| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |              |         |                         |          |          |                         |          |          |

### A.6.6.9.1.2 Test Requirements

The UE behaviour during time durations T2 and T3 shall be as follows:

During the time period T2 the UE is in Idle mode and the signal level of cell 2 is changed. The UE shall not perform reselection. The UE shall perform Idle Mode CA measurement according to Section 4.4.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report for cell 2. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for Cell 2 meets the requirements in Section 10.X and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.10 CSI-RS based intra-frequency Measurements

### A.6.6.10.1 SA event triggered reporting tests without gap under non-DRX

#### A.6.6.10.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA CSI-RS based L3 intra-frequency requirements in clauses 9.10.2.

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in Table A.6.6.10.1.1-1 and A.6.6.10.1.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.10.1.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode                      |
| 2             | 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode                      |
| 3             | 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.10.1.1-2: General test parameters for SA intra-frequency event triggered reporting without gap for FR1**

| Parameter                                       | Unit | Test configuration | Value                | Comment  |
|---|------|--------------------|----------------------|--|
| Active cell                                     |      | 1, 2, 3            | Cell 1               |  |
| Neighbour cell                                  |      | 1, 2, 3            | Cell 2               | Cell to be identified and measured.  |
| RF Channel Number                               |      | 1, 2, 3            | 1: Cell 1 and Cell 2 |  |
| SSB configuration                               |      | 1                  | SSB.1 FR1            |  |
|   |      | 2                  | SSB.1 FR1            |  |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |                        |        |

### A.6.6.10.1.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.11 CSI-RS based inter-frequency Measurements

### A.6.6.11.1 SA event triggered reporting tests with gap under DRX

#### A.6.6.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA CSI-RS based L3 inter-frequency measurement requirements in clause 9.10.3.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.11.1.1-1, A.6.6.11.1.1-2 and A.6.6.11.1.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.6.6.11.1.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.6.6.11.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

UE needs to be provided at least once every 500 ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.11.1.1-1: SA event triggered reporting tests for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode                  |
| 2       | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode                  |
| 3       | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.6.6.11.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1**

| Parameter                                       | Unit    | Test configuration | Value             |        | Comment  |
|---|---------|--------------------|-------------------|--------|--|
|   |         |                    | Test 1            | Test 2 |  |

#### A.6.6.11.1.2 Test Requirements

In test 1 with per-UE gap and test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 9280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.12 RSTD measurements

##### A. 6.6.12.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR1 SA

###### A. 6.6.12.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 9.9.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are specified in Table A.6.6.12.1.1-1.

**Table A.6.6.12.1.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All 3 cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The general test parameters are listed in Table A.6.6.12.1.1-2, and cell specific test parameters are listed in Table A.6.6.12.1.1-3.

**Table A.6.6.12.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter   | Unit         | Value   | Comment  |
|---|--------------|---|--|
| Reference cell  |              | Cell 1  | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355[34]. The reference cell is the PCell in this test case. |
| Neighbor cells  |              | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.   |
| SSB configuration   | Config 1     | SSB.1 FR1   |  |
|   | Config 2     | SSB.1 FR1   |  |
|   | Config 3     | SSB.2 FR1   |  |
| SMTC configuration  | Config 1     | SMTC.2  |  |
|   | Config 2     | SMTC.1  |  |
|   | Config 3     | SMTC.1  |  |
| PDSCH RMC configuration   | Config 1     | SR.1.1 FDD  |  |
|   | Config 2     | SR.1.1 TDD  |  |
|   | Config 3     | SR.2.1 TDD  |  |
| RMSI CORESET RMC configuration  | Config 1     | CR.1.1 FDD  | As specified in clause A.3.1.2.1   |
|   | Config 2     | CR.1.1 TDD  |  |
|   | Config 3     | CR.2.1 TDD  |  |
| Dedicated CORESET RMC configuration   | Config 1     | CR.1.1 FDD  |  |
|   | Config 2     | CR.1.1 TDD  |  |
|   | Config 3     | CR.2.1 TDD  |  |
| Initial BWP configuration   | Config 1,2,3 | DLBWP.0.1<br>ULBWP.0.1  |  |
| Active DL BWP configuration   | Config 1,2,3 | DLBWP.1.1   |  |
| Active UL BWP configuration   | Config 1,2,3 | ULBWP.1.1   |  |
| PRS Configuration   | Config 1     | PRS.1.1 FR1   | As specified in clause A.3.31  |
|   | Config 2     | PRS.1.2 FR1   |  |
|   | Config 3     | PRS.2.1 FR1   |  |
| Physical cell ID PCI  |              | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters   |
| CP length   |              | Normal  |  |
| DRX   |              | OFF   |  |
| Measurement gap   |              | GP#24 or GP#0   | GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured   |
| Radio frame receive time offset between the cells at the UE antenna connector | µs           | Cell 2 to Cell 1: 0<br>Cell 3 to Cell 1: 3  | PRS are transmitted from synchronous cells   |
| Expected RSTD   | µs           | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells:<br>randomly between -3 and 3         | The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD indicator   |

|   |    |  |   |
|---|----|--|---|
| Expected RSTD uncertainty for all neighbour cells   | µs | 5  | The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD-Uncertainty index |
| Number of cells provided in DL-TDOA assistance data |    | 16   | Including the reference cell  |
| PRS muting info                                     |    | Cell 1: '10'<br>Cell 2: '01'<br>Cell 3: '10' | Corresponds to prs-MutingInfo defined in TS 37.355 [34]   |
| PRS resource RE offset                              |    | Cell 1: 0<br>Cell 2: 0<br>Cell 3: 1          | Cell 1 and Cell 3 are configured with different resource offsets  |
| T1  | s  | 3  | The length of the time interval from the beginning of each test   |
| T2  | s  | [1..28]                                      | The length of the time interval that follows immediately after time interval T1   |

**Table A.6.6.12.1.1-3: Cell-specific test parameters for RSTD measurement reporting delay during T1**

### A.6.6.12.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.1.5 starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 10.1.23.3, i.e., between RSTD\_0000000 and RSTD1970049

## A. 6.6.12.2 NR RSTD measurement reporting delay test case for dual positioning frequency layers in FR1 SA

### A. 6.6.12.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 9.9.2 in an environment with AWGN propagation conditions in FR1 in standalone scenario when dual positioning frequency layers are configured.

The supported test configurations are specified in Table A.6.6.12.2.1-1.

**Table A.6.6.12.2.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. Cell 3 is on a different RF channel with Cell 1 and Cell 2.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2.

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #0 before T2.

The general test parameters are listed in Table A.6.6.12.2.1-2, and cell specific test parameters are listed in Table A.6.6.12.2.1-3.

**Table A.6.6.12.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter   |              | Unit | Value   | Comment  |
|---|--------------|------|---|--|
| Reference cell  |              |      | Cell 1  | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355[34]. The reference cell is the PCell in this test case. |
| Neighbor cells  |              |      | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.   |
| SSB configuration   | Config 1     |      | SSB.1 FR1   |  |
|   | Config 2     |      | SSB.1 FR1   |  |

### A.6.6.12.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.1.5 starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 10.1.23.3, i.e., between RSTD\_0000000 and RSTD\_1970049.

## A.6.6.13 PRS-RSRP measurements

### A.6.6.13.1 PRS-RSRP reporting delay test case for single positioning frequency layer

#### A.6.6.13.1.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 9.9.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in Table A.6.6.13.1.1-1.

**Table A.6.6.13.1.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cell. Both cells are on the same NR RF channel in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is  $\Delta T$  after slot #n, where  $\Delta T = 50$  ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in Table A.6.6.13.1.1-2, and cell specific test parameters are listed in Table A.6.6.13.1.1-3.

**Table A.6.6.13.1.1-2: General test parameters**

| Parameter   | Unit | Test configuration | Value                           | Comment   |
|---|------|--------------------|---------------------------------|---|
| Reference cell  |      | 1, 2, 3            | Cell 1                          | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell  |      | 1, 2, 3            | Cell 2                          | Cell 2 is a neighbour cell in the positioning assistance data.                        |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |             |        |

### A.6.6.13.1.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.3.5, starting from the beginning of time interval T2.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.13.2 PRS-RSRP reporting delay test case for dual positioning frequency layer

#### A.6.6.13.2.1 Test purpose and Environment

The purpose of the test is to verify that the PRS-RSRP measurement meets the delay requirements specified in clause 9.9.3.5 in an environment with AWGN propagation conditions.

The supported test configurations are specified in Table A.6.6.13.2.1-1.

**Table A.6.6.13.2.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR1. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR1. The test consists of two consecutive time intervals, with duration of T1 and T2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is  $\Delta T$  after slot #n, where  $\Delta T = 50$  ms is the maximum processing time of the assistance data and location information request.

The general test parameters are listed in Table A.6.6.13.2.1-2, and cell specific test parameters are listed in Table A.6.6.13.2.1-3.

Table A.6.6.13.2.1-2: General test parameters

| Parameter   | Unit | Test configuration | Value                           | Comment   |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP/PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |             |        |

### A.6.6.13.2.2 Test Requirements

The UE shall perform and report the PRS-RSRP measurements for Cell 1 and Cell 2, within the time limit specified in clause 9.9.3.5, starting from the beginning of time interval T2.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.14 UE Rx-Tx time difference measurements

### A.6.6.14.1 UE Rx-Tx time difference measurement for single positioning frequency layer in FR1 SA

#### A.6.6.14.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in Table A.6.6.14.1.1-1.

**Table A.6.6.14.1.1-1: Supported test configurations**

| Configuration   | Description                                       |
|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in Table A.6.6.14.1.1-2 and Table A.6.6.14.1.1-3 respectively.

Table A.6.6.14.1.1-2: General test parameters

| Parameter   | Unit | Test configuration | Value                           | Comment   |
|---|------|--------------------|---------------------------------|---|
| Active cell   |      | 1, 2, 3            | Cell 1                          | Cell 1 is the PCell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34].        |
| Neighbour cell  |      | 1, 2, 3            | Cell 2                          | Cell 2 is a neighbour cell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34]. |
| RF Channel Number   |      | 1, 2, 3            | 1                               | For both Cell 1 and Cell 2  |
| BW <sub>channel</sub>   | MHz  | 1                  | 10: N <sub>RB,c</sub> = 52      |   |
|   |      | 2                  | 10: N <sub>RB,c</sub> = 52      |   |
|   |      | 3                  | 40: N <sub>RB,c</sub> = 106     |   |
| SSB configuration   |      | 1                  | SSB.1 FR1                       |   |
|   |      | 2                  | SSB.1 FR1                       |   |
|   |      | 3                  | SSB.2 FR1                       |   |
| SMTC configuration  |      | 1                  | SMTC.2                          |   |
|   |      | 2                  | SMTC.1                          |   |
|   |      | 3                  | SMTC.1                          |   |
| Measurement gap   |      | 1, 2, 3            | GP#24 or GP#0 <sup>Note 1</sup> |   |
| CP length   |      | 1, 2, 3            | Normal                          |   |
| DRX   |      | 1, 2, 3            | OFF                             |   |
| Time offset between serving and neighbour cells                                 | μs   | 1, 2, 3            | 3                               | Synchronous cells   |
| T1  | s    | 1, 2, 3            | 5                               |   |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |             |        |

Table A.6.6.14.1.1-4: Void

### A.6.6.14.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.6.14.2 UE Rx-Tx time difference measurement for dual positioning frequency layers in FR1 SA

#### A.6.6.14.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR1 in standalone scenario when dual positioning frequency layers are configured.

The supported test configurations are listed in Table A.6.6.14.2.1-1.

**Table A.6.6.14.2.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). Cell 1 and Cell 2 are on different RF channels in FR1.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #0 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in Table A.6.6.14.2.1-2 and Table A.6.6.14.2.1-3 respectively.

Table A.6.6.14.2.1-2: General test parameters

| Parameter   | Unit | Test configuration | Value                           | Comment   |

Table A.6.6.14.2.1-4: Void

#### A.6.6.14.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

### A.6.6.15 Idle Mode measurements of inter-RAT CA candidate cells for early reporting

#### A.6.6.15.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly retains the detected cell status for the idle mode CA measurement when UE transitions from RRC Connected mode to Idle mode, when the UE has entered Idle mode. Additionally, test that the UE performs the required measurements on the serving cell and the configured inter-RAT carrier for idle mode measurement reporting. This test will partly verify the Idle mode CA measurements in clause 4.4. In the test, connected mode DRX configuration is not configured in either PCell or PSCell.

Additionally, the purpose of this test is to verify that the SS-RSRP, SS-RSRQ, RSRP and RSRQ measurement accuracy is within the specified limits. This test will verify the accuracy requirements in Sections 10.1.2B and 10.1.7B for intra-frequency measurements and section 10.2.4 and 10.2.5 for the inter-RAT measurements for the supported test configurations in tables A.6.6.15.1-4 and A.6.6.15.1-5.

The supported test configurations are given in Table A.6.6.15.1-1. The test parameters are given in Tables A.6.6.15.1-2, A.6.6.15.1-3, A.6.6.15.1-4 and A.6.6.15.1-5 below. In the test there are two cells, cell 1, which is the PCell in connected, and serving cell in idle mode, on radio channel 1 in FR1, and cell 2, which is the PSCell in connected, and measured LTE inter-RAT cell in idle mode, on radio channel 2 in LTE.

For the purpose of testing absolute accuracy in idle mode in this set of test cases the cells in idle mode are on different carrier frequencies (NR FR1 and LTE). The absolute accuracy of RSRP and RSRQ inter-RAT measurements are tested by using the parameters in Table A.6.6.15.1-4 and Table A.6.6.15.1-5. In all test cases, Cell 1 is the serving and Cell 2 the target cell.

The test consists of 5 successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. During T1 cell 2, the PSCell, shall be configured.

Time duration T2 starts when UE has transmitted random access preamble on the PSCell. After T2, the UE is configured with idle mode CA measurements with the PSCell carrier as the target carrier. The connection is released [500]ms after T2 when the UE has sent random access preamble on the PSCell.

T3 starts when the connection is released. During the time periods T3 and T4 the UE is in Idle mode with the serving cell on the FR1 carrier. The UE is configured to perform inter-RAT idle mode CA/DC measurements on Cell 2 carrier. After the connection release and during T3, [1000] ms after T3 is started, the signal level of the inter-RAT carrier configured for idle mode CA/DC measurements is changed at which time T4 starts. T5 starts [65]s after T4, when the UE is paged for connection setup and UE is requested by the network to report idle mode CA/DC measurements.

**Table A.6.6.15.1-1: Supported test configurations for Idle Mode measurements of inter-frequency CA candidate cells for early reporting**

| Config   | Description                                    |
|--|--|
| 1  | FR1 FDD SSB SCS 15kHz BW 10MHz – LTE FDD 10MHz |
| 2  | FR1 FDD SSB SCS 15kHz BW 10MHz – LTE TDD 10MHz |
| 3  | FR1 TDD SSB SCS 30kHz BW 40MHz – LTE FDD 10MHz |
| 4  | FR1 TDD SSB SCS 30kHz BW 40MHz – LTE TDD 10MHz |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.6.15.1-2: General test parameters for Idle Mode measurements of inter-frequency CA candidate cells for early reporting**

| Parameter   | Unit | Value       | Comment   |
|---|------|-------------|---|
| RF Channel Number   |      | 1, 2        | Two radio channels are used for this test   |
| Active PCell  |      | Cell 1      | PCell on RF channel number 1 in FR1   |
| PSCell  |      | Cell 2      | PSCell on RF channel number 2 in LTE  |
| DRX   |      | OFF         | For both PCell and PSCell once configured   |
| PRACH configuration in Cell 2                                 |      | [PRACH_2CE] | PRACH configuration as specified in Clause A.3.16 in TS 36.133  |
| CSI reporting periodicity and offset configuration for Cell 2 | ms   | 2           |   |
| T1  | s    | [0.5]       | During this time the PCell is known and PSCell is configured.   |
| T2  | s    | [0.5]       | PSCell access.  |
| T3 + T4   | s    | [66]        | During this time the UE is configured to perform inter-frequency measurements in idle mode on the PSCell carrier. |
| T5  | s    | [0.5]       | UE is paged and connection is setup. Network requests measurement report from the UE.                             |

**Table A.6.6.15.1-3: Cell specific test parameters for NR cell for Idle Mode measurements of inter-frequency CA candidate cells for early reporting**

| Parameter  | Unit             | Config  | Test 1                  |          |          |          |          |

**Table A.6.6.15.1-5: General idle mode test parameters for Idle Mode measurements of inter-frequency CA candidate cells for early reporting**

| Parameter                       | Unit | Test configuration | Value          | Comment   |
|---------------------------------|------|--------------------|----------------|---|
| Serving cell                    |      | 1, 2, 3, 4         | Cell1          | The UE camps on cell 1 which is the former PCell.                                       |
| Neighbour cell                  |      | 1, 2, 3, 4         | Cell2          | The UE shall perform inter-frequency measurements on cell 2 which is the former PSCell. |
| RF Channel Number               |      | 1, 2, 3, 4         | 1, 2           |   |
| Time offset between cells       |      | 1, 2, 3, 4         | 3 $\mu$ s      | Synchronous cells   |
| Access Barring Information      | -    | 1, 2, 3, 4         | Not Sent       | No additional delays in random access procedure.  |
| SSB configuration               |      | 1, 2               | SSB.1 FR1      | Serving cell  |
|                                 |      | 3, 4               | SSB.2 FR1      | Serving cell  |
| SMTC configuration Serving cell |      | 1, 2, 3, 4         | SMTC.2         |   |
| DRX cycle length                | s    | 1, 2, 3, 4         | 1.28           | The value shall be used for all cells in the test.                                      |
| PRACH configuration index       |      | 1, 2, 3, 4         | 190            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                     |
| rangeToBestCell                 |      | 1, 2, 3, 4         | Not configured |   |
| T3                              | s    | 1, 2, 3, 4         | [0.5]          | T3 needs to be defined so that cell measurement time is taken into account.             |
| T4                              | s    | 1, 2, 3, 4         | [65]           | T4 needs to be defined so that cell measurement time is taken into account.             |

### A.6.6.15.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During time durations T1 the UE shall start transmitting preamble on PSCell. During T2 the UE perform intra-frequency measurements on the PCell and the PSCell.

During the time-period T3 the connection is released, and UE enters idle mode. During the time period T3 and T4 the UE is camped in Idle mode and at T4 the signal level of cell 2 is changed. The UE shall not perform reselection. The UE shall perform Idle Mode CA measurement according to Section 4.4.

At the start of T5 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell including idle mode CA/DC measurement from cell 2.

After receiving the requested early measurement report, the test equipment verifies that the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in Sections 10.1.2B and 10.1.7B and Sections 10.2.4 and 10.2.5, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in Clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported

measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in Clause 10 for at least 90% of the reported cases.

- Measurements are performed in RRC\_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

## A.6.7.1 SS-RSRP

### A.6.7.1.1 SA: intra-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.2.1.1 and 10.1.2.1.2 for intra-frequency measurements.

#### A.6.7.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in A.6.7.1.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

**Table A.6.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode  |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

**Table A.6.7.1.1.2-2: SS-RSRP Intra frequency test parameters**

| Parameter                            |            | Unit | Test 1                      |           | Test 2      |           | Test 3      |           |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Subtest 1 is not used when testing with 30kHz SSB SCS.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification</p> |              |   |                  |                                     |        |        |        |        |

### A.6.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy for cell 1 and cell 2 shall fulfil absolute requirement in clause 10.1.2.1.1 and relative requirement in clause 10.1.2.1.2.

### A.6.7.1.2 SA inter-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.4.1.1 and 10.1.4.1.2 for inter-frequency measurements with the testing configurations for NR cells in Table A.6.7.1.2.1-1.

**Table A.6.7.1.2.1-1: Applicable NR configurations for FR1 inter-frequency SS-RSRP accuracy test**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode  |
| 3             | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.6.7.1.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.6.7.1.2.2-1 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.6.7.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.6.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter   | Config   | Unit | Test 1                      |        | Test 2                      |                                     |        |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |                               |                      |        |    |   |        |

A.6.7.1.2.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirement in clause 10.1.4.1.1 and relative requirement in clause 10.1.4.1.2.

A.6.7.1.3 Void

A.6.7.2 SS-RSRQ

A.6.7.2.1 SA: Intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

A.6.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.7.1.1.

A.6.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.6.7.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is tested by using the parameters in Table A.6.7.2.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ, SS-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |       |   |                  |        |        |        |        |        |        |

### A.6.7.2.1.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.7.1.1.

## A.6.7.2.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

### A.6.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.9.1.1 and 10.1.9.1.2.

### A.6.7.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.6.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in Table A.6.7.2.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                              |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ, SS-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRQ, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |  |              |   |          |      |      |      |          |          |

### A.6.7.2.2.3 Test Requirements

The SS-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.9.1.1 and 10.1.9.1.2.

## A.6.7.3 SS-SINR

### A.6.7.3.1 SA intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.12.1.1.

#### A.6.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.6.7.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is tested by using the parameters in Table A.6.7.3.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.7.3.1.2-2: SS-SINR Intra frequency test parameters**

| Parameter                                |   | Unit           | Test 1           |        | Test 2         |        |

| <p>Note 1: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-SINR, SS-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |   |                  |        |        |

**A.6.7.3.1.3 Test Requirements**

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.12.1.1.

**A.6.7.3.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell**

**A.6.7.3.2.1 Test Purpose and Environment**

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.14.1.1 and 10.1.14.1.2.

**A.6.7.3.2.2 Test Parameters**

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.6.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in Table A.6.7.3.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-SINR, SS-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-SINR, SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |   |                  |        |        |       |

### A.6.7.3.2.3 Test Requirements

The SS-SINR measurement accuracy shall fulfil the requirements in clause 10.1.14.1.1 and 10.1.14.1.2.

## A.6.7.4 L1-RSRP measurement for beam reporting

### A.6.7.4.1 SSB based L1-RSRP measurement

#### A.6.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.5.2 and clause 10.1.19.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.6.7.4.1.1-1.

**Table A.6.7.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode  |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.6.7.4.1.2 Test parameters

In this set of test cases there one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.4.1.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.6.7.4.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

**Table A.6.7.4.1.2-1: FR1 SSB based L1-RSRP test parameters**

| <p>Note 1: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |     |                  |        |        |

A.6.7.4.1.3 Test Requirements

The L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.19.1.

A.6.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

A.6.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.5.3 and clause 10.1.19.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in Table A.6.7.4.2.1-1.

**Table A.6.7.4.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config  | Description   |
|---|---|
| 1   | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | NR 30kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |   |

A.6.7.4.2.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.4.2.2-1 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.6.7.4.2.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.6.7.4.2.2-1: FR1 CSI-RS based L1-RSRP test parameters**

| Parameter   | Config                                  | Unit   | Test 1                      | Test 2                      |     |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |                               |                  |        |        |

#### A.6.7.4.2.3 Test Requirements

The L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.19.2.

### A.6.7.5 E-UTRAN RSRP

#### A.6.7.5.1 SA: inter-RAT measurement accuracy with FR1 serving cell

##### A.6.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.2 for SA inter-RAT E-UTRAN RSRP measurements.

##### A.6.7.5.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.5.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RSRP are tested by using the parameters in A.6.7.5.1.2-2 and A.6.7.5.1.2-3.

**Table A.6.7.5.1.2-1: Inter-RAT E-UTRAN RSRP supported test configurations with FR1 serving cell**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD                |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN TDD                |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

### A.6.7.5.1.3 Test Requirements

The SA inter-RAT E-UTRAN RSRP measurement accuracy for cell 2 shall fulfil absolute requirement in clause 10.2.2.

## A.6.7.6 E-UTRAN RSRQ

### A.6.7.6.1 SA: inter-RAT measurement accuracy with FR1 serving cell

#### A.6.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.3 for SA inter-RAT E-UTRAN RSRQ measurements.

#### A.6.7.6.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.6.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RSRQ are tested by using the parameters in A.6.7.6.1.2-2 and A.6.7.6.1.2-3.

**Table A.6.7.6.1.2-1: Inter-RAT E-UTRAN RSRQ supported test configurations with FR1 serving cell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD                |
| 2                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 3                    | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 4                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN TDD                |
| 5                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| 6                    | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| Note:                | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.7.6.1.2-2: NR Cell specific test parameters for SA Inter-RAT E-UTRAN RSRQ test parameters**

### A.6.7.6.1.3 Test Requirements

The SA inter-RAT E-UTRAN RSRQ measurement accuracy for cell 2 shall fulfil absolute requirement in clause 10.2.3.

## A.6.7.7 E-UTRAN RS-SINR

### A.6.7.7.1 SA: inter-RAT measurement accuracy with FR1 serving cell

#### A.6.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the E-UTRAN RS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.2.4 for SA inter-RAT E-UTRAN RS-SINR measurements.

#### A.6.7.7.1.2 Test parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an E-UTRAN inter-RAT neighbour cell. Supported test configurations are shown in table A.6.7.7.1.2-1. The measurement accuracy of SA inter-RAT E-UTRAN RS-SINR are tested by using the parameters in A.6.7.7.1.2-2 and A.6.7.7.1.2-3.

**Table A.6.7.7.1.2-1: Inter-RAT E-UTRAN RS-SINR supported test configurations with FR1 serving cell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN FDD                |
| 2                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 3                    | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN FDD                |
| 4                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, E-UTRAN TDD                |
| 5                    | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| 6                    | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, E-UTRAN TDD                |
| Note:                | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.7.1.2-2: NR Cell specific test parameters for SA Inter-RAT E-UTRAN RS-SINR test parameters**

### A.6.7.7.1.3 Test Requirements

The SA inter-RAT E-UTRAN RS-SINR measurement accuracy for cell 2 shall fulfil absolute requirement in clause 10.2.4.

## A.6.7.8 CLI measurements

### A.6.7.8.1 SA SRS-RSRP measurement accuracy with FR1 serving cell

#### A.6.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.1.1 with the testing configurations for NR cells in Table A.6.7.8.1.1-1.

**Table A.6.7.8.1.1-1: Applicable NR configurations for FR1 SRS-RSRP accuracy test**

| <b>Config</b>   | <b>Description</b>                               |
|---|--|
| 1   | 15kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode |
| 2   | 30kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |  |

#### A.6.7.8.1.2 Test parameters

In this set of test cases there is one cell in the test, FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.8.1.2-1 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in Table A.6.7.8.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in Table A.6.7.8.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 1 data symbol before SRS to be transmitted.

**Table A.6.7.8.1.2-1: FR1 test parameters for SRS-RSRP accuracy for PCell**

| Note 1: | OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.   |  |  |  |        |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |  |  |  |        |
| Note 3: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification  |  |  |  |        |
| Note 4: | Test 1 is not used when testing with 30kHz SSB SCS   |  |  |  |        |

- Note 1: The resources for uplink transmission are assigned to the UE prior to the start of the test.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3: RSRP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.
- Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.
- Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification
- Note 6: Test 1 is not used when testing with 30kHz SSB SCS

### A.6.7.8.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the requirements in clauses 10.1.22.1.1.

## A.6.7.8.2 SA CLI-RSSI measurement accuracy with FR1 serving cell

### A.6.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.2.1 with the testing configurations for NR cells in Table A.6.7.8.2.1-1.

**Table A.6.7.8.2.1-1: Applicable NR configurations for FR1 CLI-RSSI accuracy test**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode  |
| 2      | NR 30kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

### A.6.7.8.2.2 Test parameters

In this set of test cases there is one cell in the test, the FR1 PSCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.8.2.2-1 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 1 data symbol before. The CLI-RSSI measurement resource configuration is in Table A.6.7.8.2.2-2.

**Table A.6.7.8.2.2-1: FR1 test parameters for CLI-RSSI accuracy**

| Parameter  | Config | Unit         | Value                       |
|--|--------|--------------|-----------------------------|

### A.6.7.8.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the requirements in clauses 10.1.22.2.1.

## A.6.7.9 L1-SINR measurement for beam reporting

### A.6.7.9.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

#### A.6.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.8.4.1 and clause 10.1.27.1 for L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in Table A.6.7.9.1.1-1.

**Table A.6.7.9.1.1-1: Applicable NR configurations for FR1 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode   |
| 2             | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode   |
| 3             | NR 30kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.6.7.9.1.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.9.1.2-1 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.6.7.9.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.6.7.9.1.2-1: FR1 CSI-RS based L1-SINR test parameters**

| Parameter   | Config                                  | Unit | Test 1                      | Test 2                      |        |
|---|---|------|-----------------------------|-----------------------------|--------|

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |   |    |                  |        |        |

#### A.6.7.9.1.3 Test Requirements

The L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.27.1.

#### A.6.7.9.2 L1-SINR measurement with SSB based CMR and dedicated IMR

##### A.6.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 9.8.4.2 and clause 10.1.27.2 for L1-SINR measurements with SSB based CMR and dedicated CSI-RS based IMR, with the testing configurations for NR cells in Table A.6.7.9.2.1-1.

**Table A.6.7.9.2.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode  |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

##### A.6.7.9.2.2 Test parameters

In this set of test cases there one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.9.2.2-1 below. The absolute accuracy of L1-SINR measurements are tested by using the parameters in Table A.6.7.9.2.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-RS resource set with two CSI-RS resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

**Table A.6.7.9.2.2-1: FR1 SSB based L1-SINR test parameters**

| Parameter   | Config                                  | Unit | Test 1                 | Test 2                 |

| Propagation condition |  | 1~3 |  | AWGN | AWGN   |
| Antenna configuration |  | 1~3 |  | 1x2  | 1x2    |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |     |  |      |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |     |  |      |        |
| Note 3:               | RSRP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |     |  |      |        |
| Note 4:               | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |     |  |      |        |
| Note 5:               | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.   |     |  |      |        |

A.6.7.9.2.3 Test Requirements

The L1-SINR measurement accuracy for SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 of Cell 1 shall fulfil the requirements in clauses 10.1.27.2.

A.6.7.9.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

A.6.7.9.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in Clauses 9.8.4.3 and clause 10.1.27.3 for L1-SINR measurements based on CSI-RS as CMR and CSI-IM as IMR with the testing configurations for NR cells in Table A.6.7.9.3.1-1.

**Table A.6.7.9.3.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode   |
| 2      | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode   |
| 3      | NR 30kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

A.6.7.9.3.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.7.9.3.2-1 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.6.7.9.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources and one CSI-IM resource set with two CSI-IM resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as CMR and CSI-IM as IMR.

**Table A.6.7.9.3.2-1: FR2 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| Parameter   | Config       | Unit   | Test 1                      | Test 2                      |   |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |     |                  |        |        |

A.6.7.9.3.3 Test Requirements

The L1-SINR measurement accuracy for CSI-RS#0+CSI-IM#0 and CSI-RS#1+CSI-IM# of Cell 1 shall fulfil the requirements in clause 10.1.27.3.A.7 NR standalone tests with one or more NR cells in FR2.

A.6.7.10 CSI-RSRP

A.6.7.10.1 SA: intra-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

A.6.7.10.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.2.3.1 and 10.1.2.3.2 for CSI-RS intra-frequency measurements.

A.6.7.10.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.10.1.2-1. Both absolute and relative accuracy of CSI-RSRP intra-frequency measurements are tested by using the parameters in A.6.7.10.1.2-2. In all test cases, Cell 1 is the PCell, and Cell 2 is the target cell.

**Table A.6.7.10.1.2-1: CSI-RSRP intra frequency supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode   |
| 2      | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode   |
| 3      | NR 30kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

**Table A.6.7.10.1.2-2: CSI-RSRP intra frequency test parameters**

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | CSI-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | Subtest 1 is not used when testing with 30kHz SSB and CSI-RS SCS.  |
| Note 6: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification  |

### A.6.7.10.1.3 Test Requirements

The CSI-RSRP measurement accuracy for cell 1 and cell 2 shall fulfil absolute requirement in clause 10.1.2.3.1 and relative requirement in clause 10.1.2.3.2.

## A.6.7.10.2 SA inter-frequency case measurement accuracy with FR1 serving cell and FR1 target cell

### A.6.7.10.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.4.3.1 and 10.1.4.3.2 for CSI-RS inter-frequency measurements with the testing configurations for NR cells in Table A.6.7.10.2.1-1.

**Table A.6.7.10.2.1-1: Applicable NR configurations for FR1 inter-frequency CSI-RSRP accuracy test**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode   |
| 2      | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode   |
| 3      | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

### A.6.7.10.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.6.7.10.2.2-1 below. Both absolute and relative accuracy of CSI-RSRP inter-frequency measurements are tested by using the parameters in Table A.6.7.10.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.6.7.10.2.2-1: CSI-RSRP inter-frequency test parameters**

| Parameter                           | Config | Unit | Test 1                      |        | Test 2                      |        |
|-------------------------------------|--------|------|-----------------------------|--------|-----------------------------|--------|
|                                     |        |      | Cell 1                      | Cell 2 | Cell 1                      | Cell 2 |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-RSRP and I<sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |                         |     |                      |        |   |        |         |

### A.6.7.10.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirement in clause 10.1.4.3.1 and relative requirement in clause 10.1.4.3.2.

## A.6.7.11 CSI-RSRQ

### A.6.7.11.1 SA: Intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.7.2.

#### A.6.7.11.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.6.7.11.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is tested by using the parameters in Table A.6.7.11.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.11.1.2-1: Intra frequency CSI-RSRQ supported test configurations**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode                  |
| 2             | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode                  |
| 3             | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.7.11.1.2-2: CSI-RSRQ Intra frequency test parameters**

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP, and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | NR operating band groups are as defined in clause 3.5.2.   |
| Note 6: | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.   |

#### A.6.7.11.1.3 Test Requirements

The CSI-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.7.2.

#### A.6.7.11.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

##### A.6.7.11.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.9.2.1 and 10.1.9.2.2.

##### A.6.7.11.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.6.7.11.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test parameters in Table A.6.7.11.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.11.2.2-1: CSI-RSRQ Inter frequency CSI-RSRQ supported test configurations**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode                          |
| 2             | NR 15 kHz CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode                          |
| 3             | NR 30 kHz CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode                          |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: SS-RSRQ/CSI-RSRQ, SS-RSRP/CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |  |     |        |        |          |       |      |      |

### A.6.7.11.2.3 Test Requirements

The CSI-RSRQ measurement accuracy shall fulfil the requirements in clause 10.1.9.2.1 and 10.1.9.2.2.

## A.6.7.12 CSI-SINR

### A.6.7.12.1 SA intra-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.12.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.12.2.1.

#### A.6.7.12.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.6.7.12.1.2-1. The absolute accuracy of CSI-SINR intra-frequency measurement is tested by using the parameters in Table A.6.7.12.1.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is the target cell.

**Table A.6.7.12.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations**

| Config   | Description   |
|--|---|
| 1  | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.6.7.12.1.2-2: CSI-SINR Intra frequency test parameters**

| Parameter                            |            | Unit | Test 1               |        | Test 2      |        |

| <p>Note 1: OCNB shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-SINR, CSI-RSRP, and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: CSI-SINR, CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |            |   |                  |        |        |

### A.6.7.12.1.3 Test Requirements

The CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.12.2.1.

### A.6.7.12.2 SA Inter-frequency measurement accuracy with FR1 serving cell and FR1 target cell

#### A.6.7.12.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.14.2.1 and 10.1.14.2.2.

#### A.6.7.12.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.6.7.12.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test parameters in Table A.6.7.12.2.2-2. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A.6.7.12.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, FDD duplex mode                  |
| 2             | NR 15 kHz SSB and CSI-RS SCS, 10 MHz bandwidth, TDD duplex mode                  |
| 3             | NR 30 kHz SSB and CSI-RS SCS, 40 MHz bandwidth, TDD duplex mode                  |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-SINR, CSI-RSRP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: CSI-SINR, CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: NR operating band groups are as defined in clause 3.5.2.</p> <p>Note 6: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |                                      |                                      |       |     |      |  |  |

### A.6.7.12.2.3 Test Requirements

The CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.14.2.1 and 10.1.14.2.2.

## A.6.7.13 RSTD measurements

### A.6.7.13.1 RSTD measurement accuracy test case for single positioning frequency layer

#### A.6.7.13.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in Table A.6.7.13.1.1-1.

**Table A.6.7.13.1.1-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR1. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

**Table A.6.7.13.1.1-2: RSTD accuracy test parameters**

| Parameter   | Config  | Unit | Test 1                      |        | Test 2                      |        |
|---|---------|------|-----------------------------|--------|-----------------------------|--------|
|   |         |      | Cell 1                      | Cell 2 | Cell 1                      | Cell 2 |
| PRS ARFCN   | 1~3     |      | freq1                       | Freq1  | freq1                       | Freq1  |
| BW <sub>channel</sub>                             | 1       | MHz  | 10: N <sub>RB,c</sub> = 52  |        | 10: N <sub>RB,c</sub> = 52  |        |
|   | 2       |      | 10: N <sub>RB,c</sub> = 52  |        | 10: N <sub>RB,c</sub> = 52  |        |
|   | 3       |      | 40: N <sub>RB,c</sub> = 106 |        | 40: N <sub>RB,c</sub> = 106 |        |
| Duplex mode                                       | 1       |      | FDD                         |        | FDD                         |        |

| Propagation condition | 1~3  | -                    | AWGN   |            | AWGN   |        |
| Antenna configuration | 1~3  |                      | 1x2    |            | 1x2    |        |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                      |        |            |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                      |        |            |        |        |
| Note 3:               | RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                      |        |            |        |        |
| Note 4:               | RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |                      |        |            |        |        |
| Note 5:               | The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.   |                      |        |            |        |        |

#### A.6.7.13.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.7.13.2 RSTD measurement accuracy test case for dual positioning frequency layer

#### A.6.7.13.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in Table A.6.7.13.2.1-1.

**Table A.6.7.13.2.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR1. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR1. GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

**Table A.6.7.13.2.1-2: RSTD accuracy test parameters**

| Parameter   | Config  | Unit | Test 1                      |        | Test 2                      |        |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: The test configuration excludes support for band n51 and it is not required to run this test on band n51 in this release of the specification.</p> |     |                      |        |        |        |        |

#### A.6.7.13.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

### A.6.7.14 PRS-RSRP measurements

#### A.6.7.14.1 SA: measurement accuracy with PRS in FR1

##### A.6.7.14.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

##### A.6.7.14.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in table A.6.7.14.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in A.6.7.14.1.2-2. In all test cases, Cell 1 is the PCell.

**Table A.6.7.14.1.2-1: PRS-RSRP supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode  |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

**Table A.6.7.14.1.2-2: PRS-RSRP test parameters**

A.6.7.14.1.3 Test Requirements

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1. **The relative PRS-RSRP measurement between the two PRS resources within the same cell** shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

## A.6.7.15 UE Rx-Tx time difference measurements

### A.6.7.15.1 UE Rx-Tx time difference measurement accuracy for single positioning frequency layer in FR1 SA

#### A.6.7.15.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR1 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations in listed in Table A.6.7.15.1.1-1.

**Table A.6.7.15.1.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR1.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #0 or ID #24 before the test.

The UE is configured to transmit SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

#### A.6.7.15.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in Table A.6.7.15.1.2-1.

**Table A.6.7.15.1.2-2: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter                           | Unit         | Test configuration | Test 1                          |             | Test 2                          |             |
|-------------------------------------|--------------|--------------------|---------------------------------|-------------|---------------------------------|-------------|

|         |  |
|---------|--|
| Note 1: | Void.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | PRS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | GP#24 is configured if UE supports MG#24, otherwise GP#0 is configured.  |

**Table A.6.7.15.1.2-2: Void**

### A.6.7.15.1.3 Test requirements

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

## A.7.1 SA: RRC\_IDLE state mobility

### A.7.1.1 Cell re-selection to NR

#### A.7.1.1.1 Cell reselection to FR2 intra-frequency NR case

##### A.7.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements specified in clause 4.2.2.3.

##### A.7.1.1.1.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.7.1.1.1.2-1, A.7.1.1.1.2-2 and A.7.1.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only cell 1 is already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing cell 2.

**Table A.7.1.1.1.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| 2             | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.7.1.1.1.2-2: General test parameters for intra frequency NR cell re-selection test case**

| Parameter                  |                | Unit | Test configuration | Value          | Comment   |
|----------------------------|----------------|------|--------------------|----------------|---|
| Initial condition          | Active cell    |      | 1, 2               | Cell1          |   |
| T2 end condition           | Active cell    |      | 1, 2               | Cell2          |   |
|                            | Neighbour cell |      | 1, 2               | Cell1          |   |
| Final condition            | Active cell    |      | 1, 2               | Cell1          |   |
|                            | Neighbour cell |      | 1, 2               | Cell2          |   |
| RF Channel Number          |                |      | 1, 2               | 1              |   |
| Time offset between cells  |                |      | 1, 2               | 3 $\mu$ s      | Synchronous cells   |
| Access Barring Information |                | -    | 1, 2               | Not Sent       | No additional delays in random access procedure.  |
| SMTC configuration         |                |      | 1, 2               | SMTC.1         |   |
| DRX cycle length           |                | s    | 1, 2               | 1.28           | The value shall be used for all cells in the test.  |
| PRACH configuration index  |                |      | 1, 2               | 190            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2   |
| rangeToBestCell            |                |      | 1, 2               | Not configured |   |
| T1                         |                | s    | 1, 2               | >7             | During T1, Cell 2 shall be powered off, and during the off time the physical cell identity shall be changed, The intention is to ensure that Cell 2 has not been detected by the UE prior to the start of period T2 |
| T2                         |                | s    | 1, 2               | 135            | T2 needs to be defined so that cell re-selection reaction time is taken into account.   |
| T3                         |                | s    | 1, 2               | 35             | T3 needs to be defined so that cell re-selection reaction time is taken into account.   |

**Table A.7.1.1.1.2-3: Cell specific test parameters for intra frequency NR cell re-selection test case in AWGN**

| Parameter  | Unit   | Test configuration | Cell 1                      |        |        | Cell 2                      |        |        |
|--|--|--------------------|-----------------------------|--------|--------|-----------------------------|--------|--------|
|  |  |                    | T1                          | T2     | T3     | T1                          | T2     | T3     |

| Note 1:  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                    |                             |        |        |                             |        |        |
| Note 2:  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                    |                             |        |        |                             |        |        |
| Note 3:  | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                    |                             |        |        |                             |        |        |
| Note 4:  | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                    |                             |        |        |                             |        |        |

### A.7.1.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 130 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 1.

The cell re-selection delay to an already detected cell shall be less than 27 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as:  $T_{\text{detect, NR\_Intra}} + T_{\text{SI-NR}}$ , and to an already detected cell can be expressed as:  $T_{\text{evaluate, NR\_intra}} + T_{\text{SI-NR}}$ .

Where:

$T_{\text{detect, NR\_Intra}}$  See Table 4.2.2.3-1 in clause 4.2.2.3

$T_{\text{evaluate, NR\_intra}}$  See Table 4.2.2.3-1 in clause 4.2.2.3

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 129.28 s, allow 130 s for the cell re-selection delay to a newly detectable cell and 26.88 s for the cell re-selection delay to an already detected cell in the test case, which we allow 27 s.

### A.7.1.1.2 Cell reselection to FR2 inter-frequency NR case

#### A.7.1.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.4.

#### A.7.1.1.2.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.7.1.1.2.2-1, A.7.1.1.2.2-2 and A.7.1.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1. Furthermore, UE has not registered with network for the tracking area containing cell 2.

**Table A.7.1.1.2.2-1: Supported test configurations**

| Configuration   | Description for serving cell                        | Description for target cell                         |
|---|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.7.1.1.2.2-2: General test parameters for FR2 inter frequency NR cell re-selection test case**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment  |
|----------------------------|-----------------|------|--------------------|----------------|--|
| Initial condition          | Active cell     |      | 1, 2               | Cell2          | The UE camps on cell 2 in the initial phase and during T1 period the UE reselects to cell 1  |
|                            | Neighbour cell  |      | 1, 2               | Cell1          |  |
| T1 end condition           | Active cell     |      | 1, 2               | Cell1          | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2               | Cell2          |  |
| T3 end condition           | Active cell     |      | 1, 2               | Cell2          | The UE shall perform reselection to cell 2 with higher priority during T3  |
|                            | Neighbour cell  |      | 1, 2               | Cell1          |  |
| RF Channel Number          |                 |      | 1, 2               | 1, 2           |  |
| Time offset between cells  |                 |      | 1, 2               | 3 $\mu$ s      | Synchronous cells  |
| Access Barring Information |                 | -    | 1, 2               | Not Sent       | No additional delays in random access procedure.   |
| SSB configuration          |                 |      | 1                  | SSB.1 FR2      |  |
|                            |                 |      | 2                  | SSB.2 FR2      |  |
| SMTC configuration         |                 |      | 1, 2               | SMTC.1         |  |
| DRX cycle length           |                 | s    | 1, 2               | 1.28           | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                 |      | 1, 2               | 190            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| rangeToBestCell            |                 |      | 1, 2               | Not configured |  |
| T1                         |                 | s    | 1, 2               | 35             | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                         |                 | s    | 1, 2               | >7             | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |
| T3                         |                 | s    | 1, 2               | 95             | T3 needs to be defined so that cell re-selection reaction time is taken into account.  |

**Table A.7.1.1.2.2-3: Cell specific test parameters for FR2 inter frequency NR cell re-selection test case in AWGN**

| Parameter  | Unit          | Test configuration | Cell 1                      |        |        | Cell 2                      |           |        |
|--|---------------|--------------------|-----------------------------|--------|--------|-----------------------------|-----------|--------|
|  |               |                    | T1                          | T2     | T3     | T1                          | T2        | T3     |

They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |               |                    |                             |        |        |                             |           |        |

### A.7.1.1.2.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 87 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 1.

The cell re-selection delay to a lower priority cell shall be less than 27 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{\text{higher\_priority\_search}} + T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$ , and to a lower priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$ .

Where:

$T_{\text{higher\_priority\_search}}$  See clause 4.2.2.7

$T_{\text{evaluate, NR\_inter}}$  See Table 4.2.2.4-1 in clause 4.2.2.4

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 86.88 s, allow 87 s for the cell re-selection delay to a higher priority cell and 26.88 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 27 s.

### A.7.1.1.3 Cell reselection to FR2 intra-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

#### A.7.1.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for UE configured with relaxed measurement criterion specified in clause 4.2.2.9.2.

#### A.7.1.1.3.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.7.1.1.3.2-1, A.7.1.1.3.2-2 and A.7.1.1.3.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. During T1 and T2, only criteria *lowMobilityEvaluation* is configured and fulfilled, where  $(S_{\text{rxlev}}^{\text{VRef}} - S_{\text{rxlev}}) < S_{\text{SearchDeltaP}}$ . UE has not registered with network for the tracking area containing cell2.

**Table A.7.1.1.3.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| 2             | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.7.1.1.3.2-2: General test parameters for FR2 intra-frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment   |
|----------------------------|-----------------|------|--------------------|----------------|---|
| Initial condition          | Active cell     |      | 1, 2               | Cell1          | The UE camps on cell 1 in the initial phase                         |
|                            | Neighbour cells |      | 1, 2               | Cell2          |   |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |               |                    |                             |        |                             |        |

### A.7.1.1.3.3 Test Requirements

The cell reselection delay to an already detected cell for UE fulfilling low mobility relaxed criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected cell shall be less than 79 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to an already detectable cell can be expressed as:  $T_{\text{evaluate, NR\_Intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate, NR\_Intra}}$  See Table 4.2.2.9.1-1 in clause 4.2.2.9,

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 78.08 s, allow 79s for the cell re-selection delay to an already detected cell for UE fulfilling low mobility criterion in the test case.

### A.7.1.1.4 Cell reselection to FR2 intra-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

#### A.7.1.1.4.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for UE configured with relaxed measurement criterion specified in clause 4.2.2.9.3.

#### A.7.1.1.4.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.7.1.1.4.2-1, A.7.1.1.4.2-2 and A.7.1.1.4.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. During T1 and T2, only criteria *cellEdgeEvaluation* is configured and fulfilled, where  $S_{\text{rxlev}} > S_{\text{SearchThresholdP}}$ . UE has not registered with network for the tracking area containing cell2.

**Table A.7.1.1.4.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| 2             | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.7.1.1.4.2-2: General test parameters for FR2 intra-frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment   |
|----------------------------|-----------------|------|--------------------|----------------|---|
| Initial condition          | Active cell     |      | 1, 2               | Cell1          | The UE camps on cell 1 in the initial phase                         |
|                            | Neighbour cells |      | 1, 2               | Cell2          |   |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over

subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation

### A.7.1.1.4.3 Test Requirements

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected cell shall be less than 79 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to an already detected cell can be expressed as:  $T_{\text{evaluate, NR\_Intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate, NR\_Intra}}$  See Table 4.2.2.9.3-1 in clause 4.2.2.9,

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 78.08 s, allow 79s for the cell re-selection delay to an already detected cell for UE fulfilling not-at-cell edge criterion in the test case.

### A.7.1.1.5 Cell reselection to FR2 inter-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

#### A.7.1.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements for UE fulfilling low mobility criterion specified in clause 4.2.2.10.2.

#### A.7.1.1.5.2 Test Parameters

The test scenario comprises of 2 cells (Cell 1 and Cell 2) on 2 different NR carriers respectively as given in tables A.7.1.1.5.2-1, A.7.1.1.5.2-2 and A.7.1.1.5.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. Cell 2 is of higher priority than Cell 1. The UE is configured with *lowMobilityEvaluation* criterion [2].

**Table A.7.1.1.5.2-1: Supported test configurations**

| Configuration   | Description for serving cell                        | Description for target cell                         |
|---|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.7.1.1.5.2-2: General test parameters for FR2 inter frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter                  |                | Unit | Test configuration | Value             | Comment   |
|----------------------------|----------------|------|--------------------|-------------------|---|
| Initial condition          | Active cell    |      | 1, 2               | Cell2             | The UE camps on cell2 and fulfils low mobility ( <i>lowMobilityEvaluation</i> [2]) criterion. |
|                            | Neighbour cell |      | 1, 2               | Cell1             |   |
| T1 final condition         | Active cell    |      | 1, 2               | Cell1             | The UE reselects to low priority cell1 during T1  |
|                            | Neighbour cell |      | 1, 2               | Cell2             |   |
| T2 final condition         | Active cell    |      | 1, 2               | Cell2             | The UE reselects to high priority cell2 during T2   |
|                            | Neighbour cell |      |                    | Cell1             |   |
| RF Channel Number          |                |      | 1, 2               | 1, 2              |   |
| Time offset between cells  |                |      | 1, 2               | 3 $\mu$ s         | Synchronous cells   |
| Access Barring Information |                | -    | 1, 2               | Not Sent          | No additional delays in random access procedure.  |
| SSB configuration          |                |      | 1                  | SSB.1<br>FR2      |   |
|                            |                |      | 2                  | SSB.2<br>FR2      |   |
| SMTC configuration         |                |      | 1, 2               | SMTC<br>pattern 1 |   |
| DRX cycle length           |                | s    | 1, 2               | 0.64              | The value shall be used for all cells in the test.  |
| PRACH configuration index  |                |      | 1, 2               | 190               | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                           |
| rangeToBestCell            |                |      | 1, 2               | Not configured    |   |
| T1                         |                | s    | 1, 2               | 85                | T1 needs to be long enough to allow cell re-selection to already known cell1                  |
| T2                         |                | s    | 1, 2               | [85]              | T2 needs to be long enough to allow cell re-selection to already known cell2                  |

**Table A.7.1.1.5.2-3: Cell specific test parameters for FR2 inter frequency NR cell re-selection test case in AWGN for UE fulfilling low mobility criterion**

| Parameter  | Unit          | Test configuration | Cell 1                      |         | Cell 2                      |        |

They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |               |                    |                             |         |                             |        |

### A.7.1.1.5.3 Test Requirements

The cell reselection delay to an already detected low priority cell (Cell 1) for UE fulfilling low mobility criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected high priority cell, Cell 2, shall be less than 79 s.

The cell reselection delay to an already detected high priority cell (Cell 2) for UE fulfilling low mobility criterion is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected high priority cell, Cell 2, shall be less than [79] s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE 1: The cell re-selection delay to an already detected low priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$

NOTE 2: The cell re-selection delay to an already detected higher priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$

Where:

$T_{\text{evaluate, NR\_inter}}$  See Table 4.2.2.10.2-1 in clause 4.2.2.10.2

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 78.08 s, allow 79 s for the cell re-selection delay to an already detected low priority cell for UE fulfilling low mobility criterion in the test case.

This gives a total of 78.08 s, allow 79 s for the cell re-selection delay to an already detected high priority cell for UE fulfilling low mobility criterion in the test case.

### A.7.1.1.6 Cell reselection to FR2 inter-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

#### A.7.1.1.6.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements for UE fulfilling not-at-cell edge criterion specified in clause 4.2.2.10.3.

#### A.7.1.1.6.2 Test Parameters

The test scenario comprises of 2 cells (Cell 1 and Cell 2) on 2 different NR carriers respectively as given in tables A.7.1.1.6.2-1, A.7.1.1.6.2-2 and A.7.1.1.6.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing Cell 2. Cell 2 is of higher priority than Cell 1. The UE is configured with *cellEdgeEvaluation* criterion [2].

**Table A.7.1.1.6.2-1: Supported test configurations**

| Configuration   | Description for serving cell                        | Description for target cell                         |
|---|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.7.1.1.6.2-2: General test parameters for FR2 inter frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter                  |                | Unit | Test configuration | Value          | Comment  |
|----------------------------|----------------|------|--------------------|----------------|--|
| Initial condition          | Active cell    |      | 1, 2               | Cell2          | The UE camps on cell2 and fulfils not-at-cell edge ( <i>cellEdgeEvaluation</i> [2]) criterion. |
|                            | Neighbour cell |      | 1, 2               | Cell1          |  |
| T1 final condition         | Active cell    |      | 1, 2               | Cell1          | The UE reselects to low priority cell1 during T1   |
|                            | Neighbour cell |      | 1, 2               | Cell2          |  |
| T2 final condition         | Active cell    |      | 1, 2               | Cell2          | The UE reselects to high priority cell2 during T2  |
|                            | Neighbour cell |      | 1, 2               | Cell1          |  |
| RF Channel Number          |                |      | 1, 2               | 1, 2           |  |
| Time offset between cells  |                |      | 1, 2               | 3 $\mu$ s      | Synchronous cells  |
| Access Barring Information |                | -    | 1, 2               | Not Sent       | No additional delays in random access procedure.   |
| SSB configuration          |                |      | 1                  | SSB.1 FR2      |  |
|                            |                |      | 2                  | SSB.2 FR2      |  |
| SMTC configuration         |                |      | 1, 2               | SMTC pattern 1 |  |
| DRX cycle length           |                | s    | 1, 2               | 0.64           | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                |      | 1, 2               | 190            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                            |
| rangeToBestCell            |                |      | 1, 2               | Not configured |  |
| T1                         |                | s    | 1, 2               | 85             | T1 needs to be long enough to allow cell re-selection to already known cell.                   |
| T2                         |                | s    | 1, 2               | [85]           | T2 needs to be long enough to allow cell re-selection to already known cell.                   |

**Table A.7.1.1.6.2-3: Cell specific test parameters for FR2 inter frequency NR cell re-selection test case in AWGN for UE fulfilling not-at-cell edge criterion**

| Parameter | Unit | Test configuration | Cell 1 |    | Cell 2 |    |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |               |      |                             |         |                             |        |

### A.7.1.1.6.3 Test Requirements

The cell reselection delay to an already detected low priority cell (Cell 1) for UE fulfilling not-at-cell edge criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 1.

The cell re-selection delay to an already detected low priority cell, Cell 1, shall be less than 79 s.

The cell reselection delay to an already detected high priority cell (Cell 2) for UE fulfilling not-at-cell edge criterion is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected high priority cell, Cell 2, shall be less than 79 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE 1: The cell re-selection delay to an already detected low priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$

NOTE 2: The cell re-selection delay to an already detected higher priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$

Where:

$T_{\text{evaluate, NR\_inter}}$  See Table 4.2.2.10.3-1 in clause 4.2.2.10.3

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280ms is assumed in this test case.

This gives a total of 78.8 s, allow 79 s for the cell re-selection delay to an already detected low priority cell for UE fulfilling not-at-cell edge criterion in the test case.

This gives a total of 78.08 s, allow 79 s for the cell re-selection delay to an already detected high priority cell for UE fulfilling not-at-cell edge criterion in the test case.

## A.7.2 SA: RRC\_INACTIVE state mobility

## A.7.3 RRC\_CONNECTED state mobility

### A.7.3.1 Handover

#### A.7.3.1.1 Inter-frequency handover from FR1 to FR2; unknown target cell

##### A.7.3.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR2 inter frequency handover requirements specified in clause 6.1.1.5.

##### A.7.3.1.1.2 Test Parameters

Supported test configurations are shown in table A.7.3.1.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.1.1.2-2, and A.7.3.1.1.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.7.3.1.1.2-1: Inter-frequency handover from FR1 to FR2 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.7.3.1.1.2-2: General test parameters Inter-frequency handover from FR1 to FR2**

| Parameter                  |                   | Unit | Value     | Comment  |
|----------------------------|-------------------|------|-----------|--|
| Initial conditions         | Active cell       |      | Cell 1    |  |
|                            | Neighbouring cell |      | Cell 2    |  |
| Final condition            | Active cell       |      | Cell 2    |  |

They are not settable parameters themselves.</p> <p>Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0 dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |            |           |                              |                |

A.7.3.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 572 ms from the beginning of time period T2. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = [10] ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$  = 562 ms in the test.  $T_{interrupt}$  is defined in clause 6.1.1.5.2.

This gives a total of 572 ms.

A.7.3.1.2 Intra-frequency handover from FR2 to FR2; unknown target cell

A.7.3.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR2-NR FR2 intra frequency handover requirements specified in clause 6.1.1.4.

A.7.3.1.2.2 Test Parameters

Supported test configurations are shown in table A.7.3.1.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.1.2.2-2, and A.7.3.1.2.2-3.

The test scenario comprises of carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.7.3.1.2.2-1: Intra-frequency handover from FR2 to FR2 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.1.2.2-2: General test parameters Intra-frequency handover from FR2 to FR2**

| Parameter                  |                   | Unit | Value     | Comment  |
|----------------------------|-------------------|------|-----------|--|
| Initial conditions         | Active cell       |      | Cell 1    |  |

|---------|--|
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 5: | As observed with 0 dBi gain antenna at the centre of the quiet zone  |
| Note 6: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |

### A.7.3.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 232 ms from the beginning of time period T2. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt}}$  = 222 ms in the test.  $T_{\text{interrupt}}$  is defined in clause 6.1.1.4.2.

This gives a total of 232 ms.

### A.7.3.1.3 Inter-frequency handover from FR2 to FR2; unknown target cell

#### A.7.3.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR2-NR FR2 inter frequency handover requirements specified in clause 6.1.1.4.

#### A.7.3.1.3.2 Test Parameters

Supported test configurations are shown in table A.7.3.1.3.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.1.3.2-2, and A.7.3.1.3.2-3.

The test scenario comprises of carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.7.3.1.3.2-1: Inter-frequency handover from FR2 to FR2 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.1.3.2-2: General test parameters Inter-frequency handover from FR2 to FR2**

| Parameter                  | Unit              | Value     | Comment  |
|----------------------------|-------------------|-----------|--|
| Initial conditions         | Active cell       | Cell 1    |  |
|                            | Neighbouring cell | Cell 2    |  |
| Final condition            | Active cell       | Cell 2    |  |
| A4-Offset                  | dB                | -120      |  |
| Hysteresis                 | dB                | 0         |  |
| Time To Trigger            | s                 | 0         |  |
| Filter coefficient         |                   | 0         | L3 filtering is not used                         |
| Access Barring Information | -                 | Not Sent  | No additional delays in random access procedure. |
| Time offset between cells  |                   | 3 $\mu$ s | Synchronous cells                                |
| T1                         | s                 | 5         |  |
| T2                         | s                 | $\leq 10$ |  |

| Note 6:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |                              |       |           |       |

### A.7.3.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 552 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + T<sub>interrupt</sub>, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt}} = 542$  ms in the test.  $T_{\text{interrupt}}$  is defined in clause 6.1.1.4.2.

This gives a total of 552 ms.

### A.7.3.1.4 Inter-band inter-frequency synchronous DAPS handover from FR1 to FR2

#### A.7.3.1.4.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR2 Inter-band inter-frequency synchronous DAPS handover requirements specified in clause 6.1.3.4.

#### A.7.3.1.4.2 Test Parameters

Supported test configurations are shown in table A.7.3.1.4.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.1.4.2-2, A.7.3.1.4.2-3 and A.7.3.1.4.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A4 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0). Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A4. After receiving the Event A4, the test system shall send a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the test system receives the ACK of the PDSCH corresponding to the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the test system receives the ACK of the PDSCH corresponding to the last TTI containing the RRC message implying source cell release sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

**Table A.7.3.1.4.2-1: Inter-band inter-frequency synchronous DAPS handover from FR1 to FR2 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

### A.7.3.1.4.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T3. During  $D_{\text{handover1}}$ , the interruption on Cell 1 shall not exceed  $T_{\text{interrupt1}}$  as defined in Table 6.1.3.4.2-1 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{\text{handover1}}$  can be expressed as:  $T_{\text{RRC\_procedure}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}}$ , where:

$T_{\text{RRC\_procedure}} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{\text{IU}} = 20$  ms in the test.  $T_{\text{IU}}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{\text{processing}} = 40$  ms in the test.  $T_{\text{processing}}$  is defined in clause 6.1.1.2.2.

$T_{\text{margin}} = 2$  ms in the test.  $T_{\text{margin}}$  is defined in clause 6.1.1.2.2.

This gives a total of 92 ms.

The UE shall complete to release Cell 1 less than  $(10 \text{ ms} + T_{\text{interrupt2}})$  from the beginning of time period T4. During  $D_{\text{handover2}}$ , the interruption on Cell 2 shall not exceed  $T_{\text{interrupt2}}$  as defined in Table 6.1.3.4.2-2 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{\text{handover2}}$  can be expressed as:  $T_{\text{RRC\_procedure}} + T_{\text{interrupt2}}$ , where:

$T_{\text{RRC\_procedure}} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

## A.7.3.1.5 Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR2

### A.7.3.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR2 Inter-band inter-frequency asynchronous DAPS handover requirements specified in clause 6.1.3.4.

### A.7.3.1.5.2 Test Parameters

Supported test configurations are shown in table A.7.3.1.5.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.1.5.2-2, A.7.3.1.5.2-3 and A.7.3.1.5.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A4 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0). Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A4. After receiving the Event A4, the test system shall send a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the test system receives the ACK of the PDSCH corresponding to the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the test system receives the ACK of the PDSCH corresponding to the last TTI containing the RRC message implying source cell release sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

**Table A.7.3.1.5.2-1: Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR2 test configurations**

| Config   | Description  |
|--|--|
| 1  | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3  | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.7.3.1.5.2-2: General test parameters for Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR2**

| Parameter                  | Unit              | Value                      | Comment   |
|----------------------------|-------------------|----------------------------|---|
| Initial conditions         | Active cell       | Cell 1                     |   |
|                            | Neighbouring cell | Cell 2                     |   |
| Final condition            | Active cell       | Cell 2                     |   |
| A4-Threshold               | dBm               | -120                       |   |
| Hysteresis                 | dB                | 0                          |   |
| Time To Trigger            | s                 | 0                          |   |
| Filter coefficient         |                   | 0                          | L3 filtering is not used  |
| Access Barring Information | -                 | Not Sent                   | No additional delays in random access procedure.                                  |
| Time offset between cells  | $\mu$ s           | 62.5                       | Asynchronous cells  |
| T1                         | s                 | 5                          |   |
| T2                         | s                 | <5                         |   |
| T3                         | s                 | <0.5                       |   |
| T4                         | ms                | $10+T_{\text{interrupt2}}$ | $T_{\text{interrupt2}}$ as defined in Table 6.1.3.4.2-2 for asynchronous DAPS HO. |
| T5                         | ms                | 100                        |   |

**Table A.7.3.1.5.2-3: Cell specific test parameters for Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR2 (Cell 1 in FR1)**

| Parameter                                |                  | Unit                   | Cell 1                             |    |    |    |    |
|--|------------------|------------------------|------------------------------------|----|----|----|----|

### A.7.3.1.5.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T3. During  $D_{\text{handover1}}$ , the interruption on Cell 1 shall not exceed  $T_{\text{interrupt1}}$  as defined in Table 6.1.3.4.2-1 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{\text{handover1}}$  can be expressed as:  $T_{\text{RRC\_procedure}} + T_{\text{IU}} + T_{\text{processing}} + T_{\Delta} + T_{\text{margin}}$ , where:

$T_{\text{RRC\_procedure}} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{\text{IU}} = 20$  ms in the test.  $T_{\text{IU}}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{\text{processing}} = 40$  ms in the test.  $T_{\text{processing}}$  is defined in clause 6.1.1.2.2.

$T_{\text{margin}} = 2$  ms in the test.  $T_{\text{margin}}$  is defined in clause 6.1.1.2.2.

This gives a total of 792 ms.

The UE shall complete to release Cell 1 less than  $(10 \text{ ms} + T_{\text{interrupt2}})$  from the beginning of time period T4. During  $D_{\text{handover2}}$ , the interruption on Cell 2 shall not exceed  $T_{\text{interrupt2}}$  as defined in Table 6.1.3.4.2-2 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{\text{handover2}}$  can be expressed as:  $T_{\text{RRC\_procedure}} + T_{\text{interrupt2}}$ , where:

$T_{\text{RRC\_procedure}} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

## A.7.3.2 RRC Connection Mobility Control

### A.7.3.2.1 SA: RRC Re-establishment

#### A.7.3.2.1.1 Intra-frequency RRC Re-establishment in FR2

##### A.7.3.2.1.1.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR2 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.7.3.2.1.1.1-1, table A.7.3.2.1.1.1-2 and table A.7.3.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure.

**Table A.7.3.2.1.1.1-1: Supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.1.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR2**

| Parameter                  |                 | Unit | Test configuration | Value                     | Comment  |
|----------------------------|-----------------|------|--------------------|---------------------------|--|
| Initial condition          | Active cell     |      | 1                  | Cell1                     |  |
|                            | Neighbour cells |      | 1                  | Cell2                     |  |
| Final condition            | Active cell     |      | 1                  | Cell2                     |  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |               |                    |                             |           |           |                             |        |        |

### A.7.3.2.1.1.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR intra frequency cell shall be less than 5 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{\text{UL\_grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{\text{UL\_grant}}$  is not used.

$$T_{UE\_re-establish\_delay} = 50 \text{ ms} + T_{identify\_intra\_NR} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR,i} + T_{SI-NR} + T_{PRACH}$$

$$N_{freq} = 1$$

$$T_{identify\_intra\_NR} = 3520 \text{ ms}$$

$T_{SI} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target intra-frequency NR cell.

$T_{PRACH} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 4865 ms, allow 5 s in the test case.

### A.7.3.2.1.2 Inter-frequency RRC Re-establishment in FR2

#### A.7.3.2.1.2.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay in FR2 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.7.3.2.1.2.1-1, table A.7.3.2.1.2.1-2 and table A.7.3.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of cell 2 by the end of T1.

**Table A.7.3.2.1.2.1-1: Supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.3.2.1.2.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less than 6 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{UL\_grant}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{UL\_grant}$  is not used.

$$T_{UE\_re-establish\_delay} = 50 \text{ ms} + T_{identify\_intra\_NR} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR,i} + T_{SI-NR} + T_{PRACH}$$

$$N_{freq} = 2$$

$$T_{identify\_intra\_NR} = 1600 \text{ ms}$$

$$T_{identify\_inter\_NR} = 2080 \text{ ms}$$

$T_{SI} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{PRACH} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 5025 ms, allow 6 s in the test case.

### A.7.3.2.1.3 Intra-frequency RRC Re-establishment in FR2 without serving cell timing

#### A.7.3.2.1.3.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR2 without serving cell timing is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.7.3.2.1.3.1-1, table A.7.3.2.1.3.1-2 and table A.7.3.2.1.3.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.7.3.2.1.3.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.1.3.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR2**

| Parameter                  |                 | Unit | Test configuration | Value                     | Comment   |

### A.7.3.2.1.3.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR intra frequency cell without serving cell timing shall be less than 5 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{\text{UL\_grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{\text{UL\_grant}}$  is not used.

$$T_{UE\_re-establish\_delay} = 50 \text{ ms} + T_{identify\_intra\_NR} + \sum_{i=1}^{N_{freq}-1} T_{identify\_inter\_NR,i} + T_{SI-NR} + T_{PRACH}$$

$$N_{freq} = 1$$

$$T_{identify\_intra\_NR} = 3520 \text{ ms}$$

$T_{SI} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$T_{PRACH} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 4865 ms, allow 5 s in the test case.

### A.7.3.2.2 Random Access

#### A.7.3.2.2.1 4-step RA type contention based random access test in FR2 for NR Standalone

##### A.7.3.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used, with the configuration of Cell 1 configured as PCell or SCell in FR2. Supported test parameters are shown in Table A.7.3.2.2.1.1-1. UE capable of SA with PCell or SCell in FR2 needs to be tested by using the parameters in Table A.7.3.2.2.1.1-2 and Table A.7.3.2.2.1.1-3.

**Table A.7.3.2.2.1.1-1: Supported test configurations for contention based random access test in FR2 for NR Standalone**

| Config | Description   |
|--------|---|
| 1      | NR PSCell/SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.2.1.1-2: General test parameters for contention based random access test in FR2 for NR Standalone**

| Parameter   |          | Unit     | Test-1   | Comments  |

| Note 2: Void.  |                      |               |         |  |
| Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |                      |               |         |  |

#### A.7.3.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.7.3.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in Clause 6.2.2.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.7.3.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. In response to the first 2 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 2 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.7.3.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A.7.3.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.7.3.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in Clause 6.2.2.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.7.3.2.2.2 4-step RA type non-contention based random access test in FR2 for NR Standalone

#### A.7.3.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used, with the configuration of Cell 1 configured as PCell or SCell in FR2. Supported test parameters are shown in Table A.7.3.2.2.2.1-1. UE capable of SA with PCell or SCell in FR2 needs to be tested by using the parameters in Table A.7.3.2.2.2.1-2 and Table A.7.3.2.2.2.1-3 for SSB-based non-contention based random access test (Test 1) and CSI-RS-based non-contention based random access test (Test 2). Test 2 is only applicable to UE which supports csi-RSRP-AndRSRQ-MeasWithSSB or csi-RSRP-AndRSRQ-MeasWithoutSSB.

**Table A.7.3.2.2.1-1: Supported test configurations for non-contention based random access test in FR2 for NR Standalone**

| <b>Config</b> | <b>Description</b>  |

| PRACH Configuration                                     |  |          | FR2 PRACH configuration 2                          | FR2 PRACH configuration 3                          | As defined in A.3.8.3, with exceptions as defined below.  |
| rsrp-ThresholdSSB                                       |  | dBm      | RSRP_69 + $\Delta_{DL}$                            | RSRP_69 + $\Delta_{DL}$                            | RSRP_69 corresponds to -88dBm. $\Delta_{DL}$ is derived from the downlink calibration process <sup>Note 4</sup> |
| preambleReceivedTargetPower                             |  | dBm      | -100   | -100   | As defined in TS 38.331 [2]   |
| Note 1:   | OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.   |          |  |  |   |
| Note 2:   | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |          |  |  |   |
| Note 3:   | The $\Delta_{UL}$ value is calculated as $-\text{ROUND}(\text{PPRACH0} - 1)$ , where PPRACH0 is the measured first PRACH power with -80.6dBm/SCS applied, $\text{preambleReceivedTargetPower} = -100\text{dBm}$ and $\text{ss-PBCH-BlockPower} = 20\text{dBm}$ . These values are used during the uplink calibration process carried out before the test case is run, with the UE configured to send PRACH.                                |          |  |  |   |
| Note 4:   | The $\Delta_{DL}$ value is calculated as $(\text{RSRP}_{\text{REP}} - \text{RSRP}_{76})$ , where $\text{RSRP}_{\text{REP}}$ is the SS-RSRP Reported value in Table 10.1.6.1-1 with -80.6dBm/SCS applied. These values are used during the downlink calibration process carried out before the test case is run, with the UE configured to report SS-RSRP. For a Reported value $\text{RSRP}_x$ , x is treated as a positive integer value. |          |  |  |   |

#### A.7.3.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.7.3.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.7.3.2.2.2.2.2 CSI-RS-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2.2.1 for CSI-RS-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the CSI-RS configured.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-OccasionList*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.2.3 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. In response to the first 2 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.2.4 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 2 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

### A.7.3.2.2.3 2-step RA type contention based random access test in FR2 for NR Standalone

#### A.7.3.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the 2-step RA type random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used, with the configuration of Cell 1 configured as PCell or SCell in FR2. Supported test parameters are shown in Table A.7.3.2.2.3.1-1. UE capable of SA with PCell or SCell in FR2 needs to be tested by using the parameters in Table A.7.3.2.2.3.1-2 and Table A.7.3.2.2.3.1-3.

**Table A.7.3.2.2.3.1-1: Supported test configurations for 2-step RA type contention based random access test in FR2 for NR Standalone**

| Config | Description   |
|--------|---|
| 1      | NR PSCell/SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.3.1-2: General test parameters for 2-step RA type contention based random access test in FR2 for NR Standalone**

| Parameter   |   | Unit     | Test-1   | Comments  |
|---|---|----------|--|---|
| SSB Configuration                                       | Config 1  |          | SSB.1 FR2  | As defined in A.3.10  |

| Note 2: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |                      |               |          |   |

#### A.7.3.2.2.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.7.3.2.2.3.2.1 MsgA Transmission

To test the UE behavior specified in Clause 6.2.2.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first MsgA preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.7.3.2.2.3.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2.3.1.2 the System Simulator shall transmit a MsgB containing a fallbackRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. In response to the first 2 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit MsgA with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first MsgA PRACH shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.1.3 the System Simulator shall transmit a MsgB containing a fallbackRAR message and Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 2 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first MsgA PRACH shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.4 2-step RA type non-contention based random access test in FR2 for NR Standalone

##### A.7.3.2.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used, with the configuration of Cell 1 configured as PCell or SCell in FR2. Supported test parameters are shown in Table A.7.3.2.2.4.1-1. UE capable of SA with PCell or SCell in FR2 needs to be tested by using the parameters in Table A.7.3.2.2.4.1-2 and Table A.7.3.2.2.4.1-3.

**Table A.7.3.2.2.4.1-1: Supported test configurations for non-contention based random access test for 2-step RA type in FR2 for NR Standalone**

| Config | Description   |
|--------|---|
| 1      | NR PSCell/SCell 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.2.4.1-2: General test parameters for non-contention based random access test for 2-step RA type in FR2 for NR Standalone**

| Parameter   |          | Unit        | Test-1   | Comments   |
|---|----------|-------------|--|--|
| SSB Configuration   | Config 1 |             | SSB.1 FR2  | As defined in A.3.10   |
| Duplex Mode for Cell 2  | Config 1 |             | TDD  |  |
| TDD Configuration   | Config 1 |             | TDDConf.3.1  |  |
| BW <sub>channel</sub>   | Config 1 | MHz         | 100: N <sub>RB,c</sub> = 24                        |  |
| OCNG Pattern <sup>Note 1</sup>  |          |             | OP.3   | As defined in A.3.2.1.   |
| PDSCH Reference Channel <sup>Note 2</sup>   | Config 1 |             | SR3.1 TDD  | As defined in A.3.1.1.   |
| NR RF Channel Number  |          |             | 1  |  |
| EPRE ratio of PSS to SSS  |          | dB          | 0  |  |
| EPRE ratio of PBCH_DMRS to SSS  |          | dB          |  |  |
| EPRE ratio of PBCH to PBCH_DMRS   |          | dB          |  |  |
| EPRE ratio of PDCCH_DMRS to SSS   |          | dB          |  |  |
| EPRE ratio of PDCCH to PDCCH_DMRS   |          | dB          |  |  |
| EPRE ratio of PDSCH_DMRS to SSS   |          | dB          |  |  |
| EPRE ratio of PDSCH to PDSCH_DMRS   |          | dB          |  |  |
| ss-PBCH-BlockPower  |          | dBm/<br>SCS | +20 + $\Delta_{UL}$                                | As defined in TS 38.331 [2]. $\Delta_{UL}$ is derived from the uplink calibration process <sup>Note 3</sup>                |
| Configured UE transmitted power (P <sub>C<sub>MAX,f,c</sub></sub> )   |          | dBm         | maximum value configurable for certain power class | As defined in clause 6.2.4 in TS 38.101-2 [19]   |
| MsgA Configuration  |          |             | FR2 MsgA configuration 2                           | As defined in A.3.20.3, with exceptions as defined below.  |
| msgA-RSRP-ThresholdSSB  |          | dBm         | RSRP <sub>69</sub> + $\Delta_{DL}$                 | RSRP <sub>69</sub> corresponds to -88dBm. $\Delta_{DL}$ is derived from the downlink calibration process <sup>Note 4</sup> |
| msgA-PreambleReceivedTargetPower  |          | dBm         | -100   | As defined in TS 38.331 [2]  |
| <p>Note 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.</p> <p>Note 2: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.</p> <p>Note 3: The <math>\Delta_{UL}</math> value is calculated as <math>-\text{ROUND}(\text{P}_{\text{MsgA0}} - 1)</math>, where <math>\text{P}_{\text{MsgA0}}</math> is the measured first MsgA PRACH power with -80.6dBm/SCS applied, <math>\text{msgA-PreambleReceivedTargetPower} = -100\text{dBm}</math> and <math>\text{ss-PBCH-BlockPower} = 20\text{dBm}</math>. These values are used during the uplink calibration process carried out before the test case is run, with the UE configured to send MsgA.</p> <p>Note 4: The <math>\Delta_{DL}</math> value is calculated as <math>(\text{RSRP}_{\text{REP}} - \text{RSRP}_{76})</math>, where <math>\text{RSRP}_{\text{REP}}</math> is the SS-RSRP Reported value in Table 10.1.6.1-1 with -80.6dBm/SCS applied. These values are used during the downlink calibration process carried out before the test case is run, with the UE configured to report SS-RSRP. For a Reported value RSRP<sub>x</sub>, x is treated as a positive integer value.</p> |          |             |  |  |

**Table A.7.3.2.2.4.1-3: OTA-related test parameters for non-contention based random access test for 2-step RA type in FR2 for NR Standalone**

| Parameter  |                      | Unit          | Test-1  | Comments  |
|--|----------------------|---------------|---------|---|
| AoA setup  |                      |               | Setup 1 | As defined in A.3.15.1  |
| Assumption for UE beams <sup>Note 2</sup>  |                      |               | Rough   |   |
| SSB with index 0   | Es <sup>Note 1</sup> | dBm/SCS       | -80.6   | Power of SSB with index 0 is set to be above configured <i>msgA-RSRP-ThresholdSSB</i> |
|  | SSB_RP               | dBm/SCS       | -80.6   |   |
|  | Es/lot <sub>BB</sub> | dB            | 21.09   |   |
|  | lo                   | dBm/95.04 MHz | -56.01  | lo in symbols containing SSB index 0  |
| SSB with index 1   | Es <sup>Note 1</sup> | dBm/SCS       | -95.0   | Power of SSB with index 1 is set to be below configured <i>msgA-RSRP-ThresholdSSB</i> |
|  | SSB_RP               | dBm/SCS       | -95.0   |   |
|  | Es/lot <sub>BB</sub> | dB            | 6.69    |   |
|  | lo                   | dBm/95.04 MHz | -70.41  | lo in symbols containing SSB index 1  |
| Propagation Condition  |                      | -             | AWGN    |   |
| Note 1: No artificial noise is applied in this test.   |                      |               |         |   |
| Note 2: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |                      |               |         |   |

#### A.7.3.2.2.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.7.3.2.2.4.2.1 MsgA Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2.3.2.1 for MsgA transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.7.3.2.2.4.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2.3.2.2 the System Simulator shall transmit a MsgB containing a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble after 3 MsgA transmissions have been received by the System Simulator. In response to the first 2 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB if the MsgB contains a successRAR MAC subPDU corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power if all received Random Access Response Reception has not been considered as successful.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy

specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.7.3.2.2.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.2.3 the System Simulator shall transmit a MsgB corresponding to the transmitted Random Access Preamble after 3 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 2 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window configured in *RACH-ConfigGenericTwoStepRA*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be 0.6 dBm to be received at TE with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-2 [19], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-2 [19].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

### A.7.3.2.3 SA: RRC Connection Release with Redirection

#### A.7.3.2.3.1 Redirection from NR in FR2 to NR in FR2

##### A.7.3.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to NR requirements specified in clause 6.2.3.2.1.

##### A.7.3.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.7.3.2.3.1.2-1. The time delay is tested by using the parameters in table A.7.3.2.3.1.2-2, and A.7.3.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.7.3.2.3.1.2-1: Redirection from NR to NR test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.2.3.1.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter                  | Unit              | Value     | Comment  |
|----------------------------|-------------------|-----------|--|
| Initial conditions         | Active cell       | Cell 1    |  |
|                            | Neighbouring cell | Cell 2    |  |
| Final condition            | Active cell       | Cell 2    |  |
| Filter coefficient         |                   | 0         | L3 filtering is not used                         |
| Access Barring Information | -                 | Not Sent  | No additional delays in random access procedure. |
| Time offset between cells  |                   | 3 $\mu$ s | Synchronous cells                                |
| T1                         | s                 | 5         |  |
| T2                         | s                 | 3.2       |  |

**Table A.7.3.2.3.1.2-3: Cell specific test parameters for Redirection from NR to NR test case**

| Parameter   |                  | Unit      | Cell 1                       |       | Cell 2    |       |

### A.7.3.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 3160 ms from the beginning of time period T2.

The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{\text{connection\_release\_redirect\_NR}} = T_{\text{RRC\_procedure\_delay}} + T_{\text{identify-NR}} + T_{\text{SI-NR}} + T_{\text{RACH}},$$

where:

$T_{\text{RRC\_procedure\_delay}} = 110$  ms in the test.

$T_{\text{identify-NR}} = 1760$  ms in the test.

$T_{\text{SI-NR}} = 1280$  ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{\text{RACH}} = 10$  ms in the test.

This gives a total of 3160 ms.

## A.7.3.3 Conditional Handover

### A.7.3.3.1 Intra-frequency conditional handover from FR2 to FR2

#### A.7.3.3.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR2-NR FR2 intra frequency conditional handover requirements specified in clause 6.1.4.4.

#### A.7.3.3.1.2 Test Parameters

Supported test configurations are shown in table A.7.3.3.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.7.3.3.2.2-2, and A.7.3.3.2.2-3.

The test scenario comprises of two cells. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. NR shall configure a condition implying handover to cell 2 during T1, at a time earlier than  $T_{\text{RRC}}$  before the beginning of T2. Starting T2, cell 2 becomes detectable.

**Table A.7.3.3.1.2-1: Intra-frequency conditional handover from FR2 to FR2 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.3.3.1.2-2: General test parameters for conditional Intra-frequency handover from FR2 to FR2**

| Parameter                  |                   | Unit | Value     | Comment  |
|----------------------------|-------------------|------|-----------|--|
| Initial conditions         | Active cell       |      | Cell 1    |  |
|                            | Neighbouring cell |      | Cell 2    |  |
| Final condition            | Active cell       |      | Cell 2    |  |
| A3-Offset for condition    |                   | dBm  | -1        | Trigger HO to cell which may be measured as -1dB relative to cell 1. Actual SS-RSRP is 5dB stronger. |
| Hysteresis                 |                   | dB   | 0         |  |
| Time To Trigger            |                   | s    | 0         |  |
| Filter coefficient         |                   |      | 0         | L3 filtering is not used   |
| Access Barring Information |                   | -    | Not Sent  | No additional delays in random access procedure.   |
| Time offset between cells  |                   |      | 3 $\mu$ s | Synchronous cells  |
| T1                         |                   | s    | 5         |  |
| T2                         |                   | s    | $\leq 2$  |  |

### A.7.3.3.1.2.3 Test Requirements

$T_{RRC} + T_{Event\_DU}$  occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{measure} + T_{interrupt} + T_{CHO\_execution} = 1600 + 62 + 10 = 1672$  ms (power class 1) or  $1080 + 62 + 10 = 1152$  (PC2/3/4)  $62$  ms =  $1152$  ms (power classes 2,3 and 4) from the start of T2 and the interruption during T2 shall not exceed  $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} = 40 + 20 + 2 = 62$  ms excluding any transmissions which do not occur due to scheduling restrictions.

### A.7.3.3.2 Inter-frequency conditional handover from FR2 to FR2; unknown target cell

#### A.7.3.3.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR2-NR FR2 inter frequency conditional handover requirements specified in clause 6.1.4.4.

#### A.7.3.3.2.2 Test Parameters

Supported test configurations are shown in table A.7.3.3.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.7.3.3.2-2, and A.7.3.3.2-3.

The test scenario comprises of two carriers and one cell on each carrier. Gap pattern ID gp0 is configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. NR shall configure a condition implying handover to cell 2 during T1, at a time earlier than  $T_{RRC}$  before the beginning of T2. At the start of T2, cell 2 becomes detectable and meets the handover condition.

**Table A.7.3.3.2.2-1: Inter-frequency conditional handover from FR2 to FR2 test configurations**

| Config | Description  |
|--------|--|

| Note 5: As observed with 0 dBi gain antenna at the centre of the quiet zone  |                  |           |                              |       |           |       |
| Note 6: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                  |           |                              |       |           |       |

### A.7.3.3.2.3 Test Requirements

$T_{RRC} + T_{Event\_DU}$  occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{measure} + T_{interrupt} + T_{CHO\_execution} = 6720+62+10\text{ms}=6792$  ms (power class 1) or  $4160+62+10\text{ms}=4232\text{ms}$  (power classes 2,3 and 4) from the start of T2 and the interruption during T2 shall not exceed  $T_{interrupt}=T_{processing} + T_{IU} + T_{\Delta} + T_{margin} =40+20+2 = 62\text{ms}$  excluding any transmissions which do not occur due to scheduling restrictions. excluding any transmissions which do not occur due to scheduling restrictions.

## A.7.4 Timing

### A.7.4.1 UE transmit timing

#### A.7.4.1.1 NR UE Transmit Timing Test for FR2

##### A.7.4.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeB and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in Table 7.4.1.1.1-1.

**Table A.7.4.1.1.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description   |
|---------------|---|
| 1             | NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |

For this test a single NR cell is used. Tables A.7.4.1.1.1-2 and A.7.4.1.1.1-2A define the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in Table A.7.4.1.1.1-3.

**Table A.7.4.1.1-2: Cell Specific Test Parameters for UL Transmit Timing test**

| Parameter  | Unit | Config | Test1                       | Test2                       |

**Table A.7.4.1.1.1-4: Void**

### A.7.4.1.1.2 Test requirements

The test sequence shall be carried out in RRC\_CONNECTED for every test case.

Following will be the test sequence for this test:

- 1) Setup NR PCell according to parameters given in Table A.7.4.1.1.1-1.
- 2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_c$  of the first detected path of DL SSB.
  - a. The  $N_{TA}$  offset value (in  $T_c$  units) is 13792
  - b. The  $T_c$  values depend on the DL and UL SCS for which the test is being run and are given in Table 7.1.2-1
- 3) The test system shall adjust the timing of the DL path by values given in Table A.7.4.1.1.2-1

**Table A.7.4.1.1.2-1 Adjustment Value for DL Timing**

| SCS of SSB signals (kHz) | Adjustment Value    |                     |
|--------------------------|---------------------|---------------------|
|                          | Test1               | Test2               |
| 240                      | +8*64T <sub>c</sub> | +4*64T <sub>c</sub> |

- 4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_c$  respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.
- 5) The test system shall verify that the UE transmit timing offset stays within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_c$  of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment.

## A.7.4.2 UE timer accuracy

### A.7.4.3 Timing advance

#### A.7.4.3.1 SA FR2 timing advance adjustment accuracy

##### A.7.4.3.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

##### A.7.4.3.1.2 Test Parameters

Supported test configurations are shown in table A.7.4.3.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.7.4.3.1.2-2, A.7.4.3.1.2-3 and A.7.4.3.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.7.4.3.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.7.4.3.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in Clause 7.3.2.1, the UE adjusts its uplink timing at slot  $n+k$  for a timing advance command received in slot  $n$ . This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.7.4.3.1.2-1: Timing advance supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.4.3.1.2-2: General test parameters for timing advance**

| Parameter  | Unit | Value     | Comment   |
|--|------|-----------|---|
| RF channel number                                |      | 1         |   |
| Initial DL BWP                                   |      | DLBWP.0.1 | As specified in Table A.3.9.2.1-1   |
| Dedicated DL BWP                                 |      | DLBWP.1.1 | As specified in Table A.3.9.2.2-1   |
| Initial UL BWP                                   |      | ULBWP.0.1 | As specified in Table A.3.9.3.1-1   |
| Dedicated UL BWP                                 |      | ULBWP.1.1 | As specified in Table A.3.9.3.2-1   |
| Timing Advance Command ( $T_A$ ) value during T1 |      | 31        | $N_{TA\_new} = N_{TA\_old}$ for the purpose of establishing a reference value from which the timing advance adjustment accuracy can be measured during T2 |
| Timing Advance Command ( $T_A$ ) value during T2 |      | 39        | For 120 kHz SCS $N_{TA\_new} = N_{TA\_old} + 1024 * T_c$ (based on equation in clause 4.2 of TS 38.213 [3])   |
| T1   | s    | 5         |   |
| T2   | s    | 5         |   |

| Note: For further information see clause 6.3.2 in TS 38.331 [2]. |             |   |

### A.7.4.3.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e.  $k+1$  slots after the reception of the timing advance command, where  $k = 11$ .

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90%.

## A.7.5 Signaling characteristics

### A.7.5.1 Radio link Monitoring

In the following clause, any uplink signal transmitted by the UE is used for detecting the In-/Out-of-Sync state of the UE. In terms of measurement, the uplink signal is verified on the basis of the UE output power:

*Editor note: The metric for the detection of the UE UL transmitted signal by the TE is FFS.*

#### A.7.5.1.1 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode

##### A.7.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.7.5.1.1.1-1. The test parameters are given in Tables A.7.5.1.1.1-2, A.7.5.1.1.1-3, and A.7.5.1.1.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.1.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.1.1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In addition to RLM-RS radio link monitoring using SSB index 0 and SSB index 1, the UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40ms) in test 1.

**Table A.7.5.1.1.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description                                       |
|---------------|---|
| 1             | TDD, SSB SCS 120 KHz, data SCS 120KHz, BW 100 MHz |

Table A.7.5.1.1-2: General test parameters for FR2 out-of-sync testing in non-DRX mode

| Parameter   |  | Unit | Value<br>Test 1             |
|---|--|------|-----------------------------|
| Active PCell  |  |      | Cell 1                      |

Figure A.7.5.1.1.1-2:

Time multiplexed downlink transmissions

A.7.5.1.1.2 Test Requirements

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

A.7.5.1.2 Radio Link Monitoring In-sync Test for FR2 PCell configured with SSB-based RLM RS in non-DRX mode

A.7.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.7.5.1.2.1-1. The test parameters are given in Tables A.7.5.1.2.1-2, and A.7.5.1.2.1-3 below. There is one cell (Cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states, and Figure A.7.5.1.2.1-2 shows the Time multiplexed downlink transmissions from each Angle of Arrival. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

Table A.7.5.1.2.1-1: Supported test configurations for FR2 PCell

| Configuration | Description                                       |

| <p>Note 1: OCNG shall be used such that a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.</p> <p>Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.</p> <p>Note 4: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on a bands, the SNR during T3 is A.3.6.</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.</p> <p>Note 6: This value allows up to 1dB degradation from applied SNR to UE baseband</p> |          |                           |                                 |                      |     |      |                     |                     |     |     |     |     |

**Table A.7.5.1.2.1-4: Void**

Figure A.7.5.1.2.1-1: SNR variation for in-sync testing

Figure A.7.5.1.2.1-2:

A.7.5.1.2.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.5.1.3 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with SSB-based RLM RS in DRX mode

#### A.7.5.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.7.5.1.3.1-1. The test parameters are given in Tables A.7.5.1.3.1-2, and A.7.5.1.3.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.7.5.1.3.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description                                       |
|---------------|---|
| 1             | TDD, SSB SCS 120 KHz, data SCS 120KHz, BW 100 MHz |

| <p>Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.</p> <p>Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.</p> <p>Note 4: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6.</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.</p> <p>Note 6: This value allows up to 1dB degradation from applied SNR to UE baseband.</p> |          |            |                           |                      |     |

**Table A.7.5.1.3.1-4: Void**

**Table A.7.5.1.3.1-5: Void**

**Figure A.7.5.1.3.1-1: SNR variation for out-of-sync testing**

**A.7.5.1.3.2 Test Requirements**

The UE behavior in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.1.4 Radio Link Monitoring In-sync Test for FR2 PCell configured with SSB-based RLM RS in DRX mode

##### A.7.5.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR2 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0 and SSB#1, and *purpose* set to ‘*rlf*’. Supported test configurations are shown in table A.7.5.1.4.1-1. The test parameters are given in Tables A.7.5.1.4.1-2, and A.7.5.1.4.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.4.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.5.1.4.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description                                       |
|---------------|---|
| 1             | TDD, SSB SCS 120 KHz, data SCS 120KHz, BW 100 MHz |

**Table A.7.5.1.4.1-2: General test parameters for FR2 in-sync testing in DRX mode**

| Parameter                           |  | Unit | Value                       |

Table A.7.5.1.4.1-5: Void

Figure A.7.5.1.4.1-1: SNR variation for in-sync testing

A.7.5.1.4.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90%.

A.7.5.1.5 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with CSI-RS-based RLM in non-DRX mode

A.7.5.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR2 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.5.1-1, A.7.5.1.5.1-2, A.7.5.1.5.1-3 and A.7.5.1.5.1-4 below. There is one cell, cell 1 which is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.5.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test. In the test, SSB0 and SSB1 are configured as BFD-RS.

Table A.7.5.1.5.1-1: Supported test configurations for FR2 PCell

| Configuration | Description   |
|---------------|---|

**Figure A.7.5.1.5.1-1: SNR variation for CSI-RS out-of-sync testing**

**A.7.5.1.5.2 Test Requirements**

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ( $D_1$  second after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

**A.7.5.1.6 Radio Link Monitoring In-sync Test for FR2 PCell configured with CSI-RS-based RLM in non-DRX mode**

**A.7.5.1.6.1 Test Purpose and Environment**

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR2 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.6.1-1, A.7.5.1.6.1-2 and A.7.5.1.6.1-3 below. There is one cells, cell 1 which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.6.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is not enabled. In the test, SSB0 and SSB1 are configured as BFD-RS.

- ote 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- ote 2: The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T1.
- ote 3: NZP CSI-RS resource set configuration for CSI reporting are assigned to the UE prior to the start of time period T1.
- ote 4: Measurement gap configuration is assigned to the UE prior to the start of time period T1.
- ote 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.
- ote 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.
- ote 7: SNR levels correspond to the signal to noise ratio over the SSS REs.
- ote 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.7.5.1.6.1 1.
- ote 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on a bands, the SNR during T3 is A.3.6.
- ote 10: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.
- ote 11: This value allows up to 1dB degradation from applied SNR to UE baseband.

Figure A.7.5.1.6.1-1: SNR variation for CSI-RS in-sync testing

A.7.5.1.6.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

A.7.5.1.7 Radio Link Monitoring Out-of-sync Test for FR2 PCell configured with CSI-RS-based RLM in DRX mode

A.7.5.1.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR2 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.7.1-1, A.7.5.1.7.1-2, and A.7.5.1.7.1-3 below. There is one cell, cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.7.5.1.7.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 and SSB1 are configured as BFD-RS.

Table A.7.5.1.7.1-1: Supported test configurations for FR2 PCell

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

Figure A.7.5.1.7.1-1: SNR variation for CSI-RS out-of-sync testing

A.7.5.1.7.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on PCell.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ( $D_1$  seconds after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

A.7.5.1.8 Radio Link Monitoring In-sync Test for FR2 PCell configured with CSI-RS-based RLM in DRX mode

A.7.5.1.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR2 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.7.5.1.8.1-1, A.7.5.1.8.1-2, A.7.5.1.8.1-3 and A.7.5.1.8.1-4 below. There is one cells, cell 1 which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.1.8.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 10 ms. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test. In the test, SSB0 and SSB1 are configured as BFD-RS.

Table A.7.5.1.8.1-1: Supported test configurations for FR2 PCell

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Table A.7.5.1.8.1-2: General test parameters for FR2 PCell for CSI-RS in-sync testing in non-DRX mode**

| Note 5: The timers and layer 3 filtering related parameters are configured prior to the start of time period T1.  |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 6: The signal contains PDCCH for UEs other than the device under test as part of OCNG.   |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 7: SNR levels correspond to the signal to noise ratio over the SSS REs.  |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 8: The SNR in time periods T1, T2, T3, T4 and T5 is denoted as SNR1, SNR2, SNR3, SNR4 and SNR5 respectively in figure A.7.5.1.8.1-1.                                       |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 9: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6. |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 10: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |          |           |                           |    |    |    |    |                      |                       |     |      |                      |
| Note 11: This value allows up to 1dB degradation from applied SNR to UE baseband.   |          |           |                           |    |    |    |    |                      |                       |     |      |                      |

**Table A.7.5.1.8.1-4: Measurement gap configuration for FR2 CSI-RS in-sync radio link monitoring in non-DRX mode**

| Field   | Test 1 |
|---|--------|
|   | Value  |
| gapOffset   | 0      |
| Note 1: RLM RS is partially overlapped with measurement gap |        |

**Figure A.7.5.1.8.1-1: SNR variation for CSI-RS in-sync testing**

**A.7.5.1.8.2 Test Requirements**

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

**A.7.5.1.9 UE Radio Link Monitoring Scheduling Restrictions on FR2**

**A.7.5.1.9.1 Test Purpose and Environment**

The purpose is to verify that the NR UE correctly follows the RLM scheduling restrictions requirements defined in clause 8.1.7. This test verifies that the UE correctly receive the PDCCH scheduled on the symbols right before the RLM SSB symbols without overlap so that it sends ACK/NACK correctly. The test case is only applicable to UE which supports pdccch-MonitoringAnyOccasions or pdccch-MonitoringAnyOccasionsWithSpanGap.

The test parameters are given in table A.7.5.1.9.1-1, table A.7.5.1.9.1-2 and table A.7.5.1.9.1-3 below. The UE is required during time period T1 to transmit ACK/NACK correctly upon scheduling of PDSCH.

**Table A.7.5.1.9.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB SCS, 120 kHz RMC SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.1.9.1-2: General test parameters for NR RLM scheduling restriction test case in FR2**

| Parameter          | Unit | Test configuration | Value          | Comment   |
|--------------------|------|--------------------|----------------|---|
| RF Channel Number  |      | 1                  | 1              |   |
| SSB configuration  |      | 1                  | SSB.1 FR2      |   |
| SMTC configuration |      | 1                  | SMTC pattern 1 |   |
| DRX cycle length   | s    | 1                  | OFF            |   |
| T1                 | s    | 1                  | 5              | During T1 the UE is required to correctly transmit ACK/NACK |

| <p>Note 1: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Calculation of Es/Iot<sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor <math>\Delta MB_s</math> from TS 38.101-2 [19] Table 6.2.1.3-4.</p> |               |                    |                                 |                  |

Figure A.7.5.1.9.1-1: Time multiplexed downlink transmissions

A.7.5.1.9.2 Test Requirements

The UE behaviour follows the requirements defined in clause 8.1.7.3.

A.7.5.2 Interruption

A.7.5.2.1 Interruptions during measurements on deactivated NR SCC in FR2

A.7.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE missed ACK/NACK rate does not exceed the limits at NR PSCell interruptions during the measurement on the deactivated NR SCC. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2. Supported test configurations are shown in table A.7.5.2.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.7.5.2.1.1-2 and A.7.5.2.1.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell, Cell2 is an NR deactivated SCell. Cell1 shall be configured as PCell and Cell2 shall be configured as SCell.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell1 and Cell2. The point in time at which the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector, defines the start of time period T1. During T1, PCell is continuously scheduled in DL.

Table A.7.5.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD – TDD duplex mode |

**Table A.7.5.2.1.1-2: General test parameters for interruptions during measurements on deactivated NR SCC in standalone NR**

| <b>Parameter</b>                         | <b>Unit</b> | <b>Value</b> | <b>Comment</b>                               |
|--|-------------|--------------|--|
| RF Channel Number                        |             | 1, 2         | Two NR RF channels                           |
| Active PCell                             |             | Cell1        | PCell on NR RF channel number 1.             |

#### A.7.5.2.1.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5% of ACK/NACK on PCell.

If the NR PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in Table A.7.5.2.1.2-1.

If the NR PCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell no earlier than 4 slots before an SMTC and no later than 4 slots after the SMTC. the interruption on NR PCell shall not exceed the value defined in Table A.7.5.2.1.2-2.

**Table A.7.5.2.1.2-1: Interruption duration if the PCell is not in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slot) |
|-------|---------------------|----------------------------|
| 3     | 0.125               | 4                          |

**Table A.7.5.2.1.2-2: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length (slot) |
|-------|---------------------|----------------------------|
| 3     | 0.125               | 8 + SMTC duration          |

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5.2.2 SA interruptions at NR SRS carrier-based switching

### A.7.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that when a UE needs to transmit aperiodic SRS, the UE can perform SRS carrier-based switching to a carrier not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission. The test will partly verify the interruption requirements on PCell in clause 8.2.2.2.9.

### A.7.5.2.2.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR2 PCell. Cell 2 is an activated FR2 SCell on the TDD SCC which operates in downlink without PUCCH/PUSCH. The UE is configured with the SRS switching between PCell and SCell. The test parameters for PCell and SCell are given in Tables A.7.5.2.2.2-2, A.7.5.2.2.2-3, and A.7.5.2.2.2-4 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is triggered for SRS switching. The UE shall be scheduled on PCell continuously throughout the test.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell.

**Table A.7.5.2.2.2-1: Supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| NOTE: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.7.5.2.2.2-2: General test parameters for SA interruptions at NR SRS carrier-based switching**

| Parameter         | Unit | Value  | Comment  |
|-------------------|------|--------|--|
| RF Channel Number |      | 1, 2   | Two NR radio channel (1, 2) are used for this test |
| Active PCell      |      | Cell 1 | Primary cell on NR RF channel number 1             |
| Configured SCell  |      | Cell 2 | Activated secondary cell on NR RF channel number 2 |
| CP length         |      | Normal |  |
| DRX               |      | OFF    | Continuous monitoring of PCell                     |
| T1                | s    | 5      |  |
| T2                | ms   | 100    | UE shall perform SRS switching during T2           |

**Table A.7.5.2.2-3: Cell-specific test parameters for SA interruptions at NR SRS carrier-based switching**

| Parameter  |          | Unit | Cell 1 | Cell 2                      |
|--|----------|------|--------|-----------------------------|
| Frequency Range  |          |      |        | FR2                         |

### A.7.5.2.2.3 Test Requirements

During T2, interruption on PCell due to SRS carrier-based switching between Cell 1 and Cell 2 shall not exceed the required values specified in clause 8.2.2.2.9.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5.3 SCell Activation and Deactivation Delay

### A.7.5.3.1 SCell Activation and deactivation for SCell in FR2 intra-band in non-DRX

#### A.7.5.3.1.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.6.5.3.1.1 except the PCell and SCell are in FR2 intra-band.

The supported test configurations are shown in table A.7.5.3.1.1-1 below. The general test parameters are the same as defined in Table A.6.5.3.1.1-2 except those described in Tables A.7.5.3.1.1-2, and cell specific test parameters are described in Tables A.7.5.3.1.1-3. OTA related test parameters are shown in table A.7.5.3.1.1-4 below.

Table A.7.5.3.1.1-1: Supported test configurations for FR2 SCell activation case

| Configuration | Description   |
|---------------|---|
| 1             | NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |

Table A.7.5.3.1.1-2: General test parameters for FR2 SCell activation case

| Parameter         | Unit | Value | Comment  |
|-------------------|------|-------|--|
| RF Channel Number |      | 1,2   | Two NR radio channels are used for this test, cell 1 and cell2 use RF channel 1 and 2, respectively. |

Table A.7.5.3.1.1-3: Cell specific test parameters for FR2 SCell activation case

| Parameter <sup>Note 5</sup>   | Unit | Cell 1                      |    |    | Cell 2 |    |    |
|---|------|-----------------------------|----|----|--------|----|----|
|   |      | T1                          | T2 | T3 | T1     | T2 | T3 |
| SSB ARFCN   |      | freq1                       |    |    | freq2  |    |    |
| Duplex mode   |      | TDD                         |    |    |        |    |    |
| TDD configuration   |      | TDDConf.3.1                 |    |    |        |    |    |

### A.7.5.3.1.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except  $T_{activation\_time}$  will be replaced with the value  $T_{FirstSSB} + 5ms$  as defined in clause 8.3.

### A.7.5.3.2 SCell Activation and deactivation for FR1+FR2 inter-band with target SCell in FR2

#### A.7.5.3.2.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell is in FR1 and SCell is in FR2.

The supported test configurations are defined in Table A.7.5.3.2.1-1. The general test parameters are the same as defined in Table A.6.5.3.1.1-2 except that the length of T2 is 2s. And cell specific test parameters are described in Tables A.7.5.3.2.1-2. OTA related test parameters are defined in Table A.7.5.3.2.1-3.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell.

A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a slot # denoted m. The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2.

During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot  $m+T_{L1-RSRP}$ . In the next DL slot after slot  $m+T_{L1-RSRP}$ , the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell1 deactivation command is sent until CSI reporting for SCell1 is discontinued.

**Table A.7.5.3.2.1-1: Supported test configurations for FR2 SCell activation case**

| <b>Configuration</b> | <b>Description</b>  |
|----------------------|---|
| 1                    | PCell: 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 2                    | PCell: 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 3                    | PCell: 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode<br>Target SCell: 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode  |
| Note:                | The UE is only required to pass in one of the supported test configurations   |

**Table A.7.5.3.2.1-2: Cell specific test parameters for FR2 SCell activation case**

| Parameter <sup>Note 5</sup>                       | Unit         | Cell 1         |                             |    | Cell 2      |                                  |                |

| Note 4:                                   | Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone   |                              |    |    |                              |        |        |
| Note 5:                                   | Void   |                              |    |    |                              |        |        |
| Note 6:                                   | Void   |                              |    |    |                              |        |        |
| Note 7:                                   | Information about types of UE beam is given in B.2.1.3 and does not imit UE implementation or test system implementation.  |                              |    |    |                              |        |        |

**A.7.5.3.2.2 Test Requirements**

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2 the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+ $T_{L1-RSRP}$ ), where  $T_{L1-RSRP}$  is no larger than

$$3ms + T_{FirstSSB\_MAX} + 15 * T_{SMTc\_MAX} + 8 * T_{TS} + T_{L1-RSRP, measure} + T_{L1-RSRP, report}$$

as defined in clause 8.3.2. For this test case,  $T_{FirstSSB\_MAX}=T_{SMTc\_MAX}=T_{TS}=20ms$ ;  $T_{L1-RSRP, measure}=160ms$  and  $T_{L1-RSRP, report}=5ms$ , which allows  $T_{L1-RSRP}$  680 ms.

During T2 the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot  $m + \frac{T_{HARQ} + T_{activation\_time} + T_{CSI\_Reporting}}{NR\ slot\ length}$ , where

-  $T_{HARQ}$  is defined in Table A.5.5.3.1.1-2

-  $T_{\text{activation\_time}} = 3\text{ms} + T_{\text{FirstSSB\_MAX}} + 15 * T_{\text{SMTc\_MAX}} + 8 * T_{\text{rs}} + T_{\text{L1-RSRP, measure}} + T_{\text{L1-RSRP, report}} + \max \{ (T_{\text{HARQ}} + T_{\text{uncertainty\_MAC}} + 5\text{ms} + T_{\text{FineTiming}}), (T_{\text{uncertainty\_RRC}} + T_{\text{RRC\_delay}}) \}$ , which allows 710 ms

-  $T_{\text{CSI\_Reporting}} = 10\text{ms}$

- NR slot length is 0.125ms for this test case.

During T3 the UE shall stop sending CSI reports for both SCells no later than slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3.

During T2 interruption of PCell during SCell activation shall not happen outside the slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $m + 1 + \frac{T_{\text{HARQ}} + 3\text{ms} + T_{\text{X}}}{\text{NR slot length}}$ , as defined in clause 8.3, where  $T_{\text{X}} = 20\text{ms}$ .

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot  $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $n + 1 + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3.

The interruption of PCell due to activation of SCell shall not be more than the values specified for SA in Clause 8.2.2.2.7.

### A.7.5.3.3 SCell Activation and deactivation for SCell in FR2 inter-band in non-DRX

#### A.7.5.3.3.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.7.5.3.1.1 except the PCell and SCell are in FR2 inter-band.

The supported test configurations are shown in table A.7.5.3.3.1-1 below. The general test parameters are described in Tables A.7.5.3.3.1-2, and cell specific test parameters are described in Tables A.7.5.3.3.1-3. OTA related test parameters are shown in table A.7.5.3.3.1-4 below.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on NR. During T1 the SCell is powered off and UE is not aware of SCell. A MAC message for activation of SCell is sent by the test equipment 100ms after the RRC message, in a slot # denoted m.

The point in time at which the MAC message for activation of SCell is received at the UE antenna connector defines the start of time period T2. Immediately at beginning of T2 the transmission power of Cell 2 is increased to same level as for cell 2. During T2, the test equipment monitors the L1-RSRP measurement reporting for the SCell. The time when test equipment receives a valid L1-RSRP report is denoted as slot  $m + T_{\text{L1-RSRP}}$ . In the next DL slot after slot  $m + T_{\text{L1-RSRP}}$ , the test equipment sends a MAC message for the activation of the TCI state of the RMC CORESET of the SCell. In the same slot, the test equipment also sends an RRC message to configure the CSI-RS resources for SCell.

Time period T3 starts when a MAC message for deactivation of the SCell, sent from the test equipment to the UE in a slot # denoted n, is received at the UE antenna connector.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell and PSCell during activation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell1 deactivation command is sent until CSI reporting for SCell1 is discontinued.

**Table A.7.5.3.3.1-1: Supported test configurations for FR2 SCell activation in FR2 inter-band**

| Configuration | Description   |
|---------------|---|
| 1             | NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |

Table A.7.5.3.3.1-2: General test parameters for FR2 SCell activation in FR2 inter-band

| Parameter   | Unit    | Value                              | Comment   |
|---|---------|------------------------------------|---|
| RF Channel Number                                     |         | 1,2                                | Two NR radio channels are used for this test. RF channel number 1 is in band 1 and RF channel number 2 is in band 2, where bands 1 and 2 are inter-band CA operating bands in FR2 as specified in Table 5.2A.2-1 in TS38.101-2.                                 |
| Active PCell  |         | Cell 1                             | Primary cell on NR RF channel number 1.   |
| Configured deactivated SCell                          |         | Cell 2                             | Configured deactivated secondary cell on NR RF channel number 2.  |
| CP length   |         | Normal                             |   |
| DRX   |         | OFF                                | Continuous monitoring of primary cell   |
| CQI/PMI periodicity and offset configuration index    |         | 0                                  | CQI reporting for SCell every second subframe   |
| Cell-individual offset for cells on NR channel number | dB      | 0                                  | Individual offset for cells on primary component carrier.   |
| SCell measurement cycle (measCycleSCell)              | ms      | 160                                |   |
| Cell2 timing offset to cell1                          | $\mu$ s | $\leq 8$                           | A random value from 0 $\mu$ s to 8 $\mu$ s  |
| T1  | s       | 7                                  | During this time the PCell shall be known and the SCell configured and detected.  |
| T2  | s       | 2                                  | During this time the UE shall activate the SCell.   |
| T3  | s       | 1                                  | During this time the UE shall deactivate the SCell.   |
| T <sub>HARQ</sub>                                     | ms      | $k_1 \times \text{NR slot length}$ | $k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by <i>dl-DataToUL-ACK</i> , the value of $k$ should be the minimum value defined in TS 38.213 [3] depends on UE's capability |
| T <sub>CSI_Reporting</sub>                            | ms      | 2                                  | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]  |

**Table A.7.5.3.3.1-3: Cell specific test parameters for FR2 SCell activation in FR2 inter-band**

| Parameter <sup>Note 5</sup>   | Unit | T1                          |        | T2                          |                                     | T3                          |                |

| Note 7:                                   | Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |                                       |    |    |        |    |    |

### A.7.5.3.3.2 Test Requirements

During T2 the UE shall start sending CSI report for the SCell in the configured slots for CSI reporting after at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k). UE shall send the first CSI report for SCell after receiving at least one CSI-RS transmission occasion for channel measurement and reporting after slot (m+k), or in the next available uplink resource for CSI reporting if the slot was subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2, the UE shall start sending valid L1-RSRP report for the SCell in the configured slots for CSI reporting after slot (m+ $T_{L1-RSRP}$ ), where  $T_{L1-RSRP}$  is no larger than  $3ms + T_{FirstSSB\_MAX} + 15 * T_{SMTC\_MAX} + 8 * T_{rs} + T_{L1-RSRP, measure} + T_{L1-RSRP, report}$  as defined in clause 8.3.2. For this test case,  $T_{FirstSSB\_MAX} = T_{SMTC\_MAX} = T_{rs} = 20ms$ ;  $T_{L1-RSRP, measure} = 480ms$  and  $T_{L1-RSRP, report} = 5ms$ , which allows  $T_{L1-RSRP} = 1000ms$ .

During T2, the UE shall start sending CSI reports for the SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot  $m + \frac{T_{HARQ} + T_{activation\_time} + T_{CSI\_Reporting}}{NR\ slot\ length}$ , where

- $T_{HARQ}$  is defined in Table A.7.5.3.3.1-2
- $T_{activation\_time} = 3ms + T_{FirstSSB\_MAX} + 15 * T_{SMTC\_MAX} + 8 * T_{rs} + T_{L1-RSRP, measure} + T_{L1-RSRP, report} + \max \{ (T_{HARQ} + T_{uncertainty\_MAC} + 5ms + T_{FineTiming}), (T_{uncertainty\_RRC} + T_{RRC\_delay}) \}$ , which allows 1030ms
- $T_{CSI\_Reporting} = 10ms$
- NR slot length is 0.125ms for this test case.

During T2, the interruption of PCell during SCell activation shall not happen outside the slot  $m + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to  $m + 1 + \frac{T_{HARQ} + 3ms + T_X}{NR\ slot\ length}$ , where  $T_X = 20ms$ .

During T3, the UE shall stop sending CSI reports for SCell no later than slot  $n + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$ , as defined in clause 8.3.

During T3, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot  $n + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to  $n + 1 + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$  as defined in clause 8.3.

### A.7.5.3.4 Direct SCell activation at SCell addition of known SCell in FR2

#### A.7.5.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the delay and interruption for direct SCell activation delay at SCell addition are within the requirements stated in clause 8.3.4.

The supported test configurations are shown in Table A.7.5.3.4.1-1 below. The general test parameters are given in Table A.7.5.3.4.1-2 and cell-specific test parameters in Table A.7.5.3.4.1-3. OTA related test parameters are shown in Table A.7.5.3.4.1-4.

The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two FR2 carriers and two NR cells. Before the test starts the UE is connected to Cell 1 (PCell) on carrier #1, but is not aware of Cell 2 on NR carrier #2. Cell 1 and Cell 2 have constant signal levels throughout the test. The UE is monitoring the PCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the Cell 2 is monitored by the UE. During T1, Cell 2 should be detected and measured by the UE such that it meets the condition for known cell defined in clause 8.3.4 for direct SCell activation.

Time period T2 starts when the *RRCReconfiguration* message for the configuration and activation of Cell 2 (the SCell), which is sent from the test equipment, is received at the UE antenna connector in a slot # denoted m. The test equipment shall set the parameter *sCellState* to *activated* for the SCell, which causes Cell 2 to become configured and activated.

Time period T3 starts at  $(m + N_{\text{direct}})$ , at which point UE shall be reporting a valid CQI for both PCell and SCell.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during the activation of SCell. The test equipment verifies the activation time by counting the slots from the time when the SCell activation message is sent until a CQI report with other than CQI index 0 is received.

**Table A.7.5.3.4.1-1: Supported test configurations**

| Configuration  | Description  |
|--|--|
| 1  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.7.5.3.4.1-2: General test parameters**

| Parameter                                | Unit | Value  | Comment   |
|--|------|--|---|
| RF Channel Number                        |      | 1,2  | Two NR radio channels (1,2) in FR2 are used for this test   |
| Active PCell                             |      | Cell 1   | Primary cell on NR RF channel number 1.   |
| Configured and activated SCell           |      | Cell 2   | Configured and activated SCell on NR RF channel number 2.   |
| CP length                                |      | Normal   |   |
| DRX                                      |      | OFF  | Continuous monitoring of primary cell   |
| SCell measurement cycle (measCycleSCell) | ms   | 160  |   |
| T1                                       | s    | 7  | During this time the measurement for Cell 2 is configured, and Cell 2 is detected.  |
| T2                                       | s    | $N_{\text{direct}}$  | During this time the UE shall configure and activate Cell 2 as SCell.   |
| T3                                       | ms   | 100  | During this time the UE shall report valid CQI for both PCell and SCell.  |
| $T_{\text{HARQ}}$                        | ms   | $k_1 \times \text{NR slot length}$                         | $k_1$ is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by <i>dl-DataToUL-ACK</i> if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| k  | slot | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe}, \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3]   |

**Table A.7.5.3.4.1-3: Cell specific test parameters**

| Parameter   |          | Unit | Cell 1                      |    |    | Cell 2         |    |    |
|---|----------|------|-----------------------------|----|----|----------------|----|----|
|   |          |      | T1                          | T2 | T3 | T1             | T2 | T3 |
| SSB ARFCN   |          |      | freq1                       |    |    | freq2          |    |    |

#### A.7.5.3.4.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after slot  $(m+k)$ . UE is allowed to postpone CSI report to next available UL resource if an available uplink resource is subject to interruption. Whether CSI report in a slot was interrupted is checked by monitoring ACK/NACK sent in PCell in the slot.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index in the configured slots for CSI reporting no later than slot  $m + \frac{N_{direct}}{NR\ slot\ length}$ , where

$$N_{direct} = T_{RRC\_Process} + T_1 + T_{activation\_time} + T_{CSI\_Reporting} - 3ms,$$

- $T_{RRC\_Process} = 16ms$ , which is the RRC procedure delay defined for SCell addition in clause 12 of TS 38.331 [2],
- $T_1$  is the delay from slot  $m + T_{RRC\_Process}$  until the transmission of *RRCReconfigurationComplete* message,
- $T_{activation\_time} = T_{FirstSSB} + 5ms = 25ms$ ,
- $T_{CSI\_Reporting} = 10ms$

This gives a total of  $N_{direct} = 16 + T_1 + 25 + 10 - 3 = (48 + T_1)$  ms, and NR slot length is 0.125ms.

During T3 the UE shall send CSI reports for SCell with non-zero CQI index and continue to send CSI reports for SCell with non-zero CQI index until the end of T3.

During T2 interruption of PCell during SCell activation shall not happen outside the window from slot  $m+1$  to slot  $m+1 + \frac{T_{RRC\_Process} + T_1 + T_X}{NR\ slot\ length}$  as defined in clause 8.3.4, where  $T_X = 20ms$ .

The interruption of PCell due to activation of SCell shall not be more than the values specified for NR SA in clause 8.2.2.2.11.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot  $m + \frac{N_{direct}}{NR\ slot\ length}$  as defined in clause 8.3.4 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.7.5.3.5 Direct SCell activation at handover with known SCell in FR2

#### A.7.5.3.5.1 Test Purpose and Environment

This test is to verify the requirements specified in sub clause 8.3.5 for the FR2 handover with direct SCell activation.

The test scenario comprises of three FR2 cells, one source PCell (Cell 1), one target PCell (Cell 2) and one SCell (Cell 3). The test consists of three successive time periods, with time durations of T1, T2, and T3 respectively.

At the start of time duration T1, the UE is in connected mode with PCell (Cell 1). Both Cell 2 and Cell 3 are known to UE and UE is reporting CQI for all Cell 1.

Time period T2 starts when UE receives a handover command that initiate handover of UE to Cell2 and also activates Cell 3. This is done using an *RRCConnectionReconfiguration* message with parameter *sCellState* set to *activated* for the Cell 3. The message is sent from the test equipment to the UE and is received in a slot number  $n$  at the UE antenna connector. The UE shall accomplish the handover, addition and activation of the SCell no later than slot  $(n + \frac{N_{direct}}{NR\ slot\ length})$ .

Time period T3 starts at  $(n + \frac{N_{direct}}{NR\ slot\ length})$ , at which point UE shall be reporting a valid CSI for both Cell 2 and Cell 3 as given in tables A.7.5.3.5.1-1 and A.7.5.3.5.1-2.

**Table A.7.5.3.5.1-1: Supported test configurations for FR2 handover with direct SCell activation case**

| Configuration | Description  |
|---------------|--|
| 1             | SCell: NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode<br>Source cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode<br>Target cell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.5.3.5.1-2: General test parameters for FR2 handover with direct SCell activation case**

| Parameter                 | Unit           | Value     | Comment  |
|---------------------------|----------------|-----------|--|
| RF Channel Number         |                | 1, 2, 3   | Three NR radio channels are used for this test, Cell 1, Cell2 and Cell 3 use RF channel 1, 2 and 3 respectively. |
| A4-Offset                 | dBm            | -120      |  |
| Time offset between cells |                | 3 $\mu$ s | Synchronous cells  |
| Initial conditions        | Source cell    | Cell 1    | Source Cell  |
|                           | Target cell    | Cell 2    | Neighbour cell   |
|                           | SCell          | Cell 3    | SCell is not added and activated   |
| Final condition           | Source cell    | Cell 2    | Cell 2 is Source cell after handover   |
|                           | Neighbour cell | Cell 1    | Neighbour cell   |
|                           | SCell          | Cell 3    | SCell is added and activated   |

**Table A.7.5.3.5.1-3: Cell specific test parameters for FR2 SCell activation case**

| Parameter <sup>Note 5</sup>   | Unit | T1                          |        |        | T2                          |        |        | T3                          |        |        |
|---|------|-----------------------------|--------|--------|-----------------------------|--------|--------|-----------------------------|--------|--------|
|   |      | Cell 1                      | Cell 2 | Cell 3 | Cell 1                      | Cell 2 | Cell 3 | Cell 1                      | Cell 2 | Cell 3 |
| SSB ARFCN   |      | freq1                       | freq2  | freq3  | freq1                       | freq2  | freq3  | freq1                       | freq2  | freq3  |

| Note 1:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 2:                                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 3:                                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 4:                                   | Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone   |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 5:                                   | As observed with 0dBi gain antenna at the centre of the quiet zone   |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 6:                                   | Void   |                                     |    |    |                                     |    |    |                                     |    |    |
| Note 7:                                   | Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |                                     |    |    |                                     |    |    |                                     |    |    |

### A.7.5.3.5.2 Test Requirements

The UE shall be capable to transmit valid CSI report for PCell (Cell 2) and to the directly activated SCell1 no later than in slot  $n + N_{direct}$ .

The SCell activation delay,  $N_{direct}$ , can be expressed as:  $N_{direct} = T_{RRC\_process} + T_{interrupt} + T_2 + T_3 + T_{activation\_time} + T_{CSI\_Reporting} - 3ms$ ; Where:

$T_{RRC\_Process}$ : RRC procedure delay defined in clause 12 of TS 38.331 and it is equal to 16ms,

$T_{interrupt}$ : Interruption time during handover as specified in clause 6.1.1. The value to be verified in the test is 52 ms ( $T_{interrupt} = 0$  ms for  $T_{search} + 10ms$  for  $T_{IU} + 20$  ms for  $T_{processing} + 20ms$  for  $T_{\Delta} + 2$  ms for  $T_{margin}$  ms) by assuming known SCell and SMTC.1 configuration.

$T_2$ : Delay from slot  $n + \frac{T_{RRC\_Process} + T_{interrupt}}{NR\ slot\ length}$  until UE has obtained a valid TA command for the target PCell,

$T_3$ : Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to  $k+1$  slot, where  $k$  is defined in clause 4.2 in TS 38.213,

$T_{activation\_time}$  and  $T_{CSI\_Reporting}$  are specified in clause 8.3.2, where the following definitions of  $T_{FirstSSB}$  and  $T_{FirstSSB\_MAX}$  as defined in section 8.3.5 shall apply:

During time period T2 of the test, the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot  $n + \frac{T_{HARQ} + T_{activation\_time} + T_{CSI\_Reporting}}{NR\ slot\ length}$ ,  $T_{activation\_time} = T_{SMTC\_SCell} + 5ms$ , as defined in clause 8.3.

During time period T3 of the test, the UE shall stop sending CSI reports for SCell at latest in a slot  $m + \frac{T_{HARQ} + 3ms}{NR\ slot\ length}$ , as defined in clause 8.3.

During time period T2 of the test, interruption of PCell / PSCell during SCell activation shall not happen outside the slot  $n + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to  $n + 1 + \frac{T_{HARQ} + 3ms + T_X}{NR\ slot\ length} + N_{interruption}$ , as defined in clause 8.3.

During time period T3 of the test, the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot  $m + 1 + \frac{T_{\text{HARQ}}}{NR \text{ slot length}}$  to  $m + 1 + \frac{T_{\text{HARQ}} + 3\text{ms}}{NR \text{ slot length}}$ , as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During time period T2 of the test, if there are no uplink resources for reporting the valid CSI in a slot  $\frac{T_{\text{HARQ}} + T_{\text{activation\_time}} + T_{\text{CSI\_Reporting}}}{NR \text{ slot length}}$  as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

#### A.7.5.4 Void

### A.7.5.5 Beam Failure Detection and Link recovery procedures

#### A.7.5.5.1 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

##### A.7.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.1.1-1, A.7.5.5.1.1-2, A.7.5.5.1.1-3 and A.7.5.5.1.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.1.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.7.5.5.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test 1.

**Table A.7.5.5.1.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth                                |
| 2             | TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth                                |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR2 |

**Table A.7.5.5.1.1-2: General test parameters for FR2 PCell for SSB-based beam failure detection and link recovery testing in non-DRX mode**

| Parameter | Test Config. | Unit | Value  | Comment |
|-----------|--------------|------|--------|---------|

**Table A.7.5.5.1.1-4: Void**

**Figure A.7.5.5.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

#### A.7.5.5.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 960 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.5.2 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with SSB-based BFD and LR in DRX mode

##### A.7.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.2.1-1, A.7.5.5.2.1-2, A.7.5.5.2.1-3, A.7.5.5.2.1-4 and A.7.5.5.2.1-5 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.2.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.7.5.5.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

Table A.7.5.5.2.1-1: Supported test configurations for FR2 PCell

| Configuration  | Description   |
|--|---|
| 1  | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2  | TDD duplex mode, 240 kHz SSB SCS, 100 MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR2 |   |

**Figure A.7.5.5.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

#### A.7.5.5.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 560 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.5.3 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

##### A.7.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UE's active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.3.1-1, A.7.5.5.3.1-2, and A.7.5.5.3.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.3.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.3.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

Table A.7.5.5.3.1-1: Supported test configurations for FR2 PCell

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Figure A.7.5.5.3.1-1: SNR and L1-RSRP variation for CSI-RS based beam failure detection and link recovery testing in non-DRX mode**

### A.7.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.5.5.4 Beam Failure Detection and Link Recovery Test for FR2 PCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.7.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.4.1-1, A.7.5.5.4.1-2, A.7.5.5.4.1-3, and A.7.5.5.4.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.4.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active cell to emulate CSI-RS based beam failure. Figure A.7.5.5.4.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration

timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.5.5.4.1-1: Supported test configurations for FR2 PCell**

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Figure A.7.5.5.4.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode**

#### A.7.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.5.5 Scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2 PCell configured with SSB-based BFD and LR in non-DRX mode

##### A.7.5.5.5.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements in clause 8.5.7 and 8.5.8.

The test parameters are given in Tables A.7.5.5.5.1-1, A.7.5.5.5.1-2 and A.7.5.5.5.1-3 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.5.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.7.5.5.5.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. This test will focus on the scheduling availability during beam failure detection and candidate beam detection. In

the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

**Table A.7.5.5.1-1: Supported test configurations for FR2 PCell**

| Configuration  | Description   |
|--|---|
| 1  | NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 2  | NR 240 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

For testing of a UE which supports 4RX on all bands, the SNR during T3 is modified as specified in clause A.3.6.</p> <p>Note 10: Information about types of UE beam given in B.2.1.3 and does not limit UE implementation or test system implementation</p> <p>Note 11: This value allows up to 1dB degradation from applied SNR to UE baseband.</p> |            |                 |                            |        |       |       |       |

**Figure A.7.5.5.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.7.5.5.5.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

### A.7.5.5.6 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in non-DRX mode

#### A.7.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.6.1-1, A.7.5.5.6.1-2 and A.7.5.5.6.1-3. There are two cells, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.6.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.6.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of [2] ms. In the test, DRX configuration is not enabled.

**Table A.7.5.5.6.1-1: Supported test configurations for FR2 PCell and SCell**

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Table A.7.5.5.6.1-2: General test parameters for FR2 SCell for beam failure detection and link recovery testing in non-DRX mode**

| Parameter | Test Config. | Unit | Value  | Comment |
|-----------|--------------|------|--------|---------|
|           |              |      | Test 1 |         |

### A.7.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.7.5.5.6.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260+10$  ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit PUCCH with an LRR with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.5.5.7 Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.7.5.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.7.5.5.7.1-1, A.7.5.5.7.1-2 and A.7.5.5.7.1-3. There are two cell, cell 1 is the active PCell and cell 2 is the active SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.7.5.5.7.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate CSI-RS based beam failure. Figure A.7.5.5.7.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.7.5.5.7.1-1: Supported test configurations for FR2 PCell and SCell**

| Configuration | Description   |
|---------------|---|
| 1             | TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

### A.7.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 in A.7.5.5.7.1 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit PUCCH with an LRR with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5.6 Active BWP switch

### A.7.5.6.1 DCI-based and Timer-based Active BWP Switch

#### A.7.5.6.1.1 NR FR2- NR FR2 DL active BWP switch of SCell with non-DRX in SA

##### A.7.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in Table A.7.5.6.1.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in Table A.7.5.6.1.1.1-2. NR Cell-specific parameters are specified in Table A.7.5.6.1.1.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.1.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is configured with a *bwp-InactivityTimer* timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ( $i+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ( $j+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.7.5.6.1.1.1-1: DL BWP switch supported test configurations**

| Config  | Description   |

#### A.7.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ( $i + T_{BWPswitchDelay} + k_1$ ).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ( $j + T_{BWPswitchDelay} + k_1$ ).

Where,  $k_1$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the first UL slot that occurs after the beginning of DL slot ( $i + T_{BWPswitchDelay} + k_1$ ), ( $j + T_{BWPswitchDelay} + k_1$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

### A.7.5.6.1.2 NR FR1- NR FR2 DL active BWP switch of SCell with non-DRX in SA

#### A.7.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in Table A.7.5.6.1.2.1-1 below. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2). The general parameters are given in Table A.7.5.6.1.2.1-2. NR Cell-specific parameters are specified in Table A.7.5.6.1.2.1-3 below. OTA related test parameters are shown in table A.7.5.6.1.2.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).

UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.

UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 in SCell.

UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-0 in PCell.

UE is configured with a bwp-InactivityTimer timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ( $i+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ( $j+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay if the UE doesn't support per-FR gap, otherwise no interruption due to BWP switch on PCell is allowed.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.7.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3  | PCell: NR 30 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>SCell: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.7.5.6.1.2.1-2: General test parameters for DL BWP switch in SA**

| Parameter   | Unit | Value  | Comment   |
|---|------|--------|---|
| NR RF Channel Number                                    |      | 2      | Two NR radio channel is used for this test                          |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                                       |
| Active SCell  |      | Cell 2 | SCell on RF channel number 2.                                       |
| CP length   |      | Normal |   |
| DRX   |      | OFF    | For both PCell and SCell  |
| <i>bwp-InactivityTimer</i>                              | ms   | 200    |   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.                                 |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on SCC.                                 |
| Cell2 timing offset to cell1                            | μs   | 3      | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1  | s    | 0.2    |   |
| T2  | s    | 0.2    |   |
| T3  | s    | 0.2    |   |

#### A.7.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+kI$ ).

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{BWPswitchDelay}+kI$ ).

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

If the UE doesn't support per-FR gap,

- During T1 and T3, the start time of SCell interruption during PCell active BWP switch shall not happen outside the BWP switch delay.
- The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

Otherwise no interruption due to BWP switch on SCell is allowed.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+kI$ ), ( $j+T_{BWPswitchDelay}+kI$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.7.5.6.1.3 NR FR2 DL active BWP switch with non-DRX in SA

#### A.7.5.6.1.3.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6. Supported test configurations are shown in Table A.7.5.6.1.3.1-1.

The test scenario comprises of one cell (Cell 1) as given in Table A.7.5.6.1.3.1-2. Cell-specific parameters of NR PCell is specified in Table A.7.5.6.1.3.1-3 below. The OTA related test parameters for FR2 is shown in Table A.7.5.6.1.3.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell1.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell 1's slot # denoted  $i$ . The UE should switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 no later than the first UL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on Cell 1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}$ ).

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell 1.

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the half subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell 1's DL slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell 1 at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on Cell 1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}$ ).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.7.5.6.1.3.1-1: DL BWP switch supported test configurations**

| Config  | Description   |
|---------|---|
| 1       | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode  |
| Note 1: | Void.   |
| Note 2: | A UE which fulfils the requirements in test case A.7.5.6.1.1 or A.7.5.6.1.2 can skip the test cases in A.7.5.6.1.3. |

**Table A.7.5.6.1.3.1-2: General test parameters for DL BWP switch in SA**

| Parameter                  | Unit | Value  | Comment                                    |
|----------------------------|------|--------|--|
| NR RF Channel Number       |      | 1      | One NR radio channel is used for this test |
| Active Cell                |      | Cell 1 | Cell on RF channel number 1.               |
| CP length                  |      | Normal |  |

#### A.7.5.6.1.3.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $(i+T_{BWPswitchDelay}+kI)$ .

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $(j+T_{BWPswitchDelay}+kI)$ .

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot  $(i+T_{BWPswitchDelay}+kI)$ ,  $(j+T_{BWPswitchDelay}+kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.7.5.6.2 RRC-based Active BWP Switch

#### A.7.5.6.2.1 NR FR2 DL active BWP switch of PCell with non-DRX in SA

##### A.7.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in Table A.7.5.6.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in Table A.7.5.6.2.1.1-2. Cell-specific parameters of PCell are specified in Table A.7.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$  as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length} + k1$ . The UE shall be continuously scheduled on PSCell's BWP-1 starting from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$ .

$T_{RRCprocessingDelay}$  and  $T_{BWPswitchDelayRRC}$  are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.2.1.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.7.5.6.2.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter   | Unit | Value  | Comment                                    |
|---|------|--------|--|
| NR RF Channel Number                                    |      | 1      | One NR radio channel is used for this test |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.              |
| CP length   |      | Normal |  |

A.7.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$  and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length} + k1$ .

Where,  $k1$  is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

A.7.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

A.7.5.6.3.1 Active BWP switch on multiple SCells with non-DRX in SA

A.7.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of DL BWP switch delay requirement defined in clauses 8.6.2A.1 and 8.6.2B.1, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in Table A.7.5.6.3.1.1-1 below. The test scenario comprises one PCell (Cell 1) and two SCells (Cell 2 and Cell 3) as given in Table A.7.5.6.3.1.1-2. NR cell-specific parameters are provided in Table A.7.5.6.3.1.1-3, and OTA related test parameters in Table A.7.5.6.3.1.1-4 below.

The test consists of three consecutive time periods with durations T1, T2 and T3, respectively.

PDCCHs indicating new transmissions shall be transmitted in PCell, SCell1 and SCell2 throughout time periods T1 and T3 to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell1 and SCell2. During T2, there shall be scheduling on PDSCH in PCell only.

Before the test starts,

UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (SCell1) on radio channel 2 (SCC1), and Cell 3 (SCell2) on radio channel 3 (SCC2).

UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1 (PCell). BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-1 and BWP-2, for Cell 2 (SCell1). BWP-1 and BWP-2 include the bandwidth of the initial DL BWP and SSB.

UE is configured with two different UE-specific downlink bandwidth parts, BWP-3 and BWP-4, for Cell 3 (SCell2). BWP-3 and BWP-4 include the bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell1.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-3 in SCell2.

UE is configured with a *bwp-InactivityTimer* timer value for SCell1 and SCell2, respectively.

All cells have constant signal levels throughout the test.

Time period T1 starts when the UE simultaneously receives DCI format 1\_1 commands for DL BWP switch in SCell1 and SCell2, respectively, in a slot # denoted  $m$ . The UE shall switch its SCell1 bandwidth part from BWP-1 to BWP-2, and its SCell2 bandwidth part from BWP-3 to BWP-4. The UE shall be able to receive PDSCH in SCell1 and SCell2 starting from the first DL slot that occurs after slot  $(m + T_{MultipleBWPswitchDelay})$  as defined in clause 8.6.2A.1, and to transmit ACK/NACKs in SCell1 and SCell2 from the first UL slot that occurs after  $(m + T_{BWPswitchDelay} + kI)$  where  $kI$  is specified in [7]. The UE shall be continuously scheduled in SCell1 BWP-2 and SCell2 BWP-4 no later than in the first DL slot that occurs after slot  $(m + T_{MultipleBWPswitchDelay})$ . The starting time of any interruption on PCell due to DL BWP switching of SCell1 and SCell2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell1 and SCell2 shall fulfill requirements in clause 8.2.2.2.5.

Time period T2 starts when the test equipment ceases to schedule the UE on PDSCH in SCell1 and SCell2, thereby causing the *bwp-InactivityTimer* timers for SCell1 and SCell2 to be running until expiry.

Time period T3 starts at the beginning of the first DL half-subframe immediately after the earliest of the *bwp-InactivityTimer* timers expires, in a slot # denoted  $n$ . The UE shall switch its SCell1 bandwidth part from BWP-2 to BWP-1, and its SCell2 bandwidth part from BWP-4 to BWP-3. The UE shall be able to receive PDSCH in SCell1 and SCell2 starting from the first DL slot that occurs after slot  $(n + T_{MultipleBWPswitchDelay})$  as defined in clause 8.6.2B.1, and to transmit ACK/NACKs in SCell1 and SCell2 from the first UL slot that occurs after slot  $(n + T_{MultipleBWPswitchDelay} + kI)$ . The UE shall be continuously scheduled in SCell1 BWP-1 and SCell2 BWP-3 no later than in the first DL slot that occurs after slot  $(n + T_{MultipleBWPswitchDelay})$ . The starting time of any interruption on PCell due to DL BWP switching of SCell1 and SCell2 shall occur within the BWP switching delay. The length of any interruption on PCell due to DL BWP switching of SCell1 and SCell2 shall fulfill requirements in clause 8.2.2.2.5.

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch commands are received or *bwp-InactivityTimer* timers expire until ACK/NACKs are sent in SCell1 and SCell2, respectively.

The test equipment verifies that potential interruptions of PCell due to DL BWP switching on SCell1 and SCell2 are carried out within the correct time span, and are within the correct length, by monitoring ACK/NACKs sent in PCell for PCell.

**Table A.7.5.6.3.1.1-1: DL BWP switch supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD -TDD duplex mode |

**Table A.7.5.6.3.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter                     | Unit | Value   | Comment  |
|-------------------------------|------|---------|--|
| NR RF Channel Number          |      | 1, 2, 3 | Three NR radio channels are used for this test   |
| Active PCell                  |      | Cell 1  | PCell on RF channel number 1.  |
| Active SCell1                 |      | Cell 2  | SCell1 on RF channel number 2.   |
| Active SCell2                 |      | Cell 3  | SCell2 on RF channel number 3.   |
| CP length                     |      | Normal  |  |
| DRX                           |      | OFF     |  |
| <i>sCellDeactivationTimer</i> | ms   | ---     | Same value applies for SCell1 and SCell2. The value infinity is applied.               |
| <i>bwp-InactivityTimer</i>    | ms   | 200     | Same value applies for SCell1 and SCell2.  |
| Cell2 timing offset to Cell1  | μs   | 0       | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1.                    |
| Cell3 timing offset to Cell1  | μs   | 0       |  |
| T1                            | s    | 0.2     | During T1, DCI-based simultaneous BWP switching of SCell1 and SCell2 is carried out.   |
| T2                            | s    | 0.2     | During T2 <i>bwp-InactivityTimer</i> timers shall run to expiry.                       |
| T3                            | s    | 0.2     | During T3, timer-based simultaneous BWP switching of SCell1 and SCell2 is carried out. |

Table A.7.5.6.3.1.1-3: NR Cell specific test parameters for DL BWP switch in SA

| Parameter  | Unit | Cell 1               | Cell 2    | Cell 3    |

#### A.7.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send ACK/NACKs in SCell1 and SCell2 from the first UL slot that occurs after the beginning of DL slot ( $m+T_{MultipleBWPswitchDelay}+kI$ ).

During T3, the UE shall start to send ACK/NACKs in SCell1 and SCell2 from the first UL slot that occurs after the beginning of DL slot ( $n+T_{MultipleBWPswitchDelay}+kI$ ).

During T1 and T3, the start of any interruption on PCell due to active BWP switching on SCell1 and SCell2 shall not happen outside the BWP switching delay  $T_{MultipleBWPswitchDelays}$ , and the length of any interruption shall not exceed the length specified in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed active BWP switch delays in SCell1 and SCell2 to be considered correct.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.6.4 SCell dormancy switch

##### A.7.5.6.4.1 NR FR2 PCell SCell dormancy switch of single FR2 SCell inside active time

###### A.7.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the Dormant SCell BWP switch delay requirements are within the requirements stated in section 8.6 for UE configured with a single downlink SCell, when the dormancy indication is received in any of the first 3 OFDM symbols or is received after the first 3 OFDM symbols.

The Supported test configurations are given in Table A.7.5.6.4.1.1-1. The test parameters are given in Tables A.7.5.6.4.1.1-2 and cell-specific parameters in A.7.5.6.4.1.1-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A6 is used. The test consists of four successive time periods, with duration of T1, T2, T3 and T4, respectively. There are two carriers both in FR2, with one cell on the PCC and 2 cells on SCC. Cell 1, Cell 2 and Cell 3 operate in either FDD or TDD duplex mode according to test configuration. All cells have constant signal levels

throughout the test. Before the test starts the UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) with configured and activated SCell (SCell1) on radio channel 2 (SCC1). The UE is not aware of Cell 3 on radio channel 2 (SCC1). The UE is reporting CSI and shall not report CQI index 0 (out-of-range) in the available uplink resources to report CQI for the SCell. The UE shall be continuously scheduled in the PCell throughout the whole test.

The UE receives a DCI-based BWP switch command by which the SCell1 (Cell 2) is requested to switch the active BWP to the dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted  $n$ , defines the start of time period T1. The UE shall accomplish the BWP switch to the dormant BWP latest in subframe  $(n + T_{\text{BWPswitchDelay}} + X)$ . The UE shall continue to report valid CQI if the UE has available uplink resources to report CQI for the dormant SCell. The UE shall continue to report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the Dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes  $n$  to  $(n + T_{\text{BWPswitchDelay}} + X)$ .

Time T2 start at  $T1 + (T_{\text{BWPswitchDelay}} + X)$ . During T2 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Time T3 starts at  $T2 + 500\text{ms}$ . During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell.

Starting at  $T4 = T3 + 500\text{ms}$ , Cell 3 becomes detectable. During T3 the UE shall continue to measure and report CQI and L1-RSRP in the available uplink resources to report CQI and L1-RSRP for the SCell. The UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4. The UE is not required to read the neighbour cell SSB index in this test.

At time T5 starting at  $T4 + 1500\text{ms}$  a DCI-based BWP switch command by which the SCell1 (Cell 2) is requested to switch the active BWP to the non-dormant BWP.

The point in time at which the DCI message is received at the UE antenna connector, in a subframe # denoted  $n$ , defines the start of time period T6. The UE shall accomplish the BWP switch to the non-dormant BWP latest in subframe  $(n + T_{\text{BWPswitchDelay}} + X)$ . The UE shall continue to report valid CQI if the UE has available uplink resources to report CQI for the non-dormant SCell. The UE shall continue to report L1-RSRP if the UE has available uplink resources to report L1-RSRP for the non-dormant SCell. Any PCell interruption due to BWP switch on the SCell shall occur in the subframes  $n$  to  $(n + T_{\text{BWPswitchDelay}} + X)$ .

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from CQI measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from L1-RSRP measurements and RRM measurements, clause 8.2.2.2.12.x, on dormant SCells, shall not exceed [0.5]%.

During T2, T3 and T4 the total rate of ACK/NACK feedback loss on any non-dormant serving cell resulting from RRM measurements and RRM measurements, clause 8.2.2.2.12.3, on dormant SCells, shall not exceed [0.5]%.

During T1, T2, T3, T4, T5 and T6, the UE shall be continuously scheduled in the SCell1.

**Table A.7.5.6.4.1.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| Note 1:                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |   |        |        |           |        |
| Note 2:                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |   |        |        |           |        |
| Note 3:                   | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |   |        |        |           |        |
| Note 4:                   | OCNG shall be used such that the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols  |   |        |        |           |        |

#### A.7.5.6.4.1.2 Test Requirements

During T1 the UE shall switch to the dormant BWP.

During T2, T3, T4 and T5 the UE shall not send ACK/NACK for the PDSCH data scheduled on the SCell.

During T2, T3, T4 and T5 the UE shall continue to send CSI reports for SCell1 with non-zero CQI index.

During T2, T3, T4 and T5 the UE shall continue to send L1-RSRP reports for SCell.

During T4 the UE shall send one Event A6 triggered measurement report, with a measurement reporting delay less than 1000 ms from the beginning of time period T4.

During T2, T3, T4 and T5, the missing ACK/NACK sent in PCell shall be less than 1.5% of the total number of the expected ACK/NACK.

During T6, the UE shall send ACK/NACK for the PDSCH data scheduled after subframe  $(n + T_{BWPswitchDelay} + X)$  for the SCell1.

All of the above test requirements shall be fulfilled in order for the observed SCell1 BWP switch delays, Pcell interruption rate, correct CSI and L1-RSRP reporting and event triggered reporting. The rate of correct observed SCell1 hibernation delay, activation delay and SCell1 deactivation delay during repeated tests shall be at least 90%.

#### A.7.5.6.4.2 NR FR1 PCell SCell dormancy switch of two FR2 SCells outside active time

##### A.7.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of SCell dormancy switching delay requirements in clause 8.6.2A when the UE is triggered to switch between non-dormancy and dormancy outside DRX active time. In the tested scenario, the UE is connected to PCell in FR1 and two SCCells in FR2, and the SCCells are switched from non-dormancy to dormancy, and vice versa, at a point in time before start of *onDuration*. The UE is configured to monitor PDCCH for DCI format 2\_6 at *ps-Offset* before the start of *onDuration*. Two tests are specified, where a UE that only supports triggering within the first three OFDM symbols of a slot shall undergo Test1 only, and a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo both Test1 and Test2. In the tested scenario, *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.2A.

The supported test configurations are provided in Table A.7.5.6.4.2.1-1 below. General test parameters are provided in Table A.7.5.6.4.2.1-2, and cell-specific parameters are provided in Table A.7.5.6.4.2.1-3 below. OTA-related test parameters are provided in Table A.7.5.6.4.2.1-4.

The tests consist of four consecutive time periods, T1, T2, T3 and T4, respectively.

Three carriers are used in the test. Cell 1 (PCell) is on RF channel 1 (PCC) in FR1, and Cell 2 (SCCell1) and Cell 3 (SCCell2) are on RF channels 2 (SCC1) and 3 (SCC2) in FR2, respectively. All three cells have constant signal levels throughout the test.

Before the test starts,

UE is connected to Cell 1 (PCell), Cell 2 (SCCell1) and Cell 3 (SCCell2).

UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1. BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 2 and Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 1 is BWP-0.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 2 is BWP-0.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.

UE is configured with DRX.

UE is configured to monitor DCI format 2\_6, and to be active during *onDuration* even when no DCI format 2\_6 is detected (*ps-WakeUp*).

Time period T1 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2\_6 carrying dormancy indication that indicates that SCell1 and SCell2 are to be switched from non-dormancy to dormancy. The UE shall switch active bandwidth parts for SCell1 and SCell2, respectively, from non-dormant BWP-0 to dormant BWP-1. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE continuously with new data indications in PCell starting from beginning of *onDuration*. The test equipment verifies that the UE is transmitting HARQ feedback for PCell from the beginning of *onDuration* and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration*.

Time period T2 starts when T1 is completed. The test equipment continues to schedule the UE continuously in PCell. The UE shall carry out CSI and RRM measurements on the dormant SCells. The UE shall report ACK/NACK in PCell in response to scheduled PDSCH, with the maximum loss of transmitted ACK/NACKs fulfilling the requirement in clause 8.2.2.2.12. The test equipment verifies that the loss of ACK/NACKs is no larger than 1.5%.

Time period T3 starts when T2 is completed. During T3, the test equipment does not schedule the UE, by which the inactivity timer expires and the UE stops monitoring PDCCH except for signalling using DCI format 2\_6 at wake-up signalling occasions.

Time period T4 starts when the UE at *ps-Offset* before *onDuration* detects a DCI format 2\_6 carrying dormancy indication that indicates that SCell1 and SCell2 are to be switched from dormancy to non-dormancy. The UE shall switch active bandwidth parts for SCell1 and SCell2, respectively, from dormant BWP-1 to non-dormant BWP-0. The UE shall complete the switching before the start of *onDuration*. The test equipment schedules the UE with new data indication in PCell, SCell1 and SCell2 during *onDuration*. The UE shall receive in PCell, SCell1 and SCell2 and send HARQ feedback for PCell, SCell1 and SCell2 via PCell. The test equipment verifies that the UE is transmitting HARQ feedback for PCell, SCell1 and SCell2 from the beginning of *onDuration*, and thus verifies that the UE has completed interruptions due to dormancy switching before the start of *onDuration*.

**Table A.7.5.6.4.2.1-1: Supported test configurations**

| Config  | Description  |
|---|--|
| 1   | PCell: 15kHz SSB SCS, 10MHz bandwidth, FDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | PCell: 15kHz SSB SCS, 10MHz bandwidth, TDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3   | PCell: 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode<br>SCells: NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to undergo test for one of the supported test configurations. |  |

Table A.7.5.6.4.2.1-2: General test parameters

| Parameter  | Unit | Value                      |        | Comment   |
|--|------|----------------------------|--------|---|
|  |      | Test1                      | Test2  |   |
| NR RF Channel Number   |      | 1, 2, 3                    |        | Three NR radio channels are used for this test  |
| Active PCell   |      | Cell 1                     |        | PCell on RF channel number 1 in FR1   |
| Active SCell1  |      | Cell 2                     |        | SCell1 on RF channel number 2 in FR2  |
| Active SCell2  |      | Cell 3                     |        | SCell2 on RF channel number 3 in FR2  |
| CSI reporting periodicity, Non-dormant BWP                                 | ms   | 2                          |        | CSI reporting periodicity for periodic reporting of CQI for PCell and non-dormant SCells  |
| CSI reporting periodicity, Dormant BWP                                     | ms   | 40                         |        | CSI reporting periodicity for periodic reporting of CQI for dormant SCells  |
| CP length  |      | Normal                     |        |   |
| DRX  |      | DRX.8                      |        | For both PCell and SCells. See clause A.3.3.8.  |
| ps-Offset  |      | Depending on UE capability |        | Monitoring of DCI 2_6 ahead of start of drx-onDurationTimer. Value of ps-Offset shall correspond to SCell dormancy switching time for switching of two SCells, as specified in clause 8.6.2A. Actual value depends on reported UE capabilities. |
| ps-WakeUp  |      | true                       |        | Wake up for onDuration in case DCI format 2_6 is not detected.  |
| Cell 2 timing offset to Cell 1   | μs   | <24                        |        | Timing offset shall be less than MRTD for FR1-FR2 CA, and leave margin for timing difference between Cell2 and Cell3.   |
| Cell 3 timing offset to Cell 2   | ns   | <260                       |        | Timing offset shall be less than MRTD for FR2 intra-band non-contiguous CA.   |
| OFDM symbol range in slot for transmission of DCI with dormancy indication |      | 0 – 2                      | 3 – 11 | Test1 is based on that triggering DCI is received within the first three OFDM symbols of a slot. Test2 is based on that the triggering DCI is received later than within the first three OFDM symbols of a slot.                                |
| T1   | s    | 0.2                        |        | During this time the SCells are switched from non-dormancy to dormancy.   |
| T2   | s    | 10                         |        | During this time the SCells are dormant.  |
| T3   | s    | 0.2                        |        | During this time the UE is not scheduled in PCell.  |
| T4   | s    | 0.2                        |        | During this time the SCells are switched from dormancy to non-dormancy.   |

Table A.7.5.6.4.2.1-3: Cell specific test parameters

| Parameter  |            | Unit | Cell 1                              | Cell2                       | Cell 3                      |
|--|------------|------|-------------------------------------|-----------------------------|-----------------------------|

| Note 1: OCNG shall be used such that the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |      |                                     |                             |                             |

Table A.7.5.6.4.2.1: OTA related test parameters

| Parameter                        | Unit   | Cell 1                                 | Cell 2                             | Cell 3 |
|----------------------------------|--|--|------------------------------------|--------|
| Angle of arrival configuration   |  | N/A<br>Link only, see<br>clause A.3.7A | Setup 1 defined in clause A.3.15.1 |        |
| Assumption for UE beams<br>Note6 |  |  | Fine                               | Fine   |
| $N_{oc}$ Note1                   | dBm/15kHz  |  | -112                               | -112   |
| $N_{oc}$ Note1                   | dBm/SCS  |  | -103                               | -103   |
| SS-RSRP <sup>Note2</sup>         | dBm/SCS <sup>Note3</sup>   |  | -85                                | -85    |
| $\hat{E}_s/I_{ot}$               | dB   |  | 18                                 | 18     |
| $I_o$ <sup>Note4</sup>           | dBm/95.04 MHz <sup>Note4</sup>   |  | -56                                | -56    |
| Note 1:                          | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |  |                                    |        |
| Note 2:                          | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |  |                                    |        |
| Note 3:                          | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |  |                                    |        |
| Note 4:                          | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |  |                                    |        |
| Note 6:                          | Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |  |                                    |        |

#### A.7.5.6.4.2.2 Test Requirements

Starting from *onDuration* in time period T1, the UE shall transmit ACK/NACK in response to scheduling in PCell. There shall be no loss of ACK/NACK.

During time period T2, the UE shall transmit ACK/NACKs in response to scheduling in PCell and the rate of missed ACK/NACKs shall be no more than 1.5%.

Starting from *onDuration* in time period T4, the UE shall transmit ACK/NACK in response to scheduling in PCell, SCell1 and SCell2. There shall be no loss of ACK/NACK.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

#### A.7.5.6.5.1 Active BWP switch on multiple SCells with non-DRX in SA

##### A.7.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A.

The supported test configurations are shown in Table A.7.5.6.5.1.1-1. The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as given in Table A.7.5.6.5.1.1-2. NR cell-specific parameters are provided in Table A.7.5.6.5.1.1-3, and OTA related test parameters in Table A.7.5.6.5.1.1-4.

PDCCHs indicating new transmissions shall be transmitted in PCell and SCell throughout to ensure that UE sends ACK/NACKs for PDSCH reception in PCell, SCell.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell1 (PCell), Cell 2 (SCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition on Cell1 (PCell), Cell 2 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell1 and Cell2, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell1 and Cell2.

The UE shall be able to receive PDSCH on Cell 1 and Cell 2 at the beginning of the DL slot right after PCell's DL slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PCell no later than at the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ). The UE shall be continuously scheduled on Cell 1's BWP-1 and Cell 2's BWP-1 starting from the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ).

$T_{RRCprocessingDelay}$ ,  $T_{BWPswitchDelayRRC}$  and  $D_{RRC}$  are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 1 and Cell 2 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.6.5.1.1-1: DL BWP switch supported test configurations**

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD -TDD duplex mode |

**Table A.7.5.6.5.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter                    | Unit | Value   | Comment  |
|------------------------------|------|---------|--|
| NR RF Channel Number         |      | 1, 2, 3 | Three NR radio channels are used for this test                                     |
| Active PCell                 |      | Cell 1  | PCell on RF channel number 1.  |
| Active SCell                 |      | Cell 2  | SCell on RF channel number 2.  |
| CP length                    |      | Normal  |  |
| DRX                          |      | OFF     |  |
| Cell2 timing offset to Cell1 | μs   | 0       | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1.                |
| T1                           | s    | [0.2]   | During T1, RRC-based simultaneous BWP switching of PCell and SCell is carried out. |

**Table A.7.5.6.5.1.1-3: NR Cell specific test parameters for DL BWP switch in SA**

| Parameter   | Unit                          | Cell 1                        | Cell 2    |           |           |
|---|-------------------------------|-------------------------------|-----------|-----------|-----------|
| Frequency Range   |                               | FR2                           |           |           |           |
| NR RF channel   |                               | 1                             | 2         |           |           |

| Note 4:                                  | Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |                                    |          |

#### A.7.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PCell and SCell in the beginning of the DL slot right after slot ( $i + \frac{T_{RRC\ processing\ Delay} + T_{BWP\ switch\ Delay\ RRC} + D_{RRC}}{NR\ slot\ length}$ ).

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.5.7 PSCell addition and release delay

#### A.7.5.7.1 Addition and Release Delay of known NR PSCell

##### A.7.5.7.1.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is known to the UE at the time of addition.

The supported test configurations are given in Table A.7.5.7.1.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.1.1-2, A.7.5.7.1.1-3 and A.7.5.7.1.1-4 below. The test consists of five time periods with durations T1, T2, T3, T4 and T5, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. Before the start of T2, the test system shall send measurement control information including measurement gap configuration and event-triggered reporting configuration for measurements on radio channel 2.

During T2, the UE shall identify Cell 2 and send an event-triggered report. When the test system receives the report, it shall send updated measurement control information where the measurement gap pattern is released. Before the start of T3, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE

to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T3.

During T3, the UE shall carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T4.

During T4, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T5.

During T5, the UE shall release the PSCell.

**Table A.7.5.7.1.1-1: Supported test configurations for FR2 PSCell**

| Config | Description   |
|--------|---|
| 1      | FR1 FDD SSB SCS 15kHz BW 10MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |
| 2      | FR1 TDD SSB SCS 15kHz BW 10MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |
| 3      | FR1 TDD SSB SCS 30kHz BW 40MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.7.5.7.1.1-2: General test parameters for PSCell addition and release delay**

| Parameter   | Unit            | Value                     | Comment  |                              |
|---|-----------------|---------------------------|--|------------------------------|
| RF Channel Number   |                 | 1, 2                      | Two radio channels are used for this test                                    |                              |
| Active PCell  |                 | Cell 1                    | PCell on RF channel number 1 in FR1  |                              |
| Neighbour cell  |                 | Cell 2                    | Neighbour cell (PSCell-to-be) on RF channel number 2 in FR2                  |                              |

### A.7.5.7.1.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 112 ms into T3.

The UE shall transmit at least one periodic CSI report for PSCell during T4.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T5.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5.7.2 Addition and Release Delay of unknown NR PSCell

### A.7.5.7.2.1 Test Purpose and Environment

The purpose of this test is to verify the PSCell addition and release delay requirements defined in clauses 8.9.2 and 8.9.3, respectively, for the case where the PSCell is unknown to the UE at the time of addition.

The supported test configurations are given in Table A.7.5.7.2.1-1. The test scenario comprises two NR cells, Cell 1 and Cell 2, on radio channel 1 in FR1 and radio channel 2 in FR2, respectively. Test parameters are given in Tables A.7.5.7.2.1-2, A.7.5.7.2.1-3 and A.7.5.7.2.1-4 below. The test consists of four time periods with durations T1, T2, T3 and T4, respectively.

At the start of T1, the UE shall be connected to Cell 1 (PCell) on radio channel 1 (PCC) and shall only monitor PCC and hence be unaware of Cell 2 (PSCell-to-be) on radio channel 2. At the end of T1, the test system shall send a RRC message instructing the UE to add PSCell (Cell 2), and further instructing the UE to report CSI periodically in the PSCell once it has been added. Reception by the UE of this RRC message defines the start of T2.

During T2, the UE shall identify PSCell and carry out random access towards the PSCell. Reception by the test system of the PRACH preamble defines the start of T3.

During T3, the UE shall send periodic CSI reports in PSCell. After having received at least one such report, the test system shall send a RRC message instructing the UE to release the PSCell. Reception by the UE of the RRC message defines the start of T4.

During T4, the UE shall release the PSCell.

**Table A.7.5.7.2.1-1: Supported test configurations for FR2 PSCell**

| Config   | Description   |
|--|---|
| 1  | FR1 FDD SSB SCS 15kHz BW 10MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |
| 2  | FR1 TDD SSB SCS 15kHz BW 10MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |
| 3  | FR1 TDD SSB SCS 30kHz BW 40MHz – FR2 TDD SSB SCS 240kHz BW 100MHz |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.7.5.7.2.1-2: General test parameters for PSCell addition and release delay**

| Parameter   | Unit | Value                     | Comment   |
|---|------|---------------------------|---|
| RF Channel Number   |      | 1, 2                      | Two radio channels are used for this test                   |
| Active PCell  |      | Cell 1                    | PCell on RF channel number 1 in FR1                         |
| Neighbour cell  |      | Cell 2                    | Neighbour cell (PSCell-to-be) on RF channel number 2 in FR2 |
| DRX   |      | OFF                       | For both PCell and PSCell once activated                    |
| PRACH configuration in Cell 2                                 |      | FR2 PRACH configuration 2 | PRACH configuration as specified in Clause A.3.8.3.2.       |
| CSI reporting periodicity and offset configuration for Cell 2 | ms   | [2]                       |   |
| T1  | s    | 5                         | During this time the PCell is known and Cell 2 is unknown.  |
| T2  | s    | 1                         | During this time the UE adds the PSCell.                    |
| T3  | s    | 1                         | During this time the UE sends CSI reports for PSCell.       |
| T4  | s    | 1                         | During this time the UE releases the PSCell.                |

### A.7.5.7.2.2 Test Requirements

The UE shall transmit the PRACH preamble to PSCell at latest 572 ms into T2.

The UE shall transmit at least one periodic CSI report for PSCell during T3.

The UE shall stop transmitting CSI reports for PSCell at latest 20 ms into T4.

All of the above test requirements shall be fulfilled in order for the observed PSCell addition and release delay to be counted as correct. The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.5.8 Active TCI state switch delay

### A.7.5.8.1 MAC-CE based active TCI state switch

#### A.7.5.8.1.1 NR PCell FR2 active TCI state switch for a known TCI state

##### A.7.5.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in Table A.7.5.8.1.1.1-1.

The test scenario comprises of one NR PCell (Cell 1) as given in Table A.7.5.8.1.1.1-2. Cell-specific parameters of NR PCell are specified in Table A.7.5.8.1.1.1-3 below. The OTA related test parameters for FR2 are shown in Table A.7.5.8.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 2 different TCI states for PCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCIstate 1 (QCL'd to SSB1), in Cell 1 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.1.1.1-1 and Figure A.7.5.8.1.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a

switch to TCI state 1. *tci-PresentInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PCell on TCI state 0 till  $n + T_{\text{HARQ}} + 3$  ms. The test equipment also verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after  $n + T_{\text{HARQ}} + 3$  ms + ( $T_{\text{first-SSB}} + T_{\text{SSB-proc}}$ ).

**Table A.7.5.8.1.1-1: Supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Figure A.7.5.8.1.1-2: Time multiplexed downlink transmissions during T2**

**A.7.5.8.1.1.2 Test Requirements**

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till  $n + T_{HARQ} + 3 \text{ ms}$
- be able to start receiving on TCI state 1 after  $n + T_{HARQ} + 5 \text{ ms} + T_{\text{first-SSB}}$

**A.7.5.8.2 RRC based active TCI state switch**

**A.7.5.8.2.1 NR PCell FR2 active TCI state switch for a known TCI state**

**A.7.5.8.2.1.1 Test Purpose and Environment**

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configuration is shown in Table A.7.5.8.2.1.1-1.

The test scenario comprises of one NR PCell as given in Table A.7.5.8.2.1.1-2. Cell-specific parameters of NR PCell is specified in Table A.7.5.8.2.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.7.5.8.2.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 TCI state for PCell, PDCCH-TCI-state0 (QCL'd to SSB0)
- UE is indicated in TCI state0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.7.5.8.2.1.1-1 and Figure A.7.5.8.2.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI-state1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to TCI-state1.

The test equipment verifies the TCI state switch time in PCell by scheduling the UE on TCI state 1 after  $n + T_{\text{RRC\_processing}} + T_{\text{first-SSB}} + 2\text{ms}$ .

**Figure A.7.5.8.2.1.1-2: Time multiplexed downlink transmissions during T2**

**A.7.5.8.2.1.2 Test Requirements**

During T2, UE shall send L1-RSRP report with both SSB0 and SSB1.

After receiving RRC command in slot  $n$ , UE shall be able to start receiving on TCI state 1 after  $n + T_{RRC\_processing} + T_{first-SSB} + 2ms$ .

**A.7.5.9 Uplink spatial relation switch delay**

**A.7.5.9.1 MAC-CE based Spatial Relation switch**

**A.7.5.9.1.1 NR PCell FR2 spatial relation associated with known DL-RS**

**A.7.5.9.1.1.1 Test Purpose and Environment**

The purpose of this test is to verify fulfillment of the uplink spatial relation switch delay requirement defined in clause 8.12.3 by a UE capable of beam correspondence without the need for UL beam sweeping. The supported test configurations are shown in Table A.7.5.9.1.1.1-1.

The test scenario comprises one PCell (Cell 1) as outlined in Table A.7.5.9.1.1.1-2. Cell-specific parameters are provided in Table A.7.5.9.1.1.1-3. OTA-related test parameters are provided in Table A.7.5.9.1.1.1-4.

Throughout the test, PDCCH indicating new transmissions shall be sent continuously on PCell to ensure that the UE will send ACK/NACKs on PUCCH.

Before the test starts,

UE is connected to Cell 1 on radio channel 1.

UE is configured with a single TCI state, TCI State-0, which is QCLed with SSB0.

UE is configured with two spatial relation information configurations Spatial Relation Info-0 and Spatial Relation Info-1 for PUCCH, each associated with SSB0 and SSB1, respectively.

UE is indicated via MAC-CE activation of *PUCCH-SpatialRelationInfoId* corresponding to Spatial Relation Info-0

UE is configured with a CSI measurement configuration indicating L1-RSRP measurements on SSB0 and SSB1 with periodic reporting. The L1-RSRP measurement period is influenced by the following: the higher layer parameter *timeRestrictionForChannelMeasurement* is configured, measured SSBs are fully overlapping with SMTC window, and there are no conflicts with measurement gaps.

The test consists of two time periods, T1 and T2. During T1 only the SSB associated with PDCCH TCI state-0 and PUCCH Spatial Relation Info-0 is transmitted. At the beginning of T2, transmission of the SSB associated with PUCCH Spatial Relation Info-1 starts. The UE conducts periodic L1-RSRP measurements and *SSB-Index-RSRP* reporting for SSB0 and SSB1. In slot  $n$ , which is within 1280ms after UE receiving both SSB0 and SSB1, and after reporting valid results for both the SSB0 and the SSB1, the UE receives a MAC-CE indicating a switch of spatial relation to PUCCH Spatial Relation Info 1

The test equipment verifies that the UE transmits according to PUCCH Spatial Relation Info 0 up until slot  $n + T_{\text{HARQ}}/\text{NR slot length} + 3N_{\text{slot}}^{\text{subframe},\mu}$ , and according to PUCCH Spatial Relation Info 1 from slot  $n + T_{\text{HARQ}}/\text{NR slot length} + 3N_{\text{slot}}^{\text{subframe},\mu} + 1$  and onwards.

#### A.7.5.9.1.1.2 Test Requirements

During T2, the UE shall send L1-RSRP report with results for SSB0 and SSB1.

After receiving MAC-CE command in slot  $n$ , the UE shall:

Continue transmitting using PUCCH spatial relation associated with SSB0 up to and including slot  $n + T_{HARQ}/NR$  slot length +  $3N_{slot}^{subframe,\mu}$

Start transmitting using PUCCH spatial relation associated with SSB1 from slot  $n + T_{HARQ}/NR$  slot length +  $3N_{slot}^{subframe,\mu} + 1$  and onwards.

The rate of correct events observed during repeated tests shall be at least [90]%.

#### A.7.5.9.2 RRC based spatial relation switch

##### A.7.5.9.2.1 NR PCell FR2 spatial relation switch associated with a known DL-RS

###### A.7.5.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the RRC based spatial relation switch delay requirement defined in clause 8.12.5 by a UE capable of beam correspondence without the need for UL beam sweeping. In the test the higher layer parameter *timeRestrictionForChannelMeasurements* is configured. Supported test configuration is shown in Table A.7.5.9.2.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in Table A.7.5.9.2.1.1-2. Cell-specific parameters of PCell is specified in Table A.7.5.9.2.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.7.5.9.2.1.1-4.

Periodic SRS is transmitted on PCell (Cell 1), and the SRS configuration is SRSCConf.1 given in Table A.5.4.1.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE is configured with 1 SRS-SpatialRelation0 associated with SSB0.
- UE is indicated SRS-SpatialRelation0 as the active SRS spatial relation.

The test consists of two time periods, T1 and T2. During T1 only SSB0 to which SRS-SpatialRelation0 associated is transmitted. UE shall transmit periodic SRS with SRS-SpatialRelation0 on the UL of the PCell.

T2 start when the tester initiates transmission of SSB1 corresponding to SRS-SpatialRelation1. The UE is configured to transmit periodic L1-RSRP reports.

In slot n, which is within [1280]ms of UE providing the L1-RSRP report with results for both SSB0 and SSB1, the UE receives an RRC command indicating a switch to transmit periodic SRS with target SRS-SpatialRelation1. The UE shall be able to transmit periodic SRS with target spatial relation (SRS-SpatialRelation1) on PCell in slot  $n + T_{\text{RRC\_processing}}/\text{NR slot length} + 1$ .

**Table A.7.5.9.2.1.1-1: Supported test configurations**

| Config | Description   |

#### A.7.5.9.2.1.2 Test Requirements

During T1 UE shall send L1-RSRP report with SSB0 to which SRS-SpatialRelation0 is associated. During T2, UE shall send L1-RSRP report with SSB1 to which SRS-SpatialRelation1 is associated.

After receiving RRC command in slot  $n$ , UE shall be able to transmit target periodic SRS with SRS-SpatialRelation1 on the PCell in the slot  $n + T_{RRC\_processing}/NR\ slot\ length + 1$ .

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.7.5.10 UE specific CBW change

##### A.7.5.10.1 NR FR2 UE specific CBW change of PCell with non-DRX in SA

###### A.7.5.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13. Supported test configurations are shown in Table A.7.5.10.1.1-1.

The test scenario comprises of one PCell (Cell 1) as given in Table A.7.5.10.1.1-2. Cell-specific parameters of PCell are specified in Table A.7.5.10.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK transmission.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in firstActiveDownlinkBWP-Id that the active DL BWP is BWP-1 of initial condition in PCell.
- UE has been configured with UE-specific CBW (CBW-1)
- UE is indicated in SCS-SpecificCarrier [2] that the UE-specific CBW is CBW-1 as the initial condition in Cell 1 (PCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated CBW configuration, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its CBW with the updated CBW of final condition.

The UE shall be able to completely receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$  as defined in clause 8.13.2 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length} + k1$ . The UE shall be continuously scheduled on PCell's new CBW starting from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ .

$T_{RRCprocessingDelay}$  and  $T_{CBWchangeDelayRRC}$  are defined in clause 8.13.

The test equipment verifies the UE specific CBW switch time in PCell by counting the time from the time when the RRC Reconfiguration message including updated CBW configurations sent till the time when RRC Reconfiguration Complete message is received.

**Table A.7.5.10.1.1-1: UE specific CBW change supported test configurations**

| Config   | Description  |
|--|--|
| 1  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.7.5.10.1.1-2: General test parameters for UE specific CBW change in NR SA**

| Parameter   | Unit | Value  | Comment                                    |
|---|------|--------|--|
| NR RF Channel Number                                    |      | 1      | One NR radio channel is used for this test |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.              |
| CP length   |      | Normal |  |
| DRX   |      | OFF    |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.        |
| T1  | s    | [0.2]  |  |

Table A.7.5.10.1.1-3: NR Cell specific test parameters for UE specific CBW change in NR SA

| Parameter   |                               | Unit | Cell 1                          |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.</p> |              |                                |                                   |

**A.7.5.10.1.2 Test Requirements**

During T1, the UE shall be ready for the reception of uplink grant for PCell from the first DL slot that occurs after the beginning of slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$  and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length} + kI$ .

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed PCell UE specific CBW change delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.7.6 Measurement procedure

### A.7.6.1 Intra-frequency Measurements

#### A.7.6.1.1 SA event triggered reporting test without gap under non-DRX

##### A.7.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.1.1-1.

**Table A.7.6.1.1.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| 2             | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                               |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.1.1.1-2, A.7.6.1.1.1-3 and A.7.6.1.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter                             | Unit | Config | Value                | Comment   |
|---------------------------------------|------|--------|----------------------|---|
| Active cell                           |      | 1, 2   | PCell (Cell 1)       |   |
| Neighbour cell                        |      | 1, 2   | Cell 2               | Cell to be identified.                              |
| RF Channel Number                     |      | 1, 2   | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| SMTC configuration                    |      | 1, 2   | SMTC.1               |   |
| A3-Offset                             | dB   | 1, 2   | -11                  |   |
| CP length                             |      | 1, 2   | Normal               |   |
| Hysteresis                            | dB   | 1, 2   | 0                    |   |
| Time To Trigger                       | s    | 1, 2   | 0                    |   |
| Filter coefficient                    |      | 1, 2   | 0                    | L3 filtering is not used                            |
| DRX                                   |      | 1, 2   | OFF                  |   |
| Time offset between Cell 1 and Cell 2 |      | 1, 2   | 3 $\mu$ s            | Synchronous cells                                   |
| T1                                    | s    | 1, 2   | 5                    |   |
| T2                                    | s    | 1, 2   | 5                    |   |

**Table A.7.6.1.1.1-3: NR Cell specific test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter                           | Unit | Config | Cell 1                      |           | Cell 2                      |           |
|-------------------------------------|------|--------|-----------------------------|-----------|-----------------------------|-----------|
|                                     |      |        | T1                          | T2        | T1                          | T2        |
| TDD configuration                   |      | 1, 2   | TDDConf.3.1                 |           | TDDConf.3.1                 |           |

Figure A.7.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4s for a UE supporting power class 1,
- 1.44s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{PDCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.2 SA event triggered reporting test without gap under DRX

### A.7.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.2.1-1.

**Table A.7.6.1.2.1-1: supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.1.2.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.1.2.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX**

| Parameter                             | Unit | Config | Value                |        | Comment   |

|   |   | 2      | -86                         |        |                    |       |
| SSB_RP                                  | dBm/SCS   | 1      | -85                         | -85    | -Infinity          | -85   |
|   |   | 2      | -82                         | -82    | -Infinity          | -82   |
| $\hat{E}_s/N_{oc}$                      | dB  | 1, 2   | 4                           | 4      | -Infinity          | 4     |
| $I_o$                                   | dBm/95.04MHz  | 1, 2   | -54.53                      | -52.18 | See Cell 1 columns |       |
| Note 1:                                 | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.  |        |                             |        |                    |       |
| Note 2:                                 | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |        |                             |        |                    |       |
| Note 3:                                 | Es/Iot, SSB_RP and Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |        |                             |        |                    |       |
| Note 4:                                 | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.   |        |                             |        |                    |       |
| Note 5:                                 | Calculation of Es/Iot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |        |                             |        |                    |       |

**Table A.7.6.1.2.1-5: Void****Table A.7.6.1.2.1-6: Void**

### A.7.6.1.2.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2s for a UE supporting power class 1,
- 4.32s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2s for a UE supporting power class 1,
- 30.72s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.7.6.1.3 SA event triggered reporting test with per-UE gaps under non-DRX

#### A.7.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.3.1-1.

**Table A.7.6.1.3.1-1: supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.1.3.1-2 ~ 4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.1.3.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE gaps without DRX**

| Parameter                              | Unit | Config | Value                | Comment   |
|--|------|--------|----------------------|---|
| Active cell                            |      | 1, 2   | PCell (Cell 1)       |   |
| Neighbour cell                         |      | 1, 2   | Cell 2               | Cell to be identified.                              |
| RF Channel Number                      |      | 1, 2   | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| Gap type                               |      | 1, 2   | Per-UE gaps          |   |
| Measurement gap repetition periodicity | ms   | 1, 2   | 40                   |   |
| Measurement gap length                 | ms   | 1, 2   | 6                    |   |
| Measurement gap offset                 | ms   | 1, 2   | 39                   |   |
| SMTC configuration                     |      | 1, 2   | SMTC.1               |   |
| CSI-RS parameters                      |      | 1, 2   | CSI-RS.3.2 TDD       |   |
| A3-Offset                              | dB   | 1, 2   | -11                  |   |
| CP length                              |      | 1, 2   | Normal               |   |
| Hysteresis                             | dB   | 1, 2   | 0                    |   |
| Time To Trigger                        | s    | 1, 2   | 0                    |   |
| Filter coefficient                     |      | 1, 2   | 0                    | L3 filtering is not used                            |
| DRX                                    |      | 1, 2   | OFF                  |   |
| Time offset between Cell 1 and Cell 2  |      | 1, 2   | 3 $\mu$ s            | Synchronous cells                                   |
| T1                                     | s    | 1, 2   | 5                    |   |
| T2                                     | s    | 1, 2   | 5                    |   |

Figure A.7.6.1.3.1-1: Time multiplexed downlink transmissions (Config 1 example)

A.7.6.1.3.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2s for a UE supporting power class 1,
- 1.92s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.1.4 SA event triggered reporting test with per-UE gaps under DRX

### A.7.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.1.4.1-1.

**Table A.7.6.1.4.1-1: supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.1.4.1-2, A.7.6.1.4.1-3 and A.7.6.1.4.1-4 below.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.1.4.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 with per-UE gaps with DRX**

| Parameter                              | Unit | Config | Value                |        | Comment   |
|--|------|--------|----------------------|--------|---|
|  |      |        | Test 1               | Test 2 |   |
| Active cell                            |      | 1, 2   | PCell (Cell 1)       |        |   |
| Neighbour cell                         |      | 1, 2   | Cell 2               |        | Cell to be identified.                                    |
| RF Channel Number                      |      | 1, 2   | 1: Cell 1 and Cell 2 |        | One TDD carrier frequency is used for the NR cells.       |
| Gap type                               |      | 1, 2   | Per-UE gaps          |        |   |
| Measurement gap repetition periodicity | ms   | 1, 2   | 40                   |        |   |
| Measurement gap length                 | ms   | 1, 2   | 6                    |        |   |
| Measurement gap offset                 | ms   | 1, 2   | 39                   |        |   |
| SMTC configuration                     |      | 1, 2   | SMTC.1               |        |   |
| CSI-RS parameters                      |      | 1, 2   | CSI-RS.3.2 TDD       |        |   |
| A3-Offset                              | dB   | 1, 2   | -6                   |        |   |
| CP length                              |      | 1, 2   | Normal               |        |   |
| Hysteresis                             | dB   | 1, 2   | 0                    |        |   |
| Time To Trigger                        | s    | 1, 2   | 0                    |        |   |
| Filter coefficient                     |      | 1, 2   | 0                    |        | L3 filtering is not used                                  |
| DRX                                    |      | 1, 2   | DRX.1                | DRX.7  | DRX related parameters are defined in Table A.7.6.1.2.1-5 |
| Time offset between Cell 1 and Cell 2  |      | 1, 2   | 3 $\mu$ s            |        | Synchronous cells   |
| T1                                     | s    | 1, 2   | 5                    |        |   |
| T2                                     | s    | 1, 2   | 10                   | 52     |   |

**Table A.7.6.1.4.1-5: Void****Table A.7.6.1.4.1-6: Void**

#### A.7.6.1.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2s for a UE supporting power class 1,
- 4.32s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2s for a UE supporting power class 1,
- 30.72s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.2 Inter-frequency Measurements

### A.7.6.2.1 SA event triggered reporting tests For FR2 without SSB time index detection when DRX is not used (PCell in FR2)

#### A.7.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.1.1-1, A.7.6.2.1.1-2, and A.7.6.2.1.1-3.

Measurement gap pattern configuration # 13 as defined in Table A.7.6.2.1.1-2 is provided for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.1.1-1.

**Table A.7.6.2.1.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config        | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: Void. |   |

**Table A.7.6.2.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                         | Comment                                 |
|---|------|--------------------|-------------------------------|---|
| NR RF Channel Number                            |      | Config 1           | 1, 2                          | Two FR2 NR carrier frequencies is used. |
| Active cell                                     |      | Config 1           | NR cell 1 (Pcell)             | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell                                  |      | Config 1           | NR cell 2                     | NR cell 2 is on NR RF channel number 2. |
| Gap Pattern Id                                  |      | Config 1           | 13                            | As specified in clause 9.1.2-1.         |
| Measurement gap offset                          |      | Config 1           | 39                            |   |
| offsetMO  | dB   | Config 1           | 16                            | Applied to NR Cell 2 measurement object |
| A3-Offset                                       | dB   | Config 1           | -11                           |   |
| Hysteresis                                      | dB   | Config 1           | 0                             |   |
| CP length                                       |      | Config 1           | Normal                        |   |
| TimeToTrigger                                   | s    | Config 1           | 0                             |   |
| Filter coefficient                              |      | Config 1           | 0                             | L3 filtering is not used                |
| DRX   |      | Config 1           | OFF                           | DRX is not used                         |
| Time offset between serving and neighbour cells |      | Config 1           | 3µs                           | Synchronous cells.                      |
| T1  | s    | Config 1           | 5                             |   |
| T2  | s    | Config 1           | 5.2 for PC1; 3.5 for other PC |   |

**Table A.7.6.2.1.1-3: Cell specific test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

| Parameter | Unit | Test configuration | Cell 1                                |    | Cell 2 |    |
|-----------|------|--------------------|---------------------------------------|----|--------|----|
|           |      |                    | T1                                    | T2 | T1     | T2 |
| AoA setup |      | Config 1           | Setup 3 as specified in clause A.3.15 |    |        |    |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Void   |
| Note 3: | SSB-RP, Es/lot and lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | Void   |
| Note 5: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 6: | As observed with 0 dBi gain antenna at the centre of the quiet zone  |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |
| Note 8: | Calculation of Es/lot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMBs from TS 38.101-2 [19] Table 6.2.1.3-4. |

#### A.7.6.2.1.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 5120 for UE supporting power class 1, or
- 3200 for UE supporting other power class.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.7.6.2.2 SA event triggered reporting tests For FR2 without SSB time index detection when DRX is used (PCell in FR2)

##### A.7.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.2.1-1, A.7.6.2.2.1-2, and A.7.6.2.2.1-3.

In test 1&2 measurement gap pattern configuration # 13 as defined in Table A.7.6.2.2.1-2 is provided for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.2.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.2.1-1: SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config  | Description   |
|---------|---|
| 1       | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: | Void.   |

**Table A.7.6.2.2.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                        |                                | Comment                                 |
|---|------|--------------------|------------------------------|--------------------------------|---|
|   |      |                    | Test 1                       | Test 2                         |   |
| NR RF Channel Number                            |      | Config 1           | 1, 2                         |                                | Two FR2 NR carrier frequencies is used. |
| Active cell                                     |      | Config 1           | NR cell 1 (Pcell)            |                                | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell                                  |      | Config 1           | NR cell 2                    |                                | NR cell 2 is on NR RF channel number 2. |
| Gap Pattern Id                                  |      | Config 1           | 13                           |                                | As specified in clause 9.1.2-1.         |
| Measurement gap offset                          |      | Config 1           | 39                           |                                |   |
| SMTC-SSB parameters                             |      | Config 1           | SSB.3 FR2                    |                                | As specified in clause A.3.10.2         |
| A3-Offset                                       | dB   | Config 1           | -6                           |                                |   |
| Hysteresis                                      | dB   | Config 1           | 0                            |                                |   |
| CP length                                       |      | Config 1           | Normal                       |                                |   |
| TimeToTrigger                                   | s    | Config 1           | 0                            |                                |   |
| Filter coefficient                              |      | Config 1           | 0                            |                                | L3 filtering is not used                |
| DRX   |      | Config 1           | DRX.1                        | DRX.7                          | As specified in clause A.3.3            |
| Time offset between serving and neighbour cells |      | Config 1           | 3 $\mu$ s                    |                                | Synchronous cells.                      |
| T1  | s    | Config 1           | 5                            |                                |   |
| T2  | s    | Config 1           | 8 for PC1;<br>5 for other PC | 82 for PC1;<br>52 for other PC |   |

**Table A.7.6.2.2.1-3: Cell specific test parameters for CA inter-frequency event triggered reporting without SSB time index detection**

| Parameter   |                        | Unit     | Test configuration | Cell 1                                |           | Cell 2                      |    |
|---|------------------------|----------|--------------------|---------------------------------------|-----------|-----------------------------|----|
|   |                        |          |                    | T1                                    | T2        | T1                          | T2 |
| AoA setup   |                        |          | Config 1           | Setup 1 as specified in clause A.3.15 |           |                             |    |
| Beam Assumption <sup>Note 7</sup>                   |                        |          | Config 1           | Rough                                 |           | Rough                       |    |
| NR RF Channel Number                                |                        |          | Config 1           | 1                                     |           | 2                           |    |
| TDD configuration                                   |                        |          | Config 1           | TDDConf.3.1                           |           | TDDConf.3.1                 |    |
| Duplex mode   |                        |          | Config 1           | TDD                                   |           | TDD                         |    |

| $\hat{E}_s/N_{oc}$                                  | dB                     | Config 1 | 6                  | 6                                     | -Infinity | 9                           |    |
| $I_0$ <sup>Note3</sup>                              | dBm/95.04 MHz<br>Note5 | Config 1 | -59.7              | -59.7                                 | -66.7     | -57.2                       |    |

| Propagation Condition | Config 1   | AWGN | AWGN |
|-----------------------|--|------|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |
| Note 3:               | SSB_RP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |      |
| Note 4:               | Void   |      |      |
| Note 5:               | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |      |      |
| Note 6:               | As observed with 0 dBi gain antenna at the centre of the quiet zone  |      |      |
| Note 7:               | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |      |      |

#### A.7.6.2.2.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X1$  ms from the beginning of time period T2, where  $X1$  is

7680 for UE supporting power class 1, or

4800 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X2$  ms from the beginning of time period T2, where  $X2$  is

81920 for UE supporting power class 1, or

51200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.7.6.2.3 SA event triggered reporting tests For FR2 with SSB time index detection when DRX is not used (PCell in FR2)

##### A.7.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.3.1-1, A.7.6.2.3.1-2, and A.7.6.2.3.1-3.

Measurement gap pattern configuration # 13 as defined in Table A.7.6.2.3.1-2 is provided for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.3.1-1.

**Table A.7.6.2.3.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2**

| Config  | Description   |
|---------|---|
| 1       | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: | Void.   |

**Table A.7.6.2.3.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                       | Comment                                 |
|---|------|--------------------|-----------------------------|---|
| NR RF Channel Number                            |      | Config 1           | 1, 2                        | Two FR2 NR carrier frequencies is used. |
| Active cell                                     |      | Config 1           | NR cell 1 (Pcell)           | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell                                  |      | Config 1           | NR cell 2                   | NR cell 2 is on NR RF channel number 2. |
| Gap Pattern Id                                  |      | Config 1           | 13                          | As specified in clause 9.1.2-1.         |
| Measurement gap offset                          |      | Config 1           | 39                          |   |
| SMTCS-SSB parameters                            |      | Config 1           | SSB.3 FR2                   | As specified in clause A.3.10.2         |
| offsetMO  | dB   | Config 1           | 16                          | Applied to NR Cell 2 measurement object |
| A3-Offset                                       | dB   | Config 1           | -11                         |   |
| Hysteresis                                      | dB   | Config 1           | 0                           |   |
| CP length                                       |      | Config 1           | Normal                      |   |
| TimeToTrigger                                   | s    | Config 1           | 0                           |   |

| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 2: | Void  |
| Note 3: | SSB-RP, Es/lot and lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | Void  |
| Note 5: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone   |
| Note 6: | As observed with 0 dBi gain antenna at the centre of the quiet zone   |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |
| Note 8: | Calculation of Es/lot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. |

#### A.7.6.2.3.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

The UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.7.6.2.4 SA event triggered reporting tests For FR2 with SSB time index detection when DRX is used (PCell in FR2)

##### A.7.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.4.1-1, A.7.6.2.4.1-2, and A.7.6.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 13 as defined in Table A.7.6.2.4.1-2 is provided for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.4.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.4.1-1: SA event triggered reporting tests with SSB index reading for FR2-FR2**

| Config        | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: Void. |   |

**Table A.7.6.2.4.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                           |                                 | Comment                                 |
|---|------|--------------------|---------------------------------|---------------------------------|---|
|   |      |                    | Test 1                          | Test 2                          |   |

| Propagation Condition | Config 1   | AWGN | AWGN |
|-----------------------|--|------|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |
| Note 3:               | SSB_RP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |      |
| Note 4:               | Void   |      |      |
| Note 5:               | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |      |      |
| Note 6:               | As observed with 0 dBi gain antenna at the centre of the quiet zone  |      |      |
| Note 7:               | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |      |      |

#### A.7.6.2.4.2 Test Requirements

In test 1 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X_1$  ms from the beginning of time period T2, where  $X_1$  is

- 10080 for UE supporting power class 1, or
- 6240 for UE supporting other power class.

In test 2 the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X_2$  ms from the beginning of time period T2, where  $X_2$  is

- 107520 for UE supporting power class 1, or
- 66560 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.7.6.2.5 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is not used (PCell in FR1)

##### A.7.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.5.1-1, A.7.6.2.5.1-2, and A.7.6.2.5.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in Table A.7.6.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 no gap pattern is configured as defined in Table A.7.6.2.5.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.5.1-1.

**Table A.7.6.2.5.1-1 SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config   | Description of serving cell                          | Description of target cell                                |
|--|--|---|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS,<br>100 MHz bandwidth, TDD<br>duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 3  | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |   |
| Note: The UE is only required to be tested in one of the supported test configurations |  |   |

#### A.7.6.2.5.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 5120 for UE supporting power class 1, or
- 3200 for UE supporting other power class.

In test 2, without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2560 for UE supporting power class 1, or
- 1600 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{\text{DCCH}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.7.6.2.6 SA event triggered reporting tests for FR2 without SSB time index detection when DRX is used (PCell in FR1)

##### A.7.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.6.1-1, A.7.6.2.6.1-2, and A.7.6.2.6.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in Table A.7.6.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 no gap pattern is configured as defined in Table A.7.6.2.6.1-2. If a UE supports per-FR gap it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.6.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.6.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR2**

| Config   | Description of serving cell                          | Description of target cell |
|--|--|----------------------------|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS,           |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 100 MHz bandwidth, TDD     |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | duplex mode                |
| Note: The UE is only required to be tested in one of the supported test configurations |  |                            |

**Table A.7.6.2.6.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection**

**A.7.6.2.6.2 Test Requirements**

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

- 7680 for UE supporting power class 1, or
- 4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

- 81920 for UE supporting power class 1, or
- 51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.7.6.2.7 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is not used (PCell in FR1)

#### A.7.6.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.7.1-1, A.7.6.2.7.1-2, and A.7.6.2.7.1-3.

In test 1 per-UE measurement gap pattern configuration # 0 as defined in Table A.7.6.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement no gap pattern is configured as defined in Table A.7.6.2.7.1-2. If the UE supports per-FR gap, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.7.1-1.

**Table A.7.6.2.7.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config | Description of serving cell  | Description of target cell |
|--------|--|----------------------------|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             | 120 kHz SSB SCS,           |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             | 100 MHz bandwidth, TDD     |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             | duplex mode                |
| Note:  | The UE is only required to be tested in one of the supported test configurations |                            |

#### A.7.6.2.7.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

In test 2 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

3360 for UE supporting power class 1, or

2080 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

#### A.7.6.2.8 SA event triggered reporting tests for FR2 with SSB time index detection when DRX is used (PCell in FR1)

##### A.7.6.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 2 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.8.1-1, A.7.6.2.8.1-2, and A.7.6.2.8.1-3.

In test 1&2 per-UE measurement gap pattern configuration # 0 as defined in Table A.7.6.2.8.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement no gap pattern is configured as defined in Table

A.7.6.2.8.1-2.If a UE supports per-FR gap , it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.8.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.8.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR2**

| Config   | Description of serving cell                          | Description of target cell                                |
|--|--|---|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS,<br>100 MHz bandwidth, TDD<br>duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |
| Note: The UE is only required to be tested in one of the supported test configurations |  |   |

**Table A.7.6.2.8.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 with SSB time index detection**

| Parameter   | Unit | Test configuration | Value                            |                                  |                                  |                                  | Comment   |

### A.7.6.2.8.2 Test Requirements

In test 1 with per-UE gap and in test 3 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

- 10080 for UE supporting power class 1, or
- 6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 without the gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

- 107520 for UE supporting power class 1, or
- 66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.9 SA event triggered reporting tests For FR2 without SSB time index detection when DRX is not used (PCell in FR2) (rel16 additional mandatory gap pattern 17)

#### A.7.6.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.2.9.1-1, A.7.6.2.9.1-2, and A.7.6.2.9.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.2.9.1-1.

**Table A.7.6.2.9.1-1 SA event triggered reporting tests without SSB index reading for FR2-FR2**

| Config        | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: Void. |   |

**Table A.7.6.2.9.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 without SSB time index detection (GP17)**

| Parameter                                       | Unit | Test configuration | Value                   | Comment                                 |
|---|------|--------------------|-------------------------|---|
| NR RF Channel Number                            |      | Config 1           | 1, 2                    | Two FR2 NR carrier frequencies is used. |

### A.7.6.2.9.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120ms (PC1) or 3200ms (other than PC1) from the beginning of time period T2.

The UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.2.10 SA event triggered reporting test without gap under non-DRX

#### A.7.6.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that if UE supports *interFrequencyMeas-NoGap-r16* and the flag *interFrequencyConfig-NoGap-r16* is configured by the network, the UE makes correct reporting of an event. This test will partly verify the inter-frequency without gap cell search requirements in clause 9.3.9. Supported test configurations are shown in table A.7.6.2.10.1-1.

**Table A.7.6.2.10.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test, NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.2.10.1-2, A.7.6.2.10.1-3 and A.7.6.2.10.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.7.6.2.10.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap without DRX**

| Parameter                             | Unit | Config | Value          | Comment                                 |
|---------------------------------------|------|--------|----------------|---|
| Active cell                           |      | 1      | PCell (Cell 1) | NR Cell 1 is on NR RF channel number 1. |
| Neighbour cell                        |      | 1      | Cell 2         | NR cell 2 is on NR RF channel number 2. |
| RF Channel Number                     |      | 1      | 1, 2           | Two FR2 NR carrier frequencies is used. |
| SMTC configuration                    |      | 1      | SMTC.1         |   |
| A3-Offset                             | dB   | 1      | -6             |   |
| CP length                             |      | 1      | Normal         |   |

| Note 1:                           | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |        |                             |     |           |     |
| Note 2:                           | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |        |                             |     |           |     |
| Note 3:                           | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |        |                             |     |           |     |
| Note 4:                           | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |        |                             |     |           |     |

### A.7.6.2.10.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4s for a UE supporting power class 1,
- 1.44s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.7.6.2.11 SA event triggered reporting test without gap under DRX

#### A.7.6.2.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD inter-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.7.6.2.11.1-1.

**Table A.7.6.2.11.1-1: supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test: PCell (Cell 1) on NR RF channel 1 and a FR2 neighbour cell (Cell 2) on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.2.11.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.2.11.1-2: General test parameters for inter-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX**

| Parameter                             | Unit | Config | Value          | Comment   |
|---------------------------------------|------|--------|----------------|---|
| NR RF Channel Number                  |      | 1, 2   | 1, 2           | 2 TDD carrier frequency are used for the NR cells.          |
| Active cell                           |      | 1, 2   | PCell (Cell 1) | Cell 1 is on NR RF channel number 1.                        |
| Neighbour cell                        |      | 1, 2   | Cell 2         | Cell to be identified. Cell 2 is on NR RF channel number 2. |
| SMTc configuration                    |      | 1, 2   | SMTc.1         |   |
| A3-Offset                             | dB   | 1, 2   | -6             |   |
| CP length                             |      | 1, 2   | Normal         |   |

| $I_o$                             | dBm/95.04MHz   | 1      | -54.53                      | -52.18 | -54.53    | -52.18 |
| Note 1:                           | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |        |                             |        |           |        |
| Note 2:                           | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |        |                             |        |           |        |
| Note 3:                           | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |        |                             |        |           |        |
| Note 4:                           | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.  |        |                             |        |           |        |

### A.7.6.2.11.2 Test Requirements

In test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2s for a UE supporting power class 1,
- 30.72s for a UE supporting power class 2, 3 and 4est

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.3 L1-RSRP measurement for beam reporting

#### A.7.6.3.1 SSB based L1-RSRP measurement when DRX is not used

#### A.7.6.3.1 SSB based L1-RSRP measurement when DRX is not used

##### A.7.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.7.6.3.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.3.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                           |
| 2             | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                           |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

#### A.7.6.3.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.3.1.2-1 and Table A.7.6.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.7.6.3.1.2-1: General test parameters

| Parameter  | Config | Unit | Value                       |
|--|--------|------|-----------------------------|
| SSB GSCN   | 1~2    |      | freq1                       |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SSB_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |        |           |        |

### A.7.6.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 1680 for UE supporting power class 1
- 1200 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.6.3.2 SSB based L1-RSRP measurement when DRX is used

#### A.7.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.7.6.3.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

Table A.7.6.3.2.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.7.6.3.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.3.2.2-1 and Table A.7.6.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SSB_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |        |           |        |

### A.7.6.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.7.6.3.3 CSI-RS based L1-RSRP measurement when DRX is not used

#### A.7.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.7.6.3.3.1-1.

Table A.7.6.3.3.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.7.6.3.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.3.3.2-1 and Table A.7.6.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 480ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.7.6.3.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.7.6.3.3.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|
| SSB GSCN  | 1      |      | freq1  |

| $\hat{E}_s / N_{oc}$   | 1      | dB           | 0                             | 9        |
| <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.7.6.3.3.3 Test Requirements

After 480ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.6.3.3.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

Table A.7.6.3.3.3-1: L1-RSRP absolute accuracy test requirement

|   | Test requirement <sup>Notes1,2,3</sup>  |
|---|---|
| CSI-RS0   | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$ |
| CSI-RS1   | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$ |
| <p>Note 1: <math>CSI-RS\_RPn</math> is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration</p> <p>Note 2: <math>\delta</math> is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the <math>I_o</math> used in the test</p> <p>Note 3: <math>G_{min}</math> and <math>G_{max}</math> are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class</p> |   |

### A.7.6.3.4 CSI-RS based L1-RSRP measurement when DRX is used

#### A.7.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.7.6.3.4.1-1.

**Table A.7.6.3.4.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| <b>Config</b> | <b>Description</b>   |
|---------------|--|
| 1             | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                        |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

#### A.7.6.3.4.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.3.4.2-1 and Table A.7.6.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 1440ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.7.6.3.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.7.6.3.4.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|
| SSB GSCN  | 1      |      | freq1  |

| $N_{oc}$ <sup>Note1</sup>  | 1      | dBm/SSB SCS  | -95.97                        |          |
| $\hat{E}_s / I_{ot}$   | 1      | dB           | 0                             | 9        |
| CSI-RS RSRP <sup>Note2</sup>   | 1      | dBm/SSB SCS  | -95.97                        | -86.97   |
| $I_o$ <sup>Note2</sup>   | 1      | dBm/95.04MHz | -63.97                        | -57.47   |
| $\hat{E}_s / N_{oc}$   | 1      | dB           | 0                             | 9        |
| <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.7.6.3.3.3 Test Requirements

After 1440ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.6.3.4.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

Table A.7.6.3.4.3-1: L1-RSRP absolute accuracy test requirement

|   | Test requirement <sup>Notes1,2,3</sup>  |
|---|---|
| CSI-RS0   | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$ |
| CSI-RS1   | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$ |
| <p>Note 1: CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration</p> <p>Note 2: <math>\delta</math> is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the <math>I_o</math> used in the test</p> <p>Note 3: <math>G_{min}</math> and <math>G_{max}</math> are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class</p> |   |

## A.7.6.4 CLI measurements

### A.7.6.4.1 SRS-RSRP measurement with non-DRX

#### A.7.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in Table A.7.6.4.1.1-1.

**Table A.7.6.4.1.1-1: Applicable NR configurations for FR2 SRS-RSRP test**

| Configuration | Description  |
|---------------|--|
| 1             | NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.6.4.1.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in Table A.7.6.4.1.2-1 ~ A.7.6.4.1.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in Table A.7.6.4.1.2-4 and the test parameters for the (virtual) neighbour cell UE in Table A. 7.6.4.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.7.6.4.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PCell in FR2**

| Parameter   | Unit | Test configuration | Value     | Comment                  |
|---|------|--------------------|-----------|--------------------------|
| Active cell   |      | 1                  | Cell 1    |                          |
| RF Channel Number   |      | 1                  | 1: Cell 1 |                          |
| SSB configuration   |      | 1                  | SSB.1 FR2 |                          |
| SMTC configuration  |      | 1                  | SMTC.1    |                          |
| SRS configuration   |      | 1                  | SRSCnf.1  | Table A.7.6.4.1.2-4      |

**A.7.6.4.1.3 Test Requirements**

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 60 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.7.6.4.2 CLI-RSSI measurement with non-DRX

##### A.7.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in Table A.7.6.4.2.1-1.

**Table A.7.6.4.2.1-1: Applicable NR configurations for FR2 CLI-RSSI test**

| Configuration | Description  |
|---------------|--|
| 1             | NR 120 kHz SCS, 100 MHz bandwidth, TDD duplex mode |

##### A.7.6.4.2.2 Test Parameters

One cell is deployed in the test, which is FR2 PCell (Cell 1). The test parameters for PCell is given in Table A.7.6.4.2.2-1 ~ A.7.6.4.2.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 2 data symbols before. The CLI-RSSI measurement resource configuration is in Table A.7.6.4.2.2-4.

**Table A.7.6.4.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PCell in FR2**

| Parameter  | Unit    | Test configuration | Value           | Comment                  |

### A.7.6.4.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 5ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on  $I_o$ .

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.5 NR Measurements with autonomous gaps

### A.7.6.5.1 SA interfrequency CGI reporting in autonomous gaps test (PCell in FR2)

#### A.7.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an CGI. This test will partly verify the SA inter-frequency NR cell search requirements in clause 8.2.1.2.16 and 9.11

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.5.1.1-1, A.7.6.5.1.1-2, and A.7.6.5.1.1-3.

Measurement gap patterns are configured. During T1 the UE shall report event A3 for cell 2. Within 3 seconds of the event report, the test equipment shall add a measurement reporting configuration using *ReportConfigNR* which contains a ReportCGI IE with cellForWhichToReportCGI set to the physical Cell ID of cell 2 and including the optional IE useAutonomousGaps-r16

In the measurement control information, it is indicated to the UE to decode the CGI of the neighbour cell using autonomous gaps. The test consists of two time phases, T1 and T2. Time period T2 begins 10ms after the test equipment has transmitted the RRC reconfiguration message containing the ReportCGI IE.

Supported test configurations are shown in table A.7.6.5.1.1-1.

**Table A.7.6.5.1.1-1 SA interfrequency CGI reporting test in autonomous gaps**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.5.1.1-2: General test parameters for SA interfrequency CGI reporting in autonomous gaps**

| Parameter                                       | Unit | Test configuration | Value             | Comment  |
|---|------|--------------------|-------------------|--|
| NR RF Channel Number                            |      | Config 1           | 1, 2              | Two FR2 NR carrier frequencies is used.  |
| Active cell                                     |      | Config 1           | NR cell 1 (Pcell) | NR Cell 1 is on NR RF channel number 1.  |
| Neighbour cell                                  |      | Config 1           | NR cell 2         | NR cell 2 is on NR RF channel number 2.  |
| Gap Pattern Id                                  |      | Config 1           | 13                | As specified in clause 9.1.2-1.  |
| Measurement gap offset                          |      | Config 1           | 39                |  |
| SMTC-SSB parameters                             |      | Config 1           | SSB.3 FR2         | As specified in clause A.3.10.2  |
| SI-RNTI scheduling rate                         | ms   |                    | 40 ms             | S-RNTI scheduled on four occasions per 160ms transmission period   |
| A3-Offset                                       | dB   | Config 1           | -30               |  |
| Hysteresis                                      | dB   | Config 1           | 0                 |  |
| CP length                                       |      | Config 1           | Normal            |  |
| TimeToTrigger                                   | s    | Config 1           | 0                 |  |
| Filter coefficient                              |      | Config 1           | 0                 | L3 filtering is not used   |
| DRX   |      | Config 1           | OFF               | DRX is not used  |
| Time offset between serving and neighbour cells |      | Config 1           | 3µs               | Synchronous cells.   |
| T1  | s    | Config 1           | <10               | UE expected to report event A3 for cell 2 within 5,2s (PC1) or 3.5s (other PC) of the start of T1. Test equipment shall configure CGI reporting within 3s after receiving the event A3 report. T2 begins 10ms after test equipment has transmitted the RRC reconfiguration to configure CGI reporting. |
| T2  | s    | Config 1           | 1                 |  |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |
| Note 5: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 6: | As observed with 0 dBi gain antenna at the centre of the quiet zone  |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |

### A.7.6.5.1.2 Test Requirements

The UE shall report the CGI of cell 2 within  $25 \cdot T_{smtc} + 6 \cdot T_{si-rnti} + 20\text{ms} + 2\text{ms} = 762\text{ms}$  from the start of T2, allow 765ms. The rate of correct events observed during repeated tests shall be at least 90%.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 775 ms the number of interrupted slots shall not exceed the allowed number [as defined in clause 8.2.1.2.16 plus TBD].

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \cdot T_{TI_{DCC}}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.7.6.6 L1-SINR measurement for beam reporting

### A.7.6.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is not used

#### A.7.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in Table A.7.6.6.1.1-1.

**Table A.7.6.6.1.1-1: Applicable NR configurations for FR2 CSI-RS based L1-SINR test**

| Config | Description  |
|--------|--|
| 1      | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                        |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.7.6.6.1.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.6.1.2-1 and Table A.7.6.6.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 160ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.7.6.6.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.7.6.6.1.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|
| SSB GSCN  | 1      |      | freq1  |
| Duplex mode   | 1      |      | TDD  |

| CSI-RS RSRP <sup>Note3</sup>   | 1      | dBm/SSB SCS  | -95.97                        | -86.97   |
| $I_o$ <sup>Note2</sup>   | 1      | dBm/95.04MHz | -63.97                        | -57.47   |
| $\hat{E}_s / N_{oc}$   | 1      | dB           | 0                             | 9        |
| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.7.6.6.1.3 Test Requirements

After 160ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.1.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is used

#### A.7.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in Table A.7.6.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.7.6.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR**

| Config   | Description  |
|--|--|
| 1  | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

### A.7.6.6.2.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.6.2.2-1 and Table A.7.6.6.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-IM resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

**Table A.7.6.6.2.2-1: General test parameters**

| Parameter   | Config | Unit | Value                       |
|---|--------|------|-----------------------------|
| SSB GSCN  | 1~2    |      | freq1                       |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SSB RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |     |           |       |

### A.7.6.6.2.3 Test Requirements

The UE shall send L1-SINR report every 640 slots. No later than X ms plus 640 slots from the beginning of time period T2, UE shall send L1-SINR report including the results for both SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 while meeting the accuracy requirements defined in clause 10.1.28.2, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.7.6.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is used

#### A.7.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR configured in clause 9.8.4.3, with the testing configurations for NR cells in Table A.7.6.6.3.1-1.

**Table A.7.6.6.3.1-1: Applicable NR configurations for FR2 L1-SINR test with CMR and dedicated IMR**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode               |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.7.6.6.3.2 Test parameters

There is one cells in the test, the FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.6.6.3.2-1 and Table A.7.6.6.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-RS as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources and the associated IMR. UE is also configured to measure L1-SINR based on SSB. After 1440ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.7.6.6.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-RS as IMR.

Table A.7.6.6.3.2-1: General test parameters

| Parameter   | Config  | Unit | Value  |
|---|---|------|--|
| SSB GSCN  | 1   |      | freq1  |

| $\hat{E}_s / N_{oc}$   | 1~2    | dB           | 0                             | 9        |
| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.7.6.6.3.3 Test Requirements

After 1440ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-RS#0 as IMR and CSI-RS#1 as CMR + CSI-RS#1 as IMR while meeting the accuracy requirement in clause 10.1.28.3. The reported L1-SINR value shall consider the Rx antenna gain in the range of [-10 ~ +20] dB when calculated.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.7 CSI-RS based intra-frequency Measurements

### A.7.6.7.1 SA event triggered reporting test without gap under DRX for CSI-RS based intra-frequency measurement

#### A.7.6.7.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency measurement requirements in clause 9.10.2 and 9.10.3. Supported test configurations are shown in table A.7.6.7.1.1-1.

Table A.7.6.7.1.1-1: supported test configurations

| Configuration   | Description                                 |
|---|---|
| 1   | 120 kHz SSB and CSI-RS SCS, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.6.7.1.1-2 ~ 6.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.7.1.1-2: General test parameters for intra-frequency event triggered reporting for SA with TDD PCell in FR2 without gap with DRX**

| Parameter                             | Unit | Config | Value                | Comment   |
|---------------------------------------|------|--------|----------------------|---|
|                                       |      |        | Test 1               |   |
| Active cell                           |      | 1      | PCell (Cell 1)       |   |
| Neighbour cell                        |      | 1      | Cell 2               | Cell to be identified.                              |
| RF Channel Number                     |      | 1      | 1: Cell 1 and Cell 2 | One TDD carrier frequency is used for the NR cells. |
| CSI-RS resource configuration         |      | 1      | CSI-RS.RRM.FR2.1 TDD |   |
| A3-Offset                             | dB   | 1      | -6                   |   |
| CP length                             |      | 1      | Normal               |   |
| Hysteresis                            | dB   | 1      | 0                    |   |

| Note 1:                           | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |        |                             |        |           |        |
| Note 2:                           | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |        |                             |        |           |        |
| Note 3:                           | CSI-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |        |                             |        |           |        |
| Note 4:                           | Information about types of UE beam is given in B.2.1, and does not limit UE implementation or test system implementation.  |        |                             |        |           |        |

#### A.7.6.7.1.2 Test Requirements

In this test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

- 9.6s for a UE supporting power class 1,
- 5.76s for a UE supporting power class 2, 3 and 4

The UE is required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.8 CSI-RS based inter-frequency Measurements

### A.7.6.8.1 SA event triggered reporting tests for FR2 CSI-RS based measurement when non-DRX is used (PCell in FR2)

#### A.7.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for CSI-RS based L3 measurement. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.10.3.5.

In this test, there are two cells: NR cell 1 as PCell in FR2 on NR RF channel 1 and NR cell 2 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.7.6.8.1.1-1, A.7.6.8.1.1-2, and A.7.6.8.1.1-3.

In test 1&2 measurement gap pattern configuration # 13 as defined in Table A.7.6.8.1.1-2 is provided for UE that does not support per-FR gap and for UE that supports per-FR gap.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

Supported test configurations are shown in table A.7.6.8.1.1-1.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.7.6.8.1.1-1: SA event triggered reporting tests for CSI-RS based L3 measurement for FR2-FR2**

| Config | Description  |
|--------|--|
| 1      | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.8.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR2 CSI-RS based L3 measurement**

### A.7.6.2.2.2 Test Requirements

In the test the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X1$  ms from the beginning of time period  $T2$ , where  $X1$  is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.7.6.9 RSTD measurements

### A.7.6.9.1 NR RSTD measurement reporting delay test case for single positioning frequency layer in FR2 SA

#### A.7.6.9.1.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when single positioning frequency layer is configured.

Supported test configurations are shown in table A.7.7.1.1-1. The test parameters are as given in Table 7.6.7.1.1-2, Table A.7.6.9.1.1-3 and Table A.7.6.9.1.1-4.

**Table A.7.6.9.1.1-1: Supported test configurations for NR RSTD**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the same RF channel distributed in single positioning frequency layers.

The test consists of two consecutive time intervals, with duration of  $T1$  and  $T2$ . During time duration  $T1$ , the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during  $T2$ .

Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during  $T1$ . The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of  $T2$ , where  $\Delta T = 50$  ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval  $T2$  shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before  $T2$ .

**Table A.7.6.9.1.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter   |          | Unit | Value   | Comment  |
|---|----------|------|---|--|
| Reference cell  |          |      | Cell 1  | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355[34]. The reference cell is the PCell in this test case. |
| Neighbor cells  |          |      | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.   |
| SSB configuration   | Config 1 |      | SSB.2 FR2   |  |
| SMTC configuration  | Config 1 |      | SMTC.1  |  |
| PDSCH RMC configuration   | Config 1 |      | SR.1.1 FDD  |  |
| RMSI CORESET RMC configuration  | Config 1 |      | CR.3.1 TDD  | As specified in clause A.3.1.2.1   |
| Dedicated CORESET RMC configuration   | Config 1 |      | CR.1.1 FDD  |  |
| PRS Configuration   | Config 1 |      | PRS.1.1. FR2  | As specified in clause A.3.31  |
| Physical cell ID PCI  |          |      | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters   |
| CP length   |          |      | Normal  |  |
| DRX   |          |      | OFF   |  |
| Measurement gap   |          |      | GP#24 or GP#[13]  | GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured  |
| Radio frame receive time offset between the cells at the UE antenna connector |          | µs   | Cell 2 to Cell 1: 0<br>Cell 3 to Cell 1: 3  | PRS are transmitted from synchronous cells   |
| Expected RSTD   |          | µs   | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3            | The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD indicator   |
| Expected RSTD uncertainty for all neighbour cells                             |          | µs   | 500   | The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD-Uncertainty index  |
| Number of cells provided in DL-TDOA assistance data                           |          |      | 16  | Including the reference cell   |
| PRS muting info   |          |      | Cell 1: '10'<br>Cell 2: '01'<br>Cell 3: '10'  | Corresponds to prs-MutingInfo defined in TS 37.355 [24]  |

|                        |   |                                     |  |
|------------------------|---|-------------------------------------|--|
| PRS resource RE offset |   | Cell 1: 0<br>Cell 2: 0<br>Cell 3: 1 | Cell 1 and Cell 3 are configured with different resource offsets   |
| T1                     | s | 3                                   | The length of the time interval from the beginning of each test  |
| T2                     | s | [1.28]                              | The length of the time interval that follows immediately after time interval T1  |
| AoA setup              |   | Setup 1                             | As defined in A.3.15.1   |
| Beam assumption        |   | Rough                               | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |

**Table A.7.6.9.1.1-3: Cell-specific test parameters for RSTD measurement reporting delay during T1**

| Parameter  |          | Unit         | Cell 1    | Cell 2    | Cell 3    |

Table A.7.6.9.1.-5: Void

### A.7.6.9.1.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.1.5 starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 10.1.23.3, i.e., between RSTD\_0000000 and RSTD\_1970049.

### A.7.6.9.2 NR RSTD measurement reporting delay test case for dual positioning frequency layers in FR2 SA

#### A.7.6.9.2.1 Test Purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the requirements specified in Clause 9.9.2 in an environment with AWGN propagation conditions in FR2 in standalone scenario when dual positioning frequency layer is configured.

Supported test configurations are shown in table A.7.6.9.2.1-1. The test parameters are as given in Table 7.6.7.2.1-2, Table A.7.6.9.2.1-3 and , Table A.7.6.9.2.1-4.

**Table A.7.6.9.2.1-1: Supported test configurations for NR RSTD**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

In the test there are three synchronous cells: Cell 1, Cell 2 and Cell 3. Cell 1 is the reference as well as the PCell. Cell 2 and Cell 3 are the neighbour cells. All cells are on the 2 RF channels distributed in dual positioning frequency layers.

The test consists of two consecutive time intervals, with duration of T1 and T2. During time duration T1, the UE shall not have any timing information of Cell 2 and Cell 3. All three cells transmit PRS during T2. Note: The information on when PRS is muted is conveyed to the UE using PRS muting information.

The *NR-DL-TDOA-ProvideAssistanceData* and *nr-DL-TDOA-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the *DL-TDOA assistance* data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID # 24 or #13 before T2.

**Table A.7.6.9.2.1-2: General test parameters for RSTD measurement reporting delay**

| Parameter   |          | Unit | Value   | Comment   |
|---|----------|------|---|---|
| Reference cell  |          |      | Cell 1  | Reference cell is the cell in the DL-TDOA assistance data with respect to which the RSTD measurement is defined, as specified in TS 38.215 [4] and TS 37.355 [34]. The reference cell is the PCell in this test case. |
| Neighbor cells  |          |      | Cell 2 and Cell 3   | Cell 2 and Cell 3 appear at the first and second places in the neighbour cell list in the DL-TDOA assistance data.  |
| SSB configuration   | Config 1 |      | SSB.2 FR2   |   |
| SMTC configuration  | Config 1 |      | SMTC.1  |   |
| PDSCH RMC configuration   | Config 1 |      | SR.1.1 FDD  |   |
| RMSI CORESET RMC configuration  | Config 1 |      | CR.3.1 TDD  | As specified in clause A.3.1.2.1  |
| Dedicated CORESET RMC configuration   | Config 1 |      | CR.1.1 FDD  |   |
| PRS Configuration   | Config 1 |      | PRS.1.1. FR2  | As specified in clause A.3.31   |
| Physical cell ID PCI  |          |      | (PCI of Cell 1 – PCI of Cell 2)mod6=0<br>and<br>(PCI of Cell 1 – PCI of Cell 3)mod6=0 | The cell PCIs are selected such that the relative shifts of PRS patterns among cells are as given by the test parameters  |
| CP length   |          |      | Normal  |   |
| DRX   |          |      | OFF   |   |
| Measurement gap   |          |      | GP#24 or GP#13  | GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured   |
| Radio frame receive time offset between the cells at the UE antenna connector |          | µs   | Cell 2 to Cell 1: 0<br>Cell 3 to Cell 1: 3  | PRS are transmitted from synchronous cells  |
| Expected RSTD   |          | µs   | Cell 2: 3<br>Cell 3: 3<br>Other neighbour cells: randomly between -3 and 3            | The expected RSTD is what is expected at the receiver. The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD indicator  |
| Expected RSTD uncertainty for all neighbour cells                             |          | µs   | 5   | The corresponding parameter in the DL-TDOA assistance data specified in TS 37.355[34] is the expectedRSTD-Uncertainty index   |
| Number of cells provided in DL-TDOA assistance data                           |          |      | 16  | Including the reference cell  |
| PRS muting info   |          |      | Cell 1: '10'<br>Cell 2: '01'<br>Cell 3: '10'  | Corresponds to prs-MutingInfo defined in TS 37.355 [24]   |
| PRS resource RE offset  |          |      | Cell 1: 0<br>Cell 2: 0<br>Cell 3: 1   | Cell 1 and Cell 3 are configured with different resource offsets  |

Table A.7.6.9.2.1-5: Void

### A.7.6.9.2.2 Test Requirements

The RSTD measurement time fulfils the requirements specified in Clause 9.9.2.5.

The UE shall perform and report the RSTD measurements for Cell 2 and Cell 3 with respect to the reference cell in the DL-TDOA assistance data, Cell 1, within the time duration specified in section 9.9.1.5 starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported RSTD measurement for each correct event shall be within the RSTD reporting range specified in Clause 10.1.23.3, i.e., between RSTD\_0000000 and RSTD\_1970049.

## A.7.6.10 PRS-RSRP measurements

### A.7.6.10.1 PRS-RSRP reporting delay test case for single positioning frequency layer

#### A.7.6.10.1.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in Clause 9.9.3.5 for single positioning frequency layer under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.1.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the same frequency as the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is  $\Delta T$  after slot #n, where  $\Delta T = 50$  ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.1.1-2, and table A.7.6.10.1.1-3.

**Table A. 7.6.1.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.6.10.1.1-2: General test parameters for PRS RSRP measurement reporting delay**

| Parameter                                       | Unit    | Test configuration | Value                           | Comment   |
|---|---------|--------------------|---------------------------------|---|
| NR RF Channel Number                            |         | Config 1           | 1: Cell 1 and Cell 2            | One TDD carrier frequency is used for the NR cells.                                   |
| Active cell                                     |         | Config 1           | NR cell 1 (Pcell)               | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell                                  |         | Config 1           | NR cell 2                       | Cell 2 is a neighbour cell in the positioning assistance data.                        |
| Gap Pattern Id                                  |         | Config 1           | GP#13 or GP#24 <sup>Note1</sup> | As specified in clause 9.1.2-1.   |
| Measurement gap offset                          |         | Config 1           | 39                              |   |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP/PRS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 6: | As observed with 0 dBi gain antenna at the centre of the quiet zone  |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |

### A.7.6.10.1.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in Clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in section 9.9.3.5 starting from the beginning of time interval T2.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in Clause 10.1.24.3, i.e., between PRS RSRP\_0 and PRS RSRP\_126.

## A.7.6.10.2 PRS-RSRP reporting delay test case for dual positioning frequency layer

### A.7.6.10.2.1 Test Purpose and Environment

The purpose of the test is to verify the PRS RSRP measurement requirements specified in Clause 9.9.3.5 for dual positioning frequency layers under AWGN propagation conditions in standalone scenario. Supported test configurations are shown in table A.7.6.10.2.1-1

There are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on the different frequency from the PCell.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2. Both cells transmit PRS during T2.

The *NR-DL-AoD-RequestLocationInformation* message and *NR-DL-AoD-ProvideAssistanceData* message as defined in TS 37.355 shall be provided to the UE during T1. The last slot containing the two messages for the assistance data and location information request is denoted as #n.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources that is  $\Delta T$  after slot #n, where  $\Delta T = 50$  ms is the maximum processing time of the assistance data and location information request.

The test parameters are as given in table A.7.6.10.2.1-2, and table A.7.6.10.2.1-3.

**Table A.7.6.10.2.1-1: supported test configurations for PRS RSRP measurement for FR2-FR2**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Table A.7.6.10.2.1-2: General test parameters for PRS RSRP measurement reporting delay

| Parameter  | Unit | Test configuration | Value                             | Comment   |
|--|------|--------------------|-----------------------------------|---|
| Active cell  |      | Config 1           | NR cell 1 (Pcell)                 | Cell 1 is the PCell and the DL-AoD reference cell in the positioning assistance data. |
| Neighbour cell   |      | Config 1           | NR cell 2                         | Cell 2 is a neighbour cell in the positioning assistance data.                        |
| Gap Pattern Id   |      | Config 1           | GP#[13] or GP#24 <sup>Note1</sup> | As specified in clause 9.1.2-1.   |
| Measurement gap offset   |      | Config 1           | 39                                |   |
| SMTC parameters  |      | Config 1           | SMTC.1                            | As specified in clause A.3.11   |
| SSB parameters   |      | Config 1           | SSB.3 FR2                         | As specified in clause A.3.10.2   |
| A3-Offset  | dB   | Config 1           | -6                                |   |
| Hysteresis   | dB   | Config 1           | 0                                 |   |
| CP length  |      | Config 1           | Normal                            |   |
| TimeToTrigger  | s    | Config 1           | 0                                 |   |
| Filter coefficient   |      | Config 1           | 0                                 | L3 filtering is not used  |
| DRX  |      | Config 1           | OFF                               | DRX is not used   |
| Time offset between serving and neighbour cells                                    |      | Config 1           | 3μs                               | Synchronous cells.  |
| Expected RSTD  | μs   | Config 1           | 3                                 |   |
| Expected RSTD uncertainty  | μs   | Config 1           | 5                                 |   |
| T1   | s    | Config 1           | 5                                 |   |
| T2   | s    | Config 1           | 7                                 |   |
| Note 1: GP#24 is configured if UE supports MG#24, otherwise GP#[13] is configured. |      |                    |                                   |   |

**Table A.7.6.10.2.1-3: Cell-specific test parameters for PRS RSRP measurement reporting delay**

| Parameter                                 |                  | Unit                   | Test configuration | Cell 1                                |       | Cell 2                      |       |

| Propagation Condition | Config 1   | AWGN |
|-----------------------|--|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |
| Note 3:               | SS-RSRP/PRS-RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |
| Note 4:               | PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |      |
| Note 5:               | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |      |
| Note 6:               | As observed with 0 dBi gain antenna at the centre of the quiet zone  |      |
| Note 7:               | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |      |

### A.7.6.10.2.2 Test Requirements

The PRS RSRP measurement time fulfils the requirements specified in Clause 9.9.3.5. The UE shall perform and report the PRS RSRP measurements for Cell 2 with respect to the reference cell in the DL-AoD assistance data, Cell 1, within the time duration specified in section 9.9.3.5 starting from the beginning of time interval T2.

The rate of the correct events for the neighbour cell observed during repeated tests shall be at least 90%, where the reported PRS RSRP measurement for each correct event shall be within the PRS RSRP reporting range specified in Clause 10.1.24.3, i.e., between PRS RSRP\_0 and PRS RSRP\_126.

## A.7.6.11 UE Rx-Tx time difference measurements

### A.7.6.11.1 UE Rx-Tx time difference measurements for single positioning frequency layer in FR2 SA

#### A.7.6.11.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configurations are listed in Table A.7.6.11.1.1-1.

**Table A.7.6.11.1.1-1: Supported test configurations**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in Table A.7.6.11.1.1-2 and Table A.7.6.11.1.1-3 respectively.

Table A.7.6.11.1.1-2: General test parameters

| Parameter  | Unit | Test configuration | Value                            | Comment   |
|--|------|--------------------|----------------------------------|---|
| Active cell  |      | 1                  | Cell 1                           | Cell 1 is the PCell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34].        |
| Neighbour cell   |      | 1                  | Cell 2                           | Cell 2 is a neighbour cell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34]. |
| RF Channel Number  |      | 1                  | 1                                | For both Cell 1 and Cell 2  |
| BW <sub>channel</sub>  | MHz  | 1                  | 100: N <sub>RB,c</sub> = 66      |   |
| SSB configuration  |      | 1                  | SSB.2 FR2                        |   |
| SMTc configuration   |      | 1                  | SMTc.1                           |   |
| Measurement gap  |      | 1                  | GP#24 or GP#13 <sup>Note 1</sup> |   |
| CP length  |      | 1                  | Normal                           |   |
| DRX  |      | 1                  | OFF                              |   |
| Time offset between serving and neighbour cells                                  | μs   | 1                  | 3                                | Synchronous cells   |
| T1   | s    | 1                  | 5                                |   |
| T2   | s    | 1                  | 20                               |   |
| NOTE 1: GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured. |      |                    |                                  |   |

Table A.7.6.11.1.1-3: Cell specific test parameters

| Parameter                           | Unit   | Test configuration | Cell 1                                |        | Cell 2      |        |

| Note 1:                             | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |                    |                                       |        |             |        |
| Note 2:                             | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                    |                                       |        |             |        |
| Note 3:                             | PRS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                    |                                       |        |             |        |
| Note 4:                             | PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |                    |                                       |        |             |        |
| Note 5:                             | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |                    |                                       |        |             |        |
| Note 6:                             | As observed with 0 dBi gain antenna at the centre of the quiet zone  |                    |                                       |        |             |        |
| Note 7:                             | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                    |                                       |        |             |        |

Table A.7.6.11.1.1-4: Void

### A.7.6.11.1.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.6.11.2 UE Rx-Tx time difference measurement period for dual positioning frequency layers in FR2 SA

### A.7.6.11.2.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx measurement meets the requirements specified in clause 9.9.4.5 in AWGN propagation condition in FR2 in standalone scenario when dual positioning frequency layers are configured.

The supported test configurations are listed in Table A.7.6.11.2.1-1.

**Table A.7.6.11.2.1-1: Supported test configurations**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on different RF channels in FR2.

The test consists of two consecutive time intervals, with duration of T1 and T2. Cell 1 and Cell 2 mute PRS transmission during T1 and transmit PRS during T2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE during T1. The last TTI containing the two messages shall be provided to the UE  $\Delta T$  ms before the start of T2, where  $\Delta T = 50$  ms is the maximum processing time of the multi-RTT assistance data and location information request.

The beginning of the time interval T2 shall be aligned with the beginning of the first MG instance containing the PRS resources.

The UE is configured with measurement gap pattern ID #13 or ID #24 before T2.

The UE is configured to transmit SRS during T2.

The general test parameters and cell specific test parameters are as given in Table A.7.6.11.2.1-2 and Table A.7.6.11.2.1-3 respectively.

**Table A.7.6.11.2.1-2: General test parameters**

| Parameter  | Unit | Test configuration | Value                       | Comment   |
|--|------|--------------------|-----------------------------|---|
| Active cell  |      | 1                  | Cell 1                      | Cell 1 is the PCell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34].        |
| Neighbour cell   |      | 1                  | Cell 2                      | Cell 2 is a neighbour cell in <i>NR-Multi-RTT-ProvideAssistanceData</i> [34]. |

Table A.7.6.11.1.1-4: Void

### A.7.6.11.2.2 Test requirements

The UE Rx-Tx time difference measurement time fulfils the requirements specified in clause 9.9.4.5.

The UE shall perform and report the UE Rx-Tx time difference measurements for Cell 1 and Cell 2 within the specified UE Rx-Tx time difference measurement time starting from the beginning of time interval T2.

The rate of the correct events for each neighbour cell observed during repeated tests shall be at least 90%, where the reported UE Rx-Tx measurement for each correct event shall be within the UE Rx-Tx reporting range specified in clause 10.1.25.3.1.

## A.7.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in Clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in Clause 10 for at least 90% of the reported cases.
- Measurements are performed in RRC\_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

### A.7.7.1 SS-RSRP

#### A.7.7.1.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

##### A.7.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

##### A.7.7.1.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in Table A.7.7.1.1.2-2 and A.7.7.1.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

**Table A.7.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.1.1.2-2: SS-RSRP Intra frequency general test parameters**

| Parameter   | Unit | T1                          |              | T2                          |              |
|---|------|-----------------------------|--------------|-----------------------------|--------------|
|   |      | Cell 1                      | Cell 2       | Cell 1                      | Cell 2       |
| Cell ID   |      | 489                         | 0            | 489                         | 0            |

| Note 6:                                   | Calculation of $E_s/I_{ot\_BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |                                      |        |                                       |                                     |
| Note 7:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |                                      |        |                                       |                                     |

### A.7.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.7.7.1.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

**Table A.7.7.1.1.3-1: SS-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3</sup>   |
|---------|---|
| Cell 1  | $SSB\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP1 + \delta + G_{max}$   |
| Cell 2  | $SSB\_RP2 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP2 + \delta + G_{max}$   |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the $\delta$ used in the test                                 |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                             |

## A.7.7.1.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.7.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 and 10.1.5.1.2 for intrer-frequency measurements with the testing configurations for NR cells in Table A.7.7.1.2.1-1.

**Table A.7.7.1.2.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| <b>Configuration</b> | <b>Description</b>                                  |
|----------------------|---|
| 1                    | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2                    | 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.1.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.7.1.2.2-1 and Table A.7.7.1.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.7.7.1.2.2-1 and Table A.7.7.1.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter  | Config | Unit | Test 1                         |        | Test 2                         |        |
|--|--------|------|--------------------------------|--------|--------------------------------|--------|
|  |        |      | Cell 1                         | Cell 2 | Cell 1                         | Cell 2 |
| SSB ARFCN  | 1~2    |      | freq1                          | freq2  | freq1                          | freq2  |
| BW <sub>channel</sub>  | 1~2    |      | 100:<br>N <sub>RB,c</sub> = 66 |        | 100:<br>N <sub>RB,c</sub> = 66 |        |
| Data RBs allocated   | 1      |      | 24                             |        | 24                             |        |
|  | 2      |      | 48                             |        | 48                             |        |
| Gap pattern ID   |        |      | 0                              |        | 0                              |        |
| Duplex mode  | 1~2    |      | TDD                            |        | TDD                            |        |
| TDD configuration  | 1~2    |      | TDDConf.3.1                    |        | TDDConf.3.1                    |        |
| PDSCH Reference measurement channel  | 1      |      | SR.3.2 TDD                     | -      | SR.3.2 TDD                     | -      |
|  | 2      |      | SR.3.3 TDD                     |        | SR.3.3 TDD                     |        |

|         |  |
|---------|--|
| Note 1: | Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |
| Note 2: | SSB_RP, Es/lot, Io, (SSB_RP <sub>Cell 2</sub> – SSB_RP <sub>Cell 1</sub> ) and (Iofreq 2 – Iofreq 1) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 3: | Void   |
| Note 4: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 5: | Void   |
| Note 6: | Calculation of Es/lot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB <sub>P</sub> or ΔMB <sub>S</sub> from TS 38.101-2 [19] Table 6.2.1.3-4. |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |
| Note 8: | The value in Table B.2.3-2 is the Minimum SSB_RP for SCS <sub>SSB</sub> = 120 kHz, selected according to the operating band of Cell 2 and UE power class, without ΔMB <sub>P,n</sub> adjustment.   |

**A.7.7.1.2.3 Test Requirements**

The SS-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.1.1 and the relative requirements in clause 10.1.5.1.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.7.7.1.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.7.7.1.2.3-2.

**Table A.7.7.1.2.3-1: SS-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <small>Notes1,2,3,4</small>  |
|---------|--|
| Cell 1  | $SSB\_RP1 - \delta + G_{min} + X \leq \text{Reported RSRP(dBm)} \leq SSB\_RP1 + \delta + G_{max}$  |
| Cell 2  | $SSB\_RP2 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP2 + \delta + G_{max}$  |
| Note 1: | SSB_RP <sub>n</sub> is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2: | δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test   |
| Note 3: | G <sub>min</sub> and G <sub>max</sub> are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

**Table A.7.7.1.2.3-2: SS-RSRP relative accuracy test requirement**

| <b>Test requirement</b> <small>Notes 1,2,3,4, 5, 6</small> |  |
|--|--|
| Cell 2 – Cell 1  | $SSB\_RP2 - SSB\_RP1 - \delta - D - G_{inter} \leq \text{Reported RSRP (dB)} \leq SSB\_RP2 - SSB\_RP1 + \delta + G_{inter} - (X)$  |
| Note 1:  | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2:  | $\delta$ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1   |
| Note 3:  | Void   |
| Note 4:  | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |
| Note 5:  | D = [5.5dB]. D is the <a href="#">margin due to mis-alignment between fine beam and rough beam</a> .   |
| Note 6:  | $G_{inter}$ = [3dB]. $G_{inter}$ is the <a href="#">margin due to different antenna gain caused by frequency separation</a> .  |

**A.7.7.1.3 SA inter-frequency measurement accuracy with FR1 serving cell and FR2 target cell**

**A.7.7.1.3.1 Test Purpose and Environment**

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.1.1 for inter-frequency measurements with the testing configurations in Table A.7.7.1.3.1-1.

**Table A.7.7.1.3.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Config | Description of serving cell                          | Description of target cell                          |
|--------|--|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |

**A.7.7.1.3.2 Test parameters**

In this set of test cases there are two cells in the test, PCell (Cell 1) in FR1 and Cell 2 in FR2 . The test parameters for the Cell 1 and Cell 2 are given in Table A.7.7.1.3.2-1 and Table A.7.7.1.3.2-2 below. Absolute accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.7.7.1.3.2-1 and Table A.7.7.1.3.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.1.3.2-1: SS-RSRP inter-frequency test parameters**

| Parameter  | Config | Unit | Test 1                         |                                | Test 2                         |                                |

**A.7.7.1.3.3 Test Requirements**

The SS-RSRP measurement accuracy for Cell 2 shall fulfil the Absolute requirement in clause 10.1.5.1.1.

Test 1:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.7.7.1.3.3.

Test 2:

Absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.7.7.1.3.3.

**Table A.7.7.1.3.3: SS-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <small>Notes1,2,3,4</small>  |
|---------|--|
| Cell 2  | $SSB\_RP1 - \delta + G_{min} + X \leq \text{Reported RSRP(dBm)} \leq SSB\_RP1 + \delta + G_{max}$  |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the $I_0$ used in the test   |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

## A.7.7.2 SS-RSRQ

### A.7.7.2.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.8.1.1.

#### A.7.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in Table A.7.7.2.1.2-2 and Table A.7.7.2.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.7.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| <b>Configuration</b> | <b>Description</b>                                  |
|----------------------|---|
| 1                    | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.2.1.2-2: SS-RSRQ Intra frequency test parameters**

| Parameter   |                  | Unit | Test 1                      |              | Test 2                      |              |

### A.7.7.2.1.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5dB to Nominal SS-RSRQ-2.5dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal RSRQ+3.5dB to Nominal RSRQ-3.5dB according to the requirements in clause 10.1.8.1.1. Nominal RSRQ is the value shown in table A.7.7.2.1.2-3.

### A.7.7.2.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2 for inter-frequency measurement.

#### A.7.7.2.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.7.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test parameters in Table A.7.7.2.2.2-2 and Table A.7.7.2.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A. 7.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

They are not settable parameters themselves.</p> <p>Note 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                           |        |                           |        |

### A.7.7.2.2.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5dB to Nominal SS-RSRQ -2.5dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ +3.5dB to Nominal SS-RSRQ -3.5dB according to the requirements in clause 10.1.10.1.1.

The SS-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.1.2.

## A.7.7.3 SS-SINR

### A.7.7.3.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.13.1.1.

#### A.7.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.3.1.2-1. . The absolute accuracy of SS-SINR intra-frequency measurement is test by using the parameters in Table A.7.7.3.1.2-2 and Table A.7.7.3.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.7.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-SINR, SSB_RP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0 dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Void</p> <p>Note 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |                                      |        |

### A.7.7.3.1.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3dB to Nominal SS-SINR -3dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5dB to Nominal SS-SINR -3.5dB according to the requirements in clause 10.1.10.13.1.

### A.7.7.3.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.15.1.1 and 10.1.15.1.2 for inter-frequency measurement.

#### A.7.7.3.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.7.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test parameters in Table A.7.7.3.2.2-2 and Table A.7.7.3.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.7.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Table A.7.7.3.2.2-2: SS-SINR Inter frequency general test parameters

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-SINR, SSB_RP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0 dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Void</p> <p>Note 9: Void</p> <p>Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                               |        |                               |        |                               |        |

### A.7.7.3.2.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR +3dB to Nominal SS-SINR -3dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5dB to Nominal SS-SINR -3.5dB according to the requirements in clause 10.1.15.1.1.

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.1.2.

## A.7.7.4 L1-RSRP measurement for beam reporting

### A.7.7.4.1 SSB based L1-RSRP measurement

#### A.7.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.7.7.4.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.4.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode  |
| 2      | NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.7.7.4.1.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.4.1.2-1 and Table A.7.7.4.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.7.7.4.1.2-1 and Table A.7.7.4.1.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

Table A.7.7.4.1.2-1: FR2 SSB based L1-RSRP general test parameters

| Parameter   | Config | Unit | Test 1                      | Test 2                      |
|---|--------|------|-----------------------------|-----------------------------|

#### A.7.7.4.1.3 Test Requirements

After 320ms from the beginning of the test, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0 and absolute accuracy of SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB0 and absolute accuracy of SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.1.2-1.

**Table A.7.7.4.1.3-1: L1-RSRP absolute accuracy test requirement**

|   | Test requirement <sup>Notes1,2,3</sup>  |
|---|---|
| SSB0  | $SSB\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP0 + \delta + G_{max}$ |
| SSB1  | $SSB\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP1 + \delta + G_{max}$ |
| <p>Note 1: SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration</p> <p>Note 2: <math>\delta</math> is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the <math>I_o</math> used in the test</p> <p>Note 3: <math>G_{min}</math> and <math>G_{max}</math> are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class</p> |   |

## A.7.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

### A.7.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in Table A.7.7.4.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.4.2.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.4.2.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.4.2.2-1 and Table A.7.7.4.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.7.7.4.2.2-1 and Table A.7.7.4.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

Table A.7.7.4.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters

| Parameter   | Config | Unit | Test 1                      | Test 2                      |

| $\hat{E}_s / N_{oc}$   | 1~2    | dB            | -51.57                        | -2      | n.a.                          |         |
| <p>Note 1: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 3: No additional noise is added by the test system in Test 2.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |               |                               |         |                               |         |

### A.7.7.4.2.3 Test Requirements

After 640ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clause 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.7.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

**Table A.7.7.4.2.3-1: L1-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3</sup>  |
|---------|--|
| CSI-RS0 | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$  |
| CSI-RS1 | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$  |
| Note 1: | CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the $I_o$ used in the test  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                                  |

## A.7.7.5 CLI measurements

### A.7.7.5.1 SA SRS-RSRP measurement accuracy with FR2 serving cell

#### A.7.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.1.1 with the testing configurations for NR cells in Table A.7.7.5.1.1-1.

**Table A.7.7.5.1.1-1: Applicable NR configurations for FR2 SRS-RSRP accuracy test**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode   |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.7.7.5.1.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.5.1.2-1 and A.7.7.5.1.2-2 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in Table A.7.7.5.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in Table A.7.7.5.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

Table A.7.7.5.1.2-1: FR2 test parameters for SRS-RSRP accuracy

| Parameter  | Config | Unit | Test 1                      | Test 2                      |
|--|--------|------|-----------------------------|-----------------------------|
| SSB GSCN   | 1      |      | freq1                       | freq1                       |

### A.7.7.5.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.1.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

During T2:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.7.7.5.1.3-1.

**Table A.7.7.5.1.3-1: SRS-RSRP absolute accuracy test requirement**

| SRS     | Test requirement <sup>Notes1,2,3</sup>  |
|---------|---|
|         | $SRS\_RP - \delta + G_{min} \leq \text{Reported SRS-RSRP(dBm)} \leq SRS\_RP + \delta + G_{max}$                                     |
| Note 1: | SRS_RP is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test         |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the $I_o$ used in the test       |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class |

### A.7.7.5.2 SA CLI-RSSI measurement accuracy with FR2 serving cell

#### A.7.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.2.1 with the testing configurations for NR cells in Table A.7.7.5.2.1-1.

**Table A.7.7.5.2.1-1: Applicable NR configurations for FR2 CLI-RSSI accuracy test**

| Config  | Description   |
|---|---|
| 1   | 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |   |

### A.7.7.5.2.2 Test parameters

In this set of test cases there is one cell in the test, FR2 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.5.2.2-1 and A.7.7.5.2.2-2 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 2 data symbol before. The CLI-RSSI measurement resource configuration is in Table A.7.7.5.2.2-3.

**Table A.7.7.5.2.2-1: FR2 test parameters for CLI-RSSI accuracy**

| Parameter  | Config | Unit | Test 1                      | Test 2                      |

### A.7.7.5.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.2.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

During T2:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.7.7.5.2.3-1.

**Table A.7.7.5.2.3-1: CLI-RSSI absolute accuracy test requirement**

| <b>Test requirement</b> <sup>Notes1,2,3</sup>   |  |
|---|--|
| $I_o - \delta + G_{min} \leq \text{Reported CLI-RSSI(dBm)} \leq I_o + \delta + G_{max}$ |  |
| Note 1:   | $I_o$ is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for 1.08MHz |
| Note 2:   | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the $I_o$ used in the test          |
| Note 3:   | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class    |

## A.7.7.6 L1-SINR measurement for beam reporting

### A.7.7.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

#### A.7.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.1 and clause 10.1.28.1 for L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in Table A.7.7.6.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.6.1.1-1: Applicable NR configurations for FR2 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.7.7.6.1.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.6.1.2-1 and Table A.7.7.6.1.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.7.7.6.1.2-1 and Table A.7.7.6.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.7.7.6.1.2-1: FR2 CSI-RS based L1-SINR general test parameters**

| Parameter   | Config   | Unit | Test 1                      |
|---|--|------|-----------------------------|
| SSB GSCN  | 1  |      | freq1                       |
| Duplex mode                                       | 1  |      | TDD                         |
| TDD Configuration                                 | 1  |      | TDDConf.3.1                 |
| BW <sub>channel</sub>                             | 1  | MHz  | 100: N <sub>RB,c</sub> = 66 |
| PDSCH Reference measurement channel               | 1  |      | SR.3.1 TDD                  |

| nrofReportedRS                                    | 1  |      | 2                           |
| L1-SINR reporting period                          | 1  |      | slot80                      |
| Propagation condition                             | 1  |      | AWGN                        |
| Antenna configuration                             | 1  |      | 1x2                         |
| EPRE ratio of PSS to SSS                          | 1  | dB   | 0                           |
| EPRE ratio of PBCH DMRS to SSS                    |  |      |                             |
| EPRE ratio of PBCH to PBCH DMRS                   |  |      |                             |
| EPRE ratio of PDCCH DMRS to SSS                   |  |      |                             |
| EPRE ratio of PDCCH to PDCCH DMRS                 |  |      |                             |
| EPRE ratio of PDSCH DMRS to SSS                   |  |      |                             |
| EPRE ratio of PDSCH to PDSCH DMRS                 |  |      |                             |
| EPRE ratio of OCNG DMRS to SSS <sup>Note 1</sup>  |  |      |                             |
| EPRE ratio of OCNG to OCNG DMRS <sup>Note 1</sup> |  |      |                             |
| Note 1:   | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |                             |
| Note 2:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |                             |

**Table A.7.7.6.1.2-2: FR2 CSI-RS based L1-SINR OTA related test parameters**

| Parameter   | Config | Unit          | Test 1                        |         |
|---|--------|---------------|-------------------------------|---------|
|   |        |               | CSI-RS0                       | CSI-RS1 |
| Angle of arrival configuration  |        |               | Setup 1 according to A.3.15.1 |         |
| Assumption for UE beams <sup>Note 4</sup>   |        |               | Rough                         |         |
| $N_{oc}$  | 1~2    | dBm/15 kHz    | -100                          |         |
| $N_{oc}$  | 1~2    | dBm/SS B SCS  | -91                           |         |
| $\hat{E}_s / I_{ot}$  | 1~2    | dB            | 10                            | -2      |
| CSI-RS-RSRP <sup>Note1</sup>  | 1~2    | dBm/SC S      | -81                           | -93     |
| $I_o$ <sup>Note1</sup>  | 1~2    | dBm/95.04M Hz | -51.57                        | -59.86  |
| $\hat{E}_s / N_{oc}$  | 1~2    | dB            | 10                            | -2      |
| <p>Note 1: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 3: Void.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |               |                               |         |

### A.7.7.6.1.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.7.7.6.1.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.1.2-1.

**Table A.7.7.6.1.3-1: L1-SINR absolute accuracy test requirement**

|         | Test requirement <sup>Notes1,2</sup>  |
|---------|---|
| CSI-RS0 | $L1-SINR0 - \delta \leq \text{Reported SINR (dB)} \leq L1-SINR0 + \delta$   |
| CSI-RS1 | $L1-SINR1 - \delta \leq \text{Reported SINR (dB)} \leq L1-SINR1 + \delta$   |
| Note 1: | L1-SINRn is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-1, selected according to the $I_o$ used in the test                                     |

## A.7.7.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR

### A.7.7.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clauses 9.8.4.2 and clause 10.1.28.2 for L1-SINR measurements with SSB based CMR and CSI-IM based IMR, with the testing configurations for NR cells in Table A.7.7.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.7.7.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-IM based IMR**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 2             | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.7.7.6.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.6.2.2-1 and Table A.7.7.6.2.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.7.7.6.2.2-1 and Table A.7.7.6.2.2-2.

Here is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-IM resource set with two CSI-IM resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-IM resources as IMR.

**Table A.7.7.6.2.2-1: FR2 L1-SINR general test parameters with SSB based CMR and CSI-IM based IMR**

| Parameter   | Config | Unit | Test 1                      |
|---|--------|------|-----------------------------|
| SSB GSCN  | 1~2    |      | freq1                       |
| Duplex mode   | 1~2    |      | TDD                         |
| TDD Configuration   | 1~2    |      | TDDConf.3.1                 |
| BW <sub>channel</sub>   | 1~2    | MHz  | 100: N <sub>RB,c</sub> = 66 |

| <p>Note 1: RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |               |                               |        |

### A.7.7.6.2.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for SSB#0+CSI-IM#0 and SSB#1+CSI-IM#1 of Cell 1 shall fulfil the requirements in clauses 10.1.28.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB#0+CSI-IM#0 and absolute accuracy of SSB#1+CSI-IM#1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.7.7.6.2.3-1.

Relative accuracy of SSB#0+CSI-IM#0 compared with SSB#1+CSI-IM#1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.2.2-2.

Table A.7.7.6.2.3-1: L1-SINR absolute accuracy test requirement

|   | Test requirement <sup>Notes1,2</sup>                                       |
|---|--|
| SSB#0+CSI-IM#0  | $L1\_SINR0 - \delta \leq \text{Reported SINR(dB)} \leq L1\_SINR0 + \delta$ |
| SSB#1+CSI-IM#1  | $L1\_SINR1 - \delta \leq \text{Reported SINR(dB)} \leq L1\_SINR1 + \delta$ |
| <p>Note 1: <math>L1\_SINRn</math> is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the SSB#n+CSI-IM#n under consideration</p> <p>Note 2: <math>\delta</math> is the SINR absolute accuracy requirement from Table 10.1.28.2.1-2, selected according to the <math>I_o</math> used in the test</p> |  |

### A.7.7.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

#### A.7.7.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in Clauses 9.8.4.3 and clause 10.1.28.3 for L1-SINR measurements based on CSI-RS as both CMR and IMR with the testing configurations for NR cell in Table A.7.7.6.3.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

Table A.7.7.6.3.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with CSI-RS based both CMR based IMR

| Config | Description   |
|--------|---|
| 1      | NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

## A.7.7.6.3.2 Test parameters

In this set of test cases there are one cell in the test, PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.7.7.6.3.2-1 and Table A.7.7.6.3.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.7.7.6.3.2-1 and Table A.7.7.6.3.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured two CSI-RS resource sets with two CSI-RS resources for each set. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as both CMR and IMR.

**Table A.7.7.6.3.2-1: FR2 L1-SINR measurement test with CSI-RS based both CMR and IMR**

| Parameter   | Config | Unit | Test 1                      |

They are not settable parameters themselves.<br>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.<br>Note 3: No additional noise is added by the test system in Test 2.<br>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |        |               |                               |         |

### A.7.7.6.3.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0+CSI-RS#2 and CSI-RS#1+CSI-RS#3 of Cell 1 shall fulfil the requirements in clause 10.1.28.3. The following requirements are to be verified:

Absolute accuracy of CSI-RS#0 and absolute accuracy of CSI-RS#1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.7.7.6.3.3-1.

Relative accuracy of CSI-RS#0 compared with CSI-RS#1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.3.2-1.

Table A.7.7.6.3.3-1: L1-SINR absolute accuracy test requirement

|          | Test requirement <sup>Notes1,2</sup>  |
|----------|---|
| CSI-RS#0 | $L1-SINR_0 - \delta \leq \text{Reported SINR (dBm)} \leq L1-SINR_0 + \delta$  |
| CSI-RS#1 | $L1-SINR_1 - \delta \leq \text{Reported SINR (dBm)} \leq L1-SINR_1 + \delta$  |
| Note 1:  | L1-SINR <sub>n</sub> is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#n under consideration |
| Note 2:  | $\delta$ is the SINR absolute accuracy requirement from Table 10.1.28.3.1-1.  |

## A.7.7.7 CSI-RSRP

### A.7.7.7.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.3.2.1 and 10.1.3.2.2 for intra-frequency measurements.

#### A.7.7.7.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.7.1.2-1. Both absolute and relative accuracy of CSI-RSRP intra-frequency measurements are tested by using the parameters in Table A.7.7.7.1.2-2 and A.7.7.7.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1. The test consists of two time phases T1 and T2.

**Table A.7.7.1.2-1: CSI-RSRP Intra frequency CSI-RSRP supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.1.2-2: CSI-RSRP Intra frequency general test parameters**

| Parameter   | Unit | T1                          |              | T2                          |              |
|---|------|-----------------------------|--------------|-----------------------------|--------------|
|   |      | Cell 1                      | Cell 2       | Cell 1                      | Cell 2       |

| Note 5:                                   | Void   |                                      |        |   |                                       |
| Note 6:                                   | Calculation of $E_s/I_{ot_{BB}}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |                                      |        |   |                                       |
| Note 7:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                                      |        |   |                                       |

### A.7.7.7.1.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.2.1 and relative accuracy requirements in clause 10.1.3.2.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.2.2-1.

During T2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.7.7.7.1.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.2.2-1.

During T1 and T2:

Relative accuracy of Cell 1 during T2 compared with Cell 1 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.2.2-1

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.2.2-1.

**Table A.7.7.1.3-1: CSI-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3</sup>  |
|---------|--|
| Cell 1  | $\text{CSI-RS\_RP1} - \delta + G_{\min} \leq \text{Reported RSRP(dBm)} \leq \text{CSI-RS\_RP1} + \delta + G_{\max}$  |
| Cell 2  | $\text{CSI-RS\_RP2} - \delta + G_{\min} \leq \text{Reported RSRP(dBm)} \leq \text{CSI-RS\_RP2} + \delta + G_{\max}$  |
| Note 1: | CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.3.2.1-1, selected according to the $\delta$ used in the test                                    |
| Note 3: | $G_{\min}$ and $G_{\max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                              |

## A.7.7.7.2 SA inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.7.7.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.5.2.1 and 10.1.5.2.2 for inter-frequency measurements with the testing configurations for NR cells in Table A.7.7.7.2.1-1.

**Table A.7.7.7.2.1-1: Applicable NR configurations for FR2 inter-frequency CSI-RSRP accuracy test**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.7.7.7.2.2 Test parameters

In this set of test cases there are two cells in the test, PCell (Cell 1) and a FR2 neighbour cell (Cell 2) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 1 and Cell 2 are given in Table A.7.7.7.2.2-1 and Table A.7.7.7.2.2-2 below. Both absolute and relative accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.7.7.7.2.2-1 and Table A.7.7.7.2.2-1. The inter-frequency measurements are supported by a measurement gap.

**Table A.7.7.2.2-1: CSI-RSRP inter-frequency test parameters**

| Parameter   | Unit | Test 1                         |        | Test 2                         |        |  |
|---|------|--------------------------------|--------|--------------------------------|--------|--|
|   |      | Cell 1                         | Cell 2 | Cell 1                         | Cell 2 |  |
| BW <sub>channel</sub>   |      | 100:<br>N <sub>RB,c</sub> = 24 |        | 100:<br>N <sub>RB,c</sub> = 24 |        |  |
| Gap pattern ID  |      | 0                              |        | 0                              |        |  |

| Note 4:  | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone   |   |                   |   |   |
| Note 5:  | Void  |   |                   |   |   |
| Note 6:  | Calculation of $E_s/I_{ot\text{BB}}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta\text{MB}_P$ or $\Delta\text{MB}_S$ from TS 36.101-2 [19] Table 6.2.1.3-4. |   |                   |   |   |
| Note 7:  | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |   |                   |   |   |

### A.7.7.7.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 1 and Cell 2 shall fulfil the absolute requirements in clause 10.1.5.2.1 and the relative requirements in clause 10.1.5.2.2.

Test 1:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in Table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

Test 2:

Absolute accuracy of Cell 1 and absolute accuracy of Cell 2. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in Table A.7.7.7.2.3-1.

Relative accuracy of Cell 2 compared with Cell 1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in A.7.7.7.2.3-2.

**Table A.7.7.7.2.3-1: CSI-RSRP absolute accuracy test requirement**

|         | Test requirement <sup>Notes1,2,3,4</sup>   |
|---------|--|
| Cell 1  | $\text{CSI-RS\_RP1} - \delta + G_{\min} + X \leq \text{Reported RSRP(dBm)} \leq \text{CSI-RS\_RP1} + \delta + G_{\max}$  |
| Cell 2  | $\text{CSI-RS\_RP2} - \delta + G_{\min} \leq \text{Reported RSRP(dBm)} \leq \text{CSI-RS\_RP2} + \delta + G_{\max}$  |
| Note 1: | CSI-RS_RP <sub>n</sub> is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration   |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.5.2.1-1, selected according to the $I_0$ used in the test   |
| Note 3: | $G_{\min}$ and $G_{\max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

**Table A.7.7.7.2.3-2: CSI-RSRP relative accuracy test requirement**

|                 | Test requirement <sup>Notes1,2,3,4</sup>   |
|-----------------|--|
| Cell 2 – Cell 1 | $\text{CSI-RS\_RP2} - \text{CSI-RS\_RP1} - \delta \leq \text{Reported RSRP(dB)} \leq \text{CSI-RS\_RP2} - \text{CSI-RS\_RP1} + \delta - (X)$   |
| Note 1:         | CSI-RS_RP <sub>n</sub> is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration   |
| Note 2:         | $\delta$ is the RSRP relative accuracy requirement from Table 10.1.5.2.2-1   |
| Note 3:         | Void   |
| Note 4:         | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

## A.7.7.8 CSI-RSRQ

### A.7.7.8.1 SA intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.8.2.1.

#### A.7.7.8.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.8.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is tested by using the parameters in Table A.7.7.8.1.2-2 and Table A.7.7.8.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell.

**Table A.7.7.8.1.2-1: CSI-RSRQ Intra frequency CSI-RSRQ supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.8.1.2-2: CSI-RSRQ Intra frequency test parameters**

| Parameter   |                  | Unit | Test 1                      |              | Test 2                      |              |
|---|------------------|------|-----------------------------|--------------|-----------------------------|--------------|

They are not settable parameters themselves.</p> <p>Note 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: NR operating band groups are as defined in Clause 3.5.2.</p> <p>Note 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |                                      |        |

### A.7.7.8.1.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5 dB to Nominal CSI-RSRQ-3.5 dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ+3.5 dB to Nominal CSI-RSRQ-4.5 dB according to the requirements in clause 10.1.8.2.1 with an additional -1dB margin reflecting the possible impact of UE self noise in the test. Nominal RSRQ is the value shown in table A.7.7.8.1.2-3.

### A.7.7.8.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.10.2.1 and 10.1.10.2.2 for inter-frequency measurement.

#### A.7.7.8.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.7.7.8.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test parameters in Table A.7.7.8.2.2-2 and Table A.7.7.8.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell.

**Table A. 7.7.2.2.2-1: CSI-RSRQ Inter frequency supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

They are not settable parameters themselves.</p> <p>Note 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                           |        |                           |        |

### A.7.7.8.2.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ+2.5dB to Nominal CSI-RSRQ -3.5dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5dB to Nominal CSI-RSRQ -4.5dB according to the requirements in clause 10.1.10.2.1 with an additional -1dB margin reflecting the possible impact of UE self noise in the test.

The CSI-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.2.2.

## A.7.7.9 CSI-SINR

### A.7.7.9.1 SA intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.7.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.13.2.1.

#### A.7.7.9.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.9.1.2-1. . The absolute accuracy of CSI-SINR intra-frequency measurement is test by using the parameters in Table A.7.7.9.1.2-2 and Table A.7.7.9.1.2-3. In all test cases, Cell 1 is the PCell and Cell 2 the target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.7.7.9.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.7.7.9.1.2-2: CSI-SINR Intra frequency test parameters**

### A.7.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+XdB to Nominal CSI-SINR –X-1dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1dB according to the requirements in clause 10.1.13.2.1 with an additional -1dB margin reflecting the possible impact of UE self noise in the test. The relative CSI-SINR measurement accuracy shall fulfil the requirements in clause 10.1.13.2.1.

Editor's note: The values of X and Y are pending on the accuracy requirement discussion

### A.7.7.9.2 SA Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.7.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

#### A.7.7.9.2.2 Test Parameters

In this test case the two cells (i.e., Cell 1 and Cell 2) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.7.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test parameters in Table A.7.7.9.2.2-2 and Table A.7.7.9.2.2-3. In all test cases, Cell 1 is the PCell and Cell 2 is target cell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.7.7.9.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

Table A.7.7.9.2.2-2: CSI-SINR Inter frequency general test parameters

### A.7.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR +XdB to Nominal CSI-SINR –X-1dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +YdB to Nominal CSI-SINR –Y-1dB according to the requirements in clause 10.1.15.2.1 with an additional -1dB margin reflecting the possible impact of UE self noise in the test.

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

## A.7.7.10 RSTD measurements

### A.7.7.10.1 RSTD measurement accuracy test case for single positioning frequency layer

#### A.7.7.10.1.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions.

The supported test configurations are specified in Table A.7.7.10.1.1-1.

Table A.7.7.10.1.1-1: Supported test configurations

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell. Cell 2 is a neighbour cells. Both cells are on the same NR RF channel in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

Table A.7.7.10.1.1-2: RSTD accuracy test parameters

| Parameter   | Unit | T1                          |             | T2                          |             |
|---|------|-----------------------------|-------------|-----------------------------|-------------|
|   |      | Cell 1                      | Cell 2      | Cell 1                      | Cell 2      |

| <p>Note 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SSB_RP, <math>E_s/I_{ot}</math> and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 4: Calculation of <math>E_s/I_{ot_{BB}}</math> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor <math>\Delta MB_P</math> from TS 38.101-2 [19] Table 6.2.1.3-4.</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |        |        |

#### A.7.7.10.1.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

#### A.7.7.10.2 RSTD measurement accuracy test case for dual positioning frequency layer

##### A.7.7.10.2.1 Test purpose and Environment

The purpose of the test is to verify that the RSTD measurement meets the accuracy requirements specified in clause 10.1.23.2 in an environment with AWGN propagation conditions. The *NR-TDOA-ProvideAssistanceData* and *NR-TDOA-RequestLocationInformation* message as defined in TS 37.355 shall be provided to the UE before the start of the test. The test duration should be larger than the UE measurement period as defined in clause 9.9.2.

The supported test configurations are specified in Table A.7.7.10.2.1-1.

**Table A.7.7.10.2.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

In the test there are two synchronous cells: Cell 1 and Cell 2. Cell 1 is the reference as well as the PCell on NR RF channel #1 in FR2. Cell 2 is a neighbour cell on a different NR RF channel #2 in FR2. GP#24 is configured if UE supports GP#24, otherwise, GP#13 is configured for the test.

Table A.7.7.10.2.1-2: RSTD accuracy test parameters

| Parameter   | Unit | Test 1                      |             | Test 2                      |             |
|---|------|-----------------------------|-------------|-----------------------------|-------------|
|   |      | Cell 1                      | Cell 2      | Cell 1                      | Cell 2      |

### A.7.7.10.2.2 Test Requirements

The RSTD measurement accuracy for Cell 2 shall fulfil the absolute requirement in clause 10.1.23.2.

## A.7.7.11 PRS-RSRP measurements

### A.7.7.11.1 SA measurement accuracy with PRS in FR2

#### A.7.7.11.1.1 Test Purpose and Environment

The purpose of this test is to verify that the PRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in clauses 10.1.24.2.1 and 10.1.24.2.2.

#### A.7.7.11.1.2 Test parameters

In this set of test cases all cells are on the same carrier frequency. Supported test configurations are shown in Table A.7.7.11.1.2-1. Both absolute and relative accuracy of PRS-RSRP measurements are tested by using the parameters in Table A.7.7.11.1.2-2 and A.7.7.11.1.2-3. In all test cases, Cell 1 is the PCell. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.7.7.11.1.2-1: PRS-RSRP supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

| <p>Note 1: Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: PRS_RP, <math>E_s/I_{ot}</math> and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Void</p> <p>Note 4: Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone</p> <p>Note 5: Void</p> <p>Note 6: Calculation of <math>E_s/I_{ot_{BB}}</math> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor <math>\Delta MB_P</math> from TS 38.101-2 [19] Table 6.2.1.3-4.</p> <p>Note 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |        |        |

**A.7.7.11.1.3 Test Requirements**

In each test, the absolute PRS-RSRP measurement for each cell shall fulfil the absolute accuracy requirement in clause 10.1.24.2.1 if the reported PRS-RSRP is in the range shown in table A.7.7.11.1.3-1. **The relative PRS-RSRP measurement between the two PRS resources within the same cell** shall fulfil the relative accuracy requirement in clause 10.1.24.2.2.

**Table A.7.7.11.1.3-1: PRS-RSRP absolute accuracy test requirement**

|  | Test requirement <sup>Notes1,2,3</sup>  |
|--|---|
| Cell 1   | $PRS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq PRS\_RP1 + \delta + G_{max}$ |
| Cell 2   | $PRS\_RP2 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq PRS\_RP2 + \delta + G_{max}$ |
| <p>Note 1: PRS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration.</p> <p>Note 2: <math>\delta</math> is the RSRP absolute accuracy requirement from Table 10.1.24.2.1-2, selected according to the <math>I_o</math> used in the test.</p> <p>Note 3: <math>G_{min}</math> and <math>G_{max}</math> are the minimum and maximum UE gain values from Table B.2.1.6.1-1, selected according to the UE power class</p> |   |

## A.7.7.12 UE Rx-Tx time difference measurements

### A.7.7.12.1 UE Rx-Tx time difference measurement period for single positioning frequency layer in FR2 SA

#### A.7.7.12.1.1 Test purpose and environment

The purpose of the test is to verify that the UE Rx-Tx time difference measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.25.2. The test is conducted in AWGN propagation condition in FR2 in standalone scenario when single positioning frequency layer is configured.

The supported test configuration is listed in Table A.7.7.12.1.1-1.

**Table A.7.7.12.1.1-1: Supported test configurations**

| Config | Description   |
|--------|---|
| 1      | 120 kHz SSB and PRS SCS, 100 MHz bandwidth, TDD duplex mode |

There are two cells in the test: PCell (Cell 1) and a neighbour cell (Cell 2). All cells are on the same RF channel in FR2.

The *NR-Multi-RTT-ProvideAssistanceData* and *nr-Multi-RTT-RequestLocationInformation* as defined in TS 37.355 [34, clause 6.5.12.1], shall be provided to the UE before the start of the test.

The UE is configured with measurement gap pattern ID #13 or ID #24 before the test.

The UE is configured to transmit SRS on Cell 1 during the test.

The test equipment measures the transmit timing of the UE using the transmitted SRS and measures the receive timing using the PRS. The test equipment then compares the difference of these two timings to the UE Rx-Tx measurement reported by the UE for each cell.

#### A.7.7.12.1.2 Test parameters

The UE Rx-Tx time difference accuracy test parameters are given in Table A.7.7.12.1.2-1.

**Table A.7.7.12.1.2-1: UE Rx-Tx time difference measurement accuracy test parameters**

| Parameter                           | Unit           | Test configuration | Test 1                                |             | Test 2                                |             |
|-------------------------------------|----------------|--------------------|---------------------------------------|-------------|---------------------------------------|-------------|
|                                     |                |                    | Cell 1                                | Cell 2      | Cell 1                                | Cell 2      |

|         |  |
|---------|--|
| Note 1: | Void.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | PRS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 4: | PRS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.   |
| Note 5: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 6: | As observed with 0 dBi gain antenna at the centre of the quiet zone  |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |
| Note 8: | GP#24 is configured if UE supports MG#24, otherwise GP#13 is configured.   |

**Table A.7.7.12.1.2-2: Void**

### A.7.7.12.1.3 Test requirements

The UE Rx-Tx time difference measurement time fulfils the UE Rx-Tx measurement accuracy requirements specified in clause 10.1.25.2 for both Cell 1 and Cell 2.

## A.8 E-UTRA standalone tests for NR RRM

*Editor notes: All NR RRM tests under E-UTRA standalone operations are included in this Annex. All EN-DC related NR RRM tests are in A.4 and A.5.*

### A.8.1 Void

### A.8.2 RRC\_IDLE state mobility

#### A.8.2.1 Inter-RAT NR Cell re-selection

##### A.8.2.1.1 E-UTRA Cell reselection to higher priority NR target Cell in FR1

###### A.8.2.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in TS 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.1.1-1, A.8.2.1.1.1-2, A.8.2.1.1.1-3 and A.8.2.1.1.1-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. E-UTRA cell 1 is already identified by the UE prior to the start of the test. Cell 2 is of higher priority than cell 1.

**Table A.8.2.1.1.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 3             | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 6             | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

Table A.8.2.1.1.1-2: General test parameters for E-UTRA cell re-selection FR1 NR cell test case

| Parameter                    |                | Unit | Test configuration | Value     | Comment  |
|------------------------------|----------------|------|--------------------|-----------|--|
| Initial condition            | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell2     | The UE camps on cell 2 in the initial phase  |
|                              | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell1     |  |
| T1 end condition             | Active cell    |      |                    | Cell1     | During T1 period the UE reselects to cell 1  |
|                              | Neighbour cell |      |                    | Cell2     |  |
| T3 end condition             | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell2     | The UE shall perform reselection to cell 2 during T3   |
|                              | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell1     |  |
| RF Channel Number            |                |      | 1, 2, 3, 4, 5, 6   | 1, 2      | E-UTRAN radio channel (1) and NR radio channel (2) are used for this test  |
| Time offset between cells    |                |      | 1, 4               | 3 ms      | Asynchronous cells   |
|                              |                |      | 2, 5               | 3 $\mu$ s | Synchronous cells  |
|                              |                |      | 3, 6               | 3 $\mu$ s | Synchronous cells  |
| Access Barring Information   |                | -    | 1, 2, 3, 4, 5, 6   | Not Sent  | No additional delays in random access procedure.   |
| DRX cycle length             |                | s    | 1, 2, 3, 4, 5, 6   | 1.28      | The value shall be used for all cells in the test.   |
| NR PRACH configuration index |                |      | 1, 2, 3, 4, 5, 6   | 102       | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| T1                           |                | s    | 1, 2, 3, 4, 5, 6   | 15        | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                           |                | s    | 1, 2, 3, 4, 5, 6   | >7        | During T2, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T3. |
| T3                           |                | s    | 1, 2, 3, 4, 5, 6   | 75        | T3 needs to be defined so that cell re-selection reaction time is taken into account.  |

**Table A.8.2.1.1.1-3: Cell specific test parameters for NR cell 2**

| Parameter  | Unit          | Test configuration | Cell 2      |           |        |
|--|---------------|--------------------|-------------|-----------|--------|

### A.8.2.1.1.2 Test Requirements

The cell reselection delay to a higher priority NR cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate, NR} + T_{SI-NR}$ , and to a lower priority cell can be expressed as:  $T_{evaluate, NR} + T_{SI-NR}$ ,

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2 in TS 36.133 [15]

$T_{evaluate, NR}$  See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

$T_{SI-NR}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority NR cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

### A.8.2.1.2 E-UTRA Cell reselection to lower priority NR target Cell in FR1 for UE configured with highSpeedInterRAT-NR-r16

#### A.8.2.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT cell reselection requirements specified in clause 4.2.2.5.6 in 36.133 [15].

The test scenario comprises of 1 E-UTRA cell and 1 NR cell as given in tables A.8.2.1.2.1-1, A.8.2.1.2.1-2, A.8.2.1.2.1-3 and A.8.2.1.2.1-4. In SIB of the E-UTRA cell, highSpeedInterRAT-NR-r16 is configured and the carrier of NR cell is configured with highSpeedCarrierNR-r16. The test consists of two time periods, with time duration of T1 and T2 respectively. Both E-UTRA cell 1 and NR cell 2 are already identified by the UE prior to the start of the test. NR cell 2 is of lower priority than E-UTRA cell 1.

**Table A.8.2.1.2.1-1: Supported test configurations for UE configured with highSpeedInterRAT-NR-r16**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 3             | LTE FDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode  |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10MHz bandwidth, FDD duplex mode |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10MHz bandwidth, TDD duplex mode |
| 6             | LTE TDD, NR 30kHz SSB SCS, 40MHz bandwidth, TDD duplex mode  |

Note: The UE is only required to be tested in one of the supported test configurations

**Table A.8.2.1.2.1-2: General test parameters in E-UTRA cell re-selection FR1 NR cell test case for UE configured with highSpeedInterRAT-NR-r16**

| Parameter                    |                 | Unit | Test configuration | Value     | Comment   |
|------------------------------|-----------------|------|--------------------|-----------|---|
| Initial condition            | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1     | The UE camps on cell 1 in the initial phase   |
| T1 end condition             | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell2     | The UE shall perform reselection to cell 2 during T1                                  |
|                              | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell1     |   |
| T2 end condition             | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1     | The UE shall perform reselection to cell 1 during T2 for iteration of the tests.      |
|                              | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell2     |   |
| RF Channel Number            |                 |      | 1, 2, 3, 4, 5, 6   | 1, 2      | E-UTRAN radio channel (1) and NR radio channel (2) are used for this test             |
| Time offset between cells    |                 |      | 1, 4               | 3 ms      | Asynchronous cells  |
|                              |                 |      | 2, 5               | 3 $\mu$ s | Synchronous cells   |
|                              |                 |      | 3, 6               | 3 $\mu$ s | Synchronous cells   |
| Access Barring Information   |                 | -    | 1, 2, 3, 4, 5, 6   | Not Sent  | No additional delays in random access procedure.                                      |
| DRX cycle length             |                 | s    | 1, 2, 3, 4, 5, 6   | 0.32      | The value shall be used for all cells in the test.                                    |
| NR PRACH configuration index |                 |      | 1, 2, 3, 4, 5, 6   | 102       | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                   |
| T1                           |                 | s    | 1, 2, 3, 4, 5, 6   | 15        | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2                           |                 | s    | 1, 2, 3, 4, 5, 6   | 75        | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

**Table A.8.2.1.2.1-3: Cell specific test parameters for NR cell 2 in E-UTRA cell re-selection FR1 NR cell test case for UE configured with highSpeedInterRAT-NR-r16**

| Parameter  | Unit          | Test configuration | Cell 2                      |        |

#### A.8.2.1.2.2 Test Requirements

The cell reselection delay to a lower priority NR cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the RRC CONNECTION REQUEST message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, NR}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate, NR}}$  See Table 4.2.2.5.6-2 in clause 4.2.2.5.6 in [15]

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority NR cell.

## A.8.2.2 E-UTRA – NR Inter-RAT Early Measurement Reporting

### A.8.2.2.1 E-UTRA – NR Early Measurement Reporting for NR in FR1

#### A.8.2.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in Table A.8.2.2.1.1-1.

**Table A.8.2.2.1.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 3             | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 6             | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in Table A.8.2.2.1.1-4. The general test parameters and the cell specific test parameters for the NR cell are specified in Table A.8.2.2.1.1-2 and Table A.8.2.2.1.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

**Table A.8.2.2.1.1-2: General test parameters**

| Parameter                             | Unit | Test configuration | Value                  | Comment |
|---------------------------------------|------|--------------------|------------------------|---------|
| Active cell                           |      | 1, 2, 3, 4, 5, 6   | E-UTRAN Cell 1         |         |
| Neighbour cell                        |      | 1, 2, 3, 4, 5, 6   | NR Cell 2              |         |

### A.8.2.2.1.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acquire the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as:  $T_{\text{higher\_priority\_search}} + T_{\text{SSB\_index,NR}} + T_{\text{evaluate, NR}}$ .

Where:

$T_{\text{higher\_priority\_search}}$  See clause 4.2.2 in TS 36.133 [15]

$T_{\text{SSB\_index,NR}}$  See Table 4.9.2.4-1 in clause 4.9.2.4 in TS 36.133 [15]

$T_{\text{evaluate, NR}}$  See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 70.24 s, allow 71 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in Section 9.1.2B in TS 36.133 [15] and Section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.2.2.2 E-UTRA – NR Early Measurement Reporting for NR in FR2

### A.8.2.2.2.1 Test Purpose and Environment

This test is to verify the requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 4.9.2.4 in TS 36.133 [15]. This test is also to verify the accuracy requirement for the E-UTRAN to NR inter-RAT Idle mode DC measurement requirements specified in clause 9.11.1A and 9.11.2A in TS 36.133 [15]. Supported test configurations are shown in Table A.8.2.2.2-1.

**Table A.8.2.2.2.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

The test scenario comprises of 1 E-UTRA cell (Cell 1) and 1 NR cell (Cell 2). The the test parameters and applicability for the E-UTRAN cell are defined in Table A.8.2.2.2.1-4. The general test parameters and the cell specific test parameters for the NR cell are specified in Table A.8.2.2.2.1-2 and Table A.8.2.2.2.1-3, respectively.

The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Prior to the start of the time duration T1, the UE shall be connected to Cell 1. During T1, Cell 2 shall be powered off. At the end of T1, the RRC connection to Cell 1 is released and UE is configured Idle mode DC measurement on the carrier frequency of Cell 2. Time duration T2 starts when the RRC connection is released, and during the T2 UE is in Idle mode. Cell 2 shall be powered on from the beginning of T2. At beginning of T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

Table A.8.2.2.1-2: General test parameters

| Parameter                             | Unit | Test configuration | Value                  | Comment |
|---------------------------------------|------|--------------------|------------------------|---------|
| Active cell                           |      | 1, 2               | E-UTRAN Cell 1         |         |
| Neighbour cell                        |      | 1, 2               | NR Cell 2              |         |

#### A.8.2.2.2.2 Test Requirements

At the beginning of the time-period T2 the connection is released, and UE enters idle mode. During the time period T2 the UE is in Idle mode and Cell 2 is active. The UE shall not perform reselection. The UE shall perform Idle Mode DC measurement according to clause 4.9.2.4 in TS 36.133 [15]. UE shall be able to detect, acquire the SSB index and measure the SS-RSRP and SS-RSRQ from Cell 2 for Idle mode DC measurement during T2.

NOTE: The Idle mode DC measurement period for the test setup can be expressed as:  $T_{\text{detect, NR}}$ .

Where:

$T_{\text{detect, NR}}$  See Table 4.2.2.5.6-1 in clause 4.2.2.5.6 in TS 36.133 [15]

This gives a total of 128 s, allow 128 s for the T2.

At the start of T3 the UE is paged for connection setup. During the connection setup the UE is requested to transmit early measurement report. The UE shall send early measurement report to the PCell.

After receiving the requested early measurement report, the test equipment verifies the accuracy of measurement reported for serving Cell 1 and Cell 2 meets the requirements in Section 9.1.2B in TS 36.133 [15] and Section 9.1.3B, respectively and test ends.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.8.3 RRC\_CONNECTED state mobility

### A.8.3.1 Handover

#### A.8.3.1.1 E-UTRAN - NR handover in FR1

##### A.8.3.1.1.1 Test Purpose and Environment

This test shall verify the E-UTRAN to NR FR1 handover requirements as specified in clause 6.1.2.1 specified in clause 5.3.4 in TS 36.133 [15].

The test comprises of one E-UTRA carrier and one NR carrier. There are two cells and one cell on each carrier. Cell 1 is the E-UTRAN and Cell 2 is an inter-RAT NR neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 8.1.2.1-1 of TS 36.133 [15] is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.8.3.1.1-1. General test parameters are provided in Table A.8.3.1.1-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.8.3.1.1-3 and A.8.3.1.1-4 respectively.

**Table A.8.3.1.1-1: Supported test configurations for E-UTRAN inter-RAT NR handover**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 2             | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 3             | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| 4             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |
| 5             | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |
| 6             | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

Table A.8.3.1.1-2: General test parameters for E-UTRAN inter-RAT NR handover

| Parameter                    |                   | Unit | Value                             | Comment   |
|------------------------------|-------------------|------|-----------------------------------|---|
| NR RF Channel Number         |                   |      | 1                                 | 1 NR carrier frequency is used in the test                    |
| LTE RF Channel Number        |                   |      | 2                                 | 1 E-UTRAN carrier frequency is used in the test               |
| Initial conditions           | Active cell       |      | Cell 1                            | E-UTRAN cell  |
|                              | Neighbouring cell |      | Cell 2                            | NR cell   |
| Final condition              | Active cell       |      | Cell 2                            |   |
| NR measurement quantity      |                   |      | SS-RSRP                           |   |
| E-UTRAN measurement quantity |                   |      | RSRP                              |   |
| b2-Threshold1                |                   | dBm  | -83                               | Absolute E-UTRAN RSRP threshold for event B2                  |
| b2-Threshold2NR              |                   | dBm  | As specified in Table A.8.3.1.1-4 | Absolute NR SS-RSRP threshold for event B2                    |
| Hysteresis                   |                   | dB   | 0                                 |   |
| TimeToTrigger                |                   | s    | 0                                 |   |
| Filter coefficient           |                   |      | 0                                 | L3 filtering is not used                                      |
| DRX                          |                   |      | OFF                               | Non-DRX test  |
| Access Barring Information   |                   | -    | Not sent                          | No additional delays in random access procedure               |
| Time offset between cells    |                   |      | 3 ms                              | Asynchronous cells  |
| Gap pattern configuration Id |                   |      | 0                                 | As specified in Table 8.1.2.1-1 started before T2 starts [15] |
| T1                           |                   | s    | 5                                 |   |
| T2                           |                   | s    | ≤5                                |   |
| T3                           |                   | s    | 1                                 |   |

Table A.8.3.1.1-3: Cell specific test parameters for E-UTRAN inter-RAT NR handover (Cell 1)

| Parameter   | Unit | Configuration    | Cell 1   |    |    |
|---|------|------------------|--|----|----|
|   |      |                  | T1   | T2 | T3 |
