Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 1 of a multi-part deliverable covering conformance test specification for Mission Critical Services consisting of:

3GPP TS 37.579-1: "Mission Critical (MC) services; Part 1: Common test environment" (the present document)

3GPP TS 37.579-2 [2]: "Mission Critical (MC) services; Part 2: Mission Critical Push To Talk (MCPTT) User Equipment (UE) Protocol conformance specification"

3GPP TS 37.579-4 [4]: "Mission Critical (MC) services; Part 4: Test Applicability and Implementation Conformance Statement (ICS)"

3GPP TS 37.579-5 [5]: "Mission Critical (MC) services; Part 5: Abstract test suite (ATS)"

3GPP TS 37.579-6 [84]: "Mission Critical (MC) services: Mission Critical Video (MCVideo) User Equipment (UE) Protocol conformance specification"

3GPP TS 37.579-7 [85]: "Mission Critical (MC) services; Part 7: Mission Critical Data (MCData) User Equipment (UE) Protocol conformance specification"

In the present document, modal verbs have the following meanings:

- shall** indicates a mandatory requirement to do something
- shall not** indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

- should** indicates a recommendation to do something
- should not** indicates a recommendation not to do something
- may** indicates permission to do something
- need not** indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can indicates that something is possible

cannot indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will indicates that something is certain or expected to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

will not indicates that something is certain or expected not to happen as a result of action taken by an agency the behaviour of which is outside the scope of the present document

might indicates a likelihood that something will happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

might not indicates a likelihood that something will not happen as a result of action taken by some agency the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

1 Scope

The present document defines the common test environment required for testing Client and Server implementations for compliance to the Mission Critical Services protocol requirements defined by 3GPP.

It contains definitions of reference conditions and test signals, default messages and other parameters, generic procedures, and, common requirements for test equipment with the goal for facilitating testing in general and test procedures specification in particular. Various parts of its content are referred to from other parts of the Mission Critical Services protocol conformance testing specification e.g. TS 37.579-2 [2], 3GPP TS 37.579-6 [84], 3GPP TS 37.579-7 [85].

The present document does not define the common test environment required for testing the implementation of the underlying RRC/NAS protocols, i.e. the bearers used for transport of the Mission Critical Services signalling and media. This is defined in TS 36.508 [6] and referred to from the present document whenever needed.

In regard to default messages or other information elements contents, the present document refers to content defined in requirements specifications specified by 3GPP or other organisations.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

Editor's Note: Implication to the content of the present chapter due to the introduction of MCVideo and MCDData are FFS.

3.1 Terms

For the purposes of the present document, the terms given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

For the purpose of the present document, the following terms and definitions given in TS 24.379 [9] apply:

- An MCPTT user is affiliated to an MCPTT group
- An MCPTT user is affiliated to an MCPTT group at an MCPTT client
- Affiliation status
- Group identity
- In-progress emergency private call state
- In-progress imminent peril group state
- MCPTT client ID
- MCPTT emergency alert state
- MCPTT emergency group state
- MCPTT emergency group call state
- MCPTT emergency private call state
- MCPTT emergency private priority state
- MCPTT imminent peril group call state
- MCPTT imminent peril group state
- MCPTT private emergency alert state
- MCPTT speech
- Media-floor control entity
- Temporary MCPTT group identity
- Trusted mutual aid
- Untrusted mutual aid

For the purposes of the present document, the following terms and definitions given in TS 22.179 [7] apply:

- In-progress emergency
- MCPTT emergency alert
- MCPTT emergency group call
- MCPTT emergency state
- Partner MCPTT system
- Primary MCPTT system

For the purpose of the present document, the following terms and definitions given in 3GPP TS 24.380 [10] apply:

MBMS subchannel

For the purpose of the present document, the following terms and definitions given in 3GPP TS 23.179 [8] apply:

Pre-selected MCPTT user profile

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

ECGI	E-UTRAN Cell Global Identification

4 General

Editor's note: Implication to the content of the present chapter due to the introduction of MCVideo and MCDData are FFS.

4.0 Introduction

Depending on the TS 37.579-5[5] test model being used, either the UE (with the MCX Client installed) is considered as the IUT (MCX EUTRA test model), or, only the MCX Client is considered as the IUT (MCX IPCAN test model). In both cases the SUT is the UE, communicating with the SS over the Uu radio interface.

4.1 MCPTT Conformance testing test points overview

Figure 4.1.1 provides a general overview of all MCPTT players which may have a role in different conformance testing scenarios together with virtual test points representing the information flow which is intended for conformance testing. The figure is mainly for descriptive purposes and may not necessarily represent a real MCPTT deployment or implementation.

Figure 4.1.1: MCPTT Conformance testing test points model

NOTE 1: Which of the shown entities will be simulated and which will be real implementation depends on the test scenario. In the test scenarios in which they play a part, the entities presented with dashed borders and grey fill will be always simulated whereas, the entities with light yellow fill (UE3) will be Implementation Under Test (IUT). The entities with white fill will be either simulated or IUTs or real implementation (e.g. network) depending on the test scenario.

NOTE 2: While showing the different players, figure 4.1.1 should not be understood as showing test environment implementation.

The test points shown on Figure 4.1.1 cover behaviour/requirements observed at various reference points and communication scenarios:

- MCPTT on-network (whenever relevant, reference points as specified in TS 23.179 [8] Functional model description clause 7.3.1 'On-network functional model' are referred):
 - Application plane (MCPTT-1, MCPTT-4, MCPTT-7, MCPTT-8 and MCPTT-9), and, (CSC-1, CSC-2, CSC-4 and CSC-8); Signalling control plane (SIP-1, HTTP-1 and HTTP-2). Test point: (1) or (2). IUT: the UE or the MCPTT Client or the MCPTT Server.
 - MCPTT-3 (between different MCPTT Servers), CSC-7 (other group management Servers, normally associated with other MCPTT Servers); Signalling control plane (SIP-2, HTTP-1, HTTP2 and HTTP-3). Test point: (4). IUT: the MCPTT Server.
- MCPTT off-network (TS 23.179 [8], clause 7.3.2 'Off-network functional model'). Test point: (3). IUT: the UE.
- LTE Legacy requirements between UE and EPS and between 2 UEs (covering e.g. Bearer Management at the UE side, ProSe including among others UE-to-network relay, MBMS). Test point: (1), (2) or (3).

Figure 4.1.2 provides a general overview of functions distributions at the MCPTT server side when multiple MCPTT Servers are involved. More functional models can be found in TS 24.379 [9].

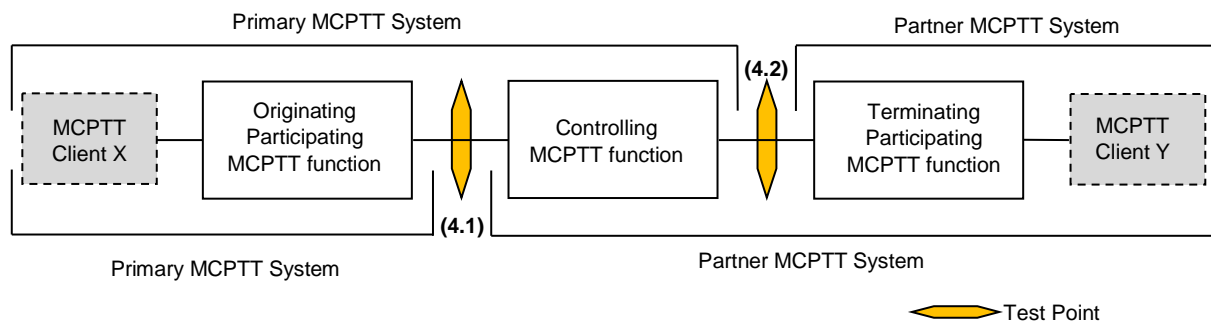

Figure 4.1.2: MCPTT Conformance testing Client-to-Client test points model

NOTE 3: While showing the different players and Server functionality, figure 4.1.2 should not be understood as showing test environment implementation.

The test points shown on Figure 4.1.2 provide an example of how 2 different communication scenarios between 2 MCPTT Servers will result in the communication between the servers being monitored at different test points (4.1) and (4.2). It should be noted that Figure 4.1.2 does not imply the physical existence of 2 test points during MCPTT Server-to-Server testing rather it shows two different information flows which need to be verified for conformance. In practice this will also mean that for testing the MCPTT Server on the Server-to-Server interface (test point 4 on Figure 4.1.1), the System Simulator (SS) will need to implement (i.e. be able to simulate) at least all 3 MCPTT functions.

4.2 MCPTT Conformance testing test environment overview

Based on the test points models shown in clause 4.1 examples for test environment implementations are provided below. Figures 4.2.1 to 4.2.3 show test configuration where the Implementation Under Test (IUT) and the System Simulator communicate, one with the other, over the radio interface (test points (1), (2) and (3)). Figure 4.2.4 shows test configuration where the IUT and the system simulator, simulating MCPTT Clients, communicate, one with the other, over the radio interface (test points (1)). Figures 4.2.5 and 4.2.6 show test configuration where the IUT and the System Simulator communicate, one with the other, over the MCPTT-3 interface, as defined by TS 23.179 [8], clause 7.5.2.4 (test points (4)).

Figure 4.2.1: Testing the MCPTT Client (on-network)

NOTE 1: Figure 4.2.1 covers also the case for testing the UE at interface (1) when the IUT behaves as a Relay. For testing this the existence of another UE playing the role of an UE off-network which uses the Relay to connect to the Server will be needed. This could be implemented by the SS simulating both in similar manner as it is shown on Figure 4.2.2.

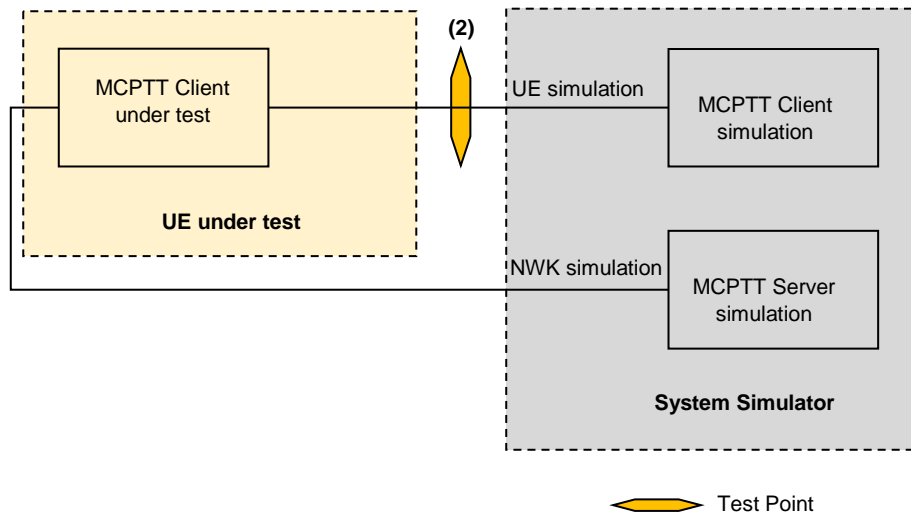

Figure 4.2.2: Testing the MCPTT Client (on-network) Relay side

NOTE 1: Figure 4.2.2 covers the case for testing the UE at interface (2) when the IUT behaves as a Relay. For testing this, the existence of NWK and Server to which the Relay relays the data will be needed. This could be implemented by the SS simulating both.

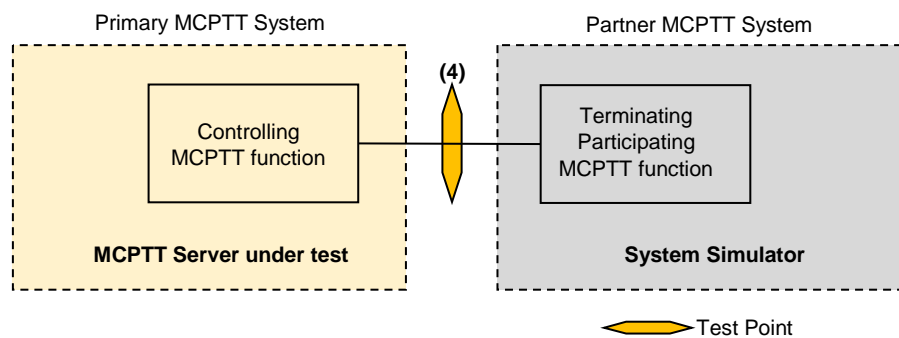

Figure 4.2.5: Testing the MCPTT Server (server-to-server), Controlling function

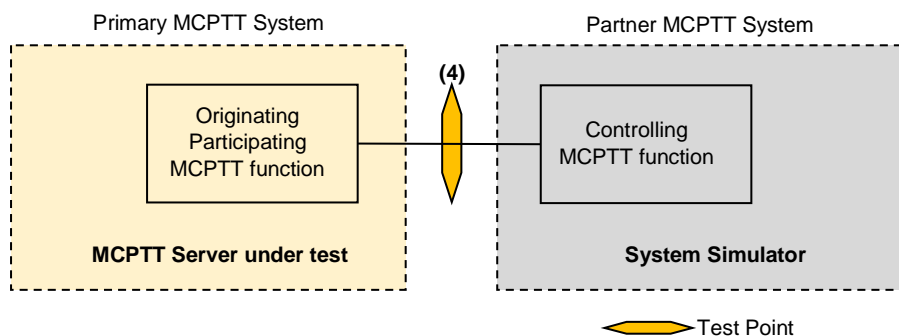

Figure 4.2.6: Testing the MCPTT Server (server-to-server), Originating function

4.3 MCPTT Conformance testing players and roles assumptions

Based on the described in clause 4.2 test environment scenarios a number of players and their roles have been designated to facilitate the test specification and provide a consistent test description.

For the purposes of MCPTT Client testing

1 MCPTT Server:

- Server A simulated by the SS (in the case of on-network operation).

2 MCPTT Clients:

- Client A installed on the implementation under test
- Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation).

3 MCPTT Users:

- User A registered with Client A and operating on the implementation under test
- User B registered with Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation); pre-set at User A configuration as User allowed to be called by User A for any types of calls
- User C known to the User A, not involved in any communication, defined for the sole purpose of testing if the User A/Client A can distinguish between different users when choosing one of them for action; pre-set at User A configuration as User allowed to be called by User A for any types of calls.

4 MCPTT groups:

- Group A to which User A is implicitly affiliated, pre-set at User A configuration, and, comprising as members User A, User B and User C, to be available throughout the entire testing.
- Group D to which User A is not implicitly affiliated, pre-set at User A configuration, and, comprising as members User B and User C, to be used for testing group affiliation.
- Groups B and C not pre-set at User A configuration, to be used for testing creation and termination of groups.

For the purposes of MCPTT Server testing

1 MCPTT Server:

- Server A installed on the implementation under test.

2 MCPTT Clients:

- Client A simulated by the System Simulator (SS)
- Client B simulated by the System Simulator (SS).

2 MCPTT Users:

- User A registered with Client A simulated by the System Simulator (SS) ; pre-set at User A configuration as User allowed to be called by User A for any types of calls
- User B registered with Client B simulated by the System Simulator (SS); pre-set at User A configuration as User allowed to be called by User A for any types of calls

1 MCPTT group:

- Group A to which User A is implicitly affiliated, pre-set at User A configuration, and, comprising as members User A and User B to be available throughout the entire testing.

4.4 References to TS 33.179 and TS 33.180

For the purposes of this Technical Specification, it is assumed that TS 33.180 supersedes TS 33.179 and is a backwards compatible substitute for TS 33.179.

4.5 MCVideo Conformance testing test points overview

Figure 4.5.1 provides a general overview of all MCVideo players which may have a role in different conformance testing scenarios together with virtual test points representing the information flow which is intended for conformance testing. The figure is mainly for descriptive purposes and may not necessarily represent a real MCVideo deployment or implementation.

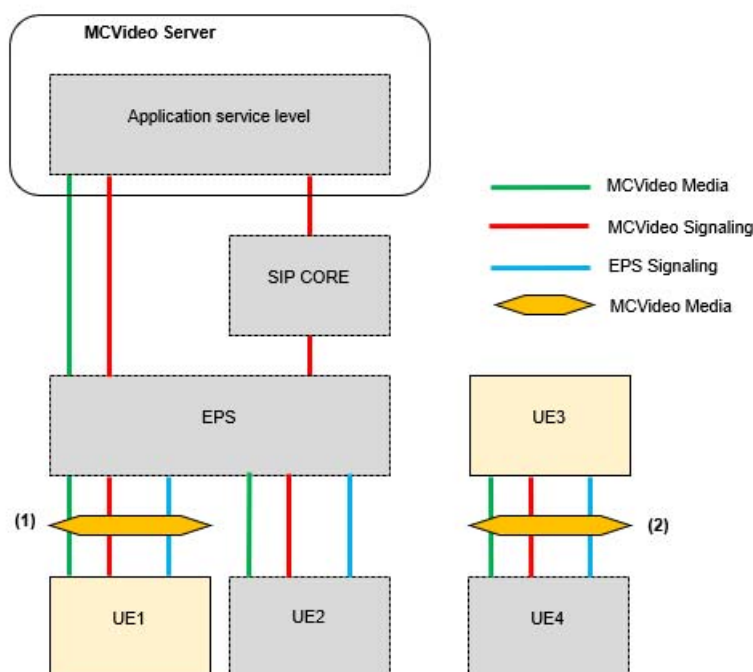

Figure 4.5.1: MCVideo Conformance testing test points model

NOTE 1: Which of the shown entities will be simulated and which will be real implementation depends on the test scenario. In the test scenarios in which they play a part, the entities presented with dashed borders and grey fill will be always simulated whereas, the entities with light yellow fill will be Implementation Under Test (IUT).

NOTE 2: While showing the different players, figure 4.5.1 should not be understood as showing test environment implementation.

The test points shown on Figure 4.5.1 cover behaviour/requirements observed at various reference points and communication scenarios:

- MCVideo on-network (TS 23.280 [110] Functional model description clause 7.3.1 'On-network functional model' and TS 23.281 [91] Functional model description clause 6.1.1 'On-network functional model').
- Application plane (MCVideo-1, MCVideo-4, MCVideo-5, MCVideo-6, MCVideo-7, MCVideo-8 and MCVideo-9), and, (CSC-1, CSC-2, CSC-4, CSC-8, and CSC-14); Signalling control plane (SIP-1, HTTP-1 and HTTP-2). Test point: (1). IUT: the UE or the MCVideo Client.
- MCVideo off-network (TS 23.280 [110], clause 7.3.2 'Off-network functional model' and TS 23.281 [91], clause 6.1.2 'Off-network functional model'). Test point: (2). IUT: the UE.
- LTE Legacy requirements between UE and EPS and between 2 UEs (covering e.g. Bearer Management at the UE side, ProSe, MBMS). Test point: (1) or (2).

4.6 MCVideo Conformance testing test environment overview

Based on the test points models shown in clause 4.5 examples for test environment implementations are provided below. Figures 4.6.1 and 4.6.2 show test configuration where the Implementation Under Test (IUT) and the System Simulator communicate, one with the other, over the radio interface (test points (1) and (2)).

4.7 MCVideo Conformance testing players and roles assumptions

Based on the described test environment scenarios in clause 4.6, a number of players and their roles have been designated to facilitate the test specification and provide a consistent test description.

For the purposes of MCVideo Client testing

1 MCVideo Server:

- Server A simulated by the SS (in the case of on-network operation).

2 MCVideo Clients:

- Client A installed on the implementation under test
- Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation).

3 MCVideo Users:

- User A registered with Client A and operating on the implementation under test
- User B registered with Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation); pre-set at User A configuration as User allowed to be called by User A for any types of calls
- User C known to the User A, not involved in any communication, defined for the sole purpose of testing if the User A/Client A can distinguish between different users when choosing one of them for action; pre-set at User A configuration as User allowed to be called by User A for any types of calls.

4 MCVideo groups:

- Group A to which User A is implicitly affiliated, pre-set at User A configuration, and, comprising as members User A, User B and User C, to be available throughout the entire testing.
- Group D to which User A is not implicitly affiliated, pre-set at User A configuration, and, comprising as members User B and User C, to be used for testing group affiliation.
- Groups B and C not pre-set at User A configuration, to be used for testing creation and termination of groups.

4.8 MCDData Conformance testing test points overview

Figure 4.8.1 provides a general overview of all MCDData players which may have a role in different conformance testing scenarios together with virtual test points representing the information flow which is intended for conformance testing. The figure is mainly for descriptive purposes and may not necessarily represent a real MCDData deployment or implementation.

Figure 4.8.1: MCDData Conformance testing test points model

NOTE 1: Which of the shown entities will be simulated and which will be real implementation depends on the test scenario. In the test scenarios in which they play a part, the entities presented with dashed borders and grey fill will be always simulated whereas, the entities with light yellow fill (UE1 or UE3) will be Implementation Under Test (IUT).

NOTE 2: While showing the different players, figure 4.8.1 should not be understood as showing test environment implementation.

The test points shown on Figure 4.8.1 cover behaviour/requirements observed at various reference points and communication scenarios:

- MCDData on-network (TS 23.280 [110] Functional model description clause 7.3.1 'On-network functional model' and TS 23.282 [91] Functional model description clause 6.4.1, 6.5.1, and 6.6.1 'On-network functional model'.):
- Application plane (MCDData-SDS-1, MCDData-SDS-2, MCDData-SDS-3, MCDData-FD-1, MCDData-FD-2, MCDData-FD-3, MCDData-FD-4, MCDData -5, and MCDData -6), and, (CSC-1, CSC-2, CSC-4, CSC-8, and CSC-14); Signalling control plane (SIP-1, HTTP-1 and HTTP-2). Test point: (1). IUT: the UE or the MCDData Client.
- MCDData off-network (TS 23.280 [110], clause 7.3.2 'Off-network functional model' and TS 23.282 [91], clause 6.4.2 'Off-network functional model'.). Test point: (2). IUT: the UE.
- LTE Legacy requirements between UE and EPS and between 2 UEs (covering e.g. Bearer Management at the UE side, ProSe). Test point: (1) or (2).

4.9 MCDData Conformance testing test environment overview

Based on the test points models shown in clause 4.8 examples for test environment implementations are provided below. Figures 4.9.1 and 4.9.2 show test configuration where the Implementation Under Test (IUT) and the System Simulator communicate, one with the other, over the radio interface (test points (1) and (2)).

Figure 4.9.1: Testing the MCDData Client (on-network)

Figure 4.9.2: Testing the MCDData Client (off-network)

4.10 MCDData Conformance testing players and roles assumptions

Based on the described test environment scenarios in clause 4.9, a number of players and their roles have been designated to facilitate the test specification and provide a consistent test description.

For the purposes of MCDData Client testing

1 MCDData Server:

- Server A simulated by the SS (in the case of on-network operation).

2 MCDData Clients:

- Client A installed on the implementation under test
- Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation).

3 MCDData Users:

- User A registered with Client A and operating on the implementation under test
- User B registered with Client B simulated by the System Simulator (SS) either explicitly (in the case of off-network operations), or, implicitly (in the case of on-network operation); pre-set at User A configuration as User allowed to be called by User A for any types of calls

- User C known to the User A, not involved in any communication, defined for the sole purpose of testing if the User A/Client A can distinguish between different users when choosing one of them for action; pre-set at User A configuration as User allowed to be called by User A for any types of calls.

4 MCDATA groups:

- Group A to which User A is implicitly affiliated, pre-set at User A configuration, and, comprising as members User A, User B and User C, to be available throughout the entire testing.
- Group D to which User A is not implicitly affiliated, pre-set at User A configuration, and, comprising as members User B and User C, to be used for testing group affiliation.
- Groups B and C not pre-set at User A configuration, to be used for testing creation and termination of groups.

5 Common Test Environment

5.1 General

Clause 5 provides basic test requirements, and, Generic Procedures and Default messages content to be used by the test cases wherever applicable.

5.2 Reference test conditions

5.2.1 General

For E-UTRA any frequency band can be used to provide the underlying communication bearer to carry the MCS communication. The requirements are defined in TS 36.508 [6].

5.2.2 On-network

5.2.2.1 General

In on-network test scenarios, for UE testing, the system simulator (SS) provides radio connectivity and acts as MCX server, the UE (with the MCX client installed) is the system under test (SUT). Depending on the test case requirements there are different test configurations: Single cell configuration, multi-cell configuration and single cell configuration with MBMS.

5.2.2.2 Test configuration for on-network UE testing

5.2.2.2.1 Single cell configuration

System Simulator:

- SS (MCX server)
- One cell:
The cell belongs to the PLMN which is configured in the <HPLMN> element of the MCX Initial UE Configuration document (Table 5.5.8.1-1).
For E-UTRA the cell uses default system information as specified in TS 36.508 [6] clause 4.4.

IUT:

- UE (MCX client)
- The test USIM as defined in clause 5.5.10 is used.

5.2.2.2.2 Multi-cell configuration

System Simulator:

- SS (MCX server)
- Two or more cells:
The details of the multi-cell configuration (number of cells, PLMN, cell power) are specified in the test case. For E-UTRA the cells use default system information as specified in TS 36.508 [6] clause 4.4.

IUT:

- UE (MCX client)
- The test USIM as defined in clause 5.5.10 is used.

5.2.2.2.3 Single cell configuration with MBMS

System Simulator:

- SS (MCX server)
- One cell:
The cell belongs to the PLMN which is configured in the <HPLMN> element of the MCX Initial UE Configuration document (Table 5.5.8.1-1).
For E-UTRA the cell uses system information combination 15 as defined in TS 36.508[6] clause 4.4.3.1; a pre-activated MBMS bearer exists.

IUT:

- UE (MCX client)
- The test USIM as defined in clause 5.5.10 is used.

5.2.3 Off-network

When operating in off-network environment a MCS client shall:

- implement the procedures for ProSe direct discovery for public safety use as specified in 3GPP TS 24.334 [78];
- implement the procedures for one-to-one ProSe direct communication for Public Safety use as specified in 3GPP TS 24.334 [78].
- implement the procedures for one-to-many ProSe direct communication for Public Safety use as specified in 3GPP TS 24.334 [78].

5.3 Generic test procedures for UE MCS operation

5.3.1 General

The purpose of the procedures specified in the following clauses is to facilitate test description by providing procedure sequences which can be referred from the relevant test cases specified e.g. in 3GPP TS 37.579-2 [2], 3GPP TS 37.579-6 [84], 3GPP TS 37.579-7 [85].

The procedures specified are required to ensure that any MC service can take place or specific MC relevant pre-conditions are met before a test case can be executed.

Within the context of the procedures, MCX refers to MCPTT, MCVideo or MCData.

5.3.2 Initial MCX Authentication, Registration, Configuration and Subscription

5.3.2.1 Initial conditions

The procedure can be used in any test configuration for on-network UE testing described in clause 5.2.2.

In addition:

- The MCX Client has been provisioned either with the address information of the server from which the client can retrieve the MCX UE initial configuration document (steps 1a1-1a2 of procedure 'MCX Initial Configuration and User Authentication', Table 5.3.2.3.1-1) or directly with the Initial UE Configuration Data as specified in Table 5.5.8.1-1.
- According to TS 33.180 [94] all HTTP connections are secured by TLS. The HTTP-1 interface authentication between the HTTP client in the MC UE and the HTTP server endpoint (HTTP proxy, IdM server or KMS) shall be performed by one-way authentication of the HTTP server endpoint based on server certificate as described in TS 33.180 [94] clause 6.1.1.
- The UE User is provided with username/password for user authentication (px_MCX_User_A_username, px_MCX_User_A_password as provided in TS 37.579-5 [5], Table 9.2-1: MCX Client Common PIXIT).
- The UE is provisioned with the names and values of the Transport Key (TrK) and the Integrity Key (InK), since the KMS shall encrypt the key material sent to the client with the TrK and sign the response with the TrK or the InK according to TS 33.180 [94].

5.3.2.2 Main Procedure

5.4 Generic test procedures for RRC/NAS signalling

5.4.1 General

The purpose of the procedures specified in the following clauses is to facilitate test description by providing procedure sequences which can be referred from the relevant test cases specified e.g. in 3GPP TS 37.579-2 [2], 3GPP TS 37.579-6 [84], 3GPP TS 37.579-7 [85].

The intention is, wherever possible, that RRC/NAS signalling and initial conditions should not be provided in the test descriptions rather should be referred to the procedure steps described in the generic procedures below, whereas the MCS SIP signalling and initial conditions when relevant for the test purposes shall be explicitly provided in the test description itself.

Throughout the generic test procedures RRC/NAS behaviour is denoted as "SS" for the System Simulator simulating the NWK side of the communication, and "UE" for the Implementation Under Test (IUT), whereas the MCPTT/MCVideo/MCData relevant behaviour is denoted as "SS (MCPTT/MCVideo/MCData server)" and "UE (MCPTT/MCVideo/MCData client)"/"UE (MCPTT/MCVideo/MCData user)" respectively. ProSe related SS behaviour when the SS simulates a UE device is denoted e.g. as "SS-UE1".

Depending on the TS 37.579-5[5] test model being used, the RRC/NAS signalling is:

- MCX EUTRA test model: normative.
- MCX IP CAN test model: informative, unless specifically specified otherwise elsewhere.

5.4.1A UE APN/PDN support assumptions

According to TS 23.280 [110] clause 5.2.7.0 an MC service UE shall use APNs for the SIP-1, HTTP-1 and CSC-1 reference points, which may be different or all the same. To limit the test specification complexity it is assumed that only one APN is used and therefore there is a single MCX PDN. In addition there might be an IMS PDN and an internet PDN so that three PDNs need to be taken into account:

1. MCX PDN with default EPS bearer using QCI=69

NOTE 1: It should be noted that the core specs impose a requirement that the QCI value 8 or better shall be used for the EPS bearer that transports HTTP-1 reference point messaging. Using a single APN and having for the EPS bearer QCI=69 will satisfy this.

NOTE 2: Void.

2. Internet PDN with default EPS bearer using QCI=9
3. IMS PDN with default EPS bearer using QCI=5

This results in the need to handle up to three PDNs during MCX conformance tests.

NOTE 3: It should be noted that, handling IMS and MCX with one APN is theoretically possible but may have undesirable implications e.g. VoLTE signalling could delay MCX signalling therefore the assumption is that such implementations will be undesirable and unlikely.

Consequently, for IMS and MCX it should be assumed that the UE will do 2 different registrations, i.e. for each of them there will be a separate IP connection (different IP addresses at the UE and the SS).

Depending on UE configuration PDN connectivities for the up-to three PDNs may be established. There are two major scenarios:

1. The MCX PDN connectivity gets established automatically after switch-on during the initial registration procedure. In addition the UE may establish PDN connectivities to the IMS PDN and/or the internet PDN. The connectivity to these PDNs may be requested in any order. There can be 1, 2 or 3 PDNs.
2. The UE requests PDN connectivities for IMS and/or internet but not for MCX. If IMS and internet are requested, it may be in any order. Establishment of the MCX PDN connectivity is triggered after the initial registration in a separate procedure. There can be 2 or 3 PDNs in total.

To serve the above scenarios the following parameters are defined in TS 37.579-5 [5]:

- `px_MCX_InitialRegistration_TypeOfPDN1`:
First PDN registered during initial registration (either 'ims' or 'internet' or 'mcx')
- `px_MCX_InitialRegistration_TypeOfPDN2`:
Second PDN registered during initial registration; in addition to 'ims' or 'internet' or 'mcx' it may be 'none' to indicate that there is no second PDN connectivity requested by the UE during initial registration.
- `px_MCX_InitialRegistration_TypeOfPDN3`:
Third PDN registered during initial registration; in addition to 'ims' or 'internet' or 'mcx' it may be 'none' to indicate that there is no third PDN connectivity requested by the UE during initial registration.

The type of the parameters is a TTCN-3 enumerated type with values 'ims', 'internet', 'mcx' and 'none'.

In addition there is the parameter `px_AccessPointName` in TS 36.523-3 [74] which is used as default APN, i.e. for a PDN for which the UE does not provide an APN (NOTE: Any, but only one, of the three PDNs can be the one with default APN).

Regarding the default EPS bearers for the respective mission critical services the following applies for MCX conformance tests:

- **MCPTT**:
A single dedicated EPS bearer with QCI=65 is used with packet filters for the audio stream and media plane control signalling (see also TS 23.379 [126] clause 5.7.3)

- MCVideo:
A single dedicated EPS bearer with QCI=67 is used with packet filters for the audio and video streams and transmission control signalling (see also TS 23.281 [90] clause 5.5.3)
- MCData:
A single dedicated EPS bearer with QCI=70 is used with packet filter for the TCP data stream (see also TS 23.282 [91] clause 5.8.3)

5.4.5 MCX CO communication over ProSe direct one-to-one communication out of E-UTRA coverage-establishment

5.4.5.1 Initial conditions

The procedure requires an off-network environment according to clause 5.2.3.

System Simulator:

- SS-UE1 (MCX client).
 - For the underlying "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [6], configured for and operating as ProSe Direct Communication transmitting and receiving device.
 - GNSS simulator configured to simulate a location in the centre of Geographical area #1 and providing timing reference as defined in TS 36.508 [6] Table 4.11.2-2 scenario #1, for the assistance of E-UTRAN off-network testing.

NOTE: For operation in off-network environment, it needs to be ensured that after the UE is powered up it considers the Geographical area #1 as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".

5.4.9 MCX communication in E-UTRA / Change of cells

5.4.9.1 Initial conditions

The procedure requires a multi-cell configuration according to clause 5.2.2.2.2 with 3 cells:

- Cell 1, Cell 2 and Cell 4, all operating on the same frequency

NOTE 1: The procedure only requires at maximum 2 cells to be active at any one instance.

- Cells 1 and 2 are on the same PLMN1, whereas Cell 4 is on a different PLMN2
- The UE is allowed to operate on both PLMN1 and PLMN2. PLMN1 is set as HPLMN and PLMN2 is set as VPLMN in Table 5.5.8.1-1 (MCX Initial UE Configuration Defaults).

NOTE 2: The assumptions for the PDN support of a MCX capable UE, including the default EPS bearer context QCI requirements in regard to the different PDN are described in 5.4.1A.

5.4.9.2 Definition of system information messages

The E-UTRA default system information messages as defined in TS 36.508 [6] are used.

5.4.9.3 Procedure

Table 5.4.9.3-1 illustrates the downlink power levels and other changing parameters to be applied for the cells at various time instants of the test execution. Row marked "T0" denotes the initial conditions after preamble, while columns marked "T1" ... "Tn" are to be applied subsequently. The exact instants on which these values shall be applied are described elsewhere in the present clause.

5.4.11 MCX CO communication over ProSe direct one-to-many communication out of E-UTRA coverage / Monitoring/Discoverer procedure for group member discovery / One-to-many communication

5.4.11.1 Initial conditions

The procedure requires an off-network environment according to clause 5.2.3.

System Simulator:

- SS-UE1 (MCX client).
 - For the underlying "transport bearer" over which the SS and the UE will communicate, the SS is behaving as SS-UE1 as defined in TS 36.508 [6], configured for and operating as ProSe Direct Communication transmitting and receiving device.
 - GNSS simulator configured to simulate a location in the centre of Geographical area #1 and providing timing reference as defined in TS 36.508 [6] Table 4.11.2-2 scenario #1, for the assistance of E-UTRAN off-network testing.

NOTE: For operation in off-network environment, it needs to be ensured that after the UE is powered up it considers the Geographical area #1 as being one of the geographical areas set in the USIM for operation when UE is "not served by E-UTRAN".

IUT:

- UE (MCX client)
 - The test USIM set as defined in clause 5.5.10 is inserted.
 - Detailed initial conditions for the UE (MCX client) shall be specified in the TC referring to the present procedure.

UE state:

- The UE is in state Switched OFF (state 1) according to TS 36.508 [6].

5.5.3 Default SDP message and other information elements

5.5.3.1 SDP Message

5.5.3.1.0 Common conditions for SDP Message

The following conditions apply throughout clause 5.5.3.1:

Table 5.5.3.1.0-1: Conditions

Condition	Explanation
INITIAL_SDP_OFFER	SDP message is an initial offer
SDP_OFFER	SDP message is an offer; INITIAL_SDP_OFFER implies SDP_OFFER, i.e. when a test case or test procedure specifies INITIAL_SDP_OFFER then SDP_OFFER shall be applied too, even when not explicitly specified.
SDP_ANSWER	SDP message is an Answer
FIRST_SDP_FROM_UE	First SDP message sent by the UE within the session; FIRST_SDP_FROM_UE shall be applied implicitly for an SDP message sent by the UE when the SDP message is the first SDP message sent by the UE for a session. ⇒ In general FIRST_SDP_FROM_UE does not need to be specified for a specific message content.
FIRST_SDP_FROM_SS	First SDP message sent by the SS within the session; FIRST_SDP_FROM_SS shall be applied implicitly for an SDP message sent by the SS when the SDP message is the first SDP message sent by the UE for a session. ⇒ In general FIRST_SDP_FROM_SS does not need to be specified for a specific message content; nevertheless FIRST_SDP_FROM_SS may be specified for a specific message content when the SDP message is for a new session (e.g. when a new dialog replaces a pre-established session)
IMPLICIT_GRANT_REQUESTED	An implicit grant is requested by the user
IMPLICIT_FLOOR_GRANTED	An implicit grant shall be granted by the SS
PRE_ESTABLISHED_SESSION	SDP message during establishment or modification of a pre-established session NOTE: The condition shall be applied for all SDP messages of preestablished session test cases and it is not explicitly mentioned in specific message content for these test cases
WITHOUT_FLOORCONTROL	SDP message for MCPTT call without floor control: In general when this condition is applied for an on-demand call the SDP message does not contain a media description for media plane control at all, whereas for call establishment using pre-established session the SDP message still contains a media description for media plane control but without any floor control related fmtp attributes (see TS 24.380 [10] clauses 14.2.6 and 14.3.7).
WITHOUT_TRANSMISSIONCONTROL	SDP message for MCVideo call without transmission control Editor's note: In contrast to MCPTT there is no "mc_no_floor_ctrl" (or similar) fmtp parameter for MCVideo yet.
WITHOUT_SECURITY	In case of private call: SDP message shall not contain any "a=key-mgmt" attribute for end-to-end security
WITH_SECURITY	End-to-end security to be applied independent from other conditions like PRIVATE-CALL, SDP_OFFER (e.g. for first-to-answer call)
SDS_SESSION	SDP message for establishment of an SDS session according to TS 24.282 [87] clause 9.2.4.

NOTE 1:	If "ssrc" media attributes are included, then at least one "ssrc=" line shall contain a "cname" source attribute according to RFC 5576 [116] clause 6.1.			
NOTE 2:	Even though there is no clarity in core specs it is assumed that a key-mgmt attribute at session level does not affect the media control security, i.e. the key-mgmt attribute is not applicable for the "application" media description for which still the CSK is used as security key. This is in contrast to RFC 4566 [27] clause 5 saying "In general, session-level values are the default for all media unless overridden by an equivalent media-level value."			
NOTE 3:	If the UE is configured as lite implementation according to RFC 5245 [115], it shall include "a=ice-lite" session-level attribute; nevertheless this is not a test requirement unless specified otherwise in a test case.

5.5.6 Default MCPTT media plane control messages and other information elements

5.5.6.1 General

The media plane control protocols messages specified in the present document are based on those specified in TS 24.380 [10] which in turn are based on the RTCP Application Packets (RTCP: APP), as defined in IETF RFC 3550 [76].

The following conditions apply throughout clause 5.5.6:

Table 5.5.6.1-1: Conditions

Condition	Explanation
FA	IE for when an active Functional Alias is used
Multi-Talker	IE for when a Multi Talker call is active
ACK	Message requests a Floor Ack
NOTE: For further conditions see table 5.5.1-1	

For MCPTT media plane control different SSRCs (Synchronization SouRCes) need to be distinguished. Table 5.5.6.1-2 specifies the SSRCs as used in the default MCPTT media plane control messages for the case that there is no multiplexing of media plane control channels.

NOTE 1: Multiplexing of media plane control channels has been introduced in Rel-18 of TS 24.379 [9] and TS 24.380 [10] and may be specified in Rel-18 and above test cases.

Table 5.5.6.1-2: SSRCs in MCPTT media plane control messages (No multiplexing of media plane control channels)

SSRC (NOTE 1)	Description	Value
---------------	-------------	-------

Audio SSRC of the client (NOTE 1)	SSRC to be used by the client (Client A) in the audio stream	Arbitrarily selected by the SS and assigned to the client when the floor is granted (NOTE 2) using the mc_ssrc fntp attribute in case of implicit grant or by a Floor Granted message otherwise (NOTE 3)
Audio SSRC of a remote client (NOTE 1)	SSRC of the audio stream of a remote client (Client B)	Arbitrarily selected by the SS (NOTE 2)
RTCP SSRC of the client (NOTE 1)	SSRC used by the client (Client A) in the RTCP header of the MCPTT media plane control messages sent to the SS	The client may use any value, value is not checked by the SS (NOTE 4).
RTCP SSRC of the SS (NOTE 1)	SSRC used by the SS in the RTCP header of the MCPTT media plane control messages sent to the client	Arbitrarily selected by the SS (NOTE 4)
<p>NOTE 1: The terms "Audio SSRC" and "RTCP SSRC" are as introduced in Rel-18 of TS 24.380 [10].</p> <p>NOTE 2: Different SSRC values shall be selected by the SS for audio streams from different clients ⇒ There is no need to consider collision detection and resolution according to IETF RFC 3550 [76].</p> <p>NOTE 3: Even though the client may use the a=ssrc SDP attribute to indicate which SSRC it would like to use in the audio stream, according to TS 24.380 [10] the client has to use the value provided by the server in the "mc_ssrc" fntp attribute of the SDP answer or in the "Audio SSRC of Granted Participant" field of the Floor Granted message.</p> <p>NOTE 4: In clause 4.3.3.1 TS 24.380 [10] clarifies in Rel-18 that "the SSRC of the RTCP header is used to enable multiplexing of media plane control channels"; in clauses 14.2.7 and 14.3.8 it is clarified that the "mc_floor_ssrc" fntp attribute is used to indicate support of multiplexing and to exchange of the SSRC values to be used in the RTCP header. ⇒ It is assumed that RTCP SSRC values have no meaning in case of no multiplexing.</p>

5.5.8.3 MCPTT User Profile

The structure of a user profile document is specified in TS 24.484 [14] clause 8.3, single MCPTT group configuration parameters are defined in TS 24.483 [13] clause 5.2.

The structure of the configuration document is based on the XML Schema in clause 8.3.2.3 of TS 24.484 [14] and XML "ruleset" schema according to IETF RFC 4745 [103]. To distinguish the schemas the prefix "cp" ("common policy") is used for the ruleset.

5.5.10 Common MCS test USIM parameters

5.5.10.1 General

The format and coding of elementary files of the USIM are defined in 3GPP TS 31.102 [73]. Those of the ISIM are defined in 3GPP TS 31.101 [79] and 3GPP TS 31.103 [80].

The present clause defines default MCS relevant parameters for programming the elementary files of the test USIM when running conformance test cases defined in TS 37.579-2 [2], TS 37.579-6 [84], or TS 37.579-7 [85].

For requirements to the test USIM/ISIM needed for the E-UTRA/EPC and MCS off-network ProSe operation see 3GPP TS 36.508 [6], clause 4.9.

5.5.11 Default MCVideo Transmission Control Messages and other Information Elements

5.5.11.0 General

The following conditions apply throughout clause 5.5.11:

Table 5.5.11.0-1: Conditions

Condition	Explanation
FA	IE for when an active Functional Alias is used
ACK	Message requests a Transmission control Ack
UPLINK	The message is sent from the UE
DOWNLINK	The message is sent from the SS
NOTE:	For further conditions see table 5.5.1-1

For MCVideo media plane control different SSRCs (Synchronization SouRCes) need to be distinguished. Table 5.5.11.0-2 specifies the SSRCs as used in the default MCVideo media plane control messages for the case that there is no multiplexing of media plane control channels.

NOTE 1: Multiplexing of media plane control channels has been introduced in Rel-18 of TS 24.281 [86] and TS 24.581 [88] and may be specified in Rel-18 and above test cases.

NOTE 2: In contrast to Rel-18 where there are distinct SSRCs for the audio and video stream, in Before-Rel-18 releases there is still only one SSRC identifying a media stream. In Transmission Control Messages this Media SSRC effectively is the same as the Audio SSRC of Rel-18 as the Field ID is the same, but in Before-Rel-18 releases there is no field for a Video SSRC.

NOTE 3: In test cases Before-Rel-18 behaviour is applied unless specified otherwise in the test case.

**Table 5.5.11.0-2: SSRCs in MCVideo media plane control messages
(No multiplexing of media plane control channels)**

SSRC (NOTE 1)	Description	Value
---------------	-------------	-------

Media/Audio SSRC of the client (NOTE 1)	Before-Rel18: SSRC identifying the media stream of the client (Client A)	Arbitrarily selected by the SS and assigned to the client when the transmission is granted by sending a Transmission Granted message (NOTE 2)
	Rel-18 and later: SSRC identifying the audio stream of the client (Client A)	
Video SSRC of the client (NOTE 1)	Before-Rel18: Not applicable - there is no Video SSRC in transmission control messages and no SDP fmp attribute indicating such SSRC and the SSRC used in RTP packets of the video stream is not specified.	Before-Rel18: Not present in DL, not checked in UL
	Rel-18 and later: SSRC identifying the audio stream of the client (Client A)	Rel-18 and later: Arbitrarily selected by the SS and assigned to the client when the transmission is granted (NOTE 2)
Media/Audio SSRC of a remote client (NOTE 1)	Before-Rel18: SSRC identifying the media stream of a remote client (Client B, C)	Arbitrarily selected by the SS (NOTE 2)
	Rel-18 and later: SSRC identifying the audio stream of a remote client (Client B, C)	
Video SSRC of a remote client (NOTE 1)	Before-Rel18: Not applicable - there is no Video SSRC in transmission control messages and no SDP fmp attribute indicating such SSRC and the SSRC used in RTP packets of the video stream is not specified.	Before-Rel18: Not present in DL, not checked in UL
	Rel-18 and later: SSRC identifying the video stream of a remote client (Client B, C)	Rel-18 and later: Arbitrarily selected by the SS (NOTE 2)
RTCP SSRC of the client (NOTE 1)	SSRC used by the client (Client A) in the RTCP header of the MCVideo media plane control messages sent to the SS	The client may use any value, value is not checked by the SS (NOTE 4).
RTCP SSRC of the SS (NOTE 1)	SSRC used by the SS in the RTCP header of the MCPTT media plane control messages sent to the client	Arbitrarily selected by the SS (NOTE 4)
<p>NOTE 1: The terms "RTCP SSRC", "Audio SSRC" and "Video SSRC" have been introduced in Rel-18 of TS 24.581 [88]. "Media SSRC" is used as in Rel-14 .. Rel-17 there is no "Audio SSRC" and "Video SSRC" yet in media plane control messages, but only a single SSRC value identifying the transmitter of a media stream.</p> <p>NOTE 2: Different SSRC values shall be selected by the SS for media streams from different clients. Nevertheless it is not clear for Before-Rel-18 releases how the client uses the SSRC value provided by the server in the Transmission Granted message and there is no way to provide SSRC value(s) in case of implicit transmission grant ⇒ In general collisions according to IETF RFC 3550 [76] may occur but collision resolution is out of scope of this document.</p> <p>NOTE 3: For Before-Rel-18 releases the Media SSRC can only be assigned by sending a Transmission Granted message as there are no "mc_ssrc", "mc_audio_ssrc" or "mc_video_ssrc" fmp attributes in Before-Rel-18 releases (nevertheless there can still be implicit grants for Before-Rel-18 releases even though in this case the server has no control over the SSRC values used by the client). From Rel-18 onward the Audio and Video SSRCs can be assigned with an implicit grant using fmp attributes "mc_audio_ssrc" and "mc_video_ssrc" or by sending a Transmission Granted message with Audio and Video SSRC (⇒ The server has control over the Audio and Video SSRCs used by the client).</p> <p>NOTE 4: In clause 4.3.3.1 TS 24.581 [88] clarifies in Rel-18 that "the SSRC of the RTCP header is used to enable multiplexing of media plane control channels"; in clauses 14.2.7 and 14.3.8 it is clarified that the "mc_transmission_ssrc" fmp attribute is used to indicate support of multiplexing and to exchange of the SSRC values to be used in the RTCP header. ⇒ It is assumed that RTCP SSRC values have no meaning in case of no multiplexing.</p>
