Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the **GSM** logo are trademarks registered and owned by the GSM Association.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) european Common information sharing environment service and Data Model (CDM).

The present document is part 3 of a multi-part deliverable. Full details of the entire series can be found in part 1 [i.11].

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

1 Scope

The present document provides parts of the Abstract Test Suite (ATS) for the CDM service APIs for the exchange of messages complying with the CDM Data Model, in accordance with the relevant guidance given in ISO/IEC 9646-7 [i.5].

The ISO standards for the methodology of conformance testing (ISO/IEC 9646-1 [i.2] and ISO/IEC 9646-2 [i.3]) as well as the ETSI rules for conformance testing (ETSI ETS 300 406 [i.6]) are used as a basis for the test methodology.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in ETSI GS CDM 004 [i.8], ETSI GS CDM 005 [i.9], ISO/IEC 9646-6 [i.4] and ISO/IEC 9646-7 [i.5] apply.

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ATM	Abstract Test Method
ATS	Abstract Test Suite
BV	Valid Behaviour tests
CDM	CISE Data Model
CISE	Common Information Sharing Environment
ES	ETSI Standard
HTML	HyperText Markup Language
HTTP	Hypertext Transfer Protocol
IUT	Implementation Under Test
PCTR	Protocol Conformance Testing Report
PICS	Protocol Implementation Conformance Statement
PIXIT	Protocol Implementation eXtra Information for Testing
SUT	System Under Test
TC	Test Case
TP	Test Purposes
TS	Test System
TTCN	Testing and Test Control Notation
UT	Upper Tester

4 Abstract Test Method

4.1 Introduction

The following clauses describe the ATM used to test the conformance test specifications for CISE.

4.2 Abstract protocol tester

The abstract protocol tester used by the test suite is described in Figure 1. The Test System simulates valid and invalid protocol behaviour and analyses the reaction of the IUT.

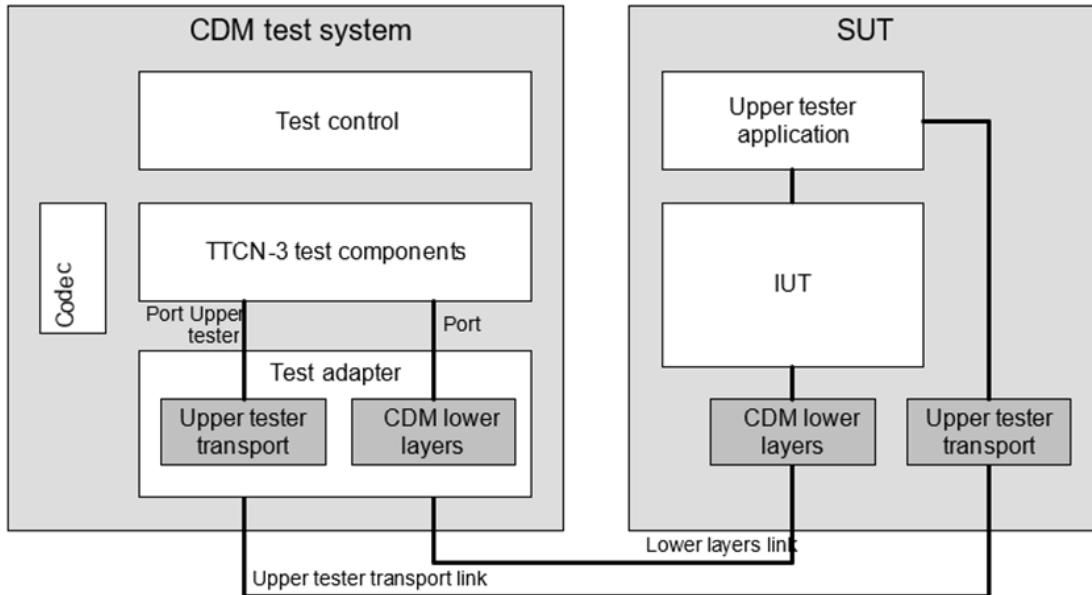

Figure 1: Abstract protocol tester - CISE ATS

4.3 Test Configuration

4.3.1 Introduction

This test suite uses three test configurations as defined in clauses below.

4.3.2 Config_CISE_1

The CISE Node is acting as the IUT and the TS is simulation an Adaptor. This configuration is used to test the interface between the CISE Node and the CISE Adaptor.

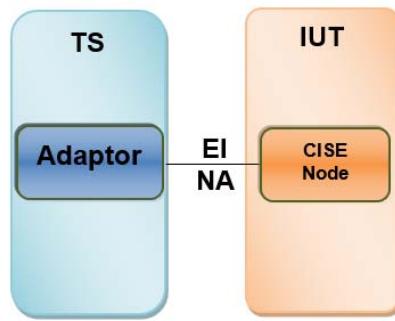

Figure 2: Config_CISE_1 to validate interface between IUT and the CISE Adaptor

4.3.3 Config_CISE_2

The CISE Node is acting as the IUT and the TS is simulating both the Adaptor and the CISE network. This configuration is used to test the interface between the CISE Node and the CISE Network.

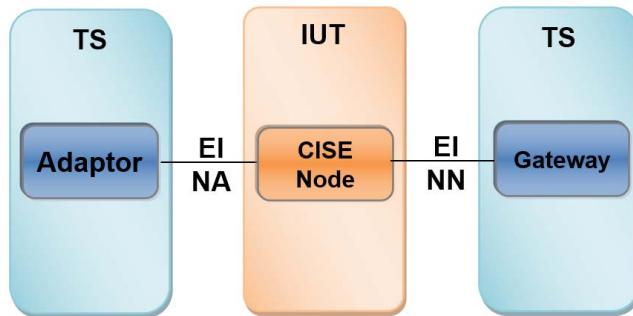

Figure 3: Config_CISE_2 to validate interface between IUT and the CISE Network

4.3.4 Config_CISE_3

The CISE Adaptor is acting as the IUT. This configuration is used to test the interface between the CISE Adaptor and the CISE Node.

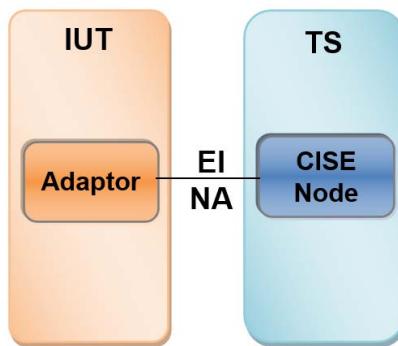

Figure 4: Config_CISE_3 to validate interface between IUT and the CISE Node

4.4 Test architecture

The test Suite is based on the test architecture described in ETSI ES 201 873-1 [i.7]. The test system communicates with the CISE IUT over the httpPort and over the utPorts as described in clause 4.5.

4.5 Ports and ASPs (Abstract Services Primitives)

4.5.0 Overview

Three ports are used by the CISE ATS:

- The communication Port, httpPort, of type HttpPort.
- The notification Port, http_notifPort, of type HttpPort.
- The Upper Tester Port, utPort, of type HttpPort.

4.5.1 Primitives of the httpPort

Four types of primitives are used in the httpPort:

- PullRequest.
- Push.

- Acknowledgement.
- Feedback.

4.5.2 Primitives of the http_notifPort

Four types of primitives are used in the httpPort:

- PullRequest.
- Push.
- Acknowledgement.
- Feedback.

4.5.3 Primitives of the utPort

4.5.3.1 Introduction

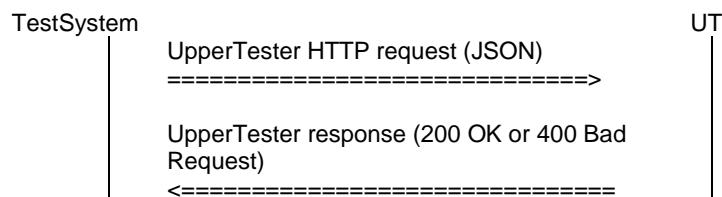

The Upper Tester port uses these types of primitives:

- The UtTrigger primitive used to trigger the event in the IUT to send a CDM message.

4.5.3.2 UpperTester primitives

4.5.3.2.0 Overview

The UpperTester primitives are sent by the test system to request the IUT to trigger a message. The communication exchange is initiated by the test system and consists in an HTTP request - response exchange as described below. The UpperTester result message is specific to each primitive and may be used to indicate the success of the request or to report some values.

4.5.3.2.1 Common Trigger payload

4.5.3.2.1.0 Overview

Table 1 contains the common data elements of the message to be triggered.

Table 1: Common Trigger payload

Name	Type	Value
Message Id	Json.String	UUID format
Context Id	Json.String	UUID format
Correlation ID	Json.String	UUID format

Sender Id	Json.String	UUID format
Recipient Id	Json.String	UUID format

Name	Type	Value
Message Type	Json.String	PullRequest Discovery Subscribe GetSubscription Unsubscribe
UtDescription	Structure	Specific to the Message Type

4.5.3.2.1.1 Triggering a pull request for a Vessel service

Table 2 contains the data elements specific to a Vessel service (ETSI GS CDM 005 [i.9]).

Table 2: Vessel service specific payload

Name	Type	Value
IMO Number	Json.String	UUID format
Type	Json.String	UUID format

4.5.3.2.1.2 Triggering a pull request for an Action service

Table 3 contains the data elements specific to a Action service (ETSI GS CDM 005 [i.9]).

Table 3: Action service specific payload

Name	Type	Value
IMO Number	Json.String	UUID format
Type	Json.String	UUID format

5 External functions

The external functions, described in Table 4, have been defined in order to perform cryptographic operations and handle complex computations.

Table 4: External functions

Function	Parameters			Return	
	Dir.	Name	Type	Value	Type
fx_getCurrentTimeUtc	in			Current time since 01/01/1970 in UTC format	UInt64
fx_enc_base64	in	p_to_encode	octetstring	B64 decoded value	octetstring
fx_dec_base64	in	p_to_decode	octetstring	Signature	octetstring
	in	p_privateKey	octetstring		
fx_get_current_date_time	in	p_shift_time	integer	Time increment	charstring

6 ATS conventions

6.1 Introduction

The ATS conventions are intended to give a better understanding of the ATS but they also describe the conventions made for the development of the ATS. These conventions shall be considered during any later maintenance or further development of the ATS.

The ATS conventions contain the testing and the naming conventions described in clause 6.2. The testing conventions describe the functional structure of the ATS. The naming conventions describe the structure of the naming of all ATS elements.

To define the ATS, the guidelines of ETSI ETS 300 406 [i.6] were considered.

6.2 Naming conventions

6.2.1 Introduction

This test suite follows the naming convention guidelines provided in ETSI EG 202 798 [i.1].

6.2.2 General guidelines

The naming convention is based on the following underlying principles:

- in most cases, identifiers should be prefixed with a short alphabetic string (specified in Table 5) indicating the type of TTCN-3 element it represents;
- suffixes should not be used except in those specific cases identified in Table 8;
- prefixes and suffixes should be separated from the body of the identifier with an underscore ("_");

EXAMPLE 1: c_sixteen, t_wait.

- only module names, data type names and module parameters should begin with an upper-case letter. All other names (i.e. the part of the identifier following the prefix) should begin with a lower-case letter;
- the start of second and subsequent words in an identifier should be indicated by capitalizing the first character. Underscores should not be used for this purpose.

EXAMPLE 2: f_initialState.

Table 5 specifies the naming guidelines for each element of the TTCN-3 language indicating the recommended prefix, suffixes (if any) and capitalization.

Table 5: ETSI TTCN-3 generic naming conventions

Language element	Naming convention	Prefix	Example identifier
Module	Use upper-case initial letter	none	IPv6Templates
Group within a module	Use lower-case initial letter	none	messageGroup
Data type	Use upper-case initial letter	none	SetupContents
Message template	Use lower-case initial letter	m_	m_setupInit
Message template with wildcard or matching expression	Use lower-case initial letters	mw_	mw_anyUserReply
Modifying message template	Use lower-case initial letter	md_	md_setupInit
Modifying message template with wildcard or matching expression	Use lower-case initial letters	mdw_	mdw_anyUserReply
Signature template	Use lower-case initial letter	s_	s_callSignature
Port instance	Use lower-case initial letter	none	signallingPort
Test component instance	Use lower-case initial letter	none	userTerminal
Constant	Use lower-case initial letter	c_	c_maxRetransmission
Constant (defined within component type)	Use lower-case initial letter	cc_	cc_minDuration
External constant	Use lower-case initial letter	cx_	cx_maclId
Function	Use lower-case initial letter	f_	f_authentication()
External function	Use lower-case initial letter	fx_	fx_calculateLength()
Altstep (incl. Default)	Use lower-case initial letter	a_	a_receiveSetup()
Test case	Use ETSI numbering	TC_	TC_CDM_NODE_PULL_RE QUEST_BV_07
Variable (local)	Use lower-case initial letter	v_	v_maclId
Variable (defined within a component type)	Use lower-case initial letters	vc_	vc_systemName
Timer (local)	Use lower-case initial letter	t_	t_wait
Timer (defined within a component)	Use lower-case initial letters	tc_	tc_authMin
Module parameters for PICS	Use all upper case letters	PICS_	PICS_CDM_VESSEL_SER VICE
Module parameters for other parameters	Use all upper case letters	PX_	PX_VESSEL_NAME

Language element	Naming convention	Prefix	Example identifier
Formal Parameters	Use lower-case initial letter	p_	p_maclId
Enumerated Values	Use lower-case initial letter	e_	e_syncOk

6.2.3 CDM specific TTCN-3 naming conventions

Next to such general naming conventions, Table 6 shows specific naming conventions that apply to the CDM TTCN-3 test suite.

Table 6: CDM specific TTCN-3 naming conventions

Language element	Naming convention	Prefix	Example identifier
CDM Module	Use upper-case initial letter	Its"IUTname"_{}	AtsCise_{}
Module containing types and values	Use upper-case initial letter	Its"IUTname"_{TypesAndValues}	AtsCise_{TypesAndValues}
Module containing Templates	Use upper-case initial letter	Its"IUTname"_{Templates}	AtsCise_{Templates}
Module containing test cases	Use upper-case initial letter	Its"IUTname"_{TestCases}	AtsCise_{TestCases}
Module containing functions	Use upper-case initial letter	Its"IUTname"_{Functions}	AtsCise_{Functions}
Module containing external functions	Use upper-case initial letter	Its"IUTname"_{ExternalFunction}s	AtsCise_{ExternalFunction}s
Module containing components, ports and message definitions	Use upper-case initial letter	Its"IUTname"_{Interface}	AtsCise_{Interface}
Module containing main component definitions	Use upper-case initial letter	Its"IUTname"_{TestSystem}	AtsCise_{TestSystem}
Module containing the control part	Use upper-case initial letter	Its"IUTname"_{TestControl}	AtsCise_{TestControl}

6.2.4 Usage of Log statements

All TTCN-3 log statements use the following format using the same order:

- Three asterisks.
- The TTCN-3 test case or function identifier in which the log statement is defined.
- One of the categories of log: INFO, WARNING, ERROR, PASS, FAIL, INCONC, TIMEOUT.
- Free text.
- Three asterisks.

EXAMPLE 1:

```
log( *** TC_CDM_NODE_MULTI_PULL_REQ_BV_01: INFO: Preamble: Received and answered the Request
*** )
```

Furthermore, the following rules are applied for the CISE ATS:

- Log statements are used in the body of the functions, so that invocation of functions are visible in the test logs.
- All TTCN-3 *setverdict* statements are combined with a log statement following the same above rules (see example 2).

EXAMPLE 2:

```
setverdict(pass, *** TC_CDM_NODE_MULTI_PULL_REQ_BV_01: PASS: Response correctly accepted *** )
```

6.2.5 Test Case (TC) identifier

Table 7 shows the test case naming convention, which follows the same naming convention as the test purposes.

Table 7: TC naming convention

Identifier	TC_<root>_<tgt>_<gr>_<sub-gr>_<sn>_<x>	Sub-Group	Category
<root> = root		CDM	CISE Conformance Test
<tgt> = target		NODE_EI_NA	CISE Node/Adaptor interface
		NODE_IF_NC	CISE Node/Gateway interface
		ADAPTOR	Adaptor
		SECURITY	Security
<gr> = group	PULL_REQUEST	PullRequest communication	
	PULL_MULTI_P ULL_REQ	PullRequest multicast communication	
	PULL_DISC	PullRequest Discovery	
	SUB	Subscription	
	SUB_LOOK	Subscribers lookup	
	SUB_DELETE	Subscription deletion	
	PUSH_NOTIFY	Notification communication	
	ACK	Asynchronous acknowledgement	
	FEEDBACK	Feedback communication	
<sn> = test case sequential number	N/A	01 to 99	
<x> = category	BV	Valid Behaviour tests	
	BO	Invalid Behaviour Tests	

EXAMPLE: TP identifier: TP_CDM_NODE_MULTI_PULL_REQ_BV_01
 TC identifier: TC_CDM_NODE_MULTI_PULL_REQ_BV_01

6.3 On line documentation

The T3D tool enables providing on-line documentation browser in HTML, by tagging TTCN-3 comments. These tags are defined in Table 8.

Table 8: TTCN-3 comment tags

Tag	Description
@author	Specifies the names of the authors or an authoring organization which either has created or is maintaining a particular piece of TTCN-3 code.
@desc	Describes the purpose of a particular piece of TTCN-3 code. The description should be concise yet informative and describe the function and use of the construct.
@remark	Adds extra information, such as the highlighting of a particular feature or aspect not covered in the description.
@see	Refers to other TTCN-3 definitions in the same or another module.
@return	Provides additional information on the value returned by a given function.
@param	Documents the parameters of parameterized TTCN-3 definitions.
@version	States the version of a particular piece of TTCN-3 code.

The HTML files result from the compilation of the TTCN-3 modules with the T3D tool. These HTML files are ready for browsing, and contain links enabling to navigate through the ATS.

EXAMPLE:

```
/***
 * @desc Check that the IUT responds with an HTTP 200 OK Acknowledgment response when receiving
multiple PullRequest for Vessel service - no Acknowledgment required
 * @see      ETSI GS CDM 007-2 [i.10], clause 6.2.2      Pull Request multicast
 * @reference ETSI GS CDM 004 [i.8], clause 5.4.2 Pull
 */
```

Annex A (informative): ATS in TTCN-3

A.1 TTCN-3 files and other related modules

This test suite has been produced using the Testing and Test Control Notation (TTCN) according to ETSI ES 201 873-1 [i.7].

ETSI GS CDM 004 [i.8], ETSI GS CDM 005 [i.9] and ETSI GS CDM 007-2 [i.10] have been applied to develop this test suite.

This test suite has been compiled error-free using two different commercial TTCN-3 compilers.

The TTCN-3 library modules, which form parts of the present document, are accessible from the ETSI source repository:

- <https://forge.etsi.org/rep/cdm/cise-data-model.git>.

Annex B (normative): Partial PIXIT pro forma for Security

B.1 The right to copy

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the Partial PIXIT pro forma in this annex so that it can be used for its intended purposes and may further publish the completed Partial PIXIT.

B.2 Introduction

Annex C (normative): PCTR pro forma for Security

C.1 The right to copy

Notwithstanding the provisions of the copyright clause related to the text of the present document, ETSI grants that users of the present document may freely reproduce the PCTR pro forma in this annex so that it can be used for its intended purposes and may further publish the completed PCTR.

C.2 Introduction

The PCTR pro forma is based on ISO/IEC 9646-6 [i.4].

C.3 Identification summary

C.3.1 Protocol conformance test report

A protocol conformance test report shall be as in Table C.1.

Table C.1: Protocol conformance test report

PCTR Number:	
PCTR Date:	
Corresponding SCTR Number:	
Corresponding SCTR Date:	
Test Laboratory Identification:	
Test Laboratory Manager:	
Signature:	

C.3.2 IUT identification

An IUT shall be identified as specified in Table C.2.

Table C.2: IUT identification

Name:	
Version:	
Protocol specification:	
PICS:	
Previous PCTR if any:	

C.3.3 Testing environment

The testing environment shall be as specified in Table C.3.

Table C.3: Testing environment

PIXIT Number:	
ATS Specification:	
Abstract Test Method:	
Means of Testing identification:	
Date of testing:	
Conformance Log reference(s):	
Retention Date for Log reference(s):	

C.3.4 Limits and reservation

Additional information relevant to the technical contents or further use of the test report, or the rights and obligations of the test laboratory and the client, may be given here. Such information may include restriction on the publication of the report.

.....

C.4 IUT Conformance status

This IUT has or has not been shown by conformance assessment to be non-conforming to the specified protocol specification.

Strike the appropriate words in this sentence. If the PICS for this IUT is consistent with the static conformance requirements (as specified in clause C.3 in the present document) and there are no "FAIL" verdicts to be recorded (in clause C.6 in the present document) strike the words "has or", otherwise strike the words "or has not".

C.5 Static conformance summary

The PICS for this IUT is or is not consistent with the static conformance requirements in the specified protocol.

Strike the appropriate words in this sentence.

C.6 Dynamic conformance summary

The test campaign did or did not reveal errors in the IUT.

Strike the appropriate words in this sentence. If there are no "FAIL" verdicts to be recorded (in clause C.8 of the present document) strike the words "did or" otherwise strike the words "or did not".

C.7 Static conformance review report

If clause C.3 indicates non-conformance, this clause itemizes the mismatches between the PICS and the static conformance requirements of the specified protocol specification.

.....
.....
.....
.....
.....

C.8 Test campaign report

For the complete list of all test cases refer to the test control module of the file described in Annex A of the present document.

C.9 Observations

Additional information relevant to the technical content of the PCTR is given here.
