### A.5.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.5.5.4 EN-DC Beam Failure Detection and Link Recovery Test for FR2 PSCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.5.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving PSCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the PSCell, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.5.5.5.4.1-1, A.5.5.5.4.1-2, A.5.5.5.4.1-3, and A.5.5.5.4.1-4 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.4.1-1 shows the variation of the downlink SNR of the PCell and the SNR of the CSI-RS in set  $q_0$  in the active PSCell to emulate CSI-RS based beam failure. Figure A.5.5.5.4.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.5.5.5.4.1-1: Supported test configurations for FR2 PSCell**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2             | LTE TDD, FDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

Table A.5.5.5.4.1-6: Void

Figure A.5.5.5.4.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in DRX mode

#### A.5.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.5.5.5.5 EN-DC scheduling availability restriction during Beam Failure Detection and Link Recovery for FR2 PSCell configured with SSB-based BFD and LR in non-DRX mode

##### A.5.5.5.5.1 Test Purpose and Environment

The purpose is to test scheduling availability restrictions when the UE is performing beam failure detection or when the UE is performing L1-RSRP measurement for candidate beam detection, when no DRX is used. This test will verify the scheduling availability restriction requirements for SSB based beam failure detection and link recovery for an FR2 serving cell in clause 8.5.7 and 8.5.8.

The test parameters are given in Tables A.5.5.5.5.1-1, A.5.5.5.5.1-2 and A.5.5.5.5.1-3 below. There are two cells, cell 1 is the E-UTRAN PCell, and cell 2 is the PSCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.5.1-3 shows the variation of the downlink SNR of the PCell and the SNR of the SSB in set  $q_0$  in the active PSCell to emulate SSB based beam failure. Figure A.5.5.5.5.1-3 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. This test will focus on the scheduling availability during beam failure detection and candidate beam detection. In the test, DRX configuration is not enabled. Test is to test the scheduling availability restriction of UE performing beam failure detection and candidate beam

detection when SSB RS configured for Beam failure detection and candidate beam detection. During the test the UE is scheduled to transmit continuously in UL.

**Table A.5.5.5.1-1: Supported test configurations for FR2 PSCell**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 3  | LTE FDD, NR 240 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| 4  | LTE TDD, NR 240 kHz SSB SCS, 100MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Figure A.5.5.5.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.5.5.5.2 Test Requirements

The UE behaviour during time duration T3 follows the requirements defined in clause 8.5.7.3:

- The UE is not expected to transmit PUCCH/PUSCH/SRS or receive PDCCH/PDSCH/CSI-RS for tracking/CSI-RS for CQI on BFD-RS symbols to be measured for beam failure detection.

The UE behaviour during time durations T4 and T5 follows the requirements defined in clause 8.5.8.3:

- The UE is not expected to transmit PUCCH/PUSCH or receive PDCCH/PDSCH on reference symbols to be measured for candidate beam detection.

### A.5.5.5.6 EN-DC Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in non-DRX mode

#### A.5.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.5.5.5.6.1-1, A.5.5.5.6.1-2 and A.5.5.5.6.1-3. There are three cells, cell 1 is the E-UTRAN PCell, cell 2 is the PCell, and cell 3 is the SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.6.1-1 shows the variation of the downlink SNR of the active SCell and the SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate CSI-RS based beam failure. Figure A.5.5.5.6.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1, cell 2, and cell 3. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 2 ms. In the test, DRX configuration is not enabled.

**Table A.5.5.5.6.1-1: Supported test configurations for FR2 PCell and SCell**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2             | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Table A.5.5.5.6.1-2: General test parameters for FR2 SCell for beam failure detection and link recovery testing in non-DRX mode**

| Parameter | Test Config. | Unit | Value  | Comment |
|-----------|--------------|------|--------|---------|
|           |              |      | Test 1 |         |

**Figure A.5.5.5.6.1-1: SNR and L1-RSRP variation for CSI-RS based beam failure detection and link recovery testing for SCell in non-DRX mode**

### A.5.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.5.5.5.6.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 2.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 2 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 2.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit PUCCH with an LRR with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.5.5.7 EN-DC Beam Failure Detection and Link Recovery Test for FR2 SCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.5.5.5.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for an active SCell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UE's active DL BWP of the SCell with *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR2 SCell requirements in clause 8.5.

The test parameters are given in Tables A.5.5.5.7.1-1, A.5.5.5.7.1-2 and A.5.5.5.7.1-3. There are three cells, cell 1 is the E-UTRAN PCell, cell 2 is the PSCell, and cell 3 is the SCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.5.5.5.7.1-1 shows the variation of the downlink SNR of the active SCell and the SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate CSI-RS based beam failure. Figure A.5.5.5.7.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1, cell 2, and cell 3. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.5.5.7.1-1: Supported test configurations for FR2 PSCell and SCell**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |
| 2             | LTE TDD, TDD duplex mode, 120 kHz SSB SCS, 100 MHz bandwidth |

**Figure A.5.5.7.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing for SCell in DRX mode**

### A.5.5.5.7.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 in A.5.5.5.7.1 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 2.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 2.

During T3 the UE shall detect beam failure and initial link recovery. During T4 and T5 the UE measures and evaluates beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 260 + 10$  ms after the start of T5, the UE shall transmit PUCCH with LRR, followed by BFR MAC CE containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit PUCCH with an LRR with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## A.5.5.6 Active BWP switch

### A.5.5.6.1 DCI-based and Timer-based Active BWP Switch

#### A.5.5.6.1.1 E-UTRAN – NR PSCell FR2 DL active BWP switch with non-DRX in synchronous EN-DC

##### A.5.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6. Supported test configurations are shown in Table A.5.5.6.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.5.5.6.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.5.5.6.1.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.6.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $i$ . The UE should switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}$ ).

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell(Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $j+T_{BWPswitchDelay}$ ).

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.5.5.6.1.1-1: DL BWP switch supported test configurations**

| Config   | Description   |
|--|---|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations                 |   |
| Note 2: A UE which fulfils the requirements in test case A.5.5.2.2 can skip the test cases in A.5.5.2.1. |   |

**Table A.5.5.6.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2      | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| CP length   |      | Normal |  |
| DRX   |      | OFF    | For both PCell and PSCell                      |

#### A.5.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+kI$ ).

During T3, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{BWPswitchDelay}+kI$ ).

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ( $i+YI$ ), ( $j+Y2$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

#### A.5.5.6.1.2 E-UTRAN – NR PSCell FR2 with FR2 SCell DL active BWP switch in non-DRX in synchronous EN-DC

##### A.5.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.2, and interruption requirements for NR victim cell defined in clause 8.2.1.2.7 . Supported test configurations are shown in Table A.5.5.6.1.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one PSCell (Cell 2) and one SCell (Cell 3) as given in Table A.5.5.6.1.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of PSCell and SCell are specified in Table A.5.5.6.1.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on E-UTRA PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) and SCell (Cell 3) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 3 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (E-UTRA PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 3 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PSCell, BWP-0 in Cell 2 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PSCell.
- UE is configured with a *bwp-InactivityTimer* timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PSCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-2 starting from the beginning of the DL slot right after slot ( $i+T_{BWPswitchDelay}$ ).

PCell(Cell 1) interruption due to BWP switch on PSCell shall occur within the BWP switch delay.

PSCell(Cell 2) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell(Cell 3).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of SCell's DL slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PSCell at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-1 starting from the first DL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}$ ).

PCell(Cell 1) interruption due to BWP switch of PSCell shall occur within the BWP switch delay.

PSCell(Cell 2) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PSCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

The test equipment verifies that potential interruption to NR PSCell is carried out in the correct time span by monitoring ACK/NACK sent in PSCell during BWP switch of SCell.

**Table A.5.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config   | Description   |
|--|---|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations                     |   |
| Note 2: A UE which fulfils the requirements in test case A.5.5.6.1.2 can skip the test cases in A.5.5.6.1.1. |   |
| Note 3: NR configuration is the same for PSCell and SCells.  |   |

**Table A.5.5.6.1.2.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2, 3   | Two NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| Active SCell  |      | Cell 3 | SCell on RF channel number 3.                  |
| CP length   |      | Normal |  |
| DRX   |      | OFF    |  |
| <i>bwp-InactivityTimer</i>                              | ms   | [200]  |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.            |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on PSCC.           |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0      | Individual offset for cells on SCC.            |
| Cell2 timing offset to cell1                            | μs   | 3      | Synchronous EN-DC                              |
| Cell3 timing offset to cell2                            | μs   | 3      | Synchronous cells                              |
| T1  | s    | 0.2    |  |
| T2  | s    | 0.2    |  |
| T3  | s    | 0.2    |  |

| $N_{oc}$ <sup>Note 1</sup>                | dBm/15 kHz   | -112                               | -112   |
| SS-RSRP <sup>Note 2</sup>                 | dBm/120 kHz <sup>Note 3</sup>  | -85                                | -85    |
| $\hat{E}_s/I_{ot}$                        | dB   | 18                                 | 18     |
| $I_o$ <sup>Note 2</sup>                   | dBm/95.04 MHz <sup>Note 4</sup>  | -56                                | -56    |
| Note 1:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                    |        |
| Note 2:                                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                    |        |
| Note 3:                                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                    |        |
| Note 4:                                   | Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone   |                                    |        |
| Note 5:                                   | As observed with 0dBi gain antenna at the centre of the quiet zone.  |                                    |        |
| Note 6:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                                    |        |

#### A.5.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL after slot  $(i+T_{BWPswitchDelay}+kI)$ .

During T3, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of DL after slot  $(j+T_{BWPswitchDelay}+kI)$ .

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of PCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in TS36.133 Clause 7.32.2.7.

During T1, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

During T3, the start of the interruption of SCell during PSCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell shall not be longer than the interruption duration specified for active BWP switch in Clause 8.6.2.

All of the above test requirements shall be fulfilled in order for the observed PCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after slot  $(i+T_{BWPswitchDelay}+kI)$ ,  $(j+T_{BWPswitchDelay}+kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK.

*Editor's note: FFS value of  $kI$  for type 1 and type 2 UE.*

## A.5.5.6.2 RRC-based Active BWP Switch

### A.5.5.6.2.1 E-UTRAN – NR PSCell FR2 DL active BWP switch with non-DRX in synchronous EN-DC

#### A.5.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.3. Supported test configurations are shown in Table A.5.5.6.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in Table A.5.5.6.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in Table A.5.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

If the *RRCReconfiguration* is embedded in E-UTRA RRC message, time period T1 starts when a E-UTRA RRC message *RRCConnectionReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side from PCell in PSCell's slot # denoted *i*. Otherwise, i.e., if the *RRCReconfiguration* is not embedded in E-UTRA RRC message, time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in from PSCell in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to completely receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ) as defined in clause 8.6.3 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $i + T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}$ ).

$T_{RRCprocessingDelay}$  and  $T_{BWPswitchDelayRRC}$  are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.5.5.6.2.1.1-1: DL BWP switch supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.5.5.6.2.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2      | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| CP length   |      | Normal |  |
| DRX   |      | OFF    |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.            |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on PSCC.           |
| Cell2 timing offset to cell1                            | μs   | 3      | Synchronous EN-DC                              |
| T1  | s    | [0.2]  |  |

#### A.5.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot ( $i+T_{RRCprocessingDelay}+T_{BWPswitchDelayRRC}$ ).

All of the above test requirements shall be fulfilled in order for the observed PSCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.5.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

##### A.5.5.6.3.1 E-UTRAN – NR PSCell FR2 and NR SCell FR2 DL active BWP switch on multiple CCs in synchronous EN-DC

###### A.5.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch on multiple CCs delay requirement defined in clause 8.6. Supported test configurations are shown in Table A.5.5.6.3.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in Table A.5.5.6.3.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and NR SCell is specified in Table A.5.5.6.3.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.6.3.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) and SCell (Cell 3) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and Cell 3 and the time duration of T2.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC) and Cell 3 (SCell) on radio channel 3 (SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PSCell and SCell, BWP-1 and BWP-2, in Cell 2 and Cell 3 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PSCell and SCell.
- UE is configured with a *bwp-InactivityTimer* timer value for PSCell and SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for PSCell DL BWP switch and a DCI format 1\_1 command for SCell DL BWP switch, sent from the test equipment to the UE simultaneously, are received at the UE side in PSCell and SCell slot # denoted  $i$ . The UE should switch its bandwidth part from BWP-1 to BWP-2 in PSCell and SCell.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i + T_{MultipleBWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ( $i + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ( $i + T_{MultipleBWPswitchDelay}$ ).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after SCell's DL slot ( $i + T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell no later than at the beginning of the DL slot right after slot ( $i + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on PSCell's BWP-2 starting from the beginning of the DL slot right after slot ( $i + T_{MultipleBWPswitchDelay}$ ).

During T2, the test equipment won't transmit DCI format for PDSCH reception on PSCell (Cell 2) and SCell (Cell 3).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the beginning slot of the DL subframe immediately after the slot wherein *bwp-InactivityTimer* timer expires in PSCell and SCell. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1 in both PSCell and SCell.

The UE shall be able to receive PDSCH on PSCell at the beginning of the DL slot right after PSCell's DL slot ( $j + T_{MultipleBWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the PSCell at latest at the beginning of the DL slot right after slot ( $j + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $j + T_{MultipleBWPswitchDelay}$ ).

The UE shall be able to receive PDSCH on SCell at the beginning of the DL slot right after SCell's DL slot ( $j + T_{MultipleBWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell at latest at the beginning of the DL slot right after slot ( $j + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on SCell's BWP-1 starting from the beginning of the DL slot right after slot ( $j + T_{MultipleBWPswitchDelay}$ ).

The test equipment verifies the DL BWP switch time in PSCell and SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK is received.

**Table A.5.5.6.3.1.1-1: DL BWP switch supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.5.5.6.3.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment   |
|---|------|--------|---|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test                  |
| NR RF Channel Number                                    |      | 2, 3   | Two NR radio channel is used for this test for PSCell and SCell |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                                   |

| Assumption for UE beams <sup>Note 6</sup> |  | Fine                                 | Fine                                 |
| $N_{oc}$ <sup>Note 1</sup>                | dBm/15 kHz   | -112                                 | -112                                 |
| $N_{oc}$ <sup>Note 1</sup>                | dBm/SCS  | -103                                 | -103                                 |
| SS-RSRP <sup>Note 2</sup>                 | dBm/120 kHz <sup>Note 3</sup>  | -85                                  | -85                                  |
| $\bar{E}_s/I_{ot}$                        | dB   | 18                                   | 18                                   |
| $I_o$ <sup>Note 2</sup>                   | dBm/95.04 MHz <sup>Note 4</sup>  | -56                                  | -56                                  |
| Note 1:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                      |                                      |
| Note 2:                                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                      |                                      |
| Note 3:                                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                      |                                      |
| Note 4:                                   | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |                                      |                                      |
| Note 5:                                   | As observed with 0dBi gain antenna at the centre of the quiet zone.  |                                      |                                      |
| Note 6:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                                      |                                      |

#### A.5.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send the ACK for PSCell and SCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{MultipleBWPswitchDelay}+kI$ ).

During T3, the UE shall start to send the ACK for PSCell and SCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{MultipleBWPswitchDelay}+kI$ ).

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* and *bwp-SwitchingMultiCCs-r16* [2], UE shall finish BWP switch within the time duration  $T_{MultipleBWPswitchDelay}$  defined in TS 38.133 clause 8.6.2A and 8.6.2B

All of the above test requirements shall be fulfilled in order for the observed PSCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK in the DL slot right after DL slot ( $i+Y1$ ), ( $j+Y2$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK.

#### A.5.5.6.4 SCell dormancy switch

##### A.5.5.6.4.1 E-UTRAN – NR FR2 PSCell SCell dormancy switch of single FR2 SCell inside active time

###### A.5.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify

- 1) the interruption due to RRM and CSI measurement during SCell dormancy on spCell is within the limits specified in clause 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cell, and
- 2) the SCell dormancy switch delay is within the requirement defined in clause 8.6.2, and the SCell dormancy switch interruption is within the limits defined in clause 8.2.1.2.15.1 for NR victim cell.

Supported test configurations are shown in Table A.5.5.6.4.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in Table A.5.5.6.4.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in Table A.5.5.6.4.1.1-3 below.

The tests consist of three consecutive time periods T1, T2, and T3, respectively. All cells have constant signal levels throughout the test. The UE is continuously scheduled in PCell and PSCell throughout the test

Before the test starts,

- UE is connected to Cell 1 (PCell), Cell 2 (PSCell) and Cell 3 (SCell).
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 2. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.
- UE is indicated that *firstOutsideActiveTimeBWP-Id* that the active DL BWP after when switching from dormant BWP in Cell 3 is BWP-0

T1 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PSCell at the antenna connector, in a slot # denoted  $m$ , pertaining to dormancy indication for switching SCell from non-dormancy to dormancy. The UE shall complete switching of the SCells to dormancy by the end of slot  $m + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 1$  in Test1, and slot  $m + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 2$  in Test2, as specified in clause 8.6.2. Any PSCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.1.2.15.1 for NR victim cell. The test equipment verifies that interruptions due to switching from non-dormancy to dormancy are within the requirements by analysing HARQ feedback transmitted in PSCell for PSCell.

During T2, the UE is carrying out CSI and RRM measurements on dormant SCell. Any interruptions due to CSI and RRM measurements shall fulfill requirements in clause 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cell. The test equipment verifies that the interruptions are within the allowed percentages by counting ACK/NACKs in PSCell. At the end of T2, the test equipment transmits a DCI with dormancy indication on PDCCH in PSCell carrying a dormancy indication for switching SCell from dormancy to non-dormancy.

T3 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PSCell at the antenna connector, in a slot # denoted  $n$ , pertaining to dormancy indication for switching SCell from dormancy to non-dormancy. The UE shall complete switching of the SCell to non-dormancy by the end of slot  $n + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 1$  in Test1, and slot  $n + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 2$  in Test2, as specified in clause 8.6.2. Any PSCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.1.2.15.1 for NR victim cell. The test equipment verifies that interruptions due to switching from dormancy to non-dormancy are within the requirements by analysing HARQ feedback transmitted in PSCell for PSCell. PDCCHs indicating new transmissions shall be sent continuously on SCell from the slot right after  $n + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 1$  in Test1, and slot  $n + \text{ceil}(T_{\text{BWPswitchDelay}}/\text{NR slot length}) + 2$  in Test2. The test equipment verifies the SCell dormancy switch delay by counting the slots from slot  $n$  till an ACK/NACK for SCell is received.

There are two subtests in this test. In Subtest 1 the DCI format 1\_1 command for SCell dormancy switch is transmitted within the first 3 OFDM symbols in a slot, and in Subtest 2 the DCI format 1\_1 command for SCell dormancy switch is transmitted after the first 3 OFDM symbols in a slot. A UE that only supports triggering during within the first three OFDM symbols of a slot shall only undergo Test1, whereas a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo Test1 and Test2.

**Table A.5.5.6.4.1.1-1: Dormancy switch supported test configurations**

| Config  | Description   |
|---------|---|
| 1       | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 2       | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| Note 1: | The UE is only required to be tested in one of the supported test configurations  |
| Note 2: | A UE which fulfils the requirements in test case in clause A.5.5.6.4.2 can skip the test cases in current clause A.5.5.6.4.1. |
| Note 3: | NR configuration is the same for PSCell and SCells.   |

Table A.5.5.6.4.1.1-2: General test parameters for Dormancy switch in synchronous EN-DC

| Parameter  | Unit | Value     |           | Comment  |
|--|------|-----------|-----------|--|
|  |      | Subtest 1 | Subtest 2 |  |
| E-UTRA RF Channel Number   |      | 1         |           | One E-UTRA radio channel is used for this test   |
| NR RF Channel Number   |      | 2, 3      |           | Two NR radio channel is used for this test   |
| Active PCell   |      | Cell 1    |           | PCell on RF channel number 1.  |
| Active PSCell  |      | Cell 2    |           | PSCell on RF channel number 2.   |
| Active SCell   |      | Cell 3    |           | SCell on RF channel number 3.  |
| CP length  |      | Normal    |           |  |
| DRX  |      | OFF       |           |  |
| Measurement gap pattern Id   |      | OFF       |           |  |
| <i>bwp-InactivityTimer</i>   | ms   | 500       |           |  |
| Cell-individual offset for cells on RF channel number 1                    | dB   | 0         |           | Individual offset for cells on PCC.  |
| Cell-individual offset for cells on RF channel number 2                    | dB   | 0         |           | Individual offset for cells on PSCC.   |
| Cell-individual offset for cells on RF channel number 3                    | dB   | 0         |           | Individual offset for cells on SCC.  |
| Cell2 timing offset to cell1   | μs   | 3         |           | Synchronous EN-DC  |
| Cell3 timing offset to cell2   | μs   | 0         |           | Synchronous cells  |
| Triggering DCI format  |      | DCI 1_1   |           | Triggering DCI format for triggering during active time  |
| OFDM symbol range in slot for transmission of DCI with dormancy indication |      | 0 – 2     | 3 – 11    | Test1 is based on that triggering DCI is received within the first three OFDM symbols of a slot. Test2 is based on that the triggering DCI is received later than within the first three OFDM symbols of a slot. |

| EPRE ratio of OCNG DMRS to SSS(Note 1)   |   |                                 |           |                                 |             |
| EPRE ratio of OCNG to OCNG DMRS (Note 1) |   |                                 |           |                                 |             |
| Note 1:                                  | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |                                 |           |                                 |             |
| Note 2:                                  | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |                                 |           |                                 |             |
| Note 3:                                  | SS-RSRP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                 |           |                                 |             |
| Note 4:                                  | For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3.   |                                 |           |                                 |             |

**Table A.5.5.6.4.1.1-4: OTA related test parameters for Dormancy switch in synchronous EN-DC**

| Parameter                      | Unit   | Cell 2                             | Cell 3 |
|--------------------------------|--|------------------------------------|--------|
| Angle of arrival configuration |  | Setup 1 according to clause A.3.15 |        |
| $N_{oc}$ <sup>Note 1</sup>     | dBm/15<br>kHz  | -112                               | -112   |
| SS-RSRP <sup>Note 2</sup>      | dBm/120<br>kHz <sup>Note3</sup>  | -85                                | -85    |
| $\tilde{E}_s/I_{ot}$           | dB   | 18                                 | 18     |
| $I_o$ <sup>Note2</sup>         | dBm/95.04<br>MHz <sup>Note4</sup>  | -56                                | -56    |
| Note 1:                        | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                    |        |
| Note 2:                        | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                    |        |
| Note 3:                        | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                    |        |
| Note 4:                        | Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone   |                                    |        |
| Note 5:                        | As observed with 0dBi gain antenna at the centre of the quiet zone.  |                                    |        |

#### A.5.5.6.4.1.2 Test Requirements

During T1, any interruption on PSCell due to dormancy switching of SCell shall be within the requirement specified in clause 8.2.1.2.15.1 for NR victim cell.

During T2, interruptions on PSCell due to CSI and RRM measurements on dormant SCell shall be within the interruption rate requirements specified in 8.2.1.2.15.1 for NR victim cell.

During T3, any interruption on PSCell due to dormancy switching of SCell shall be within the requirement specified in clause 8.2.1.2.15.1 for NR victim cell. Monitoring of PDCCH for SCell in PSCell shall be resumed within the dormancy switching time specified in clause 8.6.2A.

For an event to be considered to be correct, all requirements above have to be fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.5.5.6.4.2 E-UTRAN – NR FR1 PSCell SCell dormancy switch of two FR2 SCells outside active time

##### A.5.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify the NR SCell dormant BWP switch delay requirement defined in clause 8.6.2A.1, interruption requirements due to the NR SCell dormant BWP switch defined in clause 8.2.1.2.15.1 for NR victim cells and in clause 7.32.2.14.1 of TS36.133 for E-UTRA victim cell, respectively, and interruption requirements due to CSI and RRM measurements on the NR dormant SCells defined in clauses 8.2.1.2.15.2 and 8.2.1.2.15.3 for NR victim cells and in clause 7.32.2.14.2 of TS36.133 for E-UTRA victim cell, respectively. Supported test configurations are shown in Table Table A.5.5.6.4.2.1-1.

The general test parameters are given in Table A.5.5.6.4.2.1-2, and NR cell specific test parameters are given in Table A.5.5.6.4.2.1-3 and Table A.5.5.6.4.2.1-4 below. And the E-UTRAN cell specific test parameters can refer to Table A.3.7.2.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), one NR FR1 PSCell (Cell 2), and three NR FR2 SCells (Cell 3-5) as given in Table A.5.5.6.4.2.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and SCell are specified in Table A.5.5.6.4.2.1-3 and Table A.5.5.6.4.2.1-4 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1), PSCell (Cell 2), and SCell (Cell 5) to ensure that the UE will have ACK/NACK sending except the time before T1 and during T3. PDCCHs indicating new transmissions shall be sent continuously on SCells (Cell 3,4) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on the cells and the time duration of when active BWP of the cell is dormant.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (PSCell) on radio channel 2 (PSCC), and Cell 3-5 (SCells) on radio channels 3-5 (SCCs), respectively.
- UE is configured with 2 different UE-specific downlink BWPs for Cell 3 and Cell 4, BWP-1 and BWP-2. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB. Here, BWP-2 on Cell 3 and Cell 4 is configured as dormant BWP.
- UE is configured with 1 UE-specific downlink BWP the same as initial BWP for Cell 3 and Cell 4.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in Cell 3 and Cell 4.
- UE is configured with DRX.
- UE is configured to monitor PDCCH for DCI format 2\_6 from Cell 2 at *ps-Offset* before the start of *onDuration*. *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.2A.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, T3, and T4, respectively.

During T1,

Time period T1 starts when a DCI format 2\_6 command for Cell 3 and Cell 4 DL BWP switch to BWP-2, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i + T_{\text{MultipleBWPswitchDelay}} + X$ ) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ( $i + T_{\text{MultipleBWPswitchDelay}} + X$ ).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after SCell(Cell 5)'s DL slot ( $i + T_{\text{MultipleBWPswitchDelay}} + X$ ) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ( $i + T_{\text{MultipleBWPswitchDelay}} + X$ ).

PCell(Cell 1) interruption due to dormant BWP switch on PSCell shall occur within the dormant BWP switch delay.

SCell(Cell 5) interruption due to dormant BWP switch on SCell(Cell 5) shall occur within the dormant BWP switch delay.

During T2,

Time period T2 starts when dormant BWP switch latency requirement test is completed. The test equipment shall schedule PDSCH every slot.

The UE shall be able to report ACK/NACK corresponding to the scheduled PDSCH to PSCell except for the allowed times as defined in clauses 8.2.1.2.15.2 and 8.2.1.2.15.3.

The UE shall be able to report ACK/NACK corresponding to the scheduled PDSCH to PCell except for the allowed times as defined in clause 7.32.2.14.2 of TS36.133.

During T3,

Time period T3 starts when interruption due to SSB based RRM measurement and CSI measurement requirements test is completed. Test equipment shall not transmit PDCCH, hence, the UE doesn't monitor PDCCH except DCI format 2\_6 based PDCCH.

During T4,

Time period T4 starts when a DCI format 2\_6 command for Cell 3 and Cell 4 DL BWP switch to BWP-1, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted  $j$ . The UE shall switch its bandwidth part from BWP-2 to BWP-1.

The UE shall be able to receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $j + T_{\text{MultipleBWPswitchDelay}} + X$ ) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cell starting from the beginning of the DL slot right after slot ( $j + T_{\text{MultipleBWPswitchDelay}} + X$ ).

The UE shall be able to receive PDSCH at the beginning of the DL slot right after all SCell's (Cell 3,4,5) DL slot ( $j + T_{\text{MultipleBWPswitchDelay}} + X$ ) as defined in clause 8.6.2A.2. The UE shall be continuously scheduled on the cells starting from the beginning of the DL slot right after slot ( $j + T_{\text{MultipleBWPswitchDelay}} + X$ ).

PCell(Cell 1) interruption due to dormant BWP switch on PSCell shall occur within the dormant BWP switch delay.

SCell(Cell 5) interruption due to dormant BWP switch on SCell(Cell 5) shall occur within the dormant BWP switch delay.

**Table A.5.5.6.4.2.1-1: Supported test configurations for EN-DC DCI 2\_6 based Domant BWP Switch on Multiple NR FR2 SCells**

| Config | Cell 1  | Cell 2             | Cell 3, Cell 4, Cell 5 | DCI 2_6 of Cell 2     |
|--------|---------|--------------------|------------------------|-----------------------|
| 1      | LTE FDD | 15kHz SSB SCS, FDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 2      | LTE FDD | 15kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 3      | LTE FDD | 30kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 4      | LTE TDD | 15kHz SSB SCS, FDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 5      | LTE TDD | 15kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 6      | LTE TDD | 30kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | within 3 OFDM symbols |
| 7      | LTE FDD | 15kHz SSB SCS, FDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |
| 8      | LTE FDD | 15kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |
| 9      | LTE FDD | 30kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |
| 10     | LTE TDD | 15kHz SSB SCS, FDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |
| 11     | LTE TDD | 15kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |
| 12     | LTE TDD | 30kHz SSB SCS, TDD | 120kHz SSB SCS, TDD    | after 3 OFDM symbols  |

Note 1: 10 MHz bandwidth for Cell 2 with 15kHz SSB SCS.

Note 2: 40 MHz bandwidth for Cell 2 with 30kHz SSB SCS.

Note 3: 100 MHz bandwidth for Cell 3,4,5.

Note 4: The UE is only required to be tested in one of the supported test configurations.

**Table A.5.5.6.4.2.1-2: General test parameters for EN-DC DCI 2\_6 based Domant BWP Switch on Multiple NR FR2 SCells**

| Parameter                                | Unit | Value                      | Comment   |
|--|------|----------------------------|---|
| E-UTRA RF Channel Number                 |      | 1                          | One E-UTRAN carrier frequency is used.  |
| NR RF Channel Number                     |      | 2,3,4,5                    | Four NR radio channels are used for this test. RF channel number 2 is in FR 1 and RF channel numbers 3,4,5 are in a band where intra-band FR2 CA is allowed.  |
| Active PCell                             |      | Cell 1                     | Primary cell on NR RF channel number 1.   |
| Active PSCell                            |      | Cell 2                     | Primary SCG cell on NR RF channel number 2.   |
| Configured activated SCell               |      | Cell 3,4,5                 | Configured activated secondary cell on NR RF channel numbers 3,4,5.   |
| CP length                                |      | Normal                     |   |
| DRX                                      |      | DRX.3                      | As specified in clause A.3.3  |
| ps-Offset                                |      | Depending on UE capability | Monitoring of DCI 2_6 ahead of start of drx-onDurationTimer. Value of ps-Offset shall correspond to SCell dormancy switching time for switching of two SCells, as specified in clause 8.6.2A. Actual value depends on reported UE capabilities. |
| ps-WakeUp                                |      | true                       | Wake up for onDuration in case DCI format 2_6 is not detected.  |
| SCell measurement cycle (measCycleSCell) | ms   | 160                        |   |
| Cell2 timing offset to cell1             | μs   | 3                          |   |
| Cell3,4,5 timing offset to cell1         | μs   | 3                          |   |
| Timing offset among cell3,4,5            | μs   | 0                          |   |
| T1                                       | s    | 0.2                        | During this time cell 3,4 switch to dormancy from non-dormancy.   |
| T2                                       | s    | 10                         | During this time cell 3,4 are dormant.  |
| T3                                       | S    | 0.1                        | During this time PDCCH is not transmitted from all cells.   |
| T4                                       | s    | 0.2                        | During this time cell 3,4 switch to non-dormancy from dormancy.   |

**Table A.5.5.6.4.2.1-3: Cell specific test parameters for EN-DC DCI 2\_6 based Domant BWP Switch on Multiple NR FR2 SCells**

| Parameter   | Unit                     | Cell 2                             | Cell 3,4                    | Cell 5                      |

**A.5.5.6.4.2.2 Test Requirements**

During T1, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of PSCell’s DL slot ( $i + T_{MultipleBWPswitchDelay} + X$ ) as defined in clause 8.6.2A.2.

During T2, the UE shall transmit at least 98.5% of ACK/NACK on NR PCell.

During T4, the UE shall start to send the ACK for PSCell from the first UL slot that occurs after the beginning of PSCell’s DL slot ( $j + T_{MultipleBWPswitchDelay} + X$ ) as defined in clause 8.6.2A.2.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1, the start of the interruption of PCell and SCell (Cell 5) during dormant BWP switch on SCells (Cell 3,4) shall not happen outside the dormant BWP switch delay.

During T1, the start of the interruption of PCell and SCells (Cell 3,4,5) during dormant BWP switch on SCells (Cell 3,4) shall not happen outside the dormant BWP switch delay.

### A.5.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

A.5.5.6.5.1 E-UTRAN – NR PSCell FR2 and NR SCell FR2 DL active BWP switch on multiple CCs with non-DRX in synchronous EN-DC

A.5.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for simultaneous RRC-based BWP switch on multiple CCs defined in clause 8.6.3A. Supported test configurations are shown in Table A.5.5.6.5.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) and one NR SCell (Cell 3) as given in Table A.5.5.6.5.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell and NR SCell are specified in Table A.5.5.6.5.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), to Cell 2 (PSCell) on radio channel 2 (PSCC) and to Cell 3 (SCell) on radio channel 3.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell) and Cell 3 (SCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 2 (PSCell) and Cell 3 (SCell).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration in Cell 2 and Cell3, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition in Cell 2 and Cell 3.

The UE shall be able to completely receive PDSCH on Cell 2 and Cell 3 at the beginning of the DL slot right after PSCell's DL slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ) as defined in clause 8.6.3A and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ). The UE shall be continuously scheduled on Cell 2's BWP-1 and Cell 3's BWP-1 starting from the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ ).

$T_{RRCprocessingDelay}$ ,  $T_{BWPswitchDelayRRC}$  and  $D_{RRC}$  are defined in clause 8.6.3A.

The test equipment verifies the DL BWP switch time in Cell 2 and Cell 3 by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.5.5.6.5.1.1-1: DL BWP switch supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.5.5.6.5.1.1-2: General test parameters for DL BWP switch in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2, 3   | Two NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1                   |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2                  |
| Active SCell  |      | Cell 3 | SCell on RF channel number 3                   |
| CP length   |      | Normal |  |
| DRX   |      | OFF    |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.            |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on PSCC.           |
| Cell-individual offset for cells on RF channel number 3 | dB   | 0      | Individual offset for cells on SCC.            |
| Cell2 timing offset to cell1                            | μs   | 3      | Synchronous EN-DC                              |
| Cell3 timing offset to cell2                            | μs   | 3      | Synchronous Cells                              |
| T1  | s    | [0.2]  |  |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-RSRP and <math>I_0</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                   |                                   |

#### A.5.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell and SCell in the beginning of the DL slot right after slot  $(i + \frac{T_{RRC\ processing\ Delay} + T_{BWP\ switch\ Delay} + T_{RRC} + D_{RRC}}{NR\ slot\ length})$ .

All of the above test requirements shall be fulfilled in order for the observed PSCell and SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.5.7 PSCell addition and release delay

#### A.5.5.7.1 Addition and Release Delay of NR PSCell

##### A.5.5.7.1.1 Test purpose and environment

The purpose of this test is to verify that the NR PSCell addition and release delays under EN-DC are within the requirements stated in clause 7.31.2 of TS 36.133 [15] for the case when the PSCell is unknown by the UE at the time of addition.

Supported test configurations are shown in A.5.5.7.1.1-1. The test parameters for the E-UTRA cell are given in Table A.3.7.2.2-1. The E-UTRA cell once set up is not changed across time.

The test parameters for NR cell are given in Tables A.5.5.7.1.1-2, cell-specific parameters in A.5.5.7.1.1-3 and OTA parameters in A.5.5.7.1.1-4 below. The test consists of four successive time periods with duration of T1, T2, T3 and T4. There are two carriers each with one cell. Before the test starts the UE is connected to Cell 1 (E-UTRA PCell) on

radio channel 1 (PCC) but is not aware of Cell 2 (NR PSCell) on radio channel 2. The UE is only monitoring the PCC. During T1 only Cell1 is known to the UE.

The test system shall send a RRC message to the UE to add PSCell (Cell 2) on radio channel 2. The RRC message (to add PSCell) also includes a request for the UE to start periodic CSI reporting for the PSCell after the PSCell has been successfully added. The RRC message to add PSCell shall be sent to the UE during period T1. The point in time at which the RRC message to add PSCell (Cell2) is received at the UE antenna connector defines the start of period T2.

The test system shall observe the periodic reporting of CSI for PSCell during T3. The point in time at which the UE has sent PRACH to the PSCell (Cell 2) defines the start of period T3.

The test system shall send a RRC message to the UE to release PSCell (Cell 2) on radio channel 2. The RRC message to release PSCell (Cell2) shall be sent to the UE during period T3, after the UE has sent at least one CQI report with non-zero CQI index for PSCell (Cell 2). The point in time at which the RRC message to release PSCell (Cell2) is received at the UE antenna connector defines the start of period T4.

**Table A.5.5.7.1.1-1: Supported test configurations for FR2 PSCell**

| Configuration  | Description  |
|--|--|
| 1  | LTE FDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| 2  | LTE TDD, NR TDD, SSB SCS 240 kHz, data SCS 120 kHz, BW 100 MHz |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.5.5.7.1.1-2: General Test Parameters for PSCell Addition and Release**

| Parameter   | Unit            | Value               | Comment   |  |
|---|-----------------|---------------------|---|--|
| RF Channel Number                                       |                 | 1, 2                | Two radio channels are used for this test. One for E-UTRA cell and second for NR Cell |  |
| Initial Condition                                       | Active PCell    | Cell1               | PCell on RF channel number 1.   |  |
|   | Neighbour cell  | Cell2               | Neighbour cell on RF channel number 2.  |  |
| Final Condition   | Active PCell    | Cell1               | PCell on RF channel number 1.   |  |
|   | Neighbour Cell  | Cell2               | PSCell released on RF channel number 2.   |  |
| B1  | Hysteresis      | dB                  | 0   | Hysteresis for evaluation of event B1.   |
|   | Threshold RSRP  | dBm                 | -118  | Actual RSRP threshold for event B1. Needs to take absolute accuracy tolerance in clause 9.1.11.1 into account plus margin. |
|   | Time to Trigger | s                   | 0   |  |
| DRX   |                 | OFF                 | Continuous monitoring of primary cell   |  |
| PRACH configuration on cell2                            |                 | FR2 configuration 2 | Captured in A.3.8.3.2   |  |
| Cell-individual offset for cells on RF channel number 1 | dB              | 0                   | Individual offset for cells on primary component carrier.                             |  |
| Cell-individual offset for cells on RF channel number 2 | dB              | 0                   | Individual offset for cells on carrier frequency of cell2.                            |  |
| T1  | s               | 1                   | During this time the PCell shall be known and cell2 shall be unknown.                 |  |
| T2  | s               | 1                   | During this time the UE adds the PSCell.  |  |
| T3  | s               | 1                   | During this time the UE sends CSI reports for PSCell.                                 |  |
| T4  | s               | 1                   | During this time the UE releases the PSCell.  |  |

| Note 7:  | Calculation of Es/Iot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_s$ from TS 38.101-2 [19] Table 6.2.1.3-4. |   |    |        |    |

### A.5.5.7.1.2 Test Requirements

The UE shall transmit the PRACH to PSCell at latest 582 ms<sup>Note 1</sup> into T2.

The UE shall send at least one CSI report for PSCell with non-zero CQI index during T3.

The UE shall periodically send CSI reports for PSCell after the UE has sent first CQI report with non-zero CQI index during T3

The UE shall stop sending CSI reports for PSCell in at latest 20 ms into T4.

All the above test requirements shall be fulfilled for the observed PSCell addition delay and PSCell release delay to be counted as correct. The rate of correct observed PSCell addition delay and PSCell release delay during repeated tests shall be at least 90%.

Note1: The PSCell addition delay can be expressed as follows as specified in clause 7.31.2 of TS 36.133 [15]:

$$T_{\text{config\_PSCell}} = T_{\text{RRC\_delay}} + T_{\text{processing}} + T_{\text{search}} + T_{\Delta} + T_{\text{PSCell\_DU}} + 2\text{ms}$$

Where:

$$T_{\text{RRC\_delay}} = 20\text{ms}$$

$$T_{\text{processing}} = 40\text{ms}$$

$$T_{\text{search}} = 8 \cdot 3 \cdot 20 = 480 \text{ ms}$$

$$T_{\Delta} = 20\text{ms}$$

$$T_{\text{PSCell\_DU}} = 1 \cdot 10 + 10 = 20 \text{ ms}$$

## A.5.5.8 Active TCI state switch delay

### A.5.5.8.1 MAC-CE based active TCI state switch

#### A.5.5.8.1.1 E-UTRAN – NR PSCell FR2 active TCI state switch for a known TCI state

##### A.5.5.8.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3. Supported test configurations are shown in Table A.5.5.8.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.5.5.8.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.5.5.8.1.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.8.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 2 different TCI states for PSCell, PDCCH TCI state 0 (QCL'd to SSB0) and TCI state 1 (QCL'd to SSB1), in Cell 2 before starting the test.
- UE is indicated in TCI state 0 as the active PDCCH TCI state

The test consists of two time periods, T1 and T2. Figure A.5.5.8.1.1.1-1 and Figure A.5.5.8.1.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which PDCCH-TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI state 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to TCI state 1. *tc-IndicationInDCI* is not configured in the PDSCH configuration, i.e. TCI state for the PDSCH is identical to the PDCCH TCI state.

The test equipment verifies that UE can be scheduled on PSCell on TCI state 0 till  $n + T_{\text{HARQ}} + 3$  ms. The test equipment also verifies the TCI state switch time in PSCell by scheduling the UE on TCI state 1 after  $n + T_{\text{HARQ}} + 3$  ms +  $(T_{\text{first-SSB}} + T_{\text{SSB-proc}})$ .

**Table A.5.5.8.1.1.1-1: Supported test configurations**

| Config   | Description   |
|--|---|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.5.5.8.1.1-2: General test parameters for TCI state switch**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2      | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| CP length   |      | Normal |  |

**Figure A.5.5.8.1.1.1-2: Time multiplexed downlink transmissions during T2**

**A.5.5.8.1.1.2 Test Requirements**

During T2, UE shall send L1-RSRP report with results for both SSB0 and SSB1.

After receiving MAC-CE command in slot n, UE shall:

- be able to continue to receive on TCI state 0 till  $n + T_{HARQ} + 3 \text{ ms}$
- be able to start receiving on TCI state 1 after  $n + T_{HARQ} + 5 \text{ ms} + T_{\text{first-SSB}}$

**A.5.5.8.2 RRC based active TCI state switch**

**A.5.5.8.2.1 E-UTRAN – NR PSCell FR2 active TCI state switch for a known TCI state**

**A.5.5.8.2.1.1 Test Purpose and Environment**

The purpose of this test is to verify the active TCI state switch delay requirement defined in clause 8.10.3 Supported test configurations are shown in Table A.5.5.8.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.5.5.8.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.5.5.8.2.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.8.2.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 1 TCI state for PSCell, PDCCH-TCI-state0 (QCL'd to SSB0)
- UE is indicated in TCI state0 as the active TCI state

The test consists of two time periods, T1 and T2. Figure A.5.5.8.2.1.1-1 and Figure A.5.5.8.2.1.1-2 show the Time multiplexed (allocation in Frequency is symbolic) downlink transmissions from each Angle of Arrival. During T1 only SSB to which TCI-state0 is QCL'd is transmitted. At the beginning of T2, the SSB corresponding to TCI-state1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to TCI-state1.

The test equipment verifies the TCI state switch time in PSCell by scheduling the UE on TCI state 1 after  $n + T_{\text{RRC\_processing}} + T_{\text{first-SSB}} + 2\text{ms}$ .

**Table A.5.5.8.2.1.1-1: Supported test configurations**

| Config   | Description   |
|--|---|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |   |

**Figure A.5.5.8.2.1.1-2: Time multiplexed downlink transmissions during T2**

**A.5.5.8.2.1.2 Test Requirements**

During T2, UE shall send L1-RSRP report with both SSB0 and SSB1.

After receiving RRC command in slot n, UE shall be able to start receiving on TCI state 1 after  $n + T_{RRC\_processing} + T_{first-SSB} + 2ms$ .

**A.5.5.9 Uplink spatial relation switch delay**

**A.5.5.9.1 MAC-CE based uplink spatial relation switch**

**A.5.5.9.1.1 E-UTRAN – NR PSCell FR2 uplink spatial relation switch for a known spatial relation**

**A.5.5.9.1.1.1 Test Purpose and Environment**

The purpose of this test is to verify the uplink spatial relation switch delay requirement defined in clause 8.12.3 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configurations are shown in Table A.5.5.9.1.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.5.5.9.1.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.5.5.9.1.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.9.1.1.1-4.

PDCCHs indicating new transmissions shall be sent continuously on PSCell (Cell 2) to ensure that the UE would have continuous ACK/NACK sending by PUCCH.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).

- UE is configured with 2 different spatial relations for PSCell, PUCCH spatial relation 0 (QCL'd to SSB0) and spatial relation 1 (QCL'd to SSB1), in Cell 2 before starting the test.
- UE is indicated in spatial relation 0 as the active PUCCH spatial relation

The test consists of two time periods, T1 and T2. During T1 only SSB to which PUCCH spatial relation 0 QCLed is transmitted. At the beginning of T2, the SSB corresponding to spatial relation 1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. In slot  $n$  which is within 1280ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a MAC-CE command indicating a switch to transmit PUCCH with spatial relation 1.

The test equipment verifies that UE can be scheduled on PSCell on spatial relation 0 till  $n + T_{\text{HARQ}}/\text{NR slot length} + 3N_{\text{slot}}^{\text{subframe},\mu}$ . The test equipment also verifies the spatial relation switch time in PSCell by scheduling the UE on spatial relation 1 from slot  $n + T_{\text{HARQ}}/\text{NR slot length} + 3N_{\text{slot}}^{\text{subframe},\mu} + 1$  and onwards.

**Table A.5.5.9.1.1-1: Supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

| Note 1:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                      |       |           |       |
| Note 2:                                   | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                      |       |           |       |
| Note 3:                                   | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                      |       |           |       |
| Note 4:                                   | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |                                      |       |           |       |
| Note 5:                                   | As observed with 0dBi gain antenna at the center of the quiet zone.  |                                      |       |           |       |
| Note 6:                                   | Information about types of UE beam is given in B.2.1.3 and does not limit UE implementation or test system implementation.   |                                      |       |           |       |

#### A.5.5.9.1.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with results for SSB1.

After receiving MAC-CE command in slot  $n$ , UE shall:

- be able to continue to transmit PUCCH on spatial relation 0 till  $n + T_{HARQ}/NR$  slot length +  $3N_{slot}^{subframe,\mu}$ ;
- be able to start transmitting PUCCH on spatial relation 1 from slot  $n + T_{HARQ}/NR$  slot length +  $3N_{slot}^{subframe,\mu} + 1$ .

[The rate of correct events observed during repeated tests shall be at least 90%].

#### A.5.5.9.2 RRC based spatial relation switch

##### A.5.5.9.2.1 E-UTRAN – NR PSCell FR2 spatial relation switch associated with a known DL-RS

###### A.5.5.9.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the RRC based spatial relation switch delay requirement defined in clause 8.12.5 by a UE capable of beam correspondence without the need for UL beam sweeping. Supported test configurations are shown in Table A.5.5.9.2.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1), and one NR PSCell (Cell 2) as given in Table A.5.5.9.2.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell is specified in Table A.5.5.9.2.1.1-3 below. The OTA related test parameters for FR2 is shown in Table A.5.5.9.2.1.1-4.

Periodic SRS is transmitted on NR PSCell (Cell2), and the SRS configuration is SRSConf.1 given in Table A.5.4.1.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE is configured with 1 SRS-SpatialRelation0 associated with SSB0.
- UE is indicated SRS-SpatialRelation0 as the active SRS spatial relation.

The test consists of two time periods, T1 and T2. During T1 only SSB0 to which SRS-SpatialRelation0 associated is transmitted. UE shall transmit periodic SRS with SRS-SpatialRelation0 of PSCell. At the beginning of T2, the SSB1 corresponding to SRS-SpatialRelation1 starts transmitting. The UE is configured to provide periodic L1-RSRP reports. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured. In slot n which is within 1280 ms of UE providing L1-RSRP report with results for both SSB0 and SSB1, UE receives a RRC command indicating a switch to transmit periodic SRS with target SRS-SpatialRelation1. The test equipment verifies that UE shall be able to transmit periodic SRS with target spatial relation (SRS-SpatialRelation1) on PSCell in the slot  $n + T_{\text{RRC\_processing}}/\text{NR slot length} + 1$ .

**Table A.5.5.9.2.1.1-1: Supported test configurations**

| Config  | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.5.5.9.2.1.1-2: General test parameters for spatial relation switch associated with a known DL-RS**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2      | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| CP length   |      | Normal |  |
| DRX   |      | OFF    | For both PCell and PSCell                      |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.            |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on PSCC.           |
| T1  | s    | 0.2    |  |
| T2  | s    | 2      |  |

| Note 6:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                                      |       |           |       |

#### A.5.5.9.2.1.2 Test Requirements

During T2, UE shall send L1-RSRP report with SSB1 to which SRS-SpatialRelation1 is associated.

After receiving RRC command in slot  $n$ , UE shall be able to transmit target periodic SRS with SRS-SpatialRelation1 on PSCell in the slot  $n + T_{RRC\_processing}/NR\ slot\ length + 1$ .

The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.5.10 UE specific CBW change

#### A.5.5.10.1 UE specific CBW change on FR2 NR PSCell

##### A.5.5.10.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13. Supported test configurations are shown in Table A.5.5.10.1.1-1.

The test scenario comprises of one E-UTRA PCell (Cell 1) and one NR PSCell (Cell 2) as given in Table A.5.5.10.1.1-2. Cell-specific parameters of E-UTRA PCell are specified in Table A.3.7.2.1-1 and Cell-specific parameters of NR PSCell are specified in Table A.5.5.10.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC) and to Cell 2 (PSCell) on radio channel 2 (PSCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 2 (PSCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PSCell.
- UE is indicated in *SCS-SpecificCarrier* that the active CBW is CBW-1 of initial condition in PSCell.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* which reconfigure the UE specific CBW parameter, sent from the test equipment to the UE, is received at the UE side in PSCell's slot # denoted *i*. The UE shall reconfigure its UE specific CBW with the updated UE specific CBW of final condition.

The UE shall be able to completely receive PDSCH at the beginning of the DL slot right after PSCell's DL slot ( $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ ) as defined in clause 8.13 and be ready for the reception of uplink grant for the PSCell no later than at the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ ). The UE shall be continuously scheduled on PSCell's BWP-1 starting from the beginning of the DL slot right after slot ( $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ ).

$T_{RRCprocessingDelay}$  and  $T_{CBWchangeDelayRRC}$  are defined in clause 8.13.

The test equipment verifies the UE specific CBW change switch time in PSCell by counting the time from the time when the RRC Reconfiguration message including updated UE specific CBW configuration is sent till the time when RRC Reconfiguration Complete message is received.

**Table A.5.5.10.1.1-1: UE specific CBW change supported test configurations**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.5.5.10.1.1-2: General test parameters for UE specific CBW change in synchronous EN-DC**

| Parameter   | Unit | Value  | Comment  |
|---|------|--------|--|
| E-UTRA RF Channel Number                                |      | 1      | One E-UTRA radio channel is used for this test |
| NR RF Channel Number                                    |      | 2      | One NR radio channel is used for this test     |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                  |
| Active PSCell   |      | Cell 2 | PSCell on RF channel number 2.                 |
| CP length   |      | Normal |  |
| DRX   |      | OFF    |  |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cells on PCC.            |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cells on PSCC.           |
| Cell2 timing offset to cell1                            | μs   | 3      | Synchronous EN-DC                              |
| T1  | s    | [0.2]  |  |

**Table A.5.5.10.1.1-3: NR Cell specific test parameters for UE specific CBW change in synchronous EN-DC**

| Parameter   |                               | Unit | Cell 2                          |
|---|-------------------------------|------|---------------------------------|
| Frequency Range   |                               |      | FR2                             |
| Duplex mode   |                               |      | TDD                             |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |              |                                |                                   |

### A.5.5.10.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for PSCell in the beginning of the DL slot right after slot  $(i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length})$ .

All of the above test requirements shall be fulfilled in order for the observed PSCell UE specific CBW change switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.5.6 Measurement procedure

### A.5.6.1 Intra-frequency Measurements

#### A.5.6.1.1 EN-DC event triggered reporting test without gap under non-DRX

##### A.5.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.1.1-1.

**Table A.5.6.1.1.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 2             | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 3             | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 4             | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.6.1.1.1-2, A.5.6.1.1.1-3 and A.5.6.1.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 3.

**Table A.5.6.1.1.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PCell in FR2 without gap without DRX**

| Parameter                             | Unit | Config | Value                                    | Comment   |
|---------------------------------------|------|--------|--|---|
| Active cell                           |      | 1~4    | E-UTRAN PCell (Cell 1)<br>PCell (Cell 2) |   |
| Neighbour cell                        |      | 1~4    | Cell 3                                   | Cell to be identified.  |
| RF Channel Number                     |      | 1~4    | 1: Cell 1<br>2: Cell 2 and<br>Cell 3     | One TDD carrier frequency is used for the NR cells and one TDD or FDD carrier frequency is used for E-UTRAN cell. |
| SMTc configuration                    |      | 1~4    | SMTc.1                                   |   |
| A3-Offset                             | dB   | 1~4    | -11                                      |   |
| CP length                             |      | 1~4    | Normal                                   |   |
| Hysteresis                            | dB   | 1~4    | 0  |   |
| Time To Trigger                       | s    | 1~4    | 0  |   |
| Filter coefficient                    |      | 1~4    | 0  | L3 filtering is not used  |
| DRX                                   |      | 1~4    | OFF                                      |   |

**Figure A.5.6.1.1.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

**A.5.6.1.1.2 Test Requirements**

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 2.4s for a UE supporting power class 1,

- 1.44s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times \text{TTIDCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.1.2 EN-DC event triggered reporting test without gap under DRX

#### A.5.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.2.1-1.

**Table A.5.6.1.2.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 2             | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 3             | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 4             | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.6.1.2.1-2 ~ Table A.5.6.1.2.1-6 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 3.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.1.2.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 without gap with DRX**

| Parameter | Unit | Config | Value  |        | Comment |
|-----------|------|--------|--------|--------|---------|

|   |  | 3, 4   | -82                         | -82    | -Infinity          | -82   |
| $\hat{E}_s/N_{oc}$                        | dB   | 1~4    | 4                           | 4      | -Infinity          | 4     |
| $I_o$                                     | dBm/95.04MHz   | 1~4    | -54.53                      | -52.18 | See Cell 2 columns |       |
| Note 1:                                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |        |                             |        |                    |       |
| Note 2:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |        |                             |        |                    |       |
| Note 3:                                   | $E_s/I_{ot}$ , SSB_RP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |        |                             |        |                    |       |
| Note 4:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.  |        |                             |        |                    |       |
| Note 5:                                   | Calculation of $E_s/I_{ot_{BB}}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |        |                             |        |                    |       |

### A.5.6.1.2.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2s for a UE supporting power class 1,
- 4.32s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.2s for a UE supporting power class 1,
- 30.72s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.1.3 EN-DC event triggered reporting test with per-UE gaps under non-DRX

#### A.5.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.3.1-1.

**Table A.5.6.1.3.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 2             | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 3             | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 4             | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.6.1.3.1-2 ~ 4 below.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 3.

**Table A.5.6.1.3.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 with per-UE gaps without DRX**

| Parameter                              | Unit | Config | Value                                     | Comment   |
|--|------|--------|---|---|

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Void</p> <p>Note 3: <math>E_s/I_{ot}</math>, SSB_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.</p> <p>Note 5: Calculation of <math>E_s/I_{ot_{BB}}</math> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor <math>\Delta MB_P</math> from TS 38.101-2 [19] Table 6.2.1.3-4.</p> |              |        |                                 |        |           |        |

**Figure A.5.6.1.3.1-1: Time multiplexed downlink transmissions (Config 1,2 example)**

**A.5.6.1.3.2 Test Requirements**

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2s for a UE supporting power class 1,

- 1.92s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.5.6.1.4 EN-DC event triggered reporting test with per-UE gaps under DRX

##### A.5.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the TDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2. Supported test configurations are shown in table A.5.6.1.4.1-1.

**Table A.5.6.1.4.1-1: supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 2             | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 3             | LTE FDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| 4             | LTE TDD, 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.6.1.4.1-2 ~ 6.

During the test, Cell 2 and Cell 3 are transmitted from the direction determined according to A3.8.

There are two BWPs configured in Cell 2, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 2. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 3.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.1.4.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with TDD PSCell in FR2 with per-UE gaps with DRX**

| Parameter                              | Unit | Config | Value                                     |        | Comment   |
|--|------|--------|---|--------|---|

**Table A.5.6.1.4.1-5: Void****Table A.5.6.1.4.1-6: Void**

#### A.5.6.1.4.2 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 7.2s for a UE supporting power class 1,
- 4.32s for a UE supporting power class 2, 3 and 4

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 51.20s for a UE supporting power class 1,
- 30.72s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

## A.5.6.2 Inter-frequency Measurements

### A.5.6.2.1 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is not used

#### A.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.1.1-1, A.5.6.2.1.1-2, and A.5.6.2.1.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in Table A.5.6.2.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.1.1-1.

**Table A.5.6.2.1.1-1 EN-DC event triggered reporting tests without SSB index reading for FR2-FR2**

| Config  | Description  |
|---------|--|
| 1       | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| 2       | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.5.6.2.1.1-2: General test parameters for EN-DC inter-frequency event triggered reporting without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                                     |                               | Comment   |

### A.5.6.2.1.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.5.6.2.2 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is used

#### A.5.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.2.1-1, A.5.6.2.2.1-2, and A.5.6.2.2.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.2.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in Table A.5.6.2.2.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.2.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.2.1-1 EN-DC event triggered reporting tests without SSB index reading for FR2-FR2**

| Config  | Description  |
|---------|--|
| 1       | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| 2       | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

| Note 7:                | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |            |       |       |       |       |

### A.5.6.2.2.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X_1$  ms from the beginning of time period T2, where  $X_1$  is

- 7680 for UE supporting power class 1, or
- 4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X_2$  ms from the beginning of time period T2, where  $X_2$  is

- 81920 for UE supporting power class 1, or
- 51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.5.6.2.3 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is not used

#### A.5.6.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.3.1-1, A.5.6.2.3.1-2, and A.5.6.2.3.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.3.1-1 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in Table A.5.6.2.3.1-1 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.3.1-1.

**Table A.5.6.2.3.1-1 EN-DC event triggered reporting tests with SSB index reading for FR2-FR2**

| Config   | Description  |
|--|--|
| 1  | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

**Table A.5.6.2.3.1-2: General test parameters for EN-DC inter-frequency event triggered reporting with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value                                     |                                | Comment   |

| Note 8:                | Calculation of $E_s/lot_{BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_S$ from TS 38.101-2 [19] Table 6.2.1.3-4. |            |        |        |           |        |

### A.5.6.2.3.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

6720 for UE supporting power class 1, or

4160 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.2.4 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is used

#### A.5.6.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.4.1-1, A.5.6.2.4.1-2, and A.5.6.2.4.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.4.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in Table A.5.6.2.4.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.2.4.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.4.1-1: EN-DC event triggered reporting tests with SSB index reading for FR2-FR2**

| Config   | Description  |
|--|--|
| 1  | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

**Table A.5.6.2.4.1-2: General test parameters for EN-DC inter-frequency event triggered reporting with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value   |   |   |   | Comment   |

#### A.5.6.2.4.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.5.6.2.5 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is not used

##### A.5.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.5.1-1, A.5.6.2.5.1-2, and A.5.6.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.5.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in Table A.5.6.2.5.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.5.1-1.

**Table A.5.6.2.5.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

| Config | Description of serving cell  | Description of target cell                          |
|--------|--|---|
| 1      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2      | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |   |
| 3      | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |   |
| 4      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                    |   |
| 5      | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                    |   |
| 6      | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                    |   |
| Note:  | The UE is only required to be tested in one of the supported test configurations |   |

#### A.5.6.2.5.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

5120 for UE supporting power class 1, or

3200 for UE supporting other power class.

In test 1 and 2 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.5.6.2.6 EN-DC event triggered reporting tests for FR2 cell without SSB time index detection when DRX is used

##### A.5.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.6.1-1, A.5.6.2.6.1-2, and A.5.6.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.6.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in Table A.5.6.2.6.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.6.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.6.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

A.5.6.2.6.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

7680 for UE supporting power class 1, or  
4800 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than  $X2$  ms from the beginning of time period T2, where  $X2$  is

81920 for UE supporting power class 1, or  
51200 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is not required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.5.6.2.7 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is not used

#### A.5.6.2.7.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.7.1-1, A.5.6.2.7.1-2, and A.5.6.2.7.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.7.1-2 is provided for a UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #13 as defined in Table A.5.6.2.7.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.7.1-1.

**Table A.5.6.2.7.1-1: EN-DC event triggered reporting tests with SSB index reading for FR1-FR2**

| Config   | Description of serving cell                                   | Description of target cell                          |
|--|---|---|
| 1  | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 3  | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |
| 4  | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |   |
| 5  | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 6  | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |
| Note: The UE is only required to be tested in one of the supported test configurations |   |   |

#### A.5.6.2.7.2 Test Requirements

In test 1 with per-UE gap and in test 2 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 6720 for UE supporting power class 1, or
- 4160 for UE supporting other power class.

In test 1 and 2 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.5.6.2.8 EN-DC event triggered reporting tests for FR2 cell with SSB time index detection when DRX is used

##### A.5.6.2.8.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR1 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.2.8.1-1, A.5.6.2.8.1-2, and A.5.6.2.8.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.5.6.2.8.1-2 is provided for a UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in Table A.5.6.2.8.1-2 is provided for UE that support per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.1-1. Supported test configurations are shown in table A.5.6.2.8.1-1.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.2.8.1-1: EN-DC event triggered reporting tests without SSB index reading for FR1-FR2**

| <b>Config</b>  | <b>Description of serving cell</b>                            | <b>Description of target cell</b>                   |
|--|---|---|
| 1  | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**A.5.6.2.8.2 Test Requirements**

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X1 ms from the beginning of time period T2, where X1 is

10080 for UE supporting power class 1, or

6240 for UE supporting other power class.

In test 2 with per-UE gap and in test 4 with per-FR gap, the UE shall send one Event A4 triggered measurement report, with a measurement reporting delay less than X2 ms from the beginning of time period T2, where X2 is

107520 for UE supporting power class 1, or

66560 for UE supporting other power class.

In test 1, 2, 3 and 4 UE is required to report SSB time index. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.3 L1-RSRP measurement for beam reporting

#### A.5.6.3.1 SSB based L1-RSRP measurement when DRX is not used

##### A.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.5.6.3.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.3.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 3      | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 4      | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

##### A.5.6.3.1.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.3.1.2-1 and Table A.5.6.3.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.5.6.3.1.2-1: General test parameters

| Parameter   | Config | Unit | Value                  |     |  |      |
|---|--------|------|------------------------|-----|--|------|

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SSB_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |        |           |        |

### A.5.6.3.1.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 1680 for UE supporting power class 1
- 1200 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.6.3.2 SSB based L1-RSRP measurement when DRX is used

#### A.5.6.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.5.6.3.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.3.2.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 3      | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 4      | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.5.6.3.2.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.3.2.2-1 and Table A.5.6.3.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.5.6.3.2.2-1: General test parameters

| Parameter   | Config | Unit | Value                       |

| $\hat{E}_s / N_{oc}$   | 1~4    | dB           | 0                             | 0      | -Infinity | 9      |
| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SSB_RP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.</p> |        |              |                               |        |           |        |

### A.5.6.3.2.3 Test Requirements

The UE shall send L1-RSRP report every 320 slots. No later than X ms plus 320 slots from the beginning of time period T2, UE shall send L1-RSRP report including the results for both SSB#0 and SSB#1 while meeting the accuracy requirements defined in clause 10.1.20.1, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2,3 or 4.

The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.5.6.3.3 CSI-RS based L1-RSRP measurement when DRX is not used

#### A.5.6.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.5.6.3.3.1-1.

**Table A.5.6.3.3.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| <b>Config</b>  | <b>Description</b>   |
|--|--|
| 1  | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.5.6.3.3.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.3.3.2-1 and Table A.5.6.3.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 480ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.5.6.3.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.5.6.3.3.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|
| SSB GSCN  | 1~2    |      | freq1  |

| $I_o$ <sup>Note2</sup>                    | 1~2  | dBm/95.04MHz | -63.97                        | -57.47   |
| $\hat{E}_s / N_{oc}$                      | 1~2  | dB           | 0                             | 9        |
| Note 2:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                               |          |
| Note 3:                                   | CSI-RS RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                               |          |
| Note 4:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |              |                               |          |

### A.5.6.3.3.3 Test Requirements

After 480ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of -10 to +20 dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.6.3.3.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

Table A.5.6.3.3.3-1: L1-RSRP absolute accuracy test requirement

|         | Test requirement <sup>Notes1,2,3</sup>   |
|---------|--|
| CSI-RS0 | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$  |
| CSI-RS1 | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$  |
| Note 1: | CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the $I_o$ used in the test  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                                  |

### A.5.6.3.4 CSI-RS based L1-RSRP measurement when DRX is used

#### A.5.6.3.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.5.6.3.4.1-1.

**Table A.5.6.3.4.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| <b>Config</b>  | <b>Description</b>   |
|--|--|
| 1  | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.5.6.3.4.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.3.4.2-1 and Table A.5.6.3.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 1440ms from the beginning of the test, the DCI trigger comes in slot 1 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.5.6.3.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.5.6.3.4.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|
| SSB GSCN  | 1~2    |      | freq1  |

| Note 2:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |              |                               |          |
| Note 3:                                   | CSI-RS RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |              |                               |          |
| Note 4:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |              |                               |          |

### A.5.6.3.4.3 Test Requirements

After 1440ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.20.1. The reported L1-RSRP value shall include the Rx antenna gain in the range of [-10 ~ +20] dB.

For absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1, the UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.6.3.4.3-1.

For relative accuracy of CSI-RS0 compared with CSI-RS1, the UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

Table A.5.6.3.4.3-1: L1-RSRP absolute accuracy test requirement

|         | Test requirement <sup>Notes1,2,3</sup>   |
|---------|--|
| CSI-RS0 | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$  |
| CSI-RS1 | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$  |
| Note 1: | CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the $I_o$ used in the test  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                                  |

## A.5.6.4 CLI measurements

### A.5.6.4.1 SRS-RSRP measurement with DRX

#### A.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in Table A.5.6.4.1.1-1.

**Table A.5.6.4.1.1-1: Applicable NR configurations for FR2 SRS-RSRP test**

| Configuration | Description  |
|---------------|--|
| 1             | NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.5.6.4.1.2 Test Parameters

Two cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters for PSCell is given in Table A.5.6.4.1.2-1 ~ A.5.6.4.1.2-3 below and applicability for the E-UTRAN cell are defined in A.3.7.2. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in Table A.5.6.4.1.2-4 and the test parameters for the (virtual) neighbour cell UE in Table A.5.6.4.1.2-3. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

**Table A.5.6.4.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PSCell in FR2**

| Parameter   | Unit | Test configuration | Value                           | Comment                  |
|---|------|--------------------|---------------------------------|--------------------------|

### A.5.6.4.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 60 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.6.4.2 CLI-RSSI measurement with DRX

#### A.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in Table A.5.6.4.2.1-1.

**Table A.5.6.4.2.1-1: Applicable NR configurations for FR2 CLI-RSSI test**

| Configuration | Description  |
|---------------|--|
| 1             | NR 120 kHz SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.5.6.4.2.2 Test Parameters

Two cells are deployed in the test, which are E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters for PSCell is given in Table A.5.6.4.2.2-1 ~ A.5.6.4.2.2-3 below and applicability for the E-UTRAN cell are defined in

A.3.7.2. In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 2 data symbols before. The CLI-RSSI measurement resource configuration is in Table A.5.6.4.2.2-4.

**Table A.5.6.4.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PSCell in FR2**

| Parameter   | Unit | Test configuration | Value                           | Comment                     |

|               | rss-PeriodicityAndOffset | sl160, 25     |

### A.5.6.4.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 20 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on  $I_o$ .

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.5 Measurements with autonomous gaps

### A.5.6.5.1 EN-DC inter-frequency CGI identification of NR neighbor cell in FR2

#### A.5.6.5.1.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of NR cell with autonomous gaps in clause 9.11.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.5.1.1-1, A.5.6.5.1.1-2, and A.5.6.5.1.1-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 3. Starting T2, cell 3 becomes detectable and the UE is expected to detect and send a measurement report with SSB index. In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. Gap pattern configuration with id #0 is configured before T2 begins to enable inter-frequency monitoring.

A RRC message implying SI reading with autonomous gap shall be sent to the UE during period T2, within 3s after the UE has reported Event A3. The RRC message shall create a measurement report configuration with *reportCGI* and *useAutonomousGaps-r16* setup. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE. Measurement gaps shall be deconfigured before the start of T3.

PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of NR cell.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.5.1.1-1.

**Table A.5.6.5.1.1-1 Supported test configurations for EN-DC inter-frequency CGI identification of NR neighbor cell in FR2**

| Config  | Description  |
|---------|--|
| 1       | LTE FDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| 2       | LTE TDD, 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                     |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.5.6.5.1.1-2: General test parameters for EN-DC inter-frequency CGI identification of NR neighbor cell in FR2**

| Parameter                                       | Unit | Test configuration | Value                                     | Comment  |

### A.5.6.5.1.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 3 within 775 milliseconds from the start of T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI}$  + processing time for FR2 + reporting delay

= 10 + (25\*20 + 6\*40) + 20 + 2ms from the start of T3

= 772 ms, allow 775 ms.

The UE shall be scheduled continuously throughout the test, and from the start of T3 until 775 ms the number of interrupted slots shall not exceed the allowed number as defined in clause 8.2.1.2.16.

The maximum number of interrupted slots allowed is  $6*48 + 12*49 = 876$ .

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.6 L1-SINR measurement for beam reporting

### A.5.6.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is used

#### A.5.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in Table A.5.6.6.1.1-1.

**Table A.5.6.6.1.1-1: Applicable NR configurations for FR2 CSI-RS based L1-SINR test**

| <b>Config</b>  | <b>Description</b>   |
|--|--|
| 1  | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.5.6.6.1.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.6.1.2-1 and Table A.5.6.6.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 480ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.5.6.6.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.5.6.6.1.2-1: General test parameters

| Parameter   | Config | Unit | Value  |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.5.6.6.1.3 Test Requirements

After 480ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.1.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.5.6.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is not used

#### A.5.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in Table A.5.6.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15

**Table A.5.6.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config | Description  |
|--------|--|
| 1      | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 2      | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 3      | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| 4      | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode                  |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.5.6.6.2.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.6.2.2-1 and Table A.5.6.6.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-RS resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

Table A.5.6.6.2.2-1: General test parameters

| Parameter   | Config | Unit | Value                  |
|---|--------|------|------------------------|
| SSB GSCN  | 1~4    |      | freq1                  |
| Duplex mode   | 1~4    |      | TDD                    |
| TDD Configuration   | 1~4    |      | TDDConf.3.1            |
| $BW_{channel}$  | 1~4    | MHz  | 100: $N_{RB,c} = 66$   |
| PDSCH Reference measurement channel   | 1~4    |      | SR.3.1 TDD             |
| RMSI CORESET Reference Channel  | 1~4    |      | CR.3.1 TDD             |
| Dedicated CORESET Reference Channel   | 1~4    |      | CCR.3.1 TDD            |
| SSB configuration   | 1,2    |      | SSB.1 FR2              |

### A.5.6.6.2.3 Test Requirements

The UE shall send L1-SINR report every 640 slots. No later than X ms plus 640 slots from the beginning of time period T2, UE shall send L1-SINR report including the results for both SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 while meeting the accuracy requirements defined in clause 10.1.28.2, where X is

- 2880 for UE supporting power class 1
- 1920 for UE supporting power class 2, 3 or 4.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.5.6.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is not used

#### A.5.6.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR configured in clause 9.8.4.3, with the testing configurations for NR cells in Table A.5.6.6.3.1-1.

**Table A.5.6.6.3.1-1: Applicable NR configurations for FR2 L1-SINR test with CMR and dedicated IMR**

| Config   | Description   |
|--|---|
| 1  | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

#### A.5.6.6.3.2 Test parameters

There are two cells in the test, E-UTRAN PCell (Cell 1) and FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.6.6.3.2-1 and Table A.5.6.6.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-IM as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources and the associated IMR. UE is also configured to measure L1-SINR based on SSB. After 480ms from the beginning of the test, the DCI trigger comes in slot 8 of a frame and UE provides the report back based on the reporting configuration as defined in Table A.5.6.6.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-IM as IMR.

Table A.5.6.3.2-1: General test parameters

| Parameter   | Config | Unit | Value  |
|---|--------|------|--|

| Propagation condition   | 1~2    |      | AWGN   |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |        |      |  |

Table A.5.6.6.3.2-2: CSI-RS specific test parameters

| Parameter  | Config | Unit         | CSI-RS#0                      | CSI-RS#1 |
|--|--------|--------------|-------------------------------|----------|
| Angle of arrival configuration   | 1~2    |              | Setup 1 according to A.3.15.1 |          |
| Assumption for UE beams <sup>Note 3</sup>  | 1~2    |              | Rough                         |          |
| $N_{oc}$ <sup>Note1</sup>  | 1~2    | dBm/15kHz    | -105                          |          |
| $N_{oc}$ <sup>Note1</sup>  | 1~2    | dBm/SSB SCS  | -95.97                        |          |
| $\hat{E}_s / I_{ot}$   | 1~2    | dB           | 0                             | 9        |
| CSI-RS RSRP <sup>Note2</sup>   | 1~2    | dBm/SSB SCS  | -95.97                        | -86.97   |
| $I_o$ <sup>Note2</sup>   | 1~2    | dBm/95.04MHz | -63.97                        | -57.47   |
| $\hat{E}_s / N_{oc}$   | 1~2    | dB           | 0                             | 9        |
| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |              |                               |          |

### A.5.6.6.3.3 Test Requirements

After 480ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-IM#0 as IMR and CSI-RS#1 as CMR + CSI-IM#1 as IMR while meeting the accuracy requirements defined in clause 10.1.28.3. The reported L1-SINR value shall consider the Rx antenna gain in the range of [-10 ~ +20] dB when calculated.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.5.6.7 CSI-RS based Intra-frequency Measurements

### A.5.6.7.1 EN-DC event triggered reporting test without gap under non-DRX

#### A.5.6.7.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell identification requirements in clause e. Supported test configurations are shown in table A.5.6.7.1.1-1.

Table 5.6.7.1.1-1: supported test configurations

| Configuration   | Description   |
|---|---|
| 1   | LTE FDD, 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

There are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on the same frequency as the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.6.7.1.1-2, A.5.6.7.1.1-3 and A.5.6.7.1.1-4 below.

In the measurement control information, a measurement object is configured for the frequency of the PSCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of cell 3.

**Table A.5.6.7.1.1-2: General test parameters for intra-frequency event triggered reporting for EN-DC with PSCell in FR2 without gap without DRX**

| Parameter                             | Unit | Config | Value                                     | Comment   |
|---------------------------------------|------|--------|---|---|
| Active cell                           |      | 1,2    | E-UTRAN PCell (Cell 1)<br>PSCell (Cell 2) |   |
| Neighbour cell                        |      | 1,2    | Cell 3                                    | Cell to be identified.  |
| RF Channel Number                     |      | 1,2    | 1: Cell 1<br>2: Cell 2 and Cell 3         | One TDD carrier frequency is used for the NR cells and one TDD or FDD carrier frequency is used for E-UTRAN cell. |
| SMTC configuration                    |      | 1,2    | SMTC.1                                    |   |
| A3-Offset                             | dB   | 1,2    | -6  |   |
| CP length                             |      | 1,2    | Normal                                    |   |
| Hysteresis                            | dB   | 1,2    | 0   |   |
| Time To Trigger                       | s    | 1,2    | 0   |   |
| Filter coefficient                    |      | 1,2    | 0   | L3 filtering is not used  |
| DRX                                   |      | 1,2    | OFF                                       |   |
| Time offset between Cell 1 and Cell 2 | μs   | 1,2    | 3   | Synchronous EN-DC   |
| Time offset between Cell 2 and Cell 3 | μs   | 1,2    | 0.58                                      | Synchronous cells   |
| T1                                    | s    | 1,2    | 5   |   |

| $N_{oc}$ <sup>Note 2</sup>                | dBm/SCS  | 1,2    | -93                         |     |             |     |
| SS-RSRP                                   | dBm/SCS  | 1,2    | -89                         | -89 | -Infinity   | -85 |
| CSI-RSRP                                  | dBm/SCS  | 1,2    | -89                         | -89 | -Infinity   | -85 |
| $\hat{E}_s/N_{oc}$                        | dB   | 1,2    | 4                           | 4   | -Infinity   | 8   |
| $I_o$                                     | dBm/95.04MHz   | 1,2    | -58.56                      |     | -55.38      |     |
| Note 1:                                   | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |        |                             |     |             |     |
| Note 2:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |        |                             |     |             |     |
| Note 3:                                   | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |        |                             |     |             |     |
| Note 4:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation.  |        |                             |     |             |     |

### A.5.6.7.1.2 Test Requirements

In the test, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than X ms from the beginning of time period T2, where X is

- 3.2s for a UE supporting power class 1,
- 2.16s for a UE supporting power class 2, 3 and 4

The UE is not required to read the neighbour cell SSB index in this test in order to detect associated SSB for the CSI-RS resource of Cell 3.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to 2xTTIDCCH higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.5.6.8 CSI-RS based Inter-frequency Measurements

### A.5.6.8.1 EN-DC event triggered reporting tests for NR FR2 cell when DRX is used

#### A.5.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the EN-DC inter-frequency NR cell search requirements in clause 9.10.3.

In this test, there are three cells: LTE cell 1 as PCell on E-UTRA RF channel 1, NR cell 2 as PSCell in FR2 on NR RF channel 1 and NR cell 3 as neighbour cell in FR2 on NR RF channel 2. The test parameters and configurations are given in Tables A.5.6.8.1.1-1, A. 5.6.5.1.1-2, and A.5.6.8.1.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.5.6.8.1.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #13 as defined in Table A. 5.6.5.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A4 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 3.

The configuration of LTE cell 1 is defined in table A.3.7.2.2-1. Supported test configurations are shown in table A.5.6.8.1.1-1.

**Table A.5.6.8.1.1-1 EN-DC event triggered reporting tests for FR2-FR2**

| Config   | Description  |
|--|--|
| 1  | LTE FDD, 120 kHz SSB SCS, 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE TDD, 120 kHz SSB SCS, 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.5.6.8.1.1-2: General test parameters for EN-DC inter-frequency event triggered reporting with SSB time index detection with DRX**

| Parameter                                       | Unit | Test configuration | Value                                     |                                 | Comment   |

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 5: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 6: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 7: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |  |                       |       |       |           |       |

#### A.5.6.8.1.2 Test Requirements

In test 1 with per-UE gap and in test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than  $X1$  ms from the beginning of time period T2, where  $X1$  is

10080 ms for UE supporting power class 1, or

6240 ms for UE supporting other power class.

In test 1, and 2 UE is required to report SSB time index. The UE is required to read the neighbour cell SSB index in this test in order to detect associated SSB for the CSI-RS resource of Cell 3.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.5.7 Measurement Performance requirements

Unless explicitly stated otherwise:

- Reported measurements shall be within defined range of accuracy limits defined in Clause 10 for at least 90 % of the reported cases. If multiple measurement performance requirements are verified in the same test, the reported measurements for each requirement shall be within defined range of accuracy limits of the corresponding requirement defined in Clause 10 for at least 90% of the reported cases.
- Measurements are performed in RRC\_CONNECTED state.
- The reference channels assume transmission of PDSCH with a maximum number of 5 HARQ transmissions unless otherwise specified.

## A.5.7.1 SS-RSRP

### A.5.7.1.1 EN-DC intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

#### A.5.7.1.1.2 Test parameters

In this set of test cases, all NR cells are on the same carrier frequency. Supported test configurations are shown in Table A.5.7.1.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in Table A.5.7.1.1.2-2 and A.5.7.1.1.2-3. The E-UTRA PCell is configured as specified in clause A.3.7.2.2. In all test cases, Cell 1 is the PCell, cell 2 is the PSCell and Cell 3 is the target cell. The test consists of two time phases T1 and T2.

**Table A.5.7.1.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to pass in one of the supported test configurations |   |

**Table A.5.7.1.1.2-2: SS-RSRP Intra frequency general test parameters**

| Parameter <sup>Note 5</sup> | Unit | T1     |        | T2     |        |

| $N_{oc}$ <sup>Note1</sup>                 | dBm/SCS <sub>Note4</sub>  | -82.6                                |        | N/A                                   |                                     |
| $\hat{E}_s/N_{oc}$                        | dB  | 6.0                                  | 1.0    | N/A                                   | N/A                                 |
| $E_s$                                     | dBm/SCS <sub>Note4</sub>  |                                      |        | (Table B.2.2-2 Rx Beam Peak +2.1dB)   | (Table B.2.2-2 Rx Beam Peak +2.1dB) |
| SSB_RP <sup>Note2</sup>                   | dBm/SCS   | -76.6                                | -81.6  | (Table B.2.2-2 Rx Beam Peak +2.1dB)   | (Table B.2.2-2 Rx Beam Peak +2.1dB) |
| $\hat{E}_s/I_{ot\ BB}$ <sup>Note6</sup>   | dB  | 2.44                                 | -5.98  | -5.98                                 | -5.98                               |
| $I_o$ <sup>Note2</sup>                    | dBm/95.04 MHz <sub>Note4</sub>  | -50.05                               |        | (Table B.2.2-2 Rx Beam Peak +29.70dB) |                                     |
| Note 1:                                   | Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.  |                                      |        |                                       |                                     |
| Note 2:                                   | SSB_RP, $E_s/I_{ot}$ and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                                      |        |                                       |                                     |
| Note 3:                                   | Void  |                                      |        |                                       |                                     |
| Note 4:                                   | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone   |                                      |        |                                       |                                     |
| Note 5:                                   | Void  |                                      |        |                                       |                                     |
| Note 6:                                   | Calculation of $E_s/I_{ot\ BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |                                      |        |                                       |                                     |
| Note 7:                                   | All parameters apply for configurations 1 and 2   |                                      |        |                                       |                                     |
| Note 8:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |                                      |        |                                       |                                     |

### A.5.7.1.1.3 Test Requirements

The SS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in table A.5.7.1.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1

Relative accuracy of Cell 3 during T2 compared with Cell 3 during T1. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in Table 10.1.3.1.2-1.

**Table A.5.7.1.1.3-1: SS-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3</sup>   |
|---------|---|
| Cell 2  | $SSB\_RP2 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP2 + \delta + G_{max}$   |
| Cell 3  | $SSB\_RP3 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP3 + \delta + G_{max}$   |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the $\delta$ used in the test                                 |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                             |

### A.5.7.1.2 EN-DC inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.5.1.1 and 10.1.5.1.2 for inter-frequency measurements with the testing configurations for NR cells in Table A.5.7.1.2.1-1.

**Table A.5.7.1.2.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD LTE PCell, cells 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2                    | TDD LTE PCell, cells 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 3                    | FDD LTE PCell, cells 2&3 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 4                    | TDD LTE PCell, cells 2&3 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

#### A.5.7.1.2.2 Test parameters

In this set of test cases, there are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.7.1.2.2-1 and Table A.5.7.1.2.2-2 below. Both absolute and relative accuracy of RSRP intrer-frequency measurements are tested by using the parameters in Table A.5.7.1.2.2-1 and Table A.5.7.1.2.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.5.7.1.2.2-1: SS-RSRP inter-frequency test parameters**

| Parameter  | Config     | Unit | Test 1                         |        | Test 2                         |        |
|--|------------|------|--------------------------------|--------|--------------------------------|--------|

|         |  |
|---------|--|
| Note 1: | Where used, interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled.   |
| Note 2: | SSB_RP, Es/lot, Io, (SSB_RP <sub>Cell 3</sub> – SSB_RP <sub>Cell 2</sub> ) and (Iofreq 2 – Iofreq 1) levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |
| Note 3: | Void   |
| Note 4: | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone  |
| Note 5: | Void   |
| Note 6: | Calculation of Es/lot <sub>BB</sub> includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 38.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor ΔMB <sub>P</sub> or ΔMB <sub>S</sub> from TS 38.101-2 [19] Table 6.2.1.3-4. |
| Note 7: | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |
| Note 8: | The value in Table B.2.3-2 is the Minimum SSB_RP for SCS <sub>SSB</sub> = 120 kHz, selected according to the operating band of Cell 3 and UE power class, without ΔMB <sub>P,n</sub> adjustment.   |

**A.5.7.1.2.3 Test Requirements**

The SS-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the absolute requirements in clause 10.1.5.1.1 and the relative requirements in clause 10.1.5.1.2.

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.5.7.1.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.5.7.1.2.3-2.

Test 2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.5.7.1.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported SS-RSRP meets the requirements in A.5.7.1.2.3-2.

**Table A.5.7.1.2.3-1: SS-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <small>Notes1,2,3,4</small>  |
|---------|--|
| Cell 2  | $SSB\_RP2 - \delta + G_{min} + X \leq \text{Reported RSRP(dBm)} \leq SSB\_RP2 + \delta + G_{max}$  |
| Cell 3  | $SSB\_RP3 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP3 + \delta + G_{max}$  |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2: | δ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the Io used in the test   |
| Note 3: | G <sub>min</sub> and G <sub>max</sub> are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

**Table A.5.7.1.2.3-2: SS-RSRP relative accuracy test requirement**

| <b>Test requirement</b> <small>Notes 1,2,3,4, 5, 6</small> |  |
|--|--|
| Cell 3 – Cell 2  | $SSB\_RP3 - SSB\_RP2 - \delta - D - G_{inter} \leq \text{Reported RSRP(dB)} \leq SSB\_RP3 - SSB\_RP2 + \delta + G_{inter} - (X)$   |
| Note 1:  | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2:  | $\delta$ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1   |
| Note 3:  | Void   |
| Note 4:  | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |
| Note 5:  | D = [5.5dB]. D is the <a href="#">margin due to mis-alignment between fine beam and rough beam</a> .   |
| Note 6:  | $G_{inter}$ = [3dB]. $G_{inter}$ is the <a href="#">margin due to different antenna gain caused by frequency separation</a> .  |

### A.5.7.1.3 EN-DC inter-frequency measurement accuracy with FR1 serving cell and FR2 target cell

#### A.5.7.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.5.1.1 for inter-frequency measurements with the testing configurations in Table A.5.7.1.3.1-1.

**Table A.5.7.1.3.1-1: Applicable NR configurations for FR2 inter-frequency SS-RSRP accuracy test**

| Config   | Description of serving cell                                   | Description of target cell                          |
|--|---|---|
| 1  | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2  | LTE FDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 3  | LTE FDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |
| 4  | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |   |
| 5  | LTE TDD, NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |   |
| 6  | LTE TDD, NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |   |
| Note: The UE is only required to be tested in one of the supported test configurations |   |   |

#### A.5.7.1.3.2 Test parameters

In this set of test cases there are three cells in the test, E-UTRAN PCell (Cell 1), FR1 PCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.7.1.3.2-1 and Table A.5.7.1.3.2-2 below. Absolute accuracy of RSRP inter-frequency measurements are tested by using the parameters in Table A.5.7.1.3.2-1 and Table A.5.7.1.3.2-2. The inter-frequency measurements are supported by a measurement gap.

**Table A.5.7.1.3.2-1: SS-RSRP inter-frequency test parameters**

| Parameter   | Config         | Unit | Test 1                         |                                | Test 2                         |                                |

### A.5.7.1.3.3 Test Requirements

The SS-RSRP measurement accuracy for Cell 3 shall fulfil the Absolute requirement in clause 10.1.5.1.1.

Test 1:

Absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.5.7.1.3.3.

Test 2:

Absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported SS-RSRP is in the range shown in Table A.5.7.1.3.3.

**Table A.5.7.1.3.3: SS-RSRP absolute accuracy test requirement**

|         | Test requirement <sup>Notes1,2,3,4</sup>   |
|---------|--|
| Cell 3  | $SSB\_RP2 - \delta + G_{min} + X \leq \text{Reported RSRP(dBm)} \leq SSB\_RP2 + \delta + G_{max}$  |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the $I_0$ used in the test   |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

## A.5.7.2 SS-RSRQ

### A.5.7.2.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.8.1.1.

#### A.5.7.2.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.5.7.2.1.2-1. The absolute accuracy of SS-RSRQ intra-frequency measurement is test by using the parameters in Table A.5.7.2.1.2-2 and Table A.5.7.2.1.2-3. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.5.7.2.1.2-1: SS-RSRQ Intra frequency SS-RSRQ supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note:         | The UE is only required to pass in one of the supported test configurations |

**Table A.5.7.2.1.2-2: SS-RSRQ Intra frequency test parameters**

| Parameter   |                  | Unit | Test 1                      |              | Test 2                      |              |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-RSRQ, SSB_RP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Void</p> <p>Note 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |                                      |        |

### A.5.7.2.1.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5dB to Nominal SS-RSRQ -2.5dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ +3.5dB to Nominal SS-RSRQ -3.5dB according to the requirements in clause 10.1.8.1.1. Nominal SS-RSRQ is the value shown in table A.5.7.2.1.2-3.

## A.5.7.2.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

### A.5.7.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.9.1.1 and 10.1.9.1.2 for inter-frequency measurement.

### A.5.7.2.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.5.7.2.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-RSRQ inter-frequency measurement are tested by using test setup in Table A.5.7.2.2.2-2 and Table A.5.7.2.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

**Table A.5.7.2.2.2-1: SS-RSRQ Inter frequency SS-RSRQ supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.5.7.2.2.2-2: SS-RSRQ Inter frequency general test parameters**

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-RSRQ, SSB_RP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-RSRQ and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                          |        |                          |        |

### A.5.7.2.2.3 Test Requirements

The SS-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal SS-RSRQ+2.5dB to Nominal SS-RSRQ-2.5dB and the SS-RSRQ measurement accuracy in test 2 shall be within the range Nominal SS-RSRQ+3.5dB to Nominal SS-RSRQ-3.5dB according to the requirements in clause 10.1.10.1.1.

The SS-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.1.2.

## A.5.7.3 SS-SINR

### A.5.7.3.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.1.1.

#### A.5.7.3.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.5.7.3.1.2-1. The absolute accuracy of SS-SINR intra-frequency measurement is test by using the parameters in Table A.5.7.3.1.2-2 and Table A.5.7.3.1.2-3. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

**Table A.5.7.3.1.2-1: SS-SINR Intra frequency SS-SINR supported test configurations**

| Configuration   | Description   |
|---|---|
| 1   | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to pass in one of the supported test configurations |   |

**Table A.5.7.3.1.2-2: SS-SINR Intra frequency test parameters**

| Parameter   | Unit | Test 1                      |              | Test 2                      |              |

| Note 1:                                   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                                      |        |                                      |        |
| Note 2:                                   | SS-SINR, SSB_RP, and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                                      |        |                                      |        |
| Note 3:                                   | SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                                      |        |                                      |        |
| Note 4:                                   | Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone   |                                      |        |                                      |        |
| Note 5:                                   | As observed with 0dBi gain antenna at the centre of the quiet zone   |                                      |        |                                      |        |
| Note 6:                                   | Void   |                                      |        |                                      |        |
| Note 7:                                   | Void   |                                      |        |                                      |        |
| Note 8:                                   | Void   |                                      |        |                                      |        |
| Note 9:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation   |                                      |        |                                      |        |

### A.5.7.3.1.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3B to Nominal SS-SINR -3dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR +3.5dB to Nominal SS-SINR -3.5dB according to the requirements in clause 10.1.10.13.1. Nominal SS-SINR is the value shown in table A.5.7.3.1.2-3.

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.13.1.1.

### A.5.7.3.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.3.2.1 Test Purpose and Environment

The purpose of this test is to verify that the SS-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.1.1 and 10.1.15.1.2 for inter-frequency measurement.

#### A.5.7.3.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.5.7.3.2.2-1. Both absolute accuracy and relative accuracy requirements of SS-SINR inter-frequency measurement are tested by using test setup in Table A.5.7.3.2.2-2 and Table A.5.7.3.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.5.7.3.2.2-1: SS-SINR Inter frequency SS-SINR supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.5.7.3.2.2-2: SS-SINR Inter frequency general test parameters**

| Parameter   | Unit | Test 1                      |            | Test 2                      |            | Test 3                      |            |

| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: SS-SINR, SSB_RP, and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> <p>Note 3: SS-SINR and SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: Void</p> <p>Note 7: Void</p> <p>Note 8: Void</p> <p>Note 9: Void</p> <p>Note 10: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                               |       |                               |       |                               |        |

### A.5.7.3.2.3 Test Requirements

The SS-SINR absolute measurement accuracy in test 1 shall be within the range Nominal SS-SINR+3dB to Nominal SS-SINR -3dB and the SS-SINR measurement accuracy in test 2 shall be within the range Nominal SS-SINR+3.5dB to Nominal SS-SINR -3.5dB according to the requirements in clause 10.1.15.1.1. Nominal SS-SINR is the value shown in table A.5.7.2.2.2-3

The SS-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.1.2.

## A.5.7.4 L1-RSRP measurement for beam reporting

### A.5.7.4.1 SSB based L1-RSRP measurement

#### A.5.7.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 9.5.2 and clause 10.1.20.1 for L1-RSRP measurements based on SSB with the testing configurations for NR cells in Table A.5.7.4.1.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.4.1.1-1: Applicable NR configurations for FR2 SSB based L1-RSRP test**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 3             | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 4             | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.5.7.4.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.4.1.2-1 and Table A.5.7.4.1.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.5.7.4.1.2-1 and Table A.5.7.4.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources. UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSB resources 0 and 1.

Table A.5.7.4.1.2-1: FR2 SSB based L1-RSRP general test parameters

| Parameter   | Config | Unit | Test 1                      | Test 2                      |
|---|--------|------|-----------------------------|-----------------------------|
| SSB GSCN  | 1~4    |      | freq1                       | freq1                       |

### A.5.7.4.1.3 Test Requirements

After 320ms from the beginning of the test, the L1-RSRP measurement accuracy for SSB#0 and SSB#1 of Cell 2 shall fulfil the requirements in clauses 10.1.20.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB0 and absolute accuracy of SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.1.2-1.

For Test 2:

Absolute accuracy of SSB0 and absolute accuracy of SSB1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.7.4.1.3-1.

Relative accuracy of SSB0 compared with SSB1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.1.2-1.

**Table A.5.7.4.1.3-1: L1-RSRP absolute accuracy test requirement**

|         | Test requirement <sup>Notes1,2,3</sup>   |
|---------|--|
| SSB0    | $SSB\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP0 + \delta + G_{max}$  |
| SSB1    | $SSB\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq SSB\_RP1 + \delta + G_{max}$  |
| Note 1: | SSB_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the SSB n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.20.1.1-1, selected according to the $I_o$ used in the test                                  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                            |

### A.5.7.4.2 CSI-RS based L1-RSRP measurement on resource set with repetition off

#### A.5.7.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 9.5.3 and clause 10.1.20.2 for L1-RSRP measurements based on CSI-RS with the testing configurations for NR cells in Table A.5.7.4.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.4.2.1-1: Applicable NR configurations for FR2 CSI-RS based L1-RSRP test**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| 2      | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.5.7.4.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.4.2.2-1 and Table A.5.7.4.2.2-2 below. The absolute and relative accuracy of L1-RSRP measurements are tested by using the parameters in Table A.5.7.4.2.2-1 and Table A.5.7.4.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

Table A.5.7.4.2.2-1: FR2 CSI-RS based L1-RSRP general test parameters

| Parameter   | Config   | Unit | Test 1                      | Test 2                      |

### A.5.7.4.2.3 Test Requirements

After 320ms from the beginning of the test, the L1-RSRP measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.20.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

For Test 2:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-RSRP is in the range shown in Table A.5.7.4.2.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-RSRP meets the requirements in Table 10.1.20.2.2-1.

Table A.5.7.4.2.3-1: L1-RSRP absolute accuracy test requirement

|         | Test requirement <sup>Notes1,2,3</sup>   |
|---------|--|
| CSI-RS0 | $CSI-RS\_RP0 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP0 + \delta + G_{max}$  |
| CSI-RS1 | $CSI-RS\_RP1 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI-RS\_RP1 + \delta + G_{max}$  |
| Note 1: | CSI-RS_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.20.2.1-1, selected according to the $I_o$ used in the test  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                                  |

## A.5.7.5 CLI measurements

### A.5.7.5.1 EN-DC SRS-RSRP measurement accuracy with FR2 serving cell

#### A.5.7.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SRS-RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.1.1 with the testing configurations for NR cells in Table A.5.7.5.1.1-1.

**Table A.5.7.5.1.1-1: Applicable NR configurations for FR2 SRS-RSRP accuracy test**

| Config  | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |   |

#### A.5.7.5.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.5.1.2-1 and A.5.7.5.1.2-2 below. The test parameter for the (virtual) neighbor cell UE transmitting SRS are given in Table A.5.7.5.1.2-2.

Before the test UE is configured to perform SRS-RSRP measurement. During the test, the test system transmits SRS resources for measurement in the DL slots according to the SRS configuration in Table A.5.7.5.1.2-3. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 2 data symbols before SRS to be transmitted.

Table A.5.7.5.1.2-1: FR2 test parameters for SRS-RSRP accuracy

| Parameter  | Config | Unit          | Test 1                 | Test 2                 |

### A.5.7.5.1.3 Test Requirements

The SRS-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.1.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.5.7.5.1.3-1.

During T2:

The UE is deemed to meet the requirement if the reported SRS-RSRP is in the range shown in table A.5.7.5.1.3-1.

**Table A.5.7.5.1.3-1: SRS-RSRP absolute accuracy test requirement**

| SRS     | Test requirement <sup>Notes1,2,3</sup>  |
|---------|---|
|         | $SRS\_RP - \delta + G_{min} \leq \text{Reported SRS-RSRP(dBm)} \leq SRS\_RP + \delta + G_{max}$                                     |
| Note 1: | SRS_RP is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test         |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the $I_o$ used in the test       |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class |

### A.5.7.5.2 EN-DC CLI-RSSI measurement accuracy with FR2 serving cell

#### A.5.7.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CLI-RSSI measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.22.2.1 with the testing configurations for NR cells in Table A.5.7.5.2.1-1.

**Table A.5.7.5.2.1-1: Applicable NR configurations for FR2 CLI-RSSI accuracy test**

| Config  | Description   |
|---|---|
| 1   | LTE FDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | LTE TDD, NR 120 kHz SRS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |   |

### A.5.7.5.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.5.2.2-1 and A.5.7.5.2.2-2 below.

Before the test UE is configured to perform CLI-RSSI measurement. There is no measurement gap configured in the test. During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI resource and on 2 data symbol before. The CLI-RSSI measurement resource configuration is in Table A.5.7.5.2.2-3.

**Table A.5.7.5.2.2-1: FR2 test parameters for CLI-RSSI accuracy**

| Parameter  | Config | Unit | Test 1                      | Test 2                      |
|--|--------|------|-----------------------------|-----------------------------|
| SSB GSCN   | 1~2    |      | freq1                       | freq1                       |

### A.5.7.5.2.3 Test Requirements

The CLI-RSSI measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.22.2.1. The following requirements are to be verified:

During T1:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.5.7.5.2.3-1.

During T2:

The UE is deemed to meet the requirement if the reported CLI-RSSI is in the range shown in table A.5.7.5.2.3-1..

**Table A.5.7.5.2.3-1: CLI-RSSI absolute accuracy test requirement**

|         |  | Test requirement <sup>Notes1,2,3</sup>  |
|---------|--|---|
|         |  | $I_o - \delta + G_{min} \leq \text{Reported CLI-RSSI(dBm)} \leq I_o + \delta + G_{max}$ |
| Note 1: | $I_o$ is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for 1.08MHz |   |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.22.1.1-2, selected according to the $I_o$ used in the test          |   |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class    |   |

## A.5.7.6 L1-SINR measurement for beam reporting

### A.5.7.6.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured and CSI-RS resource set with repetition off

#### A.5.7.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 9.8.4.1 and clause 10.1.28.1 for FR2 L1-SINR measurements based on CSI-RS with the testing configurations for NR cells in Table A.5.7.6.1.1-1, which configures the measurement resources for the CSI-RS based CMR and no dedicated IMR.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.1.1-1: Applicable NR configurations for FR2 L1-SINR test with CSI-RS based CMR and no dedicated IMR configured**

| Config | Description   |
|--------|---|
| 1      | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| 2      | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| Note:  | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.5.7.6.1.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.6.1.2-1 and Table A.5.7.6.1.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.5.7.6.1.2-1 and Table A.5.7.6.1.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB.

**Table A.5.7.6.1.2-1: FR2 CSI-RS based L1-SINR general test parameters**

| Parameter   | Config   | Unit | Test 1                      |
|---|--|------|-----------------------------|

They are not settable parameters themselves.</p> <p>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 3: Void.</p> <p>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |        |               |                               |         |

### A.5.7.6.1.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0 and CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.1. The following requirements are to be verified:

For Test 1:

Absolute accuracy of CSI-RS0 and absolute accuracy of CSI-RS1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.5.7.6.1.3-1.

Relative accuracy of CSI-RS0 compared with CSI-RS1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.1.2-1.

**Table A.5.7.6.1.3-1: L1-SINR absolute accuracy test requirement**

|         | Test requirement <sup>Notes1,2</sup>  |
|---------|---|
| CSI-RS0 | $L1-SINR0 - \delta \leq \text{Reported SINR (dB)} \leq L1-SINR0 + \delta$   |
| CSI-RS1 | $L1-SINR1 - \delta \leq \text{Reported SINR (dB)} \leq L1-SINR1 + \delta$   |
| Note 1: | L1-SINRn is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS n under consideration |
| Note 2: | $\delta$ is the SINR absolute accuracy requirement from Table 10.1.28.1.1-1, selected according to the $I_o$ used in the test                                     |

### A.5.7.6.2 L1-SINR measurement with SSB based CMR and dedicated IMR

#### A.5.7.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 9.8.4.2 and clause 10.1.28.2 for L1-SINR measurements with SSB based CMR and dedicated CSI-RS based IMR, with the testing configurations for NR cells in Table A.5.7.6.2.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.2.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 2             | LTE TDD, NR 120 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 3             | LTE FDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| 4             | LTE TDD, NR 240 kHz SSB SCS, 100 MHz bandwidth, TDD duplex mode   |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.5.7.6.2.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.6.2.2-1 and Table A.5.7.6.2.2-2 below. The absolute accuracy of L1-SINR measurements are tested by using the parameters in Table A.5.7.6.2.2-1 and Table A.5.7.6.2.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one SSB resource set with two SSB resources and one CSI-RS resource set with two CSI-RS resource. UE is configured to perform RLM and BFD measurement based on the SSB resources 0 and 1. UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

**Table A.5.7.6.2.2-1: FR2 L1-SINR measurement test parameters with SSB based CMR and CSI-IM based IMR**

| Parameter   | Config | Unit | Test 1                      |

### A.5.7.6.2.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.2. The following requirements are to be verified:

For Test 1:

Absolute accuracy of SSB#0+CSI-RS#0 and absolute accuracy of SSB#1+CSI-RS#1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.5.7.6.2.3-1.

Relative accuracy of SSB#0+CSI-RS#0 compared with SSB#1+CSI-RS#1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.2.2-1.

**Table A.5.7.6.2.3-1: L1-SINR absolute accuracy test requirement**

|                | <b>Test requirement</b> <sup>Notes1,2</sup>   |
|----------------|---|
| SSB#0+CSI-RS#0 | $L1\_SINR0 - \delta + \leq \text{Reported SINR (dB)} \leq L1\_SINR0 + \delta$   |
| SSB#1+CSI-RS#1 | $L1\_SINR1 - \delta + \leq \text{Reported SINR (dB)} \leq L1\_SINR1 + \delta$   |
| Note 1:        | L1_SINRn is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the SSB#n+CSI-RS#n under consideration |
| Note 2:        | $\delta$ is the SINR absolute accuracy requirement from Table 10.1.28.2.1-1, selected according to the $I_0$ used in the test   |

### A.5.7.6.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR

#### A.5.7.6.3.1 Test Purpose and Environment

The purpose of this test is to verify that the L1-SINR measurement accuracy is within the specified limits. This test will partly verify the requirements in Clauses 9.8.4.3 and clause 10.1.28.3 for L1-SINR measurements based on CSI-RS as CMR and CSI-IM as IMR with the testing configurations for NR cells in Table A.5.7.6.3.1-1.

The AoA setup for this test is Setup 1 as defined in clause A.3.15.

**Table A.5.7.6.3.1-1: Applicable NR configurations for FR2 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | LTE FDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| 2             | LTE TDD, NR 120 kHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode                                      |
| Note:         | The UE is only required to be tested in one of the supported test configurations in each supported band |

#### A.5.7.6.3.2 Test parameters

In this set of test cases there are two cells in the test, E-UTRAN PCell (Cell 1), FR1 PSCell (Cell 2). The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 are given in Table A.5.7.6.3.2-1 and A.5.7.6.3.2-2 below. The absolute and relative accuracy of L1-SINR measurements are tested by using the parameters in Table A.5.7.6.3.2-1 and A.5.7.6.3.2-2.

There is no measurement gap configured in the test. Before the test, UE is configured one CSI-RS resource set with two CSI-RS resources and one CSI-IM resource set with two CSI-IM resources. UE is configured to perform RLM and BFD based on SSB 0 and 1. CSI-RS is not transmitted in the same OFDM symbols as SSB. UE is configured to perform L1-SINR measurement based on the configured CSI-RS as CMR and CSI-IM as IMR.

Table A.5.7.6.3.2-1: FR2 L1-SINR measurement test with CSI-RS based CMR and CSI-IM based IMR

| Parameter  | Config | Unit | Test 1                 |
|--|--------|------|------------------------|
| SSB GSCN   | 1~2    |      | freq1                  |
| Duplex mode  | 1~2    |      | TDD                    |
| TDD Configuration  | 1~2    |      | TDDConf.3.1            |
| $BW_{channel}$   | 1~2    | MHz  | 100: $N_{RB,c} = 66$   |
| PDSCH Reference measurement channel  | 1~2    |      | SR.3.1 TDD             |
| RMSI CORESET Reference Channel   | 1~2    |      | CR.3.1 TDD             |
| Dedicated CORESET Reference Channel  | 1~2    |      | CCR.3.1 TDD            |
| SSB configuration  | 1~2    |      | SSB.1 FR2              |
| OCNG Patterns  | 1~2    |      | OP.1                   |
| Initial BWP Configuration  | 1~2    |      | DLBWP.0.1<br>ULBWP.0.1 |
| Dedicated BWP configuration  | 1~2    |      | DLBWP.1.1<br>ULBWP.1.1 |
| TRS Configuration  | 1~2    |      | TRS.2.1 TDD            |
| PDCCH/PDSCH TCI Configuration  | 1~2    |      | TCI.State.2            |
| SMTc configuration   | 1~2    |      | SMTc.1                 |
| CSI-RS configuration as CMR  | 1~2    |      | CSI-RS.3.2 TDD         |
| CSI-IM configuration as IMR  | 1~2    |      | CSI-IM.3.3 TDD         |
| reportConfigType   | 1~2    |      | periodic               |
| reportQuantity-r16   | 1~2    |      | cri-SINR-r16           |
| nrofReportedRS   | 1~2    |      | 2                      |
| L1-RSRP reporting period   | 1~2    |      | slot640                |
| Propagation condition  | 1~2    |      | AWGN                   |
| Antenna configuraion   | 1~2    |      | 1x2                    |
| EPRE ratio of PSS to SSS   | 1~2    | dB   | 0                      |
| EPRE ratio of PBCH DMRS to SSS   |        |      |                        |
| EPRE ratio of PBCH to PBCH DMRS  |        |      |                        |
| EPRE ratio of PDCCH DMRS to SSS  |        |      |                        |
| EPRE ratio of PDCCH to PDCCH DMRS  |        |      |                        |
| EPRE ratio of PDSCH DMRS to SSS  |        |      |                        |
| EPRE ratio of PDSCH to PDSCH DMRS  |        |      |                        |
| EPRE ratio of OCNG DMRS to SSS <sup>Note 1</sup>   |        |      |                        |
| EPRE ratio of OCNG to OCNG DMRS <sup>Note 1</sup>  |        |      |                        |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |        |      |                        |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |        |      |                        |

Table A.5.7.6.3.2-2: FR2 CSI-RS based L1-SINR measurement OTA related test parameters

| Parameter  | Config | Unit          | Test 1                        |         |
|--|--------|---------------|-------------------------------|---------|
|  |        |               | CSI-RS0                       | CSI-RS1 |
| Angle of arrival configuration   |        |               | Setup 1 according to A.3.15.1 |         |
| Assumption for UE beams <sup>Note 4</sup>  |        |               | Rough                         |         |
| $N_{oc}$   | 1~2    | dBm/15 kHz    | -100                          |         |
| $N_{oc}$   | 1~2    | dBm/SS B SCS  | -91                           |         |
| $\hat{E}_s / I_{ot}$   | 1~2    | dB            | 10                            | -2      |
| CSI-RS-RSRP <sup>Note1</sup>   | 1~2    | dBm/SC S      | -81                           | -93     |
| $I_o$ <sup>Note1</sup>   | 1~2    | dBm/95.04M Hz | -51.57                        | -59.86  |
| $\hat{E}_s / N_{oc}$   | 1~2    | dB            | 10                            | -2      |
| Note 1: RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.<br>Note 2: RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.<br>Note 3: No additional noise is added by the test system in Test 2.<br>Note 4: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation |        |               |                               |         |

### A.5.7.6.3.3 Test Requirements

After 640ms from the beginning of the test, the L1-SINR measurement accuracy for CSI-RS#0+CSI-IM#0 and CSI-RS#1+CSI-IM#1 of Cell 2 shall fulfil the requirements in clauses 10.1.28.3. The following requirements are to be verified:

Absolute accuracy of CSI-RS#0 and absolute accuracy of CSI-RS#1. The UE is deemed to meet the requirement if the reported L1-SINR is in the range shown in Table A.5.7.6.3.3-1.

Relative accuracy of CSI-RS#0 compared with CSI-RS#1. The UE is deemed to meet the requirement if the difference in reported L1-SINR meets the requirements in Table 10.1.28.3.2-2.

Table A.5.7.6.3.3-1: L1-SINR absolute accuracy test requirement

|          | Test requirement <sup>Notes1,2</sup>  |
|----------|---|
| CSI-RS#0 | $L1-SINR_0 - \delta \leq \text{Reported SINR (dBm)} \leq L1-SINR_0 + \delta$  |
| CSI-RS#1 | $L1-SINR_1 - \delta \leq \text{Reported SINR (dBm)} \leq L1-SINR_1 + \delta$  |
| Note 1:  | L1-SINR <sub>n</sub> is the equivalent SINR received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the CSI-RS#n under consideration |
| Note 2:  | $\delta$ is the SINR absolute accuracy requirement from Table 10.1.28.3.1-2.  |

## A.5.7.7 CSI-RSRP

### A.5.7.7.1 EN-DC intra-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RS based RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.3.1.1 and 10.1.3.1.2 for intra-frequency measurements.

#### A.5.7.7.1.2 Test parameters

In this set of test cases, all NR cells are on the same carrier frequency. Supported test configurations are shown in Table A.5.7.7.1.2-1. Both absolute and relative accuracy of SS-RSRP intra-frequency measurements are tested by using the parameters in Table A.5.7.7.1.2-2 and A.5.7.7.1.2-3. The E-UTRA PCell is configured as specified in clause A.3.7.2.2. In all test cases, cell 1 is the PCell, cell 2 is the PSCell and cell 3 is the target cell. The test consists of two time phases T1 and T2.

**Table A.5.7.7.1.2-1: SS-RSRP Intra frequency SS-RSRP supported test configurations**

| Configuration   | Description  |
|---|--|
| 1   | FDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | TDD LTE PCell, Cell 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to pass in one of the supported test configurations |  |

**Table A.5.7.7.1.2-2: CSI-RSRP Intra frequency general test parameters**

| Parameter <sup>Note 5</sup>   | Unit | T1                               |                                  | T2                               |                                  |

| Note 4:                                   | Equivalent power received by an antenna with 0 dBi gain at the centre of the quiet zone   |                                      |        |                                       |                                     |
| Note 5:                                   | Void  |                                      |        |                                       |                                     |
| Note 6:                                   | Calculation of $E_s/I_{ot\ BB}$ includes the effect of UE internal noise up to the value assumed for the associated Refsens requirement in clause 7.3.2 of TS 36.101-2 [19], and an allowance of 1dB for UE multi-band relaxation factor $\Delta MB_P$ from TS 38.101-2 [19] Table 6.2.1.3-4. |                                      |        |                                       |                                     |
| Note 7:                                   | All parameters apply for configurations 1 and 2   |                                      |        |                                       |                                     |
| Note 8:                                   | Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation  |                                      |        |                                       |                                     |

### A.5.7.7.1.3 Test Requirements

The CSI-RSRP measurement accuracy shall fulfil the absolute accuracy requirements in clauses 10.1.3.1.1 and relative accuracy requirements in clause 10.1.3.1.2. The following requirements are to be verified:

During T1:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.5.7.7.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in table A.5.7.7.1.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.1.2-1.

During T1 and T2:

Relative accuracy of Cell 2 during T2 compared with Cell 2 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.1.2-1

Relative accuracy of Cell 3 during T2 compared with Cell 3 during T1. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table 10.1.3.1.2-1.

**Table A.5.7.7.1.3-1: CSI-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3</sup>   |
|---------|---|
| Cell 2  | $CSI\_RP2 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI\_RP2 + \delta + G_{max}$   |
| Cell 3  | $CSI\_RP3 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI\_RP3 + \delta + G_{max}$   |
| Note 1: | CSI_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.3.1.1-1, selected according to the $l_0$ used in the test                                    |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class                             |

## A.5.7.7.2 EN-DC inter-frequency case measurement accuracy with FR2 serving cell and FR2 target cell

### A.5.7.7.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RS based RSRP measurement accuracy is within the specified limits. This test will verify the requirements in Clauses 10.1.5.3.1 and 10.1.5.3.2 for inter-frequency measurements with the testing configurations for NR cells in Table A.5.7.7.2.1-1.

**Table A.5.7.7.2.1-1: Applicable NR configurations for FR2 inter-frequency CSI-RSRP accuracy test**

| <b>Configuration</b> | <b>Description</b>  |
|----------------------|---|
| 1                    | FDD LTE PCell, cells 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2                    | TDD LTE PCell, cells 2&3 120 kHz SSB SCS, 120KHz CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.7.7.2.2 Test parameters

In this set of test cases, there are three cells in the test, E-UTRAN PCell (Cell 1), FR2 PSCell (Cell 2) and a FR2 neighbour cell (Cell 3) on a different frequency than the PSCell. The test parameters and applicability for Cell 1 are defined in A.3.7.2. The test parameters for the Cell 2 and Cell 3 are given in Table A.5.7.7.2.2-1 and Table A.5.7.7.2.2-2 below. Both absolute and relative accuracy of RSRP intrer-frequency measurements are tested by using the parameters in Table A.5.7.7.2.2-1 and Table A.5.7.7.2.2-2. The inter-frequency measurements are supported by a measurement gap.

Table A.5.7.7.2.2-1: CSI-RSRP inter-frequency general test parameters

| Parameter   | Config | Unit | Test 1                         |                            | Test 2                         |                            |
|---|--------|------|--------------------------------|----------------------------|--------------------------------|----------------------------|
|   |        |      | Cell 2                         | Cell 3                     | Cell 2                         | Cell 3                     |
| Physical cell ID  |        |      | 489                            | 0                          | 489                            | 0                          |

### A.5.7.7.2.3 Test Requirements

The CSI-RSRP measurement accuracy for Cell 2 and Cell 3 shall fulfil the absolute requirements in clause 10.1.5.3.1 and the relative requirements in clause 10.1.5.3.2.

Test 1:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in Table A.5.7.7.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table A.5.7.7.2.3-2.

Test 2:

Absolute accuracy of Cell 2 and absolute accuracy of Cell 3. The UE is deemed to meet the requirement if the reported CSI-RSRP is in the range shown in Table A.5.7.7.2.3-1.

Relative accuracy of Cell 3 compared with Cell 2. The UE is deemed to meet the requirement if the difference in reported CSI-RSRP meets the requirements in Table A.5.7.7.2.3-2.

**Table A.5.7.7.2.3-1: CSI-RSRP absolute accuracy test requirement**

|         | <b>Test requirement</b> <sup>Notes1,2,3,4</sup>  |
|---------|--|
| Cell 2  | $CSI\_RP2 - \delta + G_{min} + X \leq \text{Reported RSRP(dBm)} \leq CSI\_RP2 + \delta + G_{max}$  |
| Cell 3  | $CSI\_RP3 - \delta + G_{min} \leq \text{Reported RSRP(dBm)} \leq CSI\_RP3 + \delta + G_{max}$  |
| Note 1: | CSI_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2: | $\delta$ is the RSRP absolute accuracy requirement from Table 10.1.5.1.1-1, selected according to the lo used in the test  |
| Note 3: | $G_{min}$ and $G_{max}$ are the minimum and maximum UE gain values from Table B.2.1.5.1-1, selected according to the UE power class  |
| Note 4: | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

**Table A.5.7.7.2.3-2: CSI-RSRP relative accuracy test requirement**

|                 | <b>Test requirement</b> <sup>Notes1,2,3,4</sup>  |
|-----------------|--|
| Cell 3 – Cell 2 | $CSI\_RP3 - CSI\_RP2 - \delta \leq \text{Reported RSRP(dB)} \leq CSI\_RP3 - CSI\_RP2 + \delta - (X)$   |
| Note 1:         | CSI_RPn is the equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone configured in the test for the cell n under consideration  |
| Note 2:         | $\delta$ is the RSRP relative accuracy requirement from Table 10.1.5.1.2-1   |
| Note 3:         | Void   |
| Note 4:         | X is the Spherical coverage gain difference in dB, derived as (UE Refsens - UE Spherical coverage) from TS 38.101-2 [19] clauses 7.3.2 and 7.3.4, selected according to the UE power class and operating band. X is always a negative value. |

## A.5.7.8 CSI-RSRQ

### A.5.7.8.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 target cell

#### A.5.7.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in Clause 10.1.8 for inter-frequency measurement.

#### A.5.7.8.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configuration are shown in Table A.5.7.8.1.2-1. The absolute accuracy of CSI-RSRQ intra-frequency measurement is test by using the parameters in Table A.5.7.8.1.2-2. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1.

**Table A.5.7.8.1.2-1: CSI-RSRQ Intra frequency CSI-RSRQ supported test configurations**

| Config  | Description  |
|---|--|
| 1   | FDD LTE PCell, Cell 2&3 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2   | TDD LTE PCell, Cell 2&3 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations in each supported band |  |

**Table A.5.7.8.1.2-2: CSI-RSRQ Intra frequency test parameters**

| Parameter   |                  | Unit | Test 1                      |              | Test 2                      |              |
|---|------------------|------|-----------------------------|--------------|-----------------------------|--------------|

They are not settable parameters themselves.</p> <p>Note 3: CSI-RSRQ and CSI-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> <p>Note 4: Equivalent power received by an antenna with 0dBi gain at the centre of the quiet zone</p> <p>Note 5: As observed with 0dBi gain antenna at the centre of the quiet zone</p> <p>Note 6: NR operating band groups are as defined in Clause 3.5.2.</p> <p>Note 7: Void</p> <p>Note 8: Void</p> <p>Note 9: Information about types of UE beam is given in B.2.1.3, and does not limit UE implementation or test system implementation</p> |                                |                                      |        |        |        |

### A.5.7.8.1.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ +2.5dB to Nominal CSI-RSRQ -3.5dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5dB to Nominal CSI-RSRQ -4.5dB according to the requirements in clause 10.1.8 with an additional -1dB margin reflecting the possible impact of UE self-noise in the test. Nominal CSI-RSRQ is the value shown in table A.5.7.8.1.2-3.

### A.5.7.8.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-RSRQ measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.10 for inter-frequency measurement.

#### A.5.7.8.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.5.7.8.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-RSRQ inter-frequency measurement are tested by using test setup in Table A.5.7.8.2.2-2 and Table A.5.7.8.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1.

**Table A.5.7.8.2.2-1: CSI-RSRQ Inter frequency CSI-RSRQ supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB&CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

### A.5.7.8.2.3 Test Requirements

The CSI-RSRQ absolute measurement accuracy in test 1 shall be within the range Nominal CSI-RSRQ +2.5dB to Nominal CSI-RSRQ -3.5dB and the CSI-RSRQ measurement accuracy in test 2 shall be within the range Nominal CSI-RSRQ +3.5dB to Nominal CSI-RSRQ -4.5dB according to the requirements in clause 10.1.10 with an additional -1dB margin reflecting the possible impact of UE self-noise in the test.

The CSI-RSRQ relative measurement accuracy shall fulfil the requirements in clause 10.1.10.

## A.5.7.9 CSI-SINR

### A.5.7.9.1 EN-DC Intra-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.13.2.1.

#### A.5.7.9.1.2 Test Parameters

In this test case all cells are on the same carrier frequency. Supported test configurations are shown in Table A.5.7.9.1.2-1. The absolute accuracy of CSI-SINR intra-frequency measurement is test by using the parameters in Table A.5.7.9.1.2-2 and Table A.5.7.9.1.2-3. The configuration of cell 1 (E-UTRA PCell) is specified in clause A.3.7.2.1. In all test cases, Cell 2 is the PSCell and Cell 3 is the target cell.

Table A.5.7.9.1.2-1: CSI-SINR Intra frequency CSI-SINR supported test configurations

| Configuration | Description  |
|---------------|--|
| 1             | FDD LTE PCell, Cell 2&3 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | TDD LTE PCell, Cell 2&3 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to pass in one of the supported test configurations

Table A.5.7.9.1.2-2: CSI-SINR Intra frequency test parameters

| Parameter   | Unit | Test 1                      |                       | Test 2                      |                       |
|---|------|-----------------------------|-----------------------|-----------------------------|-----------------------|
|   |      | Cell 2                      | Cell 3                | Cell 2                      | Cell 3                |
| SSB ARFCN   |      | Freq2                       |                       | Freq2                       |                       |
| Duplex mode   |      | TDD                         |                       | TDD                         |                       |
| TDD configuration   |      | TDDConf.3.1                 |                       | TDDConf.3.1                 |                       |
| BW <sub>channel</sub>   | MHz  | 100: N <sub>RB,c</sub> = 66 |                       | 100: N <sub>RB,c</sub> = 66 |                       |

### A.5.7.9.1.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3dB to Nominal CSI-SINR -4dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR +3.5dB to Nominal CSI-SINR -4.5dB according to the requirements in clause 10.13.2 with an additional -1dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.9.1.2-3.

### A.5.7.9.2 EN-DC Inter-frequency measurement accuracy with FR2 serving cell and FR2 TDD target cell

#### A.5.7.9.2.1 Test Purpose and Environment

The purpose of this test is to verify that the CSI-SINR measurement accuracy is within the specified limits. This test will verify the requirements in clause 10.1.15.2.1 and 10.1.15.2.2 for inter-frequency measurement.

#### A.5.7.9.2.2 Test Parameters

In this test case the two NR cells (i.e., Cell 2 and Cell 3) are on different carrier frequencies and measurement gaps are provided. Supported test configurations are shown in Table A.5.7.9.2.2-1. Both absolute accuracy and relative accuracy requirements of CSI-SINR inter-frequency measurement are tested by using test setup in Table A.5.7.9.2.2-2 and Table A.5.7.9.2.2-3. In all test cases, Cell 2 is the PSCell and Cell 3 is target cell. Cell 1 is the E-UTRA cell which specific test parameters for this test case are specified in Table A.3.7.2.1-1. The TCI status for Cell 1 is defined in Table A.3.16.2-1 and TRS configuration for Cell 1 is defined in Table A.3.17.2.1-1.

**Table A.5.7.9.2.2-1: CSI-SINR Inter frequency CSI-SINR supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | LTE FDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |
| 2             | LTE TDD, NR 120 kHz SSB and CSI-RS SCS, 100 MHz bandwidth, TDD duplex mode |

**Table A.5.7.9.2.2-2: CSI-SINR Inter frequency general test parameters**

| Parameter  | Unit | Test 1                      |                       | Test 2                      |                       | Test 3                      |                       |

#### A.5.7.9.2.3 Test Requirements

The CSI-SINR absolute measurement accuracy in test 1 shall be within the range Nominal CSI-SINR+3dB to Nominal CSI-SINR -4dB and the CSI-SINR measurement accuracy in test 2 shall be within the range Nominal CSI-SINR+3.5dB to Nominal CSI-SINR -4.5dB according to the requirements in clause 10.1.15.2.1 with an additional -1dB margin reflecting the possible impact of UE self noise in the test. Nominal CSI-SINR is the value shown in table A.5.7.2.2.2-3

The CSI-SINR relative measurement accuracy shall fulfil the requirements in clause 10.1.15.2.2.

## A.5.8 Void

## A.6 NR standalone tests with all NR cells in FR1

### A.6.1 SA: RRC\_IDLE state mobility

#### A.6.1.1 Cell re-selection to NR

##### A.6.1.1.1 Cell reselection to FR1 intra-frequency NR case

###### A.6.1.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements specified in clause 4.2.2.3.

###### A.6.1.1.1.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.1.2-1, A.6.1.1.1.2-2 and A.6.1.1.1.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only cell 1 is already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing cell 2.

**Table A.6.1.1.1.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

Table A.6.1.1.1.2-2: General test parameters for intra frequency NR cell re-selection test case

| Parameter                  |                 | Unit   | Test configuration | Value          | Comment   |
|----------------------------|-----------------|--------|--------------------|----------------|---|
| Initial condition          | Active cell     |        | 1, 2, 3            | Cell1          |   |
| T2 end condition           | Active cell     |        | 1, 2, 3            | Cell2          |   |
|                            | Neighbour cells |        | 1, 2, 3            | Cell1          |   |
| Final condition            | Active cell     |        | 1, 2, 3            | Cell1          |   |
|                            | Neighbour cells |        | 1, 2, 3            | Cell2          |   |
| RF Channel Number          |                 |        | 1, 2, 3            | 1              |   |
| Time offset between cells  |                 |        | 1                  | 3 ms           | Asynchronous cells  |
|                            |                 |        | 2                  | 3 $\mu$ s      | Synchronous cells   |
|                            |                 |        | 3                  | 3 $\mu$ s      | Synchronous cells   |
| Access Barring Information |                 | -      | 1, 2, 3            | Not Sent       | No additional delays in random access procedure.  |
| SSB configuration          |                 |        | 1                  | SSB.1 FR1      |   |
|                            |                 |        | 2                  | SSB.1 FR1      |   |

They are not settable parameters themselves.</p> |               |                    |                         |        |        |   |      |       |

### A.6.1.1.1.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 34 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 1.

The cell re-selection delay to an already detected cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as:  $T_{\text{detect, NR\_Intra}} + T_{\text{SI-NR}}$ , and to an already detected cell can be expressed as:  $T_{\text{evaluate, NR\_intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{detect, NR\_Intra}}$  See Table 4.2.2.3-1 in clause 4.2.2.3

$T_{\text{evaluate, NR\_intra}}$  See Table 4.2.2.3-1 in clause 4.2.2.3

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280ms is assumed in this test case.

This gives a total of 33.28 s, allow 34 s for the cell re-selection delay to a newly detectable cell and 7.68 s for the cell re-selection delay to an already detected cell in the test case, which we allow 8 s.

### A.6.1.1.2 Cell reselection to FR1 inter-frequency NR case

#### A.6.1.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.4.

#### A.6.1.1.2.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.2.2-1, A.6.1.1.2.2-2 and A.6.1.1.2.2-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

**Table A.6.1.1.2.2-1: Supported test configurations**

| Configuration | Description of serving cell                       | Description of target cell                        |
|---------------|---|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

**Table A.6.1.1.2.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment  |
|----------------------------|-----------------|------|--------------------|----------------|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell2          | The UE camps on cell 2 in the initial phase and during T1 period the UE reselects to cell 1  |
|                            | Neighbour cell  |      | 1, 2, 3            | Cell 1         |  |
| T1 end condition           | Active cell     |      | 1, 2, 3            | Cell1          | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2          |  |
| T3 end condition           | Active cell     |      | 1, 2, 3            | Cell2          | The UE shall perform reselection to cell 2 with higher priority during T3  |
|                            | Neighbour cell  |      | 1, 2, 3            | Cell 1         |  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1, 2           |  |

| Thresh <sub>x, lowP</sub>  | dB            | 1, 2, 3            | 50                      |        |        | 50                      |           |        |
| Propagation Condition  |               | 1, 2, 3            | AWGN                    |        |        |                         |           |        |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |               |                    |                         |        |        |                         |           |        |
| Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |               |                    |                         |        |        |                         |           |        |
| Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |               |                    |                         |        |        |                         |           |        |

### A.6.1.1.2.3 Test Requirements

The cell reselection delay to a higher priority cell is defined as the time from the beginning of time period T3, to the moment when the UE camps again on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The cell reselection delay to a lower priority cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Registration procedure for mobility and periodic registration update on cell 1.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{\text{higher\_priority\_search}} + T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$ , and to a lower priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$ .

Where:

$T_{\text{higher\_priority\_search}}$  See clause 4.2.2.7

$T_{\text{evaluate, NR\_inter}}$  See Table 4.2.2.4-1 in clause 4.2.2.4

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority cell and 7.68 s for the cell re-selection delay to a lower priority cell in the test case, which we allow 8 s.

### A.6.1.1.3 Cell reselection to FR1 intra-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

#### A.6.1.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for UE fulfilling low mobility criterion specified in clause 4.2.2.9.2

#### A.6.1.1.3.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.3.2-1, A.6.1.1.3.2-2 and A.6.1.1.3.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing cell 2.

**Table A.6.1.1.3.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.1.1.3.2-2: General test parameters for FR1 intra frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter | Unit | Test configuration | Value | Comment |
|-----------|------|--------------------|-------|---------|
|-----------|------|--------------------|-------|---------|

|                            |                 |   |         |                |   |
|----------------------------|-----------------|---|---------|----------------|---|
| Initial condition          | Active cell     |   | 1, 2, 3 | Cell1          | The UE camps on cell 1 in the initial phase   |
|                            | Neighbour cells |   | 1, 2, 3 | Cell2          |   |
| T1 end condition           | Active cell     |   | 1, 2, 3 | Cell2          | The UE reselects to cell 2 during T1 period   |
|                            | Neighbour cells |   | 1, 2, 3 | Cell1          |   |
| Final condition            | Active cell     |   | 1, 2, 3 | Cell1          | The UE reselects to cell 1 during T2 period   |
|                            | Neighbour cells |   | 1, 2, 3 | Cell2          |   |
| RF Channel Number          |                 |   | 1, 2, 3 | 1              |   |
| Time offset between cells  |                 |   | 1       | 3 ms           | Asynchronous cells  |
|                            |                 |   | 2       | 3 $\mu$ s      | Synchronous cells   |
|                            |                 |   | 3       | 3 $\mu$ s      | Synchronous cells   |
| Access Barring Information |                 | - | 1, 2, 3 | Not Sent       | No additional delays in random access procedure.                                      |
| SSB configuration          |                 |   | 1       | SSB.1 FR1      |   |
|                            |                 |   | 2       | SSB.1 FR1      |   |
|                            |                 |   | 3       | SSB.2 FR1      |   |
| SMTC configuration         |                 |   | 1       | SMTC pattern 2 | Configured in SIB2 of Cell 1  |
|                            |                 |   |         | SMTC pattern 6 | Configured in SIB2 of Cell 2  |
|                            |                 |   | 2       | SMTC pattern 1 |   |
|                            |                 |   |         | 3              | SMTC pattern 1  |
| DRX cycle length           |                 | s | 1, 2, 3 | 0.64           | The value shall be used for all cells in the test.                                    |
| PRACH configuration index  |                 |   | 1, 2, 3 | 102            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                   |
| rangeToBestCell            |                 |   | 1, 2, 3 | Not configured |   |
| T1                         |                 | s | 1, 2, 3 | 25             | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2                         |                 | s | 1, 2, 3 | 25             | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

**Table A.6.1.1.3.2-3: Cell specific test parameters for FR1 intra frequency NR cell re-selection test case in AWGN for UE fulfilling low mobility criterion**

| Parameter  | Unit          | Test configuration | Cell 1                  |        | Cell 2                       |       |
|--|---------------|--------------------|-------------------------|--------|------------------------------|-------|

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |

### A.6.1.1.3.3 Test Requirements

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected cell shall be less than 17 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to an already detected cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to an already detected cell can be expressed as:  $T_{\text{evaluate,NR\_Intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate,NR\_Intra}}$  See Table 4.2.2.9.2-1 in clause 4.2.2.9.2 for reselection to Cell 2 during T1 with UE fulfilling low mobility criterion. 15.36s.

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to an already detected cell for UE fulfilling low mobility criterion in the test case.

### A.6.1.1.4 Cell reselection to FR1 intra-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

#### A.6.1.1.4.1 Test Purpose and Environment

This test is to verify the relaxed cell re-selection requirement for UEs configured with not-at-cell edge criterion specified in clause 4.2.2.9.3.

#### A.6.1.1.4.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.4.2-1, A.6.1.1.4.2-2 and A.6.1.1.4.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both Cell 1 and Cell 2 are already identified by the UE prior to the start of the test. Cell 1 and Cell 2 belong to different tracking areas.

**Table A.6.1.1.4.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.1.1.4.2-2: General test parameters for FR1 intra frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment   |
|----------------------------|-----------------|------|--------------------|----------------|---|
| Initial condition          | Active Cell     |      | 1, 2, 3            | Cell1          | The UE camps on Cell 1 in the initial phase   |
|                            | Neighbour Cells |      | 1, 2, 3            | Cell2          |   |
| T1 end condition           | Active Cell     |      | 1, 2, 3            | Cell2          | The UE shall fulfil the not-at-cell edge criterion and reselect to cell 2 during T1 period during T1. |
|                            | Neighbour Cells |      | 1, 2, 3            | Cell1          |   |
| T2 end condition           | Active Cell     |      | 1, 2, 3            | Cell1          | The UE shall perform reselection to Cell 1 during T2  |
|                            | Neighbour Cells |      | 1, 2, 3            | Cell2          |   |
| RF Channel Number          |                 |      | 1, 2, 3            | 1              |   |
| Time offset between Cells  |                 |      | 1                  | 3 ms           | Asynchronous Cells  |
|                            |                 |      | 2                  | 3 $\mu$ s      | Synchronous Cells   |
|                            |                 |      | 3                  | 3 $\mu$ s      | Synchronous Cells   |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent       | No additional delays in random access procedure.  |
| SSB configuration          |                 |      | 1                  | SSB.1 FR1      |   |
|                            |                 |      | 2                  | SSB.1 FR1      |   |
|                            |                 |      | 3                  | SSB.2 FR1      |   |
| SMTC configuration         |                 |      | 1                  | SMTC pattern 2 | Configured in SIB2 of Cell 1  |
|                            |                 |      |                    | SMTC pattern 6 | Configured in SIB2 of Cell 2  |
|                            |                 |      | 2                  | SMTC pattern 1 |   |
|                            |                 |      |                    | 3              | SMTC pattern 1  |
| DRX cycle length           |                 | s    | 1, 2, 3            | 0.64           | The value shall be used for all Cells in the test.  |
| PRACH configuration index  |                 |      | 1, 2, 3            | 102            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                                   |
| rangeToBestCell            |                 |      | 1, 2, 3            | Not configured |   |
| T1                         |                 | s    | 1, 2, 3            | 20             | T1 needs to be defined so that Cell re-selection reaction time is taken into account.                 |
| T2                         |                 | s    | 1, 2, 3            | 20             | T2 needs to be defined so that Cell re-selection reaction time is taken into account.                 |

| <p>Note 1: OCNG shall be used such that both Cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other Cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                         |          |                         |        |

### A.6.1.1.4.3 Test Requirements

The cell re-selection delay to an already detected cell for UE configured with *cellEdgeEvaluation* criterion is defined as the time from the beginning of time period T1, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to an already detected cell for UE configured with *cellEdgeEvaluation* criterion shall be less than 17s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to an already detected cell for UE configured with relaxed measurement criterion can be expressed as:  $T_{\text{evaluate,NR\_Intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate,NR\_Intra}}$  See Table 4.2.2.9.3-1 for UE fulfilling not-at-cell edge criterion in clause 4.2.2.9.3.

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a Cell; 1280ms is assumed in this test case.

This gives a total of 16.64s, allow 17s for the cell re-selection delay to an already detected cell for UE fulfilling not-at-cell edge criterion in the test case.

### A.6.1.1.5 Cell reselection to FR1 inter-frequency NR case for UE fulfilling low mobility relaxed measurement criterion

#### A.6.1.1.5.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.10.2, for UE fulfilling low mobility relaxed measurement criterion.

#### A.6.1.1.5.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.5.2-1, A.6.1.1.5.2-2 and A.6.1.1.5.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1]. So, Cell 2 and Cell 1 configure the UE as follows:

*lowMobilityEvaluation* [2] criterion is configured according to the parameters listed in Table A.6.1.1.5.2-3;

*cellEdgeEvaluation* [2] criterion is not configured;

*combineRelaxedMeasCondition* [2] is not configured;

**Table A.6.1.1.5.2-1: Supported test configurations**

| Configuration   | Description of serving cell                       | Description of target cell                        |
|---|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.6.1.1.5.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment  |
|----------------------------|-----------------|------|--------------------|----------------|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell2          | The UE camps on cell 2 in the initial phase, it fulfills Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to cell 1 |
|                            | Neighbour cells |      | 1, 2, 3            | Cell1          |  |
| T1 end condition           | Active cell     |      | 1, 2, 3            | Cell1          | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2          |  |
| T2 end condition           | Active cell     |      | 1, 2, 3            | Cell2          | The UE shall perform reselection to cell 2 with higher priority during T2  |
|                            | Neighbour cells |      | 1, 2, 3            | Cell1          |  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1, 2           |  |
| Time offset between cells  |                 |      | 1                  | 3 ms           | Asynchronous cells   |
|                            |                 |      | 2                  | 3 $\mu$ s      | Synchronous cells  |
|                            |                 |      | 3                  | 3 $\mu$ s      | Synchronous cells  |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent       | No additional delays in random access procedure.   |
| SSB Configuration          |                 |      | 1                  | SSB.1 FR1      |  |
|                            |                 |      | 2                  | SSB.1 FR1      |  |
|                            |                 |      | 3                  | SSB.2 FR1      |  |
| SMTC configuration         |                 |      | 1                  | SMTC pattern 2 | Configured in SIB4 of Cell 1   |
|                            |                 |      |                    | SMTC pattern 6 | Configured in SIB4 of Cell 2   |
|                            |                 |      | 2                  | SMTC pattern 1 |  |
|                            |                 |      |                    | 3              | SMTC pattern 1   |
| DRX cycle length           |                 | s    | 1, 2, 3            | 0.64           | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                 |      | 1, 2, 3            | 102            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| rangeToBestCell            |                 |      | 1, 2, 3            | Not configured |  |
| T1                         |                 | s    | 1, 2, 3            | 25 s           | T1 is defined so that cell re-selection reaction time is taken into account.   |
| T2                         |                 | s    | 1, 2, 3            | 25 s           | T2 is defined so that cell re-selection reaction time is taken into account.   |

| Propagation Condition |  | 1, 2, 3 | AWGN |   |
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |         |      |   |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |         |      |   |
| Note 3:               | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |         |      |   |

### A.6.1.1.5.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to a lower priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling low mobility relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a known lower priority cell can be expressed as:  $T_{evaluate, NR\_inter} + T_{SI-NR}$ ,

Where:

$T_{evaluate, NR\_inter}$  See Table 4.2.2.10.2-1 in clause 4.2.2.10.2

$T_{SI-NR}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17s for the cell re-selection delay to an already detected lower priority cell and 16.64s for the cell re-selection delay to an already detected higher priority cell, which we allow 17s for UE fulfilling low mobility relaxed measurements in the test case.

### A.6.1.1.6 Cell reselection to FR1 inter-frequency NR case for UE fulfilling not-at-cell edge relaxed measurement criterion

#### A.6.1.1.6.1 Test Purpose and Environment

This test is to verify the requirement for the inter frequency NR cell reselection requirements specified in clause 4.2.2.10.3, for UE fulfilling not-at-cell edge relaxed measurement criterion.

#### A.6.1.1.6.2 Test Parameters

The test scenario comprises of 2 cells on 2 different NR carriers respectively as given in tables A.6.1.1.6.2-1, A.6.1.1.6.2-2 and A.6.1.1.6.2-3. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both cell 1 and cell 2 are already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas and cell 2 is of higher priority than cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE not-at-cell edge as defined in clause 5.2.4.9.2 in [1]. So, Cell 2 and Cell 1 configures the UE as follows:

*cellEdgeEvaluation* [2] criterion is configured according to the parameters listed in Table A.6.1.1.5.2-3;

*lowMobilityEvaluation* [2] criterion is not configured;

*combineRelaxedMeasCondition* [2] is not configured;

**Table A.6.1.1.6.2-1: Supported test configurations**

| Configuration   | Description of serving cell                       | Description of target cell                        |
|---|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |   |

**Table A.6.1.1.6.2-2: General test parameters for FR1 inter frequency NR cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter                  |                 | Unit | Test configuration | Value          | Comment  |
|----------------------------|-----------------|------|--------------------|----------------|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell2          | The UE camps on cell 2 in the initial phase, it fulfills Not-at-cell edge relaxation measurements criterion, and during T1 period the UE reselects to cell 1 |
|                            | Neighbour cells |      | 1, 2, 3            | Cell1          |  |
| T1 end condition           | Active cell     |      | 1, 2, 3            | Cell1          | The UE shall perform reselection to cell 1 during T1   |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2          |  |
| T2 end condition           | Active cell     |      | 1, 2, 3            | Cell2          | The UE shall perform reselection to cell 2 with higher priority during T2  |
|                            | Neighbour cells |      | 1, 2, 3            | Cell1          |  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1, 2           |  |
| Time offset between cells  |                 |      | 1                  | 3 ms           | Asynchronous cells   |
|                            |                 |      | 2                  | 3 $\mu$ s      | Synchronous cells  |
|                            |                 |      | 3                  | 3 $\mu$ s      | Synchronous cells  |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent       | No additional delays in random access procedure.   |
| SSB Configuration          |                 |      | 1                  | SSB.1 FR1      |  |
|                            |                 |      | 2                  | SSB.1 FR1      |  |
|                            |                 |      | 3                  | SSB.2 FR1      |  |
| SMTC configuration         |                 |      | 1                  | SMTC pattern 2 | Configured in SIB4 of Cell 1   |
|                            |                 |      |                    | SMTC pattern 6 | Configured in SIB4 of Cell 2   |
|                            |                 |      | 2                  | SMTC pattern 1 |  |
|                            |                 |      |                    | SMTC pattern 1 |  |
| DRX cycle length           |                 | s    | 1, 2, 3            | 0.64           | The value shall be used for all cells in the test.   |
| PRACH configuration index  |                 |      | 1, 2, 3            | 102            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| rangeToBestCell            |                 |      | 1, 2, 3            | Not configured |  |
| T1                         |                 | s    | 1, 2, 3            | 20 s           | T1 is defined so that cell re-selection reaction time is taken into account.   |
| T2                         |                 | s    | 1, 2, 3            | 20 s           | T2 is defined so that cell re-selection reaction time is taken into account.   |

**Table A.6.1.1.6.2-3: Cell specific test parameters for FR1 inter frequency NR cell re-selection test case in AWGN for UE fulfilling not-at-cell edge criterion**

| Parameter  | Unit          | Test configuration | Cell 1                  |        | Cell 2                  |        |

| Propagation Condition         |  | 1, 2, 3 | AWGN           |
| Note 1:                       | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |         |                |
| Note 2:                       | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |         |                |
| Note 3:                       | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |         |                |

### A.6.1.1.6.3 Test Requirements

The cell reselection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to an already detected lower priority cell for UE fulfilling not-at-cell edge relaxed measurements shall be less than 17 s.

The cell reselection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements is defined as the time from the beginning of time period T2, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to an already detected higher priority cell for UE fulfilling not-at-cell-edge relaxed measurements shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, NR\_inter}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{evaluate, NR\_inter}}$  See Table 4.2.2.10.3-1 in clause 4.2.2.10

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17s for the cell re-selection delay to an already detected lower priority cell and 16.64s for the cell re-selection delay to an already higher priority cell, which we allow 17s for UE fulfilling not-at-cell edge relaxed measurements in the test case.

### A.6.1.1.7 Cell reselection to FR1 intra-frequency NR case for UE configured with *highSpeedMeasFlag-r16*

#### A.6.1.1.7.1 Test Purpose and Environment

This test is to verify the requirement for the intra frequency NR cell reselection requirements for UE configured with *highSpeedMeasFlag-r16* specified in clause 4.2.2.3.

#### A.6.1.1.7.2 Test Parameters

The test scenario comprises of 1 NR carrier and 2 cells as given in tables A.6.1.1.1.x-1, A.6.1.1.1.x-2 and A.6.1.1.1.x-3. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. Only cell 1 is already identified by the UE prior to the start of the test. Cell 1 and cell 2 belong to different tracking areas. Furthermore, UE has not registered with network for the tracking area containing cell 2. *highSpeedMeasFlag-r16* is broadcasted to UE.

Table A.6.1.1.7.2-1: Supported test configurations

| Configuration   | Description                                       |
|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

Table A.6.1.1.7.2-2: General test parameters for intra frequency NR cell re-selection test case for UE configured with highSpeedMeasFlag-r16

| Parameter                  | Unit            | Test configuration | Value          | Comment   |
|----------------------------|-----------------|--------------------|----------------|---|
| Initial condition          | Active cell     | 1, 2, 3            | Cell1          |   |
|                            | Neighbour cells | 1, 2, 3            | Cell2          |   |
| T2 end condition           | Active cell     | 1, 2, 3            | Cell2          |   |
|                            | Neighbour cells | 1, 2, 3            | Cell1          |   |
| Final condition            | Active cell     | 1, 2, 3            | Cell1          |   |
|                            | Neighbour cells | 1, 2, 3            | Cell2          |   |
| RF Channel Number          |                 | 1, 2, 3            | 1              |   |
| Time offset between cells  |                 | 1                  | 3 ms           | Asynchronous cells  |
|                            |                 | 2                  | 3 $\mu$ s      | Synchronous cells   |
|                            |                 | 3                  | 3 $\mu$ s      | Synchronous cells   |
| Access Barring Information | -               | 1, 2, 3            | Not Sent       | No additional delays in random access procedure.  |
| SSB configuration          |                 | 1                  | SSB.1 FR1      |   |
|                            |                 | 2                  | SSB.1 FR1      |   |
|                            |                 | 3                  | SSB.2 FR1      |   |
| SMTC configuration         |                 | 1                  | SMTC pattern 2 | Configured in SIB2 of Cell 1  |
|                            |                 |                    | SMTC pattern 6 | Configured in SIB2 of Cell 2  |
|                            |                 | 2                  | SMTC pattern 1 |   |
|                            |                 | 3                  | SMTC pattern 1 |   |
| DRX cycle length           | s               | 1, 2, 3            | 0.32           | The value shall be used for all cells in the test.  |
| PRACH configuration index  |                 | 1, 2, 3            | 102            | The detailed configuration is specified in TS 38.211 clause 6.3.3.2   |
| rangeToBestCell            |                 | 1, 2, 3            | Not configured |   |
| T1                         | s               | 1, 2, 3            | >7             | During T1, Cell 2 shall be powered off, and during the off time the physical cell identity shall be changed, The intention is to ensure that Cell 2 has not been detected by the UE prior to the start of period T2 |
| T2                         | s               | 1, 2, 3            | 4              | T2 needs to be defined so that cell re-selection reaction time is taken into account.   |
| T3                         | s               | 1, 2, 3            | 3              | T3 needs to be defined so that cell re-selection reaction time is taken into account.   |

**Table A.6.1.1.7.2-3: Cell specific test parameters for intra frequency NR cell re-selection test case for UE configured with *highSpeedMeasFlag-r16***

| Parameter  | Unit          | Test configuration | Cell 1                  |        |        | Cell 2   |      |       |

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944 Hz.  |
| Note 5: | The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334 Hz.  |

### A.6.1.1.7.3 Test Requirements

The cell reselection delay to a newly detectable cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on Cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on Cell 2.

The cell re-selection delay to a newly detectable cell shall be less than 4 s.

The cell reselection delay to an already detected cell is defined as the time from the beginning of time period T3, to the moment when the UE camps on cell 1, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 1.

The cell re-selection delay to an already detected cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a newly detectable cell can be expressed as:  $T_{\text{detect, NR\_Intra}} + T_{\text{SI-NR}}$ , and to an already detected cell can be expressed as:  $T_{\text{evaluate, NR\_intra}} + T_{\text{SI-NR}}$ ,

Where:

$T_{\text{detect, NR\_Intra}}$  See Table 4.2.2.3-2 in clause 4.2.2.3

$T_{\text{evaluate, NR\_intra}}$  See Table 4.2.2.3-2 in clause 4.2.2.3

$T_{\text{SI-NR}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280ms is assumed in this test case.

This gives a total of 3.84s, allow 4s for the cell re-selection delay to a newly detectable cell and 2.24 s for the cell re-selection delay to an already detected cell in the test case, which we allow 3 s.

## A.6.1.2 Inter-RAT E-UTRAN cell re-selection

### A.6.1.2.1 Cell reselection to higher priority E-UTRAN

#### A.6.1.2.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2.2.5 when the E-UTRAN cell is of higher priority.

#### A.6.1.2.1.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.1.2-1, A.6.1.2.1.2-2, A.6.1.2.1.2-3 and A.6.1.2.1.2-4. The test consists of three successive time periods, with time duration of T1, T2, and T3 respectively. NR cell 1 is already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of higher priority than cell 1.

Table A.6.1.2.1.2-1: Supported test configurations

| Configuration | Description of serving cell                          | Description of target cell            |
|---------------|--|---------------------------------------|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

Table A.6.1.2.1.2-2: General test parameters for NR to E-UTRAN cell re-selection test case

| Parameter                         |                | Unit | Test configuration | Value    | Comment  |
|-----------------------------------|----------------|------|--------------------|----------|--|
| Initial condition                 | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE camps on cell 1 in the initial phase and during T2 period the UE reselects to cell 2.   |
| T2 end condition                  | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell2    | The UE shall perform reselection to cell 2 during T2.  |
|                                   | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell1    |  |
| T3 end condition                  | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE shall perform reselection to cell 1 during T3 for iteration of the tests.   |
|                                   | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| Access Barring Information        |                | -    | 1, 2, 3, 4, 5, 6   | Not Sent | No additional delays in random access procedure.   |
| DRX cycle length                  |                | s    | 1, 2, 3, 4, 5, 6   | 1.28     | The value shall be used for all cells in the test.   |
| NR PRACH configuration index      |                |      | 1, 2, 3, 4, 5, 6   | 102      | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| E-UTRAN PRACH configuration index |                |      | 1, 2, 3            | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]  |
|                                   |                |      | 4, 5, 6            | 4        |  |
| E-UTRAN PRACH configuration index |                |      | 1, 2, 3            | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]  |
|                                   |                |      | 4, 5, 6            | 4        |  |
| T1                                |                | s    | 1, 2, 3, 4, 5, 6   | >7       | During T1, cell 2 shall be powered off, and during the off time the physical cell identity shall be changed. The intention is to ensure that cell 2 has not been detected by the UE prior to the start of period T2. |
| T2                                |                | s    | 1, 2, 3, 4, 5, 6   | 75       | T2 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T3                                |                | s    | 1, 2, 3, 4, 5, 6   | 15       | T3 needs to be defined so that cell re-selection reaction time is taken into account.  |

Table A.6.1.2.1.2-3: Cell specific test parameters for NR cell 1

| Parameter   | Unit          | Test configuration | Cell 1                  |        |        |
|---|---------------|--------------------|-------------------------|--------|--------|
|   |               |                    | T1                      | T2     | T3     |
| TDD configuration   |               | 1, 4               | N/A                     |        |        |

### A.6.1.2.1.3 Test Requirements

The cell reselection delay to a higher priority E-UTRAN cell is defined as the time from the beginning of time period T2, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a higher priority cell shall be less than 68 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a higher priority cell can be expressed as:  $T_{higher\_priority\_search} + T_{evaluate, E-UTRAN} + T_{SLE-UTRA}$ ,

Where:

$T_{higher\_priority\_search}$  See clause 4.2.2.7

$T_{evaluate, E-UTRAN}$  See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{SLE-UTRA}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 67.68 s, allow 68 s for the cell re-selection delay to a higher priority E-UTRAN cell.

## A.6.1.2.2 Cell reselection to lower priority E-UTRAN

### A.6.1.2.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements specified in clause 4.2.2.5 when the E-UTRAN cell is of lower priority.

### A.6.1.2.2.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.2.2-1, A.6.1.2.2.2-2, A.6.1.2.2.2-3 and A.6.1.2.2.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR cell 1 and E-UTRAN cell 2 are already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of lower priority than cell 1.

**Table A.6.1.2.2.2-1: Supported test configurations**

| Configuration | Description of serving cell                          | Description of target cell            |
|---------------|--|---------------------------------------|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

**Table A.6.1.2.2.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter                         |                | Unit | Test configuration | Value    | Comment  |
|-----------------------------------|----------------|------|--------------------|----------|--|
| Initial condition                 | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE camps on cell 1 in the initial phase.   |
|                                   | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| T1 end condition                  | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell2    | The UE shall perform reselection to cell 2 during T1.                                |
|                                   | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell1    |  |
| T2 end condition                  | Active cell    |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE shall perform reselection to cell 1 during T2 for iteration of the tests.     |
|                                   | Neighbour cell |      | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| Access Barring Information        |                | -    | 1, 2, 3, 4, 5, 6   | Not Sent | No additional delays in random access procedure.                                     |
| DRX cycle length                  |                | s    | 1, 2, 3, 4, 5, 6   | 1.28     | The value shall be used for all cells in the test.                                   |
| NR PRACH configuration index      |                |      | 1, 2, 3, 4, 5, 6   | 102      | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                  |
| E-UTRAN PRACH configuration index |                |      | 1, 2, 3            | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]                                      |
|                                   |                |      | 4, 5, 6            | 4        |  |
| T1                                |                | s    | 1, 2, 3, 4, 5, 6   | 15       | T1 needs to be defined so that cell reselection reaction time is taken into account. |
| T2                                |                | s    | 1, 2, 3, 4, 5, 6   | 75       | T2 needs to be defined so that cell reselection reaction time is taken into account. |

Table A.6.1.2.2.2-3: Cell specific test parameters for NR cell 1

| Parameter                           | Unit  | Test configuration | Cell 1                  |        |
|-------------------------------------|---|--------------------|-------------------------|--------|

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |   |     |
| Note 2: This refers to the value of Thresh <sub>x, high</sub> which is included in E-UTRA system information, and is a threshold for the NR target cell       |            |   |     |

### A.6.1.2.2.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 8 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, E-UTRAN}} + T_{\text{SI-E-UTRA}}$ ,

Where:

$T_{\text{evaluate, E-UTRAN}}$  See Table 4.2.2.5-1 in clause 4.2.2.5

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 7.68 s, allow 8 s for the cell re-selection delay to a lower priority E-UTRAN cell.

### A.6.1.2.3 Cell reselection to lower priority E-UTRAN for UE fulfilling low mobility relaxed measurement criterion

#### A.6.1.2.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection when UE fulfills the low mobility criterion specified in clause 4.2.2.11.2 and the E-UTRAN cell is of lower priority.

#### A.6.1.2.3.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.3.2-1, A.6.1.2.3.2-2, A.6.1.2.3.2-3 and A.6.1.2.3.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR cell 1 and E-UTRAN cell 2 are already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of lower priority than cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with low mobility defined in clause 5.2.4.9.1 in [1]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvaluation* [2] criterion is configured according to the parameters listed in Table A.6.1.2.3.2-3;
- *cellEdgeEvaluation* [2] criterion is not configured;
- *combineRelaxedMeasCondition* [2] is not configured

**Table A.6.1.2.3.2-1: Supported test configurations**

| Configuration   | Description of serving cell                          | Description of target cell            |
|---|--|---------------------------------------|
| 1   | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2   | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4   | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5   | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |  |                                       |

**Table A.6.1.2.3.2-2: General test parameters for NR to E-UTRAN cell re-selection test case for UE fulfilling low mobility criterion**

| Parameter                         |                 | Unit | Test configuration | Value    | Comment  |
|-----------------------------------|-----------------|------|--------------------|----------|--|
| Initial condition                 | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE camps on cell 1 in the initial phase, it fulfills Low Mobility relaxation measurements criterion, and during T1 period the UE reselects to cell 2 |
|                                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| T1 end condition                  | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell2    | The UE shall perform reselection to cell 2 during T1   |
|                                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell1    |  |
| T2 end condition                  | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1    | The UE shall perform reselection to cell 1 with higher priority during T2 for iteration of the tests.  |
|                                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| Access Barring Information        |                 | -    | 1, 2, 3, 4, 5, 6   | Not Sent | No additional delays in random access procedure.   |
| DRX cycle length                  |                 | s    | 1, 2, 3, 4, 5, 6   | 0.64     | The value shall be used for all cells in the test.   |
| NR PRACH configuration index      |                 |      | 1, 2, 3, 4, 5, 6   | 102      | The detailed configuration is specified in TS 38.211 clause 6.3.3.2  |
| E-UTRAN PRACH configuration index |                 |      | 1, 2, 3            | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]  |
|                                   |                 |      | 4, 5, 6            | 4        |  |
| T1                                |                 | s    | 1, 2, 3, 4, 5, 6   | 24       | T1 needs to be defined so that cell re-selection reaction time is taken into account.  |
| T2                                |                 | s    | 1, 2, 3, 4, 5, 6   | 24       | T2 needs to be defined so that cell re-selection reaction time is taken into account.  |

Table A.6.1.2.3.2-3: Cell specific test parameters for NR cell 1

| Parameter                           | Unit  | Test configuration | Cell 1                  |        |
|-------------------------------------|---|--------------------|-------------------------|--------|
|                                     |   |                    | T1                      | T2     |

| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |            |   |     |
| Note 2: This refers to the value of Thresh <sub>x, high</sub> which is included in E-UTRA system information, and is a threshold for the NR target cell       |            |   |     |

### A.6.1.2.3.3 Test Requirements

time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRConnectionRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, E-UTRAN}} + T_{\text{SI-E-UTRA}}$ ,

Where:

$T_{\text{evaluate, E-UTRAN}}$  See Table 4.2.2.11.2-1 in clause 4.2.2.11.2

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of  $15.36 (T_{\text{evaluate, E-UTRAN}}) + 1.28 (T_{\text{SI-E-UTRA}}) = 16.64$  s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling low mobility criterion.

#### A.6.1.2.4 Cell reselection to lower priority E-UTRAN for UE fulfilling not-at-cell edge relaxed measurement criterion

##### A.6.1.2.4.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements when UE fulfills not-at-cell edge criterion specified in clause 4.2.2.11.3 when the E-UTRAN cell is of lower priority.

##### A.6.1.2.4.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.4.2-1, A.6.1.2.4.2-2, A.6.1.2.4.2-3 and A.6.1.2.4.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR cell 1 and E-UTRAN cell 2 are already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of lower priority than cell 1.

As specified in the Test Purpose, the UE is configured with the relaxed measurement criterion for UE with not-at-cell edge defined in clause 5.2.4.9.2 in [1]. So, Cell 1 configures the UE as follows:

- *lowMobilityEvaluation* [2] criterion is not configured;
- *cellEdgeEvaluation* [2] criterion is configured according to the parameters listed in Table A.6.1.2.4.2-3;
- *combineRelaxedMeasCondition* [2] is not configured

**Table A.6.1.2.4.2-1: Supported test configurations**

| Configuration | Description of serving cell                          | Description of target cell            |
|---------------|--|---------------------------------------|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

**Table A.6.1.2.4.2-2: General test parameters for NR to E-UTRAN cell re-selection test case for UE fulfilling not-at-cell edge criterion**

| Parameter         |                 | Unit | Test configuration | Value | Comment  |
|-------------------|-----------------|------|--------------------|-------|--|
| Initial condition | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1 | The UE camps on cell 1 in the initial phase and fulfill the not at the cell edge criteria. |
|                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell2 |  |
| T1 end condition  | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell2 | The UE shall perform reselection to cell 2 during T1.                                      |
|                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell1 |  |
| T2 end condition  | Active cell     |      | 1, 2, 3, 4, 5, 6   | Cell1 | The UE shall perform reselection to cell 1 during T2 for iteration of the tests.           |
|                   | Neighbour cells |      | 1, 2, 3, 4, 5, 6   | Cell2 |  |

|                                   |   |                  |          |   |
|-----------------------------------|---|------------------|----------|---|
| Access Barring Information        | - | 1, 2, 3, 4, 5, 6 | Not Sent | No additional delays in random access procedure.                                      |
| DRX cycle length                  | s | 1, 2, 3, 4, 5, 6 | 0.64     | The value shall be used for all cells in the test.                                    |
| NR PRACH configuration index      |   | 1, 2, 3, 4, 5, 6 | 102      | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                   |
| E-UTRAN PRACH configuration index |   | 1, 2, 3          | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]                                       |
|                                   |   | 4, 5, 6          | 4        |   |
| T1                                | s | 1, 2, 3, 4, 5, 6 | 24       | T1 needs to be defined so that cell re-selection reaction time is taken into account. |
| T2                                | s | 1, 2, 3, 4, 5, 6 | 24       | T2 needs to be defined so that cell re-selection reaction time is taken into account. |

Table A.6.1.2.4.2-3: Cell specific test parameters for NR cell 1

| Parameter   | Unit          | Test configuration | Cell 1                  |        |
|---|---------------|--------------------|-------------------------|--------|
|   |               |                    | T1                      | T2     |
| TDD configuration   |               | 1, 4               | N/A                     |        |

#### A.6.1.2.4.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCConnectionRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 17s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, E-UTRAN}} + T_{\text{SI-E-UTRA}}$ ,

Where:

$T_{\text{evaluate, E-UTRAN}}$  See Table 4.2.2.11.3-1 in clause 4.2.2.11.3

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 16.64 s, allow 17 s for the cell re-selection delay to a lower priority E-UTRAN cell for UE fulfilling not-at-cell edge criterion.

### A.6.1.2.5 Cell reselection to lower priority E-UTRAN cell for UE configured with highSpeedMeasFlag-r16

#### A.6.1.2.5.1 Test Purpose and Environment

This test is to verify the requirement for the NR to E-UTRAN inter-RAT cell reselection requirements for UE configured with *highSpeedMeasFlag-r16* specified in clause 4.2.2.5 when the E-UTRAN cell is of lower priority.

#### A.6.1.2.5.2 Test Parameters

The test scenario comprises of one NR cell and one E-UTRAN cell as given in tables A.6.1.2.5.2-1, A.6.1.2.5.2-2, A.6.1.2.5.2-3 and A.6.1.2.5.2-4. The test consists of two successive time periods, with time duration of T1 and T2 respectively. Both NR cell 1 and E-UTRAN cell 2 are already identified by the UE prior to the start of the test. E-UTRAN cell 2 is of lower priority than cell 1. The E-UTRAN cell 2 is indicated by NR cell 1 as an HST cell.

**Table A.6.1.2.5.2-1: Supported test configurations**

| Configuration | Description of serving cell                          | Description of target cell            |
|---------------|--|---------------------------------------|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, TDD duplex mode |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode | LTE 10 MHz bandwidth, FDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations.

**Table A.6.1.2.5.2-2: General test parameters for NR to E-UTRAN cell re-selection test case**

| Parameter                         | Unit            | Test configuration | Value    | Comment  |
|-----------------------------------|-----------------|--------------------|----------|--|
| Initial condition                 | Active cell     | 1, 2, 3, 4, 5, 6   | Cell1    | The UE camps on cell 1 in the initial phase.   |
| T1 end condition                  | Active cell     | 1, 2, 3, 4, 5, 6   | Cell2    | The UE shall perform reselection to cell 2 during T1.                                |
|                                   | Neighbour cells | 1, 2, 3, 4, 5, 6   | Cell1    |  |
| T2 end condition                  | Active cell     | 1, 2, 3, 4, 5, 6   | Cell1    | The UE shall perform reselection to cell 1 during T2 for iteration of the tests.     |
|                                   | Neighbour cells | 1, 2, 3, 4, 5, 6   | Cell2    |  |
| Access Barring Information        | -               | 1, 2, 3, 4, 5, 6   | Not Sent | No additional delays in random access procedure.                                     |
| DRX cycle length                  | s               | 1, 2, 3, 4, 5, 6   | 0.32     | The value shall be used for all cells in the test.                                   |
| NR PRACH configuration index      |                 | 1, 2, 3, 4, 5, 6   | 102      | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                  |
| E-UTRAN PRACH configuration index |                 | 1, 2, 3            | 53       | As specified in table 5.7.1-2 in TS 36.211 [23]                                      |
|                                   |                 | 4, 5, 6            | 4        |  |
| T1                                | s               | 1, 2, 3, 4, 5, 6   | 15       | T1 needs to be defined so that cell reselection reaction time is taken into account. |
| T2                                | s               | 1, 2, 3, 4, 5, 6   | 75       | T2 needs to be defined so that cell reselection reaction time is taken into account. |

**Table A.6.1.2.5.2-3: Cell specific test parameters for NR cell 1**

| Parameter | Unit | Test configuration | Cell 1 |    |

### A.6.1.2.5.3 Test Requirements

The cell reselection delay to a lower priority E-UTRAN cell is defined as the time from the beginning of time period T1, to the moment when the UE camps on cell 2, and starts to send preambles on the PRACH for sending the *RRCSetupRequest* message to perform a Tracking Area Update procedure on cell 2.

The cell re-selection delay to a lower priority cell shall be less than 3 s.

The rate of correct cell reselections observed during repeated tests shall be at least 90%.

NOTE: The cell re-selection delay to a lower priority cell can be expressed as:  $T_{\text{evaluate, E-UTRAN\_HST}} + T_{\text{SI-E-UTRA}}$ ,

Where:

$T_{\text{evaluate, E-UTRAN\_HST}}$  See Table 4.2.2.5-2 in clause 4.2.2.5

$T_{\text{SI-E-UTRA}}$  Maximum repetition period of relevant system info blocks that needs to be received by the UE to camp on a cell; 1280 ms is assumed in this test case.

This gives a total of 2.24 s, allow 3 s for the cell re-selection delay to a lower priority E-UTRAN cell.

## A.6.2 SA: RRC\_INACTIVE state mobility

## A.6.3 RRC\_CONNECTED state mobility

### A.6.3.1 Handover

#### A.6.3.1.1 Intra-frequency handover from FR1 to FR1; known target cell

##### A.6.3.1.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra frequency handover requirements specified in clause 6.1.1.2.

##### A.6.3.1.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.1.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.1.2-2, and A.6.3.1.1.2-3.

The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2.

NR shall send a RRC message implying handover to cell 2. The RRC message implying handover shall be sent to the UE during period T2, after the UE has reported Event A3. T3 is defined as the end of the last TTI containing the RRC message implying handover.

**Table A.6.3.1.1.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.1.2-2: General test parameters Intra-frequency handover from FR1 to FR1**

| Parameter                  | Unit              | Value     | Comment  |
|----------------------------|-------------------|-----------|--|
| Initial conditions         | Active cell       | Cell 1    |  |
|                            | Neighbouring cell | Cell 2    |  |
| Final condition            | Active cell       | Cell 2    |  |
| A3-Offset                  | dB                | 0         |  |

| Propagation condition           |  | -                | AWGN   |        |        | AWGN   |        |        |
| Note 1:                         | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                  |        |        |        |        |        |        |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |        |        |        |        |        |
| Note 3:                         | I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                  |        |        |        |        |        |        |

### A.6.3.1.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3.  
The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay + T<sub>interrupt</sub>, where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

T<sub>interrupt</sub> = 62 ms in the test. T<sub>interrupt</sub> is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

### A.6.3.1.2 Intra-frequency handover from FR1 to FR1; unknown target cell

#### A.6.3.1.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra frequency handover requirements specified in clause 6.1.1.2.

#### A.6.3.1.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.2.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.2.2-2, and A.6.3.1.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.6.3.1.2.2-1: Intra-frequency handover from FR1 to FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.2.2-2: General test parameters Intra-frequency handover from FR1 to FR1**

| Parameter                  |                   | Unit | Value     | Comment  |
|----------------------------|-------------------|------|-----------|--|
| Initial conditions         | Active cell       |      | Cell 1    |  |
|                            | Neighbouring cell |      | Cell 2    |  |
| Final condition            | Active cell       |      | Cell 2    |  |
| Access Barring Information |                   | -    | Not Sent  | No additional delays in random access procedure. |
| Time offset between cells  |                   |      | 3 $\mu$ s | Synchronous cells                                |
| T1                         |                   | s    | 5         |  |
| T2                         |                   | s    | $\leq 5$  |  |

| Propagation condition | -  | AWGN | AWGN |
|-----------------------|--|------|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |
| Note 3:               | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |      |

### A.6.3.1.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 92 ms from the beginning of time period T2. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt}$  = 82 ms in the test.  $T_{interrupt}$  is defined in clause 6.1.1.2.2.

This gives a total of 92 ms.

### A.6.3.1.3 Inter-frequency handover from FR1 to FR1; unknown target cell

#### A.6.3.1.3.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 inter frequency handover requirements specified in clause 6.1.1.2.

#### A.6.3.1.3.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.3.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.3.2-2, and A.6.3.1.3.2-3.

The test scenario comprises of two carriers and one cell on each carrier. No gap patterns are configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE receives a RRC handover command from the network. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE.

**Table A.6.3.1.3.2-1: Inter-frequency handover from FR1 to FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.3.2-2: General test parameters Inter-frequency handover from FR1 to FR1**

| Parameter                  | Unit              | Value    | Comment  |
|----------------------------|-------------------|----------|--|
| Initial conditions         | Active cell       |          | Cell 1   |
|                            | Neighbouring cell |          | Cell 2   |
| Final condition            | Active cell       |          | Cell 2   |
| Access Barring Information | -                 | Not Sent | No additional delays in random access procedure. |
| T1                         | s                 | 5        |  |
| T2                         | s                 | ≤5       |  |

**Table A.6.3.1.3.2-3: Cell specific test parameters for NR FR1-FR1 Inter frequency handover test case**

| Parameter                                |                  | Unit             | Cell 1                      |        | Cell 2    |        |

| Propagation condition | -  | AWGN | AWGN |
|-----------------------|--|------|------|
| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |      |      |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |      |      |
| Note 3:               | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |      |      |

### A.6.3.1.3.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 132 ms from the beginning of time period T2. The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

RRC procedure delay = 10 ms and is specified in clause 12 in TS 38.331 [2].

$T_{\text{interrupt}}$  = 122 ms in the test.  $T_{\text{interrupt}}$  is defined in clause 6.1.1.2.2.

This gives a total of 132 ms.

### A.6.3.1.4 SA NR - E-UTRAN handover

#### A.6.3.1.4.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to E-UTRAN handover requirements as specified in clause 6.1.2.1.

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.4-1. General test parameters are provided in Table A.6.3.1.4-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.6.3.1.4-3 and A.6.3.1.4-4 respectively.

**Table A.6.3.1.4-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.3.1.4-2: General test parameters for SA inter-RAT E-UTRAN handover**

| Parameter                    |                   | Unit | Value                             | Comment  |
|------------------------------|-------------------|------|-----------------------------------|--|
| NR RF Channel Number         |                   |      | 1                                 | 1 NR carrier frequency is used in the test             |
| LTE RF Channel Number        |                   |      | 2                                 | 1 E-UTRAN carrier frequency is used in the test        |
| Initial conditions           | Active cell       |      | Cell 1                            | NR cell  |
|                              | Neighbouring cell |      | Cell 2                            | E-UTRAN cell   |
| Final condition              | Active cell       |      | Cell 2                            |  |
| NR measurement quantity      |                   |      | SS-RSRP                           |  |
| E-UTRAN measurement quantity |                   |      | RSRP                              |  |
| b2-Threshold1                |                   | dBm  | As specified in Table A.6.3.1.4-3 | Absolute NR SS-RSRP threshold for event B2             |
| b2-Threshold2EUTRAN          |                   | dBm  | -98                               | Absolute E-UTRAN RSRP threshold for event B2           |
| Hysteresis                   |                   | dB   | 0                                 |  |
| TimeToTrigger                |                   | s    | 0                                 |  |
| Filter coefficient           |                   |      | 0                                 | L3 filtering is not used                               |
| DRX                          |                   |      | OFF                               | Non-DRX test   |
| Access Barring Information   |                   | -    | Not sent                          | No additional delays in random access procedure        |
| Time offset between cells    |                   |      | 3 ms                              | Asynchronous cells                                     |
| Gap pattern configuration Id |                   |      | 0                                 | As specified in Table 9.1.2-1 started before T2 starts |
| T1                           |                   | s    | 5                                 |  |
| T2                           |                   | s    | ≤5                                |  |
| T3                           |                   | s    | 1                                 |  |

**Table A.6.3.1.4-3: Cell specific test parameters for SA inter-RAT E-UTRA handover (Cell 1)**

| Parameter  | Unit             | Configuration    | Cell 1                            |          |        |
|--|------------------|------------------|-----------------------------------|----------|--------|
|  |                  |                  | T1                                | T2       | T3     |
| RF channel number                                |                  | 1, 2, 3, 4, 5, 6 | 1                                 |          |        |
| Duplex mode                                      |                  | 1, 4             | FDD                               |          |        |

|  | dBm/38.16 MHz    | 3, 6             | -53.68                            | -66.9448 | -64.49 |
| Propagation condition                            |                  | 1, 2, 3, 4, 5, 6 | AWGN                              |          |        |
| Antenna Configuration and Correlation Matrix     |                  | 1, 2, 3, 4, 5, 6 | 1x2 Low                           |          |        |

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3:  $\hat{E}_s/l_{ot}$ , SS-RSRP, and  $l_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table A.6.3.1.4-4: Cell specific test parameters for SA inter-RAT E-UTRA handover (Cell 2)**

| Parameter | Unit | Configuration | Cell 2 |    |    |
|-----------|------|---------------|--------|----|----|
|           |      |               | T1     | T2 | T3 |
|           |      |               |        |    |    |

|  |           |                  |  |  |  |
|--|-----------|------------------|--|--|--|

|         |  |
|---------|--|
| Note 1: | Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].  |
| Note 2: | PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].   |
| Note 3: | DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.   |
| Note 4: | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |
| Note 5: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 6: | $\hat{E}_s/I_{ot}$ , RSRP, SCH_RP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 7: | Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].  |

#### A.6.3.1.4.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 85 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{interrupt}$  = 35 ms in the test;  $T_{interrupt}$  is defined in clause 6.1.2.1.

This gives a total of 85 ms.

#### A.6.3.1.5 SA NR - E-UTRAN handover with unknown target cell

##### A.6.3.1.5.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT E-UTRAN handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to E-UTRAN handover requirements for the case when the target E-UTRAN cell is unknown as specified in clause 6.1.2.1.

The test comprises of one NR carrier and one E-UTRA carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN neighbour cell. The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable. No Gap pattern shall be configured.

A RRC message implying handover shall be sent to the UE during period T1. The start of T2 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.5-1. General test parameters are provided in Table A.6.3.1.5-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.6.3.1.5-3 and A.6.3.1.5-4 respectively.

**Table A.6.3.1.5-1: Supported test configurations for SA inter-RAT E-UTRAN handover tests**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                     |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.3.1.5-2: General test parameters for SA inter-RAT E-UTRAN handover**

| Parameter                  |                   | Unit | Value    | Comment   |
|----------------------------|-------------------|------|----------|---|
| NR RF Channel Number       |                   |      | 1        | 1 NR carrier frequency is used in the test      |
| LTE RF Channel Number      |                   |      | 2        | 1 E-UTRAN carrier frequency is used in the test |
| Initial conditions         | Active cell       |      | Cell 1   | NR cell   |
|                            | Neighbouring cell |      | Cell 2   | E-UTRAN cell                                    |
| Final condition            | Active cell       |      | Cell 2   |   |
| NR measurement quantity    |                   |      | SS-RSRP  |   |
| DRX                        |                   |      | OFF      | Non-DRX test                                    |
| Access Barring Information |                   | -    | Not sent | No additional delays in random access procedure |
| Time offset between cells  |                   |      | 3 ms     | Asynchronous cells                              |
| T1                         |                   | s    | ≤5       |   |
| T2                         |                   | s    | 1        |   |

**Table A.6.3.1.5-3: Cell specific test parameters for SA inter-RAT E-UTRA handover (Cell 1)**

| Parameter | Unit | Configuration | Cell 1 |    |
|-----------|------|---------------|--------|----|
|           |      |               | T1     | T2 |

### A.6.3.1.5.2 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 165 ms from the beginning of time period T2.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{\text{interrupt}}$ , where:

RRC procedure delay = 50 ms and is specified in clause 6.1.2.1.

$T_{\text{interrupt}}$  = 115 ms in the test;  $T_{\text{interrupt}}$  is defined in clause 6.1.2.1.

This gives a total of 165 ms.

### A.6.3.1.6 SA NR - UTRAN FDD handover

#### A.6.3.1.6.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE can make correct inter-RAT UTRAN FDD handover when operating in standalone (SA) operation with PCell in FR1. This test shall verify the NR to UTRAN FDD handover requirements as specified in clause 6.1.2.2.1.

The test comprises of one NR carrier and one UTRA FDD carrier. There are two cells and one cell on each carrier. Cell 1 is the NR PCell and Cell 2 is an inter-RAT UTRAN FDD neighbour cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of Cell 2. Starting T2, Cell 2 becomes detectable and the UE is expected to detect and send a measurement report. Gap pattern configuration with id #0 as specified in Table 9.1.2-1 is configured before T2 begins to enable inter-RAT frequency monitoring.

A RRC message implying handover shall be sent to the UE during period T2 after the UE has reported Event B2. The start of T3 is the instant when the last TTI containing the RRC message implying handover is sent to the UE. The handover message shall contain Cell 2 as the target cell.

Supported test configurations are shown in table A.6.3.1.6-1. General test parameters are provided in Table A.6.3.1.6-2. Cell specific test parameters for Cell 1 and Cell 2 are provided in Tables A.6.3.1.6-3 and A.6.3.1.6-4 respectively.

**Table A.6.3.1.6-1: Supported test configurations for SA inter-RAT UTRAN FDD handover tests**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, UTRAN FDD                  |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, UTRAN FDD                  |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, UTRAN FDD                  |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.3.1.6-2: General test parameters for SA inter-RAT UTRAN FDD handover**

| Parameter                                  |                   | Unit | Value                             | Comment  |
|--|-------------------|------|-----------------------------------|--|
| NR RF Channel Number                       |                   |      | 1                                 | 1 NR carrier frequency is used in the test             |
| UTRA RF Channel Number                     |                   |      | 2                                 | 1 UTRAN carrier frequency is used in the test          |
| Initial conditions                         | Active cell       |      | Cell 1                            | NR cell  |
|  | Neighbouring cell |      | Cell 2                            | UTRAN cell   |
| Final condition                            | Active cell       |      | Cell 2                            |  |
| NR measurement quantity                    |                   |      | SS-RSRP                           |  |
| Inter-RAT (UTRAN FDD) measurement quantity |                   |      | CPICH Ec/N0                       |  |
| b2-Threshold1                              |                   | dBm  | As specified in Table A.6.3.1.6-3 | Absolute NR SS-RSRP threshold for event B2             |
| b2-Threshold2UTRA-FDD                      |                   | dB   | -18                               | Absolute UTRAN CPICH Ec/lo threshold for event B2      |
| Hysteresis                                 |                   | dB   | 0                                 |  |

| CPICH_Ec/lo  | dB           | -infinity     | -14   | -14    |
| Propagation Condition  |              | AWGN          |       |        |
| Note 1: The DPCH level is controlled by the power control loop   |              |               |       |        |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to $I_{or}$ . |              |               |       |        |

#### A.6.3.1.6.2 Test Requirements

The UE shall start to transmit the UL DPCH to Cell 2 less than 190 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay can be expressed as: RRC procedure delay +  $T_{interrupt}$ , where:

RRC procedure delay = 50 ms, which is specified in clause 5.3.1.1.1.

$T_{interrupt}$  = 140 ms in the test;  $T_{interrupt}$  is defined in clause 5.3.1.1.2. This gives a total of 190 ms.

#### A.6.3.1.7 Intra-frequency synchronous DAPS handover in FR1

##### A.6.3.1.7.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra frequency DAPS handover requirements in synchronous scenario specified in clause 6.1.3.2.

##### A.6.3.1.7.2 Test Parameters

Supported test configurations are shown in Table A.6.3.1.7.2-1. Both handover delay and interruption length are tested by using the parameters in Table A.6.3.1.7.2-2, and A.6.3.1.7.2-3. The test consists of five successive time periods, with time durations of T1, T2, T3, T4, and T5 respectively.

Before the start of T1, the UE is connected to the cell1 and not aware of the cell2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE does not have any timing information of the cell2.

Starting T2, the cell2 becomes detectable. During T2, the UE performs cell detection and measurements on the cell2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing DAPS handover command is sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the cell2 while the DL scheduling and UL feedback in the cell1 shall be avoided. After successful RACH procedure of the cell2, UE is scheduled with PDSCH from cell1 and cell2 in alternative TTIs where both cell1 and cell2 belong to the same TAG. In the end the network sends a RRC message implying cell1 release to the UE. During T3, the handover delay  $D_{handover1}$  for target cell addition need to be verified.

The start of T4 is the instant when the last TTI containing cell1 release command is sent to the UE. During T4, the UE shall accomplish the release actions within  $D_{\text{handover}2}$ .

Starting T5, the UE stops sending the periodical CSI report to the cell1.

**Table A.6.3.1.7.2-1: Intra-frequency DAPS handover in FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.7.2-2: General test parameters synchronous Intra-frequency DAPS handover in FR1**

| Parameter                  | Unit              | Value                  | Comment   |
|----------------------------|-------------------|------------------------|---|
| Initial conditions         | Active cell       | Cell 1                 |   |
|                            | Neighbouring cell | Cell 2                 |   |

### A.6.3.1.7.3 Test Requirements

The UE shall start to transmit the PRACH to cell 2 less than 72 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The target cell add delay  $D_{handover1}$  can be expressed as:  $T_{RRC\_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{search}$ ,  $T_{IU}$ ,  $T_{processing}$ ,  $T_{\Delta}$  and  $T_{margin}$  are defined in clause 6.1.1.2.2.

If the target cell is known, then  $T_{search} = 0$  ms

$T_{IU} = 20$  ms in the test.  $T_{IU}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{processing} = 20$  ms in the test.  $T_{processing}$  is defined in clause 6.1.1.2.2.

$T_{margin} = 2$  ms in the test.  $T_{margin}$  is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

After successful RACH to cell 2 and until the start of time period T4, UE shall be able to receive PDSCH alternatively from cell 1 and cell 2. UE is not expected to transmit UL to both cell 1 and cell 2 in the same TTI.

The UE shall release cell 1 less than  $D_{handover2} = (T_{RRC\_procedure} + T_{interrupt2})$  from the beginning of time period T4.

NOTE:  $D_{handover2}$  is defined in clause 6.1.3.2.1.

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt2}$  is defined in clause 6.1.3.2.2.

UE shall not report CSI to cell 1 during T5.

### A.6.3.1.8 Intra-frequency asynchronous DAPS handover in FR1

#### A.6.3.1.8.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra frequency DAPS handover requirements in asynchronous scenario specified in clause 6.1.3.2.

#### A.6.3.1.8.2 Test Parameters

Supported test configurations are shown in Table A.6.3.1.8.2-1. Both handover delay and interruption length are tested by using the parameters in Table A.6.3.1.8.2-2, and A.6.3.1.8.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4, and T5 respectively.

Before the start of T1, the UE is connected to the cell1 and not aware of the cell2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE does not have any timing information of the cell2.

Starting T2, the cell2 becomes detectable. During T2, the UE performs cell detection and measurements on the cell2 and shall send event report to the network. After receiving the event report A3, the network sends a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing DAPS handover command is sent to the UE. During T3, UE shall be able to perform random access, DL reception or UL transmission in the cell2 while the DL scheduling and UL feedback in the cell1 shall be avoided. After successful RACH procedure of the cell2, UE is scheduled with PDSCH from cell1 and cell2 in alternative TTIs where both cell1 and cell2 belong to the same TAG. In the end the network sends a RRC message implying cell1 release to the UE. During T3, the handover delay  $D_{handover1}$  for target cell addition needs to be verified.

The start of T4 is the instant when the last TTI containing cell1 release command is sent to the UE by cell2. During T4, the UE shall accomplish the release actions within  $D_{handover2}$ .

#### Starting T5, the UE stops sending the periodical CSI report to the cell1. Table A.6.3.1.8.2-1: Intra-frequency DAPS handover in FR1 test configurations

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.8.2-2: General test parameters Intra-frequency asynchronous DAPS handover in FR1**

| Parameter                  | Unit              | Value           | Comment  |
|----------------------------|-------------------|-----------------|--|
| Initial conditions         | Active cell       | Cell 1          |  |

### A.6.3.1.8.3 Test Requirements

The UE shall start to transmit the PRACH to cell 2 less than 72 ms from the beginning of time period T3.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The target cell add delay  $D_{handover1}$  can be expressed as:  $T_{RRC\_procedure} + T_{search} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{search}$ ,  $T_{IU}$ ,  $T_{processing}$ ,  $T_{\Delta}$  and  $T_{margin}$  are defined in clause 6.1.1.2.2.

If the target cell is known, then  $T_{search} = 0$  ms

$T_{IU} = 20$  ms in the test.  $T_{IU}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{processing} = 20$  ms in the test.  $T_{processing}$  is defined in clause 6.1.1.2.2.

$T_{margin} = 2$  ms in the test.  $T_{margin}$  is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

After successful RACH to cell 2 and until the start of time period T4, UE shall be able to receive PDSCH alternatively from cell 1 and cell 2. UE is not expected to transmit UL to both cell 1 and cell 2 in the same TTI.

The UE shall release cell 1 less than  $D_{handover2} = (T_{RRC\_procedure} + T_{interrupt2})$  from the beginning of time period T4.

NOTE:  $D_{handover2}$  is defined in clause 6.1.3.2.1.

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{interrupt2}$  is defined in clause 6.1.3.2.2.

UE shall not report CSI to cell 1 during T5.

### A.6.3.1.9 Intra-band inter-frequency synchronous DAPS handover test in SA for FR1

#### A.6.3.1.9.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency synchronous DAPS handover requirements specified in clause 6.1.3.2.

#### A.6.3.1.9.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.9.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.9.2-2, and A.6.3.1.9.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2. The UE shall be configured with periodic CSI reporting for cell1. The test scenario comprises of two carriers and one cell on each carrier. Gap pattern ID gp0 as specified in Table 9.1.2-1 is configured before T2 in the test case.

Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

T3 is defined as the end of the last TTI containing the RRC message implying DAPS handover. During T3 UE shall be able to perform random access to cell 2. Cell 1 is continuously scheduled in DL during T3. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in cell 2, except preamble transmission. At the end of T3 cell 2 shall send an RRC message implying cell 1 release command.

T4 is defined as the end of the last TTI containing the RRC message implying DAPS handover. Cell 2 is continuously scheduled in DL during T4. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell. And the test system shall observe the periodic reporting of CSI for cell 1 during T5.

**Table A.6.3.1.9.2-1: Intra-band inter-frequency synchronous DAPS handover in SA for FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.9.2-2: General test parameters for intra-band inter-frequency synchronous DAPS handover test in SA for FR1**

| Parameter                  |                   | Unit | Value                        | Comment  |

| Note 1:                         |            | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                |                |                |                |                |                       |                |                |                |                |
| Note 2:                         |            | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                |                |                |                |                |                       |                |                |                |                |
| Note 3:                         |            | I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                |                |                |                |                |                       |                |                |                |                |

### A.6.3.1.9.3 Test Requirements

The UE shall start to transmit the PRACH to cell 2 less than 72 ms from the beginning of time period T3.

During T3 UE is allowed to cause T<sub>interrupt1</sub> interruption to cell 1. T<sub>interrupt1</sub> is defined in clause 6.1.3.2.2 Table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to cell 2, interruption to cell 1 is allowed.

During T4 UE is allowed to cause T<sub>interrupt2</sub> interruption to cell 1. T<sub>interrupt2</sub> is defined in clause 6.1.3.2.2 Table 6.1.3.2.2-5.

UE shall finish cell 1 release in T4 and shall not send any CSI reports to cell 1 during T5.

The rate of correct handovers observed during repeated tests shall be at least 90%.

### A.6.3.1.10 Intra-band inter-frequency asynchronous DAPS handover test in SA for FR1

#### A.6.3.1.10.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra-band inter-frequency asynchronous DAPS handover requirements specified in clause 6.1.3.2.

#### A.6.3.1.10.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.10.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.10.2-2, and A.6.3.1.10.2-3.

The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2. The UE shall be configured with periodic CSI reporting for cell1. The test scenario comprises of two carriers and one cell on each carrier. Gap pattern ID gp0 as specified in Table 9.1.2-1 is configured before T2 in the test case.

Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

T3 is defined as the end of the last TTI containing the RRC message implying DAPS handover. During T3 UE shall be able to perform random access to cell 2. Cell 1 is continuously scheduled in DL during T3. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH

procedure in cell 2, except preamble transmission. At the end of T3 cell 2 shall send an RRC message implying cell 1 release command.

T4 is defined as the end of the last TTI containing the RRC message implying DAPS handover. Cell 2 is continuously scheduled in DL during T4. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell. And the test system shall observe the periodic reporting of CSI for cell 1 during T5.

**Table A.6.3.1.10.2-1: Intra-band inter-frequency asynchronous DAPS handover in SA for FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.1.10.2-2: General test parameters for intra-band inter-frequency asynchronous DAPS handover test in SA for FR1**

| Parameter                  | Unit              | Value                        | Comment  |
|----------------------------|-------------------|------------------------------|--|
| Initial conditions         | Active cell       | Cell 1                       |  |
|                            | Neighbouring cell | Cell 2                       |  |
| Final condition            | Active cell       | Cell 2                       |  |
| A3-Offset                  | dB                | 0                            |  |
| Hysteresis                 | dB                | 0                            |  |
| Time To Trigger            | s                 | 0                            |  |
| Filter coefficient         |                   | 0                            | L3 filtering is not used   |
| Access Barring Information | -                 | Not Sent                     | No additional delays in random access procedure.                         |
| Time offset between cells  |                   | 10 $\mu$ s                   | Asynchronous cells   |
| T1                         | s                 | 5                            |  |
| T2                         | s                 | $\leq 5$                     |  |
| T3                         | s                 | 1                            |  |
| T4                         | ms                | $10 + T_{\text{interrupt}2}$ | $T_{\text{interrupt}2}$ is defined in clause 6.1.3.2.2 Table 6.1.3.2.2-5 |
| T5                         | ms                | 100                          |  |

**Table A.6.3.1.10.2-3: Cell specific test parameters for intra-band inter-frequency asynchronous DAPS handover test in SA for FR1**

| Parameter                                |                  | Unit      | Cell 1                      |    |    |    |      | Cell 2 |    |    |    |    |
|--|------------------|-----------|-----------------------------|----|----|----|------|--------|----|----|----|----|
|  |                  |           | T1                          | T2 | T3 | T4 | T5   | T1     | T2 | T3 | T4 | T5 |

### A.6.3.1.10.3 Test Requirements

The UE shall start to transmit the PRACH to cell 2 less than 72 ms from the beginning of time period T3.

During T3 UE is allowed to cause T<sub>interrupt1</sub> interruption to cell 1. T<sub>interrupt1</sub> is defined in clause 6.1.3.2.2 Table 6.1.3.2.2-2. When UE is transmitting PRACH preamble to cell 2, interruption to cell 1 is allowed.

During T4 UE is allowed to cause T<sub>interrupt2</sub> interruption to cell 1. T<sub>interrupt2</sub> is defined in clause 6.1.3.2.2 Table 6.1.3.2.2-5.

UE shall finish cell 1 release in T4 and shall not send any CSI reports to cell 1 during T5.

The rate of correct handovers observed during repeated tests shall be at least 90%.

### A.6.3.1.11 Inter-band inter-frequency synchronous DAPS handover from FR1 to FR1

#### A.6.3.1.11.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR1 inter-band inter-frequency synchronous DAPS handover requirements specified in clause 6.1.3.2.

#### A.6.3.1.11.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.11.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.11.2-2, A.6.3.1.11.2-3 and A.6.3.1.11.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A3 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0). Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) is sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the last TTI containing the RRC message implying source cell release is sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

### A.6.3.1.11.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3. During  $D_{handover1}$ , the interruption on Cell 1 shall not exceed  $T_{interrupt1}$  as defined in Table 6.1.3.2.2-3 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{handover1}$  can be expressed as:  $T_{RRC\_procedure} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{IU} = 20$  ms in the test.  $T_{IU}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{processing} = 20$  ms in the test.  $T_{processing}$  is defined in clause 6.1.1.2.2.

$T_{margin} = 2$  ms in the test.  $T_{margin}$  is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than  $(10 \text{ ms} + T_{interrupt2})$  from the beginning of time period T4. During  $D_{handover2}$ , the interruption on Cell 2 shall not exceed  $T_{interrupt2}$  as defined in Table 6.1.3.2.2-6 for synchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{handover2}$  can be expressed as:  $T_{RRC\_procedure} + T_{interrupt2}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

## A.6.3.1.12 Inter-band inter-frequency asynchronous DAPS handover from FR1 to FR1

### A.6.3.1.12.1 Test Purpose and Environment

This test is to verify the requirement for the FR1-to-FR1 inter-band inter-frequency asynchronous DAPS handover requirements specified in clause 6.1.3.2.

### A.6.3.1.12.2 Test Parameters

Supported test configurations are shown in table A.6.3.1.12.2-1. Both handover delay and interruption length are tested by using the parameters in table A.6.3.1.12.2-2, A.6.3.1.12.2-3 and A.6.3.1.12.2-4.

The test scenario comprises of two bands each with one cell. The test consists of five successive time periods, with time durations of T1, T2, T3, T4 and T5 respectively.

Before the start of T1, the UE is connected to Cell 1 (source PCell) on radio channel 1 but is not aware of Cell 2 (neighbour cell) on radio channel 2. The UE shall be configured with periodic CSI reporting for cell1. During T1, the UE shall not have any timing information of Cell 2.

Before the start of T2, the UE in the measurement control information that event-triggered reporting with Event A3 is configured for neighbour cell (Cell 2), and the UE is configured with the measurement gaps (gap pattern ID # 0).

Starting T2, Cell 2 becomes known to the UE. During T2, the UE shall report Event A3. After receiving the Event A3, the test system shall send a RRC message implying DAPS handover to the UE.

The start of T3 is the instant when the last TTI containing the RRC message implying DAPS handover to Cell 2 (target PCell) is sent to the UE. During T3, the UE shall be able to perform random access to Cell 2. DL schedule and UL feedback to cell 1 shall be avoided when UE is required to perform DL reception or UL transmission in PRACH procedure in cell 2, except preamble transmission. After the RACH procedure is completed, the test system shall send a RRC message to the UE to release Cell 1 (source cell) on radio channel 1.

The start of T4 is the instant when the last TTI containing the RRC message implying source cell release is sent to the UE. During T4, the UE shall perform source cell release.

Starting T5, the UE shall stop sending CSI report to the source cell.

| Note 1:                         | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |                  |        |        |        |        |        |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |        |        |        |        |
| Note 3:                         | I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                  |        |        |        |        |        |

### A.6.3.1.12.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 72 ms from the beginning of time period T3. During  $D_{handover1}$ , the interruption on Cell 1 shall not exceed  $T_{interrupt1}$  as defined in Table 6.1.3.2.2-3 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{handover1}$  can be expressed as:  $T_{RRC\_procedure} + T_{IU} + T_{processing} + T_{\Delta} + T_{margin}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

$T_{IU} = 20$  ms in the test.  $T_{IU}$  is defined in clause 6.1.1.2.2.

$T_{\Delta} = 20$  ms in the test.  $T_{\Delta}$  is defined in clause 6.1.1.2.2.

$T_{processing} = 20$  ms in the test.  $T_{processing}$  is defined in clause 6.1.1.2.2.

$T_{margin} = 2$  ms in the test.  $T_{margin}$  is defined in clause 6.1.1.2.2.

This gives a total of 72 ms.

The UE shall complete to release Cell 1 less than  $(10 \text{ ms} + T_{interrupt2})$  from the beginning of time period T4. During  $D_{handover2}$ , the interruption on Cell 2 shall not exceed  $T_{interrupt2}$  as defined in Table 6.1.3.2.2-6 for asynchronous DAPS HO.

The rate of correct handovers observed during repeated tests shall be at least 90%.

NOTE: The handover delay  $D_{handover2}$  can be expressed as:  $T_{RRC\_procedure} + T_{interrupt2}$ , where:

$T_{RRC\_procedure} = 10$  ms and is specified in clause 12 in TS 38.331 [2].

## A.6.3.2 RRC Connection Mobility Control

### A.6.3.2.1 SA: RRC Re-establishment

#### A.6.3.2.1.1 Intra-frequency RRC Re-establishment in FR1

##### A.6.3.2.1.1.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR1 with known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.1.1-1, table A.6.3.2.1.1.1-2 and table A.6.3.2.1.1.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.6.3.2.1.1.1-1: Supported test configurations**

| Configuration   | Description                                       |
|---|---|
| 1   | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.6.3.2.1.1.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

| Parameter                  |                 | Unit | Test configuration | Value                     | Comment  |
|----------------------------|-----------------|------|--------------------|---------------------------|--|
| Initial condition          | Active cell     |      | 1, 2, 3            | Cell1                     |  |
|                            | Neighbour cells |      | 1, 2, 3            | Cell2                     |  |
| Final condition            | Active cell     |      | 1, 2, 3            | Cell2                     |  |
| RF Channel Number          |                 |      | 1, 2, 3            | 1                         |  |
| Time offset between cells  |                 |      | 1                  | 3 ms                      | Asynchronous cells   |
|                            |                 |      | 2                  | 3 $\mu$ s                 | Synchronous cells  |
|                            |                 |      | 3                  | 3 $\mu$ s                 | Synchronous cells  |
| N310                       |                 | -    | 1, 2, 3            | 1                         | Maximum consecutive out-of-sync indications from lower layers  |
| N311                       |                 | -    | 1, 2, 3            | 1                         | Minimum consecutive in-sync indications from lower layers  |
| T310                       |                 | ms   | 1, 2, 3            | 0                         | Radio link failure timer;  |
| T311                       |                 | ms   | 1, 2, 3            | 3000                      | RRC re-establishment timer   |
| Access Barring Information |                 | -    | 1, 2, 3            | Not Sent                  | No additional delays in random access procedure.   |
| SSB configuration          |                 |      | 1                  | SSB.1 FR1                 |  |
|                            |                 |      | 2                  | SSB.1 FR1                 |  |
|                            |                 |      | 3                  | SSB.2 FR1                 |  |
| SMTC configuration         |                 |      | 1                  | SMTC.2                    |  |
|                            |                 |      | 2                  | SMTC.1                    |  |
|                            |                 |      | 3                  | SMTC.1                    |  |
| DRX cycle length           |                 | s    | 1, 2, 3            | OFF                       |  |

| Propagation Condition               |               | 1, 2, 3            | AWGN                    |           |           |                         |        |            |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers

and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.

Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

### A.6.3.2.1.1.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to a known NR intra frequency cell shall be less than 1.6 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{\text{UL\_grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{\text{UL\_grant}}$  is not used.

$$T_{\text{UE\_re-establish\_delay}} = 50 \text{ ms} + T_{\text{identify\_intra\_NR}} + \sum_{i=1}^{N_{\text{freq}}-1} T_{\text{identify\_inter\_NR},i} + T_{\text{SI-NR}} + T_{\text{PRACH}}$$

$$N_{\text{freq}} = 1$$

$$T_{\text{identify\_intra\_NR}} = 200 \text{ ms}$$

$T_{\text{SI}} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target intra-frequency NR cell.

$T_{\text{PRACH}} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 1545 ms, allow 1.6 s in the test case.

### A.6.3.2.1.2 Inter-frequency RRC Re-establishment in FR1

#### A.6.3.2.1.2.1 Test Purpose and Environment

The purpose is to verify that the NR inter-frequency RRC re-establishment delay in FR1 without known target cell is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.2.1-1, table A.6.3.2.1.2.1-2 and table A.6.3.2.1.2.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, becomes inactive. The time period T3 starts after the occurrence of the radio link failure. During T1, the UE shall be configured with the carrier frequency of cell 2 (with RF Channel Number #2) to ensure that the UE has the context of the carrier frequency of cell 2 by the end of T1.

**Table A.6.3.2.1.2.1-1: Supported test configurations**

| Configuration | Description of serving cell   | Description of target cell                        |
|---------------|---|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |   |

**Table A.6.3.2.1.2.1-2: General test parameters for NR inter-frequency RRC Re-establishment test case in FR1**

| Parameter                  |                 | Unit | Test configuration | Value                     | Comment  |
|----------------------------|-----------------|------|--------------------|---------------------------|--|

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                         |           |           |                         |           |            |

### A.6.3.2.1.2.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR inter frequency cell shall be less than 3 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{\text{UL\_grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{\text{UL\_grant}}$  is not used.

$$T_{\text{UE\_re-establish\_delay}} = 50 \text{ ms} + T_{\text{identify\_intra\_NR}} + \sum_{i=1}^{N_{\text{freq}}-1} T_{\text{identify\_inter\_NR},i} + T_{\text{SI-NR}} + T_{\text{PRACH}}$$

$$N_{\text{freq}} = 2$$

$$T_{\text{identify\_intra\_NR}} = 800 \text{ ms}$$

$$T_{\text{identify\_inter\_NR}} = 800 \text{ ms}$$

$T_{\text{SI}} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target inter-frequency NR cell.

$T_{\text{PRACH}} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 2945 ms, allow 3 s in the test case.

### A.6.3.2.1.3 Intra-frequency RRC Re-establishment in FR1 without serving cell timing

#### A.6.3.2.1.3.1 Test Purpose and Environment

The purpose is to verify that the NR intra-frequency RRC re-establishment delay in FR1 without serving cell timing is within the specified limits. These tests will verify the requirements in clause 6.2.1.

The test parameters are given in table A.6.3.2.1.3.1-1, table A.6.3.2.1.3.1-2 and table A.6.3.2.1.3.1-3 below. The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. At the start of time period T2, cell 1, which is the active cell, is deactivated. The time period T3 starts after the occurrence of the radio link failure.

**Table A.6.3.2.1.3.1-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.3.2.1.3.1-2: General test parameters for NR intra-frequency RRC Re-establishment test case in FR1**

| Parameter                  |                 | Unit | Test configuration | Value                     | Comment  |

| <p>Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                         |           |           |                         |           |        |

### A.6.3.2.1.3.2 Test Requirements

The RRC re-establishment delay is defined as the time from the start of time period T3, to the moment when the UE starts to send PRACH preambles to cell 2 for sending the *RRCReestablishmentRequest* message to cell 2.

The RRC re-establishment delay to an unknown NR intra frequency cell without serving cell timing shall be less than 2.2 s.

The rate of correct RRC re-establishments observed during repeated tests shall be at least 90%.

NOTE: The RRC re-establishment delay in the test is derived from the following expression:

$$T_{\text{re-establish\_delay}} = T_{\text{UL\_grant}} + T_{\text{UE\_re-establish\_delay}}$$

Where:

$T_{\text{UL\_grant}}$  = It is the time required to acquire and process uplink grant from the target cell. The PRACH reception at the system simulator is used as a trigger for the completion of the test; hence  $T_{\text{UL\_grant}}$  is not used.

$$T_{\text{UE\_re-establish\_delay}} = 50 \text{ ms} + T_{\text{identify\_intra\_NR}} + \sum_{i=1}^{N_{\text{freq}}-1} T_{\text{identify\_inter\_NR},i} + T_{\text{SI-NR}} + T_{\text{PRACH}}$$

$$N_{\text{freq}} = 1$$

$$T_{\text{identify\_intra\_NR}} = 800 \text{ ms}$$

$T_{\text{SI}} = 1280 \text{ ms}$ ; it is the time required for receiving all the relevant system information as defined in TS 38.331 [2] for the target intra-frequency NR cell.

$T_{\text{PRACH}} = 15 \text{ ms}$ ; it is the additional delay caused by the random access procedure.

This gives a total of 2145 ms, allow 2.2 s in the test case.

### A.6.3.2.2 Random Access

#### A.6.3.2.2.1 4-step RA type contention based random access test in FR1 for NR standalone

##### A.6.3.2.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in Table A.6.3.2.2.1.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.6.3.2.2.1.1-2.

**Table A.6.3.2.2.1.1-1: Supported test configurations for contention based random access test in FR1 for NR standalone**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

Note: The UE is only required to be tested in one of the supported test configurations depending on UE capability

**Table A.6.3.2.1.1-2: General test parameters for contention based random access test in FR1 for NR Standalone**

| Parameter   |                      | Unit     | Test-1                    | Comments  |   |
|---|----------------------|----------|---------------------------|---|---|

|         |  |
|---------|--|
| Note 1: | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |
| Note 2: | SS-RSRP, Es/lot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |
| Note 3: | Void   |
| Note 4: | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |

#### A.6.3.2.2.1.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.6.3.2.2.1.2.1 Random Access Preamble Transmission

To test the UE behavior specified in Clause 6.2.2.2.1.1 the System Simulator shall receive the Random Access Preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *rsrp-ThresholdSSB*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.1.2.2 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2.2.1.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) and shall transmit the msg3 if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.1.2.3 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.1.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.6.3.2.2.1.2.4 Receiving an UL grant for msg3 retransmission

To test the UE behavior specified in clause 6.2.2.2.1.4 the System Simulator shall provide an UL grant for msg3 retransmission following a successful Random Access Response.

The UE shall re-transmit the msg3 upon the reception of an UL grant for msg3 retransmission.

#### A.6.3.2.2.1.2.5 Reception of an Incorrect Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element *not* matching the CCCH SDU transmitted in msg3 uplink message.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires unless the received message includes a UE Contention Resolution Identity MAC control element and the UE Contention Resolution Identity included in the MAC control element matches the CCCH SDU transmitted in the uplink message.

#### A.6.3.2.2.1.2.6 Reception of a Correct Message over Temporary C-RNTI

To test the UE behavior specified in Clause 6.2.2.2.1.5 the System Simulator shall send a message addressed to the temporary C-RNTI with a UE Contention Resolution Identity included in the MAC control element matching the CCCH SDU transmitted in the msg3 uplink message.

The UE shall send ACK if the Contention Resolution is successful.

#### A.6.3.2.2.1.2.7 Contention Resolution Timer expiry

To test the UE behavior specified in Clause 6.2.2.2.1.6 the System Simulator shall *not* send a response to a msg3.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if the Contention Resolution Timer expires.

### A.6.3.2.2.2 4-step RA type non-contention based random access test in FR1 for NR standalone

#### A.6.3.2.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the PRACH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.2 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in Table A.6.3.2.2.2.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.6.3.2.2.2.1-2 for SSB-based non-contention based random access test (Test 1) and CSI-RS-based non-contention based random access test (Test 2). Test 2 is only applicable to UE which supports *csi-RSRP-AndRSRQ-MeasWithSSB* or *csi-RSRP-AndRSRQ-MeasWithoutSSB*.

**Table A.6.3.2.2.2.1-1: Supported test configurations for non-contention based random access test in FR1 for NR standalone**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.6.3.2.2.1-2: General test parameters for non-contention based random access test in FR1 for NR Standalone**

| Parameter                           |                      | Unit     | Test-1               | Test-2               | Comments  |  |
|-------------------------------------|----------------------|----------|----------------------|----------------------|---|--|
| SSB Configuration                   | Config 1             |          | SSB pattern 1 in FR1 | SSB pattern 1 in FR1 | As defined in A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |  |
|                                     | Config 2             |          | SSB pattern 2 in FR1 | SSB pattern 2 in FR1 |   |  |
| Number of SSBs per SS-burst         |                      |          | 2                    | 2                    | Different from the definition in A.3.10   |  |
| SS/PBCH block index                 |                      |          | 0,1                  | 0,1                  | Different from the definition in A.3.10   |  |
| CSI-RS Configuration                | Config 1             |          | N/A                  | CSI-RS.1.1 FDD       | As defined in A.3.1.4   |  |
|                                     | Config 2             |          |                      | CSI-RS.2.1 TDD       |   |  |
| Duplex Mode for Cell 1              | Config 1             |          | FDD                  | FDD                  |   |  |
|                                     | Config 2             |          | TDD                  | TDD                  |   |  |
| TDD Configuration                   | Config 2             |          | TDDConf.2.1          | TDDConf.2.1          |   |  |
| CSI-RS for tracking                 | Config 1             |          | TRS.1.1 FDD          | TRS.1.1 FDD          |   |  |
|                                     | Config 2             |          | TRS.1.2 TDD          | TRS.1.2 TDD          |   |  |
| OCNG Pattern <sup>Note 1</sup>      |                      |          | OP.1                 | OP.1                 | As defined in A.3.2.1.  |  |

| Propagation Condition   | -  | AWGN                      | AWGN                      |  |
| Note 1:   | OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel. |                           |                           |  |
| Note 2:   | SS-RSRP, Es/lot and Io levels have been derived from other parameters for information purpose. They are not settable parameters.   |                           |                           |  |
| Note 3:   | Void   |                           |                           |  |
| Note 4:   | The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.   |                           |                           |  |

#### A.6.3.2.2.2.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.6.3.2.2.2.2.1 SSB-based Random Access Preamble Transmission

In Test-1, to test the UE behavior specified in Clause 6.2.2.2.2.1 for SSB-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the SSB with index 0.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-ssb-OccasionMaskIndex*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.2.2.2 CSI-RS-based Random Access Preamble Transmission

In Test-2, to test the UE behavior specified in Clause 6.2.2.2.2.1 for CSI-RS-based Random Access Preamble transmission, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with CSI-RSs configured, the System Simulator shall receive the Random Access Preamble which has the Preamble Index associated with the CSI-RS configured.

In addition, the System Simulator shall receive the Random Access Preamble on the PRACH occasion which belongs to the PRACH occasions corresponding to the CSI-RS configured, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given by the *ra-OccasionList*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.2.2.3 Random Access Response Reception

To test the UE behavior specified in Clause 6.2.2.2.2 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a Random Access Response *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for Random Access Response(s) if the Random Access Response contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power if all received Random Access Responses contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.6.3.2.2.2.4 No Random Access Response Reception

To test the UE behavior specified in clause 6.2.2.2.3 the System Simulator shall transmit a Random Access Response containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2 in TS 38.321 [7], and transmit with the calculated PRACH transmission power when the backoff time expires if no Random Access Response is received within the RA Response window configured in *RACH-ConfigCommon*.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.2. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all PRACH transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.6.3.2.2.3 2-step RA type contention based random access test in FR1 for NR standalone

##### A.6.3.2.2.3.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the 2-step RA type random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in Table A.6.3.2.2.3.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.6.3.2.2.3.1-2.

**Table A.6.3.2.2.3.1-1: Supported test configurations for 2-step RA type contention based random access with successRAR test in FR1 for NR standalone**

| Config | Description   |
|--------|---|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode  |
| 2      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:  | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.6.3.2.3.1-2: General test parameters for 2-step RA type contention based random access with successRAR test in FR1 for NR standalone**

| Parameter  |                      | Unit     | Test-1                   | Comments  |   |
|--|----------------------|----------|--------------------------|---|---|
| SSB Configuration  | Config 1             |          | SSB pattern 1 in FR1     | As defined in A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |   |
|  | Config 2             |          | SSB pattern 2 in FR1     |   |   |
| Number of SSBs per SS-burst  |                      |          | 2                        | Different from the definition in A.3.10   |   |
| SS/PBCH block index  |                      |          | 0,1                      | Different from the definition in A.3.10   |   |
| Duplex Mode for Cell 2   | Config 1             |          | FDD                      |   |   |
|  | Config 2             |          | TDD                      |   |   |
| TDD Configuration  | Config 2             |          | TDDConf.2.1              |   |   |
| OCNG Pattern <sup>Note 1</sup>   |                      |          | OP.1                     | As defined in A.3.2.1.  |   |
| PDSCH parameters <sup>Note 3</sup>   | Config 1             |          | SR.1.1 FDD               | As defined in A.3.1.1.  |   |
|  | Config 2             |          | SR.2.1 TDD               |   |   |
| NR RF Channel Number   |                      |          | 1                        |   |   |
| EPRE ratio of PSS to SSS   |                      | dB       | 0                        |   |   |
| EPRE ratio of PBCH_DMRS to SSS   |                      | dB       |                          |   |   |
| EPRE ratio of PBCH to PBCH_DMRS  |                      | dB       |                          |   |   |
| EPRE ratio of PDCCH_DMRS to SSS  |                      | dB       |                          |   |   |
| EPRE ratio of PDCCH to PDCCH_DMRS  |                      | dB       |                          |   |   |
| EPRE ratio of PDSCH_DMRS to SSS  |                      | dB       |                          |   |   |
| EPRE ratio of PDSCH to PDSCH_DMRS  |                      | dB       |                          |   |   |
| SSB with index 0   | $\hat{E}_s / I_{ot}$ |          | dB                       | 3   | Power of SSB with index 0 is set to be above configured <i>msgA-RSRP-ThresholdSSB</i> |
|  | $N_{oc}$             | Config 1 | dBm/15kHz                | -98   |   |
|  |                      | Config 2 |                          | -101  |   |
|  | $\hat{E}_s / N_{oc}$ |          | dB                       | 3   |   |
| SS-RSRP  |                      | dBm/ SCS | -95                      |   |   |
| SSB with index 1   | $\hat{E}_s / I_{ot}$ |          | dB                       | -17   | Power of SSB with index 1 is set to be below configured <i>msgA-RSRP-ThresholdSSB</i> |
|  | $N_{oc}$             | Config 1 | dBm/15kHz                | -98   |   |
|  |                      | Config 2 |                          | -101  |   |
|  | $\hat{E}_s / N_{oc}$ |          | dB                       | -17   |   |
| SS-RSRP  |                      | dBm/ SCS | -115                     |   |   |
| $I_o$ <sup>Note 2</sup>  | Config 1             | dBm      | -65.3/9.36MHz            | For symbols without SSB index 1   |   |
|  | Config 2             |          | -62.2/38.16MHz           |   |   |

| Propagation Condition  |                      | -        | AWGN                     |   |   |
| <p>Note 1: OCNG shall be used such that the cell is fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.</p> <p>Note 2: SS-RSRP, <math>E_s/I_{ot}</math> and <math>I_o</math> levels have been derived from other parameters for information purpose. They are not settable parameters.</p> <p>Note 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.</p> |                      |          |                          |   |   |

#### A.6.3.2.2.3.2 Test Requirements

Contention based random access is triggered by *not* explicitly assigning a random access preamble via dedicated signalling in the downlink.

##### A.6.3.2.2.3.2.1 MsgA Transmission

To test the UE behavior specified in Clause 6.2.2.3.1.1 the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0, which has SS-RSRP above the configured *msgA-RSRP-ThresholdSSB*.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first MsgA preamble transmission shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.3.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2.3.1.2 the System Simulator shall transmit a MsgB containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB(s) and shall transmit an ACK if the MsgB with a successRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble and if the Contention Resolution is successful.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB(s) contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.3.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.1.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

#### A.6.3.2.2.4 2-step RA type non-contention based test in FR1 for NR standalone

##### A.6.3.2.2.4.1 Test Purpose and Environment

The purpose of this test is to verify that the behavior of the random access procedure is according to the requirements and that the MsgA PRACH, MsgA PUSCH power settings and timing are within specified limits. This test will verify the requirements in Clause 6.2.2.3 and Clause 7.1.2 in an AWGN model.

For this test one cell is used and configured as PCell in FR1. Supported test parameters are shown in Table A.6.3.2.2.4.1-1. UE capable of SA with PCell in FR1 needs to be tested by using the parameters in Table A.6.3.2.2.4.1-2.

**Table A.6.3.2.2.4.1-1: Supported test configurations for non-contention based random access test in FR1 for NR standalone**

| <b>Config</b> | <b>Description</b>  |
|---------------|---|
| 1             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note:         | The UE is only required to be tested in one of the supported test configurations depending on UE capability |

**Table A.6.3.2.4.1-2: General test parameters for non-contention based random access test in FR1 for NR Standalone**

| Parameter  |                           | Unit     | Test-1                   | Comments  |      |
|--|---------------------------|----------|--------------------------|---|------|
| SSB Configuration  | Config 1                  |          | SSB pattern 2 in FR1     | As defined in A.3.10, except for number of SSBs per SS-burst and SS/PBCH block index as below |      |
| Number of SSBs per SS-burst  |                           |          | 2                        | Different from the definition in A.3.10   |      |
| SS/PBCH block index  |                           |          | 0,1                      | Different from the definition in A.3.10   |      |
| Duplex Mode for Cell 1   | Config 1                  |          | TDD                      |   |      |
| TDD Configuration  | Config 1                  |          | TDDConf.2.1              |   |      |
| OCNG Pattern <sup>Note 1</sup>   |                           |          | OP.1                     | As defined in A.3.2.1.  |      |
| PDSCH parameters <sup>Note 4</sup>   | Config 1                  |          | SR.2.1 TDD               | As defined in A.3.1.1.  |      |
| NR RF Channel Number   |                           |          | 1                        |   |      |
| EPRE ratio of PSS to SSS   |                           | dB       | 0                        |   |      |
| EPRE ratio of PBCH_DMRS to SSS   |                           | dB       |                          |   |      |
| EPRE ratio of PBCH to PBCH_DMRS  |                           | dB       |                          |   |      |
| EPRE ratio of PDCCH_DMRS to SSS  |                           | dB       |                          |   |      |
| EPRE ratio of PDCCH to PDCCH_DMRS  |                           | dB       |                          |   |      |
| EPRE ratio of PDSCH_DMRS to SSS  |                           | dB       |                          |   |      |
| EPRE ratio of PDSCH to PDSCH_DMRS  |                           | dB       |                          |   |      |

The OCNG pattern is chosen during the test according to the presence of a DL reference measurement channel.</p> <p>Note 2: SS-RSRP, <math>E_s/I_{ot}</math> and <math>I_o</math> levels have been derived from other parameters for information purpose. They are not settable parameters.</p> <p>Note 3: The DL PDSCH reference measurement channel is used in the test only when a downlink transmission dedicated to the UE under test is required.</p> |                           |          |                          |   |      |

#### A.6.3.2.2.4.2 Test Requirements

Non-Contention based random access is triggered by explicitly assigning a random access preamble via dedicated signalling in the downlink. In the test, the non-contention based random access procedure is not initialized for Other SI requested from UE or beam failure recovery.

##### A.6.3.2.2.4.2.1 MsgA Transmission

To test the UE behavior specified in Clause 6.2.2.3.2.1, with the contention-free Random Access Resources and the contention-free PRACH occasions associated with SSBs configured, the System Simulator shall receive the MsgA with a preamble which belongs to one of the Random Access Preambles associated with the SSB with index 0.

In addition, the System Simulator shall receive the MsgA PRACH on the PRACH occasion which belongs to the PRACH occasions corresponding to the SSB with index 0, and the selected PRACH occasion shall belong to the PRACH occasions permitted by the restrictions given first by the *msgA-SSB-SharedRO-MaskIndex* if configured, or next by the *ra-ssb-OccasionMaskIndex* if configured.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.4.2.2 MsgB Reception

To test the UE behavior specified in Clause 6.2.2.3.2.2 the System Simulator shall transmit a MsgB containing a fallbackRAR containing a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. In response to the first 4 preambles, the System Simulator shall transmit a MsgB *not* corresponding to the transmitted Random Access Preamble.

The UE may stop monitoring for MsgB(s) and shall transmit the msg3 containing the payload of MsgA PUSCH if the MsgB with a fallbackRAR contains a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble. The UE shall monitor contention resolution as described in clause 8.2A in TS 38.213 [3].

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA PRACH and MsgA PUSCH transmission power when the backoff time expires if all received MsgB's contain Random Access Preamble identifiers that do not match the transmitted Random Access Preamble.

In addition, the power applied to all preambles shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional preambles shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA and msg3 transmissions shall be within the accuracy specified in Clause 7.1.2.

##### A.6.3.2.2.4.2.3 No MsgB Reception

To test the UE behavior specified in clause 6.2.2.3.2.3 the System Simulator shall transmit a MsgB containing a successRAR message and a Random Access Preamble identifier corresponding to the transmitted Random Access Preamble after 5 preambles have been received by the System Simulator. The System Simulator shall *not* respond to the first 4 preambles.

The UE shall again perform the Random Access Resource selection procedure specified in clause 5.1.2a in TS 38.321 [7], and transmit with the calculated MsgA transmission power when the backoff time expires if no MsgB is received within the MsgB Response window.

In addition, the power applied to all MsgA transmissions shall be in accordance with what is specified in Clause 6.2.2.3. The power of the first preamble shall be -22 dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18]. The power of the first MsgA PUSCH transmission shall be  $0.6 + 3(\mu + 2)$  dBm with an accuracy specified in clause 6.3.4.2 of TS 38.101-1 [18], where  $\mu$  indicates the MsgA PUSCH numerology. The relative power applied to additional MsgA transmissions shall have an accuracy specified in clause 6.3.4.3 of TS 38.101-1 [18].

The transmit timing of all MsgA transmissions shall be within the accuracy specified in Clause 7.1.2.

### A.6.3.2.3 SA: RRC Connection Release with Redirection

#### A.6.3.2.3.1 Redirection from NR in FR1 to NR in FR1

##### A.6.3.2.3.1.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to NR requirements specified in clause 6.2.3.2.1.

##### A.6.3.2.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.2.3.1.2-1. The time delay is tested by using the parameters in table A.6.3.2.3.1.2-2, and A.6.3.2.3.1.2-3.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2. Cell 1 and Cell 2 belong to different tracking areas.

**Table A.6.3.2.3.1.2-1: Redirection from NR to NR test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.2.3.1.2-2: General test parameters for Redirection from NR to NR test case**

| Parameter                  | Unit              | Value     | Comment  |
|----------------------------|-------------------|-----------|--|
| Initial conditions         | Active cell       | Cell 1    |  |
|                            | Neighbouring cell | Cell 2    |  |
| Final condition            | Active cell       | Cell 2    |  |
| Filter coefficient         |                   | 0         | L3 filtering is not used                         |
| Access Barring Information | -                 | Not Sent  | No additional delays in random access procedure. |
| Time offset between cells  |                   | 3 $\mu$ s | Synchronous cells                                |
| T1                         | s                 | 5         |  |
| T2                         | s                 | 2.3       |  |

**Table A.6.3.2.3.1.2-3: Cell specific test parameters for Redirection from NR to NR test case**

| Parameter                                |                  | Unit      | Cell 1                      |    | Cell 2    |    |
|--|------------------|-----------|-----------------------------|----|-----------|----|
|  |                  |           | T1                          | T2 | T1        | T2 |
| NR RF Channel Number                     |                  |           | 1                           |    | 2         |    |

| Note 1:                         | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                  |        |        |        |        |
| Note 2:                         | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |        |        |        |
| Note 3:                         | I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                  |        |        |        |        |

### A.6.3.2.3.1.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 2240 ms from the beginning of time period T2. The rate of correct RRC connection release redirection to NR observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{\text{connection\_release\_redirect\_NR}} = T_{\text{RRC\_procedure\_delay}} + T_{\text{identify-NR}} + T_{\text{SI-NR}} + T_{\text{RACH}},$$

where:

$T_{\text{RRC\_procedure\_delay}} = 110$  ms in the test.

$T_{\text{identify-NR}} = 680$  ms in the test.

$T_{\text{SI-NR}} = 1280$  ms, it is the time required for receiving all the relevant system information as defined in TS 38.331 for the target NR cell.

$T_{\text{RACH}} = 170$  ms in the test.

This gives a total of 2240 ms.

### A.6.3.2.3.2 Redirection from NR in FR1 to E-UTRAN

#### A.6.3.2.3.2.1 Test Purpose and Environment

This test is to verify RRC connection release with redirection from NR to E-UTRAN requirements specified in clause 6.2.3.2.2.

#### A.6.3.2.3.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.2.3.2.2-1. The time delay is tested by using the parameters in table A.6.3.2.3.2.2-2, A.6.3.2.3.2.2-3 and A.6.3.2.3.2.2-4.

The test consists of two successive time periods, with time duration of T1, and T2 respectively. The *RRCRelease* message shall be sent to the UE during period T1 and the start of T2 is the instant when the last TTI containing the RRC message is sent to the UE. Prior to time duration T2, the UE shall not have any timing information of Cell 2. Cell 2 is powered up at the beginning of the T2.

**Table A.6.3.2.3.2.2-1: Redirection from NR to E-UTRAN test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                     |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.3.2.3.2.2-2: General test parameters for Redirection from NR to E-UTRAN test case**

| Parameter                  |                   | Unit | Value     | Comment  |
|----------------------------|-------------------|------|-----------|--|
| Initial conditions         | Active cell       |      | Cell 1    |  |
|                            | Neighbouring cell |      | Cell 2    |  |
| Final condition            | Active cell       |      | Cell 2    |  |
| Filter coefficient         |                   |      | 0         | L3 filtering is not used                         |
| Access Barring Information |                   | -    | Not Sent  | No additional delays in random access procedure. |
| Time offset between cells  |                   |      | 3 $\mu$ s | Synchronous cells                                |
| T1                         |                   | s    | 5         |  |
| T2                         |                   | s    | 2.3       |  |

| Note 1:   | Special subframe and uplink-downlink configurations are specified in table 4.2-1 in TS 36.211 [23].   |                  |  |        |
| Note 2:   | PRACH configurations are specified in table 5.7.1-2 and table 5.7.1-3 in TS 36.211 [23].  |                  |  |        |
| Note 3:   | DL RMCs and OCNG patterns are specified in clauses A 3.1 and A 3.2 of TS 36.133 [15] respectively.  |                  |  |        |
| Note 4:   | OCNG shall be used such that all cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                  |  |        |
| Note 5:   | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N <sub>oc</sub> to be fulfilled. |                  |  |        |
| Note 6:   | $\hat{E}_s/I_{ot}$ , RSRP, SCH_RP and I <sub>o</sub> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                  |  |        |
| Note 7:   | Propagation condition and correlation matrix are defined in clause B.2 in TS 36.101 [25].   |                  |  |        |

### A.6.3.2.3.2.3 Test Requirements

The UE shall start to transmit the PRACH to Cell 2 less than 2205 ms from the beginning of time period T2. The rate of correct RRC connection release redirection to E-UTRAN observed during repeated tests shall be at least 90%.

NOTE: The redirection delay can be expressed as:

$$T_{\text{connection\_release\_redirect\_E-UTRA}} = T_{\text{RRC\_procedure\_delay}} + T_{\text{identify-E-UTRA}} + T_{\text{SI-E-UTRA}} + T_{\text{RACH}}$$

where:

$T_{\text{RRC\_procedure\_delay}} = 110$  ms in the test.

$T_{\text{identify-E-UTRA}} = 800$  ms in the test.

$T_{\text{SI-E-UTRA}} = 1280$  ms, it is the time required for receiving all the relevant system information as defined in TS 36.331 for the target E-UTRA cell.

$T_{\text{RACH}} = 15$  ms in the test.

This gives a total of 2205 ms.

## A.6.3.3 Conditional handover

### A.6.3.3.1 Intra-frequency conditional handover from FR1 to FR1

#### A.6.3.3.1.1 Test Purpose and Environment

This test is to verify the requirement for the NR FR1-NR FR1 intra frequency conditional handover requirements specified in clause 6.1.4.2.

#### A.6.3.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.1.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.1.2-2, and A.6.3.3.1.2-3.

The test consists of two successive time periods, with time durations of T1 and T2 respectively. At the start of time duration T1, the UE may not have any timing information of cell 2.

NR shall configure a condition implying handover to cell 2 during T1, at a time earlier than  $T_{\text{RRC}}$  before the beginning of T2.

**Table A.6.3.3.1.2-1: Intra-frequency conditional handover from FR1 to FR1 test configurations**

| Config   | Description  |
|--|--|
| 1  | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.3.3.1.2-2: General test parameters Intra-frequency conditional handover from FR1 to FR1**

| Parameter              | Unit              | Value  | Comment                  |
|------------------------|-------------------|--------|--------------------------|
| Initial conditions     | Active cell       | Cell 1 |                          |
|                        | Neighbouring cell | Cell 2 |                          |
| Final condition        | Active cell       | Cell 2 |                          |
| A3-Offset in condition | dB                | 0      |                          |
| Hysteresis             | dB                | 0      |                          |
| Time To Trigger        | s                 | 0      |                          |
| Filter coefficient     |                   | 0      | L3 filtering is not used |

|                            |   |                           |  |
|----------------------------|---|---------------------------|--|
| Access Barring Information | - | Not Sent                  | No additional delays in random access procedure.       |
| PRACH configuration index  |   | FR1 PRACH configuration 1 | As specified in table Table 6.3.3.2-3 in TS 38.211 [6] |
| Time offset between cells  |   | 3 $\mu$ s                 | Synchronous cells                                      |
| T1                         | s | 5                         |  |
| T2                         | s | $\leq 2$                  |  |

**Table A.6.3.3.1.2-3: Cell specific test parameters for NR FR1-FR1 Intra frequency conditional handover test case**

| Parameter                                |                  | Unit        | Cell 1                      |        | Cell 2 |        |
|--|------------------|-------------|-----------------------------|--------|--------|--------|
|  |                  |             | T1                          | T2     | T1     | T2     |
| NR RF Channel Number                     |                  |             | 1                           |        | 1      |        |

| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                  |        |        |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |        |        |        |
| Note 3:               | lo levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                  |        |        |        |        |

### A.6.3.3.1.3 Test Requirements

$T_{RRC} + T_{Event\_DU}$  occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{measure} + T_{interrupt} + T_{CHO\_execution} = 800 + 62 + 10 = 872\text{ms}$  from the start of T2 and the interruption during T2 shall not exceed  $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} = 40 + 20 + 2 = 62\text{ms}$

### A.6.3.3.2 Inter-frequency conditional handover from FR1 to FR1

#### A.6.3.3.2.1 Test Purpose and Environment

This test is to verify the requirement for the NR conditional FR1-NR FR1 inter frequency conditional handover requirements specified in clause 6.1.4.2.

#### A.6.3.3.2.2 Test Parameters

Supported test configurations are shown in table A.6.3.3.2.2-1. Both conditional handover delay and interruption length are tested by using the parameters in table A.6.3.3.2.2-2, and A.6.3.3.2.2-3.

The test scenario comprises of two carriers and one cell on each carrier Gap pattern ID gp0 is configured in the test case. The test consists of two successive time periods, with time durations of T1, T2 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. NR shall configure a condition implying handover to cell 2 during T1, at a time earlier than  $T_{RRC}$  before the beginning of T2. At the start of T2, cell 2 becomes detectable and meets the handover condition.

**Table A.6.3.3.2.2-1: Inter-frequency handover from FR1 to FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | Source cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>Target cell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | Source cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>Target cell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.3.3.2-2: General test parameters Inter-frequency handover from FR1 to FR1**

| Parameter                       |                   | Unit | Value    | Comment  |
|---------------------------------|-------------------|------|----------|--|
| Initial conditions              | Active cell       |      | Cell 1   |  |
|                                 | Neighbouring cell |      | Cell 2   |  |
| Final condition                 | Active cell       |      | Cell 2   |  |
| A3-Offset in handover condition |                   | dB   | -4       |  |
| Hysteresis                      |                   | dB   | 0        |  |
| Time To Trigger                 |                   | s    | 0        |  |
| Filter coefficient              |                   |      | 0        | L3 filtering is not used                         |
| Access Barring Information      |                   | -    | Not Sent | No additional delays in random access procedure. |
| T1                              |                   | s    | 5        |  |
| T2                              |                   | s    | ≤2       |  |

| Note 1:               | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                  |        |        |        |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |        |        |        |
| Note 3:               | Io levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |                  |        |        |        |        |

### A.6.3.3.2.3 Test Requirements

$T_{RRC} + T_{Event\_DU}$  occurs during T1 as the handover condition becomes satisfied at the start of T2. The test shall verify that there are no interruptions during T1.

The UE shall start to transmit the PRACH to Cell 2 less than  $T_{measure} + T_{interrupt} + T_{CHO\_execution} = 920 + 62 + 10 = 992$  ms from the start of T2 and the interruption during T2 shall not exceed  $T_{interrupt} = T_{processing} + T_{IU} + T_{\Delta} + T_{margin} = 40 + 20 + 2 = 62$ ms excluding any transmissions which do not occur due to measurement gaps.

Inter-frequency CHO FR1-FR1  $920 (T_{measure}) + 62 (T_{interrupt}) + 10 (T_{CHO\_execution}) = 992$  62 m

## A.6.4 Timing

### A.6.4.1 UE transmit timing

#### A.6.4.1.1 NR UE Transmit Timing Test for FR1

##### A.6.4.1.1.1 Test Purpose and environment

The purpose of this test is to verify that the UE can follow frame timing change of the connected gNodeB and that the UE initial transmit timing accuracy, maximum amount of timing change in one adjustment, minimum and maximum adjustment rate are within the specified limits. This test will verify the requirements in clause 7.1.2.

Supported test configurations are shown in Table A.6.4.1.1.1-1.

**Table A.6.4.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | NR FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                               |
| 2             | NR TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                               |
| 3             | NR TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                               |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

For this test a single NR cell is used. Table A.6.4.1.1.1-2 defines the parameters to be configured and strength of the transmitted signals. The transmit timing is verified by the UE transmitting SRS using the configuration defined in Table A.6.4.1.1.1-3.

**Table A.6.4.1.1.1-2: Cell Specific Test Parameters for UL Transmit Timing test**

| Parameter                                | Unit        | Config | Test1                       | Test2                       |

**Table A.6.4.1.1.1-4: Void****A.6.4.1.1.2 Test requirements**

The test sequence shall be carried out in RRC\_CONNECTED for every test case.

Following will be the test sequence for this test

- 1) Setup NR PCell according to parameters given in Table A.6.4.1.1.1-1.
- 2) After connection set up with the cell, the test equipment will verify that the timing of the NR cell is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB.

- a. The  $N_{TA}$  offset value (in  $T_c$  units) is 25600
  - b. The  $T_c$  values depend on the DL and UL SCS for which the test is being run and are given in Table 7.1.2-1
- 3) The test system shall adjust the timing of the DL path by values given in Table A.6.4.1.1.2-1

**Table A.6.4.1.1.2-1: Adjustment Value for DL Timing**

| SCS of SSB signals (KHz) | Adjustment Value |             |
|--------------------------|------------------|-------------|
|                          | Test1            | Test2       |
| 15                       | $+64*64T_c$      | $+32*64T_c$ |
| 30                       | $+32*64T_c$      | $+16*64T_c$ |

- 4) The test system shall verify that the adjustment step size and the adjustment rate shall be according to requirements specified in clause 7.1.2 Table 7.1.2.1-1 until the UE transmit timing offset is within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  respective to the first detected path (in time) of DL SSB. Skip this step for test 2 with DRX configured.
- 5) The test system shall verify that the UE transmit timing offset stays within  $(N_{TA} + N_{TA\_offset}) \times T_c \pm T_e$  of the first detected path of DL SSB. For Test 2 the UE transmit timing offset shall be verified for the first transmission in the DRX cycle immediately after DL timing adjustment

## A.6.4.2 UE timer accuracy

### A.6.4.3 Timing advance

#### A.6.4.3.1 SA FR1 timing advance adjustment accuracy

##### A.6.4.3.1.1 Test Purpose and Environment

The purpose of the test is to verify UE Timing Advance adjustment delay and accuracy requirement defined in clause 7.3.

##### A.6.4.3.1.2 Test Parameters

Supported test configurations are shown in table A.6.4.3.1.2-1. Both timing advance adjustment delay and accuracy are tested by using the parameters in table A.6.4.3.1.2-2, A.6.4.3.1.2-3 and A.6.4.3.1.2-4.

In all test cases, single cell is used. Each test consists of two successive time periods, with time duration of T1 and T2 respectively. In each time period, timing advance commands are sent to the UE and Sounding Reference Signals (SRS), as specified in table A.6.4.3.1.2-3, are sent from the UE and received by the test equipment. By measuring the reception of the SRS, the transmit timing, and hence the timing advance adjustment accuracy, can be measured.

During time period T1, the test equipment shall send one message with a Timing Advance Command MAC Control Element, as specified in Clause 6.1.3.4 in TS 38.321 [7]. The Timing Advance Command value shall be set to 31, which according to Clause 4.2 in TS 38.213 [3] results in zero adjustment of the Timing Advance. In this way, a reference value for the timing advance used by the UE is established.

During time period T2, the test equipment shall send a sequence of messages with Timing Advance Command MAC Control Elements, with Timing Advance Command value specified in table A.6.4.3.1.2-2. This value shall result in changes of the timing advance used by the UE, and the accuracy of the change shall then be measured, using the SRS sent from the UE.

As specified in Clause 7.3.2.1, the UE adjusts its uplink timing at slot  $n+k$  for a timing advance command received in slot  $n$ . This delay must be taken into account when measuring the timing advance adjustment accuracy, via the SRS sent from the UE.

The UE Time Alignment Timer, described in Clause 5.2 in TS 38.321 [7], shall be configured so that it does not expire in the duration of the test.

**Table A.6.4.3.1.2-1: Timing advance supported test configurations**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.4.3.1.2-2: General test parameters for timing advance**

| Parameter  | Unit | Value     | Comment  |
|--|------|-----------|--|
| RF channel number                                |      | 1         |  |
| Initial DL BWP                                   |      | DLBWP.0.1 | As specified in Table A.3.9.2.1-1  |
| Dedicated DL BWP                                 |      | DLBWP.1.1 | As specified in Table A.3.9.2.2-1  |
| Initial UL BWP                                   |      | ULBWP.0.1 | As specified in Table A.3.9.3.1-1  |
| Dedicated UL BWP                                 |      | ULBWP.1.1 | As specified in Table A.3.9.3.2-1  |
| Timing Advance Command ( $T_A$ ) value during T1 |      | 31        | $N_{TA\_new} = N_{TA\_old}$ for the purpose of establishing a reference value from which the timing advance adjustment accuracy can be measured during T2                |
| Timing Advance Command ( $T_A$ ) value during T2 |      | 39        | For 15 kHz SCS $N_{TA\_new} = N_{TA\_old} + 8192 * T_c$<br>For 30 kHz SCS $N_{TA\_new} = N_{TA\_old} + 4096 * T_c$<br>(based on equation in clause 4.2 of TS 38.213 [3]) |
| T1   | s    | 5         |  |
| T2   | s    | 5         |  |

| Note:                    | For further information see clause 6.3.2 in TS 38.331 [2]. |   |

### A.6.4.3.1.3 Test Requirements

The UE shall apply the signalled Timing Advance value to the transmission timing at the designated activation time i.e.  $k+1$  slots after the reception of the timing advance command, where  $k=5$ .

The Timing Advance adjustment accuracy shall be within the limits specified in clause 7.3.2.2.

The rate of correct Timing Advance adjustments observed during repeated tests shall be at least 90%.

## A.6.5 Signalling characteristics

### A.6.5.1 Radio link Monitoring

In the following clause, any uplink signal transmitted by the UE is used for detecting the In-/Out-of-Sync state of the UE. In terms of measurement, the uplink signal is verified on the basis of the UE output power:

For intra-band contiguous carrier aggregation, transmit OFF power is measured as the mean power per component carrier.

For UE with multiple transmit antennas, transmit OFF power is measured as the mean power at each transmit connector.

- UE output power higher than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means uplink signal
- UE output power equal to or less than Transmit OFF power -50 dBm (as defined in TS 38.101-1 [18]) means no uplink signal.

### A.6.5.1.1 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode

#### A.6.5.1.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.6.5.1.1.1-1. The test parameters are given in Tables A.6.5.1.1.1-2, A.6.5.1.1.1-3, and A.6.5.1.1.1-4 below. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.1.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. The UE is configured to perform inter-frequency measurements using Gap Pattern ID #0 (40ms) in test 1.

**Table A.6.5.1.1.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 2             | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 3             | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                                    |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.1.1-2: General test parameters for FR1 out-of-sync testing in non-DRX mode**

| Parameter                                    |  | Unit | Value                       |

| EPRE ratio of PDSCH DMRS to SSS   | dB       |           |                   |    |     |
| EPRE ratio of PDSCH to PDSCH DMRS   | dB       |           |                   |    |     |
| EPRE ratio of OCNG DMRS to SSS  | dB       |           |                   |    |     |
| EPRE ratio of OCNG to OCNG DMRS   | dB       |           |                   |    |     |
| SNR on RLM-RS   | Config 1 | dB        | 1                 | -7 | -15 |
|   | Config 2 |           | 1                 | -7 | -15 |
|   | Config 3 |           | 1                 | -7 | -15 |
| $N_{oc}$  | Config 1 | dBm/15kHz | -98               |    |     |
|   | Config 2 |           | -98               |    |     |
|   | Config 3 |           | -98               |    |     |
| $N_{oc}$  | Config 1 | dBm/SCS   | -98               |    |     |
|   | Config 2 |           | -98               |    |     |
|   | Config 3 |           | -95               |    |     |
| Propagation condition   |          |           | TDL-C 300ns 100Hz |    |     |
| Note 1: OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.      |          |           |                   |    |     |
| Note 2: The signal contains PDCCH for UEs other than the device under test as part of OCNG.   |          |           |                   |    |     |
| Note 3: SNR levels correspond to the signal to noise ratio over the SSS REs.  |          |           |                   |    |     |
| Note 4: The SNR in time periods T1, T2 and T3 is denoted as SNR1, SNR2 and SNR3 respectively in Figure A.6.5.1.1.1-1.   |          |           |                   |    |     |
| Note 5: The SNR values are specified for testing a UE which supports 2RX on at least one band. For testing of a UE which supports 4RX on all bands, the SNR during T3 is A.3.6. |          |           |                   |    |     |

**Table A.6.5.1.1-4: Measurement gap configuration for out-of-sync tests in non-DRX mode**

| Field   | Test 1 |
|---|--------|
|   | Value  |
| gapOffset   | 0      |
| Note: Ensure that RLM RS is partially overlapped with measurement gap |        |

**Figure A.6.5.1.1.1-1: SNR variation for out-of-sync testing**

#### A.6.5.1.1.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.6.5.1.2 Radio Link Monitoring In-sync Test for FR1 PCell configured with SSB-based RLM RS in non-DRX mode

##### A.6.5.1.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.6.5.1.2.1-1. The test parameters are given in Tables A.6.5.1.2.1-2, and A.6.5.1.2.1-3 below. There is one cell (Cell 1), which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.2.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms.

**Table A.6.5.1.2.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 2                    | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 3                    | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                                    |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.2.1-2: General test parameters for FR1 in-sync testing in non-DRX mode**

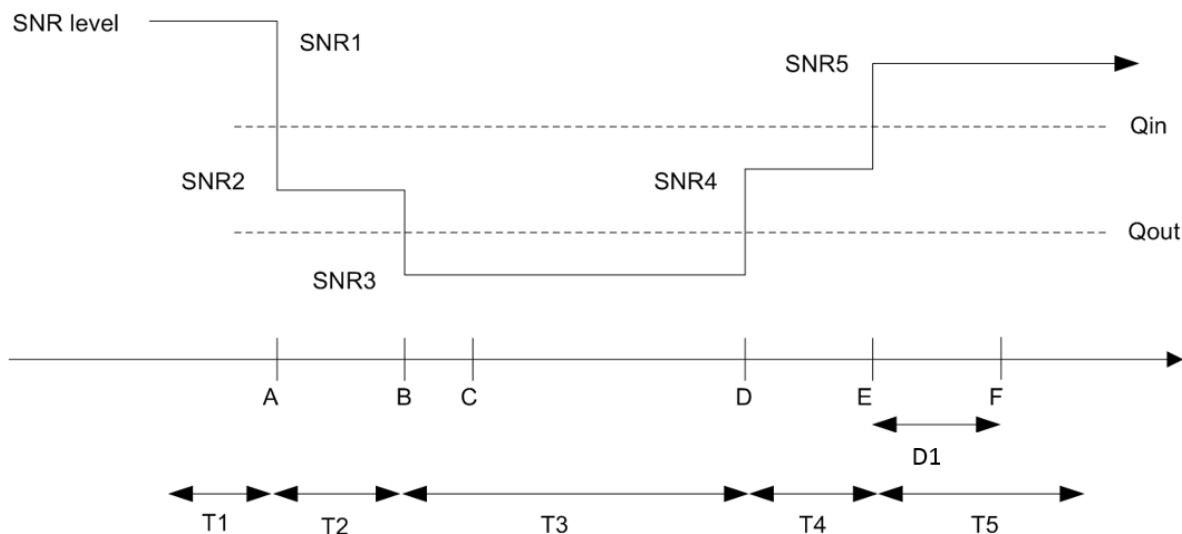

| Parameter                                    |  | Unit | Value                       |

**Table A.6.5.1.2.1-4: Void**

**Figure A.6.5.1.2.1-1: SNR variation for in-sync testing**

### A.6.5.1.2.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.1.3 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode

#### A.6.5.1.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.6.5.1.3.1-1. The test parameters are given in Tables A.6.5.1.3.1-2, and A.6.5.1.3.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.3.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.6.5.1.3.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 2             | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 3             | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                                    |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.3.1-2: General test parameters for FR1 out-of-sync testing in DRX mode**

| Parameter                                    |  | Unit | Value                       |

Table A.6.5.1.3.1-6: Void

Figure A.6.5.1.3.1-1: SNR variation for out-of-sync testing

### A.6.5.1.3.2 Test Requirements

The UE behaviour in each test during time durations T1, T2 and T3 shall be as follows:

During the period from time point A to time point B the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The UE shall stop transmitting uplink signal no later than time point C (D1 second after the start of the time duration T3).

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.1.4 Radio Link Monitoring In-sync Test for FR1 PCell configured with SSB-based RLM RS in DRX mode

#### A.6.5.1.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync and in sync for the purpose of monitoring downlink radio link quality of the PCell when DRX is used. This test will partly verify the FR1 radio link monitoring requirements in clause 8.1.

In the test, UE is configured to perform RLM on SSB, with *detectionResource* included in *RadioLinkMonitoringRS* set to SSB#0, and *purpose* set to 'rlf'. Supported test configurations are shown in table A.6.5.1.4.1-1. The test parameters are given in Tables A.6.5.1.4.1-2, and A.6.5.1.4.1-3. There is one cell (Cell 1), which is the active NR cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.4.1-1 shows the variation of the downlink SNR in the active cell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to Cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CSI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.6.5.1.4.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 2                    | TDD, SSB SCS 15 kHz, data SCS 15 kHz, BW 10 MHz                                    |
| 3                    | TDD, SSB SCS 30 kHz, data SCS 30 kHz, BW 40 MHz                                    |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.4.1-2: General test parameters for FR1 in-sync testing in DRX mode**

| Parameter                                    |  | Unit | Value                       |

A.6.5.1.4.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (D1 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting.

The rate of correct events observed during repeated tests shall be at least 90%.

A.6.5.1.5 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode

A.6.5.1.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.6.5.1.5.1-1, A.6.5.1.5.1-2, A.6.5.1.5.1-3, and A.6.5.1.5.1-3A below. There is one cell, cell 1 which is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.5.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting of 5ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test. In the test, SSB0 is configured as the BFD-RS.

Table A.6.5.1.5.1-1: Supported test configurations for FR1 PCell

| Configuration | Description  |
|---------------|--|
| 1             | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2             | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3             | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.5.1-2: General test parameters for FR1 PCell for CSI-RS out-of-sync testing in non-DRX mode**

| Parameter                                    |   | Unit | Value                      |

Table A.6.5.1.5.1-4: Void

Figure A.6.5.1.5.1-1: SNR variation for CSI-RS out-of-sync testing

A.6.5.1.5.2 Test Requirements

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 no later than time point C ( $D_1$  ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

A.6.5.1.6 Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in non-DRX mode

A.6.5.1.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when no DRX is used. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.6.5.1.6.1-1, A.6.5.1.6.1-2, and A.6.5.1.6.1-3 below. There is one cells, cell 1 which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.6.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is not enabled. In the test, SSB0 is configured as the BFD-RS.

Table A.6.5.1.6.1-1: Supported test configurations for FR1 PCell

| Configuration | Description  |
|---------------|--|
| 1             | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2             | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3             | TDD duplex mode, 30kHz SSB SCS, 40 MHz bandwidth                                   |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.6.1-2: General test parameters for FR1 PCell for CSI-RS in-sync testing in non-DRX mode**

| Parameter                                    |   | Unit | Value                      |

**Table A.6.5.1.6.1-4: Void**

**Figure A.6.5.1.6.1-1: SNR variation for CSI-RS in-sync testing**

**A.6.5.1.6.2 Test Requirements**

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

**A.6.5.1.7 Radio Link Monitoring Out-of-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode**

**A.6.5.1.7.1 Test Purpose and Environment**

The purpose of this test is to verify that the UE properly detects the out of sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS Out-of-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.6.5.1.7.1-1, A.6.5.1.7.1-2, and A.6.5.1.7.1-3 below. There is one cell, cell 1 is the PCell, in the test. The test consists of three successive time periods, with time duration of T1, T2 and T3 respectively. Figure A.6.5.1.7.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.7.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2             | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3             | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Figure A.6.5.1.7.1-1: SNR variation for CSI-RS out-of-sync testing**

**A.6.5.1.7.2 Test Requirements**

The UE behaviour during time durations T1, T2, and T3 shall be as follows:

During time durations T1, T2 and T3, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on PCell.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 (PCell) at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

The UE shall stop transmitting uplink signal in Cell 1 (PCell) no later than time point C ( $D_1$  ms after the start of the time duration T3) on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

**A.6.5.1.8 Radio Link Monitoring In-sync Test for FR1 PCell configured with CSI-RS-based RLM in DRX mode**

**A.6.5.1.8.1 Test Purpose and Environment**

The purpose of this test is to verify that the UE properly detects the in sync for the purpose of monitoring downlink CSI-RS based radio link quality of the PCell when DRX is used. This test will partly verify the FR1 PCell CSI-RS In-sync radio link monitoring requirements in clause 8.1.

The test parameters are given in Tables A.6.5.1.8.1-1, A.6.5.1.8.1-2, A.6.5.1.8.1-3 and A.6.5.1.8.1-3A below. There is one cells, cell 1 which is the PCell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.1.8.1-1 shows the variation of the downlink SNR in the PCell to emulate out-of-sync and in-sync states. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5ms. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test. In the test, SSB0 is configured as the BFD-RS.

**Table A.6.5.1.8.1-1: Supported test configurations for FR1 PCell**

| Configuration | Description  |
|---------------|--|
| 1             | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2             | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3             | TDD duplex mode, 30kHz SSB SCS, 40 MHz bandwidth                                   |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.1.8.1-2: General test parameters for FR1 PCell for CSI-RS in-sync testing in non-DRX mode**

### A.6.5.1.8.2 Test Requirements

The UE behaviour in each test during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the period from time point A to time point F (T6 second after the start of time duration T5) the UE shall transmit uplink signal at least in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting on the PCell.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.2 Interruption

### A.6.5.2.1 Interruptions during measurements on deactivated NR SCC in FR1

#### A.6.5.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE missed ACK/NACK rate does not exceed the limits at NR PSCell interruptions during the measurement on the deactivated NR SCC. This test will verify the missed ACK/NACK rate for PCell in standalone NR specified in clause 8.2.2.2. Supported test configurations are shown in table A.6.5.2.1.1-1.

The general test parameters and NR cell specific test parameters are given in Table A.6.5.2.1.1-2 and A.6.5.2.1.1-3 below. In the test there are two cells: Cell1 and Cell2. Cell1 is PCell, Cell2 is an NR deactivated SCell. Cell1 shall be configured as PCell and Cell2 shall be configured as SCell.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, the UE is connected to Cell1 and Cell2 and the RRC message including *measCycleSCell* or *allowInterruptions* for the deactivated NR SCells is received at the UE antenna connector. During T1, PCell is continuously scheduled in DL.

**Table A.6.5.2.1.1-1: Interruptions during measurements on deactivated NR SCC supported test configurations**

| Config  | Description   |
|---------|---|
| 1       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD – FDD duplex mode   |
| 2       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD – TDD duplex mode   |
| 3       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD – FDD duplex mode   |
| 4       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD – TDD duplex mode   |
| 5       | NR 30 kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD – TDD duplex mode   |
| Note 1: | The UE is only required to be tested in one of the supported test configurations  |
| Note 2: | The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs $\geq$ the bandwidth ( $BW_{\text{channel}}$ ) defined in each test configuration, |

**Table A.6.5.2.1.1-2: General test parameters for interruptions during measurements on deactivated NR SCC in standalone NR**

| Parameter                                | Unit | Value  | Comment                                      |
|--|------|--------|--|

#### A.6.5.2.1.2 Test Requirements

The UE shall be continuously scheduled on PCell during the entire length of T1. During the time duration T1 the UE shall transmit at least 99.5% of ACK/NACK on PCell.

If the NR PCell is not in the same band as the deactivated SCell, the UE is only allowed to cause interruptions on NR PCell immediately before and immediately after an SMTC. Each interruption on NR PCell shall not exceed the value defined in Table A.6.5.2.1.2-1.

If the NR PCell is in the same band as the deactivated SCell, the UE is only allowed to cause an interruption on PCell no earlier than 1 slot before an SMTC and no later than 1 slot after the SMTC. the interruption on NR PCell shall not exceed the value defined in Table A.6.5.2.1.2-2.

**Table A.6.5.2.1.2-1: Interruption duration if the PCell is not in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length |
|-------|---------------------|---------------------|
| 0     | 1                   | 1                   |
| 1     | 0.5                 | 1                   |

**Table A.6.5.2.1.2-2: Interruption duration if the PCell is in the same band as the deactivated SCell**

| $\mu$ | NR Slot length (ms) | Interruption length |
|-------|---------------------|---------------------|
| 0     | 1                   | 2 + SMTC duration   |
| 1     | 0.5                 | 2 + SMTC duration   |

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.2.2 SA interruptions at NR SRS carrier based switching

### A.6.5.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that when a UE needs to transmit aperiodic SRS, the UE can perform carrier based switching to one carrier not configured for PUCCH/PUSCH transmission from a carrier with PUCCH/PUSCH transmission. The test will partly verify the interruption requirements on PCell in clause 8.2.2.2.9.

### A.6.5.2.2.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR1 PCell and Cell 2 is activated SCell on the TDD SCC which operates in downlink without PUCCH/PUSCH. The UE is configured with the SRS switching between PCell and SCell. The test parameters for PCell and SCell are given in Table A.6.5.2.2.2-2 and A.6.5.2.2.2-3 below. The test consists of two successive time periods, with duration of T1 and T2, respectively. Immediately at the beginning of T2, the UE is triggered for SRS switching.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell.

**Table A.6.5.2.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode                           |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode                           |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode                           |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.5.2.2-2: General test parameters for SA interruptions at NR SRS carrier based switching**

| Parameter                                    | Unit | Value   | Comment   |
|--|------|---|---|
| RF Channel Number                            |      | 1,2   | Two NR radio channel (1, 2) are used for this test                              |
| Active PCell                                 |      | Cell 1  | Primary cell on NR RF channel number 1  |
| Configured SCell                             |      | Cell 2  | Activated secondary cell on NR RF channel number 2                              |
| CP length                                    |      | Normal  |   |
| DRX  |      | OFF   | Continuous monitoring of primary cell   |
| Cell2 timing offset to cell1                 | μs   | 0   |   |
| Time alignment error between cell2 and cell1 | μs   | ≤ Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation. |
| T1   | s    | 5   |   |
| T2   | ms   | 40  | UE shall perform SRS switching during T2  |

**Table A.6.5.2.2-3: Cell specific test parameters for SA interruptions at NR SRS carrier based switching**

| Parameter                          |            | Unit | T1                          |             | T2     |             |
|------------------------------------|------------|------|-----------------------------|-------------|--------|-------------|
|                                    |            |      | Cell 1                      | Cell 2      | Cell 1 | Cell 2      |
| Duplex mode                        | Config 1   |      | FDD                         | TDD         | FDD    | TDD         |
|                                    | Config 2,3 |      | TDD                         |             |        |             |

| Note 3: | SS-RSRP and SCH_RP levels have been derived from other parameters for information purposes. They are not settable parameters themselves. |
| Note 4: | The uplink resources for CSI reporting are assigned to the UE prior to the start of time period T2.                                      |

**Table A.6.5.2.2-4: Void**

### A.6.5.2.2.3 Test Requirements

The UE shall be scheduled on PCell continuously throughout the test. During the time duration T2, the interruption on PCell shall not be more than the values specified for SA in clause 8.2.2.2.9.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.3 SCell Activation and Deactivation Delay

### A.6.5.3.1 SCell Activation and deactivation of known SCell in FR1 in non-DRX for 160ms SCell measurement cycle

#### A.6.5.3.1.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.1.1-1 below. The test parameters are given in Tables A.6.5.3.1.1-2 and cell-specific parameters in A.6.5.3.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted  $n$ , defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + T_{\text{activation\_time}} + T_{\text{CSI\_Reporting}}}{\text{NR slot length}}$ , as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot  $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $n + 1 + \frac{T_{\text{HARQ}} + 3\text{ms} + T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$ , as defined in clause 8.3, where  $N_{\text{interruption}}$  is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted  $m$ , is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot  $m + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $m + 1 + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.1.1-1: known FR1 SCell activation in non-DRX for 160ms SCell measurement cycle supported test configurations**

| Config  | Description   |
|---|---|
| 1   | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode |
| 2   | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode |
| 3   | NR 30kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode  |
| Note 1: The UE is only required to be tested in one of the supported test configurations  |   |
| Note 2: The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs $\geq$ the bandwidth ( $BW_{\text{channel}}$ ) defined in each test configuration, |   |

**Table A.6.5.3.1.1-2: General test parameters for known FR1 SCell activation case, 160ms SCell measurement cycle**

| Parameter   | Unit          | Value  | Comment   |
|---|---------------|--|---|
| RF Channel Number                                     |               | 1,2  | Two NR radio channel (1, 2) are used for this test  |
| Active PCell  |               | Cell 1   | Primary cell on NR RF channel number 1.   |
| Configured deactivated SCell                          |               | Cell 2   | Configured deactivated secondary cell on NR RF channel number 2   |
| CP length   |               | Normal   |   |
| DRX   |               | OFF  | Continuous monitoring of primary cell   |
| Cell-individual offset for cells on NR channel number | dB            | 0  | Individual offset for cells on primary component carrier.   |
| SCell measurement cycle (measCycleSCell)              | ms            | 160  |   |
| Cell2 timing offset to cell1                          | $\mu\text{s}$ | 0  |   |
| Time alignment error between cell2 and cell1          | $\mu\text{s}$ | $\leq$ Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. | The value of time alignment error depends upon the type of carrier aggregation.   |
| T1  | s             | 7  | During this time the PSCell shall be known and the SCell configured and detected.   |
| T2  | s             | 1  | During this time the UE shall activate the SCell.   |
| T3  | s             | 1  | During this time the UE shall deactivate the SCell.   |
| $T_{\text{HARQ}}$                                     | ms            | Config 1: 2<br>Config 2: 3<br>Config 3: 2.5                                | $k_1 \times \text{NR slot length}$<br><br>$k_1$ is a number of slots and is indicated by the PDSCH-to-HARQ-timing-indicator field in the DCI format, if present, or provided by <i>dl-DataToUL-ACK</i> , the value of $k$ should be the minimum value defined in TS 38.213 [3] that will meet the timing constraints of this test case. |
| $T_{\text{CSI\_Reporting}}$                           | ms            | 15   | The delay (in ms) including uncertainty in acquiring the first available downlink CSI reference resource, UE processing time for CSI reporting (clause 5.2.2.5 in TS 38.214) and uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]   |

### A.6.5.3.1.2 Test Requirements

During T2 the UE shall send the first CSI report for SCell in the first available uplink resource after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $(n + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length})$ . UE is allowed to postpone CSI report to next available uplink resource if an available uplink resource is subject to interruption.

During T2 the UE shall start sending CSI reports for SCell with non-zero CQI index at latest in a slot  $n + \frac{T_{HARQ}+T_{activation\_time}+T_{CSI\_Reporting}}{NR\ slot\ length}$ ,  $T_{activation\_time} = T_{FirstSSB} + 5ms$ , as defined in clause 8.3.

During T3 the UE shall stop sending CSI reports for SCell at latest in a slot  $m + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ , as defined in clause 8.3.

During T2 interruption of PCell / PSCell during SCell activation shall not happen outside the slot  $n + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to  $n + 1 + \frac{T_{HARQ}+3ms+T_X}{NR\ slot\ length} + N_{interruption}$ , as defined in clause 8.3.

During T3 the starting point of interruption of PCell during SCell deactivation shall not happen outside the slot  $m + 1 + \frac{T_{HARQ}}{NR\ slot\ length}$  to  $m + 1 + \frac{T_{HARQ}+3ms}{NR\ slot\ length}$ , as defined in clause 8.3.

The interruption on any activated serving cell shall not be more than the values specified for SA in clause 8.2.2.2.2.

All of the above test requirements shall be fulfilled in order for the observed SCell activation delay and SCell deactivation delay to be counted as correct. The rate of correct observed SCell activation delay and SCell deactivation delay during repeated tests shall be at least 90%.

NOTE: During T2 if there are no uplink resources for reporting the valid CSI in a slot  $\frac{T_{HARQ}+T_{activation\_time}+T_{CSI\_Reporting}}{NR\ slot\ length}$  as defined in clause 8.3 then the UE shall use the next available uplink resource for reporting the corresponding valid CSI.

### A.6.5.3.2 SCell Activation and deactivation of known SCell in FR1 in non-DRX for 640 ms SCell measurement cycle

#### A.6.5.3.2.1 Test Purpose and Environment

The purpose of this test case is the same as for the test defined in clause A.6.5.3.1.1. The supported test configurations are the same as defined in clause A.6.5.3.1.1. The test parameters are the same except those described in the following

clause. The listed parameter values in Tables A.6.5.3.2.1-1 will replace the values of corresponding parameters in Tables A.4.5.3.1.1-1.

**Table A.6.5.3.2.1-1: General test parameters for known FR1 SCell activation case, 640 ms SCell measurement cycle**

| Parameter                                | Unit | Value | Comment |
|--|------|-------|---------|
| SCell measurement cycle (measCycleSCell) | ms   | 640   |         |

### A.6.5.3.2.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except  $T_{\text{activation\_time}}$  will be replaced with the value  $T_{\text{FirstSSB\_MAX}} + T_{\text{rs}} + 5\text{ms}$ .

### A.6.5.3.3 SCell Activation and deactivation of unknown SCell in FR1 in non-DRX

#### A.6.5.3.3.1 Test Purpose and Environment

The purpose of this test is to verify that the SCell activation and deactivation times are within the requirements stated in clause 8.3, when the SCell in FR1 is known by the UE at the time of activation.

The supported test configurations are shown in table A.6.5.3.1.1-1 below. The test parameters are given in Tables A.6.5.3.1.1-2 and cell-specific parameters in A.6.5.3.1.1-3 below. The test consists of three successive time periods, with duration of T1, T2 and T3, respectively. There are two NR carriers, each with one cell. Both cells have constant signal levels throughout the test. Before the test starts the UE is connected to Cell 1, but is not aware of Cell2. The UE is only monitoring the PCC. The UE shall be continuously scheduled in the PCell throughout the whole test.

At the beginning of T1 the UE receives an RRC message by which the SCell (Cell 2) becomes configured on radio channel 2. The UE now starts monitoring the SCC. The test equipment sends a MAC message for activation of the SCell.

The point in time at which the MAC message is received at the UE antenna connector, in slot # denoted  $n$ , defines the start of time period T2. The UE shall be able to report valid CSI in PCell for the activated SCell at latest in slot  $n + \frac{T_{\text{HARQ}} + T_{\text{activation\_time}} + T_{\text{CSI\_Reporting}}}{\text{NR slot length}}$ , as defined in clause 8.3. The UE shall start reporting CSI in PCell after at least one CSI-RS transmission occasion for channel measurement and reporting after slot  $n + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$  and shall report CQI index 0 (out-of-range) until the SCell activation has been completed. Any PCell interruption due to activation of SCell shall occur in the slot  $n + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $n + 1 + \frac{T_{\text{HARQ}} + 3\text{ms} + T_{\text{X}}}{\text{NR slot length}} + N_{\text{interruption}}$ , as defined in clause 8.3, where  $N_{\text{interruption}}$  is the interruption length given in clause 8.2.

Time period T3 starts when a MAC message for deactivation of SCell, sent from the test equipment to the UE in a slot # denoted  $m$ , is received at the UE antenna connector. The UE shall carry out deactivation of the SCell in a slot  $m + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3, and The starting point of any PCell interruption due to the deactivation shall occur in the slot  $m + 1 + \frac{T_{\text{HARQ}}}{\text{NR slot length}}$  to  $m + 1 + \frac{T_{\text{HARQ}} + 3\text{ms}}{\text{NR slot length}}$ , as defined in clause 8.3.

The test equipment verifies that potential interruption is carried out in the correct time span by monitoring ACK/NACK sent in PCell during activation and deactivation of SCell, respectively.

The test equipment verifies the activation time by counting the slots from the time when the SCell activation command is sent until a CSI report with other than CQI index 0 is received.

The test equipment verifies the deactivation time by counting the slots from the time when the SCell deactivation command is sent until CQI reporting for SCell is discontinued.

**Table A.6.5.3.3.1-1: General test parameters for unknown FR1 SCell activation case, 160ms SCell measurement cycle**

| Parameter | Unit | Value | Comment  |
|-----------|------|-------|--|
| T1        | ms   | 100   | During this time the PSCell shall be known and the SCell configured, but not detected. |

### A.6.5.3.3.2 Test Requirements

The test requirements defined in clause A.6.5.3.1.2 shall apply to this test case, except  $T_{\text{activation\_time}}$  will be replaced with the value  $T_{\text{FirstSSB\_MAX}} + T_{\text{SMTc\_MAX}} + 2 \cdot T_{\text{rs}} + 5\text{ms}$  as defined in clause 8.3.

### A.6.5.3.4 Direct SCell activation at SCell addition of known SCell in FR1

#### A.6.5.3.4.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of direct SCell activation delay and interruption requirements at SCell addition as defined in clause 8.3.4 and 8.2.2, respectively. The supported test configurations are shown in Table A.6.5.3.4.1-1.

The test scenario comprises one PCell (Cell 1) and one SCell (Cell 2) as outlined in Table A.6.5.3.4.1-2. Cell-specific parameters are provided in Table A.6.5.3.4.1-3.

The test consists of two successive time periods with duration  $T_1$  and  $T_2$ , respectively. There are two carriers, each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), and Cell 2 (SCell) is on RF channel 2 (SCC). Cell 1 and Cell 2 both operate according to one of the configurations in Table A.6.5.3.4.1-1.

Before the test starts the UE is connected to Cell 1 on RF channel 1. The UE is only monitoring RF channel 1 and is not aware of Cell 2 on RF channel 2.

The UE is continuously scheduled in PCell throughout the test.

At the beginning of  $T_1$  the UE is configured to measure RF channel 2 in measurement gaps. During  $T_1$ , the UE detects and measures Cell 2 on RF channel 2, and sends a measurement report containing Cell 2 to the test equipment. After having received a measurement report containing Cell 2, the test equipment deconfigures the measurement gaps and thereafter sends a RRC connection reconfiguration message to the UE by which it configures the SCell (Cell 2) in activated state (*sCellState* is set to *activated*). The time between reception of the last measurement report carrying SCell and transmission of the RRC connection reconfiguration message directly activating SCell is kept short enough to allow the SCell to remain known to the UE.

Time period  $T_2$  starts when the UE receives the RRC connection reconfiguration message at the UE antenna connector. The corresponding slot at which the message is received at the UE antenna connector is denoted  $n$ . The UE shall complete activation of the SCell no later than in slot  $n + \frac{N_{\text{direct}}}{\text{NR slot length}}$ , as specified in clause 8.3.4. From slot  $n + \frac{N_{\text{direct}}}{\text{NR slot length}}$  and onwards the UE shall report valid CSI both for PCell and SCell.

The test equipment verifies the activation time by counting the slots between the RRC connection reconfiguration message is sent and until CSI report with non-zero CQI for both PCell and SCell is received.

The test equipment verifies that interruptions on other serving cells are within the requirements by counting ACK/NACKs transmitted in PCell.

**Table A.6.5.3.4.1-1: Supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                              |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

Table A.6.5.3.4.1-2: General test parameters

| Parameter                                   | Unit    | Value       | Comment  |
|---|---------|-------------|--|
| NR RF Channel Number                        |         | 1, 2        | Two NR radio channels are used for this test   |
| Active PCell                                |         | Cell 1      | Primary cell on NR RF channel number 1.  |
| Inter-frequency neighbor cell (SCell to-be) |         | Cell 2      | Inter-frequency neighbor cell on NR RF channel number 2  |
| CP length                                   |         | Normal      |  |
| DRX   |         | OFF         | Continuous monitoring of primary cell  |
| Measurement gap pattern                     |         | gp0         | Measurement gap is used during parts of time period T1 for detection of Cell 2.                                    |
| CSI reporting periodicity                   | ms      | 2           | CSI reporting periodicity for periodic reporting of CQI for PCell and, when added, SCell.                          |
| SCell measurement cycle (measCycleSCell)    | ms      | 160         | Measurement cycle for SCell does not come into effect in direct activation at SCell addition.                      |
| Timing offset between Cell 1 and Cell 2     | $\mu$ s | $\leq$ MRTD | The value of maximum timing offset depends upon the carrier aggregation scenario.                                  |
| T1  | s       | 7           | During this time period the PCell shall be known and Cell 2 shall be detected as an inter-frequency neighbor cell. |
| T2  | s       | 1           | During this time period Cell 2 shall be configured and directly activated as SCell.                                |

Table A.6.5.3.4.1-3: NR Cell specific test parameters

| Parameter  |              | Unit         | Cell 1                      |    | Cell 2 |                |

Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.

Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for N<sub>oc</sub> to be fulfilled.

Note 3: SS-RSRP, SCH<sub>RP</sub>, and I<sub>o</sub> levels have been derived from other parameters for information purpose. They are not settable parameters themselves.

### A.6.5.3.4.2 Test Requirements

The UE shall complete the direct activation of the SCell no later than at slot  $n + \frac{N_{\text{direct}}}{\text{NR slot length}}$ .

The UE shall report non-zero CQI for SCell from slot  $n + \frac{N_{\text{direct}}}{\text{NR slot length}}$  and onwards throughout time period T2.

The interruption on PCell during direct activation of the SCell shall occur within the interruption window specified in clause 8.3.4 and shall not exceed the length specified in clause 8.2.2.2.11.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.3.5 Direct SCell activation at handover with known SCell in FR1

#### A.6.5.3.5.1 Test Purpose and Environment

This test is to verify the requirement for the FDD-FDD and TDD-TDD intra frequency handover with direct SCell activation requirements specified in subclause 8.3.5.

Supported test configurations are shown in table A.6.5.3.5.1-1. Both handover with direct SCell activation requirements are tested by using the parameters in table A.6.5.3.5.1-2, and A.6.5.3.5.1-3.

The test scenario comprises of three NR FDD or NR TDD FR1 carriers and the 3 cells as given in tables A.6.5.3.5.1-1 and A.6.5.3.5.1-2. The test consists of three successive time periods, with time durations of T1, T2, and T3 respectively.

At the start of time duration T1, the UE is in connected mode with PCell and SCell1 (cell 2) is in activated state and UE is reporting CQI for both PCell and SCell1.

Time period T2 starts when UE receives a handover command to Cell 3 that also activates SCell1 (Cell2). This is done using an *RRCReconfiguration* message with parameter *sCellState* set to *activated* for the SCell1 (Cell 2). The message is sent from the test equipment to the UE and is received in a subframe # denoted n at the UE antenna connector. The UE shall accomplish the activation of the SCell no later than subframe  $(n + N_{\text{direct}})$ .

Time period T3 starts at  $(n + N_{\text{direct}})$ , at which point UE shall be reporting a valid CQI for both PCell and SCell1.

**Table A.6.5.3.5.1-1: Intra-frequency handover with direct SCell activation from FR1 to FR1 test configurations**

| Config | Description  |
|--------|--|
| 1      | PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>SCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2      | PCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode<br>SCell: NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3      | PCell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>SCell: NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note:  | The UE is only required to be tested in one of the supported test configurations   |

**Table A.6.5.3.5.1-2: General test parameters Intra-frequency handover with direct SCell activation from FR1 to FR1**

| Parameter                  | Unit           | Value                     | Comment  |
|----------------------------|----------------|---------------------------|--|
| Initial conditions         | PCell          | Cell 1                    |  |
|                            | SCell          | Cell 2                    |  |
|                            | Target cell    | Cell 3                    |  |
| Final condition            | PCell          | Cell 3                    |  |
|                            | SCell          | Cell 2                    |  |
|                            | neighbour cell | Cell 1                    |  |
| Access Barring Information | -              | Not Sent                  | No additional delays in random access procedure.       |
| PRACH configuration index  |                | FR1 PRACH configuration 1 | As specified in table Table 6.3.3.2-3 in TS 38.211 [6] |

|                             |      |  |   |
|-----------------------------|------|--|---|
| Time offset between cells   |      | $3 \mu\text{s}$  | Synchronous cells   |
| T1                          | s    | 5  | UE is in connected mode with PCell and SCell1 (cell 2) is in activated state. UE receives a handover command  |
| T2                          | s    | $N_{\text{direct}}$  | UE shall accomplish the activation of the SCell   |
| T3                          | s    | 1  |   |
| $T_{\text{HARQ}}$           | slot | k  | k is a number of slots indicated by the PDSCH-to-HARQ_feedback timing indicator field in a corresponding DCI format or provided by <i>dl-DataToUL-ACK</i> if the PDSCH-to-HARQ feedback timing field is not present in the DCI format, the value is defined in 38.213 [3] |
| $T_{\text{CSI\_Reporting}}$ | ms   | 2  | the delay uncertainty in acquiring the first available CSI reporting resources as specified in TS 38.331 [2]  |
| k                           | ms   | $k_1 + 3 \cdot N_{\text{slot}}^{\text{subframe}, \mu} + 1$ | As specified in clause 4.3 of TS 38.213 [3]   |

### A.6.5.3.5.2 Test Requirements

The UE shall be capable to transmit valid CSI report for the directly activated SCell1 no later than in subframe  $n+N_{direct}$ .

The rate of correct observed SCell1 direct activation delay during repeated tests shall be at least 90%.

NOTE: The SCell activation delay,  $N_{direct}$ , can be expressed as:  $N_{direct} = T_{RRC\_process} + T_{interrupt} + T_2 + T_3 + T_{activation\_time} + T_{CSI\_Reporting} - 3ms$ , where:

$T_{RRC\_Process}$ : RRC procedure delay defined in clause 12 of TS 38.331 [2],

$T_{interrupt}$ : Interruption time during handover as specified in clause 6.1.1,

$T_2$ : Delay from slot  $n + \frac{T_{RRC\_Process} + T_{interrupt}}{NR\ slot\ length}$  until UE has obtained a valid TA command for the target PCell,

$T_3$ : Delay for applying the received TA for uplink transmission in the target PCell, and greater than or equal to  $k+1$  slot, where  $k$  is defined in clause 4.2 in TS 38.213,

$T_{activation\_time}$  and  $T_{CSI\_Reporting}$  are specified in clause 8.3.2, where the following definitions of  $T_{FirstSSB}$  and  $T_{FirstSSB\_MAX}$  as defined in section 8.3.5 shall apply:

-  $T_{FirstSSB}$ : the time to the end of the first complete SSB burst indicated by the SMTC after slot  $n + \frac{(T_{RRC\_Process} + T_{interrupt} + T_2 + T_3)}{(NR\ slot\ length)}$

-  $T_{FirstSSB\_MAX}$ : the time to the end of the first complete SSB burst indicated by the SMTC after slot  $n + \frac{(T_{RRC\_Process} + T_{interrupt} + T_2 + T_3)}{(NR\ slot\ length)}$

This gives a total of  $N_{direct} = 10 + 52 + T_{IU} + T_2 + T_3 + T_{activation\_time} + T_{CSI\_Reporting} - 3\ ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94\ ms$  for test configurations 1 and 2.

This gives a total of  $N_{direct} = 10 + 52 + T_{IU} + T_2 + T_3 + T_{activation\_time} + T_{CSI\_Reporting} - 3\ ms = 62 + 10 + 13 + 6 + 20 + 2 - 3 = 94\ ms$  for test configuration 3.

During T3 the UE shall send valid CSI reports for PCell and SCell1 with non-zero CQI index and continue to send CSI reports for PCell and SCell1 (Cell 2) with non-zero CQI index until the end of T3.

All of the above test requirements shall be fulfilled in order for the observed SCell1 direct activation delay to be counted as correct.

## A.6.5.4 UE UL carrier RRC reconfiguration Delay

### A.6.5.4.1 UE UL carrier RRC reconfiguration Delay

#### Table A.6.5.4.1-1 - Table A.6.5.4.1-4 : Void

#### A.6.5.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that when the UE receives a RRC message implying NR UL or Supplementary UL carrier configuration, the UE shall be ready to start transmission on the newly configured carrier within the time limits specified in clause 8.4.2 and 8.4.3 for configuring and deconfiguring, respectively.

There are two cells: FR1 PCell (cell 1) and FR1 SCell (cell 2). Both NR uplink and supplementary uplink are broadcast by *ServingCellConfigCommonSIB*. The test parameters for PCell and SCell are given in Table A. 6.5.4.1.1-1, Table A.6.5.4.1.1-2, Table A.6.5.4.1.1-3 and Table A.6.5.4.1.1-4 below. In test 1, the test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, NR uplink of cell 2 is configured to UE. At the start of T2, a supplementary uplink of cell 2 is configured to UE through *RRCReconfiguration*, then UE shall start transmission both on the NR uplink and supplementary uplink. At the start of T3, the supplementary uplink is released through *RRCReconfiguration*.

In test 2, the test consists of three time periods, with duration of T1, T2 and T3 respectively. During time duration T1, supplementary uplink on cell 2 is configured to UE. At the start of T2, a NR uplink is configured to UE through *RRCReconfiguration*, then UE shall start transmission both on the NR uplink and supplementary uplink. At the start of T3, the NR uplink is released through *RRCReconfiguration*.

Table A.6.5.4.1.1-1: Supported test configurations

| Configuration | PCell (Cell 1)  | SCell (Cell 2)  |
|---------------|---|---|
| 1             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 2             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 3             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode  | DL and UL: 30kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, $\geq 40$ MHz bandwidth, SUL duplex mode   |
| 4             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 5             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 6             | 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode  | DL and UL: 30kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, $\geq 40$ MHz bandwidth, SUL duplex mode   |
| 7             | 30 kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 8             | 30 kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode  | DL and UL: 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD duplex mode;<br>SUL: 15 kHz SCS, $\geq 10$ MHz bandwidth, SUL duplex mode |
| 9             | 30 kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode  | DL and UL: 30kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD duplex mode;<br>SUL: 30kHz SCS, $\geq 40$ MHz bandwidth, SUL duplex mode   |
| Note 1:       | The UE is only required to be tested in one of the supported test configurations  |   |
| Note 2:       | The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs $\geq$ the bandwidth ( $BW_{\text{channel}}$ ) defined in each test configuration, |   |

#### A.6.5.4.1.2 Test Requirements

In test 1 the UE shall be ready to start transmission on the supplementary uplink carrier on SCell within 20ms from the start of T2.

In test 1 the UE shall stop the transmission on the supplementary uplink carrier on SCell within 20ms from the start of T3.

In test 2 the UE shall be ready to start transmission on the NR uplink carrier on SCell within 20ms from the start of T2.

In test 2 the UE shall stop the transmission on the NR uplink carrier on SCell within 20ms from the start of T3.

All of the above test requirements shall be fulfilled in order for the observed UE UL carrier configuration delay and UE UL carrier release delay to be counted as correct. The rate of correct observed UE UL carrier configuration delay and UE UL carrier release delay during repeated tests shall be at least 90%.

#### A.6.5.4.2 Void

### A.6.5.5 Beam Failure Detection and Link recovery procedures

#### A.6.5.5.1 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in non-DRX mode

##### A.6.5.5.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.1.1-1, A.6.5.5.1.1-2, A.6.5.5.1.1-3 and A.6.5.5.1.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.1.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.6.5.5.1.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled. The UE is configured to perform inter-frequency measurements using GP ID #0 (40ms) in test 1.

**Table A.6.5.5.1.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2                    | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3                    | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.5.1.1-2: General test parameters for FR1 PCell for SSB-based beam failure detection and link recovery testing in non-DRX mode**

| Parameter                                      |  | Unit | Value             | Comment |

**Table A.6.5.5.1.1-4: Void**

**Figure A.6.5.5.1.1-1: SNR and L1-RSRP variation SSB for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.6.5.5.1.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 120 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.5.2 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with SSB-based BFD and LR in DRX mode

### A.6.5.5.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects SSB-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the SSB based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.2.1-1, A.6.5.5.2.1-2, A.6.5.5.2.1-3, A.6.5.5.2.1-4 and A.6.5.5.2.1-5 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.2.1-1 shows the variation of the downlink SNR of the SSB in set  $q_0$  in the active cell to emulate SSB based beam failure. Figure A.6.5.5.2.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to "infinity" so that UL timing alignment is maintained during the test.

**Table A.6.5.5.2.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2                    | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3                    | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Table A.6.5.5.2.1-2: General test parameters for FR1 PCell for SSB-based beam failure detection and link recovery testing in DRX mode**

| Parameter                                      |                                | Unit | Value             | Comment |

**Table A.6.5.5.2.1-5: Void**

**Figure A.6.5.5.2.1-1: SNR and L1-RSRP variation for SSB-based beam failure detection and link recovery testing in non-DRX mode**

### A.6.5.5.2.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the UE shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 1920 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.5.3 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in non-DRX mode

#### A.6.5.5.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.3.1-1, A.6.5.5.3.1-2, and below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.3.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active cell to emulate CSI-RS based beam failure. Figure A.6.5.5.3.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 3 ms. In the test, DRX configuration is not enabled.

**Table A.6.5.5.3.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2                    | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3                    | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

**Figure A.6.5.5.3.1-1: SNR and L1-RSRP variation for CSI-RS-based beam failure detection and link recovery testing in non-DRX mode**

### A.6.5.5.3.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 30+10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.5.4 Beam Failure Detection and Link Recovery Test for FR1 PCell configured with CSI-RS-based BFD and LR in DRX mode

#### A.6.5.5.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct CSI-RS-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the CSI-RS based beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.4.1-1, A.6.5.5.4.1-2, A.6.5.5.4.1-3, and A.6.5.5.4.1-4 below. There is one cell, cell 1 which is the active cell, in the test. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.4.1-1 shows the variation of the downlink SNR of the CSI-RS in set  $q_0$  in the active cell to emulate CSI-RS based beam failure. Figure A.6.5.5.4.1-1 additionally shows the variation of the downlink L1-RSRP of the CSI-RS in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in PCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.4.1-1: Supported test configurations for FR1 PCell**

| <b>Configuration</b> | <b>Description</b>   |
|----------------------|--|
| 1                    | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2                    | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3                    | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:                | The UE is only required to pass in one of the supported test configurations in FR1 |

#### A.6.5.5.4.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 1920 + 10$  ms after the start of T5, the UE shall transmit preamble on a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble on a beam associated with the candidate beam set  $q_1$  earlier than time point B.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.5.5 Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in non-DRX mode

#### A.6.5.5.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candidate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when no DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.5.1-1, A.6.5.5.5.1-2, and below. There are two cells, cell 1 is the PCell and cell 2 is the SCell, in the test. UE is not provided by *schedulingRequestID-BFR-SCell-r16*, i.e., no configuration for PUCCH transmission resources, and UE shall perform the random access procedure to recover the beam failure. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.5.1-1 shows the SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate beam failure. Figure A.6.5.5.5.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is not enabled.

**Table A.6.5.5.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration | Description  |
|---------------|--|
| 1             | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 2             | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth                                  |
| 3             | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth                                  |
| Note:         | The UE is only required to pass in one of the supported test configurations in FR1 |

**Figure A.6.5.5.1-1: SNR and L1-RSRP variation for beam failure detection and link recovery testing in for SCell non-DRX mode**

#### A.6.5.5.5.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiat link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 120+10$  ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set  $q_1$  for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

#### A.6.5.5.6 Beam Failure Detection and Link Recovery Test for FR1 SCell configured with CSI-RS-based BFD and SSB-based LR in DRX mode

##### A.6.5.5.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE properly detects CSI-RS-based beam failure in the set  $q_0$  configured for a serving cell and that the UE performs correct SSB-based link recovery based on beam candicate set  $q_1$ . The purpose is to test the downlink monitoring for beam failure detection within the UEs active DL BWP without *schedulingRequestID-BFR-SCell-r16* configuration, during the evaluation period, and link recovery, when DRX is used. This test will partly verify the beam failure detection and link recovery for an FR1 serving cell requirements in clause 8.5.

The test parameters are given in Tables A.6.5.5.6.1-1, A.6.5.5.6.1-2, A.6.5.5.6.1-3, and A.6.5.5.6.1-4 below. There are two cells, cell 1 is the PCell and cell 2 is the SCell, in the test. UE is not provided by *schedulingRequestID-BFR-SCell-r16*, i.e., no configuration for PUCCH transmission resources, and UE shall perform the random access procedure to recover the beam failure. The test consists of five successive time periods, with time duration of T1, T2, T3, T4 and T5 respectively. Figure A.6.5.5.6.1-1 shows the SNR of the CSI-RS in set  $q_0$  in the active SCell to emulate beam failure. Figure A.6.5.5.6.1-1 additionally shows the variation of the downlink L1-RSRP of the SSB in set  $q_1$  of the candidate beam used for link recovery. Prior to the start of the time duration T1, the UE shall be fully synchronized to cell 1 and

cell 2. The UE shall be configured for periodic CSI reporting with a reporting periodicity of 5 ms. In the test, DRX configuration is enabled in SCell and DRX inactivity timer has already been expired, i.e. UE tries to decode PDCCH and to send periodic CQI during the period when On-duration timer is running. Time alignment timers shall be set to “infinity” so that UL timing alignment is maintained during the test.

**Table A.6.5.5.6.1-1: Supported test configurations for FR1 PCell and SCell**

| Configuration  | Description                                       |
|--|---|
| 1  | FDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 2  | TDD duplex mode, 15 kHz SSB SCS, 10 MHz bandwidth |
| 3  | TDD duplex mode, 30 kHz SSB SCS, 40 MHz bandwidth |
| Note: The UE is only required to pass in one of the supported test configurations in FR1 |   |

**Figure A.6.5.5.6.1-1: SNR and L1-RSRP variation for beam failure detection and link recovery testing for SCell in DRX mode**

#### A.6.5.5.6.2 Test Requirements

The UE behaviour during time durations T1, T2, T3, T4 and T5 shall be as follows:

During the time duration T1 and T2, the UE shall transmit uplink signal at least in all subframes configured for CSI transmission on Cell 1.

During the period from time point A to time point B the UE shall transmit uplink signal in Cell 1 in all uplink slots configured for CSI transmission according to the configured periodic CSI reporting for Cell 1.

During T3 the shall detect beam failure and initiate link recovery. During T4 and T5 the UE measures and evaluate beam candidate from beam candidate set  $q_1$ .

No later than time point F occurring no later than  $D1 = 120 + 10$  ms after the start of T5, the UE shall transmit preamble for UL-SCH resource application, followed by MAC-CE on the assigned uplink resources containing a beam associated with the candidate beam set  $q_1$ . The UE shall not transmit preamble earlier than time point B.

During T5, the System Simulator shall transmit a Random Access Response to UE after the System Simulator receives the preamble from UE. The UE shall transmit the msg.3 containing candidate beam set  $q_1$  for SCell BFR if UE receives the Random Access Response.

Test is concluded once the test equipment has received the initial preamble transmission from the UE. The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.6 Active BWP switch

#### A.6.5.6.1 DCI-based and Timer-based Active BWP Switch

##### A.6.5.6.1.1 NR FR1- NR FR1 DL active BWP switch of SCell with non-DRX in SA

###### A.6.5.6.1.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6, and interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

The supported test configurations are shown in Table A.6.5.6.1.1.1-1 below. The test scenario comprises of one PCell (Cell 1) and one SCell (Cell 2) as given in Table A.6.5.6.1.1.1-2. NR Cell-specific parameters are specified in Table A.6.5.6.1.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 2 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).  
UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.
- UE is configured with a *bwp-InactivityTimer* timer value for SCell.

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for SCell DL BWP switch, sent from the test equipment to the UE, is received at the UE side in SCell's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's DL slot ( $i+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell no later than the first UL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-2 no later than the first DL slot that occurs after the beginning of slot ( $i+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch on SCell shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on SCell (Cell 2).

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of SCell's slot ( $j+T_{\text{BWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the SCell on PCell at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}+k_1$ ). The UE shall be continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j+T_{\text{BWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to BWP switch of SCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in SCell by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during BWP switch of SCell, respectively.

**Table A.6.5.6.1.1.1-1: DL BWP switch supported test configurations**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD - FDD duplex mode  |
| 2       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD - TDD duplex mode  |
| 3       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, TDD - FDD duplex mode  |
| 4       | NR 15 kHz SSB SCS, $\geq 10$ MHz bandwidth, FDD - TDD duplex mode  |
| 5       | NR 30 kHz SSB SCS, $\geq 40$ MHz bandwidth, TDD - TDD duplex mode  |
| Note 1: | The UE is only required to be tested in one of the supported test configurations   |
| Note 2: | The UE is only required to be tested in one with smallest aggregated channel bandwidth from supported band combinations which is composed of CCs $\geq$ the bandwidth ( $BW_{\text{channel}}$ ) defined in each test configuration |

**Table A.6.5.6.1.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter   | Unit          | Value  | Comment   |
|---|---------------|--------|---|
| NR RF Channel Number                                    |               | 1, 2   | Two NR radio channels are used for this test                        |
| Active PCell  |               | Cell 1 | PCell on RF channel number 1.                                       |
| Active SCell  |               | Cell 2 | SCell on RF channel number 2.                                       |
| CP length   |               | Normal |   |
| DRX   |               | OFF    | For both PCell and SCell  |
| <i>bwp-InactivityTimer</i>                              | ms            | 200    |   |
| Cell-individual offset for cells on RF channel number 1 | dB            | 0      | Individual offset for cells on PCC.                                 |
| Cell-individual offset for cells on RF channel number 2 | dB            | 0      | Individual offset for cells on SCC.                                 |
| Cell2 timing offset to cell1                            | $\mu\text{s}$ | 3      | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1  | s             | 0.2    |   |
| T2  | s             | 0.2    |   |
| T3  | s             | 0.2    |   |

#### A.6.5.6.1.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+k_1$ ).

During T3, the UE shall start to send the ACK/NACK for SCell on PCell from the first UL slot that occurs after the beginning of DL slot ( $j+T_{BWPswitchDelay}+k_1$ ).

Where,  $k_1$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T3, the start time of PCell interruption during SCell active BWP switch shall not happen outside the BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed SCell active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after the beginning of DL slot ( $i+T_{BWPswitchDelay}+k_1$ ), ( $j+T_{BWPswitchDelay}+k_1$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.1.2 NR FR1 DL active BWP switch with non-DRX in SA

#### A.6.5.6.1.2.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement defined in clause 8.6.

The supported test configurations are shown in Table A.6.5.6.1.2.1-1. The test scenario comprises of one cell (Cell 1) as given in Table A.6.5.6.1.2.1-2. Cell-specific parameters of the cell are specified in Table A.6.5.6.1.2.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE is configured with 2 different UE-specific downlink bandwidth parts, BWP-1 and BWP-2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1.
- UE is configured with a *bwp-InactivityTimer* timer value for Cell1.

The cell has constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for DL BWP switch, sent from the test equipment to the UE, is received at the UE side in Cell1's slot # denoted  $i$ . The UE shall switch its bandwidth part from BWP-1 to BWP-2.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell1's DL slot ( $i+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell1 no later than the first UL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on Cell1's BWP-2 starting from the first DL slot that occurs after the beginning of slot ( $i+T_{BWPswitchDelay}$ ).

During T2, the test equipment won't transmit DCI format for PDSCH reception on Cell1.

During T3,

The time period T3 starts from the slot # $j$ , where  $j$  is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE shall switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1.

The UE shall be able to receive PDSCH on the first DL slot that occurs after the beginning of Cell1's slot ( $j+T_{BWPswitchDelay}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK for the Cell1 at latest on the first UL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}+kI$ ). The UE shall be continuously scheduled on Cell1's BWP-1 starting from the first DL slot that occurs after the beginning of slot ( $j+T_{BWPswitchDelay}$ ).

The test equipment verifies the DL BWP switch time by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

**Table A.6.5.6.1.2.1-1: DL BWP switch supported test configurations**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode   |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode   |
| 3       | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode   |
| Note 1: | The UE is only required to be tested in one of the supported test configurations.                    |
| Note 2: | A UE which fulfils the requirements in test case A.6.5.6.1.1 can skip the test cases in A.6.5.6.1.2. |

| Note 1:               | OCNG shall be used such that the resources in Cell 1 are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |                  |        |
| Note 2:               | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                  |        |
| Note 3:               | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                  |        |
| Note 4:               | For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].    |                  |        |

#### A.6.5.6.1.2.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $(i+T_{BWPswitchDelay}+kI)$ .

During T3, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $(j+T_{BWPswitchDelay}+kI)$ .

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{BWPswitchDelay}$  defined in Table 8.6.2-1.

All of the above test requirements shall be fulfilled in order for the observed Cell1 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot  $(i+T_{BWPswitchDelay}+kI)$ ,  $(j+T_{BWPswitchDelay}+kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.6.2 RRC-based Active BWP Switch

#### A.6.5.6.2.1 NR FR1 DL active BWP switch of Cell with non-DRX in SA

##### A.6.5.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify the DL BWP switch delay requirement for RRC-based BWP switch defined in clause 8.6.

The supported test configurations are shown in Table A.6.5.6.2.1.1-1. The test scenario comprises of one Cell (Cell 1) as given in Table A.6.5.6.2.1.1-2. Cell-specific parameters of Cell are specified in Table A.6.5.6.2.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE will have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 on radio channel 1.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in Cell 1.

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration, sent from the test equipment to the UE, is completely received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition.

The UE shall be able to receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$  as defined in clause 8.6.3 and starts to report valid ACK/NACK for the PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}} + k1$  on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's BWP-1 of final condition starting from the first DL slot right after slot  $i + \frac{T_{\text{RRCprocessingDelay}} + T_{\text{BWPswitchDelayRRC}}}{\text{NR Slot length}}$ .

$T_{\text{RRCprocessingDelay}}$  and  $T_{\text{BWPswitchDelayRRC}}$  are defined in clause 8.6.3.

The test equipment verifies the DL BWP switch time in Cell by counting the time from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a valid ACK/NACK is received.

**Table A.6.5.6.2.1.1-1: DL BWP switch supported test configurations in SA scenario**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.5.6.2.1.1-2: General test parameters for DL BWP switch in SA scenario**

| Parameter            | Unit | Value  | Comment                                    |

They are not settable parameters themselves.</p> <p>Note 4: For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].</p> |            |                  |        |

#### A.6.5.6.2.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for the Cell from the first DL slot that occurs right after the beginning of slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length}$  and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC}}{NR\ Slot\ length} + k1$ .

Where,  $k1$  is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed Cell active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

#### A.6.5.6.3 Simultaneous DCI-based and Timer-based Active BWP Switch on multiple CCs

##### A.6.5.6.3.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

###### A.6.5.6.3.1.1 Test Purpose and Environment

The purpose of this test is to verify requirements on the DL BWP switch delay on multiple CCs and interruption requirement for NR victim cell, both defined in clause 8.6.

The supported test configurations are shown in Table A.6.5.6.3.1.1-1 below. The test scenario comprises of one NR PCell (Cell 1) and two NR SCells (Cell 2 and Cell 3) as given in Table A.6.5.6.3.1.1-2. NR Cell-specific parameters are specified in Table A.6.5.6.3.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 2) to ensure that the UE would have ACK/NACK sending except for the time duration when BWP is switching on Cell 1 and the time duration of T2.

PDCCHs indicating new transmissions shall be sent continuously on SCell (Cell 3) to ensure that the UE will have ACK/NACK sending. Before the test starts,

- UE is connected to PCell (Cell 1) on radio channel 1 (PCC), and SCell (Cell 2) on radio channel 2 (SCC) and SCell (Cell 3) on radio channel 3(SCC).
- UE is configured with 2 different UE-specific downlink bandwidth parts for PCell and SCell (Cell 2), BWP-1 and BWP-2, in Cell 1 and Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for SCell (Cell 3). BWP-0 includes the bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in PCell and SCell (Cell 2).

- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in SCell (Cell 3).
- UE is configured with a *bwp-InactivityTimer* timer value for PCell and SCell (Cell 2).

All cells have constant signal levels throughout the test.

The test consists of 3 successive time periods, with durations of T1, T2, and T3, respectively.

During T1,

Time period T1 starts when a DCI format 1\_1 command for both PCell and SCell (Cell 2) DL BWP switch, sent from the test equipment to the UE, is received at the UE side in both PCell's and SCell's slot # denoted *i*. The UE shall switch its bandwidth part from BWP-1 to BWP-2 at both PCell and SCell (Cell 2).

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's and SCell (Cell 2)'s DL slot ( $i + T_{MultipleBWPswitchDelay}$ ) as defined in clause 8.6.2A.1 and starts to report valid ACK/NACK for the both PCell and SCell (Cell 2) no later than the first UL slot that occurs after the beginning of slot ( $i + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on both PCell's and SCell (Cell 2)'s BWP-2 no later than the first DL slot that occurs after the beginning of slot ( $i + T_{MultipleBWPswitchDelay}$ ).

The starting time of SCell (Cell 3) interruption due to BWP switch on PCell and SCell (Cell 2) shall occur within the BWP switch delay.

During T2, the test equipment won't transmit DCI format for PDSCH reception on PCell (Cell 1) and SCell (Cell 2).

During T3,

The time period T3 starts from the slot #*j*, where *j* is the first slot of the subframe immediately after *bwp-InactivityTimer* timer expires. The UE should switch its bandwidth part from BWP-2 back to the default bandwidth part – BWP-1 on both PCell and SCell (Cell 2).

The UE shall be able to receive PDSCH no later than the first DL slot that occurs after the beginning of PCell's and SCell (Cell 2)'s slot ( $j + T_{MultipleBWPswitchDelay}$ ) as defined in clause 8.6.2A.1 and starts to report valid ACK/NACK for the PCell and SCell (Cell 2) no later than the first UL slot that occurs after the beginning of slot ( $j + T_{MultipleBWPswitchDelay} + kI$ ). The UE shall be continuously scheduled on PCell's and SCell (Cell 2)'s BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j + T_{MultipleBWPswitchDelay}$ ).

The starting time of SCell (Cell 3) interruption due to BWP switch of PCell shall occur within the BWP switch delay.

The test equipment verifies the DL BWP switch time in PCell and SCells by counting the slots from the time when the BWP switch command is received or *bwp-InactivityTimer* timer expires till an ACK/NACK is received.

The test equipment verifies that potential interruption to SCell (Cell 3) is carried out in the correct time span by monitoring ACK/NACK sent in SCell (Cell 3) during BWP switch of PCell, respectively.

**Table A.6.5.6.3.1.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD -FDD duplex mode  |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 3  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – FDD duplex mode |
| 4  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 5  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD - TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

Table A.6.5.6.3.1.1-2: General test parameters for DL BWP switch in SA

| Parameter   | Unit    | Value          | Comment   |
|---|---------|----------------|---|
| NR RF Channel Number                                    |         | 1, 2           | Two NR radio channels are used for this test                        |
| Active PCell  |         | Cell 1         | PCell on RF channel number 1.                                       |
| Active SCell  |         | Cell 2; Cell 3 | SCell on RF channel number 2 and number 3.                          |
| CP length   |         | Normal         |   |
| DRX   |         | OFF            | For both PCell and SCCells (Cell 2 and Cell 3)                      |
| <i>bwp-InactivityTimer</i>                              | ms      | 200            |   |
| Cell-individual offset for cells on RF channel number 1 | dB      | 0              | Individual offset for cells on PCC.                                 |
| Cell-individual offset for cells on RF channel number 2 | dB      | 0              | Individual offset for Cell 1 on SCC.                                |
| Cell-individual offset for cells on RF channel number 3 | dB      | 0              | Individual offset for Cell 2 on SCC.                                |
| Cell2 and Cell 3 timing offset to cell1                 | $\mu$ s | 3              | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1  | s       | [0.2]          |   |
| T2  | s       | [0.2]          |   |
| T3  | s       | [0.2]          |   |

**Table A.6.5.6.3.1.1-3: NR Cell specific test parameters for DL BWP switch in SA**

| Note 3:               | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                  |        |        |
| Note 4:               | For unpaired spectrum, a DL BWP is linked with an UL BWP. DLBWP.0.2 is linked with ULBWP.0.2; DLBWP.1.1 is linked with ULBWP.1.1; DLBWP.1.3 is linked with ULBWP.1.3 defined in clause 12 of TS 38.213 [3].    |                  |        |        |

#### A.6.5.6.3.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for both PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot  $(i + T_{MultipleBWPswitchDelay} + kI)$ .

During T3, the UE shall start to send the ACK/NACK for both PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot  $(j + T_{MultipleBWPswitchDelay} + kI)$ .

Where,  $kI$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability *bwp-SwitchingDelay* [2], UE shall finish BWP switch within the time duration  $T_{MultipleBWPswitchDelay}$  defined in 8.6.2A.1.

All of the above test requirements shall be fulfilled in order for the observed Cell1 and Cell2 active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T3, the start time of SCell (Cell 3) interruption during PCell and SCell (Cell 2) active BWP switch shall not happen outside the BWP switch delay.

The interruption of SCell (Cell 3) shall not be longer than the interruption duration specified for active BWP switch in clause 8.2.2.2.5.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell (Cell 2) active BWP switch interruption to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1, T3 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot  $(i + T_{MultipleBWPswitchDelay} + kI)$ ,  $(j + T_{MultipleBWPswitchDelay} + kI)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

#### A.6.5.6.4 SCell dormancy switch

##### A.6.5.6.4.1 NR FR1 PCell SCell dormancy switch of single FR1 SCell outside active time

###### A.6.5.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify the SCell dormancy switch delay requirements defined in clause 8.6 when the UE is triggered to switch between dormancy to non-dormancy and non-dormancy to dormancy outside the DRX active time. Further the test purpose is to verify the interruption rate on other serving cells when the UE performing CSI and RRM measurements on dormant SCell(s) as defined in clause 8.2.2.2.12 and also to verify the interruption requirement on other active serving cell defined in clause 8.2.2.2.5.

In the test scenario UE is connected to one PCell (Cell 1) in FR1 and one SCell in FR1. In the test the SCell is switched from non-dormancy to dormancy, and vice versa, at a point in time before start of *onDuration*. The UE is configured to monitor PDCCH for DCI format 2\_6 at *ps-Offset* before the start of *onDuration*. Two tests are specified, where a UE that only supports triggering within the first three OFDM symbols of a slot shall undergo Test1 only, and a UE that supports

triggering also in remaining OFDM symbols of a slot shall undergo both Test1 and Test2. In the tested scenario, *ps-Offset* is selected to correspond to the dormancy switching time specified in clause 8.6.

The supported test configurations are shown in Table A.6.5.6.4.1.1-1. The general test configuration is given in Table A.6.5.6.4.1.1-2. NR Cell-specific parameters are specified in Table A.6.5.6.4.1.1-3.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), and Cell 2 (SCell) on radio channel 2 (SCC).
- UE is configured with 1 UE-specific downlink bandwidth parts the same as initial BWP for PCell, BWP-0 in Cell 1 before starting the test.
- UE is configured with 2 different UE-specific downlink bandwidth parts for SCell, BWP-1 and BWP-2, in Cell 2 before starting the test. BWP-1 and BWP-2 always include bandwidth of the initial DL BWP and SSB.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-0 in PCell.
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 in SCell.
- UE is indicated in *dormantBWP-Id* that the active DL BWP is BWP-2 in the SCell.
- UE is configured with DRX.
- UE is configured to monitor DCI format 2\_6, and to be active during *onDuration* even when no DCI format 2\_6 is detected (*ps-WakeUp*).

All cells have constant signal levels throughout the test.

The test consists of 4 successive time periods, with durations of T1, T2, T3 and T4, respectively.

During T1,

Time period T1 starts when a DCI format 2\_6 command intended for dormant BWP switch in a SCell from non-dormancy to dormancy, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted  $i$  (at *ps-Offset* before *onDuration*). Upon reception of the PDCCH indicating entering dormant BWP in PCell (i.e. through cross-carrier scheduling), UE shall switch the DL BWP-1 to DL BWP-2 in SCell, i.e., switching from non-dormant BWP to dormant BWP and the UE shall complete the switching before the start of *onDuration*.

The UE shall be able to receive PDCCH on PCell no later than the first DL slot that occurs after the beginning of PCell's DL slot ( $i + T_{\text{dormantBWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK on the PCell no later than the first UL slot that occurs after the beginning of slot ( $i+N$ ) as defined in clause 10.3 in TS38.213. The UE shall be continuously scheduled on PCell's BWP-0 no later than the first DL slot that occurs after the beginning of slot ( $i + T_{\text{dormantBWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to dormancy switching on SCell shall occur within the dormant BWP switch delay, i.e. before start of *onDuration*.

The UE shall not transmit signals on SCell after the beginning of PCell's DL slot ( $i + T_{\text{dormantBWPswitchDelay}}$ ) as defined in clause 8.6. The UE shall not be scheduled on SCells BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $i + T_{\text{dormantBWPswitchDelay}}$ ).

Time period T2 starts when T1 is completed. During T2, the test equipment continues to schedule the UE continuously in PCell. The UE shall carry out CSI and RRM measurements on the dormant SCells. The UE shall report ACK/NACK in PCell in response to scheduled PDSCH, with the maximum loss of transmitted ACK/NACKs fulfilling the requirement in clause 8.2.2.2.12. The test equipment verifies that the loss of ACK/NACKs is no larger than 1.5%.

Time period T3 starts when T2 is completed. During T3, the test equipment does not schedule the UE, by which the inactivity timer expires and the UE stops monitoring PDCCH except for signalling using DCI format 2\_6 at wake-up signalling occasions.

During T4,

Time period T4 starts when a DCI format 2\_6 command for leaving dormant BWP in SCell, sent from the test equipment to the UE, is received at the UE side in PCell's slot # denoted  $j$  (at *ps-Offset* before *onDuration*). Upon

reception of the PDCCH indicating leaving dormant BWP in PCell (i.e. through cross-carrier scheduling), UE shall switch the DL BWP-2 to DL BWP-1 in SCell, i.e., switching from dormant BWP to non-dormant BWP.

The UE shall be able to receive PDSCH on PCell and SCell no later than the first DL slot that occurs after the beginning of PCell's DL slot ( $j + T_{\text{dormantBWPswitchDelay}}$ ) as defined in clause 8.6 and starts to report valid ACK/NACK on the PCell (for both PCell and SCell) no later than the first UL slot that occurs after the beginning of slot ( $j+N$ ) as defined in clause 10.3 in TS 38.213. The UE shall be continuously scheduled on PCell's BWP-0 no later than the first DL slot that occurs after the beginning of slot ( $j + T_{\text{dormantBWPswitchDelay}}$ ).

The starting time of PCell (Cell 1) interruption due to dormancy switching on SCell shall occur within the dormant BWP switch delay.

The UE shall be ready to transmit signals on SCell no later than the first DL slot that occurs after the beginning of PCell's DL slot ( $j + T_{\text{dormantBWPswitchDelay}}$ ) as defined in clause 8.6. The UE shall be ready to continuously scheduled on SCell's BWP-1 no later than the first DL slot that occurs after the beginning of slot ( $j + T_{\text{dormantBWPswitchDelay}}$ ).

The test equipment verifies the DL dormant BWP switch time in SCell by counting the slots from the time when the dormant BWP switch command is received till an ACK/NACK on PCell is received.

The test equipment verifies that potential interruption to PCell is carried out in the correct time span by monitoring ACK/NACK sent in PCell during dormant BWP switch of SCell (i.e. before start of *onDuration*), respectively.

**Table A.6.5.6.4.1.1-1: SCell dormancy switch supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD -FDD duplex mode  |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 3      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – FDD duplex mode |
| 4      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 5      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD - TDD duplex mode |

Note 1: The UE is only required to be tested in one of the supported test configurations

**Table A.6.5.6.4.1.1-2: General test parameters for SCell dormancy switch in SA**

| Parameter  | Unit | Value  |        | Comment   |
|--|------|--------|--------|---|

#### A.6.5.6.4.1.2 Test Requirements

During T1, the UE shall start to send the ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot ( $i+N$ ) (i.e. from the start of *onDuration*).

During time period T2, the UE shall transmit ACK/NACKs in response to scheduling in PCell and the rate of missed ACK/NACKs shall be no more than 1.5%.

During T4, the UE shall start to send the ACK/NACK for PCell and SCell from the first UL slot that occurs after the beginning of DL slot ( $j+N$ ) (i.e. from the start of *onDuration*).

Where,  $N$  is the timing that UE provide HARQ-ACK information in response to a detection of a DCI format 2\_6 indicating SCell dormancy as specified in [3].

All of the above test requirements shall be fulfilled in order for the observed SCell dormant BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

During T1 and T4, the start time of PCell interruption during SCell dormant BWP switch shall not happen outside the dormant BWP switch delay.

The interruption of PCell shall not be longer than the interruption duration specified for dormant BWP switch in clause 8.6.

NOTE: During T1, T4 if there are no uplink resources for reporting the ACK/NACK in the first DL slot that occurs after the beginning of DL slot ( $i+N$ ), ( $j+N$ ), then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

#### A.6.5.6.4.2 NR FR1 PCell SCell dormancy switch of two FR1 SCells inside active time

##### A.6.5.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify fulfillment of SCell dormancy switching delay requirements in clause 8.6.2A, requirements on interruptions due to SCell dormancy switching in clause 8.2.2.2.12.1, and requirements on interruptions due to CSI and RRM measurements on dormant SCells in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively. In the tested scenario, the UE is connected to PCell and two SCells in FR1, and the SCells are switched from non-dormancy to dormancy, and back, during active time. Depending on UE capability on whether DCI for dormancy switching can be received also later than within the initial three OFDM symbols of a slot, the UE may have to undergo one or two sets of tests. A UE that only supports triggering during within the first three OFDM symbols of a slot shall only undergo Test1 and Test2, whereas a UE that supports triggering also in remaining OFDM symbols of a slot shall undergo Test1 through Test4.

The supported test configurations are provided in Table A.6.5.6.4.2.1-1 below. General test parameters are provided in Table A.6.5.6.4.2.1-2, and cell-specific parameters are provided in Table A.6.5.6.4.2.1-3 below.

The tests consist of three consecutive time periods T1, T2, and T3, respectively.

Three carriers are used in the test, each within FR1 and each with one cell. Cell 1 (PCell) is on RF channel 1 (PCC), Cell 2 (SCell1) is on RF channel 2 (SCC1), and Cell 3 (SCell2) is on RF channel 3 (SCC2). All three cells have constant signal levels throughout the test. The UE is continuously scheduled in PCell throughout the test.

Before the test starts,

UE is connected to Cell 1 (PCell), Cell 2 (SCell1) and Cell 3 (SCell2).

UE is configured with a single UE-specific downlink bandwidth part, BWP-0, for Cell 1. BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is configured with one non-dormant and one dormant UE-specific downlink bandwidth part, BWP-0 and BWP-1, respectively, for Cell 2 and Cell 3. BWP-0 includes the bandwidth of the initial DL BWP and SSB.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 1 is BWP-0.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 2 is BWP-0.

UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP in Cell 3 is BWP-0.

UE is continuously scheduled in PCell, SCell1 and SCell2.

T1 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PCell at the antenna connector, in a slot # denoted  $m$ , pertaining to dormancy indication for switching SCell1 and SCell2 from non-dormancy to dormancy. The UE shall complete switching of the SCells to dormancy by the end of slot  $m + \text{ceil}(T_{\text{MultipleBWPsSwitchDelay}}/\text{NR slot length}) + 1$  in Test1 and Test2, and slot  $m + \text{ceil}(T_{\text{MultipleBWPsSwitchDelay}}/\text{NR slot length}) + 2$  in Test3 and Test4, as specified in clause 8.6.2A. Any PCell interruptions due to the switching between non-dormant and dormant BWPs shall fulfill requirements in clause 8.2.2.2.12.1. The test equipment verifies that interruptions due to switching from non-dormancy to dormancy are within the requirements by analysing HARQ feedback transmitted in PCell for PCell.

During T2, the UE is carrying out CSI and RRM measurements on dormant SCell1 and SCell2. Any PCell interruptions due to CSI and RRM measurements shall fulfill requirements in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively. The test equipment verifies that the interruptions are within the allowed percentages by counting ACK/NACKs in PCell. At the end of T2, the test equipment transmits a DCI with dormancy indication on PDCCH in PCell carrying a dormancy indication for switching SCell1 and SCell2 from dormancy to non-dormancy.

T3 starts at the point in time at which the UE receives a DCI with dormancy indication on PDCCH in PCell at the antenna connector, in a slot # denoted  $n$ , pertaining to dormancy indication for switching SCell1 and SCell2 from dormancy to non-dormancy. The UE shall complete switching of the SCells to non-dormancy by the end of slot  $n + \text{ceil}(T_{\text{MultipleBWPsSwitchDelay}}/\text{NR slot length}) + 1$  in Test1 and Test2, and slot  $n + \text{ceil}(T_{\text{MultipleBWPsSwitchDelay}}/\text{NR slot length}) + 2$  in Test3 and test4, as specified in clause 8.6.2A. Any PCell interruptions due to the switching between dormant and non-dormant BWPs shall fulfill requirements in clause 8.2.2.2.12.1. The test equipment verifies that interruptions due to switching from dormancy to non-dormancy are within the requirements by analysing HARQ feedback transmitted in PCell for PCell. The test equipment verifies the switching delay by analysing HARQ feedback transmitted in PCell for SCells.

**Table A.6.5.6.4.2.1-1: Supported test configurations**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                              |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

Table A.6.5.6.4.2.1-2: General test parameters

| Parameter  | Unit | Value   |       |        |       | Comment  |
|--|------|---------|-------|--------|-------|--|
|  |      | Test1   | Test2 | Test3  | Test4 |  |
| NR RF Channel Number   |      | 1, 2, 3 |       |        |       | Three NR radio channels are used for this test   |
| Active PCell   |      | Cell 1  |       |        |       | Primary cell on NR RF channel number 1 in FR1  |
| SCell1   |      | Cell 2  |       |        |       | SCell1 on NR RF channel number 2 in FR1  |
| SCell2   |      | Cell 3  |       |        |       | SCell2 on NR RF channel number 3 in FR1  |
| CP length  |      | Normal  |       |        |       |  |
| DRX  |      | OFF     |       |        |       | Continuous monitoring of primary cell  |
| CSI reporting periodicity, Non-dormant BWP                                 | ms   | 2       |       |        |       | CSI reporting periodicity for periodic reporting of CQI for PCell and non-dormant SCells   |
| CSI reporting periodicity, Dormant BWP                                     | ms   | 40      |       |        |       | CSI reporting periodicity for periodic reporting of CQI for dormant SCells   |
| Timing offset between Cell 1 and Cell 2                                    | ns   | 0       |       |        |       |  |
| Timing offset between Cell 1 and Cell 3                                    | ns   | 0       |       |        |       |  |
| Triggering DCI format  |      | 1_1     | 0_1   | 1_1    | 0_1   | Triggering DCI format for triggering during active time  |
| OFDM symbol range in slot for transmission of DCI with dormancy indication |      | 0 – 2   |       | 3 – 11 |       | Test1 and Test3 are based on that triggering DCI is received within the first three OFDM symbols of a slot. Test2 and Test4 are based on that the triggering DCI is received later than within the first three OFDM symbols of a slot. |
| T1   | s    | 0.2     |       |        |       |  |
| T2   | s    | 5       |       |        |       |  |
| T3   | s    | 0.2     |       |        |       |  |

**Table A.6.5.6.4.2.1-3: NR Cell specific test parameters**

| Parameter   |            | Unit         | Cell 1                      | Cell 2         | Cell 3         |
|---|------------|--------------|-----------------------------|----------------|----------------|

|--|--|---------|---------|---------|
| Correlation Matrix and Antenna Configuration |  | 1x2 Low | 1x2 Low | 1x2 Low |
| Note 1:                                      | OCNG shall be used such that the cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.   |         |         |         |
| Note 2:                                      | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |         |         |         |
| Note 3:                                      | SS-RSRP, SCH_RP, and $I_0$ levels have been derived from other parameters for information purpose. They are not settable parameters themselves.  |         |         |         |

#### A.6.5.6.4.2.2 Test Requirements

During T1, any interruption on PCell due to dormancy switching of SCells shall be within the requirement specified in clause 8.2.2.2.12.1.

During T2, interruptions on PCell due to CSI and RRM measurements on dormant SCells shall be within the interruption rate requirements specified in clauses 8.2.2.2.12.2 and 8.2.2.2.12.3, respectively.

During T3, any interruption on PCell due to dormancy switching of SCells shall be within the requirement specified in clause 8.2.2.2.12.1. Monitoring of PDCCH for SCell in SCell shall be resumed within the dormancy switching time specified in clause 8.6.2A.

For an event to be considered to be correct, all requirements above have to be fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.6.5 Simultaneous RRC-based Active BWP Switch on multiple CCs

#### A.6.5.6.5.1 NR FR1- NR FR1 DL active BWP switch on multiple CCs with non-DRX in SA

##### A.6.5.6.5.1.1 Test Purpose and Environment

The purpose of this test is to verify requirements on the RRC-based DL BWP switch delay on multiple CCs defined in clause 8.6.

The supported test configurations are shown in Table A.6.5.6.5.1.1-1 below. The test scenario comprises of one NR PCell (Cell 1) and one NR SCell (Cell 2) as given in Table A.6.5.6.5.1.1-2. NR Cell-specific parameters are specified in Table A.6.5.6.5.1.1-3 below.

PDCCHs indicating new transmissions shall be sent continuously on PCell (Cell 1) and SCell (Cell 2) to ensure that the UE would have ACK/NACK sending.

Before the test starts,

- UE is connected to Cell 1 (PCell) on radio channel 1 (PCC), Cell 2 (SCell) on radio channel 2 (SCC).
- UE has bandwidth part BWP-1 in its RRC-configuration for PCell and SCell (Cell 2).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell and SCell (Cell 2).

All cells have constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* with updated bandwidth part configuration for both PCell and SCell (Cell 2), sent from the test equipment to the UE, is completely received at the UE side in PCell's and SCell's slot # denoted  $i$ . The UE shall reconfigure its bandwidth part with the updated bandwidth part BWP-1 of final condition for both PCell and SCell (Cell 2).

The UE shall be able to receive PDSCH on PCell and SCell (Cell 2) from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$  as defined in clause 8.6.3A.1 and starts to

report valid ACK/NACK for the PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length} + k1$  on BWP-1 of final condition. The UE shall be continuously scheduled on PCell's and SCell (Cell 2)'s BWP-1 of final condition starting from the first DL slot right after slot  $i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length}$ .

$T_{RRCprocessingDelay}$ ,  $T_{BWPswitchDelayRRC}$  and  $D_{RRC}$  are defined in clause 8.6.3A.1,  $N=2$  in this test case.

The test equipment verifies the DL BWP switch time in PCell and SCell by counting the slots from the time when the RRC Reconfiguration message including updated BWP configuration is sent till the time when a valid ACK/NACK is received.

**Table A.6.5.6.5.1.1-1: DL BWP switch supported test configurations**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD – FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – TDD duplex mode |
| 3  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD – FDD duplex mode |
| 4  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD – TDD duplex mode |
| 5  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD – TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.5.6.5.1.1-2: General test parameters for DL BWP switch in SA**

| Parameter   | Unit | Value  | Comment   |
|---|------|--------|---|
| NR RF Channel Number                                    |      | 1, 2   | Two NR radio channels are used for this test                        |
| Active PCell  |      | Cell 1 | PCell on RF channel number 1.                                       |
| Active SCell  |      | Cell 2 | SCell on RF channel number 2.                                       |
| CP length   |      | Normal |   |
| DRX   |      | OFF    | For both PCell and SCell (Cell 2)                                   |
| Cell-individual offset for cells on RF channel number 1 | dB   | 0      | Individual offset for cell on PCC.                                  |
| Cell-individual offset for cells on RF channel number 2 | dB   | 0      | Individual offset for cell on SCC.                                  |
| Cell 2 timing offset to Cell 1                          | μs   | 3      | Time alignment error as specified in TS 38.104 [13] clause 6.5.3.1. |
| T1  | s    | [0.2]  |   |

**Table A.6.5.6.5.1.1-3: NR Cell specific test parameters for DL BWP switch in SA**

| Parameter                                    |                               | Unit    | Cell 1                          | Cell 2                          |
|--|-------------------------------|---------|---------------------------------|---------------------------------|
| Frequency Range                              |                               |         | FR1                             |                                 |
| Duplex mode                                  | Config 1                      |         | FDD                             | FDD                             |
|  | Config 2,5                    |         | TDD                             | TDD                             |
|  | Config 3                      |         | TDD                             | FDD                             |
|  | Config 4                      |         | FDD                             | TDD                             |

#### A.6.5.6.5.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for both PCell and SCell (Cell 2) from the first DL slot that occurs right after the beginning of slot  $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length})$  and starts to report valid ACK/NACK for both PCell and SCell (Cell 2) from the first UL slot that occurs after the beginning of DL slot  $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length} + k1)$ .

Where,  $k1$  is the timing between DL data receiving and acknowledgement as specified in [7].

Depending on UE capability  $bwp-SwitchingDelay$  [2], UE shall finish BWP switch on PCell and SCell (Cell 2) within the time duration  $T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}$  defined in 8.6.3A.1.

All of the above test requirements shall be fulfilled in order for the observed PCell and SCell (Cell 2) active BWP switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: During T1 if there are no uplink resources for reporting the ACK/NACK in the first UL slot that occurs after beginning of DL slot  $(i + \frac{T_{RRCprocessingDelay} + T_{BWPswitchDelayRRC} + D_{RRC}}{NR\ slot\ length} + k1)$ , then the UE shall use the next available uplink resource for reporting the corresponding ACK/NACK.

### A.6.5.7 DL interruptions at switching between two uplink carriers

#### A.6.5.7.1 DL interruptions at switching between two uplink carriers in FDD-TDD CA

##### A.6.5.7.1.1 Test Purpose and Environment

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink carriers defined in clause 8.2.2.2.10. The test case is applicable for an uplink band pair of an inter-band FDD-TDD CA configuration when the capability  $uplinkTxSwitchingPeriod$  is present.

There are two cells: FR1 FDD PCell (Cell 1), FR1 TDD SCell (Cell 2). The test parameters for the two cells are given in Table A.6.5.7.1.1-1, Table A.6.5.7.1.1-2 and Table A.6.5.7.1.1-3 below.

For NR FDD carrier (Cell 1), aperiodic CSI-RS for L1-RSRP reporting is triggered with power boosting 6dB on the following symbol in the slot overlapping with the special slot of the NR TDD carrier (Cell 2):

- symbol#12 if UE does not report uplinkTxSwitching-DL-Interruption-r16;
- otherwise,
  - symbol #8 if UE capability  $uplinkTxSwitchingPeriod$  is 210us or
  - symbol #9 if UE capability  $uplinkTxSwitchingPeriod$  is 140us or

- symbol #10 if UE capability *uplinkTxSwitchingPeriod* is 35us.

For NR TDD carrier (Cell 2), aperiodic CSI-RS for L1-RSRP reporting is configured with power boosting [6dB] on the following symbol in the special slot:

- symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;
- otherwise,
  - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or
  - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or
  - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.

This test verifies that the UE correctly report the L1-RSRP reporting. The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *uplinkTxSwitching* is indicated to UE.

**Table A.6.5.7.1.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | NR Cell 1: 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

| Note 6: | CSI-RS RSRP and $I_0$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |

### A.6.5.7.1.2 Test Requirements

The UE behaviour follows the requirements defined in clause 8.2.2.2.10.

UE shall send L1-RSRP report while meeting the accuracy requirements defined in clause 10.1.19.1.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.5.7.2 DL interruptions at switching between two uplink carriers in TDD-TDD CA

#### A.6.5.7.2.1 Test Purpose and Environment

The purpose of this test is to verify DL interruption requirements during UE dynamic switching between two uplink carriers defined in clause 8.2.2.2.10. The test case is applicable for an uplink band pair of an inter-band TDD-TDD CA configuration when the capability *uplinkTxSwitchingPeriod* is present.

There are two cells: FR1 TDD PCell (Cell 1), FR1 TDD SCell (Cell 2). The test parameters for the two cells are given in Table A.6.5.7.2.1-1, Table A.6.5.7.2.1-2 and Table A.6.5.7.2.1-3 below.

For NR TDD PCell (Cell 1), aperiodic CSI-RS for L1-RSRP reporting is triggered with power boosting 6dB on the following symbol in the special slot:

- symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;
- otherwise,
  - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or
  - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or
  - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.

For NR TDD SCell (Cell 2), aperiodic CSI-RS for L1-RSRP reporting is configured with power boosting 6dB [6dB] on the following symbol on the 2<sup>nd</sup> special slot of every 8 slots:

- symbol#10 if UE does not report *uplinkTxSwitching-DL-Interruption-r16*;
- otherwise,
  - symbol #4 if UE capability *uplinkTxSwitchingPeriod* is 210us or
  - symbol #5 if UE capability *uplinkTxSwitchingPeriod* is 140us or
  - symbol #8 if UE capability *uplinkTxSwitchingPeriod* is 35us.

This test verifies that the UE correctly report the L1-RSRP reporting. The test case is only applicable to UE which supports *simultaneousRxTxInterBandCA*.

The test consists of one time period, with duration of T1. Prior to the start of the time duration T1, *uplinkTxSwitching* is indicated to UE.

**Table A.6.5.7.2.1-1: Supported test configurations**

| Configuration | Description  |
|---------------|--|
| 1             | NR Cell 1: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode<br>NR Cell 2: 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |

### A.6.5.7.2.2 Test Requirements

The UE behaviour follows the requirements defined in clause 8.2.2.2.10.

UE shall send L1-RSRP report while meeting the accuracy requirements defined in clause 10.1.19.1.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.8 UE specific CBW change

### A.6.5.8.1 UE specific CBW change on PCell in FR1 in non-DRX

#### A.6.5.8.1.1 Test Purpose and Environment

The purpose of this test is to verify the UE specific CBW change delay requirement defined in clause 8.13.

The supported test configurations are shown in Table A.6.5.8.1.1-1. The test scenario comprises of one Cell (Cell 1), which is PCell as given in Table A.6.5.8.1.1-2. Cell-specific parameters are specified in Table A.6.5.8.1.1-3.

PDCCHs indicating new transmissions shall be sent continuously on Cell 1 to ensure that the UE sends ACK/NACK during the test.

Before the test starts:

- UE is connected to Cell 1 (PCell) on radio channel 1.
- UE has bandwidth part BWP-1 in its RRC-configuration for Cell 1 (PCell).
- UE is indicated in *firstActiveDownlinkBWP-Id* that the active DL BWP is BWP-1 of initial condition in PCell.
- UE has been configured with UE specific CBW (CBW-1).
- UE is indicated in *SCS-SpecificCarrier* [2] that the UE specific CBW is CBW-1 as the initial condition in Cell 1 (PCell).

Cell1 (PCell) has constant signal levels throughout the test.

The test consists of 1 time period, with duration of T1.

During T1,

Time period T1 starts when a *RRCReconfiguration* containing *SCS-SpecificCarrier* with updated UE specific CBW, sent from the test equipment to the UE, is completely received at the UE side in PCell's slot # denoted *i*. The UE shall reconfigure its UE specific CBW with the updated CBW-2 for the final condition.

The UE shall be able to receive PDSCH on PCell from the first DL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$  as defined in clause 8.13 and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length} + k1$  on the PCell's BWP-1 on CBW-2 for the final condition. The UE shall be continuously scheduled on the PCell's BWP-1 on CBW-2 for the final condition starting from the first DL slot right after slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$ .

$T_{RRCprocessingDelay}$  and  $T_{CBWchangeDelayRRC}$  are defined in clause 8.13.

The test equipment verifies the UE specific CBW switching delay in PCell by estimating the time from the moment the RRC Reconfiguration message including updated UE specific CBW configuration is sent until the moment a valid ACK/NACK is received.

**Table A.6.5.8.1.1-1: Supported test configurations for UE specific CBW change in SA scenario**

| Configuration  | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |

**Table A.6.5.8.1.1-2: General test parameters for UE specific CBW change in SA scenario**

| Parameter            | Unit | Value  | Comment                                    |
|----------------------|------|--------|--|
| NR RF Channel Number |      | 1      | One NR radio channel is used for this test |
| Active Cell          |      | Cell 1 | Cell on RF channel number 1.               |
| CP length            |      | Normal |  |
| DRX                  |      | OFF    |  |

### A.6.5.8.1.2 Test Requirements

During T1, the UE shall be ready for the reception of uplink grant for the PCell from the first DL slot that occurs right after the beginning of slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length}$  and starts to report valid ACK/NACK for PCell from the first UL slot that occurs after the beginning of DL slot  $i + \frac{T_{RRCprocessingDelay} + T_{CBWchangeDelayRRC}}{NR\ Slot\ length} + k1$ .

Where,  $k1$  is the timing between DL data receiving and acknowledgement as specified in [7].

All of the above test requirements shall be fulfilled in order for the observed UE specific CBW change delay on the PCell to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.5.9 Pathloss reference signal switching delay

### A.6.5.9.1 MAC-CE based pathloss reference signal switch delay

#### A.6.5.9.1.1 Test Purpose and Environment

The purpose of this test is to verify the MAC-CE based pathloss reference signal switch delay requirement defined in clause 8.14.

The supported test configurations are shown in Table A.6.5.9.1.1-1. The test scenario comprises of one cell (Cell 1) as given in Table A.6.5.9.1.1-2. Cell-specific parameters of the cell are specified in Table A.6.5.9.1.1-3 below.

The test consists of 3 successive time periods, with duration of T1, T2 and T3, respectively.

Prior to the start of the time duration T1,

- UE is connected to Cell 1 on radio channel 1.
- UE shall be fully synchronized to SSB #0.

During T1,

- The UE shall track SSB #1 so that SSB #1 as a pathloss reference signal is known to the UE.

Time period T2 starts when the UE is configured of the power headroom reporting functionality by upper layers by the test equipment and the UE shall transmit a PHR during T2.

During T2,

- UE is configured with a *phr-ProhibitTimer* timer value for Cell 1.
- UE is configured with a *phr-Tx-PowerFactorChange* value for Cell 1.

During T3,

Time period T3 starts when a PDSCH carrying MAC-CE activation for pathloss reference signal switch, sent from the test equipment to the UE to switch the pathloss reference signal from SSB 0 to SSB 1, is received at the

UE side in Cell1's slot # denoted  $i$ . The UE shall switch its pathloss reference signal to the target one and send PHR.

The UE shall be able to apply the target pathloss reference signal of the serving cell on which pathloss reference signal switch occurs no later than the slot  $i + T_{HARQ} + \left\lceil \frac{3\text{ms} + 5 * T_{target\_PL-RS} + 2\text{ms}}{NR\ slot\ length} \right\rceil$  as defined in clause 8.14. The UE shall be able to apply old pathloss reference signals until the slot  $i + T_{HARQ} + 3N_{slot}^{subframe,\mu}$  as defined in clause 8.14.

The test equipment verifies the pathloss RS switch time by counting the slots from the time when the pathloss RS switch command is transmitted till a PHR is received during T3.

**Table A.6.5.9.1.1-1: MAC-CE based pathloss reference signal switch supported test configurations**

| Config  | Description  |
|---|--|
| 1   | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2   | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3   | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations. |  |

**Table A.6.5.9.1.1-2: General test parameters for MAC-CE based pathloss reference signal switch in SA**

| Parameter                                    | Unit           | Value                     | Comment                  |
|--|----------------|---------------------------|--------------------------|
| Active PCell                                 |                | Cell 1                    |                          |

They are not settable parameters.</p> |                      |                |           |                |    |

### A.6.5.9.1.2 Test Requirements

During T3, the UE shall start to send the PHR for PCell no later than the slot  $i + T_{HARQ} + \left\lceil \frac{3ms + 5 * T_{target\_PL-RS} + 2ms}{NR\ slot\ length} \right\rceil$ .

During T3, the UE shall start to send the PHR for PCell no earlier than the slot  $i + T_{HARQ} + 3N_{slot}^{subframe,\mu}$ .

Where,  $T_{HARQ}$  is the timing between pathloss reference MAC-CE activation command and acknowledgement as specified in [7],  $T_{target\_PL-RS}$  is the periodicity of the target pathloss reference signal which is SSB in this test.

During T3, UE shall send L1-RSRP report with measurement results for both SSB0 and SSB1.

All of the above test requirements shall be fulfilled in order for the observed pathloss RS switch delay to be counted as correct.

The rate of correct events observed during repeated tests shall be at least 90%.

Note: The UE shall be given proper uplink transmission grant during T2 and T3.

## A.6.6 Measurement procedure

### A.6.6.1 Intra-frequency Measurements

#### A.6.6.1.1 SA event triggered reporting tests without gap under non-DRX

##### A.6.6.1.1.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

##### A.6.6.1.1.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in Table A.6.6.1.1.1-1 and A.6.6.1.1.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

**Table A.6.6.1.1.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.1.1.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for FR1**

| Parameter                                       | Unit | Test configuration | Value                | Comment   |
|---|------|--------------------|----------------------|---|

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |                        |        |

### A.6.6.1.1.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.1.2 SA event triggered reporting tests without gap under DRX

#### A.6.6.1.2.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

#### A.6.6.1.2.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in Table A.6.6.1.2.2-1, A.6.6.1.2.2-2 and A.6.6.1.2.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.2.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.1.2.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for PCell in FR1 with DRX**

| Parameter                                       | Unit | Test configuration | Value                |        | Comment   |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |                        |        |

### A.6.6.1.2.3 Test Requirements

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

## A.6.6.1.3 SA event triggered reporting tests with per-UE gaps under non-DRX

### A.6.6.1.3.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

### A.6.6.1.3.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in Table A.6.6.1.3.1-1 and A.6.6.1.3.1-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

**Table A.6.6.1.3.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.1.3.2-2: General test parameters for SA intra-frequency event triggered reporting with per-UE gaps for PCell in FR1**

| Parameter                                       | Unit | Test configuration | Value                      | Comment   |
|---|------|--------------------|----------------------------|---|
| Active cell                                     |      | 1, 2, 3            | Cell 1                     |   |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |                        |        |

### A.6.6.1.3.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.6.6.1.4 SA event triggered reporting tests with per-UE gaps under DRX

#### A.6.6.1.4.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

#### A.6.6.1.4.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in Table A.6.6.1.4.2-1, A.6.6.1.4.2-2 and A.6.6.1.4.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.4.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.1.4.2-2: General test parameters for SA intra-frequency event triggered reporting with per-UE gaps for PCell in FR1 with DRX**

| Parameter                                       | Unit | Test configuration | Value                      |        | Comment  |
|---|------|--------------------|----------------------------|--------|--|
|   |      |                    | Test 1                     | Test 2 |  |

**Table A.6.6.1.4.2-4: Void****Table A.6.6.1.4.2-5: Void****A.6.6.1.4.3 Test Requirements**

In test 1, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

In test 2, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 6400 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

**A.6.6.1.5 SA event triggered reporting tests without gap under non-DRX with SSB index reading****A.6.6.1.5.1 Test purpose and Environment**

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 9.2.5.1 and 9.2.5.2.

**A.6.6.1.5.2 Test parameters**

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for FDD PCell and neighbour cell are given in Table A.6.6.1.5.2-1 and A.6.6.1.5.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

### A.6.6.1.5.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.6.6.1.6 SA event triggered reporting tests with per-UE gaps under non-DRX with SSB index reading

#### A.6.6.1.6.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the FDD intra-frequency cell search requirements in clause 9.2.6.2 and 9.2.6.3.

### A.6.6.1.6.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for FDD PCell and neighbour cell are given in Table A.6.6.1.6.2-1 and A.6.6.1.6.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

There are two BWPs configured in Cell 1, BWP1 which contains the cell defining SSB, and BWP2 which does not contain any SSB of Cell 1. During the whole test, BWP2 is always scheduled as the active BWP for the UE.

**Table A.6.6.1.6.2-1: Supported test configurations**

| Configuration | Description                                       |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |              |                    |                        |        |                        |        |

### A.6.6.1.6.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE is required to read the neighbour cell SSB index and report the acquired SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

### A.6.6.1.7 SA event triggered reporting tests under DRX for UE configured with highSpeedMeasFlag-r16

#### A.6.6.1.7.1 Test purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event for UE configured with highSpeedMeasFlag-r16. This test will partly verify the intra-frequency cell search requirements in clauses 9.2.5.1 and 9.2.5.2.

### A.6.6.1.7.2 Test parameters

Two cells are deployed in the test, which are FR1 PCell (Cell 1) and a FR1 neighbour cell (Cell 2) on the same frequency as the PCell. The test parameters for PCell are given in Table A.6.6.1.7.2-1, A.6.6.1.7.2-2 and A.6.6.1.7.2-3 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of Cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.1.7.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.1.7.2-2: General test parameters for SA intra-frequency event triggered reporting without gap for PCell in FR1 with DRX for UE configured with highSpeedMeasFlag-r16**

| Parameter                                       | Unit | Test configuration | Value                | Comment   |

|         |  |
|---------|--|
| Note 1: | The resources for uplink transmission are assigned to the UE prior to the start of time period T2.   |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |
| Note 4: | The AWGN 1944 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 1944Hz.   |
| Note 5: | The AWGN 3334 Hz condition is a non fading propagation channel with one tap. Doppler shift is a constant 3334Hz.   |

### A.6.6.1.7.3 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 5120 ms from the beginning of time period T2. The UE is not required to read the neighbour cell SSB index in this test.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.2 Inter-frequency Measurements

### A.6.6.2.1 SA event triggered reporting tests for FR1 without SSB time index detection when DRX is not used

#### A.6.6.2.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.2.1.1-1, A.6.6.2.1.1-2 and A.6.6.2.1.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.6.6.2.1.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.6.6.2.1.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.6.6.2.1.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3       | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                              |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.6.6.2.1.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value             |        | Comment   |

#### A.6.6.2.1.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 760 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.2.2 SA event triggered reporting tests for FR1 without SSB time index detection when DRX is used

##### A.6.6.2.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.2.2.1-1, A.6.6.2.2.1-2 and A.6.6.2.2.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.6.6.2.2.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.6.6.2.2.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3       | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.6.6.2.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 without SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value             |        |        |        | Comment   |

#### A.6.6.2.2.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement

reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 10240 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.6.6.2.3 Void

A.6.6.2.4 Void

A.6.6.2.5 SA event triggered reporting tests for FR1 with SSB time index detection when DRX is not used

A.6.6.2.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.2.5.1-1, A.6.6.2.5.1-2 and A.6.6.2.5.1-3.

In test 1 measurement gap pattern configuration # 0 as defined in Table A.6.6.2.5.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #4 as defined in Table A.6.6.2.5.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.6.6.2.5.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3       | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.6.6.2.5.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 with SSB time index detection**

| Parameter                                       | Unit | Test configuration | Value             |        | Comment   |

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |              |              |        |        |           |        |

#### A.6.6.2.5.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1040 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 880 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.6.6.2.6 SA event triggered reporting tests for FR1 with SSB time index detection when DRX is used

##### A.6.6.2.6.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.2.6.1-1, A.6.6.2.6.1-2 and A.6.6.2.6.1-3.

In test 1&2 measurement gap pattern configuration # 0 as defined in Table A.6.6.2.6.1-2 is provided for UE that does not support per-FR gap and in test 3&4 measurement gap pattern configuration #4 as defined in Table A.6.6.2.6.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #4, it is only required to pass test 3&4. Otherwise it is only required to pass test 1&2.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

UE needs to be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.6.1-1: SA event triggered reporting tests with SSB index reading for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3       | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

#### A.6.6.2.6.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 3 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 4 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 12160 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1, 2, 3 and 4 UE is required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

A.6.6.2.7 Void

A.6.6.2.8 Void

A.6.6.2.9 SA event triggered reporting tests with additional mandatory gap pattern

A.6.6.2.9.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event when mandatory gap pattern with 3ms MGL is configured.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.2.9.1-1, A.6.6.2.9.1-2 and A.6.6.2.9.1-3.

In test 1 measurement gap pattern configuration # 3 as defined in Table A.6.6.2.9.1-2 is provided for UE that does not support per-FR gap and in test 2 measurement gap pattern configuration #2 as defined in Table A.6.6.2.9.1-2 is provided for UE that supports per-FR gap. If a UE supports per-FR gap and gap pattern configuration #2, it is only required to pass test 2. Otherwise it is only required to pass test 1.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.6.6.2.9.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config  | Description  |
|---------|--|
| 1       | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2       | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3       | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                              |
| Note 1: | The UE is only required to be tested in one of the supported test configurations |
| Note 2: | target NR cell has the same SCS, BW and duplex mode as NR serving cell           |

**Table A.6.6.2.9.1-2: General test parameters for SA inter-frequency event triggered reporting with additional mandatory gap pattern**

| Parameter                                       | Unit | Test configuration | Value             |        | Comment   |

They are not settable parameters themselves.</p> <p>Note 4: SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.</p> |                  |                       |        |        |           |        |

#### A.6.6.2.9.2 Test Requirements

In test 1 with per-UE gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1280 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 2 with per-FR gap, the UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 920 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test 1 and 2 UE is not required to report SSB time index.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCCH.

#### A.6.6.2.10 SA event triggered reporting tests for FR1 when DRX is used

##### A.6.6.2.10.1 Test Purpose and Environment

The purpose of this test is to verify that the UE which supports interFrequencyMeas-Nogap-r16 makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search without measurement gap requirements in clause 9.3.9.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on RF channel 2. The SSB of cell 2 is completely within UE's active BWP BW. The RBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters are given in Tables A.6.6.2.10.1-1, A.6.6.2.10.1-2 and A.6.6.2.10.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

UE needs to be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore, UE is allocated with PUSCH resource at every DRX cycle.

**Table A.6.6.2.10.1-1: SA event triggered reporting tests when DRX is used for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

**Table A.6.6.2.10.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 when DRX is used**

| Parameter                                       | Unit | Test configuration | Value             | Comment   |

| Field              | Value | Comment                                       |
|--------------------|-------|---|
| TimeAlignmentTimer | ms500 | As specified in clause 6.3.2 in TS 38.331 [2] |

#### A.6.6.2.10.2 Test Requirements

In test config 1, UE is required to report SSB time index. UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 1080 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

In test config 2 and 3, UE is not required to report SSB time index. The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 900 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.2.11 SA event triggered reporting tests for FR1 without gap when DRX is not used

##### A.6.6.2.11.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of an event. This test will partly verify the SA inter-frequency NR cell search requirements in clause 9.3.9.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The SSB of Cell 2 is completely within UE's active BWP BW. The RBs containing SSB from cell 1 and cell 2 should be different in frequency location within the cell bandwidth. The test parameters are given in Tables A.6.6.2.11.1-1, A.6.6.2.11.1-2 and A.6.6.2.11.1-3.

In the measurement control information, it is indicated to the UE that event-triggered reporting with Event A3 is used. The test consists of two successive time periods, with time duration of T1, and T2 respectively. During time duration T1, the UE shall not have any timing information of NR cell 2.

**Table A.6.6.2.11.1-1: SA event triggered reporting tests without SSB index reading for FR1-FR1**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

**Table A.6.6.2.11.1-2: General test parameters for SA inter-frequency event triggered reporting for FR1 without gap**

| Note 1:                | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |                       |        |        |           |        |
| Note 2:                | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |                       |        |        |           |        |
| Note 3:                | SS-RSRP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.  |                       |        |        |           |        |
| Note 4:                | SS-RSRP minimum requirements are specified assuming independent interference and noise at each receiver antenna port.  |                       |        |        |           |        |

### A.6.6.2.11.2 Test Requirements

The UE shall send one Event A3 triggered measurement report, with a measurement reporting delay less than 800 ms from the beginning of time period T2. The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled. The rate of correct events observed during repeated tests shall be at least 90%.

The UE is not required to read the neighbour cell SSB index in this test.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.3 Inter-RAT Measurements

### A.6.6.3.1 SA NR - E-UTRAN event-triggered reporting in non-DRX in FR1

#### A.6.6.3.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in Clauses 9.4.2 and 9.4.3.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.3.1.1-1. General test parameters are provided in Table A.6.6.3.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in Tables A.6.6.3.1.1-3 and A.6.6.3.1.1-4, respectively.

**Table A.6.6.3.1.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.6.3.1.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter   | Unit | Value   | Comment  |
|---|------|---|--|
| NR RF Channel Number                              |      | 1   | 1 NR carrier frequency is used in the test                           |
| LTE RF Channel Number                             |      | 1   | 1 LTE carrier frequency is used in the test                          |
| Channel Bandwidth                                 | MHz  | As specified in Tables A.6.6.3.1.1-2 and A.6.6.3.1.1-3. |  |
| Active cell                                       |      | Cell 1  | Cell 1 is on RF channel number 1                                     |
| Neighbour cell                                    |      | Cell 2  | Cell 2 is on RF channel number 2                                     |
| Gap Pattern Id                                    |      | 0   | As specified in Clause Table 9.1.2-1. Per-UE gap pattern.            |
| NR measurement quantity                           |      | SS-RSRP   | Measurement quantity for Cell 1                                      |
| Inter-RAT E-UTRAN measurement quantity            |      | RSRP  | Measurement quantity for Cell 2                                      |
| b2-Threshold1                                     | dBm  | Note 1  | SS-RSRP threshold for SS-RSRP measurement on cell1 for event B2      |
| b2-Threshold2EUTRA                                | dBm  | -95   | E-UTRAN RSRP threshold for SS-RSRP measurement on cell1 for event B2 |
| Hysteresis  | dB   | 0   |  |
| TimeToTrigger                                     | s    | 0   |  |
| Filter coefficient                                |      | 0   | L3 filtering is not used   |
| DRX   |      | OFF   | OFF  |
| T1  | s    | 5   |  |
| T2  | s    | 5   |  |
| Note 1: Values are defined in Table A.6.6.3.1.1-3 |      |   |  |

**Table A.6.6.3.1.1-3: PCell specific test parameters for SA inter-RAT E-UTRA event triggered reporting in non-DRX with PCell in FR1**

| Parameter  |                  | Unit         | Configuration    | Cell 1                            |         |
|--|------------------|--------------|------------------|-----------------------------------|---------|

- Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.
- Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for  $N_{oc}$  to be fulfilled.
- Note 3:  $\hat{E}_s/I_{ot}$ , SS-RSRP, SSB\_RP and  $I_o$  levels have been derived from other parameters for information purposes. They are not settable parameters themselves.

**Table A.6.6.3.1.1-4: E-UTRAN neighbour cell specific test parameters for SA inter-RAT E-UTRAN event triggered reporting in non-DRX with PCell in FR1**

| Parameter | Unit | Configuration | Cell 2 |    |

### A.6.6.3.1.2 Test Requirements

The UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.3.2 SA NR - E-UTRAN event-triggered reporting in DRX in FR1

#### A.6.6.3.2.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements when operating in standalone (SA) operation with PCell in FR1 when DRX is used. This test shall partly verify the cell search and measurement requirements in Clauses 9.4.2 and 9.4.3. There are two test cases. In test 1 the UE shall be configured with DRX cycle of 40 ms. In test 2 the UE shall be configured with DRX cycle of 640 ms.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

In each test the UE shall be provided with new Timing Advance Command MAC control element at least once during each time alignment timer period to maintain uplink time alignment. Furthermore the UE shall be allocated with PUSCH resource at every DRX cycle.

Supported test configurations are shown in table A.6.6.3.2.1-1. General test parameters are provided in Table A.6.6.3.2.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in Tables A.6.6.3.2.1-3 and A.6.6.3.2.1-4, respectively.

**Table A.6.6.3.2.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.6.3.2.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1**

| Parameter   | Unit | Test 1  | Test 2 | Comment   |
|---|------|---|--------|---|
|   |      | Value   |        |   |
| NR RF Channel Number                              |      | 1   |        | 1 NR carrier frequency is used in the test  |
| LTE RF Channel Number                             |      | 2   |        | 1 LTE carrier frequency is used in the test   |
| Channel Bandwidth                                 | MHz  | As specified in Tables A.6.6.3.2.1-2 and A.6.6.3.2.1-3. |        |   |
| Active cell                                       |      | Cell 1  |        | Cell 1 is on RF channel number 1  |
| Neighbour cell                                    |      | Cell 2  |        | Cell 2 is on RF channel number 2  |
| Gap Pattern Id                                    |      | 0   |        | As specified in Clause Table 9.1.2-1. Per-UE gap pattern.   |
| NR measurement quantity                           |      | SS-RSRP   |        | Measurement quantity for Cell 1   |
| Inter-RAT E-UTRAN measurement quantity            |      | RSRP  |        | Measurement quantity for Cell 2   |
| b2-Threshold1                                     | dBm  | Note 1  |        | SS-RSRP threshold for SS-RSRP measurement on cell1 for event B2   |
| b2-Threshold2EUTRA                                | dBm  | -95   |        | E-UTRAN RSRP threshold for SS-RSRP measurement on cell1 for event B2                                      |
| Hysteresis  | dB   | 0   |        |   |
| TimeToTrigger                                     | s    | 0   |        |   |
| Filter coefficient                                |      | 0   |        | L3 filtering is not used  |
| DRX   |      | DRX.1   | DRX.7  | DRX cycle configurations DRX.1 and DRX.7 are defined in Table A.3.3.1-1 and Table A.3.3.7-1 respectively. |
| T1  | s    | 5   |        |   |
| T2  | s    | 5   | 15     |   |
| Note 1: Values are defined in Table A.6.6.3.2.1-3 |      |   |        |   |

**Table A.6.6.3.2.1-3: PCell specific test parameters for SA inter-RAT E-UTRA event triggered reporting in DRX with PCell in FR1**

| Parameter  |                  | Unit         | Configuration    | Cell 1                            |        |
|--|------------------|--------------|------------------|-----------------------------------|--------|
|  |                  |              |                  | T1                                | T2     |
| RF channel number                                |                  |              | 1, 2, 3, 4, 5, 6 | 1                                 |        |
| Duplex mode                                      |                  |              | 1, 2, 3          | FDD                               |        |
|  |                  |              | 4, 5, 6          | TDD                               |        |
| TDD Configuration                                | SCS=15 KHz       |              | 2, 5             | TDDConf.1.1                       |        |
|  | SCS=30 KHz       |              | 3, 6             | TDDConf.2.1                       |        |
| BW <sub>channel</sub>                            |                  | MHz          | 1, 4             | 10: N <sub>RB,c</sub> = 52 (FDD)  |        |

- |         |  |
|---------|--|
| Note 1: | OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols.  |
| Note 2: | Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for $N_{oc}$ to be fulfilled. |
| Note 3: | $\hat{E}_s/I_{ot}$ , SS-RSRP, SSB_RP and $I_o$ levels have been derived from other parameters for information purposes. They are not settable parameters themselves.   |

### A.6.6.3.2.2 Test Requirements

In test 1, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 3.84s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

In test 2, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 12.8s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.3.3 SA NR - E-UTRAN event-triggered reporting in DRX in FR1 for UE configured with highSpeedMeasFlag-r16

#### A.6.6.3.3.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT E-UTRAN measurements for UE configured with highSpeedMeasFlag-r16 in standalone (SA) operation with PCell in FR1 when DRX is used. This test shall partly verify the cell search and measurement requirements in Clauses 9.4.2 and 9.4.3.

In the test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT E-UTRAN inter-RAT neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B2 (PCell becomes worse than threshold1 and inter RAT neighbour becomes better than threshold2) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

The UE shall be provided at least once every 500ms with new Timing Advance Command MAC control element to restart the Time alignment timer to keep UE uplink time alignment. Furthermore the UE shall be allocated with PUSCH resource at every DRX cycle.

Supported test configurations are shown in table A.6.6.3.3.1-1. General test parameters are provided in Table A.6.6.3.3.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in Tables A.6.6.3.3.1-3 and A.6.6.3.3.1-4, respectively.

**Table A.6.6.3.3.1-1: Supported test configurations in SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD                    |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD                    |
| 4             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD                    |
| 5             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| 6             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD                    |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.6.3.3.1-2: General test parameters for SA inter-RAT E-UTRAN event triggered reporting in DRX with PCell in FR1 for UE configured with highSpeedMeasFlag-r16**

| Parameter   | Unit | Value   | Comment  |
|---|------|---|--|
| NR RF Channel Number                              |      | 1   | 1 NR carrier frequency is used in the test                           |
| LTE RF Channel Number                             |      | 2   | 1 LTE carrier frequency is used in the test                          |
| Channel Bandwidth                                 | MHz  | As specified in Tables A.6.6.3.3.1-2 and A.6.6.3.3.1-3. |  |
| Active cell                                       |      | Cell 1  | Cell 1 is on RF channel number 1                                     |
| Neighbour cell                                    |      | Cell 2  | Cell 2 is on RF channel number 2                                     |
| Gap Pattern Id                                    |      | 0   | As specified in Clause Table 9.1.2-1. Per-UE gap pattern.            |
| NR measurement quantity                           |      | SS-RSRP   | Measurement quantity for Cell 1                                      |
| Inter-RAT E-UTRAN measurement quantity            |      | RSRP  | Measurement quantity for Cell 2                                      |
| b2-Threshold1                                     | dBm  | Note 1  | SS-RSRP threshold for SS-RSRP measurement on cell1 for event B2      |
| b2-Threshold2EUTRA                                | dBm  | -97   | E-UTRAN RSRP threshold for SS-RSRP measurement on cell1 for event B2 |
| Hysteresis  | dB   | 0   |  |
| TimeToTrigger                                     | s    | 0   |  |
| Filter coefficient                                |      | 0   | L3 filtering is not used   |
| DRX   |      | DRX.6   | DRX cycle configurations DRX.6 is defined in Table A.3.3.1-6.        |
| T1  | s    | 5   |  |
| T2  | s    | 5   |  |
| Note 1: Values are defined in Table A.6.6.3.3.1-3 |      |   |  |

### A.6.6.3.3.2 Test Requirements

In the test, the UE shall send one Event B2 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 4.8s from the start of period T2. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

## A.6.6.4 L1-RSRP measurement for beam reporting

### A.6.6.4.1 SSB based L1-RSRP measurement when DRX is not used

#### A.6.6.4.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.6.6.4.1.1-1.

**Table A.6.6.4.1.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.6.6.4.1.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.4.1.2-1 and Table A.6.6.4.1.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.6.6.4.1.2-1: General test parameters

| Parameter  | Config | Unit | Value                       |
|--|--------|------|-----------------------------|

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |        |               |        |        |           |        |

#### A.6.6.4.1.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.4.2 SSB based L1-RSRP measurement when DRX is used

##### A.6.6.4.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.1, with the testing configurations for NR cells in Table A.6.6.4.2.1-1.

Table A.6.6.4.2.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

##### A.6.6.4.2.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.4.2.2-1 and Table A.6.6.4.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.6.6.4.2.2-1: General test parameters

| Parameter  | Config | Unit | Value                       |
|--|--------|------|-----------------------------|

#### A.6.6.4.2.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.4.3 CSI-RS based L1-RSRP measurement when DRX is not used

##### A.6.6.4.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.6.6.4.3.1-1.

Table A.6.6.4.3.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

##### A.6.6.4.3.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.4.3.2-1 and Table A.6.6.4.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 80ms from the beginning of the test, the DCI trigger comes in slot n (0 for Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in Table A.6.6.4.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.6.6.4.3.2-1: General test parameters

| Parameter  | Config | Unit  | Value                       |
|--|--------|-------|-----------------------------|

| <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |        |               |          |          |

#### A.6.6.4.3.3 Test Requirements

After 80ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.20.1.1 and relative accuracy requirement in clause 10.1.20.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

#### A.6.6.4.4 CSI-RS based L1-RSRP measurement when DRX is used

##### A.6.6.4.4.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement. This test will partly verify the L1-RSRP measurement requirements in clause 9.5.4.2, with the testing configurations for NR cells in Table A.6.6.4.4.1-1.

**Table A.6.6.4.4.1-1: Applicable NR configurations for FR1 CSI-RS based L1-RSRP test**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

##### A.6.6.4.4.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.4.4.2-1 and Table A.6.6.4.4.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-RSRP on aperiodic CSI-RS resources. UE is also configured to measure L1-RSRP based on SSB. After 80ms from the beginning of the test, the DCI trigger comes in slot n (0 for Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in Table A.6.6.4.4.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.6.6.4.4.2-1: General test parameters

| Parameter  | Config | Unit  | Value                       |

#### A.6.6.4.4.3 Test Requirements

After 80ms from the beginning of the test, the UE shall send L1-RSRP report at slot 8 from the reception of DCI triggering the L1-RSRP measurement. The L1-RSRP report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.20.1.1 and relative accuracy requirement in clause 10.1.20.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

#### A.6.6.4.5 SSB based L1-RSRP measurement when DRX is used for UE configured with *highSpeedMeasFlag-r16*

##### A.6.6.4.5.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-RSRP measurement when UE is configured with *highSpeedMeasFlag-r16*. This test will partly verify the L1-RSRP measurement requirements for UE configured with *highSpeedMeasFlag-r16* in clause 9.5.4.1, with the testing configurations for NR cells in Table A.6.6.4.5.1-1.

Table A.6.6.4.5.1-1: Applicable NR configurations for FR1 SSB based L1-RSRP test

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

##### A.6.6.4.5.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.4.5.2-1 and Table A.6.6.4.5.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-RSRP measurement on the SSBs and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM, BFD and L1-RSRP measurement based on the SSBs.

Table A.6.6.4.5.2-1: General test parameters for UE configured with *highSpeedMeasFlag-r16*

| Parameter   | Config | Unit | Value                       |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |        |               |        |        |           |        |

### A.6.6.4.5.3 Test Requirements

The UE shall send L1-RSRP report every 80 slots. No later than 640ms plus 80 slots from the beginning of time period T2, UE shall send L1-RSRP report including results of both SSB0 and SSB1 while meeting the absolute accuracy requirement in clause 10.1.19.1.1 and relative accuracy requirement in clause 10.1.19.1.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.5

### A.6.6.5.1 SA NR - UTRAN FDD event-triggered reporting in non-DRX in FR1

#### A.6.6.5.1.1 Test Purpose and Environment

The purpose of this set of tests is to verify that the UE makes correct event-triggered reporting of inter-RAT UTRAN FDD measurements when operating in standalone (SA) operation with PCell in FR1. This test shall partly verify the cell search and measurement requirements in Clause 9.4.6.

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the NR PCell and Cell 2 is an inter-RAT UTRAN FDD neighbour cell. In the measurement control information from the PCell it is indicated to the UE that event-triggered reporting with Event B1 (Inter RAT neighbour becomes better than threshold) is to be used. Each test consists of two consecutive time periods, with durations T1 and T2, respectively. Prior to the start of time duration T1, the UE shall be fully synchronized to Cell 1. During T1, the UE shall not have any information on Cell 2.

Supported test configurations are shown in table A.6.6.5.1.1-1. General test parameters are provided in Table A.6.6.5.1.1-2 below. Test parameters for Cell 1 and Cell 2, valid for both time duration T1 and T2, are provided in Tables A.6.6.5.1.1-3 and A.6.6.5.1.1-4, respectively.

**Table A.6.6.5.1.1-1: Supported test configurations in SA inter-RAT UTRAN FDD event triggered reporting in non-DRX with PCell in FR1**

| Configuration | Description  |
|---------------|--|
| 1             | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, UTRA FDD                   |
| 2             | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, UTRA FDD                   |
| 3             | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, UTRA FDD                   |
| Note:         | The UE is only required to be tested in one of the supported test configurations |

**Table A.6.6.5.1.1-2: General test parameters for SA inter-RAT UTRAN FDD event triggered reporting in non-DRX with PCell in FR1**

| Parameter   | Unit | Value   | Comment   |
|---|------|---|---|
| NR RF Channel Number                              |      | 1   | 1 NR carrier frequency is used in the test                          |
| UTRA RF Channel Number                            |      | 2   | 1 UTRA carrier frequency is used in the test                        |
| Channel Bandwidth                                 | MHz  | As specified in Tables A.6.6.5.1.1-3 and A.6.6.5.1.1-4. |   |
| Active cell                                       |      | Cell 1  | Cell 1 is on RF channel number 1                                    |
| Neighbour cell                                    |      | Cell 2  | Cell 2 is on RF channel number 2                                    |
| Gap Pattern Id                                    |      | 0   | As specified in Clause Table 9.1.2-1. Per-UE gap pattern.           |
| Inter-RAT UTRA measurement quantity               |      | CPICH Ec/Io   | Measurement quantity for Cell 2                                     |
| b1-ThresholdUTRA-FDD                              | dB   | -16.5   | CPICH Ec/Io threshold for SS-RSRP measurement on cell1 for event B1 |
| Hysteresis  | dB   | 0   |   |
| TimeToTrigger                                     | s    | 0   |   |
| Filter coefficient                                |      | 0   | L3 filtering is not used  |
| DRX   |      | OFF   | OFF   |
| T1  | s    | 5   |   |
| T2  | s    | 5   |   |
| Note 1: Values are defined in Table A.6.6.5.1.1-3 |      |   |   |

**Table A.6.6.5.1.1-3: PCell specific test parameters for SA inter-RAT UTRAN FDD event triggered reporting in non-DRX with PCell in FR1**

| Parameter   |                  | Unit | Configuration | Cell 1                            |        |

| CPICH_Ec/I <sub>o</sub>   | dB           | -Infinity | -14    |
| Propagation Condition   |              | AWGN      |        |
| Note 1: The DPCH level is controlled by the power control loop.   |              |           |        |
| Note 2: The power of the OCNS channel that is added shall make the total power from the cell to be equal to I <sub>or</sub> . |              |           |        |

#### A.6.6.5.1.2 Test Requirements

The UE shall send one Event B1 triggered measurement report for Cell 2 to the PCell, with a measurement reporting delay less than 2.4s from the start of period T2, i.e. when Cell 2 becomes detectable. The measurement reporting delay is defined as the time from the beginning of time period T2 to the moment when the UE sends the measurement report on PUSCH.

The UE shall not send event-triggered measurement reports as long as the reporting criteria is not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.6 CLI measurements

#### A.6.6.6.1 SRS-RSRP measurement with DRX

##### A.6.6.6.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of SRS-RSRP measurement. This test will verify the SRS-RSRP measurement requirements in clause 9.7.2.5 with the testing configurations for NR cells in Table A.6.6.6.1.1-1.

**Table A.6.6.6.1.1-1: Applicable NR configurations for FR1 SRS-RSRP test**

| Configuration  | Description  |
|--|--|
| 1  | NR 15 kHz SRS SCS, 10 MHz bandwidth, TDD duplex mode |
| 2  | NR 30 kHz SRS SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

##### A.6.6.6.1.2 Test Parameters

One cell is deployed in the test, which is FR1 PCell (Cell 1). The test parameters for PCell is given in Table A.6.6.6.1.2-1 and A.6.6.6.1.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system transmits SRS resource for measurement in the DL slot according to the SRS configuration in Table A.6.6.6.1.2-4 and the test parameters for the (virtual) neighbour cell UE in Table A. 6.6.6.1.2-3.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on SRS symbol to be transmitted and on 1 data symbol before SRS to be transmitted.

**Table A.6.6.6.1.2-1: General test parameters for SRS-RSRP event triggered reporting for PCell in FR1**

| Parameter   | Unit | Test configuration | Value      | Comment                  |
|---|------|--------------------|------------|--------------------------|
| Active cell   |      | 1, 2               | Cell 1     |                          |
| RF Channel Number   |      | 1, 2               | 1: Cell 1  |                          |
| SSB configuration   |      | 1                  | SSB.1 FR1  |                          |
|   |      | 2                  | SSB.2 FR1  |                          |

### A.6.6.6.1.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 1920 ms from the beginning of time period T2.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

### A.6.6.6.2 CLI-RSSI measurement with DRX

#### A.6.6.6.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of CLI-RSSI measurement. This test will verify the CLI-RSSI measurement requirements in clause 9.7.3.5 with the testing configurations for NR cells in Table A.6.6.6.2.1-1.

**Table A.6.6.6.2.1-1: Applicable NR configurations for FR1 CLI-RSSI test**

| Configuration  | Description                                      |
|--|--|
| 1  | NR 15 kHz SCS, 10 MHz bandwidth, TDD duplex mode |
| 2  | NR 30 kHz SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.6.6.6.2.2 Test Parameters

One cell is deployed in the test, which are FR1 PCell (Cell 1). The test parameters for PCell is given in Table A.6.6.6.2.2-1 and A.6.6.6.2.2-2 below. In the measurement control information, a measurement object is configured for the frequency of the PCell, and it is indicated to the UE that event-triggered reporting with Event I1 is used. The test consists of two successive time periods, with time duration of T1 and T2, respectively.

During the test, the test system does not transmit PDCCH/PDSCH/OCNG on symbols for CLI-RSSI measurement resource and on 1 data symbol before. The CLI-RSSI measurement resource configuration is in Table A.6.6.6.2.2-3.

**Table A.6.6.6.2.2-1: General test parameters for CLI-RSSI event triggered reporting for PCell in FR1**

| Parameter  | Unit | Test configuration | Value           | Comment                  |
|--|------|--------------------|-----------------|--------------------------|
| Active cell  |      | 1, 2               | NR Cell 1       |                          |
| RF Channel Number  |      | 1, 2               | 1: Cell 1       |                          |

### A.6.6.2.3 Test Requirements

The UE shall send one Event I1 triggered measurement report, with a measurement reporting delay less than 640 ms from the beginning of time period T2. The nominal RSSI used to evaluate the requirement shall be based on Io.

The UE shall not send event triggered measurement reports, as long as the reporting criteria are not fulfilled.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.7 NR measurements with autonomous gaps

### A.6.6.7.1 SA intra-frequency CGI identification of NR neighbor cell in FR1

#### A.6.6.7.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of intra-frequency CGI identification of an NR neighbour cell in FR1 with autonomous gaps. This test shall partly verify the measurement requirements in Clause 9.11.

#### A.6.6.7.1.2 Test Parameters

In each test there are two cells: Cell 1 and Cell 2. Cell 1 is the FR1 PCell and Cell 2 is an FR1 neighbour cell on the same frequency as the PCell. The test parameters for PCell and neighbour cell are given in Table A.6.6.7.1.1-2 and A.6.6.7.1.3-2 below. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable. A measurement object is configured for the frequency of the PCell and it is indicated to the UE that event-triggered reporting with Event A3 is used. The UE is expected to detect and send a measurement report with Event A3.

A new RRC message triggering CGI identification shall be sent to the UE during period T2, after the UE has reported Event A3. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *useAutonomousGaps* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying CGI identification is sent to the UE.

The test equipment verifies that potential interruption is carried out correctly by monitoring ACK/NACK sent in PCell during T3 until a measurement report with CGI is sent.

**Table A.6.6.71.1.2-1: Supported test configurations**

| Configuration | Description   |
|---------------|---|
| 1             | 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                                 |
| 2             | 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                                 |
| 3             | 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                                 |
| Note:         | The UE is only required to be tested in one of the supported test configurations. |

**Table A.6.6.7.1.2-2: General test parameters for SA intra-frequency CGI identification of NR neighbor cell in FR1**

| Parameter                                       | Unit | Test configuration | Value                | Comment   |
|---|------|--------------------|----------------------|---|
| Active cell                                     |      | 1, 2, 3            | Cell 1               |   |
| Neighbour cell                                  |      | 1, 2, 3            | Cell 2               | Cell to be identified.  |
| RF Channel Number                               |      | 1, 2, 3            | 1: Cell 1 and Cell 2 |   |
| SSB configuration                               |      | 1                  | SSB.1 FR1            |   |

| <p>Note 1: The resources for uplink transmission are assigned to the UE prior to the start of time period T2.</p> <p>Note 2: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 3: SS-RSRP levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |               |                    |                        |        |                        |        |

### A.6.6.7.1.3 Test Requirements

The UE shall send a measurement report containing the CGI of cell 2 within 252 ms from the start of time period T3.

Test requirement = RRC Procedure delay +  $T_{identify\_CGI}$  + reporting delay

$$= 10 + 240 + 2\text{ms from the start of T3}$$

= 252 ms

The UE shall be scheduled continuously throughout the test. From the start of T3 until 252 ms, the interruption on PCell shall not be more than the values specified for SA in clause 8.2.2.2.14.

The rate of correct events observed during repeated tests shall be at least 90%.

### A.6.6.7.2 Identification of a new CGI of inter-RAT E-UTRA cell using autonomous gaps in NR SA

#### A.6.6.7.2.1 Test Purpose and Environment

This test is to verify the requirement for identification of a new CGI of E-UTRA cell with autonomous gaps in NR SA in clause 9.4.7.

The test scenario comprises of one NR carrier and an E-UTRA carrier and two cells as given in tables A.6.6.7.2.1-1, A.6.6.7.2.1-2, A.6.6.7.2.1-3 and A.6.6.7.2.1-4. PDCCHs indicating new transmissions shall be sent continuously to ensure that the UE would have ACK/NACK sending during identifying a new CGI of E-UTRAN cell. The test consists of three successive time periods, with time durations of T1, T2 and T3 respectively. At the start of time duration T1, the UE does not have any timing information of cell 2. Starting T2, cell 2 becomes detectable and the UE is expected to detect and send a measurement report.

A RRC message implying SI reading shall be sent to the UE during period T2, after the UE has reported Event B2. The RRC message shall create a measurement report configuration with purpose *reportCGI* and *useAutonomousGaps* set to TRUE. The start of T3 is the instant when the last TTI containing the RRC message implying SI reading is sent to the UE.

**Table A.6.6.7.2.1-1: Supported test configurations of inter-RAT E-UTRAN cell using autonomous gap in SA**

| Configuration  | Description   |
|--|---|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE FDD |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE FDD |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE FDD |
| 4  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode, LTE TDD |
| 5  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode, LTE TDD |
| 6  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode, LTE TDD |
| Note: The UE is only required to be tested in one of the supported test configurations |   |

**Table A.6.6.7.2.1-2: General test parameters for identification of a new CGI of inter-RAT E-UTRA cell using autonomous gaps in NR SA**

| Parameter                               | Unit | Value  | Comment                                      |
|---|------|--------|--|
| NR RF Channel Number                    |      | 1      | 1 NR carrier frequency is used in the test   |
| LTE RF Channel Number                   |      | 2      | 1 LTE carrier frequency is used in the test  |
| Active cell                             |      | Cell 1 |  |
| Neighbour cell                          |      | Cell 2 | Cell to be identified.                       |
| LTE Channel Bandwidth                   | MHz  | 10     |  |
| LTE PDSCH/PCFICH/PDCCH/PHICH parameters |      |        | As specified in clause A.3.7.2.1             |
| CP length                               |      | Normal |  |
| Hysteresis                              | dB   | 0      |  |
| Time To Trigger                         | s    | 0      |  |
| Filter coefficient                      |      | 0      | L3 filtering is not used                     |
| DRX                                     |      | OFF    |  |
| useAutonomousGaps                       |      | TRUE   | As specified in clause 5.5.3.1 in TS 38.331. |
| Time offset between cells               | ms   | 3      | Asynchronous cells                           |
| T1                                      | s    | 5      |  |
| T2                                      | s    | ≤10    |  |
| T3                                      | s    | 5      |  |

**Table A.6.6.7.2.1-3: PCell specific test parameters for identification of a new CGI of inter-RAT E-UTRA cell using autonomous gaps in NR**

| Parameter   |                  | Unit         | Configuration    | Cell 1                            |        |        |
|---|------------------|--------------|------------------|-----------------------------------|--------|--------|
|   |                  |              |                  | T1                                | T2     | T3     |

### A.6.6.7.2.2 Test Requirements

The UE shall transmit a measurement report containing the cell global identifier of cell 2 within 200 milliseconds from the start of T3.

Test requirement = RRC Procedure delay with additional margin + T<sub>identify\_CGIE-UTRAN</sub> + reporting delay

= 15 + 30 + 150 + 2ms from the start of T3

= 197 ms, allow 200 ms.

- The UE shall be scheduled continuously throughout the test, and from the start of T3 until 200 ms at least the number of ACK/NACK specified in NOTE 2 shall be detected as being transmitted by the UE.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE 1: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

NOTE 2: The overall ACK/NACK number is caused by two parts. Firstly, at least X ACK/NACK shall be sent during identifying the cell global identifier of cell 2, where X is defined in Table 8.2.2.2.15-1. Secondly, given that continuous DL data allocation, additional 43, 14 and 34 ACK/NACK shall be sent for FDD 15 kHz, TDD 15 kHz and TDD 30 kHz, respectively, from the start of T3 until 200 ms excludes 150 ms for identifying the cell global identifier of cell 2.

## A.6.6.8 L1-SINR measurement for beam reporting

### A.6.6.8.1 L1-SINR measurement with CSI-RS based CMR and no dedicated IMR configured when DRX is used

#### A.6.6.8.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.1, with the testing configurations for NR cells in Table A.6.6.8.1.1-1.

**Table A.6.6.8.1.1-1: Applicable NR configurations for FR1 CSI-RS based L1-SINR test**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.6.6.8.1.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.8.1.2-1 and Table A.6.6.8.1.2-2 below.

In the CSI-RS measurement configuration, UE is indicated to perform L1-SINR measurement on the CSI-RS and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. After 80ms from the beginning of the test, the DCI trigger comes in slot n (1 Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in Table A.6.6.8.1.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs.

Table A.6.6.8.1.2-1: General test parameters

| Parameter   | Config | Unit  | Value                       |
|---|--------|-------|-----------------------------|
| SSB GSCN  | 1~3    |       | freq1                       |

### A.6.6.8.1.3 Test Requirements

After 80ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 and CSI-RS#1 while meeting the absolute accuracy requirement in clause 10.1.27.1.1 and relative accuracy requirement in clause 10.1.27.1.2.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.6.6.8.2 L1-SINR measurement with SSB based CMR and dedicated IMR when DRX is not used

#### A.6.6.8.2.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements in clause 9.8.4.2, with the testing configurations for NR cells in Table A.6.6.8.2.1-1.

**Table A.6.6.8.2.1-1: Applicable NR configurations for FR1 L1-SINR measurement test with SSB based CMR and CSI-RS based IMR**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode |
| Note: The UE is only required to be tested in one of the supported test configurations |  |

#### A.6.6.8.2.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.8.2.2-1 and Table A.6.6.8.2.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the SSBs and the associated CSI-RS resources, and report periodically. The test consists of two successive time periods, with time duration of T1 and T2 respectively. The test has higher layer parameter *timeRestrictionForChannelMeasurements* configured.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD measurements based on the SSBs, and UE is configured to perform L1-SINR measurement based on the SSBs as CMR and the CSI-RS resources as IMR.

Table A.6.6.8.2.2-1: General test parameters

| Parameter   | Config | Unit | Value                       |

### A.6.6.8.2.3 Test Requirements

The UE shall send L1-SINR report every 80 slots. No later than 640ms plus 80 slots from the beginning of time period T2, UE shall send L1-SINR report including results of both SSB#0+CSI-RS#0 and SSB#1+CSI-RS#1 while meeting the accuracy requirement in clause 10.1.27.2. The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2 \times TTI_{DCC}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCC.

### A.6.6.8.3 L1-SINR measurement with CSI-RS based CMR and dedicated IMR configured when DRX is not used

#### A.6.6.8.3.1 Test Purpose and Environment

The purpose of this test is to verify that the UE makes correct reporting of L1-SINR measurement. This test will partly verify the L1-SINR measurement requirements with CSI-RS based CMR and dedicated IMR configured in clause 9.8.4.3, with the testing configurations for NR cells in Table A.6.6.8.3.1-1.

**Table A.6.6.8.3.1-1: Applicable NR configurations for FR1 L1-SINR test with CMR and dedicated IMR**

| Config | Description  |
|--------|--|
| 1      | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode                             |
| 2      | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode                             |
| 3      | NR 30 kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode                             |
| Note:  | The UE is only required to be tested in one of the supported test configurations |

#### A.6.6.8.3.2 Test parameters

There is one cells in the test, the FR1 PCell (Cell 1). The test parameters for the Cell 1 are given in Table A.6.6.8.3.2-1 and Table A.6.6.8.3.2-2 below.

In CSI measurement configuration, UE is indicated to perform L1-SINR measurement on the configured CSI-RS as CMR and an associated CSI-IM as IMR, and report aperiodically. The test consists of a single time period T1, during which the UE is triggered via DCI to report L1-SINR on aperiodic CSI-RS resources. UE is also configured to measure L1-SINR based on SSB. After 80ms from the beginning of the test, the DCI trigger comes in slot n (1 Config 1,2 and 8 for Config 3) of a frame and UE provides the report back based on the reporting configuration as defined in Table A.6.6.8.3.2-1.

There is no measurement gap configured in the test. Before the test, UE is configured to perform RLM and BFD based on the SSBs, and UE is configured to perform L1-SINR measurement based on the CSI-RS as CMR and the CSI-IM as IMR.

Table A.6.6.8.3.2-1: General test parameters

| Parameter   | Config | Unit  | Value                       |
|---|--------|-------|-----------------------------|

| Propagation condition   | 1~3    |       | AWGN                        |
| Note 1: OCNG shall be used such that both cells are fully allocated and a constant total transmitted power spectral density is achieved for all OFDM symbols. |        |       |                             |

### A.6.6.8.3.2-2: CSI-RS specific test parameters

| Parameter  | Config | Unit          | CSI-RS#0 | CSI-RS#1 |
|--|--------|---------------|----------|----------|
| $N_{oc}$ <sup>Note1</sup>  | 1~3    | dBm/15kHz     | -94.65   |          |
| $N_{oc}$ <sup>Note1</sup>  | 1,2    | dBm/SSB SCS   | -94.65   |          |
|  | 3      |               | -91.65   |          |
| $\hat{E}_s/I_{ot}$   | 1~3    | dB            | 0        | 3        |
| CSI-RS RSRP <sup>Note2</sup>   | 1,2    | dBm/SSB SCS   | -94.65   | -91.65   |
|  | 3      |               | -91.65   | -88.65   |
| $I_o$ <sup>Note2</sup>   | 1,2    | dBm/9.36 MHz  | -63.69   | -61.93   |
|  | 3      | dBm/38.16 MHz | -57.59   | -55.84   |
| $\hat{E}_s/N_{oc}$   | 1~3    | dB            | 0        | 3        |
| <p>Note 1: Interference from other cells and noise sources not specified in the test is assumed to be constant over subcarriers and time and shall be modelled as AWGN of appropriate power for <math>N_{oc}</math> to be fulfilled.</p> <p>Note 2: CSI-RS RSRP and <math>I_o</math> levels have been derived from other parameters for information purposes. They are not settable parameters themselves.</p> |        |               |          |          |

### A.6.6.8.3.3 Test Requirements

After 80ms from the beginning of the test, the UE shall send L1-SINR report at slot 26 from the reception of DCI triggering the L1-SINR measurement. The L1-SINR report shall include the results for both CSI-RS#0 as CMR + CSI-IM#0 as IMR and CSI-RS#1 as CMR + CSI-IM#1 as IMR while meeting the accuracy requirement in clause 10.1.27.3.

The rate of correct events observed during repeated tests shall be at least 90%.

NOTE: The actual overall delays measured in the test may be up to  $2xTTI_{DCCH}$  higher than the measurement reporting delays above because of TTI insertion uncertainty of the measurement report in DCCH.

## A.6.6.9 Idle Mode CA/DC Measurements

### A.6.6.9.1 SA Idle mode CA/DC measurement for FR1

#### A.6.6.9.1.1 Test Purpose and Environment

The purpose of this test is to verify that the UE performs the required measurements on the serving cell and the configured inter-frequency carrier for idle mode measurement reporting after the UE has entered Idle mode. This test will partly verify the Idle mode CA/DC measurements requirements in clause 4.4.

In this test, there are two cells: NR cell 1 as PCell in FR1 on NR RF channel 1 and NR cell 2 as neighbour cell in FR1 on NR RF channel 2. The test parameters are given in Tables A.6.6.9.1.1-1, A.6.6.9.1.1-2, A.6.6.9.1.1-3 and A.6.6.9.1.1-4.

The test consists of 3 successive time periods, with time duration of T1, T2 and T3 respectively. During T1, the UE is connected to cell 1 only and shall not have any timing information of cell 2. UE is configured with early measurement reporting with channel 2. Beam level reporting for early measurements is not configured. The connection is released at the end of T1. T2 starts when the connection is released. During the time periods T2 UE is in Idle mode. At T3 the UE is paged for connection setup and requested by the network to send idle mode measurements.

**Table A.6.6.9.1.1-1: supported test configuration**

| Config   | Description  |
|--|--|
| 1  | NR 15 kHz SSB SCS, 10 MHz bandwidth, FDD duplex mode |
| 2  | NR 15 kHz SSB SCS, 10 MHz bandwidth, TDD duplex mode |
| 3  | NR 30kHz SSB SCS, 40 MHz bandwidth, TDD duplex mode  |
| Note 1: The UE is only required to be tested in one of the supported test configurations |  |
| Note 2: target NR cell has the same SCS, BW and duplex mode as NR serving cell           |  |

**Table A.6.6.9.1.1-2: General test parameters for SA Idle mode CA/DC measurement for FR1**

| Parameter                                       | Unit | Test configuration | Value             | Comment   |
|---|------|--------------------|-------------------|---|
| NR RF Channel Number                            |      | Config 1,2,3       | 1, 2              | Two FR1 NR carrier frequencies is used.   |
| Active cell                                     |      | Config 1,2,3       | NR cell 1 (Pcell) | NR Cell 1 is on NR RF channel number 1.   |
| Neighbour cell                                  |      | Config 1,2,3       | NR cell2          | NR cell 2 is on NR RF channel number 2.   |
| SMTC-SSB parameters                             |      | Config 1           | SSB.1 FR1         | As specified in clause A.3.10.1   |
|   |      | Config 2           | SSB.1 FR1         | As specified in clause A.3.10.1   |
|   |      | Config 3           | SSB.2 FR1         | As specified in clause A.3.10.1   |
| Hysteresis                                      | dB   | Config 1,2,3       | 0                 |   |
| PRACH configuration index                       |      | Config 1,2,3       | 102               | The detailed configuration is specified in TS 38.211 clause 6.3.3.2                 |
| CP length                                       |      | Config 1,2,3       | Normal            |   |
| TimeToTrigger                                   | s    | Config 1,2,3       | 0                 |   |
| Filter coefficient                              |      | Config 1,2,3       | 0                 | L3 filtering is not used  |
| DRX in connected mode                           |      | Config 1,2,3       | OFF               | DRX is not used   |
| DRX in idle mode                                | s    | Config 1,2,3       | [0.32]            | The value shall be used for all cells in the test.                                  |
| T331  | s    |                    | 300               |   |
| Time offset between serving and neighbour cells |      | Config 1           | 3ms               | Asynchronous cells.<br>The timing of Cell 2 is 3ms later than the timing of Cell 1. |
|   |      | Config 2,3         | 3μs               | Synchronous cells.  |
| T1  | s    | Config 1,2,3       | 10                |   |
| T2  | s    | Config 1,2,3       | [11.52]           |   |
| T3  | s    | Config 1,2,3       | 10                |   |

**Table A.6.6.9.1.1-3: Cell specific test parameters for connected mode for SA Idle mode CA/DC measurement for FR1**

| Parameter                                 |                  | Unit       | Test configuration | Cell 1                      |    |    | Cell 2     |    |    |
|---|------------------|------------|--------------------|-----------------------------|----|----|------------|----|----|
|   |                  |            |                    | T1                          | T2 | T3 | T1         | T2 | T3 |
| NR RF Channel Number                      |                  |            | Config 1,2,3       | 1                           |    |    | 2          |    |    |
