### A.8.3.1.1.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

RRC procedure delay = 50 ms and is specified in TS36.133.

$T_{\text{interrupt}}$  = 62 ms in the test;  $T_{\text{interrupt}}$  is defined in TS36.133 clause 5.3.4.3.

This gives a total of 112 ms.

## A.8.4 Measurement procedure

### A.8.4.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay

#### A.8.4.1.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay in non-DRX

##### A.8.4.1.1.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and no DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in Table A.8.4.1.1.1-1 below. Test parameters and cell-specific parameters for the NR cell are provided in Tables A.8.4.1.1.1-2 and A.8.4.1.1.1-3 below, respectively. Cell-specific parameters for the E-UTRA cell are provided in Table A.3.7.2.1-1 in clause A.3.7.2.1.

**Table A.8.4.1.1.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 2      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 3      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| 4      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 5      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 6      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

**Table A.8.4.1.1.1-2: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test**

| Parameter   | Unit | Test configuration | Value     |        | Comment   |

### A.8.4.1.1.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at T<sub>RRC\_procedure\_delay</sub> + T<sub>measure\_SFTD1</sub> after the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to 2×TTI<sub>DCCH</sub> longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

### A.8.4.1.2 E-UTRA – NR Inter-RAT SFTD Measurement Delay in DRX

#### A.8.4.1.2.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell in FR1 is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 1 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in Table A.8.4.1.2.1-1 below. Test parameters are provided in Tables A.8.4.1.2.1-2 below. Cell-specific parameters for the E-UTRA and NR cells are provided in Table A.3.7.2.1-1 in clause A.3.7.2.1, and Table A.8.4.1.1.1-3 in clause A.8.4.1.1.1, respectively.

**Table A.8.4.1.2.1-1: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations

**Table A.8.4.1.2.1-2: Applicable E-UTRA and NR configurations for inter-RAT SFTD measurement delay test in DRX**

| T1  | s    | Config 1,2,3,4,5,6 | 1         |        |   |

#### A.8.4.1.2.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at the earliest DRX activity time following upon  $T_{\text{RRC\_procedure\_delay}} + T_{\text{measure\_SFTD1}}$  from the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

## A.8.4.2 E-UTRA – NR Inter-RAT Measurements

### A.8.4.2.1 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.8.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.1.1-1, A.8.4.2.1.1-2, A.8.4.2.1.1-3 and A.8.4.2.1.1-4.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.8.4.2.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.8.4.2.1.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3             | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6             | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations.

**Table A.8.4.2.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  | Unit | Test configuration | Value                 |        | Comment   |
|--|------|--------------------|-----------------------|--------|---|
|  |      |                    | Test 1                | Test 2 |   |
| E-UTRA RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     |        | One E-UTRA carrier frequency is used.   |

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |              |                    |                             |        |

#### A.8.4.2.1.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.4.2.2 NR Inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

##### A.8.4.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.2.1-1, A.8.4.2.2.1-2, A.8.4.2.2.1-3 and A.8.4.2.2.1-4.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.8.4.2.2.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.8.4.2.2.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6   | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  | Unit | Test configuration | Value                 |        |        |        | Comment   |
|--|------|--------------------|-----------------------|--------|--------|--------|---|

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |              |                    |                             |        |

#### A.8.4.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.8.4.2.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

#### A.8.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.3.1-1, A.8.4.2.3.1-2, A.8.4.2.3.1-3 and A.8.4.2.3.1-4.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.8.4.2.3.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.8.4.2.3.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.3.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6   | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  | Unit | Test configuration | Value                 |        | Comment  |
|--|------|--------------------|-----------------------|--------|--|
|  |      |                    | Test 1                | Test 2 |  |
| E-UTRA RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     |        | One E-UTRA carrier frequency is used.  |
| NR RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     |        | One FR1 NR carrier frequency is used.  |
| Active cell  |      | 1, 2, 3, 4, 5, 6   | E-UTRA cell 1 (PCell) |        | E-UTRA cell 1 is on E-UTRA RF channel number 1.                                      |
| Neighbour cell   |      | 1, 2, 3, 4, 5, 6   | NR cell 2             |        | NR cell 2 is on NR RF channel number 1.  |
| Gap Pattern Id   |      | 1, 2, 3, 4, 5, 6   | 0                     | 4      | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                            |
| Measurement gap offset   |      | 1, 2, 3, 4, 5, 6   | 39                    | 19     | As specified in TS 36.331 [16].  |

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |              |                    |                             |        |

### A.8.4.2.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1040 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.4.2.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

##### A.8.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.4.1-1, A.8.4.2.4.1-2, A.8.4.2.4.1-3 and A.8.4.2.4.1-4.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.8.4.2.4.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.8.4.2.4.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.4.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6   | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  | Unit | Test configuration | Value                 |        |        |        | Comment   |
|--|------|--------------------|-----------------------|--------|--------|--------|---|
|  |      |                    | Test 1                | Test 2 | Test 3 | Test 4 |   |
| E-UTRA RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     |        |        |        | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     |        |        |        | One FR1 NR carrier frequency is used.   |
| Active cell  |      | 1, 2, 3, 4, 5, 6   | E-UTRA cell 1 (PCell) |        |        |        | E-UTRA cell 1 is on E-UTRA RF channel number 1.                                     |
| Neighbour cell   |      | 1, 2, 3, 4, 5, 6   | NR cell 2             |        |        |        | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id   |      | 1, 2, 3, 4, 5, 6   | 0                     |        | 4      |        | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                           |

#### A.8.4.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.4.2.5 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is not used

##### A.8.4.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.5.1-1, A.8.4.2.5.1-2 and A.8.4.2.5.1-3.

The cell specific test parameters for E-UTRA cell1 as PCell are defined in clause A.3.7.2.2.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.8.4.2.5.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.8.4.2.5.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

**Table A.8.4.2.5.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in non-DRX**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.5.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX**

| Parameter   | Unit | Test configuration | Value                 |        | Comment   |
|---|------|--------------------|-----------------------|--------|---|
|   |      |                    | Test 1                | Test 2 |   |
| E-UTRA RF Channel Number  |      | 1, 2               | 1                     |        | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number  |      | 1, 2               | 1                     |        | One FR2 NR carrier frequency is used.   |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell) |        | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.      |
| Neighbour cell  |      | 1, 2               | NR cell 2             |        | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id  |      | 1, 2               | 0                     | 4      | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                           |
| Measurement gap offset  |      | 1, 2               | 39                    | 19     | As specified in TS 36.331 [16].   |
| b1-ThresholdNR  | dBm  | 1, 2               | Note 1                |        | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]               |
| Hysteresis  | dB   | 1, 2               | 0                     |        |   |
| CP length   |      | 1, 2               | Normal                |        |   |

#### A.8.4.2.5.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is not required to report SSB time index.

**Table A.8.4.2.5.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in non-DRX**

| Test case        | Measurement reporting delay (ms) |               |
|------------------|----------------------------------|---------------|
|                  | Test 1: D1 ms                    | Test 2: D2 ms |
| UE power class 3 | 3200                             | 1600          |

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.4.2.6 NR Inter-RAT event triggered reporting tests for FR2 without SSB time index detection when DRX is used

##### A.8.4.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.6.1-1, A.8.4.2.6.1-2 and A.8.4.2.6.1-3.

The cell specific test parameters for E-UTRA cell1 as PCell are defined in clause A.3.7.2.2.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.8.4.2.6.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.8.4.2.6.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have timing information of NR cell 2.

**Table A.8.4.2.6.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR2 in DRX**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.6.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX**

| Parameter   | Unit | Test configuration | Value                 |        |        |        | Comment   |
|---|------|--------------------|-----------------------|--------|--------|--------|---|
|   |      |                    | Test 1                | Test 2 | Test 3 | Test 4 |   |
| E-UTRA RF Channel Number  |      | 1, 2               | 1                     |        |        |        | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number  |      | 1, 2               | 1                     |        |        |        | One FR2 NR carrier frequency is used.   |
| Active cell   |      | 1, 2, 3, 4, 5, 6   | E-UTRA cell 1 (PCell) |        |        |        | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.      |
| Neighbour cell  |      | 1, 2, 3, 4, 5, 6   | NR cell 2             |        |        |        | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id  |      | 1, 2, 3, 4, 5, 6   | 0                     | 4      |        |        | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                           |
| Measurement gap offset  |      | 1, 2, 3, 4, 5, 6   | 39                    |        | 19     |        | As specified in TS 36.331 [16].   |
| b1-ThresholdNR  | dBm  | 1, 2               | Note 1                |        |        |        | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]               |
| Hysteresis  | dB   | 1, 2, 3, 4, 5, 6   | 0                     |        |        |        |   |
| CP length   |      | 1, 2, 3, 4, 5, 6   | Normal                |        |        |        |   |

| <p>Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |              |                    |                             |       |

#### A.8.4.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D3 ms from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B1 triggered measurement report, with a measurement reporting delay less than D4 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is not required to report SSB time index.

**Table A.8.4.2.6.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 without SSB time index detection in DRX**

| Test case        | Measurement reporting delay (ms) |               |               |               |
|------------------|----------------------------------|---------------|---------------|---------------|
|                  | Test 1: D1 ms                    | Test 2: D2 ms | Test 3: D3 ms | Test 4: D4 ms |
| UE power class 3 | 4800                             | 51200         | 4800          | 51200         |

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.8.4.2.7 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is not used

#### A.8.4.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.7.1-1, A.8.4.2.7.1-2 and A.8.4.2.7.1-3.

The cell specific test parameters for E-UTRA cell1 as PCell are defined in clause A.3.7.2.2.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.8.4.2.7.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.8.4.2.7.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.7.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in non-DRX**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations.

**Table A.8.4.2.7.1-2: General test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

| Parameter   | Unit | Test configuration | Value                 |        | Comment   |
|---|------|--------------------|-----------------------|--------|---|
|   |      |                    | Test 1                | Test 2 |   |
| E-UTRA RF Channel Numbers   |      | 1, 2               | 1                     |        | One E-UTRA carrier frequency is used.   |
| NR RF Channel Numbers   |      | 1, 2               | 1                     |        | One FR2 NR carrier frequency is used.   |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell) |        | E-UTRA cell 1 is on E-UTRA RF channel number 1 as defined in clause A.3.7.2.2.      |
| Neighbour cell  |      | 1, 2               | NR cell 2             |        | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id  |      | 1, 2               | 0                     | 4      | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                           |
| Measurement gap offset  |      | 1, 2               | 39                    | 19     | As specified in TS 36.331 [16].   |
| b1-ThresholdNR  | dBm  | 1, 2               | Note 1                |        | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B1 [16]               |
| Hysteresis  | dB   | 1, 2               | 0                     |        |   |
| CP length   |      | 1, 2               | Normal                |        |   |
| TimeToTrigger   | s    | 1, 2               | 0                     |        |   |
| Filter coefficient  |      | 1, 2               | 0                     |        | L3 filtering is not used  |
| DRX   |      | 1, 2               | OFF                   |        | DRX is not used   |
| Time offset between serving and neighbour cells                       |      | 1                  | 3ms                   |        | Asynchronous cells.<br>The timing of Cell 2 is 3ms later than the timing of Cell 1. |
|   |      | 2                  | 3μs                   |        | Synchronous cells.  |
| T1  | s    | 1, 2               | 5                     |        |   |
| T2  | s    | 1, 2               | 5                     | 3      |   |
| Note 1: The value of b1-ThresholdNR is defined in Table A.8.4.2.5.1-3 |      |                    |                       |        |   |

**Table A.8.4.2.7.1-3: NR neighbour cell specific test parameters for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |              |                    |                             |       |

#### A.8.4.2.7.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

**Table A.8.4.2.7.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in non-DRX**

| Test case        | Measurement reporting delay (ms) |               |
|------------------|----------------------------------|---------------|
|                  | Test 1: D1 ms                    | Test 2: D2 ms |
| UE power class 3 | 4160                             | 2080          |

#### A.8.4.2.8 NR Inter-RAT event triggered reporting tests for FR2 with SSB time index detection when DRX is used

##### A.8.4.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.8.1-1, A.8.4.2.8.1-2 and A.8.4.2.8.1-3.

The cell specific test parameters for E-UTRA cell1 as PCell are defined in clause A.3.7.2.2.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.8.4.2.8.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.8.4.2.8.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.8.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR2 in DRX**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

#### A.8.4.2.8.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D1 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D2 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D3 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than D4 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is required to report SSB time index.

**Table A.8.4.2.8.2-1: Test requirements for NR inter-RAT event triggered reporting for FR2 with SSB time index detection in DRX**

| Test case        | Measurement reporting delay (ms) |               |               |               |
|------------------|----------------------------------|---------------|---------------|---------------|
|                  | Test 1: D1 ms                    | Test 2: D2 ms | Test 3: D3 ms | Test 4: D4 ms |
| UE power class 3 | 6240                             | 66560         | 6240          | 66560         |

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.8.4.2.9 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection in DRX for UE configured with highSpeedInterRAT-NR-r16

##### A.8.4.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements when UE is configured with *highSpeedInterRAT-NR-r16*.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1. The test parameters are given in Tables A.8.4.2.9.1-1, A.8.4.2.9.1-2, A.8.4.2.9.1-3 and A.8.4.2.9.1-4.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.8.4.2.9.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1 for UE configured with highSpeedInterRAT-NR-r16**

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5   | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6   | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.8.4.2.9.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection for UE configured with highSpeedInterRAT-NR-r16**

| Parameter  | Unit | Test configuration | Value                 | Comment   |
|--|------|--------------------|-----------------------|---|
| E-UTRA RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number   |      | 1, 2, 3, 4, 5, 6   | 1                     | One FR1 NR carrier frequency is used.   |
| Active cell  |      | 1, 2, 3, 4, 5, 6   | E-UTRA cell 1 (PCell) | E-UTRA cell 1 is on E-UTRA RF channel number 1.                                     |
| Neighbour cell   |      | 1, 2, 3, 4, 5, 6   | NR cell 2             | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id   |      | 1, 2, 3, 4, 5, 6   | 0                     | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].                           |
| Measurement gap offset   |      | 1, 2, 3, 4, 5, 6   | 39                    | As specified in TS 36.331 [16].   |
| b2-Threshold1  | dBm  | 1, 2, 3, 4, 5, 6   | Note 1                | E-UTRA RSRP threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]       |
| b2-Threshold2NR  | dBm  | 1, 2, 3, 4, 5, 6   | Note 2                | SS-RSRP threshold for SS-RSRP measurement on cell 2 for event B2 [16]               |
| Hysteresis   | dB   | 1, 2, 3, 4, 5, 6   | 0                     |   |
| CP length  |      | 1, 2, 3, 4, 5, 6   | Normal                |   |
| TimeToTrigger  | s    | 1, 2, 3, 4, 5, 6   | 0                     |   |
| Filter coefficient   |      | 1, 2, 3, 4, 5, 6   | 0                     | L3 filtering is not used  |
| DRX  |      | 1, 2, 3, 4, 5, 6   | DRX.5                 | As specified in clause A.3.3  |
| Time offset between serving and neighbour cells                        |      | 1, 4               | 3ms                   | Asynchronous cells.<br>The timing of Cell 2 is 3ms later than the timing of Cell 1. |
|  |      | 2, 3, 5, 6         | 3μs                   | Synchronous cells.  |
| T1   | s    | 1, 2, 3, 4, 5, 6   | 5                     |   |
| T2   | s    | 1, 2, 3, 4, 5, 6   | 5                     |   |
| Note 1: The value of b2-Threshold1 is defined in Table A.8.4.2.9.1-3   |      |                    |                       |   |
| Note 2: The value of b2-Threshold2NR is defined in Table A.8.4.2.9.1-4 |      |                    |                       |   |

**Table A.8.4.2.9.1-3: E-UTRAN PCeLL specific test parameters for NR inter-RAT event triggered reporting with NR neighbour cell in FR1 with SSB time index detection for UE configured with highSpeedInterRAT-NR-r16**

| Parameter | Unit | Configuration | Cell 1 |    |
|-----------|------|---------------|--------|----|
|           |      |               | T1     | T2 |
|           |      |               |        |    |

|  |           |                  |  |                                     |
|--|-----------|------------------|--|-------------------------------------|
| RF channel number  |           | 1, 2, 3, 4, 5, 6 | 1  |                                     |
| Duplex mode  |           | 1, 2, 3          | FDD  |                                     |
|  |           | 4, 5, 6          | TDD  |                                     |

| Antenna Configuration and Correlation Matrix   |             | 1, 2, 3, 4, 5, 6   | 1x2 Low                     |        |
| <p>Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{\infty}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |             |                    |                             |        |

#### A.8.4.2.9.2 Test Requirements

The UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than 4.8s from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

**NOTE:** The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.8.5 Measurement performance

### A.8.5.1 SFTD accuracy

#### A.8.5.1.1 SFTD accuracy

##### A.8.5.1.1.1 Test Purpose

The purpose of this set of tests is to verify that the SFTD measurement accuracy is within the specified limits. This test will verify the requirements as specified in clause 9.1.27 in TS 36.133 [15] for inter-RAT FR1 SFTD measurements.

##### A.8.5.1.1.2 Test Environment

Supported test configurations are shown in Table A.8.5.1.1.2-1. In this set of test cases there are two cells on different carriers. Cell 1 is E-UTRAN PCell and Cell 2 is inter-RAT NR FR1 target cell. The test parameters of cell 1 are given in clause A.8.5.1.1.2-2. The test parameters of cell 2 are given in Table A.8.5.1.1.2-3. The SFTD between PCell and target cell shall be set by the test equipment to one of the time differences in Table A.8.5.1.1.2-4.

**Table A.8.5.1.1.2-1: Supported test configurations for SFTD accuracy**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                     |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

Table A.8.5.1.1.2-2: Test parameters for SFTD accuracy (Cell 1)

| Parameter   | Unit   | Test 1  |
|---|--|---|
| E-UTRA RF Channel Number  |  | 1   |
| Duplex mode   |  | FDD or TDD  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification  |

**Table A.8.5.1.1.2-4: Timing offsets for SFTD accuracy test**

### A.8.5.1.1.3 Test Requirements

The SFTD reported by the UE consists of 2 elements, SFN offset and frame boundary offset between PCell and inter-RAT NR target cell. The reported SFTD accuracy shall fulfil the requirement in clause 9.1.27 in TS 36.133 [15].

## A.8.5.2 E-UTRA – NR Inter-RAT Measurement Performance requirements

### A.8.5.2.1 SS-RSRP

#### A.8.5.2.1.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

##### A.8.5.2.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR1 SS-RSRP measurements.

##### A.8.5.2.1.1.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.1.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1. Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in Table A.8.5.2.1.1.2-2.

**Table A.8.5.2.1.1.2-1: SS-RSRP Inter-RAT SS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations

**Table A.8.5.2.1.1.2-2: SS-RSRP inter-RAT test parameters**

| Parameter | Unit | Test 1 | Test 2 |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |                              |  |                |  |  |        |

## A.8.5.2.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

## A.8.5.2.1.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

## A.8.5.2.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.1 in TS 36.133 [15] for inter-RAT FR2 SS-RSRP measurements.

## A.8.5.2.1.2.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.1.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRP inter-RAT measurement are tested by using test setup in Table A.8.5.2.1.2.2-2 and Table A.8.5.2.1.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

**Table A.8.5.2.1.2.2-1: SS-RSRP Inter-RAT SS-RSRP supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.8.5.2.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.1 in TS 36.133 [15].

## A.8.5.2.2 SS-RSRQ

### A.8.5.2.2.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

#### A.8.5.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR1 SS-RSRQ measurements.

#### A.8.5.2.2.1.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.2.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in Table A.8.5.2.2.1.2-2.

**Table A.8.5.2.2.1.2-1: SS-RSRQ Inter-RAT SS-RSRQ supported test configurations**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 3             | LTE FDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                     |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 6             | LTE TDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                     |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRQ, SS-RSRP, and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRQ minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | NR operating band groups are as defined in clause 3.5.2.   |
| Note 6: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.   |

#### A.8.5.2.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

#### A.8.5.2.2.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

##### A.8.5.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.2 in TS 36.133 [15] for inter-RAT FR2 SS-RSRQ measurements.

##### A.8.5.2.2.2.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.2.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-RSRQ inter-RAT measurement are tested by using test setup in Table A.8.5.2.2.2.2-2 and Table A.8.5.2.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

**Table A.8.5.2.2.2-1: SS-RSRQ Inter-RAT SS-RSRQ supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.8.5.2.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.2 in TS 36.133 [15].

In this test case there are two cells on different carriers and measurement gaps are provided

### A.8.5.2.3 SS-SINR

#### A.8.5.2.3.1 E-UTRAN – NR inter-RAT measurements with FR1 target cell

##### A.8.5.2.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR1 SS-SINR measurements.

##### A.8.5.2.3.1.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.3.1.2-1. In this test case there are two cells on different carriers. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

Cell 2 is the inter-RAT NR FR1 target cell. The absolute accuracy requirements of SS-RSRP inter-RAT measurement is tested by using test parameters in Table A.8.5.2.3.1.2-2.

**Table A.8.5.2.3.1.2-1: SS- SINR Inter-RAT SS- SINR supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | LTE FDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| 4      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 5      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 6      | LTE TDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |

Note: The UE is only required to be tested in one of the supported test configurations

**Table A.8.5.2.3.1.2-2: SS-SINR inter-RAT test parameters**

| Parameter | Unit | Test 1 | Test 2 | Test 3 |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-SINR, SS-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | NR operating band groups are as defined in clause 3.5.2.   |
| Note 6: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.   |

#### A.8.5.2.3.1.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

#### A.8.5.2.3.2 E-UTRAN – NR inter-RAT measurements with FR2 target cell

##### A.8.5.2.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS- SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.11.3 in TS 36.133 [15] for inter-RAT FR2 SS-SINR measurements.

##### A.8.5.2.3.2.2 Test Parameters

Supported test configurations are shown in Table A.8.5.2.3.2.2-1. In this test case there are two cells on different carriers. Absolute accuracy requirements of SS-SINR inter-RAT measurement are tested by using test setup in Table A.8.5.2.3.2.2-2 and A.8.5.2.3.2.2-3. In all test cases, Cell 2 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

**Table A.8.5.2.3.2.2-1: SS-SINR Inter-RAT SS-SINR supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.8.5.2.3.2.3 Test Requirements

The SS-SINR measurement accuracy for Cell 2 shall fulfil the requirement in clause 9.11.3 in TS 36.133 [15].

## A.9 V2X Tests

### A.9.1 V2X Tests in FR1

#### A.9.1.1 Test for V2X UE Transmit Timing

##### A.9.1.1.1 Test for GNSS as Synchronization Reference Source

###### A.9.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE timing requirements as specified in clause 12.2.2, when the GNSS is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.1.1-1 defines test parameters for UE transmit timing accuracy tests for V2X. There is one GNSS based synchronization source during the test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

**Table A.9.1.1.1.1-1: V2X Sidelink Test Parameters for UE Transmit Timing Tests for GNSS as Timing Reference**

| Parameter   | Unit | Value  | Comment  |
|---|------|--|--|
| RF Channel Number   |      | 1  | HD carrier in Band n47 or n38                      |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 1</sup>                             | MHz  | 20 ( $N_{\text{RB},c} = 50$ ) or<br>40 ( $N_{\text{RB},c} = 100$ ) |  |
| SCS   | kHz  | 30   |  |
| Active cell   |      | None   |  |
| Active SyncRef UE   |      | None   |  |
| V2X sidelink communication preconfiguration   |      | As specified in section A.3.21.2                                   | IE values unless specified otherwise in this test. |
| PSCCH Reference Measurement Channel   |      | CC.1A HD   | As specified in Table A.3.21.3-1                   |
| PSSCH Reference Measurement Channel   |      | CD.1A HD   | As specified in Table A.3.21.3-2                   |
| Propagation condition   |      | AWGN   |  |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |      |  |  |

#### A.9.1.1.1.2 Test requirements

For parameters specified in Tables A.9.1.1.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.2. The timing accuracy is verified by using PSSCH transmissions.

#### A.9.1.1.2 Test for SyncRef UE as Synchronization Reference Source

##### A.9.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.5, when SyncRef UE is used as timing reference. For this test, the UE is triggered by the test loop function to transmit for V2X sidelink communication.

Table A.9.1.1.2.1-1 defines test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active SyncRef UE in this test without either serving cell and or GNSS signals. Before the test starts, the UE has been synchronized to the SyncRef UE. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

**Table A.9.1.1.2.1-1: General Test Parameters for V2X UE Transmit Timing Test for SyncRef UE as Timing Reference**

| Parameter  |  | Unit      | Value   | Comment  |
|--|--|-----------|---|--|
| RF Channel Number  |  |           | 1   | HD carrier in Band n47 or n38                      |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 3</sup>  |  | MHz       | 20 ( $N_{RB,c} = 50$ ) or 40 ( $N_{RB,c} = 100$ ) |  |
| SCS  |  | kHz       | 30  |  |
| Active cell  |  |           | None  |  |
| Active SyncRef UE  |  |           | SyncRef UE 1                                      | Transmitting S-SSB on RF channel number 1          |
| V2X sidelink communication preconfiguration  |  |           | As specified in section A.3.21.2                  | IE values unless specified otherwise in this test. |
| PSCCH Reference Measurement Channel  |  |           | CC.1A HD  | As specified in Table A.3.21.3-1                   |
| PSSCH Reference Measurement Channel  |  |           | CD.1A HD  | As specified in Table A.3.21.3-2                   |
| $N_{oc}$ <sup>Note1,2</sup>  |  | dBm/30kHz | -95   |  |
| SyncRef UE 1   | sl-SSB-TimeAllocation                    |           | sl-SSB-TimeAllocation1                            |  |
|  | slssid                                   |           | 30  |  |
|  | inCoverage                               |           | TRUE  | In MIB-SL  |
|  | networkControlledSyncTx                  |           | ON  |  |
|  | V2X sidelink communication configuration |           | As specified in section A.3.21.2                  | IE values unless specified otherwise in this test. |
|  | $\hat{E}_s/N_{oc}$                       |           | 3   |  |
|  | PSBCH-RSRP <sup>Note1, Note 2</sup>      | dBm/30kHz | -92   |  |
| Propagation condition  |  |           | AWGN  |  |
| <p>Note 1: PSBCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: S-PSS <math>E_s/N_{oc}</math> and S-SSS <math>E_s/N_{oc}</math> are set the same as PSBCH <math>E_s/N_{oc}</math>.</p> <p>Note 3: The UE is only required to be tested in one of the supported test configurations.</p> |  |           |   |  |

### A.9.1.1.2.2 Test requirements

For parameters specified in Tables A.9.1.1.2.1-1, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.5. The timing accuracy is verified by using PSSCH transmissions.

### A.9.1.1.3 Test for FR1 NR Cell as Synchronization Reference Source

#### A.9.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the timing requirements for V2X sidelink transmissions specified in clause 12.2.3, when the downlink timing of the serving cell (RRC\_IDLE) or PCell (RRC\_CONNECTED) on a non-V2X sidelink carrier is used as timing reference. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X sidelink communication.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Table A.9.1.1.3.1-1, A.9.1.1.3.1-2 and A.9.1.1.3.1-3 define test parameters for UE transmit timing accuracy tests for V2X sidelink Communication. There is one active cell (PCell) in this test. The transmit timing accuracy is verified by using the transmission timing of PSSCH transmissions.

**Table A.9.1.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 2             | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 3             | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                             |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.9.1.1.3.1-2: V2X Sidelink Test Parameters for V2X UE Transmit Timing Accuracy Test for gNB as Timing Reference**

| Parameter   | Unit | Value   | Comment  |
|---|------|---|--|
| RF Channel Number   |      | 1   | HD carrier in Band n47 or n38                      |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 1</sup>                             | MHz  | 20 ( $N_{RB,c} = 50$ ) or 40 ( $N_{RB,c} = 100$ ) |  |
| SCS   | kHz  | 30  |  |
| Active cell   |      | Cell 1  |  |
| Active SyncRef UE   |      | None  |  |
| V2X sidelink communication configuration  |      | As specified in section A.3.21.2                  | IE values unless specified otherwise in this test. |
| PSCCH Reference Measurement Channel   |      | CC.1A HD  | As specified in Table A.3.21.3-1                   |
| PSSCH Reference Measurement Channel   |      | CD.1A HD  | As specified in Table A.3.21.3-2                   |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |      |   |  |

| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |              |                        |
| Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |              |                        |

**A.9.1.1.3.2 Test requirements**

For parameters specified in Tables A.9.1.1.3.1-1 A.9.1.1.3.1-2 and A.9.1.1.3.1-3, the timing accuracy for V2X sidelink transmission shall be within the limits defined in clause 12.2.3. The timing accuracy is verified by using PSSCH transmissions.

## A.9.1.2 Test for Initiation/Cease of S-SSB Transmission with V2X Sidelink Communication

### A.9.1.2.1 Test for FR1 NR Cell as synchronization reference source without gap under non-DRX

#### A.9.1.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the V2X UE meets the requirements related to the maximum evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.1, when the reference timing used for sidelink transmissions is a NR serving cell in FR1 on a non-V2X sidelink carrier.

This test is applicable for V2X sidelink communication capable UEs that support NR Uu and sidelink operation.

Supported test configurations for FR1 NR cell are shown in Table A.9.1.2.1.1-1.

**Table A.9.1.2.1.1-1: Supported Test Configurations for FR1 NR cell as synchronization reference source**

| Configuration | Description   |
|---------------|---|
| 1             | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                              |
| 2             | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                              |
| 3             | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                              |
| Note 1:       | The UE is only required to pass in one of the supported test configurations in FR1. |
| Note 2:       | For NR SL, SL BW is one between 20MHz and 40MHz, and SL SCS is 30kHz.               |

The test parameters are given in Table A.9.1.2.1.1-2 and Table A.9.1.2.1.1-3 below. There is one active cell in this test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the SS-RSRP of the PCell is above *syncTxThreshIC* and the UE is not expected to be transmitting S-SSB.

During T2, the SS-RSRP of the PCell is lowered below *syncTxThreshIC* and the UE is expected to initiate S-SSB transmissions.

During T3, the SS-RSRP of the PCell is increased back to be above *syncTxThreshIC* and the UE is expected to cease S-SSB transmissions.

### A.9.1.2.1.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.56 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.56 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as:  $T_{\text{evaluate,SLSS}} + \text{S-SSB period}$ ,

Where:

$T_{\text{evaluate,SLSS}} = 0.4 \text{ sec}$  (as specified in clause 12.3.1.1);

S-SSB period = 160ms.

### A.9.1.2.2 Test for SyncRef UE as synchronization reference source

#### A.9.1.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to the evaluation time allowed to initiate and cease S-SSB transmissions defined in clause 12.3.1.4, when the reference timing used for sidelink transmissions is a SyncRef UE.

The test parameters are given in Table A.9.1.2.2.1-1 and Table A.9.1.2.2.1-2 below. There are neither active cells nor GNSS signals in this test. There is one active SyncRef UE (SyncRef UE 1) in this test. The test system shall emulate SyncRef UE 1 to transmit S-SSB every synchronization period.

Prior to start of test, test system is required to ensure that the V2X UE is synchronized to the SyncRef UE 1 and is transmitting S-SSB as derived from the S-SSB of SyncRef UE 1 as per clause 5.8.5.3 of TS 38.331[2]. For the test configuration, the SLSSID used by the V2X UE shall be 30 with *inCoverage* IE in MIB-SL set as FALSE. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the PSBCH-RSRP of SyncRef UE 1 is above *syncTxThreshOOC* and the UE is not expected to be transmitting S-SSB.

During T2, the PSBCH-RSRP of SyncRef UE 1 is lowered below *syncTxThreshOOC* and the UE is expected to initiate S-SSB transmissions.

During T3, the PSBCH-RSRP of SyncRef UE 1 is increased back to be above *syncTxThreshOOC* and the UE is expected to cease S-SSB transmissions.

**Table A.9.1.2.2.1-1: Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source**

| Parameter                                   | Unit      | Value                            | Comment   |
|---|-----------|----------------------------------|---|
| SCS   | kHz       | 30                               |   |
| Active cell                                 |           | None                             |   |
| Active SyncRef UE                           |           | SyncRef UE 1                     | Transmitting S-SSB on RF channel number 1 (HD carrier in Band n47 or n38) |
| Active V2X UE                               |           | V2X UE                           | Transmitting S-SSB on RF channel number 1 (HD carrier in Band n47 or n38) |
| V2X sidelink communication preconfiguration |           | As specified in Table A.3.21.2-2 | IE values unless specified otherwise in this test                         |
| networkControlledSyncTx                     |           | Not configured                   |   |
| syncTxThreshOoC                             | dBm/30kHz | -97                              |   |
| T1  | s         | 3                                |   |
| T2  | s         | 5.24                             |   |
| T3  | s         | 5.24                             |   |

**Table A.9.1.2.2.1-2: SyncRef UE Specific Test Parameters for Initiation/Cease of S-SSB Transmission Test for SyncRef UE as synchronization reference source**

| Parameter  | Unit  | SyncRef UE 1                                    |        |       |
|--|---|---|--------|-------|
|  |   | T1  | T2     | T3    |
| NR RF Channel Number   |   | 1   |        |       |
| V2X SL communication resource pool configuration             |   | As specified in Table A.3.21.2-2                |        |       |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note3</sup> | MHz   | 20( $N_{RB,c} = 50$ ) or 40( $N_{RB,c} = 100$ ) |        |       |
| SLSSID   |   | 30  |        |       |
| inCoverage   |   | TRUE  |        |       |
| networkControlledSyncTx                                      |   | ON  |        |       |
| $N_{oc}$ <sup>Note1</sup>                                    | dBm/30 kHz  | -98   |        |       |
| $\hat{E}_s / I_{ot}$   | dB  | 5.5   | -3.5   | 5.5   |
| PSBCH $\hat{E}_s / N_{oc}$                                   | dB  | 5.5   | -3.5   | 5.5   |
| PSBCH-RSRP <sup>Note2</sup>                                  | dBm/30 kHz  | -92.5   | -101.5 | -92.5 |
| $I_o$ <sup>Note2</sup>                                       | dBm /3.96MHz  | -70.2   | -75.2  | -70.2 |
| Propagation condition  |   | AWGN  |        |       |
| Note 1:  | Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.        |   |        |       |
| Note 2:  | PSBCH-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves. $I_o$ level is based on the allocated RBs for S-PSS/S-SSS/PSBCH symbols. |   |        |       |
| Note 3:  | The UE is only required to be tested in one of the supported test configurations.   |   |        |       |
| Note 4:  | S-PSS $E_s/N_{oc}$ and S-SSS $E_s/N_{oc}$ are set the same as PSBCH $E_s/N_{oc}$ .  |   |        |       |

#### A.9.1.2.2.2 Test Requirements

The S-SSB transmission initiation delay is defined as the time from the beginning of time period T2 up to the moment when the UE initiates the S-SSB transmission.

The S-SSB transmission initiation delay shall be less than 0.8 s.

The S-SSB transmission cease delay is defined as the time from the beginning of time period T3 up to the moment when the UE ceases the S-SSB transmission.

The S-SSB transmission cease delay shall be less than 0.8 s.

The rate of correct initiation/cease delay of S-SSB transmissions observed during repeated tests shall be at least 90%.

NOTE: The initiation/cease delay of S-SSB transmissions can be expressed as:  $T_{\text{evaluate,SLSS}} + \text{S-SSB period}$ ,

Where:

- $T_{\text{evaluate,SLSS}} = 0.64$  sec (as specified in clause 12.3.1.4);
- S-SSB period = 160ms.

### A.9.1.3 Test for V2X Synchronization Reference Selection/Reselection

#### A.9.1.3.1 Test for GNSS configured as the highest priority

##### A.9.1.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when GNSS is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in Table A.9.1.3.1.1-1 and A.9.1.3.1.1-2 below. There are no GNSS signals in this test. There are three active SyncRef UEs (SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3) in this test. The test system shall emulate SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is not synchronized to any SyncRef UE, then the V2X UE shall use the SLSS ID belonging to set id\_oon. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. SyncRef UE 1, SyncRef UE 2 and SyncRef UE 3 are all powered off before starting the test. During T1, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as synchronization source. During T2, SyncRef UE 2 is powered ON and the V2X UE will select SyncRef UE 2 as the synchronization source. During T3, SyncRef UE 3 is powered ON and the V2X UE will reselect to SyncRef UE 3 as the synchronization source.

### A.9.1.3.1.2 Test Requirements

During T1, SyncRef UE selection delay is defined as the time from the beginning of T1 to the time UE is synchronized to SyncRef UE 1, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T1.

The SyncRef UE selection delay shall be less than 8.8sec. The SyncRef UE selection delay can be expressed as:

$$\text{SyncRef UE selection delay} = T_{\text{detect,SyncRef UE}} + T_{\text{evaluate,SLSS}} + \text{S-SSB period}$$

Where

- $T_{\text{detect,SyncRef UE}} = 8\text{sec}$  (as specified in sub-clause 12.4)
- $T_{\text{evaluate,SLSS}} = 0.64\text{ sec}$  (as specified in sub-clause 12.3)
- S-SSB period = 160ms

This gives a total of 8.8 seconds.

2) During T2, SyncRef UE reselection delay is defined as the time from the beginning of T2 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T2.

The SyncRef UE reselection delay shall be less than 8.8sec. The SyncRef UE reselection delay can be expressed as:

$$\text{SyncRef UE reselection delay} = T_{\text{detect,SyncRef UE}} + T_{\text{evaluate,SLSS}} + \text{S-SSB period}$$

Where

- $T_{\text{detect,SyncRef UE}} = 8\text{sec}$  (as specified in sub-clause 12.4)
- $T_{\text{evaluate,SLSS}} = 0.64$  (as specified in sub-clause 12.3)
- S-SSB period = 160ms

This gives a total of 8.8 seconds.

3) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 2 to SyncRef UE 3, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 3 as the synchronization source. For the test configuration, the SLSS ID will still be 0 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE reselection delay from start of T3.

The SyncRef UE reselection delay shall be less than 2.4sec. The SyncRef UE reselection delay can be expressed as:

$$\text{SyncRef UE reselection delay} = T_{\text{detect,SyncRef UE}} + T_{\text{evaluate,SLSS}} + \text{S-SSB period}$$

Where

- $T_{\text{detect,SyncRef UE}} = 1.6\text{sec}$  (as specified in sub-clause 12.4)
- $T_{\text{evaluate,SLSS}} = 0.64$  (as specified in sub-clause 12.3)
- S-SSB period = 160 ms

This gives a total of 2.4 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6% of its V2X data and S-SSB transmissions during the duration of T2, and does not drop or delay more than 30% of its S-SSB transmissions during the duration of T3.

The rate of correct SyncRef UE selection / reselection observed during repeated tests shall be at least 90%.

### A.9.1.3.2 Test for FR1 NR Cell configured as the highest priority

#### A.9.1.3.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to SyncRef UE selection / reselection defined in clause 12.4, when gNB is configured as the highest priority. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

This test is applicable for V2X sidelink communication capable UEs that support gNB as synchronization source and sidelink operation.

#### Table A.9.1.3.2.1-1: Void

The test parameters are given in Table A.9.1.3.2.1-2 and A.9.1.3.2.1-3 below. There are no active cells and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1. There are two active SyncRef UEs (SyncRef UE 1 and SyncRef UE 2) in this test. The test system shall emulate SyncRef UE 1 and SyncRef UE 2 to transmit S-SSB every S-SSB period.

The test system can verify the selection / reselection of SyncRef UE by monitoring the SLSS ID used by the V2X UE for its S-SSB transmissions. When the V2X UE is synchronized to a SyncRef UE, the V2X UE shall derive its SLSS ID from the SLSS ID of the SyncRef UE as per clause 5.8.5.3 of TS 38.331[2].

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. During T1, both SyncRef UE 1 and SyncRef UE 2 are powered off and the V2X UE will select GNSS as synchronization source. During T2, SyncRef UE 1 is powered ON and the V2X UE will select SyncRef UE 1 as the synchronization source. During T3,

a higher priority SyncRef UE 2 is additionally powered ON and the V2X UE will reselect to the higher priority SyncRef UE 2 as the synchronization source.

They are not settable parameters themselves.</p> <p>Note 3: S-PSS Es/lot and S-SSS Es/lot are set the same as PSBCH Es/lot.</p> <p>Note 4: The UE is only required to be tested in one of the supported test configurations.</p> |            |   |     |       |                                  |           |     |

### A.9.1.3.2.2 Test Requirements

1) During T2, SyncRef UE selection delay is defined as the time from the beginning of T2 to the time UE is synchronized to SyncRef UE 1 and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 1 as the synchronization source. For the test configuration, the SLSS ID will be changed to 336+59 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T2.

The SyncRef UE selection delay shall be less than 8.8sec. The SyncRef UE selection/reselection delay can be expressed as:

$$\text{SyncRef UE selection/reselection delay} = T_{\text{detect,SyncRef UE}} + T_{\text{evaluate,SLSS}} + \text{S-SSB period}$$

Where

- $T_{\text{detect,SyncRef UE}} = 8\text{sec}$  (as specified in sub-clause 12.4)
- $T_{\text{evaluate,SLSS}} = 0.64\text{sec}$  (as specified in sub-clause 12.3)
- S-SSB period = 160ms

This gives a total of 8.8 seconds.

2) During T3, SyncRef UE reselection delay is defined as the time from the beginning of T3 to the time UE changes its synchronization source from SyncRef UE 1 to SyncRef UE 2, and changes its S-SSB transmissions timing and SLSS ID to follow SyncRef UE 2 as the synchronization source. For the test configuration, the SLSS ID will be changed to 30 (with in-coverage IE in MIB-SL set to FALSE) after SyncRef UE selection delay from start of T3.

The SyncRef UE reselection delay shall be less than 8.8sec. The SyncRef UE selection/reselection delay can be expressed as:

$$\text{SyncRef UE selection/reselection delay} = T_{\text{detect,SyncRef UE}} + T_{\text{evaluate,SLSS}} + \text{S-SSB period}$$

Where

- $T_{\text{detect,SyncRef UE}} = 8\text{sec}$  (as specified in sub-clause 12.4)
- $T_{\text{evaluate,SLSS}} = 0.64\text{ sec}$  (as specified in sub-clause 12.3)
- S-SSB period = 160ms

This gives a total of 8.8 seconds.

The test system will verify that the V2X UE does not drop or delay more than 6% of its V2X data and S-SSB transmissions during the duration of T2 and T3.

## A.9.1.4 Test for L1 SL-RSRP Measurement

### A.9.1.4.1 Test for V2X UE Autonomous Resource Selection/Reselection

#### A.9.1.4.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource selection / reselection for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in Table A.9.1.4.1.1-1 and A. 9.1.4.1.1-2 below. There are 50 active V2X sidelink UEs (UE0~UE49) in this test. Both the UE under test and active V2X sidelink UEs select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH every 5ms. At the beginning of whole test, the test equipment shall send one AT command to trigger the UE under test continuously transmits PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipement are configured such that

- the measured PSSCH-RSRP for 20 active V2X sidelink UEs(UE10~UE29) is above the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be excluded in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is low the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be included in the resource selection procedure.

During T2, the signal from Test Equipement are configured such that

- the measured PSSCH-RSRP for the 20 active V2X sidelink UEs(UE10~UE29) is below the measurement threshold, and the resource occupied by the 20 active V2X sidelink UEs is expected to be included in the resource selection procedure and,
- the measured PSSCH-RSRP for other 30 active V2X sidelink UEs(UE0~UE9, UE30~UE49) is above the measurement threshold, and the resource occupied by the 30 active V2X sidelink UEs is expected to be excluded in the resource selection procedure.

**Table A.9.1.4.1.1-1: Test Parameters for V2X UE Autonomous Resource Selection/Reselection Tests for PSSCH-RSRP measurements**

| Parameter   |   | Unit          | Value  | Comment  |
|---|---|---------------|--|--|
| NR RF Channel Number  |   |               | 1  | HD carrier in Band n47 or n38  |
| Channel Bandwidth (BW <sub>channel</sub> ) <sup>Note 2</sup>                              |   | MHz           | 20 (N <sub>RB,c</sub> = 50) or<br>40 (N <sub>RB,c</sub> = 100) |  |
| SCS   |   | kHz           | 30   |  |
| V2X sidelink communication pre-configuration  |   |               | As specified in Table A.3.21.2-1 and A.3.21.2-3                | IE values unless specified otherwise in this test.   |
| sl-TimeResource-r16 included in SL-ResourcePool   |   |               | 1111111111   | Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])  |
| sl-NumSubchannel-r16 included in SL-ResourcePool  |   |               | 5  | Indicates the number of sub-channels for TX resource pool  |
| sl-SubchannelSize-r16 included in SL-ResourcePool   |   |               | 10   | Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB  |
| Number of Active Sidelink UEs   |   |               | 50   | Active Sidelink UE $i = 0, \dots, 49$  |
| <i>SL-Thres-RSRP</i>  |   |               | 12   | Corresponding -106 dBm as defined in Section 6.3.5 in TS38.331[2]<br>Same for all priority level pairs.  |
| Active Sidelink UEs (UE $i = 0, \dots, 49$ )  | V2X sidelink Communication preconfiguration           |               | As specified in Table A.3.21.2-1 And A.3.21.2-3                | IE values unless specified otherwise in this test.   |
|   | sl-TimeResource-r16 included in SL-ResourcePool       |               | {1} <sup>Note1</sup>   | Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3])  |
|   | sl-NumSubchannel-r16 included in SL-ResourcePool      |               | 1  | Indicates the number of sub-channels for TX resource pool  |
|   | sl-StartRB-Subchannel-r16 included in SL-ResourcePool |               | $\text{floor}(i/10) \times 10$                                 | Indicates the lowest RB index of the subchannel with the lowest index.<br>UE 0~9 start RB=0;<br>UE 10~19 start RB=10;<br>UE 20~29 start RB=20;<br>UE 30~39 start RB=30;<br>UE 40~49 start RB=40; |
|   | sl-SubchannelSize-r16 included in SL-ResourcePool     |               | 10   | Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB  |
| Timing offset among Active Sidelink UEs   |   | $\mu\text{s}$ | CP/2   | Synchronous  |

| <p>Note 1: Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: <math>E_s/I_{ot}</math>, PSSCH-RSRP and SL-RSSI levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: For UE 20 to 29, occupying subchannel #1/2</p> <p>Note 4: For UE 0 to 19 and 30 to 49, occupying subchannel #0/3/4</p> <p>Note 5: The UE is only required to be tested in one of the supported test configurations.</p> |             |   |        |

#### A.9.1.4.1.2 Test Requirements

The test time T1 and T2 should be long enough. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be less than 10% during T1. The rate of PSSCH transmissions on the resources on subchannel #1 or #2 shall be more than 90% during T2.

#### A.9.1.4.2 Test for V2X UE Resource Pre-emption

##### A.9.1.4.2.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource pre-emption for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in Table A. 9.1.4.2.1-1 and A.12. 9.1.4.1-2 below. There is one active V2X sidelink UE in this test. Both the UE under test and the active V2X sidelink UE select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink UEs. The test parameters for GNSS signals are defined in B.4.1. At the beginning of whole test, the test equipment shall send one message with a

SL-SCH MAC PDU as specified in Clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test needs continuously transmit PSCCH/PSSCH.

The test consists of two duration T1 and T2. During T1, the signal from Test Equipment are configured such that the active V2X sidelink UE is not transmitting. The UE under test shall transmit SL data and reserve future resources. The resource reservation is decoded by the active V2X sidelink UE. The point in time at which resource reservation from the UE under test is decoded by the active V2X sidelink UE defines the start of time period T2. During T2, the active V2X sidelink UE reserves the same resource as the UE under test with high priority data no later than slot  $n - T_{\text{pre-empt}}$ .

**Table A. 9.1.4.2.1-1: Test Parameters for V2X UE Resource Pre-emption Tests for PSSCH-RSRP measurements**

| Parameter   |   | Unit | Value  | Comment   |
|---|---|------|--|---|
| NR RF Channel Number  |   |      | 1  | HD carrier in Band n47 and n38  |
| Channel Bandwidth (BW <sub>channel</sub> ) <sup>Note 1</sup>                                      |   | MHz  | 20 (N <sub>RB,c</sub> = 50) or<br>40 (N <sub>RB,c</sub> = 100) |   |
| SCS   |   | kHz  | 30   |   |
| V2X sidelink communication pre-configuration  |   |      | As specified in Table A.3.21.2-1 and A.3.21.2-3                | IE values unless specified otherwise in this test.  |
| sl-TimeResource-r16 included in SL-ResourcePool in SL-ResourcePool in sl-TxPoolSelectedNormal-r16 |   |      | 10000000000000000000   | Indicates the time resource of resource pool within <i>sl-Period</i> . (see TS 38.213 [3])<br>Note that this is for Tx pool.        |
| sl-TimeResource-r16 included in SL-ResourcePool in sl-RxPool-r16                                  |   |      | 11111111111111111111   | Indicates the time resource of resource pool within <i>sl-Period</i> . (see TS 38.213 [3])<br>Note that this is for Rx pool.        |
| sl-NumSubchannel-r16 included in SL-ResourcePool  |   |      | 1  | Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only                      |
| sl-SubchannelSize-r16 included in SL-ResourcePool   |   |      | 10   | Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB               |
| sl-StartRB-Subchannel-r16 included in SL-ResourcePool   |   |      | 10   | Indicates the lowest RB index of the subchannel with the lowest index.  |
| Number of Active Sidelink UEs   |   |      | 1  |   |
| <i>SL-Thres-RSRP</i>  |   |      | 12   | Corresponding -106 dBm as defined in Section 6.3.8 in TS38.331[2]   |
| Active Sidelink UEs   | V2X sidelink Communication preconfiguration           |      | As specified in Table A.3.21.2-1 and A.3.21.2-3                | IE values unless specified otherwise in this test.  |
|   | sl-TimeResource-r16 included in SL-ResourcePool       |      | 11111111111111111111   | Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3]) |
|   | sl-NumSubchannel-r16 included in SL-ResourcePool      |      | 1  | Indicates the number of sub-channels for TX resource pool   |
|   | sl-StartRB-Subchannel-r16 included in SL-ResourcePool |      | 10   | Indicates the lowest RB index of the subchannel with the lowest index.  |
|   | sl-SubchannelSize-r16 included in SL-ResourcePool     |      | 10   | Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB               |
| Timing offset among Active Sidelink Ues   |   | μs   | CP/2   | Synchronous   |
| Note 1: The UE is only required to be tested in one of the supported test configurations.         |   |      |  |   |

**Table A.9.1.4.2.1-2: Active Sidelink UE Specific Test Parameters for V2X UE Resource Pre-emption Tests for PSSCH-RSRP measurements**

| Note 1:   | Interference from other Ues and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |      |
| Note 2:   | Es/lot, PSSCH-RSRP have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |      |
| Note 3:   | The UE is only required to be tested in one of the supported test configurations.  |   |      |

### A.9.1.4.2.2 Test Requirements

The test time T1 and T2 should be long enough. The UE under test is required to trigger resource reselection and not to transmit on the reserved resource at slot n when the high priority reservation is transmitted by the active V2X sidelink UE before  $n-T_{\text{pre-empt}}$ , where

$$T_{\text{pre-empt}} = T_3 + T_{\text{proc},0}$$

$$T_3 = 5 \text{ slots and } T_{\text{proc},0} = 1 \text{ slot for FR1.}$$

The rate of PSSCH transmissions on the resources at slot n shall be less than 10% during repeated tests.

### A.9.1.4.3 Test for V2X UE Resource Re-evaluation

#### A.9.1.4.3.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to autonomous resource re-evaluation for V2X UE in mode 2 defined in clause 12.5. For this test, the UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

The test parameters are given in Table A.9.1.4.3.1-1, A.9.1.4.3.1-2 and A.9.1.4.3.1-3 below. There are 130 active V2X sidelink UEs in this test. The first 100 active V2X sidelink UEs are scheduled with 50ms periodicity. The last 30 active V2X sidelink Ues are aperiodic service UE with retransmission reservation period equaling 15ms.

Both the UE under test and active V2X sidelink Ues select GNSS as synchronization reference source. The test system can emulate and send the GNSS signal to the test UE and active V2X sidelink Ues. The test parameters for GNSS signals are defined in B.4.1.

The test consists of three duration T0, T1, T2.

During T0, the signal from Test Equipment are configured. The resource occupied by the active V2X sidelink UEs is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold. The test equipment shall just configure the resource pool for the test UE without the MAC PDU for transmission channel configuration.

During T1, the signal from Test Equipment are configured. Some of the resource occupied by the active V2X sidelink Ues is expected to be excluded in the resource selection procedure such that the measured PSSCH-RSRP is above the measurement threshold and some of the resource occupied by the active V2X sidelink Ues is expected to be included in the resource selection procedure such that the measured PSSCH-RSRP is below the measurement threshold. The test system shall emulate the active V2X sidelink Ues to transmit PSCCH/PSSCH every 50ms according to the RSRP level specified in the Table A. 9.1.4.3.1-2, but UE #0~29 will be silent during T2

At the end of T1, where slot index mod 100 = 99, the test equipment shall send one message with a SL-SCH MAC PDU as specified in Clause 6.1.6 in TS 38.321[7], in order to make sure that the UE under test shall be scheduled to periodically transmit PSCCH/PSSCH.

During T2, the additional aperiodic active V2X sidelink UEs from Test Equipment are configured in the beginning 30 slots, and the resource occupied by these active V2X sidelink UEs is expected to be excluded in the resource re-evaluation procedure such that the measured PSSCH-RSRP is above the measurement threshold shown in Table A. 9.1.4.3.1-2. The test system shall emulate the active V2X sidelink UEs to transmit PSCCH/PSSCH with the maximum number of reserved PSCCH/PSSCH resources equalling  $n_2$  and time resource assignment interval as 15ms.

During T2, the test UE is expeted to reselect the resources and transmit the PSCCH/PSSCH in the newly re-evaluated resources.

**Table A.9.1.4.3.1-1: Test Parameters for V2X UE Resource Selection Tests for Re-evaluation**

| Parameter  |   | Unit | Value  | Comment   |
|--|---|------|--|---|
| NR RF Channel Number   |   |      | 1  | HD carrier in Band n47 and n38  |
| Channel Bandwidth (BW <sub>channel</sub> ) <sup>Note 2</sup>   |   | MHz  | 20 (N <sub>RB,c</sub> = 50) or 40 (N <sub>RB,c</sub> = 100)  |   |
| SCS  |   | kHz  | 30   |   |
| V2X sidelink communication pre-configuration   |   |      | As specified in Table A.3.21.2-2   | IE values unless specified otherwise in this test.  |
| sl-TimeResource-r16 included in SL-ResourcePool  |   |      | 11111111111111111111<br>11111111111111111111<br>11111111111111111111<br>11111111111111111111<br>11111111111111111111 | Indicates the bitmap of the TX and Rx resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213[3]) |
| sl-NumSubchannel-r16 included in SL-ResourcePool   |   |      | 1  | Indicates the number of sub-channels for TX resource pool   |
| sl-SubchannelSize-r16 included in SL-ResourcePool  |   |      | 10   |   |
| sl-StartRB-Subchannel-r16  |   |      | 0  |   |
| Number of Active Sidelink UEs  |   |      | 130  | Active Sidelink UE i = 0, ..., 129  |
| SL-Thres-RSRP-r16  |   |      | 17   | Corresponding -96 dBm as defined in Section 6.3.5 in TS38.331[2]  |
| Active Sidelink UEs(UE i=0-99)   | V2X sidelink Communication preconfiguration       |      | As specified in Table A.3.21.2-2   | IE values unless specified otherwise in this test.  |
|  | sl-TimeResource-r16 included in SL-ResourcePool   |      | {1 <sub>i</sub> } <sup>Note1</sup>   | Indicates the bitmap of the TX resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213 [3])       |
|  | sl-NumSubchannel-r16 included in SL-ResourcePool  |      | 1  | Indicates the number of sub-channels for TX resource pool   |
|  | sl-SubchannelSize-r16 included in SL-ResourcePool |      | 10   | Indicates the size of sub-channels for TX resource pool   |
|  | sl-ResourceReservePeriod 2-r16                    | ms   | 50   |   |
| Active Sidelink UEs(UE i= 100-129)   | V2X sidelink Communication preconfiguration       |      | As specified in Table A.3.21.2-2   | IE values unless specified otherwise in this test.  |
|  | sl-TimeResource-r16 included in SL-ResourcePool   |      | {1 <sub>i</sub> } <sup>Note1</sup>   | Indicates the bitmap of the TX resource pool, which is defined by repeating the bitmap within a SFN cycle (see TS 38.213 [3])       |
|  | sl-NumSubchannel-r16 included in SL-ResourcePool  |      | 1  | Indicates the number of sub-channels for TX resource pool   |
|  | sl-SubchannelSize included in SL-ResourcePool     |      | 10   | Indicates the size of sub-channels for TX resource pool   |
|  | sl-MultiReserveResource-r16                       |      | enabled  |   |
|  | sl-MaxNumPerReserve-r16                           |      | n2   |   |
|  | sl-ResourceReservePeriod 2-r16                    |      | 0  | Unit:ms   |
| Timing offset among Active Sidelink UEs  |   | μs   | CP/2   | Synchronous   |
| T0   |   | s    | 1  |   |
| T1   |   | ms   | 50   |   |
| T2   |   | ms   | 50   |   |
| Note 1: {1 <sub>i</sub> } is a sequence of ninety-nine 0's with one 1 in (mod(i,100)+1)'th position. |   |      |  |   |
| Note 2: The UE is only required to be tested in one of the supported test configurations.            |   |      |  |   |

**Table A.9.1.4.3.1-2: Active Sidelink UE Specific Test Parameters for V2X UE Resource Selection Tests for Re-evaluation (UE #0...99)**

| Parameter   | Unit   | Active Sidelink UE i<br>(i = 0, ..., 99)          |           |
|---|--|---|-----------|
|   |  | T1  | T2        |
| NR RF Channel Number  | -  | 1   |           |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 7</sup> | MHz  | 20 ( $N_{RB,c} = 50$ ) or 40 ( $N_{RB,c} = 100$ ) |           |
| PSSCH RMC (defined in A.3.21.3)                               | -  | CC.1A HD  |           |
| PSSCH RMC (defined in A.3.21.3)                               | -  | CD.1A HD  |           |
| $N_{oc}$ <sup>Note1</sup>                                     | dBm/SCS  | -103  |           |
| PSSCH1 $\hat{E}_s/N_{oc}$ <sup>Note 3</sup>                   | dB   | 22  | 22        |

| Note 1:   | Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |     |
| Note 2:   | Es/Iot, PSSCH-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |   |     |
| Note 3:   | UE #100~129 will occupy the subchannels on the slots with "#slot index mod 100"= #0-29 during T2.  |   |     |
| Note 4:   | The UE is only required to be tested in one of the supported configurations.   |   |     |

### A.9.1.4.3.2 Test Requirements

The rate of PSSCH transmissions on the resources of the subchannels which are occupied by UE #65-84 shall be more than 90% during T2.

## A.9.1.5 Test for Congestion Control Measurement

### A.9.1.5.1 Test Purpose and Environment

The purpose of this test is to verify the congestion control measurement requirements in section 12.6. For UE supporting NR Uu and sidelink operation, this test will also verify that V2X UE makes correct reporting of an event.

The test parameters are given in Table A.9.1.5.1-1, Table A.9.1.5.1-2, A.9.1.5.1-3 and A.9.1.5.1-4 below. There are 4 active V2X sidelink UEs in this test. The test system shall emulate the active sidelink UE to transmit PSCCH/PSSCH every 50ms. Additionally, For UE supporting NR Uu and sidelink operation, there is an active Cell (Cell 1) in this test. For UE only supporting NR sidelink, There are no active cell and GNSS is reliable during the whole test. The test system can emulate and send the GNSS signal to the test UE. The test parameters for GNSS signals are defined in B.4.1.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During T1, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with lower transmission power every 50ms. During T2, all of active V2X sidelink UEs are configured to transmit PSCCH/PSSCH with higher transmission power every 50ms.

For UE supporting NR Uu and sidelink operation, the UE under test and all active sidelink UEs select PCell as synchronization source. In the measurement control information it is indicated to the V2X UE that event-triggered reporting with Event C1 is used.

For UE only supporting NR sidelink, the UE under test and all active sidelink UEs select GNSS as synchronization source. The UE is triggered by the test loop function or the upper layers to transmit for V2X Sidelink Communication.

For UE supporting NR Uu and sidelink operation, Supported test configurations for FR1 NR cell are shown in Table A.9.1.5.1.1-1.

**Table A.9.1.5.1.1-1: Supported Test Configurations for FR1 NR cell (only for UE supporting both NR Uu and sidelink operation)**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 2                    | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 3                    | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                             |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.9.1.5.1-2: General test parameters for Congestion Control Measurement Test for V2X UE**

| Parameter   |  | Unit          | Value  | Comment   |
|---|--|---------------|--|---|
| NR RF Channel Number  |  |               | 1  | HD carrier in Band n47 or n38   |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 2</sup>   |  | MHz           | 20 ( $N_{\text{RB},c} = 50$ ) or<br>40 ( $N_{\text{RB},c} = 100$ )   |   |
| SCS   |  | kHz           | 30   |   |
| V2X sidelink communication configuration  |  |               | As specified in Table A.3.21.2-1 and A.3.21.2-3  | IE values unless specified otherwise in this test.  |

| Hysteresis  |  |               | 0  |   |
| Time To Trigger   |  | s             | 0  |   |
| Filter coefficient  |  |               | 0  | L3 filtering is not used  |
| T1  |  | s             | 5  |   |
| T2  |  | s             | 5  |   |
| Note 1: {1 <sub><math>i</math></sub> } is a sequence of ninety nine 0's with one 1 in $i+1$ 'th position. |  |               |  |   |
| Note 2: The UE is only required to be tested in one of the channel bandwidths.                            |  |               |  |   |
| Note 3: Only for UE supporting both Uu and sidelink operation.  |  |               |  |   |
| Note 4: Only for UE supporting sidelink operation but not supporting Uu.                                  |  |               |  |   |

**Table A.9.1.5.1-3: Active sidelink UE specific test parameters for Congestion Control Measurement Test for V2X UE**

| Parameter   | Unit   | Active Sidelink UE $i$ ( $i = 0, 1, 2, 3$ )                     |        |
|---|--|---|--------|
|   |  | T1  | T2     |
| NR RF Channel Number  |  | 1   |        |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 7</sup> | MHz  | 20 ( $N_{\text{RB},c} = 50$ ) or 40 ( $N_{\text{RB},c} = 100$ ) |        |
| PSCCH RMC (defined in A.3.21.3)                               |  | CC.1A HD  |        |
| PSSCH RMC (defined in A.3.21.3)                               |  | CD.1A HD  |        |
| $N_{oc}$ <sup>Note 1</sup>                                    | dBm/30 kHz   | -103  |        |
| $\hat{E}_s/N_{oc}$  | dB   | 4.35  | 10.32  |
| PSSCH-RSRP <sup>Note 2</sup>                                  | dBm/30 kHz   | -98.65  | -92.68 |
| SL-RSSI1 <sup>Note 2,3</sup>                                  | dBm/3.6 MHz  | -76.5   | -71.5  |
| SL-RSSI2 <sup>Note 2,4</sup>                                  | dBm/3.6 MHz  | -82.21  | -82.21 |
| Io1 <sup>Note 2,5</sup>                                       | dBm/3.6 MHz  | -76.5   | -71.5  |
| Io2 <sup>Note 2,6</sup>                                       | dBm/3.6 MHz  | -82.21  | -82.21 |
| Propagation Condition   | -  | AWGN  |        |
| Note 1:   | Interference from other UEs and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |        |
| Note 2:   | PSSCH $E_s/N_{oc}$ , PSSCH-RSRP, SL-RSSI1, SL-RSSI2, Io1 and Io2 levels have been derived from other parameters for information purposes. They are not settable parameters themselves.                       |   |        |
| Note 3:   | SL-RSSI1 is the SL-RSSI level measured on the slot# 0 - 3 with "SFN mod 5 = 0".  |   |        |
| Note 4:   | SL-RSSI2 is the SL-RSSI level measured on the slot# 4-9 with "SFN mod 5 = 0" and the slot# 0-9 with "SFN mod 5 = 1, ..., 4".   |   |        |
| Note 5:   | Io1 is the Io level measured on the slot# 0 - 3 with "SFN mod 5 = 0".  |   |        |
| Note 6:   | Io2 is the Io level measured on the slot# 4-9 with "SFN mod 5 = 0" and the slot# 0-9 with "SFN mod 5 = 1, ..., 4".   |   |        |
| Note 7:   | The UE is only required to be tested in one of the supported test configurations.  |   |        |

### A.9.1.5.2 Test Requirements

For UEs that support NR Uu and sidelink operation, the UEs shall not send event C1 triggered measurement reports during T1 and shall send event C1 triggered measurement reports during T2.

For UEs that support sidelink operation only, the UE channel occupancy ratio shall be larger than 0.001 during T1, and the UE channel occupancy ratio shall be no larger than 0.001 during T2.

The rate of correct events observed during repeated tests shall be at least 98%.

## A.9.1.6 Test for Interruption

### A.9.1.6.1 Test for Interruption to WAN due to V2X Sidelink Communication

#### A.9.1.6.1.1 Test Purpose and Environment

The purpose of this test is to verify the requirements related to interruptions due to V2X sidelink communication defined in clause 12.7.1 under the following additional conditions:

- The UE is out of coverage on the V2X sidelink carrier and is associated with a serving cell on a non-V2X sidelink carrier

This test is applicable for V2X sidelink communication capable UEs that support inter-band concurrent V2X sidelink operation.

For this test, the UE is triggered by the test loop function or the upper layers to monitor V2X sidelink communication.

The test parameters are given in Table A.9.1.6.1.1-1, Table A.9.1.6.1.1-2, Table A.9.1.6.1.1-3 and Table A.9.1.6.1.1-4. The test consists of one active cell (PCell) on the serving RF channel 1, and there are no active cells on RF channel 2. On RF channel 2, the test consists of 8 active Sidelink UEs in this test transmitting V2X sidelink communication. The UE under test and all active sidelink UEs select the active cell as synchronization source.

The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively.

During T1, the UE is in RRC\_IDLE and monitoring the V2X sidelink communication transmission from other active Sidelink UEs on the V2X sidelink communication resources.

During T2, the test system establishes a RRC connection with the UE. No PDSCH traffic is scheduled for UE, and the UE is expected to transmit *SidelinkUEInformationNR* indicating *sl-RxInterestedFreqList*. On reception of *SidelinkUEInformationNR*, the test system shall send RRC reconfiguration message to the UE and wait for the UE to respond with RRC reconfiguration complete message before transitioning to T3. If the UE does not transmit *SidelinkUEInformationNR* for up to 2 second, the test system shall transition to T3.

During T3, the UE is scheduled with PDSCH traffic on PCell downlink. The test system will count the missed ACK/NACKs during T3 to verify the allowed interruptions during V2X sidelink communication (no missed ACK/NACKs are allowed).

**Table A.9.1.6.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | NR Uu: FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 2             | NR Uu: TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                             |
| 3             | NR Uu: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                             |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

Table A.9.1.6.1.1-2: Test Parameters for Interruptions due to V2X Sidelink Communication

| Parameter           | Unit | Value  | Comment  |
|---------------------|------|--|--|
| RF Channel Number   | -    | 1, 2   | RF channel 1 is non-V2X sidelink carrier<br>RF channel 2 is V2X sidelink carrier |
| SCS                 | kHz  | 30   |  |
| Active cell         | -    | Cell 1   | PCell on RF channel number 1   |
| CP length of Cell 1 | -    | Normal   |  |
| T1                  | s    | 5.12   |  |
| T2                  | s    | Up to receiving RRC reconfiguration setup complete from the UE, or up to 2 second if UE does not transmit <i>SidelinkUEInformationNR</i> during this period. |  |
| T3                  | s    | 10   |  |

Table A.9.1.6.1.1-3: Slidelink Communication Configuration for Interruptions due to V2X Sidelink Communication

| Parameter   | Unit  | Value   | Comment  |  |
|---|---|---|--|--|
| RF Channel Number   | -   | 2   | HD carrier in Band n47 or n38                      |  |
| Channel Bandwidth ( $BW_{\text{channel}}$ ) <sup>Note 1</sup> | MHz   | 20 ( $N_{RB,c} = 50$ ) or 40 ( $N_{RB,c} = 100$ ) |  |  |
| V2X sidelink Communication configuration                      | -   | As specified in section A.3.21.2                  | IE values unless specified otherwise in this test. |  |
| Number of Active Sidelink UEs                                 | -   | 8   | Active Sidelink UE $i = 0, \dots, 7$               |  |
| Active Sidelink UEs (UE $i = 0, \dots, 7$ )                   | V2X sidelink Communication configuration              | -   | As specified in section A.3.21.2                   | IE values unless specified otherwise in this test.   |
|   | PSCCH Reference Measurement Channel                   | -   | CC.1A HD   | As specified in Table A.3.21.3-1   |
|   | PSSCH Reference Measurement Channel                   | -   | CD.1A HD   | As specified in Table A.3.21.3-2   |
|   | sl-NumSubchannel-r16 included in SL-ResourcePool      | -   | 1  | Indicates the number of sub-channels for TX resource pool  |
|   | sl-StartRB-Subchannel-r16 included in SL-ResourcePool | -   | $i$  | Indicates the lowest RB index of the subchannel with the lowest index for active Sidelink UE $i = 0, \dots, 7$ . |
|   | PSBCH-RSRP  | dBm/30kHz   | -95  |  |

Note 1: The UE is only required to be tested in one of the supported test configurations.

**Table A.9.1.6.1.1-4: Cell specific test parameters for interruptions due to V2X sidelink communication**

| Parameter   |              | Unit         | Cell 1                      |           |            |
|---|--------------|--------------|-----------------------------|-----------|------------|

They are not settable parameters themselves.</p> |              |              |                             |           |            |

**A.9.1.6.1.2 Test Requirements**

The UE shall be continuously scheduled on PCell on RF channel 1 during T3. During T3, 100% of all expected ACK/NACKs shall be transmitted by the V2X UE.

## A.10 EN-DC Tests with NR PSCell under CCA and Other NR Cells in FR1

*Editor's note: Test cases for EN-DC with NR PSCell under CCA and SCell under CCA are also included here.*

### A.10.1 RRC\_CONNECTED state mobility

#### A.10.1.1 RRC connection mobility control

##### A.10.1.1.1 Random Access

##### A.10.1.1.1.1 4-step RA type contention-based random access for NR PSCell with CCA

##### A.10.1.1.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in Table A.10.1.1.1.1.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in Table A.10.1.1.1.1.1-2.

**Table A.10.1.1.1.1-1: Supported test configurations for contention based random access test in FR1 for PSCell with CCA**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.10.1.1.1.1-2: General test parameters for contention based random access test in FR1 for PSCell with CCA**

| Parameter   |                      | Unit       | Test-1                              | Comments   |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and lo levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=Inf$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.   |

#### A.10.1.1.1.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.10.1.1.1.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in Clause 6.2.2A.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.
- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.10.1.1.1.1.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2A.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2A.2.1.4, the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.10.1.1.1.1.2.5 Contention Resolution Timer expiry

To test the UE behavior specified in Clause 6.2.2A.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.10.1.1.1.2 4-step RA type non-contention based random access for NR PSCell with CCA

#### A.10.1.1.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.2 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in Table A.10.1.1.2.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in Table A.10.1.1.2.1-2.

**Table A.10.1.1.2.1-1: Supported test configurations for non-contention based random access test in FR1 for PSCell with CCA**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.10.1.1.1.2.1-2: General test parameters for non-contention based random access test in FR1 for PSCell with CCA**

| Parameter   |                      | Unit       | Test-1                              | Comments                                     |  |
|---|----------------------|------------|-------------------------------------|--|--|
| SSB Configuration   | Note 4, 6            | Config 1,2 | SSB.1 CCA                           | As defined in A.3.10A                        |  |
|   | Note 5, 6            | Config 1,2 | SSB.2 CCA                           | As defined in A.3.10A                        |  |
| DBT Window Configuration                                      |                      | Config 1,2 | DBT.1                               | As specified in A.3.28.1                     |  |
| DL CCA model  |                      | Config 1,2 | As specified in A.3.26.2.1          |  |  |

| $P_{CCA\_DL}$   | Note 5, 6            |            | 0.75 / 0.75                         |  |  |
| $L_{CCA\_DL}$ <sup>Note 7</sup>                               |                      |            | 4                                   |  |  |
| $W_{CCA\_DL}$ <sup>Note 8</sup>                               |                      |            | Inf                                 |  |  |
| UL CCA probability  | Note 4, 6            |            | 0.87                                |  |  |
| $P_{CCA\_UL}$   | Note 5, 6            |            | 0.75                                |  |  |
| $L_{CCA\_UL}$ <sup>Note 7</sup>                               |                      |            | 5                                   |  |  |
| $W_{CCA\_UL}$ <sup>Note 8</sup>                               |                      |            | Inf                                 |  |  |
| Semi-static channel access config period <sup>Note 4, 6</sup> |                      | ms         | 2                                   |  |  |
| Propagation Condition   |                      | -          | AWGN                                |  |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=\text{Inf}$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.  |

#### A.10.1.1.1.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.10.1.1.1.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2A.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.10.1.1.1.2.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.
- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.10.1.1.1.2.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2A.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.2.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.3 2-step RA type contention-based random access for NR PSCell with CCA

##### A.10.1.1.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behaviour of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7A.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in Table A.10.1.1.1.3.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in Table A.10.1.1.1.3.1-2.

**Table A.10.1.1.1.3.1-1: Supported test configurations for 2-step RA type contention based random access test in FR1 for PSCell with CCA**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.10.1.1.1.3.1-2: General test parameters for 2-step RA type contention based random access test in FR1 for PSCell with CCA**

| Parameter   |                           | Unit       | Test-1                     | Comments                           |   |
|---|---------------------------|------------|----------------------------|------------------------------------|---|
| SSB Configuration   | Note 4, 6                 | Config 1,2 | SSB.1 CCA                  | As defined in A.3.10A              |   |
|   | Note 5, 6                 | Config 1,2 | SSB.2 CCA                  | As defined in A.3.10A              |   |

| $W_{CCA\_UL}$ <sup>Note 8</sup>                               |                           |            |                            | Inf                                |   |
| Semi-static channel access config period <sup>Note 4, 6</sup> |                           | ms         |                            | 2                                  |   |
| Propagation Condition   |                           | -          |                            | AWGN                               |   |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and lo levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=Inf$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.   |

#### A.10.1.1.1.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.10.1.1.1.3.2.1 MsgA Transmission

To test the UE behaviour specified in Clause 6.2.2A.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*, if the UL CCA is successful.

below are relevant for all cases of MsgA transmissions described within the clause A.10.1.1.1.3.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.
- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure. In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.10.1.1.1.3.2.2 MsgB Reception

To test the UE behaviour specified in Clause 6.2.2A.3.1.2 the System Simulator shall transmit a MsgB with fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble .

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.3 the System Simulator shall transmit a MsgB with fallbackRAR containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

### A.10.1.1.1.4 2-step RA type non-contention based random access for NR PSCell with CCA

#### A.10.1.1.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in clause 6.2.2A.3 and clause 7.1.2 in an AWGN model.

For this test two cells are used, with the configuration of Cell 1 (E-UTRA PCell) specified in clause A.3.7.2.1 and Cell 2 configured as PSCell in FR1. Cell 1 is on a licensed band and cell 2 is subjected to CCA. Supported test parameters are shown in Table A.10.1.1.1.4.1-1. UE capable of EN-DC with PSCell in FR1 needs to be tested by using the parameters in Table A.10.1.1.1.4.1-2.

**Table A.10.1.1.1.4.1-1: Supported test configurations for non-contention based random access test for 2-step RA type in FR1 for PSCell with CCA**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.10.1.1.4.1-2: General test parameters for non-contention based random access test for 2-step RA type in FR1 for PSCell with CCA**

| Parameter  |                      | Unit       | Test-1                     | Comments  |  |

| UL CCA probability                                 |                      | Note 4, 6  |                            | 0.87  |  |
| $P_{CCA\_UL}$                                      |                      | Note 5, 6  |                            | 0.75  |  |
| $L_{CCA\_UL}$ <sup>Note 7</sup>                    |                      |            |                            | 5   |  |

|   |  |      |  |
|---|--|------|--|
| $W_{CCA\_UL}$ <small>Note 8</small>                               |  | Inf  |  |
| Semi-static channel access config period <small>Note 4, 6</small> | ms   | 2    |  |
| Propagation Condition   | -  | AWGN |  |
| Note 1:   | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |      |  |
| Note 2:   | SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |      |  |
| Note 3:   | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |      |  |
| Note 4:   | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |      |  |
| Note 5:   | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |      |  |
| Note 6:   | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |      |  |
| Note 7:   | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |      |  |
| Note 8:   | A window $W_{CCA\_DL}=W_{CCA\_UL}=Inf$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.   |      |  |

#### A.10.1.1.1.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.10.1.1.1.4.2.1 MsgA Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2A.3.2.1 for MsgA transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause

##### A.10.1.1.1.4.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.
- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all MsgA transmission shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.10.1.1.1.4.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2A.3.2.2 the System Simulator shall transmit a MsgB containing a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble after 5 MsgA transmissions have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a

MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB if the MsgB contains a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power if Random Access Responses Reception has not been considered as successful.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.10.1.1.1.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.3 the System Simulator shall transmit a MsgB corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

## A.10.2 Timing

### A.10.2.1 UE transmit timing

#### A.10.2.1.1 UE Transmit Timing Test with PSCell under DL CCA

##### A.10.2.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeB when PSCell is subject to DL CCA and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2. Supported test configurations are shown in Table 10.2.1.1.1-1.

**Table A.10.2.1.1.1-1: Supported test configurations for UE transmit timing test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2      | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

Note 1: The UE is only required to be tested in one of the supported test configurations.

The test consists of E-UTRA PCell and NR PSCell, which is subject to DL CCA. The configuration for E-UTRA is given in A.3.7.2.1. Table A.10.2.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in Table A.10.2.1.1.1-3.

Table A.10.2.1.1.1-2: Cell Specific Test Parameters for UE Transmit Timing test

| Parameter  |                            | Unit        | Config | Test1                             | Test2                       |

#### A.10.2.1.1.2 Test requirements

The test sequence shall be carried out in RRC\_CONNECTED for every test case.

Following will be the test sequence for this test

- 1) Set up E-UTRA PCell according to parameters given in Table A.3.7.2.1-1 and setup NR PCell according to parameters given in Table A.10.2.1.1.1-1.
- 2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB.
  - a. The  $N_{TA}$  offset value (in  $T_c$  units) is 25600
  - b. The  $T_e$  values depend on the DL and UL SCS for which the test is being run and are given in Table 7.1.2-1
- 3) The test system shall adjust the timing of the DL path by values given in Table A.10.2.1.1.2-1

**Table A.10.2.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value  |                   |
|--------------------------|-------------------|-------------------|
|                          | Test1             | Test2             |
| 30                       | $+32 \cdot 64T_c$ | $+16 \cdot 64T_c$ |

- 4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in Clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

- 5) The test system shall verify that the UE transmit timing offset stays within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.10.2.2 UE timing advance

### A.10.2.2.1 UE Timing Advance Adjustment Accuracy with PSCell under DL CCA

#### A.10.2.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.10.2.2.1.2 Test Parameters

Supported test configurations are shown in table A.10.2.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.10.2.2.1.2-2, A.10.2.2.1.2-3 and A.10.2.2.1.2-4. The configuration of Cell 1 (LTE PCell) is specified in clause A.3.7.2.1.

In all test cases, two cells are used. Cell 1 is the PCell in the primary Timing Advance Group (pTAG) and cell 2 is the PSCell which is subject to DL CCA is in the secondary Timing Advance Group (sTAG). Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands for sTAG are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.10.2.2.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured for PSCell in sTAG.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element for sTAG, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance for sTAG used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements for sTAG, with Timing Advance Command value specified in table A.10.2.2.1.2-2. This value shall result in changes of the timing advance for sTAG used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in clause 7.3.2.1, the UE adjusts its uplink timing at slot  $n+k$  for a timing advance command received in slot  $n$ . This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in clause 5.2 in TS 38.321, shall be configured so that it does not expire in the duration of the test.

**Table A.10.2.2.1.2-1: Supported test configurations for timing advance test**

| Config  | Description   |
|---------|---|
| 1       | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                        |
| 2       | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                        |
| Note 1: | The UE is only required to be tested in one of the supported test configurations.               |
| Note 2: | The UE supporting EN-DC only on NR band(s) with shared spectrum access is required to be tested |

**Table A.10.2.2.1.2-2: General test parameters for timing advance test**

| Parameter  | Unit | Value                  | Comment   |
|--|------|------------------------|---|
| RF channel number                                |      | Cell 1: 1<br>Cell 2: 2 | 1 for E-UTRAN PCell<br>2 for NR PSCell  |
| Initial DL BWP                                   |      | DLBWP.0.1              | As specified in Table A.3.9.2.1-1   |
| Dedicated DL BWP                                 |      | DLBWP.1.1              | As specified in Table A.3.9.2.2-1   |
| Initial UL BWP                                   |      | ULBWP.0.1              | As specified in Table A.3.9.3.1-1   |
| Dedicated UL BWP                                 |      | ULBWP.1.1              | As specified in Table A.3.9.3.2-1   |
| Timing Advance Command ( $T_A$ ) value during T1 |      | 31                     | $N_{TA\_new} = N_{TA\_old}$ for the purpose of establishing a reference value from which the timing advance adjustment accuracy can be measured during T2 |
| Timing Advance Command ( $T_A$ ) value during T2 |      | 39                     | For 30 kHz SCS $N_{TA\_new} = N_{TA\_old} + 4096 * T_c$<br>(based on equation in clause 4.2 of TS 38.213 [3])   |
| T1   | s    | 5                      |   |
| T2   | s    | 5                      |   |

### A.10.2.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value for PSCell in sTAG to the transmission timing at the designated activation time i.e.  $k+1$  slots after the reception of the timing advance command, where  $k=5$ .

The Timing Advance adjustment accuracy for PSCell in sTAG shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90%.

## A.10.3 Signalling characteristics

### A.10.3.1 Radio link monitoring

#### A.10.3.1.1 Introduction

In the test cases specified in clause A.10.3.1, any uplink signal transmitted by the UE is used for detecting the in-/out-of-sync state of the UE. In terms of measurement, the uplink signal is verified based on the UE output power:

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means uplink signal
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-3 [20]) means no uplink signal.

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

### A.10.3.1.2 Radio link monitoring out-of-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

#### A.10.3.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.10.3.1.2.1-1. The test parameters are given in Tables A.10.3.1.2.1-2, A.10.3.1.2.1-3, and A.10.3.1.2.1-4 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of three successive time periods, with time duration of T1, T2 and T3, respectively. Figure A.10.3.1.2.1-1 shows the variation of the downlink SNR in the active Cell 2 to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1 and Cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in the test.

**Table A.10.3.1.2.1-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.3.1.2.1-2: General test parameters for PSCell out-of-sync testing in non-DRX mode.**

Figure A.10.3.1.2.1-1: SNR variation for out-of-sync testing.

#### A.10.3.1.2.2 Test requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

- During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.
- The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%

#### A.10.3.1.3 Radio link monitoring in-sync test for PSCell configured with SSB-based RLM RS in non-DRX mode

##### A.10.3.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PSCell. This test will partly verify the FR1 PSCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.10.3.1.3.1-1. The test parameters are given in Tables A.10.3.1.3.1-2, and A.10.3.1.3.1-3 below. There are two cells in the test: Cell 1 is the E-UTRAN PCell, and Cell 2 is the FR1 PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model.

**Table A.10.3.1.3.1-1: Supported test configurations.**

| <b>Configuration</b>   | <b>Description</b>   |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.3.1.3.1-2: General test parameters for PSCell in-sync testing in non-DRX mode.**

| Parameter   |  | Unit | Value                               |

| SNR on RLM-RS   | Config 1,2 | dB      |  |    |    |    |    |
| SNR on other channels and signals   | Config 1,2 | dB      | 1  |    |    |    |    |
| $N_{oc}$  | Config 1,2 | dBm/SCS | -95  |    |    |    |    |
| Propagation condition   |            |         | TDL-C 300ns 100Hz                              |    |    |    |    |
| NOTE 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows. |            |         |  |    |    |    |    |
| NOTE 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.   |            |         |  |    |    |    |    |
| NOTE 3: SNR levels correspond to the signal to noise ratio over the transmitted SSS REs during DBT windows.   |            |         |  |    |    |    |    |
| NOTE 4: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in Figure A.10.3.1.2.1-1.  |            |         |  |    |    |    |    |
| NOTE 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4 RX on all bands, the SNR during T3 and T4 is modified as specified in clause A.3.6.   |            |         |  |    |    |    |    |
| NOTE 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.   |            |         |  |    |    |    |    |
| NOTE 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.   |            |         |  |    |    |    |    |
| NOTE 8: For UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.   |            |         |  |    |    |    |    |
| NOTE 9: As defined in Table 8.1A.2.2-1.   |            |         |  |    |    |    |    |

**Figure A.10.3.1.2.1-1: SNR variation for in-sync testing.**

#### A.10.3.1.3.2 Test requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.10.3.1.4 Radio link monitoring out-of-sync test for PSCell configured with SSB-based RLM RS in DRX mode

##### A.10.3.1.4.1 Test purpose and environment

##### A.10.3.1.4.2 Test requirements

#### A.10.3.1.5 Radio link monitoring in-sync test for PSCell configured with SSB-based RLM RS in DRX mode

##### A.10.3.1.5.1 Test purpose and environment

##### A.10.3.1.5.2 Test requirements

### A.10.3.2 Interruption

#### A.10.3.2.1 E-UTRAN – NR interruptions during SCell operations with CCA

##### A.10.3.2.1.1 Test Purpose and Environment

The purpose of this test is to verify E-UTRAN PCell and NR PSCell interruptions during SCell operations on an NR SCC with CCA. This test will verify the interruption requirements for E-UTRAN PCell and NR PSCell in EN-DC specified in TS 38.133 clause 8.2.1 and 8.3A. Supported test configurations are shown in table A.10.3.2.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.10.3.2.1.1-2 and A.10.3.2.1.1-3 below. The E-UTRAN cell specific test parameters are provided in Table A.3.7.2.1-1. In the test there are three cells: Cell1, Cell2 and Cell3. Cell1 is LTE PCell, Cell2 and Cell3 is NR PSCell and NR SCell. Both of cell 2 and cell 3 are subject to CCA. The test consists of five time periods, with duration of T1, T2, T3, T4 and T5. Prior to the start of the time duration T1, the UE is connected to Cell1 and Cell2. Throughout the test, the LTE PCell and NR PSCell are continuously scheduled in DL. The power of signals on cell 1,2 and 3 is not modified during the test.

Prior to T1, a connection is started with cell 2 as the PSCell, and measurements of cell 3 are configured with gap pattern 0, such that cell 3 is reported. This ensures that cell 3 is known at the start of time period T1 and is not itself part of the tested requirement.

The point in time at which the RRC message implying SCell addition is received at the UE antenna connector, defines the start of time period T1. Measurement gap pattern 0 shall be stopped when the SCell is configured.

The point in time at which the RRC message implying SCell addition is received at the UE antenna connector, defines the start of time period T1.

The point in time at which the MAC-CE message implying SCell activation is received at the UE antenna connector, defines the start of time period T2.

The point in time at which the MAC-CE message implying SCell deactivation is received at the UE antenna connector, defines the start of time period T3.

The point in time at which deactivation delay requirement in section 8.3A are satisfied defines the start of time period T4

The point in time at which the RRC message implying SCell release is received at the UE antenna connector, defines the start of time period T5.

**Table A.10.3.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations**

| Config   | Description  |
|--|--|
| 1  | LTE FDD<br>NR without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD<br>NR without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.10.3.2.1.1-2: General test parameters for Interruptions during measurements on deactivated NR SCC**

| Parameter                                | Unit | Value   | Comment  |
|--|------|---------|--|
| RF Channel Number                        |      | 1, 2, 3 | One is E-UTRAN RF channel and the other two are NR RF channels |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |
| Note 3: | SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | Receive time difference of signals received between subframe timing boundary of E-UTRA PCell and slot timing boundary of PSCell at the UE antenna connector including time alignment error between the two cells   |
| Note 5: | Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells.   |
| Note 6: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 7: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 8: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

### A.10.3.2.1.2 Test Requirements

The UE shall meet the interruption requirements for SCell addition on both the victim PSCC in clause 8.2.1 and the victim LTE PCell in clause 7.32 of [15] during time T1

The UE shall meet the interruption requirements for SCell activation on both the victim PSCell in clause 8.2.1 and the victim LTE PCell in clause 7.32 of [15] during time T2. There shall be a single interruption with time window as specified in clause 8.3A.2

The UE shall meet the interruption requirements for SCell deactivation on both the victim PSCell in clause 8.2.1 and the victim LTE PCell in clause 7.32 of [15] during time T3. There shall be a single interruption with time window as specified in clause 8.3A,3

The UE shall meet the interruption requirements for deactivated SCell measurements on both the victim PSCell in clause 8.2.1 and the victim LTE PCell in clause 7.32 of [15] during time T4,3. The interruptions shall be within the time window as specified in clause 8.3A,3

The UE shall meet the interruption requirements for SCell release on both the victim PSCell in clause 8.2.1 and the victim LTE PCell in clause 7.32 of [15] during time T5.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.10.3.3 SCell activation and deactivation delay

### A.10.3.3.1 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 160 ms SCell measurement cycle

#### A.10.3.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in Table A.10.3.3.1.1-1.

The test parameters are given in Table A.10.3.3.1.1-2 and cell-specific parameters for NR cells are provided in Table A.10.3.3.1.1-3 below. Cell-specific parameters for EUTRA PCell are provided in clause A.3.7.2.1.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are three carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in E-UTRA, Cell 2 (PSCell) on radio channel 2 (PSCC) in NR, and Cell3 (SCell) on radio channel 3 (SCC) in NR. Before the test starts the UE is connected to Cell 1 and Cell 2, but is not aware of Cell 3, as the UE is only monitoring PCC and PSCC. The UE shall be continuously scheduled in the PCell and PSCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 3) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted  $m$ , defines the start of time period T2. The UE shall be able to report a valid CSI in PSCell for the activated SCell at latest in slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_Reporting\_withCCA}}) / \text{NR\_slot\_length}$ , as defined in clause 8.3A.2. The UE shall start reporting CSI in PSCell in first available uplink resource for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting following slot  $m + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PSCell interruption shall fall within the time window specified in clause 8.3A.2.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted  $n$ , defines the start of time period T3. The UE shall complete the activation at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ . Any PSCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.10.3.3.1.1-1: Supported test configurations for SCell Activation and Deactivation of known NR SCell with NR PSCell and SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description  |
|---------------|--|
| 1             | PCC: LTE FDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | PCC: LTE TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:         | The UE is only required to be tested in one of the supported test configurations   |

**Table A.10.3.3.1.1-2: General test parameters for known SCell activation case with NR PSCell and SCell under CCA, 160 ms SCell measurement cycle**

| Parameter  | Unit    | Value   | Comment  |
|--|---------|---|--|
| RF Channel Number                                  |         | 1,2,3   | Three radio channels (1, 2, 3) are used for this test  |
| Active PCell                                       |         | Cell 1  | Primary cell on E-UTRAN RF channel number 1.   |
| Active PSCell                                      |         | Cell 2  | Primary secondary cell on NR RF channel number 2.  |
| Configured deactivated SCell                       |         | Cell 3  | Configured deactivated secondary cell on NR RF channel number 3  |
| CP length  |         | Normal  |  |
| DRX  |         | OFF   | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index |         | 0   | CQI reporting for SCell every second subframe  |
| SCell measurement cycle (measCycleSCell)           | ms      | 160   |  |
| Cell 3 timing offset to Cell 2                     | $\mu$ s | 0   |  |
| Time alignment error between Cell 3 and Cell 2     | $\mu$ s | $\leq$ TAE as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.  |
| T1   | s       | 7   | During this time PCell and PSCell shall be known and the SCell configured and detected.  |
| T2   | s       | 1   | During this time the UE shall activate the SCell.  |
| T3   | s       | 1   | During this time the UE shall deactivate the SCell.  |
| T <sub>HARQ</sub>                                  | ms      | $k_1 \times \text{NR slot length}$                        | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by <i>dl-DataToUL-ACK</i> , the value of $k$ should be the minimum value defined in TS 38.213 [3] depends on UE's capability  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |
| Note 3: | SS-RSRP, SCH_RP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |
| Note 5: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 6: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 7: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |
| Note 8: | As specified in clause 8.3A for $L_{1,max}$ , $L_{2,1,max}$ , $L_{2,2,max}$ , $L_{3,1,max}$ , and $L_{3,2,max}$  |

### A.10.3.3.1.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{HARQ} + T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA})/NR\_slot\_length$ , where  $T_{activation\_time\_withCCA} = T_{FirstSSB} + L_1 * T_{rs} + 5ms$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{HARQ} + 3ms}{NR\_slot\_length}$ , as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot  $m + 1 + \frac{T_{HARQ}}{NR\_slot\_length}$  to slot  $m + 1 + \frac{T_{HARQ} + 3 + T_X}{NR\_slot\_length}$  with  $T_X = T_{FirstSSB}$ .

During T3, interruption on PSCell shall not occur outside slot  $n + 1 + T_{HARQ}/NR\_slot\_length$  to slot  $n + 1 + (T_{HARQ} + 3ms)/NR\_slot\_length$ .

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

### A.10.3.3.2 SCell Activation and Deactivation of known NR SCell with NR PSCell and NR SCell under CCA, 320 ms SCell measurement cycle

#### A.10.3.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 320 ms.

The supported test configurations are same as in Table A.10.3.3.1.1-1 above.

The test parameters are same as in Table A.10.3.3.1.1-2 above, except for parameters listed below in Table A.10.3.3.2.1-1. The cell-specific parameters are same as in Table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

**Table A.10.3.3.2.1-1: General test parameters for known NR SCell activation with NR PSCell and SCell under CCA, 320 ms SCell measurement cycle**

| Parameter                                | Unit | Value | Comment |
|--|------|-------|---------|
| SCell measurement cycle (measCycleSCell) | ms   | 320   |         |

### A.10.3.3.2.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_reporting\_withCCA}}) / \text{NR\_slot\_length}$ , where  $T_{\text{activation\_time\_withCCA}} = T_{\text{FirstSSB\_MAX}} + L_{2,1} * T_{\text{SMTC\_MAX}} + (1 + L_{2,2}) * T_{\text{rs}} + 5\text{ms}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR\_slot\_length}}$ , as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR\_slot\_length}}$  to slot  $m + 1 + \frac{T_{\text{HARQ}} + 3 + T_{\text{X}}}{\text{NR\_slot\_length}}$  with  $T_{\text{X}} = T_{\text{FirstSSB\_MAX}} + L_{2,1} * T_{\text{SMTC\_MAX}}$ .

During T3, interruption on PSCell shall not occur outside slot  $n + 1 + T_{\text{HARQ}} / \text{NR\_slot\_length}$  to slot  $n + 1 + (T_{\text{HARQ}} + 3\text{ms}) / \text{NR\_slot\_length}$ .

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

### A.10.3.3.3 SCell Activation and Deactivation of unknown NR SCell with NR PSCell and NR SCell under CCA

#### A.10.3.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for NR SCell, with NR PSCell and NR SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in Table A.10.3.3.1.1-1 above.

The test parameters are same as in Table A.10.3.3.1.1-2 above, except for parameters listed below in Table A.10.3.3.3.1-1. The cell-specific parameters are same as in Table A.10.3.3.1.1-3 above.

The test execution is the same as described in clause A.10.3.3.1 above.

**Table A.10.3.3.3.1-1: General test parameters for unknown NR SCell activation with NR PSCell and SCell under CCA**

| Parameter | Unit | Value | Comment   |
|-----------|------|-------|---|
| T1        | s    | 0.1   | During this time period PCell and PSCell shall be known and the SCell configured, but not detected. |

#### A.10.3.3.3.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_reporting\_withCCA}}) / \text{NR\_slot\_length}$ , where  $T_{\text{activation\_time\_withCCA}} = T_{\text{FirstSSB\_MAX}} + (1 + L_{3,1}) * T_{\text{SMTC\_MAX}} + (2 + L_{3,2}) * T_{\text{rs}} + 5\text{ms}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR\_slot\_length}}$ , as defined in clause 8.3A.3.

During T2, interruption on PSCell shall not occur outside slot  $m + 1 + \frac{T_{HARQ}}{NR\_slot\_length}$  to slot  $m + 1 + \frac{T_{HARQ} + 3 + T_X}{NR\_slot\_length}$  with  $T_X = T_{FirstSSB\_MAX} + L_{3,1} * T_{SMTc\_MAX}$ .

During T3, interruption on PSCell shall not occur outside slot  $n + 1 + T_{HARQ}/NR\_slot\_length$  to slot  $n + 1 + (T_{HARQ} + 3ms)/NR\_slot\_length$ .

The interruption on PSCell shall not be more than specified for EN-DC in clause 8.2.1.2.4.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

## A.10.3.4 Beam failure detection and link recovery procedures

### A.10.3.4.1 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in non-DRX mode

#### A.10.3.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in Tables A.10.3.4.1.1-1, A.10.3.4.1.1-2, and A.10.3.4.1.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.1.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set  $q_0$  in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.10.3.4.1.1-1: Supported test configurations for FR1 PSCell with CCA**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                      |
| 2             | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.3.4.1.1-2: General test parameters for FR1 PSCell for SSB-based beam failure detection and link recovery testing in non-DRX mode**

| Parameter                                      |  | Unit | Value  | Comment |
|--|--|------|--|---------|
|  |  |      | Test 1   |         |

**Figure A.10.3.4.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

#### A.10.3.4.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 410$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.10.3.4.2 EN-DC Beam Failure Detection and Link Recovery Test for FR1 PSCell configured with SSB-based BFD and LR in DRX mode

##### A.10.3.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving PSCell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in Tables A.10.3.4.2.1-1, A.10.3.4.2.1-2, and A.4.5.5.2.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell which operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.10.3.4.2.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set  $q_0$  in the active PSCell to emulate SSB based beam failure. Figure A.10.3.4.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA model. In the test, DRX configuration is enabled in PSCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.10.3.4.2.1-1: Supported test configurations for FR1 PSCell with CCA**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                      |
| 2                    | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                      |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.3.4.2.1-2: General test parameters for FR1 PSCell for SSB-based beam failure detection and link recovery testing in DRX mode**

| Parameter                                      |  | Unit | Value  | Comment |
|--|--|------|--|---------|

#### A.10.3.4.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 3850$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.10.3.5 Active BWP switching

#### A.10.3.5.1 UL active BWP switch delay with consistent UL LBT failure on PSCell subject to UL CCA in EN-DC

##### A.10.3.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the UL BWP switch delay requirement defined in clause 8.6.4.

The supported test configurations are shown in Table A.10.3.5.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in A.10.3.5.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.10.3.5.1.1-2. SRS configuration used in the test is specified in Table A.10.3.5.1.1-4.

The UE shall be configured with PRACH configuration on UL BWP on which the UE shall switch after the consistent UL LBT failure detection.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1 and Cell 2 on radio channel 2.

- UE is configured with 2 different UE-specific downlink and uplink bandwidth parts on Cell 2: DL BWP-1, DL BWP-2, UL BWP-1 and UL BWP-2 before starting the test. DL BWP-1 and DL BWP-2 always include bandwidth of the initial DL BWP and SSB. UL BWP-1 and UL BWP-2 always include bandwidth of the SRS.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is DL BWP-1.
- UE is indicated in *firstActiveUplinkBWP-Id* that the active UL BWP is UL BWP-1.
- UE is configured with *LBT-FailureRecoveryConfig* parameters for Cell 2.

The cell has constant signal levels throughout the test. The test consists of 2 successive time periods, with durations of T1 and T2, respectively.

During T1,

- Time period T1 starts when the UE has received the SRS configuration for periodic SRS transmission on active UL BWP-1.
- The UE shall perform UL CCA before SRS transmission.
- The parameter UL CCA probability  $P_{CCA}$  is set to 0 during T1. This requires the test system to set energy level above the detection level during portion of the UL slot where the UE performs UL CCA. This in turn forces the UE to fail the UL CCA. The UE consistently fails UL CCA during T1 and is therefore unable to transmit SRS.

During T2,

- T2 starts when the UE detects consistent UL LBT failures i.e. when total number of UL LBT failures in Cell 2 on active UL BWP-1 exceeds *lbt-FailureInstanceMaxCount* during *lbt-FailureDetectionTimer*.
- The UE upon detected consistent UL LBT failure starts the LBT recovery mechanism, which requires the UE to switch to active UL BWP-2 in Cell 2 and to send PRACH in the active UL BWP-2.
- Starting from T2, the UE shall be able to send PRACH in the active UL BWP-2 within the delay specified in clause 8.6.4.

**Table A.10.3.5.1.1-1: Supported test configurations for UL BWP switch test in EN-DC**

| Config | Description  |
|--------|--|
| 1      | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2      | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

Note 1: The UE is only required to be tested in one of the supported test configurations.

**Table A.10.3.5.1.1-2: General test parameters for UL BWP switch in EN-DC**

| Parameter                              | Unit | Value  | Comment  |
|--|------|--------|--|
| E-UTRA RF Channel Number               |      | 1      | One E-UTRA radio channel is used for this test                   |
| NR RF Channel Number                   |      | 2      | One NR radio channel is used for this test                       |
| Active PCell                           |      | Cell 1 | PCell on RF channel number 1.                                    |
| Active PSCell                          |      | Cell 2 | PSCell on RF channel number 2.                                   |
| CP length                              |      | Normal |  |
| DRX                                    |      | OFF    |  |
| <i>lbt-FailureDetectionTimer</i> [2]   | ms   | 80     | Parameter configured by IE: <i>LBT-FailureRecoveryConfig</i> [1] |
| <i>lbt-FailureInstanceMaxCount</i> [2] |      | 4      | Parameter configured by IE: <i>LBT-FailureRecoveryConfig</i> [1] |
| T1                                     | s    | 0.1    | During T1 consistent LBT failure is detected on active UL BWP-1  |
| T2                                     | s    | 0.1    | During T2 UE sends PRACH on active UL BWP-2                      |

**Table A.10.3.5.1.1-3: NR Cell specific test parameters for UL BWP switch test in EN-DC**

| Parameter  |                            | Unit         | Cell 2                            |                                       |
|--|----------------------------|--------------|-----------------------------------|---------------------------------------|
|  |                            |              | T1                                | T2                                    |
| TDD configuration  |                            | Config 1, 2  | TDDConf.1.1 CCA                   |                                       |

| repetitionFactor         | n1   |  |
| combOffset-n2            | 0  | transmissionComb setting   |
| cyclicShift-n2           | 0  |  |
| nrofSRS-Ports            | port1  | Number of antenna ports used for SRS transmission  |
| Note:                    | For further information see clause 6.3.2 in TS 38.331 [2]. |  |

#### A.10.3.5.1.2 Test Requirements

The UE capable of *bwp-SwitchingDelay type1* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 21.5 ms from the beginning of time period T1.

The UE capable of *bwp-SwitchingDelay type2* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 2 (PSCell) less than 23 ms from the beginning of time period T1.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The above delay is calculated as follows:’

The active UL BWP switch delay from UL BWP-1 to UL BWP-2 can be expressed as:

$$T_{\text{BWPswitchDelay}} * T_{\text{slot}} + 1 * T_{\text{slot}} + (1 + L_3) * T_{\text{SSB,RO}} + 10 \text{ ms}$$

Where:

$T_{\text{BWPswitchDelay}} = 1 \text{ ms}$  (2 slots) and  $2.5 \text{ ms}$  (5 slots) for *bwp-SwitchingDelay* [2] *type1* and *type2* UE capabilities according to clause 8.6.4.

$T_{\text{slot}} =$  It is the slot length. It is 0.5 ms for 30 kHz.

$L_3 =$  It is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure.  $L_3 = 0$  during T2 since  $P_{\text{CCA}} = 1$ .

$T_{\text{SSB,RO}} = 10 \text{ ms}$  according to FR1 PRACH configuration 1.

This gives a total of 21.5 ms and 23 ms for *type1* and *type2* UE respectively.

## A.10.3.5.2 DCI-based and Timer-based Active BWP Switch

### A.10.3.5.2.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

#### A.10.3.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in TS38.133 clause 8.6, and interruption requirement for E-UTRA victim cell defined in TS36.133 clause 7.32.2.7. Supported test configurations are shown in Table A.10.3.5.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.10.3.5.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.10.3.5.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after DL slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after DL slot ( $i+T_{BWPswitchDelay}$ ).

The starting time of PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the beginning slot of the DL subframe immediately after the *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after DL slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after DL slot ( $j+T_{BWPswitchDelay}$ ).

The starting time of PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of PSCell, respectively.

**Table A.10.3.5.2.1.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| Note 1: The UE is only required to be tested in one of the supported test configurations.                      |  |
| Note 2: A UE which fulfils the requirements in test case A.10.3.5.2.2 can skip the test cases in A.10.3.5.2.1. |  |
| Note 3: The UE supporting EN-DC with only NR band(s) with shared spectrum access is required to be test.       |  |

**Table A.10.3.5.2.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value                             | Comment  |
|---|------|-----------------------------------|--|
| E-UTRA RF Channel Number                                |      | 1                                 | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2                                 | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1                            | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2                            | PSCell on RF channel number 2.                 |

## A.10.3.5.2.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ( $i + T_{BWPswitchDelay} + kI$ ).

During T3, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot  $(j+T_{BWPswitchDelay}+kI)$ .

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1, the start time of PCell interruption during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start time of PCell interruption of during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS36.133 Clause 7.32.2.7.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot  $(i+T_{BWPswitchDelay}+kI)$ ,  $(j+T_{BWPswitchDelay}+kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK.

#### A.10.3.5.2.2 E-UTRAN – NR PSCell FR1 DL active BWP switch with FR1 SCell in non-DRX in synchronous EN-DC

##### A.10.3.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirements for NR victim cell defined in clause 8.2.1.2.7 and interruption requirement for E-UTRA victim cell defined in clause 7.32.2.7 of TS 36.133 [15]. Supported test configurations are shown in Table A.10.3.5.2.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in Table A.10.3.5.2.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in Table A.10.3.5.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 3) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for SCell, BWP-0 in Cell 3 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}$ ).

PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $j+T_{BWPswitchDelay}$ ).

PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

SCell(Cell 3) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to E-UTRA PCell and NR SCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell and SCell during BWP switch of PSCell, respectively.

**Table A.10.3.5.2.2.1-1: DL BWP switch supported test configurations**

| Config  | Description  |
|---------|--|
| 1       | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                               |
| 2       | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                               |
| Note 1: | The UE is only required to be tested in one of the supported test configurations                       |
| Note 2: | A UE which fulfils the requirements in test case A.10.3.5.2.2 can skip the test cases in A.10.3.5.2.1. |
| Note 3: | NR configuration is the same for PSCell and SCells.  |
| Note 4: | The UE supporting EN-DC with only NR band(s) with shared spectrum access is required to be tested.     |

**Table A.10.3.5.2.2.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value                             | Comment  |
|---|------|-----------------------------------|--|
| E-UTRA RF Channel Number                                |      | 1                                 | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2, 3                              | Two NR radio channel is used for this test     |
| Active PCell  |      | Cell 1                            | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2                            | PSCell on RF channel number 2.                 |
| Active SCell  |      | Cell 3                            | SCell on RF channel number 3.                  |
| CP length   |      | Normal                            |  |
| DRX   |      | OFF                               |  |
| DL CCA model  |      | As specified in clause A.3.26.2.1 |  |
| UL CCA model  |      | As specified in clause A.3.26.2.2 |  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0                                 | Individual offset for cells on PSCC.           |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0                                 | Individual offset for cells on SCC.            |
| Cell2 timing offset to cell1                            | μs   | 3                                 | Synchronous EN-DC                              |
| Cell3 timing offset to cell2                            | μs   | 3                                 | Synchronous cells                              |
| T1  | s    | 0.2                               |  |
| T2  | s    | 0.2                               |  |
| T3  | s    | 0.2                               |  |

## A.10.3.5.2.2.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ( $i + T_{BWPswitchDelay} + kI$ ).

During T3, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot  $(j+T_{BWPswitchDelay}+kI)$ .

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 7.32.2.7 of TS 36.133 [15].

During T1, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.6.2.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after slot  $(i+T_{BWPswitchDelay}+kI)$ ,  $(j+T_{BWPswitchDelay}+kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK.

*Editor's note: FFS value of k1 for type 1 and type 2 UE.*

### A.10.3.5.3 RRC-based Active BWP Switch

#### A.10.3.5.3.1 E-UTRAN – NR PSCell FR1 DL active BWP switch in non-DRX in synchronous EN-DC

##### A.10.3.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in Table A.10.3.5.3.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in Table A.10.3.5.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in Table A.10.3.5.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ) as defined in clause 8.6.3 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ).

$T_{RRCprocessingDelay}$  and  $T_{BWPswitchDelayRRC}$  are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.10.3.5.3.1.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | LTE FDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD,<br>With CCA: NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| Note 1: The UE is only required to be tested in one of the supported test configurations.                  |  |
| Note 2: The UE supporting EN-DC with only NR band(s) with shared spectrum access is required to be tested. |  |

**Table A.10.3.5.3.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value                             | Comment  |

| Note 3: SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                               |              |                          |
| Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].    |                               |              |                          |
| Note 5: Parameters $P_{CCA\_DL}$ , $P_{CCA\_DL\_1}$ , $P_{CCA\_DL\_2}$ and $P_{CCA\_UL}$ are defined in clause A.3.26.2.   |                               |              |                          |
| Note 6: For UE supporting both semi-static and dynamic cannel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.   |                               |              |                          |

## A.10.3.5.3.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.10.3.6 PSCell addition and release delay

### A.10.3.6.1 Addition and Release Delay of known NR PSCell on the carrier under CCA

#### A.10.3.6.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell addition and release delays on the carrier under CCA under EN-DC are within the requirements stated in clause 7.31A.2 [15] for the case when the PSCell is known by the UE at the time of addition.

Supported test configurations are shown in A.10.3.6.1.1-1. The test parameters for the E-UTRA cell are given in Table A.3.7.2.1-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in Tables A.10.3.6.1.1-2 and cell-specific parameters in A.10.3.6.1.1-3 below. The test consists of five successive time periods with duration of T1, T2, T3, T4 and T5 respectively. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell1 is known to the UE.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event B1 is configured for neighbour cell (Cell2). Before the start of T2 the UE is configured with the measurement gaps (gap pattern Id # 0). The Cell2 becomes known to the UE during T2. Therefore, during T2 the UE shall report Event B1. After receiving the Event B1, the test system shall send a RRC message to the UE to release the measurement gaps.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T2, after the measurement gaps are released by the test system. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of period T3.

The test system shall observe the periodic reporting of CSI for PSCell during T4. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T4.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during period T4, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of period T5.

**Table A.10.3.6.1.1-1: Supported test configurations for FR1 PSCell**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR SCS 30 kHz, BW 40 MHz, TDD   |
| 2             | LTE TDD, NR SCS 30 kHz, BW 40 MHz, TDD   |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.3.6.1.1-2: General Test Parameters for PSCell Addition and Release**

| Parameter         | Unit           | Value | Comment  |
|-------------------|----------------|-------|--|
| RF Channel Number |                | 1, 2  | Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell on the carrier under CCA |
| Initial           | Active PCell   | Cell1 | PCell on RF channel number 1.  |
|                   | Neighbour cell | Cell2 | Neighbour cell on RF channel number 2.   |

|  |   |     |   |  |
|--|---|-----|---|--|
| Final Condition  | Active PCell                                    |     | Cell1   | PCell on RF channel number 1.  |
|  | Neighbour Cell                                  |     | Cell2   | PSCell released on RF channel number 2.  |
| B1   | Hysteresis                                      | dB  | 0   | Hysteresis for evaluation of event B1.   |
|  | Threshold RSRP                                  | dBm | -93   | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin.   |
|  | Time to Trigger                                 | S   | 0   |  |
| DRX  |   |     | OFF   | Continuous monitoring of primary cell  |
| DL CCA model   | Dynamic channel access <sup>Note 1, 3</sup>     |     |   | As specified in clause A.3.20.2.1  |
|  | Semi-static channel access <sup>Note 2, 3</sup> |     |   |  |
| UL CCA model   | Dynamic channel access <sup>Note 1, 3</sup>     |     |   | As specified in clause A.3.20.2.2  |
|  | Semi-static channel access <sup>Note 2,3</sup>  |     |   |  |
| Measurement gap pattern Id   |   |     | 0   | Gaps are configured before T2 and released before T3.  |
| PRACH configuration on cell2   |   |     | FR1 PRACH configuration 2                             | Captured in A.3.8.2.1  |
| CQI/PMI periodicity and offset configuration index on cell2  |   |     | 2ms   | CQI reporting for PSCell every uplink subframe   |
| Cell-individual offset for cells on RF channel number 1  |   | dB  | 0   | Individual offset for cells on primary component carrier.  |
| Cell-individual offset for cells on RF channel number 2  |   | dB  | 0   | Individual offset for cells on carrier frequency of cell2.   |
| T304   |   | ms  | 500   |  |
| LCCA_DL  |   |     | 5   |  |
| T1   |   | s   | 1   | During this time the PCell shall be known and cell2 shall be unknown.  |
| T2   |   | s   | $\geq T_{\text{identify\_irat\_cca\_without\_index}}$ | $T_{\text{identify\_irat\_cca\_without\_index}}$ is defined in clause 8.1.2.4.21A and 8.1.2.4.22A in TS 36.133<br>During this time the UE shall identify neighbour cell (cell2) and report event B1. |
| T3   |   | s   | $\geq T_{\text{config\_PSCell\_withCCA}}$             | During this time the UE adds the PSCell.<br>$T_{\text{config\_PSCell\_withCCA}}$ is defined in clause 7.31A.2  |
| T4   |   | s   | 0.5   | During this time the UE sends CSI reports for PSCell.  |
| T5   |   | s   | 0.5   | During this time the UE releases the PSCell.   |
| <p>NOTE 1: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>NOTE 2: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>NOTE 3: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.</p> |   |     |   |  |

**Table A.10.3.6.1.1-3: Cell Specific Parameters for PSCell Addition and Release**

| Parameter   | Unit | Config   | Test |    |  |    |    |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For cells with CCA model, OCNG is transmitted only in slots with RMC burst transmission and is not transmitted during muted slots or during DBT windows.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>Note 7: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.</p> |             |      |                             |     |

### A.10.3.6.1.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest  $T_{\text{config\_PSCell\_withCCA}}$  <sup>Note1</sup> into T3.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T4.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T4

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T5.

All the above test requirements shall be fulfilled in order for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90%.

Note1: The PSCell addition delay can be expressed as follows as specified in clause 7.31A.2 [15]:

$$T_{\text{config\_PSCell\_withCCA}} = T_{\text{RRC\_delay}} + T_{\text{processing}} + T_{\text{search\_withCCA}} + T_{\Delta\_withCCA} + T_{\text{PSCell\_DU\_withCCA}} + 2 \text{ ms}$$

Where:

$$T_{\text{RRC\_delay}} = 20 \text{ ms}$$

$$T_{\text{processing}} = 20 \text{ ms}$$

$$T_{\text{search\_withCCA}} = 0$$

$$T_{\Delta\_withCCA} = (1 + L_2) * 20 \text{ ms}$$

$$T_{\text{PSCell\_DU\_withCCA}} = 20 \text{ ms.}$$

$L_2$  is the number of SMTC occasions not available at the UE for fine time tracking and acquiring full timing information, where  $L_2 \leq L_{\text{CCA\_DL}}$ .

### A.10.3.7 Void

## A.10.4 Measurement procedure

### A.10.4.1 Intra-frequency measurements

#### A.10.4.1.1 Event-triggered reporting tests on PSCC without gaps under non-DRX

##### A.10.4.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

##### A.10.4.1.1.2 Test parameters

Three cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and two cells on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model: PSCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in Table A.10.4.1.1.2-1 and A.10.4.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In the first test (Test 1), the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In the second test (Test 2), the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In the third test (Test 3), the UE is configured with SS-SINR as Event A3 measurement quantity.

**Table A.10.4.1.1.2-1: Supported test configurations**

| Configuration   | Description  |
|---|--|
| 1   | LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |  |

**Table A.10.4.1.1.2-2: General test parameters for intra-frequency event triggered reporting without gaps**

Editor's note: Table TBD

**Table A.10.4.1.1.2-3: Cell-specific test parameters for intra-frequency event-triggered reporting without gaps**

Editor's note: Table TBD

### A.10.4.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.1.2 Event-triggered reporting tests on PSCC without gaps under DRX

#### A.10.4.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.10.4.1.2.2 Test parameters

#### A.10.4.1.2.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.1.3 Event-triggered reporting tests on PSCC with per-UE gaps under non-DRX

#### A.10.4.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.10.4.1.3.2 Test parameters

#### A.10.4.1.3.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.1.4 Event-triggered reporting tests on PSCC with per-UE gaps under DRX

#### A.10.4.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.10.4.1.4.2 Test parameters

#### A.10.4.1.4.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.1.5 Event-triggered reporting tests on SCC without gaps under non-DRX

#### A.10.4.1.5.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.10.4.1.5.2 Test parameters

#### A.10.4.1.5.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.1.6 Event-triggered reporting tests on SCC without gaps under DRX

##### A.10.4.1.6.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

##### A.10.4.1.6.2 Test parameters

##### A.10.4.1.6.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.1.7 Event-triggered reporting tests on SCC with per-UE gaps under non-DRX

##### A.10.4.1.7.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

##### A.10.4.1.7.2 Test parameters

##### A.10.4.1.7.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.1.8 Event-triggered reporting tests on SCC with per-UE gaps under DRX

### A.10.4.1.8.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

### A.10.4.1.8.2 Test parameters

### A.10.4.1.8.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.10.4.1.9 RSSI measurement reporting on PSCC

### A.10.4.1.9.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the intra-frequency RSSI measurement reporting requirements in Section 9.2A.7.1.

### A.10.4.1.9.2 Test parameters

In the test, the UE is configured to perform intra-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.1.9.2-1. There are two cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.1.9.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.1.9.2-2: General test parameters.**

Editor's note: Table TBD

## A.10.4.1.10 Channel occupancy measurement reporting on PSCC

### A.10.4.1.10.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the intra-frequency channel occupancy measurement reporting requirements in Section 9.2A.7.2.

### A.10.4.1.10.2 Test parameters

In the test, the UE is configured to perform intra-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.1.10.2-1. There are two cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.1.10.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.1.10.2-2: General test parameters.**

Editor's note: Table is TBD

### A.10.4.1.11 RSSI measurement reporting on SCC

#### A.10.4.1.11.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the intra-frequency RSSI measurement reporting requirements in Section 9.2A.7.1.

#### A.10.4.1.11.2 Test parameters

In the test, the UE is configured to perform intra-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.1.11.2-1. There are three cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, Cell 3 is SCell on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1, Cell 2, and Cell 3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.1.11.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.1.11.2-2: General test parameters.**

Editor's note: Table TBD

### A.10.4.1.12 Channel occupancy measurement reporting on SCC

#### A.10.4.1.12.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the intra-frequency channel occupancy measurement reporting requirements in Section 9.2A.7.2.

#### A.10.4.1.12.2 Test parameters

In the test, the UE is configured to perform intra-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.1.12.2-1. There are three cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, and Cell 3 is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1, Cell 2, Cell 3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.1.12.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.1.12.2-2: General test parameters.**

Editor's note: Table is TBD

## A.10.4.2 Inter-frequency measurements

### A.10.4.2.1 RSSI measurement reporting

#### A.10.4.2.1.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the inter-frequency RSSI measurement reporting requirements in Section 9.3A.8.

#### A.10.4.2.1.2 Test parameters

In the test, the UE is configured to perform inter-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.2.1.2-1. There are two cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The RSSI measurement is performed on an inter-frequency under CCA. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.2.1.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.2.1.2-2: General test parameters.**

Editor's note: Table TBD

### A.10.4.2.2 Channel occupancy measurement reporting

#### A.10.4.2.2.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the inter-frequency channel occupancy measurement reporting requirements in Section 9.3A.9.

#### A.10.4.2.2.2 Test parameters

In the test, the UE is configured to perform inter-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.10.4.2.2.2-1. There are two cells in the test: Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The channel occupancy measurement is performed on an inter-frequency under CCA. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.4.2.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.4.2.2-2: General test parameters.**

Editor's note: Table is TBD

### A.10.4.2.3 EN-DC event triggered reporting tests for FR1 with CCA cell without SSB time index detection when DRX is not used

#### A.10.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.3.1-1, A.10.4.2.3.1-2, and A.10.4.2.3.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.3.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.2.3.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.3.1-1.

**Table A.10.4.2.3.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE TDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.10.4.2.3.1-2: General test parameters for EN-DC inter-frequency event triggered reporting without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value  |        | Comment  |
|---|------|--------------------|--|--------|--|
|   |      |                    | Test 1   | Test 2 |  |
| E-UTRA RF Channel Number                        |      | Config 1,2         | 1  |        | One E-UTRAN carrier frequency is used.   |
| NR RF Channel Number                            |      | Config 1,2         | 1, 2   |        | Two FR1 NR carrier frequencies are used. Channels 1 and 2 are with CCA.                          |

| Propagation Condition     |  | Config 1,2 | AWGN   |        |           |        |
| Note 1:                   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |            |        |        |           |        |
| Note 2:                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |        |        |           |        |
| Note 3:                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |            |        |        |           |        |
| Note 4:                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |            |        |        |           |        |
| Note 5:                   | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |            |        |        |           |        |
| Note 6:                   | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |            |        |        |           |        |
| Note 7:                   | For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.   |            |        |        |           |        |

#### A.10.4.2.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.4 EN-DC event triggered reporting tests for FR1 cell with CCA without SSB time index detection when DRX is used

##### A.10.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.4.1-1, A.10.4.2.4.1-2, and A.10.4.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.4.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.10.4.2.4.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.4.1-1.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.4.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE TDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.10.4.2.4.1-2: General test parameters for EN-DC inter-frequency event triggered reporting without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value  |        |        |        | Comment  |
|---|------|--------------------|--|--------|--------|--------|--|

#### A.10.4.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.5 EN-DC event triggered reporting tests for FR1 cell with CCA with SSB time index detection when DRX is not used

##### A.10.4.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.5.1-1, A.10.4.2.5.1-2, and A.10.4.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.2.5.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.5.1-1.

**Table A.10.4.2.5.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE TDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.10.4.2.5.1-2: General test parameters for EN-DC inter-frequency event triggered reporting with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value  |        | Comment  |
|---|------|--------------------|--|--------|--|
|   |      |                    | Test 1   | Test 2 |  |

| Propagation Condition     |  | Config 1,2 | AWGN   |        |           |        |
| Note 1:                   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |            |        |        |           |        |
| Note 2:                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |            |        |        |           |        |
| Note 3:                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |            |        |        |           |        |
| Note 4:                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |            |        |        |           |        |
| Note 5:                   | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |            |        |        |           |        |
| Note 6:                   | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |            |        |        |           |        |
| Note 7:                   | For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.   |            |        |        |           |        |

#### A.10.4.2.5.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.6 EN-DC event triggered reporting tests for FR1 cell with CCA with SSB time index detection when DRX is used

##### A.10.4.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.6.1-1, A.10.4.2.6.1-2, and A.10.4.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.10.4.2.6.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.6.1-1.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.6.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE TDD<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

#### A.10.4.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.7 EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is not used

##### A.10.4.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.7.1-1, A.10.4.2.7.1-2, and A.10.4.2.7.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.2.7.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.7.1-1.

**Table A.10.4.2.7.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description   |
|--|---|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| 2  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |

| <p>Note 1: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>Note 7: For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.</p> |               |                       |        |        |           |        |

A.10.4.2.7.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

$T_{identify\_inter\_cca\_without\_index} = (T_{PSS/SSS\_sync\_inter\_cca} + T_{SSB\_measurement\_period\_inter\_cca})$  ms, where

$T_{PSS/SSS\_sync\_inter\_cca}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{SSB\_measurement\_period\_inter\_cca}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.8 EN-DC event triggered reporting tests for FR1 cell without SSB time index detection when DRX is used

##### A.10.4.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.8.1-1, A.10.4.2.8.1-2, and A.10.4.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.8.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.10.4.2.8.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.8.1-1.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.8.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 5  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode,<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mod |
| 6  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

#### A.10.4.2.8.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.10.4.2.9 EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is not used

#### A.10.4.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.9.1-1, A.10.4.2.9.1-2, and A.10.4.2.9.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.9.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.2.9.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.9.1-1.

**Table A.10.4.2.9.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

#### A.10.4.2.9.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.2.10 EN-DC event triggered reporting tests for FR1 cell with SSB time index detection when DRX is used

##### A.10.4.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 on NR RF channel 2. The test parameters and configurations are given in Tables A.10.4.2.10.1-1, A.10.4.2.10.1-2, and A.10.4.2.10.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.10.4.2.10.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.10.4.2.10.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.10.4.2.10.1-1.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.10.4.2.10.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3  | E-UTRAN cell: LTE FDD<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 4  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 5  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode,<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mod |
| 6  | E-UTRAN cell: LTE TDD<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

#### A.10.4.2.10.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.10.4.3 L1-RSRP measurements for beam reporting

#### A.10.4.3.1 SSB based L1-RSRP measurement on PSCC when DRX is not used

##### A.10.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.10.4.3.1.1-1.

**Table A.10.4.3.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| 2      | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.10.4.3.1.2 Test parameters

There are two cells in the test, E-UTRAN Pcell (Cell 1) and FR1 PSCell (Cell 2) which operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in Table A.10.4.3.1.2-1 and Table A.10.4.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.10.4.3.1.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|

### A.10.4.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.10.4.3.2 SSB based L1-RSRP measurement on PSCC when DRX is used

#### A.10.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.10.4.3.1.1-1.

**Table A.10.4.3.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| 2      | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.10.4.3.2.2 Test parameters

There are two cells in the test, E-UTRAN Pcell (Cell 1) and FR1 PSCell (Cell 2) which operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in Table A.10.4.3.2.2-1 and Table A.10.4.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.10.4.3.2.2-1: General test parameters

### A.10.4.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.10.4.3.3 SSB based L1-RSRP measurement on SCC when DRX is not used

#### A.10.4.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.10.4.3.1.1-1.

**Table A.10.4.3.3.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| 2      | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.10.4.3.3.2 Test parameters

There are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2), and FR1 SCell (Cell 3). Cell 2 and Cell 3 operate on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.10.4.3.3.2-1 and Table A.10.4.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.10.4.3.3.2-1: General test parameters

| Parameter   | Config   | Unit | Value  |

### A.10.4.3.3.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 3.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.10.4.3.4 SSB based L1-RSRP measurement on SCC when DRX is used

#### A.10.4.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.10.4.3.4.1-1.

**Table A.10.4.3.4.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| 2      | LTE TDD<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.10.4.3.4.2 Test parameters

There are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2), and FR1 SCell (Cell 3). Cell 2 and Cell 3 operate on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.10.4.3.4.2-1 and Table A.10.4.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.10.4.3.4.2-1: General test parameters

| Parameter   | Config   | Unit | Value  |
|---|--|------|--|
| Active PScell                                     | 1,2  |      | Cell 2   |

#### A.10.4.3.4.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 3.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

## A.10.4.4 E-UTRAN–NR inter-RAT measurements on NR carrier frequency under CCA

### A.10.4.4.1 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.10.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements under CCA and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements under CCA.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.10.4.4.1.1-1, A.10.4.4.1.1-2, A.10.4.4.1.1-3 and A.10.4.4.1.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.4.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.4.1.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.4.4.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  |   | Unit | Test configuration | Value   |  | Comment   |
|--|---|------|--------------------|---|--|---|
|  |   |      |                    | Test 1  | Test 2   |   |
| E-UTRA RF Channel Number   |   |      | 1, 2               | 1   |  | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number   |   |      | 1, 2               | 1,2   |  | Two FR1 NR carrier frequency under CCA is used.   |
| DL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.1                     |  |   |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |  |   |
| UL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.2                     |  |   |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |  |   |
| Active cell  |   |      | 1, 2               | E-UTRA cell 1 (PCell) and NR cell 2 with CCA (PSCell) |  | E-UTRA cell 1 is on E-UTRA RF channel number 1.   |
| Neighbour cell   |   |      | 1, 2               | NR cell 3   |  | NR cell 3 is on NR RF channel number 2.   |
| Gap Pattern Id   |   |      | 1, 2               | 0   | 4  | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].   |
| Measurement gap offset   |   |      | 1, 2               | 39  | 19   | As specified in TS 36.331 [16].   |

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].

Note 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.

Note 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.

Note 5:  $\hat{E}_s/I_{ot}$ , RSRP, SCH\_RP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 6: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

**Table A.10.4.4.1.1-4: NR neighbour cell specific test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

#### A.10.4.4.1.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is not required to report SSB time index.  $T_{\text{identify\_irat\_cca\_without\_index}}$  is defined in defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.4.2 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

##### A.10.4.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.10.4.4.2.1-1, A.10.4.4.2.1-2, A.10.4.4.2.1-3 and A.10.4.4.2.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.10.4.4.2.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.10.4.4.2.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.4.4.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter  |   | Unit | Test configuration | Value   |        |        |        | Comment  |
|--|---|------|--------------------|---|--------|--------|--------|--|
|  |   |      |                    | Test 1  | Test 2 | Test 3 | Test 4 |  |
| E-UTRA RF Channel Number   |   |      | 1, 2               | 1   |        |        |        | One E-UTRA carrier frequency is used.  |
| NR RF Channel Number   |   |      | 1, 2               | 1,2   |        |        |        | Two FR1 NR carrier frequency under CCA is used.  |
| Active cell  |   |      | 1, 2               | E-UTRA cell 1 (PCell) and NR cell 2 with CCA (PSCell) |        |        |        | E-UTRA cell 1 is on E-UTRA RF channel number 1.  |
| DL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.1                     |        |        |        |  |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |        |        |        |  |
| UL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.2                     |        |        |        |  |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |        |        |        |  |
| Neighbour cell   |   |      | 1, 2               | NR cell 3   |        |        |        | NR cell 3 is on NR RF channel number 2.  |
| Gap Pattern Id   |   |      | 1, 2               | 0   | 4      |        |        | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].  |

#### A.10.4.4.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.4.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

##### A.10.4.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.10.4.4.3.1-1, A.10.4.4.3.1-2, A.10.4.4.3.1-3 and A.10.4.4.3.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.10.4.4.3.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.10.4.4.3.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.3.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.4.4.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter  |   | Unit | Test configuration | Value   |  | Comment   |
|--|---|------|--------------------|---|--|---|
|  |   |      |                    | Test 1  | Test 2   |   |
| E-UTRA RF Channel Number   |   |      | 1, 2               | 1   |  | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number   |   |      | 1, 2               | 1,2   |  | Two FR1 NR carrier frequency under CCA is used.   |
| DL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.1                     |  |   |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |  |   |
| UL CCA model   | Dynamic channel access <sup>Note 3, 5</sup>     |      |                    | As specified in clause A.3.26.2.2                     |  |   |
|  | Semi-static channel access <sup>Note 4, 5</sup> |      |                    |   |  |   |
| Active cell  |   |      | 1, 2               | E-UTRA cell 1 (PCell) and NR cell 2 with CCA (PSCell) |  | E-UTRA cell 1 is on E-UTRA RF channel number 1.   |
| Neighbour cell   |   |      | 1, 2               | NR cell 3   |  | NR cell 3 is on NR RF channel number 2.   |
| Gap Pattern Id   |   |      | 1, 2               | 0   | 4  | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].   |
| Measurement gap offset   |   |      | 1, 2               | 39  | 19   | As specified in TS 36.331 [16].   |
| b2-Threshold1  |   | dBm  | 1, 2               | Note 1  |  | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]                         |
| b2-Threshold2NR  |   | dBm  | 1, 2               | Note 2  |  | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 3 for event B2 [16]                                     |
| Hysteresis   |   | dB   | 1, 2               | 0   |  |   |
| CP length  |   |      | 1, 2               | Normal  |  |   |
| TimeToTrigger  |   | s    | 1, 2               | 0   |  |   |
| Filter coefficient   |   |      | 1, 2               | 0   |  | L3 filtering is not used  |
| DRX  |   |      | 1, 2               | OFF   |  | DRX is not used   |
| Time offset between serving and neighbour cells  |   |      | 1, 2               | 3µs   |  | Synchronous cells.  |
| T1   |   | s    | 1, 2               | 5   |  |   |
| T2   |   | s    | 1, 2               | $\geq T_{\text{identify\_irat\_cca\_with\_index}}$    | $\geq T_{\text{identify\_irat\_cca\_with\_index}}$ | $T_{\text{identify\_irat\_cca\_with\_index}}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |
| <p>NOTE 1: The value of b2-Threshold1 is defined in Table A.10.4.4.3.1-3</p> <p>NOTE 2: The value of b2-Threshold2NR is defined in Table A.10.4.4.3.1-4</p> <p>NOTE 3: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>NOTE 4: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>NOTE 5: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.</p> |   |      |                    |   |  |   |

**Table A.10.4.4.3.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neighbour cell in FR1 with SSB time index detection**

| Parameter | Unit | Configuration | Cell 1 |
|-----------|------|---------------|--------|

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].  
 Note 2: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.  
 Note 3: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  
 Note 4: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.  
 Note 5:  $\hat{E}_s/I_{ot}$ , RSRP, SCH\_RP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  
 Note 6: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

**Table A.10.4.4.3.1-4: NR neighbour cell specific test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter  | Unit | Test configuration | Cell 2   |    | Cell 3   |    |

#### A.10.4.4.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.10.4.4.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

##### A.10.4.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PCell in FR1 with CCA on NR RF channel 1 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.10.4.4.4.1-1, A.10.4.4.4.1-2, A.10.4.4.4.1-3 and A.10.4.4.4.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.10.4.4.4.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.10.4.4.4.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.10.4.4.4.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.10.4.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter  |   | Unit | Test configuration | Value   |         |        |         | Comment   |
|--|---|------|--------------------|---|---------|--------|---------|---|

#### A.10.4.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

## A.10.5 Measurement performance

### A.10.5.1 SS-RSRP

#### A.10.5.1.1 Intra-frequency measurement accuracy on a CCA serving cell

##### A.10.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.36.1.1 and 10.1.36.1.2 when the serving cell is subject to CCA.

##### A.10.5.1.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell under CCA (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. Supported test configurations are shown in Table A.10.5.1.1.1-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in Table A.10.5.1.1.1-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell, and Cell 3 is the target cell.

**Table A.10.5.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations for each supported band

**Table A.10.5.1.1.2-2: SS-RSRP Intra frequency test parameters**

| Parameter  |                            | Unit         | Test 1   |  | Test 2   |  |

| Note 1:                         | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |              |                  |        |        |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                  |        |        |
| Note 3:                         | SS-RSRP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |              |                  |        |        |
| Note 4:                         | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |              |                  |        |        |
| Note 5:                         | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |              |                  |        |        |
| Note 6:                         | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |              |                  |        |        |
| Note 7:                         | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |                  |        |        |
| Note 8:                         | For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |              |                  |        |        |

A.10.5.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for cell 2 and cell 3 shall fulfil absolute requirement in clause 10.1.2.1.1 and relative requirement in clause 10.1.36.1.1 and 10.1.36.1.2.

A.10.5.1.2 Inter-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

A.10.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.37.1.1 and 10.1.37.1.2 for inter-frequency measurements with the testing configurations in Table A.10.5.1.2.1-1.

**Table A.10.5.1.2.1-1: Applicable NR configurations for FR1 inter-frequency SS-RSRP accuracy test**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations on each supported band |

A.10.5.1.2.2 Test parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2) and a FR1 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7A.2.1. The test parameters for the Cell 2 and Cell 3 are given in Table A.10.5.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.10.5.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.10.5.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter   |                            | Config | Unit         | Test 1                            |        | Test 2                            |         |

|                       |  |   |      |      |
|-----------------------|--|---|------|------|
| Propagation condition | 1, 2   | - | AWGN | AWGN |
| Antenna configuration |  |   | 1x2  | 1x2  |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |   |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |      |      |
| Note 3:               | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |   |      |      |
| Note 4:               | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |   |      |      |
| Note 5:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |   |      |      |

### A.10.5.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the Absolute requirement in clause 10.1.4.1.1 and Relative requirement in clause 10.1.37.1.1 and 10.1.37.1.2.

## A.10.5.2 SS-RSRQ

### A.10.5.2.1 Intra-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

#### A.10.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.29.1.1.

#### A.10.5.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.10.5.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in Table A.10.5.2.1.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PCell and Cell 3 is the target cell.

**Table A.10.5.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRQ, SS-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | NR operating band groups are as defined in Clause 3.5.2.   |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

### A.10.5.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

## A.10.5.2.2 Inter-frequency measurement accuracy with FR1 CCA serving cell and FR1 CCA target cell

### A.10.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.30.1.1 and 10.1.30.1.2 for inter-frequency measurements with the testing configurations in Table A.10.5.2.2.2-1.

### A.10.5.2.2.2 Test Parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PCell (Cell 2) and a FR1 neighbour cell (Cell 3) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.4.7.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.10.5.2.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.10.5.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode   |
| 2      | LTE TDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

**Table A.10.5.2.2-2: SS-RSRQ Inter frequency test parameters**

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ, SS-RSRP, and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |                            |              |                                      |        |             |         |             |        |         |

|         |   |
|---------|---|
| Note 4: | SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.                            |
| Note 5: | NR operating band groups are as defined in Section 3.5.2.   |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations. |

#### A.10.5.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

### A.10.5.3 SS-SINR

#### A.10.5.3.1 Intra-frequency measurement accuracy on PSCC

##### A.10.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.

##### A.10.5.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.10.5.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.10.5.3.1.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell with CCA and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided with different  $N_{oc}$  on Cells 2 and 3.

**Table A.10.5.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| Note 8:               | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |                  |        |        |
| Note 9:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |              |                  |        |        |

A.10.5.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

A.10.5.3.2 Inter-frequency measurement accuracy on PSCC

A.10.5.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.32.1.1 and 10.1.32.1.2 for inter-frequency measurement.

A.10.5.3.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.10.5.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in Table A.10.5.3.2.2-2. In all test cases, Cell 2 is the PSCell with CCA and Cell 3 is target cell with CCA. Cell 1 is the E-UTRA cell of which specific test parameters for this test case are specified in Table A.3.7A.2.1-1. Three sub-tests (Test 1, Test 2 and Test 3) are provided different  $N_{oc}$  on Cells 2 and 3.

**Table A.10.5.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| Note 1:                         | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |              |                       |        |        |       |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                       |        |        |       |
| Note 3:                         | SS-SINR, SS-RSRP, and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |              |                       |        |        |       |
| Note 4:                         | SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |              |                       |        |        |       |
| Note 5:                         | NR operating band groups are as defined in Clause 3.5.2.   |              |                       |        |        |       |
| Note 6:                         | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration  |              |                       |        |        |       |
| Note 7:                         | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |              |                       |        |        |       |
| Note 8:                         | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |                       |        |        |       |
| Note 9:                         | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |              |                       |        |        |       |

A.10.5.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

A.10.5.3.3 Intra-frequency measurement accuracy on SCC

A.10.5.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.

A.10.5.3.3.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.10.5.3.3.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.10.5.3.3.2-2. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7A.2.1. In all test cases, Cell 2 is the PSCell with CCA, Cell 3 is the SCell with CCA, and Cell 4 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different  $N_{oc}$  on Cells 2, 3 and 4.

**Table A.10.5.3.3.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | LTE FDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD<br>NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

**Table A.10.5.3.3.2-2: SS-SINR Intra frequency test parameters**

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in Clause 3.5.2.</p> <p>Note 6: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration</p> <p>Note 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>Note 9: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.</p> |            |              |                  |        |        |        |        |

A.10.5.3.3.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

A.10.5.4 L1-RSRP measurement for beam reporting with CCA serving cell

A.10.5.4.1 SSB based L1-RSRP measurement

A.10.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.10.5.4.1.1-1.

**Table A.10.5.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | LTE FDD,<br>NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode             |
| 2      | LTE TDD,<br>NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode             |
| Note:  | The UE is only required to pass in one of the supported test configurations |

A.10.5.4.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell under CCA (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different  $N_{oc}$  on Cell 2. The test parameters and applicability for Cell 1 are defined in A.3.7A.2. The test parameters for the Cell 2 are given in Table A.10.5.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.10.5.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.10.5.4.1.2-1: FR1 SSB based L1-RSRP test parameters**

| Parameter | Config | Unit | Test 1 | Test 2 |
|-----------|--------|------|--------|--------|
|-----------|--------|------|--------|--------|

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification  |

#### A.10.5.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.33.1.

### A.10.5.5 RSSI

#### A.10.5.5.1 RSSI measurement accuracy on PSCC with CCA

##### A.10.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.1.

##### A.10.5.5.1.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. RSSI is measured on channel number 1. Supported test configurations are shown in table A.10.5.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.10.5.5.1.2-2 and A.10.5.5.1.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.1.2-1: RSSI supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

Table A.10.5.1.2-2: RSSI test parameters

| Parameter   |   | Configurations | Unit      | Test 1                           |
|---|---|----------------|-----------|----------------------------------|
|   |   |                |           | Cell 2                           |
| RF Channel Number   |   |                |           | 1                                |
| $BW_{channel}$  |   |                | MHz       | 40                               |
| SSB configuration   | Semi-static channel access <small>Note 1, 3</small> | 1,2            |           | SSB.1 CCA                        |
|   | Dynamic channel access <small>Note 2, 3</small>     | 1,2            |           | SSB.2 CCA                        |

| ref-SCS-CP-r16          | kHz15     |
| ReportInterval          | ms120     |

### A.10.5.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on  $I_0$  in slots corresponding to RSSI measurement time configuration (RMTC).

## A.10.5.5.2 RSSI measurement accuracy on SCC with CCA

### A.10.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.1.

### A.10.5.5.2.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, Cell 3 is SCell on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.10.5.5.2.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.10.5.5.2.2-2 and A.10.5.5.2.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.2.2-1: RSSI supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.5.5.2.2-2: RSSI test parameters**

| Parameter   |   | Configurations | Unit      | Test 1                           |                            |

### A.10.5.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.10.5.5.3 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.10.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.2.

### A.10.5.5.3.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, and Cell 3 is the neighbour with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.10.5.5.3.2-1. The accuracy of RSSI inter-frequency measurements is tested by using the parameters in A.10.5.5.3.2-2 and A.10.5.5.3.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.5.3.2-1: RSSI supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.5.5.3.2-2: RSSI test parameters**

| Parameter   |   | Configurations | Unit      | Test 1                           |                            |

### A.10.5.5.3.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.10.5.6 Channel occupancy

### A.10.5.6.1 Channel occupancy measurement accuracy on PSCC with CCA

#### A.10.5.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.1.

#### A.10.5.6.1.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, and Cell 2 is PSCell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 1. Supported test configurations are shown in table A.10.5.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.10.5.6.1.2-2 and A.10.5.6.1.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.1.2-1: CO supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

### A.10.5.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.10.5.6.2 Channel occupancy measurement accuracy on SCC with CCA

### A.10.5.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.1.

### A.10.5.6.2.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, Cell 3 is SCell on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.10.5.6.2.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.10.5.6.2.2-2 and A.10.5.6.2.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.2.2-1: CO supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.10.5.6.2.2-2: CO test parameters**

| Parameter   |   | Configurations | Unit      | Test 1                           |                            |

### A.10.5.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.10.5.6.3 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

### A.10.5.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.2.

### A.10.5.6.3.2 Test parameters

In all test cases, Cell 1 is E-UTRAN PCell on a licensed band, Cell 2 is PSCell operating on a carrier frequency under CCA, and Cell 3 is the neighbour with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.10.5.6.3.2-1. The accuracy of channel occupancy inter-frequency measurements is tested by using the parameters in A.10.5.6.3.2-2 and A.10.5.6.3.2-3. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.10.5.6.3.2-1: CO supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

### A.10.5.6.3.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.11 NR Standalone Tests with NR PCell under CCA and Other NR Cells in FR1

*Editor's note: Test cases for NR SA with NR PCell under CCA and SCell under CCA are also included here.*

### A.11.1 RRC\_IDLE state mobility

#### A.11.1.1 Cell re-selection with both source and target NR carrier frequencies under CCA

##### A.11.1.1.1 Cell reselection to FR1 intra-frequency NR cells when subject to CCA on the serving and target cell

###### A.11.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements subject to CCA specified in clause 4.2A.2.3. Supported test configurations are shown in table A. 11.1.1.1.2-1.

###### A.11.1.1.1.2 Test Parameters

The test scenario comprises of 1 NR carrier that is subject to CCA and 2 cells as given in tables A.11.1.1.2-1, A.11.1.1.2-2 and A.11.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only cell 1 is already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing cell 2.

Table A.11.1.1.1.2-1: Supported test configurations

| Configuration | Description   |
|---------------|---|
| 1             | With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Table A.11.1.1.1.2-2: General test parameters for intra frequency NR cell re-selection test case when subject to CCA

| Parameter                  |                            | Unit | Test configuration | Value                             | Comment   |
|----------------------------|----------------------------|------|--------------------|-----------------------------------|---|
| Initial condition          | Active cell                |      | 1                  | Cell1                             |   |

| Propagation Condition   |  | 1                  | AWGN                    |        |        |   |      |       |
| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                    |                         |        |        |   |      |       |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                    |                         |        |        |   |      |       |
| Note 3:   | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                    |                         |        |        |   |      |       |
| Note 4:   | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |                    |                         |        |        |   |      |       |

### A.11.1.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than  $(25 + M_d) \cdot 1.28 + T_{SI\_CCA}$  s.  $M_d$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{detect, NR\_Intra\_CCA}$ . If  $M_d > M_{d, max}$  the UE is required to restart the detection of Cell 2.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to an already detected cell shall be less than  $(5 + M_e) \cdot 1.28 + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate, NR\_Intra\_CCA}$ . If  $M_e > M_{e, max}$  the UE is required to restart the evaluation of Cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as:  $T_{detect, NR\_Intra\_CCA} + T_{SI\_CCA}$ , and to an already detected cell can be expressed as:  $T_{evaluate, NR\_intra\_CCA} + T_{SI\_CCA}$ ,

Where:

$T_{detect, NR\_Intra\_CCA}$  See Table 4.2A.2.3-1 in clause 4.2A.2.3

$T_{evaluate, NR\_intra\_CCA}$  See Table 4.2A.2.3-1 in clause 4.2A.2.3

$T_{SI\_CCA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

This gives a total of  $(25 + M_d) \cdot 1.28 + T_{SI\_CCA}$  s for the cell re-selection delay to a newly detectable cell and  $(5 + M_e) \cdot 1.28 + T_{SI\_CCA}$  s for the cell re-selection delay to an already detected cell in the test case.

### A.11.1.1.2 Cell reselection to FR1 inter-frequency NR case when subject to CCA on the serving and target cell

#### A.11.1.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements subject to CCA specified in clause 4.2A.2.4. Supported test configurations are shown in table A.11.1.1.2.2-1.

#### A.11.1.1.2.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers that are subject to CCA respectively as given in tables A.11.1.1.2.2-1, A.11.1.1.2.2-2 and A.11.1.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

**Table A.11.1.1.2.2-1: Supported test configurations**

| Configuration | Description of cell 1 with CCA                    | Description of cell 2 with CCA                    |
|---------------|---|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.1.1.2.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case when subject to CCA**

| Parameter                  |                            | Unit | Test configuration | Value                             | Comment  |
|----------------------------|----------------------------|------|--------------------|-----------------------------------|--|
| Initial condition          | Active cell                |      | 1                  | Cell2                             | The UE camps on cell 2 in the initial phase and during T1 period the UE reselects to cell 1  |
| T1 end condition           | Active cell                |      | 1                  | Cell1                             | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells            |      | 1                  | Cell2                             |  |
| T3 end condition           | Active cell                |      | 1                  | Cell2                             | The UE shall perform reselection to cell 2 with higher priority during T3  |
| RF Channel Number          |                            |      | 1                  | 1, 2                              |  |
| Time offset between cells  |                            |      | 1                  | 3 $\mu$ s                         | Synchronous cells  |
| Access Barring Information |                            | -    | 1                  | Not Sent                          | No additional delays in random access procedure.   |
| SSB configuration          | Semi-static channel access |      | 1                  | SSB.1 CCA (As defined in A.3.10A) |  |
|                            | Dynamic channel access     |      |                    | SSB.2 CCA (As defined in A.3.10A) |  |
| DBT Window Configuration   |                            |      | 1                  | DBT.1                             | As specified in clause A.3.28.1.   |
| SMTC configuration         |                            |      | 1                  | SMTC.1                            |  |
| DL CCA model               |                            |      | 1                  | As specified in clause A.3.26.2.1 |  |
| UL CCA model               |                            |      | 1                  | As specified in clause A.3.26.2.2 |  |
| DRX cycle length           |                            | s    | 1                  | 1.28                              | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                            |      | 1                  | 102                               | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| rangeToBestCell            |                            |      | 1                  | Not configured                    |  |
| T1                         |                            | s    | 1                  | 15                                | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                         |                            | s    | 1                  | >7                                | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |
| T3                         |                            | s    | 1                  | 75                                | T3 needs to be defined so that cell re-selection reaction time is taken into account.  |

**Table A.11.1.1.2.2-3: Cell specific test parameters for FR1 inter frequency NR cell re-selection test case in AWGN**

| Parameter   | Unit          | Test configuration | Cell 1                  |        |        | Cell 2                  |           |        |
|---|---------------|--------------------|-------------------------|--------|--------|-------------------------|-----------|--------|

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

### A.11.1.1.2.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a higher priority cell shall be less than  $60 + 1.28 \times (5 + M_e) + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate, NR\_Intra\_CCA}$ . If  $M_e > M_{e,max}$  the UE is required to restart the evaluation of cell 2.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to a lower priority cell shall be less than  $1.28 \times (5 + M_e) + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate, NR\_Intra\_CCA}$ . If  $M_e > M_{e,max}$  the UE is required to restart the evaluation of cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate, NR\_inter\_CCA} + T_{SI\_CCA}$ , and to a lower priority cell can be expressed as:  $T_{evaluate, NR\_inter\_CCA} + T_{SI\_CCA}$ ,

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2.7

$T_{evaluate, NR\_inter\_CCA}$  See Table 4.2A.2.4-1 in clause 4.2A.2.4

$T_{SI\_CCA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

This gives a total of  $60 + 1.28 \times (5 + M_e) + T_{SI\_CCA}$  s for the cell re-selection delay to a higher priority cell and  $1.28 \times (5 + M_e) + T_{SI\_CCA}$  s for the cell re-selection delay to a lower priority cell in the test case.

## A.11.1.2 Cell re-selection to NR with source NR carrier frequency under CCA

### A.11.1.2.1 Cell reselection to FR1 inter-frequency NR case when serving cell is subject to CCA

#### A.11.1.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.4 when the serving cell is subject to CCA. Supported test configurations are shown in table A.11.1.2.1.2-1.

#### A.11.1.2.1.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers where the first carrier is subject to CCA as given in tables A.11.1.2.1.2-1, A.11.1.2.1.2-2 and A.11.1.2.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

**Table A.11.1.2.1.2-1: Supported test configurations**

| <b>Configuration</b> | <b>Description of a cell with CCA</b>             | <b>Description of a cell without CCA</b>          |
|----------------------|---|---|
| 1                    | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2                    | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3                    | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

**Table A.11.1.2.1.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case when serving cell is subject to CCA**

| Parameter                  |                 | Unit | Test configuration | Value  | Comment  |
|----------------------------|-----------------|------|--------------------|--|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell2  | The UE camps on cell 2 which is subject to CCA in the initial phase and during T1 period the UE reselects to cell 1 which is an inter-frequency NR cell  |
| T1 end condition           | Active cell     |      | 1, 2, 3            | Cell1  | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2  |  |
| T3 end condition           | Active cell     |      | 1, 2, 3            | Cell2  | The UE shall perform reselection to cell 2 with higher priority during T3  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1, 2   |  |
| Time offset between cells  |                 |      | 1                  | 3 ms   | Asynchronous cells   |
|                            |                 |      | 2                  | 3 $\mu$ s  | Synchronous cells  |
|                            |                 |      | 3                  | 3 $\mu$ s  | Synchronous cells  |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent   | No additional delays in random access procedure.   |
| SSB configuration          |                 |      | 1                  | Cell 1: SSB.1 FR1<br>Cell 2: SSB.1 CCA for semi-static channel access;<br>Cell 2: SSB.2 CCA for dynamic channel access |  |
|                            |                 |      | 2                  | Cell 1: SSB.1 FR1<br>Cell 2: SSB.1 CCA for semi-static channel access;<br>Cell 2: SSB.2 CCA for dynamic channel access |  |
|                            |                 |      | 3                  | Cell 1: SSB.2 FR1<br>Cell 2: SSB.1 CCA for semi-static channel access;<br>Cell 2: SSB.2 CCA for dynamic channel access |  |
| SMTC configuration         |                 |      | 1                  | Cell 1: SMTC pattern 2<br>Cell 2: N/A  |  |
|                            |                 |      | 2                  | Cell 1: SMTC pattern 1<br>Cell 2: N/A  |  |
|                            |                 |      | 3                  | Cell 1: SMTC pattern 1<br>Cell 2: N/A  |  |
| DBT Window Configuration   |                 |      | 1, 2, 3            | Cell 1: N/A<br>Cell 2: DBT.1   | As specified in clause A.3.28.1.   |
| DL CCA model               |                 |      | 1, 2, 3            | Cell 1: N/A<br>Cell 2: As specified in clause A.3.26.2.1   |  |
| UL CCA model               |                 |      | 1, 2, 3            | Cell 1: N/A<br>Cell 2: As specified in clause A.3.26.2.2   |  |
| DRX cycle length           |                 | s    | 1, 2, 3            | 1.28   | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                 |      | 1, 2, 3            | 102  | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| rangeToBestCell            |                 |      | 1, 2, 3            | Not configured   |  |
| T1                         |                 | s    | 1, 2, 3            | 15   | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                         |                 | s    | 1, 2, 3            | >7   | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |

|    |   |         |    |   |
|----|---|---------|----|---|
| T3 | s | 1, 2, 3 | 75 | T3 needs to be defined so that cell re-selection reaction time is taken into account. |
|----|---|---------|----|---|

**Table A.11.1.2.1.2-3: Cell specific test parameters for FR1 inter frequency NR cell re-selection test case in AWGN when serving cell is subject to CCA**

| Parameter   | Unit          | Test configuration | Cell 1                  |        |        | Cell 2                  |           |        |

| Propagation Condition        |  | 1, 2, 3 | AWGN |    |
| Note 1:                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |         |      |    |
| Note 2:                      | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |         |      |    |
| Note 3:                      | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |         |      |    |
| Note 4:                      | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |         |      |    |

### A.11.1.2.1.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a higher priority cell shall be less than  $60 + 1.28 \times (5 + M_e) + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate, NR\_Intra\_CCA}$ . If  $M_e > M_{e, max}$  the UE is required to restart the evaluation of cell 2.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate, NR\_inter\_CCA} + T_{SI\_CCA}$ , and to a lower priority cell can be expressed as:  $T_{evaluate, NR\_inter} + T_{SI\_NR}$ .

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2.7

$T_{evaluate, NR\_inter\_CCA}$  See Table 4.2A.2.4-1 in clause 4.2A.2.4

$T_{SI\_CCA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

$T_{evaluate, NR\_inter}$  See Table 4.2.2.4-1 in clause 4.2.2.4

$T_{SI\_NR}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test cases.

This gives a total of  $60 + 1.28 \times (5 + M_e) + T_{SI\_CCA}$  s for the cell re-selection delay to a higher priority cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

### A.11.1.3 Cell re-selection from NR carrier with target NR carrier frequency under CCA

#### A.11.1.3.1 Cell reselection to FR1 inter-frequency NR case when target cell is subject to CCA

##### A.11.1.3.1.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2A.2.4 when the target cell is subject to CCA. Supported test configurations are shown in table A. 11.1.3.1.2-1.

##### A.11.1.3.1.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers where the second carrier is subject to CCA as given in tables A.11.1.3.1.2-1, A.11.1.3.1.2-2 and A.11.1.3.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

**Table A.11.1.3.1.2-1: Supported test configurations**

| Configuration   | Description of a cell without CCA                 | Description of a cell with CCA                    |
|---|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.11.1.3.1.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case when target cell is subject to CCA**

| Parameter                  |                 | Unit | Test configuration | Value   | Comment  |
|----------------------------|-----------------|------|--------------------|---|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell2   | The UE camps on cell 2 which is an inter-frequency NR cell in the initial phase and during T1 period the UE reselects to cell 1 which is cell subject to CCA |
|                            | Neighbour cell  |      | 1, 2, 3            | Cell 1  |  |
| T1 end condition           | Active cell     |      | 1, 2, 3            | Cell1   | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2   |  |
| T3 end condition           | Active cell     |      | 1, 2, 3            | Cell2   | The UE shall perform reselection to cell 2 with higher priority during T3  |
|                            | Neighbour cell  |      | 1, 2, 3            | Cell 1  |  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1, 2  |  |
| Time offset between cells  |                 |      | 1                  | 3 ms  | Asynchronous cells   |
|                            |                 |      | 2                  | 3 $\mu$ s   | Synchronous cells  |
|                            |                 |      | 3                  | 3 $\mu$ s   | Synchronous cells  |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent  | No additional delays in random access procedure.   |
| SSB configuration          |                 |      | 1                  | Cell 1: SSB.1 CCA for semi-static channel access;<br>Cell 1: SSB.2 CCA for dynamic channel access;<br>Cell 2: SSB.1 FR1 |  |
|                            |                 |      | 2                  | Cell 1: SSB.1 CCA for semi-static channel access;<br>Cell 1: SSB.2 CCA for dynamic channel access;<br>Cell 2: SSB.1 FR1 |  |
|                            |                 |      | 3                  | Cell 1: SSB.1 CCA for semi-static channel access;<br>Cell 1: SSB.2 CCA for dynamic channel access;<br>Cell 2: SSB.2 FR1 |  |
| SMTC configuration         |                 |      | 1                  | Cell 1: SMTC.1<br>Cell 2: SMTC.2  |  |
|                            |                 |      | 2                  | Cell 1: SMTC.1<br>Cell 2: SMTC.1  |  |
|                            |                 |      | 3                  | Cell 1: SMTC.1<br>Cell 2: SMTC.1  |  |

| Propagation Condition        |  | 1, 2, 3 | AWGN |    |
| Note 1:                      | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |         |      |    |
| Note 2:                      | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |         |      |    |
| Note 3:                      | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |         |      |    |
| Note 4:                      | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |         |      |    |

### A.11.1.3.1.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

$1.28 \times (5 + M_e) + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate\_NR\_Intra\_CCA}$ . If  $M_e > M_{e,max}$  the UE is required to restart the evaluation of cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate\_NR\_inter} + T_{SI-NR}$ , and to a lower priority cell can be expressed as:  $T_{evaluate\_NR\_inter} + T_{SI-NR}$ .

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2.7

$T_{evaluate\_NR\_inter\_CCA}$  See Table 4.2A.2.4-1 in clause 4.2A.2.4

$T_{SI\_CCA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

$T_{evaluate\_NR\_inter}$  See Table 4.2.2.4-1 in clause 4.2.2.4

$T_{SI-NR}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority cell and  $1.28 \times (5 + M_e) + T_{SI\_CCA}$  s for the cell re-selection delay to a lower priority cell in the test case.

## A.11.1.4 Inter-RAT cell re-selection to E-UTRAN with source NR carrier frequency under CCA

### A.11.1.4.1 Cell reselection to higher priority E-UTRAN when serving cell is subject to CCA

#### A.11.1.4.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR cell subject to CCA to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2A.2.5 when the E-UTRAN cell is of higher priority.

#### A.11.1.4.1.2 Test Parameters

The test scenario comprises of one NR cell which is subject to CCA and one E-UTRAN cell as given in tables A.11.1.4.1.2-1, A.11.1.4.1.2-2, A.11.1.4.1.2-3 and A.11.1.4.1.2-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR cell 1 is already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of higher priority than cell 1.

**Table A.11.1.4.1.2-1: Supported test configurations**

| Configuration   | Description of a cell with CCA                       | Description of a cell without CCA     |
|---|--|---------------------------------------|
| 1   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |  |                                       |

**Table A.11.1.4.1.2-2: General test parameters for NR cell subject to CCA to E-UTRAN cell re-selection test case**

| Parameter                         |                 | Unit | Test configuration | Value  | Comment  |
|-----------------------------------|-----------------|------|--------------------|--|--|
| Initial condition                 | Active cell     |      | 1, 2               | Cell1  | The UE camps on cell 1 in the initial phase and during T2 period the UE reselects to cell 2.   |
| T2 end condition                  | Active cell     |      | 1, 2               | Cell2  | The UE shall perform reselection to cell 2 during T2.  |
|                                   | Neighbour cells |      | 1, 2               | Cell1  |  |
| T3 end condition                  | Active cell     |      | 1, 2               | Cell1  | The UE shall perform reselection to cell 1 during T3 for iteration of the tests.   |
|                                   | Neighbour cells |      | 1, 2               | Cell2  |  |
| Access Barring Information        |                 | -    | 1, 2               | Not Sent   | No additional delays in random access procedure.   |

#### A.11.1.4.1.3 Test Requirements

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{\text{higher\_priority\_search}} + T_{\text{evaluate, E-UTRAN}} + T_{\text{SI-E-UTRA}}$ .

Where:

$T_{\text{higher\_priority\_search}}$  See clause 4.2.2.7

$T_{\text{evaluate, E-UTRAN}}$  See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

#### A.11.1.4.2 Cell reselection to lower priority E-UTRAN when serving cell is subject to CCA

##### A.11.1.4.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR cell subject to CCA to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2A.2.5 when the E-UTRAN cell is of lower priority.

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.11.1.4.2.1-1, A.11.1.4.2.1-2, A.11.1.4.2.1-3 and A.11.1.4.2.1-4. The test consists of three successive time periods, with time duration of T1 and T2 respectively. Both NR cell 1 and E-UTRAN cell 2 are already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of lower priority than cell 1.

**Table A.11.1.4.2.1-1: Supported test configurations**

| Configuration   | Description of a cell with CCA                       | Description of a cell without CCA     |
|---|--|---------------------------------------|
| 1   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |  |                                       |

**Table A.11.1.4.2.1-2: General test parameters for NR cell subject to CCA to E-UTRAN cell re-selection test case**

| Parameter                         |                 | Unit | Test configuration | Value                             | Comment   |
|-----------------------------------|-----------------|------|--------------------|-----------------------------------|---|
| Initial condition                 | Active cell     |      | 1, 2               | Cell1                             | The UE camps on cell 1 in the initial phase.  |
| T1 end condition                  | Active cell     |      | 1, 2               | Cell2                             | The UE shall perform reselection to cell 2 during T1.                                 |
|                                   | Neighbour cells |      | 1, 2               | Cell1                             |   |
| T2 end condition                  | Active cell     |      | 1, 2               | Cell1                             | The UE shall perform reselection to cell 1 during T2 for iteration of the tests.      |
|                                   | Neighbour cells |      | 1, 2               | Cell2                             |   |
| Access Barring Information        |                 | -    | 1, 2               | Not Sent                          | No additional delays in random access procedure.                                      |

#### A.11.1.4.2.2 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, E-UTRAN}} + T_{\text{SI-E-UTRA}}$ ,

Where:

$T_{\text{evaluate, E-UTRAN}}$  See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 7.68 s, allow 8 s for the cell re-selection delay to a lower priority E-UTRAN cell.

## A.11.2 RRC\_CONNECTED state mobility

### A.11.2.1 Handover

#### A.11.2.1.1 Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; known target cell

##### A.11.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR intra frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

##### A.11.2.1.1.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.1.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.1.2-2, and A.11.2.1.1.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2.

NR shall send a RRC message implying handover to cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.11.2.1.1.2-1: Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

- Note 1: OCNNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3: lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
- Note 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
- Note 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.2.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{\text{interrupt}}$  from the beginning of time period T3, where  $T_{\text{interrupt}}$  is defined in clause 6.1B.1.2

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}}$$

$$T_{\text{search}} = 0.$$

$$T_{\text{processing}} = 20 \text{ ms.}$$

$$T_{\text{margin}} = 2 \text{ ms.}$$

$$T_{\Delta} = (1 + L_2) * 20 \text{ ms.}$$

$$T_{\text{IU}} = (1 + L_3) * 10 + 10 \text{ ms}$$

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2],  $L_2$  is the number of SMTC occasions not available at the UE during the time tracking period where  $L_2 \leq L_{\text{CCA\_DL}}$ , and  $L_3$  is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where  $L_3 \leq L_{\text{CCA\_UL}}$ .  $L_3 = 0$  for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by  $L_1$ ,  $L_2$ ,  $L_3$  and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2]. Test equipment should make sure that  $L_{\text{CCA\_DL}}$  and  $L_{\text{CCA\_UL}}$  are not exceeded during a test by monitoring the number of CCA failures and preventing additional CCA failures from happening after  $L_{\text{CCA\_DL}}$  or  $L_{\text{CCA\_UL}}$  is reached.

### A.11.2.1.2 Intra-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement intra frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

#### A.11.2.1.2.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.2.2-2, and A.11.2.1.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

| Propagation condition  |                  | -            | AWGN   |        | AWGN   |        |

- Note 1: OCNNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3: lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
- Note 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
- Note 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.2.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{\text{interrupt}}$  from the beginning of time period T3, where  $T_{\text{interrupt}}$  is defined in clause 6.1B.1.2

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}}$$

$$T_{\text{search}} = (1+L_1) * 20 \text{ ms.}$$

$$T_{\text{processing}} = 20 \text{ ms.}$$

$$T_{\text{margin}} = 2 \text{ ms.}$$

$$T_{\Delta} = (1+L_2) * 20 \text{ ms.}$$

$$T_{\text{IU}} = (1+L_3) * 10 + 10 \text{ ms}$$

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2],  $L_1$  is the number of SMTC occasions not available at the UE during the intra-frequency detection period,  $L_2$  is the number of SMTC occasions not available at the UE during the time tracking period, where  $L_1 + L_2 \leq L_{\text{CCA\_DL}}$ , and  $L_3$  is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where  $L_3 \leq L_{\text{CCA\_UL}}$ .  $L_3 = 0$  for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by  $L_1$ ,  $L_2$ ,  $L_3$  and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer.

### A.11.2.1.3 Inter-frequency handover from FR1 carrier under CCA to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.3.1 Test Purpose and Environment

This test is to verify the requirement for inter frequency handover requirements from FR1 carrier under CCA to FR1 carrier under CCA specified in clause 6.1B.1.2.

#### A.11.2.1.3.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.3.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.3.2-2, and A.11.2.1.3.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

- Note 1: OCNNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3: lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
- Note 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
- Note 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.2.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{\text{interrupt}}$  from the beginning of time period T3, where  $T_{\text{interrupt}}$  is defined in clause 6.1B.1.2

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

$$T_{\text{interrupt}} = T_{\text{search}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}}$$

$$T_{\text{search}} = (3+L_1') * 20 \text{ ms.}$$

$$T_{\text{processing}} = 20 \text{ ms.}$$

$$T_{\text{margin}} = 2 \text{ ms.}$$

$$T_{\Delta} = (1+L_2) * 20 \text{ ms.}$$

$$T_{\text{IU}} = (1+L_3) * 10 + 10 \text{ ms}$$

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2],  $L_1'$  is the number of SMTC occasions not available at the UE during the inter-frequency detection period,  $L_2$  is the number of SMTC occasions not available at the UE during the time tracking period, where  $L_1' + L_2 \leq L_{\text{CCA\_DL}}$ , and  $L_3$  is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure, where  $L_3 \leq L_{\text{CCA\_UL}}$ .  $L_3 = 0$  for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by  $L_1', L_2, L_3$  and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer.

### A.11.2.1.4 Inter-frequency handover from FR1 carrier under CCA to FR1; known target cell

#### A.11.2.1.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR with CCA FR1-NR FR1 handover requirements specified in clause 6.1.1.2.

#### A.11.2.1.4.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.4.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.4.2-2, and A.11.2.1.4.2-3.

The test consists of three successive time periods, with time durations of T1 T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2.

NR with CCA shall send a RRC message implying handover to cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.11.2.1.4.2-1: Handover from NR with CCA FR1 to NR FR1 test configuration**

| Config   | Description   |
|--|---|
| 1  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.</p> |                  |                  |       |           |        |        |           |        |        |

### A.11.2.1.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 112 ms from the beginning of time period T3. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$  = 102 ms in the test.  $T_{interrupt}$  is defined in clause 6.1.1.2.2.

This gives a total of 112 ms.

### A.11.2.1.5 Inter-frequency handover from FR1 carrier under CCA to FR1; unknown target cell

#### A.11.2.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the NR with CCA FR1-NR FR1 handover requirements specified in clause 6.1.1.2.

#### A.11.2.1.5.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.5.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.5.2-2, and A.12.2.1.7.2-3.

The test scenario comprises of two carriers and one cell on each carrier. Cell 1 is the NR with CCA cell and Cell 2 is an NR neighbour cell. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2.

Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.11.2.1.5.2-1: Handover from NR with CCA FR1 to NR FR1 test configuration**

| Config   | Description   |
|--|---|
| 1  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | Source cell: NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.11.2.1.5.2-2: General test parameters handover from NR with CCA FR1 to NR FR1**

| Parameter                  |                   | Unit | Value                             | Comment  |
|----------------------------|-------------------|------|-----------------------------------|--|
| Initial conditions         | Active cell       |      | Cell 1                            | NR cell with CCA                                 |
|                            | Neighbouring cell |      | Cell 2                            | NR cell  |
| Final condition            | Active cell       |      | Cell 2                            |  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.</p> |                  |       |                           |        |                                     |       |

### A.11.2.1.5.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$  = 122 ms in the test.  $T_{interrupt}$  is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

### A.11.2.1.6 Inter-frequency handover from FR1 to FR1 carrier under CCA; unknown target cell

#### A.11.2.1.6.1 Test Purpose and Environment

This test is to verify the requirement for inter frequency handover requirements from FR1 to FR1 carrier under CCA specified in clause 6.1B.1.2.

### A.11.2.1.6.2 Test Parameters

Supported test configurations are shown in table A.11.2.1.6.2-1. Both handover delay and interruption length are tested by using the parameters in table A.11.2.1.6.2-2, and A.11.2.1.6.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.11.2.1.6.2-1: Inter-frequency handover from FR1 to FR1 carrier under CCA test configurations**

| Configuration | Description of a cell with CCA                    | Description of a cell without CCA                 |
|---------------|---|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations

**Table A.11.2.1.6.2-2: General test parameters Inter-frequency handover from FR1 to FR1 carrier under CCA**

| Parameter                  | Unit              | Value                             | Comment  |

### A.11.2.1.6.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{interrupt}$  from the beginning of time period T3, where  $T_{interrupt}$  is defined in clause 6.1B.1.2

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2],  $L_1'$  is the number of SMTC occasions not available at the UE during the inter-frequency detection period,  $L_2$  is the number of SMTC occasions not available at the UE during the time tracking period, and  $L_3$  is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure.  $L_3 = 0$  for Type 2C UL channel access procedure as defined in TS 37.213 [33]. The interruption time considering the potential extensions caused by  $L_1, L_1', L_2, L_3$  and by the UL CCA failure detection/recovery mechanism is limited by the T304 timer. The UE behaviour at the T304 timer expiry is detailed in TS 38.331 [2].

## A.11.2.1.7 SA NR FR1 carrier under CCA - E-UTRAN handover with known target cell

### A.11.2.1.7.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1 carrier under CCA. This test shall verify the NR to E-UTRAN handover requirements as specified in clause 6.1.2.1.

The test comprises of one NR carrier under CCA and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.11.2.1.7-1. General test parameters are provided in Table A.11.2.1.7-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.11.2.1.7-3 and A.11.2.1.7-4 respectively.

**Table A.11.2.1.7-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration   | Description of a cell with CCA                       | Description of a cell without CCA     |
|---|--|---------------------------------------|
| 1   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations.                       |  |                                       |
| Note 2: The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested. |  |                                       |

**Table A.11.2.1.7-2: General test parameters for SA inter-RAT E-UTRAN handover**

| Parameter                    | Unit              | Value                              | Comment  |
|------------------------------|-------------------|------------------------------------|--|
| NR RF Channel Number         |                   | 1                                  | 1 NR carrier frequency is used in the test             |

| Propagation condition   |                  | 1, 2          | AWGN   |          |        |
| Antenna Configuration and Correlation Matrix  |                  | 1, 2          | 1x2 Low  |          |        |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3:  $\hat{E}_s/I_{ot}$ , SS-RSRP, and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.

Note 1: Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].

Note 2: PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].

Note 3: DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.

Note 4: OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 5: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.

Note 6:  $\bar{E}_s/I_{ot}$ , RSRP, SCH\_RP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 7: Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].

### A.11.2.1.7.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 85 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{\text{interrupt}}$  = 35 ms in the test;  $T_{\text{interrupt}}$  is defined in clause 6.1.2.1.

This gives a total of 85 ms.

### A.11.2.1.8 SA NR FR1 carrier under CCA - E-UTRAN handover with unknown target cell

#### A.11.2.1.8.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1 carrier under CCA. This test shall verify the NR to E-UTRAN handover requirements for the case when the target E-UTRAN cell is unknown as specified in clause 6.1.2.1.

The test comprises of one NR carrier under CCA and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. No Gap pattern shall be configured.

A RRC message implying handover shall be sent to the UE during period T1. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.11.2.1.8-1. General test parameters are provided in Table A.11.2.1.8-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.11.2.1.8-3 and A.11.2.1.8-4 respectively.

**Table A.11.2.1.8-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description of a cell with CCA  | Description of a cell without CCA     |
|---------------|---|---------------------------------------|
| 1             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  | LTE 10 MHz bandwidth, TDD duplex mode |
| 2             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  | LTE 10 MHz bandwidth, FDD duplex mode |
| Note 1:       | The UE is only required to be tested in one of the supported test configurations.                       |                                       |
| Note 2:       | The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested. |                                       |

**A.11.2.1.8.2 Test Requirements**

The UE shall start to transmit the PRACH to Cell 2 less than 165 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + T<sub>interrupt</sub>, where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{\text{interrupt}} = 115$  ms in the test;  $T_{\text{interrupt}}$  is defined in clause 6.1.2.1.

This gives a total of 165 ms.

## A.11.2.2 RRC connection mobility control

### A.11.2.2.1 RRC re-establishment

#### A.11.2.2.1.1 Intra-frequency RRC Re-establishment with CCA in FR1

##### A.11.2.2.1.1.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay with CCA in FR1 with known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.1.1-1, table A.11.2.2.1.1.1-2 and table A.11.2.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell with CCA, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.11.2.2.1.1.1-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.2.2.1.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case with CCA**

| Parameter   |   | Unit | Value                               | Comment   |
|---|---|------|-------------------------------------|---|
| Initial Condition   | Active cell                                     | -    | Cell1                               | Cell 1 is with CCA.   |
|   | Neighbour cells                                 | -    | Cell2                               | Cell 2 is with CCA.   |
| Final condition   | Active cell                                     | -    | Cell2                               |   |

| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |               |  |           |           |  |        |               |
| NOTE 4: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |               |  |           |           |  |        |               |
| NOTE 5: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |               |  |           |           |  |        |               |
| NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |               |  |           |           |  |        |               |

**A.11.2.2.1.1.2 Test Requirements**

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to a known NR intra frequency cell with CCA shall be less than  $1350 + \text{MAX}(200, (5+K_1) \times 20)$  ms.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish\_delay\_CCA} = T_{UE\_re-establish\_delay\_CCA} + T_{UL\_grant}$$

Where:

$T_{UL\_grant}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{UL\_grant}$  is not used.

$$\begin{aligned} T_{UE\_re-establish\_delay\_CCA} &= 50 \text{ ms} + T_{identify\_intra\_NR\_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR\_CCA,i} + T_{SI-NR\_CCA} \\ &+ T_{PRACH\_CCA} \end{aligned}$$

Where

$$N_{freq} = 1$$

$$T_{identify\_intra\_NR\_CCA} = \text{MAX}(200 \text{ ms}, (5+K_1) \times T_{SMTC}), \text{ where}$$

$K_1$  is the number of SMTC occasions not available at the UE due to DL CCA failures during RRC re-establishment period on the carrier with CCA.

$T_{SMTC} = 20 \text{ ms}$  is the SMTC periodicity.

$$T_{identify\_inter\_NR\_CCA} = 0 \text{ ms}$$

$T_{SI-NR\_CCA} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target intra-frequency NR cell.

$T_{PRACH\_CCA} = T_{SSB,RO} + 10 \text{ ms}$ , where:

- $T_{SSB,RO}$  is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [39], which is  $T_{SSB,RO}=10 \text{ ms}$  for FR1 PRACH configuration 1 under CCA.

This gives a total of  $1350 + \text{MAX}(200, (5+K_1) \times 20) \text{ ms}$ .

#### A.11.2.2.1.2 Inter-frequency RRC Re-establishment with CCA in FR1

##### A.11.2.2.1.2.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay with CCA in FR1 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.2.1-1, table A.11.2.2.1.2.1-2 and table A.11.2.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell with CCA, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of cell 2 by the end of T1.

**Table A.11.2.2.1.2.1-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.2.2.1.2-1: General test parameters for NR inter-frequency RRC Re-establishment test case in FR1**

| Parameter   |   | Unit | Value                             | Comment   |
|---|---|------|-----------------------------------|---|
| Initial Condition   | Active cell                                     | -    | Cell1                             | Cell 1 is with CCA.   |
|   | Neighbour cells                                 | -    | Cell2                             | Cell 2 is with CCA.   |
| Final condition   | Active cell                                     | -    | Cell2                             |   |

| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |              |  |           |           |  |        |               |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |  |           |           |  |        |               |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |  |           |           |  |        |               |
| NOTE 4: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |  |           |           |  |        |               |
| NOTE 5: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |              |  |           |           |  |        |               |
| NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |              |  |           |           |  |        |               |

**A.11.2.2.1.2.2 Test Requirements**

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less than TBD s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish_{delay_{CCA}}} = T_{UE_{re-establish_{delay_{CCA}}} + T_{UL_{grant}}$$

Where:

$T_{UL_{grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{UL_{grant}}$  is not used.

$$T_{UE_{re-establish_{delay_{CCA}}} = 50 \text{ ms} + T_{identify_{intra_{NR_{CCA}}} + \sum_{i=1}^{N_{freq}-1} T_{identify_{inter_{NR_{CCA},i}} + T_{SI-NR_{CCA}} + T_{PRACH_{CCA}}$$

Where

$T_{identify_{intra_{NR_{CCA}}}$ : 0 ms

$T_{identify_{inter_{NR_{CCA},i}}$ : MAX (200 ms, ((6)+K<sub>2,i</sub>) x T<sub>SMTC</sub>, i),

where

K<sub>2,i</sub> is the number of SMTC not available at the UE during RRC re-establishment period on the “i” th carrier with CCA

T<sub>SMTC,i</sub>: It is the periodicity of the SMTC occasion configured for the inter-frequency carrier *i*.

$N_{freq} = 2$

$T_{SI-NR_{CCA}} = 1280$  ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH_{CCA}} = (1 + K_3) * T_{SSB,RO} + 10$  ms, where:

- $T_{SSB,RO}$  is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [39].
- [-  $K_3$  is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure.  $K_3 = 0$  for Type 2C UL channel access procedure as defined in TS 37.213 [57].]

This gives a total of TBD ms.

#### A.11.2.2.1.3 Intra-frequency RRC Re-establishment with CCA in FR1 without serving cell timing

##### A.11.2.2.1.3.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay with CCA in FR1 without serving cell timing is within the specified limits. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.3.1-1, table A.11.2.2.1.3.1-2 and table A.11.2.2.1.3.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell with CCA, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.11.2.2.1.3.1-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.2.2.1.3.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

| Parameter   |   | Unit | Value                             | Comment   |

| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |               |  |           |           |  |           |               |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |               |  |           |           |  |           |               |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |               |  |           |           |  |           |               |
| NOTE 4: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |               |  |           |           |  |           |               |
| NOTE 5: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |               |  |           |           |  |           |               |
| NOTE 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |               |  |           |           |  |           |               |

**A.11.2.2.1.3.2 Test Requirements**

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR intra frequency cell without serving cell timing shall be less than  $1350 + \text{MAX}(800 \text{ ms}, (10 + K_1) \times 20) \text{ ms}$ .

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish\_delay\_CCA} = T_{UE\_re-establish\_delay\_CCA} + T_{UL\_grant}$$

Where:

$T_{UL\_grant}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{UL\_grant}$  is not used.

$$\begin{aligned} T_{UE\_re-establish\_delay\_CCA} &= 50 \text{ ms} + T_{identify\_intra\_NR\_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR\_CCA,i} + T_{SI-NR\_CCA} \\ &+ T_{PRACH\_CCA} \end{aligned}$$

Where,

$$N_{freq} = 1$$

$$T_{identify\_intra\_NR} = \text{MAX}(800 \text{ ms}, (10 + K_1) \times T_{SMTC}), \text{ where}$$

$K_1$  is the number of SMTC occasions not available at the UE due to DL CCA failures during RRC re-establishment period on the carrier with CCA.

$T_{SMTC}$  is the SMTC periodicity which is 20 ms.

$$T_{identify\_inter\_NR\_CCA} = 0 \text{ ms}$$

$T_{SI-NR\_CCA} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$$T_{PRACH\_CCA} = (1 + K_3) \times T_{SSB,RO} + 10 \text{ ms}, \text{ where:}$$

- $T_{SSB,RO}$  is the SSB to PRACH occasion association period as defined in Table 8.1-1 of TS 38.213 [39]. It is 10 ms for FR1 PRACH configuration 1 under CCA.
- $K_3 = 0$ .

This gives total  $T_{UE\_re-establish\_delay\_CCA} = 1350 + \text{MAX}(800 \text{ ms}, (10 + K_1) \times 20) \text{ ms}$ .

#### A.11.2.2.1.4 Inter-frequency RRC Re-establishment from NR FR1 carrier without CCA to NR FR1 carrier under CCA

##### A.11.2.2.1.4.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay requirement for RRC re-establishment from NR FR1 carrier without CCA to NR FR1 inter-frequency carrier under CCA with unknown target cell. These tests will verify the requirements in clause 6.2.1A.

The test parameters are given in table A.11.2.2.1.4.1-1, table A.11.2.2.1.4.1-2 and table A.11.2.2.1.4.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of cell 2 by the end of T1.

**Table A.11.2.2.1.4.1-1: Supported test configurations inter-frequency RRC re-establishment from NR FR1 without under CCA to NR FR1 inter-frequency carrier under CCA**

| Configuration  | Source cell without CCA               | Target cell with CCA                  |
|--|---------------------------------------|---------------------------------------|
| 1  | 15 kHz SSB SCS, 10 MHz bandwidth, FDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 2  | 15 kHz SSB SCS, 10 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 3  | 30 kHz SSB SCS, 40 MHz bandwidth, TDD | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| Note: The UE is only required to be tested in one of the supported test configurations |                                       |                                       |

**Table A.11.2.2.1.4.1-2: General test parameters for NR inter-frequency RRC Re-establishment test case from NR FR1 carrier without CCA to NR FR1 intrer-frequency carrier under CCA**

| Parameter   |  | Unit | Value                                   | Comment   |
|---|--|------|---|---|
| Initial condition   | Active cell                                    |      | Cell1                                   |   |
|   | Neighbour cells                                |      | Cell2                                   |   |
| Final condition   | Active cell                                    |      | Cell2                                   |   |

| Propagation Condition  |                            | 1,2,3       |               | AWGN                    |           |           |                         |           |            |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                            |             |               |                         |           |           |                         |           |            |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                            |             |               |                         |           |           |                         |           |            |
| Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                            |             |               |                         |           |           |                         |           |            |
| Note 4: Parameters $P_{CCA\_DL}$ , $P_{CCA\_DL\_1}$ , $P_{CCA\_DL\_2}$ and $P_{CCA\_UL}$ are defined in clause A.3.20.2.   |                            |             |               |                         |           |           |                         |           |            |
| Note 5: For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |                            |             |               |                         |           |           |                         |           |            |

#### A.11.2.2.1.4.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less  $T_{UE\_re-establish\_delay\_CCA}$ .

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{re-establish\_delay\_CCA} = T_{UE\_re-establish\_delay\_CCA} + T_{UL\_grant}$$

Where:

$T_{UL\_grant}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{UL\_grant}$  is not used.

$$T_{UE\_re-establish\_delay\_CCA} = 50 \text{ ms} + T_{identify\_intra\_NR\_CCA} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR\_CCA,i} + T_{SI-NR\_CCA} + T_{PRACH\_CCA}$$

$$N_{freq} = 2$$

$$T_{identify\_intra\_NR\_CCA} = \text{MAX} (800 \text{ ms}, (10+ K_1) \times 20) \text{ ms}$$

$$T_{identify\_inter\_NR\_CCA} = \text{MAX} (800 \text{ ms}, ([13]+K_{2,2}) \times 20) \text{ ms}$$

$T_{SI} = 1280$  ms; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH\_CCA}$  = It is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell.  
 $T_{PRACH\_CCA} = (1+ K_3) \times T_{SSB,RO} + 10$  ms; where  $K_3=0$  and  $T_{SSB,RO}=10$  ms for FR1 PRACH configuration 1 under CCA.

$K_1$  is the number of SMTC occasions not available at the UE due during RRC re-establishment period on the carrier with CCA and with RF channel number # 1.

$K_{2,2}$  is the number of SMTC occasions not available at the UE during RRC re-establishment period on the carrier with CCA and with RF channel number # 2.

This gives total  $T_{UE\_re-establish\_delay\_CCA}=1350+\text{MAX} (800 \text{ ms}, (10+ K_1) \times 20) \text{ ms}+\text{MAX} (800 \text{ ms}, ([13]+K_{2,2}) \times 20) \text{ ms}$ .

### A.11.2.2.2 Random Access

#### A.11.2.2.2.1 4-step RA type contention-based random access for NR PCell with CCA

##### A.11.2.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in Clause 6.2.2A.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in Table A.11.2.2.2.1.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.11.2.2.2.1.1-2.

**Table A.11.2.2.1.1-1: Supported test configurations for contention based random access test for FR1 PCell with CCA**

| <b>Config</b> | <b>Description</b>                                   |
|---------------|--|
| 1             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:         | Void   |

**Table A.11.2.2.1.1-2: General test parameters for contention based random access test for FR1 PCell with CCA**

| Parameter   |                      | Unit     | Test-1                     | Comments                            |  |
|---|----------------------|----------|----------------------------|-------------------------------------|--|
| SSB Configuration   | Note 4, 6            | Config 1 | SSB.3 CCA                  | As defined in A.3.10A               |  |
|   | Note 5, 6            | Config 1 | SSB.4 CCA                  | As defined in A.3.10A               |  |
| DBT Window Configuration                                      |                      | Config 1 | DBT.1                      | As specified in A.3.28.1            |  |
| DL CCA model  |                      | Config 1 | As specified in A.3.26.2.1 |                                     |  |
| UL CCA model  |                      | Config 1 | As specified in A.3.26.2.2 |                                     |  |
| Duplex Mode for Cell 2  |                      | Config 1 | TDD                        |                                     |  |

| UL CCA probability  | Note 4, 6            |          |                            | 0.87                                |  |
| $P_{CCA\_UL}$   | Note 5, 6            |          |                            | 0.75                                |  |
| $L_{CCA\_UL}$ <sup>Note 7</sup>                               |                      |          |                            | 5                                   |  |
| $W_{CCA\_UL}$ <sup>Note 8</sup>                               |                      |          |                            | Inf                                 |  |
| Semi-static channel access config period <sup>Note 4, 6</sup> |                      | ms       |                            | 2                                   |  |
| Propagation Condition   |                      | -        |                            | AWGN                                |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and lo levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=\text{Inf}$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.  |

#### A.11.2.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.11.2.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in Clause 6.2.2A.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of PRACH transmissions described within the whole clause A.11.2.2.2.1.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.
- In case of UL CCA failure, The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.11.2.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2A.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2A.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.11.2.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2A.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A.11.2.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2A.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.11.2.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in Clause 6.2.2A.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.11.2.2.2.2 4-step RA type non-contention based random access for NR PSCell with CCA

#### A.11.2.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in Clause 6.2.2A.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in Table A.11.2.2.2.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.11.2.2.2.1-2.

**Table A.11.2.2.2.1-1: Supported test configurations for non-contention based random access test for FR1 PCell with CCA**

| <b>Config</b> | <b>Description</b>                                   |
|---------------|--|
| 1             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:         | Void.  |

**Table A.11.2.2.2.1-2: General test parameters for non-contention based random access test for FR1 PCell with CCA**

| Parameter   |                      | Unit     | Test-1                              | Comments                                     |  |
|---|----------------------|----------|-------------------------------------|--|--|

| Propagation Condition   |                      | -        | AWGN                                |  |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=\text{Inf}$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.  |

#### A.11.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.11.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2A.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

The three requirements below are relevant for all cases of PRACH transmissions described within the clause A.11.2.2.2.2:

- The System Simulator shall implement the UL CCA model of A.3.26.2 for the RACH occasions where PRACH transmissions are expected. The System Simulator shall monitor the RACH occasions to detect if the UE is transmitting PRACH preambles. If a PRACH transmission is detected on a RACH occasion that is expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit PRACH for semi-static channel access mode; for dynamic channel access mode it is assumed that RACH occasions are always scheduled within a UE-initiated COT.
- In case of UL CCA failure The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS38.321 [7], and transmit with the calculated PRACH transmission power.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.11.2.2.2.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2A.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2A.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of Random Access Response.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.2. The power of the first preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.3 2-step RA type contention-based random access for NR PCell with CCA

##### A.11.2.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the 2-step RA type random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in Clause 6.2.2A.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in Table A.11.2.2.2.3.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.11.2.2.2.3.1-2.

**Table A.11.2.2.2.3.1-1: Supported test configurations for 2-step RA type contention based random access with successRAR test for FR1 PCell with CCA**

| Config | Description  |
|--------|--|
| 1      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | Void.  |

**Table A.11.2.2.3.1-2: General test parameters for 2-step RA type contention based random access with successRAR test for FR1 PCell with CCA**

| Parameter   |                      | Unit     | Test-1                             | Comments   |   |

| Propagation Condition   |                      | -        | AWGN                               |  |   |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/Iot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=Inf$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.   |

#### A.11.2.2.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.11.2.2.3.2.1 MsgA Transmission

To test the UE behavior specified in Clause 6.2.2A.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*, if the UL CCA is successful.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.11.2.2.3.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.
- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble transmission shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.11.2.2.3.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2A.3.1.2 the System Simulator shall transmit a MsgB containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit an ACK if the MsgB with a successRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble and if the Contention Resolution is successful and if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting

ACK in the case of CCA UL failure. If ACK transmission is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB(s) contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.1.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.2.4 2-step RA type non-contention-based random access for NR PCell with CCA

##### A.11.2.2.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits when subject to CCA. This test will verify the requirements in Clause 6.2.2A.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1, which operates on a carrier frequency with CCA. Supported test parameters are shown in Table A.11.2.2.2.4.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.11.2.2.2.4.1-2.

**Table A.11.2.2.2.4.1-1: Supported test configurations for non-contention based random access test for FR1 PCell with CCA**

| Config | Description  |
|--------|--|
| 1      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | Void.  |

**Table A.11.2.2.4.1-2: General test parameters for non-contention based random access test for FR1 PCell with CCA**

| Parameter   |                      | Unit     | Test-1                             | Comments   |      |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds $P_{CCA\_DL1}$ and the second value corresponds to the $P_{CCA\_DL2}$ .  |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic channel occupancy and semi-static channel occupancy configuration.   |
| Note 7: | $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are chosen such that $preambleTransMax > 5 + L_{CCA\_DL} + L_{CCA\_UL}$ .  |
| Note 8: | A window $W_{CCA\_DL}=W_{CCA\_UL}=\text{Inf}$ is used to indicate that $L_{CCA\_DL}$ and $L_{CCA\_UL}$ are considered during the entire duration of a test run.  |

#### A.11.2.2.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.11.2.2.4.2.1 MsgA Transmission

To test the UE behavior specified in Clause 6.2.2A.3.2.1, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA PRACH on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

The three requirements below are relevant for all cases of MsgA transmissions described within the clause A.11.2.2.4.2:

- The System Simulator shall implement the UL CCA model for the MsgA occasions (i.e. both MsgA PRACH and MsgA PUSCH occasions) where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on MsgA occasions that are expected to have UL CCA failure, the test is considered as failed.
- In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode; for dynamic channel access mode it is assumed that MsgA occasions are always scheduled within a UE-initiated COT.
- The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated PRACH transmission power in case of UL CCA failure.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.11.2.2.4.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2A.3.2.2 the System Simulator shall transmit a MsgB containing a fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 containing the payload of MsgA PUSCH if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble if UL CCA is successful. The System Simulator shall monitor if the UE is transmitting msg3 when CCA UL failure. If a msg3 is detected on a grant expected to have UL CCA failure, the test is considered as failed. The UE shall monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

The system simulator shall implement the UL CCA model of A.3.26.2 for the MsgA occasions where MsgA System Simulator transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on a MsgA occasion that is expected to have UL CCA failure, the test is considered as failed.

In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power in case UL CCA failure.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA and msg3 transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.11.2.2.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2A.3.2.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles. In case of CCA DL failure, the test equipment should delay the transmission of MsgB.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

The System Simulator shall implement the UL CCA model of A.3.26.2 for the MsgA occasions where MsgA transmissions are expected. The System Simulator shall monitor the MsgA occasions to detect if the UE is transmitting MsgA. If a MsgA transmission is detected on a MsgA occasion that is expected to have UL CCA failure, the test is considered as failed.

In case of CCA DL failure, the test equipment should verify that the UE does not transmit MsgA for semi-static channel access mode.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS38.321 [7], and transmit with the calculated MsgA transmission power in case UL CCA failure.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2A.3. The power of the first MsgA preamble shall be -16 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

### A.11.2.2.3 RRC connection release with redirection

#### A.11.2.2.3.1 Redirection from NR FR1 carrier under CCA to NR FR1 carrier under CCA

##### A.11.2.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR FR1 carrier under CCA to NR FR1 carrier under CCA specified in clause 6.2.3.2.3.

##### A.11.2.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.11.2.2.3.1.2-1. The time delay is tested by using the parameters in table A.11.2.2.3.1.2-2, and A.11.2.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.11.2.2.3.1.2-1: Redirection from NR to NR test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.2.2.3.1.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter   | Unit  | Value  | Comment  |
|---|---|--|--|
| Initial conditions  | Active cell                                     | Cell 1   | On the carrier under CCA   |
|   | Neighbouring cell                               | Cell 2   | On the carrier under CCA   |
| Final condition   | Active cell                                     | Cell 2   | On the carrier under CCA   |
| Filter coefficient  |   | 0  | L3 filtering is not used   |
| Access Barring Information  | -   | Not Sent   | No additional delays in random access procedure.                                   |
| Time offset between cells   |   | 3 $\mu$ s  | Synchronous cells  |
| DL CCA model  | Dynamic channel access <sup>Note 1, 3</sup>     | As specified in clause A.3.26.2.1                        |  |
|   | Semi-static channel access <sup>Note 2, 3</sup> |  |  |
| UL CCA model  | Dynamic channel access <sup>Note 1, 3</sup>     | As specified in clause A.3.26.2.2                        |  |
|   | Semi-static channel access <sup>Note 2,3</sup>  |  |  |
| T1  | s   | 5  |  |
| T2  | s   | $\geq T_{\text{connection\_release\_redirect\_NR\_CCA}}$ | $T_{\text{connection\_release\_redirect\_NR\_CCA}}$ is defined in clause 6.2.3.2.3 |
| NOTE 1: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.                               |   |  |  |
| NOTE 2: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.                       |   |  |  |
| NOTE 3: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only. |   |  |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 5: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 6: | For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |
| Note 7: | As defined in clause 6.2.3.2.3 for $T_{rs} \leq 40$ ms.  |

### A.11.2.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{\text{connection\_release\_redirect\_NR\_CCA}}$  ms from the beginning of time period T2, where  $T_{\text{connection\_release\_redirect\_NR\_CCA}}$  is defined in clause 6.2.3.2.3.

The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{\text{connection\_release\_redirect\_NR\_CCA}} = T_{\text{RRC\_procedure\_delay}} + T_{\text{identify-NR\_CCA}} + T_{\text{SI-NR\_CCA}} + T_{\text{RACH\_CCA}},$$

where:

$T_{\text{RRC\_procedure\_delay}} = 110$  ms in the test.

$T_{\text{identify-NR\_CCA}} = \text{MAX}(680 \text{ ms}, (L_1+11) \times 20 \text{ ms})$  in the test.

$T_{\text{SI-NR}} = 1280$  ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{\text{RACH\_CCA}}$  is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell.

$L_1$  is the number of SMTC occasions not available at the UE due to DL CCA failures. The test equipment ensure that number of  $L_1$  in target cell does not exceed  $L_{1,\text{max}}$  using the configured  $L_{\text{CCA\_DL}}$  as in clause A.3.26.2.1;

### A.11.2.2.3.2 Redirection from NR FR1 carrier without CCA to NR FR1 carrier with CCA

#### A.11.2.2.3.2.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR FR1 carrier without CCA to NR FR1 carrier with CCA specified in clause 6.2.3.2.3.

#### A.11.2.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.11.2.2.3.2.2-1. The time delay is tested by using the parameters in table A.11.2.2.3.2.2-2, and A.11.2.2.3.2.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.11.2.2.3.2.2-1: Redirection from NR to NR test configurations**

| Configuration | Source cell without CCA  | Target cell with CCA                  |
|---------------|--|---------------------------------------|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD  | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD  | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD  | 30 kHz SSB SCS, 40 MHz bandwidth, TDD |
| Note:         | The UE is only required to be tested in one of the supported test configurations |                                       |

**Table A.11.2.3.2.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter   |   | Unit | Value  | Comment  |
|---|---|------|--|--|
| Initial conditions  | Active cell                                     |      | Cell 1   | On the carrier without CCA   |
|   | Neighbouring cell                               |      | Cell 2   | On the carrier under CCA   |
| Final condition   | Active cell                                     |      | Cell 2   | On the carrier under CCA   |
| Filter coefficient  |   |      | 0  | L3 filtering is not used   |
| Access Barring Information  |   | -    | Not Sent   | No additional delays in random access procedure.                                   |
| Time offset between cells   |   |      | 3 $\mu$ s  | Synchronous cells  |
| DL CCA model  | Dynamic channel access <sup>Note 1, 3</sup>     |      | As specified in clause A.3.26.2.1                        |  |
|   | Semi-static channel access <sup>Note 2, 3</sup> |      |  |  |
| UL CCA model  | Dynamic channel access <sup>Note 1, 3</sup>     |      | As specified in clause A.3.26.2.2                        |  |
|   | Semi-static channel access <sup>Note 2,3</sup>  |      |  |  |
| T1  |   | s    | 5  |  |
| T2  |   | s    | $\geq T_{\text{connection\_release\_redirect\_NR\_CCA}}$ | $T_{\text{connection\_release\_redirect\_NR\_CCA}}$ is defined in clause 6.2.3.2.3 |
| NOTE 1: For a UE supporting dynamic channel access and network configuring dynamic channel occupancy.                               |   |      |  |  |
| NOTE 2: For a UE supporting semi-static channel access and network configuring semi-static channel occupancy.                       |   |      |  |  |
| NOTE 3: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only. |   |      |  |  |

They are not settable parameters themselves.</p> <p>Note 4: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 5: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>Note 6: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.</p> <p>Note 7: As defined in clause 6.2.3.2.3 for <math>T_{rs} \leq 40</math> ms.</p> |            |               |        |        |           |        |

#### A.11.2.2.3.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{\text{connection\_release\_redirect\_NR\_CCA}}$  ms from the beginning of time period T2, where  $T_{\text{connection\_release\_redirect\_NR\_CCA}}$  is defined in clause 6.2.3.2.3.

The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{\text{connection\_release\_redirect\_NR\_CCA}} = T_{\text{RRC\_procedure\_delay}} + T_{\text{identify-NR\_CCA}} + T_{\text{SI-NR\_CCA}} + T_{\text{RACH\_CCA}},$$

where:

$T_{\text{RRC\_procedure\_delay}} = 110$  ms in the test.

$T_{\text{identify-NR\_CCA}} = \text{MAX}(680 \text{ ms}, (L_1+11) \times 20 \text{ ms})$  in the test.

$T_{\text{SI-NR\_CCA}} = 1280$  ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{\text{RACH\_CCA}}$  is the delay uncertainty in acquiring the first available PRACH occasion in the target NR cell.

$T_{\text{RACH\_CCA}} = (1+L_2) \times T_{\text{SSB,RO}} + 10$  ms; where  $T_{\text{SSB,RO}} = 10$  ms for FR1 PRACH configuration 1.

$L_1$  is the number of SMTC occasions not available at the UE due to DL CCA failures. The test equipment shall ensure that  $L_1$  does not exceed  $L_{1,\text{max}}$ . In the test  $L_{1,\text{max}} = L_{\text{CCA\_DL}}$  which is defined in clause A.3.26.2.1.

$L_2$  is the consecutive number of SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failures.  $L_2 = 0$  in the test.

The total delay,  $T_{\text{connection\_release\_redirect\_NR\_CCA}}$ , shall be less than  $1410 + \text{MAX}(680, (L_1+11) \times 20)$  ms.

## A.11.3 Timing

### A.11.3.1 UE transmit timing

#### A.11.3.1.1 UE Transmit Timing Test with PCell under DL CCA

##### A.11.3.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeB when PCell is subject to DL CCA and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in Table 11.3.1.1.1-1

**Table A.11.3.1.1.1-1: Supported test configuration for UE transmit timing test**

| Configuration | Description  |
|---------------|--|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

For this test a single NR cell is used. Table A.11.3.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in Table A.11.3.1.1.1-3.

Table A.11.3.1.1.1-2: Cell Specific Test Parameters for UE transmit timing test

| Parameter  |                            | Unit        | Configuration | Test1                             | Test2                      |

**A.11.3.1.1.2 Test requirements**

The test sequence shall be carried out in RRC\_CONNECTED for every test case.

Following will be the test sequence for this test

- 1) Setup NR PCell according to parameters given in Table A.11.3.1.1.1-1.
- 2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB.
  - a. The  $N_{TA}$  offset value (in  $T_c$  units) is 25600
  - b. The  $T_e$  values depend on the DL and UL SCS for which the test is being run and are given in Table 7.1.2-1
- 3) The test system shall adjust the timing of the DL path by values given in Table A.11.3.1.1.2-1

**Table A.11.3.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (KHz) | Adjustment Value  |                   |
|--------------------------|-------------------|-------------------|
|                          | Test1             | Test2             |
| 30                       | $+32 \cdot 64T_c$ | $+16 \cdot 64T_c$ |

- 4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.

- 5) The test system shall verify that the UE transmit timing offset stays within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment

## A.11.3.2 UE timing advance

### A.11.3.2.1 UE Timing Advance Adjustment Accuracy with PCell under DL CCA

#### A.11.3.2.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

#### A.11.3.2.1.2 Test Parameters

Supported test configurations are shown in table A.11.3.2.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.11.3.2.1.2-2, A.11.3.2.1.2-3 and A.11.3.2.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.11.3.2.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in Clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to Clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.11.3.2.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in Clause 7.3.2.1, the UE adjusts its uplink timing at slot  $n+k$  for a timing advance command received in slot  $n$ . This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.11.3.2.1.2-1: Supported test configuration for timing advance test**

| Config | Description  |
|--------|--|
| 1      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE supporting SA operation only on NR band(s) with shared spectrum access is required to be tested |

Table A.11.3.2.1.2-2: General test parameters for timing advance test

| Parameter  | Unit | Value     | Comment   |
|--|------|-----------|---|
| RF channel number                                |      | 1         |   |
| Initial DL BWP                                   |      | DLBWP.0.1 | As specified in Table A.3.9.2.1-1   |
| Dedicated DL BWP                                 |      | DLBWP.1.1 | As specified in Table A.3.9.2.2-1   |
| Initial UL BWP                                   |      | ULBWP.0.1 | As specified in Table A.3.9.3.1-1   |
| Dedicated UL BWP                                 |      | ULBWP.1.1 | As specified in Table A.3.9.3.2-1   |
| Timing Advance Command ( $T_A$ ) value during T1 |      | 31        | $N_{TA\_new} = N_{TA\_old}$ for the purpose of establishing a reference value from which the timing advance adjustment accuracy can be measured during T2 |
| Timing Advance Command ( $T_A$ ) value during T2 |      | 39        | For 30 kHz SCS $N_{TA\_new} = N_{TA\_old} + 4096 * T_c$<br>(based on equation in clause 4.2 of TS 38.213 [3])   |
| T1   | s    | 5         |   |
| T2   | s    | 5         |   |

Table A.11.3.2.1.2-3: Cell specific test parameters for timing advance test

| Parameter   |                            | Unit         | Test1                             |    |
|---|----------------------------|--------------|-----------------------------------|----|
|   |                            |              | T1                                | T2 |
| TDD configuration   | Config 1                   |              | TDDConf.1.1 CCA                   |    |
| BW <sub>channel</sub>   | Config 1                   | MHz          | 40: N <sub>RB,c</sub> = 106       |    |
| BWP BW  | Config 1                   | MHz          | 40: N <sub>RB,c</sub> = 106       |    |

### A.11.3.2.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e.  $k+1$  slots after the reception of the timing advance command, where  $k=5$ .

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90%.

## A.11.4 Signalling characteristics

### A.11.4.1 Radio link monitoring

#### A.11.4.1.1 Introduction

In the test cases specified in clause A.11.4.1, any uplink signal transmitted by the UE is used for detecting the in-/out-of-sync state of the UE. In terms of measurement, the uplink signal is verified based on the UE output power:

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means uplink signal
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means no uplink signal.

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

#### A.11.4.1.2 Radio link monitoring out-of-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

##### A.11.4.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 PCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.11.4.1.2.1-1. The test parameters are given in Tables A.11.4.1.2.1-2, A.11.4.1.2.1-3, and A.11.4.1.2.1-4 below. There is one cell (Cell 1), which is the active NR cell in FR1, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model.

The test consists of three successive time periods, with time duration of T1, T2 and T3, respectively. Figure A.11.4.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40 ms) in the test.

**Table A.11.4.1.2.1-1: Supported test configurations.**

| Configuration | Description  |
|---------------|--|
| 1             | TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.4.1.2.1-2: General test parameters for PCell out-of-sync testing in non-DRX mode.**

Figure A.11.4.1.2.1-1: SNR variation for out-of-sync testing.

A.11.4.1.2.2 Test requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

- During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.
- The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

A.11.4.1.3 Radio link monitoring in-sync test for PCell configured with SSB-based RLM RS in non-DRX mode

A.11.4.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE properly detects the out-of-sync and in-sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 PCell radio link monitoring requirements in clause 8.1A.

In the test, UE is configured to perform RLM based on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.11.4.1.3.1-1. The test parameters are given in Tables A.11.4.1.3.1-2, and A.11.4.1.3.1-3 below. There is one cell (Cell 1), which is the active NR cell in FR1, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model.

The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5, respectively. Figure A.11.4.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE transmits according to UL CCA model.

Table A.11.4.1.3.1-1: Supported test configurations.

| Configuration | Description  |
|---------------|--|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |

**Table A.11.4.1.3.1-2: General test parameters for PCell in-sync testing in non-DRX mode.**

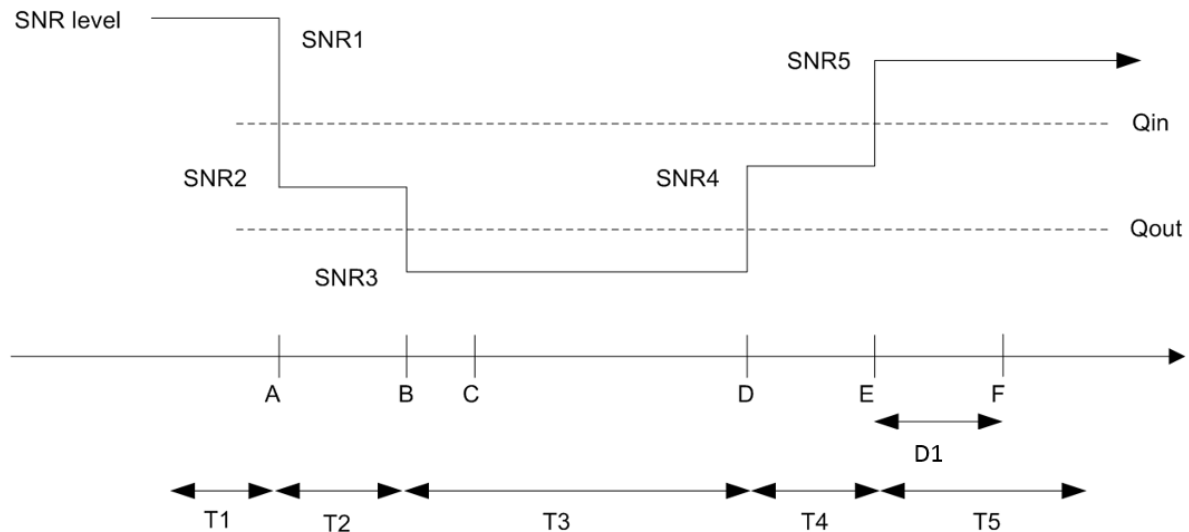

| Parameter   |  | Unit | Value                               |
|---|--|------|-------------------------------------|

### A.11.4.2 Interruption

#### A.11.4.2.1 NR interruptions during Scell operations with CCA on PCell and SCell

##### A.11.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify NR PCell interruptions during Scell operations on an NR SCC with CCA. This test will verify the interruption requirements for NR PCell in NR SA specified in TS 38.133 clause 8.2.2 and 8.3A. Supported test configurations are shown in table A.11.4.2.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.11.4.2.1.1-2 and A.11.4.2.1.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 and Cell2 are PCell and SCell. Both of cell 1 and cell 2 are subject to CCA. The test consists of five time periods, with duration of T1, T2, T3, T4 and T5. Prior to the start of the

time duration T1, the UE is connected to Cell1 and Cell2. Throughout the test, the PCell are continuously scheduled in DL. The power of signals on cell 1 and 2 is not modified during the test.

Prior to T1, a connection is started with cell 1 as the PCell, and measurements of cell 2 are configured with gap pattern 0, such that cell 2 is reported. This ensures that cell 2 is known at the start of time period T1 and is not itself part of the tested requirement.

The point in time at which the RRC message implying SCell addition is received at the UE antenna connector, defines the start of time period T1. Measurement gap pattern 0 shall be stopped when the SCell is configured.

The point in time at which the MAC-CE message implying SCell activation is received at the UE antenna connector, defines the start of time period T2.

The point in time at which the MAC-CE message implying SCell deactivation is received at the UE antenna connector, defines the start of time period T3.

The point in time at which deactivation delay requirement in section 8.3A are satisfied defines the start of time period T4

The point in time at which the RRC message implying SCell release is received at the UE antenna connector, defines the start of time period T5.

**Table A.11.4.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.4.2.1.1-2: General test parameters for Interruptions during measurements on deactivated NR SCC**

| Parameter                                | Unit | Value  | Comment                                      |
|--|------|--------|--|
| RF Channel Number                        |      | 1, 2   |  |
| Active PCell                             |      | Cell1  | PCell on RF channel number 1.                |
| Configured SCell                         |      | Cell2  | Deactivated SCell on NR RF channel number 2. |
| CP length                                |      | Normal | Applicable to Cell1, Cell2                   |
| DRX                                      |      | OFF    |  |
| Measurement gap pattern Id               |      | OFF    |  |
| SCell measurement cycle (measCycleSCell) | ms   | 160    |  |
| T1                                       | s    | <10    |  |
| T2                                       | s    | <10    |  |
| T3                                       | s    | <10    |  |
| T4                                       | s    | <10    |  |
| T5                                       | s    | <10    |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |
| Note 3: | SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | Receive time difference of signals received between subframe timing boundary of E-UTRA PCell and slot timing boundary of PSCell at the UE antenna connector including time alignment error between the two cells   |
| Note 5: | Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells.   |
| Note 6: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 7: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 8: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

#### A.11.4.2.1.2 Test Requirements

The UE shall meet the interruption requirements for SCell addition on the victim Pcell in clause 8.2.1 during time T1

The UE shall meet the interruption requirements for SCell activation on the victim Pcell in clause 8.2.1 during time T2. There shall be a single interruption with time window as specified in clause 8.3A.2

The UE shall meet the interruption requirements for SCell deactivation on the victim PCell in clause 8.2.1 during time T3. There shall be a single interruption with time window as specified in clause 8.3A.3

The UE shall meet the interruption requirements for deactivated SCell measurements on the victim PCell in clause 8.2.1 during time T4. The interruptions shall be within the time window as specified in clause 8.3A.3

The UE shall meet the interruption requirements for SCell release on the victim PCell in clause 8.2.1 during time T5.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.11.4.3 SCell activation and deactivation delay

#### A.11.4.3.1 SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 160 ms SCell measurement cycle

##### A.11.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell both under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in Table A.11.4.3.1.1-1.

The test parameters are given in Table A.11.4.3.1.1-2 and cell-specific parameters in Table A.11.4.3.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in NR with CCA, and Cell2 (SCell) on radio channel 2 (SCC) in NR with CCA. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2, as the UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted  $m$ , defines the start of time period T2. The UE shall be able to report a valid CSI in PCell for the activated SCell at latest in slot  $m + (T_{HARQ} + T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA}) / NR\_slot\_length$ , as defined in clause 8.3A.2. The UE shall start reporting CSI in PCell in first available uplink resource for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting following slot  $m + \frac{T_{HARQ} + 3ms}{NR\_slot\_length}$  and shall report CQI index 0 (out-of-

range) until the SCell activation has been completed. Any PCell interruption shall fall within the time window specified in clause 8.3.2.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted  $n$ , defines the start of time period T3. The UE shall complete the activation at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ . Any PCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.11.4.3.1.1-1: Supported test configurations for SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description   |
|---------------|---|
| 1             | With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.4.3.1.1-2: General test parameters for known SCell activation with PCell and SCell under CCA, 160 ms SCell measurement cycle**

| Parameter  | Unit          | Value   | Comment   |
|--|---------------|---|---|
| RF Channel Number                                  |               | 1,2   | Two radio channels (1, 2) are used for this test  |
| Active PCell                                       |               | Cell 1  | Primary cell on NR RF channel number 1.   |
| Configured deactivated SCell                       |               | Cell 2  | Configured deactivated secondary cell on NR RF channel number 2   |
| CP length  |               | Normal  |   |
| DRX  |               | OFF   | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index |               | 0   | CQI reporting for SCell every second subframe   |
| SCell measurement cycle (measCycleSCell)           | ms            | 160   |   |
| Cell2 timing offset to cell1                       | $\mu\text{s}$ | 0   |   |
| Time alignment error between cell2 and cell1       | $\mu\text{s}$ | $\leq$ TAE as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.   |
| T1   | s             | 7   | During this time the PCell shall be known and the SCell configured and detected.  |
| T2   | s             | 1   | During this time the UE shall activate the SCell.   |
| T3   | s             | 1   | During this time the UE shall deactivate the SCell.   |
| $T_{\text{HARQ}}$                                  | ms            | $k_1 \times \text{NR slot length}$                        | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by <i>dl-DataToUL-ACK</i> , the value of $k$ should be the minimum value defined in TS 38.213 [3] depends on UE's capability   |
| $T_{\text{CSI\_Reporting}}$                        | ms            | $10 + 5 \cdot 2^{\mu_{\text{DL}}}$                        | The delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]<br>$\mu_{\text{DL}}$ is the subcarrier spacing configuration for DL |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that resources in the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts. OCNG is not transmitted during muted slots or during DBT windows. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |
| Note 3: | SS-RSRP, SCH_RP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |
| Note 5: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 6: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 7: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |
| Note 8: | As specified in clause 8.3A for $L_{1,max}$ , $L_{2,1,max}$ , $L_{2,2,max}$ , $L_{3,1,max}$ , and $L_{3,2,max}$  |

#### A.11.4.3.1.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{HARQ} + T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA}) / NR\_slot\_length$ , where  $T_{activation\_time\_withCCA} = T_{FirstSSB} + L_1 * T_{rs} + 5ms$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{HARQ} + 3ms}{NR\_slot\_length}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m + 1 + \frac{T_{HARQ}}{NR\_slot\_length}$  to slot  $m + 1 + \frac{T_{HARQ} + 3 + T_X}{NR\_slot\_length}$  with  $T_X = T_{FirstSSB}$ .

During T3, interruption on PCell shall not occur outside slot  $n + 1 + T_{HARQ} / NR\_slot\_length$  to slot  $n + 1 + (T_{HARQ} + 3ms) / NR\_slot\_length$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

#### A.11.4.3.2 SCell Activation and Deactivation of known SCell with PCell and SCell under CCA, 320 ms SCell measurement cycle

##### A.11.4.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell under CCA, are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 320 ms.

The supported test configurations are same as in Table A.11.4.3.1.1-1 above.

The test parameters are same as in Table A.11.4.3.1.1-2 above, except for parameters listed below in Table A.11.4.3.2.1-1. The cell-specific parameters are same as in Table A.11.4.3.1.1-3 above.

The test execution is the same as described in clause A.11.4.3.1 above.

**Table A.11.4.3.2.1-1: General test parameters for known SCell activation with PCell and SCell under CCA, 320 ms SCell measurement cycle**

| Parameter                                | Unit | Value | Comment |
|--|------|-------|---------|
| SCell measurement cycle (measCycleSCell) | ms   | 320   |         |

### A.11.4.3.2.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_Reporting\_withCCA}}) / \text{NR\_slot\_length}$ , where  $T_{\text{activation\_time\_withCCA}} = T_{\text{FirstSSB\_MAX}} + L_{2,1} * T_{\text{SMTC\_MAX}} + (1 + L_{2,2}) * T_{\text{rs}} + 5\text{ms}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR\_slot\_length}}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR\_slot\_length}}$  to slot  $m + 1 + \frac{T_{\text{HARQ}} + 3 + T_{\text{X}}}{\text{NR\_slot\_length}}$  with  $T_{\text{X}} = T_{\text{FirstSSB\_MAX}} + L_{2,1} * T_{\text{SMTC\_MAX}}$ .

During T3, interruption on PCell shall not occur outside slot  $n + 1 + T_{\text{HARQ}} / \text{NR\_slot\_length}$  to slot  $n + 1 + (T_{\text{HARQ}} + 3\text{ms}) / \text{NR\_slot\_length}$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

### A.11.4.3.3 SCell Activation and Deactivation of unknown SCell with PCell and SCell under CCA

#### A.11.4.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell, with PCell and SCell under CCA, are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in Table A.11.4.3.1.1-1 above.

The test parameters are same as in Table A.11.4.3.1.1-2 above, except for parameters listed below in Table A.11.4.3.3.1-1. The cell-specific parameters are same as in Table A.11.4.3.1.1-3 above.

The test execution is the same as described in clause A.11.4.3.1 above.

**Table A.11.4.3.3.1-1: General test parameters for unknown SCell activation with PCell and SCell under CCA**

| Parameter | Unit | Value | Comment  |
|-----------|------|-------|--|
| T1        | s    | 0.1   | During this time period the PCell shall be known and the SCell configured, but not detected. |

#### A.11.4.3.3.2 Test Requirements

During T2, starting after at least one CSI-RS transmission occasion for channel measurement and reporting from the slot specified in clause 4.3 of TS 38.213 [3] and until the UE has completed the SCell activation, the UE shall report out of range if the UE has available uplink resources to report CQI for the SCell.

During T2, the UE shall send the first valid CSI report (non-zero CQI) for the SCell in first available uplink resource for CSI reporting no later than slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_Reporting\_withCCA}}) / \text{NR\_slot\_length}$ , where  $T_{\text{activation\_time\_withCCA}} = T_{\text{FirstSSB\_MAX}} + (1 + L_{3,1}) * T_{\text{SMTC\_MAX}} + (2 + L_{3,2}) * T_{\text{rs}} + 5\text{ms}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR\_slot\_length}}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR\_slot\_length}}$  to slot  $m + 1 + \frac{T_{\text{HARQ}} + 3 + T_{\text{X}}}{\text{NR\_slot\_length}}$  with  $T_{\text{X}} = T_{\text{FirstSSB\_MAX}} + L_{3,1} * T_{\text{SMTC\_MAX}}$ .

During T3, interruption on PCell shall not occur outside slot  $n + 1 + T_{\text{HARQ}}/\text{NR\_slot\_length}$  to slot  $n + 1 + (T_{\text{HARQ}} + 3\text{ms})/\text{NR\_slot\_length}$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

## A.11.4.4 Beam failure detection and link recovery procedures

### A.11.4.4.1 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode

#### A.11.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in Tables A.11.4.4.1.1-1, A.11.4.4.1.1-2, A.11.4.4.1.1-3 and A.11.4.4.1.1-4 below. There is one cell, cell 1 which is the active cell, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.11.4.4.1.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.11.4.4.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA mode. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40 ms) in test 1.

**Table A.11.4.4.1.1-1: Supported test configurations for FR1 PCell with CCA**

| Configuration | Description                                       |
|---------------|---|
| 1             | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| Note:         | void  |

**Table A.11.4.4.1.1-2: General test parameters for FR1 PCell for SSB-based beam failure detection and link recovery testing in non-DRX mode**

| Parameter                                      |  | Unit | Value  |  | Comment |
|--|--|------|--|--|---------|
|  |  |      | Test 1   |  |         |

**Figure A.11.4.4.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

#### A.11.4.4.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 410$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.11.4.4.2 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in DRX mode

##### A.11.4.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5A.

The test parameters are given in Tables A.11.4.4.2.1-1, A.11.4.4.2.1-2, and A.11.4.4.2.1-3 below. There is one cell, cell 1 which is the active cell, in the test. Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.11.4.4.2.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.11.4.4.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. The UE transmits the reporting according to UL CCA mode. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.11.4.4.2.1-1: Supported test configurations for FR1 PCell with CCA**

| <b>Configuration</b> | <b>Description</b>                                |
|----------------------|---|
| 1                    | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| Note:                | Void  |

**Figure A.11.4.4.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

#### A.11.4.4.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 3850$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.11.4.5 Active BWP switching

#### A.11.4.5.1 UL active BWP switch delay with consistent UL LBT failure on PCell subject to UL CCA

##### A.11.4.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the UL BWP switch delay requirement defined in clause 8.6.4.

The supported test configurations are shown in Table A.11.4.5.1.1-1. The test scenario comprises of one cell (Cell 1), which is Pcell as given in Table A.11.4.5.1.1-2. Cell-specific parameters of the cell are specified in Table A.11.4.5.1.1-3 below. SRS configuration used in the test is specified in Table A.11.4.5.1.1-4.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink and uplink bandwidth parts: DL BWP-1, DL BWP-2, UL BWP-1 and UL BWP-2 before starting the test. DL BWP-1 and DL BWP-2 always include bandwidth of the initial DL BWP and SSB. UL BWP-1 and UL BWP-2 always include bandwidth of the SRS.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is DL BWP-1.
- UE is indicated in *firstActiveUplinkBWP-Id* that the active UL BWP is UL BWP-1.

- UE is configured with *LBT-FailureRecoveryConfig* parameters for Cell 1.

The cell has constant signal levels throughout the test. The test consists of 2 successive time periods, with durations of T1 and T2, respectively.

During T1,

- Time period T1 starts when the UE has received the SRS configuration for periodic SRS transmission on active UL BWP-1.
- The UE shall perform UL CCA before SRS transmission.
- The parameter UL CCA probability  $P_{CCA}$  is set to 0 during T1. This requires the test system to set energy level above the detection level during portion of the UL slot where the UE performs UL CCA. This in turn forces the UE to fail the UL CCA. The UE consistently fails UL CCA during T1 and is therefore unable to transmit SRS.

During T2,

- T2 starts when the UE detects consistent UL LBT failures i.e. when total number of UL LBT failures in cell1 on active UL BWP-1 exceeds *lbt-FailureInstanceMaxCount* during *lbt-FailureDetectionTimer*.
- The UE upon detected consistent UL LBT failure starts the LBT recovery mechanism, which requires the UE to switch to active UL BWP-2 in Cell 1 and to send PRACH in the active UL BWP-2.
- Starting from T2, the UE shall be able to send PRACH in the active UL BWP-2 within the delay specified in clause 8.6.4.

**Table A.11.4.5.1.1-1: Supported test configurations for UL BWP switch test in SA**

| Config  | Description  |
|---------|--|
| 1       | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: | void   |

**Table A.11.4.5.1.1-2: General test parameters for UL BWP switch test in SA**

| Parameter                              | Unit | Value  | Comment  |
|--|------|--------|--|
| NR RF Channel Number                   |      | 1      | One NR radio channel is used for this test                       |
| Active Cell                            |      | Cell 1 | Cell1 on RF channel number 1.                                    |
| CP length                              |      | Normal |  |
| DRX                                    |      | OFF    |  |
| <i>lbt-FailureDetectionTimer</i> [2]   | ms   | 80     | Parameter configured by IE: <i>LBT-FailureRecoveryConfig</i> [1] |
| <i>lbt-FailureInstanceMaxCount</i> [2] |      | 4      | Parameter configured by IE: <i>LBT-FailureRecoveryConfig</i> [1] |
| T1                                     | s    | 0.1    | During T1 consistent LBT failure is detected on active UL BWP-1  |
| T2                                     | s    | 0.1    | During T2 UE sends PRACH on active UL BWP-2                      |

**Table A.11.4.5.1.1-3: NR Cell specific test parameters for UL BWP switch test in SA**

| Parameter  |                            | Unit             | Cell 1                            |                                       |
|--|----------------------------|------------------|-----------------------------------|---------------------------------------|

#### A.11.4.5.1.2 Test Requirements

The UE capable of *bwp-SwitchingDelay type1* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 1 (PCell) less than 21.5 ms from the beginning of time period T1.

The UE capable of *bwp-SwitchingDelay type2* [2] shall start to transmit the PRACH on active UL BWP-2 of Cell 1 (PCell) less than 23 ms from the beginning of time period T1.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The above delay is calculated as follows:'

The active UL BWP switch delay from UL BWP-1 to UL BWP-2 can be expressed as:

$$T_{\text{BWPswitchDelay}} * T_{\text{slot}} + 1 * T_{\text{slot}} + (1 + L_3) * T_{\text{SSB,RO}} + 10 \text{ ms}$$

Where:

- $T_{\text{BWPswitchDelay}} = 1 \text{ ms}$  (2 slots) and  $2.5 \text{ ms}$  (5 slots) for *bwp-SwitchingDelay* [2] *type1* and *type2* UE capabilities according to clause 8.6.4.
- $T_{\text{slot}} =$  It is the slot length. It is 0.5 ms for 30 kHz.
- $L_3 =$  It is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure.  $L_3 = 0$  during T2 since  $P_{\text{CCA}} = 1$ .
- $T_{\text{SSB,RO}} = 10 \text{ ms}$  according to FR1 PRACH configuration 1.

This gives a total of 21.5 ms and 23 ms for *type1* and *type2* UE respectively.

#### A.11.4.5.2 DCI-based and Timer-based Active BWP Switch

##### A.11.4.5.2.1 NR FR1- NR FR1 DL active BWP switch of PCell with non-DRX in SA

###### A.11.4.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in Table A.11.4.5.2.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in Table A.11.4.5.2.1.1-2. NR Cell-specific parameters are specified in Table A.11.4.5.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 1 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PCell, BWP-1 and BWP-2, in Cell 1 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for SCell, BWP-0 in Cell 2 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PCell no later than the first UL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}$ ).

The starting time of SCell (Cell 2) interruption due to BWP switch on PCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PCell (Cell 1).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}$ ).

The starting time of SCell (Cell 2) interruption due to BWP switch of PCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to SCell is carried out in the correct time span by monitoring ACK/NACK sent in SCell during BWP switch of PCell, respectively.

**Table A.11.4.5.2.1.1-1: DL BWP switch supported test configurations**

| Config  | Description   |
|---------|---|
| 1       | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: | Void  |
| Note 2: | The UE supporting SA operation with only NR band(s) with shared spectrum access is required to be tested. |

**Table A.11.4.5.2.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter   | Unit | Value                             | Comment   |
|---|------|-----------------------------------|---|
| NR RF Channel Number                                    |      | 1, 2                              | Two NR radio channels are used in this test                         |
| Active PCell  |      | Cell 1                            | PCell on RF channel number 1.                                       |
| Active SCell  |      | Cell 2                            | SCell on RF channel number 2.                                       |
| CP length   |      | Normal                            |   |
| DRX   |      | OFF                               | For both PCell and SCell  |
| DL CCA model  |      | As specified in clause A.3.26.2.1 |   |
| UL CCA model  |      | As specified in clause A.3.26.2.2 |   |
| <i>bwp-InactivityTimer</i>                              | ms   | 200                               |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0                                 | Individual offset for cells on PCC.                                 |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0                                 | Individual offset for cells on SCC.                                 |
| Cell2 timing offset to cell1                            | μs   | 3                                 | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1  | s    | 0.2                               |   |
| T2  | s    | 0.2                               |   |
| T3  | s    | 0.2                               |   |

## A.11.4.5.2.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+kI$ ).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{BWPswitchDelay}+kI$ ).

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T3, the start time of SCell interruption during PCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first DL slot that occurs after the beginning of DL slot  $(i + T_{BWPswitchDelay} + kI)$ ,  $(j + T_{BWPswitchDelay} + kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

#### A.11.4.5.2.2 NR FR1 DL active BWP switch with non-DRX in SA

##### A.11.4.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.

The supported test configurations are shown in Table A.11.4.5.2.2.1-1. The test scenario comprises of one cell (Cell 1) as given in Table A.11.4.5.2.2.1-2. Cell-specific parameters of the cell are specified in Table A.11.4.5.2.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell1.

The cell has constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell1's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell1's DL slot  $(i + T_{BWPswitchDelay})$  as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell1 no later than the first UL slot that occurs after the beginning of slot  $(i + T_{BWPswitchDelay} + kI)$ . The UE shall be continuously scheduled on Cell1's BWP-2 starting from the first DL slot that occurs after the beginning of slot  $(i + T_{BWPswitchDelay})$ .

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell1.

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell1's slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell1 at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on Cell1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}$ ).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

**Table A.11.4.5.2.1-1: DL BWP switch supported test configurations**

| Config  | Description   |
|---------|---|
| 1       | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: | The UE is only required to be tested in one of the supported test configurations.                         |
| Note 2: | A UE which fulfils the requirements in test case A.11.4.5.2.1 can skip the test cases in A.11.4.5.2.2.    |
| Note 3: | The UE supporting SA operation with only NR band(s) with shared spectrum access is required to be tested. |

**Table A.11.4.5.2.1-2: General test parameters for DL BWP switch in SA**

| Parameter                  | Unit | Value                             | Comment                                    |

#### A.11.4.5.2.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+kI$ ).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{BWPswitchDelay}+kI$ ).

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed Cell1 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot  $(i+T_{BWPswitchDelay+kI})$ ,  $(j+T_{BWPswitchDelay+kI})$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

#### A.11.4.5.3 RRC-based Active BWP Switch

##### A.11.4.5.3.1 NR FR1 DL active BWP switch of Cell with non-DRX in SA

###### A.11.4.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.

The supported test configurations are shown in Table A.11.4.5.3.1.1-1. The test scenario comprises of one Cell (Cell 1) as given in Table A.11.4.5.3.1.1-2. Cell-specific parameters of Cell are specified in Table A.11.4.5.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PCell's slot # denoted  $i$ . The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$  as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length} + k1$  on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's BWP-1 of final condition starting from the first DL slot right after slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$ .

$T_{RRCprocessingDelay}$  and  $T_{BWPswitchDelayRRC}$  are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in Cell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a valid ACK/NACK is received.

**Table A.11.4.5.3.1.1-1: DL BWP switch supported test configurations in SA scenario**

| Config  | Description   |
|---------|---|
| 1       | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: | Void  |
| Note 2: | The UE supporting SA operation with only NR band(s) with shared spectrum access is required to be tested. |

**Table A.11.4.5.3.1.1-2: General test parameters for DL BWP switch in SA scenario**

| Parameter            | Unit | Value                             | Comment                                    |
|----------------------|------|-----------------------------------|--|
| NR RF Channel Number |      | 1                                 | One NR radio channel is used for this test |
| Active Cell          |      | Cell 1                            | Cell on RF channel number 1.               |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |                               |          |                                 |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |                               |          |                                 |
| Note 3: SS-RSRP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                               |          |                                 |
| Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].           |                               |          |                                 |

### A.11.4.5.3.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for the Cell from the first DL slot that occurs right after the beginning of slot  $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$  and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}} + k1$ .

Where,  $k1$  is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed Cell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.11.4.6 Void

## A.11.5 Measurement procedure

### A.11.5.1 Intra-frequency measurements

#### A.11.5.1.1 Event-triggered reporting tests on PCC without gaps under non-DRX

##### A.11.5.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

##### A.11.5.1.1.2 Test parameters

Two cells are deployed in the test, which are PCell (Cell 1) and a neighbour cell (Cell 2) on the same carrier frequency with CCA transmitting SSBs in DBT windows according to DL CCA model. The test parameters for the two cells are given in Table A.11.5.1.1.2-1 and A.11.5.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In the first test (Test 1), the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In the second test (Test 2), the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In the third test (Test 3), the UE is configured with SS-SINR as Event A3 measurement quantity.

**Table A.11.5.1.1.2-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

**Table A.11.5.1.1.2-2: General test parameters for intra-frequency event triggered reporting without gaps**

Editor's note: Table TBD

**Table A.11.5.1.1.2-3: Cell-specific test parameters for intra-frequency event-triggered reporting without gaps**

Editor's note: Table TBD

**A.11.5.1.1.3 Test Requirements**

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

**A.11.5.1.2 Event-triggered reporting tests on PCC without gaps under DRX**

**A.11.5.1.2.1 Test purpose and environment**

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

**A.11.5.1.2.2 Test parameters**

**A.11.5.1.2.3 Test Requirements**

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

**A.11.5.1.3 Event-triggered reporting tests on PCC with per-UE gaps under non-DRX**

**A.11.5.1.3.1 Test purpose and environment**

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

**A.11.5.1.3.2 Test parameters**

**A.11.5.1.3.3 Test Requirements**

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.1.4 Event-triggered reporting tests on PCC with per-UE gaps under DRX

##### A.11.5.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

##### A.11.5.1.4.2 Test parameters

##### A.11.5.1.4.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.1.5 Event-triggered reporting tests on SCC without gaps under non-DRX

##### A.11.5.1.5.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

##### A.11.5.1.5.2 Test parameters

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.1.6 Event-triggered reporting tests on SCC without gaps under DRX

##### A.11.5.1.6.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.11.5.1.6.2 Test parameters

#### A.11.5.1.6.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.1.7 Event-triggered reporting tests on SCC with per-UE gaps under non-DRX

#### A.11.5.1.7.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.11.5.1.7.2 Test parameters

#### A.11.5.1.7.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$ .*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.1.8 Event-triggered reporting tests on SCC with per-UE gaps under DRX

#### A.11.5.1.8.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.11.5.1.8.2 Test parameters

#### A.11.5.1.8.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than  $D1$  ms from the beginning of time period T2.

*Editor's note:  $D1=TBD$  ( $D1$  is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.1.9 RSSI measurement reporting on PCC

#### A.11.5.1.9.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the intra-frequency RSSI measurement reporting requirements in Section 9.2A.7.1.

#### A.11.5.1.9.2 Test parameters

In the test, the UE is configured to perform intra-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.1.9.2-1. There is one cell in the test: Cell 1 which is PCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1.

**Table A.11.5.1.9.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.1.9.2-2: General test parameters.**

Editor's note: Table TBD

### A.11.5.1.10 Channel occupancy measurement reporting on PCC

#### A.11.5.1.10.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the intra-frequency channel occupancy measurement reporting requirements in Section 9.2A.7.2.

#### A.11.5.1.10.2 Test parameters

In the test, the UE is configured to perform intra-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.1.10.2-1. There is one cell in the test: Cell 1 which is PCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1.

**Table A.11.5.1.10.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.1.10.2-2: General test parameters.**

Editor's note: Table is TBD

### A.11.5.1.11 RSSI measurement reporting on SCC

#### A.11.5.1.11.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the intra-frequency RSSI measurement reporting requirements in Section 9.2A.7.1.

#### A.11.5.1.11.2 Test parameters

In the test, the UE is configured to perform intra-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.1.11.2-1. There are two cells in the test: Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2.

**Table A.11.5.1.11.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.1.11.2-2: General test parameters.**

Editor's note: Tabs TBD

## A.11.5.1.12 Channel occupancy measurement reporting on SCC

### A.11.5.1.12.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the intra-frequency channel occupancy measurement reporting requirements in Section 9.2A.7.2.

### A.11.5.1.12.2 Test parameters

In the test, the UE is configured to perform intra-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.1.12.2-1. There are two cells in the test: Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2.

**Table A.11.5.1.12.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.1.12.2-2: General test parameters.**

Editor's note: Table is TBD

## A.11.5.2 Inter-frequency measurements

### A.11.5.2.1 RSSI measurement reporting

#### A.11.5.2.1.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the inter-frequency RSSI measurement reporting requirements in Section 9.3A.8.

#### A.11.5.2.1.2 Test parameters

In the test, the UE is configured to perform inter-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.2.1.2-1. There is one cell in the test: Cell 1 which is PCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1. The RSSI measurement is performed on an inter-frequency under CCA.

**Table A.11.5.2.1.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.2.1.2-2: General test parameters.**

Editor's note: Table TBD

## A.11.5.2.2 Channel occupancy measurement reporting

### A.11.5.2.2.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the inter-frequency channel occupancy measurement reporting requirements in Section 9.3A.9.

### A.11.5.2.2.2 Test parameters

In the test, the UE is configured to perform inter-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.11.5.2.2.2-1. There is one cell in the test: Cell 1 which is PCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1. The channel occupancy measurement is performed on an inter-frequency under CCA.

**Table A.11.5.2.2.2-1: Supported test configurations.**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.5.2.2.2-2: General test parameters.**

Editor's note: Table is TBD

## A.11.5.2.3 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is not used

### A.11.5.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.11.5.2.3.1-1, A.11.5.2.3.1-2 and A.11.5.2.3.1-3.

In test 1, measurement gap pattern configuration # 0 as defined in Table A.11.5.2.3.1-2 is provided for UE that does not support per-FR gap. In test 2, measurement gap pattern configuration #4 as defined in Table A.11.5.2.3.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.11.5.2.3.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config  | Description  |
|---------|--|
| 1       | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode              |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |

**Table A.11.5.2.3.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                             |        | Comment   |
|---|------|--------------------|-----------------------------------|--------|---|
|   |      |                    | Test 1                            | Test 2 |   |
| NR RF Channel Number                            |      | Config 1           | 1, 2                              |        | Two FR1 NR carrier frequencies are used. Channels 1 and 2 are with CCA. |
| Active cells                                    |      | Config 1           | NR cell 1 with CCA (PCell)        |        | NR cell 1 is on NR RF channel number 1 with CCA.                        |
| Neighbour cell                                  |      | Config 1           | NR cell 2 with CCA                |        | NR cell 2 is on NR RF channel number 2 with CCA.                        |
| DL CCA model                                    |      | Config 1           | As specified in clause A.3.26.2.1 |        |   |
| UL CCA model                                    |      | Config 1           | As specified in clause A.3.26.2.2 |        |   |
| Gap Pattern Id                                  |      | Config 1           | 0                                 | 4      | As specified in clause 9.1.2-1.   |
| Measurement gap offset                          |      | Config 1           | 9                                 | 9      |   |
| A3-Offset                                       | dB   | Config 1           | -6                                |        |   |
| Hysteresis                                      | dB   | Config 1           | 0                                 |        |   |
| CP length                                       |      | Config 1           | Normal                            |        |   |

#### A.11.5.2.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.2.4 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is used

##### A.11.5.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.11.5.2.4.1-1, A.11.5.2.4.1-2 and A.11.5.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.4.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.11.5.2.4.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.4.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.11.5.2.4.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                             |        |        |        | Comment   |
|---|------|--------------------|-----------------------------------|--------|--------|--------|---|
|   |      |                    | Test 1                            | Test 2 | Test 3 | Test 4 |   |

**Table A.11.5.2.4.1-5: TimeAlignmentTimer-Configuration SA inter-frequency event triggered reporting without SSB time index detection**

| Field              | Value | Comment                                       |
|--------------------|-------|---|
| TimeAlignmentTimer | ms500 | As specified in clause 6.3.2 in TS 38.331 [2] |

**A.11.5.2.4.2 Test Requirements**

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered

measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.11.5.2.5 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is not used

##### A.11.5.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.11.5.2.5.1-1, A.11.5.2.5.1-2 and A.11.5.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.5.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.11.5.2.5.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.11.5.2.5.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.11.5.2.5.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                             |        | Comment   |
|---|------|--------------------|-----------------------------------|--------|---|
|   |      |                    | Test 1                            | Test 2 |   |
| NR RF Channel Number                            |      | Config 1           | 1, 2                              |        | Two FR1 NR carrier frequencies are used. Channels 1 and 2 are with CCA. |
| Active cells                                    |      | Config 1           | NR cell 1 with CCA (PCell)        |        | NR cell 1 is on NR RF channel number 1 with CCA.                        |
| Neighbour cell                                  |      | Config 1           | NR cell 2 with CCA                |        | NR cell 2 is on NR RF channel number 2 with CCA.                        |
| DL CCA model                                    |      | Config 1           | As specified in clause A.3.26.2.1 |        |   |

#### A.11.5.2.5.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.6 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is used

### A.11.5.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 as PCell in FR1 with CCA on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 with CCA on NR RF channel 2. The test parameters are given in Tables A.11.5.2.6.1-1, A.11.5.2.6.1-2 and A.11.5.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.6.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.11.5.2.6.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.6.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.11.5.2.6.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                             |        |        |        | Comment   |
|---|------|--------------------|-----------------------------------|--------|--------|--------|---|
|   |      |                    | Test 1                            | Test 2 | Test 3 | Test 4 |   |
| NR RF Channel Number                            |      | Config 1           | 1, 2                              |        |        |        | Two FR1 NR carrier frequencies are used. Channels 1 and 2 are with CCA. |
| Active cells                                    |      | Config 1           | NR cell 1 with CCA (PCell)        |        |        |        | NR cell 1 is on NR RF channel number 1 with CCA.                        |
| Neighbour cell                                  |      | Config 1           | NR cell 2 with CCA                |        |        |        | NR cell 2 is on NR RF channel number 2 with CCA.                        |

#### A.11.5.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered

measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of

## A.11.5.2.7 Event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

### A.11.5.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.11.5.2.7.1-1, A.11.5.2.7.1-2 and A.11.5.2.7.1-3.

In test 1, measurement gap pattern configuration # 0 as defined in Table A.11.5.2.7.1-2 is provided for UE that does not support per-FR gap. In test 2, measurement gap pattern configuration #4 as defined in Table A.11.5.2.7.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.11.5.2.7.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

### A.11.5.2.7.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.2.8 Event triggered reporting tests for FR1 without SSB time index detection when DRX is used

#### A.11.5.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.11.5.2.8.1-1, A.11.5.2.8.1-2 and A.11.5.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.8.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.11.5.2.8.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.8.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**A.11.5.2.8.2 Test Requirements**

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_without\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.9 Event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

### A.11.5.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.11.5.2.9.1-1, A.11.5.2.9.1-2 and A.11.5.2.9.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.9.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.11.5.2.9.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.11.5.2.9.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

### A.11.5.2.9.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.5.2.10 Event triggered reporting tests for FR1 with SSB time index detection when DRX is used

### A.11.5.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are two cells: NR cell 1 with CCA as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.11.5.2.10.1-1, A.11.5.2.10.1-2 and A.11.5.2.10.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.11.5.2.10.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.11.5.2.10.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.11.5.2.10.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**A.11.5.2.10.2 Test Requirements**

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_inter\_cca\_with\_index}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement

report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.11.5.3 Inter-RAT E-UTRAN measurements

#### A.11.5.4 L1-RSRP measurements for beam reporting

##### A.11.5.4.1 SSB based L1-RSRP measurement when DRX is not used

###### A.11.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.11.5.4.1.1-1.

**Table A.11.5.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

###### A.11.5.4.1.2 Test parameters

There is one cell in the test, the FR1 PCell (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in Table A.11.5.4.1.2-1 and Table A.11.5.4.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.11.5.4.1.2-1: General test parameters**

| Parameter   | Config | Unit | Value  |   |  |      |

### A.11.5.4.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.4.2 SSB based L1-RSRP measurement when DRX is used

#### A.11.5.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.11.5.4.2.1-1.

Table A.11.5.4.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.11.5.4.2.2 Test parameters

There is one cell in the test, the FR1 PCell (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in Table A.11.5.4.2.2-1 and Table A.11.5.4.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.11.5.4.2.2-1: General test parameters

| Parameter   | Config | Unit | Value  |

### A.11.5.4.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.4.3 SSB based L1-RSRP measurement on SCC when DRX is not used

#### A.11.5.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.11.5.4.3.1-1.

Table A.11.5.4.3.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.11.5.4.3.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Both Cell 1 and Cell 2 operate on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in Table A.11.5.4.3.2-1 and Table A.11.5.4.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.11.5.4.3.2-1: General test parameters

| Parameter   | Config  | Unit | Value  |
|---|---|------|--|

### A.11.5.4.3.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.11.5.4.4 SSB based L1-RSRP measurement on SCC when DRX is used

#### A.11.5.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.11.5.4.4.1-1.

**Table A.11.5.4.4.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.11.5.4.4.2 Test parameters

There are two cells in the test, the FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Both Cell 1 and Cell 2 operate on a carrier frequency with CCA and transmits SSBs in DBT windows according to DL CCA model. The test parameters for the Cell 1 are given in Table A.11.5.4.4.2-1 and Table A.11.5.4.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.11.5.4.4.2-1: General test parameters

| Parameter   | Config  | Unit | Value  |
|---|---|------|--|
| Active PCell                                      | 1   |      | Cell 1   |

#### A.11.5.4.4.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.11.6 Measurement performance

### A.11.6.1 SS-RSRP

#### A.11.6.1.1 Intra-frequency measurement accuracy on a carrier frequency with CCA

##### A.11.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

##### A.11.6.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model. Supported test configurations are shown in table A.11.6.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.11.6.1.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

**Table A.11.6.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

|  |
|--|
| NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| NOTE 3: SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| NOTE 5: Subtest 1 is not used when testing with 30kHz SSB SCS.   |
| NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.  |
| NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.  |

A.11.6.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for cell 1 and cell 2 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

A.11.6.1.2 Intra-frequency measurement accuracy on SCC on a carrier frequency with CCA

A.11.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

A.11.6.1.2.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1) on the carrier frequency with CCA, and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). Supported test configurations are shown in table A.11.6.1.2.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.11.6.1.2.2-2.

**Table A.11.6.1.2.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| Propagation condition  |              |              | AWGN   |                                      |                                       |              |                 |               |
| Antenna configuration  |              |              | 1x2  |                                      |                                       |              |                 |               |

- NOTE 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- NOTE 3: SS-RSRP and  $I_0$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
- NOTE 5: Subtest 1 is not used when testing with 30kHz SSB SCS.
- NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
- NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
- NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
- NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.11.6.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for cell 2 and cell 3 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

## A.11.6.2 SS-RSRQ

### A.11.6.2.1 Intra-frequency measurement accuracy

#### A.11.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.29.1.1.

#### A.11.6.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.11.6.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in Table A.11.6.2.1.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

A.11.6.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

A.11.6.2.2 Inter-frequency measurement accuracy

A.11.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.30.1.1 and 10.1.30.1.2.

A.11.6.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.11.6.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in Table A.11.6.2.2.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| Antenna configuration |  | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 | 1x2 |
|-----------------------|--|-----|-----|-----|-----|-----|-----|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |     |     |     |     |     |     |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |     |     |     |     |     |     |
| Note 3:               | SS-RSRQ, SS-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |     |     |     |     |     |     |
| Note 4:               | SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |     |     |     |     |     |     |
| Note 5:               | NR operating band groups are as defined in clause 3.5.2.   |     |     |     |     |     |     |
| Note 6:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.   |     |     |     |     |     |     |
| Note 7:               | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |     |     |     |     |     |     |
| Note 8:               | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |     |     |     |     |     |     |
| Note 9:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |     |     |     |     |     |     |

### A.11.6.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

### A.11.6.2.3 Intra-frequency measurement accuracy on SCC

#### A.11.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.29.1.1.

#### A.11.6.2.3.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.11.6.2.3.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in Table A.11.6.2.3.2-2. In all test cases, Cell 1 is the PCell with CCA, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1, 2, and 3.

**Table A.11.6.2.3.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

### A.11.6.2.3.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

### A.11.6.2.4 Inter-frequency measurement accuracy

#### A.11.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.30.1.1 and 10.1.30.1.2.

#### A.11.6.2.4.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.11.6.2.4.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in Table A.11.6.2.4.2-2 and A.11.6.2.4.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.2.4.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description   |
|--------|---|
| 1      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRQ, SS-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | NR operating band groups are as defined in clause 3.5.2.   |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.   |
| Note 7: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 8: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 9: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |            |   |                  |        |        |        |

#### A.11.6.2.4.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.30.1.1 and 10.1.30.1.2.

### A.11.6.3 SS-SINR

#### A.11.6.3.1 Intra-frequency measurement accuracy

##### A.11.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

##### A.11.6.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.11.6.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.11.6.3.1.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

|                       |  | NR_CCA_FR1_J |                  |        | -74.91 |
| Propagation condition |  |              | -                | AWGN   |        |
| Antenna configuration |  |              | -                | 1x2    |        |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |              |                  |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                  |        |        |
| Note 3:               | SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |              |                  |        |        |
| Note 4:               | SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |              |                  |        |        |
| Note 5:               | NR operating band groups are as defined in clause 3.5.2.   |              |                  |        |        |
| Note 6:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.   |              |                  |        |        |
| Note 7:               | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |              |                  |        |        |
| Note 8:               | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |                  |        |        |
| Note 9:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |              |                  |        |        |

A.11.6.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

A.11.6.3.2 Inter-frequency measurement accuracy

A.11.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.32.1.1 and 10.1.32.1.2.

A.11.6.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.11.6.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in Table A.11.6.3.2.2-2. In all test cases, Cell 1 is the PCell with CCA and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

**Table A.11.6.3.2.2-2: SS-SINR Inter frequency test parameters**

| Parameter  |                       | Unit         | Test 1   |        | Test 2      |        | Test 3      |        |        |  |

|                                 |  | NR_CCA_FR1_J |                  |        |        | -79.5 |
| Propagation condition           |  |              | -                | AWGN   |        |       |
| Antenna configuration           |  |              | -                | 1x2    |        |       |
| Note 1:                         | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |              |                  |        |        |       |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                  |        |        |       |
| Note 3:                         | SS-SINR, SS-RSRP, and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |              |                  |        |        |       |
| Note 4:                         | SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |              |                  |        |        |       |
| Note 5:                         | NR operating band groups are as defined in clause 3.5.2.   |              |                  |        |        |       |
| Note 6:                         | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.   |              |                  |        |        |       |
| Note 7:                         | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |              |                  |        |        |       |
| Note 8:                         | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |              |                  |        |        |       |
| Note 9:                         | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |              |                  |        |        |       |

### A.11.6.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

### A.11.6.3.3 Intra-frequency measurement accuracy on SCC

#### A.11.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

#### A.11.6.3.3.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.11.6.3.3.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.11.6.3.3.2-2. In all test cases, Cell 1 is the PCell with CCA, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different  $N_{oc}$  on Cells 1, 2, and 3.

**Table A.11.6.3.3.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

**Table A.11.6.3.3.2-2: SS-SINR Intra frequency test parameters**

| Parameter  |                  | Unit      | Test 1   |        | Test 2                               |        |

A.11.6.3.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

A.11.6.3.4 Inter-frequency measurement accuracy

A.11.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.32.1.1 and 10.1.32.1.2.

A.11.6.3.4.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.11.6.3.4.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in Table A.11.6.3.4.2-2 and Table A.11.6.3.4.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1 and 2.

**Table A.11.6.3.4.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description   |
|--------|---|
| 1      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

**Table A.11.6.3.4.2-2: SS-SINR Inter frequency test parameters**

| Parameter  |                       | Unit             | Test 1   | Test 2 | Test 3 |
|--|-----------------------|------------------|--|--------|--------|

|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-SINR, SS-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | NR operating band groups are as defined in clause 3.5.2.   |
| Note 6: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configuration.   |
| Note 7: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 8: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 9: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-SINR, SS-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |  |                      |        |        |        |

#### A.11.6.3.4.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.32.1.1 and 10.1.32.1.2.

### A.11.6.4 L1-RSRP measurement for beam reporting with CCA serving cell

#### A.11.6.4.1 SSB based L1-RSRP measurement

##### A.11.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.11.6.4.1.1-1.

**Table A.11.6.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

##### A.11.6.4.1.2 Test parameters

In this set of test cases there one cell in the test, PCell under CCA (Cell 1). Cell 1 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different  $N_{oc}$  on Cell 1. The test parameters for the Cell 1 are given in Table A.11.6.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.11.6.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.11.6.4.1.2-1: FR1 SSB based L1-RSRP test parameters**

| Parameter  | Config       | Unit | Test 1                      | Test 2                      |              |
|--|--------------|------|-----------------------------|-----------------------------|--------------|

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.</p> <p>Note 3: RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |              |      |                             |                             |              |

#### A.11.6.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 1 shall fulfil the requirements in clauses 10.1.33.1.

### A.11.6.5 RSSI

#### A.11.6.5.1 Intra-frequency RSSI measurement accuracy on PCC with CCA

##### A.11.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.1.

##### A.11.6.5.1.2 Test parameters

In all test cases, Cell 1 is the PCell with CCA. RSSI is measured on channel number 1. Supported test configurations are shown in table A.11.6.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.1.2-2 and A.11.6.5.1.2-3.

**Table A.11.6.5.1.2-1: Intra frequency RSSI supported test configurations**

| <b>Configuration</b> | <b>Description</b>  |
|----------------------|---|
| 1                    | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

Table A.11.6.5.1.2-2: RSSI Intra frequency test parameters

| Parameter   |   | Configurations | Unit      | Test 1<br>Cell 1                 |

| ReportInterval          | ms120     |

### A.11.6.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on  $I_0$  in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.5.2 Intra-frequency RSSI measurement accuracy on SCC with CCA

### A.11.6.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.1.

### A.11.6.5.2.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.11.6.5.2.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.2.2-2 and A.11.6.5.2.2-3.

**Table A.11.6.5.2.2-1: Intra frequency RSSI supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

**Table A.11.6.5.2.2-2: RSSI Intra frequency test parameters**

### A.11.6.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.5.3 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.11.6.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.2.

### A.11.6.5.3.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is neighbor cell operating on a carrier frequency under CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.11.6.5.3.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.11.6.5.3.2-2 and A.11.6.5.3.2-3.

**Table A.11.6.5.3.2-1: Inter frequency RSSI supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

### A.11.6.5.3.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.11.6.6 Channel occupancy

### A.11.6.6.1 Intra-frequency channel occupancy measurement accuracy on PCC with CCA

#### A.11.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.1.

#### A.11.6.6.1.2 Test parameters

In all test cases, Cell 1 is the PCell with CCA. channel occupancy is measured on channel number 1. Supported test configurations are shown in table A.11.6.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.1.2-2 and A.11.6.6.1.2-3.

**Table A.11.6.6.1.2-1: Intra frequency CO supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

### A.11.6.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.11.6.6.2 Intra-frequency channel occupancy measurement accuracy on SCC with CCA

### A.11.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.1.

### A.11.6.6.2.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is SCell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.11.6.6.2.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.2.2-2 and A.11.6.6.2.2-3.

**Table A.11.6.6.2.2-1: Intra frequency CO supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, bandwidth 40 MHz |

### A.11.6.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.11.6.6.3 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

### A.11.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.34.2.

### A.11.6.6.3.2 Test parameters

In all test cases, Cell 1 which is PCell operating on a carrier frequency under CCA, and Cell 2 which is neighbor cell operating on a carrier frequency under CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.11.6.6.3.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.11.6.6.3.2-2 and A.11.6.6.3.2-3.

**Table A.11.6.6.3.2-1: Inter frequency CO supported test configurations**

| Configuration | Description   |
|---------------|---|

## A.12 E-UTRA Standalone Tests with at Least One NR Cell under CCA

### A.12.1 RRC\_IDLE state mobility

#### A.12.1.1 Inter-RAT cell re-selection to NR on a carrier frequency with CCA

##### A.12.1.1.1 E-UTRA Cell reselection to higher priority NR target Cell in FR1 when target cell is subject to CCA

###### A.12.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell subject to CCA reselection requirements specified in clause 4.2.2.5.7 in TS 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell subject to CCA as given in tables A.12.1.1.1.1-1, A.8.2.1.1.1-2, A.8.2.1.1.1-3 and A.8.2.1.1.1-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. E-UTRA cell 1 is already identified by the UE prior to the start of the test. Cell 2 is of higher priority than cell 1.

**Table A.12.1.1.1-1: Supported test configurations**

| Configuration  | Description of a cell without CCA | Description of a cell with CCA                       |
|--|-----------------------------------|--|
| 1  | LTE FDD                           | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD                           | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |                                   |  |

**Table A.12.1.1.1-2: General test parameters for E-UTRA cell re-selection FR1 NR cell subject to CCA test case**

| Parameter                    |                | Unit | Test configuration | Value                             | Comment  |
|------------------------------|----------------|------|--------------------|-----------------------------------|--|
| Initial condition            | Active cell    |      | 1, 2               | Cell2                             | The UE camps on cell 2 in the initial phase  |
|                              | Neighbour cell |      | 1, 2               | Cell1                             |  |
| T1 end condition             | Active cell    |      |                    | Cell1                             | During T1 period the UE reselects to cell 1  |
|                              | Neighbour cell |      |                    | Cell2                             |  |
| T3 end condition             | Active cell    |      | 1, 2               | Cell2                             | The UE shall perform reselection to cell 2 during T3   |
|                              | Neighbour cell |      | 1, 2               | Cell1                             |  |
| RF Channel Number            |                |      | 1, 2               | 1, 2                              | E-UTRAN radio channel (1) and NR radio channel (2) are used for this test  |
| Time offset between cells    |                |      | 1, 2               | 3 $\mu$ s                         | Synchronous cells  |
| Access Barring Information   |                | -    | 1, 2               | Not Sent                          | No additional delays in random access procedure.   |
| DBT Window Configuration     |                |      | 1, 2               | TBD                               | As specified in clause A.3.28.1.   |
| DL CCA model                 |                |      | 1, 2               | As specified in clause A.3.20.2.1 | DL CCA model   |
| UL CCA model                 |                |      | 1, 2               | As specified in clause A.3.20.2.2 | UL CCA model   |
| DRX cycle length             |                | s    | 1, 2               | 1.28                              | The value shall be used for all cells in the test.   |
| NR PRACH configuration index |                |      | 1, 2               | 102                               | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| T1                           |                | s    | 1, 2               | TBD                               | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                           |                | s    | 1, 2               | TBD                               | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |
| T3                           |                | s    | 1, 2               | TBD                               | T3 needs to be defined so that cell re-selection reaction time is taken into account.  |

Table A.12.1.1.1-3: Cell specific test parameters for NR cell 2 subject to CCA

| Parameter  | Unit          | Test configuration | Cell 2    |           |        |
|--|---------------|--------------------|-----------|-----------|--------|
|  |               |                    | T1        | T2        | T3     |

#### A.12.1.1.1.2 Test Requirements

The cell reselection delay to a higher priority NR cell subject to CCA is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 2.

The cell re-selection delay to a higher priority cell shall be less than  $60 + 1.28 \times (5 + M_e) + T_{SI\_CCA}$  s.  $M_e$  is the number of DRX cycles with at least one SMTC where there are no SSBs available during the  $T_{evaluate, NR\_Intra\_CCA}$ . If  $M_e > M_{e, max}$  the UE is required to restart the evaluation of cell 2.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate, NR\_inter\_CCA} + T_{SI\_CCA}$ , and to a lower priority cell can be expressed as:  $T_{evaluate, NR} + T_{SI\_NR}$ .

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2 in TS 36.133 [15]

$T_{evaluate, NR\_inter\_CCA}$  See Table 4.2.2.5.7-1 in clause 4.2.2.5.7

$T_{SI\_CCA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell.

$T_{evaluate, NR}$  See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

$T_{SI\_NR}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority NR cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

## A.12.2 RRC\_CONNECTED state mobility

### A.12.2.1 Handover

#### A.12.2.1.1 E-UTRAN - NR with CCA handover

##### A.12.2.1.1.1 Test Purpose and Environment

This test shall verify the E-UTRAN to NR FR1 handover requirements specified in clause 5.3.4A in TS 36.133 [15].

The test comprises of one E-UTRA carrier and one NR carrier with CCA. There are two cells and one cell on each carrier. Cell 1 is the E-UTRAN cell and Cell 2 is an inter-RAT NR neighbour cell with CCA.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 of TS 36.133 [15] is configured before T2 begins to enable inter-RAT frequency monitoring. A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.12.2.1.1-1. General test parameters are provided in Table A.12.2.1.1-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.12.2.1.1-3 and A.12.2.1.1-4 respectively.

**Table A.12.2.1.1-1: Supported test configurations for E-UTRAN inter-RAT NR handover**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode            |
| 2             | LTE TDD, NR with CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode            |
| NOTE:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.12.2.1.1-2: General test parameters for E-UTRAN inter-RAT NR handover**

| Parameter                    |                   | Unit | Value                              | Comment   |
|------------------------------|-------------------|------|------------------------------------|---|
| NR RF Channel Number         |                   |      | 1                                  | 1 NR carrier frequency with CCA is used in the test           |
| LTE RF Channel Number        |                   |      | 2                                  | 1 E-UTRAN carrier frequency is used in the test               |
| Initial conditions           | Active cell       |      | Cell 1                             | E-UTRAN cell  |
|                              | Neighbouring cell |      | Cell 2                             | NR cell with CCA  |
| Final condition              | Active cell       |      | Cell 2                             |   |

### A.12.2.1.1.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than TBD ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + T<sub>interrupt</sub>, where:

RRC procedure delay = 50 ms and is specified in TS36.331.

T<sub>interrupt</sub> = 62 + (L<sub>1</sub>' + L<sub>3</sub>) \* T<sub>SMTC</sub>; T<sub>interrupt</sub> is defined in TS36.133 clause 5.3.4A.3 where

L<sub>1</sub>' is the number of SMTC occasions not available at the UE during the inter-RAT detection period.

L<sub>3</sub> is the number of consecutive SSB to PRACH occasion association periods during which no PRACH occasion is available for PRACH transmission due to UL CCA failure. L<sub>3</sub> = 0 for Type 2C UL channel access procedure as defined in TS 37.213 [57].

T<sub>SMTC</sub> = 20 ms is the SMTC periodicity ms in the test.

This gives a total of 112 + (L<sub>1</sub>' + L<sub>3</sub>)\*20 ms.

## A.12.3 Signalling characteristics

### A.12.3.1 Interruptions

## A.12.4 Measurement procedure

### A.12.4.1 E-UTRAN–NR inter-RAT SFTD measurements

#### A.12.4.1.1 E-UTRA – NR Inter-RAT SFTD Measurement Delay with NR under CCA in non-DRX

##### A.12.4.1.1.1 Test Purpose and Environment

The purpose of this test is to partly verify that measurement reporting delay for SFTD between E-UTRA PCell and inter-RAT NR neighbour cell under CCA is within the requirements stated in clauses 8.1.2.4.25 and 8.1.2.4.26 of TS 36.133 [15] for E-UTRA FDD and TDD, respectively, when no measurement gaps are provided and no DRX is configured.

The tests consist of a single time period of duration T1. Two carriers are used in the tests: one E-UTRA carrier with the PCell (Cell 1), and one NR carrier under CCA with the NR neighbour cell (Cell 2).

Prior to the start of time duration T1, the UE is connected to Cell 1 and configured to carry out intra-frequency measurements only. The point in time at which the UE receives, at the UE antenna connector(s), a RRC message containing a measurement configuration for SFTD measurements on RF channel 2 defines the start of time duration T1. Following the start of T1 the UE shall detect Cell 2, determine the SFN and frame time difference of Cell 2 relative to Cell 1, and send a measurement report.

The supported test configurations are listed in Table A.12.4.1.1.1-1 below. General test parameters and cell-specific parameters for the NR cell are provided in Tables A.12.4.1.1.1-2 and A.12.4.1.1.1-3 below, respectively. Cell-specific parameters for the E-UTRA cell are provided in clause A.3.7.2.1.

**Table A.12.4.1.1.1-1: Applicable test configurations for inter-RAT SFTD measurement delay test with NR under CCA**

| Config   | Description  |
|--|--|
| 1  | LTE FDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD; NR: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.12.4.1.1.1-2: General test parameters for inter-RAT SFTD measurement delay test with NR under CCA**

| Parameter   | Unit | Test configuration | Value  |        | Comment  |
|---|------|--------------------|--------|--------|--|
|   |      |                    | Test 1 | Test 2 |  |
| E-UTRA RF Channel Number                              |      | Config 1,2         | 1      |        | One E-UTRAN carrier frequencies is used.                                     |
| NR RF Channel Number                                  |      | Config 1,2         | 1      |        | One NR carrier frequencies is used.  |

| <p>Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols in slots with downlink transmission bursts.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.</p> <p>Note 3: SS-RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 6: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.</p> <p>Note 7: For UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel access only..</p> |                       |               |                                   |

### A.12.4.1.1.2 Test Requirements

Following the start of T1, the UE shall detect Cell 2 and determine the relative time difference between Cell 1 and Cell 2. At latest at  $T_{\text{RRC\_procedure\_delay}} + T_{\text{measure\_SFTD\_LBT\_max}}$  after the beginning of time duration T1, the UE shall send a measurement report on SFTD between Cell 1 and Cell 2.

The observed rate of successful SFTD reports in repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TI\_DCCCH}}$  longer than the measurement reporting delays above due to TTI insertion uncertainty of the measurement report in DCCH.

## A.12.4.2 E-UTRAN–NR inter-RAT measurements on NR carrier frequency under CCA

### A.12.4.2.1 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.12.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21A of TS 36.133 [15] for E-UTRAN FDD-NR measurements under CCA and clause 8.1.2.4.22A of TS 36.133 [15] for E-UTRAN TDD-NR measurements under CCA.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in Tables A.12.4.2.1.1-1, A.12.4.2.1.1-2, A.12.4.2.1.1-3 and A.12.4.2.1.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.12.4.2.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.12.4.2.1.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.12.4.2.1.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.12.4.2.1.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter   | Unit | Test configuration | Value   |   | Comment  |
|---|------|--------------------|---|---|--|
|   |      |                    | Test 1  | Test 2  |  |
| E-UTRA RF Channel Number  |      | 1, 2               | 1   |   | One E-UTRA carrier frequency is used.  |
| NR RF Channel Number  |      | 1, 2               | 1   |   | One FR1 NR carrier frequency under CCA is used.  |
| DL CCA model  |      |                    | As specified in clause A.3.26.2.1                     |   |  |
| UL CCA model  |      |                    | As specified in clause A.3.26.2.2                     |   |  |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell)                                 |   | E-UTRA cell 1 is on E-UTRA RF channel number 1.  |
| Neighbour cell  |      | 1, 2               | NR cell 2   |   | NR cell 2 is on NR RF channel number 1.  |
| Gap Pattern Id  |      | 1, 2               | 0   | 4   | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].  |
| Measurement gap offset  |      | 1, 2               | 39  | 19  | As specified in TS 36.331 [16].  |
| b2-Threshold1   | dBm  | 1, 2               | Note 1  |   | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]                            |
| b2-Threshold2NR   | dBm  | 1, 2               | Note 2  |   | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 2 for event B2 [16]  |
| Hysteresis  | dB   | 1, 2               | 0   |   |  |
| CP length   |      | 1, 2               | Normal  |   |  |
| TimeToTrigger   | s    | 1, 2               | 0   |   |  |
| Filter coefficient  |      | 1, 2               | 0   |   | L3 filtering is not used   |
| DRX   |      | 1, 2               | OFF   |   | DRX is not used  |
| Time offset between serving and neighbour cells                         |      | 1, 2               | 3µs   |   | Synchronous cells.   |
| T1  | s    | 1, 2               | 5   |   |  |
| T2  | s    | 1, 2               | $\geq T_{\text{identify\_irat\_cca\_without\_index}}$ | $\geq T_{\text{identify\_irat\_cca\_without\_index}}$ | $T_{\text{identify\_irat\_cca\_without\_index}}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |
| Note 1: The value of b2-Threshold1 is defined in Table A.12.4.2.1.1-3   |      |                    |   |   |  |
| Note 2: The value of b2-Threshold2NR is defined in Table A.12.4.2.1.1-4 |      |                    |   |   |  |

**Table A.12.4.2.1.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neighbour cell in FR1 without SSB time index detection**

| NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |              |                    |                             |        |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                    |                             |        |
| NOTE 3: SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                    |                             |        |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |              |                    |                             |        |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.  |              |                    |                             |        |

#### A.12.4.2.1.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_irat\_cca\_without\_index}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is not required to report SSB time index.  $T_{\text{identify\_irat\_cca\_without\_index}}$  is defined in defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.12.4.2.2 E-UTRA-NR inter-RAT event triggered reporting tests for FR1 without SSB time index detection when DRX is used

##### A.12.4.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in Tables A.12.4.2.2.1-1, A.12.4.2.2.1-2, A.12.4.2.2.1-3 and A.12.4.2.2.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.12.4.2.2.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.12.4.2.2.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.12.4.2.2.1-1: NR inter-RAT event triggered reporting tests without SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.12.4.2.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 without SSB time index detection**

| Parameter   | Unit | Test configuration | Value   |        |        |        | Comment  |
|---|------|--------------------|---|--------|--------|--------|--|
|   |      |                    | Test 1  | Test 2 | Test 3 | Test 4 |  |
| E-UTRA RF Channel Number  |      | 1, 2               | 1   |        |        |        | One E-UTRA carrier frequency is used.  |
| NR RF Channel Number  |      | 1, 2               | 1   |        |        |        | One FR1 NR carrier frequency under CCA is used.  |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell)                                 |        |        |        | E-UTRA cell 1 is on E-UTRA RF channel number 1.  |
| DL CCA model  |      |                    | As specified in clause A.3.26.2.1                     |        |        |        |  |
| UL CCA model  |      |                    | As specified in clause A.3.26.2.2                     |        |        |        |  |
| Neighbour cell  |      | 1, 2               | NR cell 2   |        |        |        | NR cell 2 is on NR RF channel number 1.  |
| Gap Pattern Id  |      | 1, 2               | 0   | 4      |        |        | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].  |
| Measurement gap offset  |      | 1, 2               | 39  | 19     |        |        | As specified in TS 36.331 [16].  |
| b2-Threshold1   | dBm  | 1, 2               | Note 1  |        |        |        | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]                            |
| b2-Threshold2NR   | dBm  | 1, 2               | Note 2  |        |        |        | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 2 for event B2 [16]  |
| Hysteresis  | dB   | 1, 2               | 0   |        |        |        |  |
| CP length   |      | 1, 2               | Normal  |        |        |        |  |
| TimeToTrigger   | s    | 1, 2               | 0   |        |        |        |  |
| Filter coefficient  |      | 1, 2               | 0   |        |        |        | L3 filtering is not used   |
| DRX   |      | 1, 2               | DR X.9  | DR X.1 | DR X.9 | DR X.1 | As specified in clause A.3.3   |
| Time offset between serving and neighbour cells                         |      | 1, 2               | 3µs   |        |        |        | Synchronous cells.   |
| T1  | s    | 1, 2               | 5   |        |        |        |  |
| T2  | s    | 1, 2               | $\geq T_{\text{identify\_irat\_cca\_without\_index}}$ |        |        |        | $T_{\text{identify\_irat\_cca\_without\_index}}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |
| Note 1: The value of b2-Threshold1 is defined in Table A.12.4.2.1.1-3   |      |                    |   |        |        |        |  |
| Note 2: The value of b2-Threshold2NR is defined in Table A.12.4.2.1.1-4 |      |                    |   |        |        |        |  |

**Table A.12.4.2.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neighbour cell in FR1 without SSB time index detection**

| NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |              |                    |                             |        |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                    |                             |        |
| NOTE 3: SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                    |                             |        |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |              |                    |                             |        |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.  |              |                    |                             |        |

#### A.12.4.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_irat\_cca\_without\_index}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_without\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.12.4.2.3 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

#### A.12.4.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in Tables A.12.4.2.3.1-1, A.12.4.2.3.1-2, A.12.4.2.3.1-3 and A.12.4.2.3.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.12.4.2.3.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.12.4.2.3.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. The UE is tested when MeasTriggerQuantity is configured as RSRP, RSRQ and SINR for each test. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.12.4.2.3.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| 2             | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD                                   |
| NOTE:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.12.4.2.3.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter   | Unit | Test configuration | Value   |   | Comment   |
|---|------|--------------------|---|---|---|
|   |      |                    | Test 1  | Test 2  |   |
| E-UTRA RF Channel Number  |      | 1, 2               | 1   |   | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number  |      | 1, 2               | 1   |   | One FR1 NR carrier frequency under CCA is used.   |
| DL CCA model  |      |                    | As specified in clause A.3.26.2.1                     |   |   |
| UL CCA model  |      |                    | As specified in clause A.3.26.2.2                     |   |   |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell)                                 |   | E-UTRA cell 1 is on E-UTRA RF channel number 1.   |
| Neighbour cell  |      | 1, 2               | NR cell 2   |   | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id  |      | 1, 2               | 0   | 4   | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].   |
| Measurement gap offset  |      | 1, 2               | 39  | 19  | As specified in TS 36.331 [16].   |
| b2-Threshold1   | dBm  | 1, 2               | Note 1  |   | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]                         |
| b2-Threshold2NR   | dBm  | 1, 2               | Note 2  |   | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 2 for event B2 [16]                                     |
| Hysteresis  | dB   | 1, 2               | 0   |   |   |
| CP length   |      | 1, 2               | Normal  |   |   |
| TimeToTrigger   | s    | 1, 2               | 0   |   |   |
| Filter coefficient  |      | 1, 2               | 0   |   | L3 filtering is not used  |
| DRX   |      | 1, 2               | OFF   |   | DRX is not used   |
| Time offset between serving and neighbour cells                         |      | 1, 2               | 3µs   |   | Synchronous cells.  |
| T1  | s    | 1, 2               | 5   |   |   |
| T2  | s    | 1, 2               | $\geq T_{\text{identify\_irat\_cca\_a\_with\_index}}$ | $\geq T_{\text{identify\_irat\_cca\_a\_with\_index}}$ | $T_{\text{identify\_irat\_cca\_with\_index}}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |
| Note 1: The value of b2-Threshold1 is defined in Table A.12.4.2.3.1-3   |      |                    |   |   |   |
| Note 2: The value of b2-Threshold2NR is defined in Table A.12.4.2.3.1-4 |      |                    |   |   |   |

**Table A.12.4.2.3.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neighbour cell in FR1 with SSB time index detection**

| Parameter   | Unit | Configuration | Cell 1   |    |

| EPRE ratio of PDSCH to PDSCH   |              |                    |                             |        |
| EPRE ratio of OCNG DMRS to SSS (Note 1)  |              |                    |                             |        |
| EPRE ratio of OCNG to OCNG DMRS (Note 1)   |              |                    |                             |        |
| $N_{oc}$ <sup>Note2</sup>  | dBm/15kHz    | 1, 2               | -98                         |        |
| $N_{oc}$ <sup>Note2</sup>  | dBm/SCS      | 1, 2               | -95                         |        |
| SS-RSRP <sup>Note 3,5</sup>  | dBm/SCS      | 1, 2               | -Infinity                   | -88    |
| $\hat{E}_s/I_{ot}$ <sup>Note 5</sup>   | dB           | 1, 2               | -Infinity                   | 7      |
| $\hat{E}_s/N_{oc}$ <sup>Note 5</sup>   | dB           | 1, 2               | -Infinity                   | 7      |
| $I_o$ <sup>Note3</sup>   | dBm/38.16MHz | 1, 2               | -63.95                      | -56.16 |
| Propagation Condition  |              | 1, 2               | ETU70                       |        |
| Antenna Configuration and Correlation Matrix   |              | 1, 2,              | 1x2 Low                     |        |
| NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |              |                    |                             |        |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                    |                             |        |
| NOTE 3: SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                    |                             |        |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |              |                    |                             |        |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.  |              |                    |                             |        |

### A.12.4.2.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_irat\_cca\_with\_index}$  ms from the beginning of time period T2. The UE shall not send event triggered

measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and test 2, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.12.4.2.4 NR Inter-RAT event triggered reporting tests for FR1 with SSB time index detection when DRX is used

##### A.12.4.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the NR inter-RAT cell search requirements in clause 8.1.2.4.21 of TS 36.133 [15] for E-UTRAN FDD-NR measurements and clause 8.1.2.4.22 of TS 36.133 [15] for E-UTRAN TDD-NR measurements.

In this test, there are two cells: E-UTRA cell 1 as PCell on E-UTRA RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 1 on a carrier frequency with CCA. The test parameters are given in Tables A.12.4.2.4.1-1, A.12.4.2.4.1-2, A.12.4.2.4.1-3 and A.12.4.2.4.1-4. Cell transmits SSBs in DBT windows according to DL CCA model.

In tests 1 and 2, measurement gap pattern configuration # 0 as defined in Table A.12.4.2.4.1-2 is provided for UE that does not support per-FR gap and in tests 3 and 4, measurement gap pattern configuration #4 as defined in Table A.12.4.2.4.1-2 is provided for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) [16] is used. In the measurement configuration the UE shall be indicated to report the SSB index of the identified NR cell. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.12.4.2.4.1-1: NR inter-RAT event triggered reporting tests with SSB index reading for FR1**

| Configuration  | Description                                      |
|--|--|
| 1  | LTE FDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| 2  | LTE TDD; NR with CCA: SCS 30 kHz, BW 40 MHz, TDD |
| NOTE: The UE is only required to pass in one of the supported test configurations in FR1 |  |

**Table A.12.4.2.4.1-2: General test parameters for NR inter-RAT event triggered reporting for FR1 with SSB time index detection**

| Parameter   | Unit | Test configuration | Value  |        |        |        | Comment   |
|---|------|--------------------|--|--------|--------|--------|---|
|   |      |                    | Test 1   | Test 2 | Test 3 | Test   |   |
| E-UTRA RF Channel Number  |      | 1, 2               | 1  |        |        |        | One E-UTRA carrier frequency is used.   |
| NR RF Channel Number  |      | 1, 2               | 1  |        |        |        | One FR1 NR carrier frequency under CCA is used.   |
| DL CCA model  |      |                    | As specified in clause A.3.26.2.1                  |        |        |        |   |
| UL CCA model  |      |                    | As specified in clause A.3.26.2.2                  |        |        |        |   |
| Active cell   |      | 1, 2               | E-UTRA cell 1 (PCell)                              |        |        |        | E-UTRA cell 1 is on E-UTRA RF channel number 1.   |
| Neighbour cell  |      | 1, 2               | NR cell 2  |        |        |        | NR cell 2 is on NR RF channel number 1.   |
| Gap Pattern Id  |      | 1, 2               | 0  |        | 4      |        | As specified in clause Table 8.1.2.1-1 of TS 36.133 [15].   |
| Measurement gap offset  |      | 1, 2               | 39   |        | 19     |        | As specified in TS 36.331 [16].   |
| b2-Threshold1   | dBm  | 1, 2               | Note 1   |        |        |        | E-UTRA RSRP/RSRQ/SINR threshold for E-UTRA RSRP measurement on cell 1 for event B2 [16]                         |
| b2-Threshold2NR   | dBm  | 1, 2               | Note 2   |        |        |        | SS-RSRP/ SS-RSRQ/ SS-SINR threshold measurement on cell 2 for event B2 [16]                                     |
| Hysteresis  | dB   | 1, 2               | 0  |        |        |        |   |
| CP length   |      | 1, 2               | Normal   |        |        |        |   |
| TimeToTrigger   | s    | 1, 2               | 0  |        |        |        |   |
| Filter coefficient  |      | 1, 2               | 0  |        |        |        | L3 filtering is not used  |
| DRX   |      | 1, 2               | DR X.9   | DR X.1 | DR X.9 | DR X.1 | As specified in clause A.3.3  |
| Time offset between serving and neighbour cells                         |      | 1, 2               | 3µs  |        |        |        | Synchronous cells.  |
| T1  | s    | 1, 2               | 5  |        |        |        |   |
| T2  | s    | 1, 2               | $\geq T_{\text{identify\_irat\_cca\_with\_index}}$ |        |        |        | $T_{\text{identify\_irat\_cca\_with\_index}}$ is defined in clause 8.1.2.4.21A.1 and 8.1.2.4.22A.1 in TS 36.133 |
| Note 1: The value of b2-Threshold1 is defined in Table A.12.4.2.4.1-3   |      |                    |  |        |        |        |   |
| Note 2: The value of b2-Threshold2NR is defined in Table A.12.4.2.4.1-4 |      |                    |  |        |        |        |   |

**Table A.12.4.2.4.1-3: E-UTRAN PCell specific test parameters for NR inter-RAT event triggered reporting in non-DRX with NR neighbour cell in FR1 with SSB time index detection**

| EPRE ratio of PDCCH to PDCCH DMRS  |              |                    |                             |        |
| EPRE ratio of PDSCH DMRS to SSS  |              |                    |                             |        |
| EPRE ratio of PDSCH to PDSCH   |              |                    |                             |        |
| EPRE ratio of OCNG DMRS to SSS (Note 1)  |              |                    |                             |        |
| EPRE ratio of OCNG to OCNG DMRS (Note 1)   |              |                    |                             |        |
| $N_{oc}$ <sup>Note2</sup>  | dBm/15kHz    | 1, 2               | -98                         |        |
| $N_{oc}$ <sup>Note2</sup>  | dBm/SCS      | 1, 2               | -95                         |        |
| SS-RSRP <sup>Note 3,5</sup>  | dBm/SCS      | 1, 2               | -Infinity                   | -88    |
| $\hat{E}_s/I_{ot}$ <sup>Note 5</sup>   | dB           | 1, 2               | -Infinity                   | 7      |
| $\hat{E}_s/N_{oc}$ <sup>Note 5</sup>   | dB           | 1, 2               | -Infinity                   | 7      |
| $I_o$ <sup>Note3</sup>   | dBm/38.16MHz | 1, 2               | -63.95                      | -56.16 |
| Propagation Condition  |              | 1, 2               | ETU70                       |        |
| Antenna Configuration and Correlation Matrix   |              | 1, 2,              | 1x2 Low                     |        |
| NOTE 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |              |                    |                             |        |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                    |                             |        |
| NOTE 3: SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                    |                             |        |
| NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |              |                    |                             |        |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.  |              |                    |                             |        |

#### A.12.4.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{identify\_irat\_cca\_with\_index}$  ms from the beginning of time period T2. The UE shall not send event triggered

measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event B2 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_irat\_cca\_with\_index}}$  ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In tests 1, 2, 3 and 4, the UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{\text{DCCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.12.4.2.5 RSSI measurement reporting

### A.12.4.2.5.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the inter-RAT RSSI measurement reporting requirements in TS 36.133 [15, Section 8.1.2.4.21A.1.5].

### A.12.4.2.5.2 Test parameters

In the test, the UE is configured to perform inter-RAT RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.12.4.2.5.2-1. There is one cell in the test: Cell 1 is E-UTRAN PCell on a licensed band. Prior to the start of the time duration T1, the UE is connected to Cell 1. The RSSI measurement is performed on an inter-RAT carrier frequency under CCA. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.12.4.2.5.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.12.4.2.5.2-2: General test parameters.**

Editor's note: Table TBD

## A.12.4.2.6 Channel occupancy measurement reporting

### A.12.4.2.6.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the inter-RAT channel occupancy measurement reporting requirements in TS 36.133 [15, Section 8.1.2.4.21A.1.6].

### A.12.4.2.6.2 Test parameters

In the test, the UE is configured to perform inter-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.12.4.2.6.2-1. There is one cell in the test: Cell 1 which is E-UTRAN PCell on a licensed band. Prior to the start of the time duration T1, the UE is connected to Cell 1. The channel occupancy measurement is performed on an inter-RAT carrier frequency under CCA. The E-UTRAN PCell setting refers to Table A.3.7.2.1-1.

**Table A.12.4.2.6.2-1: Supported test configurations.**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| 2  | LTE TDD; NR: TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz |
| NOTE: The UE is only required to pass in one of the supported test configurations above. |  |

**Table A.12.4.2.6.2-2: General test parameters.**

Editor's note: Table is TBD

## A.12.5 Measurement performance

### A.12.5.1 E-UTRAN–NR SFTD

#### A.12.5.1.1 Inter-RAT SFTD accuracy with NR target cell under CCA

##### A.12.5.1.1.1 Test Purpose

The purpose of this set of tests is to verify that the SFTD measurement accuracy is within the specified limits. This test will verify the requirements as specified in clause 9.1.27 in TS 36.133 [15] for inter-RAT SFTD measurements between E-UTRA PCell and NR target cell under CCA.

##### A.12.5.1.1.2 Test Environment

Supported test configurations are shown in Table A.12.5.1.1.2-1. In this set of test cases there are two cells on different carriers. Cell 1 is E-UTRAN PCell and Cell 2 is inter-RAT NR target cell under CCA. The test parameters of Cell 1 are given in clause A.12.5.1.1.2-2. The test parameters of Cell 2 are given in Table A.12.5.1.1.2-3. The SFTD between PCell and NR target cell shall be set by the test equipment to one of the time differences in Table A.12.5.1.1.2-4.

**Table A.12.5.1.1.2-1: Supported test configurations for SFTD accuracy with NR target cell under CCA**

| Config   | Description   |
|--|---|
| 1  | LTE FDD<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD<br>NR with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.12.5.1.1.2-2: Test parameters for inter-RAT SFTD accuracy with NR target cell under CCA (Cell 1)**

| Parameter   | Unit  | Test 1  |
|---|---|---|
| E-UTRA RF Channel Number  |   | 1   |
| Duplex mode   |   | FDD or TDD  |
| TDD special subframe configuration <sup>Note1</sup>                                 |   | 6   |
| TDD uplink-downlink configuration <sup>Note1</sup>                                  |   | 1   |

### A.12.5.1.1.3 Test Requirements

The SFTD reported by the UE consists of 2 elements, SFN offset and frame boundary offset between PCell and inter-RAT NR target cell. The reported SFTD accuracy shall fulfil the requirement in clause 9.1.27 in TS 36.133 [15].

#### A.13.1.1 UE transmit timing

#### A.13.1.2 Timing advance

### A.13.2 Signalling characteristics

#### A.13.2.1 Interruption

##### A.13.2.1.1 NR interruptions during SCell operations with CCA on SCell

###### A.13.2.1.1.1 Test Purpose and Environment

The purpose of this test is to verify NR PCell interruptions during SCell operations on an NR SCC with CCA, This test will verify the interruption requirements for NR PCell in NR SA specified in TS 38.133 clause 8.2.2 and 8.3A. Supported test configurations are shown in table A.13.2.1.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.13.2.1.1.1-2 and A.13.2.1.1.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 and Cell2 are PCell and SCell. Cell 1 is on a licenced band and cell 2 is subject to CCA. The test consists of five time periods, with duration of T1, T2, T3, T4 and T5. Prior to the start of the time duration T1, the UE is connected to Cell1 and Cell2. Throughout the test, the PCell are continuously scheduled in DL. The power of signals on cell 1 and 2 is not modified during the test.

Prior to T1, a connection is started with cell 1 as the PCell, and measurements of cell 2 are configured with gap pattern 0, such that cell 2 is reported. This ensures that cell 2 is known at the start of time period T1 and is not itself part of the tested requirement.

The point in time at which the RRC message implying SCell addition is received at the UE antenna connector, defines the start of time period T1. Measurement gap pattern 0 shall be stopped when the SCell is configured.

The point in time at which the MAC-CE message implying SCell activation is received at the UE antenna connector, defines the start of time period T2.

The point in time at which the MAC-CE message implying SCell deactivation is received at the UE antenna connector, defines the start of time period T3.

The point in time at which deactivation delay requirement in section 8.3A are satisfied defines the start of time period T4

The point in time at which the RRC message implying SCell release is received at the UE antenna connector, defines the start of time period T5.

**Table A.13.2.1.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2  | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3  | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.13.2.1.1.1-2: General test parameters for Interruptions during measurements on deactivated NR SCC**

| Parameter                                | Unit | Value  | Comment                          |

|         |   |
|---------|---|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For Cell 2 with CCA model, OCNG is transmitted only in slots with downlink transmission bursts and is not transmitted during muted slots or during DBT windows. |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modeled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |
| Note 3: | SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | Receive time difference of signals received between subframe timing boundary of E-UTRA PCell and slot timing boundary of PSCell at the UE antenna connector including time alignment error between the two cells  |
| Note 5: | Receive time difference between slot boundaries of signals received from the two cells at the UE antenna connector including time alignment error between the two cells.  |
| Note 6: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.   |
| Note 7: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.   |
| Note 8: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.   |

### A.13.2.1.1.2 Test Requirements

The UE shall meet the interruption requirements for SCell addition on the victim PCell in clause 8.2.1 during time T1

The UE shall meet the interruption requirements for SCell activation on the victim PCell in clause 8.2.1 during time T2. There shall be a single interruption with time window as specified in clause 8.3A.2

The UE shall meet the interruption requirements for SCell deactivation on the victim PCell in clause 8.2.1 during time T3. There shall be a single interruption with time window as specified in clause 8.3A.3

The UE shall meet the interruption requirements for deactivated SCell measurements on the victim PCell in clause 8.2.1 during time T4. The interruptions shall be within the time window as specified in clause 8.3A.3

The UE shall meet the interruption requirements for SCell release on the victim PCell in clause 8.2.1 during time T5.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.13.2.2 SCell activation and deactivation delay

### A.13.2.2.1 SCell Activation and Deactivation of known SCell under CCA, 160 ms SCell measurement cycle

#### A.13.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 160 ms.

The supported test configurations are shown in Table A.13.2.2.1.1-1.

The test parameters are given in Table A.13.2.2.1.1-2 and cell-specific parameters in Table A.13.2.2.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two carriers, each with one cell: Cell 1 (PCell) on radio channel 1 (PCC) in NR FR1, and Cell2 (SCell) on radio channel 2 (SCC) in NR with CCA. Before the test starts the UE is connected to Cell 1, but is not aware of Cell 2, as the UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. At the end of T1, the test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in a slot # denoted  $m$ , defines the start of time period T2. The UE shall be able to report a valid CSI in PCell for the activated SCell at latest in slot  $m + \frac{T_{HARQ} + T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA}}{NR\ slot\ length}$ , as defined in clause 8.3A.2. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $m + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed.

Any PCell interruption shall fall within the time window specified in clause 8.3A.2. At the end of T2 the test equipment sends a MAC message for deactivation of the SCell.

The point in time at which the MAC message is received by at the UE antenna connector, in a slot # denoted  $n$ , defines the start of time period T3. The UE shall complete the activation at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ . Any PCell interruption shall fall within the time window specified in clause 8.3A.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received, while taking into account CCA failures on SCC.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.13.2.2.1.1-1: Supported test configurations for SCell Activation and Deactivation of known SCell under CCA, 160 ms SCell measurement cycle**

| Configuration | Description  |
|---------------|--|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode;<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:         | The UE is only required to be tested in one of the supported test configurations   |

**Table A.13.2.2.1.1-2: General test parameters for known SCell activation with SCell under CCA, 160 ms SCell measurement cycle**

| Parameter  | Unit | Value  | Comment  |
|--|------|--|--|
| RF Channel Number                                  |      | 1,2  | Two radio channels (1, 2) are used for this test   |
| Active PCell                                       |      | Cell 1   | Primary cell on NR RF channel number 1.  |
| Configured deactivated SCell                       |      | Cell 2   | Configured deactivated secondary cell on NR RF channel number 2  |
| CP length  |      | Normal   |  |
| DRX  |      | OFF  | Continuous monitoring of primary cell  |
| CQI/PMI periodicity and offset configuration index |      | 0  | CQI reporting for SCell every fourth slot  |
| SCell measurement cycle (measCycleSCell)           | ms   | 160  |  |
| Cell2 timing offset to cell1                       | μs   | 0  |  |
| Time alignment error between cell2 and cell1       | μs   | ≤ TAE as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.  |
| T1   | s    | 7  | During this time the PCell shall be known and the SCell configured and detected.   |
| T2   | s    | 1  | During this time the UE shall activate the SCell.  |
| T3   | s    | 1  | During this time the UE shall deactivate the SCell.  |
| T <sub>HARQ</sub>                                  | ms   | $k_1 \times \text{NR slot length}$                   | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by <i>dl-DataToUL-ACK</i> , the value of $k$ should be the minimum value defined in TS 38.213 [3] depends on UE's capability  |
| T <sub>CSI_Reporting</sub>                         | ms   | $10 + 5 \cdot 2^{\mu_{DL}}$                          | the delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]<br>$\mu_{DL}$ is the subcarrier spacing configuration for DL |

**Table A.13.2.2.1.1-3: Cell specific test parameters for known FR1 SCell activation case with SCell under CCA, 160 ms SCell measurement cycle**

| Parameter  |                       | Unit    | Cell 1                      |    |    | Cell 2                               |    |    |
|--|-----------------------|---------|-----------------------------|----|----|--------------------------------------|----|----|

|-----------------------|--|---|--------|--------|
|                       | Config 3   |   | -52.87 | -52.87 |
| Propagation condition |  | - | AWGN   |        |
| Note 1:               | OCNG shall be used such that resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. For Cell 2 with CCA model, OCNG is transmitted only in slots with downlink transmission bursts and is not transmitted during muted slots or during DBT windows. |   |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |   |        |        |
| Note 3:               | SS-RSRP, SCH_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |   |        |        |
| Note 4:               | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.  |   |        |        |
| Note 5:               | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |   |        |        |
| Note 6:               | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |   |        |        |
| Note 7:               | For UE supporting both semi-static and dynamic channel access, the UE must be tested under both dynamic and semi-static channel occupancy configurations.  |   |        |        |
| Note 8:               | As specified in clause 8.3A for $L_{1,max}$ , $L_{2,1,max}$ , $L_{2,2,max}$ , $L_{3,1,max}$ , and $L_{3,2,max}$  |   |        |        |

### A.13.2.2.1.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $m+1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ .

During T2, conditioned on that downlink CCA failures  $L_1$  and  $L_{2,2}$  experienced in the SCell fulfill  $L_1 \leq L_{1,max}$  and  $L_{2,2} \leq L_{2,2,max}$  with  $L_{1,max} = 2$  and  $L_{2,2,max} = 2$ , respectively, the UE shall send the first valid CSI report (non-zero CQI) for the SCell no later than slot  $m + (T_{HARQ} + T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA}) / NR\_slot\_length$ , where  $T_{activation\_time\_withCCA} = T_{FirstSSB} + L_1 * T_{rs} + 5ms$  and  $T_{CSI\_reporting\_withCCA} = T_{CSI\_reporting} + L_{2,2} * T_{CSI\_RS} + T_{CSI\_ReportingDelay}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m+1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to slot  $m+1 + \frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$  with  $T_X = T_{FirstSSB}$ .

During T3, interruption on PCell shall not occur outside slot  $n+1 + T_{HARQ} / NR\_slot\_length$  to slot  $n+1 + (T_{HARQ} + 3ms) / NR\_slot\_length$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

### A.13.2.2.2 SCell Activation and Deactivation of known SCell under CCA, 320 ms SCell measurement cycle

#### A.13.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is known by the UE at the time of activation and the configured SCell measurement cycle is 320 ms.

The supported test configurations are same as in Table A.13.2.2.1.1-1 above.

The test parameters are same as in Table A.13.2.2.1.1-2 above, except for parameters listed below in Table A.13.2.2.2.1-1. The cell-specific parameters are same as in Table A.13.2.2.1.1-3 above.

The test execution is the same as described in clause A.13.2.2.1 above, except that downlink CCA failures  $L_{2,1}$  and  $L_{2,2}$  with limits  $L_{2,1} \leq L_{2,1,max}$  and  $L_{2,2} \leq L_{2,2,max}$  replace  $L_1$  as described in clause 8.3A.2 for activation of known SCell with a measurement cycle larger than 160 ms.

**Table A.13.2.2.2.1-1: General test parameters for known SCell activation with SCell under CCA, 320 ms SCell measurement cycle**

| Parameter                                | Unit | Value | Comment |
|--|------|-------|---------|
| SCell measurement cycle (measCycleSCell) | ms   | 320   |         |

#### A.13.2.2.2.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $m+1+\frac{T_{HARQ}+3ms}{NR\ slot\ length}$ .

During T2, conditioned on that downlink CCA failures  $L_{2,1}$  and  $L_{2,2}$  experienced in the SCell fulfill  $L_{2,1} \leq L_{2,1,max}$  and  $L_{2,2} \leq L_{2,2,max}$  with  $L_{2,1,max} = 2$  and  $L_{2,2,max} = 2$ , respectively, the UE shall send the first valid CSI report (non-zero CQI) for the SCell no later than slot  $m + (T_{HARQ}+T_{activation\_time\_withCCA} + T_{CSI\_Reporting\_withCCA})/NR\_slot\_length$ , where  $T_{activation\_time\_withCCA} = T_{FirstSSB\_MAX} + L_{2,1} * T_{SMTC\_MAX} + (1 + L_{2,2}) * T_{rs} + 5ms$  and  $T_{CSI\_reporting\_withCCA} = T_{CSI\_reporting} + T_{CSI\_ReportingDelay}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m+1+\frac{T_{HARQ}}{NR\ slot\ length}$  to slot  $m+1+\frac{T_{HARQ}+3+T_X}{NR\ slot\ length}$  with  $T_X = T_{FirstSSB}$ .

During T3, interruption on PCell shall not occur outside slot  $n+1+T_{HARQ}/NR\_slot\_length$  to slot  $n+1+(T_{HARQ}+3ms)/NR\_slot\_length$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

#### A.13.2.2.3 SCell Activation and Deactivation of unknown SCell under CCA

##### A.13.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that SCell activation and deactivation delays for SCell on NR-U SCC with CCA are within the requirements stated in clause 8.3A, when the SCell is unknown to the UE at the time of activation.

The supported test configurations are same as in Table A.13.2.2.1.1-1 above.

The test parameters are same as in Table A.13.2.2.1.1-2 above, except for parameters listed below in Table A.13.2.2.3.1-1. The cell-specific parameters are same as in Table A.13.2.2.1.1-3 above.

The test execution is the same as described in clause A.13.2.2.1 above, except that downlink CCA failures  $L_{3,1}$  and  $L_{3,2}$  with limits  $L_{3,1} \leq L_{3,1,max}$  and  $L_{3,2} \leq L_{3,2,max}$  replace  $L_1$  as described in clause 8.3A.2 for activation of unknown SCell.

**Table A.13.2.2.3.1-1: General test parameters for unknown SCell activation with SCell under CCA**

| Parameter | Unit | Value | Comment  |
|-----------|------|-------|--|
| T1        | s    | 0.1   | During this time period the PCell shall be known and the SCell configured, but not detected. |

##### A.13.2.2.3.2 Test Requirements

During T2, the UE shall send the first CSI report for SCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $m+1+\frac{T_{HARQ}+3ms}{NR\ slot\ length}$ .

During T2, conditioned on that downlink CCA failures  $L_{3,1}$  and  $L_{3,2}$  experienced in the SCell fulfill  $L_{3,1} \leq L_{3,1,max}$  and  $L_{3,2} \leq L_{3,2,max}$  with  $L_{3,1,max} = 2$  and  $L_{3,2,max} = 2$ , respectively, the UE shall send the first valid CSI report (non-zero CQI)

for the SCell no later than slot  $m + (T_{\text{HARQ}} + T_{\text{activation\_time\_withCCA}} + T_{\text{CSI\_Reporting\_withCCA}}) / \text{NR\_slot\_length}$ , where  $T_{\text{activation\_time\_withCCA}} = T_{\text{FirstSSB\_MAX}} + (1 + L_{3,1}) * T_{\text{SMTc\_MAX}} + (2 + L_{3,2}) * T_{\text{rs}} + 5\text{ms}$  and  $T_{\text{CSI\_reporting\_withCCA}} = T_{\text{CSI\_reporting}} + T_{\text{CSI\_ReportingDelay}}$ , as specified in clause 8.3A.2.

During T3, the UE shall stop sending CSI reports for SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR\_slot\_length}}$ , as defined in clause 8.3A.3.

During T2, interruption on PCell shall not occur outside slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR\_slot\_length}}$  to slot  $m + 1 + \frac{T_{\text{HARQ}} + 3 + T_X}{\text{NR\_slot\_length}}$  with  $T_X = T_{\text{FirstSSB}}$ .

During T3, interruption on PCell shall not occur outside slot  $n + 1 + T_{\text{HARQ}} / \text{NR\_slot\_length}$  to slot  $n + 1 + (T_{\text{HARQ}} + 3\text{ms}) / \text{NR\_slot\_length}$ .

The interruption on PCell shall not be more than specified for SA in clause 8.2.2.2.2.

The rate of correctly observed SCell activation delays and SCell deactivation delays shall for repeated tests be at least 90%.

### A.13.2.3 Void

## A.13.3 Measurement procedure

### A.13.3.1 Intra-frequency measurements

#### A.13.3.1.1 Event-triggered reporting tests on SCC without gaps under non-DRX

##### A.13.3.1.1.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

##### A.13.3.1.1.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in Table A.13.3.1.1.2-1 and A.13.3.1.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In the first test (Test 1), the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In the second test (Test 2), the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In the third test (Test 3), the UE is configured with SS-SINR as Event A3 measurement quantity.

**Table A.13.3.1.1.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE:         | The UE is only required to be tested in one of the supported test configurations.   |

**Table A.13.3.1.1.2-2: General test parameters for intra-frequency event triggered reporting without gaps**

| Parameter                             | Unit | Test configuration | Value                              |         |         | Comment   |
|---------------------------------------|------|--------------------|------------------------------------|---------|---------|---|
|                                       |      |                    | Test 1                             | Test 2  | Test 3  |   |
| Active PCell                          |      | 1, 2, 3            | Cell 1                             |         |         |   |

|   |
|---|
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy. |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.   |

### A.13.3.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than D1 ms from the beginning of time period T2.

*Editor's note: D1=TBD.*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.2 Event-triggered reporting tests on SCC without gaps under DRX

#### A.13.3.1.2.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.5.1 and 9.2A.5.2.

#### A.13.3.1.2.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in Table A.13.3.1.2.2-1 and A.13.3.1.2.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In Test 1 and Test 2, the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In Test 3 and Test 4, the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In Test 5 and Test 6, the UE is configured with SS-SINR as Event A3 measurement quantity.

**Table A.13.3.1.2.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations.

**Table A.13.3.1.2.2-2: General test parameters for intra-frequency event triggered reporting without gaps with DRX**

| Parameter                             | Unit | Test configuration | Value                              |        |         |        |         |        | Comment  |

|---|
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy. |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.   |

### A.13.3.1.2.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than D1 ms from the beginning of time period T2.

*Editor's note: D1=TBD (D1 is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.3 Event-triggered reporting tests on SCC with per-UE gaps under non-DRX

#### A.13.3.1.3.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.13.3.1.3.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in Table A.13.3.1.3.2-1 and A.13.3.1.3.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In the first test (Test 1), the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In the second test (Test 2), the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In the third test (Test 3), the UE is configured with SS-SINR as Event A3 measurement quantity.

Table A.13.3.1.3.2-1: Supported test configurations

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations.

Table A.13.3.1.3.2-2: General test parameters for intra-frequency event triggered reporting with per-UE gaps

| Parameter                              | Unit | Test configuration | Value                              |         |         | Comment   |
|--|------|--------------------|------------------------------------|---------|---------|---|
|  |      |                    | Test 1                             | Test 2  | Test 3  |   |
| Active PCell                           |      | 1, 2, 3            | Cell 1                             |         |         |   |
| Active SCell                           |      | 1, 2, 3            | Cell 2                             |         |         |   |
| Neighbour cell                         |      | 1, 2, 3            | Cell 3                             |         |         | Cell to be identified.  |

|   |
|---|
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy. |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.   |

### A.13.3.1.3.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1, SS-RSRQ in Test 2, SS-SINR in Test 3), with a measurement reporting delay less than D1 ms from the beginning of time period T2.

*Editor's note: D1=TBD.*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.1.4 Event-triggered reporting tests on SCC with per-UE gaps under DRX

#### A.13.3.1.4.1 Test purpose and environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2A.6.1 and 9.2A.6.2.

#### A.13.3.1.4.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). The test parameters for the three cells are given in Table A.13.3.1.4.2-1 and A.13.3.1.4.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the SCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively. During time duration T1, the UE shall not have any timing information of Cell 3.

FFS: The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

The test is conducted for SS-RSRP, SS-RSRQ, and SS-SINR:

- In Test 1 and Test 2, the UE is configured with SS-RSRP as Event A3 measurement quantity.
- In Test 3 and Test 4, the UE is configured with SS-RSRQ as Event A3 measurement quantity.
- In Test 5 and Test 6, the UE is configured with SS-SINR as Event A3 measurement quantity.

Table A.13.3.1.4.2-1: Supported test configurations

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations.

Table A.13.3.1.4.2-2: General test parameters for intra-frequency event triggered reporting without gap with DRX

| Parameter                              | Unit | Test configuration | Value                              |        |         |        |         |        | Comment   |

|   |
|---|
| NOTE 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |
| NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.          |
| NOTE 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| NOTE 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy. |
| NOTE 5: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.   |

#### A.13.3.1.4.3 Test Requirements

The UE shall send one Event A3 triggered measurement report (SS-RSRP in Test 1 and Test 2, SS-RSRQ in Test 3 and Test 4, SS-SINR in Test 5 and Test 6), with a measurement reporting delay less than D1 ms from the beginning of time period T2.

*Editor's note: D1=TBD (D1 is different for different DRX configurations).*

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

FFS: NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.13.3.1.5 RSSI measurement reporting on SCC

##### A.13.3.1.5.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the intra-frequency RSSI measurement reporting requirements in Section 9.2A.7.1.

##### A.13.3.1.5.2 Test parameters

In the test, the UE is configured to perform intra-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.13.3.1.5.2-1. There are two cells in the test: Cell 1 is PCell on a licensed FR1 band, and Cell 2 is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2.

Table A.13.3.1.5.2-1: Supported test configurations.

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

NOTE: The UE is only required to be tested in one of the supported test configurations.

Table A.13.3.1.5.2-2: General test parameters.

| Parameter  | Configurations | Unit      | Test 1                           |                   |

### A.13.3.1.6 Channel occupancy measurement reporting on SCC

#### A.13.3.1.6.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the intra-frequency channel occupancy measurement reporting requirements in Section 9.2A.7.2.

#### A.13.3.1.6.2 Test parameters

In the test, the UE is configured to perform intra-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.13.3.1.6.2-1. There are two cells in the test: Cell 1 is PCell on a licensed FR1 band, and Cell 2 is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2.

**Table A.13.3.1.6.2-1: Supported test configurations.**

| Configuration   | Description   |
|---|---|
| 1   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.13.3.1.6.2-2: General test parameters.**

Editor's note: Table is TBD

### A.13.3.2 Inter-frequency measurements

#### A.13.3.2.1 RSSI measurement reporting

##### A.13.3.2.1.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports RSSI measurements. This test will partly verify the inter-frequency RSSI measurement reporting requirements in Section 9.3A.8.

##### A.13.3.2.1.2 Test parameters

In the test, the UE is configured to perform inter-frequency RSSI measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.13.3.2.1.2-1. There are two cells in the test: Cell 1 is PCell on a licensed FR1 band, and Cell 2 is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The RSSI measurement is performed on an inter-frequency under CCA.

**Table A.13.3.2.1.2-1: Supported test configurations.**

| Configuration   | Description   |
|---|---|
| 1   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.13.3.2.1.2-2: General test parameters.**

Editor's note: Table TBD

### A.13.3.2.2 Channel occupancy measurement reporting

#### A.13.3.2.2.1 Test purpose and environment

The purpose of this test is to verify that the UE correctly reports channel occupancy measurements. This test will partly verify the inter-frequency channel occupancy measurement reporting requirements in Section 9.3A.13.

#### A.13.3.2.2.2 Test parameters

In the test, the UE is configured to perform inter-frequency channel occupancy measurements on a carrier frequency under CCA.

Supported test configurations are shown in Table A.13.3.2.2.2-1. There are two cells in the test: Cell 1 is PCell on a licensed FR1 band, and Cell 2 is SCell operating on a carrier frequency under CCA. Prior to the start of the time duration T1, the UE is connected to Cell 1 and Cell 2. The channel occupancy measurement is performed on an inter-frequency under CCA.

**Table A.13.3.2.2.2-1: Supported test configurations.**

| Configuration   | Description   |
|---|---|
| 1   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.13.3.2.2.2-2: General test parameters.**

Editor's note: Table is TBD

### A.13.3.2.3 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is not used

#### A.13.3.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements for NR cell with CCA in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR cell 1 as PCell in FR1 on NR RF channel 1, NR cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in Tables A.13.3.2.3.1-1, A.13.3.2.3.1-2 and A.13.3.2.3.1-3.

In test 1, measurement gap pattern configuration # 0 as defined in Table A.13.3.2.3.1-2 is provided for UE that does not support per-FR gap. In test 2, measurement gap pattern configuration #4 as defined in Table A.13.3.2.3.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.13.3.2.3.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode     |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode     |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode,<br>NR cell without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.13.3.2.3.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value   |        | Comment  |
|---|------|--------------------|---|--------|--|
|   |      |                    | Test 1  | Test 2 |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{ac}$ to be fulfilled. |
| Note 3: | SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | For UE supporting semi-static channel access and network configuring semi-static channel occupancy.  |
| Note 6: | For UE supporting dynamic channel access and network configuring dynamic channel occupancy.  |
| Note 7: | For UE supporting both semi-static and dynamic channel access, the UE must be tested under dynamic channel access configuration.   |

### A.13.3.2.3.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.2.4 Event triggered reporting tests for FR1 with CCA without SSB time index detection when DRX is used

#### A.13.3.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR cell 1 as PCell in FR1 on NR RF channel 1, NR cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in Tables A.13.3.2.4.1-1, A.13.3.2.4.1-2 and A.13.3.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.13.3.2.4.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.13.3.2.4.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.13.3.2.4.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1 with CCA**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode     |
| 2             | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode     |
| 3             | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode,<br>NR cell without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

#### A.13.3.2.4.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_without\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

$T_{\text{identify\_inter\_cca\_without\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.2.5 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is not used

#### A.13.3.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR cell 1 as PCell in FR1 on NR RF channel 1, NR cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in Tables A.13.3.2.5.1-1, A.13.3.2.5.1-2 and A.13.3.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.13.3.2.5.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.13.3.2.5.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

**Table A.13.3.2.5.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode     |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode     |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode,<br>NR cell without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

### A.13.3.2.5.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For test 1, MGRP = 40 ms and for test 2 MGRP = 20 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times T_{\text{TTI}_{\text{DCCH}}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.2.6 Event triggered reporting tests for FR1 with CCA with SSB time index detection when DRX is used

#### A.13.3.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3A.4 and 9.3A.5.

In this test, there are three cells: NR cell 1 as PCell in FR1 on NR RF channel 1, NR cell 2 as SCell in FR1 with CCA on NR RF channel 2 and NR cell 3 as neighbour cell in FR1 with CCA on NR RF channel 3. The test parameters are given in Tables A.13.3.2.6.1-1, A.13.3.2.6.1-2 and A.13.3.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.13.3.2.6.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.13.3.2.6.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.13.3.2.6.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1 with CCA**

| Config   | Description   |
|--|---|
| 1  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode     |
| 2  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR cell without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode     |
| 3  | NR cell with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode,<br>NR cell without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.13.3.2.6.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with CCA with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value   |        |        |        | Comment  |
|---|------|--------------------|---|--------|--------|--------|--|

### A.13.3.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%. In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $T_{\text{identify\_inter\_cca\_with\_index}}$  from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

$T_{\text{identify\_inter\_cca\_with\_index}} = (T_{\text{PSS/SSS\_sync\_inter\_cca}} + T_{\text{SSB\_measurement\_period\_inter\_cca}} + T_{\text{SSB\_time\_index\_inter\_cca}})$  ms, where

$T_{\text{PSS/SSS\_sync\_inter\_cca}}$ : it is the time period used in PSS/SSS detection given in table 9.3A.4-1.

$T_{\text{SSB\_time\_index\_inter\_cca}}$ : it is the time period used to acquire the index of the SSB being measured given in table 9.3A.4-2.

$T_{\text{SSB\_measurement\_period\_inter\_cca}}$ : equal to a measurement period of SSB based measurement given in table 9.3A.5-1.

For tests 1 and 2, MGRP = 40 ms and for tests 3 and 4 MGRP = 20 ms.

For tests 1 and 3, DRX cycle = 40 ms and for tests 2 and 4 DRX cycle = 640 ms.

SMTC period = 20 ms.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.3 L1-RSRP measurements for beam reporting

#### A.13.3.3.1 SSB based L1-RSRP measurement when DRX is not used

##### A.13.3.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.13.3.3.1.1-1.

**Table A.13.3.3.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

##### A.13.3.3.1.2 Test parameters

There are two cells in the tests, FR1 PCell (Cell 1) and FR1 SCell (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 and Cell 2 are given in Table A.13.3.3.1.2-1 and Table A.13.3.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.13.3.3.1.2-1: General test parameters**

| Parameter                           | Config | Unit | Value                       |  |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.</p> <p>Note 5: The signal levels apply for SSS Res when the discovery burst is transmitted during DBT windows.</p> <p>Note 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds <math>P_{CCA\_DL1}</math> and the second value corresponds to the <math>P_{CCA\_DL2}</math>.</p> |        |               |               |               |               |               |

**A.13.3.3.1.3 Test Requirements**

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to 2xTTI DCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.13.3.3.2 SSB based L1-RSRP measurement when DRX is used

#### A.13.3.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5A.4.1, with the testing configurations for NR cells in Table A.13.3.3.1.1-1.

**Table A.13.3.3.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

#### A.13.3.3.2.2 Test parameters

There are two cells in the tests, FR1 Pcell (Cell 1) and FR1 Scell (Cell 2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model. The test parameters and applicability for Cell 1 and Cell 2 are given in Table A.13.3.3.2.2-1 and Table A.13.3.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The UE transmits the reporting according to UL CCA model. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

**Table A.13.3.3.2.2-1: General test parameters**

| Parameter                           | Config | Unit | Value                       |  |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: DL and UL CCA probabilities apply for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.</p> <p>Note 5: The signal levels apply for SSS Res when the discovery burst is transmitted during DBT windows.</p> <p>Note 6: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.</p> <p>Note 7: For UE supporting dynamic channel access and network configuring dynamic channel occupancy. The first value corresponds <math>P_{CCA\_DL1}</math> and the second value corresponds to the <math>P_{CCA\_DL2}</math>.</p> |        |               |               |               |               |               |

**A.13.3.3.2.3 Test Requirements**

The UE shall send L1-RSRP report every 80 slots. No later than 640 ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall send L1-RSRP report of both SSB0 and SSB1 in Cell 2.

NOTE: The actual overall delays measured in the test may be up to 2xTTI DCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.13.4 Measurement performance

### A.13.4.1 SS-RSRP

#### A.13.4.1.1 Intra-frequency measurement accuracy on a carrier frequency with CCA

##### A.13.4.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy on the carrier frequency with CCA is within the specified limits. This test will verify the requirements in clauses 10.1.36.1.1 and 10.1.36.1.2 for intra-frequency measurements under CCA.

##### A.13.4.1.1.2 Test parameters

Three cells are deployed in the test, which are FR1 PCell (Cell 1), and two cells on the same carrier frequency with CCA and transmit SSBs in DBT windows according to DL CCA model: SCell (Cell 2) and a neighbour cell (Cell 3). Supported test configurations are shown in table A.13.4.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.13.4.1.1.2-2.

**Table A.13.4.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR carrier with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR carrier without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | NR carrier with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR carrier without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | NR carrier with CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR carrier without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations for each supported band

**Table A.13.4.1.1.2-2: SS-RSRP Intra frequency test parameters**

- NOTE 1: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- NOTE 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- NOTE 3: SS-RSRP and  $I_0$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- NOTE 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
- NOTE 5: Subtest 1 is not used when testing with 30kHz SSB SCS.
- NOTE 6: The signal levels apply for SSS REs when the discovery burst is transmitted during DBT windows.
- NOTE 7: For UE supporting semi-static channel access and network configuring semi-static channel occupancy.
- NOTE 8: For UE supporting dynamic channel access and network configuring dynamic channel occupancy.
- NOTE 9: For a UE supporting both semi-static and dynamic channel access, the UE can be tested under dynamic channel occupancy only.

### A.13.4.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for cell 2 and cell 3 shall fulfil absolute requirement in clause 10.1.36.1.1 and relative requirement in clause 10.1.36.1.2.

## A.13.4.2 SS-RSRQ

### A.13.4.2.1 Intra-frequency measurement accuracy on SCC

#### A.13.4.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.29.1.1.

#### A.13.4.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.13.4.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in Table A.13.4.2.1.2-2 and Table A.13.4.2.1.2-3. In all test cases, Cell 1 is the PCell, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Three sub-tests (Test 1, Test 2, and Test 3) are provided different  $N_{oc}$  on Cells 1, 2, and 3.

**Table A.13.4.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description   |
|--------|---|
| 1      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |            |   |                  |        |        |        |  |       |

A.13.4.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.29.1.1.

## A.13.4.3 SS-SINR

### A.13.4.3.1 Intra-frequency measurement accuracy on SCC

#### A.13.4.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.31.1.1.

#### A.13.4.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.13.4.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.13.4.3.1.2-2 and Table A.13.4.3.1.2-3. In all test cases, Cell 1 is the PCell, Cell 2 is the SCell with CCA, and Cell 3 is the target cell with CCA. Two sub-tests (Test 1 and Test 2) are provided different  $N_{oc}$  on Cells 1, 2, and 3.

**Table A.13.4.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description   |
|--------|---|
| 1      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

**A.13.4.3.1.2-2: SS-SINR Intra frequency test parameters**

| Parameter  |                  | Unit      | Test 1   |        | Test 2         |        |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-SINR, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |            |   |                  |        |        |

A.13.4.3.1.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.31.1.1.

## A.13.4.4 L1-RSRP measurement for beam reporting with CCA serving cell

### A.13.4.4.1 SSB based L1-RSRP measurement

#### A.13.4.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.33.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.13.4.4.1.1-1.

**Table A.13.4.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2      | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3      | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations  |

#### A.13.4.4.1.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a SCell under CCA (Cell2). Cell 2 operates on a carrier frequency with CCA and transmits SSBs in DBT window according to DL CCA model.

Two sub-tests (Test 1 and Test 2) are provided with different  $N_{oc}$  on Cell 2. The test parameters for the Cell 1 and Cell 2 are given in Table A.13.4.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.13.4.4.1.2-1.

The same test is applicable for UE supporting any one or both semi-static channel access or dynamic channel access and for network configuring any of semi-static channel occupancy or dynamic channel occupancy.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. On Cell 2, UE is configured to perform L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.13.4.4.1.2-1: FR1 SSB based L1-RSRP test parameters**

| Parameter  | Config | Unit | Test 1                      |                             | Test 2                      |                             |
|--|--------|------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|
|  |        |      | Cell 1                      | Cell 2                      | Cell 1                      | Cell 2                      |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3: RSRP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
- Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.

#### A.13.4.4.1.3 Test Requirements

In both Test 1 and Test 2, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.33.1.

### A.13.4.5 RSSI

#### A.13.4.5.1 Intra-frequency RSSI measurement accuracy on a carrier with CCA

##### A.13.4.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.1.

##### A.13.4.5.1.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the SCell with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.13.4.5.1.2-1. The accuracy of RSSI intra-frequency measurements is tested by using the parameters in A.13.4.5.1.2-2 and A.13.4.5.1.2-3.

**Table A.13.4.5.1.2-1: Intra frequency RSSI supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2             | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3             | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE:         | The UE is only required to be tested in one of the supported test configurations.   |

### A.13.4.5.1.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.1. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.13.4.5.2 Inter-frequency RSSI measurement accuracy on a carrier with CCA

### A.13.4.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the RSSI measurement accuracy is within the specified limits. This test will partially verify the RSSI measurement accuracy requirements in Section 10.1.34.2.

### A.13.4.5.2.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the neighbour with CCA. RSSI is measured on channel number 2. Supported test configurations are shown in table A.13.4.5.2.2-1. The accuracy of RSSI inter-frequency measurements is tested by using the parameters in A.13.4.5.2.2-2 and A.13.4.5.2.3.

**Table A.13.4.5.2.2-1: Inter frequency RSSI supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.13.4.5.2.2-2: RSSI Inter frequency test parameters**

| Parameter   |   | Configurations | Unit      | Test 1   |                            |
|---|---|----------------|-----------|--|----------------------------|
|   |   |                |           | Cell 1   | Cell 2                     |
| RF Channel Number   |   |                |           | 1  | 2                          |

### A.13.4.5.2.3 Test Requirements

The average RSSI measurement accuracy shall fulfil the requirements in sections 10.1.34.2. The nominal RSSI used to evaluate the requirement shall be based on Io in slots corresponding to RSSI measurement time configuration (RMTC).

## A.13.4.6 Channel occupancy

### A.13.4.6.1 Intra-frequency channel occupancy measurement accuracy on SCC with CCA

#### A.13.4.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.1.

#### A.13.4.6.1.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the SCell with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.13.4.6.1.2-1. The accuracy of channel occupancy intra-frequency measurements is tested by using the parameters in A.13.4.6.1.2-2 and A.13.4.6.1.2-3.

**Table A.13.4.6.1.2-1: Intra frequency CO supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 2   | Without CCA: 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| 3   | Without CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>With CCA: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.13.4.6.1.2-2: CO Intra frequency test parameters**

| Parameter   |   | Configurations | Unit      | Test 1   |                            |

### A.13.4.6.1.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## A.13.4.6.2 Inter-frequency channel occupancy measurement accuracy on a carrier with CCA

### A.13.4.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the channel occupancy measurement accuracy is within the specified limits. This test will partially verify the channel occupancy measurement accuracy requirements in Section 10.1.35.2.

### A.13.4.6.2.2 Test parameters

In all test cases, Cell 1 is the PCell on a licensed FR1 band and Cell 2 is the neighbour with CCA. Channel occupancy is measured on channel number 2. Supported test configurations are shown in table A.13.4.6.2.2-1. The accuracy of channel occupancy inter-frequency measurements is tested by using the parameters in A.13.4.6.2.2-2 and A.13.4.6.2.3.

**Table A.13.4.6.2.2-1: Inter frequency CO supported test configurations**

| Configuration   | Description   |
|---|---|

### A.13.4.6.2.3 Test Requirements

The nominal reported *channelOccupancy* shall be TBD. At least 90% of channel occupancy reports made by the UE shall indicate this value.

## Annex B (normative): Conditions for RRM requirements applicability for operating bands

### B.1 Conditions for NR RRC\_IDLE state mobility

#### B.1.1 Introduction

In Annex B.1, the following conditions are specified:

- UE conditions which shall apply for UE intra-frequency measurements procedures and requirements in clause 4,
- UE conditions which shall apply for UE inter-frequency measurements procedures and requirements in clause 4.

#### B.1.2 Conditions for measurements on NR intra-frequency cells for cell re-selection

This clause defines the following conditions for NR intra-frequency measurements performed based on SSBs for cell re-selection: SSB<sub>RP</sub> and SSB  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.1.2-1 for FR1 NR cells.

The conditions are defined in Table B.1.2-2 for FR2 NR cells.

**Table B.1.2-1: Conditions for intra-frequency cell re-selection in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}_s/I_{ot}$ |
|------------|---|-----------------------------|-----------------------------|------------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             | dB                     |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz |                        |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A                | -124                        | -121                        | ≥ -4                   |
|            | NR_FDD_FR1_B                              | -123.5                      | -120.5                      |                        |
|            | NR_TDD_FR1_C                              | -123                        | -120                        |                        |
|            | NR_FDD_FR1_D, NR_TDD_FR1_D                | -122.5                      | -119.5                      |                        |
|            | NR_FDD_FR1_E, NR_TDD_FR1_E                | -122                        | -119                        |                        |
|            | NR_FDD_FR1_F                              | -121.5                      | -118.5                      |                        |
|            | NR_FDD_FR1_G                              | -121                        | -118                        |                        |
|            | NR_FDD_FR1_H                              | -120.5                      | -117.5                      |                        |

NOTE 1: NR operating band groups are defined in clause 3.5.2.

Table B.1.2-2: Conditions for intra-frequency cell re-selection in FR2

| Parameter  | Angle of arrival                     | NR operating bands | Minimum SSB <sub>RP</sub> <sup>Note 2, Note 3</sup> |            |                              |                           | SSB $\hat{E}_s/\text{lot}$                    |     |

|            |                                      | n259               |   |            | -92.7                        |                           |   |     |
|            |                                      | n260               | -<br>114.3+Z <sub>1</sub>                           |            | -93.9                        | -<br>110.8+Z <sub>4</sub> |   |     |
|            |                                      | n261               | -<br>117.3+Z <sub>1</sub>                           | -99.8      | -98.2                        | -<br>115.8+Z <sub>4</sub> |   |     |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum SSB  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and Spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor's notes for Table B.1.2-2:

- The value of Y for Power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for Power classes 1 and 4 respectively
- The value of Z for Power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for Power classes 1 and 4 respectively

### B.1.3 Conditions for measurements on NR inter-frequency cells for cell re-selection

This clause defines the following conditions for NR inter-frequency measurements performed based on SSBs for cell re-selection: SSB<sub>RP</sub> and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions defined in Table B.1.2-1 for FR1 NR intra-frequency cell re-selection shall also apply for FR1 NR inter-frequency cells in this clause.

The conditions defined in Table B.1.2-2 for FR2 NR intra-frequency cell re-selection shall also apply for FR2 NR inter-frequency cells in this clause.

## B.2 Conditions for UE measurements procedures and performance requirements in RRC\_CONNECTED state

### B.2.1 Introduction

#### B.2.1.1 General

In Annex B.2, the following conditions are specified:

- The conditions for RRC connection release with redirection to NR requirements in clause 6.2.3.2.1,
- The conditions for UE transmit timing adjustment in clause 7.1
- UE conditions which shall apply for UE intra-frequency measurements procedures and requirements in clause 9, UE conditions which shall apply for UE inter-frequency measurements procedures and requirements in clause 9,
- UE conditions which shall apply for UE intra-frequency measurements performance requirements in clause 10,
- UE conditions which shall apply for UE inter-frequency measurements performance requirements in clause 10.

#### B.2.1.2 Derivation of Minimum SSB\_RP values for FR1

[FFS]

#### B.2.1.3 Derivation of Minimum SSB\_RP values for FR2

*Editor's note:*

- *The Assumption for UE beams (fine or rough) in Annex A RRM test cases is defined based on power class 3, and unless otherwise stated also applies for other UE power classes*

##### B.2.1.3.1 Minimum SSB\_RP values for Rx Beam Peak angle of arrival

Minimum SSB\_RP values in Tables B.2.2-2 and B.2.3-2 are based on Reference sensitivity for the Operating band and for the UE power class, taking a baseline of UE Power class 3 in Band n260 with 50 MHz channel bandwidth.

Minimum SSB\_RP = Reference sensitivity<sub>PC3, n260, 50MHz</sub> + Y - 10Log<sub>10</sub>(PRB<sub>Refsens</sub> x 12) - SNR<sub>Refsens</sub> + SSB Ês/Iot + ΔMB<sub>P,n</sub>

where:

Reference sensitivity<sub>PC3, n260, 50MHz</sub> is the reference sensitivity value in dBm specified for power class 3 in Band n260 for 50 MHz Channel bandwidth in Table 7.3.2.3-1 of TS 38.101-2 [19];

Y is the gain difference between fine and rough beams, which is defined in Table B.2.1.3.1-1;

**Table B.2.1.3.1-1: Gain difference Y between fine and rough beams, Rx beam peak direction**

| Value "Y" in dB, for each UE power class |     |     |     |
|--|-----|-----|-----|
| 1  | 2   | 3   | 4   |
| FFS                                      | 9.0 | 7.0 | FFS |

PRB<sub>Refsens</sub> is N<sub>RB</sub> associated with subcarrier spacing 120 kHz for 50MHz in TS 38.101-2 [19] Table 5.3.2-1, and is 32;

12 is the number of subcarriers in a PRB;

SNR<sub>Refsens</sub> is the SNR used for simulation of Refsens and EIS spherical coverage, and is -1 dB;

$\hat{E}_s/I_{ot}$  is the minimum value required by the UE to perform measurements, and is -6 dB for intra-frequency measurements and -4 dB for inter-frequency measurements. The only contribution to  $I_{ot}$  is the UE internal noise;

$\Delta MB_{P,n}$  is the UE multi-band relaxation factor value in dB specified in TS 38.101-2 [19] clause 6.2.1.

The calculated Minimum SSB\_RP value for the baseline of UE power class 3 in Band n260 is  $(-109.5 + \Delta MB_{P,n})$  dBm/120kHz for intra-frequency measurements and  $(-107.5 + \Delta MB_{P,n})$  dBm/120kHz for inter-frequency measurements.

The following methodology to define the Minimum SSB\_RP level for power class X (PC\_X) and operating band Y (Band\_Y) is used:

For Intra-frequency: Minimum SSB\_RP (PC\_X, Band\_Y) =  $-109.5$  dBm/120kHz + Refsens<sub>PC\_X, Band\_Y, 50MHz</sub> – Refsens<sub>PC3, n260, 50MHz</sub> +  $Y_{PC_X} - Y_{PC3} + \Delta MB_{P,n}$ ,

For Inter-frequency: Minimum SSB\_RP (PC\_X, Band\_Y) =  $-107.5$  dBm/120kHz + Refsens<sub>PC\_X, Band\_Y, 50MHz</sub> – Refsens<sub>PC3, n260, 50MHz</sub> +  $Y_{PC_X} - Y_{PC3} + \Delta MB_{P,n}$ .

### B.2.1.3.2 Minimum SSB\_RP values for angle of arrival within Spherical coverage

Minimum SSB\_RP values in Tables B.2.2-2 and B.2.3-2 are based on EIS spherical coverage for the Operating band and for the UE power class, taking a baseline of UE power class 3 in Band n260 with 50 MHz channel bandwidth.

Minimum SSB\_RP = EIS spherical coverage<sub>PC3, n260, 50MHz</sub> +  $Z - 10 \log_{10}(\text{PRB}_{\text{Refsens}} \times 12) - \text{SNR}_{\text{Refsens}} + \hat{E}_s/I_{ot} + \Delta MB_{S,n}$

where:

EIS spherical coverage<sub>PC3, n260, 50MHz</sub> is the EIS spherical coverage value in dBm specified for power class 3 in Band n260 for 50MHz Channel bandwidth in TS 38.101-2 [19] Table 7.3.4.3-1;

Z is the gain difference between fine and rough beams, and is defined in Table B.2.1.3.2-1;

**Table B.2.1.3.2-1: Gain difference Z between fine and rough beams, Spherical coverage directions**

| Value "Z" in dB, for each UE power class |     |     |     |
|--|-----|-----|-----|
| 1  | 2   | 3   | 4   |
| FFS                                      | 9.0 | 7.0 | FFS |

$\text{PRB}_{\text{Refsens}}$  is  $N_{RB}$  associated with subcarrier spacing 120 kHz for 50MHz in TS 38.101-2 [19] Table 5.3.2-1, and is 32;

12 is the number of subcarriers in a PRB;

$\text{SNR}_{\text{Refsens}}$  is the SNR used for simulation of Refsens and EIS spherical coverage, and is -1 dB;

$\hat{E}_s/I_{ot}$  is the minimum value required by the UE to perform measurements, and is -6 dB for intra-frequency measurements and -4 dB for inter-frequency measurements. The only contribution to  $I_{ot}$  is the UE internal noise;

$\Delta MB_{S,n}$  is the UE multi-band relaxation factor value in dB specified in TS 38.101-2 [19] clause 6.2.1.

The calculated Minimum SSB\_RP value for the baseline of UE power class 3 in Band n260 is  $(-96.9 + \Delta MB_{S,n})$  dBm/120kHz for intra-frequency measurements and  $(-94.9 + \Delta MB_{S,n})$  dBm/120kHz for inter-frequency measurements.

The following methodology to define the Minimum SSB\_RP level for power class X (PC\_X) and operating band Y (Band\_Y) is used:

For Intra-frequency: Minimum SSB\_RP (PC\_X, Band\_Y) =  $-96.9$  dBm/120kHz + EIS spherical coverage<sub>PC\_X, Band\_Y, 50MHz</sub> – EIS spherical coverage<sub>PC3, n260, 50MHz</sub> +  $Z_{PC_X} - Z_{PC3} + \Delta MB_{S,n}$

For Inter-frequency: Minimum SSB\_RP (PC\_X, Band\_Y) =  $-94.9$  dBm/120kHz + EIS spherical coverage<sub>PC\_X, Band\_Y, 50MHz</sub> – EIS spherical coverage<sub>PC3, n260, 50MHz</sub> +  $Z_{PC_X} - Z_{PC3} + \Delta MB_{S,n}$

### B.2.1.4 Gain to SS-RSRP and CSI-RSRP measurement point for FR1

In FR1 conducted requirements are specified at the UE antenna connector, which is also the SS-RSRP and CSI-RSRP measurement point.

### B.2.1.5 Gain to SS-RSRP and CSI-RSRP measurement point for FR2

#### B.2.1.5.1 Gain to SS-RSRP and CSI-RSRP measurement point for Rx Beam Peak angle of arrival

In clause 5.1.1 of TS 38.215 [4] SS-RSRP and CSI-RSRP is defined to be measured based on the combined signal from antenna elements corresponding to a given receiver branch. The reference point for requirement parameters from the UE perspective is the input of the UE antenna array. The gain “G” relates the combined signal from antenna elements corresponding to a given receiver branch to the reference point for requirement parameters.

The gain “G” affects absolute signal level values reported by the UE.

**Figure B.2.1.5.1-1: Gain and Reference point for requirement parameters**

The gain range for each power class is specified in Table B.2.1.5.1-1.

**Table B.2.1.5.1-1: UE gain G, Rx beam peak direction**

|              | UE Power class |     |     |     |
|--------------|----------------|-----|-----|-----|
|              | 1              | 2   | 3   | 4   |
| Minimum, dBi | FFS            | FFS | -10 | FFS |
| Maximum, dBi | FFS            | FFS | +20 | FFS |

Gain range in spherical coverage directions may be lower than in Rx beam peak direction, according to the difference between the EIS spherical coverage value specified in TS 38.101-2 [19] clause 7.3.4 and the Reference sensitivity level specified in TS 38.101-2 [19] clause 7.3.2.

### B.2.1.6 Gain to PRS-RSRP measurement point for FR2

#### B.2.1.6.1 Gain to PRS-RSRP measurement point for Rx Beam Peak angle of arrival

In clause 5.1.28 of TS 38.215 [4] PRS-RSRP is defined to be measured based on the combined signal from antenna elements corresponding to a given receiver branch. The reference point for requirement parameters from the UE perspective is the input of the UE antenna array. The gain “G” relates the combined signal from antenna elements corresponding to a given receiver branch to the reference point for requirement parameters.

The gain “G” affects absolute signal level values reported by the UE.

Figure B.2.1.6.1-1: Gain and Reference point for requirement parameters

The gain range for each power class is specified in Table B.2.1.61-1.

Table B.2.1.6.1-1: UE gain G, Rx beam peak direction

|              | UE Power class |     |     |     |
|--------------|----------------|-----|-----|-----|
|              | 1              | 2   | 3   | 4   |
| Minimum, dBi | FFS            | FFS | -10 | FFS |
| Maximum, dBi | FFS            | FFS | +20 | FFS |

Gain range in spherical coverage directions may be lower than in Rx beam peak direction, according to the difference between the EIS spherical coverage value specified in TS 38.101-2 [19] clause 7.3.4 and the Reference sensitivity level specified in TS 38.101-2 [19] clause 7.3.2.

## B.2.2 Conditions for NR intra-frequency measurements

This clause defines the following conditions for NR intra-frequency measurements and corresponding procedures performed based on SSBs: SSB<sub>RP</sub> and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.2-1 for FR1 NR cells.

The conditions are defined in Table B.2.2-2 for FR2 NR cells.

Table B.2.2-1: Conditions for intra-frequency measurements in FR1

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}_s/\text{lot}$ |
|------------|---|-----------------------------|-----------------------------|----------------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             |                            |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz | dB                         |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A  | -127                        | -124                        | ≥ -6                       |
|            | NR_FDD_FR1_B                              | -126.5                      | -123.5                      |                            |
|            | NR_TDD_FR1_C                              | -126                        | -123                        |                            |
|            | NR_FDD_FR1_D, NR_TDD_FR1_D                | -125.5                      | -122.5                      |                            |
|            | NR_FDD_FR1_E, NR_TDD_FR1_E                | -125                        | -122                        |                            |
|            | NR_FDD_FR1_F                              | -124.5                      | -121.5                      |                            |
|            | NR_FDD_FR1_G                              | -124                        | -121                        |                            |
|            | NR_FDD_FR1_H                              | -123.5                      | -120.5                      |                            |

NOTE 1: NR operating band groups are defined in clause 3.5.2.

Table B.2.2-2: Conditions for intra-frequency measurements in FR2

| Parameter  | Angle of arrival                        | NR operating bands | Minimum SSB <sub>RP</sub> <sup>Note 2, Note 3</sup> |        |        |                              | SSB $\hat{E}_s/\text{lot}$                    |            |
|------------|---|--------------------|---|--------|--------|------------------------------|---|------------|
|            |   |                    | dBm / SCS <sub>SSB</sub>                            |        |        |                              | dB  |            |
|            |   |                    | SCS <sub>SSB</sub> = 120 kHz                        |        |        | SCS <sub>SSB</sub> = 240 kHz |   |            |
|            |   |                    | UE power class                                      |        |        | UE power class               |   |            |
|            |   |                    | 1   | 2      | 3      | 4                            |   | 1, 2, 3, 4 |
| Conditions | Rx Beam Peak                            | n257               | -<br>128.3+Y <sub>1</sub>                           | -113.8 | -112.1 | -<br>127.8+Y <sub>4</sub>    | (Value for SCS <sub>SSB</sub> = 120 kHz) +3dB | ≥-6        |
|            |   | n258               | -<br>128.3+Y <sub>1</sub>                           | -113.8 | -112.1 | -<br>127.8+Y <sub>4</sub>    |   |            |
|            |   | n259               | -   | -      | -108.5 | -                            |   |            |
|            |   | n260               | -<br>125.3+Y <sub>1</sub>                           | -      | -109.5 | -<br>125.8+Y <sub>4</sub>    |   |            |
|            |   | n261               | -<br>128.3+Y <sub>1</sub>                           | -113.8 | -112.1 | -<br>127.8+Y <sub>4</sub>    |   |            |
|            | Spherical coverage<br><sup>Note 1</sup> | n257               | -<br>120.3+Z <sub>1</sub>                           | -102.8 | -101.2 | -<br>118.8+Z <sub>4</sub>    | (Value for SCS <sub>SSB</sub> = 120 kHz) +3dB | ≥-6        |
|            |   | n258               | -<br>120.3+Z <sub>1</sub>                           | -102.8 | -101.2 | -<br>118.8+Z <sub>4</sub>    |   |            |
|            |   | n259               | -   | -      | -95.7  | -                            |   |            |
|            |   | n260               | -<br>117.3+Z <sub>1</sub>                           | -      | -96.9  | -<br>113.8+Z <sub>4</sub>    |   |            |
|            |   | n261               | -<br>120.3+Z <sub>1</sub>                           | -102.8 | -101.2 | -<br>118.8+Z <sub>4</sub>    |   |            |

Note 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

Note 2: Values specified at the Reference point to give minimum SSB  $\hat{E}_s/\text{lot}$ , with no applied noise.

Note 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor's notes for Table B.2.2-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

## B.2.3 Conditions for NR inter-frequency measurements

This clause defines the following conditions for NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB<sub>RP</sub> and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.3-1 for FR1 NR cells.

The conditions are defined in Table B.2.3-2 for FR2 NR cells.

**Table B.2.3-1: Conditions for inter-frequency measurements in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}$ s/lot |
|------------|---|-----------------------------|-----------------------------|---------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             |                     |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz | dB                  |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A  | -125                        | -122                        | ≥ -4                |
|            | NR_FDD_FR1_B                              | -124.5                      | -121.5                      |                     |
|            | NR_TDD_FR1_C                              | -124                        | -121                        |                     |
|            | NR_FDD_FR1_D, NR_TDD_FR1_D                | -124.5                      | -120.5                      |                     |
|            | NR_FDD_FR1_E, NR_TDD_FR1_E                | -123                        | -120                        |                     |

|            | 115.3+Z <sub>1</sub>                 |                      |   | 111.8+Z <sub>4</sub> |                      |                              |   |            |
| n261       | -                                    | -100.8               | -99.2   | -                    |                      |                              |   |            |
|            | 118.3+Z <sub>1</sub>                 |                      |   | 116.8+Z <sub>4</sub> |                      |                              |   |            |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum SSB  $\hat{E}$ s/lot, with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and Spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor's notes for Table B.2.3-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub>, and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

## B.2.4 Conditions for NR L1-RSRP reporting

### B.2.4.1 Conditions for SSB based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on SSBs: SSB\_RP and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.4.1-1 for FR1 NR cells.

The conditions are defined in Table B.2.4.1-2 for FR2 NR cells.

**Table B.2.4.1-1: Conditions for SSB based L1-RSRP measurements in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB_RP              |                             | SSB $\hat{E}_s/\text{lot}$ |
|------------|---|-----------------------------|-----------------------------|----------------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             | dB                         |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz |                            |

|            |                                      | n258               | 117.3+Z <sub>1</sub>                     | -99.8  | -98.2                        | 115.8+Z <sub>4</sub> |   |      |
|            |                                      | n259               |  |        | -92.7                        |                      |   |      |
|            |                                      | n260               | 114.3+Z <sub>1</sub>                     |        | -93.9                        | 110.8+Z <sub>4</sub> |   |      |
|            |                                      | n261               | 117.3+Z <sub>1</sub>                     | -99.8  | -98.2                        | 115.8+Z <sub>4</sub> |   |      |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum SSB  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and Spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor's notes for Table B.2.4.1-2:*

- The value of  $Y$  for power classes 1 and 4 is FFS, where  $Y_1$  and  $Y_4$  are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of  $Z$  for power classes 1 and 4 is FFS, where  $Z_1$  and  $Z_4$  are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

### B.2.4.2 Conditions for CSI-RS based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on CSI-RS: CSI-RS<sub>RP</sub> and CSI-RS  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.4.2-1 for FR1 NR cells.

The conditions are defined in Table B.2.4.2-2 for FR2 NR cells.

**Table B.2.4.2-1: Conditions for CSI-RS based L1-RSRP measurements in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum CSI-RS <sub>RP</sub>   |                                |                                | CSI-RS $\hat{E}_s/\text{lot}$ |
|------------|--|--------------------------------|--------------------------------|--------------------------------|-------------------------------|
|            |  | dBm / SCS <sub>CSI-RS</sub>    |                                |                                | dB                            |
|            |  | SCS <sub>CSI-RS</sub> = 15 kHz | SCS <sub>CSI-RS</sub> = 30 kHz | SCS <sub>CSI-RS</sub> = 60 kHz |                               |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.  
 NOTE 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}_s/\text{lot}$ , with no applied noise.  
 NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and Spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor’s notes for Table B.2.4.2-2:*

- The value of Y for power classes 1 and 4 is FFS, where  $Y_1$  and  $Y_4$  are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of Z for power classes 1 and 4 is FFS, where  $Z_1$  and  $Z_4$  are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

## B.2.5 Conditions for RRC connection release with redirection to NR

This clause defines the following conditions for RRC connection release with redirection to NR: SSB\_RP and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.5-1 for FR1 NR cells.

The conditions are defined in Table B.2.5-2 for FR2 NR cells.

**Table B.2.5-1: Conditions for RRC connection release with redirection to NR in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}$ s/lot |
|------------|---|-----------------------------|-----------------------------|---------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             | dB                  |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz |                     |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A                | -125                        | -122                        | ≥ -4                |
|            | NR_FDD_FR1_B                              | -124.5                      | -121.5                      |                     |
|            | NR_TDD_FR1_C                              | -124                        | -121                        |                     |
|            | NR_FDD_FR1_D, NR_TDD_FR1_D                | -124.5                      | -120.5                      |                     |
|            | NR_FDD_FR1_E, NR_TDD_FR1_E                | -123                        | -120                        |                     |
|            | NR_FDD_FR1_F                              | -122.5                      | -119.5                      |                     |
|            | NR_FDD_FR1_G                              | -122                        | -119                        |                     |
|            | NR_FDD_FR1_H                              | -121.5                      | -118.5                      |                     |

NOTE 1: NR operating band groups are defined in clause 3.5.2.

**Table B.2.5-2: Conditions for RRC connection release with redirection to NR in FR2**

| Parameter  | Angle of arrival | NR operating bands                   | Minimum SSB <sub>RP</sub> <sup>Note 2, Note 3</sup> |        |                              |                      | SSB $\hat{E}$ s/lot                           |   |
|------------|------------------|--------------------------------------|---|--------|------------------------------|----------------------|---|---|
|            |                  |                                      | dBm / SCS <sub>SSB</sub>                            |        |                              |                      | dB  |   |
|            |                  |                                      | SCS <sub>SSB</sub> = 120 kHz                        |        | SCS <sub>SSB</sub> = 240 kHz |                      |   |   |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.  
 NOTE 2: Values specified at the Reference point to give minimum SSB  $\hat{E}$ s/lot, with no applied noise.  
 NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor's notes for Table B.2.5.2-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively

- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine

## B.2.7 Conditions for SRS-RSRP measurements

This clause defines the following conditions for SRS-RSRP measurement and corresponding procedures performed based on SRSs: SRS\_RP and SRS  $\hat{E}$ s/Iot, applicable for a corresponding operating band.

The conditions are defined in Table B.2.7-1 for FR1 NR cells.

The conditions are defined in Table B.2.7-2 for FR2 NR cells.

Table B.2.7-1: Conditions for SRS-RSRP measurements in FR1

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SRS_RP              |                             |                             | SRS $\hat{E}$ s/Iot |
|------------|---|-----------------------------|-----------------------------|-----------------------------|---------------------|
|            |   | dBm / SCS <sub>SRS</sub>    |                             |                             |                     |
|            |   | SCS <sub>SRS</sub> = 15 kHz | SCS <sub>SRS</sub> = 30 kHz | SCS <sub>SRS</sub> = 60 kHz | dB                  |
| Conditions | NR_TDD_FR1_A                              | -120                        | -117                        | -114                        | ≥ 1                 |
|            | NR_TDD_FR1_C                              | -119                        | -116                        | -113                        |                     |
|            | NR_TDD_FR1_D                              | -118.5                      | -115.5                      | -112.5                      |                     |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum SRS  $\hat{E}$ s/Iot, with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and Spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

## B.2.8 Conditions for NR L1-SINR reporting

### B.2.8.1 Conditions for L1-SINR reporting with CSI-RS based CMR and no dedicated IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on CSI-RSs: CSI-RS\_RP and CSI-RS  $\hat{E}$ s/Iot, applicable for a corresponding operating band.

The conditions are defined in Tables B.2.8.1-1 for FR1 NR cells.

The conditions are defined in Tables B.2.8.1-2 for FR2 NR cells.

Table B.2.8.1-1: Conditions for L1-SINR measurements with CSI-RS based CMR only in FR1

| Parameter  | NR operating band groups <sup>Note 1</sup>     | Minimum CSI-RS_RP                      |  |  | CSI-RS CMR $\hat{E}_s/\text{lot}$ |
|------------|--|--|--|--|-----------------------------------|
|            |  | dBm / $SCS_{\text{CSI-RS}}$            |  |  | dB                                |
|            |  | $SCS_{\text{CSI-RS}} = 15 \text{ kHz}$ | $SCS_{\text{CSI-RS}} = 30 \text{ kHz}$ | $SCS_{\text{CSI-RS}} = 60 \text{ kHz}$ |                                   |
| Conditions | NR_FDD_FR1_A,<br>NR_TDD_FR1_A,<br>NR_SDL_FR1_A | -124                                   | -121                                   | -118                                   | $\geq -3$                         |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and Spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

## B.2.8.2 Conditions for L1-SINR reporting with SSB based CMR and dedicated IMR configured

### B.2.8.2.1 L1-SINR reporting with SSB based CMR and dedicated ZP-IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on SSBs and ZP-IMRs: SSB\_RP and SSB  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Tables B.2.8.2.1-1 for FR1 NR cells.

The conditions are defined in Tables B.2.8.2.1-2 for FR2 NR cells.

**Table B.2.8.2.1-1: Conditions for L1-SINR measurements with SSB based CMR and ZP-IMR in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum SSB <sub>RP</sub>   |                             | SSB-CMR $\hat{E}_s/\text{lot}$ |
|------------|--|-----------------------------|-----------------------------|--------------------------------|
|            |  | dBm / SCS <sub>SSB</sub>    |                             |                                |
|            |  | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz | dB                             |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum SSB  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and Spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

**B.2.8.2.2 L1-SINR reporting with SSB based CMR and dedicated NZP-IMR configured**

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on SSBs and NZP-IMRs: SSB<sub>RP</sub>, SSB  $\hat{E}_s/\text{lot}$  and NZP-IMR  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Tables B.2.8.2.2-1 for FR1 NR cells.

The conditions are defined in Tables B.2.8.2.2-2 for FR2 NR cells. Table B.2.8.2.2-1: Conditions for L1-SINR measurements with SSB based CMR and NQP-IMR in FR1

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum SSB_RP              |                             | SSB-CMR | NQP-IMR |
|------------|--|-----------------------------|-----------------------------|---------|---------|
|            |  | dBm / SCS <sub>SSB</sub>    |                             | Ēs/lot  | Ēs/lot  |

|            |                                      | n261               | -114.3+Z <sub>1</sub>                    | -96.8  | -95.2  | -112.8+Z <sub>4</sub>        |                |         |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.  
 NOTE 2: Values specified at the Reference point to give minimum SSB Ēs/lot, with no applied noise.  
 NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by ΔMB<sub>P,n</sub> and Spherical coverage values are increased by ΔMB<sub>S,n</sub>, the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor’s notes for Table B.2.8.2.2-1 and B.2.8.2.2-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively

- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

### B.2.8.3 Conditions for L1-SINR reporting with CSI-RS based CMR and dedicated IMR configured

#### B.2.8.3.1 L1-SINR reporting with CSI-RS based CMR and dedicated ZP-IMR configured

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on CSI-RSs and ZP-IMRs: CSI-RS<sub>RP</sub> and CSI-RS  $\hat{E}$ s/lot, applicable for a corresponding operating band.

The conditions defined in Table B.2.8.3.1-1 for FR1 NR cells.

The conditions defined in Table B.2.8.3.1-2 for FR2 NR cells.

**Table B.2.8.3.1-1: Conditions for L1-SINR measurements with CSI-RS based CMR and ZP-IMR in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum CSI-RS <sub>RP</sub>   |                                |                                | CSI-RS CMR $\hat{E}$ s/lot |
|------------|---|--------------------------------|--------------------------------|--------------------------------|----------------------------|
|            |   | dBm / SCS <sub>CSI-RS</sub>    |                                |                                | dB                         |
|            |   | SCS <sub>CSI-RS</sub> = 15 kHz | SCS <sub>CSI-RS</sub> = 30 kHz | SCS <sub>CSI-RS</sub> = 60 kHz |                            |
| Conditions | NR_FDD_FR1_A, NR_TDD_FR1_A, NR_SDL_FR1_A  | -124                           | -121                           | -118                           | ≥ -3                       |
|            | NR_FDD_FR1_B                              | -123.5                         | -120.5                         | -117.5                         |                            |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}$ s/lot, with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and Spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

**B.2.8.3.2 L1-SINR reporting with CSI-RS based CMR and dedicated NZP-IMR configured**

This clause defines the following conditions for NR L1-SINR measurement reporting and corresponding procedures performed based on CSI-RSs and NZP-IMRs: CSI-RS<sub>RP</sub>, CSI-RS  $\hat{E}_s/\text{lot}$  and NZP-IMR  $\hat{E}_s/\text{lot}$ , applicable for a corresponding operating band.

The conditions are defined in Tables B.2.8.3.2-1 for FR1 NR cells. The conditions are defined in Tables B.2.8.3.2-2 for FR2 NR cells.

**Table B.2.8.3.2-1: Conditions for L1-SINR measurements with CSI-RS based CMR and NZP-IMR in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum CSI-RS <sub>RP</sub>   |                                |                                | CSI-RS CMR $\hat{E}_s/\text{lot}$ | NZP-IMR $\hat{E}_s/\text{lot}$ |
|------------|--|--------------------------------|--------------------------------|--------------------------------|-----------------------------------|--------------------------------|

|            |                                      | n260               | -114.3+Z <sub>1</sub>                                  |            | -93.9  | -110.8+Z <sub>4</sub>           |                                   |                                |
|            |                                      | n261               | -117.3+Z <sub>1</sub>                                  | -99.8      | -98.2  | -115.8+Z <sub>4</sub>           |                                   |                                |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and Spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor's notes for Tables B.2.8.3.2-1 and B.2.8.3.2-2:

- The value of  $Y$  for power classes 1 and 4 is FFS, where  $Y_1$  and  $Y_4$  are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of  $Z$  for power classes 1 and 4 is FFS, where  $Z_1$  and  $Z_4$  are the rough/fine

## B.2.9 Conditions for NR intra-frequency measurements under CCA

This clause defines the following conditions for NR intra-frequency measurements under CCA and corresponding procedures performed based on SSBs: SSB<sub>RP</sub> and SSB  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.9-1 for NR cells under CCA.

**Table B.2.9-1: Conditions for intra-frequency measurements under CCA**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}_s/I_{ot}$ |
|------------|---|-----------------------------|-----------------------------|------------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             |                        |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz | dB                     |
| Conditions | NR_CCA_FR1_I                              | -123                        | -120                        | ≥ -6                   |
|            | NR_CCA_FR1_J                              | -122.5                      | -119.5                      |                        |

NOTE 1: NR operating band groups are as defined in clause 3.5.2.

## B.2.10 Conditions for NR inter-frequency measurements under CCA

This clause defines the following conditions for NR inter-frequency measurements and corresponding procedures performed based on SSBs: SSB<sub>RP</sub> and SSB  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.10-1 for NR cells under CCA.

**Table B.2.10-1: Conditions for inter-frequency measurements under CCA**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\hat{E}_s/I_{ot}$ |
|------------|---|-----------------------------|-----------------------------|------------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             |                        |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz | dB                     |
| Conditions | NR_CCA_FR1_I                              | -121                        | -118                        | ≥ -4                   |
|            | NR_CCA_FR1_J                              | -120.5                      | -117.5                      |                        |

NOTE 1: NR operating band groups are as defined in clause 3.5.2.

## B.2.11 Conditions for NR L1-RSRP reporting under CCA

### B.2.11.1 Conditions for SSB based L1-RSRP reporting

This clause defines the following conditions for NR L1-RSRP measurement reporting and corresponding procedures performed based on SSBs under CCA: SSB<sub>RP</sub> and SSB  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.11.1-1 for NR cells under CCA.

**Table B.2.11.1-1: Conditions for SSB based L1-RSRP measurements under CCA**

| Parameter  | NR operating band groups <sup>Note1</sup> | Minimum SSB <sub>RP</sub>   |                             | SSB $\bar{E}_s$ /lot |
|------------|---|-----------------------------|-----------------------------|----------------------|
|            |   | dBm / SCS <sub>SSB</sub>    |                             | dB                   |
|            |   | SCS <sub>SSB</sub> = 15 kHz | SCS <sub>SSB</sub> = 30 kHz |                      |
| Conditions | NR_CCA_FR1_I                              | -120                        | -117                        | ≥ -3                 |
|            | NR_CCA_FR1_J                              | -119.5                      | -116.5                      |                      |

NOTE 1: NR operating band groups are defined in clause 3.5.2.

## B.2.12 Conditions for NR CSI-RS based intra-frequency measurements

This clause defines the following conditions for NR CSI-RS based intra-frequency measurements and corresponding procedures performed based on CSI-RS: CSI<sub>RP</sub> and CSI-RS  $\bar{E}_s$ /lot, applicable for a corresponding operating band.

The conditions are defined in Table B.2.12-1 for FR1 NR cells.

The conditions are defined in Table B.2.12-2 for FR2 NR cells.

**Table B.2.12-1: Conditions for CSI-RS based intra-frequency measurements in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum CSI <sub>RP</sub>      |                                |                                | CSI-RS $\bar{E}_s$ /lot |
|------------|--|--------------------------------|--------------------------------|--------------------------------|-------------------------|
|            |  | dBm / SCS <sub>CSI-RS</sub>    |                                |                                | dB                      |
|            |  | SCS <sub>CSI-RS</sub> = 15 kHz | SCS <sub>CSI-RS</sub> = 30 kHz | SCS <sub>CSI-RS</sub> = 60 kHz |                         |
| Conditions | NR_FDD_FR1_A,<br>NR_TDD_FR1_A,<br>NR_SDL_FR1_A | -127                           | -124                           | -121                           | ≥ -6                    |
|            | NR_FDD_FR1_B                                   | -126.5                         | -123.5                         | -120.5                         |                         |

|            |  | n261               | -<br>120.3+Z <sub>1</sub>                               | -102.8 | -101.2 | -<br>118.8+Z <sub>4</sub>      |   |            |

Note 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.  
 Note 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}_s/I_{ot}$ , with no applied noise.  
 Note 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta MB_{P,n}$  and spherical coverage values are increased by  $\Delta MB_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

*Editor’s notes for Table B.2.12-2:*

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

### B.2.13 Conditions for NR CSI-RS based inter-frequency measurements

This clause defines the following conditions for NR CSI-RS based inter-frequency measurements and corresponding procedures performed based on CSI-RS: CSI<sub>RP</sub> and CSI-RS  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.13-1 for FR1 NR cells.

The conditions are defined in Table B.2.13-2 for FR2 NR cells.

**Table B.2.13-1: Conditions for CSI-RS based inter-frequency measurements in FR1**

| Parameter  | NR operating band groups<br><small>Note 1</small> | Minimum CSI <sub>RP</sub><br>dBm / SCS <sub>CSI-RS</sub> |                                |                                | CSI-RS $\hat{E}_s/\text{lot}$ |
|------------|---|--|--------------------------------|--------------------------------|-------------------------------|
|            |   | SCS <sub>CSI-RS</sub> = 15 kHz                           | SCS <sub>CSI-RS</sub> = 30 kHz | SCS <sub>CSI-RS</sub> = 60 kHz | dB                            |
|            |   |  |                                |                                |                               |

|            |   | n259               | -  | -      | -93.7  | -                              |   |            |
|            |   | n260               | -<br>115.3+Z <sub>1</sub>  | -      | -94.9  | -<br>111.8+Z <sub>4</sub>      |   |            |
|            |   | n261               | -<br>118.3+Z <sub>1</sub>  | -100.8 | -99.2  | -<br>116.8+Z <sub>4</sub>      |   |            |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.  
 NOTE 2: Values specified at the Reference point to give minimum CSI-RS  $\hat{E}_s/\text{lot}$ , with no applied noise.  
 NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and Spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

Editor’s notes for Table B.2.13-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively

- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub>, and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively.

## B.2.14 Conditions for NR PRS-based measurements

This clause defines the following conditions for NR PRS-based measurements and corresponding procedures performed based on PRS: PRP and PRS  $\hat{E}_s/I_{ot}$ , applicable for a corresponding operating band.

The conditions are defined in Table B.2.14-1 for FR1 NR cells.

The conditions are defined in Table B.2.14-2 for FR2 NR cells.

**Table B.2.14-1: Conditions for NR PRS-based measurements in FR1**

| Parameter  | NR operating band groups <sup>Note1</sup>      | Minimum PRP <sub>1,2</sub>     |                                |                                | PRS $\hat{E}_s/I_{ot}$  |
|--|--|--------------------------------|--------------------------------|--------------------------------|---|
|  |  | dBm / SCS <sub>PRS</sub>       |                                |                                | dB  |
|  |  | SCS <sub>PRS</sub><br>= 15 kHz | SCS <sub>PRS</sub><br>= 30 kHz | SCS <sub>PRS</sub><br>= 60 kHz |   |
| Conditions   | NR_FDD_FR1_A,<br>NR_TDD_FR1_A,<br>NR_SDL_FR1_A | -127                           | -124                           | -121                           | $\geq -6$ <sup>Note2</sup><br>$\geq -13$ <sup>Note3</sup><br>$\geq -3$ <sup>Note4</sup> |
|  | NR_FDD_FR1_B                                   | -126.5                         | -123.5                         | -120.5                         |   |
|  | NR_TDD_FR1_C                                   | -126                           | -123                           | -120                           |   |
|  | NR_FDD_FR1_D,<br>NR_TDD_FR1_D                  | -125.5                         | -122.5                         | -119.5                         |   |
|  | NR_FDD_FR1_E,<br>NR_TDD_FR1_E                  | -125                           | -122                           | -119                           |   |
|  | NR_FDD_FR1_F                                   | -124.5                         | -121.5                         | -118.5                         |   |
|  | NR_FDD_FR1_G                                   | -124                           | -121                           | -118                           |   |
|  | NR_FDD_FR1_H                                   | -123.5                         | -120.5                         | -117.5                         |   |
| NOTE 1: NR operating band groups are defined in clause 3.5.2.  |  |                                |                                |                                |   |
| NOTE 2: PRS $\hat{E}_s/I_{ot}$ for RSTD measurement reference cell PRS resource.   |  |                                |                                |                                |   |
| NOTE 3: PRS $\hat{E}_s/I_{ot}$ for RSTD measurement neighbor cell PRS resource, PRS-RSRP measurement and UE Rx-Tx time difference measurement. |  |                                |                                |                                |   |
| NOTE 4: PRS $\hat{E}_s/I_{ot}$ for PRS-RSRP measurement and UE Rx-Tx time difference measurement.  |  |                                |                                |                                |   |

Table B.2.14-2: Conditions for NR PRS-based measurements in FR2

| Parameter  | Angle of arrival                        | NR operating bands | Minimum PRP <sub>1,2</sub> <sup>Note 2, Note 3</sup> |            |                             |                           | PRS $\hat{E}_s/\text{lot}$                     |   |
|------------|---|--------------------|--|------------|-----------------------------|---------------------------|--|---|
|            |   |                    | dBm / SCS <sub>PRS</sub>                             |            |                             |                           | dB   |   |
|            |   |                    | SCS <sub>PRS</sub> = 120 kHz                         |            | SCS <sub>PRS</sub> = 60 kHz |                           |  |   |

|            |   | n261               | -<br>120.3+Z <sub>1</sub>                            | -102.8     | -101.2                      | -<br>118.8+Z <sub>4</sub> |  |   |

NOTE 1: Values based on EIS spherical coverage as defined in clause 7.3.4 of TS 38.101-2 [19]. Side condition applies for directions in which EIS spherical coverage requirement is met.

NOTE 2: Values specified at the Reference point to give minimum PRS  $\hat{E}_s/\text{lot}$ , with no applied noise.

NOTE 3: For UEs that support multiple FR2 bands, Rx Beam Peak values are increased by  $\Delta\text{MB}_{P,n}$  and spherical coverage values are increased by  $\Delta\text{MB}_{S,n}$ , the UE multi-band relaxation factor in dB specified in clause 6.2.1 of TS 38.101-2 [19].

NOTE 4: PRS  $\hat{E}_s/\text{lot}$  for RSTD measurement reference cell PRS resource.

NOTE 5: PRS  $\hat{E}_s/\text{lot}$  for RSTD measurement neighbor cell PRS resource, PRS-RSRP measurement and UE Rx-Tx time difference measurement.

NOTE 6: PRS  $\hat{E}_s/\text{lot}$  for PRS-RSRP measurement and UE Rx-Tx time difference measurement.

Editor's notes for Table B.2.14-2:

- The value of Y for power classes 1 and 4 is FFS, where Y<sub>1</sub> and Y<sub>4</sub> are the rough/fine beam gain differences in Rx beam peak direction for power classes 1 and 4 respectively
- The value of Z for power classes 1 and 4 is FFS, where Z<sub>1</sub> and Z<sub>4</sub> are the rough/fine beam gain differences in spherical coverage directions for power classes 1 and 4 respectively

## B.3 RRM Requirements Exceptions

### B.3.1 Introduction

Annex B.3 covers exceptions for side conditions based on receiver sensitivity for CA, DC, and SUL.

### B.3.2 Receiver sensitivity relaxation for CA

#### B.3.2.1 Receiver sensitivity relaxation for UE supporting CA in FR1

For a UE supporting inter-band carrier aggregation configuration with uplink in NR band, if there is a relaxation of receiver sensitivity  $\Delta\text{R}_{\text{IB},c} > 0$  dB as defined in clause 7.3A.3 of TS 38.101-1 [18], the relevant side conditions specifying

received power levels (SSB<sub>RP</sub> and I<sub>o</sub>) shall be increased by the amount  $\Delta=\Delta R_{IB,c}$  defined for the corresponding downlink NR bands.

For a UE supporting CA configuration in FR1, the requirement in this clause applies for both SC and CA operation.

## B.3.2.2 Receiver sensitivity relaxation for UE configured with CA in FR1

### B.3.2.2.1 Inter-band carrier aggregation

For a UE configured with inter-band carrier aggregation with active uplink in NR band, if there is a relaxation of receiver sensitivity  $\Delta R_{IB,c}>0$  dB as defined in clause 7.3A.3 of TS 38.101-1 [18], the relevant side conditions specifying received power levels (SSB<sub>RP</sub> and I<sub>o</sub>) shall be increased by the amount  $\Delta=\Delta R_{IB,c}$  defined for the corresponding downlink NR bands.

If the relaxation  $\Delta$  specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

#### B.3.2.2.2 Reference sensitivity exceptions due to UL harmonic interference for CA

In this clause, requirements exceptions are described for the UE configured with a band in FR1 when it is impacted by UL harmonic interference from another band in FR1 of the same CA configuration.

A relevant side condition (SSB<sub>RP</sub> and I<sub>o</sub>) in a requirement shall be increased by the amount  $\Delta=L2-L1$ , where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3A.4 of TS 38.101-1 [18], when the following conditions are fulfilled,

- corresponding downlink component carriers on different NR bands are configured with CA and active,
- the uplink is configured in the NR low operating band and is active,
- the uplink configuration is as specified in clause 7.3A.4 of TS 38.101-1 [18], and
- the exception requirements specified in clause 7.3A.4 of TS 38.101-1 [18] apply.

If the relaxation  $\Delta$  specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

#### B.3.2.2.3 Reference sensitivity exceptions due to intermodulation interference due to 2UL CA

In this clause, requirements exceptions are described for the UE with an inter-band carrier aggregation with uplink assigned to two NR bands.

A relevant side condition (SSB<sub>RP</sub> and I<sub>o</sub>) in a requirement shall be increased by the amount  $\Delta=L2-L1$ , where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3A.5 of TS 38.101-1 [18], when the following conditions are fulfilled,

- corresponding downlink component carriers on different bands are configured with CA and active,
- uplinks are assigned to two NR bands,
- the exception requirements specified in clause 7.3A.5 of TS 38.101-1 [18] apply.

If the relaxation  $\Delta$  specified in this clause applies, then the relaxation specified in clause B.3.2.1 should not be applied.

## B.3.2.3 Receiver sensitivity relaxation for UE supporting CA in FR2

## B.3.2.4 Receiver sensitivity relaxation for UE configured with CA in FR2

### B.3.2.4.1 Intra-band contiguous carrier aggregation

For a UE configured with intra-band contiguous carrier aggregation in NR band in FR2, if there is a relaxation of receiver sensitivity  $\Delta R_{IB}>0$  dB as defined in clause 7.3A.2.1 of TS 38.101-2 [19] depending on the aggregated channel bandwidth, the relevant side conditions specifying received power levels (SSB<sub>RP</sub> and I<sub>o</sub>) shall be increased by the amount  $\Delta=\Delta R_{IB}$  defined for the corresponding downlink NR bands.

#### B.3.2.4.2 Intra-band non-contiguous carrier aggregation

For a UE configured with intra-band non-contiguous carrier aggregation in NR band in FR2, if there is a relaxation of receiver sensitivity  $\Delta R_{IB} > 0$  dB as defined in clause 7.3A.2.1 of TS 38.101-2 [19] depending on the aggregated channel bandwidth, the relevant side conditions specifying received power levels (SSB\_RP and Io) shall be increased by the amount  $\Delta = \Delta R_{IB}$  defined for the corresponding downlink NR bands.

### B.3.3 Receiver sensitivity relaxation for DC

#### B.3.3.1 Receiver sensitivity relaxation for EN-DC

Editor's note: TBD

#### B.3.3.2 Receiver sensitivity relaxation for NE-DC

Editor's note: TBD

### B.3.4 Receiver sensitivity relaxation for SUL

#### B.3.4.1 Receiver sensitivity relaxation for UE supporting SUL in FR1

For a UE supporting a SUL configuration in FR1, if there is a relaxation of receiver sensitivity  $\Delta R_{IB,c} > 0$  dB as defined in clause 7.3C.3 of TS 38.101-1 [18], the relevant side conditions specifying received power levels (SSB\_RP and Io) shall be increased by the amount  $\Delta = \Delta R_{IB,c}$  defined for the corresponding downlink NR bands.

For a UE supporting a SUL configuration in FR1, the requirement in this clause applies for both SC and SUL operation.

#### B.3.4.2 Receiver sensitivity relaxation for UE configured with SUL in FR1

##### B.3.4.2.1 Reference sensitivity exceptions due to UL harmonic interference for SUL

In this clause, requirements exceptions are described for the UE with a band in FR1 when it is impacted by UL harmonic interference from another band in FR1 of the same SUL configuration.

A relevant side condition (SSB\_RP and Io) in a requirement shall be increased by the amount  $\Delta = L2 - L1$ , where L1 is the reference sensitivity level specified in clause 7.3.2 of TS 38.101-1 [18], and L2 is the reference sensitivity level based on the requirements in clause 7.3C.2 of TS 38.101-1 [18], when the following conditions are fulfilled,

- a downlink component carrier is configured in NR band and is active,
- the uplink is configured in the NR low operating band and is active,
- the uplink configuration is as specified in clause 7.3C.2 of TS 38.101-1 [18], and
- the exception requirements specified in clause 7.3C.2 of TS 38.101-1 [18] apply.

If the relaxation  $\Delta$  specified in this clause applies, then the relaxation specified in clause B.3.4.1 should not be applied.

---

## B.4 Conditions for V2X

### B.4.1 Test parameters for GNSS signals

This clause defines the reference signal power levels of generated satellites for a corresponding GNSS, which will be used in V2X test cases.

**Table B.4.1-1: GNSS Reference Signal Power Parameters**

| System             | Parameters                                      | Unit | Value  |
|--------------------|---|------|--------|
|                    | Number of generated satellites per system       | -    | 6      |
| GPS <sup>(1)</sup> | Reference signal power level for all satellites | dBm  | -128.5 |
| Galileo            | Reference signal power level for all satellites | dBm  | -127   |
| GLONASS            | Reference signal power level for all satellites | dBm  | -131   |
| BDS                | Reference signal power level for all satellites | dBm  | -133   |

NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on UE capabilities.  
NOTE 2: The DUT UE does not need to support all systems. The DUT UE shall support at least one system and will be test for the supported systems.

## B.4.2 Conditions for PSBCH-RSRP Accuracy Requirements

This clause defines the following conditions for PSBCH-RSRP measurement accuracy requirements applicable for a corresponding operating band.

The conditions are defined in Table B.4.2-1 for FR1.

**Table B.4.2-1: Conditions for PSBCH-RSRP measurements in FR1**

| Parameter | NR V2X operating band groups <sup>Note1</sup> | Minimum S-SSB <sub>RP</sub>  |                              |                              | S-SSB $\hat{E}_s/\text{lot}$ |
|-----------|---|------------------------------|------------------------------|------------------------------|------------------------------|
|           |   | dBm/SCS <sub>S-SSB</sub>     |                              |                              | dB                           |
|           |   | SCS <sub>S-SSB</sub> = 15kHz | SCS <sub>S-SSB</sub> = 30kHz | SCS <sub>S-SSB</sub> = 60kHz |                              |
|           | NR_TDD_FR1_B                                  | -126.5                       | -123.5                       | -120.5                       | ≥ -6                         |
|           | NR_TDD_FR1_J                                  | -122.5                       | -119.5                       | -116.5                       |                              |

NOTE 1: NR V2X operating band groups are as defined in Section 3.5 for the corresponding NR operating bands.

## B.4.3 Conditions for Selection/Reselection to Intra-frequency SyncRef UE

This clause defines the S-SSB<sub>RP</sub> and S-SSB  $\hat{E}_s/\text{lot}$  applicable for a corresponding operating band.

The conditions for selection/reselection to intra-frequency SyncRef UE are defined in Table B.4.3-1 for FR1.

**Table B.4.3-1: V2X synchronization measurements in FR1**

| Parameter | NR V2X operating band groups <sup>Note1</sup> | Minimum S-SSB <sub>RP</sub>  |                              |                              | S-SSB $\hat{E}_s/\text{lot}$ |
|-----------|---|------------------------------|------------------------------|------------------------------|------------------------------|
|           |   | dBm/SCS <sub>S-SSB</sub>     |                              |                              | dB                           |
|           |   | SCS <sub>S-SSB</sub> = 15kHz | SCS <sub>S-SSB</sub> = 30kHz | SCS <sub>S-SSB</sub> = 60kHz |                              |
|           | NR_TDD_FR1_B                                  | -120.5                       | -117.5                       | -114.5                       | ≥ 0                          |
|           | NR_TDD_FR1_J                                  | -116.5                       | -113.5                       | -110.5                       | ≥ 0                          |

NOTE 1: NR V2X operating band groups are as defined in Section 3.5 for the corresponding NR operating bands.  
NOTE 2: The SyncRef UE transmission frequency shall be accurate to within ±5 PPM compared to the absolute frequency.

## B.4.4 Conditions for L1 SL-RSRP Accuracy Requirements

This clause defines the following conditions for L1 SL-RSRP measurement accuracy requirements applicable for a corresponding operating band.

The conditions are defined in Table B.4.4-1 for FR1.

Table B.4.4-1: Conditions for L1 SL-RSRP measurements in FR1

| Parameter | NR V2X operating band groups <sup>Note1</sup> | Minimum L1 SL-RSRP |               |                | $\hat{E}_s/\text{lot}$ |
|-----------|---|--------------------|---------------|----------------|------------------------|
|           |   | dBm/SCS            |               |                | dB                     |
|           |   | SCS=<br>15kHz      | SCS=<br>30kHz | SCS =<br>60kHz |                        |
|           | NR_TDD_FR1_B                                  | -120.5             | -117.5        | -114.5         | $\geq 0$               |
|           | NR_TDD_FR1_J                                  | -116.5             | -113.5        | -110.5         |                        |

NOTE 1: NR V2X operating band groups are as defined in Section 3.5 for the corresponding NR operating bands.  
NOTE 2: The parameter  $\hat{E}_s/\text{lot}$  is the  $\hat{E}_s/\text{lot}$  of PSCCH-DMRS and/or PSSCH-DMRS.  
NOTE 3: The SCS is for PSCCH and/or PSSCH.

## Annex C (informative): Change history
