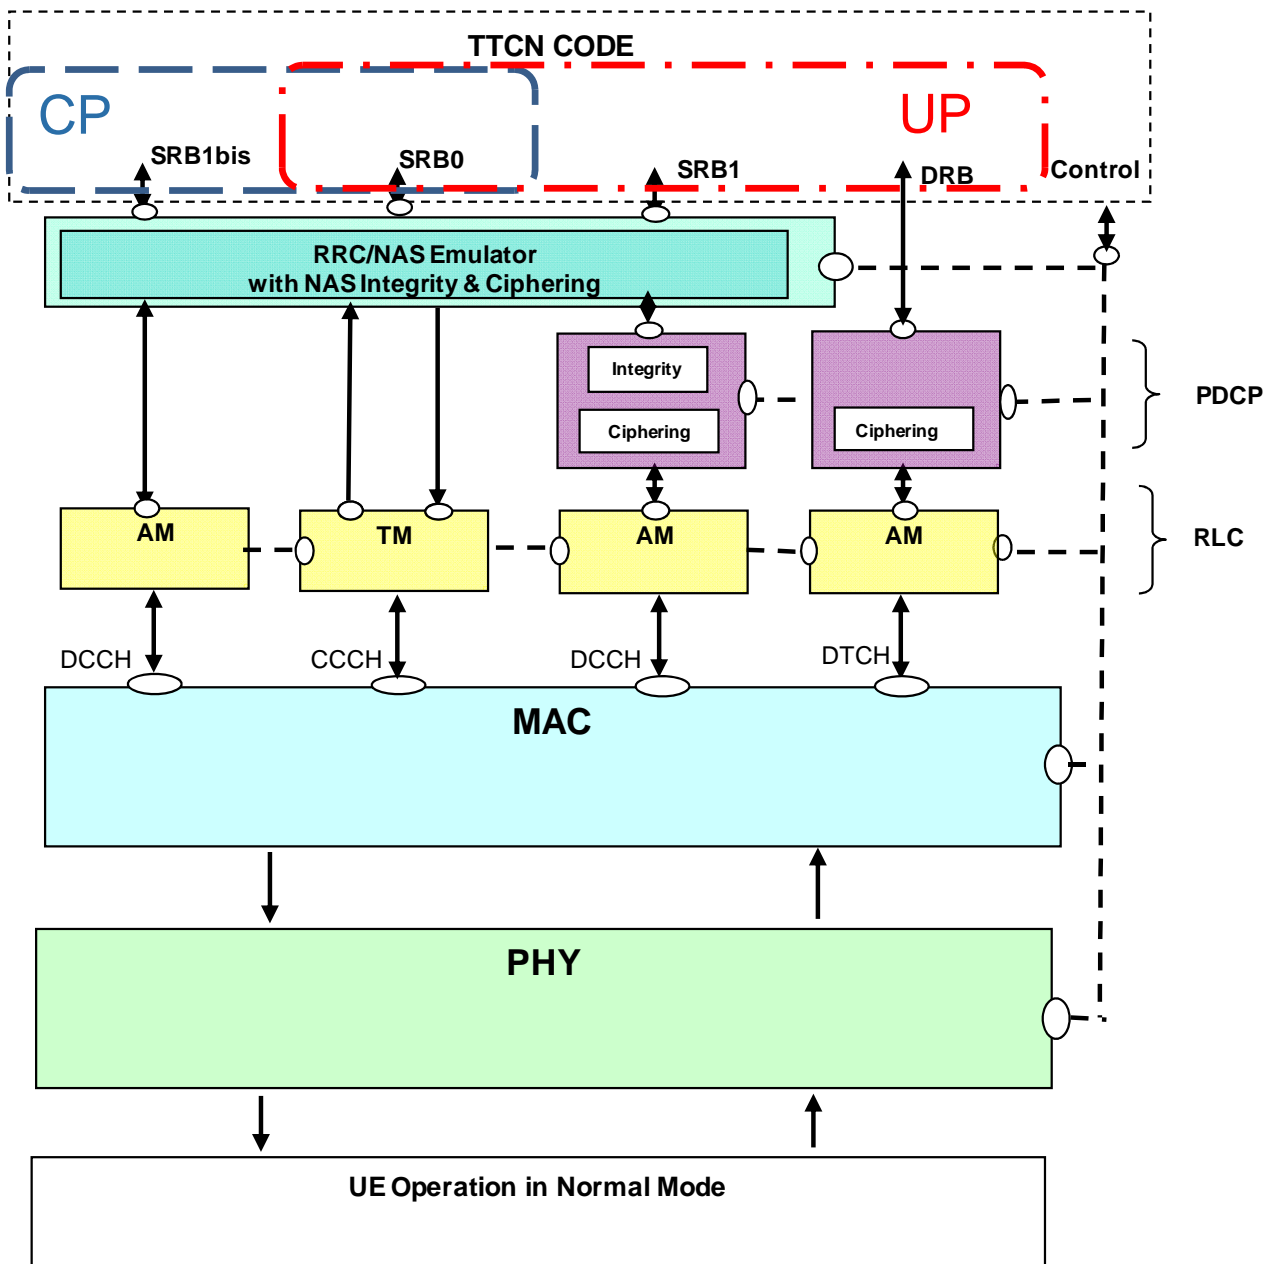

Figure 4A.2.2-1: Test model for NB-IoT RRC/NAS testing

The UE is configured in normal mode. On UE side NAS security (ciphering/integrity) is enabled and ROHC is not configured. For UP, PDCP and AS security (ciphering/integrity) are enabled.

On the SS Side L1, MAC and RLC are configured in normal mode. They shall perform all of their functions. For SRB0 the DL and UL port is above RLC. For SRB1/SRB1bis the port is above/below the RRC and NAS emulator, which is implemented as a parallel test component. NAS security (integrity/ciphering) is enabled. For UP, PDCP is configured in normal mode and the DRB port is above PDCP. AS security (ciphering/integrity) is enabled.

The NAS emulator for SRB1/SRB1bis shall provide the ciphering and integrity functionality for the NAS messages. In the UL direction, the SS shall report RRC messages, still containing (where appropriate) the secure and encoded NAS message, to the RRC port. In DL, RRC and NAS messages with same timing information shall be embedded in one PDU after integrity and ciphering for NAS messages.

The UL Scheduling Grant and DL Scheduling Assignments are configured from TTCN over the system control port.

---

## 5 Upper Tester Interface

This clause describes the handling of Upper Tester Commands at the system interface. The internal handling of those commands in TTCN is out of scope.

In the TTCN, the Upper Tester is located at the MTC; therefore there is one interface to the system adaptor common for all RATs.

### 5.1 Definitions

Upper test (UT) commands are commands at the UT interface and can be distinguished as:

- AT commands:  
Well-defined commands specified in 3GPP core specifications like TS 27.007 [32].  
At the UT interface AT commands shall be used as defined in the core specifications. It is out of scope of the TTCN implementation whether or not an AT command is supported by the UE and whether automatic operation or manual intervention is used.  
All AT commands are sent as AT command strings as defined in clause 5.2. If an AT command is not implemented in the UE, the system adaptor needs to parse the AT command and map it to an appropriate proprietary command (which is out of scope for this document). If required, the system adaptor then also needs to provide a response appropriately formatted as an AT string, as expected by the TTCN.
- MMI commands:  
In context of this specification MMI commands are commands for which there is no AT command defined in any core specification. This is independent from the operation (manual or automatic).

For each UT command the interactions between the system adaptor and the UE can be distinguished as either an automatic operation or requiring manual intervention.

- Automatic operation:  
There is no interaction needed by the test operator i.e. the UT command is performed automatically (e.g. by using the UE's AT command interface). It is up to the system adaptor implementation to use the given UT command or map it to proprietary UE command(s) depending on each UE implementation (see clause 5.2).
- Manual intervention:  
The UT command is performed by a test operator (e.g. by manual handling of the UE). The interaction between the SS and the operator, and the operator and the UE is up to the system adaptor implementation and out of scope for TTCN.

The TTCN implementation shall be the same for both modes. There shall be no difference between automatic operation and manual intervention.

- NOTE: Annex E shows message flows for manual intervention and automatic operation in different scenarios. This illustrates the behaviour at the system adaptor and shows that the behaviour is the same in TTCN for both modes.

### 5.2 Upper Tester ASPs

There is one primitive defined carrying either an MMI or an AT command to be sent to the system adaptor and one common confirmation primitive to be sent by the system adaptor.

TTCN-3 ASP Definition			
Type Name	UT_SYSTEM_REQ		
TTCN-3 Type	Record		
Cmd	TTCN-3 Type	union	
AT	charstring carrying the AT command as defined in TS 27.007 [32], TS 27.005 [31] and TS 27.060 [33]		
MMI	<ul style="list-style-type: none"> <li>- Cmd (charstring)</li> <li>- List of parameters: <ul style="list-style-type: none"> <li>- Name (charstring)</li> <li>- Value (charstring)</li> </ul> </li> </ul>		
CnfRequired	TTCN-3 Type	Ut_CnfReq_Type	
	<p><b>CNF_REQUIRED:</b> SS shall reply with one confirmation (NOTE)</p> <p><b>NO_CNF_REQUIRED:</b> SS shall swallow any confirmation generated</p> <p><b>LOCAL_CNF_REQUIRED:</b> SS shall immediately send one confirmation when the command is submitted to the UE i.e. in case of operator interaction when the operator has confirmed the command, but SS shall not wait for the UE responding(NOTE)</p>		
NOTE:	In the TTCN, a confirmation shall only be requested in cases when there is no signalling from the UE being triggered by the MMI/AT command		

TTCN-3 ASP Definition			
Type Name	UT_COMMON_CNF		
TTCN-3 Type	Record		
Result	TTCN-3 Type	boolean	
	<p><b>true:</b> success</p> <p><b>false:</b> failure</p> <p>NOTE: In case of AT commands, the SS shall return false if and only if the UE comes back with "ERROR" as result code according to ITU-T Rec V.250 clause 5.7 [60]. In case of e.g. "+CME ERROR" the SS shall return true and put the UE's response into the ResultString</p>		
ResultString	TTCN-3 Type	charstring	
	<p>response by the UE for commands which request the UE to return a result, optional</p> <p>In case of AT commands, ResultString shall contain the complete line according to the specification of the AT command.</p>		

The following MMI commands are defined.

**Table 5.1: MMI commands**

Command	Parameters	
	Name	Value
"SWITCH_ON"	(none)	
"SWITCH_OFF"	(none)

AT commands are referred to TS 27.005 [31], TS 27.007 [32] and TS 27.060 [33].

The setting in TTCN of the AT command elements listed in Table 5-3 may require adaptation to the UE dependent interpretation of the element. It shall be handled by the system adaptor.

**Table 5-3: AT commands elements**

Element	Reference	TTCN Setting
<cid>	TS 27.007 [32]	EPS Bearer Identity or PDP Context Identity

---

## 6 ASP specifications

### 6.1 General Requirements and Assumptions

The following common requirements affect ASP definitions:

- The definition of ASPs shall have no impact on the common system architecture or on the performance.
- The codec implementation is out of scope of the present document.
- For peer-to-peer PDUs contained in an ASP encoding rules need to be considered acc. to the respective protocol:
  - ASN.1 BER and PER.
  - Tabular notation for NAS PDUs or layer 2 data PDUs.

There are no encoding rules being defined for top level ASP definitions and information exchanged between the test executable and the System Adaptor (SA) only. Instead encoding depends on implementation of the codec and the SA.

There are no encoding rules being defined for ASPs between TTCN-3 components. This is implementation dependent.

Info elements defined in the protocol specifications (e.g. RRC) shall be re-used in configuration ASPs as far as possible.

For optional fields within the configuration ASPs, the following rules will be applied:

- For ASN.1 fields - these will follow the same rules as defined in the RRC specification [19].
- For TTCN-3 fields - when the current configuration of an optional field is to be 'kept as it is' then the field will be set to omit.
- For TTCN-3 fields - when the current configuration of an optional field is to be released/deleted then a separate option is provided in a union.

#### 6.1.1 IP ASP requirements

#### 6.1.2 Enhancement of IP ASP for handling IMS signalling

The IMS test model handling registration signalling introduces IPsec and SigComp layers into the IP test model in Figure 4.2.5.2-1. The ASP on system port IP\_SOCK needs to be enhanced to provide additional configuration/control functions for IPsec and SigComp. The enhanced IP ASP should contain:

1. Function to clean all IPsec and SigComp configurations and to put the IPsec and SigComp in the initial state.
2. Function to return SigComp layer a Compartment Id instructing SigComp layer to save the state of a received message which was compressed.
3. Function to start or stop signalling compression in sending direction (the SS to the UE) of SigComp.
4. Function to set security parameters (per security association) in IPsec layer.
5. A flag indicating whether SigComp layer shall be included in the data path when establishing a connection.
6. A flag indicating whether the received message was compressed by SigComp.
7. A parameter to point to a compartment used by SigComp to send a message.

## 6.2 E-UTRAN ASP Definitions

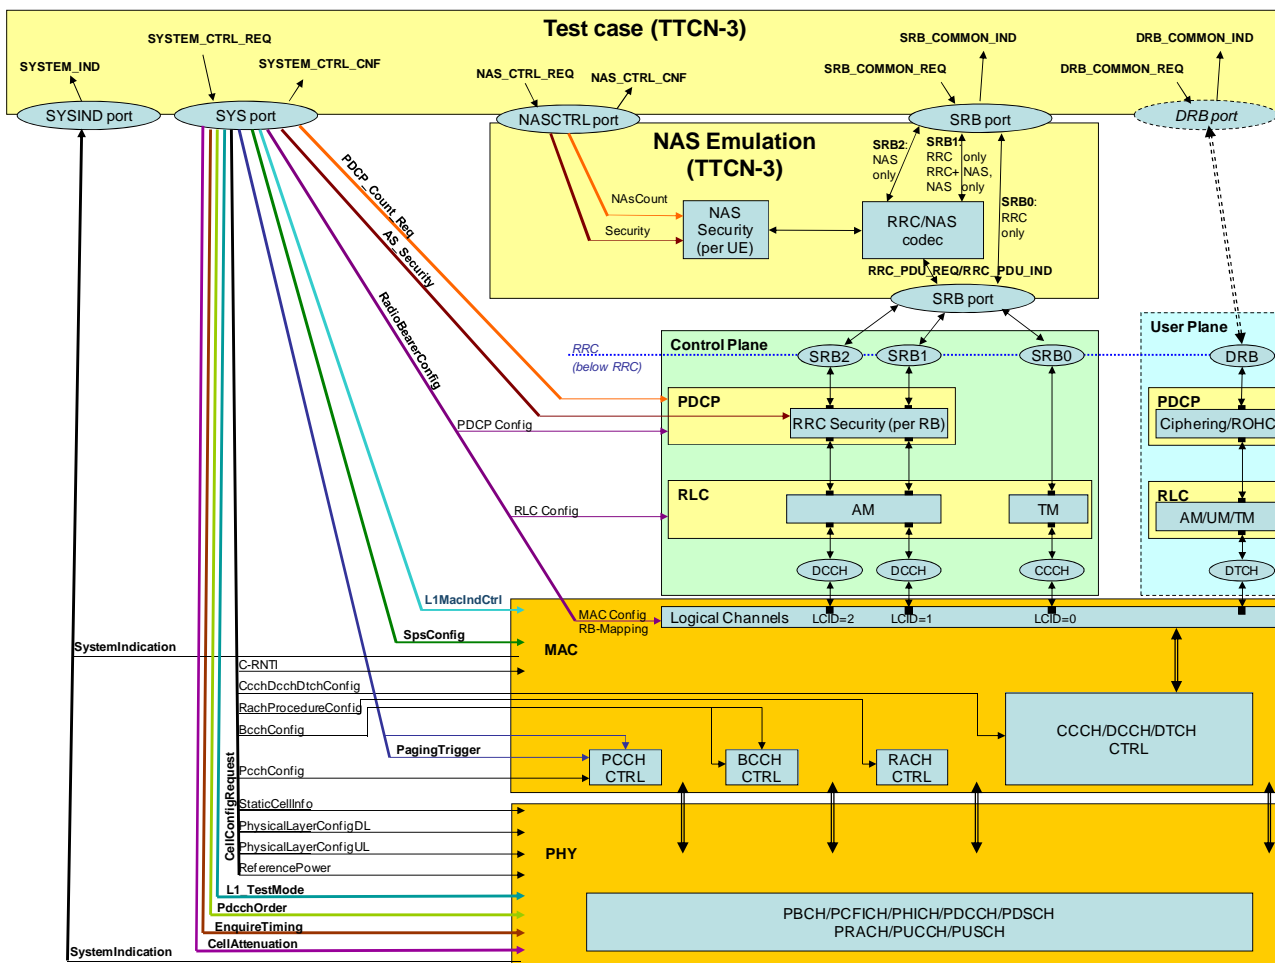

Figure 6.2-1: E-UTRAN ASP Test Model

### 6.2.1 Configuration Primitives

Annex D contains the ASP definitions for configurations.

### 6.2.2 Signalling Primitives

Annex D contains the ASP definitions for configurations.

## 6.2.3 Co-ordination Messages between NAS Emulation PTC and EUTRA PTC

TTCN-3 ASP Definition			
Type Name	SRB_COMMON_REQ		
TTCN-3 Type	Record		
Common Part	TTCN-3 Type	record	
CellId	cell id		
RoutingInfo	SRB0, SRB1, SRB2		
TimingInfo	system frame number and sub-frame number or "Now"		
ControllInfo	CnfFlag: (normally false) FollowOnFlag: <b>true:</b> Indicates that the message(s) to be sent on the same TTI will follow NOTE 1: If the same TimingInfo is not used in the messages to be sent on the same TTI, the SS shall produce an error. <b>false:</b> Indicates that no more message(s) will follow.		
Signalling Part	TTCN-3 Type	record	
Rrc	TTCN-3 Type	union	
	<b>omit:</b> NAS message shall be present; NAS message shall be sent in DLInformationTransfer <b>present, NAS message present:</b> (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's NAS_DedicatedInformation <b>present, NAS message omit:</b> (RRC message does not contain NAS information)		
Ccch	DL_CCCH_Message as define in TS 36.331 [19], clause 6.2.1		
Dcch	DL_DCCH_Message as define in TS 36.331 [19], clause 6.2.1		
Nas	TTCN-3 Type	record	
	<b>omit:</b> RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU <b>present, RRC message omit:</b> NAS message shall be sent embedded in DLInformationTransfer <b>present, RRC message present:</b> NAS message is piggybacked in RRC message NOTE 2: In case of RRC message being sent on CCCH or does not have IE NAS_DedicatedInformation NAS message shall be omitted.		
SecurityProtectionInfo	security status (if protected with integrity and/or ciphering, if at all)		
NAS message	union of all NAS messages define for DL except SECURITY PROTECTED NAS MESSAGE		

TTCN-3 ASP Definition			
Type Name	SRB_COMMON_IND		
TTCN-3 Type	Record		
Common Part	TTCN-3 Type	record	
CellId	cell id		
RoutingInfo	SRB0, SRB1, SRB2		
TimingInfo	system frame number; sub-frame number when PDU has been received		
Signalling Part	TTCN-3 Type	record	
Rrc	TTCN-3 Type	union	
	<b>omit:</b> NAS message shall be present; NAS message is received in ULInformationTransfer <b>present, NAS message present:</b> NAS_DedicatedInformation contains unstructured and security protected NAS PDU and the NAS message contains the deciphered message in structured format <b>present, NAS message omit:</b> (RRC message does not contain NAS information)		
Ccch	UL_CCCH_Message as define in TS 36.331 [19], clause 6.2.1		
Dcch	UL_DCCH_Message as define in TS 36.331 [19], clause 6.2.1		

TTCN-3 ASP Definition		
Nas	TTCN-3 Type	record
	omit RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU <b>present, RRC message omit</b> NAS message has been received in ULInformationTransfer <b>present, RRC message present</b> NAS message is piggybacked in RRC message	
SecurityProtectionInfo	security status (if protected with integrity and/or ciphering, if at all), nas count	
NAS message	union of all NAS messages define for UL except SECURITY PROTECTED NAS MESSAGE	

TTCN-3 ASP Definition		
Type Name	NAS_CTRL_REQ	
TTCN-3 Type	Record	
Common Part	TTCN-3 Type	record
CellId	cell id	
RoutingInfo	(not used for configuration)	
TimingInfo	current system frame number; sub-frame number (always provided by the SS)	
Result	Success or error (in case of error an SS specific error code shall be provided; this will not be evaluated by TTCN but may be useful for validation)	
Primitive specific Part	TTCN-3 Type	union
Security	Start/Restart Integrity Ciphering NasCountReset Release	
NAS Count	get set	

TTCN-3 ASP Definition		
Type Name	NAS_CTRL_CNF	
TTCN-3 Type	Record	
Common Part	TTCN-3 Type	record
CellId	cell id	
RoutingInfo	(not used for configuration)	
TimingInfo	current system frame number; sub-frame number (always provided by the SS)	
Result	Success or error (in case of error an SS specific error code shall be provided; this will not be evaluated by TTCN but may be useful for validation)	
Primitive specific Part	TTCN-3 Type	union
Security	(contains no further information)	
NAS Count	get set	

## 6.3 UTRAN ASP Definitions

The UTRAN ASP definitions are specified according to 3GPP TS 34.123 [7], clause 6A.3.

## 6.3.1 Void

## 6.3.2 ASPs for Data Transmission and Reception

TTCN-3 ASP Definition	
<b>Type Name</b>	U_RLC_AM_REQ
<b>TTCN-3 Type</b>	union
<b>Port</b>	UTRAN_AM
RLC_AM_DATA_REQ	TS 34.123-3, clause 7.3.2.2.34
RLC_AM_TestDataReq	TS 34.123-3, clause 7.3.3.1

TTCN-3 ASP Definition	
<b>Type Name</b>	U_RLC_AM_IND
<b>TTCN-3 Type</b>	union
<b>Port</b>	UTRAN_AM
RLC_AM_DATA_CNF	TS 34.123-3, clause 7.3.2.2.34
RLC_AM_DATA_IND	TS 34.123-3, clause 7.3.2.2.34
RLC_AM_TestDataInd	TS 34.123-3, clause 7.3.3.1

TTCN-3 ASP Definition	Port	Defined in
UTRAN_RLC_AM_REQ	UTRAN_AM	TS 34.123-3, clause 7.3.2.2.34
UTRAN_RLC_AM_IND	UTRAN_AM	TS 34.123-3, clause 7.3.2.2.34
UTRAN_RLC_TR_REQ	UTRAN_TM	TS 34.123-3, clause 7.3.2.2.33
UTRAN_RLC_TR_IND	UTRAN_TM	TS 34.123-3, clause 7.3.2.2.33
UTRAN_RLC_UM_REQ	UTRAN_UM	TS 34.123-3, clause 7.3.2.2.35
UTRAN_RLC_UM_IND	UTRAN_UM	TS 34.123-3, clause 7.3.2.2.35
RRC_DataReq	UTRAN_Dc	TS 34.123-3, clause 7.1.2
RRC_DataReqInd	UTRAN_Dc	TS 34.123-3, clause 7.1.2

The Invalid\_DL\_DCCH\_Message type is replaced with:

<b>Type Name</b>	Invalid_DL_DCCH_Message
<b>TTCN-3 Type</b>	NULL

## 6.4 GERAN ASP Definitions

### 6.4.1 ASPs for Control Primitive Transmission

TTCN-3 ASP Definition	
Type Name	G_CPHY_CONFIG_REQ
TTCN-3 Type	Union
Port	GERAN_CL1
G_CL1_CreateCell_REQ	TS 34.123-3, clause 7.3.4.3.2.1
G_CL1_DeleteCell_REQ	TS 34.123-3, clause 7.3.4.3.2.1

G_CLLC_CreateLLE_REQ	TS 34.123-3, clause 7.3.4.3.2.4
G_CLLC_DeleteLLE_REQ	TS 34.123-3, clause 7.3.4.3.2.4
G_CLLC_XID_Config_REQ	See below
G_CLLC_DoNotCheckSequenceNumber_REQ	See below

TTCN-3 ASP Definition	
Type Name	G_CLLC_CONFIG_CNF
TTCN-3 Type	empty record
Port	GERAN_CLLC

ASP Name	G_CSNDTCP_Activate_REQ	
PCO Type	G_CSAP	
Comments	The ASP is used to activate the SNDTCP entity	
Parameter Name	Parameter Type	Comments
sNDTCPid	SNDTCPid	The SNDTCP entity identifier of the cell
LLMEId	LLMEId	Logical link management entity Id
nSAPI	integer	The Network Service Access Point Identifier
sAPI	SAPI	LLC SAPI
PCI_Compression	INTEGER	0 - RFC 1144 [54] compress; 1 - RFC 2507 [55] compression; 32 - no compression
dataCompression	INTEGER	0 - ITU-T Recommendation V.42bis [56] compression; 1 - ITU-T Recommendation V.44 [57] compression; 32 - no compression
nPDUNumberSync	INTEGER	0 - Asynchronous 1 - Synchronous
Detailed Comments		

ASP Name	G_CSNDTCP_Activate_CNF	
PCO Type	G_CSAP	
Comments	The ASP is used to get the confirmation of a G_CSNDTCP_Activate_REQ	
Parameter Name	Parameter Type	Comments
sNDTCPid	SNDTCPid	SNDTCPentity identifier
nSAPI	NSAPI	The Network Service Access Point Identifier
Detailed Comments		

ASP Name	G_CSNDTCP_Release_REQ	
PCO Type	G_CSAP	
Comments	This ASP is used to inform that the NSAPI is in use and the acknowledge mode peer to peer LLC operation for the requested SAPI is established.	
Parameter Name	Parameter Type	Comments
sNDTCPid	SNDTCPid	The SNDTCP entity identifier

FFS

## 7 E-UTRAN/SAE Test Methods and Design Considerations

### 7.1 Channel Mapping

Figure 7.1 shows the channel type mapping that is used for the configuration of the SS. In layer 2 test cases non default channel mapping can be applied on SS, as explained in clause 4.2.1.

Figure 7.1-1: Channel type mapping for the default configuration of the SS

#### 7.1.1 PDCCH Candidate Selection

In this clause following abbreviations are used:

- Common search Space Aggregation: CS\_Agr.
- UE-Specific Search Space Aggregation: UE\_Agr.
- Total number of CCEs available in a subframe: Max\_CCE.

SS shall apply defined rules below in a DL subframe for PDCCH candidates selection.

- Scheduled transmissions on SI-RNTI, P-RNTI, RA-RNTI, M-RNTI, G-RNTI, SC-RNTI, SC-N-RNTI and eIMTA-RNTI, use Common Search Space. UL and DL Scheduled transmissions on C-RNTI / SPS C-RNTI, DL Scheduled transmissions on Temp. C-RNTI and UL Scheduled transmission on SL-RNTI, use UE-Specific Search Space. Transmissions on TPC-PUCCH-RNTI / TPC-PUSCH-RNTI and UL Scheduled transmissions on Temp. C-RNTI is not considered for default CCE management.
- If a transmission on SI-RNTI is scheduled, PDCCH candidate corresponding to CCEs between 0 and (CS\_Agr-1) is used. For FDD, this PDCCH candidate is reserved for SI-RNTI, and left vacant if no SI-RNTI transmission is scheduled. For TDD the default UL/DL configuration type 1, this PDCCH candidate is reserved for SI-RNTI in subframes 0 & 5 (i.e. subframes where PDCCH for UL grant for C-RNTI / SPS C-RNTI is not scheduled).

- PDCCH candidates corresponding to CCEs between  $CS\_Agr$  and  $(2*CS\_Agr-1)$  can be used for the transmission on P-RNTI, RA-RNTI, M-RNTI, G-RNTI, SC-RNTI, SC-N-RNTI or eIMTA-RNTI. In conformance test cases with single UE, there is no requirement for transmissions scheduled for more than one of P-RNTI, RA-RNTI, M-RNTI, G-RNTI, SC-RNTI, SC-N-RNTI or eIMTA-RNTI in one DL subframe. As per TS 36.331 [19] clause 5.8.1.3, the MCCH change notification indicator shall be transmitted on MBSFN subframes only.

For FDD:

- For DL transmission for C-RNTI / SPS C-RNTI / Temp C-RNTI the lowest value of  $m = m'$  which has a PDCCH available from CCEs between  $2*CS\_Agr$  and  $(Max\_CCE-1)$  shall be used. ' $m$ ' is defined in TS 36.213 [30], clause 9.1.1.
- For UL transmission for C-RNTI / SPS C-RNTI / SL-RNTI the lowest value of  $m = m'' > m'$  which has a PDCCH available from CCEs between  $2*CS\_Agr$  and  $(Max\_CCE-1)$  shall be used, irrespective of PDCCH candidate corresponding to  $m'$  is used or not. In conformance test cases with single UE, there is no requirement for transmissions scheduled for more than one of C-RNTI / SPS C-RNTI or SL-RNTI in one DL subframe.

For TDD:

- For DL transmission, for C-RNTI / SPS C-RNTI / Temp C-RNTI the lowest value of  $m = m'$  which has a PDCCH available from CCEs between  $1*CS\_Agr$  and  $(Max\_CCE-1)$  shall be used. ' $m$ ' is defined in TS 36.213 [30] clause 9.1.1. In conformance test cases with single UE, there is no requirement for transmissions scheduled for more than one of C-RNTI / SPS C-RNTI / Temp C-RNTI, P-RNTI, RA-RNTI or eIMTA-RNTI in one DL sub frame.
- For UL transmission, for C-RNTI / SPS C-RNTI / SL-RNTI the lowest value of  $m = m''$  and if in the sub frame  $m'$  is also used,  $m'' \neq m'$  has a PDCCH available from CCEs between 0 and  $(Max\_CCE-1)$  shall be used. In conformance test cases with single UE, there is no requirement for transmissions scheduled for more than one of C-RNTI / SPS C-RNTI, SL-RNTI or eIMTA-RNTI in one DL subframe.

NOTE: If  $m'$  or  $m''$  cannot be allocated in any TTI, it is a TTCN error due to X-RNTI not properly allocated. The error shall be reported to TTCN. The TTCN will exit the test case assigning an inconclusive verdict.

### 7.1.1.1 FDD candidates selection

Table 7.1.1.1-1 gives the CCE resources utilized for  $m'$  and  $m''$  for default values of common search space aggregation level  $=4$ , UE-specific search space aggregation  $L=2$  resulting in 6 PDCCH candidates  $m=0..5$  and channel Bandwidth of 5 MHz. This give  $Max\_CCE = 20$  for FDD. The table also gives the corresponding CCE start indices of PDCCH candidates for  $m'$  and  $m''$ .

Table 7.1.1.1-1: CCE Start indices(m' &amp; m'') to be used for various C-RNTIs (5 MHz)

		m''	3	5	5	5	5	5	5	3	5	3
		CCE_St_Ind''	10	8	8	10	8	8	8	10	8	10

Tables 7.1.1.1-2, 7.1.1.1-3 and 7.1.1.1-4 give the CCE resources utilized for m' and m'' for default values of common search space aggregation level =4, UE-specific search space aggregation L=2 resulting in 6 PDCCH candidates m=0..5 and bandwidths of 10/15/20 MHz respectively. This gives Max\_CCE =25(10 MHz)/37(15 MHz)/50(20 MHz) for FDD. The tables also give the corresponding CCE start indices of PDCCH candidates for m' and m''. These are in general to be applied in MAC Transport block size test cases defined in clause 7.1.7 of TS 36.523-1 [1].

### 7.1.1.2 TDD candidates selection

The default TDD subframe configuration 1 is applied to this clause. By default no DL data is scheduled in special subframes 1 and 6.

Considering that each TDD subframe having different PHICH group number, and only two symbols being present for PDCCH in the special subframes 1 and 6 for bandwidth of 5 MHz, two symbols for PDCCH in all subframes for bandwidth of 10/15/20 MHz (TS 36.508 [3]), each subframe has, therefore, different number of MAX\_CCE.

Table 7.1.1.2-1 gives the PDCCH candidates of m' and m'' for default values of common search space aggregation level =8, UE-specific search space aggregation L=8 resulting in 2 PDCCH candidates m=0,1 and the corresponding CCE start indices for channel bandwidth of 5MHz. SF0 and SF5 cannot be used for UL grant. SF1 and SF6 are not used for DL assignment. SF2, SF3, SF7 and SF8 are not applicable to PDCCH CCE allocation since they are uplink subframes.

**Table 7.1.1.2-1: CCE Start indices (m' & m'') to be used for various C-RNTIs (5 MHz)**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9

		CCE_St_Ind'	8	-	-	-	8	8	-	-	-	8

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
		m''	-	0	-	-	1	-	0	-	-	0
		CCE_St_Ind''	-	0	-	-	0	-	0	-	-	0
tsc_C_RNTI_Def9	'162E'H 5678	m'	1	-	-	-	0	0	-	-	-	1
		CCE_St_Ind'	8	-	-	-	8	8	-	-	-	8
		m''	-	0	-	-	1	-	0	-	-	0
		CCE_St_Ind''	-	0	-	-	0	-	0	-	-	0
tsc_C_RNTI_Def1 0	'1A85'H 6789	m'	1	-	-	-	0	0	-	-	-	1
		CCE_St_Ind'	8	-	-	-	8	8	-	-	-	8
		m''	-	0	-	-	1	-	0	-	-	0
		CCE_St_Ind''	-	0	-	-	0	-	0	-	-	0

Table 7.1.1.2-1a gives the PDCCH candidates of m' and m'' for default values of common search space aggregation level =4, UE-specific search space aggregation L=4 resulting in 2 PDCCH candidates m=0,1 and the corresponding CCE start indices for channel bandwidth of 5MHz and CFI=2, suitable for eMBMS test cases. SF0 and SF5 cannot be used for UL grant. SF1 and SF6 are not used for DL assignment. SF2, SF3, SF7 and SF8 are not applicable to PDCCH CCE allocation since they are uplink subframes.

Note: With Max-CCE=13 or 12, aggregation level of 8 results in only 1 PDCCH candidate. Hence aggregation level of 4 is used.

**Table 7.1.1.2-1a: CCE Start indices (m' & m'') to be used for various C-RNTIs with CFI=2 (5 MHz)**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
		Max_CCE	13	12	-	-	12	13	12	-	-	12

### 7.1.1.2.1 TDD candidates selection in special subframes

In test cases (7.1.3.12/13) testing DL data transmission in special subframes following CCE tables will be used

**Table 7.1.1.2.1-1: CCE Start indices (m' & m'') to be used for various default C-RNTI (5 MHz)**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
		Max_CCE	21	12	-	-	20	21	12	-	-	20
tsc_C_RNTI_Def	'1001'H 4097	m'	1	1	-	-	1	0	1	-	-	0
		CCE_St_Ind'	8	0	-	-	8	8	0	-	-	8
		m''	-	0	-	-	0	-	0	-	-	1
		CCE_St_Ind''	-	0	-	-	0	-	0	-	-	0
tsc_C_RNTI_Def2	'1034'H 4148	m'	1	1	-	-	0	1	1	-	-	1
		CCE_St_Ind'	8	0	-	-	8	8	0	-	-	8
		m''	-	0	-	-	1	-	0	-	-	0
		CCE_St_Ind''	-	0	-	-	0	-	0	-	-	0

NOTE: Special subframes with Max CCE =12 and aggregation of 8 result in only 1 PDCCH. Hence either only UL grant or DL allocation is possible.

**Table 7.1.1.2.1-2: CCE Start indices (m' & m'') to be used for default C-RNTI (20 MHz)**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
		Max_CCE	55	50	-	-	50	55	50	-	-	50
tsc_C_RNTI_Def	'1001'H 4097	m'	1	0	-	-	0	0	0	-	-	0
		CCE_St_Ind'	8	8	-	-	16	24	16	-	-	24
		m''	-	1	-	-	1	-	1	-	-	1
		CCE_St_Ind''	-	16	-	-	24	-	24	-	-	32
tsc_C_RNTI_Def 2	'1034'H 4148	m'	0	1	-	-	0	1	0	-	-	0
		CCE_St_Ind'	32	8	-	-	8	8	32	-	-	32
		m''	-	0	-	-	1	-	1	-	-	1
		CCE_St_Ind''	-	0	-	-	16	-	40	-	-	40

## 7.1.2 ePDCCH Candidate Selection

Total number of eREGs available in a subframe: Max\_eREG.

Total number of eCCEs available in a subframe: Max\_eCCE.

The value of numberPRB-Pairs=8 to be used in ePDCCH signalling test cases result in MAX\_eREG=128 as per TS 36.211 [35] clause 6.2.4A. As per TS 36.211 [35] clause 6.8A.1 results in MAX\_eCCE=32.

### 7.1.2.1 FDD candidates selection

The UE specific search space aggregation L=2 same as in clause 7.1.1.1 is used. For DL transmission for C-RNTI / SPS C-RNTI value of m=0 (m') in set config ID 0 shall be used. 'm' is defined in TS 36.213 [30], clause 9.1.4. For UL transmission for C-RNTI / SPS C-RNTI the lowest value of m=1 (m'') shall be used.

**Table 7.1.2.1-1: eCCE Start indices (m' & m'') to be used for various C-RNTIs**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
tsc_C_RNTI_Def	'1001'H 4097	m'	0	0	0	0	0	0	0	0	0	0
		CCE_St_Ind'	20	2	10	28	0	26	16	8	22	2
		m''	1	1	1	1	1	1	1	1	1	1
		CCE_St_Ind''	4	18	26	12	16	10	0	24	6	18
tsc_C_RNTI_Def2	'1034'H 4148	m'	0	0	0	0	0	0	0	0	0	0
		CCE_St_Ind'	8	24	4	26	14	0	4	22	26	8
		m''	1	1	1	1	1	1	1	1	1	1
		CCE_St_Ind''	24	8	20	10	30	16	20	6	10	24

NOTE: eCCE start indices are independent of bandwidth.

### 7.1.2.2 TDD candidates selection

The search space aggregation  $L=8$  same as in clause 7.1.1.2 is used. For DL transmission for C-RNTI / SPS C-RNTI value of  $m=0$  ( $m'$ ) in set config ID 0 shall be used. ' $m'$ ' is defined in TS 36.213 [30], clause 9.1.4. For UL transmission for C-RNTI / SPS C-RNTI the lowest value of  $m=1$  ( $m''$ ) shall be used.

**Table 7.1.2.2-1: CCE Start indices (m' & m'') to be used for various C-RNTIs**

C-RNTI	Value		SF0	SF1	SF2	SF3	SF4	SF5	SF6	SF7	SF8	SF9
tsc_C_RNTI_Def	'1001'H 4097	Max_CCE	21	12	-	-	20	21	12	-	-	20
		m'	0	-	-	-	0	0	-	-	-	0
		CCE_St_Ind'	16	-	-	-	0	8	-	-	-	8
		m''	-	0	-	-	1	-	0	-	-	1
tsc_C_RNTI_Def2	'1034'H 4148	CCE_St_Ind''	-	8	-	-	16	-	0	-	-	24
		m'	0	-	-	-	0	0	-	-	-	0
		CCE_St_Ind'	0	-	-	-	24	0	-	-	-	0
		m''	-	0	-	-	1	-	0	-	-	1
		CCE_St_Ind''	-	0	-	-	8	-	0	-	-	16

### 7.1.3 MPDCCH Candidate Selection

The value of numberPRB-Pairs=2+4 (numberPRB-Pairs-v1310= n6) is to be used for MPDCCH in signalling test cases. The DCI format 6-2 used for P-RNTI will be sent in Type1-common search space. The DCI format 6-1A and 6-1B scrambled with RA-RNTI will be sent in Type2-common search space. The DCI format 6-1A and 1B scrambled by C-RNTI and DCI format 6-0A and 6-0B can be sent either in Type0-common (CE Mode A only) or UE Specific by C-RNTI search space. For simplicity and to be applicable for both CE Modes, they will always be sent on UE Specific by C-RNTI search space.

It is assumed that transmissions based on P-RNTI, C-RNTI and RA-RNTI are mutually exclusive in a one UE test environment. In a subframe any one of following will happen:

- 1 DCI for P-RNTI- 1 DCI for RA-RNTI- 1 or 2 DCI for C-RNTI

For TDD with default 'specialSubframePatterns' = ssp6, as per 36.213[30] clause 9.1.5, UE is not required to monitor MPDCCH in special subframes for both CE Mode's A and B.

For Type1-common search space for P-RNTI, as per 36.213[30] clause 9.1.5 only one MPDCCH with Aggregation  $L' = 24$  is defined. This requires all 6 PRB's to be used. For this eCCE's with 0 to 23 (i.e. all eCCE's) are used.

For Type2-common search space for RA-RNTI, Aggregation  $L'$  of 24 results in only one MPDCCH utilising all 6 PRB's. For this eCCE's with 0 to 23 (i.e. all eCCE's) are used.

For UE Specific by C-RNTI search space, if only one of DCI 6-1x and 6-0x is to be sent, then Aggregation  $L'$  of 24 results in only one MPDCCH utilising all 6 PRB's. For this eCCE's with 0 to 23 (i.e. all eCCE's) are used.

For UE Specific by C-RNTI search space, if both UL and DL DCI (6-1x and 6-0x) are to be sent then:

- For CE Mode B with  $R=r1$ , aggregation level  $L'=8$  on 2 PRB's (the lowest 2 PRB's in Narrow band), resulting in only one MPDCCH utilising all 8 eCCE's with 0 to 7 are used. This is used for DCI 6-1x.
- For CE Mode B with  $R=r1$ , aggregation level  $L'=16$  on 4 PRB's (the highest 4 PRB's in Narrow band), resulting in only one MPDCCH utilising all 16 eCCE's with 0 to 15 are used. This is used for DCI 6-0x.
- For CE Mode A with  $R=r1$ , level  $L'=8$  on 4 PRB's (the highest 4 PRB's in Narrow band), resulting in two MPDCCH, MPDCCH 1 with CCE's 0-7 are used for DCI 6- 1x and MPDCCH 2 with CCE's 8-15 are used for DCI 6- 0x.

MPDCCH is repeated based on semi-statically configured higher layer parameter `mpdcch-NumRepetition` and dynamically selected by network. Each value of `mpdcch-NumRepetition = rmax` maps into max 4 allowed values of repetitions  $R = r1, r2, r3, r4$ . UE is required to monitor all  $r1, r2, r3$  &  $r4$  as per 36.213[30] table 9.1.5-2a for CE Mode A and table 9.1.5-2b for CE mode B.

Following values shall be used for DCI subframe repetition number  $R$  based on  $rmax = mpdcch-NumRepetition$  default values:

- Type1-common search space for P-RNTI, `mpdcch-NumRepetition-Paging-r13 = r16`,  $R=r1=1$  for both CE-Modes A & B.
- Type2-common search space for RA-RNTI, `mpdcch-NumRepetition-RA-r13 = r1`,  $R=r1=1$ , resulting in no retransmissions is used for both CE-Modes A & B.
- Type2-common search space for RA-RNTI, `mpdcch-NumRepetition-RA-r13 = r4`,  $R=r1=1$ , resulting in no retransmissions is used for both CE-Modes A & B.
- Type2-common search space for RA-RNTI, `mpdcch-NumRepetition-RA-r13 = r16`,  $R=r1=2$ , resulting in 2 transmissions is used for both CE-Modes A & B.
- Type2-common search space for RA-RNTI, `mpdcch-NumRepetition-RA-r13 = r64`,  $R=r1=2$ , resulting in 8 transmissions is used for both CE-Modes A & B.
- UE Specific by C-RNTI search space, `mpdcch-NumRepetition-r13 = r16`,  $R=r1=4$  resulting in 4 transmissions. This facilitates one MPDCCH with  $L'=8$  on 2 PRB's and one MPDCCH with  $L'=16$  on 4 PRB's to be simultaneously available for both CE Mode A, 36.213[30] table 9.1.5-2a and CE Mode B, 36.213[30] table 9.1.5-2b.
- UE Specific by C-RNTI search space, `mpdcch-NumRepetition-r13 = r1`,  $R=r1=1$  resulting in 1 transmissions. This facilitates 2 MPDCCH with  $L'=8$  on 4 PRB's to be simultaneously available CE Mode A, 36.213[30] table 9.1.5-2a; for CE mode B one MPDCCH with  $L'=8$  on 2 PRB's and one MPDCCH with  $L'=16$  on 4 PRB's is simultaneously available, 36.213[30] table 9.1.5-2b.

## 7.2 Uplink Grant

The Network/SS informs the UE if it is allowed to make Uplink Data transmission by transmitting 'DCI format 0' on PDCCH. The UE shall transmit (4 TTI later for FDD or variable for TDD) a Transport block of exactly the same size as specified in DCI format 0. The UE has no control of its own on TB size, and has to merely follow the network, even if that means lots of MAC padding or resource starving.

The UE has the following means to communicate if it has UL data ready for transmission and subsequently the estimate of quantity of data to be transmitted.

**RACH procedure:** UE in idle mode, handed over to a new cell or connected mode but PUCCH is unsynchronized (sometimes referred to as PUCCH is not configured) will trigger RACH procedure on data ready for transmission in UL.

**Scheduling Request:** UE in connected mode, no grant configured, PUCCH is synchronized and has data ready for transmission in UL, will transmit a scheduling request on PUCCH.

**Buffer Status Reports:** UE in connected mode, PUCCH synchronized, has a configured grant for current TTI, but grant is not sufficient to transmit all the data will include MAC control element BSR in the UL MAC PDU.

RACH and SR indicate on data availability and BSR provides an estimate of data available for transmission.

CQI/PMI/RI feedback from the UE which indicates the channel conditions and recommended number of layers.

Hence to determine the exact need of the grant requirement of the UE a network/SS needs to act on all four of the above. This eventually complicates the SS implementation and hence the grant allocation procedure is simplified such that SS needs only to react on reception of SR and grant allocation configured from the TTCN.

The SS disables aperiodic CQI/PMI/RI feedback from the UE by setting the 'CQI request field' to 0 in DCI format 0/RAR grant.

When request for periodic CQI/PMI/RI feedback is requested due to TTCN configuration, the SS does not react on periodic CQI/PMI/RI feedback received and still allocates grants as configured from TTCN.

The SS, if configured for maintaining PUCCH synchronization at UE, shall periodically transmit automatically MAC PDUs containing the MAC control element 'Timing Advance'. The period as configured by the TTCN is set to 80 % of the 'Time Alignment Timer' default value (750 ms) configured at UE.

Additionally the SS can be configured to automatically transmit a 'configured' UL grant at every reception of a Scheduling Request. This grant should be selected under the following restrictions:

- All UE categories can handle this i.e. (for UEs Cat 1 and above  $TBS \leq 5160$ , for Cat 0/M1  $TBS \leq 1000$ ).
- It is sufficiently large that most of uplink signalling messages can be transmitted. In case the grant is not sufficient to fit the whole UL data, the UE will have to wait for the expiry of RETX\_BSR\_TIMER and retransmit a SR. And hence the procedure is repeated.

The following 5 types of grant allocation configurations are possible. Grant allocation Types 1 to 3 are applicable, when the UE is in connected state. Grant allocation Type 4 is applicable when UE is establishing /re-establishing the RRC Connection, or during handover or in connected state but PUCCH is not synchronised. Grant allocation type 5 is applicable when the UE is in connected state and is used for lower category UEs when the UL grants greater than Max TBS supported by the UE is needed.

#### Grant Allocation Type 1:

- SS is configured to maintain PUCCH Synch.
- SS is configured to send an automatically 'configured Grant' (in terms of  $I_{MCS}$  and  $N_{PRB}$ ) to the UE on every reception of a Scheduling Request, within 10 subframes. The default configured grant is  $I_{MCS} = 9$  and  $N_{PRB} = 25$  for test cases without IMS signalling within the test body and  $I_{MCS} = 20$  and  $N_{PRB} = 25$  for test cases with IMS signalling within the test body, unless explicitly specified in test cases.
- By default this type of grant allocation is applied. The majority of Idle mode, RRC and NAS test cases, the preambles of all tests and the postambles of those tests for which UE is still PUCCH synchronised at the end of test body. A few Layer 2 tests also use this type of grant.

#### Grant Allocation Type 2:

- Configure SS to maintain PUCCH Synch.
- Configure SS to periodically transmit a grant ( $I_{MCS}$  and  $N_{PRB}$ ). Number of grants (1 or more) and period (in ms) configured by TTCN.
- The first grant transmitted is as specified in the explicit timing information. If timing information is "now" the SS selects the first suitable subframe for UL transmission.
- The grant allocation period for TDD shall be assigned without conflict with the allowed UL subframes in the TDD subframe configurations. As example of allocation period, the TDD UL Grant allocation can be assigned as in multiples of 5 ms.
- This type of grant allocation is applicable to the majority of RLC, PDCP and a few MAC test cases.
- No additional grant is allocated on reception of any SRs.

**Grant Allocation Type 3:**

- SS may or may not be configured to maintain PUCCH Synch.
- Configure SS to transmit a one time grant ( $I_{MCS}$  and  $N_{PRB}$ ) in the time requested by TTCN. The one time transmission is achieved by setting Number of grants=1 and period =Only once
- This type of grant allocation is suitable for MAC and DRB tests when UE is in UL Synchronised state

**Grant Allocation Type 4 (RACH configuration):**

- In addition to the 3 types of UL grant allocations, a fourth type of grant allocation during the RACH procedure is also possible, where the SS behaves as per the RACH procedure configured and allocates the configured grant during the RACH procedure. This UL Grant type is used in the configuration for the preamble in many situations, basically in MAC test cases. This type of grant is further used when UE is establishing/re-establishing the RRC connection or during handover, or when the UE is not PUCCH synchronised;

**Grant Allocation Type 5:**

- SS is configured to maintain PUCCH Synch.
- Configure SS to periodically transmit a grant ( $I_{MCS}$  and  $N_{PRB}$ ) on reception of SR. Number of grants (1 or more) and period (in ms) configured by TTCN. The first grant is sent within 10 subframes of SR. Reception of SR starts/restarts periodic grant transmission. The default configured grant is  $I_{MCS} = 12$  and  $N_{PRB} = 25$  for UE Cat 1 and  $I_{MCS} = 14$  and  $N_{PRB} = 4$  for UE Cat 0/CAT M1 (CE Mode A), unless explicitly specified in test cases.
- This type of grant allocation is suitable when the UE category is lower than 2. The majority of Idle mode, RRC and NAS test cases, the preambles of all tests and the postambles of those tests which UE is still PUCCH synchronised at the end of the test body. A few Layer 2 tests also use this type of grant.

All the UL grant allocation methods define grant allocation in terms of  $I_{MCS}$  and  $N_{PRB}$  to be used. The SS shall allocate RBs corresponding to PRB indices 0..( $N_{PRB}$ -1).

## 7.2.1 Exception TC list

This clause contains the exception test case list where the explicit uplink grant types other than UL grant type 1 are specified.

**Table 7.2.1-1: Exception test case list with explicit uplink grant types other than UL grant type 1**

Group	Test Case	Uplink Grant Type 2	Uplink Grant Type 3
RLC	7.2.2.6	X	
	7.2.2.7	X	
	7.2.3.1		X
	7.2.3.2	X	
	7.2.3.4		X

	12.1.2		X

## 7.3 Downlink Resource Allocation

The DL resource allocation is an SS emulation function. In order to ensure similar DL behaviours (within defined tolerances) on the different SS platforms in the timing stringent requirements, all downlink resource allocation schemes specified in the present clause shall be supported by the SS.

When the DL data is to be sent with a specific scheduling requirement, for instance, in a TTI in advance rather than “now”, the TTCN shall ensure that the data is scheduled at least 100 ms in advance. The 100 ms time in general covers all time delays, from the time DL data is sent by the TTCN at the EUTRA PTC to the completion of the transmission at the SS (TTCN delays, codec delays, adaptor delays and SS processing delays at various protocol Layers). In the case of more than one NAS PDU is piggy-backed in a scheduled RRC PDU, 20ms shall be added per additional NAS PDU:  $100\text{ms} + (\text{NoOfNASPDUs} - 1) * 20\text{ms}$ ; this calculation is based on the assumption that there are not more than 7 piggy-backed NAS messages; this is valid for LTE.

NOTE: The DL data means DL signalling and/or data in the present clause.

## 7.3.1 PDCCH DCI default formats

Two types of DCI combinations are identified as default formats for the signalling and protocol test.

DCI combination 1 uses:

- DCI format 1A, resource allocation type 2 localised, for all DL scheduling types.

DCI combination 2 uses:

- DCI format 1C, resource allocation type 2 distributed, for scheduling of PCCH/BCCH/RAR; and
- DCI format 1 resource allocation type 0, for UE dedicated scheduling.

### 7.3.1.1 Default DCI Format to be used in test cases configuring MIMO

Transmission mode 3 will be used in MIMO test cases configuring 2 Transmit antenna SS environment. As per 36.213 Table 7.1-5, in Transmission mode 3, UE is expected to decode only DCI formats 2A and 1A. Similarly for Transmission mode 4, UE is expected to decode only DCI formats 2 and 1A. Hence for all test cases configuring 2TX (2 antenna ports) at SS, DCI combination 1 is the default DCI combination to be applied. This allows DCI format 1A to be used as default DL scheduling scheme for test sequences not explicitly specified to use DCI formats 2A or 2(i.e. preamble, postamble etc.)

## 7.3.2 Radio parameters configured

The SS shall support DL QPSK, 16QAM and 64QAM modulation schemes. The configured radio parameters, including DCI format, resource allocation types, maximum allowed modulation scheme, first virtual / physical resource block to be used, maximum available resource blocks and redundancy version, are provided to the SS.

In the normal signalling test condition, DL RLC and HARQ retransmissions are rare. The redundancy version is provided to allow the occasional HARQ retransmissions. For those MAC, RLC tests contained in table 7.3.2-1 where timing requirements are involved the DL or UL HARQ retransmissions are not tolerable. Table 7.3.2-2 lists the RLC tests where timing requirements are involved, only one DL or UL HARQ retransmission per transport block is tolerable. Unless otherwise specified, if HARQ retransmissions occur in the test cases contained in table 7.3.2-1 or more than one HARQ retransmission occurs in the test cases of table 7.3.2-2, the test cases will be terminated with verdict inconclusive.

**NOTE:** If the test is expecting the reporting of UL ACK/NACK for the DL MAC PDUs, or is configuring the PHICH in a certain mode, HARQ retransmissions other than those that are already specified in the prose will have an impact on the test sequence. If test cases perform scheduling of data transmissions and/or receptions, or the testing timers in the test cases are less than 900 ms (i.e. the tolerance for 90 ms), HARQ retransmissions will make it difficult to continue testing.

**Table 7.3.2-1: TC list intolerable of HARQ retransmissions**

Test case	Comment
<b>MAC</b>	
7.1.3.1, 7.1.3.2, 7.1.3.4, 7.1.3.5, 7.1.3.6, 7.1.3.9, 7.1.6.1, 7.1.6.2	HARQ feedback reporting enabled or DL CRC errors introduced; DL HARQ un specified (re)transmissions will result in 'Fail' in test body, UL HARQ retransmissions are allowed;
7.1.4.8	Strict relationship between grant and UL data
7.1.4.3	Up to 104 PDUs to be sent in DL every TTI;
7.1.4.2, 7.1.4.11, 7.1.4.12, 7.1.4.14, 7.1.5.4	HARQ feedback transmission specified or PHICH errors introduced
7.1.4.15, 7.1.4.16	Periodic UL grants
<b>RLC</b>	
7.2.2.6, 7.2.2.7, 7.2.2.8, 7.2.2.10, 7.2.3.1, 7.2.3.2, 7.2.3.4, 7.2.3.5, 7.2.3.10, 7.2.3.13, 7.2.3.14, 7.2.3.15, 7.2.3.18	Tolerating HARQ retransmissions is not feasible due to rigid timing and scheduling conditions. Testing timer < 900 ms

**Table 7.3.2-2: TC list intolerable of more than one HARQ retransmission per transport block**

Test case	Comment
7.2.3.6, 7.2.3.7, 7.2.3.8, 7.2.3.9, 7.2.3.17	Tolerating more than one HARQ retransmission is not feasible due to rigid timing and scheduling conditions. Testing timer < 900 ms

### 7.3.2.1 HARQ Retransmission when MIMO is configured

For test cases configuring MIMO, if in a TTI more than one transport blocks are scheduled (DCI format 2/ 2A/2B), the HARQ retransmission is handled independently for each transport block by SS. In case UE ACKs one Transport block and NACKs the other and there is no fresh data scheduled for transmission, SS only schedules the NACKed transport block for retransmission, using same  $I_{mcs}$  as used in initial transmission, mapped to codeword 0. Aced Transport block (and hence codeword 1) is disabled by setting corresponding  $I_{MCS} = 0$  and  $r_{vidx} = 1$ . Resource allocation ( $N_{prb}$ ) used in retransmission is same as in initial transmission.

It is assumed that retransmission and fresh data scheduled in one TTI will not happen.

### 7.3.3 General DL scheduling scheme

The rules in the present clause, unless particularly specified, are applied to both default DCI combinations.

The bandwidth of 5/10/15/20 MHz makes 25/50/75/100 available physical resource blocks respectively. The 25/50/75/100 resource blocks are divided into three distinct sets. Exact set sizes and the elements contained in the individual sets depend upon the DCI combination to be applied.

- The first set is reserved for BCCH mapped to DL-SCH (SI-RNTI).
- The second set is reserved for PCCH mapped to DL-SCH (P-RNTI).
- The third set is used for one of mutually exclusive transmissions of:
  - 'Random Access Response' mapped to DL-SCH (RA-RNTI); or
  - UE-dedicated scheduling mapped to DL-SCH (C-RNTI/ SPS C-RNTI/ Temp C-RNTI).

For each subframe for which data of one or more types is scheduled, the SS shall select a Transport Block Size (TBS), independently for each type of data scheduled, such that:

- All the scheduled data is transmitted respecting the timing information. More details on the timing information can be found in clause 7.8.
- Not more than  $MaxRbCnt$  resource blocks are used, for DCI format 1C,  $N_{PRB} = MaxRbCnt$ .
- Minimum MAC Padding is performed.
- If all scheduled Data cannot be transmitted in the indicated subframe, for example due to TDD and half duplex configuration, it shall be transmitted in the next available subframe.

#### 7.3.3.1 Additional rules for BCCH scheduling scheme

This scheme is applicable for Data transmission on logical channel BCCH mapped to DL-SCH, PDCCH scrambled by SI-RNTI. For both DCI combinations 4 physical resource blocks are reserved for BCCH transmission. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- The Max TBS, the maximum TBS allowed for the scheduling scheme, is restricted to 600. (nearest value achievable for  $I_{TBS} = 9$  and  $N_{PRB} = 4$ , as per table 7.1.7.2.1-1 of TS 36.213 [30]).

- If the scheduled Data cannot fit into a TBS smaller or equal to Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.1.1 for DCI combination 1 and in clause 7.3.3.1.2 for DCI combination 2 shall be applied.

### 7.3.3.1.1 BCCH with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with  $I_{TBS} = 0..26$  and columns with  $N_{PRB} = 2$  (corresponding to TPC LSB = 0) and  $N_{PRB} = 3$  (corresponding to TPC LSB = 1),  $TBS \leq \text{Max TBS}$  are applicable.

Distinct TBSs and all (TPC LSB,  $I_{TBS}$ ) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB,  $I_{TBS}$ ) combinations, the combination with TPC LSB = 0 is selected.

RIV indicates 4 PRBs with index 0..3 allocated.

### 7.3.3.1.2 BCCH with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1,  $I_{TBS} = 0..17$  with  $TBS \leq \text{Max TBS}$  are applicable.

RIV indicates 4 virtual RBs with index 0..3 allocated. These virtual RBs correspond to the physical RBs

- with index 0, 6, 12, 18 in even slots and 12, 18, 0, 6 in odd slots for 5 MHz bandwidth;
- with index 0, 12, 27, 39 in even slots and 27, 39, 0, 12 in odd slots for 10 MHz bandwidth;
- with index 0, 16, 48, 64 in even slots and 48, 64, 0, 16 in odd slots for 15 MHz bandwidth;
- with index 0, 24, 48, 72 in even slots and 48, 72, 0, 24 in odd slots for 20 MHz bandwidth.

## 7.3.3.2 Additional rules for PCCH specific scheduling scheme

This scheme is applicable for Data transmission on logical channel PCCH mapped to DL-SCH, PDCCH scrambled by P-RNTI. For DCI combination 1, one physical resource block is reserved. For DCI combination 2, two physical resource blocks are reserved for 5 MHz bandwidth, and four physical resource blocks are reserved for 10 MHz, 15 MHz or 20 MHz bandwidth. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- If the scheduled Data cannot fit into Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.2.1 for DCI combination 1 and clause 7.3.3.2.2 for DCI combination 2 shall be applied.

### 7.3.3.2.1 PCCH with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with  $I_{TBS} = 0..26$  and columns with  $N_{PRB} = 2$  (corresponding to TPC LSB = 0) and  $N_{PRB} = 3$  (corresponding to TPC LSB = 1)  $TBS \leq \text{Max TBS}$  are applicable.

The Max TBS is restricted to 120 (nearest value achievable for  $I_{TBS} = 9$  and  $N_{PRB} = 1$ , as per table 7.1.7.2.1-1 of TS 36.213 [30]).

Distinct TBSs and all (TPC LSB,  $I_{TBS}$ ) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB,  $I_{TBS}$ ) combinations, the combination with TPC LSB = 0 is selected.

RIV indicates 1 PRBs with index 4 allocated.

### 7.3.3.2.2 PCCH with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1,  $I_{TBS} = 0..11$  for 5 MHz/  $I_{TBS} = 0..17$  for 10, 15 or 20 MHz with  $TBS \leq \text{Max TBS}$  are applicable.

The Max TBS is restricted to

296 bits (nearest value achievable for  $I_{TBS} = 9$  and  $N_{PRB} = 2$ ) for 5 MHz bandwidth,

600 bits (nearest value achievable for  $I_{TBS} = 9$  and  $N_{PRB} = 4$ ) for 10, 15 or 20 MHz bandwidth.

RIV indicates either two virtual RBs with index 4 and 5 allocated, or four virtual RBs with index 4 to 7 allocated. These virtual RBs correspond to physical RBs:

with index 1 and 7 in even slots and 13 and 19 in odd slots for 5 MHz bandwidth;

with index 1, 13, 28, 40 in even slots and 28, 40, 1, 13 in odd slots for 10 MHz bandwidth;

with index 1, 17, 49, 65 in even slots and 49, 65, 1, 17 in odd slots for 15 MHz bandwidth;

with index 1, 25, 49, 73 in even slots and 49, 73, 1, 25 in odd slots for 20 MHz bandwidth.

### 7.3.3.3 Additional rules for RAR specific scheduling scheme

This scheme is applicable for transmission of Random Access Response mapped to DL-SCH, PDCCH scrambled by RA-RNTI. For both DCI combinations four physical resource blocks are reserved. The maximum modulation scheme is restricted to QPSK.

Following additional rules are applied for TBS selection:

- The Max TBS is restricted to 600 bits (nearest value achievable for  $I_{TBS} = 9$  and  $N_{PRB} = 4$ , as per table 7.1.7.2.1-1 of TS 36.213 [30]).
- If the scheduled Data cannot fit into Max TBS, SS generates an error (it's a TTCN error). TTCN should gracefully exit the test case as a fatal error, assigning inconclusive verdict.
- Rules in clause 7.3.3.3.1 for DCI combination 1 and clause 7.3.3.3.2 for DCI combination 2 shall be applied.

#### 7.3.3.3.1 RAR with DCI combination 1

TS 36.213 [30], table 7.1.7.2.1-1, rows with  $I_{TBS} = 0..26$  and columns with  $N_{PRB} = 2$  (corresponding to TPC LSB = 0) and 3 (corresponding to TPC LSB = 1)  $TBS \leq \text{Max TBS}$  are applicable

Distinct TBSs and all (TPC LSB,  $I_{TBS}$ ) combinations for each distinct TBS are listed in the sheet.

If a TBS can have two (TPC LSB,  $I_{TBS}$ ) combinations, the combination with TPC LSB = 0 is selected.

RIV indicates 4 PRBs with index 5..8 allocated.

#### 7.3.3.3.2 RAR with DCI combination 2

TS 36.213 [30], table 7.1.7.2.3-1,  $I_{TBS} = 0..17$  with  $TBS \leq \text{Max TBS}$  are applicable.

RIV indicates 4 virtual RBs are allocated. These corresponds to physical RB

with index 13, 19, 2, 8 in even slots and 1, 7, 14, 20 in odd slots for 5 MHz bandwidth;

with index 2, 14, 29, 41 in even slots and 29, 41, 2, 14 in odd slots for 10 MHz bandwidth;

with index 2, 18, 50, 66 in even slots and 50, 66, 2, 18 in odd slots for 15 MHz bandwidth;

with index 2, 26, 50, 74 in even slots and 50, 74, 2, 26 in odd slots for 20 MHz bandwidth.

### 7.3.3.4 Additional rules for UE-dedicated scheduling scheme in normal mode

The UE-dedicated DL scheduling can work in the normal mode or in the explicit mode. The two resource allocation schemes shall be reconfigurable from each other when the UE and SS are not sending and receiving data, for instance, at end of the test preamble and before the beginning of the test body.

The present clause is specified for the use of the normal mode. The explicit mode is referred to clause 7.3.3.6.

The scheme specified in the present clause is applicable for transmission of data dedicated to a UE in a DL subframe, mapped to DL-SCH, PDCCH scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI when spatial multiplexing MIMO mode is not configured. The maximum modulation scheme is restricted to 64QAM. For the DCI combination 1, 20 physical resource blocks (5 to 24), and for the DCI combination 2, 17 physical resource blocks are reserved. In the case when three intra frequency cells are applied to the test in the DCI combination 1, for the purpose of interference reduction, only 9 PRBs (16 to 24) are reserved.

In TDD normal TBS selection mode, no data is transmitted in DwPTS of the special subframe. For FDD, data can be transmitted in any subframe, except for half-duplex Type B UEs for which scheduling restrictions are specified in clause 7.26.

The following additional rules are applied for TBS selection:

- Multiple ASPs can also carry same explicit timing information; indicating different ASP payloads, eventually needs to be transmitted in 1 TTI.
- For UE Category  $\neq 0$  the Max TBS is restricted to 10296 bits (Max supported by UE category type 1).
- For UE Category = 0 and M1, the Max TBS is restricted to 1000 bits. Hence in all TBS sheets only TB combinations with  $TBS_{Size} \leq 1000$  are used.

For 5 MHz bandwidth and the DCI combination 1 with 20 PRBs or DCI combination 2, the TBS 8248, 8760, and 9528 are blocked as they result in coding rates higher than 0.93.

For 5 MHz bandwidth and special DCI combination 1 with 9 PRBs, the TBS 2216, 5992 and 6712 are blocked as they result in coding rates higher than 0.93.

For 10 MHz, 15 MHz and 20 MHz bandwidths none of TBSs are blocked due to coding rates higher than 0.93.

TBS 280 is blocked for all bandwidths as it can be achieved by only  $N_{prb} = 1$  and  $I_{tbs} = 15$ , requiring 64 QAM modulation scheme. This TBS would normally be used for "RACH procedure MSG4+RRCconnectionSetup".

The blocked TBS are considered to be not available for selection.

- Data pending for transmission in a given sub-frame consists of (listed in transmission priority order):
  - MAC Control Elements that the SS needs to send.
  - AMD STATUS PDU(s) that the SS needs to send.
  - Data not sent in previous subframe(s).
  - Fresh Data scheduled for transmission in this subframe for all logical channels.
- Distinct TBSs and all  $(N_{PRB}, I_{TBS})$  combinations for each distinct TBS are listed in the sheet.
- If a TBS size can be achieved with more than one combination of  $I_{MCS}(I_{TBS})$  and  $N_{PRB}$ :
  - Select combination with lowest delta between  $N_{PRB}$  and  $I_{MCS}$ .
  - If still more than one combination remain, select combination with highest  $N_{PRB}$ .
- Not more than one RLC Data PDU shall be placed in a MAC PDU per logical channel (i.e. minimize RLC segmentation).
- In a subframe, in case there is data pending for transmission from more than one logical channel, for each type of data pending for transmission as defined above, priority shall be given to the logical channel with the lowest logical channel priority value. In case of more than one logical channel with the same logical channel priority value, these logical channels should be served equally. Data pending for transmission from more than one logical channel will rarely happen for the signalling and protocol test.
- Data not transmitted within a subframe is scheduled as pending for transmission in the next available subframe according to the priorities given above. Pending data for transmission will rarely happen for the signalling and protocol test.
- TBS selected in a context by various platforms shall be within an allowed deterministic tolerance of:

- 2 bytes for potential Timing Advance Command MAC Control Element (1 byte data + 1 byte MAC sub header).
- 4 bytes each for AMD STATUS PDU (2 bytes data + 2 bytes MAC subheader).
- Therefore in the worst case the SS may add up to  $(2 + 4 \times N_{AMRB})$  bytes to the data scheduled for transmission in a certain subframe, where  $N_{AMRB}$  is the number of AM radio bearers (SRB or DRB) actively sending DL data in the test, in any subframe.
- For DCI combination 1 RIV is calculated based on physical resource blocks corresponding to  $N_{PRB}$  of the selected TBS and  $(N_{PRB}, I_{TBS})$  combination. The physical resource blocks that can be allocated are the first  $N_{PRB}$  resources of index range
  - 5..24 for 5 MHz bandwidth,
  - 28..49 for 10 MHz bandwidth,
  - 9..30 for 15 & 20 MHz bandwidth.
- For DCI combination 2, RBG assignment is calculated based on physical resource blocks corresponding to  $N_{PRB}$  of the selected TBS and  $(N_{PRB}, I_{TBS})$  combination. The size of RBG is 2 for 5 MHz, 3 for 10 MHz and 4 for 15 & 20 MHz. The available physical resource blocks for allocation are:
  - For 5 MHz bandwidth, RBG1(2,3), RBG2(4,5), RBG4(8,9), RBG5(10,11), RBG7(14,15), RBG8(16,17), RBG10(20,21), RBG11(22,23) and RBG12(24). If  $N_{PRB}$  is even, the first  $N_{PRB} / 2$  available RBGs are allocated. If  $N_{PRB}$  is odd, then first  $(N_{PRB} - 1) / 2$  RBGs and RBG 12 are allocated.
  - For 10 MHz bandwidth, RBG1(3,4,5), RBG2(6,7,8), RBG3(9,10,11), RBG5(15,16,17), RBG6(18,19,20), RBG10(30,31,32), RBG11(33,34,35), RBG12(36,37,38) and RBG16(48,49). If  $N_{PRB} \bmod 3$  is 0, the first  $N_{PRB} / 3$  RBGs are allocated. If  $N_{PRB} \bmod 3$  is 2, then first  $(N_{PRB} - 2) / 3$  available RBGs and RBG 16 are allocated.
  - For 15 MHz bandwidth, RBG1(4,5,6,7), RBG2(8,9,10,11), RBG3(12,13,14,15), RBG5(20,21,22,23), RBG6(24,25,26,27), RBG7(28,29,30,31), RBG11(44,45,46,47), RBG13(52,53,54,55), RBG14(56,57,58,59), RBG15(60,61,62,63), RBG17(68,69,70,71), RBG18(72,73,74). If  $N_{PRB} \bmod 4$  is 0, the first  $N_{PRB} / 4$  RBGs are allocated. If  $N_{PRB} \bmod 4$  is 3, then first  $(N_{PRB} - 3) / 4$  available RBGs and RBG 18 are allocated.
  - For 20 MHz bandwidth, RBG1(4,5,6,7), RBG2(8,9,10,11), RBG3(12,13,14,15), RBG4(16,17,18,19), RBG5(20,21,22,23), RBG7(28,29,30,31), RBG8(32,33,34,35), RBG9(36,37,38,39), RBG10(40,41,42,43), RBG14(56,57,58,59), RBG15(60,61,62,63), RBG16(64,65,66,67), RBG17(68,69,70,71), RBG19(76,77,78,79) and RBG20(80,81,82,83). The first  $N_{PRB} / 4$  RBGs are allocated.

### 7.3.3.6 UE-dedicated scheduling scheme in explicit mode

This scheme applies to:

1. *spatial multiplexing MIMO* configurations or
2. *transmit diversity MIMO configurations* and non-MIMO configuration where the normal mode scheduling scheme is inappropriate.

SS is configured with an exact TBS (modulation and coding scheme,  $I_{mcs}$ , and number of resource blocks,  $N_{prb}$ ) to use. Other parameters, such as the HARQ process number and redundancy version to use for each transmission, are also configured by the TTCN. SS shall use TBS sheets with matching DCI format and Resource allocation Type. If the parameter 'FirstRbIndex' is configured different than specified in respective TBS sheet, the resource block bit maps in TBS sheet s are shifted by 'FirstRbIndex' and applied, with an exception for Resource allocation type 0 where only the full size 'Resource block groups' are shifted by 'FirstRbIndex'; if the last Resource block group is not full size, and is part of resource block bitmap, it is applied without any shift.

All data scheduled for a certain subframe shall be transmitted in the single indicated subframe, using configured parameters. The TTCN shall ensure that the configured parameters are consistent, in particular that the scheduled data size and the configured TBS match each other. Data scheduled by the prose, and hence also by the TTCN, provides possible space for the Timing Advance MAC control element and the RLC Status PDU. The SS shall include one of these if so triggered, else the bits reserved for these are filled by MAC padding.

Additionally, in the case of MIMO data scheduled for transmission in a given sub-frame, this consists of (listed in transmission priority order):

- MAC Control Elements that the SS needs to send (if triggered).
- AMD STATUS PDU(s) that the SS needs to send (if triggered).
- Fresh data scheduled for transmission in this subframe for one or more logical channels, as per logical channel priority [lower value = higher priority]; if data is available for more than one logical channel with the same priority, then the logical channel corresponding to the DRB-ID with the lower value has the higher priority.
- MAC padding.

The following additional rules need to be applied on data scheduled for transmission to be mapped on two transport blocks corresponding to two code words:

- Higher priority data (as stated above) maps on to Transport Block 1 and lower priority data maps on Transport Block 2 (if Transport Block 1 gets full); and
- Minimum MAC padding is performed in Transport Block 1; and
- If data from one logical channel needs to be mapped on to two transport blocks, the PDCP PDUs with lower PDCP sequence numbers get mapped on to Transport Block 1.

By default no data is scheduled in TDD special subframes (i.e. subframes 1 and 6 for default TDD subframe configuration). For testing DL data reception in TDD special subframe, explicit mode TBS selection shall be used. The TTCN shall ensure that the configured parameters are consistent, in particular that the scheduled data size and the configured TBS match each other. As per TS36.213 [30] clause 7.1.7, for special subframe configuration 9 with normal cyclic prefix or special subframe configuration 7 with extended cyclic prefix, the actual Nprb used for TB size calculation will be a  $\max(\text{floor}\{N_{\text{prb in DCI command}} \cdot 0.375\}, 1)$ . Tables 7.3.3.6-1/2 give the mapping for Nprb in DCI command and Nprb used for TB size determination.

**Table 7.3.3.6-1: Nprb DCI to Nprb TBS mapping for 20 Mhz**

Nprb in DCI command (configured by TTCN)	4	8	12	16	20	24	28	32	36	40	44	48	54	60
Nprb used for TBS determination	1	3	4	6	7	9	10	12	13	15	16	18	20	22

**Table 7.3.3.6-2: Nprb DCI to Nprb TBS mapping for 5 Mhz**

Nprb used for TBS determination	1	2	3	4	5	6

### 7.3.3.6.1 DL Scheduling in Transport Block Size Selection Test Cases

The MAC transport block size selection test cases defined in clause 7.1.7 of TS 36.523-1 [1], use bandwidths of 5/10/15/20MHz. For the preamble and postamble in these tests, the default scheduling rules defined in clauses 7.3.3.1 to 7.3.3.4 for 5/10/15/20 MHz and DCI combination 1A are applied respectively. During the test body, when the actual TB sizes with appropriate DCI and resource allocation formats needed are to be tested, the SS is configured in explicit mode for UE-dedicated scheduling.

### 7.3.3.7 Resource allocation sheets

Attached with this Technical Specification, the DL resource allocation tables can be found, providing physical resource allocations for various transport block sizes, developed as per rules specified in clause 7.3.3, in Microsoft Excel format. Each individual sheet in the workbook represents various scheduling schemes as per table 7.3.3.7-1.

**Table 7.3.3.7-1: DL resource allocation sheets**

S. No	Sheet Name	Description
1	DCI-1A-PCCH	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by P-RNTI (5 MHz, 10 MHz, 15 MHz and 20 MHz)
2	DCI-1A-BCCH	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by SI-RNTI (5 MHz, 10 MHz, 15 MHz and 20 MHz)
3	DCI-1A-RAR	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by RA-RNTI (5 MHz, 10 MHz, 15 MHz and 20 MHz)
4	DCI-1A-UE-Specific	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (5 MHz)
5	DCI-1A-3-IntraFreq-UE-Specific	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI and three Intra Freq cells are configured (5 MHz)

S. No	Sheet Name	Description
6	DCI-1A-UE-Specific-10MHz	DL Resource scheduling for DCI format 1A and PDCCH is scrambled by C-RNTI/ SPS C-RNTI/ Temp C-RNTI (10 MHz)

23	DCI-2A-RA0-ExplicitConfig	DL Resource scheduling for DCI format 2A, Resource allocation 0 and PDCCH is scrambled by C-RNTI
24	DCI-2A-RA1-ExplicitConfig	DL Resource scheduling for DCI format 2A, Resource allocation 1 and PDCCH is scrambled by C-RNTI

### 7.3.3.8 MPDCCH DL DCI formats

The PRB scheduling is for the PRB's within a selected Narrow Band consisting of 6 resources. Hence all PRB selection is restricted to these 6 PRB's in the 'X' selected narrow band.

#### 7.3.3.8.1 BCCH

There is no MPDCCH transmitted for BCCH hence no DCI format. All six contiguously allocated localized virtual resource blocks within a narrowband are used. The Ibs is configured by RRC.

### 7.3.3.8.2 PCCH

DCI format 6-2 is used for PCCH scheduling. All six contiguously allocated localized virtual resource blocks within a narrowband are used. The  $I_{TBS}$  to TB size mapping is in table 7.3.3.8.2-1 derived from TS 36.213 [30] table 7.1.7.2.3-1. The  $I_{TBS} = I_{MCS}$  in the DCI 6-2. The  $I_{MCS} = I_{TBS}$  shall be less than or equal to 7.

**Table 7.3.3.8.2-1: Transport Block Size (TBS) table for PCCH, DCI 6-2**

$I_{TBS}$	0	1	2	3	4	5	6	7
TBS	40	56	72	120	136	144	176	208

### 7.3.3.8.3 RAR

#### 7.3.3.8.3.1 RAR with DCI format 6-1A for CE ModeA UE

TS 36.213 [30], table 7.1.7.2.3-1,  $I_{TBS} = 0..15$  with  $TBS \leq \text{Max TBS}$  are applicable.

RIV =18, indicates 4 localised virtual RBs (0,1,2,3) are allocated. These correspond to physical RB (0,1,2,3) in the indicated narrow band. Resource allocation sheet 'DCI-6-1A-RAR' gives the transport block sizes.

RAR length is 7 bytes, 1 byte header and 6 bytes Payload. Needing 1 byte for Back off indicator if included.

Max Tbsize of 488, allows max up to 8 RAR messages to be sent in one MAC PDU ( $8*7*8=448$  bits).

#### 7.3.3.8.3.2 RAR with DCI format 6-1B for CE ModeB UE

TS 36.213 [30], clause 7.1.7.2.6  $I_{MCS}=I_{TBS} = 0..9$ .

Resource allocation bit is set to 0 in the indicated narrowband, indicates RBs with PRB index {0, 1, 2, 3} are allocated. The TB sizes are given by table 7.3.3.8.3.2-1.

**Table 7.3.3.8.3.2-1: Transport Block Size (TBS) table for RAR, DCI 6-1B**

$I_{TBS}$	0	1	2	3	4	5	6	7	8	9
TBS	88	144	176	208	256	328	392	472	536	616

RAR length is 6 bytes, 1 byte header and 5 bytes Payload. Needing 1 byte for Back off indicator if included.

Max Tbsize of 616, allows max up to 10 RAR messages to be sent in one MAC PDU ( $8*7*10=560$  bits).

### 7.3.3.8.4 UE-dedicated scheduling

#### 7.3.3.8.4.1 UE-dedicated scheduling with DCI format 6-1A for CE ModeA UE

TS 36.213 [30], table 7.1.7.2.3-1,  $I_{TBS} = 0..15$  with  $TBS \leq \text{Max TBS}=1000$  are applicable. The rules applied are same as clause 7.3.3.4. Resource allocation sheet 'UE-Specific-DCI-6-1A' gives the transport block sizes.

#### 7.3.3.8.4.2 UE-dedicated scheduling with DCI format 6-1B for CE ModeB UE

TS 36.213 [30], clause 7.1.7.2.6  $I_{MCS}=I_{TBS} = 0..9$ , Modulation is always QPSK.

Resource allocation bit is set to 0 in the indicated narrowband, indicates RBs with PRB index {0, 1, 2, 3} are allocated and 1 indicates all 6 PRB's are allocated. If a TB size can be achieved by both  $nPRB=4$  and 6, then the rules to select TBS combination are same as clause 7.3.3.4. Resource allocation sheet 'UE-Specific-DCI-6-1A' gives the transport block sizes.

7.3.3.9 DL Resource allocation bitmaps for BL/CE UE

7.3.3.9.1 DCI combination 1

For simplicity of scheduling, it is proposed to restrict DCI combination 1 for WB-EUTRA operation in test cases also applicable for BL/CE UE and executed against BL/CE UE.

UE-specific below includes all other transmission C-RNTI/T-CRNTI/P-RNTI/RA-RNTI.

**Table 7.3.3.9.1-1: Physical resource allocation bitmap for DCI combination 1 (5 MHz)**

$N_{PRB}$	0	1	2	3	4	5	6	7	8	9-15	16	17	18	19-24	
BCCH										Used for PBCH and other common signals					
SIB1-BR		NB 0										NB 3			
Six-BR		NB 0										NB 3			
UE-Specific															
MPDCCH								NB 1							

NOTE: The allocation assumes that SIB1-BR and Six-BR are not transmitted in same subframe.

It is unavoidable to use NB 3 for both SIB1-BR and UE-specific. This means that UE-specific transmission cannot be used in (frame number mod 2=0, subframe =4). NB 1 and 2 need to be avoided so as to avoid central 72 carriers carrying MIB and reduce interference between intra frequency cells.

**Table 7.3.3.9.1-2: Narrow band allocation per cell (5 MHz)**

Cell ID	Physical cell ID	SIB1-BR set	Six-BR	UE-specific	MPDCCH
Cell 1	0	NB 0,NB 3	NB 0	NB 3	NB 1
Cell 2	2	NB 0,NB 3	NB 0	NB 3	NB 1
Cell 4	4	NB 0,NB 3	NB 0	NB 3	NB 1

**Table 7.3.3.9.1-3 (columns 0–30): Physical resource allocation bitmap for DCI combination 1 (10 MHz)**

$N_{PRB}$	0	1	2	3	4	5	6	7-12	13-18	19..21	22..27	28-30

Cell 4	4	NB's 4,9,12,15	NB 1	NB 14	NB 7

## 7.4 Cell Configurations

### 7.4.1 Cell Configuration Types

Three cell configurations are defined in TS 36.508 [3] clause 6.3.3: Full Cell, Minimum Uplink Cell and Broadcast Only Cell; however the TTCN always considers all cells as Full Cells, and thus always provides the complete cell configuration parameters.

The SS may:

- always configure a cell as a 'Full Cell' based on the complete information; or
- configure the cell based on the 'CellConfig\_Type' flag taking only the required configuration parameters and ignoring the others.

For a given value of the 'CellConfig\_Type' flag, the TTCN shall:

- For Full Cell Configuration:
  - expect normal SS behaviour.
- For Minimum Uplink Cell Configuration:
  - Configure the SS to report Preamble detection.
  - Assign verdicts based on the PRACH Preamble Indications.
  - Consume any uplink SRB0 messages (if the SS is configured as a Full Cell).
- For Broadcast Only Cell Configuration:

- Not configure the SS to report Preamble detection.
- Consume any uplink SRB0 messages (if the SS is configured as a Full Cell).

## 7.4.2 Cell Power Change

To set and adjust the cell power at the two test ports, Reference Power and Attenuation, are provided in the record Reference Power.

The field Reference Power is only set when the cell is created and is not updated during the test case execution. The SS applies the Reference Power when the cell is fully configured.

To adjust the power level in the test case, the field Attenuation is used. After initial configuration of a cell the attenuation corresponds to the value "off". When the power is changed for more than one cell, the power changes must happen at the same time for all the cells according to the time instances for power level changes specified in TS 36.523-1 [1]. The time it takes to complete the power change for all the cells shall be done:

- within a maximum of 700 ms when changing the power of a cell from "off" to a certain value; or
- within a maximum of 100 ms (10 frames) otherwise.

The SS shall ensure the power level at the test ports conform to the required downlink signal levels specified in clause 6.2.2.1 of TS 36.508 [3].

## 7.4.3 E-UTRAN cell identity

### 7.4.3.1 Timing parameters of cells

For RRC and Idle mode test, the timing parameters in table 7.4.3.1-1 are applied. The specification of Cell 1 - Cell 30 can be found in TS 36.508 [3].

**Table 7.4.3.1-1: Timing parameters of simulated cells**

cell ID	SFN offset	FDD Tcell (Ts)	TDD Tcell (Ts)	
			Synchronous	Non synchronous
Cell 1	0	0	0	0
Cell 2	124	30720	154	30720
Cell 3	257	150897	77	150897
Cell 4	1000	61440	307	61440
Cell 6	657	524	77	524
Cell 10	129	43658	77	43658
Cell 11	957	92160	154	92160
Cell 12	1015	181617	154	181617
Cell 13	890	31244	154	31244
Cell 14	680	300501	77	300501
Cell 23	383	212337	154	212337
Cell 28	890	31244	154	31244
Cell 29	680	300501	77	300501
Cell 30	1015	181617	154	181617

NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.

Table 7.4.3.1-2 is applied to the NAS test when more than one PLMN exists in a test case. Further cell parameters can be found in TS 36.508 [3], table 6.3.2.2-3.

**Table 7.4.3.1-2: Timing parameters of simulated cells for NAS TCs in different PLMNs**

cell ID	SFN offset	FDD Tcell (Ts)	TDD Tcell (Ts)	
			Synchronous	Non synchronous
Cell A	0	0	0	0
Cell B	124	30720	154	30720
Cell C	257	61440	307	61440
Cell D	1000	92160	154	92160
Cell E	752	32047	77	32047
Cell F	NA	NA	NA	NA
Cell G	957	631	77	631
Cell H	1015	31351	154	31351
Cell I	890	127200	77	127200
Cell J	680	1327	77	1327
Cell K	383	157920	154	157920
Cell L	562	188640	307	188640
Cell M	471	122880	307	122880

NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.

Figure 7.4.3.1-3 illustrates shifting DL transmission timing offset by Tcell = 1 subframe, between multiple NAS FDD cells on the same frequency (table 7.4.3.1-4) in the same PLMN.

**Figure 7.4.3.1-3: Timing offset between FDD cells on the same frequency**

Table 7.4.3.1-4 is applied to the NAS test when all NAS cells in a test case belong to the same PLMN. Further cell parameters can be found in TS 36.508 [3], table 6.3.2.2-2.

**Table 7.4.3.1-4: Timing parameters of simulated cells for NAS TCs in same PLMN**

cell ID	SFN offset	FDD Tcell (Ts)	TDD Tcell (Ts)	
			Synchronous	Non synchronous
Cell A	0	0	0	0
Cell B	124	30720	154	30720
Cell C	257	150897	77	150897
Cell D	1000	61440	307	61440
Cell E	NA	NA	NA	NA
Cell F	NA	NA	NA	NA
Cell G	NA	NA	NA	NA
Cell H	NA	NA	NA	NA
Cell I	NA	NA	NA	NA
Cell J	NA	NA	NA	NA
Cell K	NA	NA	NA	NA
Cell L	NA	NA	NA	NA
Cell M	471	31244	154	31244

NOTE: For TDD, synchronous Tcell values are applied unless specified otherwise in the test cases.

Shifting radio frame transmission timing can eliminate the following interference between intra frequency cells:

- P-SS/S-SS to P-SS/S-SS, RS, PBCH, PCFICH, PDCCH and PHICH.
- PBCH to PBCH.
- PBCH to PCFICH, PDCCH and PHICH.
- PDSCH to PCFICH, PDCCH, PHICH.

As TDD UL and DL are on same frequency, to avoid interference between DL and UL, the Random Access Response Timing Advance (RAR TA) is related to the Tcell:

For TDD cells:

$$\text{RAR TA} = [\text{FLOOR} ((\text{Tcell}) \bmod 30720 / 16) ] \bmod 1282$$

For FDD, the Random Access Response Timing Advance is set to 0.

In MBMS test cases, cells belonging to the same MBSFN Area have a synchronized radio frame timing: the SFN offset and Tcell values are set to the values of the cell having the lower cellId value.

In Carrier Aggregation signalling test cases, the SFN offset and Tcell of configured cells has to be same.

Editor's note: More clarification in terms of tables representing configured cells may be needed. Cell 1, Cell 2, Cell3, Cell12 & Cell 6 are configured in CA test cases.

The HFSN Offset shall be set to 0 for all cells.

#### 7.4.4 Cell configurations for NAS test cases

The default cell identifiers for NAS cells are defined in 36.508 [3] clause 6.3.2.2.

The allocation of Physical layer cell identifiers to the individual cells is according to (*PCI mode 6*) being differential for the cells working on the same radio frequency. The way of PCI allocation can reduce the interference between the intra-frequency cells for reference signal to reference signal, PCFICH to PCFICH and PHICH to PHICH. The definition of Cell A - Cell M can be found in TS 36.508 [3].

#### 7.4.5 Configuration of Multi-Cell Environment

When there is more than one EUTRA cell in a test case the following rules are applied in TTCN:

- At the beginning of the preamble, before initial attachment of the UE, all EUTRA cells are configured but switched off.
- In the preamble only the serving cell is switched on; all other cells remain switched off.
- At the end of the preamble the cells are configured according to the initial power level settings (T0) of the test case.

The mapping of cells to physical resources and management of the physical resources are out of TTCN scope. The following principles can be applied to the system simulator:

- Cells being switched off need not to be mapped to physical resources.
- When a cell is switched off mapping to a physical resource may be kept and reused when the cell is switched on again.
- When a cell is switched on it can either already been mapped to a physical resource or it needs to be mapped to a free resource.
- When there are less physical resources than cells it is up to SS implementation to find strategies to dynamically map the cells to the resources.

Independent from the strategies being used the system simulator shall obey timing restrictions for changing power-levels of one or several cells as stated in clause 7.4.2.

## 7.5 TDD Considerations

LTE options of FDD and TDD will be contained in the same common FDD and TDD test cases, similar to the prose in TS 36.523-1 [1].

The TDD Uplink-downlink configuration 1 in 3GPP TS 36.211 [35], table 4.2-2 is applied.

### 7.5.1 FDD vs. TDD implementation

FDD/TDD differences are introduced in the common FDD and TDD test cases using branches at a low level in the test case. The branches are used either:

- to assign a variable;
- to implement a different behaviour;
- to change an FDD or TDD parameter in a template sent to the UE or SS.

The mode under test (FDD or TDD) is based on the value of the bands under test.

### 7.5.2 Guideline for FDD vs. TDD verification

With respect to EUTRA FDD vs. TDD technologies, it is recommended that separate verifications for FDD and TDD are required for the TCs in TS 36.523-1 [1]:

- clause 6, 7, 8, 12, 13;
- with MultiRAT involved.

## 7.6 Special RLC Modes

### 7.6.1 Suppression of RLC Acknowledgements

Two different modes, both applicable per radio bearer, are defined as:

- General suppression:
  - If this mode is activated, no RLC acknowledgements will be generated by the SS. This mode can be switched on and will persist until it is switched off. Afterwards the SS will continue handling the RLC acknowledgements as normal.
- One time suppression:
  - If this mode is activated, no RLC acknowledgement will be generated by SS for the next RLC message data PDU received. Once this has been done, the SS continues handling RLC acknowledgements as normal.

In case of a handover the modes continue to be active.

### 7.6.2 Modification of VT(S)

This mode allows to manipulate the RLC state variable VT(S) so that the SS can generate an RLC sequence number as needed during a test. The input to the special test mode is an integer (0..1023) as value of ModifyVTS, The SS shall set variable VT(S) as follows:

$$VT(S) := \text{ModifyVTS.}$$

The purpose of this special test mode is to force an incorrect RLC sequence number to be used by the SS. Once VT(S) has been modified in the RLC entity at the SS side, this RLC entity will be inconsistent. One possibility to bring the RLC entity back to normal is to re-establish the RLC peer connection. This is done in the only use case of this special RLC test mode by performing an RRC Connection reconfiguration immediately after the test mode has been applied.

Users of this test mode should ensure that the RLC AM PDU carrying the incorrect sequence number will reach the peer RLC entity. It is therefore recommended to activate the RRC Connection reconfiguration only after some delay. This delay shall be short enough to ensure that the UE will not yet request the retransmission of the RLC PDU corresponding to the skipped sequence numbers.

## 7.7 System information

### 7.7.1 System information broadcasting

The rules for the transmission of BCCH messages are specified in TS 36.331 [19], clause 5.2. The current clause provides the implementation guidelines.

The ASPs SYSTEM\_CTRL\_REQ and SYSTEM\_CTRL\_CNF are used as interface to SS; the following rules apply:

- The complete system information is provided to SS by using a single ASP.
- SS starts scheduling all system information from the same SFN.
- The scheduling information sent to SS is the same as the scheduling information sent to the UE. For each SI message, the subframeOffset in SYSTEM\_CTRL\_REQ indicates the exact point in time in the SI window at which SS shall start the transmission of the related SI.
- SS shall set the systemFrameNumber in the MIB to the 8 most significant bits of the SFN. A dummy value is provided by TTCN.
- If the HFSN value is included in SIB1 sent from the TTCN, the SS shall set the hyperSFN in this message to the current HSFN. In this case, a dummy value is provided by TTCN.
- If the HFSN is not included in the SIB1 sent from the TTCN, it shall not be added by the SS.
- The system information is sent to SS using the asn.1 types, SS shall encode in unaligned PER and add the necessary padding bits as specified in TS 36.331 [19], clause 9.1.1.1.
- In the E-UTRAN-CDMA2000 Inter RAT configuration, SS shall set the CDMA2000 synchronousSystemTime in SystemInformationBlockType8 to the SFN boundary at or after the ending boundary of the SI-window in which SystemInformationBlockType8 is transmitted (see TS 36.331 [19], clause 6.3.4). The changes of synchronousSystemTime will not result in system information change notification, nor in a modification of systemInfoValueTag in SIB1 in TTCN as specified in TS 36.331 [19], clause 6.3.1. If 1xRTT is being tested, then SS shall overwrite the longCodeState1XRTT in SystemInformationBlockType8 to the state of long code generation registers in CDMA2000 1xRTT system as defined in C.S0002-A [12, Section 1.3] at  $\lceil t/10 \rceil \times 10 + 320$  ms, where  $t$  equals to the *cdma-SystemTime*. The changes of longCodeState1XRTT will not result in system information change notification, nor in a modification of systemInfoValueTag in SIB1 in TTCN as specified in TS 36.331 [19], clause 6.3.1.

### 7.7.2 Scheduling information

The maximum number of resource blocks as defined in table 7.7.2-1 are used to broadcast the system information.

**Table 7.7.2-1: Maximum number of resource blocks**

	Maximum number of resource blocks assigned
SIB1	4
for all SIs	4

The subframe offset values used for SI messages are according to table 7.7.2-2.

**Table 7.7.2-2: SubframeOffset values**

Scheduling Information No. Acc to TS 36.508 [3], clause 4.4.3.1.2	subframeOffset (FDD)	subframeOffset (TDD)
SI1	1	0
SI2	1	0
SI3	3	15
SI4	7	15
SI5	7	15

All System Information messages are sent only once within the SI-window.

Table 7.7.2-3 (FDD) and 7.7.2-4(TDD) give the SFN's and subframe numbers in which the MIB, SI1, SI2, SI3, SI4 & SI5 are actually scheduled as per default parameters for si-WindowLength(20sf), periodicity for SI1(16), SI2(32), SI3(64) , SI4(64) and SI5(64) for bandwidths 5/10/15/20 MHz defined in TS 36.508 [3]:

## 7.7.2a Scheduling information for BR System information

The scheduling of BR System Information is based upon the following conditions (Ref: 36.211 [44] clause 6.4.1):

- $N_{\text{PDSCH}}^{\text{SIB1-BR}} = 4$  i.e. the schedulingInfoSIB1-BR-r13 values are selected from {1,4,7,10,13,16} which as per 36.213[30] table 7.1.6-1 would result in 4 repetitions.
- $N_{\text{ID}}^{\text{cell}} \bmod 2 = 0$ ; Cell 1 with Physical cell ID =0, cell 2 = 2 and cell 4 = 4 meets the criteria
- si-WindowLength-BR-r13 =20 ms (same value as si-WindowLength)
- si-RepetitionPattern-r13 = every2ndRF (hence results eventually in only transmission in first frame of window)
- Except for SIB1-BR (mandated for SIB1-BR by 36.211) hopping is assumed to be not enabled for anything else.

- The current test plan excludes inter frequency and inter rat test cases due to limitations in RAN4. Inter frequency, inter RAT system information combinations are not considered.
- The typical size of SIB1/2/3/4 is less than 700 bits, the Max TB size for SIx-BR is 936 bits, 36.213 [30] table 7.1.7.2.7-1, hence no segmentation is assumed. For SIB1-BR schedulingInfoSIB1-BR-r13 =10, and for SIB 2,3,4 the si-TBS-r13 is set as b712.
- If MIB needs to be repeated as per 36.331[19] clause 5.2.1.2 in subframe#9 of the previous radio frame for FDD and sub frame #5 of the same radio frame for TDD, the same can be achieved in the below schedule.

The sub frame offset values used for SI messages are according to table 7.7.2a-1.

**Table 7.7.2a-1: SubframeOffset values**

Scheduling Information No. Acc to TS 36.508 [3], clause 4.4.3.1.2	subframeOffset (FDD)	subframeOffset (TDD)

### 7.7.3 System information modification

For system information modification, the same rules as defined in clause 7.7.1 are applied.

The SFN and the HSFN for the start of modification period are calculated by TTCN. The modified system information and the calculated SFN, HSFN are provided in the ASP SYSTEM\_CTRL\_REQ.

#### 7.7.3.1 Non-PWS System Information modification

The modification of system information is notified by paging messages containing the *systemInfoModification* (normal DRX) or *systemInfoModification-eDRX* (extended DRX). The paging messages are sent during one modification period before broadcasting the modified system information for normal DRX, and within a Paging Time Window (PTW) for extended DRX. The paging messages are sent on paging occasions (PO) within the paging frames (PF). With the default paging and sysinfo parameters provided in TS 36.508 [3] PO is set to 9 for FDD and 0 for TDD.

In case the UE is configured by the SS with an extended DRX cycle and the cell indicates support for eDRX in System Information, eDRX is performed. See to TS 36.304 [14], clause 7.3

##### 7.7.3.1.1 UE in Idle\_mode

In the case of normal DRX, the paging frames calculation is based on the UE identity (see to TS 36.304 [14], clause 7). With:

defaultPagingCycle=128

nB=oneT

modificationPeriodCoeff=n4

it results in 4 paging messages to be sent on the paging occasions during the modification period in the frames of:

$$\text{SFN mod } 128 = (\text{UE\_ID}) \text{ mod } 128.$$

In the case of eDRX, the DRX cycle is longer than the modification period and the parameter is the Paging Hyperframe (PH) and refers to the hyper SFN (H-SFN) in which the UE starts monitoring POs during a Paging Time Window (PTW). The H-SFN is broadcasted by the cell and increments by one when the SFN wraps around. When a change notification is received, the UE acquires the updated system information at the next H-SFN boundary defined by:

$$\text{H-SFN mod } 256 = 0$$

If the UE is configured with a  $T_{\text{eDRX}}$  cycle of 512 radio frames, it monitors POs as defined on normal DRX with parameter  $T = 512$ , otherwise it will monitor POs calculated as normal DRX only within the periodic PTW configured for the UE. The calculation of the bounds for the PTW are UE-specific and described on TS 36.304 [14] clause 7.3.

**Figure 7.7.3.1.1-1: Paging cycles in eDRX idle mode**

For BL/CE UEs, the paging frames calculation is based on the UE identity (see to TS 36.304 [14], clause 7.1). With:

- defaultPagingCycle=128
- nB=oneT
- modificationPeriodCoeff\_v1310=n64
- number of paging narrowbands=1
- SystemInformationBlockType1-BR modification period = 512 frames
- SIs-BR modification period = 8192 frames

The paging occasion calculation is resulting in the frames of:  $SFN \bmod 128 = (UE\_ID) \bmod 128$ . The Paging Narrowband (PNB) is resulting in  $PNB=0$ .

One paging message is sent on the calculated paging occasion before the start of SystemInformationBlockType1-BR modification period. When both SystemInformationBlockType1-BR and SIs-BR are modified, their respective modification period starts may not match:

- When they match, SS is configured with the modified SystemInformationBlockType1-BR and SIs-BR in one ASP
- When they do not match, SS is configured with the modified SystemInformationBlockType1-BR and SIs-BR in two different ASPs with activation time set to the start of the respective modification periods.

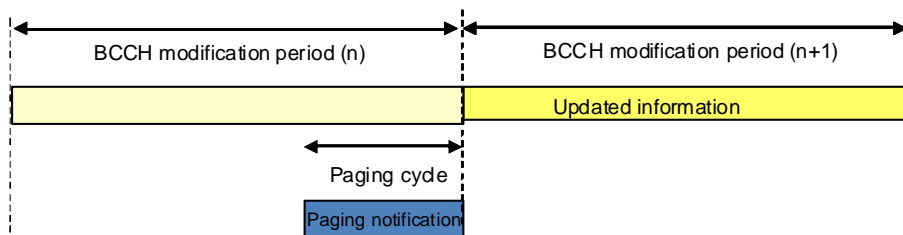

### 7.7.3.1.2 UE in connected mode

When the UE is in connected mode, paging messages are sent on the paging occasions of each frame within the paging cycle throughout a modification period. This results in 128\*4 consecutive paging messages to be sent during the modification period.

**Figure 7.7.3.1.2-1: Paging notification UE in connected mode**

For ETWS and/or CMAS capable UEs in connected mode, paging messages are sent on the paging occasions of each frame within the last paging cycle of the modification period. This results in 128 consecutive paging messages to be sent during the modification period.

**Figure 7.7.3.1.2-2: Paging notification for ETWS and/or CMAS capable UE in connected mode**

### 7.7.3.2 PWS System Information modification

The modification of system information for ETWS and CMAS notification is notified by paging messages. The transmission of system information notification is not necessarily at the beginning of a modification period.

When the UE is in idle mode, the paging frames calculation is the same as defined in clause 7.7.3.1.1.

When the UE is in connected mode, paging messages are sent on the paging occasions of each frame during a paging cycle. This results in 128 consecutive paging messages to be sent. The transmission of the first paging message and the first system information notification are simultaneous and are sent at the beginning of a paging cycle.

## 7.8 Timers and Timing Restrictions

A timer is set at the beginning of each test case to guard against system failure. Behaviour on expiry of this guard timer shall be consistent for all test cases.

A watchdog timer can be specified for receive statements in order to reduce blocking time when a test case has already failed. Watchdog timers are a kind of TTCN auxiliary timer. When a watchdog timer is used to control a receive event, its expiry does not need to be handled explicitly in the test case, but will lead to a fail or inconclusive verdict due to handling in the default behaviour.

In idle mode operations, an idle mode generic timer is specified for receive statements if the test case specification does not explicitly specify a wait time for the specific test step or test purpose. The expiry of this idle mode generic timer is at least 6 minutes to safely cover most test scenarios.

The watchdog timer and the idle mode generic timer are only to be used inside the test case test body; if the timer expires a fail verdict is applied.

It is the TTCN responsibility to ensure that appropriate timer values are being used.

Tolerances (as described in TS 36.508 [3]) are not applicable to guard timers, idle mode generic timers and watchdog timers.

In general timers of less than 500 ms shall not be implemented by TTCN timers but controlled by usage of the timing information provided by the SS (This is based on an estimate of the system delay). To achieve this, there will be cases when a DL message is scheduled at a specific point in time. This shall be done by adding at least 100 ms to the current time.

If Timing is 'now' the SS shall schedule the data transmission or the (re)configuration in the next available sub-frame, but will ensure that this period is less than 80 ms.

### 7.8.1 Auxiliary timers

For practical reasons, the TTCN can include timers that are not specified as part of the expected sequence. These timers are documented below.

RLC and PDCP watchdog timer.

## 7.8.2 RRC timers reconfiguration

Considering the allowed UE accuracy for the RRC timer T3xx being between 100 ms and 2.5 % of T3xx (see TS 36.133 [37]), the TTCN applies the RRC net timers tolerance as MAX (10% of T3xx, (100 ms + 5 RTT)), whereby:

FDD: 10 % of T3xx or 140 ms whichever is higher.

TDD: 10 % of T3xx or 155 ms whichever is higher.

## 7.8.3 MAC TA timer reconfiguration

Considering that the UE applies new values for MAC timers not before restart of the timer (see TS 36.321 [16], clause 5.8), when the TA timer is changed at the UE, a delay in TTCN will be added so as to allow SS to transmit Timing advance MCE (based on current periodic Timing advance configuration) and hence resulting in restart of TA timer at UE with new value.

## 7.8.4 Non-protocol timers

Time durations or periods in the test specification without corresponding references in the core specifications are considered as non-protocol timers for which no timer tolerances are applied in the TTCN.

## 7.9 Error Indication

There are several situations on lower layer in which SS shall raise an error rather than trying to resolve the problem. This is done by sending a SystemIndicationError to the test case. SS shall raise an error in the following cases:

- HARQ retransmissions (applicable when SS is configured to indicate HARQ retransmissions as errors):
  - HARQ CRC error for UL data;
  - HARQ NACK from the UE unless SS is configured to report HARQ ACK/NACK.
- Paging, System information exceeds max. number of resource blocks.
- Configuration: max. number of resource blocks specified for a channel exceeds system bandwidth.
- When in User-Plane a DL PDCP PDU or SDU not fitting into one TTI is sent with Harq Process being explicitly specified.
- SS gets invalid TimingInfo for TDD from the test case.
- SS detects contradiction of UL grant(s) and TDD configuration.
- Data scheduled for the same TTI does not fit into an available transport block.

Further error conditions are specified in annex D.

## 7.10 Race Conditions

When two uplink messages are sent from the UE within a very small amount of time, they may be received in either order in the TTCN if they are received on different ports. This may cause a race condition which is due to the snapshot mechanism in TTCN. In these cases, the TTCN will accept the messages in either order and then compare the timestamps of both messages to ensure they were sent in the correct order.

For UL messages received at a single port, there are normally no race conditions, with the exception of the SRB port where the following rules shall be fulfilled, in order to achieve an ordered UL message queue:

- UL messages are queued according to the timing information.
- UL messages with the same timing information are queued according to the logical channel priority with the "higher-first-in" principle.

## 7.11 Radio Link Failure

A radio link failure shall be triggered by switching the downlink power level of the source cell to the value for non-suitable "Off" for the time period of least T310 + time it takes to receive N310 consecutive out-of-sync indications from lower layers (non-suitable "Off" is defined in TS 36.508 [3], whereas T310 and N310 are defined in TS 36.331 [19]).

If the RRC re-establishment procedure is used in a radio link failure context, it shall be realised by using two cells.

## 7.12 Test method for RRC signalling latency

Test cases testing RRC signalling latency will need special test method. The PUCCH synchronisation state of UE influences the test method. Following 2 different ways in which the UE's completeness of procedure can be probed are considered:

1. UE is still PUCCH synchronized and can respond to uplink grants.
2. UE needs a RACH procedure and hence RACH procedural delays add upon the actual procedure delay.

### 7.12.1 Procedure delays in PUCCH synchronized state

For latency tests there may be up to 4 HARQ retransmissions in DL (corresponding to the default configuration of the SS) but HARQ retransmissions in UL cannot be compensated, i.e. any HARQ error in UL shall result in an inconclusive verdict for the test case (otherwise a UE may get fail due to a HARQ error).

Figure 7.12.1-1 demonstrates the latency check procedure that will be applied when UE is in PUCCH synchronized state and can respond to uplink grants.

SS is configured to report ACK/NACK received from UE, to TTCN.

NOTE: Due to L2 signalling (e.g. RLC STATUS PDUs) it is necessary to limit the reporting of UL HARQ ACK/NACK to the time between sending of the RRC message and receiving the ACK.

By default SS is configured to retransmit any DL MAC PDU max 4 times.

To avoid unexpected side effects the Time Alignment timer needs to be set to infinity and the SS shall be configured to not send any Timing Advance MAC control elements during the latency tests (since this may result in additional ACK/NACK)

The SS shall be configured to report HARQ errors and in the case of an UL HARQ error, an inconclusive verdict is assigned.

In the case of HARQ retransmissions in DL the HARQ RTT Timer according to TS 36.321 clause 7.7 [16] is

- 8 for FDD
- 10 for TDD configuration 1 in case the DL PDU is sent in subframe 4 (as per default; see Table 7.12.1-1).

The SS shall schedule DL retransmission at 4th TTI for FDD and TDD since reception of the NACK.

Let N be the max allowed delay for procedure.

TTCN schedules at time T1 a DL message to the UE.

TTCN schedules UL grants at

$$T_2(k) = T_1 + N + 1 + \Delta_1 + k * RTT;$$

with

k = 0..4; number of HARQ retransmission in DL

RTT = 8 (FDD)

RTT = 10 (TDD)

$\Delta_1$  = 0 (FDD)

$\Delta_1$  = 0..3 (TDD; possible UL subframe uncertainty since not all subframes can be used for UL)

Example:

given TDD; DL PDU sent at subframe 4; N=10

⇒ Δ<sub>1</sub> = 1 since UL grant cannot be scheduled for subframe 5 but needs subframe 6 (36.213 [30] cl.8.0)

The UL data is sent by the UE at

$T_3(K) = T_2(K) + 4 + \Delta_2$  with  $\Delta_2 = 0$  for FDD and  $\Delta_2 = 0..3$  for TDD and K is the value of k corresponding to which a HARQ Ack is received

The latency requirements are fulfilled when

$$T_3(K) - T_1 = N + 5 + \Delta_1 + \Delta_2 + K * RTT$$

Looking at TDD configuration 1 in detail it can be shown that  $\Delta = \Delta_1 + \Delta_2 = 0..3$

$$\Rightarrow T_3(K) - T_1 = N + 5 + \Delta + k * RTT; \text{ with } \Delta = 0..3$$

NOTE:

as long as N is a multiple of 5ms, given T1 is at 4th TTI for TDD configuration 1 we get  $\Delta = 3$  ( $\Delta_1 = 1$  and  $\Delta_2 = 2$ , 36.213 [30] cl.8.0)

Figure 7.12.1-1: Delays in PUCCH synchronized state

Table 7.12.1-1: TDD configuration 1

Subframe	0	1	2	3	4	5	6	7	8	9
Configuration 1	D	S	U	U	D	D	S	U	U	D
Delay from DL to Ack/Nack [TTIs]			6,7	4				6,7	4	
Delay from NCK to re tx [TTIs]			4	6				4	6	
RTT	11	10			10	11	10			10

### 7.12.2 Procedure delays when RACH procedure required

Figure 7.12.2-1 demonstrates the latency check procedure that will be applied when UE is not PUCCH synchronized state needs RACH procedure.

PRACH configuration index is set as 14 for FDD, 12 for TDD which allows UE to send Preamble in any frame at any subframe.

SS is configured to report ACK/NACK, PRACH preambles received from UE.

By default SS is configured to retransmit any DL MAC PDU max 4 times [1 Transmission and 4 Retransmission].

Let N be the max allowed delay for procedure.

TTCN schedules at time T1, DL message to the UE. This is achieved using Time stamps in send ASP's.

The time difference between the ACK and the reception of PRACH preamble will be checked against N plus any Interruption time (TS 36.133 [37]) and verdict is assigned, when  $(Y-X) \leq N + T_{interrupt} + \Delta$ :

$\Delta = 0$  for FDD;

$\Delta = 3TTI$  for TDD, where 3TTI is UL subframe uncertainty.

If cell change occurs, cell timing differences, Frame number offsets need to be included for procedural delay evaluations.

**Figure 7.12.2-1: Delays when RACH procedure needed**

### 7.13 RLC test method for scheduled data

The test loop mode is applied to the RLC tests. The allowed SS delay for sending data (< 80 ms) is comparable to the default values of the RLC timers. In order to ensure a unique TTCN implementation of the RLC test cases and the deterministic test result, independent from the SS platforms and UEs, scheduled data method can be applied to the test.

The scheduled data method is suitable to the RLC test if:

Receiving multiple UL RLC SDUs is expected in the test; the UE may send a STATUS PDU in addition.

Time measurement is required for the looped back RLC SDUs.

DL RLC PDUs are sent on consecutive TTIs; the subframe numbers to be applied are relevant in TDD.

Table 7.13-1 illustrates the data scheduling in the RLC test.

**Table 7.13-1: Scheduled RLC test events**

Scheduled timing		t0 (see note 1)	t1 (see note 1)	t2
Test event descriptions	Multiple SDUs	Obtain the reference time	Send DL data	Provide UL grant (see note 2)
	Time measurement		Send DL data	Receive UL data
	DL data in TDD		Send 1 <sup>st</sup> DL data	Send subsequent data (see note 3)
NOTE 1: $(t1-t0) \geq 100$ ms which is greater than the allowed SS max. delay time, 80 ms.				
NOTE 2: $(t2-t1) = 60$ ms, this duration will allow the UE transmitting max. 3 scheduling requests (every 20 ms once) after the UL data to be looped back being available at the UE without going onto PRACH.				
NOTE 3: The applied TDD subframe numbers 4, 5, 9, 10, 14, 15, 19, 20, 24, 25,...				

If the test case prose does not indicate timely restrictions for the scheduling, sequential sending events are scheduled in consecutive TTIs.

NOTE 1: For TDD configuration 1, the subframes 0, 4, 5 and 9 are considered as consecutive.

NOTE 2: Scheduling may imply to execute the test steps in the TTCN in an order different from the order given in the test case prose. However, the sequence of the events over the air follows the prose description.

## 7.14 IP packets for Loopback Mode

### 7.14.1 IP packets used for Loopback Mode A

It is irrelevant which kind of data is used in loopback mode A. Some PDCP test cases however specify to use IP packets. In these cases, an ICMPv4 ECHO REPLY shall be used with a valid IP header checksum and valid ICMP checksum.

### 7.14.2 IP packets used for Loopback Mode B

According to TS 36.509 [4], the UE performs loopback mode B above the UL TFT entity. Therefore IP packets need to match the packet filters signalled to the UE according to TS 36.508 [3], clause 6.6.2:

When the UE gets configured via NAS signalling with packet filter #1 and #2 according to TS 36.508 clause 6.6.2 the IP packets shall fulfil the following requirements:

Protocol:

UDP referred to packet filter #1 and #2

IP addresses:

Referred to TS 36.508 [3], table 6.6.2-3, note 1 source and destination IP address are the same.

Ports:

packet filter #1 specifies DL filter  $\Rightarrow$  IP packet's source port shall match remote port of packet filter #1.

packet filter #2 specifies UL filter  $\Rightarrow$  IP packet's destination port shall match remote port of packet filter #2.

To summarize, on dedicated bearers for loopback mode B, UDP packets used shall match the packet filters configured at the UE side. The UDP packets, having no specific content, shall have the correct header checksum and UDP checksum. On the default bearer, any other packets can be used, as an example, ICMPv4 ECHO REPLY similar as for loopback mode A.

## 7.15 Connected Mode DRX

The SS shall support connected mode DRX according to TS 36.321 [16], i.e. the SS shall not send any data to the UE while the UE is not monitoring the PDCCH. To achieve this, the SS needs to estimate the UE's Active Time by considering the on-duration as well as the drx-inactivity timer:

on-duration:

The on-duration can be derived from the SS' DRX configuration.

drx-inactivity timer:

According to TS 36.321 [16], clause 5.7 at the UE the drx-inactivity timer is started or restarted during the Active Time whenever PDCCH indicates a new transmission (DL or UL).

There is no activation time for the configuration of DRX at the UE and it is not acceptable just to consider the on-duration after re-configuration of the UE (for DRX\_L according to TS 36.508 [3] the DRX cycle is 1.28 s); instead the drx-inactivity timer needs to be taken in account after DRX reconfiguration as well.

The following rules shall be applied to achieve synchronisation of SS and UE:

1. SS shall consider drx-inactivity timer as restarted at the UE whenever the UE is addressed on the PDCCH (DL data or UL grant).
2. When there is a scheduling request sent by the UE, SS assigns a grant independent of DRX; when sending out that grant on PDCCH SS considers drx-inactivity timer as (re-)started (as per 1. above).
3. For all DL messages scheduled with specific timing information SS shall send the data at the given time irrespective of current DRX configuration.
4. DRX (re-)configuration:
  - a) when DRX has not been configured at the UE yet:
    - a1) TTCN will configure the SS just before the sending out the RRCConnectionReconfiguration message configuring DRX at the UE; no other send-events between the reconfiguration of the SS and sending the RRC message shall be scheduled in TTCN.
    - a2) TTCN will schedule sending of the RRCConnectionReconfiguration message configuring DRX with specific timing information.
  - b) Reconfiguration of DRX at the UE: Same as a) but:
    - b1) TTCN shall schedule sending of the RRCConnectionReconfiguration according to the old DRX configuration (i.e. the SS does not need to cache the new configuration).
  - c) RRC connection release:
    - c1) TTCN will release DRX at the SS just after the RRC connection release procedure.
5. There shall be no parallel data on any DRBs during DRX reconfiguration.

NOTE: Timing requirements in the DRX test cases:

- a) The drx-Inactivity Timer shall be long compared to the duration between sending RRCConnectionReconfiguration and receiving RRCConnectionReconfigurationComplete (> 50 ms). It ensures the SS in-time sending of the RLC STATUS PDU.

or

- b) The drx-cycle shall be short compared to the RLC timers applied for SRB1.

Figure 7.15-1 illustrates DRX (re)configuration at the SS and the UE.

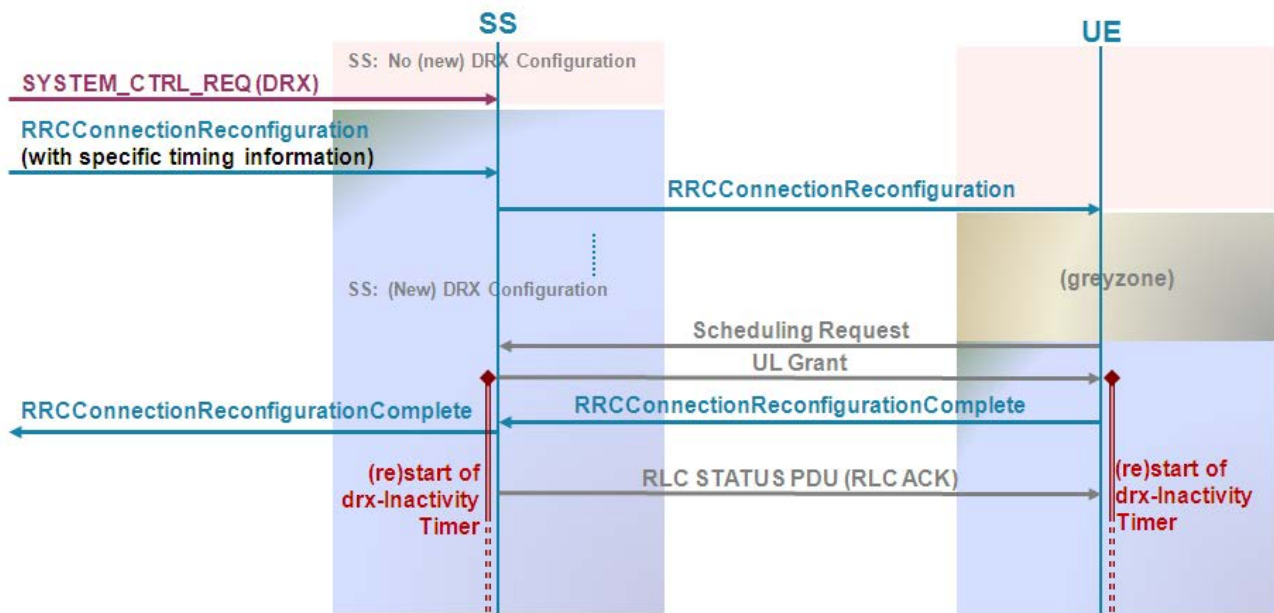

Figure 7.15-1: DRX (Re)configuration

NOTE 1: Between RRCConnectionReconfiguration and RRCConnectionReconfigurationComplete the UE may send a separate RLC STATUS PDU to acknowledge the RRCConnectionReconfiguration, but that does not affect the principle as long as SS applies rule 2.

NOTE 2: During the "greyzone" SS does not know about DRX configuration at the UE; during that period according to rule 4a1 and rule 5 there is no data to be sent by SS.

The TTCN (re)configures the connected mode DRX in SS for the test cases if DRX\_S is applied (Ref. TS 36.508 [3]). The (re)configuration of DRX\_L in SS is FFS.

Together with DRX, the SS shall implement eDRX for which an extended longDRX-Cycle can be configured. The values of eDRX cycle can be of 5.12 and 10.24s for connected mode. When TTCN configures the eDRX cycle on the SS alongside the DRX configuration, the SS shall apply it.

For test case 7.1.6.1 and 7.1.6.2, DRX will not be activated at the SS. Periodic UL grants every 5ms (suitable for both FDD and TDD and less than drx-InactivityTimer 6ms) will be allocated to the UE during the steps configuring test case specific DRX parameters of the test case to prevent UE from activating DRX; These grants may result in padding MAC PDU's transmitted by UE, which will be received by SS MAC and discarded.

## 7.16 Handover Sequences

### 7.16.1 Sequence of inter-cell handover

In general, the Inter-Cell handover is done without activation time, i.e. the timing information for configuration of the SS and sending of the RRCConnectionReconfiguration is 'Now'.

The sequence may be interrupted if other events need to be handled. E.g. when a TAU procedure is performed in the target cell and there are procedures left to be executed on the source cell.

1. Transfer of the PDCP Count for AM DRBs from source to target cell:
  - a) Source Cell: Get PDCP COUNT.
  - b) Target Cell: Set PDCP COUNT.

NOTE 1: There shall be no further sending/receiving of AM DRB data before the HO has been done.

2. Target Cell: Inform the SS about the HO and about the source cell id.
3. Target Cell: Configure RACH procedure either dedicated or C-RNTI based.
4. Target Cell: Activate security.

NOTE 2: For AM DRBs the PDCP count is maintained (for SRBs and UM DRBs the PDCP count is reset).

5. Target Cell: configure DRX (if necessary).

NOTE 3: As long as the DRX configuration is not modified by the RRCConnectionReconfiguration the target cell gets the same DRX configuration as the source cell.

NOTE 3A: According to TS 36.331 clause 5.5.6.1 the measurement gap configuration is released at the UE due to the handover, therefore nothing needs to be configured at the target cell regarding measurement gaps.

6. Source Cell: Stop periodic TA.

NOTE 4: Unless explicitly specified UL grant configuration keeps configured as per default at the source cell.

7. Target Cell: Configure UL grant configuration ("OnSR", periodic TA is not started).
8. Source Cell: Send RRCConnectionReconfiguration.
9. Target Cell: Receive RRCConnectionReconfigurationComplete.
10. Target Cell: Start periodic TA.
11. Target Cell: Inform the SS about completion of the HO (e.g. to trigger PDCP STATUS PDU).
12. Target Cell: Re-configure RACH procedure as for initial access.
- 12a. Target Cell: Configure measurement gap configuration (if necessary).
13. Source Cell: Reset SRBs and release DRBs.
14. Source Cell: Release DRX and MeasGapConfig configuration.

### 7.16.1a Sequence of inter-cell CA handover (more than one CC before and after handover)

The Inter-Cell handover is done with activation time, i.e. the timing information for configuration of the SS and sending of the RRCConnectionReconfiguration is explicit. Time 'T' is set to 700 ms in advance of the handover, time T1 = T + 10 ms and time T2 = T + 20 ms.

At Time T, steps 1-3:

1. Source Pcell: Configure source primary cell for stop of automatic Time alignment MCE transmission by SS
2. Target Pcell: Configure target pcell for no RACH response transmission
3. Source Pcell: Schedule the transmission of RRC Connection Reconfiguration message to UE requesting Handover to target Pcell and Scell

At time T2, steps 4-5:

4. Target Pcell: If target Pcell is same as source Scell, configure SS for target Pcell to be converted from a Scell to Pcell
- 4a. Configuration of DRBs at the target PCell
5. Transfer of the PDCP Count for AM DRBs from source to target Pcell:
  - a) Source PCell: Get PDCP COUNT.
  - b) Target PCell: Set PDCP COUNT.

NOTE 1: There shall be no further sending/receiving of AM DRB data before the HO has been done.

At time T1, steps 6-12:

6. Target PCell: Inform the SS about the HO and about the source Pcell id.
7. Target PCell: Configure RACH procedure either dedicated or C-RNTI based.
8. Target PCell: Activate security.

NOTE 2: For AM DRBs the PDCP count is maintained (for SRBs and UM DRBs the PDCP count is reset).

9. Target PCell & Target Scell: configure DRX.

NOTE 3: As long as the DRX configuration is not modified by the RRCConnectionReconfiguration the target cell gets the same DRX configuration as the source cell.

NOTE 4: According to TS 36.331 clause 5.5.6.1 the measurement gap configuration is released at the UE due to the handover, therefore nothing needs to be configured at the target cell regarding measurement gaps.

10. Target PCell: Configure UL grant configuration ("OnSR", periodic TA is not started).
11. Target PCell: Configure Target Pcell as Pcell.
12. Target SCell: Configure Target Scell for
  - 12.1 Configure RACH procedure C-RNTI based.
  - 12.2 Configure UL grant configuration ("OnSR", periodic TA is not started).
  - 12.3 Configure target SCell as Scell with new Pcell association.

After time T2 (without activation time):

13. Target PCell: Receive RRCConnectionReconfigurationComplete.
14. Target PCell: Start periodic TA.
15. Target PCell: Inform the SS about completion of the HO (e.g. to trigger PDCP STATUS PDU).
16. Target PCell: Re-configure RACH procedure as for initial access.
- 16a. Target Pcell & TargetScell: Configure measurement gap configuration (if necessary).
17. Source PCell: If source Pcell is not target Scell, reset SRBs and release DRBs.
18. Source Pcell: If source Pcell is not target Scell, configure from Pcell to normal cell.
19. Source Pcell: If source Pcell is not target Scell, Release DRX and MeasGap configuration
20. Source SCell: If source Scell is neither target Pcell or Scell, Release DRX and MeasGapConfig configuration.
21. Source Scell: If source Scell is neither target Pcell or Scell, configure from Scell to normal cell.
22. Source Scell: If source Scell is neither target Pcell or Scell, Configure UL grant configuration ("OnSR", periodic TA is not started).

## 7.16.2 Sequence of intra-cell handover

For Intra-Cell handover dedicated timing information is used: the sequence starts at time T with sending of the RRCConnectionReconfiguration. T is set to 300 ms in advance of the handover.

0. Before T: Get PDCP count for AM DRBs.
1. At T: Send RRCConnectionReconfiguration.
2. At T + 5ms: Release SRBs and DRBs.

3. At T + 5ms: Configure RACH procedure either dedicated or C-RNTI based.

NOTE 1: Since the RACH procedure may require a new C-RNTI to be used it cannot be configured before sending out the RRCConnectionReconfiguration.

- 3A At T + 5ms: Release MeasGapConfig configuration.

NOTE 2: According to TS 36.331, clause 5.5.6.1 the measurement gap configuration is released at the UE due to the handover, therefore MeasGapConfig is released unless a new measurement gap configuration is explicitly given in the RRCConnectionReconfiguration.

4. At T + 10ms: (Re-) configure SRBs and DRBs.
5. At T + 10ms: Reestablish security, disable TA transmission.

NOTE 3: For AM DRBs the PDCP count is maintained while for SRBs and UM DRBs the PDCP count is reset.

6. (after step 5) Receive RRCConnectionReconfigurationComplete.
7. (after step 6) Re-configure RACH procedure as for initial access, enable TA transmissions.
8. (after step 7) Restore the PDCP count for AM DRBs.

### 7.16.3 UL Grants used in RA procedure during handover

In the Random Access Procedure a grant is assigned to the UE by the Random Access Response and another grant, as initial grant, is assigned for contention resolution.

When UL data is pending, the UE will try to put as much data into given grants as possible, i.e. it will segment the user data and send it e.g. with the initial grant if possible. To avoid this segmentation of user data, the grants assigned during handover will be set in TTCN to:

Grant assigned by Random Access Response: 56 bits.

Initial grant: 104 bits.

NOTE 1: According to TS 36.321 [16], clause 5.1.4, 56 bits are the minimum grant which can be assigned by the Random Access Response. That is sufficient to convey C-RNTI (3 bytes) and short BSR (2 bytes) or long BSR (4 bytes) but even with short BSR the remaining 2 bytes are not sufficient to convey any segment of the RRCConnectionReconfigurationComplete (at least 4 bytes).

NOTE 2: The RRCConnectionReconfigurationComplete (9 bytes) shall completely be conveyed in the initial grant of RA procedure. This requires a minimum of 10 bytes (1 byte MAC header + 2 bytes RLC header + 5 bytes PDCP header + 2 bytes payload). Additionally an optional PHR MAC element (2 bytes) needs to be considered since the PHR has higher priority than the MAC SDU. Any further user data would require a minimum of 5 additional bytes (2 bytes MAC header + 2 bytes RLC header + 1 byte payload).

## 7.17 Simulation of PDCP MAC-I Failure in UE

PDCP integrity protection test cases 7.3.4.x have the requirement to trigger MAC-I failures in UE for downlink messages; to achieve the MAC-I failure in UE two methods are specified in the subsequent sub clauses.

### 7.17.1 Integrity and ciphering not yet activated

UE has not yet started Integrity protection and it is required to trigger MAC-I failure for the PDCP PDU carrying RRC SecurityModeCommand starting integrity with one of integrity protection algorithms. Further a conformant UE will respond with SecurityModeFailure without any integrity protection.

This is achieved by:

Not configuring SS PDCP to start integrity and ciphering with selected algorithm.

RRC SecurityModeCommand is sent indicating Integrity protection through the desired algorithm.

Normal behaviour of PDCP layer in SS will include all zeros in MAC-I.

This results in MAC-I failure as UE will calculate the XMAC-I with indicated algorithm.

## 7.17.2 Integrity and/or ciphering already activated

UE has started Integrity protection (ciphering configured with possibly non null algorithm) and it is required to trigger MAC-I failure for the PDCP PDU carrying an RRC UE Capability Enquiry message. A conformant UE will trigger an RRC Connection Reestablishment procedure.

This is achieved by:

Configuring SS PDCP to use a different Integrity algorithm other than used by UE (i.e. if UE is configured to use AES, SS is configured to use SNOW3G and vice versa).

Ciphering is configured at SS side same as in UE side.

The MAC-I included by SS PDCP will be as per new algorithm.

UE will calculate XMAC-I based on its own algorithm which is different from the algorithm SS has used and will result in MAC-I failure.

## 7.18 RRC Connection Release Sequence

According to TS 36.331 [19], clause 5.3.8.3, after reception of the RRC Connection Release the UE may either wait 60 ms or for indication of acknowledgement from lower layer. After the RRC connection release there are cases where the UE may immediately come up with an RRC connection request. This requires scheduled release of resources at the SS:

1. At T: Send RRC Connection Release, stop UL grants.
2. At T + 5ms: Release security.
3. At T + 10ms: Release DRX configuration at the SS.
- 3A At T + 15ms: Release measurement gap configuration at the SS.
4. At T + 50ms: no action.
5. At T + 55ms: Release SRBs and DRBs.
6. At T + 60ms: (Re-) configure SRBs.
7. Delay of 840ms (NOTE)

T is set to 300ms in advance of RRC connection release.

NOTE: The delay ensures that the UE is camping on the serving cell again to avoid side effects e.g. due to subsequent power level changes. It does not affect any sending of messages by the UE. The delay 840ms is chosen to ensure the UE is re-camping on the cell and has read relevant system information, MIB, SIB1, SIB2 and all other SIs.

## 7.19 DL CCCH Message and Contention Resolution MAC Control Element transmission in one MAC PDU or in separate MAC PDUs

When the contention based RACH procedure is being executed (RRC Connection Establishment or RRC Connection Reconfiguration), in general the contention resolution MAC control element and the DL RRC PDU (RRC Connection Setup/RRC Connection Reject/RRC Connection Re-establishment/RRC Connection Re-establishment Reject) are sent in one MAC PDU. This is achieved by pre-configuring the SS (before the start of the RRC procedure) to send the encoded DL message and contention resolution MCE in one MAC PDU.

Nevertheless, due to specific test purposes there are still many cases where it is necessary to send the DL CCCH message separately:

RRC connection establishment

When RRC connection establishment is part of the test purpose

Special cases: , e.g. when no contention resolution shall be sent according to the test purpose

RRC Connection Reestablishment is part of the test purpose

RRC Connection Reject is part of the test purpose

RRC Connection Reestablishment Reject is part of the test purpose

NOTE: The way contention resolution is applied has impact on the DCI format being used in a test case: when the DL CCCH message is sent separately DCI combination 1 according to clause 7.3.1 shall be used.

## 7.20 RRC Connection Reconfiguration Sequence (Measurement Control)

When an RRC Connection Reconfiguration message contains information to configure measurement gaps at the UE according to TS 36.331 [19] clause 5.5.2.9, the SS needs to be configured accordingly:

IF MeasConfig contains measGapConfig:

1. At T: Send RRC Connection Reconfiguration.
2. At T + 5ms: Configure measurement gaps at the SS.
3. (after step 2) Receive RRC Connection Reconfiguration Complete

ELSE

1. Send RRC Connection Reconfiguration (without scheduling)
2. Receive RRC Connection Reconfiguration Complete.

T in general is set to 100ms in advance of the RRC connection reconfiguration.

## 7.21 Inter-RAT - GERAN special issues

### 7.21.1 Timeslot assigned for GERAN CS traffic

Timeslot 3 shall be used as the timeslot assigned for GERAN CS traffic, in order to avoid conflicts with timeslots reserved for other purposes (e.g. the GPRS channel which is assigned to timeslot 4).

### 7.21.2 Subchannel used in GERAN L2 access message

The subchannel is valid only for the following logical channel types: FACCH/H, SDCCH/8, SDCCH/4. For other logical channel types this field is not applicable and shall be coded as 15 for compatibility with TTCN2 test cases. The SS shall ignore it if this field is coded as 15.

### 7.21.3 Paging in GERAN

The system paging parameter BS\_PA\_MFRMS is set to a value of 2 multi frames, in order to ensure the next paging occasion is as soon as possible.

## 7.22 EUTRAN RSRQ Calculations

### 7.22.1 Assumptions

- As per 36.214 [53] clause 5.1.1 and 5.12, the RSRP and RSSI shall be averaged over the same set of resource blocks. It is assumed that the power calculations made over one symbol are good enough for RSRQ calculations. This is based on the assumption that the power levels remain the same across the symbols on which the UE is calculating the average. The contribution of Nprb and the OFDM symbols carrying cell specific reference symbols per PRB contribute equally in numerator and denominator, hence RSRQ calculations in dB with aggregation over cell DL bandwidth and without aggregation result in the same output.
- As per table 7.4.3.1.1-1, for FDD the timing offset between the intra frequency cells is always a multiple of sub frame duration i.e. 3072 Ts, hence in the symbols carrying cell-specific reference signals in one cell, the other cell (interference) is also carrying a cell-specific reference signal, even though in a different subframe. Hence from an interference calculation perspective, we can safely assume that the cells contributing an interference shall also transmit the same cell specific reference signal in the symbol/
- The noise source is treated as a dummy cell transmitting on all resource elements with equal EPRE. Hence to switch off the noise source, a value of non-suitable "Off" cell, as per 36.508 [3] table 6.2.2.1-1 shall be used (<-145), and the signal level uncertainties similar to configured cells in 36.508 [3] clause 6.2.2.1 will also be applied to the noise source.
- When the Noc value remains 'off' during the test case execution, the Virtual Noise Generator is not configured in the SS.

### 7.22.2 The Ideal Calculation

The test case specifies the RS-EPRE (dBm/15kHz) which is the cell absolute power-cell attenuation in dBm per carrier of 15 kHz; the linear average over few measurements will give the RRP value.

It is assumed that the power levels of all contributors is fluctuating hence in the typical test environment RS-EPRE will be the RSRP over a single carrier frequency.

The RS-EPRE<sub>mW</sub>(mW/15kHz) = 10 power (RSRP/10).

The energy in noise source [Noc] for the frequency is also specified in the same units of dBm/15kHz.

The RSSI<sub>mW</sub> calculation(mW over a resource block frequency of 180 kHz) = 2 (the sum over all intra frequency configured cells RS-EPRE<sub>mW</sub>) + 10 power ((Noc/10)\*12).

The cell inference is multiplied by 2 as in a RB, cell specific reference is transmitted in only 2 carriers. But the AWGN transmits on all 12 carriers in the resource block.

The RSRQ in dB will be the 10\*log (RS-EPRE<sub>mW</sub>/RSSI<sub>mW</sub>).

### 7.22.3 Additional RSRQ Calculations For Fixing Boundary Values

In addition to the ideal calculation, various RSRQ calculations take into consideration the combinations of the SS signal uncertainties and possibly all 12 carriers being used for DL transmission.

The 12 carriers being used can happen when the UE makes the measurement in a subframe when a DL PDSCH is scheduled or measurement is in subframe zero and the UE measures in OFDM symbol carrying PBCH i.e. slot 1, symbol 0.

The Min and Max RSRQ values are identified from 6 different RSRQ calculations:

RSRQ Ideal: RSRQ calculated in ideal conditions as given above

RSRQ Min: RSRQ calculation applying -ve signal uncertainty to all configured cells and noise source

RSRQ Max: RSRQ calculation applying +ve signal uncertainty to all configured cells and noise source

RSRQ Max Worst Case: RSRQ calculation applying +ve signal uncertainty for measured cell and –ve signal uncertainty to all remaining configured cells and noise source. This shall be the Max RSRQ possible

RSRQ Max And 12 Carriers: RSRQ calculation applying +ve signal uncertainty to all configured cells and noise source and cell interference considered over all 12 carriers

RSRQ Min Worst Case And 12 Carriers: RSRQ calculation applying -ve signal uncertainty for measured cell and +ve signal uncertainty to all others; and cell interference considered over all 12 carriers. This shall be the Min RSRQ possible

Applying UE measurement accuracy 36.133 [37], Table 9.1.6.2-1, +/-4dB normal conditions and side conditions of RSRQ when  $RSRP \hat{E}_s/I_{ot} \geq -6$  dB &  $RSRP \geq -124$  dBm the final boundary value for RSRQ is

Min RSRQ With UE Meas Acc := Min RSRQ -4 dB

Max RSRQ With UE Meas Acc := Max RSRQ + 4 dB

For conditions to fulfil desired cell selection or reselection, the respective conditions shall be satisfied for both the boundary values Min RSRQ RSRQ With UE Measurement Accuracy and Max RSRQ With UE Measurement Accuracy.

As the Boundary conditions also consider the worst scenario of all 12 carriers being transmitted, the requirement for OCNG is removed. There is no need to restrict measurement bandwidth and will be applicable for both DCI formats.

## 7.23 Test method for eICIC and feICIC

When periodic CQI feedback is requested due to TTCN configuration, the SS reports the periodic CQI to the TTCN. SS does not react on periodic CQI received and still allocates grants as configured from TTCN.

In the selected ABS no DL/UL user data (SRB/DRB) is scheduled, nor paging is transmitted; this is controlled by TTCN.

For feICIC testing, the SS may be configured to temporarily stop the transmission of SIB1 and its associated DCI.

## 7.24 Carrier Aggregation Signalling Sequences

### 7.24.1 Initial configuration of Pcell

Cell is configured as a normal cell by using function `f_EUTRA_CellConfig_Def`. The missing CA default parameters (e.g. UL power control Common) are configured by using additional ASP call(s).

Figure 7.24.1-1: CA sequence of an initial cell configuration for a cell to be used as Pcell

## 7.24.2 Initial configuration of SCell

Cell is configured as a normal cell except for SRB/DRB configuration by function `f_EUTRA_SS_ConfigureActiveCell`.

SRB0 not yet configured in step 1 is then configured.

The missing CA default parameters (e.g. UL power control (Common + Dedicated), PUSCH config Dedicated, SRS UL Dedicated) are configured by using additional ASP call(s).

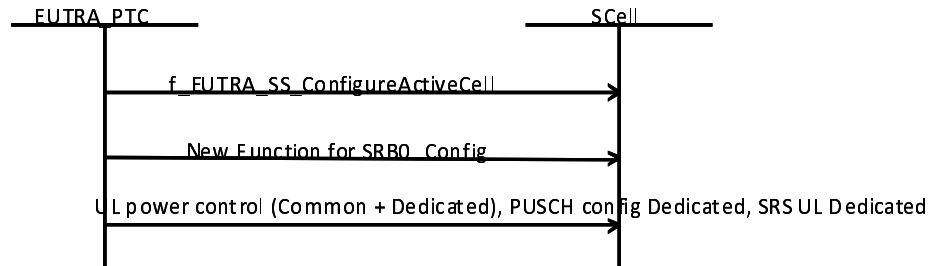

Figure 7.24.2-1: CA sequence of an initial cell configuration for a cell to be used as SCell

### 7.24.3 Scell Addition and/or release

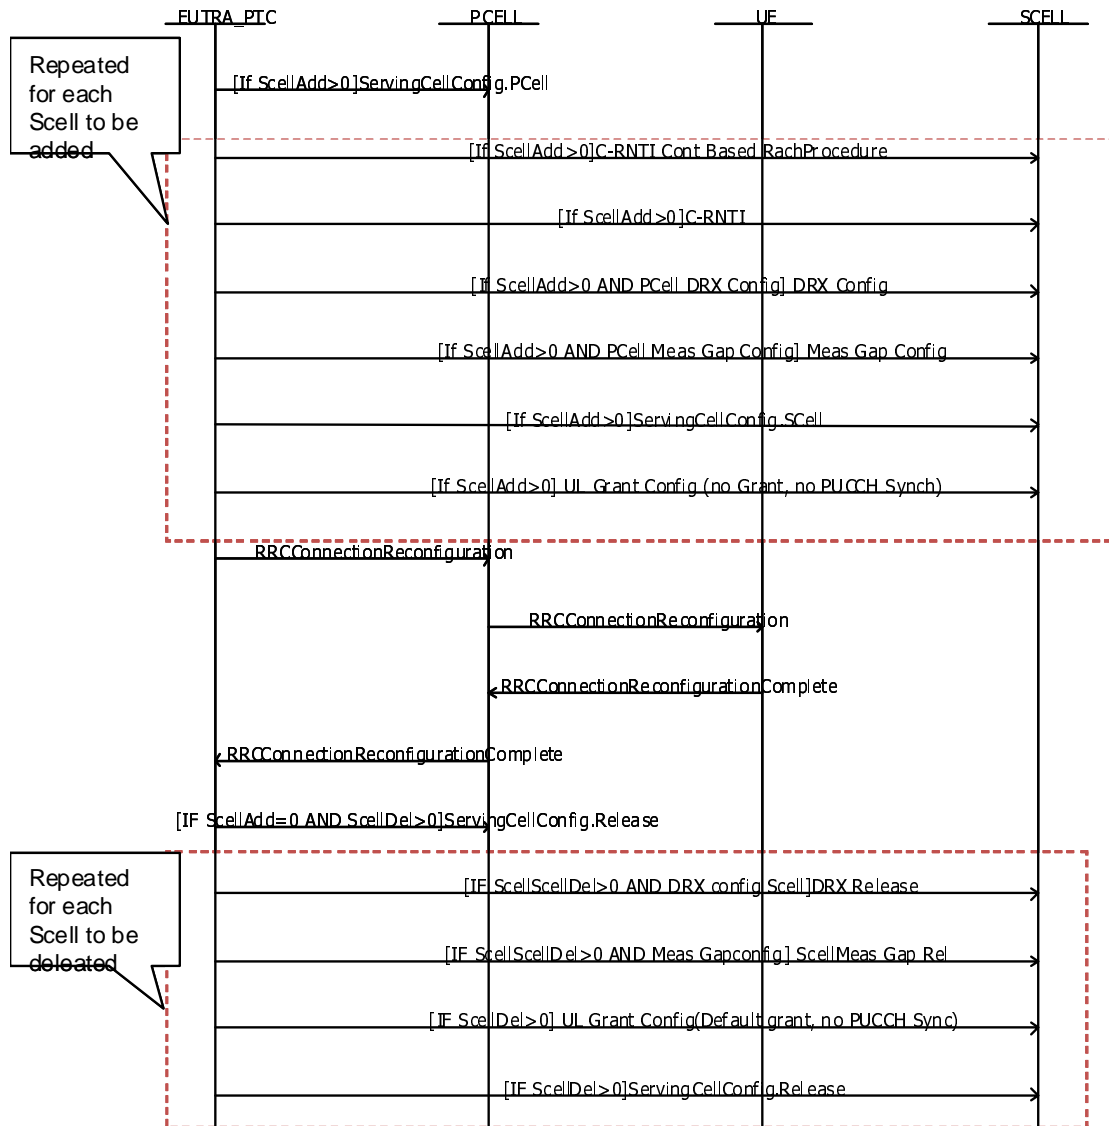

Figure 7.24.3-1: CA sequence of Scell Addition and/or release

## 7.25 Test method for MBMS

### 7.25.1 Schedule transmission of MCCH messages

The rules for the transmission of MCCH messages are specified in TS 36.331 [19], clause 5.8.1.2. The ASPs SYSTEM\_CTRL\_REQ and SYSTEM\_CTRL\_CNF are used as interface to SS; the following rules apply:

The complete MCCH information is provided to SS by using a single ASP. The MCCH carries the *MBSFNAreaConfiguration* and may also carry the *MBMSCountingRequest* message.

The scheduling information sent to SS is the same as the scheduling information sent to the UE.

The MCCH information is sent to SS using the asn.1 types, SS shall encode in unaligned PER and add the necessary padding bits as specified in TS 36.331 [19], clause 9.1.1.1.

Segmentation occurs when the MCCH message size is larger than the TBS of the MCH. SS starts scheduling all MCCH information blocks from the same SFN.

NOTE: With the default values  $NPRB=NRBDL=25$  for 5 MHz and default signalling  $Imcs=2$ ; then  $Itbs=2$  and the TB size will be 1096 bits, hence segmentation may never happen.

## 7.25.2 MCCH change notification

A change notification is used to indicate the modification of MCCH information. The notification is transmitted on PDCCH, it includes the notification indicator provided in the ASP and is transmitted using the M-RNTI (defined in 3GPP TS 36.321 [16] Table 7.1-1).

The notification messages are sent during one modification period before transmitting the modified MCCH information. The SFN for the start of modification period is calculated by TTCN. The modified MCCH information and the calculated SFN are provided in the ASP SYSTEM\_CTRL\_REQ. The notification messages are sent on SFN/subframes calculated by TTCN according to 36.331 [19] clause 6.3.7.

## 7.25.3 MTCH data scheduling

The SS is configured with configuration parameters for CSA, PMCH, MRBs, MSI and scheduling information for MTCH data transmission.

The TTCN shall ensure that:

- For each configured MCH, the routing & timing information of the scheduled MRB data is consistent with the configured MSI.
- The size of all MRB data scheduled in the same subframe shall fit within the resource allocation of that subframe.

The SS shall ensure that:

- In subframes belonging to the CSA and for which no MCCH/MTCH/MSI data is scheduled by the TTCN, no MCH data shall be sent in MBMS subframes not used as per MSI.

If an MTCH packet is scheduled from TTCN in a subframe in which MCCH will be automatically transmitted by SS and/or MSI is configured and needs to be included, the MTCH packet and MCCH data along with possible MSI are included in one MAC PDU and *signallingMCS* is used.

When data is sent on MTCH the SS shall set the MSI in the MAC header according to TS 36.321 [16] clause 6.1.3.7. The periodicity of the MSI is defined by the MCH scheduling period i.e. the MSI is not necessarily included in the subframe where the RLC SDU is transmitted.

## 7.26 Type B FDD Half-Duplex Considerations

Type B FDD half-duplex UE has limitations in receiving a DL subframe preceding or following a UL subframe for the same UE hence a blank subframe is needed. In [non TTI bundling considerations] max 3 contiguous subframes UL or DL can be scheduled. And after and before any contiguous DL/UL subframes block a blank subframe is needed.

If the UE under test is a Type B FDD half-duplex UE:

- SS will be configured per cell by providing UE category info and FDD half-duplex operation.
- When explicit timing info is provided in any DL transmission, the SS shall ignore the UE capability and shall follow the explicit scheduling. It will be TTCN responsibility to schedule UL/DL transmissions based on UE capability. Paging is always explicitly scheduled and hence SS follows explicit scheduling for paging.
- For UE Category 0, SI scheduling will be configured as per TDD SI scheduling (Table 7.7.2-4) restricting system info transmissions in sub frames 0 and 5. For UE Category M1, SI scheduling is specified in clause 7.7.2a.
- For non-explicitly scheduled new DL transmissions/ new UL grant allocations, the SS shall restrict UL/DL operations as per table below:

**Table 7.26-1: Scheduling pattern for type B half-duplex FDD UE (non-explicitly scheduled)**

SFN/ SubFrame	0	1	2	3	4	5	6	7	8	9
X (any)	SI	Blank	New UL Data/ HARQ	Blank	Blank	SI	DL HARQ	Blank	New DL Data/ UL Grant	Blank

- If HARQ retransmissions are required:
  - DL retransmissions being asynchronous in nature shall be scheduled by the SS as per above schedule (i.e. subframe 8).
  - UL retransmissions being synchronous will not be limited to subframe 2. i.e. the first UL retransmission will be in frame X+1, subframe 0, second retransmission in frame X+1, subframe 8 and so on.
  - HARQ retransmissions shall be prioritised over new transmissions.

## 7.27 Test method for Device-to-Device Proximity Services

### 7.27.1 Direct Discovery test method

SS-UE is configured in coverage, i.e. it is associated with a EUTRA-cell (as specified in clause 7.27.2.1).

SS-UE can be configured for sidelink data transmission and/or reception:

- When UE under test is configured in sidelink discovery type 1 (i.e. ue-Selected), the SS-UE is configured in reception with the same pool(s) of resource.
- When UE under test is configured in sidelink discovery type 2B (i.e. scheduled), the SS-UE is configured in reception with the same pool of resource and same indexes.
- For transmission, TTCN configures the SS-UE with a pool of resources and provides the SL\_DATA\_REQ ASP including:
  - the SL-DCH message to be transmitted,
  - the timing info indicating the SFN/Subframe of the first discovery period,
  - the number of discovery periods in which the message shall be transmitted,
  - the selected PSDCH resource value (n\_PSDCH), this value is incremented by TTCN after each transmission cycle. To avoid clashes when multiple PC5\_DISCOVERY messages are transmitted within the same discovery period, TTCN will provide different n\_PSDCH values.

### 7.27.2 Direct Communication test method

#### 7.27.2.1 Synchronisation and SBCCH transmission

When configured in coverage, the SS-UE is associated with a EUTRA-cell, it is configured with the same configuration parameters i.e. Band, Bandwidth, UL frequency, Cell timing, TDD Frame structure of the associated EUTRA cell.

When out of coverage, SS-UE is configured explicitly by TTCN, e.g. Band, Bandwidth, TDD Frame structure. For timing synchronisation SS-UE can be configured either:

- To synchronise from UE under test transmitted SLSS/MIB-SL: UE under test is the synchronisation source. The SS-UE shall use the received SLSS and MIB-SL including the DirectFrameNumber/DirectSubframeNumber as synchronisation source as specified in TS 36.331 [19], clause 5.10.9.2
- To be the synchronisation source: SS-UE shall initiate autonomously the DirectFrameNumber/DirectSubframeNumber and transmit SLSS/MIB-SL.

When the SS-UE is configured by TTCN over sidelink system control port to receive/transmit SLSS and MIB-SL, the following rules apply:

- For transmission, the complete MIB-SL message is provided to SS-UE. SS-UE shall set the DirectFrameNumber and DirectSubframeNumber in the MIB-SL, a dummy value is provided by TTCN.
- The MIB-SL is sent to SS-UE using asn.1 types. The rules for encoding and transmission of SBCCH messages (MIB-SL) are specified in TS 36.331 [19].
- For reception, SS-UE shall report SLSS or MIB-SL over the sidelink system indication port.

### 7.27.2.2 Sidelink data transmission/reception

When UE is in coverage and configured in transmission mode 1 (i.e. scheduled), the sidelink Scheduling Grant is configured in SS by TTCN over system control port. On PDCCH, the SS informs the UE under test if it is allowed to make sidelink data transmission by transmitting 'DCI format 5' including 'SCI format 0' with the CRC scrambled by SL-RNTI (acc. to TS 36.213 [30] clause 14.2). The UE under test will transmit on PSCCH/PSSCH as specified in the received DCI format 5 and 'SCI format 0'. SS shall only react on reception of SR and grant allocation configured from the TTCN. The following sidelink grant allocation is configured:

- SS is configured to maintain PUCCH Synch.
- SS is configured to send automatically a 'configured Grant' (in terms of  $N_{\text{PSCCH}}$ ,  $I_{\text{TRP}}$  and  $N_{\text{PRB}}$ ) to the UE on every reception of a Scheduling Request, within 10 subframes.
  - The default resource for PSCCH is  $N_{\text{PSCCH}} = 11$ ,
- The default configured grant for PSSCH in SCI format 0 is  $I_{\text{TRP}} = 36$  and  $N_{\text{PRB}} = 25$ . The SS shall allocate resource allocation RBs corresponding to PRB indices  $0..(N_{\text{PRB}}-1)$ .- SS-UE is configured with the same pool(s) of resources as UE under test.

When UE is out of coverage or configured in transmission mode 2 (i.e. ue-Selected), UE selects autonomously the resources on PSCCH/PSSCH. SS-UE is configured with the same pool(s) of resources as UE under test.

The SS-UE, when triggered to transmit data, is configured with  $I_{\text{MCS}}=0$  and the same  $N_{\text{PSCCH}}$ ,  $I_{\text{TRP}}$  and  $N_{\text{PRB}}$  as specified above.

## 7.28 Test method for SC-PTM

### 7.28.1 Schedule transmission of SC-MCCH messages

The rules for the transmission of SC-MCCH messages are specified in TS 36.331 [19], clause 5.8a.1.2. The ASPs SYSTEM\_CTRL\_REQ and SYSTEM\_CTRL\_CNF are used as interface to SS; the following rules apply:

- The complete SC-MCCH information is provided to SS by using a single ASP. The SC-MCCH carries the *SPCTMConfiguration* message.
- The scheduling information sent to SS is the same as the scheduling information sent to the UE.
- The SC-MCCH information is sent to SS using the asn.1 types, SS shall encode in unaligned PER and add the necessary padding bits as specified in TS 36.331 [19], clause 9.1.1.7.
- Segmentation occurs when the SC-MCCH message size is larger than the TBS of the DL-SCH. SS starts scheduling all SC-MCCH information blocks from the same SFN.

NOTE: With the default values  $N_{\text{PRB}}=N_{\text{RBDL}}=25$  for 5 MHz and default signalling  $I_{\text{mcs}}=2$ ; then  $I_{\text{tbs}}=2$  and the TB size will be 1096 bits, hence segmentation may never happen.

## 7.28.2 SC-MCCH information change

There are two possibilities to update SC-MCCH information. One is to transmit modified SC-MCCH information at the beginning of the modification period. Alternatively, notification mechanism can be used. The notification is transmitted using the DCI format 1C with SC-N-RNTI (defined in 3GPP TS 36.321 [16] Table 7.1-1) and one bit within the 8-bit bitmap. The notification is sent in the first subframe, which can be used for SC-MCCH transmission in a repetition period. Modified SC-MCCH message is to be transmitted starting from the same subframe, as defined in TS 36.300 clause 15.3.5a.

The SFN for the start of modification to SC-MCCH is calculated by TTCN according to TS 36.331 [19] clause 6.3.1 as defined for *SystemInformationBlockType20*. The modified SC-MCCH information, the calculated SFN and a flag, pointing on if a notification mechanism has to be used, are provided in the ASP SYSTEM\_CTRL\_REQ.

## 7.28.3 SC-MTCH data scheduling

The SS may be configured with scheduling information for SC-MTCH data transmission. The TTCN shall ensure that SC-MTCH packets will be scheduled for the transmission only during the Active Time for a PDCCH subframe as defined in TS 36.321 [16] clause 5.7a.

---

# 7A NB-IoT Test Methods and Design Considerations

NOTE: Unless explicitly stated otherwise, the present clause and its subclauses apply to the NB-IoT anchor carrier.

## 7A.1 Physical signals and channels

For Signalling testing, single Tx antenna shall be used by the SS, unless specified otherwise in a test case.

The SS shall transmit all NB-IoT physical signals and channels according to TS 36.211 [35], with the following additional requirements, unless specified otherwise in a test case:

- The NRS shall be transmitted on one antenna port.
- The NPSS and NSSS shall be transmitted on one and the same antenna port.

No (WB-E-UTRA) LTE signals and channels shall be transmitted by the SS, except for the case of 'in-band same PCI' operation mode where the SS shall transmit the LTE CRS. For the in-band operation modes, TTCN will provide the necessary LTE CRS configuration to the SS ; for the case of 'in-band different PCI' operation mode, the SS shall use this information to skip the resource elements, which should be occupied by the LTE CRS, when transmitting NB-IoT downlink physical channels.

## 7A.2 System information

### 7A.2.1 System information broadcasting in general

TTCN provides separately the BCCH (MIB-NB, SIB-NB's) messages to transmit, and the scheduling of how and when to transmit them. However the complete information is provided to the SS by using a single ASP.

The SS shall transmit all BCCH messages according to TS 36.331 [19], with the following additional requirements:

- SS shall start scheduling all BCCH messages from the same timing (H-SFN, SFN).
- SS shall set and maintain the SFN-MSB and the HSFN-LSB in the MIB-NB message provided by TTCN, according to its internal timing. A dummy value is provided by TTCN.
- SS shall set and maintain the HSFN-MSB in the SIB1-NB message provided by TTCN, according to its internal timing. A dummy value is provided by TTCN.

- TTCN provides the BCCH messages to the SS using the ASN.1 types. The SS shall encode them in unaligned PER and add the necessary padding bits as specified in TS 36.331 [19], clause 8.5.

## 7A.2.2 System information scheduling and synchronisation signals

For NB-IoT the scheduling of UL and DL data strongly depends on the scheduling of system information and synchronisation signals: The SS can schedule DL assignments and UL grants only in subframes which are not used by system information or synchronisation signals.

This clause shows the allocation of system information and synchronisation signals according to core specifications and for cases of common system information scheduling according to TS 36.508 [3] clause 8.1.4.3.

NOTE: Unless explicitly stated otherwise, the present clause and its subclauses apply to downlinkBitmap-r13 not being specified in SIB1-NB.

### 7A.2.2.1 MIB-NB, NPSS, NSSS

NPSS is transmitted in subframe 5 of every radio frame (TS 36.211 [35] clause 10.2.7.1.2).

NSSS is transmitted in subframe 9 of every radio frame with even frame number (TS 36.211 [35] clause 10.2.7.2.2).

MIB-NB is sent on NPBCH: It is split into 8 blocks, each of which is repeated 8 times in the first subframe of a frame (TS 36.331 [19] clause 5.2.1.2a) ⇒ MIB uses first subframe of every frame, periodicity is 640ms.

**Table 7A.2.2.1-1: MIB-NB, NPSS, NSSS scheduling**

...	SFN mod 2 = 0										SFN mod 2 = 1										...	
...	0	1	2	3	4	5	6	7	8	9	0	1	2	3	4	5	6	7	8	9	...	
...	N P B C H					N P S S					N S S S	N P B C H					N P S S					...

### 7A.2.2.2 SIB1-NB

SIB1-NB scheduling depends on

- schedulingInfoSIB1-r13 contained in MasterInformationBlock-NB:  
TBS of 208, 328, 440 or 680 and 4, 8 or 16 repetitions (TS 36.213 [30] Tables 16.4.1.3-3 & 16.4.1.5.2-1)
- Physical Cell ID (PCID) derived by the UE from the NSSS:  
Starting radio frame number for NB-SIB1 repetitions depends on the PCID and the number of repetitions (TS 36.213 [30] Table 16.4.1.3-4)

According to TS 36.331 [19] clause 5.2.1.2a independent from the TBS a single SIB1-NB transmission takes every second of 16 sub-sequent frames and the parts of the SIB1-NB are sent at subframe #4.

Table 7A.2.2.2-1 shows SIB1-NB scheduling for the 16 repetitions for the case that the radio frame of the first transmission is 0 ( $N_{ID}^{Ncell} \bmod 4 = 0$  in Table 16.4.1.3-4 of TS 36.213 [30]); frames with SIB1-NB are shown in green.

Table 7A.2.2.2-1: SIB1-NB scheduling with 16 repetitions

### 7A.2.2.3 SI-messages containing SIB3-NB, SIB4-NB, SIB5-NB, SIB14-NB, SIB16-NB

Scheduling of SI messages is specified in TS 36.331 [19] clauses 5.2.1.2a and 5.2.3a.

As SI messages are sent on NPDSCH, only "NB-IoT DL subframes" can be used according to TS 36.213 [30] clause 16.4: In case of SIB1-NB not specifying *downlinkBitmap-r13* NB-IoT DL subframes are subframes not containing NPSS/NSSS/NPBCH/NB-SIB1 transmissions.

The parameters for SI scheduling are contained in SystemInformationBlockType1-NB:

Configuration common for all SI messages:

- Window size
- Frame offset for scheduling

Configuration per SI message:

- SI window:  
According to TS 36.331 [19] clause 5.2.3a the position of an SI-window depends on the order of the corresponding SI-message in the list, the window size and the periodicity.
- Repetitions of the SI-message:  
Within an SI-window repetitions are specified by the repetition-pattern.
- SIBs mapped to the SI-message
- Transport block size (TBS) and number of subframes ( $N_{SF}$ ) used for transmission:  
According to clause 6.7.2 of TS 36.331 [19]  $N_{SF}$  is either 2 (for TBS = 56, 120) or  $N_{SF}$  is 8 (for TBS = 208, 256, 328, 440, 552, 680).

#### 7A.2.2.3.1 SI combination 1 scheduling

TS 36.508 [3] clause 8.1.4.3 specifies configuration of SI combination 1 scheduling as shown in table 7A.2.1.3.1-1 with

- 16 Repetitions of SIB1-NB  $\Rightarrow$  SIB1-NB in every second frame at subframe 4
- si-WindowLength-r13: ms160
- si-RadioFrameOffset-r13: 0 (not present in SystemInformationBlockType1-NB)
- 1 SI-message:
  - SI-Window 1
    - si-Periodicity-r13 rf64
    - si-RepetitionPattern-r13 every8thRF
    - si-TB-r13 552  $\Rightarrow N_{SF} = 8$
- According to TS 36.331 [19] clause 5.2.3a the SI-windows start at subframe 0 of frame SI1:  
 $(H-SFN * 1024 + SFN) \bmod T_{SI} = 0$ ; with  $T_{SI} = 64$

Table 7A.2.2.3-1: SI combination 1 scheduling (SIB2-NB only)

With

7A.2.2.3.2 SI combination 2/3/4 scheduling

TS 36.508 [3] clause 8.1.4.3 specifies configuration of SI combination 2/3/4 scheduling as shown in table 7A.2.1.3.1-2 with

- 16 Repetitions of SIB1-NB ⇒ SIB1-NB in every second frame at subframe 4
- si-WindowLength-r13: ms160
- si-RadioFrameOffset-r13: 0 (not present in SystemInformationBlockType1-NB)
- 3 SI-messages:
  - SI-Window 1
    - si-Periodicity-r13 rf64
    - si-RepetitionPattern-r13 every8thRF
    - si-TB-r13 552 ⇒ N<sub>SF</sub> = 8
  - SI-Window 2
    - si-Periodicity-r13 rf64
    - si-RepetitionPattern-r13 every16thRF
    - si-TB-r13 256 ⇒ N<sub>SF</sub> = 8
  - SI-Window 3
    - si-Periodicity-r13 rf64
    - si-RepetitionPattern-r13 every16thRF
    - si-TB-r13 256 ⇒ N<sub>SF</sub> = 8
- According to TS 36.331 [19] clause 5.2.3a the SI-windows start at subframe 0 of frame
  - (H-SFN \* 1024 + SFN) mod T<sub>SI1</sub> = 0; with T<sub>SI1</sub> = 64
  - (H-SFN \* 1024 + SFN) mod T<sub>SI2</sub> = 16; with T<sub>SI2</sub> = 64
  - (H-SFN \* 1024 + SFN) mod T<sub>SI3</sub> = 32; with T<sub>SI3</sub> = 64

Scheduling of DL assignments and UL grants is not possible in subframes occupied by system information or synchronisation signals or in subframes outside the respective search space.

- Timing of NB-IoT conformance test cases strongly depends on the system information scheduling (see clause 7A.2.2) and the search space configurations described in this clause.

In addition it is the responsibility of the SS to determine the exact timing for scheduling of DL assignments and UL grants.

Table 7A.3-1 shows the relevant parameters for search space calculations.

**Table 7A.3-1: Parameters for search space calculations**

$R_{max}$	Type1CSS	configured in SIB2-NB (PCCH-Config-NB-r13)
	Type2CSS	configured in SIB2-NB (NPRACH-Parameters-NB-r13)
	UESS	configured in RadioResourceConfigDedicated-NB-r13 (NPDCCH-ConfigDedicated-NB-r13)
G	Type1CSS	(not applicable)
	Type2CSS	configured in SIB2-NB (NPRACH-Parameters-NB-r13)
	UESS	configured in RadioResourceConfigDedicated-NB-r13 (NPDCCH-ConfigDedicated-NB-r13)
$\alpha_{offset}$	Type1CSS	(not applicable)
	Type2CSS	configured in SIB2-NB (NPRACH-Parameters-NB-r13)
	UESS	configured in RadioResourceConfigDedicated-NB-r13 (NPDCCH-ConfigDedicated-NB-r13)
T	Type1CSS	DRX cycle according to PCCH-Config-NB-r13.defaultPagingCycle-r13
	Type2CSS	search space cycle: $R_{max} * G$
	UESS	search space cycle: $R_{max} * G$
R	Type1CSS	depends on $R_{max}$ and the "DCI subframe repetition number" in the DCI format N2 as shown in TS 36.213 [30] table 16.6-2
	Type2CSS	depends on $R_{max}$ and the "DCI subframe repetition number" in the DCI format N1 as shown in TS 36.213 [30] table 16.6-3
	UESS	depends on $R_{max}$ and the "DCI subframe repetition number" in the DCI format N0/N1 as shown in TS 36.213 [30] table 16.6-1

### 7A.3.1 Type1CSS - Paging

For NB-IoT the same calculations for paging are applied as for WB-E-UTRA (TS 36.304 [14] clause 7), but in contrast to WB-E-UTRA the paging does not happen at the paging occasion itself, but the Type1-NPDCCH common search space starts at the paging occasion according to TS 36.213 [30] clause 16.6: DCI with format N2 is sent out on NPDCCH from the next suitable subframe onward (starting at the paging occasion).

As for WB-E-UTRA the paging occasion is calculated by TTCN and provided to SS as timing information of the system request. The SS shall schedule the DCI and the corresponding paging message (if any) according to the given configuration of the Type1CSS, PCCH configuration and according to the rules provided by core specifications (mainly TS 36.213 [30] clause 16).

### 7A.3.2 Type2CSS – Random access

In principle the same considerations can be applied as for the UESS (see below).

### 7A.3.3 UESS

Taking into account the SIB scheduling as described in clause 7A.2 and applying parameters for the UESS as per TS 36.508 [3] UESS configuration results in

**Table 7A.3.3-1: Parameters for UESS**

$R_{max}$	16	according to TS 36.508 [3] table 8.1.6.3-3
G	4	according to TS 36.508 [3] table 8.1.6.3-3
$\alpha_{offset}$	0	according to TS 36.508 [3] table 8.1.6.3-3
T	64	$R_{max} * G$
R	2	according to DCI subframe repetition number in TS 36.508 [3] Table 8.1.3.6.1.2-2 and parameters as above

- according to TS 36.213 [30] clause 16.6

the search spaces start at  $k_0 = 0, 64, 128, 192, 256, \dots$

the candidates within a search space start at  $b = R * u = 0, 2, 4, 6, 8, 10, 12, 14.$

With

NOTE 1: Depending on SS configuration in general the first search space candidate can be used for the transmission of the DCI. Therefore the first search space candidate is highlighted in table 7A.3.3-2.

## 7A.4 Timing considerations

Based on SIB scheduling and search space configuration as described in the previous clauses timing considerations are made as below.

### 7A.4.1 Random access procedure

Details regarding random access procedure in NB-IoT are specified in clause 16.3 of TS 36.213 [30] and clause 5.1 of TS 36.321 [16]. The timing of a random access procedure in NB-IoT is illustrated in table 7A.4.1-1.

**Table 7A.4.1-1: Timing of random access procedure**

with

steps 1-4	Random access procedure according to TS 36.300 [69] clause 10.1.5.1: step 2: RAR is addressed to RA-RNTI step 3: Msg3 contains either a CCCH SDU (a) or the C-RNTI (b) step 4: a) temporary C-RNTI based contention resolution (DL assignment for Msg4) b) C-RNTI based contention resolution (UL grant) NOTE: According to TS 36.213 [30] clause 16.5.1, Table 16.5.1-4 and clause 16.4.1, Table 16.4.1-5 the DCI for step 4 is sent on NPDCCH in the Type2 common search space	
t <sub>delay1</sub>	≥ 3ms (but up to ≥ 50ms)	depends on Type1-CSS configuration, start of RA response window according to TS 36.321 [16] clause 5.1.4 and when the RACH preamble happens
t <sub>DCI</sub>	≥ 2ms	for R <sub>max</sub> = 16 and DCI subframe repetition number = 0 (TS 36.213 [30] clause 16.6)
t <sub>delay2</sub>	≥ 4ms	scheduling delay according to DCI (TS 36.213 [30] clause 16.4.1 and table 16.4.1-1)
t <sub>RAR</sub>	≥ 1ms	depending on TBS and number of repetitions (TS 36.213 [30] clause 16.4.1)
t <sub>delay3</sub>	≥ 12ms	scheduling delay according to RAR grant (TS 36.213 [30] clause 16.3.3)
t <sub>Msg3</sub>	≥ 1ms	depending on MSC index and number of repetitions according to RAR grant; the TBS is 88 bits in all cases (TS 36.213 [30] clause 16.3.3)
t <sub>delay4</sub>	≥ 3ms	delay before the UE monitors NPDCCH again (TS 36.213 [30] clause 16.6)
t <sub>delay5</sub>	≥ 13ms	depending on whether UL or DL transmission follows, see clause 7A.4.2 and 7A.4.3

NOTE 1: In addition to the delay in table 7A.4.1-1 there is further delay caused by PBCH, NPSS, NSSS, SI transmissions.

NOTE 2: Assuming a search space configuration as per clause 7A.3 in general a random access procedure needs more than two search space cycles.

### 7A.4.2 Uplink transmissions

**Table 7A.4.2-1: Timing of uplink transmissions**

with

t <sub>DCI1</sub>	≥ 2ms	for R <sub>max</sub> = 16 and DCI subframe repetition number = 0 (TS 36.213 [30] clause 16.6)
t <sub>delay1</sub>	≥ 8ms	according to TS 36.213 [30] table 16.5.1-1
t <sub>Data</sub>	≥ 1ms	depending on TBS and number of repetitions (TS 36.213 [30] clause 16.5.1 and TS 36.211 Table 10.1.2.3-1)
t <sub>delay2</sub>	≥ 3ms	according to TS 36.213 [30] clause 16.5.2
t <sub>DCI2</sub>	≥ 2ms	(same as t <sub>DCI1</sub> )

NOTE 1: In addition to the delay in table 7A.4.2-1 there is further delay caused by PBCH, NPSS, NSSS, SI transmissions.

NOTE 2: Assuming a search space configuration as per clause 7A.3 in general an uplink transmission takes one search space cycle.

NOTE 3: Even when in case of necessary UL re-transmission the grant for the re-transmission is sent immediately using adaptive HARQ NACK it is hardly predictable how many search space cycles the complete successful transmission takes. Nevertheless one re-transmission may still be finished in the same search space cycle in which the initial UL has been scheduled.

### 7A.4.3 Downlink transmissions

**Table 7A.4.3-1: Timing of downlink transmissions**

...																			...
...	DCI format N1				DL-SCH													ACK/NACK	...
	← t <sub>DCI</sub> →	← t <sub>delay1</sub> →			← t <sub>Data</sub> →	← t <sub>delay2</sub> →												← t <sub>ACK/NACK</sub> →	

with

t <sub>DCI</sub>	≥ 2ms	for R <sub>max</sub> = 16 and DCI subframe repetition number = 0 (TS 36.213 [30] clause 16.6)
t <sub>delay1</sub>	≥ 4ms	scheduling delay according to DCI (TS 36.213 [30] clause 16.4.1 and table 16.4.1-1)
t <sub>Data</sub>	≥ 1ms	depending on TBS and number of repetitions (TS 36.213 [30] clause 16.4.1)
t <sub>delay2</sub>	≥ 12ms	depending HARQ-ACK resource allocation according to TS 36.213 [30] clause 16.4.2
t <sub>ACK/NACK</sub>	≥ 2ms	multiples of 2ms according to TS 36.211 [35] Table 10.1.2.3-1; depending on number of repetitions configured by RRC signalling (NPUSCH-ConfigCommon-NB-r13, NPUSCH-ConfigDedicated-NB-r13; N <sub>Rep</sub> ≥ 1)

NOTE 1: In addition to the delay in table 7A.4.3-1 there is further delay caused by PBCH, NPSS, NSSS, SI transmissions.

NOTE 2: Assuming a search space configuration as per clause 7A.3 in general a downlink transmission takes one search space cycle.

NOTE 3: Assuming a search space configuration as per clause 7A.3 in case of a HARQ NACK from the UE a re-transmission needs to be scheduled in the next search space cycle (as even when the DL transmission has been scheduled using the first search space candidate, at the point in time the SS detects the NACK there is no search space candidate in the current search space cycle anymore).

### 7A.4.4 Half-duplex mode

According to TS 36.211 [35] for NB-IoT only type-B half-duplex FDD operation is supported (clause 10.2.2.3) in which according to clause 4.1 the UE cannot transmit and receive at the same time.

In addition in clause 16.6 of TS 36.213 [30] there are further rules further restricting the timing of UL/DL transmissions summarised in table 7A.4.4-1 and table 7A.4.4-2.

**Table 7A.4.4-1: Uplink transmissions**

	n	n+1	...	n+k-1	n+k			n <sub>1</sub>	n <sub>1</sub> +1	n <sub>1</sub> +2	n <sub>1</sub> +3		
DCI Format N0						NPUSCH transmission						ACK/NACK (NPDCCH)	
	UL-SCH transmission: NPDCCH not monitored by the UE												

Table 7A.4.4-2: Downlink transmissions

	n	n+1										n+k-1	n+k			n <sub>i</sub>	n <sub>i</sub> +1	n <sub>i</sub> +2	n <sub>i</sub> +3		
DCI Format N1																					
	DL-SCH transmission: NPDCCH not monitored by the UE																				

## 7A.4.5 Conclusions

Based on the system information scheduling as in clause 7A.2 and search space configuration as in clause 7A.3 the following conclusions are made:

- Random access procedure:  
After detection of the random access preamble steps 2-4 of the random access procedure take at least two search space cycles.
- Uplink and downlink transmissions:  
In general an UL or DL transmission takes one search space cycle and UL/DL transmission are mutually exclusive, i.e. a search space cycle can be either for UL or for DL.

## 7A.5 Scheduling requests and scheduling of UL grants

As there is no NPUCCH in NB-IoT the UE cannot directly indicate scheduling requests to the network. Instead according to TS 36.321 [16] clause 5.4.4 the UE starts with a RACH procedure, unless an SR-ProhibitTimer is configured by RRC signalling.

- NOTE 1: It seems not to be reliable that, when no SR-ProhibitTimer is configured, the UE will use an UL grant being scheduled in advance.
- NOTE 2: It seems not to be reliable that a UE uses an UL grant addressed with C-RNTI when it has already started a RACH procedure and is waiting for the RA response being addressed by the RA-RNTI. Furthermore there is no core spec reference about the UE to abort the RACH procedure in this case.
- In terms of UL scheduling there are two modes for the UE in RRC connected mode: RACH procedure mode and polling mode.

### 7A.5.1 RACH procedure mode

UL grant scheduling is triggered by a RACH procedure and the subsequent evaluation of BSRs. There is no explicit scheduling of UL grants in advance.

The SS assigns UL grants according to RACH procedure configuration and common MAC configuration (DCI format N0 configuration of UL grants).

- NOTE: In case of uncorrelated UL and DL transmissions there may be race conditions resulting in the UE having started a random access procedure already when the SS schedules the DL transmission. In this case the UE may not read the DL assignment anymore and therefore not receive the DL data.

### 7A.5.2 Polling mode

SR-ProhibitTimer (logicalChannelSR-Prohibit-r13 according to release 13 ASN.1, TS 36.331 [19]) is configured at the UE (for each logical channel) and the SS polls the UE with UL grants: When the UE has UL data pending it will use a given grant; the UE in connected mode will not start any RACH procedure while SR-ProhibitTimer is running.

The SS gets configured with periodic UL grants to be assigned to the UE: grant size, periodicity, total number of grants.

## 7A.6 Scheduling requirements

As conclusion of the above timing and scheduling considerations this clause defines SS requirements about how to schedule UL grants and DL assignments.

## 7A.6.1 Random access procedure

The SS gets configured with:

- configuration of the Type2 common search space ( $R_{\max}$ ,  $G$ ,  $\alpha_{\text{offset}}$ )
- Type 2 common search space candidate to schedule RAR
- Type 2 common search space candidate to schedule DL assignment or UL grant at step 4 of the random access procedure
- UL grant to be provided in RAR
- DCI for DL assignment of Msg4 in case of temporary C-RNTI based contention resolution
- For C-RNTI based contention resolution (RACH procedure mode):  
DCI for UL grants to be used at step 4 of the random access procedure and for any subsequent UL transmissions (if any)

The SS shall:

- when it has detected a RACH preamble, wait until start of the next Type2 common search space within the RA response window and schedule the Random Access Response containing the UL grant for Msg3 by using the Type2 common search space candidate as configured
- after it has received Msg3, schedule a DL assignment or UL grant in the next Type2 common search space by using the search space candidate as configured
- in case of RACH procedure with C-RNTI based contention resolution (i.e. UE in connected mode), check whether the UL MAC PDU sent at step 4 of the random access procedure contains a BSR element indicating that the UE needs more UL grant. If so, the SS shall use the ACK/NACK response corresponding to step 4's UL transmission as specified in clause 16.5.2 of TS 36.213 [30] to schedule another UL grant as configured at the SS ( $\Rightarrow$  the SS shall not do any dynamic calculation for the UL grant based on the details of the BSR); this shall be repeated until the UE does not indicate need for further UL grant anymore. Pending DL transmissions shall be postponed until after all UL data has been received.  
NOTE: This rule applies for RACH procedure mode according to clause 7A.5.1.
- in case of RACH procedure with C-RNTI based contention resolution (i.e. UE in connected mode), not use any adaptive HARQ ACK to schedule a DL transmission.

## 7A.6.2 Downlink transmissions

The SS gets configured with:

- configuration of the UE specific search space ( $R_{\max}$ ,  $G$ ,  $\alpha_{\text{offset}}$ )
- search space candidate to be used for DL assignments within the search space
- DCI to be used for DL assignments:  
normal mode: transport block size,  $I_{\text{TBS}}$  and  $I_{\text{SF}}$  to be automatically determined by the SS  
explicit mode: DCI with  $I_{\text{TBS}}$ ,  $I_{\text{SF}}$  provided by TTCN

When the SS gets a message from TTCN to be sent in DL it shall:

- when the timing info is now, schedule the DL assignment in the next search space not being used for HARQ re-transmissions.
- when a specific timing info is given, schedule the DL assignment by using the next the search space candidate according to the search space configuration after the given point in time. If for any reason there is an ongoing UL or DL transmission so that the UE may not monitor the NPDCCH, the SS shall raise an error.
- when timing info is "now" and a previous DL transmission is still pending, schedule the DL assignment of the 2<sup>nd</sup> message in the search space starting after the HARQ ACK of the 1<sup>st</sup> message.

- when e.g. an RRC message containing user data needs to be segmented by the RLC layer transmission of the resulting transport blocks shall be scheduled in consecutive search space cycles and the given timing info is applied for the first transmission.
- when TBS,  $I_{TBS}$  and  $I_{SF}$  shall be determined by the SS, use the mapping according to table 7A.6.2-1, otherwise use  $I_{TBS}$  and  $I_{SF}$  as provided by TTCN.

Table 7A.6.2-1: DL Resource allocation in normal mode

amount of pending DL data (bits): $N_{Data}$	TBS to be chosen by the SS	$I_{TBS}$ (NOTE)	$I_{SF}$ (NOTE)	Comment
$N_{Data} \leq 16$	16	0	0	
$16 < N_{Data} \leq 24$	24	1	0	
$24 < N_{Data} \leq 32$	32	2	0	
$32 < N_{Data} \leq 40$	40	3	0	
$40 < N_{Data} \leq 56$	56	4	0	
$56 < N_{Data} \leq 72$	72	5	0	
$72 < N_{Data} \leq 88$	88	6	0	
$88 < N_{Data} \leq 104$	104	7	0	
$104 < N_{Data} \leq 120$	120	8	0	
$120 < N_{Data} \leq 136$	136	9	0	
$136 < N_{Data} \leq 144$	144	10	0	TBS=152 skipped as it would require $I_{SF}=5$ (NOTE)
$144 < N_{Data} \leq 176$	176	11	0	
$176 < N_{Data} \leq 208$	208	12	0	
$208 < N_{Data} \leq 224$	224	7	1	
$224 < N_{Data} \leq 256$	256	8	1	
$256 < N_{Data} \leq 296$	296	9	1	
$296 < N_{Data} \leq 328$	328	10	1	TBS=344 skipped as it would require $I_{SF}=7$ (NOTE)
$328 < N_{Data} \leq 376$	376	11	1	
$376 < N_{Data} \leq 392$	392	8	2	TBS=408 skipped as it would require $I_{SF}=5$ (NOTE) TBS=424 skipped as it would require $I_{SF}=4$ (NOTE)
$392 < N_{Data} \leq 440$	440	12	1	
$440 < N_{Data} \leq 456$	456	9	2	TBS=472 skipped as it would require $I_{SF}=3$ (NOTE)
$456 < N_{Data} \leq 504$	504	10	2	TBS=536 skipped as it would require $I_{SF}=3$ (NOTE) TBS=552 skipped as it would require $I_{SF}=6$ (NOTE) TBS=568 skipped as it would require $I_{SF}=7$ (NOTE)
$504 < N_{Data} \leq 584$	584	11	2	TBS=600 skipped as it would require $I_{SF}=5$ (NOTE) TBS=616 skipped as it would require $I_{SF}=3$ (NOTE)
$584 < N_{Data}$	680	12	2	

NOTE: According to TS 36.213 [30] Table 16.4.1.5.1-1

- $I_{SF} \leq 2$  for all DL transmission (i.e. a DL transmission needs not more than 3 NB-IoT DL subframes, which is needed for maximum TBS of 680)

### 7A.6.3 Periodic uplink grants

Periodic scheduling of UL grants applies for polling mode according to clause 7A.5.2, i.e. in general the UE is configured with SR-ProhibitTimer(s) to be prevented from triggering RACH procedures in connected mode.

The SS gets configured with:

- configuration of the UE specific search space ( $R_{max}$ ,  $G$ ,  $\alpha_{offset}$ )
- search space candidate to be used for UL grants within the search space
- configuration of grant scheduling:
  - DCI of the UL grants
  - number of UL grants to be scheduled: one grant only, several, continuous
  - periodicity: every search space, every 2<sup>nd</sup> search space, ...

When the SS gets configured for periodic scheduling of uplink grants, the SS shall:

- start UL grant scheduling with the next available search space candidate as configured for the UE specific search space after the given timing information (which can be "now" or a specific point in time).
- not give any additional grants base on buffer status reporting by the UE.
- not use the adaptive HARQ ACK to schedule another transmission.
- when DL transmission is scheduled, postpone any UL grant which would be scheduled for the same search space by one search space cycle.  
NOTE: the periodicity is related to beginning of the UL grant scheduling i.e. independent from whether or not a single grant is postponed.

Table 7A.6.3-1 gives an example for periodic UL grant scheduling for a periodicity of every 3<sup>rd</sup> search space cycle: at UESS cycle 7 the UL grant is postponed to cycle 8 due to DL transmission.

**Table 7A.6.3-1: Periodic UL grant scheduling – Example for UL and DL transmissions**

...	UESS cycle 1	UESS cycle 2	UESS cycle 3	UESS cycle 4	UESS cycle 5	UESS cycle 6	UESS cycle 7	UESS cycle 8	UESS cycle 9	UESS cycle 10	...
UL grant configuration	UL		DL	UL			DL	UL		UL	

## 7A.6.4 HARQ re-transmissions

NOTE: HARQ re-transmission are considered being rare in a RF cabled test environment. Nevertheless depending on test requirements HARQ re-transmissions may be tolerated at least for some test cases.

The SS shall report HARQ errors to TTCN if HARQ error reporting is configured by TTCN.

### 7A.6.4.1 Uplink

When the SS needs to request a re-transmission in uplink, it shall use adaptive HARQ ACK/NACK to indicate the NACK to the UE. ⇒ The re-transmission shall be scheduled immediately by using the ACK/NACK response corresponding to the UL transmission as specified in clause 16.5.2 of TS 36.213 [30] independent from any UL grant scheduling.

If the re-transmission is not successfully finished within the search cycle in which the transmission has been started, i.e. a second search space cycle is needed to complete the UL transmission, the SS shall:

- if a DL transmission is pending with timing info "now":  
postpone the DL transmission
- if DL transmission is scheduled explicitly for the second search space cycle:  
raise an error
- if an UL grant is scheduled for the second search space cycle:  
postpone this UL grant for one cycle.

### 7A.6.4.2 Downlink

When the UE indicates a HARQ NACK to the SS for a DL transmission in search space cycle N, the SS shall re-schedule the DL assignment in search space cycle N+1.

The SS shall:

- if a another DL transmission is pending with timing info "now":  
postpone the DL transmission
- if DL transmission is scheduled explicitly for the second search space cycle:  
raise an error

- if an UL grant is scheduled for the second search space cycle:  
postpone this UL grant for one cycle.

### 7A.6.5 Timing info for UL messages

The SS shall provide the H-SFN, SFN and subframe number of the subframe corresponding to the first RU of the NPUSCH transmission. It is up to TTCN implementation to derive other timing information if needed (e.g. the start of the corresponding search space).

NOTE: E.g. in case of IP data a layer 3 message carrying the user data on the control plane may be segmented by the RLC layer. In this case the timing info shall be related to the first segment.

### 7A.6.6 Uplink time alignment

As for legacy LTE the SS can be configured to periodically send Timing Advance Commands to the UE to prevent the UE from starting a RACH procedure due to expiry of the Time Alignment Timer. When the Time Alignment Timer at the UE is set to infinity, the SS is configured not to do any automatic transmission of Timing Advance Commands.

## 7A.7 RRC Connection Release Sequence

As for legacy LTE according to TS 36.331 [19], clause 5.3.8.3, after reception of the RRCConnectionRelease the UE may either wait 60ms or for indication of acknowledgement from lower layer. Furthermore according to TS 36.331 [19], clause 5.3.12, upon leaving RRC\_CONNECTED the UE resets layer 2.

- As the UE resets layer 2 anyway after 60ms there is no need to provide the UE with UL grants for layer 2 signalling (e.g. RLC ACK).

Assuming search space cycles of 64ms as described in clause 7A.3 and with a given search space cycle N starting at time T being at least 100ms in advance, TTCN scheduled schedules the RRC Connection Release Sequence as

1. At T: Start of search space cycle N:  
Send RRCConnectionRelease, stop UL grants.
2. At T + 64ms: Start of search space cycle N+1:  
Release security (optional; only when security has been configured).
3. At T + 80ms: Release SRBs and DRBs (if configured).
4. At T + 96ms: (Re-) configure SRBs.
5. Delay of 840ms (NOTE)

NOTE: The delay 840ms is chosen to ensure the UE is re-camping on the cell and has read relevant system information, MIB, SIB1, SIB2 and all other SIs.

## 7A.8 DL CCCH Message and Contention Resolution MAC Control Element transmission in one MAC PDU or in separate MAC PDUs

Regarding DL RRC PDU (e.g. RRC Connection Setup) being contained in Msg4 of the random access procedure or being sent in a separate DL message the same principles apply as described in clause 7.19 for legacy LTE.

---

# 8 External Function Definitions

The following external functions are required to be implemented by the SS.

TTCN-3 External Function		
<b>Name</b>	<b>fx_KeyDerivationFunction</b>	
<b>Description</b>	Hashing function for Hashing algorithms as defined in TS 33.401 [24] SHA-256 encoding algorithm is used as KEY Description Function	
<b>Parameters</b>	KDF	KDF_HMAC_SHA_256 (no other KDF defined yet)
	Key	bit key
	String	string being constructed acc. to TS 33.401 [24], annex A
<b>Return Value</b>	256 bit derived key	

TTCN-3 External Function		
<b>Name</b>	<b>fx_NasIntegrityAlgorithm</b>	
<b>Description</b>	Apply integrity protection algorithm on a given octetstring	
<b>Parameters</b>	NAS PDU	octetstring according to TS 24.301 [21], clause 4.4.3.3 this shall include octet 6 to n of the security protected NAS message, i.e. the sequence number IE and the NAS message IE
	Integrity Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	KNAS <sub>int</sub>	Integrity key
	NAS COUNT	as documented in TS 24.301
	BEARER Id	fix value ('00000'B) acc. TS 33.401 [24], clause 8.1
	Direction	UL: 0 DL: 1 (acc. to TS 33.401 [24], clause B.1)
<b>Return Value</b>	Message Authentication Code (4 octets)	

TTCN-3 External Function		
<b>Name</b>	<b>fx_NasCipherng</b>	
<b>Description</b>	Apply cipherng on a given octetstring	
<b>Parameters</b>	NAS PDU	octetstring
	Cipherng Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	KNAS <sub>enc</sub>	Cipherng Key
	NAS COUNT	as documented in TS 24.301
	BEARER Id	fixed value ('00000'B) acc. TS 33.401 [24], clause 8.1
<b>Return Value</b>	cipherng octet string	

TTCN-3 External Function		
<b>Name</b>	<b>fx_NasDecipherng</b>	
<b>Description</b>	Apply decipherng on a given octetstring	
<b>Parameters</b>	cipherng NAS PDU	octetstring
	Cipherng Algorithm	3 bits as defined in TS 24.301 [21], clause 9.9.3.23
	KNAS <sub>enc</sub>	Cipherng Key
	NAS COUNT	as documented in TS 24.301 [21]
	BEARER Id	fixed value ('00000'B) acc. TS 33.401 [24], clause 8.1
<b>Return Value</b>	decipherng octet string	

TTCN-3 External Function		
<b>Name</b>	<b>fx_AsIntegrityAlgorithm</b>	
<b>Description</b>	Apply integrity protection algorithm on a given octetstring	
<b>Parameters</b>	PDCP PDU	octetstring
	Integrity Algorithm	3 bits as defined in TS 33.401 [24]
	KRRC <sub>int</sub>	Integrity key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
	Direction	UL: 0 DL: 1 (acc. to TS 33.401 [24], clause B.2)
<b>Return Value</b>	Message Authentication Code (4 octets)	

TTCN-3 External Function		
<b>Name</b>	<b>fx_AsCiphering</b>	
<b>Description</b>	Apply ciphering on a given octetstring	
<b>Parameters</b>	SDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 33.401 [24]
	KRRRC <sub>enc</sub>	Ciphering Key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
<b>Return Value</b>	ciphered octet string	

TTCN-3 External Function		
<b>Name</b>	<b>fx_AsDeciphering</b>	
<b>Description</b>	Apply deciphering on a given octetstring	
<b>Parameters</b>	ciphered SDU	octetstring
	Ciphering Algorithm	3 bits as defined in TS 33.401 [24]
	KRRRC <sub>enc</sub>	Ciphering Key
	PDCP COUNT	octetstring, length 4
	BEARER Id	the value of the DRB identity minus one
<b>Return Value</b>	deciphered octet string	

TTCN-3 External Function		
<b>Name</b>	<b>fx_GetSystemTime</b>	
<b>Description</b>	Function to get the system time: Implementation is based on C standard library (time.h)	
<b>Parameters</b>	p_Struct_tm (out)	<p>p_Struct_tm returns local system time equivalent to "struct tm" as defined for C standard library (time.h or ctime):</p> <pre> type record Struct_tm_Type {     integer tm_sec, // seconds after the minute                     // (0..61; see NOTE)     integer tm_min, // minutes after the hour (0..59)     integer tm_hour, // hours since midnight (0..23)     integer tm_mday, // day of the month (1..31)     integer tm_mon, // months since January (0..11)     integer tm_year, // years since 1900     integer tm_wday, // days since Sunday (0..6)     integer tm_yday, // days since January 1 (0..365)     integer tm_isdst // Daylight Saving Time flag }; </pre> <p>NOTE: tm_sec is generally 0-59. Extra range to accommodate for leap seconds in certain systems</p> <p>C implementation:</p> <pre> time_t v_Now = time(NULL); struct tm *v_Tm = localtime(&amp;v_Now); </pre>
	p_TimezoneInfo (out)	<p>p_TimezoneInfo returns the difference (in seconds) between the UTC time (GMT) and the local time (integer value);</p> <p>C implementation:</p> <pre> int timezone =     (int)difftime(mktime(gmtime(&amp;v_Now)), v_Now); </pre> <p>NOTE: p_TimezoneInfo does not consider daylight saving e.g. it is always 3600 for CET independent of summer/winter</p>
<b>Return Value</b>	None	

TTCN-3 External Function		
<b>Name</b>	<b>fx_MD5_Hex</b>	
<b>Description</b>	external function to calculate the MD5 Message-Digest Algorithm according to RFC 1321	
<b>Parameters</b>	Data	octetstring
<b>Return Value</b>	octetstring	

TTCN-3 External Function	
<b>Name</b>	<b>fx_CalculateCRC32</b>
<b>Description</b>	Cyclic Redundancy Check calculation according to ITU-T Recommendation V.42 of CRC-32 algorithm.
<b>Parameters</b>	p_Input   bitstring
<b>Return Value</b>	bitstring, length 32

## 9 IXIT Proforma

This partial IXIT proforma contained in the present document is provided for completion, when the related Abstract Test Suite is to be used against the Implementation Under Test (IUT).

Text in *italics* is a comment for guidance for the production of an IXIT, and is not to be included in the actual IXIT.

The completed partial IXIT will normally be used in conjunction with the completed ICS, as it adds precision to the information provided by the ICS.

### 9.1 E-UTRAN PIXIT

**Table 9.1-1: Common PIXIT**

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_AccessPointName	octetstring			Access Point Name, as defined in TS 23.003 [48] and used in TS 24.008 [20], clause 10.5.6.1
px_AttachTypeTested	EUTRA_ATTACH_TESTED_Type	EPS_ATTACH_ON LY	EPS_ATTACH_ONLY, COMBINED_ATTACH	Attach Type to be tested, if UE supports both pc_Attach and pc_Combined_Attach
px_eAuthRAND	B128_Type	oct2bit('A3DE0C6 D363E30C364A40 78F1BF8D577'O)		Random Challenge
px_EllipsoidPointWithAltitude	O8_Type			Ellipsoid Point With Altitude value to be provided in Update UE location information (see 36.509 cl. 6.12)
px_HorizontalVelocity	O3_Type			Horizontal Velocity value to be provided in Update UE location information (see 36.509 cl. 6.12)
px_eJapanMCC_Band6	NAS_Mcc	'442'H		Japan MCC code to be used for Band 6. The same value will be used for E-UTRA and Inter-RAT cells. Type is different to that defined in TS 34.123-3 [7]
px_PWS_CB_DataPage1	charstring			ETWS or CMAS Page 1 warning data message
px_PWS_CB_DataPage2	charstring			ETWS or CMAS Page 2 warning data message
px_PWS_CB_DataPage3	charstring			ETWS or CMAS Page 3 warning data message
px_PWS_CB_DataPage4	charstring			ETWS or CMAS Page 4 warning data message
px_PWS_CB_DataCodingScheme	bitstring			ETWS or CMAS data coding scheme of the alphabet/coding and the applied language [see TS 23.041]
px_ETWS_DigitalSignature	O43_Type			ETWS Digital Signature
px_IPv4_Address1_UE	charstring			IPv4 Address connected to PDN1
px_IPv4_Address2_UE	charstring			IPv4 Address connected to PDN2
px_IPv4_Address2a_UE	charstring			IPv4 Address connected to PDN2a
px_IPv4_Address1_NW	charstring			IPv4 Gateway Address in PDN1
px_IPv4_Address2_NW	charstring			IPv4 Gateway Address in PDN2
px_IPv4_Address1_RemoteUE	charstring			IPv4 Address of remote UE connected to PDN1
px_IPv4_Address2_RemoteUE	charstring			IPv4 Address of remote UE connected to PDN2
px_IPv4_Address_HomeAgent	charstring			IPv4 Home Agent Address
px_IPv6_Address1_UE	charstring			IPv6 Address connected to PDN1
px_IPv6_Address2_UE	charstring			IPv6 Address connected to PDN2

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_IPv6_Address2a_UE	charstring			IPv6 Address connected to PDN2a
px_IPv6_Address1_NW	charstring			IPv6 Gateway Address in PDN1
px_Ipv6_Address2_NW	charstring			Ipv6 Gateway Address in PDN2
px_IPv6_Address1_RemoteUE	charstring			IPv6 Address of remote UE connected to PDN1
px_IPv6_Address2_RemoteUE	charstring			IPv6 Address of remote UE connected to PDN2
px_Ipv6_Address_HomeAgent	charstring			Ipv6 Home Agent Address
px_SMS_ChkMsgReceived	boolean	true		Whether the operator can check an MT Short Message received
px_SMS_MsgFrmt	charstring	"1"		SMS message format <mode> (see TS 27.005 [31] cl. 3.2.3).  NOTE: Default value is for text mode. Change value to "0" to execute tests with PDU mode.
px_RATComb_Tested	RATComb_Test ed_Type	EUTRA_UTRA	EUTRA_UTRA, EUTRA_GERAN, EUTRA_Only	This parameter represents the network RAT capability / preference and indicates which, if any is supported, RAT combination is to be tested.
px_SinglePLMN_Test ed	SinglePLMN_Te sted_Type	MultiPLMN	SinglePLMN, MultiPLMN, MultiPLMNi nPrimaryBa nd, MultiPLMNi nSecondary Band	This parameter represents the network capability/preference to support multi PLMNs on the same test Band and indicates the preference of multi PLMNs or single PLMN test environment. This PIXIT shall be set to SinglePLMN when only one frequency is defined for the test band.
px_UE_CS_PS_UsageSetting_ Tested	CS_PS_MODE	VOICE_CENTRIC	VOICE_CENTRIC, DATA_CENTRIC	Specifies which CS/PS mode is under test
px_UE_PS_UsageSetting_ Tested	PS_MODE	VOICE_CENTRIC	VOICE_CENTRIC, DATA_CENTRIC	Specifies which PS mode is under test
px_UTRAN_ModeUnderTest	UTRAN_FDD_T DD	UTRAN_FDD	UTRAN_FD D, UTRAN_TD D	Specifies which radio access technology is being tested in UTRAN
px_TestLoopModeB_Delay	O1_Type	'5A'		This parameter represents the IP_PDU_delay to be used for UE test loop mode B in test cases, where long delay may be needed e.g. because of user interaction.
px_IP_MTU_Size	integer	65535		MTU Size. This value is specific to the SS.
px_UTRAN_OverlappingNotSup portedFrequencyBandMFBI	integer			A not supported UTRAN frequency band that is overlapping with a supported band (px_MFBI_UTRAN_FrequencyBa nd). This PIXIT shall be set also in accordance with the values of the 3 PIXIT items: px_UARFCN_D_High, px_UARFCN_D_Mid,px_UARFCN_L_Mid. Applied to MFBI test case scenario.
px_MFBI_UTRAN_FrequencyB and	integer			A supported UTRAN frequency band overlapping with

Parameter Name	Parameter Type	Default Value	Supported Values	Description
				px_UTRAN_OverlappingNotSupportedFrequencyBandMFBI. Applied to MFBI test case scenario.

Table 9.1-2: E-UTRAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_EllipsoidPointWithAltitude_ProSe_Area1	O8_Type			Ellipsoid Point With Altitude value corresponding to geographical area 1 provided in EF <sub>PROSE_RADIO_COM</sub> to be provided in Update UE location information (see 36.509 cl. 6.12)
px_EllipsoidPointWithAltitude_ProSe_Area2	O8_Type			Ellipsoid Point With Altitude value corresponding to geographical area 2 provided in EF <sub>PROSE_RADIO_COM</sub> to be provided in Update UE location information (see 36.509 cl. 6.12)
px_EllipsoidPointWithAltitude_NotProSe	O8_Type			Ellipsoid Point With Altitude value not corresponding to geographical area provided in EF <sub>PROSE_RADIO_COM</sub> to be provided in Update UE location information (see 36.509 cl. 6.12)
px_eTDDsubframeConfig	TDD_SubframeAssignment_Type	1		TDD uplink-downlink subframe configuration
px_ePrimaryBandChannelBandwidth	DI_Bandwidth_Type	n25		Channel bandwidth used on px_ePrimaryFrequencyBand
px_ePrimaryFrequencyBand	integer	1		E-UTRA primary frequency band
px_eSecondaryFrequencyBand	integer	2		E-UTRA secondary frequency band
px_eSecondaryBandChannelBandwidth	DI_Bandwidth_Type	n25		Channel bandwidth used on px_eSecondaryFrequencyBand
px_EUTRA_CA_BandCombination	CA_BandCombination_Type	CA_1C		Band combination for CA test cases
px_EUTRA_DC_BandCombination	DC_BandCombination_Type	DC_1A-3A		Band combination for DC test cases
px_NAS_CipheringAlgorithm	B3_Type	001'B		NAS Ciphering Algorithm (eea1)
px_NAS_IntegrityProtAlgorithm	B3_Type	001'B		NAS Integrity Algorithm (eia1)
px_RRC_CipheringAlgorithm	CipheringAlgorithm_r12	eea1		Ciphering Algorithm
px_RRC_IntegrityProtAlgorithm	IntegrityProtAlgorithm	eia1		Integrity Algorithm
px_eMaxNumberROHC_ContextSessions	MaxNumberROHC_ContextSessions_Type	Cs16		Maximum number of ROHC context sessions
px_MFBI_FrequencyBand	integer	26		A supported E-UTRA frequency band overlapping with px_OverlappingNotSupportedFrequencyBand_MFBI. Applied to MFBI test case scenario.
px_MFBI_BandChannelBandwidth	DI_Bandwidth_Type	n25		E-UTRAN channel bandwidth used on px_MFBI_FrequencyBand. Applied to MFBI test case scenario.
px_OverlappingNotSupportedFrequencyBand_MFBI	integer	27		A not supported E-UTRA frequency band that is overlapping with a supported band (px_MFBI_FrequencyBand). Applied to MFBI test case scenario.
px_OverlappingSupportedFrequencyBand_MFBI	integer	26		A supported E-UTRA frequency band overlapping with px_OverlappingNotSupportedFrequencyBand_MFBI. Applied to MFBI enhancement test case scenario.
px_ProSeAnnApplicationIdentity	charstring	mcc345.mnc012.Pr		A ProSe Application ID with

1		oSeApp.Food.Restaurants.Italian		which data structure the UE is preconfigured and for which the UE can request and perform Direct Discovery Announcing. TS 23.003, section 24.2.
px_ProSeMonApplicationIdentity1	charstring	mcc300.mnc165.ProSeApp.*.Sports.Surfing		A ProSe Application ID with which data structure the UE is preconfigured and for which the UE can request and perform Direct Discovery Monitoring. TS 23.003, section 24.2
px_ProSeMonApplicationIdentityNot1	charstring	mcc208.mnc*.ProSeApp.Shops.Food.Wine		A ProSe Application ID with which data structure the UE is NOT preconfigured to request and perform Direct Discovery Monitoring. TS 23.003, section 24.2
px_ProSe_TLS_CipherSuite	TLS_CIPHER_Type	TLS_PSK_WITH_3DES_EDE_CBC_SHA		TLS cipher suite to be used for ProSe communication
px_SL_AdditionalSupportedBandwidth	UI_Bandwidth_Type	n25		Supported sidelink bandwidth different from px_ePrimaryBandChannelBandwidth

## 9.2 MultiRAT PIXIT

Table 9.2-1: GERAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_GERAN_BandUnderTest	GERAN_BandUnderTestType	GSM_P900		Indicates which band is under test

Table 9.2-2: UTRAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_UTRAN_CipheringAlgorithm	CipheringAlgorithm_r7	uea2	uea0, uea1, uea2	UTRAN Ciphering algorithm
px_UARFCN_Low_TDD	integer			Low Range downlink UARFCN value for LCR TDD
px_UARFCN_Mid_TDD	integer			Mid Range downlink UARFCN value for LCR TDD
px_UARFCN_High_TDD	integer			High Range downlink UARFCN value for LCR TDD
px_TDD_OperationBandCharstring	charstring	a	px_UARFCN_Mid_TDD, px_UARFCN_Low_TDD and px_UARFCN_High_TDD shall take the values according to the value of px_TDD_OperationBandCharstring	Applicable for TDD The operation band under test as defined in 34.108 clause 5.1.2
px_NoTDD_LCR_onLTE	boolean	false		Only applicable to UE supporting (at least) LTE and LCR TDD. If set to true, the UE is configured not to report support of LCR TDD (IE ultraTDD128 in UE CapabilityInformation) when being camped on an LTE cell with no detectable LCR TDD cell in the environment

Table 9.2-3: CDMA2000 HRPD PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_HRPD_BandClass	BandclassCDMA2000_Type	1		Band Class; Table 1.5-1 of C.S0057-E v1.0 Default value corresponds to 1.8 to 2.0 GHz PCS band
px_HRPD_SectorID_Cell15	SectorID_HRPD_Type	oct2bit('FEA0001'O)		Sector ID of Cell 15; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell16	SectorID_HRPD_Type	oct2bit('FEA0002'O)		Sector ID of Cell 16; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell17	SectorID_HRPD_Type	oct2bit('FEA0003'O)		Sector ID of Cell 17; Clause 13.9 of C.S0024-C v2.0
px_HRPD_SectorID_Cell18	SectorID_HRPD_Type	oct2bit('FEA0004'O)		Sector ID of Cell 18; Clause 13.9 of C.S0024-C v2.0
px_ColorCode	ColorCode_Type	64		Colour code of the subnet to which the sectors belong; Same for all HRPD cells
px_ColorCodeDiff	B32_Type	128		Colour code of the subnet to which the sectors belong; Adifferent colour code than default
px_OpenLoopAdjust	OpenLoopAdjust_Type	10		The value of open loop adjust to be used by access terminals in the open loop power estimate, expressed as an unsigned value in units of 1 dB. The value used by the access terminal is -1 times the value of this field
px_UATI24	O3_Type	'123456'O		UATI to be allocated to the UE, clause 6.3.7.2.2 of C.S0024-C v2.0
px_MACIndex	integer	15		ReverseLinkMACIndex to be used. Allowed values 0...383 C.S0024-C v2.0 clause 12.4.1.3.2.2

Table 9.2-4: CDMA2000 1xRTT PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_1XRTT_Baseld_Cell19	B16_Type	int2bit (39,16)		Base ID of Cell 19
px_1XRTT_Baseld_Cell20	B16_Type	int2bit (40,16)		Base ID of Cell 20
px_1XRTT_Baseld_Cell21	B16_Type	int2bit (41,16)		Base ID of Cell 21
px_1XRTT_Baseld_Cell22	B16_Type	int2bit (42,16)		Base ID of Cell 22
px_1XRTT_NID	B16_Type	int2bit (100,16)		default Network ID of 1xRTT Cells
px_1XRTT_SID	B15_Type	int2bit (200,15)		default SystemID of 1xRTT Cells
px_1XRTT_TMSI_Def	O4_Type	'1234ABCD'O		TMSI to be used in 1XRTT
px_1XRTT_MinProtRev	ProtRev_Type	0		Minimum Protocol revision supported by Base Station
px_1XRTT_UserInfo_EncMode	EncryptionMode_Type	2		Encryption Mode Rijndael algorithm
px_1XRTT_Sig_EncMode	EncryptionMode_Type	2		Encryption Mode Rijndael algorithm
px_1XRTT_BandClass	BandclassCDMA2000_Type	1		Band Class; Table 1.5-1 of C.S0057 E v1.0. Default value corresponds to 1.8 GHz to 2.0 GHz PCS band
px_PowerDownRegEnabled	boolean	true		Parameter for power down reg in 1xRTT
px_1XRTT_Zone_Timer	B3_Type	'000'B		Zone timer sent in 'System Parameters Message' overhead message
px_RAND	B32_Type	'00001111000011110000111100001111'B		Random Challenge Data to be included along with mobility parameters in CSFBParametersResponseCDMA2000 or HandoverFromEUTRAPreparationRequest
px_RAND2	B32_Type	'00001111000011110000111100001111'B		Random Challenge Data to be included along with mobility parameters in CSFBParametersResponseCDMA2000 or HandoverFromEUTRAPreparationRequest

Table 9.2-5: WLAN PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_ePDG_Ipsec_CipheringAlgorithm	IPsec_CipheringAlgorithm_Type	des_ede3_cbc	des_ede3_cbc, aes_cbc, nociph	Ipsec Ciphering Algorithm used in ePDG
px_ePDG_Ipsec_IntegrityAlgorithm	IPsec_IntegrityAlgorithm_Type	hmac_sha_1_96	hmac_md5_96, hmac_sha_1_96	Ipsec Integrity Algorithm used in ePDG
px_WLANBand	WLAN_Band_Type	Band2_4Ghz	Band2_4Ghz, Band5Ghz, Band3_6Ghz	WLAN ISM Band
px_WLAN_RulesToBeTested	WLAN_RulesToBeTested	"ANDSF_Rules"	"ANDSF_Rules", "RAN_Rules"	Rules to be tested in WLAN test cases
px_WLAN_PDN1_ToOffload	boolean	true		If set to true, the first PDN connection is offloaded to WLAN. If set to false, the second PDN connection is offloaded to WLAN.
px_WLAN_UE_AddrIPv4	charstring			IPv4 WLAN UE Address
px_WLAN_UE_AddrIPv6	charstring			IPv6 WLAN UE Address
px_WLAN_NetworkAddrIPv4	charstring			IPv4 WLAN Network Address

px_WLAN_NetworkAddrIPv6	charstring			IPv6 WLAN Network Address
-------------------------	------------	--	--	---------------------------

## 9.3 NB-IoT PIXIT

Table 9.3-1: NB-IoT PIXIT

Parameter Name	Parameter Type	Default Value	Supported Values	Description
px_NB_OperationMode	NB_OperationMode_Type	standalone	inband_samePCI, inband_differentPCI, guardband, standalone	NB-IoT Operation Mode
px_DoAttachWithoutPDN	boolean	false		UE is configured to do Attach without PDN; if the value is FALSE it is assumed that the UE is configured to do Attach with PDN
px_SMSTransport_CP_CIoT	boolean	false		NB-IoT UE configured to utilise the SMS service as transport mechanism for user data for Control Plane Clot Optimisation
px_nonSMSTransport_CP_CIoT	boolean	false		NB-IoT UE configured to utilise non-SMS services as transport mechanism for user data for Control Plane Clot Optimisation
px_ModifyBearerResources	boolean	false		NB-IoT UE configured to handle modification of bearer resources including dedicated bearers (PDN of type "IP")

## 10 Postambles

The purpose of this clause is to specify postambles to bring the UE to a well defined state regardless of the UE state at the termination of main test body or of the SS conditions and values of the system information inherited from the test.

### 10.1 Postambles for E-UTRA to UTRA tests

This clause describes UE postamble procedures which are used at the end of inter-RAT test cases specified in TS 36.508 [3] so as to switch off the UE.

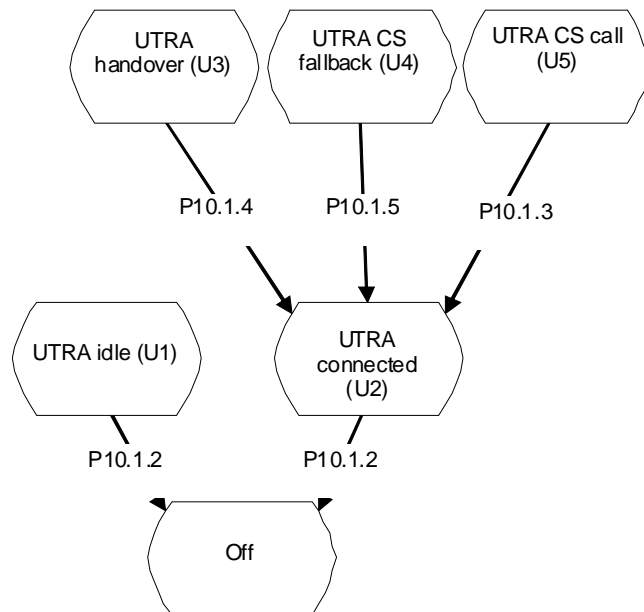

UE LTE and UTRAN postamble conditions are specified in table 10.1-1.

Table 10.1-1: UE postamble conditions

LTE UE attach type	UE UTRA CS/PS domain	Postamble condition
attach	pc_CS AND pc_PS	C1
	pc_PS AND NOT (pc_CS)	C2
combined_attach	pc_CS AND pc_PS	C3
	pc_CS AND NOT (pc_PS)	C4

#### 10.1.1 UE postamble states and procedures for E-UTRA to UTRA

In order to bring the UE to the switched/powering off state, a number of procedures need to be executed in a hierarchical sequence, according to the reference end state specified in each test procedure sequence. The sequences and the identified procedures are shown in figure 10.1.1-1.

**Figure 10.1.1-1: UE postamble procedures for E-UTRA / UTRA test cases**

NOTE 1: Depending on the test case specifications the termination of a test case can be in any state of figure 10.1.1-1.

UE in UTRA state U2, U3, U4 and U5 may send data on the established radio bearer and shall be accepted and handled.

NOTE 2: NAS and AS security procedures during routing area update and handover are performed according to TS 33.401 [24], clauses 9.1.1 and 9.2.1 and TS 25.331 [36], clause 8.3.6.3.

## 10.1.2 Switch/Power off procedure

### 10.1.2.1 Procedure

**Table 10.1.2.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off, (see ICS)	-	-
-	EXCEPTION: Steps 2 to 7 specify the behaviour if UE supports pc_SwitchOnOff.	-	-
-	EXCEPTION: Steps 2 to 4 are used only when the UE is in UTRA idle end state (U1).		
2	The UE transmits RRC CONNECTION REQUEST	-->	RRC CONNECTION REQUEST
3	The SS transmit a RRC CONNECTION SETUP	<--	RRC CONNECTION SETUP
4	The UE transmits an RRC CONNECTION SETUP COMPLETE message	-->	RRC CONNECTION SETUP COMPLETE
-	EXCEPTION: Step 4Aa1 to 4Aa6 specifies optional behaviour if the UE is registered to IMS services. UE may perform IMS-deregistration procedure.		
4Aa1	The UE transmits UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes a GMM SERVICE REQUEST message with service type=Data.	-->	GMM SERVICE REQUEST
4Aa2	The SS transmits a SECURITY MODE COMMAND message for the ps domain.		SECURITY MODE COMMAND
4Aa3	The UE transmits a SECURITY MODE COMPLETE message.		SECURITY MODE COMPLETE
4Aa4	The SS transmits a RADIO BEARER SETUP message using the UTRA reference radio bearer parameters and combination "UTRA PS RB" according to TS 36.508 subclause 4.8.3 and Table 4.8.3-1.		RADIO BEARER SETUP
4Aa5	The UE transmits a RADIO BEARER SETUP COMPLETE		RADIO BEARER SETUP COMPLETE
4Aa6	IMS de-registration is performed using the generic procedure defined in 34.229-1 [40] Annex C.30.		
-	EXCEPTION: Step 4Aa7a1 to 4Aa7a2 specifies optional behaviour depending on the UE implementation. The UE may perform PDP context deactivation procedure before Detach.		
4Aa7a1	The UE transmits DEACTIVATE PDP CONTEXT REQUEST	-->	DEACTIVATE PDP CONTEXT REQUEST
4Aa7a2	The SS transmits DEACTIVATE PDP CONTEXT ACCEPT	<--	DEACTIVATE PDP CONTEXT ACCEPT
-	EXCEPTION: Step 5a1 specifies behaviour when the current UTRA cell is in NMO I and the UE is in condition: - C1 or - C3	-	-
5a1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes a DETACH REQUEST message with the detach type='power switched off, GPRS/IMSI combined detach'	-->	DETACH REQUEST

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: Step 5b1 specifies behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition C4	-	-
5b1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
-	EXCEPTION: Step 5c1 specifies behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition C2	-	-
5c1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1). This message includes a DETACH REQUEST message with detach type='power switched off, PS detach'	-->	DETACH REQUEST
-	EXCEPTION: Steps 5d1 and 5d2 specify behaviour when the current UTRA cell is in NMO II and the UE is in condition: - C1 or - C3. Both detach messages (in steps 5d1 and 5d2) can be sent by UE in any order.	-	-
5d1	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1) and this is the first message received. This message includes a DETACH REQUEST message with the detach type='power switched off, PS detach'	-->	DETACH REQUEST
5d2	The UE transmits an UPLINK DIRECT TRANSFER message or INITIAL DIRECT TRANSFER message when the UE is in UTRA idle end state (U1) and this is the first message received. This message includes an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
6	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE
7	The UE transmits a RRC CONNECTION RELEASE COMPLETE message	-->	RRC CONNECTION RELEASE COMPLETE

## 10.1.3 CC disconnect procedure

### 10.1.3.1 Procedure

**Table 10.1.3.1-1: CC disconnect procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a DISCONNECT message.	<--	DISCONNECT
2	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a RELEASE message.	-->	RELEASE
3	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a RELEASE COMPLETE message.	<--	RELEASE COMPLETE
4	Void		
5a	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE
5b	The UE transmits a RRC CONNECTION RELEASE COMPLETE message	-->	RRC CONNECTION RELEASE COMPLETE
5c	The UE transmits RRC CONNECTION REQUEST	-->	RRC CONNECTION REQUEST
5d	The SS transmit a RRC CONNECTION SETUP	<--	RRC CONNECTION SETUP
5e	The UE transmits an RRC CONNECTION SETUP COMPLETE message	-->	RRC CONNECTION SETUP COMPLETE
6	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type = 'Combined RA/LA Updated'	-->	ROUTING AREA UPDATE REQUEST
7	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
8	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE

## 10.1.4 PS Routing Area Update procedure

### 10.1.4.1 Procedure

**Table 10.1.4.1-1: PS Routing Area Update procedure**

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: steps 1a1 to 1a5 specify the UE behaviour when the current UTRA cell is in NMO I and the UE is in condition: - C1 or - C3 and the UE is not registered to the LAC of the current UTRA cell	-	-
1a1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type = 'Combined RA/LA Updated'	-->	ROUTING AREA UPDATE REQUEST
1a2	Void	-	-
1a3	Void	-	-
1a4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1a5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: steps 1b1 to 1b5 specify the UE behaviour when the current UTRA cell is in (NMO I or NMO II) and the UE is in condition: - C2 or - C3 and the UE is registered to the LAC of the current UTRA cell	-	-
1b1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type = 'RA Update'	-->	ROUTING AREA UPDATE REQUEST
1b2	Void	-	-
1b3	Void	-	-
1b4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1b5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: steps 1c1 to 1c9 specify the UE behaviour when the current UTRA cell is in NMO II and the UE is in condition: - C1 or - C3 and the UE is not registered to the LAC of the current UTRA cell.  The LOCATION UPDATE REQUEST message (step 1c6) can be received during the routing area updating procedure (steps 1c1 to 1c4).	-	-
1c1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE REQUEST message with Update type = 'RA Update'.	-->	ROUTING AREA UPDATE REQUEST

Step	Procedure	Message Sequence	
		U - S	Message
1c2	Void	-	-
1c3	Void	-	-
1c4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1c5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
1c6	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST
1c7	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
1c8	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
1c9	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING ACCEPT message.	<--	LOCATION UPDATING ACCEPT
1c10	The UE transmits a UPLINK DIRECT TRANSFER message. This message includes a TMSI REALLOCATION COMPLETE message.	-->	TMSI REALLOCATION COMPLETE

## 10.1.5 CS fallback procedure

### 10.1.5.1 Procedure

**Table 10.1.5.1-1: CS fallback procedure**

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: In parallel to the events described in step 1a1 to 2a5 the steps specified in table 10.1.5.1-2 takes place.	-	-
-	EXCEPTION: Steps 1a1 and 1a2 specify the MO call procedure and step 1b1 specifies the MT call procedure.	-	-
1a1	The UE transmits an INITIAL DIRECT TRANSFER message including a CM SERVICE REQUEST message.	-->	CM SERVICE REQUEST
1a2	The SS transmits an UPLINK DIRECT TRANSFER message including a CM SERVICE REJECT with the reject cause #32 (Service option not supported)	<--	CM SERVICE REJECT
-	EXCEPTION: Step 1b1 specifies the MT call procedure.	-	-
1b1	The UE transmits an INITIAL DIRECT TRANSFER message including a PAGING RESPONSE message.	-->	PAGING RESPONSE
-	EXCEPTION: Steps 2a1 and 2a5 specify the location area update procedure when the current UTRA cell is in NMO II and the UE is in condition C3 and the UE is not registered to the LAC of the current UTRA cell.	-	-
2a1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST

Step	Procedure	Message Sequence	
		U - S	Message
2a2	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
2a3	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
2a4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING ACCEPT	<--	LOCATION UPDATING ACCEPT
2a5	The EU transmits a UPLINK DIRECT TRANSFER message. This message includes a TMSI REALLOCATION COMPLETE	-->	TMSI REALLOCATION COMPLETE
3	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
4	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
5	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
6	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: Steps 7a1 and 7a5 specify the combined routing updating procedure when the initial RAU procedure was for RA Only. This may occur either before, or after, steps 8 and 9	-	-
7a1	The UE transmits a ROUTING AREA UPDATE REQUEST message.	-->	ROUTING AREA UPDATE REQUEST
7a2	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
7a3	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
7a4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
7a5	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: Steps 7b1 and 7b4 specify the location updating procedure when the current UTRA cell is in network mode (NMO I or NMO II) and the UE is in condition C4 and the UE is not registered to the LAC of the current UTRA cell.	-	-
7b1	The UE transmits an UPLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST
7b2	The SS transmits a SECURITY MODE COMMAND message.	<--	SECURITY MODE COMMAND
7b3	The UE transmits a SECURITY MODE COMPLETE message.	-->	SECURITY MODE COMPLETE
7b4	The SS transmits a DOWNLINK DIRECT TRANSFER message. This message includes a LOCATION UPDATING ACCEPT	<--	LOCATION UPDATING ACCEPT
7b5	The EU transmits a UPLINK DIRECT TRANSFER message. This message includes a TMSI REALLOCATION COMPLETE	-->	TMSI REALLOCATION COMPLETE

Step	Procedure	Message Sequence	
		U - S	Message
8	The SS transmits an RRC CONNECTION RELEASE message.	<--	RRC CONNECTION RELEASE
9	The UE transmits an RRC CONNECTION RELEASE COMPLETE message.	-->	RRC CONNECTION RELEASE COMPLETE

Table 10.1.5.1-2: Parallel behaviour

St	Procedure	Message Sequence		TP	Verdict
		U - S	Message		
1	The UE transmits a ROUTING AREA UPDATE REQUEST message.	-->	ROUTING AREA UPDATE REQUEST	-	-

## 10.2 Postambles for E-UTRAN to GERAN tests

This clause describes UE postamble procedures which are used at the end of inter-RAT test cases defined in TS 36.508 [3] so as to switch off the UE. UE LTE and GERAN postamble transitions are specified in table 10.2-1.

Table 10.2-1: UE postamble conditions

LTE UE attach type	UE GERAN CS/PS domain	Postamble condition
attach	pc_GPRS	C1
combined attach	pc_GPRS	C2
	NOT pc_GPRS	C3

### 10.2.1 UE postamble states and procedures for E-UTRA to GERAN test cases

In order to bring the UE to the switched/powered off state there are a number of procedures that need to be executed in a hierarchical sequence, according to the reference end state specified in each test procedure sequence. The sequences and the identified procedures are shown in figure 10.2.1-1.

**Figure 10.2.1-1: UE postamble procedures for E-UTRA / GERAN test cases**

NOTE 1: Depending on the test case specifications the termination of a test case can be in any state of figure 10.2.1-1.

NOTE 2: The security procedures for interworking to GERAN are according to TS 33.401 [24] clauses 10.2.1 and 10.3.1.

## 10.2.2 Switch/Power off procedure

### 10.2.2.1 Procedure

**Table 10.2.2.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off, (see ICS)	-	-
-	EXCEPTION: Steps 2a1 to 2c2 specify the behaviour if UE supports <i>pc_SwitchOnOff</i> .	-	-
-	EXCEPTION: Step 2a1 specifies behaviour when the GERAN cell is in (NMO I or NMO II) and UE is in condition C1	-	-
2a1	The UE transmits a DETACH REQUEST message	-->	DETACH REQUEST
-	EXCEPTION: Step 2b1 specifies behaviour when the GERAN cell is in (NMO I or NMO II) and UE is in condition C3	-	-
2b1	The UE transmits an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
-	EXCEPTION: Steps 2c1 – 2c1A3 and step 2c2 specify behaviour when the GERAN cell is in NMO II and UE is in condition C2. The messages can be sent in any order	-	-
2c1	The UE transmits an IMSI DETACH INDICATION message	-->	IMSI DETACH INDICATION
2c1A1	The UE transmits a <i>Classmark Change</i> message	-->	CLASSMARK CHANGE
-	EXCEPTION: Steps 2c1A2 and 2cA3 can occur in any order	-	-
2c1A2	IF <i>pc_UTRA</i> THEN the UE transmits a <i>Utran Classmark Change</i> message.	-->	UTRAN CLASSMARK CHANGE.
2c1A3	IF UE is still attached for GPRS (step 2c2 has not yet occurred) THEN the UE transmits a <i>GPRS Suspension Request</i> message	-->	GPRS SUSPENSION REQUEST
2c2	The UE transmits a DETACH REQUEST message	-->	DETACH REQUEST

## 10.2.3 PS Handover procedure

### 10.2.3.1 Procedure

**Table 10.2.3.1-1: PS handover procedure**

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: Steps 1a1 and 1a3 specify the UE behaviour when GERAN cell is in NMO I and the UE is in condition C2 and the UE is not registered to the LAC of this cell.	-	-
1a1	The UE transmits a ROUTING AREA UPDATE REQUEST message with update type='Combined RA/LA Update'.	-->	ROUTING AREA UPDATE REQUEST
1a2	The SS transmits a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1a3	The UE transmits a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: Steps 1b1 and 1b3 specify the location updating procedure when GERAN cell is in (NMO I or NMO II) and the UE is in condition C2 and the UE is registered to the LAC of this cell.	-	-
1b1	The UE transmits a ROUTING AREA UPDATE REQUEST message with update type='RA Update'.	-->	ROUTING AREA UPDATE REQUEST
1b2	The SS transmits a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1b3	The UE transmits a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
-	EXCEPTION: Steps 1c1 and 1c6 specify the location updating procedure when GERAN cell is in NMO II and the UE is in condition C2 and the UE is not registered to the LAC of this cell.	-	-
1c1	The UE transmits a ROUTING AREA UPDATE REQUEST message with update type='RA Update'.	-->	ROUTING AREA UPDATE REQUEST
1c2	The SS transmits a ROUTING AREA UPDATE ACCEPT message.	<--	ROUTING AREA UPDATE ACCEPT
1c3	The UE transmits a ROUTING AREA UPDATE COMPLETE message.	-->	ROUTING AREA UPDATE COMPLETE
1c4	The UE transmits a LOCATION UPDATING REQUEST message.	-->	LOCATION UPDATING REQUEST
1c4A1	The UE transmits a <i>Classmark Change</i> message	-->	CLASSMARK CHANGE
-	EXCEPTION: The next step describes behaviour that depends on UE capability.	-	-
1c4A2	IF pc_UTRA THEN the UE transmits a <i>Utran Classmark Change</i> message.	-->	UTRAN CLASSMARK CHANGE.
1c5	The SS transmits a LOCATION UPDATING ACCEPT	<--	LOCATION UPDATING ACCEPT
1c6	The UE transmits a TMSI REALLOCATION COMPLETE		TMSI REALLOCATION COMPLETE

## 10.2.4 CC disconnect procedure

### 10.2.4.1 Procedure

**Table 10.2.4.1-1: CC disconnect procedure**

### 10.3 Postambles for E-UTRA test cases

This clause describes UE postamble states which can be used in the post condition of E-UTRA test cases defined in TS 36.523-1 [1]. The clause also specifies a set of procedures to bring the UE into these states.

#### 10.3.1 UE postamble states and procedures for E-UTRA test cases

In order to bring the UE to switched/powering off state there are some procedures that need to be executed. The identified procedures are shown in figure 10.3.1-1.

Figure 10.3.1-1: UE postamble states and procedures for E-UTRA

## 10.3.2 Switch/Power off procedure in State E1

### 10.3.2.1 Procedure

**Table 10.3.2.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off, (see ICS)	-	-
-	EXCEPTION: Steps 2a1 to 2a4 specify behaviour if the UE supports <i>pc_SwitchOnOff</i>	-	-
2a1	UE transmits an <i>RRCConnectionRequest</i> message.	-->	RRC: <i>RRCConnectionRequest</i>
2a2	SS transmit an <i>RRCConnectionSetup</i> message.	<--	RRC: <i>RRCConnectionSetup</i>
-	EXCEPTION: Steps 2a3Aa1 to 2a3Aa6 specify optional behaviour if the UE has previously performed IMS registration	-	-
2a3Aa 1	The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the IMS signalling procedure by including the SERVICE REQUEST message.	-->	RRC: <i>RRCConnectionSetupComplete</i> NAS: SERVICE REQUEST
2a3Aa 2	The SS transmits a <i>SecurityModeCommand</i> message to activate AS security.	<--	RRC: <i>SecurityModeCommand</i>
2a3Aa 3	The UE transmits a <i>SecurityModeComplete</i> message and establishes the initial security configuration.	-->	RRC: <i>SecurityModeComplete</i>
2a3Aa 4	The SS configures a new data radio bearer, associated with the default EPS bearer context. The <i>RRCConnectionReconfiguration</i> message is using condition SRB2-DRB(1, 0). The DRB associated with default EPS bearer context obtained during the attach procedure is established	<--	RRC: <i>RRCConnectionReconfiguration</i>
	EXCEPTION: In parallel to the event described in step 2a3Aa5 below, the behaviour in TS 34.229-1 [40] Annex C.30 may occur. (IMS de-registration)	-	-
2a3Aa 5	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the establishment of the new data radio bearer, associated with the default EPS bearer context.	-->	RRC: <i>RRCConnectionReconfigurationComplete</i>
2a3Aa 6	The UE initiates the Detach procedure by sending DETACH REQUEST	-->	NAS: DETACH REQUEST
	EXCEPTION : Step 2a3Ba1 below specifies the behaviour if the UE has not previously performed IMS registration		
2a3 Ba1	The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the Detach procedure by including the DETACH REQUEST message.	-->	RRC: <i>RRCConnectionSetupComplete</i> NAS: DETACH REQUEST
2a4	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE

### 10.3.3 Switch/Power off procedure in State E2 and E3

#### 10.3.3.1 Procedure for E2 and E3

**Table 10.3.3.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
-	EXCEPTION: In parallel to the events described in steps 1 to 2a2, the steps described: - in Table 10.3.3.1-2 may take place if UE supports <i>pc_eMBMS_SC</i> and SIB15 is broadcasted in the cell, - in Table 10.3.3.1-3 may take place if UE supports <i>pc_discSupportedBands</i> and SIB19 is broadcasted in the cell or if UE supports <i>pc_commSupportedBands</i> and SIB18 is broadcasted in the cell.		
1	The UE is powered off or switched off (see ICS)	-	-
-	EXCEPTION: Steps 2a1 to 2a2 specify behaviour if the UE supports <i>pc_SwitchOnOff</i>	-	-
-	EXCEPTION : Step 2a1Aa1 to 2a1Aa2 below specifies optional behaviour if the UE has previously performed IMS registration	-	-
2a1Aa1 – 2a1Aa2	The UE may perform the procedure described in TS 34.229-1 [40] Annex C.30 (IMS de-registration)	-	-
2a1	The UE transmits DETACH REQUEST	-->	DETACH REQUEST
2a2	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE

1	UE transmits a <i>SidelinkUEInformation</i> message.	-->	<i>SidelinkUEInformation</i>

## 10.3.3.2 Procedure for E2\_T3440

Table 10.3.3.2-1: RRC release and switch/power off procedure

Step	Procedure	Message Sequence	
		U - S	Message
1	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE
2	The SS waits for 5s to ensure that the UE goes to RRC_IDLE state.	-	
3	The UE is powered off or switched off (see ICS)	-	-
-	EXCEPTION: Steps 4a1 to 4a4 specify behaviour if the UE supports pc_SwitchOnOff	-	-
4a1	UE transmits an <i>RRCConnectionRequest</i> message.	-->	RRC: <i>RRCConnectionRequest</i>
4a2	SS transmit an <i>RRCConnectionSetup</i> message.	<--	RRC: <i>RRCConnectionSetup</i>
-	EXCEPTION: Steps 4a3Aa1 to 4a3Aa6 specify optional behaviour if the UE has previously performed IMS registration	-	-
4a3Aa 1	The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the IMS signalling procedure by including the SERVICE REQUEST message.	-->	RRC: <i>RRCConnectionSetupComplete</i> NAS: SERVICE REQUEST
4a3Aa 2	The SS transmits a <i>SecurityModeCommand</i> message to activate AS security.	<--	RRC: <i>SecurityModeCommand</i>
4a3Aa 3	The UE transmits a <i>SecurityModeComplete</i> message and establishes the initial security configuration.	-->	RRC: <i>SecurityModeComplete</i>
4a3Aa 4	The SS configures a new data radio bearer, associated with the default EPS bearer context. The <i>RRCConnectionReconfiguration</i> message is using condition SRB2-DRB(1, 0). The DRB associated with default EPS bearer context obtained during the attach procedure is established	<--	RRC: <i>RRCConnectionReconfiguration</i>
-	EXCEPTION: In parallel to the event described in step 4a3Aa5 below, the behaviour in TS 34.229-1 [40] Annex C.30 may occur. (IMS de-registration)	-	-
4a3Aa 5	The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the establishment of the new data radio bearer, associated with the default EPS bearer context.	-->	RRC: <i>RRCConnectionReconfigurationComplete</i>
4a3Aa 6	The UE initiates the Detach procedure by sending DETACH REQUEST	-->	NAS: DETACH REQUEST
-	EXCEPTION : Step 4a3Ba1 below specifies the behaviour if the UE has not previously performed IMS registration	-	
4a3 Ba1	The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the Detach procedure by including the DETACH REQUEST message.	-->	RRC: <i>RRCConnectionSetupComplete</i> NAS: DETACH REQUEST
4a4	The SS transmits an RRC CONNECTION RELEASE message	<--	RRC CONNECTION RELEASE

## 10.3.4 Switch/Power off procedure in State E4

### 10.3.4.1 Procedure

**Table 10.3.4.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off (see ICS)	-	-

## 10.3.5 Automatic selection mode procedure in State E5 (current cell, neighbour cell)

### 10.3.5.1 Procedure

**Table 10.3.5.1-1: Automatic selection mode procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	Set UE to Automatic PLMN selection mode.	-	-
2	The SS configures: - the current cell as a "Non-Suitable Off cell" - the neighbour cell as a "Serving cell"	-	-
3	Generic test procedure in TS 36.508 subclause 6.4.2.7-1 is performed on the neighbour cell	-	-
-	At the end of this test procedure sequence, the UE is in end state E-UTRA idle (E1)	-	-

## 10.4 Postambles for E-UTRA to HRPD test cases

This clause describes UE postamble states which can be used in the post condition of E-UTRA test cases defined in TS 36.523-1 [1]. The clause also specifies a set of procedures to bring the UE into these states.

### 10.4.1 UE postamble procedures for E-UTRA to HRPD (No Pre-Registration)

#### 10.4.1.1 Registration on HRPD Cell

**Table 10.4.1.1: Registration on HRPD Cell procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE transmits a <i>UATIRequest</i> message.	-->	<i>UATIRequest</i>
2	The SS transmits <i>UATIAssignment</i> message	<--	<i>UATIAssignment</i>
3	The UE transmits <i>UATIComplete</i> message	-->	<i>UATIComplete</i>
4	The UE transmits <i>ConnectionRequest</i> message.	-->	<i>ConnectionRequest</i>
5	The SS transmits a <i>TrafficChannelAssignment</i> message.	<--	<i>TrafficChannelAssignment</i>
6	The UE transmits <i>TrafficChannelcomplete</i> .	-->	<i>TrafficChannelcomplete</i>
7	The UE transmits <i>ConfigurationRequest</i> message for SCP configuration.	-->	<i>SCP:ConfigurationRequest</i>
8	The SS transmits a <i>ConfigurationResponse</i>	<--	<i>SCP:ConfigurationResponse</i>

Step	Procedure	Message Sequence	
		U - S	Message
	message for SCP configuration.		
9	The UE transmits <i>ConfigurationRequest</i> message for Stream protocol.	-->	<i>Stream:ConfigurationRequest</i>
10	The SS transmits a <i>ConfigurationResponse</i> message for Stream protocol accepting EMPA bound to service network.	<--	<i>Stream: ConfigurationResponse</i>
11	The UE transmits <i>EMPA ConfigurationRequest</i> message.	-->	<i>EMPA:ConfigurationRequest</i>
12	The SS transmits an <i>EMPA ConfigurationResponse</i> message.	<--	<i>EMPA: ConfigurationResponse</i>
13	The UE transmits <i>ConfigurationComplete</i> message.	-->	<i>ConfigurationComplete</i>
14	Optionally session negotiation initiated by the SS might take place	<-->	-
15	Optionally device level authentication may take place.	<-->	-
16	Optionally Location Update procedure may take place if the SS is configured to support it.	<-->	-
17	PPP LCP negotiation is performed between the UE and the SS. EAP-AKA is selected as the authentication protocol.	<-->	-
18	Tunnelled EAP-AKA is performed between the UE and the SS.	<-->	-
19	The UE transmits <i>VSNCP Configure-Request</i> message, including a PDN-ID, PDN Type, APN, PDN Address with empty content, Protocol Configuration Options, and Attach Type = "handover". The Address Allocation Preference option contained in the Protocol Configuration Options indicates whether the UE wants to perform the IP address allocation during the attach procedure or deferred IPv4 address allocation. PDN Type indicates the UE's IP capability (IPv4, IPv6 or IPv4/v6)	-->	<i>VSNCP: Configure-Request</i>
20	The SS transmits a <i>VSNCP Configure-Ack</i> message.	<--	<i>VSNCP: Configure-Ack</i>
21	The SS transmits a <i>VSNCP Configure-Request</i> message including the PDN-ID configuration option.	<--	<i>VSNCP: Configure-Request</i>
22	The UE transmits <i>VSNCP Configure-Ack</i> message.	-->	<i>VSNCP :Configure-Ack</i>
23	Optionally IPv4 address allocation by DHCPv4 may occur (depending on the Address Allocation Preference indicated by the UE at Step 19).	<-->	-
24	Optionally Link global IPv6 address configuration by ICMPv6 may occur (depending on the Address Allocation Preference indicated by the UE at Step 19). <i>solicitation</i> message.	<-->	-

10.4.1.2 Detach on HRPD Cell

Table 10.4.1.2: Detach on HRPD Cell procedure

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE transmits PPP:LCP Terminate-Request	-->	LCP:Terminate-Request
2	The SS transmits PPP: LCP Terminate-Ack	<--	LCP:Terminate-Ack
3	the UE and SS perform Session update to release the reservations	<-->	-

10.5 Postambles for NB-IoT test cases

This clause describes UE postamble states which can be used in the post condition of NB-IoT test cases defined in TS 36.523-1 [1]. The clause also specifies a set of procedures to bring the UE into these states.

10.5.1 UE postamble states and procedures for NB-IoT test cases

In order to bring the UE to switched/powering off state there are some procedures that need to be executed. The identified procedures are shown in figure 10.5.1-1.

Figure 10.5.1-1: UE postamble states and procedures for NB-IoT

## 10.5.2 Switch/Power off procedure in State N1

### 10.5.2.1 Procedure

**Table 10.5.2.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off, (see ICS)	-	-
-	EXCEPTION: Steps 2a1 to 2a4 specify behaviour if the UE supports <i>pc_SwitchOnOff</i>	-	-
2a1	UE transmits an <i>RRCCONNECTIONREQUEST-NB</i> message.	-->	RRC: <i>RRCCONNECTIONREQUEST-NB</i>
2a2	SS transmit an <i>RRCCONNECTIONSETUP-NB</i> message.	<--	RRC: <i>RRCCONNECTIONSETUP-NB</i>
2a3	The UE transmits an <i>RRCCONNECTIONSETUPCOMPLETE-NB</i> message to confirm the successful completion of the connection establishment and to initiate the Detach procedure by including the DETACH REQUEST message.	-->	RRC: <i>RRCCONNECTIONSETUPCOMPLETE-NB</i> NAS: DETACH REQUEST
2a4	The SS transmits an <i>RRCCONNECTIONRELEASE-NB</i> message	<--	<i>RRCCONNECTIONRELEASE-NB</i>

## 10.5.3 Switch/Power off procedure in State N2 and N3

### 10.5.3.1 Procedure for N2 and N3

**Table 10.5.3.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off (see ICS)	-	-
2	The UE transmits DETACH REQUEST	-->	DETACH REQUEST
3	The SS transmits an <i>RRCCONNECTIONRELEASE-NB</i> message	<--	<i>RRCCONNECTIONRELEASE-NB</i>

## 10.5.4 Switch/Power off procedure in State N4

### 10.5.4.1 Procedure

**Table 10.5.4.1-1: Switch/Power off procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	The UE is powered off or switched off (see ICS)	-	-

## 10.5.5 Automatic selection mode procedure in State N5 (current cell, neighbour cell)

### 10.5.5.1 Procedure

**Table 10.5.5.1-1: Automatic selection mode procedure**

Step	Procedure	Message Sequence	
		U - S	Message
1	Set UE to Automatic PLMN selection mode.	-	-
2	The SS configures: - the current cell as a "Non-Suitable Off cell" - the neighbour cell as a "Serving cell"	-	-
3	Generic test procedure in TS 36.508 subclause 8.1.5A.X is performed on the neighbour cell	-	-
-	At the end of this test procedure sequence, the UE is in end state NB-IoT idle (N1)	-	-

**Editors Note: Subclause of generic test procedure introduced in R5-167185.**

# 11 Guidelines on test execution

This clause provides the guidelines on test executions.

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth to accommodate the necessary number of radio frequencies for the specific operating Band as used by the test cases.

## 11.1 EUTRA single technology

This clause provides the guidelines for the test cases to be executed on the pure EUTRA test configuration.

A test case using more than one radio frequency, i.e. using the radio frequencies f2 or f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31.

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.3, 6.1.1.6, 6.1.1.7, 6.1.1.8, 6.1.2.7, 6.1.2.8, 6.1.2.9, 6.1.2.11, 6.1.2.13, 6.1.2.15, 6.1.2.17, 6.1.2.18, 6.3.1, 6.3.5, 6.3.6, 6.3.9, 6.4.1, 6.4.2,

8.1.3.4, 8.1.3.5, 8.2.4.6, 8.2.4.26, 8.3.1.3, 8.3.1.3a, 8.3.1.4, 8.3.1.6, 8.3.1.9, 8.3.1.10, 8.3.1.11, 8.3.1.26, 8.3.1.27, 8.3.1.31, 8.3.4.2, 8.3.4.3, 8.3.4.5, 8.6.2.2, 8.6.2.3a, 8.6.2.8, 8.6.2.10, 8.6.2.11, 8.6.2.12, 8.6.4.2, 8.6.4.3, 8.6.4.4, 8.6.4.8, 8.6.4.9, 8.6.4.10, 8.6.6.2, 8.6.6.5, 8.6.6.6, 8.6.6.7, 8.6.8.2, 8.6.8.6,

9.2.1.1.1a, 9.2.1.1.7, 9.2.1.1.13, 9.2.1.1.15, 9.2.1.1.16, 9.2.1.2.1, 9.2.1.2.10, 9.2.1.2.12, 9.2.1.2.14, 9.2.3.2.1, 9.2.3.2.12, 9.2.3.2.15, 9.2.3.2.16,

11.2.6, 11.2.7,

13.4.1.2,  
17.4.1, 17.4.2, 17.4.3,  
21.3.1, 21.3.2, 21.3.3, 21.3.7, 21.3.10, 21.3.11, 21.3.12.

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 6,  
Band 11,  
Band 14,  
Band 17 with 5MHz bandwidth,  
Band 23 with 10MHz bandwidth,  
Band 30,  
Band 38,  
Band 39

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.3, 6.1.1.6, 6.1.1.7, 6.1.1.8, 6.1.2.7, 6.1.2.8, 6.1.2.9, 6.1.2.15, 6.3.5  
8.1.3.5, 8.3.1.4, 8.6.4.3,  
9.2.1.1.1a, 9.2.1.1.7, 9.2.1.1.15,  
11.2.7.

A test case using more than three radio frequencies, i.e. using the radio frequency f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 12 with 5MHz bandwidth,  
Band 19,  
Band 20,  
Band 21,  
Band 27,  
Band 34.

The list containing such test cases is given below:

6.1.1.1, 6.1.1.2, 6.1.1.6, 6.1.1.8,  
9.2.1.1.7.

### 11.1.1 Replacement of test case execution

In case of bandwidth limitation for accommodation of more frequencies, a number of test cases can be replaced with the corresponding mirror test cases without affecting the test coverage. The table 11.1.1-1 shows the possible replacements. Only one of the paired test cases is required for execution.

**Table 11.1.1-1: Replacement of test cases**

Original test case	Replacing test case
6.1.1.1	6.1.1.1b
6.1.1.2	6.1.1.2a
6.1.1.3	6.1.1.3b
6.1.1.6	6.1.1.6a
6.1.2.7	6.1.2.7a
6.1.2.8	6.1.2.8a
6.1.2.9	6.1.2.9a
8.3.1.9	8.3.1.9a
8.3.1.11	8.3.1.11a
9.2.1.1.1a	9.2.1.1.1b
9.2.1.1.7	9.2.1.1.7a
9.2.1.1.13	9.2.1.1.13a
9.2.1.1.15	9.2.1.1.15a
9.2.1.1.16	9.2.1.1.16a

## 11.2 EUTRA - UTRA - GERAN

This clause contains the guidelines for the EUTRA interRAT test cases to be executed on the different test configurations: with only UTRA configured, with only GERAN configured or with UTRA-GERAN both configured. Whether or not an EUTRA frequency band overlaps the UTRA band, the dependency will affect the restrictions of the test execution on this band.

NOTE: The case where an EUTRA band overlaps a GSM band is not considered.

### 11.2.1 UTRA configured – GERAN not configured

This clause provides the guidelines for the EUTRA interRAT test cases where UTRA is configured, while GERAN is either not needed or not configured.

#### 11.2.1.1 EUTRA band overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA or UTRA radio frequencies if an E-UTRA band overlaps the UTRA Band. A test case using more than one radio frequency, on the same EUTRA and UTRA band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3, 6.2.2.1, 6.2.2.5, 6.2.2.8, 6.2.3.3, 6.2.3.3a, 6.2.3.4, 6.2.3.4a, 6.2.3.5, 6.2.3.5a, 6.2.3.6, 6.2.3.13, 6.2.3.31, 6.2.3.32, 6.2.3.33, 6.2.4.1, 6.2.4.2, 6.2.4.3, 6.2.4.4, 6.2.4.5, 6.2.4.6, 6.2.4.7, 6.3.3, 6.3.4, 6.3.7, 6.4.3, 6.4.4, 6.4.5, 6.4.6,

8.1.3.6, 8.1.3.6a, 8.1.3.7, 8.3.2.3, 8.3.2.3a, 8.3.2.4, 8.3.3.2, 8.3.4.4, 8.4.1.2, 8.4.1.4, 8.4.1.5, 8.4.2.2, 8.4.2.4, 8.5.2.1, 8.6.3.1, 8.6.3.4, 8.6.5.1, 8.6.5.1a, 8.6.5.4, 8.6.7.1, 8.6.7.4, 8.6.9.1, 8.6.9.2, 8.6.10.1, 8.7.1,

9.2.1.1.11, 9.2.1.1.12, 9.2.1.2.1b, 9.2.1.2.1c, 9.2.1.2.1d, 9.2.1.2.5, 9.2.1.2.8, 9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.1.2.15, 9.2.2.1.3, 9.2.2.1.10, 9.2.3.1.6, 9.2.3.1.10, 9.2.3.1.11, 9.2.3.1.12, 9.2.3.1.15, 9.2.3.1.15a, 9.2.3.1.17, 9.2.3.1.18, 9.2.3.1.18a, 9.2.3.2.1a, 9.2.3.2.1b, 9.2.3.2.1c, 9.2.3.2.3, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8,

9.2.3.2.9, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14, 9.2.3.3.1, 9.2.3.3.2, 9.2.3.3.3, 9.2.3.3.4, 9.2.3.3.5, 9.2.3.3.5a, 9.3.1.4, 9.3.1.5, 9.3.1.6,

11.2.10, 11.2.11,

13.1.2, 13.1.2a, 13.1.3, 13.1.4, 13.1.5, 13.1.15, 13.1.16, 13.3.2.1, 13.4.2.1, 13.4.2.4, 13.4.3.1, 13.4.3.2, 13.4.3.4, 13.4.3.6, 13.4.3.7, 13.4.3.8, 13.4.3.9, 13.4.3.10, 13.4.3.11, 13.4.3.13, 13.4.3.14, 13.4.3.15, 13.4.3.16, 13.4.3.18, 13.4.3.19, 13.4.3.20.

A test case using more than two radio frequencies on the same EUTRA and UTRA band shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 38,

Band 39.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3,

8.6.3.4, 8.6.5.1a, 8.6.7.4,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14.

A test case using more than three radio frequencies, on the same EUTRA and UTRA band shall avoid to be executed on operating

Band 12 with 5MHz bandwidth,

Band 19,

Band 20,

Band 21,

Band 27,

Band 34.

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

### 11.2.1.2 EUTRA band not overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA radio frequencies. A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31.

The list containing such test cases is given below:

6.2.1.2, 6.2.1.3,

8.6.3.4, 8.6.5.1a, 8.6.7.4,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14,

A test case using more than two radio frequencies shall avoid to be executed on E-UTRA operating

Band 6,

Band 11,

Band 14,

Band 17 with 5MHz bandwidth,

Band 23 with 10MHz bandwidth,

Band 30,

Band 38,

Band 39.

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

## 11.2.2 GERAN configured - UTRA not configured

This clause provides the guidelines for the EUTRA/GERAN test cases where UTRA is either not needed or not configured. The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA Band accommodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31

The list containing such test cases is given below:

6.2.1.4, 6.2.3.17, 6.2.3.18,

8.3.2.2,

9.2.1.2.9, 9.2.1.2.11, 9.2.1.2.13, 9.2.3.1.15, 9.2.3.1.18, 9.2.3.2.5, 9.2.3.2.6, 9.2.3.2.7, 9.2.3.2.8, 9.2.3.2.11, 9.2.3.2.13, 9.2.3.2.14.

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

Band 6,

Band 11,

Band 14,  
Band 17 with 5MHz bandwidth,  
Band 23 with 10MHz bandwidth,  
Band 30,  
Band 38,  
Band 39

The list containing such test cases is given below:

9.2.1.2.13, 9.2.3.2.13.

### 11.2.3 Neither UTRA nor GERAN configured

Certain EMM test cases can be executed as EUTRA\_Only configuration despite of UTRA or GERAN test branches included in the test cases. The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,  
Band 13,  
Band 17 with 10MHz bandwidth,  
Band 18,  
Band 31.

The list containing such test cases is given below:

9.2.3.1.15, 9.2.3.1.18.

### 11.2.4 Both UTRA and GERAN configured

This clause provides the guidelines for the EUTRA - UTRA - GERAN test cases where three RAT technologies are simultaneously configured.

#### 11.2.4.1 EUTRA band overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the bandwidth of an EUTRA Band accommodating the necessary number of EUTRA or UTRA, UTRA radio frequencies if an E-UTRA band overlaps the UTRA Band.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

Band 12 with 10MHz bandwidth,  
Band 13,  
Band 17 with 10MHz bandwidth,  
Band 18,  
Band 31.

The list containing such test cases is given below:

6.2.1.1, 8.3.2.5, 8.3.2.6,

9.2.1.2.6, 9.2.1.2.7,

## 11.2.8

A test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on operating:

- Band 6,
- Band 11,
- Band 14,
- Band 17 with 5MHz bandwidth,
- Band 23 with 10MHz bandwidth,
- Band 38
- Band 39

The list containing such test cases is given below:

6.2.1.1.

#### 11.2.4.2 EUTRA band not overlapping UTRA band

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA Band accommodating the necessary number of EUTRA radio frequencies.

A test case using more than one radio frequency shall avoid to be executed on E-UTRA operating

- Band 12 with 10MHz bandwidth,
- Band 13,
- Band 17 with 10MHz bandwidth,
- Band 18,
- Band 31.

The list containing such test cases is given below:

6.2.1.1

#### 11.2.5 Replacement of test case execution

In case of bandwidth limitation for accommodation of more frequencies, a number of test cases can be replaced with the corresponding mirror test cases without affecting the test coverage. The table 11.2.1.5-1 shows the possible replacements. Only one of the paired test cases is required for execution.

**Table 11.2.5-1: Replacement of interRAT test cases**

Original test case	Replacing test case
9.2.3.1.15	9.2.3.1.15a
9.2.3.1.18	9.2.3.1.18a

### 11.3 EUTRA inter-band

The restriction on test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA band accommodating the necessary number of EUTRA radio frequencies. The inter-band test includes also EUTRA FDD-TDD and inter-band carrier aggregation tests.

### 11.3.1 Primary operating band

A test case using more than one radio frequency on the first operating band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31.

The list containing such test cases is given below:

6.1.2.15a, 8.1.3.12.

### 11.3.2 Secondary operating band for inter-band cells

Test case using more than one radio frequency, on the second operating band, shall avoid to be executed on operating

Band 12 with 10MHz bandwidth,

Band 13,

Band 17 with 10MHz bandwidth,

Band 18,

Band 31.

The list containing such test cases is given below:

6.1.1.1a, 6.1.1.3a, 6.1.1.4a, 6.1.2.16, 8.1.3.11a, 8.1.3.12b, 8.2.4.13a, 8.2.4.14a, 8.3.1.12a, 8.3.1.14a

### 11.3.3 Replacement of test case execution

In case of bandwidth limitation for accommodation of more frequencies, a number of test cases can be replaced with the corresponding mirror test cases without affecting the test coverage. The table 11.3.3-1 shows the possible replacements. Only one of the paired test cases is required for execution.

**Table 11.3.3-1: Replacement of test cases**

Original test case	Replacing test case
8.1.3.12	8.1.3.12b

## 11.4 EUTRA CA

The restriction on CA test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA CA band accommodating the necessary number of EUTRA radio frequencies.

### 11.4.1 CA contiguous Intra-band operation

Test case using more than two radio frequencies, i.e. using the radio frequencies f3 or f4 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA\_5B,

CA\_23B,

CA\_38C,

CA\_39C.

The list containing such test cases is given below:

8.2.4.19.1, 8.2.4.21.1

## 11.4.2 CA Inter-band operation

Test case using more than one radio frequency on the primary band, i.e. using the radio frequency f2 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA\_8A-11A,

CA\_12A-25A,

CA\_12A-30A,

CA\_18A-28A,

CA\_19A-21A,

CA\_19A-28A,

CA\_19A-42A,

CA\_19A-42C,

CA\_21A-42C,

and on E-UTRA CA switched configuration

CA\_1A-18A,

CA\_1A-19A,

CA\_1A-21A,

CA\_2A-12A,

CA\_2A-13A,

CA\_2A-17A,

CA\_2A-29A,

CA\_2A-30A,

CA\_3A-19A,

CA\_4A-12A,

CA\_4A-13A,

CA\_4A-17A,

CA\_4A-29A,

CA\_4A-30A,

CA\_5A-12A,

CA\_5A-13A,

CA\_5A-17A,

CA\_5A-30A,

CA\_7A-12A,

CA\_8A-11A,  
CA\_11A-18A,  
CA\_12A-30A,  
CA\_19A-21A,  
CA\_20A-31A,  
CA\_29A-30A

The list containing such test cases is given below:

8.2.4.19.2

Test case using more than one radio frequency on the primary band, i.e. using the radio frequency f2 or f6 (depending upon the Cell being used) specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA\_8A-11A,  
CA\_19A-21A,  
CA\_12A\_30A

and on E-UTRA CA switched configuration

CA\_8A-11A,  
CA\_19A-21A,  
CA\_12A\_30A,  
CA\_29A-30A

The list containing such test cases is given below:

8.2.4.21.2

These test cases can be run with switched allocation of PCell and SCell as specified in TS 36.508 [3] clause 6.2.3.2 (NOTE 3 and 4).

The following test cases are not applicable to be run when executed in the band combinations CA\_2A-29A and CA\_4A-29A, CA\_20A-32A, CA\_23A-29A, CA\_20A-67A and on E-UTRA CA switched configuration CA\_29A-30A:

7.1.2.10.2,  
7.1.2.11.2,  
7.1.4.20.2,  
8.2.2.7.2,  
8.2.4.17.2,  
8.2.4.20.2,  
8.2.4.23.2,  
8.3.1.17.2,  
8.3.1.18.2

The 3DL CA test cases can be run on 3CCs FDD-TDD band combinations, they are using more than one radio frequency on the primary band, i.e. using the radio frequency f2 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA\_19A-42C,

CA\_21A-42C

The list containing such test cases is given below:

7.1.2.11.4

### 11.4.3 CA non-contiguous Intra-band operation

Test case using more than two radio frequencies, i.e. using the radio frequencies  $f_3$  specified in TS 36.508 [3], shall avoid to be executed on E-UTRA CA Configuration:

CA\_5A-5A,

CA\_23A-23A

The list containing such test cases is given below:

8.2.4.19.3

8.2.4.21.3

## 11.5 EUTRA MFBI

The following EUTRA MFBI test cases shall be executed using the combinations specified in Table 11.5-1 for `px_OverlappingNotSupportedFrequencyBand_MFBI` and `px_MFBI_FrequencyBand`:

6.1.2.19, 6.1.2.20, 6.1.2.21, 6.1.2.22, 6.2.3.34, 6.2.3.35

**Table 11.5-1: Operating and MFBI EUTRA bands combinations**

<code>px_OverlappingNotSupportedFrequencyBand_MFBI</code>	<code>px_MFBI_FrequencyBand (Note)</code>
2	25
3	9
4	10
5	18, 19, 26
9	3
10	4
12	17
17	12
18	5, 26, 27
19	5, 26
25	2
26	5, 18, 19, 27
27	18, 26
33	39
38	41
39	33
41	38
Note: The UE supports one or more of the listed MFBI bands and does not support at least one overlapping band. If the UE supports all overlapping bands, these test cases are not applicable.	

Test case 6.1.2.20 is not applicable to be run when executed in the band combination 5 & 18.

For test case 6.2.3.34 additionally the UTRA band combinations specified in Table 11.5-2 for `px_UTRAN_OverlappingNotSupportedFrequencyBandMFBI` and `px_MFBI_UTRAN_FrequencyBand` shall also be applicable

**Table 11.5-2: Operating and MFBI UTRA bands combinations**

10	4
18	5, 26
19	5, 26
25	2
26	5, 18, 19
Note: The UE supports one or more of the listed MFBI bands and does not support at least one overlapping band. If the UE supports all overlapping bands, these test cases are not applicable.	

The MFBI test case 6.1.2.23 shall be executed using the combinations specified in Table 11.5-3 for px\_ePrimaryFrequencyBand, px\_MFBI\_FrequencyBand and px\_OverlappingNotSupportedFrequencyBandMFBI

**Table 11.5-3: Operating and MFBI EUTRA bands combinations**

px_ePrimaryFrequencyBand	px_MFBI_FrequencyBand	px_OverlappingNotSupportedFrequencyBandMFBI
39	38	41

## 11.6 EUTRA DC

The restriction on DC test case execution as listed in this clause is due to the restriction of bandwidth of an EUTRA DC band accommodating the necessary number of EUTRA radio frequencies.

Test case using more than one radio frequency on the primary band, i.e. using the radio frequency f2 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA DC inter-band configuration:

- DC\_19A-21A,
- and on E-UTRA DC switched configuration
- DC\_1A-19A,
- DC\_1A-21A,
- DC\_2A-13A,
- DC\_3A-19A,
- DC\_4A-12A,
- DC\_4A-13A,
- DC\_4A-17A,
- DC\_5A-12A,
- DC\_19A-21A

The list containing such test cases is given below:

- 8.2.4.25.1, 8.2.4.25.2, 8.2.4.25.3, 8.2.4.25.4, 8.2.4.25.5, 8.2.4.25.6, 8.2.4.25.7

Test cases using more than one radio frequency on the secondary band, i.e. using the radio frequency f6 specified in TS 36.508 [3], shall avoid to be executed on E-UTRA DC inter-band configurations:

DC\_1A-19A,

DC\_1A-21A,

DC\_2A-13A,

DC\_3A-19A,

DC\_4A-12A,

DC\_4A-13A,

DC\_4A-17A,

DC\_5A-12A,

DC\_19A-21A

and on E-UTRA DC switched configuration

DC\_19A-21A

The list containing such test cases is given below:

8.5.1.8.1, 8.5.1.8.2

## Annex A (normative): Test Suites

This annex contains the approved TTCN Test Suites. The test suites have been produced using the Testing and Test Control Notation version 3 (TTCN3) according to ES 201 873-1 [13].

### A.1 Baseline of specifications

Table A.1 shows the baseline of the relevant cores specifications and the test specifications which the delivered TTCN test suites are referred to.

**Table A.1: References of the test and Core specifications**

<b>Core specifications baseline</b>	TS 36.331 [19]
	TS 24.301 [21]
<b>Test specifications</b>	TS 36.508 [3]
	TS 36.509 [4]
	TS 36.523-1 [1]
	TS 36.523-2 [2]

### A.2 E-UTRA Test Suites

Table A.2 lists all approved test cases.

For a given test case, the following variants are distinguished (if applicable):

- FDD: E-UTRA FDD mode; and UTRA FDD mode in case the test case is Inter-RAT with UTRA cell(s).
- TDD: E-UTRA TDD mode; and UTRA TDD mode in case the test case is Inter-RAT with UTRA cell(s).
- T/F: E-UTRA TDD mode and UTRA FDD mode; only applicable to Inter-RAT test cases with UTRA cell(s).

An "X" in columns FDD, TDD or T/F indicates the test case is approved for the respective variant.

An "-" in columns FDD, TDD or T/F indicates the test case is not applicable to the respective variant.

**Table A.2: E-UTRA/EPS TTCN test cases**

Test case	Description	FDD	TDD	T/F
6.1.1.1	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN/Automatic mode	X	X	-
6.1.1.1a	PLMN selection / Automatic mode / between FDD and TDD	X	X	-
6.1.1.1b	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / Single Frequency operation	X	X	-
6.1.1.2	PLMN selection of "Other PLMN/access technology combinations" / Automatic mode	X	X	-
6.1.1.2a	PLMN selection of "Other PLMN/access technology combinations" / Automatic mode / Single Frequency operation	X	X	-
6.1.1.3	Cell reselection of ePLMN in manual mode	X	X	-
6.1.1.3a	Cell reselection of ePLMN in manual mode / between FDD and TDD	X	X	-
6.1.1.3b	Cell reselection of ePLMN in manual mode / Single Frequency operation	X	X	-
6.1.1.4	PLMN selection in shared network environment / Automatic mode	X	X	-
6.1.1.4a	PLMN selection in shared network environment / Automatic mode / between FDD and TDD	X	X	-
6.1.1.6	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / User reselection	X	X	-
6.1.1.6a	PLMN selection of RPLMN, HPLMN/EHPLMN, UPLMN and OPLMN / Automatic mode / User reselection / Single Frequency operation	X	X	-
6.1.1.7	PLMN selection / Periodic reselection / MinimumPeriodicSearchTimer	X	X	-
6.1.1.7a	PLMN selection / Periodic reselection / MinimumPeriodicSearchTimer / Single Frequency	X	X	-

Test case	Description	FDD	TDD	T/F
	operation			
6.1.1.8	PLMN selection of RPLMN or (E)HPLMN / Automatic mode	X	X	-
6.1.1.9	PLMN selection of RPLMN or (E)HPLMN; Manual mode	X	X	-
6.1.2.2	Cell selection, Qrxlevmin	X	X	-
6.1.2.2a	Cell selection / Qqualmin	X	X	-
6.1.2.2b	Cell selection / UE Cat 0 not allowed	X		-
6.1.2.3	Cell selection/Intra E-UTRAN/Serving cell becomes non-suitable (S<0 or barred)	X	X	-
6.1.2.3a	Cell selection / Intra E-UTRAN / Serving cell becomes non-suitable (Srxlev > 0 and Squal <0)	X	X	-
6.1.2.4	Cell reselection	X	X	-
6.1.2.5	Cell reselection for inter-band operation	X	X	-
6.1.2.6	Cell reselection using Qhyst, Qoffset and Treselection	X	X	-
6.1.2.7	Cell reselection/Equivalent PLMN	X	X	-
6.1.2.7a	Cell reselection / Equivalent PLMN / Single Frequency operation	X	X	-
6.1.2.8	Cell reselection using cell status and cell reservations/Access control class 0 to 9	X	X	-
6.1.2.8a	Cell reselection using cell status and cell reservations / Access control class 0 to 9 / Single Frequency operation	X	X	-
6.1.2.9	Cell reselection using cell status and cell reservations/Access control class 11 to15	X	X	-
6.1.2.9a	Cell reselection using cell status and cell reservations / Access control class 11 to 15 / Single Frequency operation	X	X	-
6.1.2.10	Cell reselection in shared network environment	X	X	-
6.1.2.11	Inter-frequency cell reselection	X	X	-
6.1.2.12	Cell reselection / Cell-specific reselection parameters provided by the network in a neighbouring cell list	X	X	-
6.1.2.13	Cell re-selection, Sintrasearch, Snonintrasearch	X	X	-
6.1.2.14	Speed-dependent cell reselection	X	X	-
6.1.2.15	Inter-frequency cell reselection according to cell reselection priority provided by SIBs	X	X	-
6.1.2.15a	Inter-frequency cell reselection according to cell reselection priority provided by SIBs / Between FDD and TDD	X	X	-
6.1.2.15b	Inter-band cell reselection according to cell reselection priority provided by SIBs	X	X	-
6.1.2.16	Cell reselection / interband operation / Between FDD and TDD	X	X	-
6.1.2.17	Cell reselection for Squal to check against SintraSearchQ and SnonIntraSearchQ	X	X	-
6.1.2.18	Inter-frequency cell reselection based on common priority information with parameters ThreshX, HighQ, ThreshX, LowQ and ThreshServing, LowQ	X	X	-
6.1.2.19	Intra-frequency cell reselection / MFBI	X	X	-
6.1.2.20	Inter-frequency cell reselection / MFBI	X	X	-
6.1.2.21	Inter-band cell reselection / MFBI	X	X	-
6.1.2.22	Cell reselection / MFBI / UE does not support multiBandInfoList	X		-
6.2.1.1	Inter-RAT PLMN selection / Selection of correct RAT for OPLMN / Automatic mode	X	X	X
6.2.1.2	Inter-RAT PLMN selection / Selection of correct RAT for UPLMN / Automatic mode	X	X	X
6.2.1.3	Inter-RAT PLMN selection / Selection of correct PLMN and RAT in shared network environment / Automatic mode	X	X	X
6.2.1.4	Inter-RAT PLMN selection / Selection of correct RAT from the OPLMN list / Manual mode	X	X	-
6.2.1.6	Inter-RAT background HPLMN search / Search for correct RAT for HPLMN / Automatic mode	X	X	-
6.2.2.1	Inter-RAT cell selection/From E-UTRA RRC_IDLE to UTRA_Idle/Serving cell becomes non-suitable	X	X	X
6.2.2.2	Inter-RAT cell selection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_idle / Serving cell becomes non-suitable	X	X	-
6.2.2.3	Inter-RAT cell selection / From E-UTRA RRC_IDLE to HRPD Idle / Serving cell becomes non-suitable	X	X	-
6.2.2.4	Inter-RAT cell selection / From E-UTRA RRC_IDLE to 1xRTT Dormant / Serving cell becomes non-suitable	X	X	-
6.2.2.5	Cell selection / No USIM	X	X	X
6.2.2.6	Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA RRC_IDLE / Serving cell becomes non-suitable	X	X	-
6.2.2.7	Inter-RAT Cell selection / From GSM_Idle/GPRS Packet_idle to E-UTRA RRC_IDLE / Serving cell is barred	X	X	-
6.2.2.8	Inter-RAT cell selection / From UTRA_Idle to E-UTRA RRC_IDLE / Serving cell becomes non-suitable	X	X	X
6.2.3.1	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_Idle	X	X	-
6.2.3.1a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to GSM_Idle/GPRS Packet_Idle (Squal < ThreshServing, LowQ, Srxlev > ThreshX, LowP and Srxlev > ThreshX, HighP)	X	X	-
6.2.3.3	Inter-RAT cell reselection/From UTRA_Idle to E-UTRA RRC_IDLE	X	X	X

Test case	Description	FDD	TDD	T/F
6.2.3.3a	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE (QualminEUTRA, SqualServingCell < Threshserving,low2, SqualnonServingCell,x > Threshx, low2 and SqualnonServingCell,x > Threshx, high2)	X	-	-
6.2.3.4	Inter-RAT cell reselection / From UTRA_CELL_PCH state to E-UTRA RRC_IDLE	X	X	X
6.2.3.4a	Inter-RAT cell reselection / From UTRA_CELL_PCH state to E-UTRA RRC_IDLE based on RSRQ+RSRP evaluation	X	X	X
6.2.3.5	Inter-RAT cell reselection/From E-UTRA RRC_IDLE to UTRA_Idle	X	X	X
6.2.3.5a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle (Squal > ThreshX, HighQ, Squal < ThreshServing, LowQ, Squal > ThreshX, LowQ and SnonIntraSearchQ)	X	-	-
6.2.3.6	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle according to RAT priority provided by dedicated signalling	X	X	X
6.2.3.7	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is higher reselection priority than E-UTRA	X	X	-
6.2.3.7a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is higher reselection priority than E-UTRA (Srxlev > ThreshX, HighP)	X	X	-
6.2.3.8	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is lower reselection priority than E-UTRA	X	X	-
6.2.3.8a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to HRPD Idle / HRPD cell is lower reselection priority than E-UTRA (Squal < ThreshServing, LowQ and Srxlev > ThreshX, LowP)	X	X	-
6.2.3.9	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is higher reselection priority than E-UTRA	X	X	-
6.2.3.9a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is higher reselection priority than E-UTRA (Srxlev > ThreshX, HighP)	X	X	-
6.2.3.10	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is lower reselection priority than E-UTRA	X	X	-
6.2.3.10a	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to 1xRTT Dormant / 1xRTT cell is lower reselection priority than E-UTRA (Squal < ThreshServing, LowQ and Srxlev > ThreshX, LowP)	X	X	-
6.2.3.13	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE according to RAT priority provided by dedicated signalling	X	X	X
6.2.3.14	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority of E-UTRA cells are higher than the serving cell	X	X	-
6.2.3.15	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority of E-UTRA cells are lower than the serving cell	X	X	-
6.2.3.16	Inter-RAT cell reselection / From GSM_Idle to E-UTRAN /based on H_PRIO criteria	X	X	-
6.2.3.17	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Priority E-UTRA cells	X	X	-
6.2.3.18	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA / Blacklisted E-UTRA cells	X	X	-
6.2.3.19	Inter-RAT cell redirection to E-UTRA cell from GSM TCH mode	X	X	-
6.2.3.21	Inter-RAT autonomous cell reselection GPRS Packet_transfer NC0 mode to E-UTRA	X	X	-
6.2.3.23	Inter-RAT cell reselection from GPRS Packet_transfer to E-UTRA in CCN mode / PACKET CELL CHANGE CONTINUE	X	X	-
6.2.3.24	Inter-RAT cell reselection from GPRS Packet_transfer to E-UTRA in CCN mode / PACKET CELL CHANGE ORDER	X	X	-
6.2.3.26	Inter-RAT autonomous cell reselection GPRS Packet_transfer NC1 mode to E-UTRA Cell	X	X	-
6.2.3.27	Inter-RAT cell selection from GPRS Packet_transfer to E-UTRA (NC2 mode)	X	X	-
6.2.3.28	Inter-RAT cell reselection from GPRS Packet_transfer to E-UTRA	X	X	-
6.2.3.29	Inter-RAT Cell Reselection from GPRS Packet_transfer NC1 mode to E-UTRA in CCN mode (PACKET MEASUREMENT ORDER)	X	X	-
6.2.3.31	Inter-RAT cell reselection / From UTRA_Idle (low priority) to E-UTRA RRC_IDLE (high priority) according to RAT priority provided by dedicated signalling	X	X	X
6.2.3.32	Inter-RAT cell re-selection / From E-UTRA RRC_IDLE to UTRA_Idle, Snonintrasearch	X	X	X
6.2.3.33	Inter-RAT cell reselection / From E-UTRA RRC_IDLE to UTRA_Idle / Squal based cell reselection parameters are broadcasted in E-UTRAN / UE does not support Squal based cell reselection in UTRAN	X	X	X
6.2.3.35	Inter-RAT cell reselection from UTRA to E-UTRA / MFBI	X		
6.2.4.1	Inter-RAT absolute priority based reselection in UTRA_CELL_FACH to E-UTRA RRC_IDLE (Higher Priority Layers, Srxlev,x > Threshx,high and Srxlev,serv > Sprioritysearch1 and SqualServ > Sprioritysearch2)	X	-	X
6.2.4.2	Inter-RAT absolute priority based reselection in UTRA_CELL_FACH (Higher Priority Layers, no cell reselection to E-UTRA RRC_IDLE when Srxlev,serv < Sprioritysearch1)	X	-	X
6.2.4.3	Inter-RAT absolute priority based reselection in UTRA_CELL_FACH to E-UTRA RRC_IDLE (Higher Priority Layers, Squal,x > Threshx,high2 and Srxlev,serv > Sprioritysearch1 and SqualServ > Sprioritysearch2)	X	-	X

Test case	Description	FDD	TDD	T/F
6.2.4.4	Inter-RAT absolute priority based reselection in UTRA CELL_FACH (lower priority) to E-UTRA RRC_IDLE (higher priority) (All Layers, Srxlev,x > Threshx,high)	X	-	X
6.2.4.5	Inter-RAT absolute priority based reselection in UTRA CELL_FACH (lower priority) to E-UTRA RRC_IDLE (higher priority) (All Layers, Squal,x > ThreshX,high2)	X	-	X
6.2.4.6	Inter-RAT absolute priority based reselection in UTRA CELL_FACH (higher priority) to E-UTRA RRC_IDLE (lower priority) (All Layers, Srxlev,serv < Sprioritysearch1 , Srxlev,serv < Thresh serv,low and Srxlev,x > ThreshX,low)	X	-	X
6.2.4.7	Inter-RAT absolute priority based reselection in UTRA CELL_FACH (higher priority) to E-UTRA RRC_IDLE (lower priority) (All Layers, Srxlev,serv < Sprioritysearch1 , Squal,serv < Thresh serv,low2 && Squal,x > ThreshX,low2)	X	-	X
6.3.1	Inter-frequency cell reselection / From E-UTRA RRC_IDLE non-CSG cell to E-UTRA RRC_IDLE CSG cell	X	X	
6.3.2	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA idle CSG cell	X		-
6.3.3	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE CSG cell	X	X	X
6.3.4	Inter-RAT cell reselection / From UTRA CELL_PCH state to E-UTRA RRC_IDLE CSG cell	X		
6.3.5	Manual support for CSG ID selection	X	X	-
6.3.6	Ignoring CSG cells in cell selection/reselection when allowed CSG list is empty or not supported	X	X	-
6.3.7	Inter-RAT Cell reselection from E-UTRA idle non-CSG cell to a UTRA CSG cell	X	X	X
6.3.9	Manual CSG ID selection across PLMNs	X	X	-
6.4.1	Manual CSG ID selection / Hybrid cell whose CSG ID is not in the Allowed CSG list nor Operator's list	X	X	-
6.4.2	Inter-frequency cell reselection / From E-UTRA RRC_IDLE non-CSG cell to E-UTRA RRC_IDLE member hybrid cell	X	X	-
6.4.3	Inter-RAT cell reselection / From E-UTRA RRC_IDLE non-CSG cell to UTRA_Idle member hybrid cell	X	X	X
6.4.4	Inter-RAT cell reselection / From E-UTRA RRC_IDLE non-member hybrid cell to UTRA_Idle member hybrid cell	X		X
6.4.5	Inter-RAT cell reselection / From UTRA_Idle to E-UTRA RRC_IDLE member hybrid cell	X	X	X
6.4.6	Inter-RAT cell reselection / From UTRA CELL_PCH to E-UTRA RRC_IDLE member hybrid cell	X		
6.4.7	Inter-RAT cell reselection / From GSM_Idle/GPRS Packet_Idle to E-UTRA RRC_IDLE member hybrid cell	X		-
7.1.1.1	CCCH mapped to UL SCH/ DL-SCH/Reserved LCID (Logical Channel ID)	X	X	-
7.1.1.1a	CCCH mapped to UL SCH/ DL-SCH / UE Cat 0	X		-
7.1.1.2	DTCH or DCCH mapped to UL SCH/ DL-SCH/Reserved Logical Channel ID	X	X	-
7.1.2.1	Correct selection of RACH parameters/Random access preamble and PRACH resource explicitly signalled to the UE by RRC/Non-contention based random access procedure	X	X	-
7.1.2.2	Correct selection of RACH parameters/Random access preamble and PRACH resource explicitly signalled to the UE in PDCCH Order/Non-contention based random access procedure	X	X	-
7.1.2.3	Correct selection of RACH parameters/Preamble selected by MAC itself/Contention based random access procedure	X	X	-
7.1.2.4	Random access procedure/Successful	X	X	-
7.1.2.5	Random access procedure/MAC PDU containing multiple RARs	X	X	-
7.1.2.6	Maintenance of uplink time alignment	X	X	-
7.1.2.7	MAC contention resolution/Temporary C-RNTI	X	X	-
7.1.2.8	MAC contention resolution/C-RNTI	X	X	-
7.1.2.9	MAC backoff indicator	X	X	-
7.1.2.10.1	CA / Random access procedure / SCell / Intra-band Contiguous CA	X	X	-
7.1.2.10.2	CA / Random access procedure / SCell / Inter-band CA	X	X	-
7.1.2.10.3	CA / Random access procedure / SCell / Intra-band non-contiguous CA	X		-
7.1.2.11.2	CA / Maintenance of uplink time alignment / Multiple TA / Inter-band CA	X	X	-
7.1.3.1	Correct handling of DL assignment/Dynamic case	X	X	-
7.1.3.2	Correct handling of DL assignment / Semi-persistent case	X	X	-
7.1.3.3	MAC PDU header handling	X	X	-
7.1.3.3a	MAC PDU header handling / UE with limited TB size	X		-
7.1.3.4	Correct HARQ process handling/DCCH and DTCH	X	X	-
7.1.3.5	Correct HARQ process handling/CCCH	X	X	-
7.1.3.6	Correct HARQ process handling/BCCH	X	X	-
7.1.3.7	MAC padding	X	X	-
7.1.3.9	MAC reset DL	X	X	-
7.1.3.11.1	CA / Correct HARQ process handling / DCCH and DTCH / P cell and Scell / Intra-band Contiguous CA	X	X	-
7.1.3.11.2	CA / Correct HARQ process handling / DCCH and DTCH / P cell and Scell / Inter-band CA	X	X	-

Test case	Description	FDD	TDD	T/F
7.1.3.11.3	CA / Correct HARQ process handling / DCCH and DTCH / P cell and Scell / Intra-band non-Contiguous CA	X		-
7.1.3.11.4	FDD-TDD CA / Correct HARQ process handling / DCCH and DTCH / FDD PCell and TDD SCell	X		-
7.1.3.11.5	FDD-TDD CA / Correct HARQ process handling / DCCH and DTCH / TDD PCell and FDD SCell	X		-
7.1.3.12	TDD additional special subframe configuration / Special subframe pattern 9 with Normal Cyclic Prefix / CRS based transmission scheme	-	X	-
7.1.3.12a	TDD additional special subframe configuration / Special subframe pattern 7 with Extended Cyclic Prefix / CRS based transmission scheme	-	X	-
7.1.3.13	TDD additional special subframe configuration / Special subframe pattern 9 with Normal Cyclic Prefix / UE-specific reference signals based transmission scheme	-	X	-
7.1.3.13a	TDD additional special subframe configuration / Special subframe pattern 7 with Extended Cyclic Prefix / UE-specific reference signals based transmission scheme	-	X	-
7.1.4.1	Correct handling of UL assignment/Dynamic case	X	X	-
7.1.4.2	Correct handling of UL assignment / Semi-persistent case	X	X	-
7.1.4.3	Logical channel prioritization handling	X	X	-
7.1.4.4	Correct handling of MAC control information/Scheduling requests and PUCCH	X	X	-
7.1.4.5	Correct handling of MAC control information/Scheduling requests and random access procedure	X	X	-
7.1.4.6	Correct handling of MAC control information/Buffer status/UL data arrive in the UE Tx buffer and retransmission of BSR/Regular BSR	X	X	-
7.1.4.7	Correct handling of MAC control information/Buffer Status/UL resources are allocated/Padding BSR	X	X	-
7.1.4.7a	Correct handling of MAC control information / Buffer Status / UL resources are allocated / Cancellation of Padding BSR	X	X	-
7.1.4.8	Correct handling of MAC control information/Buffer status/Periodic BSR timer expires	X	X	-
7.1.4.10	MAC padding	X	X	-
7.1.4.11	Correct HARQ process handling	X	X	-
7.1.4.12	MAC reset UL	X	X	-
7.1.4.13	MAC PDU header handling	X	X	-
7.1.4.14	Correct HARQ process handling / TTI bundling	X	X	-
7.1.4.15	UE power headroom reporting/Periodic reporting	X	X	-
7.1.4.16	UE power headroom Reporting/DL pathloss change reporting	X	X	-
7.1.4.18	CA / Correct handling of MAC control information / Buffer Status / UL data arrive in the UE Tx buffer / Extended buffer size	X	X	-
7.1.4.19.1	CA / UE power headroom reporting / SCell activation and DL pathloss change reporting / Extended PHR / Intra-band Contiguous	X	X	-
7.1.4.19.2	CA / UE power headroom reporting / SCell activation and DL pathloss change reporting / Extended PHR / Inter-band CA	X	X	-
7.1.4.20.1	CA / Correct handling of MAC control information / Buffer status / Intra-band Contiguous CA	X	X	-
7.1.4.20.2	CA / Correct handling of MAC control information / Buffer status / Inter-band CA	X	X	-
7.1.4.20.3	CA / Correct handling of MAC control information / Buffer status / Intra-band non-Contiguous CA	X		-
7.1.4.21	CA / UE power headroom reporting / Extended PHR	X	X	-
7.1.4.23	Correct HARQ process handling / TTI bundling with enhanced HARQ pattern	X		-
7.1.4.24	Correct HARQ process handling / TTI bundling without resource allocation restriction	X	X	-
7.1.5.1	Inter-TTI PUSCH hopping by uplink grant	X	X	-
7.1.5.2	Predefined intra-TTI PUSCH hopping (N <sub>sb</sub> =1)	X	X	-
7.1.5.3	Predefined intra-TTI PUSCH hopping (N <sub>sb</sub> =2/3/4)	X	X	-
7.1.5.4	Predefined inter-TTI PUSCH hopping (N <sub>sb</sub> =1)	X	X	-
7.1.5.5	Predefined inter-TTI PUSCH hopping (N <sub>sb</sub> =2/3/4)	X	X	-
7.1.6.1	DRX operation/Short cycle not configured/Parameters configured by RRC	X	X	-
7.1.6.2	DRX operation/Short cycle not configured/DRX command MAC control element reception	X	X	-
7.1.6.3	DRX operation / Short cycle configured / Parameters configured by RRC	X	X	-
7.1.6.4	DRX Operation / Short cycle configured / DRX command MAC control element reception	X	X	-
7.1.7.1.1	DL-SCH transport block size selection/DCI format 1/RA type 0	X	X	-
7.1.7.1.2	DL-SCH transport block size selection/DCI format 1/RA type 1	X	X	-
7.1.7.1.3	DL-SCH transport block size selection/DCI format 1A/RA type 2/Localised VRB	X	X	-
7.1.7.1.4	DL-SCH transport block size selection/DCI format 1A/RA type 2/Distributed VRB	X	X	-
7.1.7.1.5	DL-SCH transport block size selection / DCI format 2A / RA type 0 / Two transport blocks enabled / Transport block to codeword swap flag value set to 0	X	X	-
7.1.7.1.6	DL-SCH transport block size selection / DCI format 2A / RA type 1 / Two transport blocks enabled / Transport block to codeword swap flag value set to 1	X	X	-
7.1.7.1.7	DL-SCH transport block size selection / DCI format 1 / RA type 0 / 256QAM	X	X	-
7.1.7.1.8	DL-SCH transport block size selection / DCI format 1 / RA type 1 / 256QAM	X	X	-

Test case	Description	FDD	TDD	T/F
7.1.7.1.11	DL-SCH transport block size selection / DCI format 2A / RA type 0 / Two transport blocks enabled / Transport block to codeword swap flag value set to '0' / 256QAM	X		-
7.1.7.1.12	DL-SCH Transport Block Size selection / DCI format 2A / RA type 1 / Two transport blocks enabled / Transport block to codeword swap flag value set to '1' / 256QAM	X	X	-
7.1.7.2.1	UL-SCH transport block size selection/DCI format 0	X	X	-
7.1.8.1	Periodic RI reporting using PUCCH / Category 1 UE / Transmission mode 3/4	X	X	-
7.1.9.1.1	CA / Activation/Deactivation of SCells / Activation/Deactivation MAC control element reception / sCellDeactivationTimer/ Intra-band Contiguous CA	X	X	-
7.1.9.1.2	CA / Activation/Deactivation of SCells / Activation/Deactivation MAC control element reception / sCellDeactivationTimer/ Inter-band CA	X	X	-
7.1.9.1.3	CA / Activation/Deactivation of SCells / Activation/Deactivation MAC control element reception / sCellDeactivationTimer / Intra-band non-Contiguous CA	X	X	-
7.1.10.1	Sending SR on PUCCH with DMRS generated by using virtual cell identity / nPUCCH-Identity	X	X	-
7.1.10.2	7.1.10.2 Transmitting data on PUSCH with DMRS generated by using virtual cell identity / nPUSCH-Identity	X	X	-
7.2.2.1	UM RLC/Segmentation and reassembly/5-bit SN/Framing info field	X	X	-

7.2.3.17	AM RLC/Re-segmentation RLC PDU/SO, FI, LSF	X	X	-
7.2.3.18	AM RLC/Reassembly/AMD PDU reassembly from AMD PDU segments, Segmentation Offset and Last Segment Flag fields	X	X	-
7.2.3.20	AM RLC/Duplicate detection of RLC PDUs	X	X	-
7.2.3.21	AM RLC/RLC re-establishment at RRC connection reconfiguration including mobilityControlInfo IE	X	X	-
7.3.1.1	Maintenance of PDCP sequence numbers/User plane/RLC AM	X	X	-
7.3.1.2	Maintenance of PDCP sequence numbers/User plane/RLC UM/Short PDCP SN (7 bits)	X	X	-
7.3.1.3	Maintenance of PDCP sequence numbers/User plane/RLC UM/Long PDCP SN (12 bits)	X	X	-
7.3.3.1	Ciphering and deciphering/Correct functionality of EPS AS encryption algorithms/SNOW 3G	X	X	-
7.3.3.2	Ciphering and deciphering/Correct functionality of EPS UP encryption algorithms/SNOW 3G	X	X	-
7.3.3.3	Ciphering and deciphering/Correct functionality of EPS AS encryption algorithms/AES	X	X	-
7.3.3.4	Ciphering and deciphering/Correct functionality of EPS UP encryption algorithms/AES	X	X	-
7.3.3.5	Ciphering and deciphering / Correct functionality of EPS AS encryption algorithms / ZUC	X	X	-
7.3.3.6	Ciphering and deciphering / Correct functionality of EPS AS encryption algorithms / ZUC	X	X	-
7.3.4.1	Integrity protection/Correct functionality of EPS AS integrity algorithms/SNOW 3G	X	X	-
7.3.4.2	Integrity protection/Correct functionality of EPS AS integrity algorithms/AES	X	X	-
7.3.4.3	Integrity protection / Correct functionality of EPS AS integrity algorithms / ZUC	X	X	-
7.3.5.2	PDCP handover/Lossless handover/PDCP sequence number maintenance	X	X	-
7.3.5.3	PDCP handover/Non-lossless handover/PDCP sequence number maintenance	X	X	-

Test case	Description	FDD	TDD	T/F
7.3.5.4	PDCP handover/Lossless handover/PDCP status report to convey the information on missing or acknowledged PDCP SDUs at handover	X	X	-
7.3.5.5	PDCP handover/In-order delivery and duplicate elimination in the downlink	X	X	-
7.3.6.1	PDCP discard	X	X	-
8.1.1.1	RRC/Paging for connection in idle mode	X	X	-
8.1.1.2	RRC/Paging for notification of BCCH modification in idle mode	X	X	-
8.1.1.3	RRC / Paging for connection in idle mode / Multiple paging records	X	X	-
8.1.1.4	RRC / Paging for connection in idle mode / Shared network environment	X	X	-
8.1.1.6	RRC/BCCH modification in connected mode	X	X	-
8.1.1.7	RRC / Paging / EAB active	X	X	-
8.1.2.2	RRC connection establishment/Reject with wait time	X	X	-
8.1.2.3	RRC connection establishment/Return to idle state after T300 timeout	X	X	-
8.1.2.5	RRC connection establishment/0% access probability for MO calls, no restriction for MO signalling	X	X	-
8.1.2.6	RRC connection establishment / Non-zero percent access probability for MO calls, no restriction for MO signalling	X	X	-
8.1.2.7	RRC connection establishment/0% access probability for AC 0 to 9, AC 10 is barred, AC 11 to 15 are not barred, access for UE with access class in the range 11 to 15 is allowed	X	X	-
8.1.2.8	RRC connection establishment / Range of access barring time	X	X	-
8.1.2.9	RRC Connection Establishment / 0% access probability for MO calls, non-zero percent access probability for MO signalling	X	X	-
8.1.2.11	RRC connection establishment of emergency call	X	X	-
8.1.2.12	RRC connection establishment of emergency call / Limited Service	X	X	-
8.1.2.13	RRC connection establishment / 0% access probability for MO calls, 0% access probability for MO signalling	X	X	-
8.1.2.14	RRC connection establishment / High speed flag	X	X	-
8.1.3.1	RRC connection release/Success	X	X	-
8.1.3.4	RRC connection release/Redirection to another E-UTRAN frequency	X	X	-
8.1.3.5	RRC connection release/Success/With priority information	X	X	-
8.1.3.6	RRC connection release/Redirection from E-UTRAN to UTRAN	X	X	X
8.1.3.6a	RRC connection release / Redirection from E-UTRAN to UTRAN / Pre-redirection info	X	X	X
8.1.3.7	RRC connection release / Redirection from UTRAN to E-UTRAN	X	X	X
8.1.3.8	RRC connection release / Redirection from E-UTRAN to GERAN	X	X	-
8.1.3.9	RRC connection release / Redirection from E-UTRAN to HRPD	X	X	-
8.1.3.10	RRC connection release / Redirection from E-UTRAN to 1xRTT	X	X	-
8.1.3.11	RRC connection release / Redirection to another E-UTRAN band	X	X	-
8.1.3.11a	RRC connection release / Redirection to another E-UTRAN band / Between FDD and TDD	X	X	-
8.1.3.12	RRC connection release / Success / With priority information / Inter-band	X	X	-
8.1.3.12a	RRC connection release / Success / With priority information / Inter-band / Between FDD and TDD	X	X	-
8.1.3.12b	RRC connection release / Success / With priority information / Inter-band(Single frequency operation in source band)	X	X	-
8.2.1.1	RRC connection reconfiguration/Radio bearer establishment for transition from RRC_IDLE to RRC_CONNECTED/Success/Default bearer/Early bearer establishment	X	X	-
8.2.1.3	RRC connection reconfiguration/Radio bearer establishment/Success/Dedicated bearer	X	X	-
8.2.1.5	RRC connection reconfiguration / Radio bearer establishment for transition from RRC_IDLE to RRC_CONNECTED / Success / Latency check	X	X	-
8.2.1.6	RRC connection reconfiguration / Radio bearer establishment for transition from RRC_IDLE to RRC_CONNECTED / Success / Latency check / SecurityModeCommand and RRCConnectionReconfiguration transmitted in the same TTI	X	X	-
8.2.1.7	RRC connection reconfiguration/Radio bearer establishment/Success/SRB2	X	X	-
8.2.1.8	RRC connection reconfiguration / Radio bearer establishment / Success / Dedicated bearer / ROHC configured	X	X	-
8.2.2.1	RRC connection reconfiguration/Radio resource reconfiguration/Success	X	X	-
8.2.2.2	RRC connection reconfiguration/SRB/DRB reconfiguration/Success	X	X	-
8.2.2.3.1	CA / RRC connection reconfiguration / SCell addition/ modification/release / Success / Intra-band contiguous CA	X	X	-
8.2.2.3.2	CA / RRC connection reconfiguration / SCell addition/ modification/release / Success / Inter-band CA	X	X	-
8.2.2.3.3	CA / RRC connection reconfiguration / SCell addition/ modification/release / Success / Intra-band non-contiguous CA	X	X	-
8.2.2.4.1	CA / RRC connection reconfiguration / SCell SI change / Success / Intra-band Contiguous CA	X	X	-
8.2.2.4.2	CA / RRC connection reconfiguration / SCell SI change / Success / Inter-band CA	X	X	-

Test case	Description	FDD	TDD	T/F
8.2.2.4.3	CA / RRC connection reconfiguration / SCell SI change / Success / Intra-band non-contiguous CA	X	X	-
8.2.2.5.1	CA / RRC connection reconfiguration / SCell addition without UL / Success / Intra-band contiguous CA	X	X	-
8.2.2.5.2	CA / RRC connection reconfiguration / SCell addition without UL / Success / Inter-band CA	X	X	-
8.2.2.5.3	CA / RRC connection reconfiguration / SCell addition without UL / Success / Intra-band non-contiguous CA	X	X	-
8.2.2.6.1	RRC connection reconfiguration/ UE Assistance Information/power preference indication setup and release	X	X	-
8.2.2.6.2	RRC connection reconfiguration/ UE Assistance Information/power preference indication release on connection re-establishment	X	X	-
8.2.2.6.3	RRC connection reconfiguration/ UE Assistance Information/T340 running	X	X	-
8.2.2.7.1	CA / RRC connection reconfiguration / sTAG addition/ modification/release / Success / Intra-band Contiguous CA	X	X	X
8.2.2.7.2	CA / RRC connection reconfiguration / sTAG addition/ modification/release / Success / Inter-band CA	X	X	-
8.2.2.7.3	CA / RRC connection reconfiguration / sTAG addition/ modification/release / Success / Intra-band non-contiguous CA		X	-
8.2.2.8	RRC connection reconfiguration / SIB1 information / Success	X	X	-
8.2.3.1	RRC connection reconfiguration/Radio bearer release/Success	X	X	-
8.2.4.1	RRC connection reconfiguration/Handover/Success/Dedicated preamble	X	X	-
8.2.4.2	RRC connection reconfiguration/Handover/Success/Common preamble	X	X	-
8.2.4.3	RRC connection reconfiguration/Handover/Success/Intra-cell/Security reconfiguration	X	X	-
8.2.4.4	RRC connection reconfiguration/Handover/Failure/Intra-cell/Security reconfiguration	X	X	-
8.2.4.5	RRC connection reconfiguration/Handover/All parameters included	X	X	-
8.2.4.6	RRC connection reconfiguration/Handover/Success/Inter-frequency	X	X	-
8.2.4.7	RRC connection reconfiguration/Handover/Failure/Re-establishment successful	X	X	-
8.2.4.8	RRC connection reconfiguration / Handover / Failure / Re-establishment failure	X	X	-
8.2.4.9	RRC connection reconfiguration/Handover/Inter-band blind handover/Success	X	X	-
8.2.4.10	RRC connection reconfiguration / Handover / Between FDD and TDD	X	X	-
8.2.4.12	RRC connection reconfiguration / Handover / Setup and release of MIMO	X	X	-
8.2.4.13	RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band	X	X	-
8.2.4.13a	RRC connection reconfiguration / Handover / Success (with measurement) / Inter-band / between FDD and TDD	X	X	-
8.2.4.14	RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band	X	X	-
8.2.4.14a	RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band / between FDD and TDD	X	X	-
8.2.4.15	RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band	X	X	-
8.2.4.15a	RRC connection reconfiguration / Handover / Failure / Re-establishment failure / Inter-band / Between FDD and TDD	X	X	-
8.2.4.16.1	CA / RRC connection reconfiguration / Setup and Change of MIMO / Intra-band Contiguous CA	X	X	-
8.2.4.16.2	CA / RRC connection reconfiguration / Setup and Change of MIMO / Inter-band CA	X	X	-
8.2.4.16.3	CA / RRC connection reconfiguration / Setup and Change of MIMO / Intra-band non-contiguous CA	X	X	-
8.2.4.17.1	CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Intra-band contiguous CA	X	X	-
8.2.4.17.2	CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Inter-band CA	X	X	-
8.2.4.17.3	CA / RRC connection reconfiguration / Handover / Success / PCell Change and SCell addition / Intra-band non-contiguous CA	X	X	-
8.2.4.18.1	CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra- band contiguous CA	X	X	-
8.2.4.18.2	CA / RRC connection reconfiguration / Handover / Success / SCell release / Inter- band CA	X	X	-
8.2.4.18.3	CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra- band non-contiguous CA	X	X	-
8.2.4.19.1	CA / RRC connection reconfiguration / Handover / Success / PCell Change/ Scell no Change / Intra-band contiguous CA	X	X	-
8.2.4.19.2	CA / RRC connection reconfiguration / Handover / Success / PCell Change/ Scell no Change / Inter-band CA	X	X	-
8.2.4.19.3	CA / RRC connection reconfiguration / Handover / Success / PCell Change/ Scell no Change / Intra-band non-contiguous CA	X	X	-

Test case	Description	FDD	TDD	T/F
8.2.4.20.1	CA / RRC connection reconfiguration / Handover / Success / Scell Change / Intra-band Contiguous CA	X	X	-
8.2.4.20.2	CA / RRC connection reconfiguration / Handover / Success / Scell Change / Inter-band CA	X	X	-
8.2.4.20.3	CA / RRC connection reconfiguration / Handover / Success / SCell Change / Intra-band non-Contiguous CAChange / Intra-band non-contiguous CA	X	X	-
8.2.4.21.1	CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band Contiguous CA	X	X	-
8.2.4.21.2	CA / RRC connection reconfiguration / Handover / Success / SCell release / Inter-band CA	X	X	-
8.2.4.21.3	CA / RRC connection reconfiguration / Handover / Success / SCell release / Intra-band non-contiguous CA	X	X	-
8.2.4.22	RRC connection reconfiguration / Handover / MFBI / Target cell broadcasting information disregarded by the UE	X	X	-
8.2.4.23.1	CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Intra-band Contiguous CA	X	X	-
8.2.4.23.2	CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Inter-band CA	X	X	-
8.2.4.23.3	CA / RRC connection reconfiguration / Handover / Failure / Re-establishment successful / Intra-band non-Contiguous CA	X	X	-
8.3.1.1	Measurement configuration control and reporting/Intra E-UTRAN measurements/Event A1	X	X	-
8.3.1.2	Measurement configuration control and reporting/Intra E-UTRAN measurements/Event A2	X	X	-
8.3.1.3	Measurement configuration control and reporting/Intra E-UTRAN measurements/Two simultaneous events A3 (intra and inter-frequency measurements)	X	X	-
8.3.1.3a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (intra and inter-frequency measurements) / RSRQ based measurements	X	X	-
8.3.1.4	Measurement configuration control and reporting/Intra E-UTRAN measurements/Periodic reporting (intra and inter-frequency measurements)	X	X	-
8.3.1.5	Measurement configuration control and reporting/Intra E-UTRAN measurements/Two simultaneous event A3 (intra-frequency measurements)	X	X	-
8.3.1.6	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-frequency measurements)	X	X	-
8.3.1.7	Measurement configuration control and reporting/Intra E-UTRAN measurements/Blacklisting	X	X	-
8.3.1.8	Measurement configuration control and reporting/Intra E-UTRAN measurements/Handover/IE measurement configuration present	X	X	-
8.3.1.9	Measurement configuration control and reporting/Intra E-UTRAN measurements/Intra-frequency handover/IE measurement configuration not present	X	X	-
8.3.1.9a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Intra-frequency handover / IE measurement configuration not present / Single Frequency operation	X	X	-
8.3.1.10	Measurement configuration control and reporting/Intra E-UTRAN measurements/Inter-frequency handover/IE measurement configuration not present	X	X	-
8.3.1.11	Measurement configuration control and reporting/Intra E-UTRAN measurements/Continuation of the measurements after RRC connection re-establishment	X	X	-
8.3.1.11a	Measurement configuration control and reporting / Intra Frequency measurements / Continuation of the measurements after RRC connection re-establishment / Single Frequency operation	X	X	-
8.3.1.12	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (Inter-band measurements)	X	X	-
8.3.1.12a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A3 (inter-band measurements) / Between FDD and TDD	X	X	-
8.3.1.13	Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements)	X	X	-
8.3.1.13a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Periodic reporting (intra-frequency and inter-band measurements) / Between FDD and TDD	X	X	-
8.3.1.14	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (Inter-band measurements)	X	X	-
8.3.1.14a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Two simultaneous events A2 and A3 (inter-band measurements) / Between FDD and TDD	X	X	-
8.3.1.15	Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present	X	X	-
8.3.1.15a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Inter-band handover / IE measurement configuration not present / Between FDD and TDD	X	X	-
8.3.1.16	Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment / Inter-band	X	X	-

Test case	Description	FDD	TDD	T/F
8.3.1.16a	Measurement configuration control and reporting / Intra E-UTRAN measurements / Continuation of the measurements after RRC connection re-establishment / Inter-band / Between FDD and TDD	X	X	-
8.3.1.17.1	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6 / Intra-band contiguous CA	X	X	-
8.3.1.17.2	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6 / Inter-band CA	X	X	-
8.3.1.17.3	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A6 / Intra-band non-contiguous CA	X	X	-
8.3.1.18.1	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Intra-band contiguous CA	X	X	-
8.3.1.18.2	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Inter-band CA	X	X	-
8.3.1.18.3	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Additional measurement reporting / Intra-band non-contiguous CA	X	X	-
8.3.1.19	eICIC / Measurement configuration control and reporting / CSI change	X	X	-
8.3.1.21	eICIC / Measurement configuration control and reporting/Event A3 Handover / Neighbor RSRP measurement configuration change	X	X	-
8.3.1.22.1	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1 / Event A2 / Intra-band Contiguous CA	X	X	-
8.3.1.22.2	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1 / Event A2 / Inter-band CA	X	X	-
8.3.1.22.3	CA / Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A1/Event A2 / Intra-band non-contiguous CA	X	X	-
8.3.1.23	Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A4	X	X	-
8.3.1.24	Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5	X	X	-
8.3.1.25	Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 / RSRQ based measurements	X	X	-
8.3.1.26	Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 (Inter-frequency measurements)	X	X	-
8.3.1.27	Measurement configuration control and reporting / Intra E-UTRAN measurements / Event A5 (Inter-frequency measurements) / RSRQ based measurements	X	X	-
8.3.1.28	eICIC / Measurement configuration control and reporting/Event A1 / RSRP and RSRQ measurement / Serving ABS	X	X	-
8.3.2.1	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of GERAN cells	X	X	-
8.3.2.2	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of GERAN cells	X	X	-
8.3.2.3	Measurement configuration control and reporting/Inter-RAT measurements/Event B2/Measurement of UTRAN cells	X	X	X
8.3.2.3a	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of UTRAN cells / RSRQ based measurements	X	X	X
8.3.2.4	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of UTRAN cells	X	X	X
8.3.2.5	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurements of E-UTRAN, UTRAN and GERAN cells	X	X	X
8.3.2.6	Measurement configuration control and reporting / Inter-RAT measurements / Simultaneous A2 and two B2 / Measurements of E-UTRAN, UTRAN and GERAN cells	X	X	X
8.3.2.7	Measurement configuration control and reporting/Inter-RAT measurements/Event B2/Measurement of HRPD cells	X	X	-
8.3.2.8	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of HRPD cells	X	X	-
8.3.2.9	Measurement configuration control and reporting / Inter-RAT measurements / Event B2 / Measurement of 1xRTT cells	X	X	-
8.3.2.10	Measurement configuration control and reporting / Inter-RAT measurements / Periodic reporting / Measurement of 1xRTT cells	X	X	-
8.3.2.11	Measurement configuration control and reporting / Inter-RAT Measurements / Event B1 / Measurement of UTRAN cells	X	X	X
8.3.3.1	Measurement configuration control and reporting/SON/ANR/CGI reporting of E-UTRAN cell	X	X	-
8.3.3.2	Measurement configuration control and reporting / SON / ANR / CGI reporting of UTRAN cell	X		X
8.3.3.3	Measurement configuration control and reporting / SON / ANR / CGI reporting of GERAN cell	X	X	-

Test case	Description	FDD	TDD	T/F
8.3.3.4	Measurement configuration control and reporting / SON / ANR / CGI reporting of HRPD cell	X	X	-
8.3.4.1	Intra-frequency SI acquisition / CSG cell and non-CSG cell	X	X	-
8.3.4.2	Inter-freq SI acquisition / Non-member hybrid cell	X	X	-
8.3.4.3	Inter-freq SI acquisition / Member hybrid cell	X	X	-
8.3.4.4	Inter-RAT SI acquisition / RRC_CONNECTED / UMTS member CSG cell	X	X	X
8.3.4.5	Inter-frequency E-UTRAN FDD – FDD / CSG Proximity Indication	X	-	-
8.4.1.2	Inter-RAT handover / From E-UTRA to UTRA PS / Data	X	X	X
8.4.1.4	Inter-RAT handover / From E-UTRA to UTRA HSPA / Data	X	X	X
8.4.1.5	Inter-RAT handover / from E-UTRA to UTRA HSUPA/HSDPA / Data	X		X
8.4.2.2	Inter-RAT handover / From UTRA PS to E-UTRA / Data	X	X	X
8.4.2.4	Inter-RAT handover / From UTRA HSPA to E-UTRA / Data	X	X	X
8.4.2.7.1	CA / RRC connection reconfiguration / Handover UTRAN to E-UTRAN/ Success / SCell addition / Intra-band Contiguous CA	X	X	X
8.4.2.7.2	CA / RRC connection reconfiguration / Handover UTRAN to E-UTRAN/ Success / SCell addition / Inter-band CA	X		X
8.4.2.7.3	CA / RRC connection reconfiguration / Handover UTRAN to E-UTRAN/ Success / SCell addition / Intra-band non-contiguous CA	X	X	X
8.4.3.2	Inter-RAT cell change order / From E-UTRA data RRC_CONNECTED to GPRS / Without NACC	X	X	-
8.4.3.3	Inter-RAT cell change order / From E-UTRA data to GPRS / With NACC	X	X	-
8.4.7.3	Pre-registration at 1xRTT and inter-RAT handover / CS fallback from E-UTRA RRC_IDLE to 1xRTT	X	X	-
8.4.7.4	Pre-Registration at 1xRTT and inter-RAT handover / CS fallback caused by addition of CS service / From E-UTRA Data to 1xRTT	X	X	-
8.4.7.5	Pre-registration at 1xRTT and inter-RAT handover / Enhanced CS fallback from E-UTRA RRC_IDLE to 1xRTT / MT call	X		
8.4.7.6	Pre-registration at 1xRTT and inter-RAT handover / Enhanced CS fallback from E-UTRA RRC_CONNECTED to 1xRTT / MO call	X	X	-
8.4.7.7	Pre-registration at 1xRTT and inter-RAT handover / Enhanced CS fallback from E-UTRA RRC_CONNECTED to e1XCSEB ECAM-based 1xRTT / MO call	X	X	-
8.4.7.8	Pre-registration at 1xRTT and inter-RAT Handover / Enhanced CS fallback from E-UTRA RRC_CONNECTED to 1xRTT / ECAM-based MT call	X	X	-
8.4.7.9	Pre-registration at 1xRTT and inter-RAT Handover / Enhanced CS fallback from E-UTRA RRC_CONNECTED to 1xRTT / Extended Service Reject / MO call	X	X	-
8.4.7.10	Pre-registration at 1xRTT and inter-RAT Handover / Enhanced CS fallback from E-UTRA call failure – GCSNA with Reorder Order	X	X	-
8.5.1.1	Radio link failure/RRC connection re-establishment Success	X	X	-
8.5.1.2	Radio link failure/T301 expiry	X	X	-
8.5.1.3	Radio link failure/T311 expiry	X	X	-
8.5.1.4	Radio link failure / RRC connection re-establishment reject	X	X	-
8.5.1.5	Radio link failure/Radio link recovery while T310 is running	X	X	-
8.5.1.6	Radio link failure / T311 expiry / Dedicated RLF timer	X	X	-
8.5.1.7.1	CA / No Radio link failure on Scell/ RRC Connection Continues on PCell / Intra-band Contiguous CA	X	X	-
8.5.1.7.2	CA / No Radio link failure on Scell/ RRC Connection Continues on PCell / Inter-band CA	X	X	-
8.5.1.7.3	CA / No Radio link failure on Scell/ RRC Connection Continues on PCell / Intra-band non-contiguous CA	X	X	-
8.5.2.1	Redirection to E-UTRAN / From UTRAN upon reception of RRC CONNECTION REJECT	X	X	X
8.5.4.1	UE capability transfer/Success	X	X	-
8.5.4.2	Network-requested CA Band Combination Capability Signalling / Number of UE supported CA band combinations less than or equal to 128	X	X	-
8.5.4.4	UE Capability Transfer/ Success/ UE Cat 0/ UE Paging Info	X		-
8.6.1.1	Immediate MDT / Reporting / Location information	X	X	-
8.6.1.2	Immediate MDT / Reporting / Location information / Request from eNB / Event A2	X	X	-
8.6.2.1	Logged MDT / Intra-frequency measurement, logging and reporting	X	X	-
8.6.2.2	Logged MDT / Inter-frequency measurement, logging and reporting	X	X	-
8.6.2.3	Logged MDT / Logging and reporting / Limiting area scope	X	X	-
8.6.2.3a	Logged MDT / Logging and reporting / Limiting area scope / TAC list with PLMN identity	X	X	
8.6.2.4	Logged MDT / Logging and reporting / Indication of logged measurements at E-UTRA handover	X	X	-
8.6.2.5	Logged MDT / Logging and reporting / Indication of logged measurements at E-UTRA re-establishment	X	X	-
8.6.2.6	Logged MDT / Release of logged MDT measurement configuration / Expire of duration timer	X	X	-

Test case	Description	FDD	TDD	T/F
8.6.2.7	Logged MDT / Release of logged MDT measurement configuration / Reception of new logged measurement configuration, Detach or UE power off	X	X	-
8.6.2.8	Logged MDT / Maintaining logged measurement configuration / UE state transitions and mobility	X	X	-
8.6.2.9	Logged MDT / Location information	X	X	-
8.6.2.10	Logged MDT / Logging and reporting / Reporting at RRC connection establishment / PLMN list	X	X	-
8.6.2.11	Logged MDT / Logging and reporting / Reporting at intra LTE handover / PLMN list	X	X	-
8.6.2.12	Logged MDT / Logging and reporting / Reporting at RRC connection re-establishment / PLMN list	X	X	-
8.6.3.1	Logged MDT / UTRAN Inter-RAT measurement, logging and reporting	X		X
8.6.3.4	Logged MDT / Logging and reporting / Reporting at UTRAN Inter-RAT handover / PLMN list	X		X
8.6.4.1	Radio Link Failure logging / Reporting of Intra-frequency measurements	X	X	-
8.6.4.2	Radio Link Failure logging / Reporting of Inter-frequency measurements	X	X	-
8.6.4.3	Radio Link Failure logging / Reporting at RRC connection establishment and reestablishment	X	X	-
8.6.4.4	Radio Link Failure logging / Reporting at E-UTRA handover	X	X	-
8.6.4.5	Radio Link Failure logging / Reporting of ECGI of the PCell	X	X	-
8.6.4.7	Radio Link Failure logging / Location information	X	X	-
8.6.4.8	Radio Link Failure logging / Logging and reporting / Reporting at RRC connection establishment / PLMN list	X	X	-
8.6.4.9	Radio Link Failure logging / Logging and reporting / Reporting at intra LTE handover / PLMN list	X	X	-
8.6.4.10	Radio Link Failure logging / Logging and reporting / Reporting at RRC connection re-establishment / PLMN list	X	X	-
8.6.5.1	Radio Link Failure logging / Reporting at UTRAN Inter-RAT handover	X	X	X
8.6.5.1a	Radio Link Failure logging / Reporting at UTRAN Inter-RAT handover / PLMN list	X		X
8.6.5.4	Radio Link Failure logging / Reporting of selected UTRA cell	X	X	X
8.6.6.1	Handover Failure logging / Reporting of Intra-frequency measurements	X	X	-
8.6.6.2	Handover Failure logging / Reporting of Inter-frequency measurements	X	X	-
8.6.6.4	Handover Failure logging / Location information	X	X	-
8.6.6.5	Handover Failure logging / Logging and reporting / Reporting at RRC connection establishment / PLMN list	X	X	-
8.6.6.6	Handover Failure logging / Logging and reporting / Reporting at intra LTE handover / PLMN list	X	X	-
8.6.6.7	Handover Failure logging / Logging and reporting / Reporting at RRC connection re-establishment / PLMN list	X	X	-
8.6.7.1	Handover Failure logging / Reporting of UTRAN Inter-RAT measurements	X	X	X
8.6.7.2	Handover Failure logging / Reporting of GERAN Inter-RAT measurements	X	X	-
8.6.7.3	Handover Failure logging / Reporting of CDMA2000 Inter-RAT measurements	X		-
8.6.7.4	Handover Failure logging / Reporting at UTRAN Inter-RAT handover / PLMN list	X	X	
8.6.8.1	Connection Establishment Failure logging / Logging and reporting / T300 expiry	X	X	-
8.6.8.2	Connection Establishment Failure logging / Logging and reporting / Reporting at intra-LTE handover	X	X	-
8.6.8.3	Connection Establishment Failure logging / Logging and reporting / Reporting at RRC connection re-establishment	X	X	-
8.6.8.4	Connection Establishment Failure logging / Logging and reporting / Location Information	X	X	-
8.6.8.5	Connection Establishment Failure logging / Logging and reporting / Reporting of Intra-frequency measurements	X	X	-
8.6.8.6	Connection Establishment Failure logging / Logging and reporting / Reporting of Inter-frequency measurements	X	X	-
8.6.9.1	Connection Establishment Failure logging / Logging and reporting / Reporting at UTRAN Inter-RAT handover	X	X	X
8.6.9.2	Connection Establishment Failure logging / Logging and reporting / Reporting of UTRAN Inter-RAT measurements	X	X	X
8.6.9.3	Connection Establishment Failure logging / Logging and reporting / Reporting of GERAN Inter-RAT measurements	X	X	-
8.6.10.1	Inter-RAT Immediate MDT / Reporting / Location information / Event B2	X	X	X
8.6.11.1	RACH Optimisation	X	X	-
8.7.1	Inter-RAT / ANR measurement, logging and reporting / E-UTRAN cell	X		
9.1.2.1	Authentication accepted	X	X	-
9.1.2.3	Authentication not accepted by the network, GUTI used, authentication reject and re-authentication	X	X	-
9.1.2.4	Authentication not accepted by the UE/MAC code failure	X	X	-
9.1.2.5	Authentication not accepted by the UE/SQN failure	X	X	-

Test case	Description	FDD	TDD	T/F
9.1.2.6	Abnormal cases/Network failing the authentication check	X	X	-
9.1.2.7	Authentication not accepted by the UE/ non-EPS authentication unacceptable	X	X	-
9.1.3.1	NAS security mode command accepted by the UE	X	X	-
9.1.3.2	NAS security mode command not accepted by the UE	X	X	-
9.1.3.3	No emergency bearer service / NAS security mode command with EIA0 not accepted by the UE	X	X	-
9.1.4.2	Identification procedure/IMEI requested	X	X	-
9.1.5.1	EMM information procedure	X	X	-
9.2.1.1.1	Attach Procedure/Success/Valid GUTI	X	X	-
9.2.1.1.1a	Attach/Success/Last visited TAI, TAI list and equivalent PLMN list handling	X	X	-
9.2.1.1.1b	Attach Procedure / Success / Last visited TAI, TAI list and equivalent PLMN list handling / Single Frequency operation	X	X	-
9.2.1.1.2	Attach Procedure/Success/With IMSI/GUTI reallocation	X	X	-
9.2.1.1.2a	AttachWithIMSI configured / Selected PLMN is neither the registered PLMN nor in the list of equivalent PLMNs / Success	X	X	-
9.2.1.1.7	Attach/Success/List of equivalent PLMNs in the ATTACH ACCEPT message	X	X	-
9.2.1.1.7a	Attach Procedure / Success / List of equivalent PLMNs in the ATTACH ACCEPT message / Single Frequency operation	X	X	-
9.2.1.1.7b	Attach / Success / native GUMMEI	X	X	-
9.2.1.1.7c	Attach / Success / PSM	X	X	-
9.2.1.1.9	Attach/Rejected/IMSI invalid	X	X	-
9.2.1.1.10	Attach/Rejected/Illegal ME	X	X	-
9.2.1.1.11	Attach / Rejected / EPS services and non-EPS services not allowed	X	X	X
9.2.1.1.12	Attach / Rejected / EPS services not allowed	X	X	X

9.2.1.1.14	Attach/Rejected/Tracking area not allowed	X	X	-
9.2.1.1.15	Attach/Rejected/Roaming not allowed in this tracking area	X	X	-
9.2.1.1.15a	Attach / Rejected / Roaming not allowed in this tracking area / Single Frequency operation	X	X	-
9.2.1.1.16	Attach/Rejected/EPS services not allowed in this PLMN	X	X	-
9.2.1.1.16a	Attach / Rejected / EPS services not allowed in this PLMN / Single Frequency operation	X	X	--
9.2.1.1.17	Attach/Rejected/No suitable cells in tracking area	X	X	-
9.2.1.1.18	Attach / Rejected / Not authorized for this CSG	X	X	-
9.2.1.1.19	Attach/Abnormal case/Failure due to non integrity protection	X	X	-
9.2.1.1.20	Attach/Abnormal case/Access barred because of access class barring or NAS signalling connection establishment rejected by the network	X	X	-
9.2.1.1.21	Attach/Abnormal case/Success after several attempts due to no network response	X	X	-
9.2.1.1.22	Attach/Abnormal case/Unsuccessful attach after 5 attempts	X	X	-
9.2.1.1.23	Attach/Abnormal case/Repeated rejects for network failures	X	X	-
9.2.1.1.24	Attach/Abnormal case/Change of cell into a new tracking area	X	X	-
9.2.1.1.25	Attach/Abnormal case/Mobile originated detach required	X	X	-
9.2.1.1.26	Attach/Abnormal case/Detach procedure collision	X	X	-
9.2.1.1.27	Attach / Abnormal case / Network reject with Extended Wait Timer	X	X	-
9.2.1.1.27a	Attach Procedure / EAB broadcast handling / ExtendedAccessBarring configured in the UE	X	X	-
9.2.1.1.28	Attach / Success / IMS	X	X	-
9.2.1.1.28a	Attach / Success / IMS / Second PDN	X	X	-
9.2.1.1.29	Attach / Rejected / IMEI not accepted	X	X	-
9.2.1.1.30	Attach / Abnormal case / ESM failure	X	X	-
9.2.1.2.1	Combined attach/Success/EPS and non-EPS services	X	X	-
9.2.1.2.1b	Combined attach / Success / SMS only	X	X	X
9.2.1.2.1c	Combined attach procedure / Success / CS Fallback not preferred	X	X	X
9.2.1.2.1d	Combined attach procedure / Success / EPS and CS Fallback not preferred / data centric UE	X	X	X
9.2.1.2.2	Combined attach / Success / EPS services only / IMSI unknown in HSS	X	X	-
9.2.1.2.3	Combined attach / Success / EPS services only / MSC temporarily not reachable	X	X	-
9.2.1.2.4	Combined attach/Success/EPS services only/CS domain not available	X	X	-
9.2.1.2.4a	Successful combined attach procedure / EPS service only / congestion	X	X	-
9.2.1.2.5	Combined attach / Rejected / IMSI invalid	X	X	X
9.2.1.2.6	Combined attach / Rejected / Illegal ME	X	X	X
9.2.1.2.7	Combined attach / Rejected / EPS services and non-EPS services not allowed	X	X	X
9.2.1.2.8	Combined attach / Rejected / EPS services not allowed	X	X	X
9.2.1.2.9	Combined attach / Rejected / PLMN not allowed	X	X	X
9.2.1.2.10	Combined attach / Rejected / Tracking area not allowed	X	X	-

Test case	Description	FDD	TDD	T/F
9.2.1.2.11	Combined attach / Rejected / Roaming not allowed in this tracking area	X	X	X
9.2.1.2.12	Combined attach / Rejected / EPS services not allowed in this PLMN	X	X	-
9.2.1.2.13	Combined attach / Rejected / No suitable cells in tracking area	X	X	X
9.2.1.2.14	Combined attach / Rejected / Not authorized for this CSG	X	X	-
9.2.1.2.15	Combined attach / Abnormal case / Handling of the EPS attach attempt counter	X	X	X
9.2.2.1.1	UE initiated detach/UE switched off	X	X	-
9.2.2.1.2	UE initiated detach/USIM removed from the UE	X	X	-
9.2.2.1.3	UE initiated detach/EPS capability of the UE is disabled	X	X	X
9.2.2.1.4	UE initiated detach / detach for non-EPS services	X	X	-
9.2.2.1.6	UE initiated detach/Abnormal case/Local detach after 5 attempts due to no network response	X	X	-
9.2.2.1.7	UE initiated detach/Abnormal case/Detach procedure collision	X	X	-
9.2.2.1.8	UE initiated detach/Abnormal case/Detach and EMM common procedure collision	X	X	-
9.2.2.1.9	UE initiated detach/Abnormal case/Change of cell into a new tracking area	X	X	-
9.2.2.1.10	UE initiated detach / Mapped security context	X	X	X
9.2.2.2.1	NW initiated detach/Re-attach required	X	X	-
9.2.2.2.2	NW initiated detach/IMSI detach	X	X	-
9.2.2.2.14	NW initiated detach/Abnormal case/EMM cause not included	X	X	-
9.2.3.1.1	Normal tracking area update/Accepted	X	X	-
9.2.3.1.1a	Normal tracking area update / Accepted / PSM	X	X	-
9.2.3.1.4	Normal tracking area update/List of equivalent PLMNs in the TRACKING AREA UPDATE ACCEPT message	X	X	-
9.2.3.1.5	Periodic tracking area update/Accepted	X	X	-
9.2.3.1.5a	Periodic tracking area update / Accepted / Per-device timer	X	X	-
9.2.3.1.5b	Periodic tracking area update / Accepted / PSM / T3312 Extended Value	X	X	-
9.2.3.1.6	Normal tracking area update / UE with ISR active moves to E-UTRAN	X	X	X
9.2.3.1.8	UE receives an indication that the RRC connection was released with cause "load balancing TAU required"	X	X	-
9.2.3.1.8a	Normal tracking area update / low priority override	X	X	-
9.2.3.1.8b	Normal tracking area update / EAB active	X	X	-
9.2.3.1.9	Normal tracking area update / Correct handling of CSG list	X	X	-
9.2.3.1.9a	Normal tracking area update/NAS signalling connection recovery	X	X	-
9.2.3.1.10	Normal tracking area update / Rejected / IMSI invalid	X	X	X
9.2.3.1.11	Normal tracking area update / Rejected / Illegal ME	X	X	X
9.2.3.1.12	Normal tracking area update / Rejected / EPS service not allowed	X	X	X
9.2.3.1.13	Normal tracking area update/Rejected/UE identity cannot be derived by the network	X	X	-
9.2.3.1.14	Normal tracking area update/Rejected/UE implicitly detached	X	X	-
9.2.3.1.15	Normal tracking area update / Rejected / PLMN not allowed	X	X	X
9.2.3.1.15a	Normal tracking area update / Rejected / PLMN not allowed / Single Frequency operation	X	X	X
9.2.3.1.16	Normal tracking area update/Rejected/Tracking area not allowed	X	X	-
9.2.3.1.17	Normal tracking area update / Rejected / Roaming not allowed in this tracking area	X	X	X
9.2.3.1.18	Normal tracking area update / Rejected / EPS services not allowed in this PLMN	X	X	X
9.2.3.1.18a	Normal tracking area update / Rejected / EPS services not allowed in this PLMN / Single Frequency operation	X	X	X
9.2.3.1.19	Normal tracking area update/Rejected/No suitable cells in tracking area	X	X	-
9.2.3.1.20	Normal tracking area update / Rejected / Not authorized for this CSG	X	X	-
9.2.3.1.20a	Normal tracking area update / Rejected / Congestion	X	X	-
9.2.3.1.22	Normal tracking area update / Abnormal case / access barred due to access class control or NAS signalling connection establishment rejected by the network	X	X	-
9.2.3.1.23	Normal tracking area update/Abnormal case/Success after several attempts due to no network response/TA belongs to TAI list and status is UPDATED	X	X	-
9.2.3.1.25	Normal tracking area update/Abnormal case/Failure after 5 attempts due to no network response	X	X	-
9.2.3.1.26	Normal tracking area update/Abnormal case/TRACKING AREA UPDATE REJECT	X	X	-
9.2.3.1.27	Normal tracking area update/Abnormal case/Change of cell into a new tracking area	X	X	-
9.2.3.1.28	Normal tracking area update/Abnormal case/Tracking area updating and detach procedure collision	X	X	-
9.2.3.2.1	Combined tracking area update/Successful	X	X	-
9.2.3.2.1a	Combined tracking area update / Successful / Check of last visited TAI and handling of TAI list, LAI and TMSI	X	X	X
9.2.3.2.1b	Combined tracking area update / Success / SMS only	X	X	X
9.2.3.2.1c	Combined tracking area update / Success / CS Fallback not preferred	X	X	X
9.2.3.2.2	Combined tracking area update / Successful for EPS services only / IMSI unknown in HSS	X	X	-

Test case	Description	FDD	TDD	T/F
9.2.3.2.3	Combined tracking area update / Successful for EPS services only / MSC temporarily not reachable	X	X	X
9.2.3.2.4	Combined tracking area update / Successful for EPS services only / CS domain not available	X	X	-
9.2.3.2.4a	Combined tracking area update / Successful for EPS services only / congestion	X	X	-
9.2.3.2.5	Combined tracking area update / Rejected / IMSI invalid	X	X	X
9.2.3.2.6	Combined tracking area update / Rejected / Illegal ME	X	X	X
9.2.3.2.7	Combined tracking area update / Rejected / EPS services and non-EPS services not allowed	X	X	X
9.2.3.2.8	Combined tracking area update / Rejected / EPS services not allowed	X	X	X
9.2.3.2.9	Combined tracking area update / Rejected / UE identity cannot be derived by the network	X	X	X
9.2.3.2.10	Combined tracking area update / Rejected / UE implicitly detached	X	X	-
9.2.3.2.11	Combined tracking area update / Rejected / PLMN not allowed	X	X	X
9.2.3.2.12	Combined tracking area update / Rejected / Tracking area not allowed	X	X	-
9.2.3.2.13	Combined tracking area update / Rejected / Roaming not allowed in this tracking area	X	X	X
9.2.3.2.14	Combined tracking area update / Rejected / EPS services not allowed in this PLMN	X	X	X
9.2.3.2.15	Combined tracking area update / Rejected / No suitable cells in tracking area	X	X	-
9.2.3.2.16	Combined tracking area update / Rejected / Not authorized for this CSG	X	X	-
9.2.3.2.17	Combined tracking area update / Abnormal case / handling of the EPS tracking area updating attempt counter	X	X	-
9.2.3.3.1	First lu mode to S1 mode inter-system change after attach	X	X	X
9.2.3.3.2	lu mode to S1 mode intersystem change / ISR is active / Expiry of T3312 in E-UTRAN or T3412 in UTRAN and further intersystem change	X	X	X
9.2.3.3.3	lu mode to S1 mode intersystem change / Periodic TAU and RAU / ISR activated, T34xx expired	X	X	X
9.2.3.3.4	First S1 mode to lu mode inter-system change after attach	X	X	X
9.2.3.3.5	Periodic routing area update	X	X	X
9.2.3.3.5a	Periodic location update	X	X	X
9.2.3.4.1	TAU/RAU procedure for inter-system cell reselection between A/Gb and S1 modes	X	X	-
9.3.1.1	Service request initiated by UE for user data	X	X	-
9.3.1.3	Service request / Mobile originating CS fallback	X	X	-
9.3.1.4	Service request / Rejected / IMSI invalid	X	X	X
9.3.1.5	Service request / Rejected / Illegal ME	X	X	X
9.3.1.6	Service request / Rejected / EPS services not allowed	X	X	X
9.3.1.7	Service request/Rejected/UE identity cannot be derived by the network	X	X	-
9.3.1.7a	Service request/Rejected/UE implicitly detached	X	X	-
9.3.1.12a	Extended service request / Rejected / CS domain temporarily not available	X	X	-
9.3.1.16	Service request/Abnormal case/Switch off	X	X	-
9.3.1.17	Service request/Abnormal case/Procedure collision	X	X	-
9.3.1.18	Service request / Rejected / Not authorized for this CSG	X	X	-
9.3.2.1	Paging procedure	X	X	-
9.3.2.2	Paging for CS fallback/Idle mode	X	X	-
9.3.2.2a	Paging for CS fallback/Connected mode	X	X	-
9.4.1	Integrity protection/Correct functionality of EPS NAS integrity algorithm/SNOW3G	X	X	-
9.4.2	Integrity protection/Correct functionality of EPS NAS integrity algorithm/AES	X	X	-
9.4.3	Ciphering and deciphering/Correct functionality of EPS NAS encryption algorithm/SNOW3G	X	X	-
9.4.4	Ciphering and deciphering/Correct functionality of EPS NAS encryption algorithm/AES	X	X	-
9.4.5	Integrity protection / Correct functionality of EPS NAS integrity algorithm / ZUC	X	X	-
9.4.6	Ciphering and deciphering / Correct functionality of EPS NAS encryption algorithm / ZUC	X	X	-
10.2.1	Dedicated EPS bearer context activation/Success	X	X	-
10.3.1	EPS bearer context modification/Success	X	X	-
10.4.1	EPS bearer context deactivation/Success	X	X	-
10.4.2	EPS bearer context deactivation / Re-establishment	X	X	-
10.5.1	UE requested PDN connectivity procedure accepted by the network	X	X	-
10.5.1a	UE requested PDN connectivity accepted / Dual priority / T3396 override	X	X	-
10.5.1b	UE requested PDN connectivity accepted / Dual priority / T3346 override	X	X	-
10.5.3	UE requested PDN connectivity procedure not accepted	X	X	-
10.5.4	UE requested PDN connectivity not accepted / Network reject with Extended Wait Timer	X	X	-
10.6.1	UE requested PDN disconnect procedure accepted by the network	X	X	-
10.7.1	UE requested bearer resource allocation, accepted by the network/New EPS bearer context	X	X	-
10.7.2	UE requested bearer resource allocation accepted by the network/Existing EPS bearer context	X	X	-
10.7.3	UE requested bearer resource allocation not accepted by the network	X	X	-

Test case	Description	FDD	TDD	T/F
10.7.4	UE requested bearer resource allocation/Expiry of timer T3480	X	X	-
10.7.5	UE requested bearer resource allocation / BEARER RESOURCE ALLOCATION REJECT message including cause #43 "unknown EPS bearer context"	X	X	-
10.8.1	UE requested bearer resource modification accepted by the network/New EPS bearer context	X	X	-
10.8.2	UE requested bearer resource modification accepted by the network/Existing EPS bearer context	X	X	-
10.8.3	UE requested bearer resource modification not accepted by the network	X	X	-
10.8.4	UE requested bearer resource modification / Cause #36 "regular deactivation"	X	X	-
10.8.5	UE requested bearer resource modification / BEARER RESOURCE MODIFICATION REJECT message including cause #43 "unknown EPS bearer context"	X	X	-
10.8.6	UE requested bearer resource modification / Collision of a UE requested bearer resource modification procedure and EPS bearer context deactivation procedure	X	X	-
10.8.7	UE requested bearer resource modification / Expiry of timer T3481	X	X	-
10.9.1	UE routing of uplinks packets	X	X	-
11.1.1	MT-SMS over SGs/Idle mode	X	X	-
11.1.2	MT-SMS over SGs/Active mode	X	X	-
11.1.3	MO-SMS over SGs/Idle mode	X	X	-
11.1.4	MO-SMS over SGs/Active mode	X	X	-
11.1.5	Multiple MO-SMS over SGs / Idle mode	X	X	-
11.1.6	Multiple MO-SMS over SGs / Active mode	X	X	-
11.2.1	Emergency bearer services / Normal cell / NORMAL-SERVICE / Local Emergency Numbers List sent in the Attach / PDN connect new emergency EPS bearer context / Service request / Emergency PDN disconnect	X	X	-
11.2.2	Emergency bearer services / Normal cell / LIMITED-SERVICE / Attach / PDN connect / Service request / PDN disconnect / Detach / Temporary storage of EMM information	X	X	-
11.2.3	Emergency bearer services / CSG cell / LIMITED-SERVICE / Attach / Security mode control procedure without prior authentication / PDN connect / Service request / PDN disconnect / Detach upon UE switched off / Temporary storage of EMM information	X	X	-
11.2.4	Emergency bearer services / Normal cell / NO-IMSI / Attach / No EPS security context / PDN connect / Service request / Timer T3412 expires	X	X	-
11.2.5	Emergency bearer services / Normal cell / NORMAL-SERVICE / Local Emergency Numbers List NOT sent in the Attach / PDN connect new emergency EPS bearer context / Authentication SQN code failure – MME aborts authentication continues using current security context / Service request / Emergency PDN disconnect	X	X	-
11.2.6	Handling of Local Emergency Numbers List provided during Attach and Normal tracking area update procedures	X	X	-
11.2.7	UE has PDN connection only for emergency bearer services / Normal tracking area update / Accepted / Local Emergency Numbers List is not sent by the network / Handling of the lists of forbidden tracking areas	X	X	-
11.2.8	Attach for emergency bearer services / Rejected / No suitable cells in tracking area / Emergency call using the CS domain / UTRA or GERAN	X	X	X
11.2.10	LIMITED-SERVICE / EPS does not support IMS Emergency / Emergency call using the CS domain	X	X	X
11.2.11	LIMITED-SERVICE / Inter-system mobility / E-UTRA to UTRA CS / SRVCC Emergency Call Handover to UTRAN	X	X	X
11.2.12	LIMITED-SERVICE / Inter-system mobility / E-UTRA to GSM CS / SRVCC Emergency Call Handover to GERAN	X	X	-
12.2.1	Data transfer of E-UTRA radio bearer combinations 1, 3, 6 and 9	X	X	-
12.2.2	Data transfer of E-UTRA radio bearer combinations 2, 4, 7 and 10	X	X	-
12.2.3	Data transfer of E-UTRA radio bearer combinations 5, 6, 8, 11 and 12	X	X	-
12.2.4	Data transfer of E-UTRA radio bearer combination 13	X	X	-
12.3.1	Data transfer of E-UTRA radio bearer combinations 1, 3, 6 and 9 / MIMO	X	X	-
12.3.2	Data transfer of E-UTRA radio bearer combinations 2, 4, 7 and 10 / MIMO	X	X	-
12.3.3	Data transfer of E-UTRA radio bearer combinations 5, 6, 8, 11 and 12 / MIMO	X	X	-
12.3.4	Data transfer of E-UTRA radio bearer combination 13 / MIMO	X	X	-
13.1.1	Activation and deactivation of additional data radio bearer in E-UTRA	X	X	-
13.1.2	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with redirection / MO call	X	X	X
13.1.2a	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with redirection including System Information / MO call	X	X	X
13.1.3	Call setup from E-UTRAN RRC_CONNECTED / CS fallback to UTRAN with redirection / MT call	X	X	X
13.1.4	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with handover / MT call	X	X	X
13.1.5	Call setup from E-UTRAN RRC_CONNECTED / CS fallback to UTRAN with handover / MO call	X	X	X

Test case	Description	FDD	TDD	T/F
13.1.7	Call setup from E-UTRA RRC_IDLE / CS fallback to GSM with redirection / MT call	X	X	-
13.1.8	Call setup from E-UTRA RRC_CONNECTED / CS fallback to GSM with redirection / MO call	X	X	-
13.1.9	Call setup from E-UTRA RRC_IDLE / CS fallback to GSM with CCO without NACC / MO call	X	X	-
13.1.10	Call setup from E-UTRA RRC_CONNECTED / CS fallback to GSM with CCO without NACC / MT call	X	X	-
13.1.15	Call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with redirection / MT call / UTRAN cell is barred	X	X	X
13.1.16	Emergency call setup from E-UTRAN RRC_IDLE / CS fallback to UTRAN with handover	X	X	X
13.1.17	Call setup from E-UTRAN RRC_IDLE / mobile originating 1xCS fallback emergency call to 1xRTT	X	X	-
13.1.18	Call setup from E-UTRAN RRC_IDLE / mobile originating enhanced 1xCS fallback emergency call to 1xRTT	X	X	-
13.1.19	Emergency call setup from E-UTRAN RRC_IDLE / IMS VoPS supported / EMC BS not supported / CS fallback to UTRAN or GERAN with redirection	X	X	X
13.1.20	Emergency call setup from E-UTRAN RRC_IDLE / IMS VoPS not supported / EMC BS supported / CS fallback to UTRAN or GERAN with redirection	X	X	X
13.2.1	RRC connection reconfiguration/E-UTRA to E-UTRA	X	X	-
13.3.1.1	Intra-system connection re-establishment/Radio link recovery while T310 is running	X	X	-
13.3.1.2	Intra-system connection re-establishment/Re-establishment of a new connection when further data is to be transferred	X	X	-
13.3.1.3	RRC connection reconfiguration / Full configuration / DRB establishment	X	X	-
13.3.2.1	Inter-system connection re-establishment / E-UTRAN to UTRAN / Further data are to be transferred	X	X	X
13.3.2.2	Inter-system connection re-establishment / E-UTRAN to GPRS / Further data are to be transferred	X	X	-
13.4.1.2	Inter-frequency mobility/E-UTRA to E-UTRA packet	X	X	-
13.4.1.3	Intra-system mobility / E-UTRA FDD to E-UTRA TDD to E-UTRA FDD packet	X	X	-
13.4.1.4	Inter-band mobility / E-UTRA to E-UTRA packet	X	X	-
13.4.1.5	RRC connection reconfiguration / Handover / Full configuration / DRB establishment	X	X	-
13.4.2.1	Inter-system mobility / E-UTRA to UTRA packet	X	X	X
13.4.2.4	Inter-system mobility / Service based redirection from UTRA to E-UTRA	X	X	X
13.4.2.5	Inter-system mobility / Service based redirection from GSM/GPRS to E-UTRA	X	X	-
13.4.3.1	Inter-system mobility / E-UTRA voice to UTRA CS voice / SRVCC	X		

Test case	Description	FDD	TDD	T/F
13.4.3.2	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / SRVCC	X		
13.4.3.3	Inter-system mobility / E-UTRA voice to GSM CS voice / SRVCC	X	X	-
13.4.3.4	Inter-system mobility / E-UTRA voice to UTRA CS voice / Unsuccessful case / Retry on old cell / SRVCC	X		
13.4.3.5	Inter-system mobility / E-UTRA voice to GSM CS voice / Unsuccessful case / Retry on old cell / SRVCC	X	X	-
13.4.3.6	Inter-system mobility / E-UTRA PS voice + PS Data / HO cancelled / Notification procedure / SRVCC	X		X
13.4.3.7	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MO call	X		X
13.4.3.8	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MO call / Forked responses	X		X
13.4.3.9	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MO call / SRVCC HO failure	X	X	X
13.4.3.10	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MT call	X		X
13.4.3.11	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MT call / SRVCC HO failure	X	X	X
13.4.3.13	Inter-system mobility / E-UTRA voice to UTRA CS voice / aSRVCC / MT call / User answers in PS domain / SRVCC HO cancelled	X	X	X
13.4.3.14	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / aSRVCC / MO call	X		X
13.4.3.15	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / aSRVCC / MO call / SRVCC HO cancelled	X		X
13.4.3.16	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / aSRVCC / MT call	X		X
13.4.3.18	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / bSRVCC / MO call	X		
13.4.3.19	Inter-system mobility / E-UTRA PS voice + PS data to UTRA CS voice + PS data / bSRVCC / MO call / SRVCC HO cancelled	X		X
13.4.3.20	Inter-system mobility / E-UTRA voice to UTRA CS voice / bSRVCC / MO call / SRVCC HO failure	X		X
13.4.3.21	Inter-system mobility / E-UTRA PS voice to GSM CS voice / bSRVCC / MO call	X	X	-
13.4.3.22	Inter-system mobility / E-UTRA PS voice to GSM CS voice / bSRVCC / MO call / SRVCC HO cancelled	X	X	-
13.4.3.23	Inter-system mobility / E-UTRA voice to GSM CS voice / bSRVCC / MO call / SRVCC HO failure	X	X	-
13.4.3.24	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MO call	X	X	-
13.4.3.25	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MO call / Forked responses	X	X	-
13.4.3.26	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MO call / SRVCC HO failure	X	X	-
13.4.3.27	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MT call	X	X	-
13.4.3.28	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MT call / SRVCC HO failure	X	X	-
13.4.3.30	Inter-system mobility / E-UTRA voice to GSM CS voice / aSRVCC / MT call / User answers in PS domain / SRVCC HO cancelled	X	X	-
13.4.3.32	Inter-system mobility / UTRA CS voice to E-UTRA voice / rSRVCC	X		
13.4.3.34	Inter-system mobility / UTRA CS voice to E-UTRA voice / alerting / rSRVCC / MO call	X		
13.4.3.41	Inter-system mobility / E-UTRA PS voice to GSM CS voice / HO cancelled / Notification procedure / SRVCC	X	X	-
13.4.4.1	Pre-registration at 1xRTT and Cell reselection / 1x Zone Registration	X	X	-
13.4.4.2	Pre-registration at 1xRTT and Cell reselection / 1x Ordered Registration	X		
13.4.4.5	Pre-Registration at 1xRTT / Power Down Registration	X	X	-
13.5.1	MTSI MO speech call / SSAC / 0% access probability for MTSI MO speech call	X	X	-
13.5.1a	MTSI MO speech call / SSAC in Connected mode / 0% access probability for MTSI MO speech call	X	X	-
13.5.2	MTSI MO video call / SSAC / 0% access probability for MTSI MO video call	X	X	-
13.5.2a	MTSI MO video call / SSAC in connected mode / 0% access probability for MTSI MO video call	X	X	-
13.5.3	Emergency call / Success / SSAC / 0% access probability for MTSI MO speech call	X	X	-
13.5.3a	Emergency call / Success / SSAC in connected mode / 0% access probability for MTSI MO speech call	X	X	-
13.5.4	MTSI MO speech call / SCM / 0% access probability skip for MTSI MO speech call	X	X	-
13.5.5	MTSI MO video call / SCM / 0% access probability skip for MTSI MO video call	X		-
14.1	ETWS reception in RRC_IDLE state / Duplicate detection	X		-
14.2	ETWS reception in RRC_CONNECTED state / Duplicate detection	X		-

Test case	Description	FDD	TDD	T/F
17.1.1	MCCH information acquisition/ UE is switched on	X	X	-
17.1.2	MCCH information acquisition/UE cell reselection to a cell in a new MBSFN area	X	X	-
17.1.3	MCCH information acquisition/UE handover to a cell in a new MBSFN area	X	X	-
17.1.4	MCCH information acquisition/ UE is receiving an MBMS service	X	X	-
17.1.5	MCCH information acquisition/UE is not receiving MBMS data	X	X	-
17.2.1	UE acquire the MBMS data based on the SIB13 and MCCH message / MCCH and MTCH are on the same MCH	X	X	-
17.2.2	UE acquire the MBMS data based on the SIB13 and MCCH message / MCCH and MTCH are on different MCHs	X	X	-
17.2.3	UE receives the MBMS data when this data is in the beginning of the MSAP	X	X	-
17.2.4	Reception of PDCCH DCI format 0 and PHICH in MBSFN subframes.	X	X	-
17.3.1	MBMS Counting / UE not receiving MBMS service	X	X	-
17.3.2	MBMS Counting / UE receiving MBMS service	X	X	-
17.4.1	Cell reselection to intra-frequency cell to start MBMS service	X	X	-
17.4.1a	Cell reselection to intra-frequency cell to continue MBMS service reception / Single Frequency operation (inter-band neighbouring cell)	X	X	-
17.4.2	Cell reselection to inter- frequency cell to start MBMS service	X	X	-
17.4.2a	Cell reselection to inter- band cell to start MBMS service reception	X	X	-
17.4.3	Handover to inter-frequency cell to start MBMS service reception	X	X	-
17.4.3a	Handover to inter-band cell to start MBMS service reception	X	X	-
17.4.4	MBMS service continuity / Handover to inter-frequency cell / MBMS Interest Indication on cell not broadcasting SIB15	X	X	-
17.4.5	Conditional retransmission of MBMS Interest Indication after handover	X	X	-
17.4.6	MBMS service continuity / E-UTRAN release of unicast bearer	X	X	-
17.4.7	MBMS Interest Indication after Radio Link Failure	X	X	-
17.4.8	Continue MBMS service reception after E-UTRAN release of unicast bearer	X	X	-
17.4.9.1	CA / Start MBMS reception on Non-Serving Cell / Continue MBMS reception on SCell after SCell addition / Intra-band Contiguous CA	X		-
17.4.9.2	CA / Start MBMS reception on Non-Serving Cell / Continue MBMS reception on SCell after SCell addition / Inter-band CA	X		-
17.4.10.1	CA / Start MBMS reception on SCell / Continue MBMS reception on Non-Serving after SCell release / Intra-band Contiguous CA	X	X	-
17.4.10.2	CA / Start MBMS reception on SCell / Continue MBMS reception on Non-Serving after SCell release / Inter-band CA	X	X	-
17.4.11.1	CA / Start MBMS reception on PCell / Continue MBMS reception after swap of SCell and PCell / Intra-band Contiguous CA	X	X	-
17.4.11.2	CA / Start MBMS reception on PCell / Continue MBMS reception after swap of SCell and PCell / Inter-band CA	X	X	-
18.1.1	PWS reception in RRC_IDLE state / Duplicate detection	X	-	-
18.1.2	PWS reception in RRC_CONNECTED state / Duplicate detection	X	-	-
18.1.3	PWS reception in RRC_CONNECTED State/Power On	X	-	-

The Test Suite in TTCN3 is contained in multiple ASCII files which accompany the present document.

---

## Annex B (informative): Style Guides

### B.1 Introduction

This annex is based on the style guide given in TS 34.123-3 [7], annex E but the language for UE conformance tests is TTCN-3.

---

### B.2 General Requirements for TTCN-3 Implementations

The TTCN-3 implementation for UE conformance tests shall be based on the following general design considerations:

- Even though it is not reflected in TTCN-3 anymore in UE conformance tests ASPs and PDUs will still be distinguished. This has impact on type definitions and naming conventions.
- In general, templates for UE conformance tests shall be separated for sending and receiving.
- Modified templates shall not be modified again.
- All local variables shall be declared at the beginning of a function; the order of declarations is:
  - local constants
  - local variables
  - local timers
- The purpose of the test case implementation is conformance testing.
- The common RAN5 approval process needs to be considered.

The TTCN-3 implementation for UE conformance tests shall fulfil the following requirements.

The implementation shall:

- follow ES 201 873-1 [13] (TTCN-3 Core Language) and ES 201 873-4 [27] (TTCN-3 Operational Semantics);
- be independent from interface specifications like TRI (ES 201 873-5 [28]) and TCI (ES 201 873-6 [29]) as well as from proprietary approaches;
- not use or rely on tool dependent features;
- support maintainability and extendibility;
- follow the naming conventions as defined below.

Further requirements:

- Usage of external functions should be avoided.
- Type definitions:
  - Existing ASN.1 type definitions contained in protocol specifications are imported from the respective standards. All other type definitions shall be done within TTCN-3.

## B.3 Naming Conventions

Even though these are being used for TTCN-3 the naming conventions provided in the present document are mainly backward compatible to TTCN-2 as defined in TS 34.123-3 [7].

### B.3.1 Prefixes and Restrictions for TTCN-3 Objects

**Table B.3.1: Prefixes used for TTCN-3 objects**

TTCN object	Initial Letter	Prefix/Postfix	Comment
TTCN module	upper case	(none)	
TTCN group	upper case	(none)	
function parameter	upper case	p_	
function running on a component	upper case	f_	
local function (tree) not to be used by other modules	upper case	fl_	local function not to be used by other modules
external function	upper case	fx_	
altstep	upper case	a_	(including defaults)
test case selection expression			name as specified in TS 36.523-2 [2] shall be used
global constant	upper case	tsc_	(see note 1)
local constant	upper case	const_	local constant being defined in a function
Enumerated		(none)	there are no restrictions regarding enumerated types
type definition	upper case	_Type	(see note 7)
local variable	upper case	v_	(see note 6)
global (component) variable	upper case	vc_	(see note 2)
port type	upper case		
port name	upper case		
local timer	upper case	t_	
ASP template	upper case	cas_ cads_ car_ cadr_	send ASP modified (derived) send ASP receive ASP modified (derived) receive ASP
PDU template	upper case	cs_ cds_ cr_ cdr_	send PDU modified (derived) send PDU receive PDU modified (derived) receive PDU (see note 3)
CM template	upper case	cms_ cmr_	send coordination message receive coordination message
Template (neither ASP nor PDU nor CM)	upper case	cs_ cds_ cr_ cdr_ crs_	send template modified (derived) send template receive template modified (derived) receive template templates for IEs used in both directions (see note 5)
test suite parameter (PICS)	upper case	pc_	(see note 8)
test suite parameter (PIXIT)	upper case	px_	(see note 8)
test case		TC_	(see note 4)

<p>NOTE 1: Global constants may be defined differently in imported modules (e.g. without any prefix and with lower case initial letter).</p> <p>NOTE 2: Global variables or timers are those defined within the TTCN-3 components. They are visible to all the functions run in the component.</p> <p>NOTE 3: Base template may have a second prefix:</p> <ul style="list-style-type: none"><li>- 508: PDU as defined in TS 36.508 [3];</li><li>- 108: PDU as defined in TS 34.108 [8].</li></ul> <p>NOTE 4: Test case names will correspond to the clause in the prose that specifies the test purpose. E.g. TC_8_1.</p> <p>NOTE 5: Applicable only in case of "quasi-constant" definitions, e.g. to define a (constant) random pattern to be used for sending and receiving when the UE is configured in loopback mode.</p> <p>NOTE 6: Counter variables do not need to have a prefix.</p> <p>NOTE 7: Exceptions for type definitions:</p> <ul style="list-style-type: none"><li>- ASP names are fully upper case letters and typically have postfix "_REQ", "_CNF" or "_IND".</li><li>- RRC protocol type definitions are extracted and imported from TS 36.331 [19]/TS 25.331 [36] and are therefore out of scope.</li><li>- NAS protocol type definitions follow the names provided in the tabular notion of the standards and therefore do not have a "_Type" postfix.</li></ul> <p>NOTE 8: For clarification an additional postfix _FDD/_TDD can be added.</p>
---

## B.3.2 Void

## B.3.3 Void

## B.3.4 Identifiers consisting of more than one Name

When identifiers are a concatenation of several words the words shall start with capital letters:

e.g.: "px" + "Cell" + "A" + "Cell" + "Id" -> px\_CellACellId.

Further details are described in TS 34.123-3 [7], clause E.2.1.

---

# B.4 Implementation Issues

## B.4.1 Control part

Even though the control part may not be used in a test campaign but be overruled by the test management system it is used to provide the following information:

- All test cases contained in the test suite.
- For each test case:
  - Test case selection expression.

For maintenance reasons it shall be possible to generate the control part automatically by an appropriate tool.

## B.4.2 Top Level Test Case Definitions

The top level test case definitions run on the MTC exclusively. The tasks of these test case definitions are generally the same for each test case:

- Start guard timer.
- Create PTCs.
- Connect PTCs.

- Start PTCs.
- Wait for PTCs having finished.

Additionally the MTC may host the upper tester but this is left open to implementation.

For maintenance reasons it shall be possible to generate the top level test case definitions defined for the MTC automatically by an appropriate tool. To achieve this, the name of a function to be started on particular PTC need derived from the test case name:

e.g. the function for PTC\_A in test case TC\_XX\_YY\_ZZ shall be f\_TC\_XX\_YY\_ZZ\_A.

Cells are created in an off-state in the preambles of the corresponding PTCs while UE is in the switched off-state.

### B.4.3 Inter Component Communication

Communication between PTCs or PTCs and the MTC can be done by messages or by build-in mechanisms as *done* and *kill*. For maintenance reasons and extendibility the inter component communication shall be encapsulated by TTCN-3 implementation.

### B.4.4 Encoding Information

For UE conformance tests several encoding rules need to be applied by the TTCN-3 codec. Even though the codec is out of scope of the present document there are aspects with impact on TTCN-3 implementation depending on different type definitions.

**Table B.4.4-1**

Type definitions	Encoding
ASN.1 types used for RRC signalling	ASN.1 PER
ASN.1 types used by NAS protocols	ASN.1 BER
NAS types	Tabular notated (see note)
SMS Types	Tabular notated (see note)
DRB types	Tabular notated (see note)
DHCPv4 types	Tabular notated (see note)
ICMPv6 types	Tabular notated (see note)
DNS types	Tabular notated (see note)
GERAN types	Tabular notated (see note)
GPRS Padding	see TS 34.123-3 [7], clause 6.10.2.9.1
GSM Spare Padding	see TS 34.123-3 [7], clause 6.10.2.9.2
LowHigh Rule	see TS 34.123-3 [7], clause 6.10.2.9.3
SACCHSysInfo Spare Padding	see TS 34.123-3 [7], clause 6.10.2.9.5
TTCN-3 types not used at the air interface: <ul style="list-style-type: none"> <li>- Configuration of system simulator</li> <li>- Coordination between components</li> <li>- Types used internally in TTCN-3</li> </ul>	(no specific encoding required)
NOTE: Tabular notated is performed by concatenation of all the present fields in the TTCN-3 template.	

Encoding information may be provided and supported in TTCN-3 by grouping of type definitions and using the *encode* attribute.

### B.4.5 Verdict Assignment

In general the following rules shall be applied.

**Table B.4.5-1: Rules for verdict assignment**

Verdict	Rule
<b>Pass</b>	shall be assigned for each step defined in the prose of the test case
<b>Fail</b>	shall be assigned when there is a non-conformant signalling by the UE within the test body
<b>Inconc</b>	shall be assigned outside the test body and when it is not unequivocal whether a misbehaviour is caused by non-conformity of the UE signalling
<b>Error</b>	In case of obvious programming or parameterisation errors (e.g. missing case in a <i>select</i> statement)

### B.4.5.1 PASS verdict assignment

The PASS verdicts are assigned by test cases or test case specific functions.

For generic test procedures as specified in 36.508 cl. 6.4.2, the preliminary pass is assigned directly after the procedure if all described in the procedure UL messages have been successfully received; this allows re-usage of these procedures for other purposes.

### B.4.5.2 FAIL or INCONC verdict assignment

The verdict FAIL or INCONC can be assigned in test cases, in the test case-specific function, in the common functions and in the default behaviour.

Test case or test case-specific function:

In normal cases the common function `f_EUTRA_SetVerdictFailOrInconc` or `f_UTRAN_SetVerdictFailOrInconc` shall be used to assign FAIL or INCONC depending on whether it is in the test body or outside of the body.

An exception is made in the NITZ test cases: TC 9.1.5.1 in 3GPP TS 36.523-1 [1], TC 9.4.10, TC 12.2.1.13, TC 12.2.1.14, TC 12.2.1.15 in 3GPP TS 34.123-1 [2], in the UE capability test cases: TC 8.4.5.1 in 3GPP TS 36.523-1 [1] and TC 8.1.5.7 in 3GPP TS 34.123-1 [2]: the function `f_SetVerdict` is used in the test body to assign a FAIL verdict without stopping the execution of the test case.

If in test cases a verdict FAIL shall be assigned for watchdog timer timeouts this needs to be done explicitly.

Common Functions:

The majority of the common functions have no verdict assignment. If a verdicts assignment is required in some common functions, the common function `f_EUTRA_SetVerdictFailOrInconc` or `f_UTRAN_SetVerdictFailOrInconc` shall be used to assign FAIL or INCONC.

As an exception in the altstep `a_EUTRA_RacingCond_AwaitRrcMessage` an INCONC is assigned when the RRC message and the L1/MAC indication are in the wrong order.

### B.4.5.3 Verdict assignment in default behaviour

The default behaviour handles all events not being handled in test cases or functions. Whether the verdict FAIL or INCONC to be assigned in the default behaviour it depends very much on the port where the event occurs.

**Table B.4.5.3-1: Verdict assignment in default behaviour upon test ports**

Test port	Message	Comment	Verdict
SYS	SYSTEM_CTRL_CNF	unexpected confirmation	INCONC
SYSIND	SYSTEM_IND: Error indication	unspecific error at SS	INCONC
	SYSTEM_IND: MAC indication	(see note 1)	FAIL in the test body INCONC outside the test body
	SYSTEM_IND: L1 indication	RachPreamble, SchedReq, UL_HARQ may be repeated by the UE in case of transmission errors (see note 1)	INCONC
SRB	SRB_COMMON_IND	Any unexpected L3 signalling (see note 3)	FAIL in the test body INCONC outside the test body
NASCTRL	NAS_CTRL_CNF	unexpected confirmation	INCONC
DRB	DRB_COMMON_IND	L2 and combined tests (see note 2)	FAIL in the test body INCONC outside the test body
		pure signalling tests (see note 2)	INCONC
UT	UT_COMMON_CNF	unexpected confirmation	INCONC
NOTE 1: L1/MAC indications need to be enabled by the test case therefore they occur only when being relevant for the test case.			
NOTE 2: L2 and combined tests can be distinguished from pure signalling tests by additional global information controlled by f_EUTRA_TestBody_Set.			
NOTE 3: Layer 3 signalling by definition covers NAS and RRC signalling i.e. in general unexpected RRC messages will cause a FAIL in the body of any NAS test case as well as unexpected NAS messages will cause a FAIL in the body of any RRC test case.			

**Table B.4.5.3-2: Verdict assignment in default behaviour when time-out**

Timeout	Comment	Verdict
any timer	unspecific timeout (see note)	INCONC
NOTE: Local timers of test cases or functions cannot be distinguished in the default behaviour.		

## B.4.6 Default Behaviour

As experience from UMTS conformance tests there shall be one standard default behaviour for each component.

The following rules shall be applied:

- The standard default behaviour is activated during initialisation of the respective component. In normal cases a TTCN writer does not need to care about the default.
- In general there is only one default behaviour activated (i.e. the standard default behaviour).
- The standard default behaviour shall cover all ports and timers of the component.
- Whenever possible deviations from the standard default behaviour shall be implemented locally rather than by introducing a new default behaviour.

If for exceptional cases the standard default behaviour needs to be replaced by another default behaviour or another default behaviour needs to be activated on top, the TTCN writer is responsible:

- to avoid side effects;
- to restore the standard behaviour.

## B.4.7 Templates for Sending and Receiving

Templates used for sending and receiving shall be separated in general:

- A template shall be either for sending or for receiving; this shall be reflected in the prefix of the identifier.
- Send templates shall use no receive templates and vice versa.
- All parameters of a send template shall be restricted to:
  - values;
  - template (value);
  - template (omit).
- Parameters of receive templates may allow wildcards. They can be:
  - values;
  - unrestricted template parameters;
  - template parameters restricted to be present.
- The only exception to the above rule is for "quasi-constant" definitions, as described in note 5 of table B.3.1. Otherwise, even when the same data is expected for sending and receiving templates, there shall be different templates and the following rule shall be applied.
- The receive template is assigned the send template e.g.:
  - template My\_Type cr\_Template := cs\_Template
- This results in separate definitions for sending and receiving and improves maintainability.

NOTE 1: For maintenance reasons, a send template shall never be derived from a receive template; and also a receive template shall never be assigned to a send template.

NOTE 2: When a send template is assigned to a receive template, the formal parameters of the receive template must follow the rules of send templates (i.e. it shall only contain 'template (value)', 'template (omit)' or values only).

## B.4.8 Logging

In general no explicit log statements shall be used. As an exception log may be used to report unexpected situations in TTCN-3 like fatal programming error.

### B.4.8.1 Prose Step Numbers

Informative comments containing the prose steps defined in 36.523-1 should be implemented according to the following guidelines:

- They relate to the Expected Sequence steps in the prose
- They should not be placed in common functions
- They should only be placed in functions containing the test case body
- They should always start with `//@siclog`
- They should always finish with `siclog@`
- For single steps they should be in the form `//@siclog "Step 1" siclog@`
- For multiple steps (where several steps are completed in a common function), they should be in the form `//@siclog "Steps 1 - 3" siclog@` - i.e. Steps, space, first number, space, dash, space, second number

- They should be placed as close as possible, but always BEFORE, the line send/receive/function call
- The step number should also be included in any pass/fail verdict specified in the test case body
- If the step is listed as Void (or a group of steps) in the expected sequence, include the word Void in the comment.

Therefore the format of the comment should be:

```
//@siclog "Step[s] X [- Y] [Void]" siclog@
```

## B.4.9 Top level comments

No restriction is specified for the top level comments.

## B.4.10 Mapping of DRBs

LTE DRBs are mapped in TTCN according to the following rules:

- DRB1 is exclusively reserved for the default DRB and hence is always AM
- additional DRBs (AM or UM) may be assigned from DRB2 onward in any order
- there shall be no reconfiguration of a DRB from AM to UM or vice versa (unless a test case explicitly requires this); this especially means that DRB1 is never reconfigured to UM
- in general at the SS all DRBs needed by a test case may be configured at the beginning of the test case.

---

## B.5 Modularisation

Even though there are no specific rules how to apply modularisation in general some principles can be defined:

- Maintainability and extendibility:
  - Maintainability and extendibility are essential for definition of the modular structure.
- Granularity of modules:
  - Cyclic imports are forbidden in TTCN-3; this has impact on the extendibility:
    - The granularity of modules shall not be too small.
  - Too big modules are hard to handle and may cause increase of compilation time:
    - The granularity of modules shall not be too rough.

NOTE: These are only vague principles since there is no way to define what small or huge modules are.

- General module structure:
  - The following modularisation can be applied independent from the internal structure:
    - Type definitions: TTCN-3, ASN.1.
    - Component definitions.
    - Common Templates: component dependent, component independent.
    - Common behaviour: MTC, PTCs.
    - Test case specific templates.
    - Test case specific behaviour.

- Whether or how these module groups can further be sub-divided is implementation dependent and therefore out of scope of the present document.

---

# Annex C (informative): Design Principles

## C.1 ASP Design

All ASPs consist of a common part (defined as a TTCN-3 type) and a specific part.

All ASPs sent by the SS include timing information (SFN, subframe number) in the common part.

Only one ASP is defined per direction per port, but this ASP may contain a union of several sub-ASPs in the specific part.

In general a small number of common ASPs cover all functionality, although other ASPs may be introduced to simplify TTCN-3 implementation and improve readability. Recurrent SS changes, such as power level changes, security activation and MAC scheduling are handled in dedicated ASPs. In addition, special purpose ASPs are used to control special behaviour, for example in L2 tests.

Configuration ASPs re-use ASN.1 definitions defined in the core specs.

No encoding rules are specified for the configuration ASPs; how they are encoded is left up to the SS implementation.

Configuration ASPs are 'procedure-based', rather than 'protocol layer-based' and reflect the state transitions of the SS. The same ASPs are used for reconfiguration and for initial configuration. In the case of reconfiguration the semantics of omit is to keep the configuration as it is; therefore when an IE in a configuration may be left out this is done e.g. by setting the respective field to a special value "None".

Data ASPs for sending/receiving peer-to-peer PDUs and user data all have different ASPs for the different SAPs.

The common part includes (at least):

- Timing Info:
  - SFN.
  - Subframe number (optional).
  - Which timing to use will depend on the test procedure and ASP purpose.
- Control Info:
  - Confirmation Flag.

The RRC ASN.1 IEs used in the specific part of the configuration ASPs:

- are imported using the granularity at the channel structure level or below;
- allow the ASP to be organised according to SS requirements;
- have a name that relates to SS configuration.

The SS specific IEs used in the specific part of the configuration ASPs (i.e. those elements not imported from the RRC ASN.1):

- use a naming convention such that they are easily distinguishable from the RRC ASN.1 IEs;
- are defined in TTCN-3 (i.e. not in ASN.1).

---

## C.2 SS State Model

Figure C.2 shows the basic SS state model. It is basic in the sense that internally the SS may have more states; however, (re)configuration actions (state transitions in the model) should cause the SS to transit between the states defined below.

The following assumptions have been made about this state model:

- It presents a model of states in scope of a single cell. Hence, all configuration activities shall be performed in scope of a single cell.
- It depicts only SS states and SS (re)configuration actions between these states:
  - It does not show events which may trigger state transitions, e.g. L3 messages or procedures - i.e. it is test case and L3 procedure agnostic.
  - It does not show any peer-to-peer (i.e. between SS and UE) messages.
- Triggers for state transitions are always SS configuration messages (ASPs) coming from the test suite:
  - L2 messages coming from the UE can only trigger internal SS sub-state transitions and semi-autonomous procedures.
- L1 and L2 procedures (e.g. random access procedure, scheduling, security activation steps) are semi-autonomously handled by the SS and after being pre-configured do not require interaction with the test case:
  - The majority of test cases do not need to worry about e.g. RA procedure and letting the SS handle it would greatly simplify test case definition and implementation.
  - There may be stringent time requirements in case of some procedures that can be hard to meet in a generic way in the test suite.
  - Semi-autonomous procedures should be flexibly configurable and should have a "manual" mode in which they are handled by the test suite in order to enable testing them. What is the desired level and way of control is FFS.

Most states are stationary states, i.e. the SS can stay in them for a long time or, after performing some procedures, returns to these states. However, there is one state (indicated by dashed lines) which is part of the AS security activation procedure and is transitional, i.e. the SS can only stay in it for a short time until a transition to the next stationary state is triggered.

To make the diagram more readable, a separate state called *ANY\_STATE* has been introduced, together with some transitions. It shows which transitions are allowed at any point of time in any state.

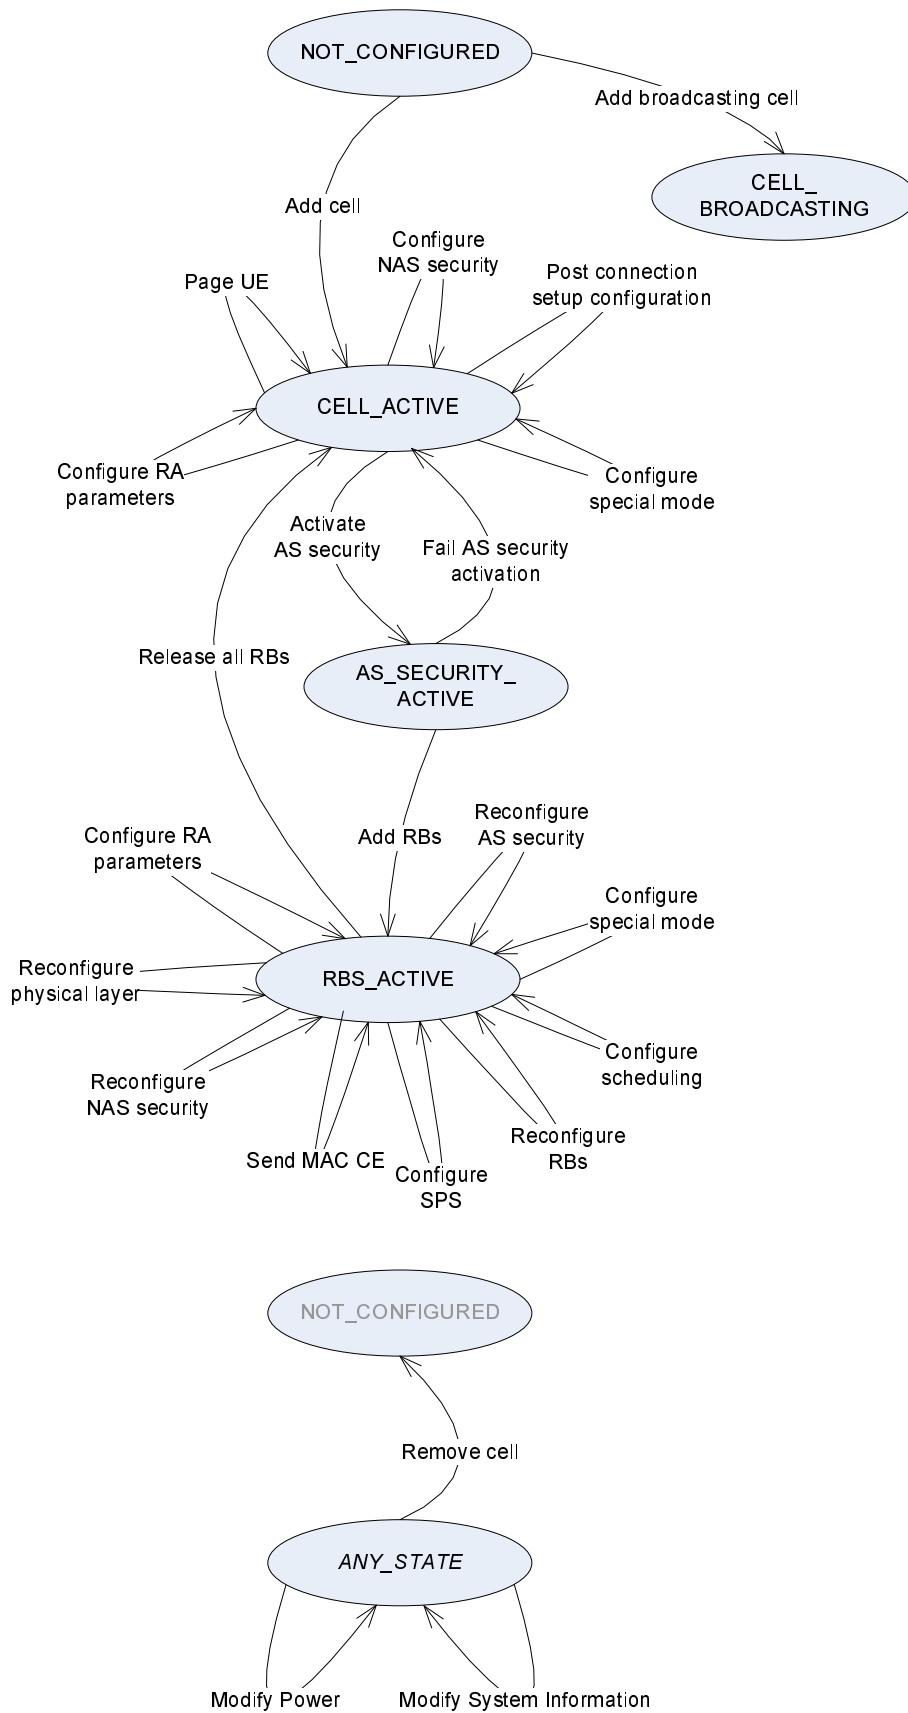

Figure C.2-1: Basic SS state model

Description of states.

**Table C.2-1: Description of states**

<b>State</b>	<b>Description</b>
NOT_CONFIGURED	The cell does not exist (is not configured) in the SS
CELL_BROADCASTING	Physical DL channels and signals configured Initial cell configuration done: freq, BW, antennas, MIMO mode, power, etc. Transport and logical channels configured for SI broadcast Cell is broadcasting SI and downlink signals NOTE 1: This type of cell is needed only to serve as a neighbouring cell for measurement purposes, where full cell configuration does not need to be specified. There is no need to be able to promote a broadcasting cell to a full cell. NOTE 2: It is currently open whether a separate cell type with limited PRACH/RACH Rx capability is needed - this depends on whether a justified use case is defined for such a cell type.
CELL_ACTIVE	Cell configured to send and receive data from UE (fully functional) SRB0 defined (default configuration specified in TS 36.508 [3]) SRB1 defined (default configuration specified in TS 36.508 [3])
AS_SECURITY_ACTIVE	The SS has AS security (integrity protection and ciphering) active NOTE 3: The SS needs to autonomously take care of a temporary state in which integrity protection is applied to an outgoing SMC message, but ciphering is not.
RBS_ACTIVE	SRB2 and/or DRBs are configured for the UE (in addition to SRB0 and SRB1)
ANY_STATE	Represents any of the above states (except NOT_CONFIGURED)

## Annex D (informative)

### TTCN-3 Definitions

#### D.1 EUTRA\_ASP\_TypeDefs

Type definitions for configuration of the system simulator;

Common design principles:

Semantics of OMIT: for all TTCN-3 type definitions used in ASPs omit means "keep as it is" =>

- on initial configuration in general all fields shall be provided
- no default values for fields are foreseen
- if necessary non-existence of information shall be explicitly configured (e.g. with a union of "no configuration" and "configuration parameters")
- fields within structures imported from the core spec are excepted from this rule

##### D.1.1 ASN1\_Container

Definitions containing ASN.1 types for backward compatibility;

NOTE 1: PCCH\_Message and BCCH\_DL\_SCH\_Message already have a critical extension mechanism by RRC type definition

NOTE 2: BCCH\_BCH\_Message contains the MIB and therefore is considered to be not extendable

NOTE 3: "simple types" are not considered: C\_RNTI, PhysCellId, CellIdentity, ARFCN\_ValueEUTRA

##### AntennaInfoDedicated\_R8andLater\_Type

TTCN-3 Record Type			
Name	AntennaInfoDedicated_R8andLater_Type		
Comment			
antennaInfo	AntennaInfoDedicated		
antennaInfo_v920	AntennaInfoDedicated_v920	opt	

##### AntennaInfoDedicated\_R10andLater\_Type

TTCN-3 Record Type			
Name	AntennaInfoDedicated_R10andLater_Type		
Comment			
antennaInfo	AntennaInfoDedicated_r10

## D.1.2 System\_Configuration

Formal ASP Definitions for system configuration

## SystemRequest\_Type

TTCN-3 Union Type		
Name	SystemRequest_Type	
Comment		
Cell	<a href="#">CellConfigRequest_Type</a>	configure/release a cell
CellAttenuation List	<a href="#">CellAttenuationList_Type</a>	power attenuation for one or several cells; all cells included in the list shall be changed at the same time; all cells in the list shall reach the new cell power within a maximum of 100ms (10 frames) acc. to the tolerances given in TS 36.508 NOTE: In the common ASP part the CellId shall be set - to the cell the timing information refers to if activation time shall be applied - to eutra_Cell_NonSpecific when there is no activation time
RadioBearerList	<a href="#">RadioBearerList_Type</a>	configure/release one or several SRBs and/or DRBs NOTE: RBs are not configured in an SCell
EnquireTiming	<a href="#">Null_Type</a>	get SFN and sub-frame number for this cell
AS_Security	<a href="#">AS_Security_Type</a>	StartRestart/Release of AS security
Sps	<a href="#">SpsConfig_Type</a>	to configure/activate or release semi-persistent scheduling
Paging	<a href="#">PagingTrigger_Type</a>	to trigger SS to send paging at the given paging occasion (as calculated in TTCN)
L1MacIndCtrl	<a href="#">L1Mac_IndicationControl_Type</a>	to configure SS to generate indications for L1/MAC events
RlcIndCtrl	<a href="#">Rlc_IndicationControl_Type</a>	to configure SS to generate indications for RLC events
PdcpCount	<a href="#">PDCP_CountReq_Type</a>	to set or enquire PDCP COUNT for one ore more RBs
PdcpHandover Control	<a href="#">PDCP_HandoverControlReq_Type</a>	to inform the target cell about the handover
L1_TestMode	<a href="#">L1_TestMode_Type</a>	To Set L1/MAC in special Test modes e.g. DL CRC, PHICH etc
PdchOrder	<a href="#">RA_PDCCH_Order_Type</a>	to configure SS to transmit a PDCCH order with configured C-RNTI to the UE to trigger RA procedure; result in DCI Format 1A transmission as in TS 36.212, clause 5.3.3.1.3
ActivateScell	<a href="#">ActivateScell_Type</a>	to configure SS to transmit a MAC control Element to activate an SCell
MbmsConfig	<a href="#">MBMS_Config_Type</a>	Configuration of PMCH/MCCH/MTCH for eMBMS
PDCCH_MCC H_ChangeNotification	<a href="#">PDCCH_MCCH_ChangeNotification_Type</a>	To trigger SS to send MCCH change notification at the given SFN/subframe (as calculated in TTCN)
MSI_Config	<a href="#">MSI_Config_Type</a>	Configuration of MSI in MBMS normal mode to be included by the SS in the first subframe allocated to the MCH within the MCH scheduling period; uses MRB_ID option in routing info and logical channel ID is omitted
UE_Cat_Info	<a href="#">UE_CategoryInfo_Type</a>	provides UE category info to SS; to be used e.g. for determination of Nsoft bits for rate matching To be configured in SS after preamble in MAC TBS test cases
OCNG_Config	<a href="#">OCNG_Config_Type</a>	Provides SS Mode for Activating/Releasing OCNG configuration in the cell
PdchTddConfigOrder	<a href="#">PDCCH_TDD_ConfigOrder_Type</a>	To trigger SS to send DCI 1C message(s) from a given SFN/subframe (as calculated in TTCN) over PDCCH with CRC scrambled by the eIMTA-RNTI, to indicate the eIMTA-UL/DL-configuration. The SS shall set the DCI 1C content according to eimta_UL_DL_ConfigIndex_r12 provided in EIMTA_Config

## SystemConfirm\_Type

TTCN-3 Union Type		
Name	SystemConfirm_Type	
Comment	confirmations for system configuration; in general to be sent after the configuration has been done	
Cell	<a href="#">Null_Type</a>	(no further parameters from SS)
CellAttenuationList	<a href="#">Null_Type</a>	(no further parameters from SS) NOTE 1: the confirmation shall be sent when all cells have changed power levels NOTE 2: for the CellId in the common ASP part the same rules are applied as for the SYSTEM REQ
RadioBearerList	<a href="#">Null_Type</a>	(no further parameters from SS)
EnquireTiming	<a href="#">Null_Type</a>	SFN and sub-frame number are included in the TimingInfo
AS_Security	<a href="#">Null_Type</a>	(no further parameters from SS)
Sps	<a href="#">Null_Type</a>	(no further parameters from SS)
Paging	<a href="#">Null_Type</a>	normally not needed but defined for completeness
L1MacIndCtrl	<a href="#">Null_Type</a>	(no further parameters from SS)
RlcIndCtrl	<a href="#">Null_Type</a>	(no further parameters from SS)
PdcpCount	<a href="#">PDCP_CountCnf_Type</a>	as response to 'Get' a list is returned containing COUNT information for the requested RBs
PdcpHandoverControl	<a href="#">Null_Type</a>	confirmation for PDCP handover control
L1_TestMode	<a href="#">Null_Type</a>	confirmation for L1 test mode
PdchOrder	<a href="#">Null_Type</a>	confirmation for PDCCH Order
ActivateScell	<a href="#">Null_Type</a>	confirmation for ActivateScell
MbmsConfig	<a href="#">Null_Type</a>	confirmation for MbmsConfig
PDCCH_MCC H_ChangeNotification	<a href="#">Null_Type</a>	normally not needed but defined for completeness
MSI_Config	<a href="#">Null_Type</a>	confirmation for explicit MSI Configuration
UE_Cat_Info	<a href="#">Null_Type</a>	confirmation for UE CAT info
OCNG_Config	<a href="#">Null_Type</a>	Confirmation of OCNG configuration
ScPtmConfig	<a href="#">Null_Type</a>	confirmation for ScPtmConfig

## SystemIndication\_Type

TTCN-3 Union Type		
Name	SystemIndication_Type	
Comment		
Error	charstring	indicates an error situation in SS; is not explicitly handled in TTCN but causes an INCONC due to default behaviour; an additional error code can be signalled in the common part of the ASP; SS shall raise an error in case of - Invalid TimingInfo for TDD - Contradiction of periodic UL grants and TDD configuration - Data scheduled for the same TTI does not fit into an available transport block (NOTE: additional cases may occur)
RachPreamble	<a href="#">RachPreamble_Type</a>	RACH preamble being sent by the UE
SchedReq	<a href="#">Null_Type</a>	indication for scheduling request sent by the UE
BSR	<a href="#">BSR_Type</a>	to report the Buffer/Extended Buffer status report being received
UL_HARQ	<a href="#">HARQ_Type</a>	to report the UL HARQ as received on PUCCH[TTI] for corresponding DL transmission in TTI-x, where x is normally 4
C_RNTI	C_RNTI	indicates C-RNTI being contained in a MAC PDU sent by the UE
PHR	<a href="#">PHR_Type</a>	to report the Power headroom report received
HarqError	<a href="#">HarqError_Type</a>	indicates detection of HARQ error: 1. HARQ CRC error for UL data 2. HARQ NACK from the UE unless SS is configured to report HARQ ACK/NACK
RlcDiscardInd	<a href="#">RlcDiscardInd_Type</a>	indicates e.g. discarded PDUs
PeriodicRI	<a href="#">RI_Type</a>	indicates periodic Rank Indicator (RI) reported by the UE on PUCCH or PUSCH; periodic CQI/PMI/RI Reporting is semi-statically configured at the UE by higher layers (see TS 36.213 clause 7.2.2); aperiodic reporting acc. to TS 36.213 clause 7.2.1 shall not be indicated NOTE: Acc. to TS 36.213 clause 7.2 aperiodic reporting has higher precedence than periodic reporting; => as working assumption the CQI request field in DCI format 0 is expected to be 0 for UL grants assigned by the SS i.e. aperiodic reporting acc. to TS 213 clause 7.2.1 does not happen
EPHR	<a href="#">MAC_CTRL_ExtPowerHeadRoom_Type</a>	indicates Extended Power headroom report reported by the UE
CqiInd	<a href="#">Null_Type</a>	indicates periodic CQI reported by the UE - NOTE: Report CQI value is currently not required
SrsInd	<a href="#">SRSInd_Type</a>	Indicates start or stop of Type 0 SRS reception on configured periodic SRS resources
DC_PHR	<a href="#">MAC_CTRL_DC_PowerHeadRoom_Type</a>	indicates Dual Connectivity Power headroom report reported by the UE

## D.1.3 Cell\_Configuration

Specific Info for Cell Configuration Primitive

## D.1.3.1 Cell\_Configuration\_Common

## Cell\_Configuration\_Common: Basic Type Definitions

TTCN-3 Basic Types		
EUTRA_FDD_Info_Type	<a href="#">Null_Type</a>	no further parameters defined for FDD
CfiValue_Type	integer (1..3)	

## CellConfigRequest\_Type

TTCN-3 Union Type		
Name	<b>CellConfigRequest_Type</b>	
Comment		
AddOrReconfigure	<a href="#">CellConfigInfo_Type</a>	for cell configuration: CellId : identifier of the cell to be configured RoutingInfo : None TimingInfo : Now (for initial configuration and for reconfiguration in general) ControlInfo : Cnfflag:=true; FollowOnFlag:=false (in general)
Release	<a href="#">Null_Type</a>	to remove a cell completely - CellId : identifier of the cell to be released; extra_Cell_NonSpecific, in case all cells shall be released RoutingInfo : None TimingInfo : Now ControlInfo : Cnfflag:=true; FollowOnFlag:=false (in general)

## CellConfigInfo\_Type

TTCN-3 Record Type			
Name	<b>CellConfigInfo_Type</b>		
Comment	common information for initial cell configuration or reconfiguration; in case of reconfiguration OMIT means 'keep configuration as it is'		
Basic	<a href="#">BasicCellConfig_Type</a>	opt	basic information for a cell (e.g. broadcasting)
Active	<a href="#">ActiveCellConfig_Type</a>	opt	add. configuration for active cell (i.e. cell being capable to receive RACH preamble)

## CellConfigCapability\_Type

TTCN-3 Enumerated Type	
Name	<b>CellConfigCapability_Type</b>
Comment	capabilities of a cell acc. to the initial condition of a test case
broadcastOnlyCell	no detection of RACH preables required; cell is only broadcasting
minimumUplinkCell	detection of RACH preables required but not any further RX capability
fullCell	full TX and RX capabilities

## CA\_CellInitialConfig\_Type

TTCN-3 Enumerated Type	
Name	<b>CA_CellInitialConfig_Type</b>
Comment	
PCell	The cell when added as a CC in CA scenario for first time will be configured as an PCell
Scell_Active	The cell when added as a CC in CA scenario for first time will be configured as an SCell, and when configured as Scell, it may be activated, 36.508 clause 6.3.4
Scell_Inactive	The cell when added as a CC in CA scenario for first time will be configured as an SCell, and when configured as Scell, it will never be activated, 36.508 clause 6.3.4
PScell	The cell when added as a CC in CA-Dual connectivity scenario for first time will be configured as a PScell. PScell is always active like PCell

**BasicCellConfig\_Type**

TTCN-3 Record Type			
Name	BasicCellConfig_Type		
Comment			
ConfigCapability	<a href="#">CellConfigCapability_Type</a>	opt	mandatory for the initial configuration; to be omitted afterwards
StaticCellInfo	<a href="#">StaticCellInfo_Type</a>	opt	Common information which does not change during a test
PhysicalLayerConfigDL	<a href="#">PhysicalLayerConfigDL_Type</a>	opt	default settings regarding physical control channels: PCFICH, PHICH, PDCCH
InitialCellPower	<a href="#">InitialCellPower_Type</a>	opt	reference cell power for the RS of each antenna in DL NOTE 1: the power of the RS of an antenna may be reduced by antenna specific configuration NOTE 2: in general the power may be adjusted on a per resource element basis => all physical channel/signal power settings shall be adjusted relatively to the RS; if there are more than one TX antennas each one may have its own attenuation; independently from those relative power settings the cell power can easily be adjusted by just changing the reference power
BcchConfig	<a href="#">BcchConfig_Type</a>	opt	configuration of BCCH/BCH; SS is triggered to configure RLC/MAC regardingly; BCCH data on the PDSCH is distinguished by the SI-RNTI PBCH: MIB; PDSCH: scheduling and resource allocation; SIBs
PcchConfig	<a href="#">PcchConfig_Type</a>	opt	configuration of PCCH/PCH; SS is triggered to configure RLC/MAC regardingly; PCCH data on the PDSCH is distinguished by the P-RNTI (needed even to modify SI => shall be configured for CELL_BROADCASTING)
CA_CellInitialConfig	<a href="#">CA_CellInitialConfig_Type</a>	opt	capability of a cell when added as a CC in CA scenario. 1. Provided at the initial configuration of a cell in CA test cases; to be omitted afterwards; 2. Always omit for a cell which remains normal non CA cell
BRBcchConfig	<a href="#">Bcch_BRConfig_Type</a>	opt	configuration of BCCH_BR/BCH; SS is triggered to configure RLC/MAC regardingly; BCCH_BR data on the PDSCH is follows fixed schedule hence no SI-RNTI DCI sent PBCH: MIB; PDSCH: scheduling and resource allocation; SIBs

## ActiveCellConfig\_Type

TTCN-3 Record Type			
Name	ActiveCellConfig_Type		
Comment			
C_RNTI	C_RNTI	opt	(pre-)configured C-RNTI; affects scrambling of PDSCH/PUSCH and CRC of PDCCH(s); shall be used implicitly in RACH procedure (i.e. as CE in RAR)
PhysicalLayerConfigUL	<a href="#">PhysicalLayerConfigUL_Type</a>	opt	parameters for PRACH, PUCCH, PUSCH Omitted when no UL frequency is applied to the band
RachProcedureConfig	<a href="#">RachProcedureConfig_Type</a>	opt	to configure the SS's behaviour for the RACH procedure Omitted when no UL frequency is applied to the band
CcchDcchDtchConfig	<a href="#">CcchDcchDtchConfig_Type</a>	opt	Parameters related to CCCH/DCCH/DTCH in UL and DL
ServingCellConfig	<a href="#">ServingCellConfig_Type</a>	opt	not present as long as the cell is 'normal' cell (i.e. does not act as a carrier component in CA); present to configure cell for CA (Pcell or SCell); in general at initial configuration 'ServingCellInfo' is omit; after sending/scheduling the RRCConnectionReconfiguration adding 1 or more cells for CA 'ServingCellInfo' is provided for the cell which gets Pcell and for the cell which gets SCell
SciSchedulingConfig	<a href="#">SciSchedulingConfig_Type</a>	opt	Parameters related to Sidelink scheduling SCI format 0
EIMTA_Config	<a href="#">EIMTA_Config_Type</a>	opt	Parameters related to eIMTA in UL and DL
CE_Mode	<a href="#">CE_Mode_r13_Type</a>	opt	Indicates the CE mode as specified in TS 36.213 It is FFS if this can be ignored by SS

## StaticCellInfo\_Type

TTCN-3 Record Type			
Name	StaticCellInfo_Type		
Comment	Common information which (normally) does not change during a test; therefore all fields are mandatory		
Common	<a href="#">CommonStaticCellInfo_Type</a>		
Downlink	<a href="#">DownlinkStaticCellInfo_Type</a>		
Uplink	<a href="#">UplinkStaticCellInfo_Type</a>	opt	NOTE: for TDD UL and DL are using the same parameters Omitted when no UL frequency is applied to the band

## CommonStaticCellInfo\_Type

TTCN-3 Record Type			
Name	CommonStaticCellInfo_Type		
Comment	information common for UL and DL; all fields are mandatory		
RAT	<a href="#">EUTRA_RAT_Type</a>		FDD or TDD; FDD/TDD specific parameters
PhysicalCellId	PhysCellId		N(cell, ID): imported from core spec; -> cell specific reference signals (non-MBSFN) -> scrambling of all DL physical channels: PBCH, PCFICH, PDCCH, PHICH and PDSCH (together with nRNTI)
eNB_CellId	CellIdentity	opt	Placeholder for Cell identity (28 bits): eNB (20bits) and cell identity (8bits). The use of that field is for future usage and omit for the time being
EutraBand	integer		NOTE: in 3G there are overlapping bands therefore the band needs to be provided; in EUTRA it is provided as well to be extendable in the future
CellTimingInfo	<a href="#">CellTimingInfo_Type</a>		

**EUTRA\_TDD\_Info\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>EUTRA_TDD_Info_Type</b>
<b>Comment</b>	
Configuration	<a href="#">TDD_Config_Type</a>   TDD_Config acc. to RRC ASN.1 (acc. TS 36.331, clause 6.3.2 )

**EUTRA\_HalfDuplexFDD\_Info\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>EUTRA_HalfDuplexFDD_Info_Type</b>
<b>Comment</b>	NOTE: No specific elements required When UE is FDD Type B Half-Duplex (i.e. Cat 0 and Half Duplex) SS restricts non-explicitly scheduled UL data transmission in sub frame 2 and DL transmission in sub frame 8. This results in UL HARQ feedback in 8, DL HARQ feedback in sub frame 6, UL specific grant allocation in sub frame 8. SS obeys explicit scheduling.

**EUTRA\_RAT\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>EUTRA_RAT_Type</b>
<b>Comment</b>	specifies RAT type and frame structure (TS 36.211, clause 4)

Comment			
Common	<a href="#">PUSCH_ConfigCommon_Type</a>	opt	
Dedicated	<a href="#">PUSCH_ConfigDedicated_Type</a>	opt	

**PhysicalLayerConfigUL\_Type**

TTCN-3 Record Type			
Name	<b>PhysicalLayerConfigUL_Type</b>		
Comment	NOTE: For the time being there is no requirement to configure the SS with TPC-PDCCH-Config; In general SS is required to keep the UE's UL power constant		
Prach	<a href="#">PRACH_Config_Type</a>	opt	parameters acc. TS 36.331, clause 6.3.2; in general depending on FDD/TDD (see TS 36.211, clause 5.7)
Pucch	<a href="#">PUCCH_Configuration_Type</a>	opt	parameters acc. TS 36.331, clause 6.3.2
Pusch	<a href="#">PUSCH_Configuration_Type</a>	opt	parameters acc. TS 36.331, clause 6.3.2 (including configuration of RS)
TimingAdvance	<a href="#">SS_TimingAdvanceConfig_Type</a>	opt	to adjust timing advance; normally timing advance is configured as 0 at the beginning and never changed during the test case; in some MAC test cases timing advance may be configured to a non-zero (11 bit value) at the beginning and modified by (6 bit) timing advance commands during the test
SRS_UL_Config	<a href="#">SRS_UL_Config_Type</a>	opt	sounding reference symbol (SRS); -> TS 36.213, clause 8.2, TS 36.211, clause 5.5.3
SR_Config	<a href="#">SchedulingRequestConfig_Type</a>	opt	PUCCH resources for scheduling requests acc. to TS 36.213 table 10.15; as signalled to the UE acc. to TS 36.331, clause 6.3.2
CQI_ReportConfig	<a href="#">CQI_ReportConfig_Type</a>	opt	
UplinkPowerControlCommon	<a href="#">UplinkPowerControlCommon_Type</a>	opt	
UplinkPowerControlDedicated	<a href="#">UplinkPowerControlDedicated_Type</a>	opt	

**D.1.3.4 Common\_MAC\_Configuration**

Transport channel and MAC related procedures and configuration

**Common\_MAC\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types		
<b>ImcsValue_Type</b>	integer (0..31)	Modulation and coding scheme index coding
<b>RepetitionNumber_Type</b>	integer (0..7)	DCI Format 6-0A, value 0..3 as per 36.213 table 8.2b DCI Format 6-0B, value 0..7 as per 36.213 table 8.2c DCI Format 6-1A, value 0..3 as per 36.213 table 7.1.11-1 DCI Format 6-1B, 6_2, value 0..7 as per 36.213 table 7.1.11-2
<b>DCISubframeRepetitionNumber_Type</b>	integer (0..3)	36.213 clause as defined in section 9.1.5

## RedundancyVersionListDL\_Type

TTCN-3 Record of Type	
Name	RedundancyVersionListDL_Type
Comment	NOTE: in general the list shall contain maxHARQ-Tx elements; if there are not enough elements specified SS shall raise an error; per default the list is configured to 0,2,3,1,0 (TS 36.321, clause 5.4.2.2)
record length (1..28) of <a href="#">RedundancyVersion_Type</a>	

## UL\_TransRetransmission\_Type

TTCN-3 Union Type		
Name	UL_TransRetransmission_Type	
Comment		
NewTransmission	<a href="#">Null_Type</a>	new transmission of data with redundancy version RV=0 (acc. to TS 36.321 clause 5.4.2.2); NDI is toggled
RetransmissionAdaptive	<a href="#">RedundancyVersion_Type</a>	SS assigns grant to requests retransmission of data with given redundancy version; NDI is not toggled
RetransmissionNonAdaptive	<a href="#">Null_Type</a>	place holder for non-adaptive retransmissions; SS does not send any grant
RetransmissionAsynchronous	<a href="#">RetransmissionAsynchronous_Type</a>	Used to schedule time controlled asynchronous UL grant for BL/CE UEs

## RetransmissionAsynchronous\_Type

TTCN-3 Record Type			
Name	RetransmissionAsynchronous_Type		
Comment			
RedundancyVersion	<a href="#">RedundancyVersion_Type</a>		SS assigns grant to requests retransmission of data with given redundancy version; NDI is not toggled
SubframeOffset	integer		the subframe offset since previous grant in the list, shall include all repetitions
RepetitionNumber	<a href="#">RepetitionNumber_Type</a>		
DCISubframeRepetitionNumber	<a href="#">DCISubframeRepetitionNumber_Type</a>		

## UL\_TransRetransmissionList\_Type

TTCN-3 Record of Type	
Name	UL_TransRetransmissionList_Type
Comment	list of transmission and subsequent retransmissions: in UL retransmissions are synchronous (every 8 TTIs for FDD); independent from the HARQ_ModelList SS shall send grants for every adaptive retransmissions; in case of non-adaptive retransmissions SS simply does not sent a grant (i.e. RetransmissionNonAdaptive elements are used to adjust timing of the adaptive retransmissions only)
record length (1..28) of <a href="#">UL_TransRetransmission_Type</a>	

## Imcs\_Type

TTCN-3 Union Type		
Name	Imcs_Type	
Comment		
Value	<a href="#">ImcsValue_Type</a>	
NotUsed	<a href="#">Null_Type</a>	

## ULGrant\_Period\_Type

TTCN-3 Union Type		
Name	ULGrant_Period_Type	
Comment		
OnlyOnce	<a href="#">Null_Type</a>	grant is sent out only once; no period
Duration	integer (1..infinity)	duration of the grant period (TTI=1ms); for TDD the starting time and periodicity need to be chosen in TTCN so that the grants are assigned at valid subframes only; otherwise SS shall raise an error

## FreqDomainSchedulCommon\_Type

TTCN-3 Record Type		
Name	FreqDomainSchedulCommon_Type	
Comment	<p>common type to specify restrictions for frequency domain scheduling by a start index and a maximum range of RBs; in general the resource allocation refers to virtual resource blocks:</p> <ul style="list-style-type: none"> <li>- format 1A (localised): FirstRbIndex refers to the first physical RB; the RBs are subsequent (upto MaxRbCnt RBs); may be applied for all kind of channels</li> <li>- format 1C (distributed): FirstRbIndex refers to the first virtual RB; the virtual RBs are subsequent (upto MaxRbCnt RBs) but mapped (distributed) to physical resource; typically applied on BCCH, PCCH and RAR</li> <li>- format 1 (localised): FirstRbIndex refers to the first physical RB; RBs are not consecutive; SS needs to provided bitmap of RBs (see TS 36.523-3) to cope with mapping of virtual resource allocation (format 1C) applied on other channels; typically there are either <ul style="list-style-type: none"> <li>- all channels having format 1A (localised)</li> <li>- BCCH, PCCH and RAR having format 1C (distributed) + DTCH/DCCH having format 1</li> </ul> </li> </ul>	
FirstRbIndex	integer	index of the first (vital) resource block in frequency domain; 0 .. N(UL/DL, RB) - 1; NOTE: DCI format 1C refers to a virtual RB allocation i.e. the resource block index; differs from the physical resource allocation where the RBs are distributed over the whole frequency bandwidth (TS 36.213, clause 7.1.6.3)
MaxRbCnt	integer	max. number of resource blocks to be assigned; FirstRbIndex + MaxRbCnt <= N(UL/DL, RB); SS shall not assigned more than the given resource blocks to the respective channel (i.e. MaxRbCnt is the upper bound); if the the configuration for a channel exceeds the total bandwidth this is a TTCN error (=> SS shall raise an error)

## FreqDomainSchedulExplicit\_Type

TTCN-3 Record Type		
Name	FreqDomainSchedulExplicit_Type	
Comment	type used for explicit DL scheduling; Nprb is the exact number of RBs whereas in FreqDomainSchedulCommon_Type MaxRbCnt is the upper bound	
FirstRbIndex	integer	index of the first resource block in frequency domain; 0 .. N(UL/DL, RB) - 1
Nprb	integer	number of resource blocks to be assigned;

**PdcchDciFormat\_Type**

TTCN-3 Enumerated Type	
Name	PdcchDciFormat_Type
Comment	DCI format acc. to TS 36.212, clause 5.3.3.1; SS shall apply physical parameters accordingly as specified in TS 36.508, clause 4.3.6
dci_0	physical layer parameters acc. TS 36.508 Table 4.3.6.1.1-1
dci_1	physical layer parameters acc. TS 36.508 Table 4.3.6.1.2-1
dci_1A	physical layer parameters acc. TS 36.508 Table 4.3.6.1.3-1
dci_1B	
dci_1C	physical layer parameters acc. TS 36.508 Table 4.3.6.1.4-1
dci_1D	
dci_2	physical layer parameters acc. TS 36.508 Table 4.3.6.1.5-1
dci_2A	physical layer parameters acc. TS 36.508 Table 4.3.6.1.6-1
dci_2B	
dci_2C	
dci_2D	
dci_3	
dci_3A	
dci_4	
dci_6_0A	DCI format 6-0A is used for the scheduling of PUSCH in one UL cell
dci_6_0B	DCI format 6-0B is used for the scheduling of PUSCH in one UL cell
dci_6_1A	DCI format 6-1A is used for the compact scheduling of one PDSCH codeword in one cell and random access procedure initiated by a PDCCH order. The DCI corresponding to a PDCCH order can be carried by MPDCCH
dci_6_1B	DCI format 6-1B is used for the scheduling of one PDSCH codeword in one cell
dci_6_2	DCI format 6-2 is used for for paging and direct indication

**PdcchResourceAllocation\_Type**

TTCN-3 Enumerated Type	
Name	PdcchResourceAllocation_Type
Comment	Resource allocation acc. TS 36.213, clause 7.1.6
ra_0	
ra_1	
ra_2_Localised	=> physical and virtual RB index are identical
ra_2_Distributed	=> virtual resource allocation
ra_Unspecified	=> None of above resource allocations and as specified by DCI format in 36.211. For example used for DCI 6_1B

**MIMO\_PrecodingBits\_Type**

TTCN-3 Union Type		
Name	MIMO_PrecodingBits_Type	
Comment	Number of bits for precoding information acc. TS 36.212, table 5.3.3.1.5-3 and 5.3.3.1.5A-1	
None	<a href="#">Null_Type</a>	DCI 2A: 2 antenna ports at eNodeB (table 5.3.3.1.5A-1)
Bit2	<a href="#">B2_Type</a>	DCI 2A: 4 antenna ports at eNodeB (table 5.3.3.1.5A-1)
Bit3	<a href="#">B3_Type</a>	DCI 2: 2 antenna ports at eNodeB (table 5.3.3.1.5-3)
Bit6	<a href="#">B6_Type</a>	DCI 2: 4 antenna ports at eNodeB (table 5.3.3.1.5-3)

## MIMO\_DciDlInfo\_Type

TTCN-3 Record Type			
Name	MIMO_DciDlInfo_Type		
Comment	additional information for DL DCI in case of MIMO (i.e. when a 2nd CW is specified)		
RedundancyVersionList_2ndCW	<a href="#">RedundancyVersionListDL_Type</a>	opt	list of Redundancy version for 2nd code word; shall have the same length as RedundancyVersionList_1stCW; if omit, for the 2nd CW the same RedundancyVersionList shall be applied as for the 1st CW
CodeWordSwapFlag	<a href="#">B1_Type</a>		transport block to codeword mapping acc. to TS 36.212 Table 5.3.3.1.5-1
PrecodingBits	<a href="#">MIMO_PrecodingBits_Type</a>		precoding information acc. TS 36.212, table 5.3.3.1.5-3 and 5.3.3.1.5A-1

## DciDlInfoCommon\_Type

TTCN-3 Record Type			
Name	DciDlInfoCommon_Type		
Comment	used for normal DL scheduling acc. to TS 36.523-3, clause 7.3		
Format	<a href="#">PdcchDciFormat_Type</a>		BCCH, PCCH and RACH Response: 1A or 1C (TS 36.213, clause 7.1) CCCH: 1A since transmission mode is not (may not be) configured at the UE yet (TS 36.213, clause 7.1) DTCH/DCCH: depending on transmission mode
ResourceAllocationType	<a href="#">PdcchResourceAllocation_Type</a>		depends on DCI format, e.g. ra_2_Localised or ra_2_Distributed for DCI format 1A
Modulation_1stCW	<a href="#">Modulation_Type</a>		max. modulation scheme for the 1st code word; depending on the amount of data a lower modulation scheme may be by SS but not a higher one; BCCH, PCCH and RACH Response: QPSK only
Modulation_2ndCW	<a href="#">Modulation_Type</a>		modulation scheme for 2nd code word in case of spatial multiplexing; can be different than 1st code word (see TS 36.211, clause 6.3.2; TS 36.212, clause 5.3.3.1.5); 'unused' when there is no spatial multiplexing; NOTE: Acc. to 36.523-3 cl. 7.3.3.4 in normal mode MIMO shall not be used => for the time being Modulation_2ndCW is always "unused"
FreqDomainScheduling	<a href="#">FreqDomainScheduling_Type</a>		index of 1st RB; max. number of RBs per TTI; NOTE: in case of DCI format 1C the first RB index has no meaning since distributed virtual resource blocks assigned in this case (TS 36.213, clause 7.1.6.3) NOTE: For DCI formats used for BL/CE UEs i.e DCIs 6_X, this IE identifies the Narrow band of 6 PRBs
RedundancyVersionList	<a href="#">RedundancyVersionListDL_Type</a>		list of Redundancy version to be used in case of retransmission; the number of elements in the list provides the maxHARQ-Tx
RepetitionNumber	<a href="#">RepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs
DCISubframeRepetitionNumber	<a href="#">DCISubframeRepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs

**DciDlInfoExplicit\_Type**

TTCN-3 Record Type			
Name	<b>DciDlInfoExplicit_Type</b>		
Comment	used for explicit DL scheduling acc. to TS 36.523-3, clause 7.3		
Imcs_1stCW	<a href="#">Imcs_Type</a>		MCS index of table 7.1.7.1-1 of TS 36.213
Imcs_2ndCW	<a href="#">Imcs_Type</a>		MCS index for the 2nd code word in case of MIMO; 'NotUsed' when MIMO is not used
Format	<a href="#">PdcchDciFormat_Type</a>		
ResourceAlloc Type	<a href="#">PdcchResourceAllocation_Type</a>		
FreqDomainSchedul	<a href="#">FreqDomainSchedulExplicit_Type</a>		For DCI formats used for BL/CE UEs i.e DCIs 6_X, this IE identifies the resources in Narrow band of 6 PRBs
RedundancyVersionList	<a href="#">RedundancyVersionListDL_Type</a>		list of Redundancy version to be used in case of retransmission the number of elements in the list provides the maxHARQ-Tx
MimoInfo	<a href="#">MIMO_DciDlInfo_Type</a>	opt	shall be present when Imcs_2ndCW specifies a 2nd CW to be used; shall be omit when Imcs_2ndCW is 'NotUsed'
RepetitionNumber	<a href="#">RepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs
DCISubframeRepetitionNumber	<a href="#">DCISubframeRepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs

**DciDlInfo\_Type**

TTCN-3 Union Type		
Name	<b>DciDlInfo_Type</b>	
Comment		
Auto	<a href="#">DciDlInfoCommon_Type</a>	SS shall chose the appropriate TBS up to the maximim number of resource blocks
Explicit	<a href="#">DciDlInfoExplicit_Type</a>	used in MAC or RAB tests where exact TBS needs to be specified

## DciUlInfo\_Type

TTCN-3 Record Type			
Name	DciUlInfo_Type		
Comment			
Imcs	<a href="#">Imcs_Type</a>		MCS index of table 8.6.1-1 of TS 36.213
TransRetransmissionList	<a href="#">UL_TransRetransmissionList_Type</a>		list of possible retransmissions and their redundancy versions (depending on being adaptive or non-adaptive); the list shall <ul style="list-style-type: none"> <li>- start with <ul style="list-style-type: none"> <li>- "New Transmission" (normal case) or</li> <li>- "Adaptive Retransmission" (e.g. to request a retransmission even when the data has been acknowledged with a HARQ ACK)</li> </ul> </li> <li>- end with "Adaptive Retransmission" (if there are retransmissions)</li> </ul> NOTE1: TTCN implementation shall ensure that a reconfiguration is done not before the previous list has been fully processed NOTE2: for normal operation the list contains only one NewTransmission element (i.e. possible retransmissions are non-adaptive)
FreqDomainScheduling	<a href="#">FreqDomainSchedulingExplicit_Type</a>		For DCI formats used for BL/CE UEs i.e DCIs 6_0X, this IE identifies the resources in Narrow band of 6 PRBs
Format	<a href="#">PdcchDciFormat_Type</a>	opt	If omit, default DCI format 0 will be applied; for BL/CE UEs 6_0X shall be specified
HarqProcessId	integer	opt	Can be present in DCI format is not 6_0X; If present SS Uses the specified HARQ process for all UL transmissions/retransmissions;
RepetitionNumber	<a href="#">RepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs
DCISubframeRepetitionNumber	<a href="#">DCISubframeRepetitionNumber_Type</a>	opt	used only for DCI format 6_X for BL/CE UEs

## PeriodicGrant\_Type

TTCN-3 Record Type			
Name	PeriodicGrant_Type		
Comment			
Period	<a href="#">ULGrant_Period_Type</a>		time period after which UL Grant need to be automatically transmitted or 'OnlyOnce'
NoOfRepetitions	<a href="#">TransmissionRepetition_Type</a>		number of UL Grant repetitions to be automatically transmitted or continuous repetition

## UL\_GrantConfig\_Type

TTCN-3 Union Type			
Name	UL_GrantConfig_Type		
Comment			
OnSR_Reception	<a href="#">Null_Type</a>		SS transmits UL Grant as configured by CommonDciInfoUL_Type at every reception of SR; to be used in non L2 Test
Periodic	<a href="#">PeriodicGrant_Type</a>		SS transmits UL Grant as configured by CommonDciInfoUL_Type periodically; to be used in L2 tests; MAC tests testing Grants might set the period as infinite and num grant as 1
PeriodicOnSR_Reception	<a href="#">PeriodicGrant_Type</a>		SS transmits UL Grant as configured by CommonDciInfoUL_Type periodically; the periodic grant transmission is started/restarted on reception of a SR from UE to be used in non L2 Test to enable large UL data transmission for lower category UEs (Cat<=1)
None	<a href="#">Null_Type</a>		disable any grant transmission

## D.1.3.5 Random\_Access\_Procedure

## UplinkGrant\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>UplinkGrant_Type</b>
<b>Comment</b>	TS 36.213, clause 6.2
HoppingFlag	<a href="#">B1_Type</a> Hopping flag
RB_Allocation	<a href="#">B10_Type</a> Fixed size resource block assignment
ModAndCodScheme	<a href="#">B4_Type</a> Truncated modulation and coding scheme
TPC_Command	<a href="#">B3_Type</a> TPC command for scheduled PUSCH
UL_Delay	<a href="#">B1_Type</a> UL delay
CQI_Req	<a href="#">B1_Type</a> CQI request

## CRNTI\_ContentionResolutionCtrl\_Type

TTCN-3 Union Type	
<b>Name</b>	<b>CRNTI_ContentionResolutionCtrl_Type</b>
<b>Comment</b>	configuration for Random Access Procedure in RRC_CONNECTED (see TS 36.300, clause 10.1.5.1); when SS receives C-RNTI MAC element sent by the UE after Random Access Response, SS shall deal with the C-RNTI as specified in this structure
AutomaticGrant	<a href="#">DciUlInfo_Type</a> before expiry of the contention resolution timer SS shall automatically address PDCCH using C-RNTI as sent by the UE; the UL grant is specified acc. to DciUlInfo_Type
None	<a href="#">Null_Type</a> Used in case of dedicated preamble transmission or to simulate failure cases; SS shall not address PDCCH using C-RNTI => expiry of contention resolution timer on UE side

## ContentionResolutionCtrl\_Type

TTCN-3 Union Type	
<b>Name</b>	<b>ContentionResolutionCtrl_Type</b>
<b>Comment</b>	NOTE: SS only needs to consider one kind of contention resolution at one time; in the initial configuration of a cell TCRNTI_Based shall be configured and the common assumption is that in RRC_CONNECTED normally there are no RACH procedures (i.e. no CRNTI_Based configuration needed) whereas e.g. in case of handover scenarios CRNTI_Based shall be configured
TCRNTI_Based	<a href="#">TCRNTI_ContentionResolutionCtrl_Type</a> TCRNTI based contention resolution (e.g. initial access), hence involves inclusion contention resolution identity in DL message 4 of RACH procedure
CRNTI_Based	<a href="#">CRNTI_ContentionResolutionCtrl_Type</a> CRNTI based contention resolution (e.g. in case UE is being in RRC_CONNECTED): hence uplink message in step 3 (of RACH procedure) is followed by PDCCH transmission with UE C-RNTI to end procedure

## RandomAccessResponseParameters\_Type

TTCN-3 Record Type		
Name	<b>RandomAccessResponseParameters_Type</b>	
Comment	parameters to control content of RAR sent to the UE	
RapId	<a href="#">RapIdCtrl_Type</a>	to control Random Access Preamble Id to be sent back to the UE; used in RAR MAC sub-header
InitialGrant	<a href="#">UplinkGrant_Type</a>	initial UL grantgrant ; May be ignored if UplinkGrantCE_Mode_Type is configured
TimingAdvance	<a href="#">RACH_TimingAdvance_Type</a>	timing advance: granularity of 0.52 micro sec (16*Ts); see TS 36.300, clause 5.2.7.3, TS 36.321, clause 6.1.3.5; NOTE: timing advance has impact not only on the RA procedure; SS in general needs to adjust its timing accordingly
TempC_RNTI	<a href="#">TempC_RNTI_Type</a>	NOTE: For initial Random Access Procedure at network (SS) side there is no temporary C-RNTI: network assigns the C-RNTI which is used by any UE as being temporary; the UE which 'wins' the contention resolution keeps the (temporary) C-RNTI; other UEs need to repeat the RACH procedure; => at the SS the TempC_RNTI shall be 'SameAsC_RNTI' For Random Access Procedure in RRC_CONNECTED state the NW assigns a temporary C-RNTI which is replaced by the one stored at the UE; => TempC_RNTI may be 'SameAsC_RNTI' (in this case temp. C-RNTI and C-RNTI are equal what is not likely in a real network), or there is an explicit temp. C-RNTI what is used during RA procedure only (as in a real network)
InitialGrantCE_Mode	<a href="#">UplinkGrantCE_Mode_Type</a>	opt used by SS based on PRACH coverage enhancement levels

## RarList\_Type

TTCN-3 Record of Type	
Name	<b>RarList_Type</b>
Comment	in general MAC PDU may contain one or several RARs; normally only one RAR is contained
record of <a href="#">RandomAccessResponseParameters_Type</a>	

## UplinkGrantCE\_ModeA\_Type

TTCN-3 Record Type		
Name	<b>UplinkGrantCE_ModeA_Type</b>	
Comment	TS 36.213, clause 6.2 table 6-2	
Msg3_PUSCH_NB_Index	<a href="#">B4_Type</a>	Msg3 PUSCH narrowband index
Msg3_PUSCH_ResAllocation	<a href="#">B4_Type</a>	Msg3 PUSCH Resource allocation
Msg3_PUSCH_Repetitions	<a href="#">B2_Type</a>	Number of Repetitions for Msg3 PUSCH
MCS	<a href="#">B3_Type</a>	
TPC_Command	<a href="#">B3_Type</a>	TPC command for scheduled PUSCH
CSI_Req	<a href="#">B1_Type</a>	CSI request
UL_Delay	<a href="#">B1_Type</a>	UL delay
Msg3_4_MPD_CCH_NB_Index	<a href="#">B2_Type</a>	Msg3/4 MPDCCH narrowband index

## UplinkGrantCE\_ModeB\_Type

TTCN-3 Record Type		
Name	UplinkGrantCE_ModeB_Type	
Comment	TS 36.213, clause 6.2 table 6-2	
Msg3_PUSCH_NB_Index	<a href="#">B2_Type</a>	Msg3 PUSCH narrowband index
Msg3_PUSCH_ResAllocation	<a href="#">B3_Type</a>	Msg3 PUSCH Resource allocation
Msg3_PUSCH_Repetitions	<a href="#">B3_Type</a>	Number of Repetitions for Msg3 PUSCH
TBS	<a href="#">B2_Type</a>	TBS
Msg3_4_MPD_CCH_NB_Index	<a href="#">B2_Type</a>	Msg3/4 MPDCCH narrowband index

## UplinkGrantCE\_Mode\_Type

TTCN-3 Record Type		
Name	UplinkGrantCE_Mode_Type	
Comment		
CE_ModeA	<a href="#">UplinkGrantCE_ModeA_Type</a>	If the most recent PRACH coverage enhancement level for the UE is 0 or 1, the contents of the Random Access Response Grant are interpreted according to CEModeA.
CE_ModeB	<a href="#">UplinkGrantCE_ModeB_Type</a>	If the most recent PRACH coverage enhancement level for the UE is 2 or 3, the contents of the Random Access Response Grant are interpreted according to CEModeB

## RandomAccessResponse\_Type

TTCN-3 Union Type		
Name	RandomAccessResponse_Type	
Comment		
None	<a href="#">Null_Type</a>	used for unsuccessful RA procedure
List	<a href="#">RarList_Type</a>	normally one RAR to be sent to the UE; in general there can be more than one RAR

## RandomAccessResponseCtrl\_Type

TTCN-3 Record Type		
Name	RandomAccessResponseCtrl_Type	
Comment	configuration for Random Access Response mapped to DL-SCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: RA-RNTI (TS 36.321, clause 7.1); if both RAR msg and backoff indicator are 'None' SS shall not respond on random access preamble	
DciInfo	<a href="#">DciDlInfoCommon_Type</a>	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI
Rar	<a href="#">RandomAccessResponse_Type</a>	RAR to be sent to the UE
BackoffInd	<a href="#">RandomAccessBackoffIndicator_Type</a>	possible backoff indicator; 'None' for normal cases

## RandomAccessResponseConfig\_Type

TTCN-3 Union Type		
Name	RandomAccessResponseConfig_Type	
Comment		
Ctrl	<a href="#">RandomAccessResponseCtrl_Type</a>	contains information to control sending of RAR
Ctrl_CRC_Error	<a href="#">RandomAccessResponseCtrl_Type</a>	same as Ctrl (see above), but MAC PDU transmitted will contain CRC bits (0-3) being toggled; no retransmissions shall be made as UE shall not send a NACK
None	<a href="#">Null_Type</a>	to be used when there is no RAR to be sent at all

## RachProcedure\_Type

TTCN-3 Record Type		
Name	RachProcedure_Type	
Comment		
RAResponse	<a href="#">RandomAccessResponseConfig_Type</a>	control of how the SS shall react on RA preamble; this may be - the RAP id as expected by the UE - a RAP id not matching to the UE's RAP - a backoff indicator - nothing at all
ContentionResolutionCtrl	<a href="#">ContentionResolutionCtrl_Type</a>	

## RachProcedureList\_Type

TTCN-3 Record of Type	
Name	RachProcedureList_Type
Comment	<p>to simulate RACH procedure with one or more than one attempt by the UE:</p> <p>1. Normal cases: one single RandomAccessResponse is sent to the UE matching the UE's RACH preamble; contention resolution is successful immediately =&gt; list contains only one element which is used for any RA procedure (Even if a RACH procedure is repeated by the UE for any reason this element shall be used; e.g. it needs not to be handled as error when the UE sends another RACH preamble instead of the RRC connection request message)</p> <p>2. Special cases: there are upto tsc_RandomAccessResponseListSize preambles sent by the UE =&gt; there are upto tsc_RandomAccessResponseListSize responses to be configured as elements of the list; SS shall start with the first element in the list and use the RAR as specified in this element; if the RAR matches at the UE side the UE will send UL data and contention resolution is performed as configured for this element; if the RAR does not match the UE sends another RAP and SS continues with the next element in the list; in this case the contention resolution of the respective element is not used; if the end of the list is reached and further RACH preambles are sent by the UE SS shall repeatedly apply the last element of the list (this is necessary because there might be not enough time to reconfigure SS after the end of the list has been reached and there shall be well-defined behaviour after the list has been processed);</p> <p>to change from a special mode to normal mode the RachProcedureList is reconfigured by TTCN to achieve transparency and readability of the code;</p> <p>NOTE: when there are RACH_ConfigDedicated configured (see below) and the RA preamble matches with one the configured ones the contention resolution ctrl is obsolete (non contention based random access procedure)</p>
record length(1..tsc_RandomAccessResponseListSize) of <a href="#">RachProcedure_Type</a>	

## RachProcedureConfig\_Type

TTCN-3 Record Type			
Name	<b>RachProcedureConfig_Type</b>		
Comment	parameters to control the random access procedure; TS 36.321, clause 5.1		
RACH_ConfigCommon	<a href="#">RACH_ConfigCommon_Type</a>	opt	acc. TS 36.331, clause 6.3.2; may not be necessary for SS; omit: "keep as it is"
RACH_ConfigDedicated	<a href="#">RACH_ConfigDedicated_Type</a>	opt	acc. TS 36.331, clause 6.3.2; when random access preamble sent by the UE matches with the configured one, SS shall assume the random access procedure being non-contention based; initial configuration: no RACH_ConfigDedicated are configured; omit means "keep as it is"
RachProcedureList	<a href="#">RachProcedureList_Type</a>	opt	in normal cases there is one element which is used for any RA procedure; special cases are used in MAC test cases; omit means "keep as it is" If the cell is an Active Scell, the RACH procedure configuration in the Active Scell controls the RAR transmission in the associated Pcell, for received PRACH preamble in Scell

## D.1.3.6 System\_Information\_Control

Primitive to configuration BCCH/BCH

## System\_Information\_Control: Basic Type Definitions

TTCN-3 Basic Types		
BcchToPbchConfig_Type	<a href="#">Null_Type</a>	place holder for BCCH mapped to BCH mapped to PBCH: MIB using fixed scheduling (periodicity: 40ms); transmission mode: single antenna port configuration (layer mapping acc. TS 36.211, clause 6.3.3.1) or transmit diversity (layer mapping acc. TS 36.211, clause 6.3.3.3) depending on antenna configuration

## Sib1Schedul\_Type

TTCN-3 Record Type			
Name	<b>Sib1Schedul_Type</b>		
Comment	SIB1: fixed scheduling in time domain acc. TS 36.331, clause 5.2.1.2 (periodicity: 80ms; repetitions every 20ms)		
DciInfo	<a href="#">DciDlInfoCommon_Type</a>	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI

**SingleSiSchedul\_Type**

TTCN-3 Record Type			
Name	<b>SingleSiSchedul_Type</b>		
Comment	specifies scheduling for a single SI in freq and time domain		
DciInfo	<a href="#">DciDlInfoCommon_Type</a>	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI
SubframeOffset	integer	opt	offset within the SI-window; NOTE: SI-window may span more than one frame

**SiSchedul\_Type**

TTCN-3 Record Type			
Name	<b>SiSchedul_Type</b>		
Comment	specifies for a specific SI scheduling and repetitions within as SI window		
Periodicity	<a href="#">SiPeriodicity_Type</a>	opt	
Window	record of <a href="#">SingleSiSchedul_Type</a>	opt	NOTE: acc. to TS 36.331, clause 5.2.1.2 the same SI may occur more than once in an SI-window; to allow this there is a "record of" even though acc. to TS 36.508, clause 4.4.3.3 all SIs are sent only once within the window

**SiSchedulList\_Type**

TTCN-3 Record of Type	
Name	<b>SiSchedulList_Type</b>
Comment	
record length(1..maxSI_Message) of <a href="#">SiSchedul_Type</a>	

**AllSiSchedul\_Type**

TTCN-3 Record Type			
Name	<b>AllSiSchedul_Type</b>		
Comment			
WindowLength	<a href="#">SiWindowLength_Type</a>	opt	to calculate start of each SI window acc. TS 36.331, clause 5.2.3
SiList	<a href="#">SiSchedulList_Type</a>	opt	list of scheduling info for the SIs containing one ore more SIBs
SegmentedSiList	<a href="#">SiSchedulList_Type</a>	opt	list of scheduling info for segmented SIs (e.g. SI containing SIB11); corresponds to SegmentedSIs in BcchInfo_Type: SS shall subsequently schedule the elements of the corresponding SegmentedSIs (BcchInfo_Type); e.g. SegmentedSiList[i] provided scheduling info for BcchInfo_Type's SegmentedSIs[i] and the kth element of SegmentedSIs[i] is sent at $T_0 + ((K * N) + k) * \text{periodicity}$ with K: number for segments k = 0 .. K-1 N = 0, 1, 2, ... T <sub>0</sub> , periodicity: scheduling info as given by SegmentedSiList[i]

**BcchToPdschConfig\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>BcchToPdschConfig_Type</b>		
<b>Comment</b>	configuration for BCCH mapped to DL-SCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: SI-RNTI (TS 36.321, clause 7.1)		
Sib1Schedul	<a href="#">Sib1Schedul_Type</a>	opt	scheduling of SIB1 in frequency domain
SiSchedul	<a href="#">AllSiSchedul_Type</a>	opt	scheduling of SIs in frequency and time domain

**SI\_List\_Type**

TTCN-3 Record of Type	
<b>Name</b>	<b>SI_List_Type</b>
<b>Comment</b>	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message and clause 6.2.2 SystemInformation
record of BCCH_DL_SCH_Message	

**SegmentedSI\_List\_Type**

TTCN-3 Record of Type	
<b>Name</b>	<b>SegmentedSI_List_Type</b>
<b>Comment</b>	Each element is a list of segments; used for SIB11/12 segmentation
record of <a href="#">SI_List_Type</a>	

**BcchInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>BcchInfo_Type</b>		
<b>Comment</b>	all fields are declared as optional to allow modification of single field; acc. to TS 36.331, clause 9.1.1.1 "RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5."; therefore this needs to be done by the system simulator		
MIB	BCCH_BCH_Message	opt	TS 36.331, clause 6.2.1 BCCH-BCH-Message and clause 6.2.2 MasterInformationBlock; NOTE: the sequence number included in MIB needs to be handled and maintained by the system simulator; that means that the sequence number being setup by TTCN will be overwritten by SS
SIB1	BCCH_DL_SCH_Message	opt	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message and clause 6.2.2 SystemInformationBlockType1
SIs	<a href="#">SI_List_Type</a>	opt	list of SIs corresponding to SiList of AllSiSchedul_Type (i.e. element i of AllSiSchedul_Type's SiList specifies the scheduling for SIs[i])
SegmentedSIs	<a href="#">SegmentedSI_List_Type</a>	opt	list of SIs containing segmented SIBs; corresponds to SegmentedSiList in AllSiSchedul_Type

**BcchConfig\_Type**

TTCN-3 Record Type			
Name	BcchConfig_Type		
Comment	all fields are optional to allow single modifications; activation time may be applied in the common part of the ASP; NOTE 1: acc. to TS 36.331, clause 9.1.1.1 there is no PDCP and RLC/MAC are in TM NOTE 2: mapping/scheduling and contents of the System Information in general is done in one go (i.e. there are no separate ports for SIB data and configuration)		
Pbch	<a href="#">BcchToPbchConfig_Type</a>	opt	
Pdsch	<a href="#">BcchToPdschConfig_Type</a>	opt	
BcchInfo	<a href="#">BcchInfo_Type</a>	opt	
StopSib1Transmission	<a href="#">Null_Type</a>	opt	if omitted: SS transmits SIB1 last provided in BcchInfo and associated DCI.  if set: SS shall stop transmission of SIB1 and associated DCI.  To resume SIB1 transmission, this flag shall be omitted and SIB1 shall be provided in BcchInfo.

**Bcch\_BRConfig\_Type**

TTCN-3 Record Type			
Name	Bcch_BRConfig_Type		
Comment	all fields are optional to allow single modifications; activation time may be applied in the common part of the ASP; NOTE 1: acc. to TS 36.331, clause 9.1.1.8 there is no PDCP and RLC/MAC are in TM NOTE 2: mapping/scheduling and contents of the System Information in general is done in one go (i.e. there are no separate ports for SIB data and configuration)		
Pbch	<a href="#">Bcch_BRToPbchConfig_Type</a>	opt	
Pdsch	<a href="#">Bcch_BRToPdschConfig_Type</a>	opt	
BcchInfo	<a href="#">Bcch_BRInfo_Type</a>	opt	
StopSib1Transmission	<a href="#">Null_Type</a>	opt	if omitted: SS transmits SIB1 last provided in BcchInfo and associated DCI.  if set: SS shall stop transmission of SIB1 and associated DCI.  To resume SIB1 transmission, this flag shall be omitted and SIB1 shall be provided in BcchInfo.

**Bcch\_BRToPbchConfig\_Type**

TTCN-3 Record Type			
Name	Bcch_BRToPbchConfig_Type		
Comment	BCCH_BL mapped to BCH mapped to PBCH: MIB using fixed scheduling (periodicity: 40ms); transmission mode: single antenna port configuration (layer mapping acc. TS 36.211, clause 6.3.3.1) or transmit diversity (layer mapping acc. TS 36.211, clause 6.3.3.3) depending on antenna configuration		
EnableMIB_Repetition	boolean		If true MIB transmission shall be repeated in subframe#9 of the previous radio frame for FDD and subframe #5 of the same radio frame for TDD

**SI\_SubframeOffsetList\_Type**

TTCN-3 Record of Type	
Name	<b>SI_SubframeOffsetList_Type</b>
Comment	
record length (0..infinity) of integer	

**Bcch\_BRToPdschConfig\_Type**

TTCN-3 Record Type			
Name	<b>Bcch_BRToPdschConfig_Type</b>		
Comment	Configuration for BCCH_BR mapped to DL-SCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: No RNTI as BR SIs are sent without DCI info and scheduling for SIB-1 is provided in MIB and for other SIBs in SIB 1		
Sib1_BRScheduled	<a href="#">Sib1_BRScheduled_Type</a>	opt	scheduling of SIB1 in frequency & time domain
SiSchedul	<a href="#">BandwidthReducedAccessRelatedInfo_Type</a>	opt	scheduling of SIs in frequency and time domain. SS shall ignore si-ValidityTime-r13 and systemInfoValueTagList-r13 and TTCN shall omit them
SubframeOffsetList	<a href="#">SI_SubframeOffsetList_Type</a>	opt	offset within the SI-window; NOTE: SI-window may span more than one frame. There shall be 1 to 1 mapping with <a href="#">BandwidthReducedAccessRelatedInfo_Type.schedulingInfoList_BR_r13</a> elements

**Sib1\_BRScheduled\_Type**

TTCN-3 Record Type			
Name	<b>Sib1_BRScheduled_Type</b>		
Comment	SIB1: fixed scheduling in time domain acc. TS 36.331, clause 5.2.1.2 (periodicity: 80ms) For a BL/CE UE, the resource allocation for PDSCH carrying SystemInformationBlockType1-BR and SI messages is a set of six contiguously allocated localized virtual resource blocks within a narrowband . the Narrow band index used for a transmission is as per 36.211 clause 6.4.1		
SchedulingInfoSIB1_BR_r13	<a href="#">SchedulingInfoSIB1_BR_r13_Type</a>		TBS for SystemInformationBlockType1-BR and the repetitions made within 80ms as indicated in MIB

**BR\_SI\_List\_Type**

TTCN-3 Record of Type	
Name	<b>BR_SI_List_Type</b>
Comment	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message-BR and clause 6.2.2 SystemInformation
record of BCCH_DL_SCH_Message_BR	

**BR\_SegmentedSI\_List\_Type**

TTCN-3 Record of Type	
Name	<b>BR_SegmentedSI_List_Type</b>
Comment	Each element is a list of segments; used for SIB11/12 segmentation
record of <a href="#">BR_SI_List_Type</a>	

**Bcch\_BRInfo\_Type**

TTCN-3 Record Type			
Name	Bcch_BRInfo_Type		
Comment	all fields are declared as optional to allow modification of single field; acc. to TS 36.331, clause 9.1.1.1 "RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5."; therefore this needs to be done by the system simulator		
MIB	BCCH_BCH_Message	opt	The MIB shall not be present if transmission of MIB is configured by BcchInfo_Type. TS 36.331, clause 6.2.1 BCCH-BCH-Message and clause 6.2.2 MasterInformationBlock; NOTE: the sequence number included in MIB needs to be handled and maintained by the system simulator; that means that the sequence number being setup by TTCN will be overwritten by SS
SIB1	BCCH_DL_SCH_Message_BR	opt	TS 36.331, clause 6.2.1 BCCH-DL-SCH-Message-BR and clause 6.2.2 SystemInformationBlockType1
SIs	<a href="#">BR_SI_List_Type</a>	opt	list of SIs corresponding to SiList of AllSiSchedul_Type (i.e. element i of AllSiSchedul_Type's SiList specifies the scheduling for SIs[i])
SegmentedSIs	<a href="#">BR_SegmentedSI_List_Type</a>	opt	list of SIs containing segmented SIBs; corresponds to SegmentedSiList in AllSiSchedul_Type

**D.1.3.7 Paging\_Control**

Primitive to configuration PCCH/PCH

**PcchConfig\_Type**

TTCN-3 Record Type			
Name	PcchConfig_Type		
Comment	configuration for PCCH mapped to PCH mapped to PDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: P-RNTI (TS 36.321, clause 7.1) NOTE: acc. to TS 36.331, clause 9.1.1.3 there is no PDCP and RLC/MAC are in TM		
DciInfo	<a href="#">DciDlInfoCommon_Type</a>	opt	DCI format: 1A or 1C (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK Frequency domain schedule: index of 1st RB; max. number of RBs per TTI
PCCH_Config_v13	PCCH_Config_v1310	opt	provides MPDCCH repetition for PCCH etc

**D.1.3.8 UE\_Specific\_Channel\_Configuration****D.1.3.8.1 UE\_Specific\_Channel\_Configuration\_DL**

Scheduling and other information for CCCH/DCCH/DTCH mapped to DL-SCH mapped to PDSCH

**HarqProcessConfigDL\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>HarqProcessConfigDL_Type</b>	
<b>Comment</b>	HARQ processes to be used automatically for DL assignments	
AllProcesses	<a href="#">Null_Type</a>	all HARQ processes shall be used for automatic assignment; this is the normal case
SpecificSubset	<a href="#">HarqProcessList_Type</a>	only the HARQ processes of this list shall be used automatically, other processes are excluded from automatic assignments; nevertheless all HARQ processes may be addressed explicitly by DRB_DataPerSubframe_DL_Type.HarqProcess

**CcchDcchDtchConfigDL\_Type**

TTCN-3 Record Type		
<b>Name</b>	<b>CcchDcchDtchConfigDL_Type</b>	
<b>Comment</b>	configuration for CCCH/DCCH/DTCH mapped to DL-SCH mapped to PDSCH TransmissionMode: as signalled to the UE (AntennaInfoDedicated in RRCConnectionSetup); RNTI: C-RNTI (TS 36.321, clause 7.1); all fields optional (omit = "keep as it is") since DCI format and modulation may be changed during a test; for initial configuration all fields are mandatory	
DciInfo	<a href="#">DciDlInfo_Type</a>	opt DCI format: 1A per default since for CCCH mimo cannot be applied in general ResourceAllocType: (depending on DCI format) Modulation: QPSK for signalling Frequency domain schedule: index of 1st RB; max. number of RBs per TTI; in case of spatial multiplexing if there are 2 code words FreqDomainSchedul shall be applied to both
AntennaInfo	<a href="#">AntennaInfoDedicated_Type</a>	opt as signalled to the UE (TS 36.331, clause 6.3.2): transmissionMode, codebookSubsetRestriction
HarqProcessConfig	<a href="#">HarqProcessConfigDL_Type</a>	opt HARQ processes automatically used by the SS in DL

**D.1.3.8.2 UE\_Specific\_Channel\_Configuration\_UL**

Scheduling information for CCCH/DCCH/DTCH mapped to UL-SCH mapped to PUSCH

**PucchHoppingBits\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>PucchHoppingBits_Type</b>	
<b>Comment</b>	Number of hopping bits acc. to TS 36.213 table 8.4-2	
OneBit	<a href="#">B1_Type</a>	N(UL, RB) = 6..49 i.e. default system bandwidth this less than 10 MHz (does not include 10 MHz)
TwoBits	<a href="#">B2_Type</a>	N(UL, RB) = 50..110 i.e. default system bandwidth is 10 MHz or above

**UplinkHoppingResourceParameters\_Type**

TTCN-3 Record Type		
<b>Name</b>	<b>UplinkHoppingResourceParameters_Type</b>	
<b>Comment</b>		
PucchHopping	<a href="#">PucchHoppingBits_Type</a>	to control hopping resource allocation as signalled in DCI format 0 (TS 36.212, clause 5.3.3.1.1)

**UplinkHoppingControl\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>UplinkHoppingControl_Type</b>
<b>Comment</b>	shall be considered by SS to fill in the information needed for DCI format 0 (TS 36.213, clause 7.1)
Deactivated	<a href="#">Null_Type</a>
Activated	<a href="#">UplinkHoppingResourceParameters_Type</a>

**CcchDcchDtchConfigUL\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>CcchDcchDtchConfigUL_Type</b>
<b>Comment</b>	scheduling for CCCH/DCCH/DTCH mapped to UL-SCH mapped to PUSCH NOTE 1: for definition of the possible UL grants the location of the PUCCH (TS 36.211, clause 5.4.3) and the PRACH (TS 36.211, clause 5.7.3) need to be taken into account; NOTE 2: In contrast to the DL where the scheduling can be done (with consideration of some restrictions) by SS on a per need basis in the UL the scheduling depends on information provided by the UE: e.g. BSR (buffer status report), SR (scheduling request) see TS 36.523-3 clause 7.2 for further information.
DciInfo	<a href="#">DciUlInfo_Type</a> opt DCI format: 0 (TS 36.213, clause 7.1) ResourceAllocType: 2 (acc. to DCI format) Modulation: QPSK per default Frequency domain schedule: index of 1st RB; max. number of RBs per TTI (upper bound up to which SS may assign grants to the UE)
Hopping	<a href="#">UplinkHoppingControl_Type</a> opt when Hopping = 'Activated' SS shall set hopping flag in DCI format 0
PUCCH_Synch	<a href="#">UplinkTimeAlignment_Synch_Type</a> opt parameters to control automatic control of timing advance
UL_GrantConfig	<a href="#">UL_GrantConfig_Type</a> opt UL grant allocation to be applied

**UE\_Specific\_Channel\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types	
<b>N_PSCCH_Type</b>	<a href="#">B6_Type</a>
<b>ltp_Type</b>	integer (0..127)

**DrxCtrl\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>DrxCtrl_Type</b>
<b>Comment</b>	DRX configuration for connected mode (TS 36.321, clause 5.7)
None	<a href="#">Null_Type</a> DRX not configured
Config	<a href="#">DRX_Config_Type</a> DRX is configured as signalled to the UE; NOTE: the release branch of DRX-Config in general is not used for configuration of the SS

**MeasGapCtrl\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>MeasGapCtrl_Type</b>
<b>Comment</b>	support of measurement gap configuration
None	<a href="#">Null_Type</a> no measurement gap configuration
Config	<a href="#">MeasGapConfig_Type</a> measurement gap configuration acc. to TS 36.331, clause 6.3.5 and gap pattern acc. TS 36.133 Table 8.1.2.1-1; NOTE: the release branch of MeasGapConfig in general is not used for configuration of the SS

**CcchDcchDtchConfig\_Type**

TTCN-3 Record Type			
Name	<b>CcchDcchDtchConfig_Type</b>		
Comment			
MeasGapCtrl	<a href="#">MeasGapCtrl_Type</a>	opt	to tell the SS when no assignments/grants shall be assigned to the UE
DL	<a href="#">CcchDcchDtchConfigDL_Type</a>	opt	Scheduling, parameters related to CCCH, DCCH and DTCH in DL
UL	<a href="#">CcchDcchDtchConfigUL_Type</a>	opt	Scheduling, parameters related to CCCH, DCCH and DTCH in UL
DrxCtrl	<a href="#">DrxCtrl_Type</a>	opt	DRX configuration as sent to the UE (or 'None' when the UE does not support connected mode DRX)
TtiBundling	<a href="#">TTI_BundlingConfig_Type</a>	opt	TTI bundling as configured at the UE
CifPresence	boolean	opt	corresponds to PhysicalConfigDedicated.cif_Presence_r10: The CIF field is applied for dedicated search space scheduling i.e. DCCH/DTCH. Not present for common search space scheduling. CIF indicator as true may be configured even in non CA cell, to facilitate the future false: no serving cell is cross scheduled by this cell true: carrier indicator field is present when the PDCCH CRC is scrambled by C-RNTI or SPS C-RNTI omit means "keep as it is"

**SciSchedulingConfig\_Type**

TTCN-3 Record Type			
Name	<b>SciSchedulingConfig_Type</b>		
Comment	Scheduling for STCH mapped to SL-SCH mapped to PSSCH DPCCH DCI format 5 (TS 36.213, clause 14.2) UL grant allocation to be applied: On SL-BSR Reception For the time being there is no requirement to configure the SS with TPC-PDCCH-Config; In general SS is required to keep the UE's UL power constant		
SL_RNTI_r12	C_RNTI	opt	
N_PSCCH	<a href="#">N_PSCCH_Type</a>	opt	Resource for PSCCH - 6 bits
SL_Scheduling	<a href="#">SL_SciConfig_Type</a>	opt	SCI format 0 configuration

**SL\_SciConfig\_Type**

TTCN-3 Record Type			
Name	<b>SL_SciConfig_Type</b>		
Comment	SCI format 0 (TS 36.213 clause 14.2 TS 36.212 clause 5.3.3.1.9) ResourceAllocType: 0 (36.213 cl 14.1.1.2.1 and 8.1.1) Frequency domain schedule: index of 1st RB; max. number of RBs per TTI (upper bound up to which SS may assign grants to the UE)		
Hopping	<a href="#">UplinkHoppingControl_Type</a>		Frequency hopping flag - bit
FreqDomainSchedul	<a href="#">FreqDomainSchedulExplicit_Type</a>		Resource block assignment
ltrp	<a href="#">ltrp_Type</a>		Time resource pattern of 14.1.1.1.1 of TS 36.213

## D.1.3.9 Carrier\_Aggregation

## ActivateScell\_Type

TTCN-3 Record Type			
Name	ActivateScell_Type		
Comment			
ScellActivation	<a href="#">ScellBitMap_Type</a>		36.321 clause 6.1.3.8; B0=C7, B1=C6 .. B6=C1, B7 is reserved. B0 to B6, 1 means Activate associated Scell
SendMCE	boolean		If true the SS sends a MAC Control Element to the UE

## Scell\_Capability\_Type

TTCN-3 Enumerated Type	
Name	Scell_Capability_Type
Comment	
DIOnly	the CC is configured in DL only, no aggregation in this cell in UL
UL_DL	the aggregation is configured in both UL and DL

## ScellDeactivationTimer\_Type

TTCN-3 Union Type		
Name	ScellDeactivationTimer_Type	
Comment	NOTE: this type is a union to allow semantic of "keep as it is" for optional fields of this type	
NumberOfRadioFrames	<a href="#">MAC_MainConfig_ScellDeactivationTimer_Type</a>	Scell deactivation timer acc. to TS 36.321
Infinity	<a href="#">Null_Type</a>	infinity as when 'sCellDeactivationTimer' is omitted in 'MAC-MainConfig' sent to the UE

## SCellIndexList\_List

TTCN-3 Record of Type	
Name	SCellIndexList_List
Comment	
record length (1..7) of SCellIndex_r10	

## CrossCarrierScheduledCellsList\_Type

TTCN-3 Union Type		
Name	CrossCarrierScheduledCellsList_Type	
Comment		
None	<a href="#">Null_Type</a>	No Cells Cross Scheduled by this Cell; CIF can still be true.
CrossScheduledCells	<a href="#">SCellIndexList_List</a>	List of Scells Scheduled by this Scell; CIF field shall be true; Pcell cannot be cross scheduled

## SchedulingCarrierConfig\_Type

TTCN-3 Union Type		
Name	SchedulingCarrierConfig_Type	
Comment		
Own	<a href="#">CrossCarrierScheduledCellsList_Type</a>	Cell is scheduled by itself and possible cross schedules other Scells
CrossScheduled	<a href="#">CrossSchedulingCarrierInfo_Type</a>	Cell is cross Scheduled by other carrier; the CIF field shall be configured in the serving cell scheduling this scell

**CrossCarrierSchedulingConfig\_Type**

TTCN-3 Union Type		
Name	<b>CrossCarrierSchedulingConfig_Type</b>	
Comment		
Config	<a href="#">SchedulingCarrierConfig_Type</a>	When cross carrier scheduling is enabled then the CIF field shall be configured in the serving cell scheduling this scell
None	<a href="#">Null_Type</a>	

**PrimaryCellInfo\_Type**

TTCN-3 Record Type			
Name	<b>PrimaryCellInfo_Type</b>		
Comment			
AssociatedScellList	<a href="#">EUTRA_CellIdList_Type</a>		List of Scells associated with the Pcell/PScells (needs to be consistent with AssociatedPcellId in Scell/PScell )
MeasSubframePatternPCell	MeasSubframePatternPCell_r10	opt	
CrossCarrierScheduledCellsList	<a href="#">CrossCarrierScheduledCellsList_Type</a>	opt	Information of possible Cells Cross Scheduled by this cell

**Pcell\_Mode\_Type**

TTCN-3 Union Type		
Name	<b>Pcell_Mode_Type</b>	
Comment		
FDD	<a href="#">Null_Type</a>	
TDD	<a href="#">TDD_SubframeAssignment_Type</a>	

**SecondaryCellInfo\_Type**

TTCN-3 Record Type			
Name	<b>SecondaryCellInfo_Type</b>		
Comment			
AssociatedPcellId	<a href="#">EUTRA_CellId_Type</a>		cell ID of associated Pcell/PScell (eutra_Cell_NonSpecific is not allowed)
SCellIndex	SCellIndex_r10		
Scell_Capability	<a href="#">Scell_Capability_Type</a>	opt	if DL only or both UL and DL (omit means "keep as it is")
ScellDeactivationTimer	<a href="#">ScellDeactivationTimer_Type</a>	opt	SCell deactivation timer; omit means "keep as it is"; when there is more than one SCell associated to the same PCell this field shall be set to the same value for each SCell
CrossCarrierSchedulingConfig	<a href="#">CrossCarrierSchedulingConfig_Type</a>	opt	omit means "keep as it is"
STAG_Id	STAG_Id_r11	opt	if IE is never configured then scell is part of PTAG. Uses the STAG_ID or PTAG in Auto PUCCH synchronization when transmitting periodically Timing Advance MCE
Pcell_Mode	<a href="#">Pcell_Mode_Type</a>	opt	omit means Pcell/PScell and Scell mode are same. To be provide for FDD-TDD mixed mode CA/Dual connectivity configurations

## ServingCellConfig\_Type

TTCN-3 Union Type		
Name	ServingCellConfig_Type	
Comment		
PCell	<a href="#">PrimaryCellInfo_Type</a>	cell shall become PCell
SCell	<a href="#">SecondaryCellInfo_Type</a>	cell shall become SCell
PSCell	<a href="#">PSCellInfo_Type</a>	cell shall become PSCell
Release	<a href="#">Null_Type</a>	cell is changed back to normal non CA cell

## PSCellInfo\_Type

TTCN-3 Record Type		
Name	PSCellInfo_Type	
Comment		
AssociatedPcellId	<a href="#">EUTRA_CellId_Type</a>	cell ID of associated Pcell (eutra_Cell_NonSpecific is not allowed)
SCellIndex	SCellIndex_r10	
AssociatedScellList	<a href="#">EUTRA_CellIdList_Type</a>	List of Scells associated with the PSCell (needs to be consistent with AssociatedPcellId in Scell)
CrossCarrierSchedulingConfig	<a href="#">CrossCarrierSchedulingConfig_Type</a>	opt omit means "keep as it is"
Pcell_Mode	<a href="#">Pcell_Mode_Type</a>	opt omit means PCell and PSCell mode are same. To be provide for FDD-TDD mixed mode Dual connectivity configurations

## D.1.3.10 OCNG\_Config

## OCNG\_Config\_Type

TTCN-3 Union Type		
Name	OCNG_Config_Type	
Comment		
Activate	<a href="#">OCNG_ActivateInfo_Type</a>	CellId : identifier of the cell where the OCNG needs to be activated RoutingInfo : None TimingInfo : activation time from when the SS starts transmission of uncorrelated pseudo random MAC TB's addressed to Virtual UE's in non ABS subframes. ControllInfo : Cnfflag:=false; FollowOnFlag:=false
Deactivate	<a href="#">Null_Type</a>	CellId : identifier of the cell where the OCNG needs to be deactivated RoutingInfo : None TimingInfo : activation time from when the SS stops transmission of MAC TB's addressed to Virtual UE's in non ABS subframes. ControllInfo : Cnfflag:=false; FollowOnFlag:=false

## OCNG\_ActivateInfo\_Type

TTCN-3 Record Type		
Name	OCNG_ActivateInfo_Type	
Comment	OFDMA Channel Noise Generator (OCNG): SS for transmitting uncorrelated pseudo random data in MAC TB's addressed to Virtual UE's, will not do any retransmissions due to no HARQ ACK/NACK reception being considered as NACK.	
MeasSubframePattern	MeasSubframePattern_r10	provides the bit string for x (size of bit string divided by 10 ) frames to be repeated continuously from provided timing info; 1 represents ABS subframe hence no pseudo random MAC TB is scheduled 0 represent non-ABS subframe and SS automatically transmits MAC TB's consisting of pseudo random data in each non-ABS subframe

## D.1.3.11 EIMTA\_Config

## EIMTA\_Config\_Type

TTCN-3 Record Type			
Name	EIMTA_Config_Type		
Comment			
EIMTA_MainConfig_r12	EIMTA_MainConfig_r12		The IE EIMTA-MainConfig is used to specify the eIMTA-RNTI used for eIMTA and the subframes used for PDCCH monitoring by the UE with eIMTA-RNTI
EIMTA_MainConfigServCell_r12	EIMTA_MainConfigServCell_r12		The IE EIMTA-MainConfigServCell is used to specify the eIMTA related parameters applicable for the cell

## PeriodicTransmission\_Type

TTCN-3 Record Type			
Name	PeriodicTransmission_Type		
Comment			
Period	integer (1..infinity)		DCI 1C transmission period (TTI=1ms); the starting time, Period and NumRepetitions need to be chosen in TTCN so that the DCI 1C transmissions are assigned at valid subframes according to EIMTA_MainConfig_r12 settings; otherwise SS shall raise an error
NumRepetitions	<a href="#">TransmissionRepetition_Type</a>		number of DCI 1C repetitions to be automatically transmitted or 'Continuous'

## PDCCH\_TDD\_ConfigOrder\_Type

TTCN-3 Union Type			
Name	PDCCH_TDD_ConfigOrder_Type		
Comment			
OnlyOnce	<a href="#">Null_Type</a>		DCI 1C is sent out on PDCCH with CRC scrambled by eIMTA-RNTI only once; no period
Periodic	<a href="#">PeriodicTransmission_Type</a>		SS transmits DCI 1C periodically as configured by EIMTA_MainConfig_Type
None	<a href="#">Null_Type</a>		stop DCI 1C transmission

## D.1.4 Cell\_Power\_Attenuation

## CellAttenuationConfig\_Type

TTCN-3 Record Type			
Name	CellAttenuationConfig_Type		
Comment			
CellId	<a href="#">EUTRA_CellId_Type</a>		
Attenuation	<a href="#">Attenuation_Type</a>		
TimingInfo	<a href="#">TimingInfo_Type</a>	opt	

## CellAttenuationList\_Type

TTCN-3 Record of Type			
Name	CellAttenuationList_Type		
Comment			
record length(1.. <a href="#">tsc_EUTRA_MaxNumberOfCells</a> ) of <a href="#">CellAttenuationConfig_Type</a>			

## D.1.5 Radio\_Bearer\_Configuration

Radio Bearer Configuration: SRBs/DRBs

### D.1.5.1 PDCP\_Configuration

#### PDCP\_SNLengh\_Type

TTCN-3 Enumerated Type	
Name	<b>PDCP_SNLengh_Type</b>
Comment	PDCP Sequence Number
PDCP_SNLengh5	TS 36.323 clause 6.2.2
PDCP_SNLengh7	TS 36.323 clause 6.2.3

TTCN-3 Record Type	
Name	<b>PDCP_NonROHC_Mode_Type</b>
Comment	
SN_Size	<a href="#">PDCP_SNLengh_Type</a>

#### PDCP\_TestModelInfo\_Type

TTCN-3 Union Type		
Name	<b>PDCP_TestModelInfo_Type</b>	
Comment		
PDCP_ROHC_Mode	<a href="#">PDCP_ROHC_Mode_Type</a>	ROHC test mode acc. to TS 36.523-3, clause 4.2.1.3.1; requires PDCP to be configured for this RB => <ul style="list-style-type: none"> <li>- SS applies ciphering in UL and DL</li> <li>- SS maintains PDCP sequence numbers and state variables</li> </ul> Furthermore in this mode <ul style="list-style-type: none"> <li>- SS does not add/remove PDCP headers (in UL the PDCP PDUs are decoded depending on SN_Size)</li> <li>- SS applies ROHC in DL only</li> </ul>
PDCP_NonROHC_Mode	<a href="#">PDCP_NonROHC_Mode_Type</a>	PDCP test mode acc. to TS 36.523-3, clause 4.2.1.3.2 (non-ROHC test mode); requires PDCP to be configured as transparent => <ul style="list-style-type: none"> <li>- SS does not apply ciphering in UL and DL</li> <li>- SS does not interpret, insert or remove PDCP headers (in UL PDCP PDUs are decoded depending on SN_Size)</li> <li>- SS does not maintain PDCP sequence numbers and state variables</li> </ul>

#### PDCP\_TestModeConfig\_Type

TTCN-3 Union Type	
Name	<b>PDCP_TestModeConfig_Type</b>
Comment	
None	<a href="#">Null_Type</a>
Info	<a href="#">PDCP_TestModelInfo_Type</a>

**PDCP\_RbConfig\_Type**

TTCN-3 Union Type		
Name	<b>PDCP_RbConfig_Type</b>	
Comment		
Srb	<a href="#">Null_Type</a>	for SRB1/2 there are no PDCP_Parameters; SN is always 5 bits
Drb	<a href="#">PDCP_Config_Type</a>	PDCP-Configuration acc. to TS 36.331, clause 6.3.2; among others for UM here pdcp-SN-Size is configured to be either len7bits or len12bits; for AM it always is 12bit
Transparent	<a href="#">Null_Type</a>	used for PDCP tests (TS 36.523-3, clause 4.2.1.3.2): the SS does not apply ciphering and does not maintain PDCP sequence numbers and state variables; in UL the PDCP PDUs are decoded acc. to the TestMode; Note: a reconfiguration of a RB from transparent mode to 'normal' mode is not foreseen (i.e. there is no mechanism to restore Ciphering, PDCP sequence numbers and state variables at the SS)

**PDCP\_ConfigInfo\_Type**

TTCN-3 Record Type			
Name	<b>PDCP_ConfigInfo_Type</b>		
Comment			
Rb	<a href="#">PDCP_RbConfig_Type</a>	opt	mandatory for initial configuration; omit means "keep as it is"
TestMode	<a href="#">PDCP_TestModeConfig_Type</a>	opt	mandatory for initial configuration; omit means "keep as it is"

**PDCP\_Configuration\_Type**

TTCN-3 Union Type		
Name	<b>PDCP_Configuration_Type</b>	
Comment		
None	<a href="#">Null_Type</a>	for SRB0 no PDCP is configured; furthermore the PDCP may not be configured e.g. for DRBs tested in MAC test cases
Config	<a href="#">PDCP_ConfigInfo_Type</a>	

**D.1.5.2 RLC\_Configuration**

RLC configuration: radio bearer specific

**RLC\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types		
RLC_AM_SequenceNumber_Type	integer (0..1023)	RLC AM sequence number
SS_RLC_TM_Type	<a href="#">Null_Type</a>	TM to configure SRB0; no parameters to be defined

**RLC\_ACK\_Prohibit\_Type**

TTCN-3 Enumerated Type	
Name	<b>RLC_ACK_Prohibit_Type</b>
Comment	
Prohibit	cause SS RLC layer to stop any ACK transmission for UL PDU's received from UE
Continue	bring back the SS RLC in normal mode, where ACK/NACK are transmitted at polling

**RLC\_NotACK\_NextRLC\_PDU\_Type**

TTCN-3 Enumerated Type	
Name	<b>RLC_NotACK_NextRLC_PDU_Type</b>
Comment	
Start	cause SS RLC layer not to ACK the next received RLC PDU; this is done regardless of whether the poll bit is set or not; Example [from UMTS]: when the UE gets new security information in a SECURITY MODE COMMAND the response (SECURITY MODE COMPLETE) sent by the UE is not acknowledged at the RLC level; this causes the UE to continue using the "old" security information

**RLC\_TestModelInfo\_Type**

TTCN-3 Union Type

Comment			
Rb	<a href="#">RLC_RbConfig_Type</a>	opt	mandatory for initial configuration; omit means "keep as it is"
TestMode	<a href="#">RLC_TestModeConfig_Type</a>	opt	mandatory for initial configuration; omit means "keep as it is"

**D.1.5.3 MAC\_Configuration**

MAC configuration: radio bearer specific configuration

**EUTRA\_ASP\_TypeDefs: Constant Definitions**

TTCN-3 Basic Types			
tsc_MaxHarqRetransmission	integer	28	maximum value for maxHARQ-Msg3Tx as being signalled to the UE

**MAC\_Test\_DLLogChID\_Type**

TTCN-3 Union Type		
Name	MAC_Test_DLLogChID_Type	
Comment		
LogChId	<a href="#">TestLogicalChannelId_Type</a>	Specifies to over write the logical channel ID in MAC header in all the DL messages sent on the configured logical channel
ConfigLchId	<a href="#">Null_Type</a>	Specifies that the normal mode of correct logical channel ID to be used in DL Mac header. This will be the default mode, when SS is initially configured.

**MAC\_Test\_DL\_SCH\_CRC\_Mode\_Type**

TTCN-3 Enumerated Type	
Name	<b>MAC_Test_DL_SCH_CRC_Mode_Type</b>
Comment	
Normal	default mode, the CRC generation is correct
Erroneous	SS shall generate CRC error by toggling CRC bits; the CRC error shall be applied for all PDUs of the given RNTI and their retransmission until SS is configured back to 'normal' operation
Error1AndNormal	the SS generates wrong CRC for first transmission and correct CRC on first retransmission. Later SS operates in normal mode. The retransmission is automatically triggered by reception of HARQ NACK

**MAC\_Test\_SCH\_NoHeaderManipulation\_Type**

TTCN-3 Enumerated Type	
Name	<b>MAC_Test_SCH_NoHeaderManipulation_Type</b>
Comment	
NormalMode	MAC header is fully controlled by the SS
DL_SCH_Only	TTCN can submit a final MAC PDU including header and payloads; SS does not do anything with this MAC PDU i.e. no header is added for the DL SCH transport channel. It is possible that data belonging to multiple DRBs is sent in one MAC PDU and from one special RB configured. NOTE: SRBs shall work as in normal mode and data can be sent/received on SRBs but sending on SRBs shall be in different TTIs than sending data PDUs.
DL_UL_SCH	In UL and DL the SS' MAC layer is transparent i.e. SS does not add or remove any MAC header

**HARQ\_ModeList\_Type**

TTCN-3 Record of Type	
Name	<b>HARQ_ModeList_Type</b>
Comment	
record length (1.. <a href="#">tsc_MaxHargRetransmission</a> ) of <a href="#">HARQ_Type</a>

Name	RadioBearerList_Type
Comment	array of SRBs and/or DRBs (DRBs + 3 SRBs)
record length (1.. <a href="#">tsc_MaxRB</a> ) of <a href="#">RadioBearer_Type</a>	

## D.1.6 AS\_Security

Primitive for control of AS security

### PdcpSQN\_Type

TTCN-3 Record Type			
Name	PdcpSQN_Type		
Comment			
Format	<a href="#">PdcpCountFormat_Type</a>		5 bit, 7 bit or 12 bit SQN
Value	integer		SQN value (5 bit, 7 bit or 12 bit SQN) NOTE: in TTCN the test case writer is responsible to deal with potential overflows (e.g. there shall be a "mod 32", "mod 128" or "mod 4096" according to the format)

### PDCP\_ActTime\_Type

TTCN-3 Union Type			
Name	PDCP_ActTime_Type		
Comment	The sequence number in UL and DL for SRB1 should be one more than the present SQN, as Ciphering starts in UL and DL soon after SMC and SMComp; For other SRB/DRB it should be the present SQN.		
None	<a href="#">Null_Type</a>		No Activation time; to be used if Ciphering is not applied
SQN	<a href="#">PdcpSQN_Type</a>		PDCP sequence number

### SecurityActTime\_Type

TTCN-3 Record Type			
Name	SecurityActTime_Type		
Comment			
RadioBearerId	<a href="#">RadioBearerId_Type</a>		
UL	<a href="#">PDCP_ActTime_Type</a>		
DL	<a href="#">PDCP_ActTime_Type</a>		

### SecurityActTimeList\_Type

TTCN-3 Record of Type			
Name	SecurityActTimeList_Type		
Comment			
record length (1.. <a href="#">tsc_MaxRB</a> ) of <a href="#">SecurityActTime_Type</a>			

### AS\_IntegrityInfo\_Type

TTCN-3 Record Type			
Name	AS_IntegrityInfo_Type		
Comment	for initial configuration activation time is not needed for integrity protection as all messages in DL after security activation are integrity protected; this means this ASP is invoked before transmission of Security mode command; if there is a integrity violation in UL SS shall set the IndicationStatus in the common ASP part to flag the integrity error (IndicationStatus.Error.Integrity.Pdcp := true); integrity to be provided for each SRB as per core spec		
Algorithm	<a href="#">IntegrityProtAlgorithm_Type</a>		IntegrityProtAlgorithm_Type being defined in RRC ASN.1
KRRCint	<a href="#">B128_Key_Type</a>		
ActTimeList	<a href="#">SecurityActTimeList_Type</a>	opt	omit for initial configuration (i.e. all SRBs to be integrity protected immediately); in HO scenarios activation time may be needed e.g. for SRB1

**AS\_CipheringInfo\_Type**

TTCN-3 Record Type			
Name	<b>AS_CipheringInfo_Type</b>		
Comment			
Algorithm	CipheringAlgorithm_r12		CipheringAlgorithm_Type being defined in RRC ASN.1
KRRCenc	<a href="#">B128_Key_Type</a>		
KUPenc	<a href="#">B128_Key_Type</a>		KUPenc is mandatory; and SS uses it when DRB are configured
ActTimeList	<a href="#">SecurityActTimeList_Type</a>		

**AS\_SecStartRestart\_Type**

TTCN-3 Record Type			
Name	<b>AS_SecStartRestart_Type</b>		
Comment			
Integrity	<a href="#">AS_IntegrityInfo_Type</a>	opt	optional to allow separated activation of integrity and ciphering; omit: keep as it is
Ciphering	<a href="#">AS_CipheringInfo_Type</a>	opt	optional to allow separated activation of integrity and ciphering; omit: keep as it is

**AS\_Security\_Type**

TTCN-3 Union Type			
Name	<b>AS_Security_Type</b>		
Comment	Security mode command procedure (TS 36.331, clause 5.3.4): both SMC and SMComp are integrity protected (nevertheless SS shall be able to cope with unprotected SM reject); ciphering is started just after SMComp (acc. to TS 36.331, clause 5.3.4.3 and 5.3.1.1)		
StartRestart	<a href="#">AS_SecStartRestart_Type</a>		information to start/restart AS security protection in the PDCP
Release	<a href="#">Null_Type</a>		to release AS security protection in the PDCP

**D.1.7 Semi\_Persistent\_Scheduling**

Semi-persistent scheduling (SPS)

NOTE 1:

configuration of SPS cannot be done completely in advance but needs to be activated by PDCCH signalling  
=> SPS is configured/activated in an own primitive which may be sent to SS during RBs are being configured

NOTE 2:

semi-persistent (configured) scheduling is per UE (as well as 'normal' scheduling; see e.g. TS 36.300, clause 11.1)

**SpsAssignmentUL\_Type**

TTCN-3 Record Type			
Name	<b>SpsAssignmentUL_Type</b>		
Comment	information to assign semi-persistent scheduls in UL		
DciInfo	<a href="#">DciUlInfo_Type</a>	opt	to apply a grant
SchedulInterval	<a href="#">SpsConfigurationUL_Type</a>	opt	as in TS 36.331, clause 6.3.2 SPS-ConfigUL
SetNDI_1	<a href="#">Null_Type</a>	opt	if present then NDI is set as 1 indicating a retransmission; If absent then NDI is set as 0 indicating a new transmission

**SpsAssignmentDL\_Type**

TTCN-3 Record Type			
Name	SpsAssignmentDL_Type		
Comment	information to assign semi-persistent scheduls in DL		
DciInfo	<a href="#">DciDlInfo_Type</a>	opt	to apply a assignment
SchedulInterval	<a href="#">SpsConfigurationDL_Type</a>	opt	as in TS 36.331, clause 6.3.2 SPS-ConfigDL
SetNDI_1	<a href="#">Null_Type</a>	opt	if present then NDI is set as 1 indicating a retransmission; If absent then NDI is set as 0 indicating a new transmission

**SpsActivateInfo\_Type**

TTCN-3 Record Type			
Name	SpsActivateInfo_Type		
Comment	<p>Semi-persistent scheduling (SPS):  Even though SPS is pre-configured at the UE (e.g. RRCConnectionSetup-&gt;RadioResourceConfiguration-&gt;MAC_MainConfig) it needs to be activated by L1 signalling =&gt; SS shall 'activate' SPS by sending appropriate assignments/grants to the UE; this shall be done with an activation time.  If SPS is already configured and new Activate command is received, at the activation time SS locally deactivates old SPS configuration, sends UE an PDCCH assignment for new SPS assignment and locally activates new SPS configuration.  In DL, in addition to SS SPS assignment configuration with activation time 'T', TTCN writer shall also schedule a DL MAC PDU with same activation time 'T' and at every SPS ScheduleInterval (NOTE: in general it is an error when TTCN does not provide data for a ScheduleInterval; SS shall send no data in this case).  Special fields of PDCCH assignment are filled as per table 9.2-1 of 36.213</p>		
SPS_C_RNTI	C_RNTI		SPS C-RNTI as signalled to UE
UplinkGrant	<a href="#">SpsAssignmentUL_Type</a>	opt	
DownlinkAssignment	<a href="#">SpsAssignmentDL_Type</a>	opt	

**SpsPdcchRelease\_Type**

TTCN-3 Record Type			
Name	SpsPdcchRelease_Type		
Comment	<p>On reception of this information SS shall send an SPS release indicated by PDCCH transmission with indicated DCI format (0 or 1A) at the activation time.  Special fields of PDCCH assignment are filled as per table 9.2-1A of 36.213</p>		
SPS_C_RNTI	C_RNTI		
DCI_Format	<a href="#">PdcchDciFormat_Type</a>		only formats 0 (UL release) and 1A (DL release) are applicable. It is a TTCN error if any other formats are used.

**SpsDeactivateInfo\_Type**

TTCN-3 Union Type			
Name	SpsDeactivateInfo_Type		
Comment			
LocalRelease	<a href="#">Null_Type</a>		SPS configuration shall be released at the SS, that means as well that the SS shall not address SPS_C_RNTI anymore from the given TimingInfo onward; NOTE: there is no SPS release to be signalled on PDCCH (this is done with PdcchExplicitRelease - see below)
PdcchExplicitRelease	<a href="#">SpsPdcchRelease_Type</a>		SS transmits PDCCH content indicating SPS release but holds the local SPS configuration until it is locally released

**SpsConfig\_Type**

TTCN-3 Union Type		
Name	<b>SpsConfig_Type</b>	
Comment		
Activate	<a href="#">SpsActivateInfo_Type</a>	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : activation time for SPS assignment/grant transmission; NOTE: the first SPS DL data packet shall be sent with the same timing information ControllInfo : Cnfflag:=false; FollowOnFlag:=false
Deactivate	<a href="#">SpsDeactivateInfo_Type</a>	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : activation time for SPS release indicated by PDCCH transmission or SS local deactivation ControllInfo : Cnfflag:=false; FollowOnFlag:=false

**D.1.8 Paging\_Trigger****SubframeOffsetList\_Type**

TTCN-3 Record of Type	
Name	<b>SubframeOffsetList_Type</b>
Comment	
record length (1..infinity) of integer	

**PagingTrigger\_Type**

TTCN-3 Record Type		
Name	<b>PagingTrigger_Type</b>	
Comment	CellId : identifier of the cell where the UE is active RoutingInfo : None TimingInfo : Calculated paging occasion ControllInfo : Cnfflag:=false; FollowOnFlag:=false primitive to trigger transmission of a paging on the PCCH at a calculated paging occasion (TS 36.304, clause 7); the paging occasion is calculated by TTCN and activation time is applied; as for BCCH Infor acc. to TS 36.331, clause 9.1.1.3 "RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5."; therefore this needs to be done by the system simulator	
Paging	PCCH_Message	paging to be send out at paging occasion and being announced on PDCCH using P-RNTI
SubframeOffset List	<a href="#">SubframeOffsetList_Type</a>	opt list of subframe offsets relative to the absolute timing information given in the common part of the ASP; if present, multiple pagings are sent out at all occasions given by the list; if omitted only a single paging is sent at the occasion given timing information given in the common part of the ASP

**D.1.9 L1\_MAC\_Indication\_Control**

Primitive for control of L1/MAC indication for special purposes

## L1Mac\_IndicationControl\_Type

TTCN-3 Record Type			
Name	L1Mac_IndicationControl_Type		
Comment	NOTE: Initially all indications are disabled in SS (i.e. it shall not be necessary in 'normal' test cases to use this primitive but only if a specific indication is needed); omit means indication mode is not changed		
RachPreamble	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of PRACH preamble received.
SchedReq	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of reception of Scheduling Request on PUCCH.
BSR	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of Buffer/Extended Buffer Status Report. NOTE: this is applicable only when MAC is configured in normal mode in UL; MAC configured in test mode, results in over writing the report.
UL_HARQ	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of reception of HARQ ACK/NACK.
C_RNTI	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of C-RNTI sent by the UE within MAC PDU
PHR	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of Power Headroom Report. NOTE: this is applicable only when MAC is configured in normal mode in UL; MAC configured in test mode, results in over writing the report.
HarqError	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of HARQ errors
PeriodicRI	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of reception of periodic Rank Indicators
EPHR	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of Extended Power Headroom Report. NOTE: this is applicable only when MAC is configured in normal mode for UL; MAC configured in test mode, results in overwriting the report.
PeriodicCQI	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of reception of periodic CQI
SRS	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of start and stop of reception of Type 0 (Configured by Higher Layer) SRS in frames meant for periodic SRS transmission by UE. SS reports an indication every time when SRS reception from UE has toggled in the frames configured for periodic SRS reception i.e. 'No periodic SRS' reception -> 'periodic SRS' reception or 'periodic SRS' reception -> 'No periodic' SRS reception.
DC_PHR	<a href="#">IndicationAndControlMode_Type</a>	opt	To enable/disable reporting of Dual Connectivity Power Headroom Report. NOTE: this is applicable only when MAC is configured in normal mode for UL; MAC configured in test mode, results in overwriting the report.

## D.1.10 Rlc\_Indication\_Control

Primitive for control of RLC indication for special purposes

## Rlc\_IndicationMode\_Type

TTCN-3 Enumerated Type	
Name	Rlc_IndicationMode_Type
Comment	
enable	
disable	

**Rlc\_IndicationControl\_Type**

## D.1.15 System\_Indications

Primitives for System indications

## System\_Indications: Basic Type Definitions

TTCN-3 Basic Types		
PRTPower_Type	<a href="#">Dummy_Type</a>	needs to define appropriately the power level report of PREAMBLE_RECEIVED_TARGET_POWER; NOTE: for the time being this is just a place holder for enhancements in the future.
LogicalChannelGroup_Type	integer (0..3)	
BSR_Value_Type	integer (0..63)	
PHR_Type	integer (0..63)	
RI_Type	integer (1..4)	Rank indicator reported acc. to TS 36.212 Table 5.2.2.6-6

**HarqProcessInfo\_Type**

TTCN-3 Record Type			
Name	<b>HarqProcessInfo_Type</b>		
Comment			
Id	<a href="#">HarqProcessId_Type</a>		
CURRENT_TX_NB	integer		acc. to TS 36.321 clause 5.4.2.2

**HarqError\_Type**

TTCN-3 Union Type			
Name	<b>HarqError_Type</b>		
Comment			
UL	<a href="#">HarqProcessInfo_Type</a>		indicates HARQ error detected at the SS side (error at UL transmission)
DL	<a href="#">HarqProcessInfo_Type</a>		indicates HARQ NACK sent by the UE (error at DL transmission)

**RachPreamble\_Type**

TTCN-3 Record Type			
Name	<b>RachPreamble_Type</b>		
Comment			
RAPID	<a href="#">PrachPreambleIndex_Type</a>		indicates the RAPID of the preamble used (integer (0..63))
PRTPower	<a href="#">PRTPower_Type</a>		represents the PREAMBLE_RECEIVED_TARGET_POWER

**Short\_BSR\_Type**

TTCN-3 Record Type			
Name	<b>Short_BSR_Type</b>		
Comment			
LCG	<a href="#">LogicalChannelGroup_Type</a>		Logical channel Group
Value	<a href="#">BSR_Value_Type</a>		BSR or Extended BSR value

**Long\_BSR\_Type**

TTCN-3 Record Type			
Name	<b>Long_BSR_Type</b>		
Comment			
Value_LCG1	<a href="#">BSR_Value_Type</a>		BSR or Extended BSR value for LCG 1
Value_LCG2	<a href="#">BSR_Value_Type</a>		BSR or Extended BSR value for LCG 2
Value_LCG3	<a href="#">BSR_Value_Type</a>		BSR or Extended BSR value for LCG 3
Value_LCG4	<a href="#">BSR_Value_Type</a>		BSR or Extended BSR value for LCG 4

**BSR\_Type**

TTCN-3 Union Type			
Name	<b>BSR_Type</b>		
Comment			
Short	<a href="#">Short_BSR_Type</a>		
Truncated	<a href="#">Short_BSR_Type</a>		
Long	<a href="#">Long_BSR_Type</a>		

**RlcDiscardInd\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>RlcDiscardInd_Type</b>
<b>Comment</b>	SS shall send this indication if it discards a received RLC AMD PDU as specified in TS 36.322 cl. 5.1.3.2.2.
SequenceNumber	integer
ber	sequence number of the PDU being discarded

**SRSInd\_Type**

TTCN-3 Enumerated Type	
<b>Name</b>	<b>SRSInd_Type</b>
<b>Comment</b>	
SRS_Start	SS was not receiving SRS in the frames configured for periodic SRS, and SS has started reception of higher layer configured SRS in frame meant for periodic SRS transmission
SRS_Stop	SS was receiving SRS in the frames configured for periodic SRS, and SS has stopped reception of higher layer configured SRS in frame meant for periodic SRS transmission

## D.1.16 System\_Interface

## SYSTEM\_CTRL\_REQ

TTCN-3 Record Type		
Name	SYSTEM_CTRL_REQ	
Comment		
Common	<a href="#">ReqAspCommonPart_Type</a>	TimingInfo depends on respective primitive:
Request	<a href="#">SystemRequest_Type</a>	<ul style="list-style-type: none"> <li>- Cell TimingInfo: 'now' (in general)</li> <li>- CellAttenuationList TimingInfo: 'now' (in general, but activation time may be used also)</li> <li>- RadioBearerList TimingInfo: 'now' in general; activation time may be used in special case for release and/or reconfiguration of one or several RBs; the following rules shall be considered: <ul style="list-style-type: none"> <li>- release/Reconfiguration of an RB shall not be scheduled earlier than 5ms after a previous data transmission on this RB</li> <li>- subsequent release and reconfiguration(s) shall be scheduled with an interval of at least 5ms</li> <li>- a subsequent data transmission on an RB shall not be scheduled earlier than 5ms after the last reconfiguration of the RB the configuration shall be performed exactly at the given time</li> </ul> </li> <li>- EnquireTiming TimingInfo: 'now'</li> <li>- AS_Security TimingInfo: 'now'; NOTE: "activation time" may be specified in the primitive based on PDCP SQN</li> <li>- Sps TimingInfo: activation time for SPS assignment transmission</li> <li>- Paging TimingInfo: Calculated paging occasion</li> <li>- L1MacIndCtrl TimingInfo: 'now' (in general)</li> <li>- Pdcpcount TimingInfo: 'now' (in general) activation time may be used in case of CA inter cell handover to set the Pdcpcount</li> <li>- L1_TestMode TimingInfo: depends on the test mode; activation time is used e.g. for manipulation of the CRC</li> <li>- PdcchOrder TimingInfo: 'now' (in general)</li> </ul>

## SYSTEM\_CTRL\_CNF

TTCN-3 Record Type		
Name	SYSTEM_CTRL_CNF	
Comment		
Common	<a href="#">CnfAspCommonPart_Type</a>	TimingInfo is ignored by TTCN (apart from EnquireTiming) => SS may set TimingInfo to "None"
Confirm	<a href="#">SystemConfirm_Type</a>	

**SYSTEM\_IND**

TTCN-3 Record Type			
<b>Name</b>	<b>SYSTEM_IND</b>		
<b>Comment</b>			
Common	<a href="#">IndAspCommonPart_Type</a>		The SS shall provide TimingInfo (SFN + subframe number) depending on the respective indication:
Indication	<a href="#">SystemIndication_Type</a>		<ul style="list-style-type: none"> <li>- Error/HarqError TimingInfo: related to the error (if available)</li> <li>- RachPreamble TimingInfo: shall indicate start of the RACH preamble</li> <li>- SchedReq TimingInfo: subframe containing the SR</li> <li>- BSR TimingInfo: subframe in which the MAC PDU contains the BSR</li> <li>- UL_HARQ TimingInfo: subframe containing the UL HARQ</li> <li>- C_RNTI TimingInfo: subframe in which the MAC PDU contains the C_RNTI</li> <li>- PHR TimingInfo: subframe in which the MAC PDU contains the PHR</li> </ul>

**EUTRA\_SYSTEM\_PORT**

TTCN-3 Port Type			
<b>Name</b>	<b>EUTRA_SYSTEM_PORT</b>		
<b>Comment</b>	EUTRA PTC: Port for system configuration		
out	<a href="#">SYSTEM_CTRL_REQ</a>		
in	<a href="#">SYSTEM_CTRL_CNF</a>		

**EUTRA\_SYSIND\_PORT**

TTCN-3 Port Type			
<b>Name</b>	<b>EUTRA_SYSIND_PORT</b>		
<b>Comment</b>	EUTRA PTC: Port for system indications		
in	<a href="#">SYSTEM_IND</a>		

**D.1.17 MBMS\_Configuration****EUTRA\_ASP\_TypeDefs: Constant Definitions**

TTCN-3 Basic Types			
<b>tsc_MaxMRB</b>	integer	32	maximum MRB used in test cases - Value arbitrarily set to 32 (5bits) Theoretically the maximum value is maxPMCH-PerMBSFN * maxSessionPerPMCH i.e. 15*29

**MBMS\_Config\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>MBMS_Config_Type</b>		
<b>Comment</b>	all fields are optional to allow single modifications; activation time is applied in the common part of the ASP		
Mbsfn_SubframeConfigList	MBSFN_SubframeConfigList	opt	Configure subframes reserved for MBSFN
MbsfnAreaList	<a href="#">MbsfnAreaList_Type</a>	opt	Configure all MBSFN areas
SctpmConfig	<a href="#">SCPTM_Config_Type</a>	opt	If this IE is present, MBMS services are provided via SC-PTM

**MbsfnAreaList\_Type**

TTCN-3 Record of Type	
Name	<b>MbsfnAreaList_Type</b>
Comment	
record length(1..maxMBSFN_Area) of <a href="#">MbsfnArea_Type</a>	

**MbsfnArea\_Type**

TTCN-3 Record Type			
Name	<b>MbsfnArea_Type</b>		
Comment			
Mbsfn_Arealnf o	MBSFN_Arealnf_r9	opt	Configure MCCH scheduling acc. to TS 36. 331 cl 9.1.1.4 there is no PDCP and MCCH use the RLC-UM mode configuration/scheduling and contents of the MCCH Information is done in one go (i.e. there are no separate ports for MCCH data and configuration)
McchData	<a href="#">MCCH_Data_Type</a>	opt	MCCH information to be broadcasted
MbsfnAreaConf figuration	MBSFNAreaConfiguration_r 9	opt	Configuration parameters for CommonCSA/PMCH/MTCH
MRB_List	<a href="#">MRB_List_Type</a>	opt	Configure/release MTCH MRBs

**MCCH\_Data\_Type**

TTCN-3 Record Type			
Name	<b>MCCH_Data_Type</b>		
Comment			
Mbsfn_Areald	MBSFN_Areald_r12	opt	Used only for modification of MCCH info. Omitted if Mbsfn_Arealnf is present and mandatory present otherwise
MsgList	<a href="#">MCCH_MessageList_Type</a>		

**MCCH\_MessageList\_Type**

TTCN-3 Record of Type	
Name	<b>MCCH_MessageList_Type</b>
Comment	Includes mbsfnAreaConfiguration-r9 and optionally mbmsCountingRequest-r10.
record length(1..2) of MCCH_Message	

**MRB\_List\_Type**

TTCN-3 Record of Type	
Name	<b>MRB_List_Type</b>
Comment	
record length(1.. <a href="#">tsc_MaxMRB</a> ) of <a href="#">MRB_Type</a>	

**MRB\_Type**

TTCN-3 Record Type

## D.3 EUTRA\_NB\_ASP\_L2DataDefs

ASP interface for DRBs

### D.3.1 PDU\_TypeDefs

#### D.3.1.1 MAC\_PDU

**MAC\_PDU: Basic Type Definitions**

TTCN-3 Basic Types		
<b>MAC_CTRL_C_RNTI_Type</b>	C_RNTI	TS 36.321, clause 6.1.3.2
<b>MAC_CTRL_ContentionResolutionId_Type</b>	<a href="#">ContentionResolutionId_Type</a>	TS 36.321, clause 6.1.3.4 fix 48-bit size; consists of a single field defined UE Contention Resolution Identity (first 48 bits of the uplink CCCH SDU transmitted by MAC)
<b>MAC_CTRL_TimingAdjustment_Type</b>	<a href="#">B8_Type</a>	TS 36.321, clause 6.1.3.5 indicates the amount of timing adjustment in 0.5 ms that the UE has to apply; the length of the field is 8 bits
<b>MAC_SDU_Type</b>	octetstring	

**MAC\_PDU\_Length\_Type**

TTCN-3 Record Type			
Name	<b>MAC_PDU_Length_Type</b>		
Comment	NOTE: since F and L field are either both present or both omitted they are put into this record; to allow homogeneous (direct) encoding the PDU length is not defined as union; TTCN-3 does allow length restrictions to one length or a range of length but not to two specific lengths; further restriction may be achieved by appropriate templates (parameter either 7 or 15 bit)		
Format	<a href="#">B1_Type</a>		F: The Format field indicates the size of the Length field as indicated in table 6.2.1-3. There is one F field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the F field is 1 bit. If the size of the MAC SDU or MAC control element is less than 128 bytes, the UE shall set the value of the F field to 0, otherwise the UE shall set it to 1
Value	<a href="#">B7_15_Type</a>		L: The Length field indicates the length of the corresponding MAC SDU or MAC control element in bytes. There is one L field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the L field is indicated by the F field

**MAC\_PDU\_SubHeader\_Type**

TTCN-3 Record Type			
Name	<b>MAC_PDU_SubHeader_Type</b>		
Comment			
Reserved	<a href="#">B2_Type</a>		Reserved bits
Extension	<a href="#">B1_Type</a>		E: The Extension field is a flag indicating if more fields are present in the MAC header or not. The E field is set to "1" to indicate another set of at least R/R/E/LCID fields. The E field is set to "0" to indicate that either a MAC SDU, a MAC control element or padding starts at the next byte
LCID	<a href="#">B5_Type</a>		LCID: The Logical Channel ID field identifies the logical channel instance of the corresponding MAC SDU or the type of the corresponding MAC control element or padding as described in tables 6.2.1-1 and 6.2.1-2 for the DL and UL-SCH respectively. There is one LCID field for each MAC SDU, MAC control element or padding included in the MAC PDU. The LCID field size is 5 bits; NOTE: In case of DRX command the sub-header corresponds to a control element of length zero (i.e. there is no control element)
Length	<a href="#">MAC_PDU_Length_Type</a>	opt	

**MAC\_Header\_Type**

### HarqProcessAssignment\_Type

TTCN-3 Union Type		
Name	<b>HarqProcessAssignment_Type</b>	
Comment	in DL the HARQ process id may be specified by the test case or automatically assigned by SS	
Id	<a href="#">HarqProcessId_Type</a>	HARQ process as specified by the test case NOTE1: the scope of this type is only for data being sent in one TTI; if data needs more than one TTI the HarqProcessId is undefined for the 2nd TTI onward what shall be handled as an error at the SS; SS may send a SYSTEM_IND indicating an error in this case; NOTE2: The initial value of the NDI shall be the same for all HARQ processes and cells
Automatic	<a href="#">Null_Type</a>	HARQ process id automatically assigned by SS

### D.3.2.2 Downlink

#### DRB\_DataPerSubframe\_DL\_Type

TTCN-3 Record Type		
Name	<b>DRB_DataPerSubframe_DL_Type</b>	
Comment	common definition for one or several PDUs/SDUs to be sent in the subframe given by the subframe offset; NOTE 1: For MAC and RLC PDUs a single PDU is always sent in one subframe; SS shall raise an error indication (using SYSTEM_IND) when that is not possible NOTE 2: For PDCP the data may be spread over more than one subframe (segmented by the RLC); the TTCN implementation is responsible to calculate appropriate offsets accordingly; the exact timing depends on (and is exactly specified by) configuration of the DL scheduling; SS shall raise an error when there is any conflict	
SubframeOffset	integer	subframe offset relative to the absolute timing information given in the common part of the ASP; NOTE 1: Notes: Acc. to TS 36.523-3, clause 7.3.3 in case of TDD or half-duplex configuration only subframes available for DL are taken into consideration NOTE 2: if a PDCP PDU or SDU takes more than one subframe, SubframeOffset specifies the first TTI
HarqProcess	<a href="#">HarqProcessAssignment_Type</a>	opt HARQ process to be used: specific value (0..7) or automatically assigned by SS; in automatic mode SS chooses HARQ process out of the set configured by CcchDcchDtchConfigDL_Type.HarqProcessConfig NOTE 1: for PDCP SDUs or PDUs automatic mode shall be used; otherwise SS shall raise an error NOTE 2: for NB-IoT the HarqProcess shall be omitted by TTCN and ignored by the SS
PduSduList	<a href="#">L2DataList_Type</a>	list of PDUs/SDUs to be sent in one TTI

## DRB\_DataPerSubframeList\_DL\_Type

TTCN-3 Record of Type	
<b>Name</b>	<b>DRB_DataPerSubframeList_DL_Type</b>
<b>Comment</b>	list of user plane data to be sent in sub-frames given by the SubframeOffset in the single elements of the list; Timing: the start time for the whole sequence is given by the timing info of the ASP (common information); the timing for the respective data pdus is given by the SubframeOffset relative to the common timing info; design consideration: repetitions of this sequence are not foreseen (in which case the subframe offset could not be related to the timing info of the ASP)
record of <a href="#">DRB_DataPerSubframe_DL_Type</a>	

## L2Data\_Request\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>L2Data_Request_Type</b>
<b>Comment</b>	NOTE: formal type definition to allow later enhancements; L2Data_Request_Type defines a sequence of subframes in which data shall be sent
SubframeDataList	<a href="#">DRB_DataPerSubframeList_DL_Type</a>

## D.3.2.3 Uplink

## DRB\_DataPerSubframe\_UL\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>DRB_DataPerSubframe_UL_Type</b>
<b>Comment</b>	common definition for one or several PDUs/SDUs being received in one subframe or to receive one PDCP PDU or SDU being spread over more than one TTI; NOTE: There is a fix relation between HARQ process id and subframe in UL => it is not necessary to include HARQ process id for UL data
PduSduList	<a href="#">L2DataList_Type</a> list of PDUs/SDUs being received in one TTI; elements of the list appear in the same order as the PDUs/SDUs in the MAC PDU; for PDCP when a PDU or SDU takes more than one TTI the list only contains this PDU or SDU
NoOfTTIs	integer in case of PDCP: number of TTIs the SDU or PDU has taken NOTE 1: for the time being the NoOfTTIs is not checked by TTCN-3 and may be set to 1 by SS; NOTE 2: the timing info in common part of the ASP refers to the last TTI NOTE 3: when NoOfTTIs > 1 => PduSduList shall only contain one PDCP PDU or SDU in case of MAC or RLC PDUs: NoOfTTIs shall always be 1 (acc. to TS 36.321 MAC is not doing segmentation of RLC PDUs and acc. to TS 36.322, clause 6.2.2.2 the maximum RLC data is calculated to fit into a MAC PDU and RLC does segmentation accordingly)

**L2Data\_Indication\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>L2Data_Indication_Type</b>
<b>Comment</b>	NOTE: formal type definition to allow later enhancements; L2Data_Indication_Type defines data being received in a single subframe i.e. PDUs of subsequent TTIs are indicated in separated ASPs
SubframeData	<a href="#">DRB_DataPerSubframe_U_L_Type</a>

**D.4 EUTRA\_ASP\_SrbDefs****D.4.1 SRB\_DATA\_ASPs**

ASP Definitions to send/receive peer-to-peer messages on SRBs

**C\_Plane\_Request\_Type**

TTCN-3 Record Type				
<b>Name</b>	<b>C_Plane_Request_Type</b>			
<b>Comment</b>	RRC and/or NAS PDU to be send to the UE; Note: it may be necessary to allow more than one NAS PDU (-> "record of")			
Rrc	<table border="1"> <tr> <td><a href="#">RRC_MSG_Request_Type</a></td> <td>opt</td> <td>omit: NAS message shall be present; NAS message shall be sent in DLInformationTransfer present: if NAS message is present also, (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's DedicatedInfoNAS</td> </tr> </table>	<a href="#">RRC_MSG_Request_Type</a>	opt	omit: NAS message shall be present; NAS message shall be sent in DLInformationTransfer present: if NAS message is present also, (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's DedicatedInfoNAS
<a href="#">RRC_MSG_Request_Type</a>	opt	omit: NAS message shall be present; NAS message shall be sent in DLInformationTransfer present: if NAS message is present also, (piggybacked) NAS PDU shall be security protected (if necessary) and inserted in RRC PDU's DedicatedInfoNAS		
Nas	<table border="1"> <tr> <td>NAS_MSG_RequestList_Type</td> <td>opt</td> <td>omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted =&gt; NAS message shall be sent embedded in DLInformationTransfer if RRC message is present =&gt; NAS message is piggybacked in RRC message in case of RRC message is sent on CCCH, NAS message shall be omitted NOTE: acc. DEC 08 ASN.1 RRCConnectionReconfiguration may contain DedicatedInfoNAS several times</td> </tr> </table>	NAS_MSG_RequestList_Type	opt	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted => NAS message shall be sent embedded in DLInformationTransfer if RRC message is present => NAS message is piggybacked in RRC message in case of RRC message is sent on CCCH, NAS message shall be omitted NOTE: acc. DEC 08 ASN.1 RRCConnectionReconfiguration may contain DedicatedInfoNAS several times
NAS_MSG_RequestList_Type	opt	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted => NAS message shall be sent embedded in DLInformationTransfer if RRC message is present => NAS message is piggybacked in RRC message in case of RRC message is sent on CCCH, NAS message shall be omitted NOTE: acc. DEC 08 ASN.1 RRCConnectionReconfiguration may contain DedicatedInfoNAS several times		

**C\_Plane\_Indication\_Type**

TTCN-3 Record Type			
Name	<b>C_Plane_Indication_Type</b>		
Comment	RRC and/or NAS PDU to be received from the UE; Note: it may be necessary to allow more than one NAS PDU (-> "record of")		
Rrc	<a href="#">RRC_MSG_Indication_Type</a>	opt	omit: NAS message shall be present; NAS message is received in ULInformationTransfer present: if NAS message is present also, DedicatedInfoNAS contains unstructured and ciphered NAS message and the NAS message is the deciphered message in structured format
Nas	NAS_MSG_IndicationList_Type	opt	omit: RRC message shall be present; RRC message does not contain (piggybacked) NAS PDU present: if RRC message is omitted => NAS message has been received in ULInformationTransfer if RRC message is present => NAS message has been piggybacked in RRC message NOTE: even though currently (DEC 08 ASN.1) there is no RRC PDU in UL containing more than one DedicatedInfoNAS we provide a list to allow extendability

**SRB\_COMMON\_REQ**

TTCN-3 Record Type			
Name	<b>SRB_COMMON_REQ</b>		
Comment	common ASP to send PDUs to SRB0, SRB1 or SRB2		
Common	<a href="#">ReqAspCommonPart_Type</a>		CellId identifier of the cell RoutingInfo SRB0, SRB1, SRB2 TimingInfo Now in normal cases; For latency tests TimingInfo can be set to the SFN/subframe in which the RRC messages shall be sent out (in this case and if the RRC PDU is too long to be sent in one TTI the TimingInfo corresponds to the first TTI) ControllInfo Cnfflag:=false; FollowOnFlag true: Indicates that the message(s) to be sent on the same TTI will follow NOTE 1: When FollowOnFlag is true, TimingInfo shall always be "Now". Otherwise SS shall produce an error NOTE 2: the follow on flag applies only for messages of the same SRB false: Indicates that no more message(s) will follow
Signalling	<a href="#">C_Plane_Request_Type</a>		

**SRB\_COMMON\_IND**

TTCN-3 Record Type			
Name	<b>SRB_COMMON_IND</b>		
Comment	common ASP to receive PDUs from SRB0, SRB1 or SRB2		
Common	<a href="#">IndAspCommonPart_Type</a>		CellId identifier of the cell RoutingInfo SRB0, SRB1, SRB2 TimingInfo time when message has been received (as received from the SS by the NAS emulator)
Signalling	<a href="#">C_Plane_Indication_Type</a>		

## D.4.2 Port\_Definitions

### EUTRA\_SRB\_PORT

TTCN-3 Port Type

### NASEMU\_EUTRA\_SRB\_PORT

TTCN-3 Port Type	
<b>Name</b>	<b>NASEMU_EUTRA_SRB_PORT</b>
<b>Comment</b>	NASEMU PTC: Port for Sending/Receiving data on SRBs (interface to EUTRA PTC)
out	<a href="#">SRB_COMMON_IND</a>
in	<a href="#">SRB_COMMON_REQ</a>

---

## D.5 IP\_ASP\_TypeDefs

General Notes:

NOTE 1:

In general the handling of IP data shall be independent from the RAT being used on lower layers.

NOTE 2:

It shall be possible for SS implementation to reuse existing IP stack implementations in the system adaptor; therefore the well-known concept of socket programming shall be supported (regardless of whether those are used in the system adaptor implementation or not)

NOTE 3:

Since in general at the network side there are several different IP addresses the SS needs to simulate more than one IP address;

that can be based on a concept of multiple virtual network adaptors

NOTE 4:

There is no easy way to control the routing of IP data for an IP connection from above the IP stack

i.e. there are no parameters at the socket interface to determine e.g. cell id and DRB id

=> another independent logical entity (DRB-MUX) is needed below the IP stack which is responsible to control the routing of IP packets from/to DRBs in different cells of different RATs

Reference:

An introduction to socket programming can be found in

UNIX Network Programming Volume 1, Third Edition: The Sockets Networking API

by W. Richard Stevens, Bill Fenner, Andrew M. Rudoff

### D.5.1 IP\_Common

#### IP\_Common: Basic Type Definitions

TTCN-3 Basic Types	
PortNumber_Type	<a href="#">UInt16_Type</a>

**IPv4\_AddrInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>IPv4_AddrInfo_Type</b>		
<b>Comment</b>	IPv4 specific info of the socket addr (AF_INET)		
Addr	charstring		IP Address as string (IP v4 dot notation) to be converted to 32-bit unsigned integer

**IPv6\_AddrInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>IPv6_AddrInfo_Type</b>		
<b>Comment</b>	IPv6 specific info of the socket addr (AF_INET6); NOTE: sin6_flowinfo can be ignored and set to 0		
Addr	charstring		to be converted to sin6_addr
Scopeld	<a href="#">UInt32_Type</a>	opt	sin6_scope_id in general an IPv6 address is like "fe80::1%eth0" with eth0 being the network adaptor mapped to a scope id (Unix) assumption: for UE conformance testing it is not necessary to distinguish different scopes and the scope id in general can be determined by the system adaptor => omit

**IP\_AddrInfo\_Type**

TTCN-3 Union Type			
<b>Name</b>	<b>IP_AddrInfo_Type</b>		
<b>Comment</b>			
V4	<a href="#">IPv4_AddrInfo_Type</a>		
V6	<a href="#">IPv6_AddrInfo_Type</a>

TTCN-3 Record Type			
<b>Name</b>	<b>IP_Socket_Type</b>		
<b>Comment</b>	Socket		
IpAddr	<a href="#">IP_AddrInfo_Type</a>	opt	IP address
Port	<a href="#">PortNumber_Type</a>	opt	port number

**InternetProtocol\_Type**

TTCN-3 Enumerated Type	
<b>Name</b>	<b>InternetProtocol_Type</b>
<b>Comment</b>	
udp	
tcp	
icmp	
icmpv6	

**IP\_Connection\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>IP_Connection_Type</b>		
<b>Comment</b>	A connection between peer-to-peer entities is unambiguously defined by the protocol (udp/tcp/icmp/icmpv4), the local socket and the remote socket		
Protocol	<a href="#">InternetProtocol_Type</a>		
Local	<a href="#">IP_Socket_Type</a>	opt	
Remote	<a href="#">IP_Socket_Type</a>	opt	

## D.5.2 IP\_Config

Configuration of the routing table managed by the system adaptor's DRB-MUX:  
for each IP connection it is specified which

- RAT
- Cell
- DRB

to be used.

The IP connection does not need to be fully specified depending on the role SS plays (e.g. in case of a server role the port number of the remote side is not known in advance).

The configurations of DRBs within the same cell shall be mutual exclusive.

With the configuration of the IP routing the DRB is configured either in IP or in raw mode:

either there are entries for the DRB in the routing table (IP mode) or not (raw mode)

=> It is not necessary to reconfigure this for the respective RAT.

Behaviour of the DRB-MUX in UL:

- SS gets data packet from the lower layers (e.g. PDCP SDU)
- SS checks whether there is any IP connection configured for this DRB (identified by {RAT, CellId, DrbId})
  - if YES => packet is routed to the IP stack (IP mode)
  - if NO => packet is handed over to the DRB port (raw mode)

NOTE 1:

If there is any entry for a DRB in the routing table this DRB is considered as being in IP mode and all UL IP packets are sent to the IP stack regardless of whether their addresses match the DRB's routing entries or not (in general 'unknown' packets are discarded by the IP stack)

=> a DRB can be either in IP or in raw mode

NOTE 2:

=> The SS does not need to evaluate any IP headers to decide whether data shall be routed to the DRB port or to the IP stack (i.e. there is no conflict with unstructured loopback data)

Behaviour of the DRB-MUX in DL:

- SS gets IP packets from the IP stack for an IP connection
- SS compares the IP connection (protocol, local/remote IP Addr) against the IP routing table and checks whether the corresponding protocol stack is configured at the lower layers =>

1. no match:

no entry in the routing table fits to the address in the IP packet  
or the corresponding RB is not configured

=> SS shall raise an error (DRBMUX\_COMMON\_IND\_CNF.Error)

2. one match:

There is exactly one possibility to route the IP packet

=> SS shall send the packet to this RB

3. several matches:

There are more than one DRBs, cells or RATs to which the packet may be routed

=> SS shall raise an error if there is more than one DRB in one cell matching;

if the DRBs belong to different cells or RATs SS shall send the data to all of them  
(whether this may occur in test cases is FFS)

General notes:

NOTE 1:

SS may use the information of the routing table to determine which network adaptors it needs to simulate (implementation dependent);

in general there will be more than one IP address at the network side.

NOTE 2:

In general the routing table is a simplified DL TFT implementation

NOTE 3:

When the routing table is empty all DRBs are in raw mode; this shall be the initial condition at the DRB-MUX;

=> for L2 testing in general (and apart from the preamble) there is no need to use/configure the IP\_PTC; the configuration of the RAT specific U-plane stacks is not affected

## IP\_DataMode\_Type

record of	<a href="#">IP_RoutingInfo_Type</a>

## D.5.3 IPsec\_Config

## IP\_ASP\_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_IPsec_SPI_Max	integer	4294967295	

## IPsec\_Config: Basic Type Definitions

TTCN-3 Basic Types		
IPsec_SPI_Type	integer (0.. <a href="#">tsc IPsec SPI Max</a> )	security parameter index for IPsec; According to RFC 2406, SPI values from 0 to 255 are reserved

## IPsec\_IntegrityAlgorithm\_Type

TTCN-3 Enumerated Type	
Name	IPsec_IntegrityAlgorithm_Type
Comment	
hmac_md5_96	
hmac_sha_1_96	

## IPsec\_CipheringAlgorithm\_Type

TTCN-3 Enumerated Type	
Name	IPsec_CipheringAlgorithm_Type
Comment	
des_ed3_cbc	
aes_cbc	
nociph	no ciphering

## IPsec\_SecurityKeys\_Type

TTCN-3 Record Type			
Name	IPsec_SecurityKeys_Type		
Comment	to install the security keys		
MD5_96Key	bitstring length (128)		
SHA_1_96Key	bitstring length (160)		
DES_EDE3_C BCKey	bitstring length (192)		
AES_CBCKey	bitstring length (128)		

## IPsec\_SecurityAssociation\_Type

TTCN-3 Record Type			
Name	IPsec_SecurityAssociation_Type		
Comment	single security association (SA); for configuration of an SA at the SS all fields are mandatory; to release an SA the optional information is omitted		
SPI	<a href="#">IPsec_SPI_Type</a>		
SrcAddress	charstring		
DestAddress	charstring		
SrcPort	<a href="#">UInt16_Type</a>		
DestPort	<a href="#">UInt16_Type</a>		
IntegrityAlgorith m	<a href="#">IPsec_IntegrityAlgorithm_T ype</a>	opt	mandatory to set-up an SA
CipheringAlgori thm	<a href="#">IPsec_CipheringAlgorithm_ Type</a>	opt	mandatory to set-up an SA

## IPsec\_SecurityAssociationList\_Type

TTCN-3 Record of Type	
Name	IPsec_SecurityAssociationList_Type
Comment	
record of <a href="#">IPsec_SecurityAssociation_Type</a>	

**IPsec\_Configure\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>IPsec_Configure_Type</b>
<b>Comment</b>	add new security associations; existing SAs are not affected
SA_List	<a href="#">IPsec_SecurityAssociationList_Type</a>
SecurityKeys	<a href="#">IPsec_SecurityKeys_Type</a>

**IPsec\_Release\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>IPsec_Release_Type</b>
<b>Comment</b>	release security associations; NOTE: in context with multiple PDNs it cannot be ensured that all SPIs are unique; e.g. the UE may use the same SPI values in different PDNs in which case uniqueness cannot be achieved furthermore it depends on the system implementation how entries in the IPsec SAD and SPD are administrated => to release SAs the SS gets the same information as for configuration but without the security algorithms
SA_List	<a href="#">IPsec_SecurityAssociationList_Type</a>

## D.5.4 IP\_SocketHandling

Handling of IP data and IP connections

NOTE 1:

In general IP connections are distinguished by the tuple {protocol, local socket, remote socket}; this information is used at the interface between TTCN and the system adaptor.

It is up to the system adaptor implementation to associate the IP connection with the internal socket (file descriptor; implementation dependent)

NOTE 2:

In general the association of the IP connections to (internal) sockets and the routing table for the DRB mapping (as configured with IP\_RoutingTable\_Type) are independent from each other

### D.5.4.1 Socket\_Common

**IP\_SockOpt\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>IP_SockOpt_Type</b>
<b>Comment</b>	socket options acc. to the setsockopt system call (i.e. for level=SOL_SOCKET in case of Berkeley socket API); NOTE: only options being relevant for a specific applications (upon a socket) are configured by TTCN other options (e.g. SO_REUSEADDR) are out of TTCN and therefore a matter of system adaptor implementation
SO_BROADCAST	boolean set to true when IP broadcast messages shall be allowed for a port; this is required e.g. in case of DHCP
IP_MTU_SIZE	integer MTU size to be used for IP data; NOTES: - Even though the MTU size is defined as socket option it shall be the same for all sockets of a given interface (i.e. at least within one PDN the MTU size shall be the same) - in general a PIXIT is used as constant value for all sockets

**IP\_SockOptList\_Type**

TTCN-3 Record of Type	
Name	<b>IP_SockOptList_Type</b>
Comment	
record of <a href="#">IP_SockOpt_Type</a>	

**IP\_SocketError\_Type**

TTCN-3 Union Type		
Name	<b>IP_SocketError_Type</b>	
Comment	used to indicate errors related to sockets; the IP_Connection shall contain as much address information as available at the system adaptor	
InvalidAddress	<a href="#">Null_Type</a>	TTCN error: e.g. invalid or incomplete address information
System	integer	system error caused by system call; the integer value may be used for validation but shall not be evaluated by TTCN

**D.5.4.2 Socket\_Datagram****Socket\_Datagram: Basic Type Definitions**

TTCN-3 Basic Types		
Datagram_Content_Type	octetstring	data as sent/received with sendto()/recvfrom() on UDP or ICMP socket; NOTE: For ICMP the data may depend on the socket options; in general it does not include the IP header and the checksum of the ICMP packet needs to be calculated/checked in TTCN

**Datagram\_DL\_Type**

TTCN-3 Record Type		
Name	<b>Datagram_DL_Type</b>	
Comment	datagram to be sent at a UDP or ICMP socket	
Buffer	<a href="#">Datagram_Content_Type</a>	content of the IP packet

**Datagram\_UL\_Type**

TTCN-3 Record Type		
Name	<b>Datagram_UL_Type</b>	
Comment	datagram as received on a UDP or ICMP socket	
Buffer	<a href="#">Datagram_Content_Type</a>	content of the IP packet
DrblInfo	<a href="#">IP_DrblInfo_Type</a>	opt "interface id" where the data comes from in case of broadcast or multicast packets: for the LTE test model this is the DRB on which the IP packet has been received; the information is necessary when the SS cannot resolve an IP address being assigned to that DRB. => when the SS provides a broadcast or multicast address as local address in the ConnectionId of the ASP, the SS shall provide the DRB information in this field When the ConnectionId of the ASP is fully specified and unique (unicast address at least for local address) the DrblId is ignored by TTCN

### D.5.4.3 TCP\_Socket

TCP primitives used on the IP port

#### TCP\_Socket: Basic Type Definitions

TTCN-3 Basic Types		
TCP_Data_Type	octetstring	data as sent/received with send()/recv() on a TCP socket

#### InternetApplication\_Type

TTCN-3 Enumerated Type	
Name	InternetApplication_Type
Comment	as TCP is stream oriented SS may need information about which criteria to be applied to get start/end of an application message
ims	
http	

#### TLS\_CIPHER\_Type

TTCN-3 Enumerated Type	
Name	TLS_CIPHER_Type
Comment	Cipher suite to be used for TLS
TLS_PSK_WITH_RC4_128_SHA	RFC 4279
TLS_PSK_WITH_3DES_EDE_CBC_SHA	RFC 4279
TLS_PSK_WITH_AES_128_CBC_SHA	RFC 4279
TLS_PSK_WITH_AES_256_CBC_SHA	RFC 4279
TLS_PSK_WITH_AES_128_CBC_SHA256	RFC 5487

#### PSK\_BootstrappingInfo\_Type

TTCN-3 Record Type			
Name	PSK_BootstrappingInfo_Type		
Comment	bootstrapping information as defined in 24.109		
BTid	charstring		
Ks_NAF	bitstring		

#### TLS\_PSK\_Info\_Type

TTCN-3 Record Type			
Name	TLS_PSK_Info_Type		
Comment	configuration information for PSK TLS		
IdentityHint	charstring		
BootstrappingInfo	<a href="#">PSK_BootstrappingInfo_Type</a>		

### TLS\_CipherSuiteInfo\_Type

TTCN-3 Union Type	
Name	TLS_CipherSuiteInfo_Type
Comment	
psk	<a href="#">TLS_PSK_Info_Type</a>

### TLSInfo\_Type

TTCN-3 Record Type		
Name	TLSInfo_Type	
Comment		
cipherSuite	<a href="#">TLS_CIPHER_Type</a>	Cipher suite to be used
cipherSuiteInfo	<a href="#">TLS_CipherSuiteInfo_Type</a>	parameters for the respective cipher suite

### TCP\_ConnectRequest\_Type

TTCN-3 Record Type		
Name	TCP_ConnectRequest_Type	
Comment	TCP client: -> 'connect' system call	
SockOptList	<a href="#">IP_SockOptList_Type</a>	when there are no options to configure the list is empty
Application	<a href="#">InternetApplication_Type</a>	to specify start/end criteria for application messages

### TCP\_Listen\_Type

TTCN-3 Record Type		
Name	TCP_Listen_Type	
Comment	TCP server: -> 'listen' system call	
SockOptList	<a href="#">IP_SockOptList_Type</a>	when there are no options to configure the list is empty
Application	<a href="#">InternetApplication_Type</a>	to specify start/end criteria for application messages
TLSInfo	<a href="#">TLSInfo_Type</a>	opt to support TLS for HTTP server implementation

## TCP\_CtrlRequest\_Type

TTCN-3 Union Type		
Name	TCP_CtrlRequest_Type	
Comment		
ConnectReq	<a href="#">TCP_ConnectRequest_Type</a>	<p>request a 'connect' to a remote server</p> <p>system calls (informative)  socket -- get file descriptor  (setsockopt) -- normally not needed  bind -- assign local IP addr (to cope with multiple IP addresses) and dedicated port number (if local port is given)  connect -- connect to the client</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory to distinguish different network adaptors  local port -- omit (ephemeral port will be assigned by the system) or specific port to be used for this connection (e.g. to bind a given port number to the IMS client)  remote IP addr -- mandatory  remote port -- mandatory</p>
Listen	<a href="#">TCP_Listen_Type</a>	<p>establish a server at the local (SS) side</p> <p>system calls (informative)  socket -- get file descriptor  (setsockopt) -- if needed  bind -- assign local IP addr and port  listen -- await incoming connection</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory to distinguish different network adaptors  local port -- mandatory  remote IP addr -- omit  remote port -- omit</p>
Close	<a href="#">Null_Type</a>	<p>close a connection</p> <p>system calls (informative):  close</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory  local port -- mandatory  remote IP addr -- mandatory for TCP connections, omit for TCP server  remote port -- mandatory for TCP connections, omit for TCP server</p>

## TCP\_DataRequest\_Type

TTCN-3 Union Type		
Name	TCP_DataRequest_Type	
Comment		
Send	<a href="#">TCP_Data_Type</a>	<p>send data</p> <p>system calls (informative): send or write</p> <p>IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory</p>

## TCP\_CtrlIndication\_Type

TTCN-3 Union Type		
Name	TCP_CtrlIndication_Type	
Comment		
ConnectCnf	<a href="#">Null_Type</a>	<p>confirm a 'connect' to a remote server</p> <p>system calls (informative):  getsockname -- get local port (ephemeral port assigned by the system)</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory (as in corresponding TCP_ConnectRequest)  local port -- mandatory (if there is more than one connection to the same server the local port is necessary to distinguish the connections)  remote IP addr -- mandatory (as in corresponding TCP_ConnectRequest)  remote port -- mandatory (as in corresponding TCP_ConnectRequest)</p>
Accept	<a href="#">Null_Type</a>	<p>sent by the SS when it 'accepts' an incoming connection</p> <p>system calls (informative):  accept</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory (as in corresponding TCP_ListenRequest)  local port -- mandatory (as in corresponding TCP_ListenRequest)  remote IP addr -- mandatory (as gotten from 'accept')  remote port -- mandatory (as gotten from 'accept')</p>
Close	<a href="#">Null_Type</a>	<p>indicate 'close' by the remote side</p> <p>system calls (informative):  indicated by recv or read</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory  local port -- mandatory  remote IP addr -- mandatory  remote port -- mandatory</p>
CloseCnf	<a href="#">Null_Type</a>	<p>Confirmation for 'close' request; necessary since for TCP there are IP packets to release the connection</p> <p>system calls (informative):  close</p> <p>IP_Connection:  protocol -- tcp  local IP addr -- mandatory  local port -- mandatory  remote IP addr -- mandatory for TCP connections, omit for TCP server  remote port -- mandatory for TCP connections, omit for TCP server</p>

**TCP\_DataIndication\_Type**

TTCN-3 Union Type		
Name	<b>TCP_DataIndication_Type</b>	
Comment		
Recv	<a href="#">TCP_Data_Type</a>	receive data  system calls (informative): recv or read  IP_Connection: protocol -- tcp local IP addr -- mandatory local port -- mandatory remote IP addr -- mandatory remote port -- mandatory

**D.5.4.4 UDP\_Socket**

UDP primitives used on the IP port

NOTE:

In principle a UDP socket may communicate with different remote entities;  
 therefore the system adaptor may associate the socket handle with the local socket only  
 (local IP address and local port)

**UDP\_SocketReq\_Type**

TTCN-3 Record Type		
Name	<b>UDP_SocketReq_Type</b>	
Comment	to establish a UDP server or to bind local port number	
SockOptList	<a href="#">IP_SockOptList_Type</a>	e.g. to allow broadcast messages; when there are no options to configure the list is empty

**UDP\_CtrlRequest\_Type**

TTCN-3 Union Type		
Name	<b>UDP_CtrlRequest_Type</b>	
Comment		
SocketReq	<a href="#">UDP_SocketReq_Type</a>	<p>request the system adaptor to bind a socket to a local address; this is needed in general when the system adaptor acts as</p> <ol style="list-style-type: none"> <li>1. UDP server</li> <li>2. UDP client when it uses a well-known port rather than an ephemeral port (this is e.g. for DHCP)</li> <li>3. UDP client when a local address needs to be bond (e.g. when there are several local addresses)</li> </ol> <p>system calls (informative):</p> <pre>socket -- get file descriptor (setsockopt) -- needed e.g. to allow broad cast message bind -- assign local IP address (to cope with multiple IP addresses) and local port (in case of well-known local port)</pre> <p>IP_Connection:</p> <pre>protocol -- udp local IP addr -- mandatory (to distinguish multiple IP addresses) local port -- optional (mandatory in case of a UDP server) remote IP addr -- omit remote port -- omit</pre>
Close	<a href="#">Null_Type</a>	<p>release local socket</p> <p>system calls (informative):</p> <pre>close</pre> <p>IP_Connection:</p> <pre>protocol -- udp local IP addr -- mandatory (to identify local socket) local port -- mandatory (to identify local socket) remote IP addr -- omit remote port -- omit</pre>

**UDP\_DataRequest\_Type**

TTCN-3 Union Type		
Name	<b>UDP_DataRequest_Type</b>	
Comment		
SendTo	<a href="#">Datagram_DL_Type</a>	<p>send data to (any) remote socket;</p> <p>NOTE:</p> <p>To simplify implementation of the system adaptor the local socket shall be bond in any case (using 'SocketReq') to specify the local IP address before sending data;</p> <p>(in general the sendto system call can be used without explicitly binding the socket before;</p> <p>in this case the port gets implicitly bond to an ephemeral port and the default IP address is used)</p> <p>system calls (informative):</p> <pre>sendto</pre> <p>IP_Connection:</p> <pre>protocol -- udp local IP addr -- mandatory (to identify local socket) local port -- mandatory (to identify local socket) remote IP addr -- mandatory (to address remote socket) remote port -- mandatory (to address remote socket)</pre>

**UDP\_CtrlIndication\_Type**

TTCN-3 Union Type		
Name	UDP_CtrlIndication_Type	
Comment		
SocketCnf	<a href="#">Null_Type</a>	confirm 'SocketReq' and tell TTCN about assignment of ephemeral port;  system calls (informative): getsockname -- get local port (ephemeral port assigned by the system; not needed if local port is well-known)  IP_Connection: protocol -- udp local IP addr -- mandatory local port -- mandatory (well-known or ephemeral port assigned by the system) remote IP addr -- omit remote port -- omit

**UDP\_DataIndication\_Type**

TTCN-3 Union Type		
Name	UDP_DataIndication_Type	
Comment		
RecvFrom	<a href="#">Datagram_UL_Type</a>	receive data;  system calls (informative): recvfrom -- get data and src addr  IP_Connection: protocol -- udp local IP addr -- mandatory (see note) local port -- mandatory remote IP addr -- mandatory (as gotten from recvfrom) remote port -- mandatory (as gotten from recvfrom)  NOTE: The UE may send a UDP packet as broadcast (IP Addr 255.255.255.255 - e.g. in case of DHCP) or multicast (e.g. ICMPv6) SS shall consider a broadcast address as matching every IP for UL and DL; the SS shall not replace the broadcast/multicast address by the local unicast address, but shall provide DRB information in RecvFrom; example: - SS gets DHCPDISCOVER with DEST_Addr=255.255.255.255 DEST_Port=67, SRC_Addr=0.0.0.0 SRC_Port=68 - TTCN gets DHCPDISCOVER with local Addr=(255.255.255.255 Port=67), remote Addr=(0.0.0.0 Port=68), DrbId=(LTE, cell1, DRB1) - TTCN sends DHCPOFFER with local Addr=(local IP Addr Port=67), remote Addr=(255.255.255.255 Port=68)

**D.5.4.5 ICMP\_Socket**

ICMP primitives used on the IP port

NOTE:

the local side is identified by the protocol and in general by the local IP address

**ICMP\_SocketReq\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>ICMP_SocketReq_Type</b>
<b>Comment</b>	to establish a raw socket to send/receive ICMP packets
SockOptList	<a href="#">IP_SockOptList_Type</a> e.g. to set the IP_HDRINCL socket option (to include the IP header in the data buffer) when there are no options to configure the list is empty

**ICMP\_CtrlRequest\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>ICMP_CtrlRequest_Type</b>
<b>Comment</b>	
SocketReq	<a href="#">ICMP_SocketReq_Type</a> request the system adaptor to open a raw socket (IPv4 or IPv6)  system calls (informative): socket -- get file descriptor (IPPROTO_ICMP or IPPROTO_IPV6); (setsockopt) -- optional; to set socket options bind -- assign local IP address (to cope with multiple IP addresses)  IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to distinguish multiple IP addresses) local port -- omit (not applicable for ICMP) remote IP addr -- omit remote port -- omit (not applicable for ICMP)
Close	<a href="#">Null_Type</a> release local socket  system calls (informative): close  IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to identify local socket) local port -- omit remote IP addr -- omit remote port -- omit

**ICMP\_DataRequest\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>ICMP_DataRequest_Type</b>
<b>Comment</b>	
SendTo	<a href="#">Datagram_DL_Type</a> send datagram  system calls (informative): sendto  IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (to identify local socket) local port -- omit remote IP addr -- mandatory remote port -- omit

**ICMP\_CtrlIndication\_Type**

TTCN-3 Union Type		
Name	<b>ICMP_CtrlIndication_Type</b>	
Comment		
SocketCnf	<a href="#">Null_Type</a>	confirm 'SocketReq'  system calls (informative): (SocketCnf is sent when all system calls for SocketReq have been successful)  IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory local port -- omit remote IP addr -- omit remote port -- omit

**ICMP\_DataIndication\_Type**

TTCN-3 Union Type		
Name	<b>ICMP_DataIndication_Type</b>	
Comment		
RecvFrom	<a href="#">Datagram_UL_Type</a>	receive datagram  system calls (informative): recvfrom -- get data and src addr  IP_Connection: protocol -- icmp or icmpv6 local IP addr -- mandatory (see note) local port -- omit remote IP addr -- mandatory (as gotten from recvfrom) remote port -- omit  NOTE: As for UDP there may be multicast/broadcast packets. In this case - as for UDP - the SS shall provide the DRB information in RecvFrom.

## D.6 NasEmu\_AspTypes\_EUTRA

System interface between NAS emulation and system adaptor

## D.6.1 System\_Interface

## EUTRA\_RRC\_PDU\_REQ

TTCN-3 Record Type	
Name	EUTRA_RRC_PDU_REQ
Comment	
Common	<p><a href="#">ReqAspCommonPart_Type</a></p> <p>CellId : identifier of the cell  RoutingInfo : SRB0, SRB1, SRB2  TimingInfo : Now in normal cases;  For latency tests TimingInfo can be set to the SFN/subframe in which the RRC messages shall be sent out  NOTE 1: if the RRC PDU is too long to be sent in one TTI the TimingInfo corresponds to the first TTI  NOTE 2: the TimingInfo is not changed by the NAS Emu (i.e. the timing info as coming from the test case (SRB_COMMON_REQ) is handed through by the NAS Emu)  ControlInfo  Cnfflag:=false;  FollowOnFlag  true: Indicates that the message(s) to be sent on the same TTI will follow  NOTE 1: If the TimingInfo is not the same for messages to be sent on the same TTI, the SS shall produce an error  NOTE 2: the follow on flag applies only for messages of the same SRB  false: Indicates that no more message(s) will follow</p>
RrcPdu	<a href="#">RRC MSG Request Type</a>

## EUTRA\_RRC\_PDU\_IND

TTCN-3 Record Type	
Name	EUTRA_RRC_PDU_IND
Comment	common ASP to receive PDUs from SRB0, SRB1 or SRB2
Common	<p><a href="#">IndAspCommonPart_Type</a></p> <p>CellId : identifier of the cell  RoutingInfo : SRB0, SRB1, SRB2  TimingInfo : time when message has been received (frame and sub-frame number); this is handed through to the test case by the NAS emulation  NOTE: normally an RRC PDU is expected in one TTI; nevertheless if it is spread over more than one TTIs TimingInfo shall refer to the end of the PDU i.e. to the last RLC PDU being received;  Status : OK or RRC integrity error</p>
RrcPdu	<a href="#">RRC MSG Indication Type</a>

## NASEMU\_EUTRA\_SYSTEM\_PORT

TTCN-3 Port Type	
Name	NASEMU_EUTRA_SYSTEM_PORT
Comment	NASEMU PTC: Port for Sending/Receiving data to/from the SYSTEM Interface
out	<a href="#">EUTRA_RRC_PDU_REQ</a>
in	<a href="#">EUTRA_RRC_PDU_IND</a>

## D.7 EUTRA\_CommonDefs

### D.7.1 Common\_Types

#### Common\_Types: Basic Type Definitions

TTCN-3 Basic Types		
RedundancyVersion_Type	integer (0..3)	used in EUTRA_ASP_DrbDefs and EUTRA_ASP_Typedefs

#### HarqProcessList\_Type

TTCN-3 Record of Type	
Name	HarqProcessList_Type
Comment	list of HARQ processes: each element shall be unique
record length(0..14) of <a href="#">HarqProcessId_Type</a>	

#### RRC\_MSG\_Request\_Type

TTCN-3 Union Type	
Name	RRC_MSG_Request_Type
Comment	DL RRC PDU on CCCH or DCCH
Ccch	DL_CCCH_Message
Dcch	DL_DCCH_Message

#### RRC\_MSG\_Indication\_Type

CA_Info	<a href="#">CarrierAggregationInfo_Type</a>	opt	place holder for additional routing information for carrier aggregation

## D.7.6 MBMS\_CommonDefs

Common definitions for MBMS needed for configuration of the SS

## MBMS\_CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
<a href="#">Pmch_InfoIndex_Type</a>	integer (0..maxPMCH_PerMBSFN)	

**MRB\_Identity\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>MRB_Identity_Type</b>		
<b>Comment</b>	MTCH is uniquely identified by: - the logicalChannelIdentity in the mbms-SessionInfoList-r9 - the MBSFN area identity, - the MCH index in the pmch-InfoList-r9		
Mbsfn_Areald	MBSFN_Areald_r12		
PmchLogicalChannel	<a href="#">PmchLogicalChannel_Type</a>		

**PmchLogicalChannel\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>PmchLogicalChannel_Type</b>		
<b>Comment</b>			
Pmch_InfoIndex	<a href="#">Pmch_InfoIndex_Type</a>		
LogicalChannelIdentity	<a href="#">LogicalChannelIdentity_r9_Type</a>		

## D.8 CDMA2000\_ASP\_TypeDefs

### D.8.1 CDMA2000\_Common

Common definitions for CDMA2000 and CDMA2000 ASPs

#### D.8.1.1 CDMA2000\_SystemContants

**CDMA2000\_ASP\_TypeDefs: Constant Definitions**

TTCN-3 Basic Types			
<b>tsc_CDMA2000_MaxNumberOfCells</b>	integer	8	Maximum number of CDMA2000 cells; in TS 36.508 in, clause 6.3.1.5 and 6.3.1.6 define 4 cells each for HRPD and 1XRTT; hence total is 8

#### D.8.1.2 CDMA2000\_Routing

**CDMA2000\_Routing: Basic Type Definitions**

TTCN-3 Basic Types		
<b>RLP_FlowId_Type</b>	integer (0..30)	As per S.0024, clause 4.8.2.10 both MaxNumRLPFlowsFwd and MaxNumRLPFlowsRvs need to be in the range of 0x06(6) to 0x1F(31) As per x.s007 clause 10, the PDN ID and Flow ID identify a flow

### RLP\_FlowIdList\_Type

TTCN-3 Record of Type	
Name	RLP_FlowIdList_Type
Comment	
record of <a href="#">RLP_FlowId_Type</a>	

### CDMA2000\_RoutingInfo\_Type

TTCN-3 Union Type	
Name	CDMA2000_RoutingInfo_Type
Comment	
None	<a href="#">Null_Type</a>
RLP_FlowId	<a href="#">RLP_FlowId_Type</a>

## D.8.1.3 CDMA2000\_TimingInfo

### CDMA2000\_TimingInfo: Basic Type Definitions

TTCN-3 Basic Types		
HRPD_FrameNumber_Type	integer	CDMA system time specified in units of 16 slots i.e. 26.66 ms.
SubFrameNumber_Type	integer (0..3)	A sub-frame is a group of four contiguous slots. The start of a sub-frame is specified by $(T - \text{FrameOffset}) \bmod 4 = 0$ , where T is the CDMA System Time in slots
RTT1X_FrameNumber_Type	integer	CDMA System Time, in integer multiples of 20 ms

### HRPD\_SubFrameInfo\_Type

TTCN-3 Union Type	
Name	HRPD_SubFrameInfo_Type
Comment	
Number	<a href="#">SubFrameNumber_Type</a>
Any	<a href="#">Null_Type</a> no specific sub-frame (valid for REQ ASPs only)

### HRPD\_Frame\_Type

TTCN-3 Union Type	
Name	HRPD_Frame_Type
Comment	
Number	<a href="#">HRPD_FrameNumber_Type</a>
Any	<a href="#">Null_Type</a> no specific TimeStamp (valid for REQ ASPs only)

### RTT1X\_Frame\_Type

TTCN-3 Union Type	
Name	RTT1X_Frame_Type
Comment	
Number	<a href="#">RTT1X_FrameNumber_Type</a>
Any	<a href="#">Null_Type</a> no specific TimeStamp (valid for REQ ASPs only)

### HRPD\_SubFrameTiming\_Type

TTCN-3 Record Type	
Name	HRPD_SubFrameTiming_Type
Comment	
Frame	<a href="#">HRPD_Frame_Type</a>
Subframe	<a href="#">HRPD_SubFrameInfo_Type</a>

### CDMA2000\_SubFrameTiming\_Type

TTCN-3 Union Type	
Name	CDMA2000_SubFrameTiming_Type
Comment	
HRPD	<a href="#">HRPD_SubFrameTiming_Type</a>
RTT1X	<a href="#">RTT1X_Frame_Type</a>

### CDMA2000\_TimingInfo\_Type

TTCN-3 Union Type	
Name	CDMA2000_TimingInfo_Type
Comment	
SubFrame	<a href="#">CDMA2000_SubFrameTiming_Type</a>
Now	<a href="#">Null_Type</a>
None	<a href="#">Null_Type</a>

## D.8.1.4 CDMA2000\_ReqAspCommonPart

### CDMA2000\_ReqAspControllInfo\_Type

TTCN-3 Record Type	
Name	CDMA2000_ReqAspControllInfo_Type
Comment	
CnfFlag	boolean
FollowOnFlag	boolean

true => SS shall send CNF:  
when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue.  
Example:  
when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event or system Command.  
If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message.  
When there is an activation time SS shall send the CNF after the configuration has been scheduled;  
that means SS shall not wait until the activation time has been expired.

false => no further (related) information  
true: further related information will be sent to SS ; Currently this value is not foreseen to be used.

## CDMA2000\_ReqAspCommonPart\_Type

TTCN-3 Record Type			
Name	CDMA2000_ReqAspCommonPart_Type		
Comment			
CellId	<a href="#">CDMA2000_CellId_Type</a>		
RoutingInfo	<a href="#">CDMA2000_RoutingInfo_Type</a>		
TimingInfo	<a href="#">CDMA2000_TimingInfo_Type</a>		
ControllInfo	<a href="#">CDMA2000_ReqAspControllInfo_Type</a>		

## D.8.1.5 CDMA2000\_IndAspCommonPart

## CDMA2000\_ErrorIndication\_Type

TTCN-3 Record Type			
Name	CDMA2000_ErrorIndication_Type		
Comment			
System	integer		any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE requests retransmission of an RLC PDU

## CDMA2000\_IndicationStatus\_Type

TTCN-3 Union Type			
Name	CDMA2000_IndicationStatus_Type		
Comment			
Ok	<a href="#">Null_Type</a>		
Error	<a href="#">CDMA2000_ErrorIndication_Type</a>		

## CDMA2000\_IndAspCommonPart\_Type

TTCN-3 Record Type			
Name	CDMA2000_IndAspCommonPart_Type		
Comment			
CellId	<a href="#">CDMA2000_CellId_Type</a>		
RoutingInfo	<a href="#">CDMA2000_RoutingInfo_Type</a>		
TimingInfo	<a href="#">CDMA2000_TimingInfo_Type</a>		
Status	<a href="#">CDMA2000_IndicationStatus_Type</a>		

## D.8.1.6 CDMA2000\_CnfAspCommonPart

## CDMA2000\_ConfirmationResult\_Type

TTCN-3 Union Type			
Name	CDMA2000_ConfirmationResult_Type		
Comment			
Success	<a href="#">Null_Type</a>		
Error	integer		may contain SS specific error code; this will not be evaluated by TTCN

## CDMA2000\_CnfAspCommonPart\_Type

TTCN-3 Record Type			
Name	CDMA2000_CnfAspCommonPart_Type		
Comment			
CellId	<a href="#">CDMA2000_CellId_Type</a>

TimingInfo	<a href="#">CDMA2000_TimingInfo_Type</a>		
Result	<a href="#">CDMA2000_ConfirmationResult_Type</a>		Similar definition as EUTRA

## D.8.2 CDMA2000\_PowerLevel

## CDMA2000\_ASP\_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_CDMA2000_Attenuation_Off	<a href="#">CDMA2000_Attenuation_Type</a>	{Off:=true}	

## CDMA2000\_PowerLevel: Basic Type Definitions

TTCN-3 Basic Types		
CDMA2000_InitialAttenuation_Type	<a href="#">CDMA2000_Attenuation_Type</a> (tsc_CDMA2000_Attenuation_Off)	Attenuation restricted to 'Off'

## CDMA2000\_Attenuation\_Type

TTCN-3 Union Type		
Name	CDMA2000_Attenuation_Type	
Comment	attenuation of the reference power	
Value	<a href="#">Attenuation_Type</a>	cell power reference power reduced by the given attenuation (value is in dB)
Off	<a href="#">Null_Type</a>	for non suitable off cell we specify an explicit "Off" value here

## CDMA2000\_CellAttenuation\_Type

TTCN-3 Record Type			
Name	CDMA2000_CellAttenuation_Type		
Comment			
CellId	<a href="#">CDMA2000_CellId_Type</a>		
Attenuation	<a href="#">CDMA2000_Attenuation_Type</a>		

## CDMA2000\_CellAttenuationList\_Type

TTCN-3 Record of Type	
Name	CDMA2000_CellAttenuationList_Type
Comment	
record length(1.. <a href="#">tsc_CDMA2000_MaxNumberOfCells</a> ) of <a href="#">CDMA2000_CellAttenuation_Type</a>	

## CDMA2000\_AbsoluteCellPower\_Type

TTCN-3 Record Type			
Name	CDMA2000_AbsoluteCellPower_Type		
Comment			
Powerloc	<a href="#">Powerloc_Type</a>		TTCN writer Shall set same vale in all cells; SS shall have only one AWGN channel for all configured cells per frequency SS shall create a AWGN channel in first cell per frequency and ignore this in later cell creations on the same frequency; i.e. this channel is created along once for Cell 15 or 16 and one each per 17 and 19 similary for RTT1X once for 19 or 20 and one each per 21 and 22
Powerlor	<a href="#">Powerlor_Type</a>		Total Transmit power in cell before attenuation
PilotOffset	<a href="#">PilotOffset_Type</a>		Default -7

## CDMA2000\_InitialCellPower\_Type

TTCN-3 Record Type			
Name	CDMA2000_InitialCellPower_Type		
Comment			
MaxReference Power	<a href="#">CDMA2000_AbsoluteCellPower_Type</a>		maximum value of cell reference power corresponding to Max lor/loc in power level table; a cell is initialised with this reference power; its value is the upper bound of the cell power during the test case
Attenuation	<a href="#">CDMA2000_InitialAttenuation_Type</a>		initial attenuation Cell is off

## D.8.3 CDMA2000\_Data

Data primitives sent/received at CDMA2000\_RLP\_FLOW\_PORT

## CDMA2000\_Data: Basic Type Definitions

TTCN-3 Basic Types		
RLP_SDU_Type	octetstring	

## RLP\_SDUList\_Type

TTCN-3 Record of Type	
Name	RLP_SDUList_Type
Comment	
record of <a href="#">RLP_SDU_Type</a>	

## CDMA2000\_U\_PlaneData\_Type

TTCN-3 Union Type		
Name	CDMA2000_U_PlaneData_Type	
Comment	Union structure is provided for future possible enhancements	
RLP_Sdu	<a href="#">RLP_SDUList_Type</a>	RLP SDU's

## RLPFlow\_DataPerSubframe\_DL\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>RLPFlow_DataPerSubframe_DL_Type</b>
<b>Comment</b>	common definition for one or several SDUs to be sent in the subframe given by the subframe offset; SS shall raise an error indication (using SYSTEM_IND) when that is not possible NOTE 1: For RLP the data may be spread over more than one subframe ; the TTCN implementation is responsible to calculate appropriate offsets accordingly
SubframeOffset	integer  subframe offset relative to the absolute timing information given in the common part of the ASP; NOTE : if a RLP SDU takes more than one subframe, SubframeOffset specifies the first TTI
SduList	<a href="#">CDMA2000_U_PlaneData_Type</a>  list of PDUs/SDUs to be sent in one subframe

## RLPFlow\_DataPerSubframeList\_DL\_Type

TTCN-3 Record of Type	
<b>Name</b>	<b>RLPFlow_DataPerSubframeList_DL_Type</b>
<b>Comment</b>	list of user plane data to be sent in sub-frames given by the SubframeOffset in the single elements of the list; Timing: the start time for the whole sequence is given by the timing info of the ASP (common information); the timing for the respective data pdus is given by the SubframeOffset relative to the common timing info; design consideration: repetitions of this sequence are not foreseen (in which case the subframe offset could not be related to the timing info of the ASP)
record of <a href="#">RLPFlow_DataPerSubframe_DL_Type</a>	

## CDMA2000\_U\_Plane\_Request\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>CDMA2000_U_Plane_Request_Type</b>
<b>Comment</b>	NOTE: formal type definition to allow later enhancements; CDMA2000_U_Plane_Request_Type defines a sequence of subframes in which data shall be sent
SubframeDataList	<a href="#">RLPFlow_DataPerSubframeList_DL_Type</a>

## D.8.4 CDMA2000\_CellConfiguration

### HRPD\_CellParameters\_Type

TTCN-3 Record Type			
Name	<b>HRPD_CellParameters_Type</b>		
Comment	Parameters specific to HRPD		
SystemType	<a href="#">SystemType_Type</a>		Specifies the system type of Channel As per Table 13.1-1 of C.S0024 0, 1, 2 are defined values and 3 to 255 are reserved
SubNetMask	<a href="#">B8_Type</a>		7.11.6.2.2 of C.S0024 Sector Subnet identifier set this field to the number of consecutive 1s in the subnet mask of the subnet to which this sector belongs
ColorCode	<a href="#">ColorCode_Type</a>		7.11.6.2.1 of C.S0024 set to the color code corresponding to this sector part of QuickConfig Over head message
CountryCode	<a href="#">MCC_Type</a>		7.11.6.2.2 of C.S0024 three-digit BCD (binary coded decimal) encoded representation of the Mobile Country Code associated with this sector
OpenLoopAdjust	<a href="#">OpenLoopAdjust_Type</a>		9.4.6.2.6 of C.S0024; The negative of the nominal power to be used by access terminals in the open loop power estimate, expressed as an unsigned value in units of 1 dB. The value used by the access terminal is -1 times the value of this field
ReverseRateLimit	<a href="#">ReverseRateLimit_Type</a>		Table 9.9.6.3-2 of C.S0024; set to the highest data rate that the access terminal is allowed to use on the Reverse Traffic Channel
MACIndex	<a href="#">ReverseLinkMACIndex_Type</a>		C.S0024 clause 12.4.1.3.2.2 Forward channel MAC is derived from this based on table 12.4.1.3.2.2-1
PacketApp	<a href="#">PacketApplication_Type</a>		Multi Flow Packet Application to be used Enhanced Multi-Flow Packet Application subtype(0x0009) defined in C.S0087 or as per C.S0087, clause 2.3 the UE Shall not propose AEMPA during stream protocol negotiation (0xFFFE) in C.R1001
ControlChannelRate	<a href="#">ControlChannelRate_Type</a>		MAC index to be used for the Control Channel
PDN_Id	<a href="#">PDN_Id_Type</a>		PDN_ID of the bearer
PDN_Address	<a href="#">PDN_Address_Type</a>		the PDN Address to be provided to the UE in VSNCP ConfigAck
UATI	<a href="#">UATI_Type</a>		UATI to be Assigned to the UE

**RTT1X\_CellParameters\_Type**

TTCN-3 Record Type		
Name	<b>RTT1X_CellParameters_Type</b>	
Comment	Parameters specific to 1XRTT	
Reg_Zone	<a href="#">B12_Type</a>	C.S005 clause 3.7.2.3.2.1 and 2.6.5.1.5 Registration Zone of the base station Reg_Zone, SID and NID shall be unique for each base station
Base_Class	<a href="#">B4_Type</a>	C.S0005 clause 3.7.2.3.2.1 Base station class. The base station shall set this field as follows: For Band Class 1 and 4, the base station shall set this field to '0001'; otherwise, the base station shall set this field to '0000'
MCC	<a href="#">B10_Type</a>	3.7.2.3.2.13 and 2.3.1.1 of C.S0005 encoding is int2bit (100*D1+10*D2+D3 -111,10) with digit 0 being mapped to 10 binary representation of the Mobile Country Code associated with this sector
IMSI_11_12	<a href="#">B7_Type</a>	3.7.2.3.2.13 and 2.3.1.2 of C.S0005 encoding is int2bit (10*D2+D3 -11,7) with digit 0 being mapped to 10 binary representation of the Mobile Network Code associated with this sector
TMSI	<a href="#">TMSI_Type</a>	the TMSI to be assigned to the MS
ProtRev	<a href="#">ProtRev_Type</a>	Protocol Revision
Min_ProtRev	<a href="#">ProtRev_Type</a>	the minimum protocol revision supported by Base station
Sig_Encryption Mode	<a href="#">EncryptionMode_Type</a>	Encryption mode for Common and dedicated signalling
USerInfo_EncryptionMode	<a href="#">EncryptionMode_Type</a>	User information Encryption mode

**ModeSpecificCellParams\_Type**

TTCN-3 Union Type		
Name	<b>ModeSpecificCellParams_Type</b>	
Comment		
RTT1X	<a href="#">RTT1X_CellParameters_Type</a>	
HRPD	<a href="#">HRPD_CellParameters_Type</a>

Error	<a href="#">Null_Type</a>		Used by SS to indicate any error; the Actual Error types reported in ASP common part in CDMA2000_IndicationStatus_Type
InitialAccessProbeRcvd	<a href="#">Null_Type</a>		Initial Access probe is received;
RegAndDefBearerEstInd	<a href="#">RegAndDefBearerEstInd_Type</a>		UE has succesfully performed registration and default bearer esabishment
DedicatedBearerEstInd	<a href="#">Null_Type</a>		Vendor specific network protocol (RFC 3772) procedures to re-establish Dedicated bearer as defined in S.0057 clause 5.5.3.1 (BCM is MS/NW) or clause 5.5.4.1.1 (BCM = MS-Only) Bearer Configuration Mode Dedicated bearers are (re) established
DedicatedBearerRelInd	<a href="#">DedicatedBearerRelInd_Type</a>		To indicate the Dedicated bearer is released
DefaultBearerRelDetachInd	<a href="#">DefaultBearerRelDetachInd_Type</a>		To Release configured default bearer and hense associated Dedicated bearer x.s0057 clause 11.3 and 11.1.1 Dedicated bearers are deactivated/released To detach the UE x.s0057 clause 11.2 Detach completed
MovedToDormantMode	<a href="#">Null_Type</a>		The channels are released and UE is moved to PPP dormant mode/Air interface Idle.
MobilityFromEUTRACmpl	<a href="#">MobilityFromEUTRACmpl_Type</a>		To confirm that Handover from EUTRAN is completed by receiving Traffic Channel Complete and the MessageSequence is same as in Traffic Channel Assignment
AdditionalDefBearerEstInd	<a href="#">AdditionalDefBearerEstInd_Type</a>		UE has successfully performed additional default bearer establishment (additional PDN)
HRPD_ZoneRegistrationInd	<a href="#">HRPD_ZoneRegistrationInd_Type</a>		Initially pre-registered UE detects change in HRPD Zone ID in SIB and hence updates registration

## D.8.5.4 HRPD\_Commands

## HRPD\_UE\_InitStateType

TTCN-3 Enumerated Type	
Name	<b>HRPD_UE_InitStateType</b>
Comment	HRPD UE states as defined in C.S0057 clause 3.1
idle_Null	In the Inactive/Null State, 1. there is no physical traffic channel between the UE and the eAN, and no connection exists between the eAN and the ePCF 2. no PPP link between the UE and the HSGW . 3. The UE may have a Universal Access Terminal Identifier (UATI) that has been assigned by an eHRPD eAN
dormant	In the Dormant State, 1. no physical traffic channel exists between the UE and the eAN and no connection exists between the eAN and the ePCF. 2. PPP link between the UE and the HSGW 3. eHRPD DORMANT state equates to the "idle" state referred to in TS 23.402
active_Connected	In the Active/Connected State, 1. a physical traffic channel exists between the UE and the eAN over which data may be sent. A connection exists between the eAN and the ePCF, and between the ePCF and the HSGW, 2. there is a PPP link between the UE and the HSGW
preregister	The UE is performing pre-register though a different Access network

CS_OrderedRegistration	<a href="#">CS_Registration_Type</a>	ordered registration on (already registered) 1xRTT cell or Pre registration Power up attach) through a different RAT. SS triggers the procedure by sending Registration Request order (GCSNA encapsulated in case of pre-registration) and sends mobilityParameters to be tunneled in CSFBParametersRequestCDMA2000 SS is expected to send InitialAccessProbeRcvd (only if initial state is not pre-registration) and CS_RegistrationCmpl as an indication for succesful completion of procedure
E_CSFB_Call	<a href="#">RTT1X_CS_CallType</a>	Prepare SS for Enhanced CSFB call If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (MO)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA encapsulated 1xRTT Handoff Direction message to be sent tunneled in MobilityFromEUTRACommand Receive HandoffCmpl in the 1xRTT Cell; SS responds with Alert With Information (MT)/Sevice connect (MO) in the 1xRTT cell. SS receives Connect order (MT)/Service Connect Completion (MO)

		SS is expected to send ECSFB_CallCmplInd as an indication for succesful completion of procedure
E_CSFB_Call_ECAM	<a href="#">RTT1X_CS_CallType</a>	Prepare SS for Enhanced CSFB call with Extended channel assignment If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (MO)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA Encapsulated ECAM message to be sent tunneled in MobilityFromEUTRACommand Receive Origination in the 1xRTT Cell; After extended channel assignment, SS receives Connect order (MT)/Service Connect Completion (MO) SS is expected to send ECSFB_ECAM_CallCmplInd as an indication for succesful completion of procedure
E_CSFB_Call_Reject	<a href="#">RTT1X_CS_CallType</a>	Prepare SS for Enhanced CSFB call, which needs to be rejected If the call Type is mt, CDMA SS sends 1x RTT GCSNA encapsulated General Page to be tunneled in DLInformation Transfer CDMA SS sends mobilityParameters to be tunneled in HandoverFromEUTRAPreparationRequest Receive tunneled 1xRTT GCSNA Encapsulated Origination (MO)/Page Response (MT) message and MEID in ULHandoverPreparationTransfer Respond with GCSNA encapsulated 1xRTT Release Order message to be sent tunneled in DLInformation Transfer SS is expected to send ECSFB_CallRejInd as an indication for succesful completion of procedure

## D.8.7 System\_Interface

### CDMA2000\_SystemRequest\_Type

TTCN-3 Union Type		
<b>Name</b>	<b>CDMA2000_SystemRequest_Type</b>	
<b>Comment</b>		
Cell	<a href="#">CDMA2000_CellConfigRequest_Type</a>	configure/release a cell
CellAttenuation List	<a href="#">CDMA2000_CellAttenuationList_Type</a>	

### CDMA2000\_SystemConfirm\_Type

TTCN-3 Union Type		
<b>Name</b>	<b>CDMA2000_SystemConfirm_Type</b>	
<b>Comment</b>	confirmations for system configuration; in general to be sent after the configuration has been done	
Cell	<a href="#">Null_Type</a>	(no further parameters from SS)
CellAttenuation List	<a href="#">Null_Type</a>	(no further parameters from SS) NOTE 1: the confirmation shall be sent when all cells have changed power levels NOTE 2: for the CellId in the common ASP part the same rules are applied as for the CDMA2000 SYSTEM REQ

**CDMA2000\_SYSTEM\_CTRL\_REQ**

TTCN-3 Record Type			
<b>Name</b>	<b>CDMA2000_SYSTEM_CTRL_REQ</b>		
<b>Comment</b>			
Common	<a href="#">CDMA2000_ReqAspComm onPart_Type</a>		TimingInfo depends on respective primitive:
Request	<a href="#">CDMA2000_SystemReque st_Type</a>		- Cell TimingInfo: 'now' (in general) - CellAttenuationList TimingInfo: 'now' (in general, but activation time may be used also)

**CDMA2000\_SYSTEM\_CTRL\_CNF**

TTCN-3 Record Type			
<b>Name</b>	<b>CDMA2000_SYSTEM_CTRL_CNF</b>		
<b>Comment</b>			
Common	<a href="#">CDMA2000_CnfAspComm onPart_Type</a>		TimingInfo is ignored by TTCN => SS may set TimingInfo to "None"
Confirm	<a href="#">CDMA2000_SystemConfir m_Type</a>		

**CDMA2000\_SystemCommand\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>CDMA2000_SystemCommand_Type</b>	
<b>Comment</b>		
HRPD	<a href="#">HRPD_SystemCommand_Type</a>	HRPD Specific System commands
RTT1X	<a href="#">RTT1X_SystemCommand_Type</a>	1XRTT specific System commands

**CDMA2000\_SYSTEM\_CMD**

TTCN-3 Record Type			
<b>Name</b>	<b>CDMA2000_SYSTEM_CMD</b>		
<b>Comment</b>			
Common	<a href="#">CDMA2000_ReqAspComm onPart_Type</a>		Routing info will be none generally; TimingInfo is generally now but activation time may be used also for all System commands Cnf and Follow on flags are both false
Command	<a href="#">CDMA2000_SystemComm and_Type</a>		HRPD or 1XRTT System commands

**CDMA2000\_SystemIndication\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>CDMA2000_SystemIndication_Type</b>	
<b>Comment</b>		
HRPD	<a href="#">HRPD_SystemIndication_Type</a>	
RTT1X	<a href="#">RTT1X_SystemIndication_Type</a>	

## CDMA2000\_SYSTEM\_IND

TTCN-3 Record Type		
<b>Name</b>	<b>CDMA2000_SYSTEM_IND</b>	
<b>Comment</b>		
Common	<a href="#">CDMA2000_IndAspCommo nPart_Type</a>	The SS shall provide TimingInfo depending on the respective indication:
Indication	<a href="#">CDMA2000_SystemIndicati on_Type</a>	- Error TimingInfo: related to the error (if available) - HRPD/RTT1X Procedure completion The timing info corresponding to logical completion of the complete procedure includes completion of all sub protocols

## CDMA2000\_RLP\_FLOW\_COMMON\_IND

TTCN-3 Record Type		
<b>Name</b>	<b>CDMA2000_RLP_FLOW_COMMON_IND</b>	
<b>Comment</b>	ASP to receive PDUs from RLP Packet Flows	
Common	<a href="#">CDMA2000_IndAspCommo nPart_Type</a>	CellId : identifier of the cell RoutingInfo : RLP Flow id TimingInfo : time when RLP SDU's has been completely received
Data	<a href="#">CDMA2000_U_PlaneData Type</a>	

## CDMA2000\_RLP\_FLOW\_COMMON\_REQ

TTCN-3 Record Type		
<b>Name</b>	<b>CDMA2000_RLP_FLOW_COMMON_REQ</b>	
<b>Comment</b>	ASP to send PDUs to RLP Packet flows	
Common	<a href="#">CDMA2000_ReqAspComm onPart_Type</a>	CellId : identifier of the cell RoutingInfo : RLP Flow id TimingInfo : starting point when to start sending sequence of data PDUs e.g. TimeStampLong_Type = X, subframe number = x; U_Plane.SubframeDataList (i).SubframeOffset := offset_i; => U_Plane.SubframeDataList(i).PduSduList shall be sent out at TimeStampLong_Type = X + ((x + offset_i) / 4); subframe number = (x + offset_i) mod 4 ControlInfo : CnfFlag:=false; FollowOnFlag:=false
U_Plane	<a href="#">CDMA2000_U_Plane_Req uest_Type</a>	

## CDMA2000\_SYSTEM\_PORT

TTCN-3 Port Type		
<b>Name</b>	<b>CDMA2000_SYSTEM_PORT</b>	
<b>Comment</b>	CDMA2000 PTC: Port for system configuration	
out	<a href="#">CDMA2000_SYSTEM_CTRL_RE Q</a>	
in	<a href="#">CDMA2000_SYSTEM_CTRL_CN F</a>	

**CDMA2000\_SYSCMD\_IND\_PORT**

TTCN-3 Port Type	
<b>Name</b>	<b>CDMA2000_SYSCMD_IND_PORT</b>
<b>Comment</b>	CDMA2000 PTC: Port for system indications/Commands
out	<a href="#">CDMA2000_SYSTEM_CMD</a>
in	<a href="#">CDMA2000_SYSTEM_IND</a>

**CDMA2000\_RLP\_FLOW\_PORT**

TTCN-3 Port Type	
<b>Name</b>	<b>CDMA2000_RLP_FLOW_PORT</b>
<b>Comment</b>	CDMA2000 PTC: Port for RLP SDU's to be sent on RLP packet data streams
out	<a href="#">CDMA2000_RLP_FLOW_COMM ON_REQ</a>
in	<a href="#">CDMA2000_RLP_FLOW_COMM ON_IND</a>

## D.9 CDMA2000\_CommonDefs

type definitions used by CDMA2000 and EUTRA

## CDMA2000\_CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
<b>BandclassCDMA2000_Type</b>	integer (0..31)	Band class defined as in 36.331 ASN.1 definition for BandclassCDMA2000
<b>ARFCN_ValueCDMA2000_Type</b>	integer (0..2047)	ARFCN for CDMA2000 cell as in 36.331 ASN.1 definition for ARFCN_ValueCDMA2000
<b>PhysCellIdCDMA2000_Type</b>	integer (0..511)	PN offset for CDMA2000 cell as in 36.331 ASN.1 definition for PhysCellIdCDMA2000
<b>ProtRev_Type</b>	integer (0..255)	protocol revision
<b>OpenLoopAdjust_Type</b>	integer (0..255)	9.4.6.2.6 of C.S0024
<b>BCD_Digit_Type</b>	integer (0..9)	To represent BCD digit of MCC
<b>TMSI_Code_Type</b>	<a href="#">O4_Type</a>	
<b>EncryptionMode_Type</b>	integer (0..7)	C.S0005 table 3.7.4.5-1 & 3.7.5.7-3 0 ... Encryption disabled 1 ... Encryption with ORYX algorithm for User Info and Enhanced Cellular Msg Encryption Algorithm for Signalling 2 ... Encryption with Rijndael algorithm 3-7 ... reserved
<b>TMSI_ZoneLen_Type</b>	integer (1..8)	TMSI Zone Length; On encoding this is encoded to B4_Type
<b>SectorID_HRPD_Type</b>	<a href="#">B128_Type</a>	Sector ID for HRPD as in 36.331 ASN.1 definition for CellGlobalIdCDMA2000.cellGlobalIdHRPD
<b>PilotOffset_Type</b>	integer (-31..0)	Represents the offset i.e. Pilot Channel power to total cell power(dB); By default shall be set to -7 127 selected Max value by 7 bits
<b>Powerlor_Type</b>	integer (-127..0)	Represents the cell total Tx power lor (dBm/1.23 MHz)
<b>Powerloc_Type</b>	integer (-127..0)	Represents the cell total AWGN power loc (dBm/1.23 MHz) which is independent of cell
<b>Attenuation_Type</b>	integer (0..127)	
<b>SystemType_Type</b>	integer (0..255)	0 to 2 are allowed and 3 to 255 are reserved 13.1 of C.S0024
<b>ColorCode_Type</b>	integer (0..255)	7.11.6.2.1 of C.S0024
<b>ReverseLinkMACIndex_Type</b>	integer (0..383)	C.S0024 clause 12.4.1.3.2.2

## MCC\_Type

TTCN-3 Record of Type	
<b>Name</b>	<b>MCC_Type</b>
<b>Comment</b>	Represents Mobile Country Code
record length (3) of <a href="#">BCD_Digit_Type</a>	

## TMSI\_Zone\_Type

TTCN-3 Record of Type	
<b>Name</b>	<b>TMSI_Zone_Type</b>
<b>Comment</b>	TMSI Zone 1 to 8 octets
record length (1..8) of <a href="#">B8_Type</a>	

**TMSI\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>TMSI_Type</b>
<b>Comment</b>	Globally unique TMSI as defined in C.s0005 clause 3.7.2.3.2.19
TMSI_ZoneLen	<a href="#">TMSI_ZoneLen_Type</a> Length of TMSI_Zone 1..8
TMSI_Zone	<a href="#">TMSI_Zone_Type</a> TMSI_ZoneLen octets of TMSI_Zone
TMSI_Code	<a href="#">TMSI_Code_Type</a> TMSI code

**SectorID\_RTT1X\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>SectorID_RTT1X_Type</b>
<b>Comment</b>	Sector ID for 1XRTT acc. to C.S0005 clause 3.7.2.3.2.1 and as in 36.331 ASN.1 clause 6.3.4, definition of CellGlobalIdCDMA2000.cellGlobalId1XRTT
BaselId	<a href="#">B16_Type</a> Base station identification. The base station shall set this field to its identification number
NID	<a href="#">B16_Type</a> Network identification This field serves as a sub-identifier of a system as defined by the owner of the SID. The base station shall set this field to the network identification number for this network
SID	<a href="#">B15_Type</a> System identification. set to the system identification number for this system

**CarrierFreqCDMA2000\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>CarrierFreqCDMA2000_Type</b>
<b>Comment</b>	Carrier Frequency for CDMA2000 cell as in 36.331 ASN.1 definition for CarrierFreqCDMA2000; contains Band class 5 bit and Channel number 11 bit part of Sector Channel over head message contained in 24 bit Channel IE
BandClass	<a href="#">BandclassCDMA2000_Type</a>
ARFCN	<a href="#">ARFCN_ValueCDMA2000_Type</a>

**CDMA2K\_Type**

TTCN-3 Enumerated Type	
<b>Name</b>	<b>CDMA2K_Type</b>
<b>Comment</b>	CDMA 2000 Type for CDMA2000 cell as in 36.331 ASN.1 definition for CDMA2000-Type
type1XRTT	
typeHRPD	

**CellGlobalIdCDMA2000\_Type**

TTCN-3 Union Type	
<b>Name</b>	<b>CellGlobalIdCDMA2000_Type</b>
<b>Comment</b>	CDMA 2000 Type Sector ID of the Cell as in 36.331 ASN.1 definition CellGlobalIdCDMA2000
RTT1X	<a href="#">SectorID_RTT1X_Type</a>
HRPD	<a href="#">SectorID_HRPD_Type</a>

## ReverseRateLimit\_Type

TTCN-3 Enumerated Type	
Name	ReverseRateLimit_Type
Comment	Table 9.9.6.3-2 of C.S0024; set to the highest data rate that the access terminal is allowed to use on the Reverse Traffic Channel; 10 Reserved values

## PacketApplication\_Type

TTCN-3 Enumerated Type	
Name	PacketApplication_Type
Comment	Type of Packet Application to be used in Stream protocol
enhMultiFlowPacketApp	

## ControlChannelRate\_Type

TTCN-3 Enumerated Type	
Name	ControlChannelRate_Type
Comment	Determines the MAC configuration for Control Channel
macIndex2	
macIndex3	

## CDMA2000\_CellId\_Type

TTCN-3 Enumerated Type	
Name	CDMA2000_CellId_Type
Comment	
cdma2000_Cell_NonSpecific	
cdma2000_Cell15	HRDP Cell
cdma2000_Cell16	HRDP Cell
cdma2000_Cell17	HRDP Cell
cdma2000_Cell18	HRDP Cell
cdma2000_Cell19	RTT1X Cell
cdma2000_Cell20	RTT1X Cell
cdma2000_Cell21	RTT1X Cell
cdma2000_Cell22	RTT1X Cell

## SearchWindowSizeRecord\_Type

TTCN-3 Record Type			
Name	SearchWindowSizeRecord_Type		
Comment			
SearchWindow_Active	<a href="#">SearchWindowSize_Type</a>		Search Window for Active Cells
SearchWindow_Neighbor	<a href="#">SearchWindowSize_Type</a>		Search Window for Neighbor Cells
SearchWindow_Remaining	<a href="#">SearchWindowSize_Type</a>		Search Window for Rest Cells

## D.10 EUTRA\_ASP\_CDMA2000TunnellingDefs

ASP definitions for tunnelling of CDMA2000 messages e.g. during CDMA2000 pre-registration

## EUTRA\_ASP\_CDMA2000TunnellingDefs: Basic Type Definitions

TTCN-3 Basic Types		
TunneledInfoCDMA2000	octetstring	
MEID_Type	ULHandoverPreparationTransfer_r8_IEs.meid	
CDMA2000_MSG_REQ	<a href="#">CDMA2000_UL_Container_Type</a>	
CDMA2000_MSG_IND	<a href="#">CDMA2000_DL_Container_Type</a>	

## UL\_TunneledInfoCDMA2000

TTCN-3 Record Type			
Name	UL_TunneledInfoCDMA2000		
Comment			
Msg	<a href="#">TunneledInfoCDMA2000</a>		OCTET STRING
Meid	<a href="#">MEID_Type</a>	opt	ASN.1 type: BIT STRING (SIZE (56)) used to tunnel meid received from UE in ULHandoverPreparationTransfer for 1xRTT, not present other wise

## CDMA2000\_UL\_Container\_Type

TTCN-3 Record Type			
Name	CDMA2000_UL_Container_Type		
Comment			
CDMA2000Type	CDMA2000_Type		ASN.1 type: type1XRTT, typeHRPD
UL_Msg	<a href="#">UL_TunneledInfoCDMA2000</a>		

## DL\_TunneledInfoCDMA2000

TTCN-3 Record Type			
Name	DL_TunneledInfoCDMA2000		
Comment			
Msg	<a href="#">TunneledInfoCDMA2000</a>		OCTET STRING

## CDMA2000\_DL\_Container\_Type

TTCN-3 Record Type			
Name	CDMA2000_DL_Container_Type		
Comment			
CDMA2000Type	CDMA2000_Type		ASN.1 type: type1XRTT, typeHRPD
DL_Msg	<a href="#">DL_TunneledInfoCDMA2000</a>		OCTET STRING

## CDMA2000\_TUNNELLING\_PORT

TTCN-3 Port Type			
Name	CDMA2000_TUNNELLING_PORT		
Comment	EUTRA PTC: Port to deal with tunnelling of CDMA2000 messages		
out	<a href="#">CDMA2000_MSG_REQ</a>		
in	<a href="#">CDMA2000_MSG_IND</a>		

## D.11 EUTRA\_ASP\_VirtualNoiseDefs

ASP definitions for virtual noise generation in EUTRA cells.

The noise is configured for an already existing EUTRA cell.

For UEs with 2 antenna connectors the AWGN (Additive white Gaussian noise) signals applied to each receiver antenna connector shall be uncorrelated.

### EUTRA\_ASP\_VirtualNoiseDefs: Basic Type Definitions

TTCN-3 Basic Types		
EUTRA_VngConfigConfirm_Type	<a href="#">Null_Type</a>	

### EUTRA\_VngConfigInfo\_Type

TTCN-3 Record Type			
Name	EUTRA_VngConfigInfo_Type		
Comment			
Bandwidth	<a href="#">DL_Bandwidth_Type</a>		Bandwidth to be used for the noise (in general the same bandwidth as for the associated EUTRA cell)
NocLevel	integer		Noc level; calculation is according to 36.523-3 cl 7.22

### EUTRA\_VngConfigRequest\_Type

TTCN-3 Union Type			
Name	EUTRA_VngConfigRequest_Type		
Comment	configure/activate noise for a given cell; NOTE: it is assumed the the associated EUTRA cell has been created beforehand		
Configure	<a href="#">EUTRA_VngConfigInfo_Type</a>		configuration of the virtual noise generator; regardless of the power level the noise generator is off before it gets activated for this cell; in case the configuration needs to be changed during a test, the noise generator shall be deactivated for this cell
Activate	<a href="#">Null_Type</a>		noise is activated (switched on) for the given cell acc. to the previous configuration; while being active the configuration shall not be modified
Deactivate	<a href="#">Null_Type</a>		deactivate noise for given cell

## EUTRA\_VNG\_CTRL\_REQ

TTCN-3 Record Type			
Name	EUTRA_VNG_CTRL_REQ		
Comment			
Common	<a href="#">ReqAspCommonPart_Type</a>		CellId : as for the associated EUTRA cell RoutingInfo : None TimingInfo : Now ControlInfo : CnfFlag:=true; FollowOnFlag:=false
Request	<a href="#">EUTRA_VngConfigRequest_Type</a>		

## EUTRA\_VNG\_CTRL\_CNF

TTCN-3 Record Type			
Name	EUTRA_VNG_CTRL_CNF		
Comment			
Common	<a href="#">CnfAspCommonPart_Type</a>		TimingInfo is ignored by TTCN (apart from EnquireTiming) => SS may set TimingInfo to "None"
Confirm	<a href="#">EUTRA_VngConfigConfirm_Type</a>		

## EUTRA\_VNG\_PORT

TTCN-3 Port Type			
Name	EUTRA_VNG_PORT		
Comment	EUTRA PTC: Port for virtual noise generator		
out	<a href="#">EUTRA_VNG_CTRL_REQ</a>		
in	<a href="#">EUTRA_VNG_CTRL_CNF</a>		

## D.12 UTRAN\_ASP\_VirtualNoiseDefs

ASP definitions for virtual noise generation in UTRAN cells.

The noise is configured for an already existing UTRAN cell.

NOTE: For the time being VNG is applicable for UTRAN FDD only as acc. to TS 36.304 clause 5.2.4.5 there is no quality based measurement for UTRAN TDD, GERAN or CDMA2000

### UTRAN\_ASP\_VirtualNoiseDefs: Basic Type Definitions

TTCN-3 Basic Types			
UTRAN_VngConfigConfirm_Type	<a href="#">Null_Type</a>		

### UTRAN\_VngConfigInfo\_Type

TTCN-3 Record Type			
Name	UTRAN_VngConfigInfo_Type		
Comment			
locLevel	integer		loc level; calculation is testcase specific

### UTRAN\_VngConfigRequest\_Type

TTCN-3 Union Type		
<b>Name</b>	<b>UTRAN_VngConfigRequest_Type</b>	
<b>Comment</b>	configure/activate noise for a given cell; NOTE: it is assumed the the associated UTRAN cell has been created beforehand	
Configure	<a href="#">UTRAN_VngConfigInfo_Type</a>	configuration of the virtual noise generator; regardless of the power level the noise generator is off before it gets activated for this cell; in case the configuration needs to be changed during a test, the noise generator shall be deactivated for this cell
Activate	<a href="#">Null_Type</a>	noise is activated (switched on) for the given cell acc. to the previous configuration; while being active the configuration shall not be modified
Deactivate	<a href="#">Null_Type</a>	deactivate noise for given cell

### UTRAN\_VNG\_CTRL\_REQ

TTCN-3 Record Type			
<b>Name</b>	<b>UTRAN_VNG_CTRL_REQ</b>		
<b>Comment</b>			
CellId	integer		id of associated UTRAN cell
Request	<a href="#">UTRAN_VngConfigRequest_Type</a>		

### UTRAN\_VNG\_CTRL\_CNF

TTCN-3 Record Type			
<b>Name</b>	<b>UTRAN_VNG_CTRL_CNF</b>		
<b>Comment</b>			
CellId	integer		id of associated UTRAN cell
Confirm	<a href="#">UTRAN_VngConfigConfirm_Type</a>		

### UTRAN\_VNG\_PORT

TTCN-3 Port Type		
<b>Name</b>	<b>UTRAN_VNG_PORT</b>	
<b>Comment</b>	UTRAN PTC: Port for virtual noise generator	
out	<a href="#">UTRAN_VNG_CTRL_REQ</a>	
in	<a href="#">UTRAN_VNG_CTRL_CNF</a>	

## D.13 WLAN\_ASP\_TypeDefs

### WLAN\_ASP\_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_WLAN_MaxNumberOfCells	integer	3	Only one cell is foreseen to be used. defined 3 just for completeness.

**WLAN\_ASP\_TypeDefs: Basic Type Definitions**

TTCN-3 Basic Types		
<b>WLAN_ChannelNumber_Type</b>	integer (1..2047)	Channel Number of WLAN Channel 1 to 14 belong to 2.4 Ghz ISM band 131-138 belong to 3.6 Ghz ISM band 36,40,44,48,52,56,60,64,100,104,108,112,116,120,124,128,132,136,140,149,153,157,161&165 belong to 5Ghz ISM band Other channel numbers may be defined in future for other bands and are reserved until defined Channel number uniquely identifies the frequency
<b>WLAN_BeaconRSSI_Type</b>	integer (0..255)	WLAN Beacon RSSI is defined in IEEE 802.11-2012, Part 11 table 6.7 as integer - 100..40 but defined in 36.331/25.331 as integer(0..255) so actual beacon RSSI = value -100, and values 141..255 are not used or spares
<b>WLAN_ChannelUtilization_Type</b>	integer (0..255)	As defined in in IEEE 802.11-2012, Part 11 clause 8.4.2.20 used in BSS load element
<b>WLAN_TimeStamp_Type</b>	<a href="#">O8_Type</a>	TimeStamp field (TSF) timer in microseconds as defined in IEEE 802.11-2012 clause 8.4.1.10

**WLAN\_Band\_Type**

TTCN-3 Enumerated Type	
Name	WLAN_Band_Type
Comment	
Band2_4Ghz	Band2_4Ghz = 2.4 Ghz ISM band
Band5Ghz	Band5Ghz = 5Ghz ISM band
Band3_6Ghz	Band3_6Ghz = 3.6 Ghz ISM band

**WLAN\_CellId\_Type**

TTCN-3 Enumerated Type	
Name	WLAN_CellId_Type
Comment	
wlan_Cell_NonSpecific	
wlan_Cell27	WLAN AP in EUTRA environment
wlan_Cell39	WLAN AP in UTRA environment

**WLAN\_RoutingInfo\_Type**

TTCN-3 Union Type		
Name	WLAN_RoutingInfo_Type	
Comment		
None	<a href="#">Null_Type</a>	place holder for any possible extensions, currently only none defined

**WLAN\_TimingInfo\_Type**

TTCN-3 Union Type		
Name	<b>WLAN_TimingInfo_Type</b>	
Comment		
TimeStamp	<a href="#">WLAN_TimeStamp_Type</a>	
Now	<a href="#">Null_Type</a>	to be used in REQ ASPs when there is no 'activation time'
None	<a href="#">Null_Type</a>	only to be used in WLAN_AP_SYSTEM_CTRL_CNF

**WLAN\_ReqAspControllInfo\_Type**

TTCN-3 Record Type		
Name	<b>WLAN_ReqAspControllInfo_Type</b>	
Comment		
CnfFlag	boolean	<p>true =&gt; SS shall send CNF: when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue. Example: when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event or system Command. If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message. When there is an activation time SS shall send the CNF after the configuration has been scheduled; that means SS shall not wait until the activation time has been expired.</p>
FollowOnFlag	boolean	<p>false =&gt; no further (related) information true: further related information will be sent to SS; currently this value is not foreseen to be used.</p>

**WLAN\_ReqAspCommonPart\_Type**

TTCN-3 Record Type		
Name	<b>WLAN_ReqAspCommonPart_Type</b>	
Comment		
CellId	<a href="#">WLAN_CellId_Type</a>	
RoutingInfo	<a href="#">WLAN_RoutingInfo_Type</a>	
TimingInfo	<a href="#">WLAN_TimingInfo_Type</a>	
ControllInfo	<a href="#">WLAN_ReqAspControllInfo_Type</a>	

**WLAN\_ErrorIndication\_Type**

TTCN-3 Record Type		
Name	<b>WLAN_ErrorIndication_Type</b>	
Comment		
System	integer	any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE performs an out of sequence signalling

**WLAN\_IndicationStatus\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>WLAN_IndicationStatus_Type</b>	
<b>Comment</b>		
Ok	<a href="#">Null_Type</a>	
Error	<a href="#">WLAN_ErrorIndication_Type</a>	

**WLAN\_IndAspCommonPart\_Type**

TTCN-3 Record Type		
<b>Name</b>	<b>WLAN_IndAspCommonPart_Type</b>	
<b>Comment</b>		
CellId	<a href="#">WLAN_CellId_Type</a>	
RoutingInfo	<a href="#">WLAN_RoutingInfo_Type</a>	
TimingInfo	<a href="#">WLAN_TimingInfo_Type</a>	
Status	<a href="#">WLAN_IndicationStatus_Type</a>	

**WLAN\_ConfirmationResult\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>WLAN_ConfirmationResult_Type</b>	
<b>Comment</b>		
Success	<a href="#">Null_Type</a>	
Error	integer	may contain SS specific error code; this will not be evaluated by TTCN

**WLAN\_CnfAspCommonPart\_Type**

TTCN-3 Record Type

## D.15 CommonDefs

**CommonDefs: Constant Definitions**

TTCN-3 Basic Types			
<b>tsc_UInt16Max</b>	integer	65535	
<b>tsc_UInt32Max</b>	integer	4294967295	

## CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
<b>B1_Type</b>	bitstring length(1)	
<b>B2_Type</b>	bitstring length(2)	
<b>B3_Type</b>	bitstring length(3)	
<b>B4_Type</b>	bitstring length(4)	
<b>B5_Type</b>	bitstring length(5)	
<b>B6_Type</b>	bitstring length(6)	
<b>B7_Type</b>	bitstring length(7)	
<b>B7_15_Type</b>	bitstring length(7..15)	NOTE: length restriction can only be a range but not two distinct lengths
<b>B8_Type</b>	bitstring length(8)	
<b>B10_Type</b>	bitstring length(10)	
<b>B11_Type</b>	bitstring length(11)	
<b>B12_Type</b>	bitstring length(12)	
<b>B15_Type</b>	bitstring length(15)	
<b>B16_Type</b>	bitstring length(16)	
<b>B18_Type</b>	bitstring length(18)	
<b>B24_Type</b>	bitstring length(24)	
<b>B32_Type</b>	bitstring length(32)	
<b>B64_Type</b>	bitstring length(64)	
<b>B128_Type</b>	bitstring length(128)	
<b>B256_Type</b>	bitstring length(256)	
<b>B128_Key_Type</b>	<a href="#">B128_Type</a>	128 bit security key
<b>O3_Type</b>	octetstring length(3)	
<b>O4_Type</b>	octetstring length(4)	
<b>O6_Type</b>	octetstring length(6)	
<b>O8_Type</b>	octetstring length(8)	
<b>O13_Type</b>	octetstring length(13)	
<b>Null_Type</b>	boolean (true)	dummy type for 'typeless' fields in unions
<b>Dummy_Type</b>	boolean (true)	dummy type for temporary purposes only
<b>UInt16_Type</b>	integer (0 .. <a href="#">tsc UInt16Max</a> )	
<b>UInt32_Type</b>	integer (0 .. <a href="#">tsc UInt32Max</a> )	
<b>IP_Drbld_Type</b>	integer	DRB identity type common for all RATs: - for EUTRA it corresponds to the ASN.1 type DRB-Identity - for UTRAN it corresponds to the ASN.1 type RB-Identity and values are as defined in TS 34.123-3 Table 8.2.4.1 - for GERAN the NSAPI value (type record NSAPI) may be used NOTE: this is introduced to simplify the dependencies (i.e. to keep IP_ASP_TypeDefs independent from any RAT specific type definitions)
<b>PdcpCountValue_Type</b>	<a href="#">B32_Type</a>

## D.16 EUTRA\_NB\_ASP\_TypeDefs

Type definitions for configuration of the system simulator;

Common design principles:

Semantics of OMIT: for all TTCN-3 type definitions used in ASPs omit means "keep as it is" =>

- on initial configuration in general all fields shall be provided
- no default values for fields are foreseen
- if necessary non-existence of information shall be explicitly configured (e.g. with a union of "no configuration" and "configuration parameters")
- fields within structures imported from the core spec are excepted from this rule

### D.16.1 Cell\_Configuration

Specific Info for Cell Configuration Primitive

#### D.16.1.1 Cell\_Configuration\_Common

**EUTRA\_NB\_ASP\_TypeDefs: Constant Definitions**

TTCN-3 Basic Types	
tsc_CellAttenuation_Off	<a href="#">Attenuation_Type</a> {Off:=true}

**Cell\_Configuration\_Common: Basic Type Definitions**

TTCN-3 Basic Types	
InitialAttenuation_Type	<a href="#">Attenuation_Type</a> ( <a href="#">tsc_CellAttenuation_Off</a> ) Attenuation restricted to 'Off'
ToRS_EPRES_Ratio_Type	integer (-35..0) any-resource-element to RS ratio in dB (e.g. PDSCH-to-RS ratio; see TS 36.213, clause 5.2)

**CellTimingInfo\_Type**

TTCN-3 Record Type			
Name	<b>CellTimingInfo_Type</b>		
Comment	Cell Timing		
Tcell	integer (0..307199)		frame duration $T_f = 307200 * T_s = 10\text{ms}$ ; System Time Unit $T_s = 1/(15000 * 2048)$
SfnOffset	integer (0..1023)		
HsfnOffset	integer (0..1023)		

**InitialCellPower\_Type**

TTCN-3 Record Type			
Name	<b>InitialCellPower_Type</b>		
Comment			
MaxReference Power	<a href="#">AbsoluteCellPower_Type</a>		maximum value of cell reference power (RS EPRE in dBm/15kHz as per TS 36.508, clause 4.3.4.1); a cell is initialised with this reference power; its value is the upper bound of the cell power during the test case
Attenuation	<a href="#">InitialAttenuation_Type</a>		initial attenuation

**D.16.1.2 Uplink\_Physical\_Layer\_Configuration****SS\_TimingAdvanceConfig\_Type**

TTCN-3 Union Type			
Name	<b>SS_TimingAdvanceConfig_Type</b>		
Comment			
InitialValue	<a href="#">RACH_TimingAdvance_Type</a>		initial value corresponding to what is sent to the UE in RACH response (range acc. 11 bit value; 0 in normal cases)
Relative	<a href="#">TimingAdvanceIndex_Type</a>		timing advance command to adjust changes of timing advance acc. to TS 36.213, clause 4.2.3; (range acc. 6 bit value: -31..32)

**D.16.1.3 Common\_MAC\_Configuration**

Transport channel and MAC related procedures and configuration

**Common\_MAC\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types			
<b>TimingAdvanceIndex_Type</b>	integer (0..63)		acc. to TS 36.321, clause 6.1.3.5 "Timing Advance Command MAC Control Element" and TS 36.213, clause 4.2.3 "Transmission timing adjustments"
<b>TimingAdvance_Period_Type</b>	integer (400, 600, 1020, 1530, 2040, 4090, 8190)		the values correspond to 80 % of TimeAlignmentTimer (acc. to TS 36.523-3, clause 7.2) (TS 36.331, clause 6.3.2: sf500, sf750, sf1280, sf1920, sf2560, sf5120, sf10240) rounded to nearest multiple of 10

## UplinkTimeAlignment\_AutoSynch\_Type

TTCN-3 Record Type			
Name	UplinkTimeAlignment_AutoSynch_Type		
Comment			
TimingAdvance	<a href="#">TimingAdvanceIndex_Type</a>		
TA_Period	<a href="#">TimingAdvance_Period_Type</a>		time period after which TA MAC control elements need to be automatically transmitted
TA_Repetition	<a href="#">TransmissionRepetition_Type</a>		number of TA MAC control element repetitions to be automatically transmitted or 'Continuous'

## UplinkTimeAlignment\_Synch\_Type

TTCN-3 Union Type			
Name	UplinkTimeAlignment_Synch_Type		
Comment			
None	<a href="#">Null_Type</a>		no PUCCH Synchronisation applied
Auto	<a href="#">UplinkTimeAlignment_AutoSynch_Type</a>		SS automatically maintains PUCCH synchronization at UE If the cell is a - Rel 10 or earlier cell - or Rel 11 or later Pcell - or the Rel-11 or later scell with no STAG-ID configured, the TAG-ID is set to '00' i.e. P-TAG in Timing advance MCE If the cell is Rel 11 scell with STAG-ID configured, the configured stag-ID is used as TAG-ID in Timing advance MCE

## TransmissionRepetition\_Type

TTCN-3 Union Type			
Name	TransmissionRepetition_Type		
Comment			
Continuous	<a href="#">Null_Type</a>		
NumOfCycles	integer (1..infinity)		

## D.16.1.4 Random\_Access\_Procedure

## EUTRA\_NB\_ASP\_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_RandomAccessResponseListSize	integer	10	arbitrary value (needs to be extended, if necessary); in case of RACH in idle, UE will keep on making RACH attempts until t300 expires => number of PRACH preambles maybe even greater than maximum value of PREAMBLE_TRANS_MAX

## Random\_Access\_Procedure: Basic Type Definitions

TTCN-3 Basic Types			
RACH_TimingAdvance_Type	integer (0..2047)		11 bit timing advance as used in RACH response (absolute value)

## ContentionResolution\_ContainedRlcPdu\_Type

TTCN-3 Union Type		
Name	<b>ContentionResolution_ContainedRlcPdu_Type</b>	
Comment		
RlcPdu	octetstring	octetstring of an RLC PDU containing e.g. the RRC Connection Setup; to be sent in the same MAC PDU as the MAC Contention Resolution Control Element
None	<a href="#">Null_Type</a>	MAC PDU containing the MAC Contention Resolution Control Element does not contain an RLC PDU (i.e. RRC Connection Setup is sent in another PDU)

## ContentionResolution\_ContainedId\_Type

TTCN-3 Union Type		
Name	<b>ContentionResolution_ContainedId_Type</b>	
Comment		
XorMask	<a href="#">ContentionResolutionId_Type</a>	When SS receives Contention Resolution ID from the UE, SS shall XOR it with the given mask and use this as Contention Resolution ID; this allows to get an unmatching Contention Resolution ID; in normal cases mask shall be set to tsc_ContentionResolutionId_Unchanged (i.e. the Contention Resolution ID remains unchanged)
None	<a href="#">Null_Type</a>	MAC Contention Resolution Control Element is not contained in the MAC PDU sent out as response on Msg3

## TCRNTI\_ContentionResolutionMacPdu\_Type

TTCN-3 Record Type		
Name	<b>TCRNTI_ContentionResolutionMacPdu_Type</b>	
Comment	NOTE: Either ContainedId or ContainedRlcPdu (or both) shall not be 'none'; (if no Contention Resolution Mac Pdu shall be sent, TCRNTI_ContentionResolutionCtrl_Type.NoContResolID shall be used instead)	
ContainedId	<a href="#">ContentionResolution_ContainedId_Type</a>	Either the Contention Resolution ID as received from the UE or a modified Contention Resolution ID (XorMask != tsc_ContentionResolutionId_Unchanged) or no Contention Resolution ID at all
ContainedRlcPdu	<a href="#">ContentionResolution_ContainedRlcPdu_Type</a>	the MAC PDU containing the MAC Contention Resolution Control Element may contain the RRC Connection Setup; in this case the RRC PDU shall be completely encoded been contained in an RLC PDU

## TCRNTI\_ContentionResolutionCtrl\_Type

TTCN-3 Union Type		
Name	<b>TCRNTI_ContentionResolutionCtrl_Type</b>	
Comment	when the UE responds on a Random Access Response with a RRC Connection Request on CCCH and not with a C-RNTI SS shall assume initial Random Access Procedure (TS 36.300, clause 10.1.5.1), i.e. sends a ContentionResolutionId back to the UE	
MacPdu	<a href="#">TCRNTI_ContentionResolutionMacPdu_Type</a>	MAC PDU containing the Contention Resolution ID and optionally an RRC PDU (RRC Connection Setup)
MacPdu_CRC_Error	<a href="#">TCRNTI_ContentionResolutionMacPdu_Type</a>	same as MacPdu (see above), but SS shall generate CRC error by toggling CRC bits; no retransmissions shall be made as UE shall not send a NACK
NoContResolID	<a href="#">Null_Type</a>	SS shall not include contention resolution ID (i.e. no MAC PDU shall be sent); used for contention resolution fail case

**RapIdCtrl\_Type**

TTCN-3 Union Type		
Name	<b>RapIdCtrl_Type</b>	
Comment		
Automatic	<a href="#">Null_Type</a>	SS shall automatically use same RAPID as received from the UE
Unmatched	<a href="#">Null_Type</a>	SS shall use RAPID being different from preamble sent by the UE; SS shall calculate this RAPID acc. to $RAPID := (RAPID + 3..63) \bmod 64$ if single RAR is transmitted in a MAC PDU then only 3 is added if multiple RAR's are transmitted in MAC PDU, then for first unmatched RAR 3 is added, second unmatched 4 is added, third unmatched 5 is added and so on

**TempC\_RNTI\_Type**

TTCN-3 Union Type		
Name	<b>TempC_RNTI_Type</b>	
Comment		
SameAsC_RNTI	<a href="#">Null_Type</a>	in the RA response SS shall use the same C-RNTI as configured in ActiveCellConfig_Type; this is useful for initial random access
Explicit	C_RNTI	in the RA response SS shall use different value as configured in ActiveCellConfig_Type; this can be used when the UE already is in RRC_CONNECTED to have a temporary C-RNTI different from the one used by the UE; NOTE: when the UE is not in RRC_CONNECTED there shall be no explicit temp. C-RNTI since then the UE would assume this value as C-RNTI

**RandomAccessBackoffIndicator\_Type**

TTCN-3 Union Type		
Name	<b>RandomAccessBackoffIndicator_Type</b>	
Comment		
None	<a href="#">Null_Type</a>	normal case, no back off indicator included
Index	integer (0..15)	Backoff Parameter values acc. TS 36.321, clause 7.2; values 0..12 are defined, 13..15 may be used in error case

**D.16.2 System\_Indications****HARQ\_Type**

TTCN-3 Enumerated Type	
Name	<b>HARQ_Type</b>
Comment	ack represents HARQ ACK; nack represents HARQ NACK
ack	
nack	

## D.17 EUTRA\_NB\_CommonDefs

### D.17.1 Common\_Types

#### Common\_Types: Basic Type Definitions

TTCN-3 Basic Types		
HarqProcessId_Type	integer (0..14)	The values 0..7 represent the ID of HARQ process ID; value range 0..14 is for TDD
ContentionResolutionId_Type	bitstring length(48)	used in EUTRA_ASP_DrbDefs and EUTRA_ASP_Typedefs
AbsoluteCellPower_Type	integer (-150..0)	absolute cell power (dBm)

### D.17.3 RRC\_Nested\_Types

#### RRC\_Nested\_Types: Basic Type Definitions

TTCN-3 Basic Types		
IntegrityProtAlgorithm_Type	SecurityAlgorithmConfig.integrityProtAlgorithm	

### D.17.4 ASP\_CommonPart

Definition of ASP common parts for REQ-, CNF- and IND-ASPs

#### D.17.4.1 ASP\_CommonPart\_Definitions

##### D.17.4.1.1 Routing\_Info

#### EUTRA\_NB\_CommonDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_SRB0	integer	0	
tsc_SRB1	integer	1	

##### D.17.4.1.2 Timing\_Info

#### Timing\_Info: Basic Type Definitions

TTCN-3 Basic Types		
SystemFrameNumber_Type	integer (0..1023)	
HyperSystemFrameNumberInfo_Type	<a href="#">SystemFrameNumberInfo_Type</a>	

#### SubFrameInfo\_Type

TTCN-3 Union Type		
Name	<a href="#">SubFrameInfo_Type</a>	
Comment		
Number	<a href="#">SubFrameNumber_Type</a>	
Any	<a href="#">Null_Type</a>	no specific sub-frame (valid for REQ ASPs only)

**SystemFrameNumberInfo\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>SystemFrameNumberInfo_Type</b>	
<b>Comment</b>		
Number	<a href="#">SystemFrameNumber_Type</a>	
Any	<a href="#">Null_Type</a>	no specific frame number (valid for REQ ASPs only)

**SubFrameTiming\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>SubFrameTiming_Type</b>		
<b>Comment</b>			
SFN	<a href="#">SystemFrameNumberInfo_Type</a>		
Subframe	<a href="#">SubFrameInfo_Type</a>		
HSFN	<a href="#">HyperSystemFrameNumberInfo_Type</a>		

**TimingInfo\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>TimingInfo_Type</b>	
<b>Comment</b>		
SubFrame	<a href="#">SubFrameTiming_Type</a>	
Now	<a href="#">Null_Type</a>	to be used in REQ ASPs when there is no 'activation time'
None	<a href="#">Null_Type</a>	only to be used in SYSTEM_CTRL_CNF but not for EnquireTiming

**D.17.4.2 REQ\_ASP\_CommonPart****ReqAspControllInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>ReqAspControllInfo_Type</b>		
<b>Comment</b>			
CnfFlag	boolean		<p>true =&gt; SS shall send CNF: when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue.</p> <p>Example: when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event. If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message. When there is an activation time SS shall send the CNF after the configuration has been scheduled; that means SS shall not wait until the activation time has been expired.</p>
FollowOnFlag	boolean		<p>false =&gt; no further (related) information true: further related information will be sent to SS (semantics depending on respective ASP)</p>

## D.17.4.3 CNF\_ASP\_CommonPart

## ConfirmationResult\_Type

TTCN-3 Union Type		
Name	ConfirmationResult_Type	
Comment		
Success	<a href="#">Null_Type</a>	
Error	integer	may contain SS specific error code; this will not be evaluated by TTCN

## D.17.4.4 IND\_ASP\_CommonPart

## IntegrityErrorIndication\_Type

TTCN-3 Record Type			
Name	IntegrityErrorIndication_Type		
Comment			
Nas	boolean		NAS Integrity: set to true when received MAC does not match calculated MAC
Pdcp	boolean		PDCP Integrity: set to true when received MAC does not match calculated MAC

## ErrorIndication\_Type

TTCN-3 Record Type			
Name	ErrorIndication_Type		
Comment			
Integrity	<a href="#">IntegrityErrorIndication_Type</a>		Integrity error: received MAC does not match calculated MAC
System	integer		any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE requests retransmission of an RLC PDU

## IndicationStatus\_Type

TTCN-3 Union Type		
Name	IndicationStatus_Type	
Comment		
Ok	<a href="#">Null_Type</a>	
Error	<a href="#">ErrorIndication_Type</a>	

## D.17.5 L2Data\_CommonDefs

Common definitions of L2 control elements used in L2 messages (EUTRA\_NB\_ASP\_L2DataDefs) as well as for SS configuration (EUTRA\_ASP\_TypeDefs)

## L2Data\_CommonDefs: Basic Type Definitions

TTCN-3 Basic Types		
MAC_CTRL_ScellActDeact_Type	<a href="#">ScellBitMap_Type</a>	36.321 clause 6.1.3.8

**ScellBitMap\_Type**

TTCN-3 Record Type			
Name	<b>ScellBitMap_Type</b>		
Comment			
Value	<a href="#">B7_Type</a>		7 MSB bits the C Fields C7 to C1. 1 => the corresponding Scell is Active 0 => Inactive
Reserved	<a href="#">B1_Type</a>		LSBit Reserved. Shall be set to 0

**PH\_Record\_Type**

TTCN-3 Record Type			
Name	<b>PH_Record_Type</b>		
Comment	36.321 clause 6.1.3.6a		
P_Bit	<a href="#">B1_Type</a>		P bit: 1 indicates the UE applies power backoff due to power management
V_Bit	<a href="#">B1_Type</a>		V bit: Indicates if the PH value is based on a real transmission or a reference format. For Type 1 PH, V=0 indicates real transmission on PUSCH and V=1 indicates that a PUSCH reference format is used
Valve	<a href="#">B6_Type</a>		The power headroom level. Ph Type 2 (if configured) for Pcell and Type 1 for Pcell and Scell
Reserved	<a href="#">B2_Type</a>	opt	2 reservid bits. Present if V=1
PCMaxc	<a href="#">B6_Type</a>	opt	Present if V=1

**PH\_RecordList\_Type**

TTCN-3 Record of Type	
Name	<b>PH_RecordList_Type</b>
Comment	If simultaneousPUCCH-PUSCH is not configured at least oneType 1 PH record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1. If simultaneousPUCCH-PUSCH is configured then one PH Type 2 record for P cell followed by PH Type 1 record for P cell is present. Additional one record per Scell for which respective 'C' bit is set as 1
record length(1..9) of <a href="#">PH_Record_Type</a>	

**MAC\_CTRL\_ExtPowerHeadRoom\_Type**

TTCN-3 Record Type			
Name	<b>MAC_CTRL_ExtPowerHeadRoom_Type</b>		
Comment			
EPH_Octet1	<a href="#">ScellBitMap_Type</a>		
PH_RecordList	<a href="#">PH_RecordList_Type</a>		At least one record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1

**DC\_PH\_RecordList\_Type**

TTCN-3 Record of Type	
Name	<b>DC_PH_RecordList_Type</b>
Comment	If simultaneousPUCCH-PUSCH is not configured at least oneType 1 PH record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1. If simultaneousPUCCH-PUSCH is configured then one PH Type 2 record for Pcell followed one PH Type 2 record for PScell followed by PH Type 1 record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1
record length(1..10) of <a href="#">PH_Record_Type</a>	

## MAC\_CTRL\_DC\_PowerHeadRoom\_Type

TTCN-3 Record Type			
Name	MAC_CTRL_DC_PowerHeadRoom_Type		
Comment			
DC_PH_Octet1	<a href="#">ScellBitMap_Type</a>		
DC_PH_RecordList	<a href="#">DC_PH_RecordList_Type</a>		At least one record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1

## Annex E (informative): Upper Tester Scenarios

Depending on whether automatic operation is used, or is replaced by the SS by manual intervention, the following scenarios may occur.

### E.1 No confirmation

There is no confirmation required in TTCN e.g. because the UE starts signalling triggered by the UT command.

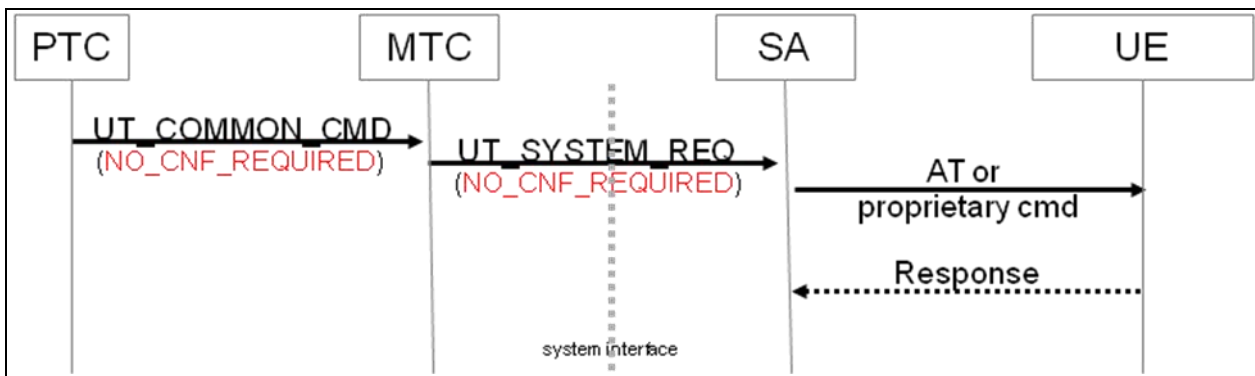

Figure E.1-1: No confirmation (automatic operation)

NOTE: The SS discards any response from the UE.

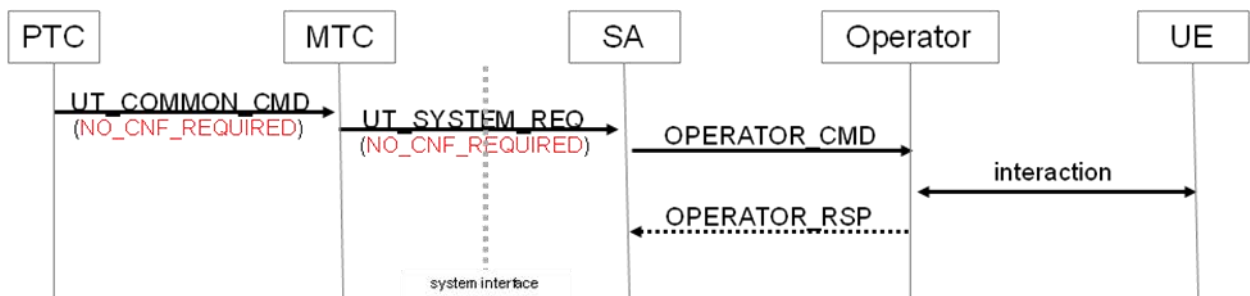

Figure E.1-2: No confirmation (manual intervention)

### E.2 Immediate confirmation

TTCN needs an immediate response as a trigger to continue e.g. with DL signalling or starting a timer. In general there is no signalling in between UT\_COMMON\_CMD and UT\_COMMON\_CNF.

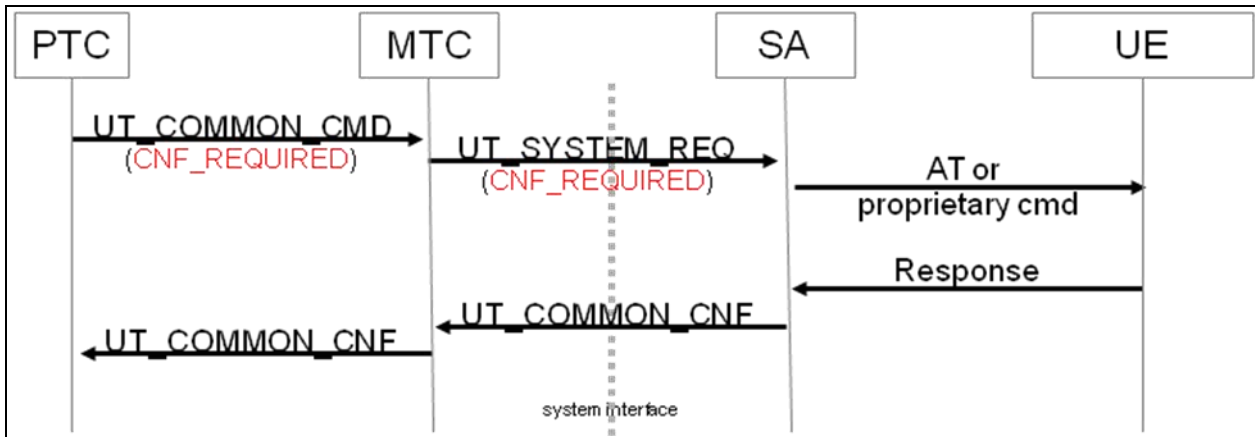

Figure E.2-1: Immediate confirmation (automatic operation, normal case)

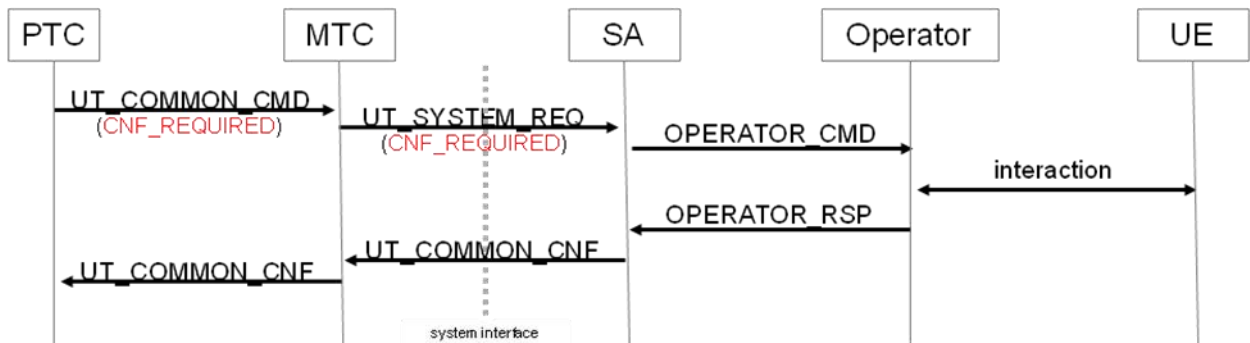

Figure E.2-2: Immediate confirmation (manual intervention, normal case)

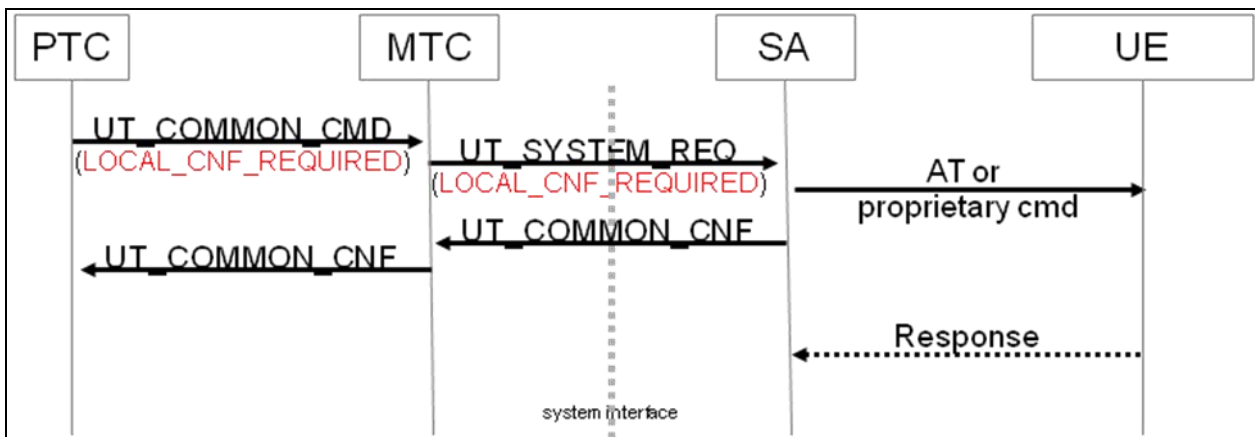

Figure E.2-3: Immediate confirmation (automatic operation, local confirmation)

NOTE: When local confirmation is required in automatic operation mode the SS discards any late response from the UE.

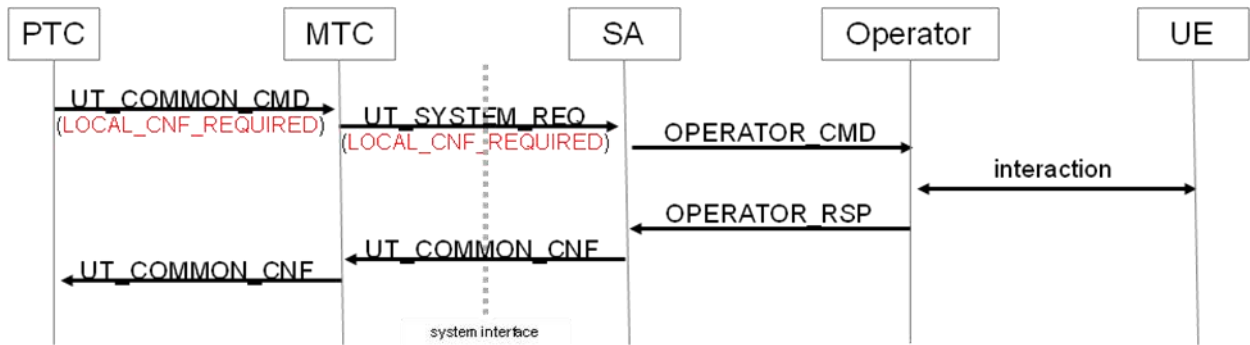

Figure E.2-4: Immediate confirmation (manual intervention, local confirmation)

### E.3 Late response

TTCN needs to get the response which is provided by the UE after some signalling related to the UT command. To achieve a common implementation for automatic operation and manual intervention, the TTCN provides a DUMMY command to trigger a 2<sup>nd</sup> interaction between the operator and the UE. Whether or not this DUMMY is used for automatic operation is up to SS implementation. Nevertheless the DUMMY is sent just before the final DL message which triggers the UE to generate the response, i.e. the SS may use the DUMMY to trigger reception of the response (NOTE: in this case it is up to SS implementation to be fast enough). When replacing the AT command with manual intervention, the SS is responsible to ensure that 2<sup>nd</sup> interaction does not happen before the final DL message has been received and processed by the UE.

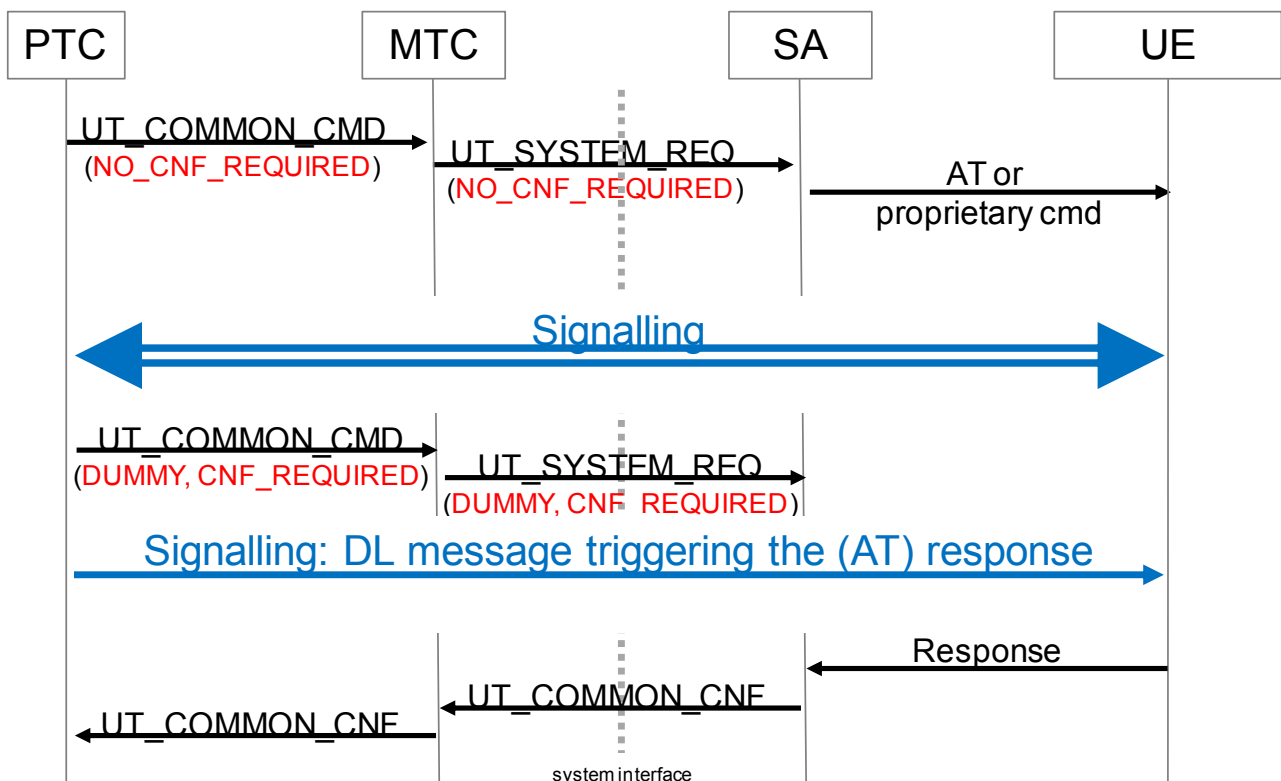

Figure E.3-1: Late response (automatic operation)

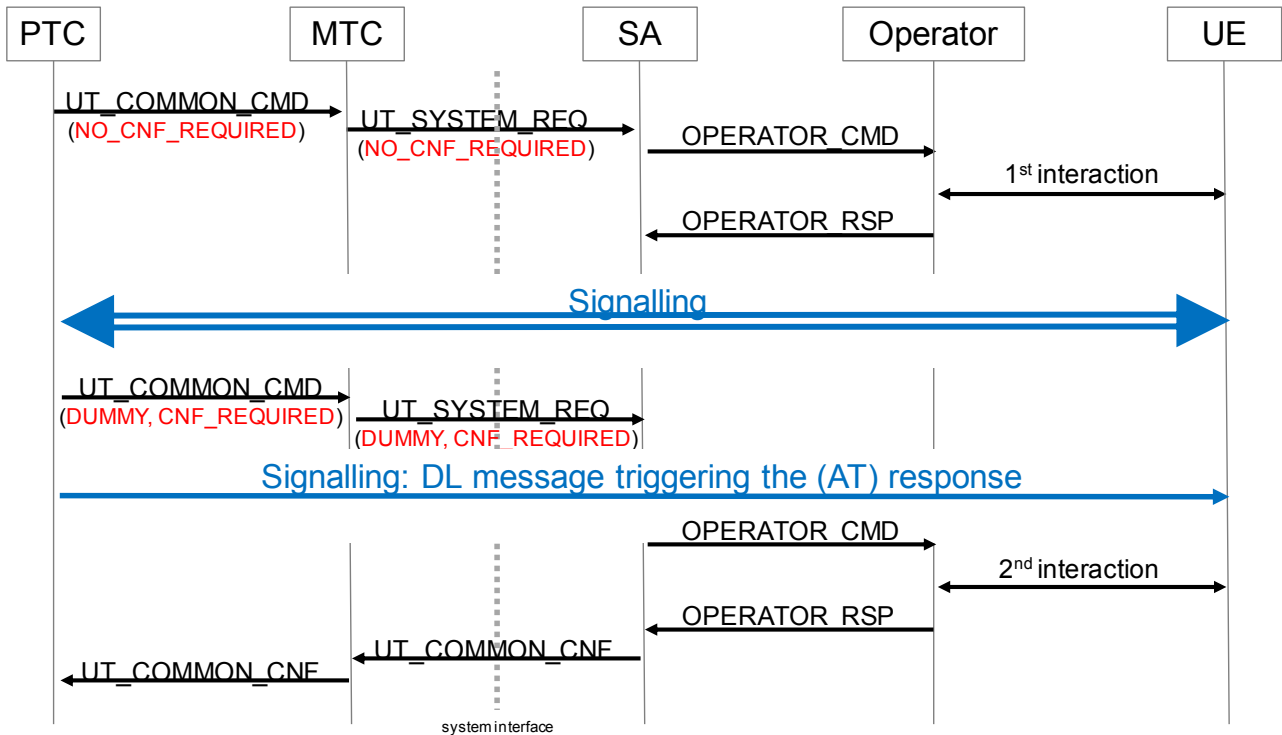

Figure E.3-2: Late response (manual intervention)

## E.4 Multiple responses

In principle the message flow for multiple responses is the same as for a single late response but for more than one response (⇒ The same requirements as for late response are applicable).

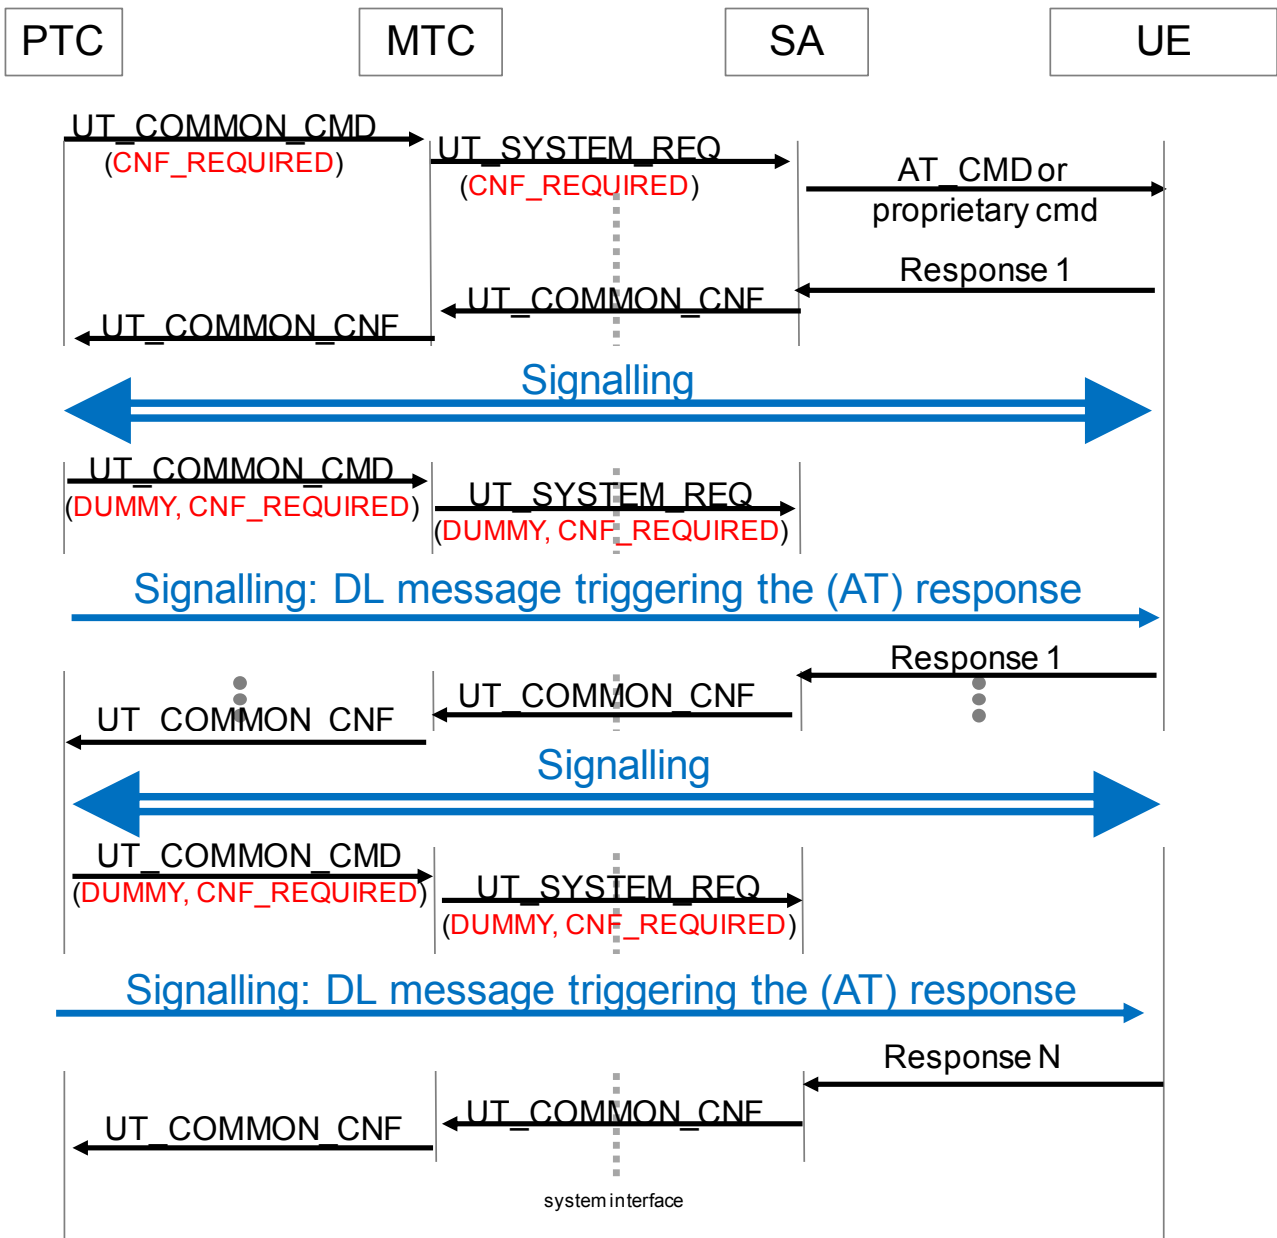

Figure E.4-1: Multiple responses (automatic operation)

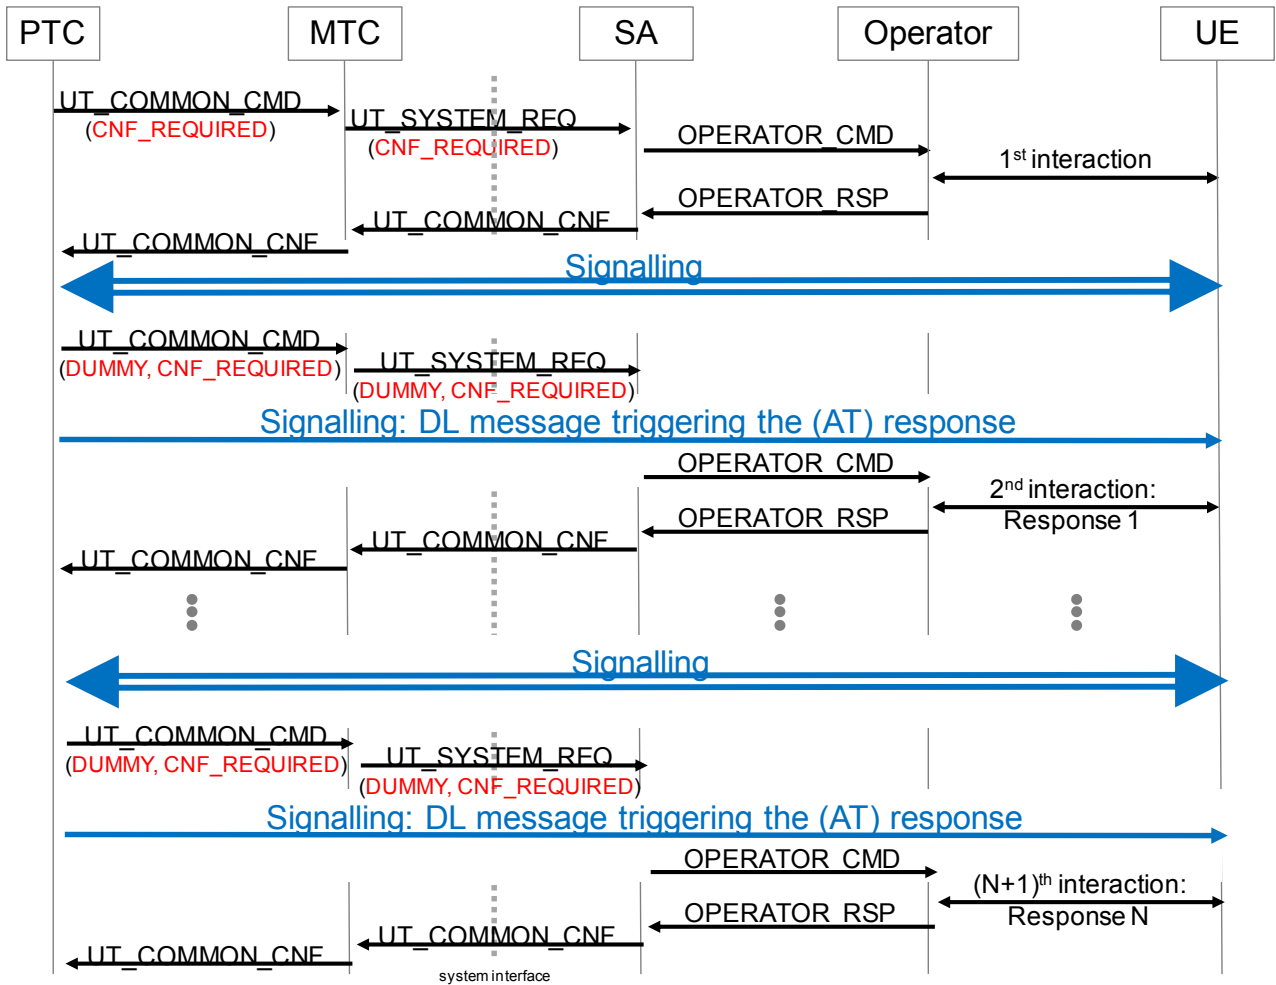

Figure E.4-2: Multiple responses (manual intervention)

# Annex F (informative): NB-IoT TTCN-3 Definitions

## F.1 NBIOT\_ASP\_TypeDefs

Type definitions for configuration of the system simulator;

Common design principles:

Semantics of OMIT: for all TTCN-3 type definitions used in ASPs omit means "keep as it is" =>

- on initial configuration in general all fields shall be provided
- no default values for fields are foreseen
- if necessary non-existence of information shall be explicitly configured (e.g. with a union of "no configuration" and "configuration parameters")
- fields within structures imported from the core spec are excepted from this rule

### F.1.1 ASN1\_Container

Definitions containing ASN.1 types for backward compatibility.

NOTE 1: PCCH\_Message and BCCH\_DL\_SCH\_Message already have a critical extension mechanism by RRC type definition.

NOTE 2: BCCH\_BCH\_Message contains the MIB and therefore is considered to be not extendable.

NOTE 3: "simple types" are not considered: C\_RNTI, PhysCellId, CellIdentity, ARFCN\_ValueEUTRA.

#### NPUSCH\_ConfigDedicated\_Type

**F.1.2 System\_Configuration**

Formal ASP Definitions for system configuration

**System\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types		
NB_DPR_DataVolumInd ex_Type	integer (0..15)	
NB_DPR_PowerHeadroomLevel_Type	integer (0..3)	

**NB\_SystemRequest\_Type**

TTCN-3 Union Type		
Name	NB_SystemRequest_Type	
Comment		
Cell	<a href="#">NB_CellConfigRequest_Type</a>	configure/release a cell
CellAttenuationList	<a href="#">NB_CellAttenuationList_Type</a>	power attenuation for one or several cells; all cells included in the list shall be changed at the same time; all cells in the list shall reach the new cell power within a maximum of 100ms (10 frames) acc. to the tolerances given in TS 36.508 NOTE: In the common ASP part the CellId shall be set - to the cell the timing information refers to if activation time shall be applied - to nbiot_Cell_NonSpecific when there is no activation time
RadioBearerList	<a href="#">NB_RadioBearerList_Type</a>	configure/release one or several SRBs and/or DRBs
EnquireTiming	<a href="#">Null_Type</a>	get HSFN, SFN and sub-frame number for this cell
AS_Security	<a href="#">NB_AS_Security_Type</a>	StartRestart/Release of AS security
Paging	<a href="#">NB_PagingTrigger_Type</a>	to trigger SS to send paging at the given paging occasion (as calculated in TTCN) or a Direct Indication
L1MacIndCtrl	<a href="#">NB_L1Mac_IndicationControl_Type</a>	to configure SS to generate indications for L1/MAC events
RlcIndCtrl	<a href="#">NB_Rlc_IndicationControl_Type</a>	to configure SS to generate indications for RLC events
PdcpCount	<a href="#">NB_PDCP_CountReq_Type</a>	to set or enquire PDCP COUNT for one or more RBs
RlcCounts	<a href="#">NB_RLC_CountsReq_Type</a>	to set or enquire RLC Counts VTS and VRR
L1_TestMode	<a href="#">NB_L1_TestMode_Type</a>	Set L1/MAC in special Test modes

**NB\_SystemConfirm\_Type**

TTCN-3 Union Type		
Name	<b>NB_SystemConfirm_Type</b>	
Comment	confirmations for system configuration; in general to be sent after the configuration has been done	
Cell	<a href="#">Null_Type</a>	(no further parameters from SS)
CellAttenuationList	<a href="#">Null_Type</a>	(no further parameters from SS) NOTE 1: the confirmation shall be sent when all cells have changed power levels NOTE 2: for the CellId in the common ASP part the same rules are applied as for the SYSTEM REQ
RadioBearerList	<a href="#">Null_Type</a>	(no further parameters from SS)
EnquireTiming	<a href="#">Null_Type</a>	SFN and sub-frame number are included in the TimingInfo
AS_Security	<a href="#">Null_Type</a>	(no further parameters from SS)
Paging	<a href="#">Null_Type</a>	normally not needed but defined for completeness
L1MacIndCtrl	<a href="#">Null_Type</a>	(no further parameters from SS)
RlcIndCtrl	<a href="#">Null_Type</a>	(no further parameters from SS)
PdcpCount	<a href="#">NB_PDCP_CountCnf_Type</a>	as response to 'Get' a list is returned containing COUNT information for the requested RBs
RlcCounts	<a href="#">NB_RLC_CountsCnf_Type</a>	as response to 'Get' a list is returned containing RLC Counts VTS and VRR
L1_TestMode	<a href="#">Null_Type</a>	confirmation for L1 test mode

**NB\_HarqError\_Type**

TTCN-3 Union Type		
Name	<b>NB_HarqError_Type</b>	
Comment		
UL	<a href="#">Null_Type</a>	there is just one HARQ process for NB-IoT and uplink HARQ operation is asynchronous (see TS 36.321 clause 5.4.2)
DL	<a href="#">Null_Type</a>	

**NB\_RachPreamble\_Type**

TTCN-3 Record Type		
Name	<b>NB_RachPreamble_Type</b>	
Comment		
RAPID	integer	indicates the RAPID of the preamble used (integer (0..63)); according to 36.321 clause 6.2.2 "For NB-IoT, the Random Access Preamble Identifier field corresponds to the start subcarrier index"

**NB\_DPR\_Type**

TTCN-3 Record Type		
Name	<b>NB_DPR_Type</b>	
Comment		
DataVolumnIndex	<a href="#">NB_DPR_DataVolumnIndex_Type</a>	
PowerHeadroomLevel	<a href="#">NB_DPR_PowerHeadroomLevel_Type</a>	

**NB\_SystemIndication\_Type**

TTCN-3 Union Type		
Name	<b>NB_SystemIndication_Type</b>	
Comment	FFS	
Error	charstring	indicates an error situation in SS; is not explicitly handled in TTCN but causes an INCONC due to default behaviour; an additional error code can be signalled in the common part of the ASP;
RachPreamble	<a href="#">NB_RachPreamble_Type</a>	RACH preamble being sent by the UE NOTE: for NB-IoT there can be more than one repetition per preamble attempt (numRepetitionsPerPreambleAttempt-r13 in NPRACH-ConfigSIB-NB-DEFAULT in SystemInformationBlockType2-NB) in which case the SS shall indicate each RACH preamble
DPR	<a href="#">NB_DPR_Type</a>	indicates MAC DPR control element (TS 36.321 clause 6.1.3.10) being contained in MAC PDU
HarqError	<a href="#">NB_HarqError_Type</a>	indicates detection of HARQ error: 1. HARQ CRC error for UL data 2. HARQ NACK from the UE unless SS is configured to report HARQ ACK/NACK
UL_HARQ	<a href="#">HARQ_Type</a>	to report the UL HARQ ACK/NACK

**F.1.3 Cell\_Configuration**

Specific Info for Cell Configuration Primitive

**F.1.3.1 Cell\_Configuration\_Common****Cell\_Configuration\_Common: Basic Type Definitions**

TTCN-3 Basic Types		
<b>NB_ToRS_EPRES_Ratio_Type</b>	integer (-35..0)	any-resource-element to NRS ratio in dB (e.g. NPDSCH-to-NRS ratio; see TS 36.213, clause 16.2.2)

**NB\_CellConfigRequest\_Type**

TTCN-3 Union Type		
Name	<b>NB_CellConfigRequest_Type</b>	
Comment		
AddOrReconfigure	<a href="#">NB_CellConfigInfo_Type</a>	for cell configuration: CellId : identifier of the cell to be configured RoutingInfo : None TimingInfo : Now (for initial configuration and for reconfiguration in general) ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)
Release	<a href="#">Null_Type</a>	to remove a cell completely - CellId : identifier of the cell to be released; nbiot_Cell_NonSpecific, in case all cells shall be released RoutingInfo : None TimingInfo : Now ControlInfo : CnfFlag:=true; FollowOnFlag:=false (in general)

**NB\_CellConfigInfo\_Type**

TTCN-3 Record Type			
Name	<b>NB_CellConfigInfo_Type</b>		
Comment	common information for initial cell configuration or reconfiguration; in case of reconfiguration OMIT means 'keep configuration as it is'		
Basic	<a href="#">NB_BasicCellConfig_Type</a>	opt	basic information for a cell (e.g. broadcasting)
Active	<a href="#">NB_ActiveCellConfig_Type</a>	opt	add. configuration for active cell (i.e. cell being capable to receive RACH preamble)

**NB\_BasicCellConfig\_Type**

TTCN-3 Record Type			
Name	<b>NB_BasicCellConfig_Type</b>		
Comment			
StaticCellInfo	<a href="#">NB_StaticCellInfo_Type</a>	opt	Common information which does not change during a test
PhysicalLayerConfigDL	<a href="#">NB_PhysicalLayerConfigDL_Type</a>	opt	default settings regarding DL physical control channels
InitialCellPower	<a href="#">InitialCellPower_Type</a>	opt	reference cell power for the NRS of each antenna in DL NOTE 1: the power of the RS of an antenna may be reduced by antenna specific configuration NOTE 2: in general the power may be adjusted on a per resource element basis => all physical channel/signal power settings shall be adjusted relatively to the NRS; if there are more than one TX antennas each one may have its own attenuation; independently from those relative power settings the cell power can easily be adjusted by just changing the reference power
DownlinkBitmapConfig	<a href="#">NB_DownlinkBitmapConfig_Type</a>	opt	Usage of bitmap or no bitmap to define valid NB-IoT DL subframes; omit means "keep as it is"
BcchConfig	<a href="#">NB_BcchConfig_Type</a>	opt	configuration of BCCH/BCH; SS is triggered to configure RLC/MAC regardingly; BCCH data on the NPDSCH NPBCH: MIB; NPDSCH: scheduling and resource allocation; SIBs
PcchConfig	<a href="#">NB_PcchConfig_Type</a>	opt	configuration of PCCH/PCH; SS is triggered to configure RLC/MAC regardingly; PCCH data on the NPDSCH is distinguished by the P-RNTI (needed even to modify SI => shall be configured for CELL_BROADCASTING)

**NB\_ActiveCellConfig\_Type**

TTCN-3 Record Type			
Name	<b>NB_ActiveCellConfig_Type</b>		
Comment			
C_RNTI	<a href="#">EUTRA ASN1 C_RNTI_Type</a>	opt	(pre-)configured C-RNTI; affects scrambling of NPDSCH/NPUSCH and CRC of NPDCCH(s); shall be used implicitly in RACH procedure (i.e. as CE in RAR)
PhysicalLayerConfigUL	<a href="#">NB_PhysicalLayerConfigUL_Type</a>	opt	parameters for NPRACH, NPUSCH Omitted when no UL frequency is applied to the band
RachProcedureConfig	<a href="#">NB_RachProcedureConfig_Type</a>	opt	to configure the SS's behaviour for the RACH procedure Omitted when no UL frequency is applied to the band
CcchDcchDtchConfig	<a href="#">NB_CcchDcchDtchConfig_Type</a>	opt	Parameters related to CCCH/DCCH/DTCH in UL and DL
NonAnchorCarrier	<a href="#">NB_NonAnchorCarrier_Type</a>	opt	configuration for non-Anchor Carrier ("None" if there is no non-Anchor Carrier)

**NB\_StaticCellInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NB_StaticCellInfo_Type</b>		
<b>Comment</b>	Common information which (normally) does not change during a test; therefore all fields are mandatory		
Common	<a href="#">NB_CommonStaticCellInfo_Type</a>		information common for UL and DL
Earfcn	<a href="#">NB_CarrierFreq_Type</a>		DL or UL EARFCN as defined in TS 36.101

**NB\_CommonStaticCellInfo\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NB_CommonStaticCellInfo_Type</b>		
<b>Comment</b>	information common for UL and DL; all fields are mandatory		
PhysicalCellId	<a href="#">EUTRA_ASN1_PhysCellId_Type</a>		N(Ncell, ID): imported from core spec; -> narrowband reference signals -> scrambling of all DL physical channels: NPBCH, NPDCCH, and NPDSCH (together with nRNTI)
NB_Band	integer		
CellTimingInfo	<a href="#">CellTimingInfo_Type</a>		
OperationModeInfo	<a href="#">NB_OperationModeInfo_Type</a>		
eutraControlRegionSize	<a href="#">NB_EutraControlRegionSize_Type</a>	opt	Only used for the in-band operation mode, omitted otherwise. Indicates the control region size of the E-UTRA cell.

**F.1.3.2 Downlink\_Physical\_Layer\_Configuration**

Downlink physical layer configuration:

- DL antenna configuration
- control region (NPDCCH)
- primary/secondary sync signals
- power control for physical channels and signals

**F.1.3.2.1 Physical\_Channels****Physical\_Channels: Basic Type Definitions**

TTCN-3 Basic Types		
<b>NPdcchSearchSpaceCandidateIndex_Type</b>	integer (0..7)	Index of the search space candidate to be used for UL grant or DL assignment

**NPbchConfig\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NPbchConfig_Type</b>		
<b>Comment</b>			
RelativeTxPower	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	power ratio for NPBCH's resource elements relative to the NRS

**NPdcchFormat\_Type**

TTCN-3 Enumerated Type	
<b>Name</b>	<b>NPdcchFormat_Type</b>
<b>Comment</b>	NPDCCH format according to 36.211 clauses 10.2.5.1 => aggregation level according to 36.213 clause 16.6
npdcchFormat0	
npdcchFormat1	

### NPdcchUESpecificSearchSpace\_Type

TTCN-3 Record Type			
Name	NPdcchUESpecificSearchSpace_Type		
Comment	parameters for UE specific search space (UESS, TS 36.213 clause 16.6); In addition the SS needs to consider the "DCISubFrameRepetitionNumber" in the DCI UL/DL configuration to determine the value of R (actual number of NPDCCH repetitions for the DCI)		
NPdcchFormat	<a href="#">NPdcchFormat_Type</a>		Aggregation level: According to tables 16.6-1, 16.6-2, 16.6-3 in TS 36.213 for typical search space configuration as per TS 36.508 NPDCCH format 1 is used i.e. there is just one search space candidate per NPDCCH transmission. Use cases for NPDCCH format 0 are FFS
NumRepetitions	<a href="#">NPDCCH_NumRepetitions_UESS_Type</a>		Rmax for UE specific search space; TS 36.213 clause 16.6
StartSF	<a href="#">NPDCCH_StartSF_UESS_Type</a>		G for UE specific search space; TS 36.213 clause 16.6
Offset	<a href="#">NPDCCH_Offset_UESS_Type</a>		offset for UE specific search space; TS 36.213 clause 16.6
SearchSpaceCandidateForDL	<a href="#">NPdcchSearchSpaceCandidateIndex_Type</a>		index of the search space candidate to be used for DL assignment
SearchSpaceCandidateForUL	<a href="#">NPdcchSearchSpaceCandidateIndex_Type</a>		index of the search space candidate to be used for UL grant

### NPdcchType1CommonSearchSpace\_Type

TTCN-3 Record Type			
Name	NPdcchType1CommonSearchSpace_Type		
Comment	parameters for Type1 common search space for paging (Type1CSS, TS 36.213 clause 16.6); In addition the SS needs to consider the "DCISubFrameRepetitionNumber" in the DCI DL configuration to determine the value of R (actual number of NPDCCH repetitions for the DCI)		
NPdcchFormat	<a href="#">NPdcchFormat_Type</a>		aggregation level; FFS whether this parameter is really needed
NumRepetitions	<a href="#">NPDCCH_NumRepetitions_Type1CSS_Type</a>		Rmax for Type1 common search space; TS 36.213 clause 16.6

## NPdcchType2CommonSearchSpace\_Type

TTCN-3 Record Type			
Name	NPdcchType2CommonSearchSpace_Type		
Comment	parameters for Type2 common search space for RACH procedure (Type2CSS, TS 36.213 clause 16.6); In addition the SS needs to consider the "DCISubFrameRepetitionNumber" in the DCI DL configuration to determine the value of R (actual number of NPDCCH repetitions for the DCI); NOTE: NumRepetitions, StartSF and Offset are also included in each entry of the nprach-ParametersList of NPRACH_Config_Type (NB_PhysicalLayerConfigUL_Type); nevertheless NPRACH_Config_Type contains a list of NPRACH resources whereas the SS needs to consider only one search space corresponding to the NPRACH resource the UE shall select		
NPdcchFormat	<a href="#">NPdcchFormat_Type</a>		aggregation level; FFS whether this parameter is really needed
NumRepetitions	<a href="#">NPDCCH_NumRepetitions_Type2CSS_Type</a>		Rmax for Type2 common search space; TS 36.213 clause 16.6
StartSF	<a href="#">NPDCCH_StartSF_Type2CSS_Type</a>		G for Type2 common search space; TS 36.213 clause 16.6
Offset	<a href="#">NPDCCH_Offset_Type2CSS_Type</a>		offset for Type2 common search space; TS 36.213 clause 16.6
SearchSpaceCandidateForRAR	<a href="#">NPdcchSearchSpaceCandidateIndex_Type</a>		index of the search space candidate to be used for random access response
SearchSpaceCandidateForMsg4	<a href="#">NPdcchSearchSpaceCandidateIndex_Type</a>		index of the search space candidate to be used for Msg4 scheduling; this can be an DL transmission (contention resolution id based) or an UL transmission (C-RNTI based)

## NPdcchConfig\_Type

TTCN-3 Record Type			
Name	NPdcchConfig_Type		
Comment			
UESS	<a href="#">NPdcchUESpecificSearchSpace_Type</a>	opt	parameters for UE specific search space
Type1CSS	<a href="#">NPdcchType1CommonSearchSpace_Type</a>	opt	parameters for Type1 common search space
Type2CSS	<a href="#">NPdcchType2CommonSearchSpace_Type</a>	opt	parameters for Type2 common search space
RelativeTxPower	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	power ratio for NPDCCH's resource elements relative to the NRS

## NPdschRelativeTxPower\_Type

TTCN-3 Record Type			
Name	NPdschRelativeTxPower_Type		
Comment	FFS		
RachResponse	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	
BchOnNPdsc h	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	
PcchOnNPdsc h	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	
CcchOnNPdsc h	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	
DcchDtchOnNPdsc h	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	

**NPdschConfig\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NPdschConfig_Type</b>		
<b>Comment</b>			
RelativeTxPower	<a href="#">NPdschRelativeTxPower_Type</a>	opt	

## F.1.3.2.2 Physical\_Signals

**NB\_PrimarySyncSignal\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NB_PrimarySyncSignal_Type</b>		
<b>Comment</b>			
RelativeTxPower	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	power ratio for NPSS's resource elements relative to the NRS (NOTE: applicable even though NRS is not in the same subframe)

**NB\_SecondarySyncSignal\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NB_SecondarySyncSignal_Type</b>		
<b>Comment</b>			
RelativeTxPower	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	power ratio for NPSS's resource elements relative to the NRS (NOTE: applicable even though NRS is not in the same subframe)

**NB\_LTE\_CellSpecificReferenceSignal\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>NB_LTE_CellSpecificReferenceSignal_Type</b>		
<b>Comment</b>			
RelativeTxPower	<a href="#">NB_ToRS_EPRES_Ratio_Type</a>	opt	power ratio for the LTE CRS in case of In-band transmission with same PCI

**AntennaConfig\_Type**

TTCN-3 Enumerated Type	
<b>Name</b>	<b>AntennaConfig_Type</b>
<b>Comment</b>	This type specifies how many Tx antennas shall be used by the SS
AN1	single Tx antenna shall be used by the SS
AN2	two Tx antennas shall be used by the SS

**NB\_PhysicalLayerConfigDL\_Type**

TTCN-3 Record Type			
Name	<b>NB_PhysicalLayerConfigDL_Type</b>		
Comment	all fields are declared as optional to allow single reconfigurations; in this case omit means "keep as it is"		
Antenna	<a href="#">AntennaConfig_Type</a>	opt	
NPbch	<a href="#">NPbchConfig_Type</a>	opt	
NPdch	<a href="#">NPdchConfig_Type</a>	opt	
NPdsch	<a href="#">NPdschConfig_Type</a>	opt	
NPss	<a href="#">NB_PrimarySyncSignal_Type</a>	opt	
NSss	<a href="#">NB_SecondarySyncSignal_Type</a>	opt	
LteCrbs	<a href="#">NB_LTE_CellSpecificReferenceSignal_Type</a>	opt	if omitted in initial configuration the CRS shall be considered as being not present, i.e. shall not be transmitted by the SS

**NB\_DownlinkBitmapConfig\_Type**

TTCN-3 Union Type		
Name	<b>NB_DownlinkBitmapConfig_Type</b>	
Comment	to specify valid NB-IoT DL subframes according to TS 36.213 clause 16.4	
Bitmap	<a href="#">DL_Bitmap_Type</a>	valid NB-IoT DL subframe specified by bitmap and does not contain NPSS/NSSS/NPBCH/NB-SIB1 transmission
None	<a href="#">Null_Type</a>	valid NB-IoT DL subframe does not contain NPSS/NSSS/NPBCH/NB-SIB1 transmission

**NB\_NonAnchorCarrier\_Type**

TTCN-3 Union Type		
Name	<b>NB_NonAnchorCarrier_Type</b>	
Comment		
Config	<a href="#">CarrierConfigDedicated_Type</a>	
None	<a href="#">Null_Type</a>	

**F.1.3.3 Uplink\_Physical\_Layer\_Configuration**

Uplink physical channel configuration: NPRACH, NPUSCH and UL RS

**NB\_SubCarrierSpacingUL\_Type**

TTCN-3 Enumerated Type	
Name	<b>NB_SubCarrierSpacingUL_Type</b>
Comment	
subCarrierSpacing_1 5kHz	
subCarrierSpacing_3 _75kHz	

**NPUSCH\_Configuration\_Type**

TTCN-3 Record Type			
Name	<b>NPUSCH_Configuration_Type</b>		
Comment			
Common	<a href="#">NPUSCH_ConfigCommon_Type</a>	opt	
Dedicated	<a href="#">NPUSCH_ConfigDedicated_Type</a>	opt	

### NB\_PhysicalLayerConfigUL\_Type

TTCN-3 Record Type			
Name	<b>NB_PhysicalLayerConfigUL_Type</b>		
Comment	NOTE: In general SS is required to keep the UE's UL power constant		
NPrach	<a href="#">NPRACH_Config_Type</a>	opt	parameters acc. TS 36.331, clause 6.7.3.2
NPusch	<a href="#">NPUSCH_Configuration_Type</a>	opt	parameters acc. TS 36.331, clause 6.7.3.2 (including configuration of RS)
TimingAdvance	<a href="#">SS_TimingAdvanceConfig_Type</a>	opt	to adjust timing advance; normally timing advance is configured as 0 at the beginning and never changed during the test case; in some MAC test cases timing advance may be configured to a non-zero (11 bit value) at the beginning and modified by (6 bit) timing advance commands during the test
SubCarrierSpacingUL	<a href="#">NB_SubCarrierSpacingUL_Type</a>	opt	15kHz or 3.75kHz UL carrier spacing; cyclic prefix as per 36.211 Table 10.1.5-1 accordingly
UplinkPowerControlCommon	<a href="#">NB_UplinkPowerControlCommon_Type</a>	opt	
UplinkPowerControlDedicated	<a href="#">NB_UplinkPowerControlDedicated_Type</a>	opt	

### F.1.3.4 Common\_MAC\_Configuration

Transport channel and MAC related procedures and configuration

#### Common\_MAC\_Configuration: Basic Type Definitions

TTCN-3 Basic Types		
<b>NPDSCH_ImcsValue_Type</b>	integer (0..12)	Modulation and coding scheme index coding; TS 36.213 Table 16.4.1.5.1-1
<b>NPUSCH_ImcsValue_Type</b>	integer (0..12)	Modulation and coding scheme index coding; TS 36.213 Table 16.5.1.2-2

### NB\_PdcchDciFormat\_Type

TTCN-3 Enumerated Type	
Name	<b>NB_PdcchDciFormat_Type</b>
Comment	
dci_N0	physical layer parameters acc. TS 36.508 Table 8.1.3.6.1.1-1 (for NPUSCH)
dci_N1	physical layer parameters acc. TS 36.508 Table 8.1.3.6.1.1-3 (for NPDSCH)
dci_N2	physical layer parameters acc. TS 36.508 Table 8.1.3.6.1.1-3 (for Paging)

### NB\_DciDlInfoCommon\_Type

TTCN-3 Record Type			
Name	<b>NB_DciDlInfoCommon_Type</b>		
Comment	Downlink control information according to 36.212 clause 6.4.3		
Format	<a href="#">NB_PdcchDciFormat_Type</a>		NPDSCH: N1; Paging: N2

RepetitionNumber	integer		Defined in TS 36.213, clause 16.5.1.1
DCISubFrameRepetitionNumber	integer		Defined in TS 36.213, clause 16.6
TransRetransmissionList	<a href="#">NB_UL_TransRetransmissionList_Type</a>		for possible adaptive retransmissions: when there is more than one entry in the list the SS shall sent DCIs for the subsequent entries as ACK/NACK response according to TS 36.213 clause 16.5.2

**NB\_PeriodicGrant\_Type**

TTCN-3 Record Type			
Name	<b>NB_PeriodicGrant_Type</b>		
Comment	configuration of UL grants to be assigned periodically acc. to configuration of the UE specific search space; DL assignments have higher priority than UL grant schedules: when there is a DL transmission to be scheduled for some search space the UL grant shall be scheduled in the next search space which is not used for DL assignment		
DciInfo	<a href="#">NB_DciUInfo_Type</a>		DCI format: N0 (TS 36.212, clause 6.4.3.1)
NoOfRepetitions	<a href="#">TransmissionRepetition_Type</a>		number of UL Grants to be automatically transmitted or continuous repetition
Periodicity	integer	opt	1 => every search space, 2 => every 2nd search space, 3 => every 3rd search space, etc. may be omitted if only one UL grant shall be assigned and shall be ignored by the SS in this case; the periodicity is related to beginning of the UL grant scheduling, i.e. independent from whether or single grant is postponed due to pending DL assignment

**NB\_UESS\_GrantScheduling\_Type**

TTCN-3 Union Type		
Name	<b>NB_UESS_GrantScheduling_Type</b>	
Comment	Configuration of (periodic) UL grants for the UE specific search space; NOTE: UL grants for Type2 common search space during RACH procedure are configured as part of the RACH procedure configuration	
None	<a href="#">Null_Type</a>	no UL grant configured => UE needs to trigger RACH procedure to get UL resources; to used also to stop periodic UL grant scheduling when the UE goes back to IDLE
Periodic	<a href="#">NB_PeriodicGrant_Type</a>	configuration of one or several grants
PeriodicAfterRachContResolution	<a href="#">NB_PeriodicGrant_Type</a>	The SS shall schedule UL grants periodically after sending the DCI for contention resolution: a) contention resolution id based contention resolution: DCI is DL assignment of Msg4 sent to the UE b) C-RNTI based contention resolution: DCI is grant for UL transmission The periodicity starts from the search space of DCI used for contention resolution NOTE: for now it is not foreseen that the SS needs to evaluate BSRs for (automatic) UL grant assignments; FFS

**F.1.3.5 Random\_Access\_Procedure****NB\_RAR\_UplinkGrant\_Type**

TTCN-3 Record Type		
Name	<b>NB_RAR_UplinkGrant_Type</b>	
Comment	TS 36.213, clause 16.3.3 First bit for subcarrier spacing shall be set according to SubCarrierSpacingUL in NB_PhysicalLayerConfigUL_Type	
SubCarrierIndication	<a href="#">B6_Type</a>	Defined in TS 36.213 clause 16.5.1.1
SchedulingDelay	<a href="#">B2_Type</a>	Defined in TS 36.213 clause 16.5.1 where NB-IoT DL subframe n is the last subframe in which the NPDSCH associated with the NB random access response grant is transmitted
Msg3RepetitionNumber	<a href="#">B3_Type</a>	Defined in TS 36.213 clause 16.5.1.1
MCSIndex	<a href="#">B3_Type</a>	Indicating TBS, modulation and number of RUs for Msg3 according to TS 36.213 table 16.3.3-1

**NB\_CRNTI\_ContentionResolutionCtrl\_Type**

TTCN-3 Union Type		
Name	<b>NB_CRNTI_ContentionResolutionCtrl_Type</b>	
Comment	configuration for Random Access Procedure in RRC_CONNECTED (see TS 36.300, clause 10.1.5.1); when SS receives C-RNTI MAC element sent by the UE after Random Access Response, SS shall deal with the C-RNTI as specified in this structure	
AutomaticGrant	<a href="#">NB_DciUInfo_Type</a>	before expiry of the contention resolution timer SS shall automatically send an UL grant to the UE by addressing NPDCCH using C-RNTI as sent by the UE in Msg3 but scheduled according to Type2 common search space; the UL grant is explicitly specified by NB_DciUInfo_Type
None	<a href="#">Null_Type</a>	Used in case of dedicated preamble transmission or to simulate failure cases; SS shall not address PDCCH using C-RNTI => expiry of contention resolution timer on UE side

**NB\_ContentionResolutionCtrl\_Type**

TTCN-3 Union Type		
Name	<b>NB_ContentionResolutionCtrl_Type</b>	
Comment	NOTE: SS only needs to consider one kind of contention resolution at one time; in the initial configuration of a cell TCRNTI_Based shall be configured; whether or not a UE triggers RACH procedures in RRC_CONNECTED depends on RRC signalling (logicalChannelSR-Prohibit, logicalChannelSR-ProhibitTimer); when the UE is supposed to trigger RACH procedures in RRC_CONNECTED the SS needs to be configured for C-RNTI based contention resolution after the temporary C-RNTI based contention resolution has been done at RRC connection establishment	
TCRNTI_Based	<a href="#">TCRNTI_ContentionResolutionCtrl_Type</a>	TCRNTI based contention resolution (e.g. initial access), hence involves inclusion contention resolution identity in DL message 4 of RACH procedure
CRNTI_Based	<a href="#">NB_CRNTI_ContentionResolutionCtrl_Type</a>	CRNTI based contention resolution (e.g. in case UE is being in RRC_CONNECTED): hence uplink message in step 3 (of RACH procedure) is followed by PDCCH transmission with UE C-RNTI to end procedure

**NB\_RandomAccessResponseParameters\_Type**

TTCN-3 Record Type		
Name	<b>NB_RandomAccessResponseParameters_Type</b>	
Comment	parameters to control content of RAR sent to the UE	
RapId	<a href="#">RapIdCtrl_Type</a>	to control Random Access Preamble Id to be sent back to the UE; used in RAR MAC sub-header
InitialGrant	<a href="#">NB_RAR_UplinkGrant_Type</a>	initial UL grant
TimingAdvance	<a href="#">RACH_TimingAdvance_Type</a>	timing advance: granularity of 0.52 micro sec (16*Ts); see TS 36.300, clause 5.2.7.3, TS 36.321, clause 6.1.3.5; NOTE: timing advance has impact not only on the RA procedure; SS in general needs to adjust its timing accordingly
TempC_RNTI	<a href="#">TempC_RNTI_Type</a>	NOTE: For initial Random Access Procedure at network (SS) side there is no temporary C-RNTI: network assigns the C-RNTI which is used by any UE as being temporary; the UE which 'wins' the contention resolution keeps the (temporary) C-RNTI; other UEs need to repeat the RACH procedure; => at the SS the TempC_RNTI shall be 'SameAsC_RNTI' For Random Access Procedure in RRC_CONNECTED state the NW assigns a temporary C-RNTI which is replaced by the one stored at the UE; => TempC_RNTI may be 'SameAsC_RNTI' (in this case temp. C-RNTI and C-RNTI are equal what is not likely in a real network), or there is an explicit temp. C-RNTI what is used during RA procedure only (as in a real network)

**NB\_RarList\_Type**

TTCN-3 Record of Type

Comment	configuration for Random Access Response mapped to DL-SCH mapped to NPDSCH TransmissionMode: single antenna mode when there is only one antenna configured, transmit diversity else; RNTI: RA-RNTI (TS 36.321, clause 7.1); if both RAR msg and backoff indicator are 'None' SS shall not respond on random access preamble	
DciInfo	<a href="#">NB_DciDlInfoCommon_Type</a>	DCI format N1 addressed by RA-RNTI
Rar	<a href="#">NB_RandomAccessResponse_Type</a>	RAR to be sent to the UE
BackoffInd	<a href="#">RandomAccessBackoffIndicator_Type</a>	possible backoff indicator; 'None' for normal cases

**NB\_RandomAccessResponseConfig\_Type**

TTCN-3 Union Type		
Name	<b>NB_RandomAccessResponseConfig_Type</b>	
Comment		
Ctrl	<a href="#">NB_RandomAccessResponseCtrl_Type</a>	contains information to control sending of RAR
None	<a href="#">Null_Type</a>	to be used when there is no RAR to be sent at all

**NB\_RachProcedure\_Type**

TTCN-3 Record Type		
Name	<b>NB_RachProcedure_Type</b>	
Comment		
RAResponse	<a href="#">NB_RandomAccessResponseConfig_Type</a>	control of how the SS shall react on RA preamble; this may be - the RAP id as expected by the UE - a RAP id not matching to the UE's RAP - a backoff indicator - nothing at all
ContentionResolutionCtrl	<a href="#">NB_ContentionResolutionCtrl_Type</a>	

**NB\_RachProcedureList\_Type**

TTCN-3 Record of Type	
Name	<b>NB_RachProcedureList_Type</b>
Comment	<p>to simulate RACH procedure with one or more than one attempt by the UE:</p> <p>1. Normal cases:  one single RandomAccessResponse is sent to the UE matching the UE's RACH preamble;  contention resolution is successful immediately  =&gt; list contains only one element which is used for any RA procedure  (Even if a RACH procedure is repeated by the UE for any reason this element shall be used;  e.g. it needs not to be handled as error when the UE sends another RACH preamble instead of the RRC connection request message)</p> <p>2. Special cases:  SS shall start with the first element in the list and use the RAR as specified in this element;  if the RAR matches at the UE side the UE will send UL data and contention resolution is performed as configured for this element;  if the RAR does not match the UE sends another RAP and SS continues with the next element in the list;  in this case the contention resolution of the respective element is not used;  if the end of the list is reached and further RACH preambles are sent by the UE SS shall repeatedly apply the last element of the list  (this is necessary because there might be not enough time to reconfigure SS after the end of the list has been reached and there shall be well-defined behaviour after the list has been processed);</p> <p>to change from a special mode to normal mode the RachProcedureList is reconfigured by TTCN to achieve transparency and readability of the code;</p> <p>NOTE:  for NB-IoT there can be more than one repetition per preamble attempt  (numRepetitionsPerPreambleAttempt-r13 in NPRACH-ConfigSIB-NB-DEFAULT in SystemInformationBlockType2-NB); as in general the SS cannot know about how many repetitions of the RACH preamble are done per attempt, the RachProcedureList shall contain one entry per RACH procedure rather than one entry per attempt (with dummies for the first numRepetitionsPerPreambleAttempt - 1 entries</p>

## F.4 EUTRA\_NB\_ASP\_L2DataDefs

ASP interface for DRBs

## F.4.1 PDU\_TypeDefs

### F.4.1.1 MAC\_PDU

#### MAC\_PDU: Basic Type Definitions

TTCN-3 Basic Types		
MAC_CTRL_C_RNTI_Type	C_RNTI	TS 36.321, clause 6.1.3.2
MAC_CTRL_ContentionResolutionId_Type	<a href="#">ContentionResolutionId_Type</a>	TS 36.321, clause 6.1.3.4 fix 48-bit size; consists of a single field defined UE Contention Resolution Identity (first 48 bits of the uplink CCCH SDU transmitted by MAC)
MAC_CTRL_TimingAdvance_Type	<a href="#">B8_Type</a>	TS 36.321, clause 6.1.3.5 indicates the amount of timing adjustment in 0.5 ms that the UE has to apply; the length of the field is 8 bits
MAC_SDU_Type	octetstring	

#### MAC\_PDU\_Length\_Type

TTCN-3 Record Type		
Name	MAC_PDU_Length_Type	
Comment	NOTE: since F and L field are either both present or both omitted they are put into this record; to allow homogeneous (direct) encoding the PDU length is not defined as union; TTCN-3 does allow length restrictions to one length or a range of length but not to two specific lengths; further restriction may be achieved by appropriate templates (parameter either 7 or 15 bit)	
Format	<a href="#">B1_Type</a>	F: The Format field indicates the size of the Length field as indicated in table 6.2.1-3. There is one F field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the F field is 1 bit. If the size of the MAC SDU or MAC control element is less than 128 bytes, the UE shall set the value of the F field to 0, otherwise the UE shall set it to 1
Value	<a href="#">B7_15_Type</a>	L: The Length field indicates the length of the corresponding MAC SDU or MAC control element in bytes. There is one L field per MAC PDU subheader except for the last subheader and sub-headers corresponding to fixed-sized MAC control elements. The size of the L field is indicated by the F field

**MAC\_PDU\_SubHeader\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>MAC_PDU_SubHeader_Type</b>		
<b>Comment</b>			
Reserved	<a href="#">B2_Type</a>		Reserved bits
Extension	<a href="#">B1_Type</a>		E: The Extension field is a flag indicating if more fields are present in the MAC header or not. The E field is set to "1" to indicate another set of at least R/R/E/LCID fields. The E field is set to "0" to indicate that either a MAC SDU, a MAC control element or padding starts at the next byte
LCID	<a href="#">B5_Type</a>		LCID: The Logical Channel ID field identifies the logical channel instance of the corresponding MAC SDU or the type of the corresponding MAC control element or padding as described in tables 6.2.1-1 and 6.2.1-2 for the DL and UL-SCH respectively. There is one LCID field for each MAC SDU, MAC control element or padding included in the MAC PDU. The LCID field size is 5 bits; NOTE: In case of DRX command the sub-header corresponds to a control element of length zero (i.e. there is no control element)
Length	<a href="#">MAC_PDU_Length_Type</a>	opt	

**MAC\_Header\_Type**

TTCN-3 Record of Type	
<b>Name</b>	<b>MAC_Header_Type</b>
<b>Comment</b>	
record of <a href="#">MAC_PDU_SubHeader_Type</a>

**PDCP\_PDUList\_Type**

TTCN-3 Record of Type	
Name	PDCP_PDUList_Type
Comment	
	record of <a href="#">PDCP_PDU_Type</a>

**F.4.2 DRB\_Primitive\_Definitions**

Primitive definitions to send/receive data PDUs over DRB's

**F.4.2.1 DRB\_Common****L2DataList\_Type**

TTCN-3 Union Type		
Name	L2DataList_Type	
Comment	<p>MAC: acc. to rel-8 protocols there is not more than one MAC PDU per TTI; any MAC PDU is completely included in one subframe</p> <p>RLC: one or more RLC PDUs per TTI (e.g. RLC Data + Status PDU on a logical channel; more than one RLC Data PDU in one MAC PDU is valid too) any RLC PDU is completely included in one subframe</p> <p>PDCP: one or more PDUs per TTI; one PDCP PDU may be included in more than one subframe</p>	
MacPdu	<a href="#">MAC_PDUList_Type</a>	SS configuration: RLC TM mode, MAC no header removal (PDCP is not configured)
RlcPdu	<a href="#">RLC_PDUList_Type</a>	SS configuration: RLC TM mode, MAC header removal (PDCP is not configured)
PdcpPdu	<a href="#">PDCP_PDUList_Type</a>	SS configuration: RLC AM/UM mode, PDCP no header removal
PdcpSdu	<a href="#">PDCP_SDUList_Type</a>	SS configuration: RLC AM/UM mode, PDCP header removal
RlcSdu	<a href="#">RLC_SDUList_Type</a>	SS configuration: RLC UM mode with no PDCP, for example MRB

**HarqProcessAssignment\_Type**

TTCN-3 Union Type		
Name	<b>HarqProcessAssignment_Type</b>	
Comment	in DL the HARQ process id may be specified by the test case or automatically assigned by SS	
Id	<a href="#">HarqProcessId_Type</a>	HARQ process as specified by the test case NOTE1: the scope of this type is only for data being sent in one TTI; if data needs more than one TTI the HarqProcessId is undefined for the 2nd TTI onward what shall be handled as an error at the SS; SS may send a SYSTEM_IND indicating an error in this case; NOTE2: The initial value of the NDI shall be the same for all HARQ processes and cells
Automatic	<a href="#">Null_Type</a>	HARQ process id automatically assigned by SS

## F.4.2.2 Downlink

**DRB\_DataPerSubframe\_DL\_Type**

TTCN-3 Record Type		
Name	<b>DRB_DataPerSubframe_DL_Type</b>	
Comment	common definition for one or several PDUs/SDUs to be sent in the subframe given by the subframe offset; NOTE 1: For MAC and RLC PDUs a single PDU is always sent in one subframe; SS shall raise an error indication (using SYSTEM_IND) when that is not possible NOTE 2: For PDCP the data may be spread over more than one subframe (segmented by the RLC); the TTCN implementation is responsible to calculate appropriate offsets accordingly; the exact timing depends on (and is exactly specified by) configuration of the DL scheduling; SS shall raise an error when there is any conflict	
SubframeOffset	integer	subframe offset relative to the absolute timing information given in the common part of the ASP; NOTE 1: Notes: Acc. to TS 36.523-3, clause 7.3.3 in case of TDD or half-duplex configuration only subframes available for DL are taken into consideration NOTE 2: if a PDCP PDU or SDU takes more than one subframe, SubframeOffset specifies the first TTI
HarqProcess	<a href="#">HarqProcessAssignment_Type</a>	opt HARQ process to be used: specific value (0..7) or automatically assigned by SS; in automatic mode SS chooses HARQ process out of the set configured by CcchDcchDtchConfigDL_Type.HarqProcessConfig NOTE 1: for PDCP SDUs or PDUs automatic mode shall be used; otherwise SS shall raise an error NOTE 2: for NB-IoT the HarqProcess shall be omitted by TTCN and ignored by the SS
PduSduList	<a href="#">L2DataList_Type</a>	list of PDUs/SDUs to be sent in one TTI

## DRB\_DataPerSubframeList\_DL\_Type

TTCN-3 Record of Type	
<b>Name</b>	<b>DRB_DataPerSubframeList_DL_Type</b>
<b>Comment</b>	list of user plane data to be sent in sub-frames given by the SubframeOffset in the single elements of the list; Timing: the start time for the whole sequence is given by the timing info of the ASP (common information); the timing for the respective data pdus is given by the SubframeOffset relative to the common timing info; design consideration: repetitions of this sequence are not foreseen (in which case the subframe offset could not be related to the timing info of the ASP)
record of <a href="#">DRB_DataPerSubframe_DL_Type</a>	

## L2Data\_Request\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>L2Data_Request_Type</b>
<b>Comment</b>	NOTE: formal type definition to allow later enhancements; L2Data_Request_Type defines a sequence of subframes in which data shall be sent
SubframeDataList	<a href="#">DRB_DataPerSubframeList_DL_Type</a>

## F.4.2.3 Uplink

## DRB\_DataPerSubframe\_UL\_Type

TTCN-3 Record Type	
<b>Name</b>	<b>DRB_DataPerSubframe_UL_Type</b>
<b>Comment</b>	common definition for one or several PDUs/SDUs being received in one subframe or to receive one PDCP PDU or SDU being spread over more than one TTI; NOTE: There is a fix relation between HARQ process id and subframe in UL => it is not necessary to include HARQ process id for UL data
PduSduList	<a href="#">L2DataList_Type</a> list of PDUs/SDUs being received in one TTI; elements of the list appear in the same order as the PDUs/SDUs in the MAC PDU; for PDCP when a PDU or SDU takes more than one TTI the list only contains this PDU or SDU
NoOfTTIs	integer in case of PDCP: number of TTIs the SDU or PDU has taken NOTE 1: for the time being the NoOfTTIs is not checked by TTCN-3 and may be set to 1 by SS; NOTE 2: the timing info in common part of the ASP refers to the last TTI NOTE 3: when NoOfTTIs > 1 => PduSduList shall only contain one PDCP PDU or SDU in case of MAC or RLC PDUs: NoOfTTIs shall always be 1 (acc. to TS 36.321 MAC is not doing segmentation of RLC PDUs and acc. to TS 36.322, clause 6.2.2.2 the maximum RLC data is calculated to fit into a MAC PDU and RLC does segmentation accordingly)

**L2Data\_Indication\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>L2Data_Indication_Type</b>
<b>Comment</b>	NOTE: formal type definition to allow later enhancements; L2Data_Indication_Type defines data being received in a single subframe i.e. PDUs of subsequent TTIs are indicated in separated ASPs
SubframeData	<a href="#">DRB_DataPerSubframe_U_L_Type</a>

## F.5 NasEmu\_AspTypes\_NBIOT

System interface between NAS emulation and system adaptor

### F.5.1 System\_Interface

**NBIOT\_RRC\_PDU\_REQ**

TTCN-3 Record Type	
<b>Name</b>	<b>NBIOT_RRC_PDU_REQ</b>
<b>Comment</b>	
Common	<a href="#">NB_ReqAspCommonPart_Type</a>  CellId : identifier of the cell RoutingInfo : SRB0, SRB1, SRB1bis TimingInfo : Now in normal cases; For latency tests TimingInfo can be set to the SFN/subframe in which the RRC messages shall be sent out NOTE 1: if the RRC PDU is too long to be sent in one TTI the TimingInfo corresponds to the first TTI NOTE 2: the TimingInfo is not changed by the NAS Emu (i.e. the timing info as coming from the test case (SRB_COMMON_REQ) is handed through by the NAS Emu) ControllInfo CnfFlag:=false; FollowOnFlag true: Indicates that the message(s) to be sent on the same TTI will follow NOTE 1: If the TimingInfo is not the same for messages to be sent on the same TTI, the SS shall produce an error NOTE 2: the follow on flag applies only for messages of the same SRB false: Indicates that no more message(s) will follow
RrcPdu	<a href="#">NB_RRC_MSG_Request_Type</a>

**NBIOT\_RRC\_PDU\_IND**

TTCN-3 Record Type		
<b>Name</b>	<b>NBIOT_RRC_PDU_IND</b>	
<b>Comment</b>	common ASP to receive PDUs from SRB0, SRB1, SRB1bis	
Common	<a href="#">NB_IndAspCommonPart_Type</a>	<p>CellId : identifier of the cell  RoutingInfo : SRB0, SRB1, SRB1bis  TimingInfo : time when message has been received (frame and sub-frame number); this is handed through to the test case by the NAS emulation</p> <p>NOTE: normally an RRC PDU is expected in one TTI; nevertheless if it is spread over more than one TTIs TimingInfo shall refer to the end of the PDU i.e. to the last RLC PDU being received;  Status : OK or RRC integrity error</p>
RrcPdu	<a href="#">NB_RRC_MSG_Indication_Type</a>

TTCN-3 Enumerated Type	
Name	IndicationAndControlMode_Type
Comment	
enable	
disable	

## F.9 EUTRA\_NB\_ASP\_TypeDefs

Type definitions for configuration of the system simulator;

Common design principles:

Semantics of OMIT: for all TTCN-3 type definitions used in ASPs omit means "keep as it is" =>

- on initial configuration in general all fields shall be provided
- no default values for fields are foreseen
- if necessary non-existence of information shall be explicitly configured (e.g. with a union of "no configuration" and "configuration parameters")
- fields within structures imported from the core spec are excepted from this rule

### F.9.1 Cell\_Configuration

Specific Info for Cell Configuration Primitive

#### F.9.1.1 Cell\_Configuration\_Common

##### EUTRA\_NB\_ASP\_TypeDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_CellAttenuation_Off	<a href="#">Attenuation_Type</a>	{Off:=true}	

##### Cell\_Configuration\_Common: Basic Type Definitions

TTCN-3 Basic Types		
InitialAttenuation_Type	<a href="#">Attenuation_Type</a> <a href="#">(tsc_CellAttenuation_Off)</a>	Attenuation restricted to 'Off'

##### CellTimingInfo\_Type

TTCN-3 Record Type			
Name	CellTimingInfo_Type		
Comment	Cell Timing		
Tcell	integer (0..307199)		frame duration Tf = 307200 * Ts = 10ms; System Time Unit Ts = 1/(15000 * 2048)
SfnOffset	integer (0..1023)		
HsfnOffset	integer (0..1023)		

**Attenuation\_Type**

TTCN-3 Union Type		
Name	<b>Attenuation_Type</b>	
Comment	attenuation of the reference power	
Value	integer (0..149)	cell power reference power reduced by the given attenuation (value is in dB)
Off	<a href="#">Null_Type</a>	even though in TS 36.508 -145dBm for LTE and -150dBm for NB-IoT is given for a non suitable cell we specify an explicit "Off" value here

**InitialCellPower\_Type**

TTCN-3 Record Type		
Name	<b>InitialCellPower_Type</b>	
Comment		
MaxReference Power	<a href="#">AbsoluteCellPower_Type</a>	maximum value of cell reference power (RS EPRE in dBm/15kHz as per TS 36.508, clause 4.3.4.1); a cell is initialised with this reference power; its value is the upper bound of the cell power during the test case
Attenuation	<a href="#">InitialAttenuation_Type</a>	initial attenuation

**F.9.1.2 Uplink\_Physical\_Layer\_Configuration****SS\_TimingAdvanceConfig\_Type**

TTCN-3 Union Type		
Name	<b>SS_TimingAdvanceConfig_Type</b>	
Comment		
InitialValue	<a href="#">RACH_TimingAdvance_Type</a>	initial value corresponding to what is sent to the UE in RACH response (range acc. 11 bit value; 0 in normal cases)
Relative	<a href="#">TimingAdvanceIndex_Type</a>	timing advance command to adjust changes of timing advance acc. to TS 36.213, clause 4.2.3; (range acc. 6 bit value: -31..32)

**F.9.1.3 Common\_MAC\_Configuration**

Transport channel and MAC related procedures and configuration

**Common\_MAC\_Configuration: Basic Type Definitions**

TTCN-3 Basic Types		
<b>TimingAdvanceIndex_Type</b>	integer (0..63)	acc. to TS 36.321, clause 6.1.3.5 "Timing Advance Command MAC Control Element" and TS 36.213, clause 4.2.3 "Transmission timing adjustments"
<b>TimingAdvance_Period_Type</b>	integer (400, 600, 1020, 1530, 2040, 4090, 8190)	the values correspond to 80 % of TimeAlignmentTimer (acc. to TS 36.523-3, clause 7.2) (TS 36.331, clause 6.3.2: sf500, sf750, sf1280, sf1920, sf2560, sf5120, sf10240) rounded to nearest multiple of 10

## UplinkTimeAlignment\_AutoSynch\_Type

TTCN-3 Record Type		
Name	UplinkTimeAlignment_AutoSynch_Type	
Comment		
TimingAdvance	<a href="#">TimingAdvanceIndex_Type</a>	
TA_Period	<a href="#">TimingAdvance_Period_Type</a>	time period after which TA MAC control elements need to be automatically transmitted
TA_Repetition	<a href="#">TransmissionRepetition_Type</a>	number of TA MAC control element repetitions to be automatically transmitted or 'Continuous'

## UplinkTimeAlignment\_Synch\_Type

TTCN-3 Union Type		
Name	UplinkTimeAlignment_Synch_Type	
Comment		
None	<a href="#">Null_Type</a>	no PUCCH Synchronisation applied
Auto	<a href="#">UplinkTimeAlignment_AutoSynch_Type</a>	SS automatically maintains PUCCH synchronization at UE If the cell is a - Rel 10 or earlier cell - or Rel 11 or later Pcell - or the Rel-11 or later scell with no STAG-ID configured, the TAG-ID is set to '00' i.e. P-TAG in Timing advance MCE If the cell is Rel 11 scell with STAG-ID configured, the configured stag-ID is used as TAG-ID in Timing advance MCE

## TransmissionRepetition\_Type

TTCN-3 Union Type		
Name	TransmissionRepetition_Type	
Comment		
Continuous	<a href="#">Null_Type</a>	
NumOfCycles	integer (1..infinity)	

## F.9.1.4 Random\_Access\_Procedure

## Random\_Access\_Procedure: Basic Type Definitions

TTCN-3 Basic Types		
RACH_TimingAdvance_Type	integer (0..2047)	11 bit timing advance as used in RACH response (absolute value)

## ContentionResolution\_ContainedRlcPdu\_Type

TTCN-3 Union Type		
Name	ContentionResolution_ContainedRlcPdu_Type	
Comment		
RlcPdu	octetstring	octetstring of an RLC PDU containing e.g. the RRC Connection Setup; to be sent in the same MAC PDU as the MAC Contention Resolution Control Element
None	<a href="#">Null_Type</a>	MAC PDU containing the MAC Contention Resolution Control Element does not contain an RLC PDU (i.e. RRC Connection Setup is sent in another PDU)

## ContentionResolution\_ContainedId\_Type

TTCN-3 Union Type		
Name	ContentionResolution_ContainedId_Type	
Comment		
XorMask	<a href="#">ContentionResolutionId_Type</a>	When SS receives Contention Resolution ID from the UE, SS shall XOR it with the given mask and use this as Contention Resolution ID; this allows to get an unmatching Contention Resolution ID; in normal cases mask shall be set to tsc_ContentionResolutionId_Unchanged (i.e. the Contention Resolution ID remains unchanged)
None	<a href="#">Null_Type</a>	MAC Contention Resolution Control Element is not contained in the MAC PDU sent out as response on Msg3

## TCRNTI\_ContentionResolutionMacPdu\_Type

TTCN-3 Record Type		
Name	TCRNTI_ContentionResolutionMacPdu_Type	
Comment	NOTE: Either ContainedId or ContainedRlcPdu (or both) shall not be 'none'; (if no Contention Resolution Mac Pdu shall be sent, TCRNTI_ContentionResolutionCtrl_Type.NoContResoID shall be used instead)	
ContainedId	<a href="#">ContentionResolution_ContainedId_Type</a>	Either the Contention Resolution ID as received from the UE or a modified Contention Resolution ID (XorMask != tsc_ContentionResolutionId_Unchanged) or no Contention Resolution ID at all
ContainedRlcPdu	<a href="#">ContentionResolution_ContainedRlcPdu_Type</a>	the MAC PDU containing the MAC Contention Resolution Control Element may contain the RRC Connection Setup; in this case the RRC PDU shall be completely encoded been contained in an RLC PDU

## TCRNTI\_ContentionResolutionCtrl\_Type

TTCN-3 Union Type		
Name	TCRNTI_ContentionResolutionCtrl_Type	
Comment	when the UE responds on a Random Access Response with a RRC Connection Request on CCCH and not with a C-RNTI SS shall assume initial Random Access Procedure (TS 36.300, clause 10.1.5.1), i.e. sends a ContentionResolutionId back to the UE	
MacPdu	<a href="#">TCRNTI_ContentionResolutionMacPdu_Type</a>	MAC PDU containing the Contention Resolution ID and optionally an RRC PDU (RRC Connection Setup)
MacPdu_CRC_Error	<a href="#">TCRNTI_ContentionResolutionMacPdu_Type</a>	same as MacPdu (see above), but SS shall generate CRC error by toggling CRC bits; no retransmissions shall be made as UE shall not send a NACK
NoContResoID	<a href="#">Null_Type</a>	SS shall not include contention resolution ID (i.e. no MAC PDU shall be sent); used for contention resolution fail case

**RapIdCtrl\_Type**

TTCN-3 Union Type		
Name	<b>RapIdCtrl_Type</b>	
Comment		
Automatic	<a href="#">Null_Type</a>	SS shall automatically use same RAPID as received from the UE
Unmatched	<a href="#">Null_Type</a>	SS shall use RAPID being different from preamble sent by the UE; SS shall calculate this RAPID acc. to $RAPID := (RAPID + 3..63) \bmod 64$ if single RAR is transmitted in a MAC PDU then only 3 is added if multiple RAR's are transmitted in MAC PDU, then for first unmatched RAR 3 is added, second unmatched 4 is added, third unmatched 5 is added and so on

**TempC\_RNTI\_Type**

TTCN-3 Union Type		
Name	<b>TempC_RNTI_Type</b>	
Comment		
SameAsC_RNTI	<a href="#">Null_Type</a>	in the RA response SS shall use the same C-RNTI as configured in ActiveCellConfig_Type; this is useful for initial random access
Explicit	C_RNTI	in the RA response SS shall use different value as configured in ActiveCellConfig_Type; this can be used when the UE already is in RRC_CONNECTED to have a temporary C-RNTI different from the one used by the UE; NOTE: when the UE is not in RRC_CONNECTED there shall be no explicit temp. C-RNTI since then the UE would assume this value as C-RNTI

**RandomAccessBackoffIndicator\_Type**

TTCN-3 Union Type		
Name	<b>RandomAccessBackoffIndicator_Type</b>	
Comment		
None	<a href="#">Null_Type</a>	normal case, no back off indicator included
Index	integer (0..15)	Backoff Parameter values acc. TS 36.321, clause 7.2; values 0..12 are defined, 13..15 may be used in error case

**F.9.2 System\_Indications****HARQ\_Type**

TTCN-3 Enumerated Type	
Name	<b>HARQ_Type</b>
Comment	ack represents HARQ ACK; nack represents HARQ NACK
ack	
nack	

## F.10 EUTRA\_NB\_CommonDefs

### F.10.1 Common\_Types

#### Common\_Types: Basic Type Definitions

TTCN-3 Basic Types		
HarqProcessId_Type	integer (0..14)	The values 0..7 represent the ID of HARQ process ID; value range 0..14 is for TDD
ContentionResolutionId_Type	bitstring length(48)	used in EUTRA_ASP_DrbDefs and EUTRA_ASP_Typedefs
AbsoluteCellPower_Type	integer (-150..0)	absolute cell power (dBm)

### F.10.3 RRC\_Nested\_Types

#### RRC\_Nested\_Types: Basic Type Definitions

TTCN-3 Basic Types		
IntegrityProtAlgorithm_Type	SecurityAlgorithmConfig.integrityProtAlgorithm	

### F.10.4 ASP\_CommonPart

Definition of ASP common parts for REQ-, CNF- and IND-ASPs

#### F.10.4.1 ASP\_CommonPart\_Definitions

##### F.10.4.1.1 Routing\_Info

#### EUTRA\_NB\_CommonDefs: Constant Definitions

TTCN-3 Basic Types			
tsc_SRB0	integer	0	
tsc_SRB1	integer	1	

##### F.10.4.1.2 Timing\_Info

#### Timing\_Info: Basic Type Definitions

TTCN-3 Basic Types		
SystemFrameNumber_Type	integer (0..1023)	
SubFrameNumber_Type	integer (0..9)	
HyperSystemFrameNumberInfo_Type	<a href="#">SystemFrameNumberInfo_Type</a>	

**SubFrameInfo\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>SubFrameInfo_Type</b>	
<b>Comment</b>		
Number	<a href="#">SubFrameNumber_Type</a>	
Any	<a href="#">Null_Type</a>	no specific sub-frame (valid for REQ ASPs only)

**SystemFrameNumberInfo\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>SystemFrameNumberInfo_Type</b>	
<b>Comment</b>		
Number	<a href="#">SystemFrameNumber_Type</a>	
Any	<a href="#">Null_Type</a>	no specific frame number (valid for REQ ASPs only)

**SubFrameTiming\_Type**

TTCN-3 Record Type			
<b>Name</b>	<b>SubFrameTiming_Type</b>		
<b>Comment</b>			
SFN	<a href="#">SystemFrameNumberInfo_Type</a>		
Subframe	<a href="#">SubFrameInfo_Type</a>		
HSFN	<a href="#">HyperSystemFrameNumberInfo_Type</a>		

**TimingInfo\_Type**

TTCN-3 Union Type		
<b>Name</b>	<b>TimingInfo_Type</b>	
<b>Comment</b>		
SubFrame	<a href="#">SubFrameTiming_Type</a>	
Now	<a href="#">Null_Type</a>	to be used in REQ ASPs when there is no 'activation time'
None	<a href="#">Null_Type</a>	only to be used in SYSTEM_CTRL_CNF but not for EnquireTiming

## F.10.4.2 REQ\_ASP\_CommonPart

## ReqAspControllInfo\_Type

TTCN-3 Record Type		
Name	ReqAspControllInfo_Type	
Comment		
CnfFlag	boolean	<p>true =&gt; SS shall send CNF: when the REQ is with no timing information (no activation time), SS shall send the confirmation when the configuration is done, i.e. when the test case may continue. Example: when there is a configuration follow by a send event it shall not be necessary to have a wait timer in between but the CNF triggers the send event. If there are other triggers e.g. like the UE sending a message, CnfFlag shall be set to false by the test case to avoid racing conditions with the CNF and the signalling message. When there is an activation time SS shall send the CNF after the configuration has been scheduled; that means SS shall not wait until the activation time has been expired.</p>
FollowOnFlag	boolean	<p>false =&gt; no further (related) information true: further related information will be sent to SS (semantics depending on respective ASP)</p>

## F.10.4.3 CNF\_ASP\_CommonPart

## ConfirmationResult\_Type

TTCN-3 Union Type		
Name	ConfirmationResult_Type	
Comment		
Success	<a href="#">Null_Type</a>	
Error	integer	may contain SS specific error code; this will not be evaluated by TTCN

## F.10.4.4 IND\_ASP\_CommonPart

## IntegrityErrorIndication\_Type

TTCN-3 Record Type		
Name	IntegrityErrorIndication_Type	
Comment		
Nas	boolean	NAS Integrity: set to true when received MAC does not match calculated MAC
Pdcp	boolean	PDCCP Integrity: set to true when received MAC does not match calculated MAC

**ErrorIndication\_Type**

TTCN-3 Record Type			
Name	<b>ErrorIndication_Type</b>		
Comment			
Integrity	<a href="#">IntegrityErrorIndication_Type</a>		Integrity error: received MAC does not match calculated MAC
System	integer		any other error: may be SS specific error code; this will not be evaluated by TTCN; e.g. an error shall be raised when the UE requests retransmission of an RLC PDU

**IndicationStatus\_Type**

TTCN-3 Union Type			
Name	<b>IndicationStatus_Type</b>		
Comment			
Ok	<a href="#">Null_Type</a>		
Error	<a href="#">ErrorIndication_Type</a>		

**F.10.5 L2Data\_CommonDefs**

Common definitions of L2 control elements used in L2 messages (EUTRA\_NB\_ASP\_L2DataDefs) as well as for SS configuration (EUTRA\_ASP\_TypeDefs)

**L2Data\_CommonDefs: Basic Type Definitions**

TTCN-3 Basic Types		
MAC_CTRL_ScellActDeact_Type	<a href="#">ScellBitMap_Type</a>	36.321 clause 6.1.3.8

**ScellBitMap\_Type**

TTCN-3 Record Type			
Name	<b>ScellBitMap_Type</b>		
Comment			
Value	<a href="#">B7_Type</a>		7 MSB bits the C Fields C7 to C1. 1 => the corresponding Scell is Active 0 => Inactive
Reserved	<a href="#">B1_Type</a>		LSBit Reserved. Shall be set to 0

**PH\_Record\_Type**

TTCN-3 Record Type			
Name	<b>PH_Record_Type</b>		
Comment	36.321 clause 6.1.3.6a		
P_Bit	<a href="#">B1_Type</a>		P bit: 1 indicates the UE applies power backoff due to power management
V_Bit	<a href="#">B1_Type</a>		V bit: Indicates if the PH value is based on a real transmission or a reference format. For Type 1 PH, V=0 indicates real transmission on PUSCH and V=1 indicates that a PUSCH reference format is used
Valve	<a href="#">B6_Type</a>		The power headroom level. Ph Type 2 (if configured) for Pcell and Type 1 for Pcell and Scell
Reserved	<a href="#">B2_Type</a>	opt	2 reservid bits. Present if V=1
PCMaxc	<a href="#">B6_Type</a>	opt	Present if V=1

**PH\_RecordList\_Type**

TTCN-3 Record of Type	
<b>Name</b>	<b>PH_RecordList_Type</b>
<b>Comment</b>	If simultaneousPUCCH-PUSCH is not configured at least oneType 1 PH record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1. If simultaneousPUCCH-PUSCH is configured then one PH Type 2 record for P cell followed by PH Type 1 record for P cell is present. Additional one record per Scell for which respective 'C' bit is set as 1
record length(1..9) of <a href="#">PH_Record_Type</a>	

**MAC\_CTRL\_ExtPowerHeadRoom\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>MAC_CTRL_ExtPowerHeadRoom_Type</b>
<b>Comment</b>	
EPH_Octet1	<a href="#">ScellBitMap_Type</a>
PH_RecordList	<a href="#">PH_RecordList_Type</a>
	At least one record for Pcell is present. Additional one record per Scell for which respective 'C' bit is set as 1

**DC\_PH\_RecordList\_Type**

TTCN-3 Record of Type	
<b>Name</b>	<b>DC_PH_RecordList_Type</b>
<b>Comment</b>	If simultaneousPUCCH-PUSCH is not configured at least oneType 1 PH record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1. If simultaneousPUCCH-PUSCH is configured then one PH Type 2 record for Pcell followed one PH Type 2 record for PScell followed by PH Type 1 record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1
record length(1..10) of <a href="#">PH_Record_Type</a>	

**MAC\_CTRL\_DC\_PowerHeadRoom\_Type**

TTCN-3 Record Type	
<b>Name</b>	<b>MAC_CTRL_DC_PowerHeadRoom_Type</b>
<b>Comment</b>	
DC_PH_Octet1	<a href="#">ScellBitMap_Type</a>
DC_PH_RecordList	<a href="#">DC_PH_RecordList_Type</a>
	At least one record for Pcell is present. Additional one record per PScell/Scell for which respective 'C' bit is set as 1

## Annex G (informative): Change history

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2008-05					Creation of draft TS		0.0.2
2008-08					Add test models	0.0.2	0.1.0
2008-10					Add ASPs and state model	0.1.1	0.3.0
2008-12					Add details of UL/DL scheduling and cell configurations	0.4.0	0.5.0
2009-02					Change naming conventions, add more design considerations	0.5.0	1.0.0
2009-03	RAN#43	RP-090271			Presentation for Information	1.0.0	1.0.2
2009-03					Add Upper tester interface	1.0.2	1.1.0
2009-04					Improved DL scheduling	1.1.0	1.2.0
2009-06					Add normative annex D for ASP definitions	1.2.0	1.3.0
2009-08					General update	1.3.0	1.4.0
2009-09					Style /format check from ETSI EditHelp	1.4.0	1.4.1
2009-09	RAN#45	RP-090753			Presentation of v2.0.0 for approval	1.4.1	2.0.0
2009-09					Updated to 8.0.0 with no change	2.0.0	8.0.0
2009-12	RAN#46	RP-091122	0001	-	LTE ASP clarifications and update	8.0.0	8.1.0
2009-12	RAN#46	RP-091119	0002	-	CR to 36.523-3: Add new e-mail agreed LTE TTCN test cases in the TC list of Annex A and update Annex D	8.0.0	8.1.0
2009-12	RAN#46	R5s090180	0003	-	Resubmission of GCF WI 81 LTE RRC test case 8.1.2.1 on wk42 TTCN	8.0.0	8.1.0
2009-12	RAN#46	R5s090139	0004	-	Addition of GCF WI 81 LTE RRC test case 8.1.1.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090144	0005	-	Addition of GCF WI 81 LTE RRC test case 8.1.3.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090163	0006	-	Addition of GCF WI 82 EUTRA NAS test case 9.2.1.1.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090141	0007	-	Addition of GCF WI 81 LTE MAC test case 7.1.1.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090160	0008	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090156	0009	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090154	0010	-	Addition of GCF WI 82 EPC test case 9.2.2.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090165	0011	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.3	8.0.0	8.1.0
2009-12	RAN#46	R5s090171	0012	-	Addition of GCF WI 81 EUTRA MAC test case 7.1.3.3	8.0.0	8.1.0
2009-12	RAN#46	R5s090176	0013	-	Addition of GCF WI 82 EPC test case 9.3.2.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090174	0014	-	Addition of GCF WI 81 EUTRA MAC test case 7.1.3.7	8.0.0	8.1.0
2009-12	RAN#46	R5s090178	0015	-	Addition of GCF WI 81 EUTRA MAC test case 7.1.3.6	8.0.0	8.1.0
2009-12	RAN#46	R5s090198	0016	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.3.1	8.0.0	8.1.0
2009-12	RAN#46	R5s090204	0017	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.3.4	8.0.0	8.1.0
2009-12	RAN#46	R5s090202	0018	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.3.3	8.0.0	8.1.0
2009-12	RAN#46	R5s090200	0019	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.3.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090196	0020	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.4.2	8.0.0	8.1.0
2009-12	RAN#46	R5s090194	0021	-	Addition of GCF WI 81 EUTRA PDCP test case 7.3.4.1	8.0.0	8.1.0
2010-03	RAN#47	R5-100103	0090	-	An additional option for IP address allocation in test cases using UE test mode	8.1.0	8.2.0
2010-03	RAN#47	R5-101049	0081	-	Add a new clause for postamble in a UTRA/GERAN cell	8.1.0	8.2.0
2010-03	RAN#47	R5-101050	0082	2	Routine maintenance of TS 36.523-3	8.1.0	8.2.0
2010-03	RAN#47	RP-100147	0022	1	CR to 36.523-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	8.1.0	8.2.0
2010-03	RAN#47	R5s090209	0076	-	Addition of GCF WI 81 LTE Idle Mode test case 6.1.2.2 on wk42 TTCN	8.1.0	8.2.0
2010-03	RAN#47	R5s090210	0075	-	Addition of GCF WI 82 EPC test case 9.1.3.1	8.1.0	8.2.0
2010-03	RAN#47	R5s090212	0078	-	Addition of GCF WI 82 EPC test case 9.2.3.1.5	8.1.0	8.2.0
2010-03	RAN#47	R5s090214	0077	-	Addition of GCF WI 81 EUTRA MAC test case 7.1.4.15	8.1.0	8.2.0
2010-03	RAN#47	R5s090217	0072	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.5	8.1.0	8.2.0
2010-03	RAN#47	R5s090219	0073	-	Addition of GCF WI 81 EUTRA RLC test case 7.2.3.17	8.1.0	8.2.0

2014-06	RAN#64	R5s140406	2135	-	Addition of GCF WI-172 EUTRA<>UTRA aSRVCC Testcase 13.4.3.7	11.3.0	11.4.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2014-06	RAN#64	R5s140411	2136	-	Correction to applicability condition C81 for Multi-layer test case 13.1.4 & 13.1.5	11.3.0	11.4.0
2014-06	RAN#64	R5s140414	2137	-	Correction to GCF WI-082 EMM Test Case 9.2.3.1.12	11.3.0	11.4.0
2014-06	RAN#64	R5s140421	2138	-	Addition of GCF WI-172 EUTRA<->UTRA aSRVCC Testcase 13.4.3.14	11.3.0	11.4.0
2014-06	RAN#64	R5s140423	2139	-	Correction to GCF WI-156 EUTRA RRC test case 8.2.4.15a	11.3.0	11.4.0
2014-06	RAN#64	R5s140424	2140	-	Addition of Rel-10 MDT test case 8.6.2.9	11.3.0	11.4.0
2014-06	RAN#64	R5s140431	2141	-	Addition of GCF WI-172 EUTRA<->UTRA aSRVCC Testcase 13.4.3.16	11.3.0	11.4.0
2014-06	RAN#64	R5s140440	2142	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.1.4	11.3.0	11.4.0
2014-06	RAN#64	R5s140442	2143	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.2.1	11.3.0	11.4.0
2014-06	RAN#64	RP-140823	2144	-	CR to 36.523-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	11.3.0	11.4.0
2014-09	RAN#65	R5-144219	2145	-	Routine maintenance and updates	11.4.0	11.5.0
2014-09	RAN#65	R5-144399	2146	-	Correction to the guideline of EUTRA CA test execution on Band 29	11.4.0	11.5.0
2014-09	RAN#65	R5-144678	2147	-	Correction to the calculation in Test method for RRC signalling latency	11.4.0	11.5.0
2014-09	RAN#65	RP-141582	2301	-	CR to 36.523-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	11.4.0	11.5.0
2014-09	RAN#65	R5s140127	2148	-	Addition of Rel-9 Home eNB test case 8.3.4.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140331	2149	-	Correction to SRVCC test case 13.4.3.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140333	2150	-	Correction to GCF WI-159 Pre-registration at 1xRTT testcase 13.4.4.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140412	2151	-	Addition of LTE-A Minimization of Drive Tests (MDT) Testcase 8.6.11.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140427	2152	-	Correction to SRVCC testcases 13.4.3.4 and 13.4.3.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140429	2153	-	Addition of GCF WI-164 eMBMS test case 17.2.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140444	2154	-	Correction to GCF WI-081 EUTRA Idle mode Test Case 6.1.2.8a	11.4.0	11.5.0
2014-09	RAN#65	R5s140447	2155	-	Correction to common function in NAS Authentication module	11.4.0	11.5.0
2014-09	RAN#65	R5s140448	2156	-	LTE_TDD : Addition of GCF WI-086 EUTRA-UTRAN CSG test case 6.3.7	11.4.0	11.5.0
2014-09	RAN#65	R5s140450	2157	-	LTE_TDD : Addition of EUTRA-UTRAN Rel-9 Home eNB test case 6.4.3	11.4.0	11.5.0
2014-09	RAN#65	R5s140455	2158	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.2.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140457	2159	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.2.3	11.4.0	11.5.0
2014-09	RAN#65	R5s140459	2160	-	Addition of GCF WI-172 EUTRA<->UTRA aSRVCC Testcase 13.4.3.13	11.4.0	11.5.0
2014-09	RAN#65	R5s140461	2161	-	Correction of GCF WI-167 EUTRA RRC test case 8.3.2.11	11.4.0	11.5.0
2014-09	RAN#65	R5s140465	2162	-	LTE_TDD: Addition of Rel-9 Home eNB test case 8.3.4.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140467	2163	-	Correction of GCF WI-167 EUTRA Inter-RAT test cases 6.2.3.4a and 6.2.3.5a	11.4.0	11.5.0
2014-09	RAN#65	R5s140468	2164	-	Correction to f_UTRAN_RB_SetUp_PS_RAB	11.4.0	11.5.0
2014-09	RAN#65	R5s140470	2165	-	Addition of Rel-10 MDT test case 8.6.1.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140472	2166	-	Correction to definition of O13_Type	11.4.0	11.5.0
2014-09	RAN#65	R5s140473	2167	-	Correction of GCF WI-086 EUTRA<->UTRAN CSG test case 6.3.7	11.4.0	11.5.0
2014-09	RAN#65	R5s140474	2168	-	Correction of EUTRA-UTRAN HomeENB test case 6.4.3	11.4.0	11.5.0
2014-09	RAN#65	R5s140475	2169	-	Correction to function f_UTRAN_CS_Fallback_WithRedirection_WithoutRRCConnEst.	11.4.0	11.5.0
2014-09	RAN#65	R5s140476	2170	-	Correction to function f_SS_Config_64kPS_DCH4_RAB for TD_LTE<->TDSMA	11.4.0	11.5.0
2014-09	RAN#65	R5s140477	2171	-	Correction to GCF WI-086 EUTRA EMM Test Case 9.2.1.2.1c	11.4.0	11.5.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2014-09	RAN#65	R5s140478	2172	-	Addition of GCF WI-172 EUTRA<>UTRA aSRVCC Testcase 13.4.3.15	11.4.0	11.5.0
2014-09	RAN#65	R5s140480	2173	-	Correction to IMS Emergency Call test case 11.2.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140481	2174	-	Correction to GCF WI-086 UTRA<>EUTRA HSPA Handover Testcase 8.4.2.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140482	2175	-	Correction for SI 2 quater message for EUTRA<>UTRA<>GERAN test case 8.3.2.6	11.4.0	11.5.0
2014-09	RAN#65	R5s140483	2176	-	Correction to GCF WI-156 EUTRA RRC test case 8.2.4.15a	11.4.0	11.5.0
2014-09	RAN#65	R5s140484	2177	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.1.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140488	2178	-	LTE_TDD: Addition of LTE eMBMS Testcase 17.3.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140492	2179	-	Correction of test cases 8.3.1.12a, 8.3.1.15, 8.3.1.16 and 8.6.4.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140493	2180	-	Correction to template cr_G_AttachReq_EUTRANCap	11.4.0	11.5.0
2014-09	RAN#65	R5s140496	2181	-	Correction to Rel-9 EUTRA Home eNB test case 8.3.4.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140497	2182	-	Correction to GCF WI-081 EUTRA RRC Test Case 8.2.1.5	11.4.0	11.5.0
2014-09	RAN#65	R5s140498	2183	-	Addition of WI-162 LTE-A Carrier Aggregation MAC test case 7.1.3.11.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140501	2184	-	Correction for EUTRA RRC MDT re-establishment test cases	11.4.0	11.5.0
2014-09	RAN#65	R5s140503	2185	-	Correction to GCF WI-086 EUTRA RRC handover test cases 8.4.2.2 and 8.4.2.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140505	2186	-	Correction to eMBMS common functions	11.4.0	11.5.0
2014-09	RAN#65	R5s140506	2187	-	Correction to SIB 6 contents for EUTRA<>UTRA test cases using UTRA Band VI	11.4.0	11.5.0
2014-09	RAN#65	R5s140507	2188	-	Addition of WI-162 LTE-A Carrier Aggregation MAC test case 7.1.3.11.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140509	2189	-	Extension of EUTRA common functions for MAC test cases	11.4.0	11.5.0
2014-09	RAN#65	R5s140513	2190	-	Correction to GCF WI-087 EMM Test Case 9.2.3.4.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140514	2191	-	Addition of Rel-10 eICIC test case 8.3.1.21	11.4.0	11.5.0
2014-09	RAN#65	R5s140520	2192	-	Correction of test cases 8.4.2.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140526	2193	-	Correction of LTE-A Minimization of Drive Tests (MDT) Testcase 8.6.3.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140527	2194	-	Correction of GCF WI-162 LTE-A CA inter-band test cases for band combination with Band 29A	11.4.0	11.5.0
2014-09	RAN#65	R5s140528	2195	-	Correction to test case applicability conditions	11.4.0	11.5.0
2014-09	RAN#65	R5s140529	2196	-	Correction to GCF WI-086 EUTRA Idle mode test case 6.2.3.31	11.4.0	11.5.0
2014-09	RAN#65	R5s140530	2197	-	Correction to LTE-IRAT test cases 8.4.2.2 and 8.4.2.4	11.4.0	11.5.0
2014-09	RAN#65	R5s140531	2198	-	Correction to GCF WI-162 LTE-A Carrier Aggregation MAC test case 7.1.3.11.1/7.1.3.11.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140533	2199	-	Correction to EUTRA MDT test Case 8.6.2.3	11.4.0	11.5.0
2014-09	RAN#65	R5s140534	2200	-	Correction of LTE-A Minimization of Drive Tests (MDT) Test case 8.6.2.8	11.4.0	11.5.0
2014-09	RAN#65	R5s140535	2201	-	Correction to GCF WI-181 EUTRA EPS FDD <>UTRAN test Case 8.6.5.1	11.4.0	11.5.0
2014-09	RAN#65	R5s140537	2202	-	Correction of GCF WI-182 EUTRA FDD<>GERAN test case 8.6.7.2	11.4.0	11.5.0
2014-09	RAN#65	R5s140539	2203	-	Correction to EUTRA eMBMS function f_EUTRA_SetSysinfoCombination_MBMS	11.4.0	11.5.0
2014-09	RAN#65	R5s140540	2204	-	Correction to UE Test Loop Mode C for EUTRA eMBMS Testcases	11.4.0	11.5.0
2014-09	RAN#65	R5s140541	2205	-	Corrections of GCF WI-162 LTE-A CA Testcase 8.2.2.3.x for Band 29A	11.4.0	11.5.0
2014-09	RAN#65	R5s140543	2206	-	Correction of EUTRA RRC Measurement test case 8.3.1.27	11.4.0	11.5.0
2014-09	RAN#65	R5s140544	2207	-	Correction to EUTRA RRC Measurement test case 8.3.3.3	11.4.0	11.5.0
2014-09	RAN#65	R5s140545	2208	-	Correction to GCF WI-082 EUTRA RRC handover test cases 8.4.1.2 and 8.4.1.4	11.4.0	11.5.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New

2015-12	RAN#70	R5s150694	2912	-	LTE_TDD: Addition of GCF WI-201 LTE-A eICIC test case 8.3.1.21 (... new test model with OCN simulation in non-ABS subframes)	12.3.0	12.4.0
2015-12	RAN#70	R5s150704	2913	-	Addition of Rel-11 EUTRA<->UTRA rSRVCC test case 13.4.3.32	12.3.0	12.4.0
2015-12	RAN#70	R5s150741	2914	-	Correction to IMS SIP De-registration procedure for xSRVCC test cases	12.3.0	12.4.0
2015-12	RAN#70	R5s150751	2915	-	Addition of Rel-11 EUTRA<->UTRA rSRVCC test case 13.4.3.34	12.3.0	12.4.0
2015-12	RAN#70	R5s150771	2916	-	Correction of Cell reselection test case 6.1.2.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150772	2917	-	Correction of Intra E-UTRAN measurement test case 8.3.1.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150774	2918	-	Correction to GCF WI-0150 EUTRA RRC test case 8.5.1.6	12.3.0	12.4.0
2015-12	RAN#70	R5s150777	2919	-	Correction to GCF WI-082 SMS over SGs test cases 11.1.3, 11.1.4, 11.1.5, 11.1.6	12.3.0	12.4.0
2015-12	RAN#70	R5s150778	2920	-	Addition of Rel-11 LTE-A SIMTC test case 10.5.1b	12.3.0	12.4.0
2015-12	RAN#70	R5s150782	2921	-	Addition of LTE-A 2x UL Carrier Aggregation test case 8.2.2.7.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150784	2922	-	LTE_TDD: Addition of LTE-A 2x UL Carrier Aggregation test case 8.2.2.7.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150787	2923	-	Addition of LTE-A 2UL Carrier Aggregation MAC test case 7.1.4.19.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150789	2924	-	LTE_TDD: Addition of LTE-A 2UL Carrier Aggregation MAC test case 7.1.4.19.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150790	2925	-	LTE_TDD: Addition of LTE-A 2x UL Carrier Aggregation test case 8.2.2.7.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150793	2926	-	Correction to LTE-A RRC CA test cases 8.3.1.18.1, 8.3.1.18.2 and 8.3.1.18.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150794	2927	-	Correction to GCF WI-082 EMM test case 9.2.1.2.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150796	2928	-	Correction to GEA4 and A5/4 Ciphering Algorithm Implementation	12.3.0	12.4.0
2015-12	RAN#70	R5s150797	2929	-	Addition of LTE-A 2UL Carrier Aggregation RACH on SCell test case 7.1.2.10.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150799	2930	-	Correction to GCF WI-172 aSRVCC test case 13.4.3.8	12.3.0	12.4.0
2015-12	RAN#70	R5s150801	2931	-	Correction to EUTRA Idle-mode test case 6.1.2.3a	12.3.0	12.4.0
2015-12	RAN#70	R5s150802	2932	-	Correction to GCF WI-081 EUTRA Idle Mode test case 6.1.1.1b	12.3.0	12.4.0
2015-12	RAN#70	R5s150803	2933	-	Correction to LTE UTRA CSG test case 6.3.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150804	2934	-	Correction to LTE-UTRA CSG test case 6.3.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150806	2935	-	Correction to GCF WI-082 ESM test case 10.2.1	12.3.0	12.4.0
2015-12	RAN#70	R5s150807	2936	-	Correction to LTE-A (Rel-11) rSRVCC test case 13.4.3.34	12.3.0	12.4.0
2015-12	RAN#70	R5s150808	2937	-	Correction of 7.1.7.1.x and 7.1.7.2.1 test cases	12.3.0	12.4.0
2015-12	RAN#70	R5s150810	2938	-	Addition of Rel-11 LTE-A SIMTC test case 9.2.3.1.8a	12.3.0	12.4.0
2015-12	RAN#70	R5s150812	2939	-	Correction to GCF WI-087 EUTRA RRC Test case 8.4.3.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150815	2940	-	Correction to GCF WI-087 EUTRA Idle mode Testcases 6.2.3.28, 6.2.3.30	12.3.0	12.4.0
2015-12	RAN#70	R5s150816	2941	-	Correction to GCF WI-179 LTE-NIMTC testcase 9.2.1.1.2a	12.3.0	12.4.0
2015-12	RAN#70	R5s150819	2942	-	Correction to LTE-A MAC test case 7.1.3.11.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150820	2943	-	Correction to LTE-A RRC CA test cases 8.2.4.16.1, 8.2.4.16.2 and 8.2.4.16.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150821	2944	-	Addition of Rel-11 LTE-A SIMTC test case 9.2.3.1.8b	12.3.0	12.4.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2015-12	RAN#70	R5s150824	2945	-	Correction to GCF WI-087 Multi-layer testcase 13.3.2.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150828	2946	-	Correction to GCF WI-162 CA IRAT test case 8.4.2.7.1, 8.4.2.7.2 and 8.4.2.7.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150833	2947	-	Addition of GCF WI-227 Inter-RAT eMDT test case 8.6.7.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150836	2948	-	Correction to TestCases 6.2.2.2, 6.2.3.1, 6.2.3.1a	12.3.0	12.4.0
2015-12	RAN#70	R5s150837	2949	-	Correction to configuration of DRX	12.3.0	12.4.0
2015-12	RAN#70	R5s150838	2950	-	Correction to UTRAN function f_UTRAN_GMM_ServReq	12.3.0	12.4.0
2015-12	RAN#70	R5s150839	2951	-	Correction of GCF WI-081 Testcases 12.2.x and 12.3.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150840	2952	-	Correction of GCF WI-082 EPC test case 9.3.2.1	12.3.0	12.4.0
2015-12	RAN#70	R5s150842	2953	-	Correction of GCF WI 82 EPC test case 9.1.2.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150844	2954	-	Correction to Rel-9 eMBMS test case 17.2.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150845	2955	-	Correction to SS configuration for UTRAN	12.3.0	12.4.0
2015-12	RAN#70	R5s150847	2956	-	Correction to GCF WI-162 CA testcases 8.4.2.7.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150848	2957	-	Correction to GCF WI-162 TestCase 7.1.3.11.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150849	2958	-	Correction to IMSs emergency call TestCases 11.2.1, 11.2.2 and 11.2.5	12.3.0	12.4.0
2015-12	RAN#70	R5s150852	2959	-	Correction of GCF WI-162-Inter test cases 8.2.2.3.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150853	2960	-	Correction to GCF WI-086 SRVCC Testcases 13.4.3.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150855	2961	-	Correction to IMS emergency call TestCases 11.2.6	12.3.0	12.4.0
2015-12	RAN#70	R5s150856	2962	-	Correction to Rel-11 rSRVCC test case 13.4.3.32	12.3.0	12.4.0
2015-12	RAN#70	R5s150857	2963	-	Correction of function f_EUTRA_508Check_TrackingAreaUpdating_AfterHO_Steps7to8	12.3.0	12.4.0
2015-12	RAN#70	R5s150858	2964	-	Correction to GCF WI-087 EUTRA EMM testcase 9.2.3.3.5	12.3.0	12.4.0
2015-12	RAN#70	R5s150859	2965	-	Correction to GCF WI-081 testcase 7.2.3.5	12.3.0	12.4.0
2015-12	RAN#70	R5s150860	2966	-	Correction to GCF WI-082 EUTRA EMM test case 9.2.1.1.22	12.3.0	12.4.0
2015-12	RAN#70	R5s150861	2967	-	Correction to eMBMS-SC test cases 17.4.x	12.3.0	12.4.0
2015-12	RAN#70	R5s150862	2968	-	Correction to Bandwidth in MIB in initialisation of CA Testcases	12.3.0	12.4.0
2015-12	RAN#70	R5s150863	2969	-	Correction to EMM test case 9.2.2.1.3	12.3.0	12.4.0
2015-12	RAN#70	R5s150867	2970	-	Correction to Rel-8 LTE<->GERAN test cases	12.3.0	12.4.0
2015-12	RAN#70	R5s150869	2971	-	Correction to ESM test case 10.2.1	12.3.0	12.4.0
2015-12	RAN#70	R5s150870	2972	-	Correction to Rel-10 MDT test case 8.6.4.4	12.3.0	12.4.0
2015-12	RAN#70	R5s150871	2973	-	Addition of LTE-A Rel-11 test case 8.5.4.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150874	2974	-	Correction to Rel-11 SIMTC test case 10.5.1b	12.3.0	12.4.0
2015-12	RAN#70	R5s150875	2975	-	Correction of GCF WI-227-Handover failure logging test case 8.6.6.6	12.3.0	12.4.0
2015-12	RAN#70	R5s150876	2976	-	Correction of GCF WI-227 RLF logging test case 8.6.4.9	12.3.0	12.4.0
2015-12	RAN#70	R5s150877	2977	-	Correction to EMM test case 9.2.1.1.30	12.3.0	12.4.0
2015-12	RAN#70	R5s150882	2978	-	LTE_TDD: Addition of LTE-A Rel-11 test case 8.5.4.2	12.3.0	12.4.0
2015-12	RAN#70	R5s150884	2979	-	Correction of Postamble procedure for LTE<->1xRTT Pre-registration TCs	12.3.0	12.4.0
2015-12	RAN#70	R5s150887	2980	-	Correction to IMS Emergency Call test case 11.2.10	12.3.0	12.4.0
2015-12	RAN#70	R5s150899	2981	-	Correction to UTRAN postamble function for IMS emergency call test cases	12.3.0	12.4.0

2016-03	RAN#71	RP-160124	3121	-	CR to 36.523-3: Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	12.4.0	12.5.0
2016-06	RAN#72	R5-162026	3249	-	D2D ProSe: Test Model updates	12.5.0	12.6.0
2016-06	RAN#72	R5-163035	3281	1	Dual Connectivity: Test Model updates	12.5.0	12.6.0
2016-06	RAN#72	R5-163084	3288	1	Addition of PIXIT parameter required for MFBI ehancement test case	12.5.0	12.6.0
2016-06	RAN#72	R5-163085	3248	1	Routine maintenance for TS 36.523-3	12.5.0	12.6.0
2016-06	RAN#72	R5s160296	3201	-	Correction to IMS Emergency Call test case 11.2.6	12.5.0	12.6.0
2016-06	RAN#72	R5s160298	3202	-	Addition of Rel-11 EUTRA MAC test case 7.1.2.10.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160301	3204	-	Addition of Rel-11 EUTRA MAC test case 7.1.2.10.3	12.5.0	12.6.0
2016-06	RAN#72	R5s160303	3205	-	Addition of LTE-CA Inter band test case 8.2.2.3.2 in Rel-12 FDD+TDD band combination	12.5.0	12.6.0
2016-06	RAN#72	R5s160305	3206	-	Correction to Rel-10 EUTRA MAC test cases 7.1.4.18 and 7.1.4.21	12.5.0	12.6.0
2016-06	RAN#72	R5s160306	3207	-	Correction to EMM test case 9.1.3.1 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160308	3209	-	Correction to EMM test case 9.1.2.5 (Multi-PDN / IMS enabled UE)	12.5.0	12.6.0
2016-06	RAN#72	R5s160309	3210	-	Correction to EMM test case 9.1.2.7 (Multi-PDN / IMS enabled UE)	12.5.0	12.6.0
2016-06	RAN#72	R5s160315	3213	-	Addition of LTE-A CA 2UL test case 7.1.2.11.2	12.5.0	12.6.0
2016-06	RAN#72	R5s160317	3214	-	LTE_TDD: Addition of LTE-A CA 2UL test case 7.1.2.11.2	12.5.0	12.6.0
2016-06	RAN#72	R5s160319	3215	-	Correction to function f_Get_508_EPSBearerTI	12.5.0	12.6.0
2016-06	RAN#72	R5s160320	3216	-	Correction to EUTRA RRC test case 8.5.4.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160321	3217	-	Correction to EMM test case 9.2.3.1.25	12.5.0	12.6.0
2016-06	RAN#72	R5s160322	3218	-	Addition of Rel-11 LTE-A CA test case 8.2.2.7.3	12.5.0	12.6.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2016-06	RAN#72	R5s160326	3219	-	Correction to testcase 7.3.5.5	12.5.0	12.6.0
2016-06	RAN#72	R5s160327	3220	-	Correction to IMS Emergency Call test case 11.2.6	12.5.0	12.6.0
2016-06	RAN#72	R5s160329	3222	-	Correction to Cell-FACH RB setup procedure	12.5.0	12.6.0
2016-06	RAN#72	R5s160330	3223	-	Correction to (x)SRVCC test cases 13.4.3.2, 13.4.3.15 and 13.4.3.18	12.5.0	12.6.0
2016-06	RAN#72	R5s160331	3224	-	Corrections to EMM test case 9.2.1.1.29	12.5.0	12.6.0
2016-06	RAN#72	R5s160333	3226	-	Correction to test case 9.2.3.2.14 with IMS enabled	12.5.0	12.6.0
2016-06	RAN#72	R5s160334	3227	-	Corrections to EMM test cases 9.2.1.1.1a and 9.2.1.1.1b for Multi-PDN UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160335	3228	-	Correction to EMM test case 9.2.3.1.16 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160336	3229	-	Corrections to Rel-12 SSAC test cases	12.5.0	12.6.0
2016-06	RAN#72	R5s160337	3230	-	Correction to EUTRA LTE-A<>IRAT TestCase 8.6.5.4	12.5.0	12.6.0
2016-06	RAN#72	R5s160340	3231	-	Correction to EMM test case 9.2.2.2.14 (IMS enabled UE / Multi-PDN)	12.5.0	12.6.0
2016-06	RAN#72	R5s160341	3232	-	Correction to usage of function f_EUTRA_RRC_ActivateSecurity	12.5.0	12.6.0
2016-06	RAN#72	R5s160342	3233	-	Correction to function f_EUTRA_MobileInfo_GetUECapability_UECategoryExtn	12.5.0	12.6.0
2016-06	RAN#72	R5s160343	3234	-	Corrections to GCF WI-086 CSG test case 6.3.4	12.5.0	12.6.0
2016-06	RAN#72	R5s160344	3235	-	Corrections to CSG test case 6.4.6	12.5.0	12.6.0
2016-06	RAN#72	R5s160346	3237	-	Correction to function f_EUTRA_508RRC_IntraLTE_HO_InterCell_Common_Steps1_12	12.5.0	12.6.0
2016-06	RAN#72	R5s160347	3238	-	Correction to Emergency Call test case 11.2.3	12.5.0	12.6.0
2016-06	RAN#72	R5s160348	3239	-	Correction to GCF WI-082 test case 9.2.3.1.18 with IMS enabled	12.5.0	12.6.0
2016-06	RAN#72	R5s160350	3241	-	Correction of GCF WI-082 EMM test case 9.1.5.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160351	3242	-	Correction to LTE-A eMBMS-SC-CA test case 17.4.9.1 and 17.4.9.2.	12.5.0	12.6.0
2016-06	RAN#72	R5s160354	3244	-	Addition of LTE-A UL CA test case 7.1.4.20.3	12.5.0	12.6.0
2016-06	RAN#72	R5s160359	3245	-	Corrections to EMM test case 9.2.1.2.1 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160360	3246	-	Corrections to EMM test case 9.2.1.1.19 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160361	3247	-	Corrections to EMM test case 9.2.1.1.24 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160362	3250	-	Corrections to EMM test case 9.2.1.1.1 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160363	3251	-	Corrections to EMM test case 9.2.1.2.1d for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160365	3253	-	Correction to EUTRA LTE<>IRAT TestCase 6.2.1.2 and 6.2.1.3	12.5.0	12.6.0
2016-06	RAN#72	R5s160367	3254	-	Correction to IMS MO video call SSAC test case 13.5.2a	12.5.0	12.6.0
2016-06	RAN#72	R5s160368	3255	-	Corrections to EMM test case 9.2.1.1.18 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160369	3256	-	Corrections to EMM test case 9.2.1.2.4a for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160370	3257	-	Corrections to EMM test case 9.2.1.1.26 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160376	3259	-	Corrections to EUTRA Idle Mode test case 6.1.1.4 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160383	3260	-	Corrections to EUTRA MAC test cases 7.1.2.8 and 7.1.3.9	12.5.0	12.6.0
2016-06	RAN#72	R5s160384	3261	-	LTE_TDD: Correction to EUTRA eMDT test case 8.6.8.5	12.5.0	12.6.0
2016-06	RAN#72	R5s160385	3262	-	Correction to UTRAN Registration procedure with IMS enabled for LTE-IRAT test cases	12.5.0	12.6.0
2016-06	RAN#72	R5s160386	3263	-	Corrections to EMM test case 9.2.1.1.2 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160387	3264	-	Corrections to EMM test case 9.2.2.1.2 for IMS-enabled UE	12.5.0	12.6.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2016-06	RAN#72	R5s160388	3265	-	Correction to IMS Emergency Call test case 11.2.3 for Multi-PDN UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160391	3266	-	Correction to GERAN ciphering setup for InterRAT test cases with IMS relation	12.5.0	12.6.0
2016-06	RAN#72	R5s160393	3267	-	Correction to test cases 9.2.3.1.15, 9.2.3.1.15a and 9.2.3.1.18a with MultiPDN configuration	12.5.0	12.6.0
2016-06	RAN#72	R5s160394	3268	-	Correction to LTE-IRAT test cases 6.2.3.13 & 6.2.3.4 for IMS over UTRA enabled UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160395	3269	-	Correction to LTE-A eMBMS-SC-CA test case 17.4.9.1 and 17.4.9.2	12.5.0	12.6.0
2016-06	RAN#72	R5s160396	3270	-	Correction to CA / RRC connection reconfiguration test cases 8.2.4.17.x	12.5.0	12.6.0
2016-06	RAN#72	R5s160397	3271	-	Correction to f_EUTRA_508RRC_IntraLTE_CA_HO_InterCell	12.5.0	12.6.0
2016-06	RAN#72	R5s160398	3272	-	Correction to test case 7.1.4.12	12.5.0	12.6.0
2016-06	RAN#72	R5s160399	3273	-	Corrections to EMM test case 9.2.1.2.2 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160400	3274	-	Addition of PTCRB RFT-111 EUTRA Hybrid Cell TestCase 6.4.7	12.5.0	12.6.0
2016-06	RAN#72	R5s160402	3276	-	Corrections to EMM test case 9.2.1.2.3 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160404	3278	-	Corrections to EMM test case 9.2.1.2.4 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160405	3279	-	Corrections to testcase 11.2.8	12.5.0	12.6.0
2016-06	RAN#72	R5s160407	3280	-	Correction to NIMTC test case 10.5.4	12.5.0	12.6.0
2016-06	RAN#72	R5s160408	3282	-	Corrections to EMM test case 9.2.3.2.11 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160412	3284	-	Correction to GCF WI-227 Inter-RAT eMDT test case 8.6.7.4	12.5.0	12.6.0
2016-06	RAN#72	R5s160414	3287	-	Corrections to EMM test case 9.2.2.2.1 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160415	3289	-	Corrections to EMM test case 9.2.3.1.5 for Multi-PDN UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160416	3290	-	Corrections to EMM test case 9.2.3.2.2 for IMS-enabled UE	12.5.0	12.6.0
2016-06	RAN#72	R5s160417	3291	-	Correction to EMM test case 9.2.1.1.30	12.5.0	12.6.0
2016-06	RAN#72	R5s160418	3292	-	Correction to CMAS test case 18.1.3 for IMS enabled UE with Multi-PDN configuration	12.5.0	12.6.0
2016-06	RAN#72	R5s160422	3294	-	Correction to LTE-A eMBMS-SC-CA test cases	12.5.0	12.6.0
2016-06	RAN#72	R5s160423	3295	-	Corrections to testcases 13.1.19 and 13.1.20	12.5.0	12.6.0
2016-06	RAN#72	R5s160424	3296	-	LTE_TDD: Addition of Rel-11 LTE-A CA Enhancements test case 7.1.2.10.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160426	3297	-	Correction to EMM test case 9.2.2.1.8 for IMS enabled UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160429	3298	-	Corrections to EMM test cases 9.2.2.1.6 and 9.2.2.1.7	12.5.0	12.6.0
2016-06	RAN#72	R5s160430	3299	-	Corrections for EMM test cases 9.2.1.1.13 and 9.2.1.2.12	12.5.0	12.6.0
2016-06	RAN#72	R5s160434	3300	-	Correction to LTE-IRAT test case 6.2.2.8 for "IMS over UTRA" enabled UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160437	3303	-	Correction to LTE-IRAT test case 6.2.3.31 for "IMS over UTRA" enabled UEs	12.5.0	12.6.0
2016-06	RAN#72	R5s160449	3312	-	Correction for EPS transaction Identifier IE	12.5.0	12.6.0
2016-06	RAN#72	R5s160452	3314	-	Correction to EMM test case 9.2.3.1.5 for Multi-PDN UEs	12.5.0	12.6.0
2016-06	RAN#72	RP-160852	3316	-	Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	12.5.0	12.6.0
2016-06	RAN#72	R5s160459	3060	1	Correction to EUTRA Idle Mode PLMN Selection test case 6.1.1.9	12.5.0	12.6.0
2016-06	RAN#72	R5s160464	3111	1	Correction to WI-82 EMM Information procedure Testcase 9.1.5.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160465	3112	1	Addition of LTE-A UL CA test case 7.1.4.20.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160466	3114	1	LTE_TDD: Addition of LTE-A UL CA test case 7.1.4.20.1	12.5.0	12.6.0
2016-06	RAN#72	R5s160467	3115	1	Addition of LTE-A CA 2UL test case 7.1.4.20.2	12.5.0	12.6.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New

2016-09	RAN#73	R5-166273	3421	1	eDRX: Introduction of Test Model	12.7.0	13.0.0
2016-09	RAN#73	R5-165329	3423	-	eMTC: Introduction of Test Model	12.7.0	13.0.0
2016-09	RAN#73	R5s160711	3414	-	Rel-13 baseline upgrade for LTE Test Suites	12.7.0	13.0.0
2016-09	RAN#73	RP-161433	3444	-	Add new verified and e-mail agreed TTCN test cases in the TC lists in 36.523-3 (prose), Annex A	12.7.0	13.0.0
2016-12	RAN#74	R5-168069	3488	-	D2D ProSe: Test Model updates	13.0.0	13.1.0
2016-12	RAN#74	R5-168084	3491	-	eDRX: Test Model updates	13.0.0	13.1.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2016-12	RAN#74	R5-168098	3492	-	SC-PTM: Introduction of Test Model	13.0.0	13.1.0
2016-12	RAN#74	R5-168426	3496	-	Correction to UTRAN postamble sequence	13.0.0	13.1.0
2016-12	RAN#74	R5-169113	3490	-	eMTC: Test Model updates	13.0.0	13.1.0
2016-12	RAN#74	R5-169120	3487	-	Routine maintenance for TS 36.523-3	13.0.0	13.1.0
2016-12	RAN#74	R5-169149	3489	-	NB-IoT: Introduction of Test Model	13.0.0	13.1.0
2016-12	RAN#74	R5s160843	3461		Correction to EUTRA test cases for FDD half-duplex operation	13.0.0	13.1.0
2016-12	RAN#74	R5s160844	3462		Additional corrections to SCE_PHY test cases 7.1.7.1.x for DL 256QAM	13.0.0	13.1.0
2016-12	RAN#74	R5s160845	3463		Correction to EMM test case 9.2.3.3.4	13.0.0	13.1.0
2016-12	RAN#74	R5s160846	3464		Correction to EUTRA RRC MDT test case 8.6.6.2	13.0.0	13.1.0
2016-12	RAN#74	R5s160847	3465		Correction to Rel-10 EMM test case 9.2.1.1.7b	13.0.0	13.1.0
2016-12	RAN#74	R5s160849	3466		Corrections for EUTRA radio bearer test cases	13.0.0	13.1.0
2016-12	RAN#74	R5s160850	3467		Correction for EUTRA MAC test cases 7.1.4.10 and 7.1.4.18	13.0.0	13.1.0
2016-12	RAN#74	R5s160851	3468		Corrections to Inter-RAT Idle mode HeNB test case 6.4.6	13.0.0	13.1.0
2016-12	RAN#74	R5s160857	3471		Correction to EUTRA band 2 and band 25 <-> CDMA BC 1 for LTE<->1xRTT test cases	13.0.0	13.1.0
2016-12	RAN#74	R5s160858	3472		Correction to function f_EUTRA_SS_ConfigureActiveCell()	13.0.0	13.1.0
2016-12	RAN#74	R5s160866	3473		Correction to IMS emergency vcall test case test case 11.2.8	13.0.0	13.1.0
2016-12	RAN#74	R5s160870	3474		Addition of Rel-12 LTE UEPCOP test case 9.2.1.1.7c	13.0.0	13.1.0
2016-12	RAN#74	R5s160872	3475		Addition of Rel-12 LTE UEPCOP test case 9.2.3.1.1a	13.0.0	13.1.0
2016-12	RAN#74	R5s160875	3477		Addition of LTE-A Rel-12 Coverage Enhancement test case 7.1.4.24	13.0.0	13.1.0
2016-12	RAN#74	R5s160877	3478		Correction to LTE-A Rel-12 DL-256QAM test cases 7.1.7.1.11 and 7.1.7.1.12	13.0.0	13.1.0
2016-12	RAN#74	R5s160880	3480		Addition of Rel-12 LTE-A SCM test case 13.5.4	13.0.0	13.1.0
2016-12	RAN#74	R5s160882	3481		Addition of Rel-12 LTE UEPCOP test case 9.2.3.1.5b	13.0.0	13.1.0
2016-12	RAN#74	R5s160884	3482		LTE_TDD: Addition of Rel-12 LTE-A SCM test case 13.5.4	13.0.0	13.1.0
2016-12	RAN#74	R5s160886	3483		Addition of testcase 13.5.5- MTSI MO video call / SCM / 0% access probability skip for MTSI MO video call	13.0.0	13.1.0
2016-12	RAN#74	R5s160890	3485		Correction to handling of IMSoGERAN procedures	13.0.0	13.1.0
2016-12	RAN#74	R5s160891	3486		Correction to LTE-GERAN TC 6.2.2.2	13.0.0	13.1.0
2016-12	RAN#74	R5s160896	3494		Correction to NIMTC test case 10.5.4	13.0.0	13.1.0
2016-12	RAN#74	R5s160897	3495		Correction to EUTRA Idle Mode CSG test case 6.3.4	13.0.0	13.1.0
2016-12	RAN#74	R5s160902	3499		Correction to Idle Mode Test cases 6.1.1.8 and 6.1.1.9	13.0.0	13.1.0
2016-12	RAN#74	R5s160904	3500		LTE_TDD: Addition of LTE-A Rel-12 Coverage Enhancement test case 7.1.4.24	13.0.0	13.1.0
2016-12	RAN#74	R5s160906	3501		Correction to test case 9.2.3.2.1b	13.0.0	13.1.0
2016-12	RAN#74	R5s160907	3502		Correction to EMM Inter-RAT test case 9.2.3.4.1 for IMS-enabled UEs	13.0.0	13.1.0
2016-12	RAN#74	R5s160909	3504		Correction to common function f_GERAN_LLC_XID()	13.0.0	13.1.0
2016-12	RAN#74	R5s160914	3415	1	Correction to IMS Emergency Call test case 11.2.6	13.0.0	13.1.0
2016-12	RAN#74	R5s160915	3445	1	Correction to EUTRA CA Testcases 8.2.4.18.x and 8.2.4.21.x	13.0.0	13.1.0
2016-12	RAN#74	R5s160917	3446	1	Correction to function f_EUTRA_SetSystemInformationBlockType1_FreqBandIndicatorExt()	13.0.0	13.1.0

Date	TSG #	TSG Doc.	CR	Rev	Subject/Comment	Old	New
2016-12	RAN#74	R5s160918	3447	1	Correction to GCF WI-081 EUTRA Idle Mode test case 6.1.2.15	13.0.0	13.1.0
2016-12	RAN#74	R5s160919	3448	1	Correction to GCF WI-086 EUTRA RRC test cases 8.1.3.7 and 8.5.2.1	13.0.0	13.1.0
2016-12	RAN#74	R5s160920	3449	1	Correction to LTE<->U/G test cases with pre-preamble in UTRA	13.0.0	13.1.0
2016-12	RAN#74	R5s160921	3451	1	Correction to MultiPDN handling in EUTRA Testcases	13.0.0	13.1.0
2016-12	RAN#74	R5s160922	3452	1	Enhancement to MFBI pixit px_OverlappingSupportedFrequencyBand_MFBI	13.0.0	13.1.0
2016-12	RAN#74	R5s160924	3453	1	Correction to GCF WI-167 MultiLayer test case 13.1.2a	13.0.0	13.1.0
2016-12	RAN#74	R5s160926	3455	1	Correction to Rel-10 EUTRA MDT test case 8.6.3.1	13.0.0	13.1.0
2016-12	RAN#74	R5s160928	3456	1	Correction to eMBMS-SC CA TCs 17.4.9.X, 17.4.10.X, 17.4.11.X	13.0.0	13.1.0
2016-12	RAN#74	R5s160929	3458	1	Correction to GCF WI-081 EUTRA MAC test cases TCs 7.1.7.1.x	13.0.0	13.1.0
2016-12	RAN#74	R5s160930	3459	1	Correction to measCycleSCell_r10 for EUTRA CA Testcases	13.0.0	13.1.0
2016-12	RAN#74	R5s160959	3440	2	Correction to IMS emergency call test case 11.2.10	13.0.0	13.1.0
2016-12	RAN#74	R5s160960	3450	1	Correction to GCF WI-151 EUTRA RRC testcases 8.3.1.14a and 8.2.4.15a	13.0.0	13.1.0
2016-12	RAN#74	R5s160961	3454	1	Correction to function f_CheckUE_SupportedEUTRA_Bands_Chunk()	13.0.0	13.1.0
2016-12	RAN#74	R5s160963	3457	1	Correction to EUTRA Band2 – CDMA BC 1 band combination	13.0.0	13.1.0
