## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under  
<http://webapp.etsi.org/key/queryform.asp>.

---

## Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

## Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

The present document is part 1 of a multi-part deliverable covering the Digital cellular telecommunications system (GSM Phase2 and Phase 2+ Releases 1996, 1997, 1998, 1999, 3GPP Release 4, 3GPP Release 5, 3GPP Release 6, 3GPP Release 7, 3GPP Release 8, 3GPP Release 9, 3GPP Release 10, 3GPP Release 11 and 3GPP Release 12); Mobile Station (MS) conformance specification, as identified below:

Part 1: Conformance specification  
Reference: 3GPP TS 51.010-1.

Part 2: Protocol Implementation Conformance Statement (PICS) proforma specification.  
Reference: 3GPP TS 51.010-2.

Part 3: Layer 3 (L3) Abstract Test Suite (ATS).  
Reference: 3GPP TS 51.010-3 v6.3.0 (Note 1).

Part 4: SIM Application Toolkit conformance specification.  
Reference: 3GPP TS 51.010-4.

Part 5: Inter-RAT (GERAN to UTRAN) Abstract Test Suite (ATS)  
Reference: 3GPP TS 51.010-5.

**Part 7: Location Services (LCS) test scenarios and assistance data.**  
**Reference: 3GPP TS 51.010-7.**

NOTE 1: GP-25: TTCN is not maintained after v6.3.0, and is henceforward to be considered an example test suite rather than the conformance tests

## 1 Scope

The present document contains the orbital model information, the assistance data and the assistance data files that shall be used for all LCS Assisted GPS and Assisted GNSS test cases defined in subclause 70 of TS 51.010-1 [4].

## 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

## 3 Abbreviations

### 3.1 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

|        |   |
|--------|---|
| A-BDS  | Assisted - BeiDou Navigation Satellite System |
| A-GNSS | Assisted - Global Navigation Satellite System |
| A-GPS  | Assisted - Global Positioning System          |
| BDS    | BeiDou Navigation Satellite System            |
| FFS    | For Further Study                             |
| GNSS   | Global Navigation Satellite System            |
| GPS    | Global Positioning System                     |
| LCS    | Location Services                             |
| SS     | Satellite Simulator                           |

|       |                              |
|-------|------------------------------|
| SV    | Space Vehicle                |
| SV ID | Space Vehicle Identification |

## 4 Orbital model information, assistance data and assistance data files

### 4.1 General

The following subclauses define the GPS and GNSS orbital model information, the assistance data and the assistance data files for the test cases defined in TS 51.010-1 [4] subclauses 70.7 to 70.9 for A-GPS Signalling test cases, subclauses 70.13 to 70.15 for A-GNSS Signalling test cases, subclause 70.11 for A-GPS Minimum Performance test cases and subclause 70.16 for A-GNSS Minimum Performance test cases.

The orbital model information is defined and where appropriate is given in Yuma format in .txt files for each scenario in the appropriate data file defined in Annex A or Annex B.

Where the assistance data is fixed or is not required on a per-satellite basis, then it is defined in the following subclauses. Where assistance data is required on a per-satellite basis, or where the values of the data also vary with time then it is specified in comma-separated-variable files in the appropriate data file defined in Annex A or Annex B. These files specify the values to be used for each satellite, indexed by satellite PRN or SV ID, and, where applicable, the values to be used indexed by both time and satellite PRN or SV ID.

All the Assistance Data information elements are given with reference to TS 44.031 [5], where the details are defined.

## 5 GPS information

### 5.1 GPS Scenario and Assistance data for Assisted GPS signalling tests

#### 5.1.1 General

This subclause defines the GPS scenario and the associated assistance data that shall be used for all Assisted GPS signalling tests defined in TS 51.010-1 [4] subclauses 70.7 to 70.9.

The satellite simulator (SS) shall generate the six satellite signals defined in subclause 5.1.2 and shall provide assistance data as defined in subclauses 5.1.3 to 5.1.8.

Where assistance data is required on a per-satellite basis, or where the values of the data also varies with time it is specified in comma-separated-variable files in the GPS\_data.zip file defined in Annex A. These files specify the values to be used for each satellite, indexed by satellite PRN, and, where applicable, the values to be used indexed by both time and satellite PRN.

Assistance data that is marked as "time varying" and the GPS TOW field are only specified and used in 0.96 second increments. Interpolation between these values shall not be used.

The accuracy of the GPS TOW and assistance data that is marked as "time varying" in the provided assistance data shall be within +/- 2 s relative to the GPS time in the system simulator.

Assistance data Information Elements and fields that are not specified shall not be used.

#### 5.1.2 GPS Scenario

The following GPS scenario shall be used. The assistance data specified in the following subclauses is consistent with this GPS scenario:

- Yuma Almanac data: see file Sig Tokyo\_Yuma.txt in the GPS\_data.zip file defined in Annex A

- MS location and Reference location: static at latitude: 35 degrees 40 minutes north, longitude: 139 degrees 45 minutes east, (Tokyo) height: = 50m
- Start time: 12th September 2003 21:30:00
- Visible satellites simulated: PRNs: 4, 6, 9, 10, 13, 22.
- Ionospheric model: see values in subclause 5.1.6
- The levels of the simulated satellites shall all be at -125dBm +/- 6dB

### 5.1.3 Assistance Data Reference Time

**Table 5.1.3.1: Reference Time (Fields occurring once per message)**

| Parameter   | Units | Value/remark   |
|---|-------|--|
| GPS Week  | weeks | 211  |
| GPS TOW   | Sec   | 509400<br>Start time. Add integer number of 0.96 seconds as required. (Note) |
| Note: GPS TOW<br>This is the value of GPS TOW in seconds when the GPS scenario is started in the GPS simulator. The value of GPS TOW to be used in the Reference Time IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GPS simulator to this value, rounded up to the next 0.96 second interval. This "current GPS TOW" is then also used to determine the value of any other parameters marked as "Time varying" in subclause 5.1 |       |  |

### 5.1.3a Assistance Data GPS Reference Time Extension

**Table 5.1.3a.1: GPS Reference Time Extension (Fields occurring once per message)**

| Parameter             | Units      | Value/remark | Release        |
|-----------------------|------------|--------------|----------------|
| GPS Week Cycle Number | 1024 weeks | 1            | Rel-10 onwards |

### 5.1.4 Assistance Data Reference Location

**Table 5.1.4.1: Reference Location**

| Parameter                 | Units     | Value/remark  |
|---------------------------|-----------|---|
| Type of Shape             | Bit field | Ellipsoid point with altitude and uncertainty Ellipsoid |
| Degrees of latitude       | degrees   | +3.56666666666667 10E1                                  |
| Degrees of longitude      | degrees   | +1.39750000000000 10E2                                  |
| Altitude                  | m         | +50   |
| Uncertainty semi-major    | m         | 3000  |
| Uncertainty semi-minor    | m         | 3000  |
| Orientation of major axis | degrees   | 0   |
| Uncertainty altitude      | m         | 500   |
| Confidence                | %         | 68  |

## 5.1.5 Assistance Data Navigation Model

**Table 5.1.5.1: Navigation Model (Fields occurring once per message)**

| Parameter      | Units | Value/remark |
|----------------|-------|--------------|
| Num_Sats_Total |       | 6            |

**Table 5.1.5.2: Navigation Model (Fields occurring once per satellite)**

| Parameter         | Units                 | Value/remark                       |
|-------------------|-----------------------|------------------------------------|
| SatID             |                       | PRNs: 4, 6, 9, 10, 13, 22.         |
| Satellite Status  |                       | See file: Sig_Navigation_model.csv |

| ω                  | semi-circles          | See file: Sig_Almanac.csv |
| M <sub>0</sub>     | semi-circles          | See file: Sig_Almanac.csv |
| af <sub>0</sub>    | seconds               | See file: Sig_Almanac.csv |
| af <sub>1</sub>    | sec/sec               | See file: Sig_Almanac.csv |

## 5.1.7a Assistance Data GPS Almanac Extension

**Table 5.1.7a.1: GPS Almanac Extension (Fields occurring once per message)**

| Parameter                 | Units | Value/remark | Release        |
|---------------------------|-------|--------------|----------------|
| Complete Almanac Provided |       | 1 (TRUE)     | Rel-10 onwards |

## 5.1.8 Assistance Data Acquisition Assistance

**Table 5.1.8.1: GPS Acquisition Assistance - Parameters appearing once per message**

| Parameter            | Units | Value/remark   |
|----------------------|-------|--|
| Number of Satellites |       | 6  |
| GPS TOW              | sec   | 509400<br>Start time. Add integer number of 0.96 seconds as required. (Note) |

Note: GPS TOW  
This is the value of GPS TOW in seconds when the GPS scenario is started in the GPS simulator. The value of GPS TOW to be used in the Acquisition Assistance IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GPS simulator to this value, rounded up to the next 0.96 second interval.

**Table 5.1.8.2: GPS Acquisition Assistance - Parameters appearing [number of satellites] times per message**

| Parameter  | Units  | Value/remark  |
|--|--------|---|
| SVID/PRNID   |        | PRNs: 4, 6, 9, 10, 13, 22.                                |
| Doppler (0 <sup>th</sup> order term)   | Hz     | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Doppler (1 <sup>st</sup> order term)   | Hz/sec | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Doppler Uncertainty  | Hz     | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Code Phase   | chips  | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Integer Code Phase   |        | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| GPS Bit number   |        | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Code Phase Search Window   | chips  | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Azimuth  | deg    | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Elevation  | deg    | Time varying. See file: Sig Acquisition_assist.csv (Note) |
| Note: Acquisition_assistparameters<br>This field is "Time varying" and its value depends on the "current GPS TOW" as described in subclause 5.1.3.<br>The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Sig Acquisition_assist.csv file corresponding to the value of "current GPS TOW". |        |   |

## 5.1.8a Assistance Data GPS Acquisition Assistance Extension

**Table 5.1.8a.1: GPS Acquisition Assistance Extension - Parameters appearing once per message**

| Parameter | Units | Value/remark | Release        |
|-----------|-------|--------------|----------------|
| N_SAT     |       | 6            | Rel-10 onwards |

**Table 5.1.8a.2: GPS Acquisition Assistance Extension - Parameters appearing [number of satellites] times per message**

| Parameter   | Units   | Value/remark   | Release        |
|---|---------|--|----------------|
| SatID   |         | PRNs: 4, 6, 9, 10, 13, 22.   | Rel-10 onwards |
| Azimuth LSB   | degrees | Time varying. Calculated from Azimuth, see file: Sig Acquisition_assist.csv (Note)   | Rel-10 onwards |
| Elevation LSB   | degrees | Time varying. Calculated from Elevation, see file: Sig Acquisition_assist.csv (Note) | Rel-10 onwards |
| Note: This field is "Time varying" and its value depends on the "current GPS TOW" as described in subclause 5.1.3. The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Sig Acquisition_assist.csv file corresponding to the value of "current GPS TOW". |         |  |                |

## 5.2 GPS Scenarios and Assistance Data for Assisted GPS Minimum Performance tests

### 5.2.1 General

#### 5.2.1.0 Introduction

This subclause defines the GPS scenarios and assistance data IEs which shall be available for use as specified in all A-GPS Minimum Performance test cases defined in TS 51.010-1 [4] subclause 70.11.

The information elements are given with reference to TS 44.031 [5], where the details are defined.

Subclauses 5.2.2 and 5.2.3 list the assistance data IEs required for performance testing of MS-based mode, and subclauses 5.2.4 and 5.2.5 list the assistance data available for performance testing of MS-assisted mode. Subclause 5.2.6 lists the values of the assistance data IE fields for all performance testing.

The A-GPS minimum performance requirements are defined by assuming that all relevant and valid assistance data is received by the MS in order to perform GPS measurements and/or position calculation. This subclause does not include nor consider delays occurring in the various signalling interfaces of the network.

#### 5.2.1.1 Satellite constellations and assistance data for performance testing

The satellite constellations for performance testing shall consist of 24 satellites. Almanac assistance data shall be available for all these 24 satellites. At least 9 of the satellites shall be visible to the MS (that is above 5 degrees elevation with respect to the MS). Other assistance data shall be available for 9 of these visible satellites. In each test, signals are generated for only a subset of these satellites for which other assistance data is available. The number of satellites in this subset is specified in the test. The satellites in this subset shall all be above 15 degrees elevation with respect to the MS. The HDOP for the test shall be calculated using this subset of satellites. The selection of satellites for this subset shall be random and consistent with achieving the required HDOP for the test.

#### 5.2.1.2 GPS Scenarios for performance testing

##### 5.2.1.2.0 General

This subclause defines the GPS scenarios that shall be used for all Assisted GPS performance tests defined in subclause TS 51.010-1 [4] subclause 70.11.

The GPS scenarios achieve the required HDOP for the Test Cases as defined in the Requirements specification TS 45.005 [8]. They also satisfy the requirement that for each test instance the reference location shall change sufficiently such that the MS shall have to use the new assistance data.

The satellites to be simulated in each test case are specified in subclause 5.2.1.2.5.

The viable running time during which the scenario maintains the required HDOP or HDOPs is given. Once this time has been reached the scenario shall be restarted from its nominal start time.

##### 5.2.1.2.1 GPS Scenario #1

The following GPS scenario #1 shall be used during the TTFF tests defined in TS 51.010-1 [4] subclause 70.11. The assistance data specified in the following subclauses for GPS scenario #1 is consistent with this GPS scenario.

Yuma Almanac data: see file Perf GPS\_1\_Yuma.txt in the GPS\_data\_perf.zip file defined in Annex A.

MS location: the MS location is calculated as a random offset from the reference location using the method described in subclause 5.2.1.2.4. The reference location is: latitude: 33 degrees 45 minutes 0.019 seconds north, longitude: 84 degrees 23 minutes 0.011 seconds west, (Atlanta USA), height: = 300m.

Nominal start time: 22nd January 2005 (Saturday) 00:08:00.

Viable running time to maintain specified HDOP values: 19 minutes.

Visible satellites available for simulation and for which Assistance Data (other than Almanac) shall be generated:  
PRNs: 2, 6, 10, 17, 18, 21, 26, 29, 30.

Ionospheric model: see values in subclause 5.2.6.6.

Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [6].

### 5.2.1.2.2 GPS Scenario #2

The following GPS scenario #2 shall be used during the TTFF tests defined in TS 51.010-1 [4] subclause 70.11. The assistance data specified in the following subclauses for GPS scenario #2 is consistent with this GPS scenario.

Yuma Almanac data: see file Perf GPS\_2\_Yuma.txt in the GPS\_data\_perf.zip file defined in Annex A.

MS location: the MS location is calculated as a random offset from the reference location using the method described in subclause 5.2.1.2.4. The reference location is: latitude: 37 degrees 48 minutes 59.988 seconds south, longitude: 144 degrees 58 minutes 0.013 seconds east, (Melbourne Australia), height: = 100m.

Nominal start time: 22nd January 2004 (Thursday) 00:08:00.

Viable running time to maintain specified HDOP values: 19 minutes.

Visible satellites available for simulation and for which Assistance Data (other than Almanac) shall be generated:  
PRNs: 3, 11, 14, 15, 18, 22, 23, 25, 31.

Ionospheric model: see values in subclause 5.2.6.6.

Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [6].

### 5.2.1.2.3 GPS Scenario #3

The following GPS scenario #3 shall be used during the Moving Scenario and Periodic Location test case defined in TS 51.010-1 [4] subclause 70.11. The assistance data specified in the following subclauses for GPS scenario #3 is consistent with this GPS scenario.

Yuma Almanac data: see file Perf GPS\_3\_Yuma.txt in the GPS\_data\_perf.zip file defined in Annex A.

MS location: the MS location is given as a trajectory as shown in Figure 70.11.9.1 of TS 51.010-1 [4] subclause 70.11. The reference location is at the centre of the trajectory and is at: latitude: 37 degrees 48 minutes 59.988 seconds south, longitude: 144 degrees 58 minutes 0.013 seconds east, (Melbourne Australia), height: = 100m.

Start time: 22nd January 2004 (Thursday) 00:08:00.

Start location: at the point between  $l_{11}$  and  $l_{12}$  in Figure 70.11.9.1 of TS 51.010-1 [4] subclause 70.11, going in a clockwise direction.

Visible satellites available for simulation and for which Assistance Data (other than Almanac) shall be generated:  
PRNs: 3, 11, 14, 15, 18, 22, 23, 25, 31.

Viable running time to maintain specified HDOP values: 19 minutes.

Ionospheric model: see values in subclause 5.2.6.6.

Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [6].

### 5.2.1.2.4 MS Location for TTFF test cases

#### 5.2.1.2.4.0 General

This subclause defines the method for generating the random MS locations that are required to be used for the TTFF tests defined in TS 51.010-1 [4] subclause 70.11.

For every Test Instance in each TTFF test case, the MS location shall be randomly selected to be within 3 km of the Reference Location. The Altitude of the MS shall be randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid. These values shall have uniform random distributions.

The MS location is calculated as an offset from the Reference Location.

#### 5.2.1.2.4.1 MS Location Offset

The MS location offset shall be calculated by selecting the next pair of random numbers, representing a pair of latitude and longitude offsets in degrees, from a standard uniform random number generator, with the following properties:

The ranges of the latitude and longitude offsets values shall be such that when translated onto the surface of the earth they shall lie within a 3km radius circle, centred on the Reference location specified for the GPS scenario under consideration. For the purposes of this calculation make the following assumptions:

- a) Over the 3km radius circle at the Reference location the earth is flat and the meridians and parallels form a rectangular grid
- b) The earth is spherical with a radius of 6371141m (equal to the WGS 84 value at 35 degrees latitude)

The resolution used for the latitude and longitude offsets values shall be 90/2E23 for the latitude offset values and 360/2E24 for the longitude offset values, representing the coding resolution in degrees specified in 3GPP TS 23.032 [7].

#### 5.2.1.2.4.2 MS Altitude

The MS altitude value shall be calculated by selecting the next random number from a standard uniform random number generator, in the range 0 to 500, representing meters. The resolution used for the random number shall be 1, representing 1 meter.

#### 5.2.1.2.5 Satellites to be simulated in each test case

The satellites to be simulated in each test case have been selected in order to achieve the required HDOP for that test case.

**Table 5.2.1.2.5.1: Satellites to be simulated**

| Test case                             | PRNs GPS #1                  | PRNs GPS #2                   | PRNs GPS #3       |
|---------------------------------------|------------------------------|-------------------------------|-------------------|
| Sensitivity Coarse Time Assistance    | 2, 6, 10, 17, 18, 21, 26, 29 | 3, 11, 14, 15, 22, 23, 25, 31 |                   |
| Sensitivity Fine Time Assistance      | 2, 6, 10, 17, 18, 21, 26, 29 | 3, 11, 14, 15, 22, 23, 25, 31 |                   |
| Nominal Accuracy                      | 2, 6, 10, 17, 18, 21, 26, 29 | 3, 11, 14, 15, 22, 23, 25, 31 |                   |
| Dynamic Range                         | 2, 6, 10, 17, 26, 29         | 3, 14, 15, 22, 25, 31         |                   |
| Multi-Path scenario                   | 2, 6, 17, 21, 26             | 3, 14, 15, 22, 25             |                   |
| Moving Scenario and Periodic location |                              |                               | 3, 14, 15, 22, 25 |

## 5.2.2 Information elements required for normal MS based testing

The following A-GPS assistance data IEs and fields shall be present for each test. Fields not specified shall not be present. The values of the fields are specified in subclause 5.2.6.

- a) **Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| GPS TOW Assist   |
| SatID            |
| TLM Message      |
| Anti-Spoof       |
| Alert            |
| TLM Reserved     |

**aa) GPS Reference Time Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE      | Release        |
|-----------------------|----------------|
| GPS Week Cycle Number | Rel-10 onwards |

**b) Reference Location IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE  |
|---|
| Ellipsoid point with Altitude and uncertainty ellipsoid |

**c) Navigation Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE          |
|---------------------------|
| All satellite information |

**d) Ionospheric Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| All              |

### 5.2.3 Information elements required for MS based Sensitivity Fine Time Assistance test case

The A-GPS assistance data IEs and fields that shall be present for the Sensitivity Fine Time Assistance test case shall be those specified in subclause 5.2.2 with the following exception. Fields not specified shall not be present. The values of the fields are specified in subclause 5.2.6.

**Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| BCCH Carrier     |
| BSIC             |
| FNm              |
| TN               |
| BN               |
| GPS TOW Assist   |
| SatID            |
| TLM Message      |
| Anti-Spoof       |
| Alert            |
| TLM Reserved     |

### 5.2.4 Information elements available for normal MS assisted testing

The following A-GPS assistance data IEs and fields shall be available for use in each test. Fields not specified shall not be present. The values of the fields are specified in subclause 5.2.6.

**a) Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| GPS TOW Assist   |
| SatID            |
| TLM Message      |
| Anti-Spoof       |

|              |
|--------------|
| Alert        |
| TLM Reserved |

**aa) GPS Reference Time Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE      | Release        |
|-----------------------|----------------|
| GPS Week Cycle Number | Rel-10 onwards |

**b) Reference Location IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE  |
|---|
| Ellipsoid point with Altitude and uncertainty ellipsoid |

**c) Almanac IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE          |
|---------------------------|
| Almanac Reference Week    |
| All Satellite information |

**ca) GPS Almanac Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE          | Release        |
|---------------------------|----------------|
| Complete Almanac Provided | Rel-10 onwards |

**d) Navigation Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE          |
|---------------------------|
| All satellite information |

**e) Acquisition Assistance IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE                     |
|--------------------------------------|
| GPS TOW                              |
| Satellite information                |
| SVID/PRNID                           |
| Doppler (0 <sup>th</sup> order term) |
| Doppler (1 <sup>st</sup> order term) |
| Doppler Uncertainty                  |
| Code Phase                           |
| Integer Code Phase                   |
| GPS Bit number                       |
| Code Phase Search Window             |
| Azimuth                              |
| Elevation                            |

**f) GPS Acquisition Assistance Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE | Release        |
|------------------|----------------|
| N_SAT            | Rel-10 onwards |
| SatID            | Rel-10 onwards |
| Azimuth LSB      | Rel-10 onwards |
| Elevation LSB    | Rel-10 onwards |

## 5.2.5 Information elements available for MS assisted Sensitivity Fine Time Assistance test case

The A-GPS assistance data IEs and fields that shall be available for use for the Sensitivity Fine Time Assistance test case shall be those specified in subclause 5.2.4 with the following exceptions. Fields not specified shall not be present. The values of the fields are specified in subclause 5.2.6.

- a) **Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| BCCH Carrier     |
| BSIC             |
| FNm              |
| TN               |
| BN               |
| GPS TOW Assist   |
| SatID            |
| TLM Message      |
| Anti-Spoof       |
| Alert            |
| TLM Reserved     |

- b) **Acquisition Assistance IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE                     |
|--------------------------------------|
| GPS TOW                              |
| BCCH Carrier                         |
| BSIC                                 |
| Frame #                              |
| Timeslots #                          |
| Bit #                                |
| SVID/PRNID                           |
| Doppler (0 <sup>th</sup> order term) |
| Doppler (1 <sup>st</sup> order term) |
| Doppler Uncertainty                  |
| Code Phase                           |
| Integer Code Phase                   |
| GPS Bit number                       |
| Code Phase Search Window             |
| Azimuth                              |
| Elevation                            |

## 5.2.6 Contents of Information elements for Minimum performance testing

### 5.2.6.1 General

This subclause defines the assistance data values that shall be used for all Assisted GPS performance tests defined in TS 51.010-1 [4] subclause 70.11. It is given for GPS scenarios #1, #2 and #3 where it is different for each scenario; otherwise it is marked "All" where the same value is used for all scenarios.

Where assistance data is required on a per-satellite basis, or where the values of the data also varies with time it is specified in comma-separated-variable files with suffixes XX in the GPS\_data\_perf.zip file defined in Annex A, where XX is 01, 02 and 03 for GPS scenarios #1, #2 and #3 respectively. These files specify the values to be used for each satellite, indexed by satellite PRN, and, where applicable, the values to be used indexed by both time and satellite PRN.

Assistance data that is marked as "time varying" is specified and used in 80 ms increments. Interpolation between these values shall not be used.

Assistance data Information Elements and fields that are not specified shall not be used.

## 5.2.6.2 IE Random Offset Values

### 5.2.6.2.0 Introduction

This subclause defines the methods for generating the random offsets that are required to be applied to one or two assistance data IEs for certain tests defined in TS 51.010-1 [4] subclause 70.11.

### 5.2.6.2.1 GPS TOW

For every Test Instance in each TTFF test case, the IE GPS TOW shall have a random offset, relative to GPS system time, within the allowed error range of Coarse Time Assistance defined in the test case. This offset value shall have a uniform random distribution.

Note: For the Moving Scenario and Periodic Update Test Case the value of the IE GPS TOW shall be set to the nominal value, i.e. no offset shall be used.

The offset value shall be calculated by selecting the next random number from a standard uniform random number generator, in the range specified for the GPS Coarse Time assistance error range in the Test Requirements, Test parameters table for the test under consideration. The resolution used for the random number shall be 0.01, representing 10ms.

### 5.2.6.2.2 GPS bit number (BN or Bit #)

In addition, for every Fine Time Assistance Test Instance the IE BN or Bit # shall have a random offset, relative to the true value of the relationship between the two time references, within the allowed error range of Fine Time Assistance defined in the test case. This offset value shall have a uniform random distribution.

The offset value shall be calculated by selecting the next random number from a standard uniform random number generator with the following properties:

The range shall be the number of GSM bits whose duration is less than the range specified for the GPS Fine Time assistance error range in the Test Requirements, Test parameters table for the test under consideration.

The resolution used for the random number shall be 1, representing 1 GSM bit.

### 5.2.6.3 Assistance Data Reference Time

#### Contents of Reference Time IE

**Table 5.2.6.3.1: Reference Time (Fields occurring once per message)**

| Parameter    | Units | Value/remark GPS #1   | Value/remark GPS #2   | Value/remark GPS #3   |
|--------------|-------|---|---|---|
| GPS Week     | weeks | 282   | 230   | 230   |
| GPS TOW      | ms    | 518880000<br>Start time. Add number of 80ms as required. (Note 1)                                     | 346080000<br>Start time. Add number of 80ms as required. (Note 1)                                     | 346080000<br>Start time. Add number of 80ms as required. (Note 1) |
| BCCH Carrier |       | ARFCN of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. | ARFCN of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. |   |
| BSIC         |       | BSIC of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise.  | BSIC of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise.  |   |
| FNm          |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |   |
| TN           |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |   |
| BN           |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |   |

**Note 1: GPS TOW**

This is the value in ms of GPS TOW when the GPS scenario is initially started in the GPS simulator. For all TTFF test cases, each time a GPS scenario is used, the GPS start time shall be advanced by 120 seconds from the value last used so that, at the time the fix is made, it is at least 2 minutes later than the previous fix made with that scenario.

The actual value of GPS TOW to be used in the Reference Time IE (before the addition of the random offset, if applicable) shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GPS simulator to this value. The accuracy shall be such that the Maximum Test System Uncertainty for Coarse Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

For all TTFF test cases a random offset is then added to the value of GPS TOW as described in subclause 5.2.6.2

**Note 2: GSM Frame Number (FNm), Timeslot Number (TN) and Bit Number (BN)**

The values of the IEs FNm, TN and BN (before the addition of the random offset) shall be calculated at the time the IE is required. The accuracy of the relationship between the two time references shall be such that the Maximum Test System Uncertainty for Fine Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

A random offset is then added to the value of BN as described in subclause 5.2.6.2

**Table 5.2.6.3.2: Satellite Information**

| Parameter            | Units | Value/remark GPS All |
|----------------------|-------|----------------------|
| Number of satellites |       | 9                    |

| Timeslots #  |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |   |
| Bit #        |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |   |

Note 1: GPS TOW  
This is the value in ms of GPS TOW when the GPS scenario is initially started in the GPS simulator. For all TTFF test cases, each time a GPS scenario is used, the GPS start time shall be advanced by 120 seconds from the value last used so that, at the time the fix is made, it is at least 2 minutes later than the previous fix made with that scenario.  
The actual value of GPS TOW to be used in the Acquisition Assistance IE (before the addition of the random offset, if applicable) shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GPS simulator to this value. The accuracy shall be such that the Maximum Test System Uncertainty for Coarse Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.  
For all TTFF test cases a random offset is then added to the value of GPS TOW as described in subclause 5.2.6.2  
This "final GPS TOW" value is then also used to determine the value of the Acquisition Assistance parameters marked as "Time varying" in subclause 5.2.6.8

Note 2: GSM Frame Number (Frame #), Timeslot Number (Timeslots #) and Bit Number (Bit #)  
The values of the IEs Frame #, Timeslots # and Bit # (before the addition of the random offset) shall be calculated at the time the IE is required. The accuracy of the relationship between the two time references shall be such that the Maximum Test System Uncertainty for Fine Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.  
A random offset is then added to the value of Bit # as described in subclause 5.2.6.2

**Table 5.2.6.8.2: Satellite Information**

| Parameter            | Units | Value/remark GPS All |
|----------------------|-------|----------------------|
| Number of satellites |       | 9                    |

**Table 5.2.6.8.3: GPS Acquisition Assistance (Fields occurring once per satellite)**

| Parameter  | Units | Value/remark GPS #1                    | Value/remark GPS #2                     | Value/remark GPS #3                     |
|------------|-------|--|---|---|
| SVID/PRNID |       | PRNs: 2, 6, 10, 17, 18, 21, 26, 29, 30 | PRNs: 3, 11, 14, 15, 18, 22, 23, 25, 31 | PRNs: 3, 11, 14, 15, 18, 22, 23, 25, 31 |

**Table 5.2.6.8.4: GPS Acquisition Assistance (Fields occurring once per satellite)**

| Parameter   | Units  | Value/remark GPS All   |
|---|--------|--|
| Doppler (0 <sup>th</sup> order term)  | Hz     | Time varying. See file: Perf Acquisition_assistXX.csv (Note) |
| Doppler (1 <sup>st</sup> order term)  | Hz/sec | Time varying. See file: Perf Acquisition_assistXX.csv (Note) |
| Doppler Uncertainty   | Hz     | Time varying. See file: Perf Acquisition_assistXX.csv (Note) |
| Code Phase  | chips  | Time varying. See file: Perf Acquisition_assistXX.csv (Note) |
| Integer Code Phase  |        | Time varying. See file: Perf Acquisition_assistXX.csv (Note) |

| Parameter  | Units   | Value/remark GPS All  | Release        |
|--|---------|---|----------------|
| SatID  |         | See SVID/PRNID values in Table 5.2.6.8.3  | Rel-10 onwards |
| Azimuth LSB  | degrees | Time varying. Calculated from Azimuth, see file: Perf Acquisition_assistXX.csv (Note)   | Rel-10 onwards |
| Elevation LSB  | degrees | Time varying. Calculated from Elevation, see file: Perf Acquisition_assistXX.csv (Note) | Rel-10 onwards |
| Note: This field is "Time varying" and its value depends on the "current GPS TOW" as described in subclause 5.1.3. The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Perf Acquisition_assistXX.csv file corresponding to the value of "current GPS TOW". |         |   |                |

## 6 GNSS information

### 6.1 GNSS Scenarios and Assistance Data for Assisted GNSS signalling tests

#### 6.1.1 General

This subclause defines the GNSS scenario and the associated assistance data that shall be used for all Assisted GNSS signalling tests defined in TS 51.010-1 [4] subclauses 70.12 to 70.15.

The satellite simulator (SS) shall generate all the MS supported GNSS satellite signals defined in subclause 6.1.2 and shall provide assistance data dependent on the MS capabilities defined in subclause 6.1.3.

Where assistance data is required on a per-satellite basis, or where the values of the data also varies with time it is specified in comma-separated-variable files in the GNSS\_data.zip file defined in Annex B. These files specify the values to be used for each satellite, indexed by satellite SV ID, and, where applicable, the values to be used indexed by both time and satellite SV ID.

Assistance data that is marked as "time varying" and the GNSS TOW and GANSS TOD fields are only specified and used in 0.96 or 1 second increments. Interpolation between these values shall not be used.

The accuracy of the GNSS TOW and GANSS TOD and assistance data that is marked as "time varying" in the provided assistance data shall be within +/- 2 s relative to the GNSS time in the system simulator.

Assistance data Information Elements and fields that are not specified shall not be used.

The A-GNSS signalling test cases may include several sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 6.1.1-1. The detailed assistance data content defined in subclause 6.1.3 depends on the particular sub-test case.

The term SV ID used in this subclause is defined as the satellite PRN for GPS and Galileo, as the satellite Slot Number for GLONASS and as the Ranging Code Number for BDS.

Most data for Galileo is for further study [FFS].

**Table 6.1.1.1: Sub-Test Case Number Definition**

| Sub-Test Case Number | Supported GNSS                              |
|----------------------|---|
| 1                    | MS supporting A-GLONASS only                |
| 2                    | MS supporting A-Galileo only                |
| 3                    | MS supporting A-GPS and Modernized GPS only |
| 4                    | MS supporting A-GPS and A-GLONASS only      |
| 5                    | Reserved                                    |
| 6                    | Reserved                                    |
| 7                    | Reserved                                    |
| 8                    | Reserved                                    |
| 9                    | MS supporting A-BDS only                    |
| 10                   | MS supporting A-GPS and A-BDS only          |

#### 6.1.2 GNSS Scenario

The following GNSS scenario shall be used. The assistance data specified in the following subclauses is consistent with this GNSS scenario:

- Yuma Almanac data: the required file(s) in the GNSS\_data\_sig.zip file specified in Annex B are given below.

**Table 6.1.2.1: Yuma Almanac data files for TS 51.010-1 subclause 70.12 to 70.15**

| <b>Sub-Test Case Number</b> | <b>Yuma file(s)</b>                             |
|-----------------------------|---|
| 1                           | Sig_GNSS_1-1_Yuma.txt                           |
| 2                           | Sig_GNSS_1-2_Yuma.txt                           |
| 3                           | Sig_GNSS_1-3_Yuma.txt                           |
| 4                           | Sig_GNSS_1-1_Yuma.txt and Sig_GNSS_1-3_Yuma.txt |
| 5                           | [FFS]   |
| 6                           | [FFS]   |
| 7                           | [FFS]   |
| 8                           | [FFS]   |
| 9                           | Sig_GNSS_1-9_Yuma.txt                           |
| 10                          | Sig_GNSS_1-3_Yuma.txt and Sig_GNSS_1-9_Yuma.txt |

- MS location and Reference location: static at latitude: 35 degrees 44 minutes 39.432 seconds north, longitude: 139 degrees 40 minutes 48.633 seconds east, (Tokyo Japan 2012), height: 300m
- Start time: 1st January 2012 00:31:00 (GPS time)
- Visible satellites simulated are given below

**Table 6.1.2.2: Satellites to be simulated for TS 51.010-1 subclause 70.12 to 70.15**

| <b>Sub-Test Case Number</b> | <b>SV IDs of Satellites to be simulated</b> |
|-----------------------------|---|
| 1                           | 3, 4, 9, 10, 18, 20                         |
| 2                           | [FFS]                                       |
| 3                           | 1, 11, 17, 20, 23, 28 (Note)                |
| 4                           | GPS: 1, 17, 20, 28. GLONASS: 3, 10, 18, 20  |
| 5                           | [FFS]                                       |
| 6                           | [FFS]                                       |
| 7                           | [FFS]                                       |
| 8                           | [FFS]                                       |
| 9                           | 1, 2, 7, 18, 21, 27                         |
| 10                          | GPS: 1, 17, 20, 28. BDS: 1, 7, 18, 21       |

NOTE: For this sub-test the satellite simulator shall generate all the GPS signals supported by the MS for all the simulated satellites.

- Ionospheric model: see values in subclause 6.1.3
- The levels of the simulated satellites shall all be at -125dBm +/- 6dB

### 6.1.3 Default Assistance Data Elements to be provided by the SS

The assistance data listed in subclause 6.1.3 are the assistance data elements to be pushed by the SS in some of the tests defined in TS 51.010-1 [4] subclause 70.12 to 70.15. After the reception of an RRLP MEASURE POSITION REQUEST message, the MS may request additional assistance data. In this case the SS shall provide the requested assistance data only if it is available as defined in subclause 6.1.4.

**Table 6.1.3.1: GNSS assistance data to be provided to the MS**

| <b>GNSS Assistance Data IE to be provided to the MS</b> | <b>Mode used in test case</b> |                    |
|---|-------------------------------|--------------------|
|   | <b>MS-based</b>               | <b>MS-assisted</b> |
|   |                               |                    |

|   |                                     |                                     |
|---|-------------------------------------|-------------------------------------|
| GPS Reference Time                                    | Yes for sub-tests 3, 4, 10          | Yes for sub-tests 3, 4, 10          |
| GPS Reference Time Extension (Rel-10 onwards)         | Yes for sub-tests 3, 4, 10          | Yes for sub-tests 3, 4, 10          |

| GNSS Navigation Model                                 | Yes for sub-tests 1, 2, 4, 9, 10    | No                                  |
| GNSS Reference Measurement Information                | No                                  | Yes for sub-tests 1, 2, 4, 9, 10    |
| GNSS Reference Measurement Extension (Rel-10 onwards) | No                                  | Yes for sub-tests 1, 2, 4, 9, 10    |
| GNSS Auxiliary Information                            | Yes for sub-tests 1, 3, 4.<br>Note. | Yes for sub-tests 1, 3, 4.<br>Note. |

Note: Also if MS supports multiple signals per GNSS

#### 6.1.4 Assistance Data values

##### Satellite SV IDs to be used

For assistance data IEs which contain the field SatID or SVID/PRNID, and where the values for these fields are not given below, then the following values shall be used.

**Table 6.1.4.1: Satellite SV IDs to be used for SatID or SVID/PRNID**

| Sub-Test Case Number | SV IDs of Satellites to be used            |
|----------------------|--|
| 1                    | 3, 4, 9, 10, 18, 20                        |
| 2                    | [FFS]                                      |
| 3                    | 1, 11, 17, 20, 23, 28                      |
| 4                    | GPS: 1, 17, 20, 28. GLONASS: 3, 10, 18, 20 |
| 5                    | [FFS]                                      |
| 6                    | [FFS]                                      |
| 7                    | [FFS]                                      |
| 8                    | [FFS]                                      |
| 9                    | 1, 2, 7, 18, 21, 27                        |
| 10                   | GPS: 1, 17, 20, 28. BDS: 1, 7, 18, 21      |

## Assistance Data GPS Reference Time

**Table 6.1.4.2: GPS Reference Time (Fields occurring once per message)**

| Information Element  | Units | Value/remark   |
|--|-------|--|
| GPS Week   | weeks | 1669   |
| GPS TOW  | sec   | 1860<br>Start time. Add integer number of 0.96 seconds as required. (Note) |
| <b>Note: GPS TOW</b>   |       |  |
| This is the value of GPS TOW in seconds when the GNSS scenario is started in the GNSS simulator. The value of GPS TOW to be used in the Reference Time IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value, rounded up to the next 0.96 second interval. This "current GPS TOW" is then also used to determine the value of any other Information Elements marked as "Time varying" in subclause 6.1.4. |       |  |

## Assistance Data GPS Reference Time Extension

**Table 6.1.4.2a: GPS Reference Time Extension (Fields occurring once per message)**

| Information Element   | Units      | Value/remark | Release        |
|-----------------------|------------|--------------|----------------|
| GPS Week Cycle Number | 1024 weeks | 1            | Rel-10 onwards |

## Assistance Data GPS Reference Location

**Table 6.1.4.3: GPS Reference Location**

| Information Element       | Units   | Value/remark |
|---------------------------|---------|--------------|
| Latitude sign             |         | 0            |
| Degrees Of Latitude       | degrees | 35.744287    |
| Degrees Of Longitude      | degrees | 139.680176   |
| Altitude Direction        |         | 0            |
| Altitude                  | m       | 300          |
| Uncertainty semi-major    | m       | 3000         |
| Uncertainty semi-minor    | m       | 3000         |
| Orientation of major axis | degrees | 0            |
| Uncertainty Altitude      | m       | 500          |
| Confidence                | %       | 68           |

## Assistance Data GPS Navigation Model

**Table 6.1.4.4: Satellite Information**

| Information Element | Units | Value/remark |
|---------------------|-------|--------------|
| Num_Sats_Total      |       | 6            |

**Table 6.1.4.5: GPS Navigation Model (Fields occurring once per satellite)**

| Information Element | Units | Value/remark      |
|---------------------|-------|-------------------|
| SatID               |       | See Table 6.1.4-1 |
| Satellite Status    |       | 0 (see note)      |

NOTE: For consistency Satellite Status is also given in file: Sig\_GPS\_Navigation\_model.csv

**Table 6.1.4.6: GPS Ephemeris and Clock correction Information Elements (Fields occurring once per satellite)**

| Information Element  | Units                 | Value/remark                           |
|----------------------|-----------------------|--|
| C/A or P on L2       |                       | See file: Sig_GPS_Navigation_model.csv |
| URA Index            |                       | See file: Sig_GPS_Navigation_model.csv |

| OMEGA <sub>0</sub>  | semi-circles          | See file: Sig_GPS_Almanac.csv                       |
| ω                   | semi-circles          | See file: Sig_GPS_Almanac.csv                       |
| M <sub>0</sub>      | semi-circles          | See file: Sig_GPS_Almanac.csv                       |
| af <sub>0</sub>     | seconds               | See file: Sig_GPS_Almanac.csv                       |
| af <sub>1</sub>     | sec/sec               | See file: Sig_GPS_Almanac.csv                       |

Assistance Data GPS Almanac Extension

**Table 6.1.4.10a: GPS Almanac Extension (Fields occurring once per message)**

| Information Element       | Units | Value/remark | Release        |
|---------------------------|-------|--------------|----------------|
| Complete Almanac Provided |       | 1 (TRUE)     | Rel-10 onwards |

## Assistance Data GPS Acquisition Assistance

**Table 6.1.4.11: GPS Acquisition Assistance - Information Elements appearing once per message**

| Information Element   | Units | Value/remark  |
|---|-------|---|
| Number of Satellites  |       | 6   |
| GPS TOW   |       | 1860 s<br>Start time. Add integer number of 0.96 seconds as required.<br>(Note) |
| Note: GPS TOW   |       |   |
| This is the value of GPS TOW in seconds when the GNSS scenario is started in the GNSS simulator. The value of GPS TOW to be used in the Acquisition Assistance IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value, rounded up to the next 0.96 second interval. |       |   |

**Table 6.1.4.12: GPS Acquisition Assistance - Information Elements appearing once per satellite**

| Information Element   | Units  | Value/remark  |
|---|--------|---|
| SVID/PRNID  |        | See Table 6.1.4-1   |
| Doppler ( $0^{\text{th}}$ order term)   | Hz     | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Doppler ( $1^{\text{st}}$ order term)   | Hz/sec | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Doppler Uncertainty   | Hz     | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Code Phase  | chips  | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Integer Code Phase  |        | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| GPS Bit number  |        | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Code Phase Search Window  | chips  | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Azimuth   | deg    | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Elevation   | deg    | Time varying. See file: Sig_GPS_Acquisition_assist.csv (Note) |
| Note: This field is "Time varying" and its value depends on the "current GPS TOW". The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Sig_GPS_Acquisition_assist.csv file corresponding to the value of "current GPS TOW". |        |   |

## Assistance Data GPS Acquisition Assistance Extension

**Table 6.1.4.12a: GPS Acquisition Assistance Extension - Information Elements appearing once per message**

| Information Element | Units | Value/remark | Release        |
|---------------------|-------|--------------|----------------|
| N_SAT               |       | 6            | Rel-10 onwards |

**Table 6.1.4.12b: GPS Acquisition Assistance Extension - Information Elements appearing once per satellite**

| Information Element   | Units   | Value/remark   | Release        |
|---|---------|--|----------------|
| SatID   |         | See Table 6.1.4-1  | Rel-10 onwards |
| Azimuth LSB   | degrees | Time varying. Calculated from Azimuth, see file: Sig_GPS_Acquisition_assist.csv (Note)   | Rel-10 onwards |
| Elevation LSB   | degrees | Time varying. Calculated from Elevation, see file: Sig_GPS_Acquisition_assist.csv (Note) | Rel-10 onwards |
| Note: This field is "Time varying" and its value depends on the "current GPS TOW" as described in subclause 5.1.3. The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Sig_GPS_Acquisition_assist.csv file corresponding to the value of "current GPS TOW". |         |  |                |

## Assistance Data GANSS Reference Time

**Table 6.1.4.13: Assistance Data GANSS Reference Time: sub-test 1**

| Information Element   | Units   | Value/remark   |
|-----------------------|---------|--|
| GANSS Day             |         | 5844   |
| GANSS TOD             | seconds | 12645 s<br>Start time. Add integer number of 1 seconds as required. (Note) |
| GANSS TOD Uncertainty |         | 125 (2.127 seconds)  |
| GANSS Time ID         |         | 2 (GLONASS)  |

**Note: GANSS TOD**  
This is the value of GANSS TOD when the GNSS scenario is started in the GNSS simulator. The value of GANSS TOD to be used in the Reference Time IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value, rounded up to the next 1 second interval. This "current GANSS TOD" is then also used to determine the value of any other Information Elements marked as "Time varying" in subclause 6.1.4

**Table 6.1.4.14: Assistance Data GANSS Reference Time: sub-test 2**

| Information Element   | Units   | Value/remark   |
|-----------------------|---------|--|
| GANSS Day             |         | FFS  |
| GANSS TOD             | seconds | FFS<br>Start time. Add integer number of 1 seconds as required. (Note) |
| GANSS TOD Uncertainty |         | 125 (2.127 seconds)  |
| GANSS Time ID         |         | Not present (Galileo)  |

**Note: GANSS TOD**  
This is the value of GANSS TOD when the GNSS scenario is started in the GNSS simulator. The value of GANSS TOD to be used in the Reference Time IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value, rounded up to the next 1 second interval. This "current GANSS TOD" is then also used to determine the value of any other Information Elements marked as "Time varying" in subclause 6.1.4

**Table 6.1.4.14a: Assistance Data GANSS reference time: sub-test 9**

| Information Element    | Units   | Value/remark  | Release |
|------------------------|---------|---|---------|
| GANSS Day              |         | 2191  |         |
| GANSS Day Cycle Number |         | 0   |         |
| GANSS TOD              | Seconds | 1846. Start time. Add integer number of 1 seconds as required. (Note) |         |
| GANSS TOD Uncertainty  |         | 125 (2.127 seconds)   |         |
| GANSS Time ID          |         | 3 (BDS)   |         |

**Note: GANSS TOD**  
This is the value of GANSS TOD when the GNSS scenario is started in the GNSS simulator. The value of GANSS TOD to be used in the Reference Time IE shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value, rounded up to the next 1 second interval. This "current GANSS TOD" is then also used to determine the value of any other Information Elements marked as "Time varying" in subclause 6.1.4

## Assistance Data GANSS Reference Location

**Table 6.1.4.15: Assistance Data GANSS Reference Location**

| Information Element       | Units   | Value/remark |
|---------------------------|---------|--------------|
| Latitude sign             |         | 0            |
| Degrees Of Latitude       | degrees | 35.744287    |
| Degrees Of Longitude      | degrees | 139.680176   |
| Altitude Direction        |         | 0            |
| Altitude                  | m       | 300          |
| Uncertainty semi-major    | m       | 3000         |
| Uncertainty semi-minor    | m       | 3000         |
| Orientation of major axis | degrees | 0            |

| Information Element  | Units | Value/remark |
|----------------------|-------|--------------|
| Uncertainty Altitude | m     | 500          |
| Confidence           | %     | 68           |

Assistance Data GANSS Ionospheric Model

**Table 6.1.4.16: GANSS Ionospheric Model**

| Information Element | Units | Value/remark |
|---------------------|-------|--------------|
| $a_{i0}$            |       | FFS          |
| $a_{i1}$            |       | FFS          |
| $a_{i2}$            |       | FFS          |
| Storm Flag 1        |       | 0            |
| Storm Flag 2        |       | 0            |
| Storm Flag 3        |       | 0            |
| Storm Flag 4        |       | 0            |
| Storm Flag 5        |       | 0            |

Assistance Data GANSS Additional Ionospheric Model

**Table 6.1.4.16a: GANSS Additional Ionospheric Model (GLONASS)**

| Information Element | Units                          | Value/remark    |
|---------------------|--------------------------------|-----------------|
| Data Id             |                                | 00              |
| $\alpha_0$          | Seconds                        | 4.6566129 10E-9 |
| $\alpha_1$          | sec/semi-circle                | 1.4901161 10E-8 |
| $\alpha_2$          | sec/(semi-circle) <sup>2</sup> | -5.96046 10E-8  |
| $\alpha_3$          | sec/(semi-circle) <sup>3</sup> | -5.96046 10E-8  |
| $\beta_0$           | Seconds                        | 79872           |
| $\beta_1$           | sec/semi-circle                | 65536           |
| $\beta_2$           | sec/(semi-circle) <sup>2</sup> | -65536          |
| $\beta_3$           | sec/(semi-circle) <sup>3</sup> | -393216         |

**Table 6.1.4.16a0: GANSS additional ionospheric model (BDS)**

| Information Element | Units                          | Value/remark    |
|---------------------|--------------------------------|-----------------|
| Data Id             |                                | 01              |
| $\alpha_0$          | Seconds                        | 4.6566129 10E-9 |
| $\alpha_1$          | sec/semi-circle                | 1.4901161 10E-8 |
| $\alpha_2$          | sec/(semi-circle) <sup>2</sup> | -5.96046 10E-8  |

## 6.2 GNSS Scenarios and Assistance Data for Assisted GNSS Minimum Performance tests

### 6.2.1 General

#### 6.2.1.0 Introduction

This subclause defines the GNSS scenarios and assistance data IEs which shall be available for use as specified in all A-GNSS Minimum Performance test cases defined in TS 51.010-1 [4] subclause 70.16.

The information elements are given with reference to TS 44.031 [5], where the details are defined.

Subclauses 6.2.2 and 6.2.3 list the assistance data IEs required for performance testing of MS-based mode, and subclauses 6.2.4 and 6.2.5 list the assistance data available for performance testing of MS-assisted mode. Subclause 6.2.6 lists the values of the assistance data IE fields for all performance testing.

The A-GNSS minimum performance requirements are defined by assuming that all relevant and valid assistance data is received by the MS in order to perform GNSS measurements and/or position calculation. This subclause does not include nor consider delays occurring in the various signalling interfaces of the network.

The term SV ID used in this subclause is defined as the satellite PRN for GPS and Galileo, as the satellite Slot Number for GLONASS and as the Ranging Code Number for BDS.

Most data for Galileo is for further study [FFS].

#### 6.2.1.1 Satellite constellations and assistance data for A-GNSS performance testing

The satellite constellation shall consist of 24 satellites for GLONASS; 27 satellites for GPS, Modernized GPS and Galileo; 3 satellites for QZSS; 2 satellites for SBAS; and 35 satellites for BDS. Almanac assistance data shall be available for all these satellites (30 satellites for BDS). At least 7 of the satellites per GPS, Modernized GPS, Galileo, GLONASS or BDS constellation shall be visible to the MS (that is, above 15 degrees elevation with respect to the MS). At least 1 of the satellites for QZSS shall be within 15 degrees of zenith; and at least 1 of the satellites for SBAS shall

be visible to the MS. All other satellite specific assistance data shall be available for all visible satellites. In each test, signals are generated for only 6 satellites (or 7 if SBAS is included). The HDOP for the test shall be calculated using these satellites. The simulated satellites for GPS, Modernized GPS, Galileo, GLONASS and BDS shall be selected from the visible satellites for each constellation, consistent with achieving the required HDOP for the test.

## 6.2.1.2 GNSS Scenarios for A-GNSS performance testing

### 6.2.1.2.0 Introduction

This subclause defines the GNSS scenarios that shall be used for all Assisted GNSS performance tests defined in TS 51.010-1 [4] subclause 70.16.

The GNSS scenarios achieve the required HDOP for the Test Cases as defined in the Requirements specification TS 45.005 [8]. They also satisfy the requirement that for each test instance the reference location shall change sufficiently such that the MS shall have to use the new assistance data.

The viable running time during which the scenario maintains the required HDOP or HDOPs is given. Once this time has been reached the scenario shall be restarted from its nominal start time.

The test cases include sub-test cases dependent on the GNSS supported by the MS. Each sub-test case is identified by a Sub-Test Case Number as defined in Table 6.2.1.2.0.1. For each GNSS scenario the parameters that vary with the sub-test are given for each sub-test.

**Table 6.2.1.2.0.1: Sub-Test Case Number Definition**

| Sub-Test Case Number | Supported GNSS                              |
|----------------------|---|
| 1                    | MS supporting A-GLONASS only                |
| 2                    | MS supporting A-Galileo only                |
| 3                    | MS supporting A-GPS and Modernized GPS only |
| 4                    | MS supporting A-GPS and A-GLONASS only      |
| 5                    | Reserved                                    |
| 6                    | Reserved                                    |
| 7                    | Reserved                                    |
| 8                    | Reserved                                    |
| 9                    | MS supporting A-BDS only                    |
| 10                   | MS supporting A-GPS and A-BDS only          |

### 6.2.1.2.1 GNSS Scenario #1

The following GNSS scenario #1 shall be used during the TTFF tests defined in TS 51.010-1 [4] subclause 70.16 with the exception of the Nominal Accuracy test. The assistance data specified in the following subclauses for GNSS scenario #1 is consistent with this GNSS scenario.

Yuma Almanac data: the required file(s) in the GNSS\_data\_perf.zip file defined in Annex B are given in Table 6.2.1.2.1.1.

**Table 6.2.1.2.1.1: Yuma Almanac data files**

| <b>Sub-Test Case Number</b> | <b>Yuma file(s)</b>                               |
|-----------------------------|---|
| 1                           | Perf_GNSS_1-1_Yuma.txt                            |
| 2                           | Perf_GNSS_1-2_Yuma.txt                            |
| 3                           | Perf_GNSS_1-3_Yuma.txt                            |
| 4                           | Perf_GNSS_1-1_Yuma.txt and Perf_GNSS_1-3_Yuma.txt |
| 5                           | [FFS]   |
| 6                           | [FFS]   |
| 7                           | [FFS]   |
| 8                           | [FFS]   |
| 9                           | Perf_GNSS_1-9_Yuma.txt                            |
| 10                          | Perf_GNSS_1-3_Yuma.txt and Perf_GNSS_1-9_Yuma.txt |

MS location: the MS location is calculated as a random offset from the reference location using the method described in subclause 6.2.1.2.5. The reference location is: latitude: 35 degrees 44 minutes 39.432 seconds north, longitude: 139 degrees 40 minutes 48.633 seconds east, (Tokyo Japan 2012), height: = 300m.

Nominal start time: 1st January 2012 00:31:00 (GPS time).

Viable running time to maintain specified HDOP values: 19 minutes.

Visible satellites available for simulation and for which Assistance Data (other than Almanac) shall be generated are given in Table 6.2.1.2.1.2

**Table 6.2.1.2.1.2: Visible satellites**

| <b>Sub-Test Case Number</b> | <b>SV IDs of Visible satellites</b>  |
|-----------------------------|--|
| 1                           | 3, 4, 5, 9, 10, 18, 19, 20   |
| 2                           | [FFS]  |
| 3                           | 1, 4, 11, 17, 19, 20, 23, 28, 32   |
| 4                           | GPS: 1, 4, 11, 17, 19, 20, 23, 28, 32. GLONASS: 3, 4, 5, 9, 10, 18, 19, 20                   |
| 5                           | [FFS]  |
| 6                           | [FFS]  |
| 7                           | [FFS]  |
| 8                           | [FFS]  |
| 9                           | 1, 2, 3, 4, 6, 7, 17, 18, 21, 22, 23, 26, 27, 28   |
| 10                          | GPS: 1, 4, 11, 17, 19, 20, 23, 28, 32. BDS: 1, 2, 3, 4, 6, 7, 17, 18, 21, 22, 23, 26, 27, 28 |

The satellites to be simulated in each test case have been selected in order to achieve the required HDOP. They are defined in Table 6.2.1.2.1.3.

**Table 6.2.1.2.1.3: Satellites to be simulated**

| <b>Sub-Test Case Number</b> | <b>SV IDs of Satellites to be simulated</b> |
|-----------------------------|---|
| 1                           | 3, 4, 9, 10, 18, 20                         |
| 2                           | [FFS]                                       |
| 3                           | 1, 11, 17, 19, 23, 28 (Note)                |
| 4                           | GPS: 20, 28, 32. GLONASS: 5, 10, 20         |
| 5                           | [FFS]                                       |
| 6                           | [FFS]                                       |
| 7                           | [FFS]                                       |
| 8                           | [FFS]                                       |
| 9                           | 1, 2, 7, 18, 21, 27                         |
| 10                          | GPS: 20, 28, 32. BDS: 1, 7, 21              |

NOTE: For this sub-test the satellite simulator shall generate all the GPS signals supported by the MS for all the simulated satellites.

Ionospheric model: see values in subclause 6.2.6.6.

Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [6].

### 6.2.1.2.2 GNSS Scenario #2

The following GNSS scenario #2 shall be used during the TTFF tests defined in TS 51.010-1 [4] subclause 70.16 with the exception of the Nominal Accuracy test. The assistance data specified in the following subclauses for GNSS scenario #2 is consistent with this GNSS scenario.

Yuma Almanac data: the required file(s) in the GNSS\_data\_perf.zip file defined in Annex B are given in Table 6.2.1.2.2.1.

**Table 6.2.1.2.2.1: Yuma Almanac data files**

| Sub-Test Case Number | Yuma file(s)                                      |
|----------------------|---|
| 1                    | Perf_GNSS_2-1_Yuma.txt                            |
| 2                    | Perf_GNSS_2-2_Yuma.txt                            |
| 3                    | Perf_GNSS_2-3_Yuma.txt                            |
| 4                    | Perf_GNSS_2-1_Yuma.txt and Perf_GNSS_2-3_Yuma.txt |
| 5                    | [FFS]   |
| 6                    | [FFS]   |
| 7                    | [FFS]   |
| 8                    | [FFS]   |
| 9                    | Perf_GNSS_2-9_Yuma.txt                            |
| 10                   | Perf_GNSS_2-3_Yuma.txt and Perf_GNSS_2-9_Yuma.txt |

MS location: the MS location is calculated as a random offset from the reference location using the method described in subclause 6.2.1.2.5. The reference location is: latitude: 37 degrees 24 minutes 53.391 seconds north, longitude: 122 degrees 1 minute 3.722 seconds west, (Sunnyvale, USA), height: = 50m.

Nominal start time: 1st June 2012, 00:01:00 (GPS time).

Viable running time to maintain specified HDOP values: 19 minutes.

Visible satellites available for simulation and for which Assistance Data (other than Almanac) shall be generated are given in Table 6.2.1.2.2.2

**Table 6.2.1.2.2.2: Visible satellites**

| Sub-Test Case Number | SV IDs of Visible satellites   |
|----------------------|--|
| 1                    | 1, 8, 9, 10, 16, 19, 20, 21  |
| 2                    | [FFS]  |
| 3                    | 1, 7, 8, 11, 15, 17, 26, 27, 28  |
| 4                    | GPS: 1, 7, 8, 11, 15, 17, 26, 27, 28. GLONASS: 1, 8, 9, 10, 16, 19, 20, 21 |
| 5                    | [FFS]  |
| 6                    | [FFS]  |
| 7                    | [FFS]  |
| 8                    | [FFS]  |
| 9                    | 4, 15, 16, 17, 18, 25, 26, 27  |
| 10                   | GPS: 1, 7, 8, 11, 15, 17, 26, 27, 28. BDS: 4, 15, 16, 17, 18, 25, 26, 27   |

The satellites to be simulated in each test case have been selected in order to achieve the required HDOP. They are defined in Table 6.2.1.2.2.3.

**Table 6.2.1.2.2.3: Satellites to be simulated**

| <b>Sub-Test Case Number</b>  | <b>SV IDs of Satellites to be simulated</b> |
|--|---|
| 1  | 1, 8, 9, 10, 19, 20                         |
| 2  | [FFS]                                       |
| 3  | 1, 7, 8, 17, 27, 28 (Note)                  |
| 4  | GPS: 1, 8, 26. GLONASS 8, 10, 20            |
| 5  | [FFS]                                       |
| 6  | [FFS]                                       |
| 7  | [FFS]                                       |
| 8  | [FFS]                                       |
| 9  | 15, 16, 17, 25, 26, 27                      |
| 10   | GPS: 1, 8, 26. BDS: 15, 25, 27              |
| NOTE: For this sub-test the satellite simulator shall generate all the GPS signals supported by the MS for all the simulated satellites. |   |

Ionospheric model: see values in subclause 6.2.6.6.

Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [6].

### 6.2.1.2.3 GNSS Scenario #3

#### 6.2.1.2.3.0 Introduction

The following GNSS scenario #3 shall be used during the Nominal Accuracy test defined in TS 51.010-1 [4] subclause 70.16. The assistance data specified in the following subclauses for GNSS scenario #3 is consistent with this GNSS scenario.

The scenario used varies dependent on the SBAS supported by the MS and also whether QZSS is supported. The scenario to be used is defined in Table 6.2.1.2.3.0.1. Where more than one SBAS is supported use the scenario for MSAS if MSAS and QZSS are supported, otherwise use the scenario for the first supported SBAS in the list.

**Table 6.2.1.2.3.0.1: Scenarios used for Scenario #3**

| <b>SBAS supported</b> | <b>Scenarios used</b>                           |                                 |
|-----------------------|---|---------------------------------|
|                       | <b>MS supports QZSS</b>                         | <b>MS does not support QZSS</b> |
| None                  | GNSS Scenario #1 with QZSS Scenario #1          | GNSS Scenario #1                |
| WAAS                  | [FFS]   | GNSS Scenario #2 with WAAS      |
| EGNOS                 | [FFS]   | GNSS Scenario #3A with EGNOS    |
| MSAS                  | GNSS Scenario #1 with QZSS Scenario #1 and MSAS | GNSS Scenario #1 with MSAS      |
| GAGAN                 | [FFS]   | GNSS Scenario #3B with GAGAN    |

#### 6.2.1.2.3.1 GNSS Scenario #3A

[FFS]

#### 6.2.1.2.3.2 GNSS Scenario #3B

[FFS]

#### 6.2.1.2.3.3 QZSS Scenario #1

Yuma Almanac data: see file Perf\_QZSS\_1\_Yuma.txt in the GNSS\_data\_perf.zip file defined in Annex B.

MS location: as for GNSS scenario #1.

Nominal start time: as for GNSS scenario #1.

Viable running time to maintain specified requirements: as for GNSS scenario #1.

Satellite meeting specified requirements to be used for simulation and for which Assistance Data (other than Almanac) shall be generated: PRN 193.

#### 6.2.1.2.3.4 WAAS Scenario

Satellite positions: (PRN 135)133.0 degrees west, height: 35786037.417m, (PRN 138)107.3 degrees west, height: 35786037.417m.

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 135.

#### 6.2.1.2.3.5 EGNOS Scenario

Satellite positions: (PRN 120)15.5 degrees west, height: 35786037.417m, (PRN 124) 21.5 degrees west, height: 35786037.417m.

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 120.

#### 6.2.1.2.3.6 MSAS Scenario

Satellite positions: (PRN 129)140.0 degrees east, height: 35786037.417m, (PRN 137)145 degrees east, height: 35786037.417m

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 129.

#### 6.2.1.2.3.7 GAGAN Scenario

[FFS]

#### 6.2.1.2.4 GNSS Scenario #4

##### 6.2.1.2.4.0 Introduction

The following GNSS scenario #4 shall be used during the Nominal Accuracy test defined in TS 51.010-1 [4] subclause 70.16. The assistance data specified in the following subclauses for GNSS scenario #4 is consistent with this GNSS scenario.

The scenario used varies dependent on the SBAS supported by the MS and also whether QZSS is supported. The scenario to be used is defined in Table 6.2.1.2.4. 0.1. Where more than one SBAS is supported use the scenario for MSAS if MSAS and QZSS are supported, otherwise use the scenario for the first supported SBAS in the list.

**Table 6.2.1.2.4.0.1: Scenarios used for Scenario #4**

| SBAS supported | Scenarios used                                   |                              |
|----------------|--|------------------------------|
|                | MS supports QZSS                                 | MS does not support QZSS     |
| None           | GNSS Scenario #4D with QZSS Scenario #2          | GNSS Scenario #2             |
| WAAS           | [FFS]  | GNSS Scenario #4C with WAAS  |
| EGNOS          | [FFS]  | GNSS Scenario #4A with EGNOS |
| MSAS           | GNSS Scenario #4D with QZSS Scenario #2 and MSAS | GNSS Scenario #4D with MSAS  |
| GAGAN          | [FFS]  | GNSS Scenario #4B with GAGAN |

[FFS]

**6.2.1.2.4.2            GNSS Scenario #4B**

[FFS]

**6.2.1.2.4.3            GNSS Scenario #4C**

[FFS]

**6.2.1.2.4.4            GNSS Scenario #4D**

[FFS]

**6.2.1.2.4.5            QZSS Scenario #2**

Yuma Almanac data: see file Perf\_QZSS\_2\_Yuma.txt in the GNSS\_data\_perf.zip file defined in Annex B.

MS location: as for GNSS scenario #4D.

Nominal start time: as for GNSS scenario #4D.

Viable running time to maintain specified requirements: as for GNSS scenario #4D.

Satellite meeting specified requirements to be used for simulation and for which Assistance Data (other than Almanac) shall be generated: PRN [FFS].

**6.2.1.2.3.6            WAAS Scenario**

Satellite positions: (PRN 135)133.0 degrees west, height: 35786037.417m, (PRN 138)107.3 degrees west, height: 35786037.417m.

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 138.

**6.2.1.2.3.7            EGNOS Scenario**

Satellite positions: (PRN 120)15.5 degrees west, height: 35786037.417m, (PRN 124) 21.5 degrees west, height: 35786037.417m.

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 124.

**6.2.1.2.3.8            MSAS Scenario**

Satellite positions: (PRN 129)140.0 degrees east, height: 35786037.417m, (PRN 137)145 degrees east, height: 35786037.417m.

MS location: as for related GNSS scenario.

Satellite used for simulation: PRN 137.

**6.2.1.2.3.9            GAGAN Scenario**

[FFS]

**6.2.1.2.5            MS Location for TTFF test cases****6.2.1.2.5.0            Introduction**

This subclause defines the method for generating the random MS locations that are required to be used for the TTFF tests defined in TS 51.010-1 [4] subclause 70.16.

For every Test Instance in each TTFF test case, the MS location shall be randomly selected to be within 3 km of the Reference Location. The Altitude of the MS shall be randomly selected between 0 m to 500 m above WGS-84 reference ellipsoid. These values shall have uniform random distributions.

The MS location is calculated as an offset from the Reference Location.

#### 6.2.1.2.5.1 MS Location Offset

The MS location offset shall be calculated by selecting the next pair of random numbers, representing a pair of latitude and longitude offsets in degrees, from a standard uniform random number generator, with the following properties:

The ranges of the latitude and longitude offsets values shall be such that when translated onto the surface of the earth they shall lie within a 3km radius circle, centred on the Reference location specified for the GNSS scenario under consideration. For the purposes of this calculation make the following assumptions:

- a) Over the 3km radius circle at the Reference location the earth is flat and the meridians and parallels form a rectangular grid
- b) The earth is spherical with a radius of 6371141m (equal to the WGS 84 value at 35 degrees latitude)

The resolution used for the latitude and longitude offsets values shall be 90/2E23 for the latitude offset values and 360/2E24 for the longitude offset values, representing the coding resolution in degrees specified in 3GPP TS 23.032 [7].

#### 6.2.1.2.5.2 MS Altitude

The MS altitude value shall be calculated by selecting the next random number from a standard uniform random number generator, in the range 0 to 500, representing meters. The resolution used for the random number shall be 1, representing 1 meter.

### 6.2.2 Information elements required for normal MS based testing

The following A-GPS and A-GANSS assistance data IEs and fields shall be present for each test as appropriate for the GNSS(s) used during the test. Fields not specified shall not be present. The values of the fields are specified in subclause 6.2.6.

- a) **GPS Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |  |
|------------------|--|
| GPS Week         |  |
| GPS TOW          |  |
| GPS TOW Assist   |  |
| SatID            |  |
| TLM Message      |  |
| Anti-Spoof       |  |
| Alert            |  |
| TLM Reserved     |  |

- aa) **GPS Reference Time Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE      | Release        |
|-----------------------|----------------|
| GPS Week Cycle Number | Rel-10 onwards |

- b) **GANSS Reference Time IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE      |  |
|-----------------------|--|
| GANSS Day             |  |
| GANSS TOD             |  |
| GANSS TOD Uncertainty |  |
| GANSS Time ID         |  |

- c) **GNSS Time Model IE.** This information element is only required for multi system tests, and is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE                    |  |
|-------------------------------------|--|
| GNSS_TOD_ID                         |  |
| For each GNSS included in the test. |  |

- ca) **GNSS Time Model Extension IE.** This information element is only required for multi system tests, and is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE                    | Release        |
|-------------------------------------|----------------|
| GNSS_TOD_ID                         | Rel-10 onwards |
| For each GNSS included in the test. |                |
| Delta T                             | Rel-10 onwards |

- d) **GPS Reference Location IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE  |  |
|---|--|
| Ellipsoid point with Altitude and uncertainty ellipsoid |  |

- e) **GNSS Reference Location IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE  |  |
|---|--|
| Ellipsoid point with Altitude and uncertainty ellipsoid |  |

- f) **GPS Navigation Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE          |  |
|---------------------------|--|
| All satellite information |  |

- g) **GNSS Navigation Model IE.** This information element is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE          |  |
|---------------------------|--|
| All satellite information |  |

| GNSS                | Clock and Orbit Model Choice |
|---------------------|------------------------------|
| Galileo             | Model-1                      |
| Modernized GPS      | Model-3                      |
| GLONASS             | Model-4                      |
| QZSS QZS-L1         | Model-2                      |
| QZSS QZS-L1C/L2C/L5 | Model-3                      |
| SBAS                | Model-5                      |
| BDS                 | Model-6                      |

- h) **GPS Ionospheric Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |  |
|------------------|--|
| All              |  |

- i) **GNSS Ionospheric Model IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE |  |
|------------------|--|
| All              |  |

- j) **GNSS Additional Ionospheric Model IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| All              |

k) **GPS UTC Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| All              |

l) **Void**

m) **GANSS Auxiliary Information IE.** This information element is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE            |
|-----------------------------|
| GANSS Auxiliary Information |

### 6.2.3 Information elements required for MS based Sensitivity Fine Time Assistance test case

The A-GPS and A-GANSS assistance data IEs and fields that shall be present for the Sensitivity Fine Time Assistance test case shall be those specified in subclause 6.2.2 with the following exception. Fields not specified shall not be present. The values of the fields are specified in subclause 6.2.6.

a) **GPS Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| BCCH Carrier     |
| BSIC             |
| FNm              |
| TN               |
| BN               |
| GPS TOW Assist   |
| SatID            |
| TLM Message      |
| Anti-Spoof       |
| Alert            |
| TLM Reserved     |

b) **GANSS Reference Time IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE      |
|-----------------------|
| GANSS Day             |
| GANSS TOD             |
| GANSS TOD Uncertainty |
| GANSS Time ID         |
| BCCH Carrier          |
| BSIC                  |
| FNm                   |
| TN                    |
| BN                    |

### 6.2.4 Information elements available for normal MS assisted testing

The following A-GPS and A-GANSS assistance data IEs and fields shall be available for use in each test as appropriate for the GNSS(s) used during the test. Fields not specified shall not be present. The values of the fields are specified in subclause 6.2.6.

- a) **GPS Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |  |
|------------------|--|
| GPS Week         |  |
| GPS TOW          |  |
| GPS TOW Assist   |  |
| SatID            |  |
| TLM Message      |  |
| Anti-Spoof       |  |
| Alert            |  |
| TLM Reserved     |  |

- aa) **GPS Reference Time Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE      | Release        |
|-----------------------|----------------|
| GPS Week Cycle Number | Rel-10 onwards |

- b) **GANSS Reference Time IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE      |  |
|-----------------------|--|
| GANSS Day             |  |
| GANSS TOD             |  |
| GANSS TOD Uncertainty |  |
| GANSS Time ID         |  |

- c) **GANSS Time Model IE.** This information element is only required for multi system tests, and is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE |  |
|------------------|--|
| GNSS_TOD_ID      |  |

For each GNSS included in the test.

- ca) **GANSS Time Model Extension IE.** This information element is only required for multi system tests, and is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE                                   | Release        |
|--|----------------|
| GNSS_TOD_ID<br>For each GNSS included in the test. | Rel-10 onwards |
| Delta T  | Rel-10 onwards |

- d) **GPS Reference Location IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE  |  |
|---|--|
| Ellipsoid point with Altitude and uncertainty ellipsoid |  |

- e) **GANSS Reference Location IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE  |  |
|---|--|
| Ellipsoid point with Altitude and uncertainty ellipsoid |  |

- f) **GPS Almanac IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE          |  |
|---------------------------|--|
| Almanac Reference Week    |  |
| All Satellite information |  |

- fa) **GPS Almanac Extension IE.** This information element is defined in subclause A.4.2.4c of TS 44.031 [5].

| Fields of the IE          | Release        |

- ka) **GANSS Reference Measurement Extension IE.** This information element is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE | Release        |
|------------------|----------------|
| Num_Sat          | Rel-10 onwards |
| SV_ID            | Rel-10 onwards |
| Azimuth LSB      | Rel-10 onwards |
| Elevation LSB    | Rel-10 onwards |

- l) **GANSS Auxiliary Information IE.** This information element is defined in subclause A.4.2.6.2 of TS 44.031 [5].

| Fields of the IE            |
|-----------------------------|
| GANSS Auxiliary Information |

- m) **GPS UTC Model IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| All              |

## 6.2.5 Information elements available for MS assisted Sensitivity Fine Time Assistance test case

The A-GNSS assistance data IEs and fields that shall be available for use for the Sensitivity Fine Time Assistance test case shall be those specified in subclause 6.2.4 with the following exceptions. Fields not specified shall not be present. The values of the fields are specified in subclause 6.2.6.

- a) **GPS Reference Time IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE |
|------------------|
| GPS Week         |
| GPS TOW          |
| BCCH Carrier     |
| BSIC             |

|                |
|----------------|
| FNm            |
| TN             |
| BN             |
| GPS TOW Assist |
| SatID          |
| TLM Message    |
| Anti-Spoof     |
| Alert          |
| TLM Reserved   |

b) **GANSS Reference Time IE.** This information element is defined in subclause A.4.2.6.1 of TS 44.031 [5].

| Fields of the IE      |
|-----------------------|
| GANSS Day             |
| GANSS TOD             |
| GANSS TOD Uncertainty |
| GANSS Time ID         |
| BCCH Carrier          |
| BSIC                  |
| FNm                   |
| TN                    |
| BN                    |

c) **GPS Acquisition Assistance IE.** This information element is defined in subclause A.4.2.4 of TS 44.031 [5].

| Fields of the IE                     |
|--------------------------------------|
| GPS TOW                              |
| BCCH Carrier                         |
| BSIC                                 |
| Frame #                              |
| Timeslots #                          |
| Bit #                                |
| SVID/PRNID                           |
| Doppler (0 <sup>th</sup> order term) |
| Doppler (1 <sup>st</sup> order term) |
| Doppler Uncertainty                  |
| Code Phase                           |
| Integer Code Phase                   |
| GPS Bit number                       |
| Code Phase Search Window             |
| Azimuth                              |
| Elevation                            |

## 6.2.6 Contents of Information elements for Minimum performance testing

### 6.2.6.1 General

This subclause defines the assistance data values that shall be used for all Assisted GNSS performance tests defined in TS 51.010-1 [4] subclause 70.16. It is given for GNSS scenarios #1, #2, #3 and #4 and QZSS Scenarios #1 and #2, where it is different for each scenario; otherwise it is marked "All" where the same value is used for all scenarios.

Where assistance data is required on a per-satellite basis, or where the values of the data also varies with time it is specified in comma-separated-variable files in the GNSS\_data\_perf.zip file defined in Annex B. These files specify the values to be used for each satellite, indexed by satellite SV ID, and, where applicable, the values to be used indexed by both time and satellite SV ID.

Assistance data that is marked as "time varying" is specified and used in 80 ms increments. Interpolation between these values shall not be used.

Assistance data Information Elements and fields that are not specified shall not be used.

## 6.2.6.2 IE Random Offset Values

### 6.2.6.2.0 Introduction

This subclause defines the methods for generating the random offsets that are required to be applied to one or two assistance data IEs for certain tests defined in TS 51.010-1 [4] subclause 70.16.

### 6.2.6.2.1 GNSS TOW

For every Test Instance in each TTFF test case, the IE GPS TOW or GNSS TOD shall have a random offset, relative to GNSS system time, within the allowed error range of Coarse Time Assistance defined in the test case. This offset value shall have a uniform random distribution.

The offset value shall be calculated by selecting the next random number from a standard uniform random number generator, in the range specified for the GNSS Coarse Time assistance error range in the Test Requirements, Test parameters table for the test under consideration. The resolution used for the random number shall be 0.01, representing 10ms.

### 6.2.6.2.2 GNSS bit number (BN or Bit #)

In addition, for every Fine Time Assistance Test Instance the IE BN or Bit # shall have a random offset, relative to the true value of the relationship between the two time references, within the allowed error range of Fine Time Assistance defined in the test case. This offset value shall have a uniform random distribution.

The offset value shall be calculated by selecting the next random number from a standard uniform random number generator with the following properties:

The range shall be the number of GSM bits whose duration is less than the range specified for the GNSS Fine Time assistance error range in the Test Requirements, Test parameters table for the test under consideration.

The resolution used for the random number shall be 1, representing 1 GSM bit.

### 6.2.6.3 Satellite SV IDs to be used

For assistance data IEs which contain the field SatID or SVID/PRNID, and where the values for these fields are not given below, then the following values shall be used.

**Table 6.2.6.3.1: Satellite SV IDs to be used for SatID or SVID/PRNID**

| Sub-Test Case Number | GNSS #1  | GNSS #2  | GNSS #4C |
|----------------------|--|--|----------|
| 1                    | 3, 4, 5, 9, 10, 18, 19, 20   | 1, 8, 9, 10, 16, 19, 20, 21  | [FFS]    |
| 2                    | [FFS]  | [FFS]  | [FFS]    |
| 3                    | 1, 4, 11, 17, 19, 20, 23, 28, 32   | 1, 7, 8, 11, 15, 17, 26, 27, 28  | [FFS]    |
| 4                    | GPS: 1, 4, 11, 17, 19, 20, 23, 28, 32. GLONASS: 3, 4, 5, 9, 10, 18, 19, 20                   | GPS: 1, 7, 8, 11, 15, 17, 26, 27, 28. GLONASS: 1, 8, 9, 10, 16, 19, 20, 21 | [FFS]    |

### 6.2.6.4 Assistance Data Contents

Assistance Data GPS Reference Time: sub-test 3, 4, 10

**Table 6.2.6.4.1: GPS Reference Time (Fields occurring once per message)**

| Information Element  | Units | Value/remark GNSS #1   | Value/remark GNSS #2   | Value/remark GNSS #4C |
|--|-------|--|--|-----------------------|
| GPS Week   | Weeks | 1669   | 1690   | [FFS]                 |
| GPS TOW  |       | 1860 s<br>Start time. Add number of 80ms as required.<br>(Note 1)                                  | 432060 s<br>Start time. Add number of 80ms as required.<br>(Note 1)                                | [FFS]                 |
| BCCH Carrier   |       | ARFCN of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case. Absent otherwise. | ARFCN of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case. Absent otherwise. | -                     |
| BSIC   |       | BSIC of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case. Absent otherwise.  | BSIC of serving BCCH<br>Present for Sensitivity Fine Time Assistance test case. Absent otherwise.  | -                     |
| FNm  |       | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | -                     |
| TN   |       | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | -                     |
| BN   |       | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | -                     |
| <p>Note 1: GPS TOW</p> <p>This is the value in ms of GPS TOW when the GNSS scenario is initially started in the GNSS simulator. For all TTFF test cases, each time a GNSS scenario is used, the GPS start time shall be advanced by 120 seconds from the value last used so that, at the time the fix is made, it is at least 2 minutes later than the previous fix made with that scenario.</p> <p>The actual value of GPS TOW to be used in the Reference Time IE (before the addition of the random offset, if applicable) shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value. The accuracy shall be such that the Maximum Test System Uncertainty for Coarse Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.</p> <p>For all TTFF test cases a random offset is then added to the value of GPS TOW as described in subclause 6.2.6.2.</p> <p>Note 2: GSM Frame Number (FNm), Timeslot Number (TN) and Bit Number (BN)</p> <p>The values of the IEs FNm, TN and BN (before the addition of the random offset) shall be calculated at the time the IE is required. The accuracy of the relationship between the two time references shall be such that the Maximum Test System Uncertainty for Fine Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.</p> <p>A random offset is then added to the value of BN as described in subclause 6.2.6.2.</p> |       |  |  |                       |

| Frame #      |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |                       |
| Timeslots #  |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |                       |
| Bit #        |       | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case.<br>Absent otherwise. Note 2                   |                       |

**Note 1: GPS TOW**

This is the value in ms of GPS TOW when the GNSS scenario is initially started in the GPS simulator. For all TTFF test cases, each time a GNSS scenario is used, the GPS start time shall be advanced by 120 seconds from the value last used so that, at the time the fix is made, it is at least 2 minutes later than the previous fix made with that scenario.

The actual value of GPS TOW to be used in the Acquisition Assistance IE (before the addition of the random offset, if applicable) shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value. The accuracy shall be such that the Maximum Test System Uncertainty for Coarse Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

For all TTFF test cases a random offset is then added to the value of GPS TOW as described in subclause 6.2.6.2

This "final GPS TOW" value is then also used to determine the value of the Acquisition Assistance parameters marked as "Time varying" in subclause 6.2.6.4

**Note 2: GSM Frame Number (Frame #), Timeslot Number (Timeslots #) and Bit Number (Bit #)**

The values of the IEs Frame #, Timeslots # and Bit # (before the addition of the random offset) shall be calculated at the time the IE is required. The accuracy of the relationship between the two time references shall be such that the Maximum Test System Uncertainty for Fine Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

A random offset is then added to the value of Bit # as described in subclause 6.2.6.2

**Table 6.2.6.4.15: Satellite Information**

| Parameter            | Units | Value/remark GNSS #1 | Value/remark GNSS #2 | Value/remark GNSS #4C |
|----------------------|-------|----------------------|----------------------|-----------------------|
| Number of satellites |       | 9                    | 9                    | [FFS]                 |

**Table 6.2.6.4.16: GPS Acquisition Assistance (Fields occurring once per satellite)**

| Parameter  | Units | Value/remark GNSS #1 | Value/remark GNSS #2 | Value/remark GNSS #4C |
|------------|-------|----------------------|----------------------|-----------------------|
| SVID/PRNID |       | See Table 6.2.6.3-1  | See Table 6.2.6.3-1  | See Table 6.2.6.3-1   |

**Table 6.2.6.4.17: GPS Acquisition Assistance (Fields occurring once per satellite)**

| Parameter                            | Units  | Value/remark GNSS All   |
|--------------------------------------|--------|---|
| Doppler (0 <sup>th</sup> order term) | Hz     | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Doppler (1 <sup>st</sup> order term) | Hz/sec | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Doppler Uncertainty                  | Hz     | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Code Phase                           | chips  | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Integer Code Phase                   |        | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| GPS Bit number                       |        | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Code Phase Search Window             | chips  | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Azimuth                              | deg    | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |
| Elevation                            | deg    | Time varying. See file: Perf_GPS_Acquisition_assist_XX.csv (Note) |

**Note: Acquisition Assistance parameters**

This field is "Time varying" and its value depends on the "final GPS TOW" as described in subclause 6.2.6.8. The value of this field to be used shall be determined by taking the "final GPS TOW" value and selecting the nearest field value in the Perf\_GPS\_Acquisition\_assist\_XX.csv file corresponding to the value of "final current GPS TOW".

Assistance Data GPS Acquisition Assistance Extension: sub-test 3, 4, 10

**Table 6.2.6.4.17a: GPS Acquisition Assistance Extension (Fields occurring once per message)**

| Parameter | Units | Value/remark GNSS #1 | Value/remark GNSS #2 | Value/remark GNSS #4C | Release        |
|-----------|-------|----------------------|----------------------|-----------------------|----------------|
| N_SAT     |       | 9                    | 9                    | [FFS]                 | Rel-10 onwards |

**Table 6.2.6.4.17b: GPS Acquisition Assistance Extension (Fields occurring once per satellite)**

| Parameter     | Units   | Value/remark GNSS All  | Release        |
|---------------|---------|--|----------------|
| SatID         |         | See Table 6.2.6.3-1  | Rel-10 onwards |
| Azimuth LSB   | degrees | Time varying. Calculated from Azimuth, see file: Perf_GPS_Acquisition_assist_XX.csv (Note)   | Rel-10 onwards |
| Elevation LSB | degrees | Time varying. Calculated from Elevation, see file: Perf_GPS_Acquisition_assist_XX.csv (Note) | Rel-10 onwards |

Note: This field is "Time varying" and its value depends on the "current GPS TOW" as described in subclause 5.1.3. The value of this field to be used shall be determined by taking the "current GPS TOW" value and selecting the field value in the Perf\_GPS\_Acquisition\_assist\_XX.csv file corresponding to the value of "current GPS TOW".

Assistance Data GANSS Reference Time: sub-test 1, 2, 9

**Table 6.2.6.4.18: Assistance Data GANSS Reference Time: sub-test 1 (Fields occurring once per message)**

| Information Element   | Units   | Value/remark GNSS #1   | Value/remark GNSS #2   | Value/remark GNSS #4C |

| FNm                   |         | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   |                       |
| TN                    |         | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   |                       |
| BN                    |         | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   | Present for Sensitivity Fine Time Assistance test case. Absent otherwise. Note 2                   |                       |

**Note 1: GANSS TOD**

This is the value in seconds of GANSS TOD when the GNSS scenario is initially started in the GNSS simulator. For all TTFF test cases, each time a GNSS scenario is used, the GANSS start time shall be advanced by 120 seconds from the value last used so that, at the time the fix is made, it is at least 2 minutes later than the previous fix made with that scenario.

The actual value of GANSS TOD to be used in the Reference Time IE (before the addition of the random offset, if applicable) shall be calculated at the time the IE is required by adding the elapsed time since the time the scenario was started in the GNSS simulator to this value. The accuracy shall be such that the Maximum Test System Uncertainty for Coarse Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

For all TTFF test cases a random offset is then added to the value of GANSS TOD as described in subclause 6.2.6.2

**Note 2: GSM Frame Number (FNm), Timeslot Number (TN) and Bit Number (BN)**

The values of the IEs FNm, TN and BN (before the addition of the random offset) shall be calculated at the time the IE is required. The accuracy of the relationship between the two time references shall be such that the Maximum Test System Uncertainty for Fine Time Assistance, specified in Table A5.5.1 of TS 51.010-1 [4], shall be met.

A random offset is then added to the value of BN as described in subclause 6.2.6.2

**Table 6.2.6.4.19: Assistance Data GANSS Reference Time: sub-test 2 (Fields occurring once per message)**

| Information Element   | Units   | Value/remark GNSS #1   | Value/remark GNSS #2   | Value/remark GNSS #4C  |

## Annex A (normative): GPS data files

### A.1 GPS data files for signalling tests

The GPS data files for use in GPS signalling tests are contained in archive GPS\_Data\_Sig\_V5.zip which accompanies this document.

### A.2 GPS data files for Minimum Performance tests

The GPS data files for use in GPS Minimum Performance tests are contained in archive GPS\_Data\_Perf\_V4.zip which accompanies this document. The different scenarios are designated with suffixes XX in the zip file, where XX is 01, 02, 03 for scenarios #1, #2, #3.

---

## Annex B (normative): GNSS data files

### B.1 GNSS data files for signalling tests

The GNSS data files for use in GNSS signalling tests are contained in archive GNSS\_Data\_Sig\_V6.zip which accompanies the present document.

### B.2 GNSS data files for Minimum Performance tests

The GNSS data files for use in GNSS Minimum Performance tests are contained in archive GNSS\_Data\_Perf\_V6.zip which accompanies the present document. The different scenarios are designated with suffixes XX in the zip file, where XX is 01, 02, 03 etc. for scenarios #1, #2, #3 etc.
