Contents

Intellectual Property Rights	19
Foreword.....	19
Modal verbs terminology.....	19
1 Scope	20
2 References	20
2.1 Normative references	20
2.2 Informative references.....	21
3 Definition of terms, symbols and abbreviations.....	22
3.1 Terms.....	22
3.2 Symbols.....	22
3.3 Abbreviations	22
4 Overview of TOSCA model.....	23
5 General concept of using TOSCA to model NFV descriptors	23
5.1 Introduction	23
5.2 Network Service Descriptor	23
5.3 Virtualised Network Function Descriptor	23
5.4 Physical Network Function Descriptor.....	24
5.5 toasca_definitions_version and Namespace prefix	24
5.6 Imports statement	25
5.6.1 VNFD TOSCA service template	25
5.6.2 NSD TOSCA service template	25
5.6.3 PNFD TOSCA service template	26
5.7 Type extension	26
5.7.1 Introduction.....	26
5.7.2 Rules	26
5.7.3 VNFD Types.....	27
5.7.4 NSD types.....	28
5.8 Non-Backward Compatible changes	28
6 VNFD TOSCA model.....	28
6.1 Introduction	28
6.2 Data Types.....	29
6.2.1 toasca.datatypes.nfv.CpProtocolData	29
6.2.1.1 Description	29
6.2.2 toasca.datatypes.nfv.AddressData	30
6.2.2.1 Description	30
6.2.3 toasca.datatypes.nfv.L2AddressData.....	30
6.2.3.1 Description	30
6.2.4 toasca.datatypes.nfv.VirtualNetworkInterfaceRequirements	30
6.2.4.1 Description	30
6.2.4.2 Properties	30
6.2.4.3 Definition	31
6.2.4.4 Examples.....	31
6.2.4.5 Additional Requirements	31
6.2.5 toasca.datatypes.nfv.L3AddressData.....	31
6.2.5.1 Description	31
6.2.6 toasca.datatypes.nfv.RequestedAdditionalCapability.....	32
6.2.6.1 Description	32
6.2.6.2 Properties	32
6.2.6.3 Definition	33
6.2.6.4 Examples.....	33
6.2.6.5 Additional Requirements	33
6.2.7 toasca.datatypes.nfv.VirtualMemory.....	33
6.2.7.1 Description	33
6.2.7.2 Properties	34

6.2.7.3	Definitions	34
6.2.7.4	Examples	34
6.2.7.5	Additional Requirements	35
6.2.8	tosca.datatypes.nfv.VirtualCpu	35
6.2.8.1	Description	35
6.2.8.2	Properties	35
6.2.8.3	Definition	35
6.2.8.4	Examples	36
6.2.8.5	Additional Requirements	36
6.2.9	tosca.datatypes.nfv.VirtualCpuPinning	36
6.2.9.1	Description	36
6.2.9.2	Properties	36
6.2.9.3	Definition	37
6.2.9.4	Examples	37
6.2.9.5	Additional Requirements	37
6.2.10	tosca.datatypes.nfv.VnfcConfigurableProperties	37
6.2.10.1	Description	37
6.2.10.2	Properties	38
6.2.10.3	Definition	38
6.2.10.4	Examples	38
6.2.10.5	Additional Requirements	39
6.2.11	tosca.datatypes.nfv.VnfcAdditionalConfigurableProperties	39
6.2.11.1	Description	39
6.2.11.2	Properties	39
6.2.11.3	Definition	39
6.2.12	tosca.datatypes.nfv.VduProfile	39
6.2.12.1	Description	39
6.2.12.2	Properties	40
6.2.12.3	Definition	40
6.2.12.4	Examples	41
6.2.12.5	Additional requirements	42
6.2.13	tosca.datatypes.nfv.VIProfile	42
6.2.13.1	Description	42
6.2.13.2	Properties	42
6.2.13.3	Definition	43
6.2.13.4	Examples	43
6.2.13.5	Additional Requirements	43
6.2.14	tosca.datatypes.nfv.VirtualLinkProtocolData	43
6.2.14.1	Description	43
6.2.14.2	Properties	44
6.2.14.3	Definition	44
6.2.14.4	Examples	44
6.2.14.5	Additional Requirements	44
6.2.15	tosca.datatypes.nfv.L2ProtocolData	45
6.2.15.1	Description	45
6.2.15.2	Properties	45
6.2.15.3	Definition	45
6.2.15.4	Examples	46
6.2.15.5	Additional Requirements	46
6.2.16	tosca.datatypes.nfv.L3ProtocolData	46
6.2.16.1	Description	46
6.2.16.2	Properties	46
6.2.16.3	Definition	47
6.2.16.4	Examples	48
6.2.16.5	Additional Requirements	48
6.2.17	tosca.datatypes.nfv.IpAllocationPool	48
6.2.17.1	Description	48
6.2.17.2	Properties	48
6.2.17.3	Definition	49
6.2.17.4	Examples	49
6.2.17.5	Additional Requirements	49
6.2.18	tosca.datatypes.nfv.InstantiationLevel	49

6.2.18.1	Description	49
6.2.18.2	Properties	49
6.2.18.3	Definition	50
6.2.18.4	Examples	50
6.2.18.5	Additional Requirements	50
6.2.19	tosca.datatypes.nfv.VduLevel	50
6.2.19.1	Description	50
6.2.19.2	Properties	50
6.2.19.3	Definition	51
6.2.19.4	Examples	51
6.2.19.5	Additional Requirements	51
6.2.20	tosca.datatypes.nfv.VnfLcmOperationsConfiguration	51
6.2.20.1	Description	51
6.2.20.2	Properties	51
6.2.20.3	Definition	52
6.2.20.4	Examples	53
6.2.20.5	Additional Requirements	53
6.2.21	tosca.datatypes.nfv.VnfInstantiateOperationConfiguration	53
6.2.21.1	Description	53
6.2.21.2	Properties	53
6.2.21.3	Definition	53
6.2.21.4	Examples	53
6.2.21.5	Additional Requirements	53
6.2.22	tosca.datatypes.nfv.VnfScaleOperationConfiguration	54
6.2.22.1	Description	54
6.2.22.2	Properties	54
6.2.22.3	Definition	54
6.2.22.4	Examples	54
6.2.22.5	Additional Requirements	54
6.2.23	tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration	55
6.2.23.1	Description	55
6.2.23.2	Properties	55
6.2.23.3	Definition	55
6.2.23.4	Examples	55
6.2.23.5	Additional Requirements	55
6.2.24	tosca.datatypes.nfv.VnfHealOperationConfiguration	55
6.2.24.1	Description	55
6.2.24.2	Properties	56
6.2.24.3	Definition	56
6.2.24.4	Examples	56
6.2.24.5	Additional Requirements	56
6.2.25	tosca.datatypes.nfv.VnfTerminateOperationConfiguration	56
6.2.25.1	Description	56
6.2.25.2	Properties	57
6.2.25.3	Definition	57
6.2.25.4	Examples	57
6.2.25.5	Additional Requirements	57
6.2.26	tosca.datatypes.nfv.VnfOperateOperationConfiguration	57
6.2.26.1	Description	57
6.2.26.2	Properties	58
6.2.26.3	Definition	58
6.2.26.4	Examples	58
6.2.26.5	Additional Requirements	58
6.2.27	tosca.datatypes.nfv.ScaleInfo	59
6.2.27.1	Description	59
6.2.27.2	Properties	59
6.2.27.3	Definition	59
6.2.27.4	Examples	59
6.2.27.5	Additional Requirements	59
6.2.28	tosca.datatypes.nfv.ScalingAspect	59
6.2.28.1	Description	59
6.2.28.2	Properties	60

6.2.28.3	Definition	60
6.2.28.4	Examples	61
6.2.28.5	Additional Requirements	61
6.2.29	tosca.datatypes.nfv.LinkBitrateRequirements	61
6.2.29.1	Description	61
6.2.30	tosca.datatypes.nfv.ConnectivityType	61
6.2.30.1	Description	61
6.2.31	tosca.datatypes.nfv.VnfConfigurableProperties.....	61
6.2.31.1	Description	61
6.2.31.2	Properties	61
6.2.31.3	Definition	63
6.2.31.4	Examples	64
6.2.31.5	Additional Requirements	65
6.2.32	tosca.datatypes.nfv.VnfAdditionalConfigurableProperties.....	66
6.2.32.1	Description	66
6.2.32.2	Properties	66
6.2.32.3	Definition	66
6.2.32.4	Examples	66
6.2.32.5	Additional Requirements	67
6.2.33	tosca.datatypes.nfv.VnfInfoModifiableAttributes	67
6.2.33.1	Description	67
6.2.33.2	Properties	67
6.2.33.3	Definition	67
6.2.33.4	Examples	67
6.2.33.5	Additional Requirements	68
6.2.34	tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions	68
6.2.34.1	Description	68
6.2.34.2	Properties	68
6.2.34.3	Definition	68
6.2.34.4	Examples	68
6.2.34.5	Additional Requirements	68
6.2.35	tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata	68
6.2.35.1	Description	68
6.2.35.2	Properties	68
6.2.35.3	Definition	69
6.2.35.4	Examples	69
6.2.35.5	Additional Requirements	69
6.2.36	tosca.datatypes.nfv.Qos	69
6.2.36.1	Description	69
6.2.37	tosca.datatypes.nfv.LogicalNodeData.....	70
6.2.37.1	Description	70
6.2.37.2	Properties	70
6.2.37.3	Definition	70
6.2.37.4	Examples	70
6.2.37.5	Additional Requirements	71
6.2.38	tosca.datatypes.nfv.SwImageData	71
6.2.38.1	Description	71
6.2.38.2	Properties	71
6.2.38.3	Definition	72
6.2.38.4	Examples	73
6.2.38.5	Additional Requirements	73
6.2.39	tosca.datatypes.nfv.VirtualBlockStorageData	73
6.2.39.1	Description	73
6.2.39.2	Properties	74
6.2.39.3	Definition	74
6.2.39.4	Examples	74
6.2.39.5	Additional Requirements	75
6.2.40	tosca.datatypes.nfv.VirtualObjectStorageData	75
6.2.40.1	Description	75
6.2.40.2	Properties	75
6.2.40.3	Definition	75
6.2.40.4	Examples	75

6.2.40.5	Additional Requirements	75
6.2.41	tosca.datatypes.nfv.VirtualFileStorageData	76
6.2.41.1	Description	76
6.2.41.2	Properties	76
6.2.41.3	Definition	76
6.2.41.4	Examples	76
6.2.41.5	Additional Requirements	76
6.2.42	tosca.datatypes.nfv.VirtualLinkBitrateLevel	77
6.2.42.1	Description	77
6.2.42.2	Properties	77
6.2.42.3	Definition	77
6.2.42.4	Examples	77
6.2.42.5	Additional Requirements	77
6.2.43	tosca.datatypes.nfv.VnfOperationAdditionalParameters	77
6.2.43.1	Description	77
6.2.43.2	Properties	78
6.2.43.3	Definition	78
6.2.43.4	Examples	78
6.2.43.5	Additional Requirements	78
6.2.44	tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration	79
6.2.44.1	Description	79
6.2.44.2	Properties	79
6.2.44.3	Definition	79
6.2.44.4	Examples	79
6.2.44.5	Additional Requirements	79
6.2.45	tosca.datatypes.nfv.VnfChangeExtConnectivityOperation Configuration	79
6.2.45.1	Description	79
6.2.45.2	Properties	80
6.2.45.3	Definition	80
6.2.45.4	Examples	80
6.2.45.5	Additional Requirements	80
6.2.46	tosca.datatypes.nfv.VnfMonitoringParameter	80
6.2.47	tosca.datatypes.nfv.VnfcMonitoringParameter	80
6.2.47.1	Description	80
6.2.47.2	Properties	80
6.2.47.3	Definition	82
6.2.47.4	Examples	82
6.2.47.5	Additional Requirements	82
6.2.48	tosca.datatypes.nfv.VirtualLinkMonitoringParameter	82
6.2.48.1	Description	82
6.2.48.2	Properties	83
6.2.48.3	Definition	83
6.2.48.4	Examples	83
6.2.48.5	Additional Requirements	84
6.2.49	tosca.datatypes.nfv.InterfaceDetails	84
6.2.49.1	Description	84
6.2.49.2	Properties	84
6.2.49.3	Definition	84
6.2.49.4	Examples	84
6.2.49.5	Additional Requirements	85
6.2.50	tosca.datatypes.nfv.UriComponents	85
6.2.50.1	Description	85
6.2.50.2	Properties	85
6.2.50.3	Definition	85
6.2.50.4	Examples	86
6.2.50.5	Additional Requirements	86
6.2.51	tosca.datatypes.nfv.UriAuthority	86
6.2.51.1	Description	86
6.2.51.2	Properties	86
6.2.51.3	Definition	87
6.2.51.4	Examples	87
6.2.51.5	Additional Requirements	87

6.2.52	tosca.datatypes.nfv.VnfProfile	87
6.2.52.1	Description	87
6.2.53	tosca.datatypes.nfv.ChecksumData	88
6.2.53.1	Description	88
6.2.53.2	Properties	88
6.2.53.3	Definition	88
6.2.53.4	Examples	88
6.2.53.5	Additional Requirements	89
6.2.54	tosca.datatypes.nfv.VnfmInterfaceInfo	89
6.2.54.1	Description	89
6.2.54.2	Properties	89
6.2.54.3	Definition	89
6.2.54.4	Examples	90
6.2.54.5	Additional Requirements	90
6.2.55	tosca.datatypes.nfv.OauthServerInfo	90
6.2.55.1	Description	90
6.2.55.2	Properties	90
6.2.55.3	Definition	90
6.2.55.4	Examples	90
6.2.55.5	Additional Requirements	90
6.2.56	tosca.datatypes.nfv.BootData	91
6.2.56.1	Description	91
6.2.56.2	Properties	91
6.2.56.3	Definition	92
6.2.56.4	Examples	92
6.2.56.5	Additional Requirements	92
6.2.57	tosca.datatypes.nfv.KvpData	92
6.2.57.1	Description	92
6.2.57.2	Properties	93
6.2.57.3	Definition	93
6.2.57.4	Examples	93
6.2.57.5	Additional Requirements	93
6.2.58	tosca.datatypes.nfv.ContentOrFileData	93
6.2.58.1	Description	93
6.2.58.2	Properties	93
6.2.58.3	Definition	94
6.2.58.4	Examples	95
6.2.58.5	Additional Requirements	95
6.2.59	tosca.datatypes.nfv.BootDataVimSpecificProperties	95
6.2.59.1	Description	95
6.2.59.2	Properties	95
6.2.59.3	Definition	96
6.2.59.4	Examples	96
6.2.59.5	Additional Requirements	96
6.3	Artifact Types	96
6.3.1	tosca.artifacts.nfv.SwImage	96
6.3.1.1	Description	96
6.3.1.2	Description	96
6.3.2	tosca.artifacts.Implementation.nfv.Mistral	97
6.3.2.1	Description	97
6.3.2.2	Definition	97
6.4	Capability Types	97
6.4.1	tosca.capabilities.nfv.VirtualBindable	97
6.4.1.1	Description	97
6.4.1.2	Properties	97
6.4.1.3	Definition	97
6.4.2	tosca.capabilities.nfv.VirtualLinkable	98
6.4.2.1	Description	98
6.4.3	tosca.capabilities.nfv.VirtualCompute	98
6.4.3.1	Description	98
6.4.3.2	Properties	98
6.4.3.3	Definition	98

6.4.4	tosca.capabilities.nfv.VirtualStorage	99
6.4.4.1	Description	99
6.4.4.2	Definition	99
6.5	Requirements Types	99
6.6	Relationship Types	100
6.6.1	tosca.relationships.nfv.VirtualBindsTo.....	100
6.6.1.1	Description	100
6.6.1.2	Properties	100
6.6.1.3	Definition	100
6.6.2	tosca.relationships.nfv.VirtualLinksTo.....	100
6.6.2.1	Description	100
6.6.3	tosca.relationships.nfv.AttachesTo	100
6.6.3.1	Description	100
6.6.3.2	Properties	100
6.6.3.3	Definition	101
6.7	Interface Types	101
6.7.1	tosca.interfaces.nfv.Vnflcm	101
6.7.1.1	Description	101
6.7.1.2	Definition	102
6.7.1.3	Additional Requirements	103
6.7.1.4	Support of LCM scripts.....	104
6.7.1.5	Examples	105
6.7.2	tosca.interfaces.nfv.VnfIndicator	107
6.7.2.1	Description	107
6.7.2.2	Definition	107
6.7.2.3	Examples	107
6.8	Node Types	108
6.8.1	tosca.nodes.nfv.VNF.....	108
6.8.1.1	Description	108
6.8.1.2	Properties	108
6.8.1.3	Attributes.....	110
6.8.1.4	Requirements	110
6.8.1.5	Capabilities.....	110
6.8.1.6	Definition	110
6.8.1.7	Artifact	112
6.8.1.8	Additional Requirements	112
6.8.1.9	Example	114
6.8.2	tosca.nodes.nfv.VnfExtCp	116
6.8.2.1	Description	116
6.8.2.2	Properties	117
6.8.2.3	Attributes.....	117
6.8.2.4	Requirements	117
6.8.2.5	Capabilities.....	117
6.8.2.6	Definition	117
6.8.2.7	Additional Requirements	118
6.8.2.8	Example	118
6.8.3	tosca.nodes.nfv.Vdu.Compute	118
6.8.3.1	Description	118
6.8.3.2	Properties	118
6.8.3.3	Attributes.....	119
6.8.3.4	Requirements	119
6.8.3.5	Capabilities.....	120
6.8.3.6	Definition	120
6.8.3.7	Additional requirements.....	121
6.8.3.8	Example	122
6.8.4	tosca.nodes.nfv.Vdu.VirtualBlockStorage.....	126
6.8.4.1	Description	126
6.8.4.2	Properties	126
6.8.4.3	Attributes.....	127
6.8.4.4	Requirements	127
6.8.4.5	Capabilities.....	127
6.8.4.6	Definition	127

6.8.4.7	Additional requirements.....	127
6.8.5	tosca.nodes.nfv.Vdu.VirtualObjectStorage.....	127
6.8.5.1	Description.....	127
6.8.5.2	Properties.....	128
6.8.5.3	Attributes.....	128

7.8.2.5	Capabilities.....	168
7.8.2.6	Definition	168
7.8.2.7	Additional requirements.....	169
7.8.2.8	Example	169
7.8.3	tosca.nodes.nfv.NsVirtualLink	169
7.8.3.1	Description	169
7.8.3.2	Properties	169
7.8.3.3	Attributes.....	170
7.8.3.4	Requirements	170
7.8.3.5	Capabilities.....	170
7.8.3.6	Definition	170
7.8.3.7	Artifact	170
7.8.3.8	Additional Requirements	171
7.8.3.9	Example	171
7.8.4	tosca.nodes.nfv.Cp.....	171
7.8.4.1	Description	171
7.8.5	tosca.nodes.nfv.NfpPositionElement	171
7.8.5.1	Description	171
7.8.5.2	Properties	171
7.8.5.3	Attributes.....	171
7.8.5.4	Requirements	171
7.8.5.5	Capabilities.....	172
7.8.5.6	Definition	172
7.8.5.7	Artifact	172
7.8.5.8	Additional Requirements	172
7.8.5.9	Example	172
7.8.6	tosca.nodes.nfv.NFP	172
7.8.6.1	Description	172
7.8.6.2	Properties	173
7.8.6.3	Attributes.....	173
7.8.6.4	Requirements	173
7.8.6.5	Capabilities.....	173
7.8.6.6	Definition	173
7.8.7	tosca.nodes.nfv.NfpPosition	173
7.8.7.1	Description	173
7.8.7.2	Properties	173

7.8.7.3	Attributes.....	174
7.8.7.4	Requirements	174
7.8.7.5	Capabilities.....	174
7.8.7.6	Definition	175
7.8.7.7	Artifact	175
7.8.7.8	Additional Requirements	175
7.8.7.9	Example	175
7.8.8	tosca.nodes.nfv.Forwarding	175
7.8.8.1	Description	175
7.8.8.2	Properties	176
7.8.8.3	Attributes.....	176
7.8.8.4	Requirements	176
7.8.8.5	Capabilities.....	176
7.8.8.6	Definition	176
7.8.8.7	Artifact	177
7.8.8.8	Additional Requirements	177
7.8.8.9	Example	177
7.9	Group Types.....	177
7.9.1	tosca.groups.nfv.NsPlacementGroup.....	177
7.9.1.1	Description	177
7.9.1.2	Properties	177
7.9.1.3	Definition	177
7.9.1.4	Additional Requirements	178
7.9.2	tosca.groups.nfv.VNFFG	178
7.9.2.1	Description	178
7.9.2.2	Properties	178
7.9.2.3	Definition	178
7.9.2.4	Additional Requirements	178
7.9.2.5	Example	178
7.10	Policy Types.....	179
7.10.1	NsAffinityRule, NsAntiAffinityRule.....	179
7.10.1.1	Description	179
7.10.1.2	Properties	179
7.10.1.3	Targets.....	179
7.10.1.4	Definition	180
7.10.1.5	Examples.....	180
7.10.2	tosca.policies.nfv.NsSecurityGroupRule	181
7.10.2.1	Description	181
7.10.2.2	Properties	181
7.10.2.3	targets	181
7.10.2.4	Definition	182
7.10.2.5	Additional Requirements	182
7.10.3	tosca.policies.nfv.NfpRule.....	182
7.10.3.1	Description	182
7.10.3.2	Properties	182
7.10.3.3	Targets.....	183
7.10.3.4	Definition	183
7.10.3.5	Example	184
7.10.4	tosca.policies.nfv.NsMonitoring	184
7.10.4.1	Description	184
7.10.4.2	Properties	185
7.10.4.3	targets	185
7.10.4.4	Definition	185
7.10.4.5	Additional Requirements	185

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Network Functions Virtualisation (NFV).

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

1 Scope

The present document specifies a data model for NFV descriptors, using the TOSCA Simple Profile in YAML [3], fulfilling the requirements specified in ETSI GS NFV-IFA 011 [1] and ETSI GS NFV-IFA 014 [2] for a Virtualised Network Function Descriptor (VNFD), a Network Service Descriptor (NSD) and a Physical Network Function Descriptor (PNFD). The present document also specifies requirements on the VNFM and NFVO specific to the handling of NFV descriptors based on the TOSCA Simple Profile in YAML specification [3].

2 References

2.1 Normative references

References are either specific (identified by date of publication and/or edition number or version number) or non-specific. For specific references, only the cited version applies. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Referenced documents which are not found to be publicly available in the expected location might be found at <https://docbox.etsi.org/Reference/>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication, ETSI cannot guarantee their long term validity.

The following referenced documents are necessary for the application of the present document.

3 Definition of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in ETSI GS NFV 003 [i.2] and the following apply:

TOSCA interface type: reusable entity that describes a set of TOSCA operations that can be included as part of a Node type or Relationship Type definition

NOTE: See TOSCA-Simple-Profile-YAML-v1.2 [3].

TOSCA operation: behavioural lifecycle procedure in a TOSCA node or relationship definition that can be invoked by an orchestration engine, whose implementation definition can be provided in the service template as part of a node template definition or a relationship template definition, or rely on an implementation of the operation built in the orchestration engine

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in ETSI GS NFV 003 [i.2] apply.

4 Overview of TOSCA model

TOSCA (Topology and Orchestration Specification for Cloud Applications) is a modelling language for describing the components of a cloud application and their relationships. TOSCA uses the concept of service templates to describe cloud workloads. TOSCA further provides means of associating standard or user-defined lifecycle operations to a cloud application component or to a relationship between components. The present document is based on TOSCA-Simple-Profile-yaml v1.2 [3], which describes a YAML rendering for TOSCA.

5 General concept of using TOSCA to model NFV descriptors

5.1 Introduction

An NFV deployment template is modelled by using one or more TOSCA service template as defined in TOSCA-Simple-Profile-yaml-v1.2 [3].

Three main deployment templates are identified in the present document:

- The Virtualised Network Function Descriptor (VNFD).
- The Network Service Descriptor (NSD).
- The Physical Network Function Descriptor (PNFD).

5.2 Network Service Descriptor

The Network Service Descriptor (NSD) is a deployment template which consists of information used by the NFVO for lifecycle management of an NS as defined in ETSI GS NFV-IFA 014 [2]. The NSD:

- References zero, one or more Virtualised Network Function Descriptors (VNFD).
- References zero, one or more Physical Network Functions Descriptors (PNFD).
- References zero, one or more nested NSD.
- Includes zero, one or more Virtual Link Descriptors (VLD).
- Includes zero, one or more VNF Forwarding Graph Descriptors (VNFFGD).

A VNFFGD describes a topology of the Network Service or a portion of the Network Service.

A VLD describes the resource for deploying and managing the lifecycle of virtual links between the constituents of an NS.

A PNFD describes the connectivity requirements to integrate PNFs in an NS.

A nested NSD is an NSD from which a nested NS can be instantiated within a parent NS instance.

5.3 Virtualised Network Function Descriptor

The VNFD is a component of a VNF package. It is used by both the NFVO and the VNFM.

A VNFD is a deployment template which describes a VNF in terms of deployment and operational behaviour requirements. It also contains Virtualised Deployment Units (VDUs), internal virtual link descriptors, external connection point descriptors, software image descriptors, and deployment flavour descriptors, as defined in ETSI GS NFV-IFA 011 [1].

A VNFD contains the following main pieces of information, as shown in figure 5.3-1:

- Virtualisation Deployment Unit (VDU) is a construct supporting the description of the deployment and operational behaviour of a VNF Component (VNFC). A VNFC instance created based on the VDU maps to a single virtualisation container (e.g. a VM). A VDU describes the resources needed to deploy and manage the lifecycle of a VNFC. A VDU includes internal Connection Point Descriptors (CPDs) that describe internal connection points that can either be used to connect a VNFC to an internal virtual link or be re-exposed outside the VNF as external connection points.
- External CPD: describes an external connection point of a VNF, where either an internal connection point of a VDU is exposed as external connection point or the external connection point is directly connected to an internal virtual link.
- Internal VLD: describes the resource requirements for deploying and managing the lifecycle of virtual links between one or more VNFC instances created based on one or more VDUs.

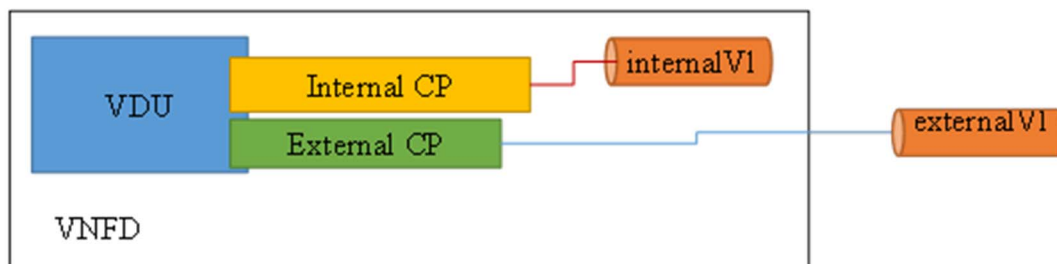

Figure 5.3-1: Overview of VNF descriptor

The information within a VNFD is structured according to one or more VNF deployment flavours (VnfDf) that specify different deployment configuration of a VNF, in terms of its internal topology and resource needs.

5.4 Physical Network Function Descriptor

The Physical Network Function Descriptor (PNFD) information element is a deployment template enabling on-boarding PNFs and referencing them from an NSD. It focuses on connectivity aspects only.

5.5 `tosca_definitions_version` and Namespace prefix

The "`tosca_definitions_version`" keyword when used in the present document shall comply with the definition as specified in section 3.1.2 of TOSCA-Simple-Profile-YAML-v1.2 [3] with the associated Namespace Alias value defined in the TOSCA-Simple-Profile-YAML-v1.2 specification [3], unless VNF indicators are used, in which case the "`tosca_definitions_version`" keyword shall point to TOSCA-Simple-Profile-YAML-v1.3 [20].

NOTE: In the present version of the present document, only the notification feature defined in TOSCA-Simple-Profile-YAML-v1.3 [20] is used.

Table 5.5-1 defines the TOSCA Namespace prefix that shall be used to declare the namespace of all the TOSCA types as specified in the present document.

Table 5.5-1

Namespace Prefix	Specification Description
toscanfv	The TOSCA namespace prefix of all the TOSCA types as specified in the present document.

5.6 Imports statement

5.6.1 VNFD TOSCA service template

A VNFD TOSCA service template as specified in clause 6.11 shall include a TOSCA import definition referencing the following files:

- The file defined in clause B.2 that includes all the type definitions from clause 6 of the present document.
- Others, as described in clause 6.11.

As specified in TOSCA-Simple-Profile-yaml-v1.2 [3], the import statement can use a single-line or multi-line grammar.

The single-line grammar supports the import of single or multiple uniquely named VNFD types and other template definition files.

EXAMPLE 1:

```
imports:
- https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_vnfd_types.yaml
- any_other_files.yaml
- custom_vnfd_datatypes_extension.yaml
```

The multi-line grammar also supports the import of single or multiple uniquely named VNFD types and other template definition files. The "file" keyword is a mandatory parameter in this grammar.

EXAMPLE 2:

```
imports:
- file:
https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_vnfd_types.yaml
- file: any_other_files.yaml
- file: custom_vnfd_datatypes_extension.yaml
```

5.6.2 NSD TOSCA service template

An NSD TOSCA service template as specified in clause 7.11 shall include a TOSCA import definition referencing the following files:

- The file defined in clause B.3 that includes all the type definitions from clause 7 of the present document.
- Others, as described in clause 7.11.

As specified in TOSCA-Simple-Profile-yaml-v1.2 [3], the import statement can use a single-line or multi-line grammar.

The single-line grammar supports the import of single or multiple uniquely named NSD types and other template definition files.

EXAMPLE 1:

```
imports:
- https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_nsd_types.yaml
- any_other_files.yaml
- custom_nsd_node_types_extension.yaml
```

The multi-line grammar also supports the import of single or multiple uniquely named NSD types and other template definition files. The "file" keyword is a mandatory parameter in this grammar.

EXAMPLE 2:

```
imports:
- file:
https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_nsd_types.yaml
- file: any_other_files.yaml
- file: custom_nsd_node_types_extension.yaml
```

5.6.3 PNFD TOSCA service template

A PNFD TOSCA service template as specified in clause 8.11 shall include a TOSCA import definition referencing the following files:

- The file defined in clause B.4 that includes all the type definitions from clause 8 of the present document.
- Others, as described in clause 8.11.

As specified in TOSCA-Simple-Profile-yaml-v1.2 [3], the import statement can use a single-line or multi-line grammar.

The single-line grammar supports the import of single or multiple uniquely named PNFD types and other template definition files.

EXAMPLE 1:

```
imports:
- https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_pnfd_types.yaml
- any_other_files.yaml
- custom_pnfd_node_types_extension.yaml
```

The multi-line grammar also supports the import of single or multiple uniquely named PNFD types and other template definition files. The "file" keyword is a mandatory parameter in this grammar.

EXAMPLE 2:

```
imports:
- file:
https://forge.etsi.org/rep/nfv/SOL001/raw/v2.6.1/etsi_nfv_sol001_pnfd_types.yaml
- file: any_other_files.yaml
- file: custom_pnfd_node_types_extension.yaml
```

5.7 Type extension

5.7.1 Introduction

Type extension is used when VNF-specific type information is introduced in the VNFD (e.g. modifiable attributes, configurable properties and additional parameters to LCM operations) or NSD.

5.7.2 Rules

Type extension may be applied to NFV types defined in the present document within the limits specified table 5.7.3-1, adhering to the following rule.

A derived type shall extend the base type in such a way that it remains substitutable for the base type with the following requirements.

New properties and attributes may be introduced with no restriction within the limits specified table 5.7.3-1.

Existing properties may be extended according to the following rules:

- a) A scalar property may not be extended to another type (e.g. a string property may not be replaced with an integer property or with a complex property of the same name).
- b) A complex property of data type "X" may only be extended to a property of type "Y" where "Y" is derived from "X" according to the present rules (recursive rule: present rules applied to each property of the derived data type).
- c) A property of type list with entry schema "X" may only be extended to a list with entry schema "Y" where "Y" is an extension of "X" according to the present rules (recursive rule: present rules applied to the elements of the list).
- d) A property of type map with entry schema "X" may only be extended to a map with entry schema "Y" where "Y" is an extension of "X" according to the present rules (recursive rule: present rules applied to the values of the map).

In general, the same rules (1 and 2) apply to introducing/extending other elements beyond properties such as capabilities, requirements, interfaces, operations, inputs, etc. as well; in the current version of the specification, however, there are only examples of extending properties and the `tosca.nodes.nfv.VNF` node type.

5.7.3 VNFD Types

Table 5.7.3-1 specifies the extension point where VNFD author may extend the pre-defined types.

Table 5.7.3-1: VNFD type extension points

Type	Keyname	Property name
tosca.nodes.nfv.VNF	properties	modifiable_attributes (as a new property) configurable_properties (as a new property) See note 4.
	interfaces	Vnflcm.{operation_name}.inputs.additional_parameters (as a new property) Vnflcm.{operation_name}.inputs (as new properties). See note 4.
	attributes	One attribute of primitive type per VNF indicator may be added.
tosca.nodes.nfv.Vdu.Compute	properties	configurable_properties (as a new property). See note 2 and note 4.
tosca.datatypes.nfv.VnfInfoModifiableAttributes	properties	extensions (as a new property) metadata (as a new property). See note 1 and note 4.
tosca.datatypes.nfv.VnfConfigurableProperties	properties	additional_configurable_properties (as a new property). See note 1 and note 4.
tosca.datatypes.nfv.VnfcConfigurableProperties	properties	additional_vnfc_configurable_properties (as a new property). See note 4.
tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions	properties	(new properties). See note 1 and note 4.
tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata	properties	(new properties). See note 1 and note 4.
tosca.datatypes.nfv.VnfAdditionalConfigurableProperties	properties	(new properties). See note 1 and note 4.
tosca.datatypes.nfv.VnfAdditionalVnfcConfigurableProperties	properties	(new properties). See note 1 and note 4.
tosca.datatypes.nfv.VnfOperationAdditionalParameters	properties	(new properties). See note 1 and note 4.
tosca.interfaces.nfv.VnfIndicator	notifications	one notification may be added per Vnf indicator. See note 3.
NOTE 1: VNF specific extension datatypes should be given names starting by the provider name followed by a dot (".") in order to avoid collisions when importing these datatypes in an NSD service template. The provider name may, but need not, be identical to the value of the provider property of the VNF node type. Furthermore, it is the VNF provider's responsibility to ensure the uniqueness of the names of its datatypes, i.e. the datatype names starting with its provider name.		
NOTE 2: VNF specific Vdu.Compute node types should be given names starting by the provider name followed by a dot (".") in order to avoid collisions if these node types are imported in an NSD service template. The provider name may, but need not, be identical to the value of the provider property of the VNF node type. Furthermore, it is the VNF provider's responsibility to ensure the uniqueness of the names of its Vdu.Compute node types, i.e. the Vdu.Compute node type names starting with its provider name.		

Type	Keyname	Property name
NOTE 3:	VNF specific interface types should be given names starting by the provider name followed by a dot (".") in order to avoid collisions when importing these types in an NSD service template. The provider name may, but need not, be identical to the value of the provider property of the VNF node type. Furthermore, it is the VNF provider's responsibility to ensure the uniqueness of the names of its interface types, i.e. the interface type names starting with its provider name.	
NOTE 4:	If a property is defined with a required value equal to false, the default value shall not be present in VNFD. This also applies to any new datatypes introduced in the VNFD.	

5.7.4 NSD types

Table 5.7.4-1 specifies the extension points where NSD author may extend the pre-defined types.

Table 5.7.4-1: NSD type extension points

Type	Keyname	Property name
tosca.datatypes.nfv.NsOperationAdditionalParameters	properties	(new properties). See note.
NOTE:	If a property is defined with a required value equal to false, the default value shall not be present in NSD. This also applies to any new datatypes introduced in the NSD.	

5.8 Non-Backward Compatible changes

Annex F provides the list of non-backward compatible changes during the development of the present document.

6 VNFD TOSCA model

6.1 Introduction

The VNFD information model specified by ETSI GS NFV-IFA 011 [1] is mapped to the TOSCA concepts. The VNFD is represented as one or more TOSCA service templates to be used by the VNFM for deploying and managing the lifecycle of a VNF instance.

Table 6.1-1 describes the mapping of the main information elements defined in ETSI GS NFV-IFA 011 [1] applicable to a VNFD and the corresponding NFV-specific TOSCA Types, as well the basic TOSCA types defined in TOSCA Simple YAML Profile [3] from which they are derived from. The full definition of all types can be found in the following clauses.

NOTE: The autoScale feature specified in ETSI GS NFV-IFA 011 [1] is not supported in this version of the present document.

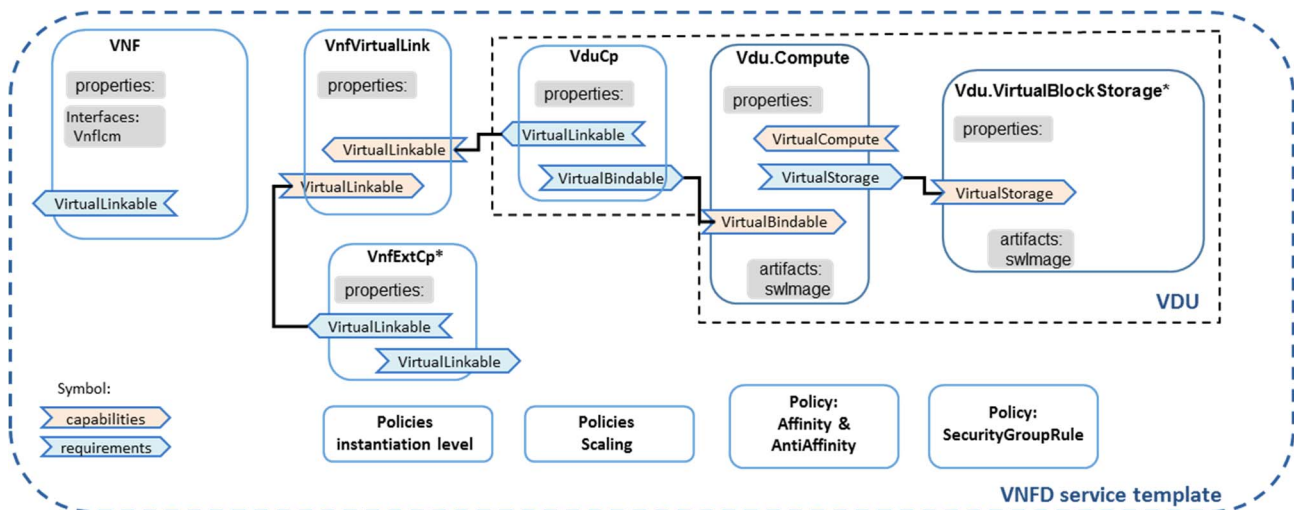

Table 6.1-1: Mapping of ETSI GS NFV-IFA 011 [1] information elements with TOSCA types

ETSI GS NFV-IFA 011 [1] Elements	VNFD TOSCA types	Derived from
VNFD	tosca.nodes.nfv.VNF	tosca.nodes.Root
Vdu	n/a (see note 1)	n/a
Cpd (Connection Point)	tosca.nodes.nfv.Cp	tosca.nodes.Root
VduCpd (internal connection point)	tosca.nodes.nfv.VduCp	tosca.nodes.nfv.Cp
VnfVirtualLinkDesc (Virtual Link)	tosca.nodes.nfv.VnfVirtualLink	tosca.nodes.Root
VnfExtCpd (External Connection Point)	tosca.nodes.nfv.VnfExtCp tosca.nodes.nfv.VduCp	tosca.nodes.nfv.Cp
VirtualStorageDesc	tosca.nodes.nfv.Vdu.VirtualBlockStorage tosca.nodes.nfv.Vdu.VirtualObjectStorage tosca.nodes.nfv.Vdu.VirtualFileStorage	tosca.nodes.Root
VirtualComputeDesc	tosca.nodes.nfv.Vdu.Compute	tosca.nodes.Root
SwImageDesc	tosca.artifacts.nfv.SwImage	tosca.artifacts.Deployment .Image
VnfDf	n/a (see note 2)	n/a
SecurityGroupRule	tosca.policies.nfv.SecurityGroupRule	tosca.policies.Root
VnfConfigurableProperties	tosca.datatypes.nfv.VnfConfigurableProperties	tosca.datatypes.Root
VnfInfoModifiableAttributes	tosca.datatypes.nfv.VnfInfoModifiableAttributes	tosca.datatypes.Root

NOTE 1: The Vdu information element is represented as a collection of tosca.nodes.nfv.VduCp, tosca.nodes.nfv.Vdu.Compute, tosca.nodes.nfv.Vdu.VirtualBlockStorage, tosca.nodes.nfv.Vdu.VirtualObjectStorage and tosca.nodes.nfv.Vdu.VirtualFileStorage types.

NOTE 2: The VnfDf information element is represented as a TOSCA service template.

Figure 6.1-1 provides an overview of the TOSCA node types used to build a service template representing a VNFD for a specific deployment flavour, and of the relationship between them. The figure shows one of the three types of virtual storage. A detailed description is provided in clause 6.11.

**Figure 6.1-1: Service template VNFD overview**

6.2 Data Types

6.2.1 tosca.datatypes.nfv.CpProtocolData

6.2.1.1 Description

The CpProtocolData data type is defined in clause 9.2.6 of the present document.

6.2.2 `tosca.datatypes.nfv.AddressData`

6.2.2.1 Description

The `AddressData` data type is defined in clause 9.2.3 of the present document.

6.2.3 `tosca.datatypes.nfv.L2AddressData`

6.2.3.1 Description

The `L2AddressData` data type is defined in clause 9.2.1 of the present document.

6.2.4 `tosca.datatypes.nfv.VirtualNetworkInterfaceRequirements`

6.2.4.1 Description

The `VirtualNetworkInterfaceRequirements` data type describes requirements on a virtual network interface, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.4.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.4.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualNetworkInterfaceRequirements</code>
Type Qualified Name	<code>toscanfv:VirtualNetworkInterfaceRequirements</code>
Type URI	<code>tosca.datatypes.nfv.VirtualNetworkInterfaceRequirements</code>

6.2.4.2 Properties

The properties of the `VirtualNetworkInterfaceRequirements` data type shall comply with the provisions set out in table 6.2.4.2-1.

Table 6.2.4.2-1: Properties

Name	Required	Type	Constraints	Description
<code>name</code>	no	string		Provides a human readable name for the requirement.
<code>description</code>	no	string		Provides a human readable description of the requirement.
<code>support_mandatory</code>	yes	boolean		Indicates whether fulfilling the constraint is mandatory (TRUE) for successful operation or desirable (FALSE).
<code>network_interface_requirements</code>	yes	map of string		The network interface requirements. A map of strings that contain a set of key-value pairs that describes the hardware platform specific network interface deployment requirements. More information regarding the usage of this property is available at: https://register.etsi.org
<code>nic_io_requirements</code>	no	<code>tosca.datatypes.nfv.LogicalNodeData</code>		This references (couples) the CP with any logical node I/O requirements (for network devices) that may have been created. Linking these attributes is necessary so that I/O requirements that need to be articulated at the logical node level can be associated with the network interface requirements associated with the CP.

6.2.4.3 Definition

The syntax of the VirtualNetworkInterfaceRequirements data type shall comply with the following definition:

```

tosca.datatypes.nfv.VirtualNetworkInterfaceRequirements:
  derived_from: toska.datatypes.Root
  description: Describes requirements on a virtual network interface
  properties:
    name:
      type: string
      description: Provides a human readable name for the requirement.
      required: false
    description:
      type: string
      description: Provides a human readable description of the requirement.
      required: false
    support_mandatory:
      type: boolean
      description: Indicates whether fulfilling the constraint is mandatory (TRUE)
for successful operation or desirable (FALSE).
      required: true
    network_interface_requirements:
      type: map
      description: The network interface requirements. A map of strings that contain
a set of key-value pairs that describes the hardware platform specific network
interface deployment requirements.
      required: true
      entry_schema:
        type: string
    nic_io_requirements:
      type: toska.datatypes.nfv.LogicalNodeData
      description: references (couples) the CP with any logical node I/O
requirements (for network devices) that may have been created. Linking these
attributes is necessary so that so that I/O requirements that need to be articulated
at the logical node level can be associated with the network interface requirements
associated with the CP.
      required: false

```

6.2.4.4 Examples

None.

6.2.4.5 Additional Requirements

None.

6.2.5 toska.datatypes.nfv.L3AddressData

6.2.5.1 Description

The L3AddressData data type is defined in clause 9.2.2 of the present document.

6.2.6 toska.datatypes.nfv.RequestedAdditionalCapability

6.2.6.1 Description

The RequestedAdditionalCapability data type describes requested additional capability for a particular VDU, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.6.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.6.1-1: Type name, shorthand, and URI

Shorthand Name	RequestedAdditionalCapability
Type Qualified Name	toscanfv:RequestedAdditionalCapability
Type URI	tosca.datatypes.nfv.RequestedAdditionalCapability

6.2.6.2 Properties

The properties of the RequestedAdditionalCapability data type shall comply with the provisions set out in table 6.2.6.2-1.

Table 6.2.6.2-1: Properties

Name	Required	Type	Constraints	Description
requested_additional_capability_name	yes	string		Identifies a requested additional capability for the VDU.
support_mandatory	yes	boolean		Indicates whether the requested additional capability is mandatory for successful operation.
min_requested_additional_capability_version	no	string		Identifies the minimum version of the requested additional capability.
preferred_requested_additional_capability_version	no	string		Identifies the preferred version of the requested additional capability.
target_performance_parameters	yes	map of string		Identifies specific attributes, dependent on the requested additional capability type.

6.2.6.3 Definition

The syntax of the RequestedAdditionalCapability data type shall comply with the following definition:

```

tosca.datatypes.nfv.RequestedAdditionalCapability:
  derived_from: toska.datatypes.Root
  description: describes requested additional capability for a particular VDU
  properties:
    requested_additional_capability_name:
      type: string
      description: Identifies a requested additional capability for the VDU.
      required: true
    support_mandatory:
      type: boolean
      description: Indicates whether the requested additional capability is
mandatory for successful operation.
      required: true
    min_requested_additional_capability_version:
      type: string
      description: Identifies the minimum version of the requested additional
capability.
      required: false
    preferred_requested_additional_capability_version:
      type: string
      description: Identifies the preferred version of the requested additional
capability.
      required: false
    target_performance_parameters:
      type: map
      description: Identifies specific attributes, dependent on the requested
additional capability type.
      required: true
    entry_schema:
      type: string

```

6.2.6.4 Examples

None.

6.2.6.5 Additional Requirements

None.

6.2.7 toska.datatypes.nfv.VirtualMemory

6.2.7.1 Description

The VirtualMemory data type supports the specification of requirements related to virtual memory of a virtual compute resource, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.7.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.7.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualMemory
Type Qualified Name	toscanfv:VirtualMemory
Type URI	tosca.datatypes.nfv.VirtualMemory

6.2.7.2 Properties

The properties of the VirtualMemory data type shall comply with the provisions set out in table 6.2.7.2-1.

Table 6.2.7.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_mem_size	yes	scalar-unit.size		Amount of virtual memory.
virtual_mem_oversubscription_policy	no	string		The memory core oversubscription policy in terms of virtual memory to physical memory on the platform.
vdu_mem_requirements	no	map of string		The hardware platform specific VDU memory requirements. A map of strings that contains a set of key-value pairs that describes hardware platform specific VDU memory requirements. More information regarding the usage of this property is available at: https://register.etsi.org
numa_enabled	yes	boolean	default: false	It specifies the memory allocation to be cognisant of the relevant process/core allocation.

6.2.7.3 Definitions

The syntax of the VirtualMemory data type shall comply with the following definition:

```

tosca.datatypes.nfv.VirtualMemory:
  derived_from: tosca.datatypes.Root
  description: supports the specification of requirements related to virtual memory
of a virtual compute resource
  properties:
    virtual_mem_size:
      type: scalar-unit.size
      description: Amount of virtual memory.
      required: true
    virtual_mem_oversubscription_policy:
      type: string
      description: The memory core oversubscription policy in terms of virtual
memory to physical memory on the platform.
      required: false
    vdu_mem_requirements:
      type: map
      description: The hardware platform specific VDU memory requirements. A map of
strings that contains a set of key-value pairs that describes hardware platform
specific VDU memory requirements.
      required: false
      entry_schema:
        type: string
    numa_enabled:
      type: boolean
      description: It specifies the memory allocation to be cognisant of the
relevant process/core allocation.
      required: true
      default: false

```

6.2.7.4 Examples

None.

6.2.7.5 Additional Requirements

None.

6.2.8 toska.datatypes.nfv.VirtualCpu

6.2.8.1 Description

The VirtualCpu data type supports the specification of requirements related to virtual CPU(s) of a virtual compute resource, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.8.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.8.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualCpu
Type Qualified Name	toscanfv:VirtualCpu
Type URI	tosca.datatypes.nfv.VirtualCpu

6.2.8.2 Properties

The properties of the VirtualCpu data type shall comply with the provisions set out in table 6.2.8.2-1.

Table 6.2.8.2-1: Properties

Name	Required	Type	Constraints	Description
cpu_architecture	no	string		CPU architecture type. Examples are x86, ARM.
num_virtual_cpu	yes	integer	greater_than: 0	Number of virtual CPUs.
virtual_cpu_clock	no	scalar- unit.frequency		Minimum virtual CPU clock rate.
virtual_cpu_oversubscription_policy	no	string		CPU core oversubscription policy e.g. the relation of virtual CPU cores to physical CPU cores/threads.
vdu_cpu_requirements	no	map of string		The hardware platform specific VDU CPU requirements. A map of strings that contains a set of key-value pairs describing VDU CPU specific hardware platform requirements. More information regarding the usage of this property is available at: https://register.etsi.org .
virtual_cpu_pinning	no	tosca.datatypes.nfv.VirtualCpuPinning		The virtual CPU pinning configuration for the virtualised compute resource.

6.2.8.3 Definition

The syntax of the VirtualCpu data type shall comply with the following definition:

```
tosca.datatypes.nfv.VirtualCpu:
  derived_from: toska.datatypes.Root
  description: Supports the specification of requirements related to virtual CPU(s)
of a virtual compute resource
  properties:
    cpu_architecture:
      type: string
      description: CPU architecture type. Examples are x86, ARM
      required: false
```

```

num_virtual_cpu:
  type: integer
  description: Number of virtual CPUs
  required: true
  constraints:
    - greater_than: 0
virtual_cpu_clock:
  type: scalar-unit.frequency
  description: Minimum virtual CPU clock rate
  required: false
virtual_cpu_oversubscription_policy:
  type: string
  description: CPU core oversubscription policy e.g. the relation of virtual CPU
cores to physical CPU cores/threads.
  required: false
vdu_cpu_requirements:
  type: map
  description: The hardware platform specific VDU CPU requirements. A map of
strings that contains a set of key-value pairs describing VDU CPU specific hardware
platform requirements.
  required: false
  entry_schema:
    type: string
virtual_cpu_pinning:
  type: toska.datatypes.nfv.VirtualCpuPinning
  description: The virtual CPU pinning configuration for the virtualised compute
resource.
  required: false

```

6.2.8.4 Examples

None.

6.2.8.5 Additional Requirements

None.

6.2.9 toska.datatypes.nfv.VirtualCpuPinning

6.2.9.1 Description

The VirtualCpuPinning data type supports the specification of requirements related to the virtual CPU pinning configuration of a virtual compute resource, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.9.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.9.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualCpuPinning
Type Qualified Name	toscanfv:VirtualCpuPinning
Type URI	tosca.datatypes.nfv.VirtualCpuPinning

6.2.9.2 Properties

The properties of the VirtualCpuPinning data type shall comply with the provisions set out in table 6.2.9.2-1.

Table 6.2.9.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_cpu_pinning_policy	no	string	Valid values: static, dynamic	Indicates the policy for CPU pinning. The policy can take values of "static" or "dynamic". In case of "dynamic" the allocation of virtual CPU cores to logical CPU cores is decided by the VIM. (e.g. SMT (Simultaneous Multi-Threading) requirements). In case of "static" the allocation is requested to be according to the virtual_cpu_pinning_rule.
virtual_cpu_pinning_rule	no	list of string		Provides the list of rules for allocating virtual CPU cores to logical CPU cores/threads.

6.2.9.3 Definition

The syntax of the VirtualCpuPinning data type shall comply with the following definition:

```

tosca.datatypes.nfv.VirtualCpuPinning:
  derived_from: toasca.datatypes.Root
  description: Supports the specification of requirements related to the virtual CPU
pinning configuration of a virtual compute resource
  properties:
    virtual_cpu_pinning_policy:
      type: string
      description: Indicates the policy for CPU pinning. The policy can take values
of "static" or "dynamic". In case of "dynamic" the allocation of virtual CPU cores to
logical CPU cores is decided by the VIM. (e.g. SMT (Simultaneous Multi-Threading)
requirements). In case of "static" the allocation is requested to be according to the
virtual_cpu_pinning_rule.
      required: false
      constraints:
        - valid_values: [ static, dynamic ]
    virtual_cpu_pinning_rule:
      type: list
      description: Provides the list of rules for allocating virtual CPU cores to
logical CPU cores/threads
      required: false
      entry_schema:
        type: string

```

6.2.9.4 Examples

None.

6.2.9.5 Additional Requirements

The virtual_cpu_pinning_rule shall be included if the virtual_cpu_pinning_policy property is set to "static" and shall be absent otherwise.

6.2.10 toasca.datatypes.nfv.VnfcConfigurableProperties

6.2.10.1 Description

The VnfcConfigurableProperties data type defines the configurable properties of a VNFC, as defined in ETSI GS NFV-IFA 011 [1].

Table 6.2.10.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.10.1-1: Type name, shorthand, and URI

Shorthand Name	VnfcConfigurableProperties
Type Qualified Name	toscanfv:VnfcConfigurableProperties
Type URI	tosca.datatypes.nfv.VnfcConfigurableProperties

6.2.10.2 Properties

The properties of the VnfcconfigurableProperties shall comply with the provisions set out in table 6.2.10.2-1.

Table 6.2.10.2-1: Properties

Name	Required	Type	Constraints	Description
additional_vnfc_configurable_properties	no	tosca.datatypes.nfv.VnfcAdditionalConfigurableProperties		Describes additional configuration for VNFC that can be modified using the ModifyVnfInfo operation.

6.2.10.3 Definition

The syntax of the VnfcConfigurableProperties data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfcConfigurableProperties:
  derived_from: toasca.datatypes.Root
  description: Defines the configurable properties of a VNFC
  #properties:
    # additional_vnfc_configurable_properties:
    #   type: toasca.datatypes.nfv.VnfcAdditionalConfigurableProperties
    #   description: Describes additional configuration for VNFC that can be
modified using the ModifyVnfInfo operation
    #   required: false
    # derived types are expected to introduce
    # additional_vnfc_configurable_properties with its type derived from
    # toasca.datatypes.nfv.VnfcAdditionalConfigurableProperties
```

6.2.10.4 Examples

```
tosca_definitions_version: toasca_simple_yaml_1_2

node_types:
  MyCompany.nodes.nfv.Vdu.Aux:
    derived_from: toasca.nodes.nfv.Vdu.Compute
    properties:
      configurable_properties:
        type: MyCompany.datatypes.nfv.AuxVnfcConfigurableProperties

data_types:
  MyCompany.datatypes.nfv.AuxVnfcConfigurableProperties:
    derived_from: toasca.datatypes.nfv.VnfcConfigurableProperties
    properties:
      additional_vnfc_configurable_properties:
        type: MyCompany.datatypes.nfv.AuxVnfcAdditionalConfigurableProperties
        required: true

  MyCompany.datatypes.nfv.AuxVnfcAdditionalConfigurableProperties:
    derived_from: toasca.datatypes.nfv.VnfcAdditionalConfigurableProperties
    properties:
      name_prefix_in_vim:
```

```

    type: string
    required: false
  dns_server:
    type: string
    required: true

topology_template:
  ..

node_templates:
  aux:
    type: MyCompany.nodes.nfv.Vdu.Aux
    properties:
      ..

```

6.2.10.5 Additional Requirements

None.

6.2.11 toska.datatypes.nfv.VnfcAdditionalConfigurableProperties

6.2.11.1 Description

The `VnfcAdditionalConfigurableProperties` type is an empty base type for deriving data types for describing additional configurable properties for a given VNFC. Table 6.2.11.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.11.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfcAdditionalConfigurableProperties</code>
Type Qualified Name	<code>toscanfv:VnfcAdditionalConfigurableProperties</code>
Type URI	<code>tosca.datatypes.nfv.VnfcAdditionalConfigurableProperties</code>

6.2.11.2 Properties

None.

6.2.11.3 Definition

The syntax of the `VnfcAdditionalConfigurableProperties` data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfcAdditionalConfigurableProperties:
  derived_from: toska.datatypes.Root
  description: VnfcAdditionalConfigurableProperties type is an empty base type
for deriving data types for describing additional configurable properties for a
given VNFC.

```

6.2.12 toska.datatypes.nfv.VduProfile

6.2.12.1 Description

The `VduProfile` data type describes additional instantiation data for a given `Vdu.Compute` used in a specific deployment flavour. Table 6.2.12.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.12.1-1: Type name, shorthand, and URI

Shorthand Name	VduProfile
Type Qualified Name	toscanfv:VduProfile
Type URI	tosca.datatypes.nfv.VduProfile

6.2.12.2 Properties

The properties of the VduProfile data type shall comply with the provisions set out in table 6.2.12.2-1.

Table 6.2.12.2-1: Properties

Name	Required	Type	Constraints	Description
min_number_of_instances	yes	integer	greater_or_equal: 0	Minimum number of instances of the VNFC based on this Vdu.Compute that is permitted to exist for a particular VNF deployment flavour.
max_number_of_instances	yes	integer	greater_or_equal: 0	Maximum number of instances of the VNFC based on this Vdu.Compute that is permitted to exist for a particular VNF deployment flavour.
NOTE: A vdu:property, which exists in ETSI GS NFV-IFA 011 [1] is not needed, as the VduProfile is contained in the Vdu.Compute node.				

6.2.12.3 Definition

The syntax of the VduProfile data type shall comply with the following definition:

```

tosca.datatypes.nfv.VduProfile:
  derived_from: toscanfv:Root
  description: describes additional instantiation data for a given Vdu.Compute used
in a specific deployment flavour.
  properties:
    min_number_of_instances:
      type: integer
      description: Minimum number of instances of the VNFC based on this Vdu.Compute
that is permitted to exist for a particular VNF deployment flavour.
      required: true
      constraints:
        - greater_or_equal: 0
    max_number_of_instances:
      type: integer
      description: Maximum number of instances of the VNFC based on this Vdu.Compute
that is permitted to exist for a particular VNF deployment flavour.
      required: true
      constraints:
        - greater_or_equal: 0

```

6.2.12.4 Examples

```

tosca_definitions_version: tosca_simple_yaml_1_2

topology template:
...

node_templates:
  VDU_A:
    type: tosca.nodes.nfv.Vdu.Compute
    properties:
      vdu_profile:
        min_number_of_instances: 2
        max_number_of_instances: 6
    # other properties omitted for brevity
    requirements:
      - virtual_storage: VirtualStorage_A1
      - virtual_storage: VirtualStorage_A2
    capabilities:
      virtual_binding:

  VirtualStorage_A1:
    type: tosca.nodes.nfv.Vdu.VirtualBlockStorage
    properties:
      # omitted for brevity
    capabilities:
      virtual_storage

  VirtualStorage_A2:
    type: tosca.nodes.nfv.Vdu.VirtualBlockStorage
    properties:
      # omitted for brevity
    capabilities:
      virtual_storage

  VduCp_A1:
    type: tosca.nodes.nfv.VduCp
    properties:
      # omitted for brevity
    requirements:
      - virtual_binding: VDU_A
      - virtual_link

  VduCp_A2:
    type: tosca.nodes.nfv.VduCp
    properties:
      # omitted for brevity
    requirements:
      - virtual_binding: VDU_A
      - virtual_link

```

Above snippet shows part of a topology template. The VDU_A node template is a Vdu.Compute node that is connected to two VirtualBlockStorage nodes: VirtualStorage_A1 and VirtualStorage_A2. It also has two VduCps: VduCp_A1 and Vdu_CpA2.

The minimum number of instances of VDU_A that are permitted to exist is 2. Likewise, the minimum number of instances of VirtualStorage_A1, VirtualStorage_A2, VduCp_A1 and VduCp_A2 that are permitted to exist is 2.

The maximum number of instances of VDU_A that are permitted to exist is 6. Likewise, the maximum number of instances of VirtualStorage_A1, VirtualStorage_A2, VduCp_A1 and VduCp_A2 that are permitted to exist is 6.

6.2.12.5 Additional requirements

The properties of the vdu_profile indicate the maximum and minimum number of Vdu.Compute instances that are permitted to exist, created from a given Vdu.Compute node template during its lifecycle, as well as:

- The maximum and minimum number of instances of each VirtualBlockStorage, VirtualObjectStorage and VirtualFileStorage nodes connected to the Vdu.Compute via one particular occurrence of the virtual_storage requirement.
- The maximum and minimum number instances of each VduCp node connected to the Vdu.Compute via one particular occurrence of the virtual_binding capability.

6.2.13 tosca.datatypes.nfv.VIProfile

6.2.13.1 Description

The VIProfile data type describes additional instantiation data for a given VL used in a specific VNF deployment flavour. Table 6.2.13.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.13.1-1: Type name, shorthand, and URI

Shorthand Name	VIProfile
Type Qualified Name	toscanfv:VIProfile
Type URI	tosca.datatypes.nfv.VIProfile

6.2.13.2 Properties

The properties of the VIProfile data type shall comply with the provisions set out in table 6.2.13.2-1.

Table 6.2.13.2-1: Properties

Name	Required	Type	Constraints	Description
max_bitrate_requirements	yes	tosca.datatypes.nfv.LinkBitrateRequirements		Specifies the maximum bitrate requirements for a VL instantiated according to this profile.
min_bitrate_requirements	yes	tosca.datatypes.nfv.LinkBitrateRequirements		Specifies the minimum bitrate requirements for a VL instantiated according to this profile.
qos	no	tosca.datatypes.nfv.Qos		Specifies the QoS requirements of a VL instantiated according to this profile.
virtual_link_protocol_data	no	list of tosca.datatypes.nfv.VirtualLinkProtocolData		Specifies the protocol data for a virtual link.
NOTE: A vnfVirtualLinkDescId property, which exists in ETSI GS NFV-IFA 011 [1] is not needed, as the VLProfile is contained in the VL node.				

6.2.13.3 Definition

The syntax of the VProfile data type shall comply with the following definition:

```

tosca.datatypes.nfv.VProfile:
  derived_from: tosca.datatypes.Root
  description: Describes additional instantiation data for a given VL used in a
  specific VNF deployment flavour.
  properties:
    max_bitrate_requirements:
      type: tosca.datatypes.nfv.LinkBitrateRequirements
      description: Specifies the maximum bitrate requirements for a VL instantiated
  according to this profile.
      required: true
    min_bitrate_requirements:
      type: tosca.datatypes.nfv.LinkBitrateRequirements
      description: Specifies the minimum bitrate requirements for a VL instantiated
  according to this profile.
      required: true
    qos:
      type: tosca.datatypes.nfv.Qos
      description: Specifies the QoS requirements of a VL instantiated according to
  this profile.
      required: false
    virtual_link_protocol_data:
      type: list
      description: Specifies the protocol data for a virtual link.
      required: false
    entry_schema:
      type: tosca.datatypes.nfv.VirtualLinkProtocolData

```

6.2.13.4 Examples

None.

6.2.13.5 Additional Requirements

None.

6.2.14 tosca.datatypes.nfv.VirtualLinkProtocolData

6.2.14.1 Description

The VirtualLinkProtocolData data type describes one protocol layer and associated protocol data for a given virtual link used in a specific VNF deployment flavour. Table 6.2.14.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.14.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualLinkProtocolData
Type Qualified Name	toscanfv:VirtualLinkProtocolData
Type URI	tosca.datatypes.nfv.VirtualLinkProtocolData

6.2.14.2 Properties

The properties of the VirtualLinkProtocolData data type shall comply with the provisions set out in table 6.2.14.2-1.

Table 6.2.14.2-1: Properties

Name	Required	Type	Constraints	Description
associated_layer_protocol	yes	string	Valid values: ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire	Identifies one of the protocols a virtualLink gives access to (ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire) as specified by the connectivity_type property.
l2_protocol_data	no	tosca.datatype s.nfv.L2ProtocolData		Specifies the L2 protocol data for a virtual link. Shall be present when the associatedLayerProtocol attribute indicates a L2 protocol and shall be absent otherwise.
l3_protocol_data	no	tosca.datatype s.nfv.L3ProtocolData		Specifies the L3 protocol data for this virtual link. Shall be present when the associatedLayerProtocol attribute indicates a L3 protocol and shall be absent otherwise.

6.2.14.3 Definition

The syntax of the VirtualLinkProtocolData data type shall comply with the following definition:

```

tosca.datatypes.nfv.VirtualLinkProtocolData:
  derived_from: tosca.datatypes.Root
  description: describes one protocol layer and associated protocol data for a
  given virtual link used in a specific VNF deployment flavour
  properties:
    associated_layer_protocol:
      type: string
      description: Identifies one of the protocols a virtualLink gives access
      to (ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire) as specified by the
      connectivity_type property.
      required: true
      constraints:
        - valid_values: [ ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire ]
    l2_protocol_data:
      type: tosca.datatypes.nfv.L2ProtocolData
      description: Specifies the L2 protocol data for a virtual link. Shall be
      present when the associatedLayerProtocol attribute indicates a L2 protocol and
      shall be absent otherwise.
      required: false
    l3_protocol_data:
      type: tosca.datatypes.nfv.L3ProtocolData
      description: Specifies the L3 protocol data for this virtual link. Shall
      be present when the associatedLayerProtocol attribute indicates a L3 protocol and
      shall be absent otherwise.
      required: false

```

6.2.14.4 Examples

None.

6.2.14.5 Additional Requirements

None.

6.2.15 tosca.datatypes.nfv.L2ProtocolData

6.2.15.1 Description

The L2ProtocolData data type describes L2 protocol data for a given virtual link used in a specific VNF deployment flavour. Table 6.2.15.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.15.1-1: Type name, shorthand, and URI

Shorthand Name	L2ProtocolData
Type Qualified Name	toscanfv:L2ProtocolData
Type URI	tosca.datatypes.nfv.L2ProtocolData

6.2.15.2 Properties

The properties of the L2ProtocolData data type shall comply with the provisions set out in table 6.2.15.2-1.

Table 6.2.15.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Identifies the network name associated with this L2 protocol.
network_type	no	string	Valid values: flat, vlan, vxlan, gre	Specifies the network type for this L2 protocol. The value may be overridden at run-time.
vlan_transparent	yes	boolean	default: false	Specifies whether to support VLAN transparency for this L2 protocol or not.
mtu	no	integer	greater_than : 0	Specifies the Maximum Transmission Unit (MTU) value for this L2 protocol.
segmentation_id	no	string		If present, specifies a specific virtualised network segment, which depends on the network type. For e.g. VLAN ID for VLAN network type and tunnel ID for GRE/VXLAN network types. See note.
NOTE: If this property is included in the VNFD, the property value shall be provided at run-time, unless a default value is provided at design time in the VNFD. If a default value is provided at design-time, this value may be overridden at run-time.				

6.2.15.3 Definition

The syntax of the L2ProtocolData data type shall comply with the following definition:

```
tosca.datatypes.nfv.L2ProtocolData:
  derived_from: tosca.datatypes.Root
  description: describes L2 protocol data for a given virtual link used in a
  specific VNF deployment flavour.
  properties:
    name:
      type: string
      description: Identifies the network name associated with this L2 protocol.
      required: false
    network_type:
      type: string
      description: Specifies the network type for this L2 protocol. The value
      may be overridden at run-time.
      required: false
    constraints:
      - valid_values: [ flat, vlan, vxlan, gre ]
```

```

vlan_transparent:
  type: boolean
  description: Specifies whether to support VLAN transparency for this L2
protocol or not.
  required: true
  default: false
mtu:
  type: integer
  description: Specifies the maximum transmission unit (MTU) value for this
L2 protocol.
  required: false
  constraints:
    - greater_than: 0
segmentation_id:
  type: string
  description: Specifies a specific virtualised network segment, which
depends on the network type. For e.g., VLAN ID for VLAN network type and tunnel ID
for GRE/VXLAN network types
  required: false

```

6.2.15.4 Examples

See example in clause A.5.

6.2.15.5 Additional Requirements

None.

6.2.16 tosca.datatypes.nfv.L3ProtocolData

6.2.16.1 Description

The L3ProtocolData data type describes L3 protocol data for a given virtual link used in a specific VNF deployment flavour. Table 6.2.16.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.16.1-1: Type name, shorthand, and URI

Shorthand Name	L3ProtocolData
Type Qualified Name	toscanfv:L3ProtocolData
Type URI	tosca.datatypes.nfv.L3ProtocolData

6.2.16.2 Properties

The properties of the L3ProtocolData data type shall comply with the provisions set out in table 6.2.16.2-1.

Table 6.2.16.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Identifies the network name associated with this L3 protocol.
ip_version	yes	string	Valid values: ipv4 ipv6	Specifies IP version of this L3 protocol. The value of the ip_version property shall be consistent with the value of the layer_protocol in the connectivity_type property of the virtual link node.

Name	Required	Type	Constraints	Description
cidr	yes	string		Specifies the CIDR (Classless Inter-Domain Routing) of this L3 protocol. The value may be overridden at run-time.
ip_allocation_pools	no	list of tosca.datatypes .nfv.IpAllocation Pool		Specifies the allocation pools with start and end IP addresses for this L3 protocol. The value may be overridden at run-time.
gateway_ip	no	string		Specifies the gateway IP address for this L3 protocol. The value may be overridden at run-time.
dhcp_enabled	no	boolean		Indicates whether DHCP (Dynamic Host Configuration Protocol) is enabled or disabled for this L3 protocol. The value may be overridden at run-time.
ipv6_address_mode	no	string	Valid values: slaac dhcpv6-stateful dhcpv6-stateless	Specifies IPv6 address mode. May be present when the value of the ipVersion attribute is "ipv6" and shall be absent otherwise. The value may be overridden at run-time.

6.2.16.3 Definition

The syntax of the L3ProtocolData data type shall comply with the following definition:

```

tosca.datatypes.nfv.L3ProtocolData:
  derived_from: toska.datatypes.Root
  description: describes L3 protocol data for a given virtual link used in a
  specific VNF deployment flavour.
  properties:
    name:
      type: string
      description: Identifies the network name associated with this L3 protocol.
      required: false
    ip_version:
      type: string
      description: Specifies IP version of this L3 protocol. The value of the
      ip_version property shall be consistent with the value of the layer_protocol in
      the connectivity_type property of the virtual link node.
      required: true
      constraints:
        - valid_values: [ ipv4, ipv6 ]
    cidr:
      type: string
      description: Specifies the CIDR (Classless Inter-Domain Routing) of this
      L3 protocol. The value may be overridden at run-time.
      required: true
    ip_allocation_pools:
      type: list
      description: Specifies the allocation pools with start and end IP
      addresses for this L3 protocol. The value may be overridden at run-time.
      required: false
      entry_schema:
        type: toska.datatypes.nfv.IpAllocationPool
    gateway_ip:
      type: string
      description: Specifies the gateway IP address for this L3 protocol. The
      value may be overridden at run-time.
      required: false
    dhcp_enabled:
      type: boolean

```

```

    description: Indicates whether DHCP (Dynamic Host Configuration Protocol)
    is enabled or disabled for this L3 protocol. The value may be overridden at run-
    time.
    required: false
    ipv6_address_mode:
    type: string
    description: Specifies IPv6 address mode. May be present when the value of
    the ipVersion attribute is "ipv6" and shall be absent otherwise. The value may be
    overridden at run-time.
    required: false
    constraints:
    - valid_values: [ slaac, dhcpv6-stateful, dhcpv6-stateless ]

```

6.2.16.4 Examples

None.

6.2.16.5 Additional Requirements

None.

6.2.17 toska.datatypes.nfv.IpAllocationPool

6.2.17.1 Description

The IpAllocationPool data type specifies a range of IP addresses. Table 6.2.17.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.17.1-1: Type name, shorthand, and URI

Shorthand Name	IpAllocationPool
Type Qualified Name	toscanfv:IpAllocationPool
Type URI	tosca.datatypes.nfv.IpAllocationPool

6.2.17.2 Properties

The properties of the IpAllocationPool data type shall comply with the provisions set out in table 6.2.17.2-1.

Table 6.2.17.2-1: Properties

Name	Required	Type	Constraints	Description
start_ip_address	yes	string		The IP address to be used as the first one in a pool of addresses derived from the cidr block full IP range
end_ip_address	yes	string		The IP address to be used as the last one in a pool of addresses derived from the cidr block full IP range

6.2.17.3 Definition

The syntax of the IpAllocationPool data type shall comply with the following definition:

```

tosca.datatypes.nfv.IpAllocationPool:
  derived_from: tosca.datatypes.Root
  description: Specifies a range of IP addresses
  properties:
    start_ip_address:
      type: string
      description: The IP address to be used as the first one in a pool of
addresses derived from the cidr block full IP range
      required: true
    end_ip_address:
      type: string
      description: The IP address to be used as the last one in a pool of
addresses derived from the cidr block full IP range
      required: true

```

6.2.17.4 Examples

None.

6.2.17.5 Additional Requirements

None.

6.2.18 tosca.datatypes.nfv.InstantiationLevel

6.2.18.1 Description

The InstantiationLevel data type describes the scale level for each aspect that corresponds to a given level of resources to be instantiated within a deployment flavour in term of the number VNFC instances. Table 6.2.18.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.18.1-1: Type name, shorthand, and URI

Shorthand Name	InstantiationLevel
Type Qualified Name	toscanfv:InstantiationLevel
Type URI	tosca.datatypes.nfv.InstantiationLevel

6.2.18.2 Properties

The properties of the InstantiationLevel data type shall comply with the provisions set out in table 6.2.18.2-1.

Table 6.2.18.2-1: Properties

Name	Required	Type	Constraints	Description
description	yes	string		Human readable description of the level.
scale_info	no	map of tosca.datatypes .nfv.ScaleInfo		Represents for each aspect the scale level that corresponds to this instantiation level. scale_info shall be present if the VNF supports scaling.

6.2.18.3 Definition

The syntax of the InstantiationLevel data type shall comply with the following definition:

```

tosca.datatypes.nfv.InstantiationLevel:
  derived_from: toasca.datatypes.Root
  description: Describes the scale level for each aspect that corresponds to a given
level of resources to be instantiated within a deployment flavour in term of the
number VNFC instances
  properties:
    description:
      type: string
      description: Human readable description of the level
      required: true
    scale_info:
      type: map # key: aspectId
      description: Represents for each aspect the scale level that corresponds to
this instantiation level. scale_info shall be present if the VNF supports scaling.
      required: false
    entry_schema:
      type: toasca.datatypes.nfv.ScaleInfo

```

6.2.18.4 Examples

See clause A.6.

6.2.18.5 Additional Requirements

None.

6.2.19 toasca.datatypes.nfv.VduLevel

6.2.19.1 Description

The VduLevel data type indicates for a given Vdu.Compute in a given level the number of instances to deploy. Table 6.2.19.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.19.1-1: Type name, shorthand, and URI

Shorthand Name	VduLevel
Type Qualified Name	toscanfv:VduLevel
Type URI	tosca.datatypes.nfv.VduLevel

6.2.19.2 Properties

The properties of the VduLevel data type shall comply with the provisions set out in table 6.2.19.2-1.

Table 6.2.19.2-1: Properties

Name	Required	Type	Constraints	Description
number_of_instances	yes	integer	greater_or_equal : 0	Number of instances of VNFC based on this VDU to deploy for this level.

6.2.19.3 Definition

The syntax of the VduLevel data type shall comply with the following definition:

```

tosca.datatypes.nfv.VduLevel:
  derived_from: toska.datatypes.Root
  description: Indicates for a given Vdu.Compute in a given level the number of
instances to deploy
  properties:
    number_of_instances:
      type: integer
      description: Number of instances of VNFC based on this VDU to deploy for this
level.
    required: true
    constraints:
      - greater_or_equal: 0

```

6.2.19.4 Examples

See clause A.6.

6.2.19.5 Additional Requirements

None.

6.2.20 toska.datatypes.nfv.VnfLcmOperationsConfiguration

6.2.20.1 Description

The VnfLcmOperationsConfiguration data type represents information to configure lifecycle management operations as specified in ETSI GS NFV-IFA 007 [i.1]. Each VNF LCM operations configuration property represents a container for all attributes that affect the invocation of the corresponding VNF Lifecycle Management operation. Table 6.2.20.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.20.1-1: Type name, shorthand, and URI

Shorthand Name	VnfLcmOperationsConfiguration
Type Qualified Name	toscanfv:VnfLcmOperationsConfiguration
Type URI	tosca.datatypes.nfv.VnfLcmOperationsConfiguration

6.2.20.2 Properties

The properties of the VnfLcmOperationsConfiguration data type shall comply with the provisions set out in table 6.2.20.2-1.

Table 6.2.20.2-1: Properties

Name	Required	Type	Constraints	Description
instantiate	no	tosca.datatypes.nfv.VnfInstantiateOperationConfiguration		Configuration parameters for the InstantiateVnf operation.
scale	no	tosca.datatypes.nfv.VnfScaleOperationConfiguration		Configuration parameters for the ScaleVnf operation.
scale_to_level	no	tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration		Configuration parameters for the ScaleVnfToLevel operation.
change_flavour	no	tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration		Configuration parameters for the changeVnfFlavourOpConfig operation.
heal	no	tosca.datatypes.nfv.VnfHealOperationConfiguration		Configuration parameters for the HealVnf operation.
terminate	no	tosca.datatypes.nfv.VnfTerminateOperationConfiguration		Configuration parameters for the TerminateVnf operation.
operate	no	tosca.datatypes.nfv.VnfOperateOperationConfiguration		Configuration parameters for the OperateVnf operation.
change_ext_connectivity	no	tosca.datatypes.nfv.VnfChangeExtConnectivityOperationConfiguration		Configuration parameters for the changeExtVnfConnectivityOpConfig operation.

6.2.20.3 Definition

The syntax of the VnfLcmOperationsConfiguration data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfLcmOperationsConfiguration:
  derived_from: tosca.datatypes.Root
  description: Represents information to configure lifecycle management operations
  properties:
    instantiate:
      type: tosca.datatypes.nfv.VnfInstantiateOperationConfiguration
      description: Configuration parameters for the InstantiateVnf operation
      required: false
    scale:
      type: tosca.datatypes.nfv.VnfScaleOperationConfiguration
      description: Configuration parameters for the ScaleVnf operation
      required: false
    scale_to_level:
      type: tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration
      description: Configuration parameters for the ScaleVnfToLevel operation
      required: false
    change_flavour:
      type: tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration
      description: Configuration parameters for the changeVnfFlavourOpConfig
operation
      required: false
    heal:
      type: tosca.datatypes.nfv.VnfHealOperationConfiguration
      description: Configuration parameters for the HealVnf operation
      required: false
    terminate:
      type: tosca.datatypes.nfv.VnfTerminateOperationConfiguration
      description: Configuration parameters for the TerminateVnf operation

```

```

    required: false
  operate:
    type: toska.datatypes.nfv.VnfOperateOperationConfiguration
    description: Configuration parameters for the OperateVnf operation
    required: false
  change_ext_connectivity:
    type: toska.datatypes.nfv.VnfChangeExtConnectivityOperationConfiguration
    description: Configuration parameters for the changeExtVnfConnectivityOpConfig
operation
    required: false

```

6.2.20.4 Examples

None.

6.2.21 toska.datatypes.nfv.VnfInstantiateOperationConfiguration

6.2.21.1 Description

The VnfInstantiateOperationConfiguration data type represents information that affect the invocation of the InstantiateVnf operation, as specified in ETSI GS NFV-IFA 011 [1]. This data type definition is reserved for future use in the present document. Table 6.2.21.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.21.1-1: Type name, shorthand, and URI

Shorthand Name	VnfInstantiateOperationConfiguration
Type Qualified Name	toscanfv:VnfInstantiateOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfInstantiateOperationConfiguration

6.2.21.2 Properties

None.

6.2.21.3 Definition

The syntax of the VnfInstantiateOperationConfiguration data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfInstantiateOperationConfiguration:
  derived_from: toska.datatypes.Root
  description: represents information that affect the invocation of the
InstantiateVnf operation.
  # This data type definition is reserved for future use in the present document.
  # properties:

```

6.2.21.4 Examples

None.

6.2.21.5 Additional Requirements

None.

6.2.22 tosca.datatypes.nfv.VnfScaleOperationConfiguration

6.2.22.1 Description

VnfScaleOperationConfiguration represents information that affect the invocation of the ScaleVnf operation, as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.22.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.22.1-1: Type name, shorthand, and URI

Shorthand Name	VnfScaleOperationConfiguration
Type Qualified Name	toscanfv:VnfScaleOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfScaleOperationConfiguration

6.2.22.2 Properties

The properties of the VnfScaleOperationConfiguration data type shall comply with the provisions set out in table 6.2.22.2-1.

Table 6.2.22.2-1: Properties

Name	Required	Type	Constraints	Description
scaling_by_more_than_one_step_supported	yes	boolean		Signals whether passing a value larger than one in the numScalingSteps parameter of the ScaleVnf operation is supported by this VNF. Default is FALSE, i.e. "not supported".

6.2.22.3 Definition

The syntax of the VnfScaleOperationConfiguration data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfScaleOperationConfiguration:
  derived_from: tosca.datatypes.Root
  description: Represents information that affect the invocation of the ScaleVnf
operation
  properties:
    scaling_by_more_than_one_step_supported:
      type: boolean
      description: Signals whether passing a value larger than one in the
numScalingSteps parameter of the ScaleVnf operation is supported by this VNF.
      required: true
      default: false
```

6.2.22.4 Examples

See clause 6.8.1.9.

6.2.22.5 Additional Requirements

None.

6.2.23 tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration

6.2.23.1 Description

The VnfScaleToLevelOperationConfiguration data type represents information that affect the invocation of the ScaleVnfToLevel operation, as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.23.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.23.1-1: Type name, shorthand, and URI

Shorthand Name	VnfScaleToLevelOperationConfiguration
Type Qualified Name	toscanfv:VnfScaleToLevelOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration

6.2.23.2 Properties

The properties of the VnfScaleToLevelOperationConfiguration data type shall comply with the provisions set out in table 6.2.23.2-1.

Table 6.2.23.2-1: Properties

Name	Required	Type	Constraints	Description
arbitrary_target_levels_supported	yes	boolean		Signals whether scaling according to the parameter "scaleInfo" is supported by this VNF.

6.2.23.3 Definition

The syntax of the VnfScaleToLevelOperationConfiguration data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfScaleToLevelOperationConfiguration:
  derived_from: tosca.datatypes.Root
  description: represents information that affect the invocation of the
ScaleVnfToLevel operation
  properties:
    arbitrary_target_levels_supported:
      type: boolean
      description: Signals whether scaling according to the parameter "scaleInfo" is
supported by this VNF
      required: true

```

6.2.23.4 Examples

See clause 6.8.1.9.

6.2.23.5 Additional Requirements

None.

6.2.24 tosca.datatypes.nfv.VnfHealOperationConfiguration

6.2.24.1 Description

The VnfHealOperationConfiguration data type represents information that affect the invocation of the HealVnf operation, as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.24.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.24.1-1: Type name, shorthand, and URI

Shorthand Name	VnfHealOperationConfiguration
Type Qualified Name	toscanfv:VnfHealOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfHealOperationConfiguration

6.2.24.2 Properties

The properties of the VnfHealOperationConfiguration data type shall comply with the provisions set out in table 6.2.24.2-1.

Table 6.2.24.2-1: Properties

Name	Required	Type	Constraints	Description
causes	no	list of string		Supported "cause" parameter values.

6.2.24.3 Definition

The syntax of the VnfHealOperationConfiguration data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfHealOperationConfiguration:
  derived_from: toasca.datatypes.Root
  description: represents information that affect the invocation of the HealVnf
  operation
  properties:
    causes:
      type: list
      description: Supported "cause" parameter values
      required: false
      entry_schema:
        type: string
```

6.2.24.4 Examples

See clause 6.8.1.9.

6.2.24.5 Additional Requirements

None.

6.2.25 toasca.datatypes.nfv.VnfTerminateOperationConfiguration

6.2.25.1 Description

The VnfTerminateOperationConfiguration data type represents information that affect the invocation of the TerminateVnf, as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.25.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.25.1-1: Type name, shorthand, and URI

Shorthand Name	VnfTerminateOperationConfiguration
Type Qualified Name	toscanfv:VnfTerminateOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfTerminateOperationConfiguration

6.2.25.2 Properties

The properties of the VnfTerminateOperationConfiguration data type shall comply with the provisions set out in table 6.2.25.2-1.

Table 6.2.25.2-1: Properties

Name	Required	Type	Constraints	Description
min_graceful_termination_timeout	yes	scalar-unit.time		Minimum timeout value for graceful termination of a VNF instance.
max_recommended_graceful_termination_timeout	no	scalar-unit.time		Maximum recommended timeout value that can be needed to gracefully terminate a VNF instance of a particular type under certain conditions, such as maximum load condition. This is provided by VNF provider as information for the operator facilitating the selection of optimal timeout value. This value is not used as constraint.

6.2.25.3 Definition

The syntax of the VnfTerminateOperationConfiguration data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfTerminateOperationConfiguration:
  derived_from: toska.datatypes.Root
  description: represents information that affect the invocation of the TerminateVnf
  properties:
    min_graceful_termination_timeout:
      type: scalar-unit.time
      description: Minimum timeout value for graceful termination of a VNF instance
      required: true
    max_recommended_graceful_termination_timeout:
      type: scalar-unit.time
      description: Maximum recommended timeout value that can be needed to
      gracefully terminate a VNF instance of a particular type under certain conditions,
      such as maximum load condition. This is provided by VNF provider as information for
      the operator facilitating the selection of optimal timeout value. This value is not
      used as constraint
      required: false

```

6.2.25.4 Examples

None.

6.2.25.5 Additional Requirements

None.

6.2.26 toska.datatypes.nfv.VnfOperateOperationConfiguration

6.2.26.1 Description

The VnfOperateOperationConfiguration data type represents information that affect the invocation of the OperateVnf operation, as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.26.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.26.1-1: Type name, shorthand, and URI

Shorthand Name	VnfOperateOperationConfiguration
Type Qualified Name	toscanfv:VnfOperateOperationConfiguration
Type URI	tosca.datatypes.nfv.VnfOperateOperationConfiguration

6.2.26.2 Properties

The properties of the VnfOperateOperationConfiguration data type shall comply with the provisions set out in table 6.2.26.2-1.

Table 6.2.26.2-1: Properties

Name	Required	Type	Constraints	Description
min_graceful_stop_timeout	yes	scalar-unit.time		Minimum timeout value for graceful stop of a VNF instance.
max_recommended_graceful_stop_timeout	no	scalar-unit.time		Maximum recommended timeout value that can be needed to gracefully stop a VNF instance of a particular type under certain conditions, such as maximum load condition. This is provided by VNF provider as information for the operator facilitating the selection of optimal timeout value. This value is not used as constraint.

6.2.26.3 Definition

The syntax of the VnfOperateOperationConfiguration data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfOperateOperationConfiguration:
  derived_from: toasca.datatypes.Root
  description: represents information that affect the invocation of the OperateVnf
operation
  properties:
    min_graceful_stop_timeout:
      type: scalar-unit.time
      description: Minimum timeout value for graceful stop of a VNF instance
      required: true
    max_recommended_graceful_stop_timeout:
      type: scalar-unit.time
      description: Maximum recommended timeout value that can be needed to
gracefully stop a VNF instance of a particular type under certain conditions, such as
maximum load condition. This is provided by VNF provider as information for the
operator facilitating the selection of optimal timeout value. This value is not used
as constraint
      required: false

```

6.2.26.4 Examples

None.

6.2.26.5 Additional Requirements

None.

6.2.27 `tosca.datatypes.nfv.ScaleInfo`

6.2.27.1 Description

The `scaleInfo` data type indicates for a given `scaleAspect` the corresponding `scaleLevel`. Table 6.2.27.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.27.1-1: Type name, shorthand, and URI

Shorthand Name	<code>ScaleInfo</code>
Type Qualified Name	<code>toscanfv:ScaleInfo</code>
Type URI	<code>tosca.datatypes.nfv.ScaleInfo</code>

6.2.27.2 Properties

The properties of the `ScaleInfo` data type shall comply with the provisions set out in table 6.2.27.2-1.

Table 6.2.27.2-1: Properties

Name	Required	Type	Constraints	Description
<code>scale_level</code>	yes	integer	<code>greater_or_equal : 0</code>	The scale level for a particular aspect.

6.2.27.3 Definition

The syntax of the `ScaleInfo` data type shall comply with the following definition:

```
tosca.datatypes.nfv.ScaleInfo:
  derived_from: toasca.datatypes.Root
  description: Indicates for a given scaleAspect the corresponding scaleLevel
  properties:
    scale_level:
      type: integer
      description: The scale level for a particular aspect
      required: true
      constraints:
        - greater_or_equal: 0
```

6.2.27.4 Examples

See clause 6.8.1.9.

6.2.27.5 Additional Requirements

None.

6.2.28 `tosca.datatypes.nfv.ScalingAspect`

6.2.28.1 Description

The `ScalingAspect` data type describes the details of an aspect used for horizontal scaling. Table 6.2.28.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.28.1-1: Type name, shorthand, and URI

Shorthand Name	ScalingAspect
Type Qualified Name	toscanfv:ScalingAspect
Type URI	tosca.datatypes.nfv.ScalingAspect

6.2.28.2 Properties

The properties of the ScalingAspect data type shall comply with the provisions set out in table 6.2.28.2-1.

Table 6.2.28.2-1: Properties

Name	Required	Type	Constraints	Description
name	yes	string		Human readable name of the aspect.
description	yes	string		Human readable description of the aspect.
max_scale_level	yes	integer	positiveInteger	Total number of scaling steps that can be applied with regards to this aspect. The value of this property corresponds to the number of scaling steps can be applied to this aspect when scaling it from the minimum scale level (i.e. 0) to the maximum scale level defined by this property.
step_deltas	no	list of string		List of scaling deltas to be applied for the different subsequent scaling steps of this aspect. The first entry in the array shall correspond to the first scaling step (between scale levels 0 to 1) and the last entry in the array shall correspond to the last scaling step (between maxScaleLevel-1 and maxScaleLevel).

6.2.28.3 Definition

The syntax of the ScalingAspect data type shall comply with the following definition:

```

tosca.datatypes.nfv.ScalingAspect:
  derived_from: toasca.datatypes.Root
  description: describes the details of an aspect used for horizontal scaling
  properties:
    name:
      type: string
      description: Human readable name of the aspect
      required: true
    description:
      type: string
      description: Human readable description of the aspect
      required: true
    max_scale_level:
      type: integer # positiveInteger
      description: Total number of scaling steps that can be applied w.r.t. this
aspect. The value of this property corresponds to the number of scaling steps can be
applied to this aspect when scaling it from the minimum scale level (i.e. 0) to the
maximum scale level defined by this property
      required: true
      constraints:
        - greater_or_equal: 0
    step_deltas:
      type: list

```

```

description: List of scaling deltas to be applied for the different subsequent
scaling steps of this aspect. The first entry in the array shall correspond to the
first scaling step (between scale levels 0 to 1) and the last entry in the array shall
correspond to the last scaling step (between maxScaleLevel-1 and maxScaleLevel)
required: false
entry_schema:
  type: string # Identifier

```

6.2.28.4 Examples

See clause A.6.

6.2.28.5 Additional Requirements

None.

6.2.29 `tosca.datatypes.nfv.LinkBitrateRequirements`

6.2.29.1 Description

The `LinkBitrateRequirements` data type is defined in clause 9.2.5 of the present document.

6.2.30 `tosca.datatypes.nfv.ConnectivityType`

6.2.30.1 Description

The `ConnectivityType` data type is defined in clause 9.2.4 of the present document.

6.2.31 `tosca.datatypes.nfv.VnfConfigurableProperties`

6.2.31.1 Description

The `VnfConfigurableProperties` data type describes configurable properties for a given VNF. Configurable properties can be standardized as listed below (e.g. related to auto scaling, auto healing and interface configuration) or can be VNF-specific as defined by the VNF provider.

The value of all VNF configurable properties listed in table 6.2.31.2-1 shall be modifiable anytime (including after instantiation of the VNF) via the Modify VNF information operation, unless stated otherwise in the description of the specific VNF configurable property.

Table 6.2.31.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.31.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfConfigurableProperties</code>
Type Qualified Name	<code>toscanfv:VnfConfigurableProperties</code>
Type URI	<code>tosca.datatypes.nfv.VnfConfigurableProperties</code>

6.2.31.2 Properties

The properties of the `VnfConfigurableProperties` data type shall comply with the provisions set out in table 6.2.31.2-1.

Table 6.2.31.2-1: Properties

Name	Required	Type	Constraints	Description
is_autoscale_enabled	no	boolean		It permits to enable (TRUE)/disable (FALSE) the auto-scaling functionality. If the property is not present, then configuring this VNF property is not supported.
is_autoheal_enabled	no	boolean		It permits to enable (TRUE)/disable (FALSE) the auto-healing functionality. If the property is not present, then configuring this VNF property is not supported.
vnfm_interface_info	no	tosca.datatypes.nfv.VnfmInterfaceInfo		<p>Contains information enabling the VNF instance to access to the NFV-MANO interfaces produced by the VNFM (e.g. URIs and credentials).</p> <p>If the property is not present, then configuring this VNF property is not supported.</p> <p>If this attribute is declared for a VNF, its initial value shall be set prior to or at instantiation time (as initial value in the VNFD or via the VNF LCM interface). Its value shall be further modifiable after instantiation via the Modify VNF information operation.</p>
vnfm_oauth_server_info	no	tosca.datatypes.nfv.OauthServerInfo		<p>Contains information to enable discovery of the authorization server protecting access to VNFM interfaces.</p> <p>If the property is not present, then configuring this VNF property is not supported.</p> <p>If this attribute is declared for a VNF, its initial value shall be set prior to or at instantiation time (as initial value in the VNFD or via the VNF LCM interface). Its value shall be further modifiable after instantiation via the Modify VNF information operation.</p>
vnf_oauth_server_info	no	tosca.datatypes.nfv.OauthServerInfo		<p>Contains information to enable discovery of the authorization server to validate the access tokens provided by the VNFM when the VNFM accesses the VNF interfaces, if that functionality (token introspection) is supported by the authorization server.</p> <p>If the property is not present, then configuring this VNF property is not supported.</p> <p>If this attribute is declared for a VNF, its initial value shall be set prior to or at instantiation time (as initial value in the VNFD or via the VNF LCM interface). Its value shall be further modifiable after instantiation via the Modify VNF information operation.</p>

Name	Required	Type	Constraints	Description
additional_configurable_property	no	tosca.datatypes.nfv.VnfAdditionalConfigurableProperties		<p>It provides VNF specific configurable properties that can be modified using the ModifyVnfInfo operation.</p> <p>If some of these properties are declared as required, their values shall be set prior to or at instantiation time (as initial value in the VNFD or via the VNF LCM interface). Their values may be modifiable after instantiation via the Modify VNF information operation if such modification of individual attributes is supported by the VNF and declared per attribute in the VNFD.</p>

6.2.31.3 Definition

The syntax of the VnfConfigurableProperties data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfConfigurableProperties:
  derived_from: toska.datatypes.Root
  description: indicates configuration properties for a given VNF (e.g. related to
auto scaling and auto healing).
  properties:
    is_autoscale_enabled:
      type: boolean
      description: It permits to enable (TRUE)/disable (FALSE) the auto-scaling
functionality. If the property is not present, then configuring this VNF property is
not supported.
      required: false
    is_autoheal_enabled:
      type: boolean
      description: It permits to enable (TRUE)/disable (FALSE) the auto-healing
functionality. If the property is not present, then configuring this VNF property is
not supported.
      required: false
    vnfm_interface_info:
      type: toska.datatypes.nfv.VnfmInterfaceInfo
      description: Contains information enabling access to the NFV-MANO interfaces
produced by the VNFM (e.g. URIs and credentials). If the property is not present, then
configuring this VNF property is not supported.
      required: false
    vnfm_oauth_server_info:
      type: toska.datatypes.nfv.OauthServerInfo
      description: Contains information to enable discovery of the authorization
server protecting access to VNFM interfaces. If the property is not present, then
configuring this VNF property is not supported.
      required: false
    vnf_oauth_server_info:
      type: toska.datatypes.nfv.OauthServerInfo
      description: Contains information to enable discovery of the authorization
server to validate the access tokens provided by the VNFM when the VNFM accesses the
VNF interfaces, if that functionality (token introspection) is supported by the
authorization server. If the property is not present, then configuring this VNF
property is not supported.
      required: false
    # additional_configurable_properties:
    # description: It provides VNF specific configurable properties that can be
    # modified using the ModifyVnfInfo operation
    # required: false

```

```
# type: toska.datatypes.nfv.VnfAdditionalConfigurableProperties
# derived types are expected to introduce
# additional_configurable_properties with its type derived from
# toska.datatypes.nfv.VnfAdditionalConfigurableProperties
```

6.2.31.4 Examples

Example definition of configurable properties without properties assignment value.

```
tosca_definitions_version: toska_simple_yaml_1_2

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: toska.nodes.nfv.VNF
    properties:
      flavour_id:
        constraints:
          - valid_values: [ simple, complex ]
      configurable_properties:
        type: MyCompany.datatypes.nfv.VnfConfigurableProperties

data_types:
  MyCompany.datatypes.nfv.VnfConfigurableProperties:
    derived_from: toska.datatypes.nfv.VnfConfigurableProperties
    properties:
      additional_configurable_properties:
        type: MyCompany.datatypes.nfv.VnfAdditionalConfigurableProperties

  MyCompany.datatypes.nfv.VnfAdditionalConfigurableProperties:
    derived_from: toska.datatypes.nfv.VnfAdditionalConfigurableProperties
    properties:
      name_prefix_in_vim:
        type: string
        required: false
      dns_server:
        type: string
        required: true
```

In the above example, properties definitions are provided and properties assignment values are not necessary. The properties values are available in the API.

Example definition of configurable properties with properties assignment value.

```
tosca_definitions_version: toska_simple_yaml_1_2

...

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: toska.nodes.nfv.VNF
    interfaces:
      Vnflcm:
        type: toska.interfaces.nfv.Vnflcm

  MyCompany.nodes.nfv.Vdu.Aux:
    derived_from: toska.nodes.nfv.Vdu.Compute
    properties:
      configurable_properties:
```

```

    type: MyCompany.datatypes.nfv.AuxVnfcConfigurableProperties
    required: false

data_types:
  MyCompany.datatypes.nfv.AuxVnfcConfigurableProperties:
    derived_from: tosca.datatypes.nfv.VnfcConfigurableProperties
    properties:
      additional_vnfc_configurable_properties:
        type: MyCompany.datatypes.nfv.AuxVnfcAdditionalConfigurableProperties
        required: true

  MyCompany.datatypes.nfv.AuxVnfcAdditionalConfigurableProperties:
    derived_from: tosca.datatypes.nfv.VnfcAdditionalConfigurableProperties
    properties:
      name_prefix_in_vim:
        type: string
        required: true
        default: "MyCustomer"
      dns_server:
        type: string
        required: true
        default: "90.200.250.57"

topology_template:
  substitution_mappings:
    node_type: MyCompany.SunshineDB.1_0.1_0
  requirements:
    virtual_link: [ dbBackendIpv4, virtual_link ] # IPv4 for SQL

inputs:
  name_prefix_in_vim:
    type: string
  dns_server:
    type: string

node_templates:
  SunshineDB:
    type: MyCompany.SunshineDB.1_0.1_0

  dbBackend:
    type: MyCompany.nodes.nfv.Vdu.Aux
    properties:
      ...
      configurable_properties:
        additional_vnfc_configurable_properties:
          name_prefix_in_vim: { get_input: name_prefix_in_vim }
          dns_server: { get_input: dns_server }

```

In the above example, default values are provided in the node type definition, properties assignment by using TOSCA `get_input` function is described in the node template. The properties values from the API will override the default values.

6.2.31.5 Additional Requirements

None.

6.2.32 tosca.datatypes.nfv.VnfAdditionalConfigurableProperties

6.2.32.1 Description

The VnfAdditionalConfigurableProperties data type is an empty base type for deriving data types for describing additional configurable properties for a given VNF. Table 6.2.32.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.32.1-1: Type name, shorthand, and URI

Shorthand Name	VnfAdditionalConfigurableProperties
Type Qualified Name	toscanfv:VnfAdditionalConfigurableProperties
Type URI	tosca.datatypes.nfv.VnfAdditionalConfigurableProperties

6.2.32.2 Properties

The properties of the VnfAdditionalConfigurableProperties data type shall comply with the provisions set out in table 6.2.32.2-1.

Table 6.2.32.2-1: Properties

Name	Required	Type	Constraints	Description
is_writable_anytime	yes	boolean		It specifies whether these additional configurable properties are writable (TRUE) at any time (i.e. prior to / at instantiation time as well as after instantiation).or (FALSE) only prior to / at instantiation time. If this property is not present, the additional configurable properties are writable anytime.

6.2.32.3 Definition

The syntax of the VnfAdditionalConfigurableProperties data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfAdditionalConfigurableProperties:
  derived_from: tosca.datatypes.Root
  description: is an empty base type for deriving data types for describing
  additional configurable properties for a given VNF
  properties:
    is_writable_anytime:
      type: boolean
      description: It specifies whether these additional configurable properties are
  writeable (TRUE) at any time (i.e. prior to / at instantiation time as well as after
  instantiation).or (FALSE) only prior to / at instantiation time. If this property is
  not present, the additional configurable properties are writable anytime.
      required: true
      default: true
```

6.2.32.4 Examples

See clause 6.2.31.4.

6.2.32.5 Additional Requirements

None.

6.2.33 `tosca.datatypes.nfv.VnfInfoModifiableAttributes`

6.2.33.1 Description

The `VnfInfoModifiableAttributes` data type describes VNF-specific extension and metadata for a given VNF. Table 6.2.33.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.33.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfInfoModifiableAttributes</code>
Type Qualified Name	<code>toscanfv:VnfInfoModifiableAttributes</code>
Type URI	<code>tosca.datatypes.nfv.VnfInfoModifiableAttributes</code>

6.2.33.2 Properties

The properties of the `VnfInfoModifiableAttributes` data type shall comply with the provisions set out in table 6.2.33.2-1.

Table 6.2.33.2-1: Properties

Name	Required	Type	Constraints	Description
<code>extensions</code>	no	<code>tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions</code>		"Extension" properties of <code>VnfInfo</code> that are writeable.
<code>metadata</code>	no	<code>tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata</code>		"Metadata" properties of <code>VnfInfo</code> that are writeable.

6.2.33.3 Definition

The syntax of the `VnfInfoModifiableAttributes` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfInfoModifiableAttributes:
  derived_from: toska.datatypes.Root
  description: Describes VNF-specific extension and metadata for a given VNF
  #properties:
    #extensions:
      #type: toska.datatypes.nfv.VnfInfoModifiableAttributesExtensions
      #description: "Extension" properties of VnfInfo that are writeable
      #required: false
      # derived types are expected to introduce
      # extensions with its type derived from
      # toska.datatypes.nfv.VnfInfoModifiableAttributesExtensions
    #metadata:
      #type: toska.datatypes.nfv.VnfInfoModifiableAttributesMetadata
      #description: "Metadata" properties of VnfInfo that are writeable
      #required: false
      # derived types are expected to introduce
      # metadata with its type derived from
      # toska.datatypes.nfv.VnfInfoModifiableAttributesMetadata
```

6.2.33.4 Examples

See clause 6.8.1.9.

6.2.33.5 Additional Requirements

None.

6.2.34 `tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions`

6.2.34.1 Description

The `VnfInfoModifiableAttributesExtensions` data type is an empty base type for deriving data types for describing VNF-specific extension. Table 6.2.34.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.34.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfInfoModifiableAttributesExtensions</code>
Type Qualified Name	<code>toscanfv:VnfInfoModifiableAttributesExtensions</code>
Type URI	<code>tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions</code>

6.2.34.2 Properties

None.

6.2.34.3 Definition

The syntax of the `VnfInfoModifiableAttributesExtensions` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions:
  derived_from: toasca.datatypes.Root
  description: is an empty base type for deriving data types for describing
  VNF-specific extension
```

6.2.34.4 Examples

See clause 6.8.1.9.

6.2.34.5 Additional Requirements

None.

6.2.35 `tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata`

6.2.35.1 Description

The `VnfInfoModifiableAttributesMetadata` data type is an empty base type for deriving data types for describing VNF-specific metadata. Table 6.2.35.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.35.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfInfoModifiableAttributesMetadata</code>
Type Qualified Name	<code>toscanfv:VnfInfoModifiableAttributesMetadata</code>
Type URI	<code>tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata</code>

6.2.35.2 Properties

None.

6.2.35.3 Definition

The syntax of the VnfInfoModifiableAttributesMetadata data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata:
  derived_from: tosca.datatypes.Root
  description: is an empty base type for deriving data types for describing VNF-
specific metadata
```

6.2.35.4 Examples

Example metadata definition:

```
tosca_definitions_version: tosca_simple_yaml_1_2

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    properties:
      flavour_id:
        constraints:
          - valid_values: [ simple, complex ]
      modifiable_attributes:
        type: mycompany.datatypes.nfv.VnfInfoModifiableAttributes

data_types:
  mycompany.datatypes.nfv.VnfInfoModifiableAttributes:
    derived_from: tosca.datatypes.nfv.VnfInfoModifiableAttributes
    properties:
      metadata:
        type: mycompany.datatypes.nfv.VnfInfoModifiableAttributesMetadata

  mycompany.datatypes.nfv.VnfInfoModifiableAttributesMetadata:
    derived_from: tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata
    properties:
      metadata_key_1:
        type: string
        required: false
      metadata_key_2:
        type: string
        required: false
```

6.2.35.5 Additional Requirements

None.

6.2.36 tosca.datatypes.nfv.Qos

6.2.36.1 Description

The Qos data type is defined in clause 9.2.7 of the present document.

6.2.37 tosca.datatypes.nfv.LogicalNodeData

6.2.37.1 Description

The LogicalNodeData data type describes compute, memory and I/O requirements associated with a particular VDU. Table 6.2.37.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.37.1-1: Type name, shorthand, and URI

Shorthand Name	LogicalNodeData
Type Qualified Name	toscanfv:LogicalNodeData
Type URI	tosca.datatypes.nfv.LogicalNodeData

6.2.37.2 Properties

The properties of the LogicalNodeData data type shall comply with the provisions set out in table 6.2.37.2-1.

Table 6.2.37.2-1: Properties

Name	Required	Type	Constraints	Description
logical_node_requirements	no	map of string		<p>The logical node-level compute, memory and I/O requirements. A map of strings that contains a set of key-value pairs that describes hardware platform specific deployment requirements, including the number of CPU cores on this logical node, a memory configuration specific to a logical node or a requirement related to the association of an I/O device with the logical node.</p> <p>More information regarding the usage of this property is available at: https://register.etsi.org</p>

6.2.37.3 Definition

The syntax of the LogicalNodeData data type shall comply with the following definition:

```
tosca.datatypes.nfv.LogicalNodeData:
  derived_from: tosca.datatypes.Root
  description: Describes compute, memory and I/O requirements associated with a
particular VDU.
  properties:
    logical_node_requirements:
      type: map
      description: The logical node-level compute, memory and I/O requirements. A
map of strings that contains a set of key-value pairs that describes hardware
platform specific deployment requirements, including the number of CPU cores on this
logical node, a memory configuration specific to a logical node or a requirement
related to the association of an I/O device with the logical node.
      required: false
      entry_schema:
        type: string
```

6.2.37.4 Examples

None.

6.2.37.5 Additional Requirements

None.

6.2.38 `tosca.datatypes.nfv.SwImageData`

6.2.38.1 Description

The `SwImageData` data type describes information related to a software image artifact. Table 6.2.38.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.38.1-1: Type name, shorthand, and URI

Shorthand Name	<code>SwImageData</code>
Type Qualified Name	<code>toscanfv:SwImageData</code>
Type URI	<code>tosca.datatypes.nfv.SwImageData</code>

6.2.38.2 Properties

The properties of the `SwImageData` data type shall comply with the provisions set out in table 6.2.38.2-1.

Table 6.2.38.2-1: Properties

Name	Required	Type	Constraints	Description
<code>name</code>	yes	string		Name of this software image.
<code>version</code>	yes	string		Version of this software image.
<code>provider</code>	no	string		Provider of this software image.
<code>checksum</code>	yes	<code>tosca.datatypes.nfv.ChecksumData</code>		Checksum of the software image file.
<code>container_format</code>	yes	string	Valid values: [aki, ami, ari, bare, docker, ova, ovf]	The container format describes the container file format in which software image is provided. Description of valid values: aki: a kernel image ami: a machine image ari: a ramdisk image bare: the image does not have a container or metadata envelope docker: docker container format ova: OVF package in a tarfile ovf: OVF container format Future versions of the present document may extend the list of possible values. See note 1.

Name	Required	Type	Constraints	Description
disk_format	yes	string	Valid values: [aki, ami, ari, iso, qcow2, raw, vdi, vhd, vhdx, vmdk]	The disk format of a software image is the format of the underlying disk image. Description of valid values: aki: a kernel image ami: a machine image ari: a ramdisk image iso: an archive format for the data contents of an optical disc, such as CD-ROM qcow2: a common disk image format, which can expand dynamically and supports copy on write raw: an unstructured disk image format vdi: a common disk image format vhd: a common disk image format vhdx: enhanced version of VHD format vmdk: a common disk image format Future versions of the present document may extend the list of possible values. See note 2.
min_disk	yes	scalar-unit.size	greater_or_equal: 0 B	The minimal disk size requirement for this software image.
min_ram	no	scalar-unit.size	greater_or_equal: 0 B	The minimal RAM requirement for this software image.
size	yes	scalar-unit.size		The size of this software image.
operating_system	no	string		Identifies the operating system used in the software image.
supported_virtualisation_environments	no	list of string		Identifies the virtualisation environments (e.g. hypervisor) compatible with this software image.
NOTE 1: The list of permitted values was taken from "Container formats" in [i.12].				
NOTE 2: The list of permitted values was adapted from "Disk formats" in [i.12].				

6.2.38.3 Definition

The syntax of the SwImageData data type shall comply with the following definition:

```

tosca.datatypes.nfv.SwImageData:
  derived_from: toasca.datatypes.Root
  description: describes information related to a software image artifact
  properties:
    name:
      type: string
      description: Name of this software image
      required: true
    version:
      type: string
      description: Version of this software image
      required: true
    provider:
      type: string
      description: Provider of this software image
      required: false
    checksum:
      type: toasca.datatypes.nfv.ChecksumData
      description: Checksum of the software image file
      required: true
    container_format:
      type: string
      description: The container format describes the container file format in which
software image is provided

```

```

  entry_schema:
    type: string

```

6.2.38.4 Examples

None.

6.2.38.5 Additional Requirements

None.

6.2.39 `tosca.datatypes.nfv.VirtualBlockStorageData`

6.2.39.1 Description

The `VirtualBlockStorageData` data type describes block storage requirements associated with compute resources in a particular VDU, either as a local disk or as virtual attached storage. Table 6.2.39.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.39.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualBlockStorageData
Type Qualified Name	toscanfv:VirtualBlockStorageData
Type URI	tosca.datatypes.nfv.VirtualBlockStorageData

6.2.39.2 Properties

The properties of the VirtualBlockStorageData data type shall comply with the provisions set out in table 6.2.39.2-1.

Table 6.2.39.2-1: Properties

Name	Required	Type	Constraints	Description
size_of_storage	yes	scalar-unit.size	greater_or_equal:0 B	Size of virtualised storage resource
vdu_storage_requirements	no	map of string		The hardware platform specific storage requirements. A map of strings that contains a set of key-value pairs that represents the hardware platform specific storage deployment requirements More information regarding the usage of this property is available at: https://register.etsi.org
rdma_enabled	yes	boolean	default: false	Indicate if the storage support RDMA

6.2.39.3 Definition

The syntax of the VirtualBlockStorageData data type shall comply with the following definition:

```
tosca.datatypes.nfv.VirtualBlockStorageData:
  derived_from: toscanfv:VirtualBlockStorageData
  description: VirtualBlockStorageData describes block storage requirements
  associated with compute resources in a particular VDU, either as a local disk or as
  virtual attached storage
  properties:
    size_of_storage:
      type: scalar-unit.size
      description: Size of virtualised storage resource
      required: true
      constraints:
        - greater_or_equal: 0 B
    vdu_storage_requirements:
      type: map
      description: The hardware platform specific storage requirements. A map of
      strings that contains a set of key-value pairs that represents the hardware platform
      specific storage deployment requirements
      required: false
      entry_schema:
        type: string
    rdma_enabled:
      type: boolean
      description: Indicates if the storage support RDMA
      required: true
      default: false
```

None.

6.2.39.5 Additional Requirements

None.

6.2.40 toska.datatypes.nfv.VirtualObjectStorageData

6.2.40.1 Description

The VirtualObjectStorageData data type describes object storage requirements associated with compute resources in a particular VDU. Table 6.2.40.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.40.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualObjectStorageData
Type Qualified Name	toscanfv:VirtualObjectStorageData
Type URI	tosca.datatypes.nfv.VirtualObjectStorageData

6.2.40.2 Properties

The properties of the VirtualObjectStorageData data type shall comply with the provisions set out in table 6.2.40.2-1.

Table 6.2.40.2-1: Properties

Name	Required	Type	Constraints	Description
max_size_of_storage	no	scalar-unit.size	greater_or_equal:0 B	Maximum size of virtualised storage resource

6.2.40.3 Definition

The syntax of the VirtualObjectStorageData data type shall comply with the following definition:

```
tosca.datatypes.nfv.VirtualObjectStorageData:
  derived_from: toska.datatypes.Root
  description: VirtualObjectStorageData describes object storage requirements
  associated with compute resources in a particular VDU
  properties:
    max_size_of_storage:
      type: scalar-unit.size
      description: Maximum size of virtualised storage resource
      required: false
      constraints:
        - greater_or_equal: 0 B
```

6.2.40.4 Examples

None.

6.2.40.5 Additional Requirements

None.

6.2.41 tosca.datatypes.nfv.VirtualFileStorageData

6.2.41.1 Description

The VirtualObjectFileData data type describes file storage requirements associated with compute resources in a particular VDU. Table 6.2.41.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.41.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualObjectFileData
Type Qualified Name	toscanfv:VirtualFileStorageData
Type URI	tosca.datatypes.nfv.VirtualFileStorageData

6.2.41.2 Properties

The properties of the VirtualFileStorageData data type shall comply with the provisions set out in table 6.2.41.2-1.

Table 6.2.41.2-1: Properties

Name	Required	Type	Constraints	Description
size_of_storage	yes	scalar-unit.size	greater_or_equal:0 B	Size of virtualised storage resource
file_system_protocol	yes	string		The shared file system protocol (e.g. NFS, CIFS)

6.2.41.3 Definition

The syntax of the VirtualFileStorageData data type shall comply with the following definition:

```
tosca.datatypes.nfv.VirtualFileStorageData:
  derived_from: tosca.datatypes.Root
  description: VirtualFileStorageData describes file storage requirements
  associated with compute resources in a particular VDU
  properties:
    size_of_storage:
      type: scalar-unit.size
      description: Size of virtualised storage resource
      required: true
      constraints:
        - greater_or_equal: 0 B
    file_system_protocol:
      type: string
      description: The shared file system protocol (e.g. NFS, CIFS)
      required: true
```

6.2.41.4 Examples

None.

6.2.41.5 Additional Requirements

None.

6.2.42 `tosca.datatypes.nfv.VirtualLinkBitrateLevel`

6.2.42.1 Description

The `VirtualLinkBitrateLevel` data type describes bitrate requirements applicable to the virtual link instantiated from a particular `VnfVirtualLink`. Table 6.2.42.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.42.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualLinkBitrateLevel</code>
Type Qualified Name	<code>toscanfv:VirtualLinkBitrateLevel</code>
Type URI	<code>tosca.datatypes.nfv.VirtualLinkBitrateLevel</code>

6.2.42.2 Properties

The properties of the `VirtualLinkBitrateLevel` data type shall comply with the provisions set out in table 6.2.42.2-1.

Table 6.2.42.2-1: Properties

Name	Required	Type	Constraints	Description
<code>bitrate_requirements</code>	yes	<code>tosca.datatypes.nfv.LinkBitrateRequirements</code>		Virtual link bitrate requirements for an instantiation level or bitrate delta for a scaling step.

6.2.42.3 Definition

The syntax of the `VirtualLinkBitrateLevel` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VirtualLinkBitrateLevel:
  derived_from: toasca.datatypes.Root
  description: Describes bitrate requirements applicable to the virtual link
instantiated from a particular VnfVirtualLink
  properties:
    bitrate_requirements:
      type: toasca.datatypes.nfv.LinkBitrateRequirements
      description: Virtual link bitrate requirements for an instantiation level or
bitrate delta for a scaling step
      required: true
```

6.2.42.4 Examples

See clause A.6.

6.2.42.5 Additional Requirements

None.

6.2.43 `tosca.datatypes.nfv.VnfOperationAdditionalParameters`

6.2.43.1 Description

The `VnfOperationAdditionalParameters` data type is an empty base type for deriving data type for describing VNF-specific parameters to be passed when invoking lifecycle management operations as specified in ETSI GS NFV-IFA 011 [1]. Table 6.2.43.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.43.1-1: Type name, shorthand, and URI

Shorthand Name	VnfOperationAdditionalParameters
Type Qualified Name	toscanfv:VnfOperationAdditionalParameters
Type URI	tosca.datatypes.nfv.VnfOperationAdditionalParameters

6.2.43.2 Properties

None.

6.2.43.3 Definition

The syntax of the VnfOperationAdditionalParameters data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfOperationAdditionalParameters:
  derived_from: toasca.datatypes.Root
  description: Is an empty base type for deriving data type for describing VNF-
  specific parameters to be passed when invoking lifecycle management operations
  #properties:
```

6.2.43.4 Examples

```
tosca_definitions_version: toasca_simple_yaml_1_2

node_types:
  MyCompany.nodes.nfv.SunshineDB.1_0.1_0:
    derived_from: toasca.nodes.nfv.VNF
    properties:
      ..
    interfaces:
      Vnflcm:
        instantiate:
          inputs:
            additional_parameters:
              type: MyCompany.datatypes.nfv.VnfInstantiateAdditionalParameters

data_types:
  MyCompany.datatypes.nfv.VnfInstantiateAdditionalParameters:
    derived_from: toasca.datatypes.nfv.VnfOperationAdditionalParameters
    properties:
      parameter_1:
        type: string
        required: true
      parameter_2:
        type: string
        required: true
        default: value_2
```

6.2.43.5 Additional Requirements

None.

6.2.44 `tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration`

6.2.44.1 Description

The `VnfChangeFlavourOperationConfiguration` data type represents information that affect the invocation of the `ChangeVnfFlavour` operation, as specified in ETSI GS NFV-IFA 011 [1]. This data type definition is reserved for future use in the present document. Table 6.2.44.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.44.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfChangeFlavourOperationConfiguration</code>
Type Qualified Name	<code>toscanfv:VnfChangeFlavourOperationConfiguration</code>
Type URI	<code>tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration</code>

6.2.44.2 Properties

None.

6.2.44.3 Definition

The syntax of the `VnfChangeFlavourOperationConfiguration` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfChangeFlavourOperationConfiguration:
  derived_from: toasca.datatypes.Root
  description: represents information that affect the invocation of the
ChangeVnfFlavour operation
  # This data type definition is reserved for future use in the present document.
  # properties:
```

6.2.44.4 Examples

None.

6.2.44.5 Additional Requirements

None.

6.2.45 `tosca.datatypes.nfv.VnfChangeExtConnectivityOperationConfiguration`

6.2.45.1 Description

The `VnfChangeExtConnectivityOperationConfiguration` data type represents information that affect the invocation of the `ChangeExtVnfConnectivity` operation, as specified in ETSI GS NFV-IFA 011 [1]. This data type definition is reserved for future use in the present document. Table 6.2.45.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.45.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfChangeExtConnectivityOperationConfiguration</code>
Type Qualified Name	<code>toscanfv:VnfChangeExtConnectivityOperationConfiguration</code>
Type URI	<code>tosca.datatypes.nfv.VnfChangeExtConnectivityOperationConfiguration</code>

6.2.45.2 Properties

None.

6.2.45.3 Definition

The syntax of the VnfChangeExtConnectivityOperationConfiguration data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfChangeExtConnectivityOperationConfiguration:
  derived_from: toska.datatypes.Root
  description: represents information that affect the invocation of the
ChangeExtVnfConnectivity operation
  # This data type definition is reserved for future use in the present document.
  # properties:
```

6.2.45.4 Examples

None.

6.2.45.5 Additional Requirements

None.

6.2.46 toska.datatypes.nfv.VnfMonitoringParameter

The VnfMonitoringParameter data type is defined in clause 9.2.9 of the present document.

6.2.47 toska.datatypes.nfv.VnfcMonitoringParameter

6.2.47.1 Description

This data type provides information on virtualised resource related performance metrics applicable to a VNFC. Table 6.2.47.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.47.1-1: Type name, shorthand, and URI

Shorthand Name	VnfcMonitoringParameter
Type Qualified Name	toscanfv:VnfcMonitoringParameter
Type URI	tosca.datatypes.nfv.VnfcMonitoringParameter

6.2.47.2 Properties

The properties of the VnfcMonitoringParameter data type shall comply with the provisions set out in table 6.2.47.2-1.

Table 6.2.47.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Human readable name of the monitoring parameter.
performance_metric	yes	string	valid values: v_cpu_usage_mean_vnf v_cpu_usage_peak_vnf v_memory_usage_mean_vnf v_memory_usage_peak_vnf v_disk_usage_mean_vnf v_disk_usage_peak_vnf byte_incoming_vnf_int_cp byte_outgoing_vnf_int_cp packet_incoming_vnf_int_cp packet_outgoing_vnf_int_cp v_cpu_usage_mean v_cpu_usage_peak v_memory_usage_mean v_memory_usage_peak v_disk_usage_mean v_disk_usage_peak v_net_byte_incoming v_net_byte_outgoing v_net_packet_incoming v_net_packet_outgoing usage_mean_vStorage usage_peak_vStorage	Identifies a performance metric to be monitored. Performance metric values shall be either set to: <ul style="list-style-type: none"> • A corresponding measurement name defined in clause 7.2 of ETSI GS NFV-IFA 027 [7], without appending a sub-counter. In this case the VNFM computes these measurements from lower-level metrics collected from the VIM. See note. • A corresponding measurement name defined in clause 7.1 of ETSI GS NFV-IFA 027 [7], without appending a sub-counter. In this case the VNFM collects these metrics from the VIM for all compute, storage and network resources allocated to the VNFC instance.
collection_period	no	scalar-unit.time		Describes the periodicity at which to collect the performance information.
NOTE: The measured object type for _cpu_usage_mean_vnf, v_cpu_usage_peak_vnf, v_memory_usage_mean_vnf, v_memory_usage_peak_vnf, v_disk_usage_mean_vnf and v_disk_usage_peak_vnf is the VNFC.				

6.2.47.3 Definition

The syntax of the VnfcMonitoringParameter data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfcMonitoringParameter:
  derived_from: toska.datatypes.Root
  description: Represents information on virtualised resource related performance
metrics applicable to the VNF.
  properties:
    name:
      type: string
      description: Human readable name of the monitoring parameter
      required: true
    performance_metric:
      type: string
      description: Identifies a performance metric to be monitored, according to
ETSI GS NFV-IFA 027.
      required: true
      constraints:
        - valid_values: [ v_cpu_usage_mean_vnf, v_cpu_usage_peak_vnf,
v_memory_usage_mean_vnf, v_memory_usage_peak_vnf, v_disk_usage_mean_vnf,
v_disk_usage_peak_vnf, byte_incoming_vnf_int_cp, byte_outgoing_vnf_int_cp,
packet_incoming_vnf_int_cp, packet_outgoing_vnf_int_cp, v_cpu_usage_mean,
v_cpu_usage_peak, v_memory_usage_mean, v_memory_usage_peak, v_disk_usage_mean,
v_disk_usage_peak, v_net_byte_incoming, v_net_byte_outgoing, v_net_packet_incoming,
v_net_packet_outgoing, usage_mean_vStorage, usage_peak_vStorage ]
    collection_period:
      type: scalar-unit.time
      description: Describes the periodicity at which to collect the performance
information.
      required: false
      constraints:
        - greater_than: 0 s

```

6.2.48 toska.datatypes.nfv.VirtualLinkMonitoringParameter

6.2.48.1 Description

This data type provides information on virtualised resource related performance metrics. Table 6.2.48.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.48.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualLinkMonitoringParameter
Type Qualified Name	toscanfv: VirtualLinkMonitoringParameter
Type URI	tosca.datatypes.nfv.VirtualLinkMonitoringParameter

6.2.48.2 Properties

The properties of the VirtualLinkMonitoringParameter data type shall comply with the provisions set out in table 6.2.48.2-1.

Table 6.2.48.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Human readable name of the monitoring parameter.
performance_metric	yes	string	valid values: byte_incoming byte_outgoing packet_incoming packet_outgoing	Identifies a performance metric to be monitored. Performance metric values shall be set to following measurement names defined in clause 7.1 of ETSI GS NFV-IFA 027 [7], without appending a sub-counter: <ul style="list-style-type: none"> • ByteIncoming • ByteOutgoing • PacketIncoming • PacketOutgoing The VNFM collects these metrics from the VIM by aggregating the sub-counters of all virtual link ports attached to the virtual link to which the metrics apply.
collection_period	no	scalar-unit.time		Describes the periodicity at which to collect the performance information.

6.2.48.3 Definition

The syntax of the VirtualLinkMonitoringParameter data type shall comply with the following definition:

```

tosca.datatypes.nfv.VirtualLinkMonitoringParameter:
  derived_from: toska.datatypes.Root
  description: Represents information on virtualised resource related performance
metrics applicable to the VNF.
  properties:
    name:
      type: string
      description: Human readable name of the monitoring parameter
      required: true
    performance_metric:
      type: string
      description: Identifies a performance metric to be monitored.
      required: true
      constraints:
        - valid_values: [ byte_incoming, byte_outgoing, packet_incoming,
packet_outgoing ]
    collection_period:
      type: scalar-unit.time
      description: Describes the periodicity at which to collect the performance
information.
      required: false
      constraints:
        - greater_than: 0 s

```

6.2.48.5 Additional Requirements

None.

6.2.49 `tosca.datatypes.nfv.InterfaceDetails`

6.2.49.1 Description

The `InterfaceDetails` data type describes information used to access an interface exposed by a VNF. It corresponds to the `interfaceDetails` attribute of the `VnfInterfaceDetails` information element defined in ETSI GS NFV-IFA 011 [1]. Table 6.2.49.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.49.1-1: Type name, shorthand, and URI

Shorthand Name	<code>InterfaceDetails</code>
Type Qualified Name	<code>toscanfv:InterfaceDetails</code>
Type URI	<code>tosca.datatypes.nfv.InterfaceDetails</code>

6.2.49.2 Properties

The properties of the `InterfaceDetails` data type shall comply with the provisions set out in table 6.2.49.2-1.

Table 6.2.49.2-1: Properties

Name	Required	Type	Constraints	Description
<code>uri_components</code>	no	<code>tosca.datatypes.nfv.UriComponents</code>		Provides components to build a Uniform Resource Identifier (URI) where to access the interface end point.
<code>interface_specific_data</code>	no	map of string		Provides additional details that are specific to the type of interface considered.

6.2.49.3 Definition

The syntax of the `InterfaceDetails` data type shall comply with the following definition:

```
tosca.datatypes.nfv.InterfaceDetails:
  derived_from: toska.datatypes.Root
  description: information used to access an interface exposed by a VNF
  properties:
    uri_components:
      type: toska.datatypes.nfv.UriComponents
      description: Provides components to build a Uniform Resource Identifier (URI)
where to access the interface end point.
      required: false
    interface_specific_data:
      type: map
      description: Provides additional details that are specific to the type of
interface considered.
      required: false
  entry_schema:
    type: string
```

6.2.49.4 Examples

See clause 6.10.12.

6.2.49.5 Additional Requirements

None.

6.2.50 `tosca.datatypes.nfv.UriComponents`

6.2.50.1 Description

The `UriComponents` data type describes information used to build a URI that complies with IETF RFC 3986 [8]. Table 6.2.50.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.50.1-1: Type name, shorthand, and URI

Shorthand Name	<code>UriComponents</code>
Type Qualified Name	<code>toscanfv:UriComponents</code>
Type URI	<code>tosca.datatypes.nfv.UriComponents</code>

6.2.50.2 Properties

The properties of the `UriComponents` data type shall comply with the provisions set out in table 6.2.50.2-1.

Table 6.2.50.2-1: Properties

Name	Required	Type	Constraints	Description
<code>scheme</code>	yes	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the scheme component of a URI, as per IETF RFC 3986 [8]
<code>authority</code>	no	<code>tosca.datatypes.nfv.UriAuthority</code>		Corresponds to the authority component of a URI, as per IETF RFC 3986 [8] See note
<code>path</code>	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the path component of a URI, as per IETF RFC 3986 [8]
<code>query</code>	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the query component of a URI, as per IETF RFC 3986 [8]
<code>fragment</code>	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the fragment component of a URI, as per IETF RFC 3986 [8]
NOTE: If this property is not included while the URI scheme requires it, the VNFM is expected to generate it, based on knowledge of the network configuration of the external CP instance that provides the connectivity for this interface.				

6.2.50.3 Definition

The syntax of the `UriComponents` data type shall comply with the following definition:

```
tosca.datatypes.nfv.UriComponents:
  derived_from: toska.datatypes.Root
  description: information used to build a URI that complies with IETF RFC 3986 [8].
  properties:
    scheme:
      type: string # shall comply with IETF RFC 3986
      description: scheme component of a URI.
      required: true
    authority:
      type: toska.datatypes.nfv.UriAuthority
      description: Authority component of a URI
      required: false
```

```

path:
  type: string # shall comply with IETF RFC 3986
  description: path component of a URI.
  required: false
query:
  type: string # shall comply with IETF RFC 3986
  description: query component of a URI.
  required: false
fragment:
  type: string # shall comply with IETF RFC 3986
  description: fragment component of a URI.
  required: false

```

6.2.50.4 Examples

See clause 6.10.12.

6.2.50.5 Additional Requirements

When this datatype is used to provide information for accessing APIs defined in ETSI GS NFV-SOL 002 [i.4], the path property may be included and the query and fragment properties shall be absent. The values of the scheme, authority and path properties form the {apiRoot} of the URI prefix.

6.2.51 toska.datatypes.nfv.UriAuthority

6.2.51.1 Description

The UriAuthority data type corresponds to the authority component of a URI as specified in IETF RFC 3986 [8]. Table 6.2.51.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.51.1-1: Type name, shorthand, and URI

Shorthand Name	UriAuthority
Type Qualified Name	toscanfv:UriAuthority
Type URI	tosca.datatypes.nfv.UriAuthority

6.2.51.2 Properties

The properties of the UriAuthority data type shall comply with the provisions set out in table 6.2.51.2-1.

Table 6.2.51.2-1: Properties

Name	Required	Type	Constraints	Description
user_info	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the user_info field of the authority component of a URI, as per IETF RFC 3986 [8]. For HTTP and HTTPS URIs, the provisions in sections 2.7.1 and 2.7.2 of IETF RFC 7230 [12] apply, respectively.
host	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the host field of the authority component of a URI, as per IETF RFC 3986 [8]. See note 1.
port	no	string	String values shall comply with IETF RFC 3986 [8]	Corresponds to the port field of the authority component of a URI, as per IETF RFC 3986 [8]. See note 2.

Name	Required	Type	Constraints	Description
NOTE 1:				If this property is not included the VNFM is expected to generate it, based on knowledge of the network configuration of the external CP instance that provides the connectivity for this interface.
NOTE 2:				If this property is not included the default port for the protocol declared by the scheme property of the parent UriComponents structure shall be used unless there are configuration mechanisms applied that are outside the scope of the present document. If no default port exists for the URI scheme, the port property shall be included unless there are configuration mechanisms applied that are outside the scope of the present document.

6.2.51.3 Definition

The syntax of the UriAuthority data type shall comply with the following definition:

```

tosca.datatypes.nfv.UriAuthority:
  derived_from: toasca.datatypes.Root
  description: information that corresponds to the authority component of a URI as
  specified in IETF RFC 3986 [8]
  properties:
    user_info:
      type: string # shall comply with IETF RFC 3986
      description: user_info field of the authority component of a URI
      required: false
    host:
      type: string # shall comply with IETF RFC 3986
      description: host field of the authority component of a URI
      required: false
    port:
      type: string # shall comply with IETF RFC 3986
      description: port field of the authority component of a URI
      required: false

```

6.2.51.4 Examples

See clause 6.10.12.

6.2.51.5 Additional Requirements

When this datatype is used to provide information for accessing APIs defined in ETSI GS NFV-SOL 002 [i.4], the host property and port properties may be included and the user_info property shall not be included. If the host property is included and the value is a registered name, it is assumed that means are in place to resolve the host name to the correct IP address. If the host property is not included, it is assumed that the VNFM will use the IP address associated to one of the connection point instances created from the VnfExpCp and VduCp node types declared as a target of the SupportedVnfInterface policy.

NOTE: This means that if multiple CP instances exist that were created from a particular VnfExtCp or VduCp node template, the VNFM may use any of them to attempt accessing the interface. If no reply is received because the selected CP instance is out of service or is not reachable, the VNFM is expected to try reaching the interface through another CP instance.

6.2.52 toasca.datatypes.nfv.VnfProfile

6.2.52.1 Description

The VnfProfile data type is defined in clause 9.2.8 of the present document.

6.2.53 tosca.datatypes.nfv.ChecksumData

6.2.53.1 Description

The ChecksumData data type describes information about the result of performing a checksum operation over some arbitrary data. Table 6.2.53.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.53.1-1: Type name, shorthand, and URI

Shorthand Name	ChecksumData
Type Qualified Name	toscanfv:ChecksumData
Type URI	tosca.datatypes.nfv.ChecksumData

6.2.53.2 Properties

The properties of the ChecksumData data type shall comply with the provisions set out in table 6.2.53.2-1.

Table 6.2.53.2-1: Properties

Name	Required	Type	Constraints	Description
algorithm	yes	string	Valid values: sha-224, sha-256, sha-384, sha-512	Describes the algorithm used to obtain the checksum value, as described in [14].
hash	yes	string		Contains the result of applying the algorithm indicated by the algorithm property to the data to which this ChecksumData refers.

6.2.53.3 Definition

The syntax of the ChecksumData data type shall comply with the following definition:

```
tosca.datatypes.nfv.ChecksumData:
  derived_from: tosca.datatypes.Root
  description: Describes information about the result of performing a checksum
operation over some arbitrary data
  properties:
    algorithm:
      type: string
      description: Describes the algorithm used to obtain the checksum value
      required: true
      constraints:
        - valid_values: [sha-224, sha-256, sha-384, sha-512 ]
    hash:
      type: string
      description: Contains the result of applying the algorithm indicated by the
algorithm property to the data to which this ChecksumData refers
      required: true
```

6.2.53.4 Examples

```
<some_tosca_entity>:
  properties:
    checksum:
      algorithm: sha-256
      hash: b9c3036539fd7a5f87a1bf38eb05fdde8b556a1a7e664dbeda90ed3cd74b4f9d
```

6.2.53.5 Additional Requirements

None.

6.2.54 `tosca.datatypes.nfv.VnfmInterfaceInfo`

6.2.54.1 Description

The `VnfmInterfaceInfo` data type describes information enabling the VNF instance to access the NFV-MANO interfaces produced by the VNFM (e.g. URIs and credentials). Table 6.2.54.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.54.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfmInterfaceInfo</code>
Type Qualified Name	<code>toscanfv:VnfmInterfaceInfo</code>
Type URI	<code>tosca.datatypes.nfv.VnfmInterfaceInfo</code>

6.2.54.2 Properties

The properties of the `VnfmInterfaceInfo` data type shall comply with the provisions set out in table 6.2.54.2-1.

Table 6.2.54.2-1: Properties

Name	Required	Type	Constraints	Description
<code>interface_name</code>	yes	string	Valid values <code>vnf_lcm</code> <code>vnf_pm</code> <code>vnf_fm</code>	Identifies an interface produced by the VNFM.
<code>details</code>	no	<code>tosca.datatypes.nfv.InterfaceDetails</code>		Provide additional data to access the interface endpoint (e.g. API URI prefix).
<code>credentials</code>	no	map of string		Provides credential enabling access to the interface. This property is reserved for future use in the present document.

6.2.54.3 Definition

The syntax of the `VnfmInterfaceInfo` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfmInterfaceInfo:
  derived_from: toska.datatypes.Root
  description: Describes information enabling the VNF instance to access the NFV-
MANO interfaces produced by the VNFM
  properties:
    interface_name:
      type: string
      description: Identifies an interface produced by the VNFM.
      required: true
      constraints:
        - valid_values: [ vnf_lcm, vnf_pm, vnf_fm ]
    details:
      type: toska.datatypes.nfv.InterfaceDetails
      description: Provide additional data to access the interface endpoint
      required: false
    credentials:
```

```

type: map
description: Provides credential enabling access to the interface
required: false
entry_schema:
  type: string

```

6.2.54.4 Examples

None.

6.2.54.5 Additional Requirements

None.

6.2.55 `tosca.datatypes.nfv.OauthServerInfo`

6.2.55.1 Description

The `OauthServerInfo` data type describes information to enable discovery of the authorization server. This data type definition is reserved for future use in the present document. Table 6.2.55.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.55.1-1: Type name, shorthand, and URI

Shorthand Name	<code>OauthServerInfo</code>
Type Qualified Name	<code>toscanfv:OauthServerInfo</code>
Type URI	<code>tosca.datatypes.nfv.OauthServerInfo</code>

6.2.55.2 Properties

None.

6.2.55.3 Definition

The syntax of the `OauthServerInfo` data type shall comply with the following definition:

```

tosca.datatypes.nfv.OauthServerInfo:
  derived_from: toasca.datatypes.Root
  description: information to enable discovery of the authorization server
  #properties:
  #This data type definition is reserved for future use in the present document

```

6.2.55.4 Examples

None.

6.2.55.5 Additional Requirements

None.

6.2.56 tosca.datatypes.nfv.BootData

6.2.56.1 Description

The BootData data type describes the information used to customize a virtualised compute resource at boot time. Table 6.2.56.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.56.1-1: Type name, shorthand, and URI

Shorthand Name	BootData
Type Qualified Name	toscanfv:BootData
Type URI	tosca.datatypes.nfv.BootData

6.2.56.2 Properties

The properties of the BootData data type shall comply with the provisions set out in table 6.2.56.2-1.

Table 6.2.56.2-1: Properties

Name	Required	Type	Constraints	Description
vim_specific_properties	no	tosca.datatypes.nfv.BootDataVimSpecificProperties		Properties used for selecting VIM specific capabilities when setting the boot data.
kvp_data	no	tosca.datatypes.nfv.KvpData		A set of key-value pairs for configuring a virtual compute resource. The mechanisms for conveying these key-value pairs to the virtual compute resource are out of the scope of the present document. An example of such mechanisms is the OpenStack metadata service defined in [i.13].
content_or_file_data	no	tosca.datatypes.nfv.ContentOrFileData		A string content or a file for configuring a virtual compute resource. The mechanisms for conveying the string content or the file to the virtual compute resource are out of the scope of the present document. An example of such mechanisms is the OpenStack User-data service defined in [i.14].

6.2.56.3 Definition

The syntax of the BootData data type shall comply with the following definition:

```

tosca.datatypes.nfv.BootData:
  derived_from: toska.datatypes.Root
  description: describes the information used to customize a virtualised compute
resource at boot time.
  properties:
    vim_specific_properties:
      type: toska.datatypes.nfv.BootDataVimSpecificProperties
      description: Properties used for selecting VIM specific capabilities when
setting the boot data.
      required: false
    kvp_data:
      type: toska.datatypes.nfv.KvpData
      description: A set of key-value pairs for configuring a virtual compute
resource.
      required: false
    content_or_file_data:
      type: toska.datatypes.nfv.ContentOrFileData
      description: A string content or a file for configuring a virtual compute
resource.
      required: false

```

6.2.56.4 Examples

See clause 6.8.3.8.

6.2.56.5 Additional Requirements

None.

6.2.57 toska.datatypes.nfv.KvpData

6.2.57.1 Description

The KvpData data type describes a set of key-value pairs information used to customize a virtualised compute resource by using only key-value pairs data. Table 6.2.57.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.57.1-1: Type name, shorthand, and URI

Shorthand Name	KvpData
Type Qualified Name	toscanfv:KvpData
Type URI	tosca.datatypes.nfv.KvpData

6.2.57.2 Properties

The properties of the MetaData data type shall comply with the provisions set out in table 6.2.57.2-1.

Table 6.2.57.2-1: Properties

Name	Required	Type	Constraints	Description
data	no	map of string		A map of strings that contains a set of key-value pairs that describes the information for configuring the virtualised compute resource.

6.2.57.3 Definition

The syntax of the KvpData data type shall comply with the following definition:

```

tosca.datatypes.nfv.KvpData:
  derived_from: toscadatatypes.Root
  description: describes a set of key-value pairs information used to customize
a virtualised compute resource at boot time by using only key-value pairs data.
  properties:
    data:
      type: map
      description: A map of strings that contains a set of key-value pairs that
describes the information for configuring the virtualised compute resource.
      required: false
      entry_schema:
        type: string

```

6.2.57.4 Examples

See clause 6.8.3.8.

6.2.57.5 Additional Requirements

None.

6.2.58 toscadatatypes.nfv.ContentOrFileData

6.2.58.1 Description

The ContentOrFileData data type describes a string content or a file information used to customize a virtualised compute resource by using string content or file. Table 6.2.58.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.58.1-1: Type name, shorthand, and URI

Shorthand Name	ContentOrFileData
Type Qualified Name	toscanfv:ContentOrFileData
Type URI	tosca.datatypes.nfv.ContentOrFileData

6.2.58.2 Properties

The properties of the ContentOrFileData data type shall comply with the provisions set out in table 6.2.58.2-1.

Table 6.2.58.2-1: Properties

Name	Required	Type	Constraints	Description
data	no	map of string		A map of strings that contains a set of key-value pairs that carries the dynamic deployment values which used to replace the corresponding variable parts in the file as identify by a URL as described in source_path. Shall be present if "source_path" is present and shall be absent otherwise. See note 1.
content	no	string		The string information used to customize a virtualised compute resource at boot time. See note 2.
source_path	no	string		The URL to a file contained in the VNF package used to customize a virtualised compute resource. The content shall comply with IETF RFC 3986 [8]. See note 2.
destination_path	no	string		The URL where to inject a file indicated by the source_path property into the virtualised compute resource. The content shall comply with IETF RFC 3986 [8]. See note 3.
<p>NOTE 1: It is the file processor (e.g. in the VNFM) responsibility to replace the corresponding variable parts in the file with the value carried in the data property, the variable parts in the file are start with \$ and end with \$, its content is the same character with one of the keys in the data property, for example, if one of the keys in 'data' is "https_proxy", somewhere in the file content there is \$https_proxy\$.</p> <p>NOTE 2: One and only one of the following properties shall be present: contents or source_path.</p> <p>NOTE 3: It is only present when a particular method is used for transferring boot information into a virtualised compute resource and source_path is also present. For example, such method can be the personality method as described in [i.15], and it has been deprecated since Openstack 12.0.0 (Stein).</p>				

6.2.58.3 Definition

The syntax of the ContentOrFileData data type shall comply with the following definition:

```

tosca.datatypes.nfv.ContentOrFileData:
  derived_from: tosc.datatypes.Root
  description: describes a string content or a file information used to
  customize a virtualised compute resource at boot time by using string content or
  file.
  properties:
    data:
      type: map
      description: A map of strings that contains a set of key-value pairs that
      carries the dynamic deployment values which used to replace the corresponding
      variable parts in the file as identify by a URL as described in source_path. Shall
      be present if "source_path" is present and shall be absent otherwise..
      required: false
      entry_schema:
        type: string
    content:
      type: string
      description: The string information used to customize a virtualised
      compute resource at boot time.
      required: false

```

```

source_path:
  type: string
  description: The URL to a file contained in the VNF package used to
customize a virtualised compute resource. The content shall comply with IETF
RFC 3986 [8].
  required: false
destination_path:
  type: string
  description: The URL address when inject a file into the virtualised
compute resource. The content shall comply with IETF RFC 3986 [8].
  required: false

```

6.2.58.4 Examples

See clause 6.8.3.8.

6.2.58.5 Additional Requirements

None.

6.2.59 `tosca.datatypes.nfv.BootDataVimSpecificProperties`

6.2.59.1 Description

The `BootDataVimSpecificProperties` data type describes the VIM related information used for selecting VIM specific capabilities when setting the boot data when setting the boot data. Table 6.2.59.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.2.59.1-1: Type name, shorthand, and URI

Shorthand Name	<code>BootDataVimSpecificProperties</code>
Type Qualified Name	<code>toscanfv: BootDataVimSpecificProperties</code>
Type URI	<code>tosca.datatypes.nfv.BootDataVimSpecificProperties</code>

6.2.59.2 Properties

The properties of the `BootDataVimSpecificProperties` data type shall comply with the provisions set out in table 6.2.59.2-1.

Table 6.2.59.2-1: Properties

Name	Required	Type	Constraints	Description
<code>vim_type</code>	no	string		Discriminator for the different types of the VIM information. The set of permitted values is expected to change over time as new types or versions of VIMs become available. The ETSI NFV registry of VIM-related information [i.16] provides access to information about various VIM types.
<code>properties</code>	yes	map of string		Properties used for selecting VIM specific capabilities when setting the boot data. For example, it can set whether <code>config_drive</code> functionality is selected in case VIM support it. This property is reserved for future use in the present document.

6.2.59.3 Definition

The syntax of the `BootDataVimSpecificProperties` data type shall comply with the following definition:

```

tosca.datatypes.nfv.BootDataVimSpecificProperties:
  derived_from: tosc.datatypes.Root
  description: describes the VIM specific information used for selecting VIM
specific capabilities when setting the boot data.
  properties:
    vim_type:
      type: string
      description: Discriminator for the different types of the VIM information.
      required: true
    properties:
      type: map
      description: Properties used for selecting VIM specific capabilities when
setting the boot data
      entry_schema:
        type: string
        required: true

```

6.2.59.4 Examples

None.

6.2.59.5 Additional Requirements

None.

6.3 Artifact Types

6.3.1 `tosca.artifacts.nfv.SwImage`

6.3.1.1 Description

The `SwImage` artifact describes the software image which is directly loaded on the virtualisation container realizing of the VDU or is to be loaded on a virtual storage resource, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.3.1.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.3.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>SwImage</code>
Type Qualified Name	<code>toscanfv:SwImage</code>
Type URI	<code>tosca.artifacts.nfv.SwImage</code>

6.3.1.2 Description

```

tosca.artifacts.nfv.SwImage:
  derived_from: tosc.artifacts.Deployment.Image
  description: describes the software image which is directly loaded on the
virtualisation container realizing of the VDU or is to be loaded on a virtual storage
resource

```

6.3.2 `tosca.artifacts.Implementation.nfv.Mistral`

6.3.2.1 Description

This artifact type represents a Mistral file that contains Mistral language [i.7] constructs that can be executed within a Mistral workbook. Support of this type is optional.

Table 6.3.2.1-1: Type name, shorthand, and URI

Shorthand Name	Mistral
Type Qualified Name	toscanfv:Mistral
Type URI	tosca.artifacts.Implementation.nfv.Mistral
derived_from	tosca.artifacts.Implementation

6.3.2.2 Definition

The syntax of the Mistral artifact type shall comply with the following definition:

```
tosca.artifacts.Implementation.nfv.Mistral:
  derived_from: toscanfv.Implementation
  description: artifacts for Mistral workflows
  mime_type: application/x-yaml
  file_ext: [ yaml ]
```

6.4 Capability Types

6.4.1 `tosca.capabilities.nfv.VirtualBindable`

6.4.1.1 Description

The VirtualBindable capability indicates that the node that includes it can be pointed by a `tosca.relationships.nfv.VirtualBindsTo` relationship type which is used to model the VduHasCpd association illustrated in ETSI GS NFV-IFA 011 [1]. Table 6.4.1.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.4.1.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualBindable
Type Qualified Name	toscanfv:VirtualBindable
Type URI	tosca.capabilities.nfv.VirtualBindable

6.4.1.2 Properties

None.

6.4.1.3 Definition

The syntax of the VirtualBindable capability type shall comply with the following definition:

```
tosca.capabilities.nfv.VirtualBindable:
  derived_from: toscanfv.Node
  description: Indicates that the node that includes it can be pointed by a
  toscanfv.relationships.nfv.VirtualBindsTo relationship type which is used to model the
  VduHasCpd association
```

6.4.2 `tosca.capabilities.nfv.VirtualLinkable`

6.4.2.1 Description

The `VirtualLinkable` capability type is defined in clause 9.4.1 of the present document.

6.4.3 `tosca.capabilities.nfv.VirtualCompute`

6.4.3.1 Description

The `VirtualCompute` capability type describes the capabilities related to virtual compute resources, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.4.3.1-1 specifies the declared names for this capability type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.4.3.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualCompute</code>
Type Qualified Name	<code>toscanfv:VirtualCompute</code>
Type URI	<code>tosca.capabilities.nfv.VirtualCompute</code>

6.4.3.2 Properties

The properties of the `VirtualCompute` capability type shall comply with the provisions set out in table 6.4.3.2-1.

Table 6.4.3.2-1: Properties

Name	Required	Type	Constraints	Description
<code>logical_node</code>	no	map of <code>tosca.datatypes.nfv.LogicalNodeData</code>		The Logical Node requirements.
<code>request_additional_capabilities</code>	no	map of <code>tosca.datatypes.nfv.RequestedAdditionalCapability</code>		Describes additional capability for a particular VDU.
<code>compute_requirements</code>	no	map of string		Describes compute requirements.
<code>virtual_memory</code>	yes	<code>tosca.datatypes.nfv.VirtualMemory</code>		Describes virtual memory of the virtualised compute.
<code>virtual_cpu</code>	yes	<code>tosca.datatypes.nfv.VirtualCpu</code>		Describes virtual CPU(s) of the virtualised compute.
<code>virtual_local_storage</code>	no	list of <code>tosca.datatypes.nfv.VirtualBlockStorageData</code>		A list of virtual system disks created and destroyed as part of the VM lifecycle.

6.4.3.3 Definition

The syntax of the `VirtualCompute` capability type shall comply with the following definition:

```
tosca.capabilities.nfv.VirtualCompute:
  derived_from: toska.capabilities.Node
  description: Describes the capabilities related to virtual compute resources
  properties:
    logical_node:
      type: map
      description: Describes the Logical Node requirements
      required: false
```

```

    entry_schema:
      type: tosca.datatypes.nfv.LogicalNodeData
  requested_additional_capabilities:
    type: map
    description: Describes additional capability for a particular VDU
    required: false
    entry_schema:
      type: tosca.datatypes.nfv.RequestedAdditionalCapability
  compute_requirements:
    type: map
    required: false
    entry_schema:
      type: string
  virtual_memory:
    type: tosca.datatypes.nfv.VirtualMemory
    description: Describes virtual memory of the virtualised compute
    required: true
  virtual_cpu:
    type: tosca.datatypes.nfv.VirtualCpu
    description: Describes virtual CPU(s) of the virtualised compute
    required: true
  virtual_local_storage:
    type: list
    description: A list of virtual system disks created and destroyed as part of
the VM lifecycle
    required: false
    entry_schema:
      type: tosca.datatypes.nfv.VirtualBlockStorageData
    description: virtual system disk definition

```

6.4.4 tosca.capabilities.nfv.VirtualStorage

6.4.4.1 Description

The VirtualStorage capability indicates that the node that includes it can be pointed by a `tosca.relationships.nfv.AttachesTo` relationship type which is used to model the `VduHasVirtualStorageDesc` association illustrated in ETSI GS NFV-IFA 011 [1]. Table 6.4.4.1-1 specifies the declared names for this capability type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.4.4.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualStorage
Type Qualified Name	toscanfv:VirtualStorage
Type URI	tosca.capabilities.nfv.VirtualStorage

6.4.4.2 Definition

The syntax of the VirtualStorage capability type shall comply with the following definition:

```

tosca.capabilities.nfv.VirtualStorage:
  derived_from: tosca.capabilities.Root
  description: Describes the attachment capabilities related to Vdu.Storage

```

6.5 Requirements Types

None.

6.6 Relationship Types

6.6.1 `tosca.relationships.nfv.VirtualBindsTo`

6.6.1.1 Description

This relationship type represents an association between `Vdu.Compute` and `VduCp` node types. Table 6.6.1.1-1 specifies the declared names for this relationship type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.6.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualBindsTo</code>
Type Qualified Name	<code>toscanfv:VirtualBindsTo</code>
Type URI	<code>tosca.relationships.nfv.VirtualBindsTo</code>

6.6.1.2 Properties

None.

6.6.1.3 Definition

The syntax of the `VirtualBindsTo` relationship type shall comply with the following definition:

```
tosca.relationships.nfv.VirtualBindsTo:
  derived_from: toasca.relationships.DependsOn
  description: Represents an association relationship between Vdu.Compute and VduCp
  node types
  valid_target_types: [ toasca.capabilities.nfv.VirtualBindable ]
```

6.6.2 `tosca.relationships.nfv.VirtualLinksTo`

6.6.2.1 Description

The `VirtualLinksTo` relationship type is defined in clause 9.6.1 of the present document representing an association relationship between a `VduCp` and a `VnfVirtualLink` node type or a `VnfExtCp` and a `VnfVirtualLink` node type.

6.6.3 `tosca.relationships.nfv.AttachesTo`

6.6.3.1 Description

This relationship type represents an association between the `Vdu.Compute` and one of the following node types: `Vdu.VirtualBlockStorage`, `Vdu.VirtualObjectStorage` or `Vdu.VirtualFileStorage`. Table 6.6.3.1-1 specifies the declared names for this relationship type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.6.3.1-1: Type name, shorthand, and URI

Shorthand Name	<code>AttachesTo</code>
Type Qualified Name	<code>toscanfv:AttachesTo</code>
Type URI	<code>tosca.relationships.nfv.AttachesTo</code>

6.6.3.2 Properties

None.

6.6.3.3 Definition

The syntax of the AttachesTo relationship type shall comply with the following definition:

```
tosca.relationships.nfv.AttachesTo:
  derived_from: toasca.relationships.Root
  description: Represents an association relationship between the Vdu.Compute and
one of the node types, Vdu.VirtualBlockStorage, Vdu.VirtualObjectStorage or
Vdu.VirtualFileStorage
  valid_target_types: [ toasca.capabilities.nfv.VirtualStorage ]
```

6.7 Interface Types

6.7.1 toasca.interfaces.nfv.Vnflcm

6.7.1.1 Description

The toasca.interfaces.nfv.Vnflcm contains a set of TOSCA operations corresponding to the following VNF LCM operations defined in ETSI GS NFV-IFA 007 [i.1]:

- Instantiate VNF
- Terminate VNF
- Modify VNF information
- Change VNF Flavour
- Change External VNF Connectivity
- Operate VNF
- Heal VNF
- Scale VNF
- Scale VNF To Level

In addition, the VNFM shall also support TOSCA operations corresponding to preamble and postamble to the execution of the base operation. The name of these operations is constructed according to the following pattern:

- <base_operation_name>_start for a preamble
- <base_operation_name>_end for a postamble

The designations ("_start", "_end") in the name of TOSCA operations are postfixes so that related operations are adjacent in an alphabetical listing.

Table 6.7.1.1-1 specifies the declared names for this interface type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.7.1.1-1: Type name, shorthand, and URI

Shorthand Name	Vnflcm
Type Qualified Name	toscanfv:Vnflcm
Type URI	tosca.interfaces.nfv.Vnflcm

6.7.1.2 Definition

The syntax of the Vnflcm interface type shall comply with the following definition:

```

tosca.interfaces.nfv.Vnflcm:
  derived_from: tosca.interfaces.Root
  description: This interface encompasses a set of TOSCA operations corresponding to
the VNF LCM operations defined in ETSI GS NFV-IFA 007 as well as to preamble and
postamble procedures to the execution of the VNF LCM operations.
  instantiate:
    description: Invoked upon receipt of an Instantiate VNF request
    # inputs:
      # additional_parameters:
        # type: tosca.datatypes.nfv.VnfOperationAdditionalParameters
        # required: false
    # derived types are expected to introduce additional_parameters with its
    # type derived from tosca.datatypes.nfv.VnfOperationAdditionalParameters
  instantiate_start:
    description: Invoked before instantiate
  instantiate_end:
    description: Invoked after instantiate
  terminate:
    description: Invoked upon receipt Terminate VNF request
    # inputs:
      # additional_parameters:
        # type: tosca.datatypes.nfv.VnfOperationAdditionalParameters
        # required: false
    # derived types are expected to introduce additional_parameters with its
    # type derived from tosca.datatypes.nfv.VnfOperationAdditionalParameters
  terminate_start:
    description: Invoked before terminate
  terminate_end:
    description: Invoked after terminate
  modify_information:
    description: Invoked upon receipt of a Modify VNF Information request
  modify_information_start:
    description: Invoked before modify_information
  modify_information_end:
    description: Invoked after modify_information
  change_flavour:
    description: Invoked upon receipt of a Change VNF Flavour request
    # inputs:
      # additional_parameters:
        # type: tosca.datatypes.nfv.VnfOperationAdditionalParameters
        # required: false
    # derived types are expected to introduce additional_parameters with its
    # type derived from tosca.datatypes.nfv.VnfOperationAdditionalParameters
  change_flavour_start:
    description: Invoked before change_flavour
  change_flavour_end:
    description: Invoked after change_flavour
  change_external_connectivity:
    description: Invoked upon receipt of a Change External VNF Connectivity request
    # inputs:
      # additional_parameters:
        # type: tosca.datatypes.nfv.VnfOperationAdditionalParameters
        # required: false
    # derived types are expected to introduce additional_parameters with its
    # type derived from tosca.datatypes.nfv.VnfOperationAdditionalParameters
  change_external_connectivity_start:
    description: Invoked before change_external_connectivity

```

```

change_external_connectivity_end:
  description: Invoked after change_external_connectivity
operate:
  description: Invoked upon receipt of an Operate VNF request
  # inputs:
  #   # additional_parameters:
  #   #   type: toasca.datatypes.nfv.VnfOperationAdditionalParameters
  #   #   required: false
# derived types are expected to introduce additional_parameters with its
# type derived from toasca.datatypes.nfv.VnfOperationAdditionalParameters
operate_start:
  description: Invoked before operate
operate_end:
  description: Invoked after operate
heal:
  description: Invoked upon receipt of a Heal VNF request
  # inputs:
  #   # additional_parameters:
  #   #   type: toasca.datatypes.nfv.VnfOperationAdditionalParameters
  #   #   required: false
# derived types are expected to introduce additional_parameters with its
# type derived from toasca.datatypes.nfv.VnfOperationAdditionalParameters
heal_start:
  description: Invoked before heal
heal_end:
  description: Invoked after heal
scale:
  description: Invoked upon receipt of a Scale VNF request
  # inputs:
  #   # additional_parameters:
  #   #   type: toasca.datatypes.nfv.VnfOperationAdditionalParameters
  #   #   required: false
# derived types are expected to introduce additional_parameters with its
# type derived from toasca.datatypes.nfv.VnfOperationAdditionalParameters
scale_start:
  description: Invoked before scale
scale_end:
  description: Invoked after scale
scale_to_level:
  description: Invoked upon receipt of a Scale VNF to Level request
  # inputs:
  #   # additional_parameters:
  #   #   type: toasca.datatypes.nfv.VnfOperationAdditionalParameters
  #   #   required: false
# derived types are expected to introduce additional_parameters with its
# type derived from toasca.datatypes.nfv.VnfOperationAdditionalParameters
scale_to_level_start:
  description: Invoked before scale_to_level
scale_to_level_end:
  description: Invoked after scale_to_level

```

6.7.1.3 Additional Requirements

All VNF supported LCM operations shall be listed in the service template, except "instantiate" and "terminate" that may be omitted, as specified in ETSI GS NFV-IFA 011 [1] for the supportedOperation attribute of a deployment flavour.

The implementation and inputs keynames specified in TOSCA-Simple-Profile-YAML-v1.2 [3] for an operation definition may be included for each operation listed in the Vnflcm interface definition.

If a TOSCA operation representing a VNF LCM operation is listed in the service template without an associated implementation, then it means that:

- the VNF LCM operation is supported (i.e. this is the manifestation of the supportedOperation attribute as per ETSI GS NFV-IFA 011 [1]); and
- the processing logic associated with the LCM operation is the default implementation provided by the VNFM.

If an implementation is associated to a TOSCA operation that represents a preamble or a postamble to a VNF LCM operation, the implementation logic is executed before or after the execution of the VNF LCM operation implementation, respectively.

The VNFM shall make available all parameters from the message invoking the VNF LCM operation as inputs to the corresponding TOSCA interface operations.

In the operation definitions on the Vnflcm interface, the additional_parameters (VNF-specific extension of the `tosca.datatypes.nfv.VnfOperationAdditionalParameters`) of the inputs section describes the name and type of the additional parameters (additionalParams) that can be submitted in the VNF LCM operation request. See an example in clause 6.2.43 (`tosca.datatypes.nfv.VnfOperationAdditionalParameters`).

The inputs keyname can also be used to specify additional input parameters for executing the TOSCA operation, beyond those received in the VNF LCM operation request. To distinguish them from the latter ones, such input parameters shall not be named "additional_parameters".

The implementation of the operation corresponding to preamble and postamble TOSCA operations (`instantiate_start`, `instantiate_end`, `scale_start`, `scale_end`, etc.), if present, shall be invoked with the same parameters as the corresponding base operations ones (`instantiate`, `scale`, etc.). The inputs of the operations corresponding to the postamble and preamble operations shall not be defined in the VNFD.

6.7.1.4 Support of LCM scripts

In ETSI GS NFV-IFA 011 [1], the definition of the "LifeCycleManagementScript" information element of the VNFD associates scripts with events, where an event can be an external or an internal stimulus. These events are mapped to TOSCA operations of the VNF node type in the following way:

- external stimuli are mapped to TOSCA operations corresponding to the VNF LCM operations defined in ETSI GS NFV-IFA 007 [i.1];
- internal stimuli are mapped to preamble and postamble of these TOSCA operations;
- events that cannot be mapped to these TOSCA operations (`lcmTransitionEvent` as described in ETSI GS NFV-IFA 011 [1], clause 7.1.13) can be mapped to further TOSCA operations by extending the TOSCA interface.

The LCM scripts can be regarded as artifacts that provide a VNF-specific implementation of the TOSCA operation corresponding to the stimulus. The script input parameters shall be provided to the script according to the declaration in the inputs field of the operation definition. The artifact type definition shall enable identifying the DSL used by the script. The artifact type definition for Python is provided in section 5.4.4.1 of TOSCA-Simple-Profile-YAML-v1.2 [3]. The artifact definition for Mistral is provided in clause 6.3.2 of the present document.

NOTE: As all input parameters needed for operations corresponding to external and internal stimuli are defined in the "input parameters of the external stimuli operations", the VNF Designer is expected to make the list of parameters as complete as needed to handle not only the external stimuli but also the internal stimuli.

6.7.1.5 Examples

The following example template fragments illustrate the concepts.

```

tosca_definitions_version: tosca_simple_yaml_1_2

imports:
- ..

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    ..

topology_template:
  substitution_mappings:
    node_type: MyCompany.SunshineDB.1_0.1_0
    ..

node_templates:
  SunshineDB:
    type: MyCompany.SunshineDB.1_0.1_0
    ..
  interfaces:
    Vnflcm:
      instantiate:
        ..

```

In the above example, as there is no implementation and inputs specified to the operations, the built-in implementation of the operation is invoked when the Instantiate VNF request is received on the LCM interface of the Or-Vnfm reference point. The received parameters (flavourId, instantiationLevelId, etc.) are passed to the built-in implementation (as flavour_id, instantiation_level_id).

```

tosca_definitions_version: tosca_simple_yaml_1_2

imports:
- ..

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    ..

topology_template:
  substitution_mappings:
    node_type: MyCompany.SunshineDB.1_0.1_0
    ..

node_templates:
  SunshineDB:
    type: MyCompany.SunshineDB.1_0.1_0
    ..
  interfaces:
    Vnflcm:
      instantiate:
        implementation: instantiate-script
        ..

```

In the above example, the `instantiate-script` is invoked when the Instantiate VNF request is received, passing the received parameters to it similarly to the previous example. This example does not imply a one-to-one mapping between operations and script names.

```
tosca_definitions_version: tosca_simple_yaml_1_2

imports:
- ..

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    ..

topology_template:
  substitution_mappings:
    node_type: MyCompany.SunshineDB.1_0.1_0
    ..

node_templates:
  SunshineDB:
    type: MyCompany.SunshineDB.1_0.1_0
    ..
  interfaces:
    Vnflcm:
      ..
      scale_start: pre-scale-script
      scale_end: post-scale-script
      ..
```

In the above example, LCM scripts are associated with the "scale start" and "scale end" internal stimuli. As no script is associated to the `scale` operation, its default implementation runs (after running the `pre-scale-script`, and before running the `post-scale-script`).

```
tosca_definitions_version: tosca_simple_yaml_1_2

imports:
- ..

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    ..

topology_template:
  substitution_mappings:
    node_type: MyCompany.SunshineDB.1_0.1_0
    ..

node_templates:
  SunshineDB:
    type: MyCompany.SunshineDB.1_0.1_0
    ..
  interfaces:
    Vnflcm:
      instantiate:
        implementation: instantiate-script
        inputs:
          script_input_1: value_1
          script_input_2: value_2
```

```
artifacts:
  instantiate-script:
    description: Instantiate workflow script
    type: toska.artifacts.Implementation.Python
    file: instantiate.py
    #repository: ..
    #deploy_path: ..
    ..
```

In the above example:

- The inputs section provides additional input values to the instantiate-script (i.e. the manifestation of the scriptInput attribute of LifecycleManagementScript as defined in ETSI GS NFV-IFA 011 [1]).

NOTE: There is another kind of input called `additional_parameters` dedicated to the additional parameters (additionalParams) received in the message invoking the VNF LCM operation; this input is not illustrated by the above examples; see clause 6.2.43.4 on how to declare `additional_parameters` in the derived VNF node type.

- TOSCA artifacts definition is used to convey the type of DSL used as a scripting language that is associated with an operation (i.e. the manifestation of the scriptDsl attribute of LifecycleManagementScript as per ETSI GS NFV-IFA 011 [1]).

6.7.2 toska.interfaces.nfv.VnfIndicator

6.7.2.1 Description

The `tosca.interfaces.nfv.VnfIndicator` is an empty base interface type for deriving VNF specific interface types that include VNF indicator specific notifications.

Table 6.7.2.1-1 specifies the declared names for this interface type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.3 [20].

Table 6.7.2.1-1: Type name, shorthand, and URI

Shorthand Name	VnfIndicator
Type Qualified Name	toscanfv:VnfIndicator
Type URI	tosca.interfaces.nfv.VnfIndicator

6.7.2.2 Definition

The syntax of the VnfIndicator interface type shall comply with the following definition:

```
tosca.interfaces.nfv.VnfIndicator:
  derived_from: toska.interfaces.Root
  description: This interface is an empty base interface type for deriving VNF
specific interface types that include VNF indicator specific notifications.
```

6.7.2.3 Examples

See clause 6.8.1.9.

6.8 Node Types

6.8.1 toska.nodes.nfv.VNF

6.8.1.1 Description

The VNF node type is the generic abstract type from which all VNF specific node types shall be derived to form, together with other node types, the TOSCA service template(s) representing the VNFD information element as defined in ETSI GS NFV-IFA 011 [1]. Table 6.8.1.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.1.1-1: Type name, shorthand, and URI

Shorthand Name	VNF
Type Qualified Name	toscanfv:VNF
Type URI	tosca.nodes.nfv.VNF

6.8.1.2 Properties

The properties of the VNF node type shall comply with the provisions set out in table 6.8.1.2-1.

Table 6.8.1.2-1: Properties

Name	Required	Type	Constraints	Description
descriptor_id	yes	string		Identifier of this VNFD information element. This attribute shall be globally unique. See note 3. The VNFD Identifier shall be used as the unique identifier of the VNF Package that contains this VNFD. Any modification of the content of the VNFD or the VNF Package shall result in a new VNFD Identifier.
descriptor_version	yes	string		Identifies the version of the VNFD.
provider	yes	string		Provider of the VNF and of the VNFD.
product_name	yes	string		Name to identify the VNF Product. Invariant for the VNF Product lifetime.
software_version	yes	string		Software version of the VNF. This is changed when there is any change to the software that is included in the VNF Package.
product_info_name	no	string		Human readable name for the VNF Product. Can change during the VNF Product lifetime.
product_info_description	no	string		Human readable description of the VNF Product. Can change during the VNF Product lifetime.

Name	Required	Type	Constraints	Description
vnfm_info	yes	list of string		Identifies VNFM(s) compatible with the VNF described in this version of the VNFD. To indicate that a VNF can be managed by any ETSI NFV compliant VNFM, the string value shall be the concatenation of the string "etsivnfm" and the minimum version of ETSI GS NFV-SOL 002 [i.4] to be supported by this VNFM (e.g. etsivnfm:v2.3.1). If the VNF is compatible with multiple versions, multiple values may be included. See note 1. To indicate a specific VNFM product, the string value shall be the concatenation of the IANA enterprise number of the VNFM provider [5], followed by a product-specific string.
localization_languages	no	list of string	Valid values: string values that comply with IETF RFC 5646 [13]	Information about localization languages of the VNF (includes e.g. strings in the VNFD). This allows to provide one or more localization languages to support selecting a specific localization language at VNF instantiation time.
default_localization_language	no	string	Valid values: string values that comply with IETF RFC 5646 [13]	Default localization language that is instantiated if no information about selected localization language is available. Shall be present if "localizationLanguage" is present and shall be absent otherwise.
configurable_properties	no	tosca.datatype pes.nfv.VnfConfigurableProperties		Describes the configurable properties of the VNF (e.g. related to auto scaling and auto healing).
modifiable_attributes	no	tosca.datatype pes.nfv.VnfInfoModifiableAttributes		Describes the modifiable attributes of the VNF.
lcm_operations_configuration	no	tosca.datatype pes.nfv.VnfLcmOperationsConfiguration		Describes the configuration parameters for the VNF LCM operations.
monitoring_parameters	no	list of tosca.datatype pes.nfv.VnfMonitoringParameter		Describes monitoring parameters applicable to the VNF. See note 4.
flavour_id	yes	string		Identifier of this DF within the VNFD.
flavour_description	yes	string		Human readable description of the DF.
vnf_profile	no	tosca.datatype pes.nfv.VnfProfile		Describes a profile for instantiating VNFs of a particular NS DF according to a specific VNFD and VNF DF. See note 2.
NOTE 1: When LCM scripts are used, the support of this minimum version might not be sufficient to ensure that the VNF can be managed by a VNFM. The support of the domain specific language(s) used by these LCM scripts is another criterion for determining the compatibility of the VNF with a VNFM.				
NOTE 2: This property is only used in an NSD service template when describing a VNF node template with the corresponding VnfProfile information.				
NOTE 3: The value of the descriptor_id string shall comply with an UUID format as specified in section 3 of IETF RFC 4122 [9].				

Name	Required	Type	Constraints	Description
NOTE 4: This property is only used in a VNFD service template when describing a VNF node template with the corresponding monitoring information.				

The syntax of the `vnfm_info` string values shall comply with the following ABNF [6] snippet:

```
value = any_etsi_nfv_compliant_product | product_specific
any_etsi_nfv_compliant_product = "etsivnfm" SEP "version"
version = "v" version_identifier
version_identifier = 1*2DIGIT DOT 1*2DIGIT DOT 1*2DIGIT
; the version identifier is encoded as a sequence of items of 1 or 2 digits separated by dots
; representing the 3 fields (major, technical and editorial) of the version of an ETSI deliverable.
product_specific = enterprise_number SEP product_specific_string
enterprise_number = 1*DIGIT
product_specific_string = *(ALPHA / DIGIT / "-" / ".")
SEP = ":"
DOT = "."
```

This implies that `vnfm_info` string values shall also comply with the pattern defined by the following regular expression [15]: `(^etsivnfm:v[0-9]?[0-9]\.[0-9]?[0-9]\.[0-9]?[0-9]$)|(^[0-9]+:[a-zA-Z0-9.-]+)$`

6.8.1.3 Attributes

If the VNF supports VNF indicators, the VNF node type definition shall include one TOSCA attribute of a primitive type for each supported VNF indicator. The attribute definition shall indicate all possible values as constraints.

NOTE: In this version of the present document, the type of VNF indicators is constrained to primitive types. This is due to the limitations in the TOSCA-Simple-Profile-YAML-v1.3 [20] to define conditions on attributes of complex types.

VNF indicators may be defined in the VNFD to allow for the asynchronous notification of VNF specific information to the VNFM.

An attribute defined in the VNF node type for a VNF indicator holds the value for that indicator during the lifecycle of the VNF. A notification defined in the derived interface for VNF indicators (see clause 6.7.2) produces an output value which is assigned to the attribute, as per TOSCA Simple Profile in YAML 1.3 syntax. Examples of such assignments are shown in clause 6.8.1.9. Thus, the value of the VNF indicator may change every time a notification is received.

6.8.1.4 Requirements

The requirements of the VNF node type shall comply with the provisions set out in table 6.8.1.4-1.

Table 6.8.1.4-1: Requirements

Name	Required	Capability type	Constraints	Description
<code>virtual_link</code>	no	<code>tosca.capabilities.nfv.VirtualLinkable</code>		Describes the requirements for linking to virtual link

6.8.1.5 Capabilities

None.

6.8.1.6 Definition

The syntax of the VNF node type shall comply with the following definition:

```
tosca.nodes.nfv.VNF:
  derived_from: tosca.nodes.Root
  description: The generic abstract type from which all VNF specific node types
```

```

shall be derived to form, together with other node types, the TOSCA service
template(s) representing the VNFD
  properties:
    descriptor_id: # instead of vnfd_id
      type: string # UUID
      description: Identifier of this VNFD information element. This attribute shall
be globally unique
      required: true
    descriptor_version: # instead of vnfd_version
      type: string
      description: Identifies the version of the VNFD
      required: true
    provider: # instead of vnf_provider
      type: string
      description: Provider of the VNF and of the VNFD
      required: true
    product_name: # instead of vnf_product_name
      type: string
      description: Human readable name for the VNF Product
      required: true
    software_version: # instead of vnf_software_version
      type: string
      description: Software version of the VNF
      required: true
    product_info_name: # instead of vnf_product_info_name
      type: string
      description: Human readable name for the VNF Product
      required: false
    product_info_description: # instead of vnf_product_info_description
      type: string
      description: Human readable description of the VNF Product
      required: false
    vnfm_info:
      type: list
      required: true
      description: Identifies VNFM(s) compatible with the VNF
      entry_schema:
        type: string
      constraints:
        - pattern: (^etsivnfm:v[0-9]?[0-9]\.[0-9]?[0-9]\.[0-9]?[0-9]$)|(^[0-9]+:[a-
zA-Z0-9.-]+)$)
    localization_languages:
      type: list
      description: Information about localization languages of the VNF
      required: false
      entry_schema:
        type: string #IETF RFC 5646 string
    default_localization_language:
      type: string #IETF RFC 5646 string
      description: Default localization language that is instantiated if no
information about selected localization language is available
      required: false
    #configurable_properties:
      #type: toasca.datatypes.nfv.VnfConfigurableProperties
      #description: Describes the configurable properties of the VNF
      #required: false
    # derived types are expected to introduce configurable_properties
    # with its type derived from toasca.datatypes.nfv.VnfConfigurableProperties
    #modifiable_attributes:
      #type: toasca.datatypes.nfv.VnfInfoModifiableAttributes
      #description: Describes the modifiable attributes of the VNF

```

```

    #required: false
    # derived types are expected to introduce modifiable_attributes
    # with its type derived from
    # tosca.datatypes.nfv.VnfInfoModifiableAttributes
    lcm_operations_configuration:
      type: tosca.datatypes.nfv.VnfLcmOperationsConfiguration
      description: Describes the configuration parameters for the VNF LCM operations
      required: false
    monitoring_parameters:
      type: list
      entry_schema:
        type: tosca.datatypes.nfv.VnfMonitoringParameter
        description: Describes monitoring parameters applicable to the VNF.
        required: false
    flavour_id:
      type: string
      description: Identifier of the Deployment Flavour within the VNFD
      required: true
    flavour_description:
      type: string
      description: Human readable description of the DF
      required: true
    vnf_profile:
      type: tosca.datatypes.nfv.VnfProfile
      description: Describes a profile for instantiating VNFs of a particular NS DF
      according to a specific VNFD and VNF DF
      required: false
    requirements:
      - virtual_link:
          capability: tosca.capabilities.nfv.VirtualLinkable
          relationship: tosca.relationships.nfv.VirtualLinksTo
          occurrences: [ 0, 1 ]
      # Additional requirements shall be defined in the VNF specific node type (deriving
      # from tosca.nodes.nfv.VNF) corresponding to NS virtual links that need to connect to
      # VnfExtCps
    interfaces:
      Vnflcm:
        type: tosca.interfaces.nfv.Vnflcm
      # VnfIndicator:
      # type: tosca.interfaces.nfv.VnfIndicator
      # derived types are expected to introduce Vnf Indicator interfaces
      # with their type derived from tosca.interfaces.nfv.VnfIndicator

```

6.8.1.7 Artifact

None.

6.8.1.8 Additional Requirements

For a given VNFD, a new VNF node type shall be defined following the below requirements:

- a) The node type shall be derived from: `tosca.nodes.nfv.VNF`.
- b) The following properties listed in `tosca.nodes.nfv.VNF` where the "required:" field is set to "true" shall be included with their values indicated as constraints and as default values:
 - a. `descriptor_id`
 - b. `descriptor_version`

- c. provider
- d. product_name
- e. software_version
- f. vnfm_info
- g. flavour_id
- h. flavour_description

NOTE 1: Indicating their values as default allows not to include them in property assignments in node templates, e.g. in the NSD.

- c) An empty string shall be indicated as the default value of the flavour_description property.
- d) The capabilities, requirements, interfaces of `tosca.nodes.nfv.VNF` shall be preserved.
- e) Depending on the number of external connection points of the VNF that need to connect to NS virtual links, additional requirements for `VirtualLinkable` capability shall be defined with the occurrences set to [0, 1]. In this case, it is the VNFD author's choice to use the requirement for `VirtualLinkable` capability defined in the `tosca.nodes.nfv.VNF` node type or use only the additional requirements defined in the derived VNF specific node type. In the latter case, the `virtual_link` requirement should be included in the node type definition with occurrences [0, 0].

If the external connection point exposes a `VipCp`, a new requirement for `VirtualLinkableCapability` using the `VipVirtualLinksTo` relationship shall be defined for this connection point.

- f) The rule for naming this node type in the service template should be:
 - `provider.product_name.software_version.descriptor_version`, by concatenating the values of the corresponding properties of the created VNF node type.

NOTE 2: If the `software_version` value or `descriptor_version` value contains a dot (i.e. "."), this character should be replaced with an underscore (i.e. "_").

- g) If the VNF supports VNF indicators, the VNF node type definition shall include an interface definition of a VNF specific interface type indicating the mapping of notification outputs to the VNF node attributes. For each of the VNF indicators, the name of the notification output shall be the same as the name of the corresponding VNF attribute.

NOTE 3: The notifications keyname in TOSCA interface is defined in TOSCA-Simple-Profile-YAML-v1.3 [20].

VNF Providers shall use the following types to derive the VNF specific modifiable attributes and additional configurable properties:

- `tosca.datatypes.nfv.VnfInfoModifiableAttributesExtensions`.
- `tosca.datatypes.nfv.VnfInfoModifiableAttributesMetadata`.
- `tosca.datatypes.nfv.VnfAdditionalConfigurableProperties`.
- `tosca.datatypes.nfv.VnfInfoModifiableAttributes`.
- `tosca.datatypes.nfv.VnfConfigurableProperties`.

See illustrative examples in clauses 6.8.1.9, 6.2.35.4 and 6.2.31.4.

In the derived VNF node type, the `modifiable_attributes` and `configurable_properties` (VNF-specific extension of the `tosca.datatypes.nfv.VnfInfoModifiableAttributes` and `tosca.datatypes.nfv.VnfConfigurableProperties`, respectively, by extending the above listed types) describe the name and type of the modifiable attributes (extensions and metadata) and configurable properties (`vnfConfigurableProperties`).

The `modifiable_attributes` and `configurable_properties` information provided in the node type is sufficient for the client of the VNF LCM API for providing values to these properties. A value provided via the VNF LCM API to such a property overrides the value (if any) assigned in the node template or defined as default value in the node type definition.

Node templates of the VNF specific node type shall not include the `vnf_profile` property when they are part of a VNFD service template.

For a given NSD, when describing a referenced VNFD as a node templates, the `vnf_profile` property shall be included with a valid value.

For a given NSD, when describing a referenced VNFD as a node templates, the `monitoring_parameters` property shall not be included.

6.8.1.9 Example

Example usage of `modifiable_attributes`:

```
tosca_definitions_version: toscasimpleyaml_1_2

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: toscanodes.nfv.VNF
    properties:
      flavour_id:
        constraints:
          - valid_values: [ simple, complex ]
    modifiable_attributes:
      type: mycompany.datatypes.nfv.VnfInfoModifiableAttributes

data_types:
  mycompany.datatypes.nfv.VnfInfoModifiableAttributes:
    derived_from: toscadatatypes.nfv.VnfInfoModifiableAttributes
    properties:
      extensions:
        type: mycompany.datatypes.nfv.VnfInfoModifiableAttributesExtensions

  mycompany.datatypes.nfv.VnfInfoModifiableAttributesExtensions:
    derived_from: toscadatatypes.nfv.VnfInfoModifiableAttributesExtensions
    properties:
      http_proxy:
        type: string
        required: true
      https_proxy:
        type: string
        required: false
```

Example usage of lcm_operations_configuration:

Top level service template:

```
tosca_definitions_version: tosca_simple_yaml_1_2

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    properties:
      flavour_id:
        type: string
        constraints:
          - valid_values: [ simple, complex ]
    lcm_operations_configuration:
      scale:
        scaling_by_more_than_one_step_supported: true
      scale_to_level:
        arbitrary_target_levels_supported: true
      heal:
        causes:
          - service_unavailable
          - performance_degraded
      terminate:
        min_graceful_termination_timeout: 60 s
        max_recommended_graceful_termination_timeout: 600 s
      operate:
        min_graceful_stop_timeout: 60 s
        max_recommended_graceful_stop_timeout: 600 s
```

Example usage of describing a VNF node template with vnf_profile in an NSD TOSCA service template:

```
tosca_definitions_version: tosca_simple_yaml_1_2

description: an example of NSD TOSCA service template

topology template:
...

node_templates:
  VNF_1:
    type: tosca.nodes.nfv.exampleVNF
    properties:
      flavour_id: small
      descriptor_id: b1bb0ce7-ebca-4fa7-95ed-4840d70a1177
      provider: MyCompany
      product_name: SunshineDB
      software_version: 1.0
      descriptor_version: 1.0
      vnf_profile:
        instantiation_level: level_1
        min_number_of_instances: 2
        max_number_of_instances: 6
    # other properties omitted for brevity
    requirements:
      - virtual_link: NsVirtualLink
```

Example usage of VNF indicators attributes in VNF node type definition and VNF indicator notifications in interface definition:

```

tosca_definitions_version: tosca_simple_yaml_1_3

interface_types:
  tosca.nfv.interfaces.MyCompanyVnfIndicator
    derived_from: tosca.nfv.interfaces.VnfIndicator
    notifications:
      health:
        description: this notification is used to received asynchronous
information of value change of the health_vnf_indicator
      utilization:
        description: this notification is used to received asynchronous
information of value change of the utilization_vnf_indicator

node_types:
  MyCompany.SunshineDB.1_0.1_0:
    derived_from: tosca.nodes.nfv.VNF
    properties:
      flavour_id:
        constraints:
          - valid_values: [ simple, complex ]
    modifiable_attributes:
      type: mycompany.datatypes.nfv.VnfInfoModifiableAttributes
    attributes:
      health_vnf_indicator:
        type: string
        constraints:
          - valid_values: [ green, red, yellow ]
      utilization_vnf_indicator:
        type: float
        constraints:
          - in_range [ 0.0, 100.0 ]
    interfaces:
      Vnflcm:
        type: tosca.interfaces.nfv.Vnflcm
        operations:
          # omitted for brevity
      VnfIndicator:
        type: tosca.interfaces.nfv.MyCompanyVnfIndicator
        notifications:
          health:
            output:
              health_vnf_indicator: [ SELF, health_vnf_indicator ]
          utilization:
            output:
              utilization_vnf_indicator: [ SELF, utilization_vnf_indicator ]

```

6.8.2 tosca.nodes.nfv.VnfExtCp

6.8.2.1 Description

The VnfExtCp node type represents the VnfExtCpd information element as defined in ETSI GS NFV-IFA 011 [1], which describes a logical external connection point, exposed by this VNF enabling connecting with an external Virtual Link. Table 6.8.2.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.2.1-1: Type name, shorthand, and URI

Shorthand Name	VnfExtCp
Type Qualified Name	toscanfv:VnfExtCp
Type URI	tosca.nodes.nfv.VnfExtCp

6.8.2.2 Properties

The properties of the VnfExtCp node type shall comply with the provisions set out in table 6.8.2.2-1.

Table 6.8.2.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_network_interface_requirements	no	list of toasca.datatypes.nfv.VirtualNetworkInterfaceRequirements		The actual virtual NIC requirements that is been assigned when instantiating the connection point.

6.8.2.3 Attributes

None.

6.8.2.4 Requirements

The requirements of the VnfExtCp node type shall comply with the provisions set out in table 6.8.2.4-1.

Table 6.8.2.4-1: Requirements

Name	Required	Capability type	Constraints	Description
external_virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Specifies that CP instances require to be connected to a node that has a VirtualLinkable capability
internal_virtual_link	yes	tosca.capabilities.nfv.VirtualLinkable		Specifies that CP instances require to be connected to a node that has a VirtualLinkable capability

6.8.2.5 Capabilities

None.

6.8.2.6 Definition

The syntax of the VnfExtCp node type shall comply with the following definition:

```

tosca.nodes.nfv.VnfExtCp:
  derived_from: toasca.nodes.nfv.Cp
  description: Describes a logical external connection point, exposed by the VNF
  enabling connection with an external Virtual Link
  properties:
    virtual_network_interface_requirements:
      type: list
      description: The actual virtual NIC requirements that is been assigned when
  instantiating the connection point
      required: false
      entry_schema:
        type: toasca.datatypes.nfv.VirtualNetworkInterfaceRequirements
  requirements:
    - external_virtual_link:

```

```

    capability: toska.capabilities.nfv.VirtualLinkable
    relationship: toska.relationships.nfv.VirtualLinksTo
    occurrences: [0, 1]
  - internal_virtual_link:
    capability: toska.capabilities.nfv.VirtualLinkable
    relationship: toska.relationships.nfv.VirtualLinksTo
    occurrences: [1, 1]

```

6.8.2.7 Additional Requirements

A node template of this type is used to represent a VNF external connection point only in the case the VnfExtCp is connected to an internal virtual link. The node template has the following requirements:

- internal_virtual_link requirement to allow to connect it to an internal virtual link;
- external_virtual_link requirement to allow to connect it to an external virtual link.

In the case where a VNF external connection point is re-exposing a VduCp (internal connection point), the VduCp node type shall be used in the service template, instead of the VnfExtCp node type.

6.8.2.8 Example

In a typical scenario, the VnfExtCp node template will be part of a service template representing a certain VNF deployment flavour. The service template substitutes for a VNF specific node type. In this substitution, the virtual_link requirement is mapped to the external_virtual_link requirement of the VnfExtCp node. This example is illustrated in clause A.3.3.

When a VNF external connection point re-exposes a Vdu connection point, the service template does not require an explicit node template of type VnfExtCp in a typical scenario where a VNF specific node type is substituted by a service template representing a certain VNF deployment flavour. In this substitution, the virtual_link requirement is mapped to the virtual_link requirement of the VduCp node. This example is illustrated in clause A.3.2.

6.8.3 toska.nodes.nfv.Vdu.Compute

6.8.3.1 Description

The Vdu.Compute node type describes the virtual compute part of a VDU which is a construct supporting the description of the deployment and operational behaviour of a VNFC, as defined in ETSI GS NFV-IFA 011 [1].

Table 6.8.3.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.3.1-1: Type name, shorthand, and URI

Shorthand Name	Vdu.Compute
Type Qualified Name	toscanfv.Vdu.Compute
Type URI	tosca.nodes.nfv.Vdu.Compute

6.8.3.2 Properties

The properties of the Vdu.Compute node type shall comply with the provisions set out in table 6.8.3.2-1.

Table 6.8.3.2-1: Properties

Name	Required	Type	Constraints	Description
name	yes	string		Human readable name of the Vdu.
description	yes	string		Human readable description of the Vdu.
boot_order	yes	boolean		It indicates whether the order of the virtual_storage requirements is used as the boot index (the first requirement represents the lowest index and defines highest boot priority). If no boot order is indicated or the value is false, the default boot order defined in the VIM or NFVI shall be used.
nfvi_constraints	no	map of string		Describes constraints on the NFVI for the VNFC instance(s) created from this Vdu. For example, aspects of a secure hosting environment for the VNFC instance that involve additional entities or processes. This property is reserved for future use in the present document.
monitoring_parameters	no	list of toasca.datatype pes.nfv.Vnfc MonitoringParameter		Describes monitoring parameters applicable to a VNFC based on this VDU.
configurable_properties	no	map of toasca.datatype pes.nfv.Vnfc ConfigurableProperties		Describes the configurable properties of all VNFC instances based on this VDU.
boot_data	no	tosca.datatype pes.nfv.Boot Data		Contains the information used to customize a virtualised compute resource at boot time. The bootData may contain variable parts that are replaced by deployment specific values before being sent to the VIM. For the parameters with "volatile" values, the parameters of each variable part shall be declared in the toasca.datatypes.nfv.VnfOperationAdditionalParameters; for parameters with "persistent" values during the lifetime of the VNF instance, the parameters shall be declared in the toasca.datatypes.nfv.VnfInfoModifiableAttributesExtensions.
vdu_profile	yes	tosca.datatype pes.nfv.Vdu Profile		Defines additional instantiation data for the VDU.Compute node.
sw_image_data	no	tosca.datatype pes.nfv.SwImageData		Defines information related to a SwImage artifact used by this Vdu.Compute node.

6.8.3.3 Attributes

None.

6.8.3.4 Requirements

The requirements of the Vdu.Compute node type shall comply with the provisions set out in table 6.8.3.4-1.

Table 6.8.3.4-1: Requirements

Name	Required	Capability type	Constraints	Description
virtual_storage	no	tosca.capabilities.nfv.VirtualStorage		Describes storage requirements for a virtual_storage instance attached to the virtualisation container created from virtual_compute defined for this vdu.

6.8.3.5 Capabilities

The capabilities of the Vdu.Compute node type shall comply with the provisions set out in table 6.8.3.5-1.

Table 6.8.3.5-1: Capabilities

Name	Type	Constraints	Description
virtual_compute	tosca.capabilities.nfv.VirtualCompute		Describes virtual compute resources capabilities.
virtual_binding	tosca.capabilities.nfv.VirtualBindable		Defines ability of VirtualBindable. See note.
NOTE: Due to current grammar limitations in TOSCA-Simple-Profile-YAML-v1.2 [3], the Vdu.Compute node template cannot limit the number of the virtual_binding capability occurrences. It is the VNFD author's responsibility to make sure that the number of VduCps connected to a particular Vdu.Compute node is compatible with the virtualised resources assigned to this node.			

6.8.3.6 Definition

The syntax of the Vdu.Compute node type shall comply with the following definition:

```
tosca.nodes.nfv.Vdu.Compute:
  derived_from: toska.nodes.Root
  description: Describes the virtual compute part of a VDU which is a construct
  supporting the description of the deployment and operational behavior of a VNFC
  properties:
    name:
      type: string
      description: Human readable name of the VDU
      required: true
    description:
      type: string
      description: Human readable description of the VDU
      required: true
    boot_order:
      type: boolean
      description: indicates whether the order of the virtual_storage requirements
  is used as the boot index (the first requirement represents the lowest index and
  defines highest boot priority)
      required: true
      default: false
    nfvi_constraints:
      type: map
      description: Describes constraints on the NFVI for the VNFC instance(s)
  created from this VDU. This property is reserved for future use in the present
  document.
      required: false
    entry_schema:
      type: string
    monitoring_parameters:
      type: list
      description: Describes monitoring parameters applicable to a VNFC instantiated
  from this VDU
      required: false
    entry_schema:
      type: toska.datatypes.nfv.VnfcMonitoringParameter
  #configurable_properties:
  #type: toska.datatypes.nfv.VnfcConfigurableProperties
  #required: false
  # derived types are expected to introduce
  # configurable_properties with its type derived from
  # toska.datatypes.nfv.VnfcConfigurableProperties
```

```

vdu_profile:
  type: toska.datatypes.nfv.VduProfile
  description: Defines additional instantiation data for the VDU.Compute node
  required: true
sw_image_data:
  type: toska.datatypes.nfv.SwImageData
  description: Defines information related to a SwImage artifact used by this
Vdu.Compute node
  required: false # property is required when the node template has an
associated artifact of type toska.artifacts.nfv.SwImage and not required otherwise
boot_data:
  type: toska.datatypes.nfv.BootData
  description: Contains the information used to customize a virtualised compute
resource at boot time. The bootData may contain variable parts that are replaced by
deployment specific values before being sent to the VIM.
  required: false
capabilities:
  virtual_compute:
    type: toska.capabilities.nfv.VirtualCompute
    occurrences: [ 1, 1 ]
  virtual_binding:
    type: toska.capabilities.nfv.VirtualBindable
    occurrences: [ 1, UNBOUNDED ]
requirements:
  - virtual_storage:
    capability: toska.capabilities.nfv.VirtualStorage
    relationship: toska.relationships.nfv.AttachesTo
    occurrences: [ 0, UNBOUNDED ]

```

6.8.3.7 Additional requirements

Node templates of type `tosca.nodes.nfv.Vdu.Compute` may contain an artifact definition of type `tosca.artifacts.nfv.SwImage`. There shall be a maximum number of one such artifact definition in a `tosca.nodes.nfv.Vdu.Compute` node template. The node template name of type `tosca.nodes.nfv.Vdu.Compute` fulfills the purpose of the "SwImageDescId" attribute of the `SwImageDesc` information element in ETSI GS NFV-IFA 011 [1] and hence it will be used in APIs to identify the software image id from the VNFD perspective. See example in clause 6.8.3.8.

When VNF-specific configurable properties are defined at the VDU-level, VNF providers shall define a VNF/VDU specific `Vdu.Compute` node type, where the `configurable_properties` property has a datatype derived from `tosca.datatypes.nfv.VnfcConfigurableProperties`. See example in clause 6.2.10.4.

The VNF/VDU specific `Vdu.Compute` node type shall be defined as follows:

- All properties listed in `tosca.nodes.nfv.Vdu.Compute` where the "required:" field is set to "true" shall be included.
- The capabilities and requirements of `tosca.nodes.nfv.Vdu.Compute` shall be preserved.
- The `configurable_properties` property shall have a datatype derived from `tosca.datatypes.nfv.VnfcConfigurableProperties`, according to the rules defined in clause 5.7.2 of the present document.

The definition of a VNF/VDU specific node type shall be included in one of the following yaml files:

- 1) In the yaml file which contains the corresponding VNF specific node type definition.
- 2) In low-level service templates or in the single TOSCA service template representing the VNFD in case of a single deployment flavour design with a single TOSCA service template.

- 3) In a standalone yaml file, to be imported from the low-level TOSCA service templates or from the single TOSCA service template representing the VNFD in case of a single deployment flavour design with a single TOSCA service template.
- 4) In any other VNF-specific files containing type definitions used by the VNFD TOSCA service template.

In the derived `Vdu.Compute` node type, the `additional_vnfc_configurable_properties` (VNF/VDU-specific extension of the `tosca.datatypes.nfv.VnfAdditionalVnfcConfigurableProperties` data type and the containing `tosca.datatypes.nfv.VnfcConfigurableProperties` data type) describe the name and type of the VNFC configurable properties.

The `additional_vnfc_configurable_properties` information provided in the node type is sufficient for the client of the VNF LCM API for providing values to these properties. A value provided via the VNF LCM API to such a property overrides the value (if any) assigned in the node template or defined as default value in the node type definition.

The node template name of type `tosca.nodes.nfv.Vdu.Compute` fulfills the purpose of the 'virtualComputeDescId' attribute of the `virtualComputeDesc` information element in ETSI GS NFV-IFA 011 [1] and hence it will be used in APIs to identify the virtual compute id (`vnfdVirtualComputeDescId`).

NOTE: The use of the node template name of type `tosca.nodes.nfv.Vdu.Compute` for the 'virtualComputeDescId' attribute of the `virtualComputeDesc` information element in ETSI GS NFV-IFA 011 [1] implies in the present document version a one-to-one mapping of `virtualComputeDesc` with VDU. This deviates from the ETSI GS NFV-IFA 011 [1] modelling that defines a mapping where a `virtualComputeDesc` can be reused by one or more VDU, i.e. it implies a one-to-many mapping of `virtualComputeDesc` with VDU. This can have an impact in the determination of the number of compute flavours needed to be created with the VIM.

6.8.3.8 Example

This example illustrates boot data containing `kvp_data`.

```
tosca_definitions_version: tosca_simple_yaml_1_2
..
node_types:
  mycompany.nodes.nfv.SunshineDB.1_0.1_0:

  ..

node_templates:
  vnf:
    type: mycompany.nodes.nfv.SunshineDB.1_0.1_0
    properties:
      ..
      modifiable_attributes: { get_input: modifiable_attributes }

dbBackend:
  type: toasca.nodes.nfv.Vdu.Compute
  properties:
    ..
    boot_data:
      content_or_file_data
      contents: { concat: [ "#!/bin/bash\n",
"echo setting HTTP proxy to: ", { get_property: [vnf, modifiable_attributes,
extensions, http_proxy ] }, "\n", "..."] }

```

This example illustrates fetching the boot data value from a file by using `content_or_file_data`.

```

tosca_definitions_version: toasca_simple_yaml_1_2
..
topology_template:
  ..

node_templates:
  dbBackend:
    type: toasca.nodes.nfv.Vdu.Compute
    properties:
      ..
      boot_data:
        content_or_file_data
        data:
          http_proxy: { get_property: [vnf, modifiable_attributes, extensions,
http_proxy ] }
          source_path: { get_artifact : [ SELF, boot_data ] }
    artifacts:
      sw_image:
        type: toasca.artifacts.nfv.SwImage
        file: images/dbBackend.v1.0.1.qcow2
      boot_data:

```

```

type: toska.artifacts.example
file: implementation/templates/boot_data.file
..

```

This example illustrates fetching the boot data value from a file by using `content_or_file_data` with `destination_path`.

```

tosca_definitions_version: toska_simple_yaml_1_2
..
topology_template:
..

node_templates:
dbBackend:
type: toska.nodes.nfv.Vdu.Compute
properties:
..
boot_data:
content_or_file_data:
data:
vm_name: get_property: [vnf, modifiable_attributes, extensions,
vm_name ]
source_path: { get_artifact : [ SELF, boot_data ] }
destination_path: /etc/
artifacts:
sw_image:
type: toska.artifacts.nfv.SwImage
file: images/dbBackend.v1.0.1.qcow2
boot_data:
type: toska.artifacts.example
file: implementation/templates/boot_data.file
..

```

This example illustrates the association of a software image artifact to a `Vdu.Compute` node. The name of the artifact "dbBackend" will be used in external APIs to identify the image.

```

tosca_definitions_version: toska_simple_yaml_1_2
..
topology_template:
..

node_templates:
dbBackend:
type: toska.nodes.nfv.Vdu.Compute
properties:
..
sw_image_data:
..
artifacts:
sw_image:
type: toska.artifacts.nfv.SwImage
file: images/dbBackend.v1.0.1.qcow2
..

```

This example illustrates the association of a software image artifact to more than `Vdu.Compute` nodes. The name of the artifact "dbBackend and oamService" will be used in external APIs to identify the image of each `Vdu.Compute` node.

```

tosca_definitions_version: tosca_simple_yaml_1_2
..
topology_template:
  ..

  node_templates:
    dbBackend:

        artifacts:
          sw_image:
            type: tosca.artifacts.nfv.SwImage
            file: images/dbBackend.v1.0.1.qcow2

    ..

```

6.8.4 tosca.nodes.nfv.Vdu.VirtualBlockStorage

6.8.4.1 Description

The VirtualBlockStorage node type describes the specifications of requirements related to virtual block storage resources, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.8.4.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.4.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualBlockStorage
Type Qualified Name	toscanfv:VirtualBlockStorage
Type URI	tosca.nodes.nfv.Vdu.VirtualBlockStorage

6.8.4.2 Properties

The properties of the VirtualBlockStorage node type shall comply with the provisions set out in table 6.8.4.2-1.

Table 6.8.4.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_block_storage_data	yes	tosca.datatypes.nfv.VirtualBlockStorage		Describes the block storage characteristics.
sw_image_data	no	tosca.datatypes.nfv.SwImageData		Defines information related to a SwImage artifact used by this Vdu.Compute node.

6.8.4.3 Attributes

None.

6.8.4.4 Requirements

None.

6.8.4.5 Capabilities

The capabilities of the VirtualBlockStorage node type shall comply with the provisions set out in table 6.8.4.5-1.

Table 6.8.4.5-1: Capabilities

Name	Type	Constraints	Description
virtual_storage	tosca.capabilities.nfv.VirtualStorage		Defines the capabilities of virtual_storage.

6.8.4.6 Definition

The syntax of the VirtualBlockStorage node type shall comply with the following definition:

```
tosca.nodes.nfv.Vdu.VirtualBlockStorage:
  derived_from: toska.nodes.Root
  description: This node type describes the specifications of requirements related
to virtual block storage resources
  properties:
    virtual_block_storage_data:
      type: toska.datatypes.nfv.VirtualBlockStorageData
      description: Describes the block storage characteristics.
      required: true
    sw_image_data:
      type: toska.datatypes.nfv.SwImageData
      description: Defines information related to a SwImage artifact used by this
Vdu.Compute node.
      required: false # property is required when the node template has an
associated artifact of type toska.artifacts.nfv.SwImage and not required otherwise
    capabilities:
      virtual_storage:
        type: toska.capabilities.nfv.VirtualStorage
        description: Defines the capabilities of virtual_storage.
```

6.8.4.7 Additional requirements

Node templates of type `tosca.nodes.nfv.Vdu.VirtualBlockStorage` may contain an artifact definition of type `tosca.artifacts.nfv.SwImage`. There shall be a maximum number of one such artifact definition in a `tosca.nodes.nfv.Vdu.VirtualBlockStorage` node template. The node template name of type `tosca.nodes.nfv.Vdu.VirtualBlockStorage` fulfills the purpose of the "SwImageDescId" attribute of the `SwImageDesc` information element in ETSI GS NFV-IFA 011 [1] and hence it will be used in APIs to identify the software image id from the VNFD descriptor. See example in clause 6.8.3.8.

6.8.5 toska.nodes.nfv.Vdu.VirtualObjectStorage

6.8.5.1 Description

The `VirtualObjectStorage` node type describes the specifications of requirements related to virtual object storage resources, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.8.5.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.5.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualObjectStorage
Type Qualified Name	toscanfv:VirtualObjectStorage
Type URI	tosca.nodes.nfv.Vdu.VirtualObjectStorage

6.8.5.2 Properties

The properties of the VirtualObjectStorage node type shall comply with the provisions set out in table 6.8.5.2-1.

Table 6.8.5.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_object_storage_data	yes	tosca.datatypes.nfv.VirtualObjectStorageData		Describes the object storage characteristics.

6.8.5.3 Attributes

None.

6.8.5.4 Requirements

None.

6.8.5.5 Capabilities

The capabilities of the VirtualObjectStorage node type shall comply with the provisions set out in table 6.8.5.5-1.

Table 6.8.5.5-1: Capabilities

Name	Type	Constraints	Description
virtual_storage	tosca.capabilities.nfv.VirtualStorage		Defines the capabilities of virtual_storage.

6.8.5.6 Definition

The syntax of the VirtualObjectStorage node type shall comply with the following definition:

```
tosca.nodes.nfv.Vdu.VirtualObjectStorage:
  derived_from: toscanodes.Root
  description: This node type describes the specifications of requirements
related to virtual object storage resources
  properties:
    virtual_object_storage_data:
      type: toscanodes.datatypes.nfv.VirtualObjectStorageData
      description: Describes the object storage characteristics.
      required: true
  capabilities:
    virtual_storage:
      type: toscanodes.capabilities.nfv.VirtualStorage
      description: Defines the capabilities of virtual_storage.
```

6.8.5.7 Additional requirements

None.

6.8.6 tosca.nodes.nfv.Vdu.VirtualFileStorage

6.8.6.1 Description

The VirtualFileStorage node type describes the specifications of requirements related to virtual file storage resources, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.8.6.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.6.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualFileStorage
Type Qualified Name	toscanfv:VirtualFileStorage
Type URI	tosca.nodes.nfv.Vdu.VirtualFileStorage

6.8.6.2 Properties

The properties of the VirtualFileStorage node type shall comply with the provisions set out in table 6.8.6.2-1.

Table 6.8.6.2-1: Properties

Name	Required	Type	Constraints	Description
virtual_file_storage_data	yes	tosca.datatypes.nfv.VirtualFileStorageData		Describes the file storage characteristics.

6.8.6.3 Attributes

None.

6.8.6.4 Requirements

The requirements of the VirtualFileStorage node type shall comply with the provisions set out in table 6.8.6.4-1.

Table 6.8.6.4-1: Requirements

Name	Required	Capability type	Constraints	Description
virtual_link	yes	tosca.capabilities.nfv.VirtualLinkable		Describes the requirements for linking to virtual link

6.8.6.5 Capabilities

The capabilities of the VirtualFileStorage node type shall comply with the provisions set out in table 6.8.6.5-1.

Table 6.8.6.5-1: Capabilities

Name	Type	Constraints	Description
virtual_storage	tosca.capabilities.nfv.VirtualStorage		Defines the capabilities of virtual_storage.

6.8.6.6 Definition

The syntax of the VirtualFileStorage node type shall comply with the following definition:

```

tosca.nodes.nfv.Vdu.VirtualFileStorage:
  derived_from: tosca.nodes.Root
  description: This node type describes the specifications of requirements
related to virtual file storage resources
  properties:
    virtual_file_storage_data:
      type: tosca.datatypes.nfv.VirtualFileStorageData
      description: Describes the file storage characteristics.
      required: true
  capabilities:
    virtual_storage:
      type: tosca.capabilities.nfv.VirtualStorage
      #description: Defines the capabilities of virtual_storage.
  requirements:
    - virtual link:
      capability: tosca.capabilities.nfv.VirtualLinkable
      relationship: tosca.relationships.nfv.VirtualLinksTo
      occurrences: [1, 1]
      # description: Describes the requirements for linking to virtual link

```

6.8.6.7 Additional requirements

None.

6.8.7 tosca.nodes.nfv.Cp

6.8.7.1 Description

The Cp node type is defined in clause 9.8.1 of the present document.

6.8.8 tosca.nodes.nfv.VduCp

6.8.8.1 Description

A VduCp node type represents the VduCpd information element as defined in ETSI GS NFV-IFA 011 [1], which describes network connectivity between a VNFC instance (based on VDU) and an internal VL. Table 6.8.8.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.8.1-1: Type name, shorthand, and URI

Shorthand Name	VduCp
Type Qualified Name	toscanfv:VduCp
Type URI	tosca.nodes.nfv.VduCp

6.8.8.2 Properties

The properties of the VduCp node type shall comply with the provisions set out in table 6.8.8.2-1.

Table 6.8.8.2-1: Properties

Name	Required	Type	Constraints	Description
bitrate_requirement	no	integer	greater_or_equal: 0	Bitrate requirement in bit per second on this connection point.
virtual_network_interface_requirements	no	list of toasca.data types.nfv.VirtualNetworkInterfaceRequirements		Specifies requirements on a virtual network interface realizing the CPs instantiated from this CPD.
order	no	integer	greater_or_equal: 0	The order of the NIC on the compute instance (e.g. eth2). See note. compute (aka multi vNICs) and ordering is desired, it is *mandatory* that all ports will be set with an order value and. The order values shall represent a positive, arithmetic progression that starts with 0 (e.g. 0, 1, 2, ..., n). If the property is not present, it shall be left to the VIM to assign the value when creating the instance.
vnic_type	no	string	Allowed values: normal, macvtap, direct, baremetal, virtio-forwarder, direct-physical, smart-nic	Describes the type of the virtual network interface realizing the CPs instantiated from this CPD. This is used to determine which mechanism driver(s) to be used to bind the port.
NOTE: When binding more than one port to a single.				

6.8.8.3 Attributes

None.

6.8.8.4 Requirements

The requirements of the VduCp node type shall comply with the provisions set out in table 6.8.8.4-1.

Table 6.8.8.4-1: Requirements

Name	Required	Capability type	Constraints	Description
virtual_binding	yes	tosca.capabilities.nfv.VirtualBindable		Describe the requirement for binding with VDU
virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Describes the requirements for linking to virtual link

6.8.8.5 Definition

The syntax of the VduCp node type shall comply with the following definition:

```

tosca.nodes.nfv.VduCp:
  derived_from: tosca.nodes.nfv.Cp
  description: describes network connectivity between a VNFC instance based on this
  VDU and an internal VL
  properties:
    bitrate_requirement:
      type: integer # in bits per second
      description: Bitrate requirement in bit per second on this connection point
      required: false
      constraints:
        - greater_or_equal: 0
    virtual_network_interface_requirements:
      type: list
      description: Specifies requirements on a virtual network interface realizing
      the CPs instantiated from this CPD
      required: false
      entry_schema:
        type: tosca.datatypes.nfv.VirtualNetworkInterfaceRequirements
    order:
      type: integer
      description: The order of the NIC on the compute instance (e.g.eth2)
      required: false
      constraints:
        - greater_or_equal: 0
    vnic_type:
      type: string
      description: Describes the type of the virtual network interface realizing the
      CPs instantiated from this CPD
      required: false
      constraints:
        - valid_values: [ normal, macvtap, direct, baremetal, virtio-forwarder,
        direct-physical, smart-nic ]
    requirements:
      - virtual_link:
          capability: tosca.capabilities.nfv.VirtualLinkable
          relationship: tosca.relationships.nfv.VirtualLinksTo
          occurrences: [0, 1]
      - virtual_binding:
          capability: tosca.capabilities.nfv.VirtualBindable
          relationship: tosca.relationships.nfv.VirtualBindsTo
          node: tosca.nodes.nfv.Vdu.Compute
          occurrences: [1, 1]

```

6.8.9 tosca.nodes.nfv.VnfVirtualLink

6.8.9.1 Description

The VnfVirtualLink node type represents the VnfVirtualLinkDesc information element as defined in ETSI GS NFV-IFA 011 [1], which describes the information about an internal VNF VL. Table 6.8.9.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.9.1-1: Type name, shorthand, and URI

Shorthand Name	VnfVirtualLink
Type Qualified Name	toscanfv:VnfVirtualLink
Type URI	tosca.nodes.nfv.VnfVirtualLink

6.8.9.2 Properties

The properties of the VnfVirtualLink node type shall comply with the provisions set out in table 6.8.9.2-1.

Table 6.8.9.2-1: Properties

Name	Required	Type	Constraints	Description
connectivity_type	yes	ConnectivityType		Specifies the protocol exposed by the VL and the flow pattern supported by the VL.
description	no	string		Provides human-readable information on the purpose of the VL (e.g. control plane traffic).
test_access	no	list of string	Valid values: passive_monitoring, active_loopback	Test access facilities available on the VL.
vl_profile	yes	tosca.datatypes.nfv.VIProfile		Defines additional data for the VL: maximum and minimum bit rate requirements and QoS.
monitoring_parameters	no	list of tosca.datatypes.nfv.VirtualLinkMonitoringParameter		Describe monitoring parameters applicable to a VL instantiated from this node type.

6.8.9.3 Requirements

None.

6.8.9.4 Capabilities

The capabilities of the VnfVirtualLink node type shall comply with the provisions set out in table 6.8.9.4-1.

Table 6.8.9.4-1: Capabilities

Name	Type	Constraints	Description
virtual_linkable	tosca.capabilities.nfv.VirtualLinkable		Defines ability of VirtualLinkable.

6.8.9.5 Definition

The syntax of the VnfVirtualLink node type shall comply with the following definition:

```
tosca.nodes.nfv.VnfVirtualLink:
  derived_from: toasca.nodes.Root
  description: Describes the information about an internal VNF VL
  properties:
    connectivity_type:
      type: toasca.datatypes.nfv.ConnectivityType
      description: Specifies the protocol exposed by the VL and the flow pattern
      supported by the VL
      required: true
      description:
```

```

type: string
description: Provides human-readable information on the purpose of the VL
required: false
test_access:
  type: list
  description: Test access facilities available on the VL
  required: false
  entry_schema:
    type: string
  constraints:
    - valid_values: [ passive_monitoring, active_loopback ]
vl_profile:
  type: toasca.datatypes.nfv.VlProfile
  description: Defines additional data for the VL
  required: true
monitoring_parameters:
  type: list
  entry_schema:
    type: toasca.datatypes.nfv.VirtualLinkMonitoringParameter
  description: Describes monitoring parameters applicable to the VL
  required: false
capabilities:
  virtual_linkable:
    type: toasca.capabilities.nfv.VirtualLinkable

```

6.8.10 toasca.nodes.nfv.VipCp

6.8.10.1 Description

A VipCp node type represents the VipCpd information element as defined in ETSI GS NFV-IFA 011 [1], which describes a connection point to allocate one or a set of virtual IP addresses. Table 6.8.10.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.8.10.1-1: Type name, shorthand, and URI

Shorthand Name	VipCp
Type Qualified Name	toscanfv:VipCp
Type URI	tosca.nodes.nfv.VipCp

6.8.10.2 Properties

The properties of the VipCp node type shall comply with the provisions set out in table 6.8.10.2-1.

Table 6.8.10.2-1: Properties

Name	Required	Type	Constraints	Description
vip_function	yes	string	valid values: high_availability, load_balance	Indicates the function the virtual IP address is used for: high availability or load balancing. See note.
NOTE: When used for high availability, only one of the internal VDU CP instances or VNF external CP instances that share the virtual IP is bound to the VIP address at a time, i.e. only one is configured in the external (to the VNF) router to receive the packets e.g. as a result of a G-ARP message previously sent by this instance. When used for load balancing purposes all CP instances that share the virtual IP are bound to it. A load balancing function sends the packet to one or the other, but not to both.				

6.8.10.3 Attributes

None.

6.8.10.4 Requirements

The requirements of the VipCp node type shall comply with the provisions set out in table 6.8.10.4-1.

Table 6.8.10.4-1: Requirements

Name	Required	Type	Constraints	Description
target	yes	tosca.capabilities.Node		Describes the requirement for connecting to CP instances that share the virtual IP address.
virtual_link	yes	tosca.capabilities.nfv.VirtualLinkable		Describes the requirements for linking to virtual link.

6.8.10.5 Definition

The syntax of the VipCp node type shall comply with the following definition:

```

tosca.nodes.nfv.VipCp:
  derived_from: tosca.nodes.nfv.Cp
  description: Describes a connection point to allocate one or a set of virtual IP
addresses
  properties:
    vip_function:
      type: string
      description: "Indicates the function the virtual IP address is used for: high
availability or load balancing. When used for high availability, only one of the
internal VDU CP instances or VNF external CP instances that share the virtual IP is
bound to the VIP address at a time. When used for load balancing purposes all CP
instances that share the virtual IP are bound to it."
      required: true
      constraints:
        - valid_values: [ high_availability, load_balance ]
  requirements:
    - target:
      capability: tosca.capabilities.Node
      relationship: tosca.relationships.DependsOn
      occurrences: [ 1, UNBOUNDED ]
    - virtual_link:
      capability: tosca.capabilities.nfv.VirtualLinkable
      relationship: tosca.relationships.nfv.VipVirtualLinksTo
      occurrences: [1, 1]

```

6.8.10.6 Example

See clause A.13.

6.9 Group Types

6.9.1 tosca.groups.nfv.PlacementGroup

6.9.1.1 Description

PlacementGroup is used for describing the affinity or anti-affinity relationship applicable between the virtualisation containers to be created based on different VDUs, or between internal VLS to be created based on different VnfVirtualLinkDesc(s). Table 6.9.1.1-1 specifies the declared names for this group type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.9.1.1-1: Type name, shorthand, and URI

Shorthand Name	PlacementGroup
Type Qualified Name	toscanfv:PlacementGroup
Type URI	tosca.groups.nfv.PlacementGroup

6.9.1.2 Properties

The properties of the PlacementGroup group type shall comply with the provisions set out in table 6.9.1.2-1.

Table 6.9.1.2-1: Properties

Name	Required	Type	Constraints	Description
description	yes	string		Human readable description of the group

6.9.1.3 Definition

The syntax of the PlacementGroup group type shall comply with the following definition:

```
tosca.groups.nfv.PlacementGroup:
  derived_from: toasca.groups.Root
  description: PlacementGroup is used for describing the affinity or anti-affinity
relationship applicable between the virtualisation containers to be created based on
different VDUs, or between internal VLs to be created based on different
VnfVirtualLinkDesc(s)
  properties:
    description:
      type: string
      description: Human readable description of the group
      required: true
  members: [ toasca.nodes.nfv.Vdu.Compute, toasca.nodes.nfv.VnfVirtualLink ]
```

6.9.1.4 Additional Requirements

A group with type toasca.groups.nfv.PlacementGroup shall contain more than one member when used as the target of an AffinityRule or AntiAffinityRule policy.

6.9.1.5 Examples

See clause 6.10.10.5.

6.10 Policy Types

6.10.1 toasca.policies.nfv.InstantiationLevels

6.10.1.1 Description

The InstantiationLevels type is a policy type representing all the instantiation levels of resources to be instantiated within a deployment flavour and including default instantiation level in term of the number of VNFC instances to be created as defined in ETSI GS NFV-IFA 011 [1]. This policy concerns the whole VNF (deployment flavour) represented by the topology_template and thus has no explicit target list. Table 6.10.1.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.1.1-1: Type name, shorthand, and URI

Shorthand Name	InstantiationLevels
Type Qualified Name	toscanfv:InstantiationLevels
Type URI	tosca.policies.nfv.InstantiationLevels

6.10.1.2 Properties

The properties of the InstantiationLevels policy type shall comply with the provisions set out in table 6.10.1.2-1.

Table 6.10.1.2-1: Properties

Name	Required	Type	Constraints	Description
levels	yes	map of toasca.datatypes.nfv.InstantiationLevel		Describes the various levels of resources that can be used to instantiate the VNF using this flavour.
default_level	no	string		The default instantiation level for this flavour.

6.10.1.3 Definition

The syntax of the InstantiationLevels policy type shall comply with the following definition:

```
tosca.policies.nfv.InstantiationLevels:
  derived_from: toasca.policies.Root
  description: The InstantiationLevels type is a policy type representing all the
instantiation levels of resources to be instantiated within a deployment flavour and
including default instantiation level in term of the number of VNFC instances to be
created as defined in ETSI GS NFV-IFA 011 [1].
  properties:
    levels:
      type: map # key: levelId
      description: Describes the various levels of resources that can be used to
instantiate the VNF using this flavour.
      required: true
      entry_schema:
        type: toasca.datatypes.nfv.InstantiationLevel
        constraints:
          - min_length: 1
      default_level:
        type: string # levelId
        description: The default instantiation level for this flavour.
        required: false # required if multiple entries in levels
```

6.10.2 toasca.policies.nfv.VduInstantiationLevels

6.10.2.1 Description

The VduInstantiationLevels type is a policy type representing all the instantiation levels of resources to be instantiated within a deployment flavour in term of the number of VNFC instances to be created from each vdu.Compute. as defined in ETSI GS NFV-IFA 011 [1].

Table 6.10.2.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.2.1-1: Type name, shorthand, and URI

Shorthand Name	VduInstantiationLevels
Type Qualified Name	toscanfv:VduInstantiationLevels
Type URI	tosca.policies.nfv.VduInstantiationLevels

6.10.2.2 Properties

The properties of the VduInstantiationLevels policy type shall comply with the provisions set out in table 6.10.2.2-1.

Table 6.10.2.2-1: Properties

Name	Required	Type	Constraints	Description
levels	yes	map of tosca.dataty pes.nfv.Vdu Level		Describes the Vdu.Compute levels of resources that can be used to instantiate the VNF using this flavour.

6.10.2.3 Definition

The syntax of the VduInstantiationLevels policy type shall comply with the following definition:

```
tosca.policies.nfv.VduInstantiationLevels:
  derived_from: toasca.policies.Root
  description: The VduInstantiationLevels type is a policy type representing all the
instantiation levels of resources to be instantiated within a deployment flavour in
term of the number of VNFC instances to be created from each vdu.Compute. as defined
in ETSI GS NFV-IFA 011 [1]
  properties:
    levels:
      type: map # key: levelId
      description: Describes the Vdu.Compute levels of resources that can be used to
instantiate the VNF using this flavour
      required: true
      entry_schema:
        type: toasca.datatypes.nfv.VduLevel
      constraints:
        - min_length: 1
  targets: [ toasca.nodes.nfv.Vdu.Compute ]
```

6.10.2.4 Additional Requirements

A VduInstantiationLevels policy shall contain an entry for each instantiation level (and only for them) defined in the InstantiationLevels policy.

6.10.3 toasca.policies.nfv.VirtualLinkInstantiationLevels

6.10.3.1 Description

The VirtualLinkInstantiationLevels type is a policy type representing all the instantiation levels of virtual link resources to be instantiated within a deployment flavour as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.3.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.3.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualLinkInstantiationLevels
Type Qualified Name	toscanfv:VirtualLinkInstantiationLevels
Type URI	tosca.policies.nfv.VirtualLinkInstantiationLevels

6.10.3.2 Properties

The properties of the VirtualLinkInstantiationLevels policy type shall comply with the provisions set out in table 6.10.3.2-1.

Table 6.10.3.2-1: Properties

Name	Required	Type	Constraints	Description
levels	yes	map of toscadataypes.nfv.VirtualLinkBitrateLevel		Describes the virtual link levels of resources that can be used to instantiate the VNF using this flavour.

6.10.3.3 Definition

The syntax of the VirtualLinkInstantiationLevels policy type shall comply with the following definition:

```
tosca.policies.nfv.VirtualLinkInstantiationLevels:
  derived_from: toscapolicies.Root
  description: The VirtualLinkInstantiationLevels type is a policy type representing
all the instantiation levels of virtual link resources to be instantiated within a
deployment flavour as defined in ETSI GS NFV-IFA 011 [1].
  properties:
    levels:
      type: map # key: levelId
      description: Describes the virtual link levels of resources that can be used
to instantiate the VNF using this flavour.
      required: true
      entry_schema:
        type: toscadataypes.nfv.VirtualLinkBitrateLevel
      constraints:
        - min_length: 1
  targets: [ toscanodes.nfv.VnfVirtualLink ]
```

6.10.3.4 Additional Requirements

A VirtualLinkInstantiationLevels policy shall contain an entry for each instantiation level (and only for them) defined in the InstantiationLevels policy.

6.10.4 Void

6.10.5 toscapolicies.nfv.ScalingAspects

6.10.5.1 Description

The ScalingAspects type is a policy type representing the scaling aspects used for horizontal scaling as defined in ETSI GS NFV-IFA 011 [1]. This policy concerns the whole VNF (deployment flavour) represented by the topology_template and thus has no explicit target list. Table 6.10.5.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.5.1-1: Type name, shorthand, and URI

Shorthand Name	ScalingAspects
Type Qualified Name	toscanfv:ScalingAspects
Type URI	tosca.policies.nfv.ScalingAspects

6.10.5.2 Properties

The properties of the ScalingAspects policy type shall comply with the provisions set out in table 6.10.5.2-1.

Table 6.10.5.2-1: Properties

Name	Required	Type	Constraints	Description
aspects	yes	Map of toscanfv.datatypes.nfv.ScalingAspect		Describe maximum scale level for total number of scaling steps that can be applied to a particular aspect.

6.10.5.3 Definition

The syntax of the ScalingAspects policy type shall comply with the following definition:

```
tosca.policies.nfv.ScalingAspects:
  derived_from: toscanfv.Root
  description: The ScalingAspects type is a policy type representing the scaling
aspects used for horizontal scaling as defined in ETSI GS NFV-IFA 011 [1]
  properties:
    aspects:
      type: map # key: aspectId
      description: Describe maximum scale level for total number of scaling steps
that can be applied to a particular aspect
      required: true
      entry_schema:
        type: toscanfv.datatypes.nfv.ScalingAspect
      constraints:
        - min_length: 1
```

6.10.5.4 Examples

See clause A.6.

6.10.6 toscanfv.VduScalingAspectDeltas

6.10.6.1 Description

The VduScalingAspectDeltas type is a policy type representing the Vdu.Compute detail of an aspect deltas used for horizontal scaling, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.6.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.6.1-1: Type name, shorthand, and URI

Shorthand Name	VduScalingAspectDeltas
Type Qualified Name	toscanfv:VduScalingAspectDeltas
Type URI	tosca.policies.nfv.VduScalingAspectDeltas

6.10.6.2 Properties

The properties of the VduScalingAspectDeltas policy type shall comply with the provisions set out in table 6.10.6.2-1.

Table 6.10.6.2-1: Properties

Name	Required	Type	Constraints	Description
aspect:	yes	string		Represents the scaling aspect to which this policy applies.
deltas	yes	map of tosca.datatypes .nfv.VduLevel		Describes the Vdu.Compute scaling deltas to be applied for every scaling steps of a particular aspect.

6.10.6.3 Definition

The syntax of the VduScalingAspectDeltas policy type shall comply with the following definition:

```
tosca.policies.nfv.VduScalingAspectDeltas:
  derived_from: toasca.policies.Root
  description: The VduScalingAspectDeltas type is a policy type representing the
  Vdu.Compute detail of an aspect deltas used for horizontal scaling, as defined in ETSI
  GS NFV-IFA 011 [1]
  properties:
    aspect:
      type: string
      description: Represents the scaling aspect to which this policy applies
      required: true
    deltas:
      type: map # key: scalingDeltaId
      description: Describes the Vdu.Compute scaling deltas to be applied for every
      scaling steps of a particular aspect.
      required: true
      entry_schema:
        type: toasca.datatypes.nfv.VduLevel
      constraints:
        - min_length: 1
  targets: [ toasca.nodes.nfv.Vdu.Compute ]
```

6.10.6.4 Examples

See clause A.6.

6.10.7 toasca.policies.nfv.VirtualLinkBitrateScalingAspectDeltas

6.10.7.1 Description

The VirtualLinkBitrateScalingAspectDeltas type is a policy type representing the VnfVirtualLink detail of an aspect deltas used for horizontal scaling, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.7.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.7.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualLinkBitrateScalingAspectDeltas
Type Qualified Name	toscanfv:VirtualLinkBitrateScalingAspectDeltas
Type URI	tosca.policies.nfv.VirtualLinkBitrateScalingAspectDeltas

6.10.7.2 Properties

The properties of the VirtualLinkBitrateScalingAspectDeltas policy type shall comply with the provisions set out in table 6.10.7.2-1.

Table 6.10.7.2-1: Properties

Name	Required	Type	Constraints	Description
aspect	yes	string		Represents the scaling aspect to which this policy applies.
aspect_deltas	yes	map of tosca.datatypes.nfv.VirtualLinkBitrateLevel		Describes the VnfVirtualLink scaling deltas to be applied for every scaling steps of a particular aspect.

6.10.7.3 Definition

The syntax of the VirtualLinkBitrateScalingAspectDeltas policy type shall comply with the following definition:

```

tosca.policies.nfv.VirtualLinkBitrateScalingAspectDeltas:
  derived_from: toasca.policies.Root
  description: The VirtualLinkBitrateScalingAspectDeltas type is a policy type
  representing the VnfVirtualLink detail of an aspect deltas used for horizontal
  scaling, as defined in ETSI GS NFV-IFA 011 [1].
  properties:
    aspect:
      type: string
      description: Represents the scaling aspect to which this policy applies.
      required: true
    deltas:
      type: map # key: scalingDeltaId
      description: Describes the VnfVirtualLink scaling deltas to be applied for
      every scaling steps of a particular aspect.
      required: true
      entry_schema:
        type: toasca.datatypes.nfv.VirtualLinkBitrateLevel
      constraints:
        - min_length: 1
  targets: [ toasca.nodes.nfv.VnfVirtualLink ]

```

6.10.7.4 Examples

See clause A.6.

6.10.8 toasca.policies.nfv.VduInitialDelta

6.10.8.1 Description

The VduInitialDelta type is a policy type representing the Vdu.Compute detail of an initial delta used for horizontal scaling, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.8.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.8.1-1: Type name, shorthand, and URI

Shorthand Name	VduInitialDelta
Type Qualified Name	toscanfv:VduInitialDelta
Type URI	tosca.policies.nfv.VduInitialDelta

6.10.8.2 Properties

The properties of the VduInitialDelta policy type shall comply with the provisions set out in table 6.10.8.2-1.

Table 6.10.8.2-1: Properties

Name	Required	Type	Constraints	Description
initial_delta:	yes	tosca.datatypes.nfv.VduLevel		Represents the initial minimum size of the VNF.

6.10.8.3 Definition

The syntax of the VduInitialDelta policy type shall comply with the following definition:

```
tosca.policies.nfv.VduInitialDelta:
  derived_from: toasca.policies.Root
  description: The VduInitialDelta type is a policy type representing the
  Vdu.Compute detail of an initial delta used for horizontal scaling, as defined in
  ETSI GS NFV-IFA 011 [1].
  properties:
    initial_delta:
      type: toasca.datatypes.nfv.VduLevel
      description: Represents the initial minimum size of the VNF.
      required: true
  targets: [ toasca.nodes.nfv.Vdu.Compute ]
```

6.10.8.4 Examples

See clause A.6.

6.10.9 toasca.policies.nfv.VirtualLinkBitrateInitialDelta

6.10.9.1 Description

The VirtualLinkBitrateInitialDelta type is a policy type representing the VnfVirtualLink detail of an initial deltas used for horizontal scaling, as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.9.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.9.1-1: Type name, shorthand, and URI

Shorthand Name	VirtualLinkBitrateInitialDelta
Type Qualified Name	toscanfv:VirtualLinkBitrateInitialDelta
Type URI	tosca.policies.nfv.VirtualLinkBitrateInitialDelta

6.10.9.2 Properties

The properties of the VirtualLinkBitrateInitialDelta policy type shall comply with the provisions set out in table 6.10.9.2-1.

Table 6.10.9.2-1: Properties

Name	Required	Type	Constraints	Description
initial_delta:	yes	tosca.datatypes.nfv.VirtualLinkBitrateLevel		Represents the initial minimum size of the VNF.

6.10.9.3 Definition

The syntax of the VirtualLinkBitrateInitialDelta policy type shall comply with the following definition:

```

tosca.policies.nfv.VirtualLinkBitrateInitialDelta:
  derived_from: tosca.policies.Root
  description: The VirtualLinkBitrateInitialDelta type is a policy type
  representing the VnfVirtualLink detail of an initial deltas used for horizontal
  scaling, as defined in ETSI GS NFV-IFA 011 [1].
  properties:
    initial_delta:
      type: tosca.datatypes.nfv.VirtualLinkBitrateLevel
      description: Represents the initial minimum size of the VNF.
      required: true
    targets: [ tosca.nodes.nfv.VnfVirtualLink ]

```

6.10.9.4 Examples

See clause A.6.

6.10.10 AffinityRule, AntiAffinityRule

6.10.10.1 Description

The AffinityRule or AntiAffinityRule describes the affinity or anti-affinity rules applicable for the defined targets:

- If there is only one node template with node type `tosca.nodes.nfv.Vdu.Compute` or `tosca.nodes.nfv.VnfVirtualLink` set as the targets, the AffinityRule or AntiAffinityRule applies between the virtualisation containers to be created based on a particular VDU, or between internal VLs to be created based on a particular `VnfVirtualLinkDesc` as described in ETSI GS NFV-IFA 011 [1].
- If there are more than one node templates with node type `tosca.nodes.nfv.Vdu.Compute` or `tosca.nodes.nfv.VnfVirtualLink` set as the targets, or a group with type `tosca.groups.nfv.PlacementGroup` which contains more than one members set as targets, the AffinityRule or AntiAffinityRule applies between the virtualisation containers to be created based on different VDUs, or between internal VLs to be created based on different `VnfVirtualLinkDesc(s)` as described in ETSI GS NFV-IFA 011 [1].

Tables 6.10.10.1-1 and 6.10.10.1-2 specify the declared names for the policy types. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.10.1-1: Type name, shorthand, and URI

Shorthand Name	AffinityRule
Type Qualified Name	toscanfv:AffinityRule
Type URI	tosca.policies.nfv.AffinityRule

Table 6.10.10.1-2: Type name, shorthand, and URI

Shorthand Name	AntiAffinityRule
Type Qualified Name	toscanfv:AntiAffinityRule
Type URI	tosca.policies.nfv.AntiAffinityRule

6.10.10.2 Properties

The properties of the AffinityRule and AntiAffinityRule types shall comply with the provisions set out in table 6.10.10.2-1.

Table 6.10.10.2-1: Properties

Name	Required	Type	Constraints	Description
scope	Yes	String	Possible values are "nfvi_pop", "zone", "zone_group", "nfvi_node".	Specifies the scope of the local affinity rule.

6.10.10.3 targets

The targets of the AffinityRule and AntiAffinityRule policy types shall comply with the provisions set out in table 6.10.10.3-1.

Table 6.10.10.3-1: Targets

Name	Required	Type	Constraints	Description
targets	Yes	string[]	Valid types: toasca.nodes.nfv.Vdu.Compute, toasca.nodes.nfv.VnfVirtualLink, toasca.groups.nfv.PlacementGroup	In case of LocalAffinityOrAntiAffinityRule as defined in ETSI GS NFV-IFA 011 [1], the valid type of the targets is toasca.nodes.nfv.Vdu.Compute or toasca.nodes.nfv.VnfVirtualLink. In case of affinityOrAntiAffinityGroup as defined in ETSI GS NFV-IFA 011 [1], the valid types of the targets are: toasca.nodes.nfv.Vdu.Compute and toasca.nodes.nfv.VnfVirtualLink or a toasca.groups.nfv.PlacementGroup.

6.10.10.4 Definition

The syntax of the AffinityRule policy type shall comply with the following definition:

```
tosca.policies.nfv.AffinityRule:
  derived_from: toasca.policies.Placement
  description: The AffinityRule describes the affinity rules applicable for the
defined targets
  properties:
    scope:
      type: string
      description: scope of the rule is an NFVI_node, an NFVI_PoP, etc.
      required: true
      constraints:
        - valid_values: [ nfvi_node, zone, zone_group, nfvi_pop ]
    targets: [ toasca.nodes.nfv.Vdu.Compute, toasca.nodes.nfv.VnfVirtualLink,
tosca.groups.nfv.PlacementGroup ]
```

The syntax of the AntiAffinityRule policy type shall comply with the following definition:

```
tosca.policies.nfv.AntiAffinityRule:
  derived_from: toasca.policies.Placement
  description: The AntiAffinityRule describes the anti-affinity rules applicable for
the defined targets
  properties:
    scope:
      type: string
      description: scope of the rule is an NFVI_node, an NFVI_PoP, etc.
      required: true
      constraints:
        - valid_values: [ nfvi_node, zone, zone_group, nfvi_pop ]
```

```
targets: [ tosca.nodes.nfv.Vdu.Compute, tosca.nodes.nfv.VnfVirtualLink,
tosca.groups.nfv.PlacementGroup ]
```

6.10.10.5 Examples

The following example template fragments illustrate the concepts:

```
node_templates:
  VDU_1:
    type: tosca.nodes.nfv.Vdu.Compute

policies:
  policy_affinity_local_VDU_1:
    type: tosca.policies.nfv.AffinityRule
    targets: [ VDU_1 ]
    properties:
      scope: nfvi_node
```

The above example illustrates a local affinity rule for VDU_1.

```
node_template:
  VDU_1:
    type: tosca.nodes.nfv.Vdu.Compute

  VDU_2:
    type: tosca.nodes.nfv.Vdu.Compute

groups:
  affinityOrAntiAffinityGroup_1:
    type: tosca.groups.nfv.PlacementGroup
    members: [ VDU_1, VDU_2 ]

policies:
  policy_antiaffinity_group_1:
    type: tosca.policies.nfv.AntiAffinityRule
    targets: [ affinityOrAntiAffinityGroup_1 ]
    properties:
      scope: nfvi_node
```

The above example illustrates an anti-affinity policy among a group which contains VDU_1 and VDU_2 as members.

6.10.11 tosca.policies.nfv.Abstract.SecurityGroupRule

6.10.11.1 Description

The Abstract.SecurityGroupRule policy type is defined in clause 9.10.1 of the present document.

6.10.12 tosca.policies.nfv.SupportedVnfInterface

6.10.12.1 Description

The SupportedVnfInterface policy type represents interfaces produced by a VNF, the details to access them and the applicable connection points to use to access these interfaces. It corresponds to the VnfInterfaceDetails information element defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.12.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.12.1-1: Type name, shorthand, and URI

Shorthand Name	SupportedVnfInterface
Type Qualified Name	toscanfv:SupportedVnfInterface
Type URI	tosca.policies.nfv.SupportedVnfInterface

6.10.12.2 Properties

The properties of the SupportedVnfInterface policy type shall comply with the provisions set out in table 6.10.12.2-1.

Table 6.10.12.2-1: Properties

Name	Required	Type	Constraints	Description
interface_name	yes	string	Valid values vnf_indicator vnf_configuration	Identifies an interface produced by the VNF.
details	no	tosca.datatypes.nfv.InterfaceDetails		Provide additional data to access the interface endpoint (e.g. API URI prefix).

6.10.12.3 Definition

The syntax of the SupportedVnfInterface policy type shall comply with the following definition:

```
tosca.policies.nfv.SupportedVnfInterface:
  derived_from: toasca.policies.Root
  description: this policy type represents interfaces produced by a VNF, the details
to access them and the applicable connection points to use to access these interfaces
properties:
  interface_name:
    type: string
    description: Identifies an interface produced by the VNF.
    required: true
    constraints:
      - valid_values: [ vnf_indicator, vnf_configuration ]
  details:
    type: toasca.datatypes.nfv.InterfaceDetails
    description: Provide additional data to access the interface endpoint
    required: false
targets: [ toasca.nodes.nfv.VnfExtCp, toasca.nodes.nfv.VduCp ]
```

6.10.12.4 Additional requirements

The valid targets for this policy type shall be the node templates representing the connection point descriptors from which to instantiate the connection point instances through which the interfaces can be accessed. This may be a VnfExtCp node template or a VduCp node template when an internal connection point is re-exposed externally.

6.10.12.5 Example

```
policies:
  policy_interface_1:
    type: toasca.policies.nfv.SupportedVnfInterface
    targets: [ MyVnfmFacingExtCp ]
    properties:
      interface_name: vnf_indicator
    details:
      uri_components:
        scheme: https
```

```
authority:
  host: myvnf.example.com
```

6.10.13 toasca.policies.nfv.SecurityGroupRule

6.10.13.1 Description

The SecurityGroupRule type is a policy type specifying the matching criteria for the ingress and/or egress traffic to and from visited connection points as defined in ETSI GS NFV-IFA 011 [1]. Table 6.10.13.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 6.10.13.1-1: Type name, shorthand, and URI

Shorthand Name	SecurityGroupRule
Type Qualified Name	toscanfv:SecurityGroupRule
Type URI	tosca.policies.nfv.SecurityGroupRule

6.10.13.2 Properties

None.

6.10.13.3 targets

The targets of the SecurityGroupRule policy types shall comply with the provisions set out in table 6.10.13.3-1.

Table 6.10.13.3-1: Targets

Name	Required	Type	Constraints	Description
targets	yes	string[]	Valid types: tosca.nodes.nfv.VduCp, tosca.nodes.nfv.VnfExtCp	Target connection points of VduCp and/or VnfExtCp

6.10.13.4 Definition

The syntax of the SecurityGroupRule policy type shall comply with the following definition:

```
tosca.policies.nfv.SecurityGroupRule:
  derived_from: toasca.policies.nfv.Abstract.SecurityGroupRule
  description: The SecurityGroupRule type is a policy type specified the
  matching criteria for the ingress and/or egress traffic to/from visited connection
  points as defined in ETSI GS NFV-IFA 011 [1].
  targets: [ toasca.nodes.nfv.VduCp, toasca.nodes.nfv.VnfExtCp ]
```

6.10.13.5 Additional Requirements

None.

6.11 VNFD TOSCA service template design

6.11.1 General

The TOSCA service template design for a VNFD in the general case uses two levels of service templates as described in clause 6.11.2. In this design, the top level contains an abstract VNF node template, i.e. without an implementation of the creation operation and is therefore substituted by one of the lower level service templates. This design is applicable regardless of whether the VNF has one or multiple deployment flavours.

In the particular case of a VNF with only one deployment flavour there is an alternative design which is described in clause 6.11.3 and which uses only one service template.

6.11.2 Single or multiple deployment flavour design with TOSCA-Simple-Profile-YAML-v1.2

VNFD shall be implemented as one top-level service template and one or multiple lower level service templates, where each lower level service template represents a deployment flavour. A separate YAML file with a VNF specific node type definition which shall be derived from `tosca.nodes.nfv.VNF` node type as defined in clause 6.8.1 shall be provided and is also considered as a part of a VNFD. The top level service template shall be the main entry point of the VNF package as specified in ETSI GS NFV-SOL 004 [i.6], i.e. the Entry-definitions file.

See clause A.2 for an example of VNFD design with multiple deployment flavours.

The top level service template shall comply with TOSCA-Simple-Profile-YAML-v1.2 [3] and shall include:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.2;
- b) an import statement referencing the definitions of all low level service template(s);
- c) an import statement referencing a yaml file which contains a VNF specific node type definition;
- d) Optionally, import statements referencing additional VNF-specific files containing only type definitions used by this TOSCA service template; and
- e) a topology template with a node template of the VNF specific node type, which shall include the `flavour_id` and other properties and the requirements as defined in clause 6.8.1.

The deployment and lifecycle management of instances of this VNF node type is done by means of substitution by any of the lower level service templates.

The lower level service template is an implementable TOSCA service template for the deployment of a specific deployment flavour. The lower level service template shall comply with TOSCA-Simple-Profile-YAML-v1.2 [3] and shall include:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.2;
- b) an import statement referencing a yaml file which contains a VNF specific node type definition which shall be derived from `tosca.nodes.nfv.VNF` node type as defined in clause 6.8.1;
- c) Optionally, import statements referencing additional VNF-specific files containing type definitions used by this TOSCA service template; and
- d) a topology template describing the internal topology of the VNF with:
 - `substitution_mappings` indicating:
 - the same node type as defined in the VNF specific node type definition service template;
 - a `flavour_id` property value which identifies the DF corresponding to this low level template within the VNFD; and
 - the mapping of the `virtual_link` requirements on external connection points;

- a node template referencing the VNF specific node type, implementations of the operations of the LCM interface to be executed by the VNFM, if applicable; and
- additional node templates of type Vdu.Compute (or a derived node type), Vdu.VirtualBlockStorage, Vdu.VirtualObjectStorage, Vdu.VirtualFileStorage VduCp, etc. that define the topology and composition of the VNF flavour.

NOTE 1: The format and structure of a VNF package is defined in ETSI GS NFV-SOL 004 [i.6].

NOTE 2: All the imported type definition files as indicated either in the top level service template or in any of the lower level service template are considered as parts of a VNFD.

When the flavour_id of a VNF has been chosen (e.g. through an input parameter of a VNF instantiation request received by a VNFM) among the values included in the VNF node type imported into the top level service template, it is then used as the property constraint for selecting a particular lower level TOSCA service template inside the VNF package by using abstract node template matching with substitution as described in TOSCA-Simple-Profile-YAML-v1.2 [3].

6.11.3 Single deployment flavour design with TOSCA-Simple-Profile-YAML-v1.1

In case of single deployment flavour scenario, TOSCA-Simple-Profile-YAML-v1.1 [4] may be used to describe the VNFD with a single TOSCA service template.

NOTE 1: The present document does not preclude this pattern using TOSCA-Simple-Profile-YAML-v1.2 [3]. In this case one single service template is used as specified in TOSCA-Simple-Profile-YAML-v1.1 [4] and includes:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.2;
- b) either a VNF specific node type definition derived from the `tosca.nodes.nfv.VNF` node type, as defined in clause 6.8.1 or an import statement referencing a file that contains such definition;
- c) Optionally, import statements referencing additional VNF-specific files containing type definitions used by this TOSCA service template; and
- d) a topology template describing the internal topology of the VNF with:
 - `substitution_mappings` indicating the same VNF specific node type and the mapping of the `virtual_link` requirements on external connection points;
 - a node template of this VNF specific node type with the `flavour_id` and other properties and, if applicable, implementations of the operations of the LCM interface to be executed by the VNFM; and
 - additional node templates of type Vdu.Compute (or a derived node type), Vdu.VirtualBlockStorage, Vdu.VirtualObjectStorage, Vdu.VirtualFileStorage, VduCp, etc. that define the topology and composition of the VNF flavour.

See clause A.5 for an example of VNFD design with single deployment flavour.

NOTE 2: The service template is deployed stand-alone, i.e. without performing a substitution. However including the `substitution_mappings` rule indicate its ability to substitute a node template of the VNF specific node type, which may appear in an NSD.

NOTE 3: All the imported type definition files as indicated in the service template are considered as parts of a VNFD.

7 NSD TOSCA model

7.1 Introduction

The NSD information model specified by ETSI GS NFV-IFA 014 [2] is mapped to the TOSCA concepts. NSD occurrences are represented as TOSCA service templates, as defined in the TOSCA Simple YAML Profile v1.2 [3], to be used by the NFVO for managing the lifecycle of NS instances.

Table 7.1-1 shows an overview of the mapping between the main NSD information elements defined in ETSI GS NFV-IFA 014 [2] and TOSCA types defined in the present document. The definition of all TOSCA types for representing all information elements is described in the following clauses.

NOTE: There is only part of NSD features as specified in ETSI GS NFV-IFA 014 [2] included in this version of the present document, the following are features not included:

- NS scaling Aspect
- Multiple Ns instantiation levels
- VnfIndicators

Table 7.1-1: Mapping of ETSI GS NFV-IFA 014 [2] information elements with TOSCA types

ETSI NFV Information Element ETSI GS NFV-IFA 014 [2]	TOSCA type	Derived from
NSD	tosca.nodes.nfv.NS	tosca.nodes.Root
Sapd	tosca.nodes.nfv.Sap	tosca.nodes.Root
NsVirtualLinkDesc	tosca.nodes.nfv.NsVirtualLink	tosca.nodes.Root
Pnfd	tosca.nodes.nfv.PNF	tosca.nodes.Root
Vnfd	tosca.nodes.nfv.VNF	tosca.nodes.Root
Vnffgd	tosca.groups.nfv.VNFFG	tosca.groups.Root

7.2 Data Types

7.2.1 toasca.datatype.nfv.ServiceAvailability

7.2.1.1 Description

ServiceAvailability describes the information on the Service Availability Level for a particular virtual link flavour, as defined in ETSI GS NFV-IFA 014 [2] and ETSI GS NFV-REL 001 [i.3]. Table 7.2.1.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.1.1-1: Type name, shorthand, and URI

Shorthand Name	ServiceAvailability
Type Qualified Name	toscanfv:ServiceAvailability
Type URI	tosca.datatypes.nfv.ServiceAvailability

7.2.1.2 Properties

The properties of the ServiceAvailability data type shall comply with the provisions set out in table 7.2.1.2-1.

Table 7.2.1.2-1: Properties

Name	Required	Type	Constraints	Description
level	yes	string	valid_values: [level1, level2, level3]	Service available level as defined in ETSI GS NFV-REL 001 [i.3]

7.2.1.3 Definition

The syntax of the ServiceAvailability data type shall comply with the following definition:

```

tosca.datatypes.nfv.ServiceAvailability:
  derived_from: toska.datatypes.Root
  description: service availability
  properties:
    level:
      type: string
      description: service availability levels
      required: true
      constraints:
        - valid_values: [ level1, level2, level3 ]

```

7.2.1.4 Examples

None.

7.2.2 toska.datatypes.nfv.VnfProfile

7.2.2.1 Description

The VnfProfile data type is defined in clause 9.2.8 of the present document.

7.2.3 toska.datatype.nfv.NsVIPProfile

7.2.3.1 Description

The NsVIPProfile data type describes additional instantiation data for a given NsVirtualLink used in a specific NS deployment flavour. Table 7.2.3.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.3.1-1: Type name, shorthand, and URI

Shorthand Name	NsVIPProfile
Type Qualified Name	toscanfv:NsVIPProfile
Type URI	tosca.datatypes.nfv.NsVIPProfile

7.2.3.2 Properties

The properties of the NsVIPProfile data type shall comply with the provisions set out in table 7.2.3.2-1.

Table 7.2.3.2-1: Properties

Name	Required	Type	Constraints	Description
max_bitrate_requirements	yes	tosca.datatypes.nfv.LinkBitrateRequirements		Specifies the maximum bitrate requirements for a VL instantiated according to this profile.
min_bitrate_requirements	yes	tosca.datatypes.nfv.LinkBitrateRequirements		Specifies the minimum bitrate requirements for a VL instantiated according to this profile.
qos	no	tosca.datatypes.nfv.NsVirtualLinkQos		Specifies the QoS requirements of a VL instantiated according to this profile.
service_availability	no	tosca.datatypes.nfv.ServiceAvailability		Network service virtual link service availability levels, as described in ETSI GS NFV-REL 001 [i.3].
NOTE: A virtualLinkDescId property, which exists in ETSI GS NFV-IFA 014 [2] is not needed, as the NsVIProfile is contained in the NsVirtualLink node.				

7.2.3.3 Definition

The syntax of the NsVIProfile data type shall comply with the following definition:

```

tosca.datatypes.nfv.NsVIProfile:
  derived_from: toska.datatypes.Root
  description: Describes additional instantiation data for a given NsVirtualLink
  used in a specific NS deployment flavour.
  properties:
    max_bitrate_requirements:
      type: toska.datatypes.nfv.LinkBitrateRequirements
      description: Specifies the maximum bitrate requirements for a VL instantiated
  according to this profile.
      required: true
    min_bitrate_requirements:
      type: toska.datatypes.nfv.LinkBitrateRequirements
      description: Specifies the minimum bitrate requirements for a VL instantiated
  according to this profile.
      required: true
    qos:
      type: toska.datatypes.nfv.NsVirtualLinkQos
      description: Specifies the QoS requirements of a VL instantiated according to
  this profile.
      required: false
    service_availability:
      type: toska.datatypes.nfv.ServiceAvailability
      description: Network service virtual link service availability levels, as
  described in ETSI GS NFV-REL 001
      required: false

```

7.2.3.4 Examples

None.

7.2.3.5 Additional Requirements

None.

7.2.4 toska.datatypes.nfv.ConnectivityType

7.2.4.1 Description

The ConnectivityType data type is defined in clause 9.2.4 of the present document.

7.2.5 toska.datatypes.nfv.NsVirtualLinkQos

7.2.5.1 Description

The NsVirtualLinkQoS describes QoS data type a given NsVirtualLink used in an NS deployment flavour. Table 7.2.5.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.5.1-1: Type name, shorthand, and URI

Shorthand Name	NsVirtualLinkQos
Type Qualified Name	toscanfv:NsVirtualLinkQos
Type URI	tosca.datatypes.nfv.NsVirtualLinkQos

7.2.5.2 Properties

The properties of the NsVirtualLinkQos data type shall comply with the provisions set out in table 7.2.5.2-1.

Table 7.2.5.2-1: Properties

Name	Required	Type	Constraints	Description
priority	no	integer	greater_or_equal: 0	Specifies the priority level in case of congestion on the underlying physical links.

7.2.5.3 Definition

The syntax of the NsVirtualLinkQos data type shall comply with the following definition:

```
tosca.datatypes.nfv.NsVirtualLinkQos:
  derived_from: toska.datatypes.nfv.Qos
  description: describes QoS data for a given VL used in a VNF deployment flavour
  properties:
    priority:
      type: integer
      constraints:
        - greater_or_equal: 0
      description: Specifies the priority level in case of congestion on the
underlying physical links
      required: false
```

7.2.5.4 Examples

None.

7.2.5.5 Additional Requirements

None.

7.2.6 `tosca.datatypes.nfv.LinkBitrateRequirements`

7.2.6.1 Description

The `LinkBitrateRequirements` data type is defined in clause 9.2.5 of the present document.

7.2.7 Void

7.2.8 Void

7.2.9 Void

7.2.10 Void

7.2.11 `tosca.datatypes.nfv.CpProtocolData`

7.2.11.1 Description

The `CpProtocolData` data type is defined in clause 9.2.6 of the present document.

7.2.12 `tosca.datatypes.nfv.AddressData`

7.2.12.1 Description

The `AddressData` data type is defined in clause 9.2.3 of the present document.

7.2.13 `tosca.datatypes.nfv.L2AddressData`

7.2.13.1 Description

The `L2AddressData` data type is defined in clause 9.2.1 of the present document.

7.2.14 `tosca.datatypes.nfv.L3AddressData`

7.2.14.1 Description

The `L3AddressData` data type is defined in clause 9.2.2 of the present document.

7.2.15 `tosca.datatypes.nfv.Qos`

7.2.15.1 Description

The `Qos` data type is defined in clause 9.2.7 of the present document.

7.2.16 `tosca.datatypes.nfv.NsProfile`

7.2.16.1 Description

The `NsProfile` data type describes a profile for instantiating nested NSs which are constituents of an NS with a particular NS DF as defined in ETSI GS NFV-IFA 014 [2]. Table 7.2.16.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.16.1-1: Type name, shorthand, and URI

Shorthand Name	NsProfile
Type Qualified Name	toscanfv:NsProfile
Type URI	tosca.datatypes.nfv.NsProfile

7.2.16.2 Properties

The properties of the NsProfile data type shall comply with the provisions set out in table 7.2.16.2-1.

Table 7.2.16.2-1: Properties

Name	Required	Type	Constraints	Description
ns_instantiation_level	no	string		Identifier of the instantiation level of the NS DF to be used for instantiation. If not present, the default instantiation level as declared in the NSD shall be used.
min_number_of_instances	yes	integer	greater_or_equal : 0	Minimum number of instances of the NS based on this NSD that is permitted to exist for this NsProfile.
max_number_of_instances	yes	integer	greater_or_equal : 0	Maximum number of instances of the NS based on this NSD that is permitted to exist for this NsProfile.
flavour_id	yes	string		Identifies the applicable network service DF within the scope of the NSD.

7.2.16.3 Definition

The syntax of the NsProfile data type shall comply with the following definition:

```

tosca.datatypes.nfv.NsProfile:
  derived_from: toscanfv:Root
  description: describes a profile for instantiating NSs of a particular NS DF
according to a specific NSD and NS DF.
  properties:
    ns_instantiation_level:
      type: string
      description: Identifier of the instantiation level of the NS DF to be used for
instantiation. If not present, the default instantiation level as declared in the NSD
shall be used.
      required: false
    min_number_of_instances:
      type: integer
      description: Minimum number of instances of the NS based on this NSD that is
permitted to exist for this NsProfile.
      required: true
      constraints:
        - greater_or_equal: 0
    max_number_of_instances:
      type: integer
      description: Maximum number of instances of the NS based on this NSD that is
permitted to exist for this NsProfile.
      required: true
      constraints:
        - greater_or_equal: 0
    flavour_id:
      type: string
      description: Identifies the applicable network service DF within the scope of
the NSD.
      required: true

```

7.2.16.4 Example

None.

7.2.16.5 Additional Requirements

None.

7.2.17 tosca.datatypes.nfv.Mask

7.2.17.1 Description

The Mask data type describes the value to be matched for a sequence of bits at a particular location in a frame. Table 7.2.17.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.17.1-1: Type name, shorthand, and URI

Shorthand Name	Mask
Type Qualified Name	toscanfv:Mask
Type URI	tosca.datatypes.nfv.Mask

7.2.17.2 Properties

The properties of the Mask data type shall comply with the provisions set out in table 7.2.17.2-1.

Table 7.2.17.2-1: Properties

Name	Required	Type	Constraints	Description
starting_point	yes	integer		Indicates the offset between the last bit of the source mac address and the first bit of the sequence of bits to be matched.
length	yes	integer		Indicates the number of bits to be matched.
value	yes	string		Provides the sequence of bit values to be matched.

7.2.17.3 Definition

The syntax of the Mask data type shall comply with the following definition:

```
tosca.datatypes.nfv.Mask:
  derived_from: tosca.datatypes.Root
  properties:
    starting_point:
      description: Indicates the offset between the last bit of the source mac
address and the first bit of the sequence of bits to be matched.
      type: integer
      required: true
    length:
      description: Indicates the number of bits to be matched.
      type: integer
      required: true
    value:
      description: Provide the sequence of bit values to be matched.
      type: string
      required: true
```

7.2.17.4 Examples

None.

7.2.18 toasca.datatypes.nfv.NsOperationAdditionalParameters

7.2.18.1 Description

The NsOperationAdditionalParameters data type is an empty base type for deriving data types for describing NS specific additional parameters that affect the invocation of NS Lifecycle Management operations, as defined in ETSI GS NFV-IFA 014 [2]. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3]. Table 7.2.18.1-1 specifies the declared names for this data type.

Table 7.2.18.1-1: Type name, shorthand, and URI

Shorthand Name	NsOperationAdditionalParameters
Type Qualified Name	toscanfv:NsOperationAdditionalParameters
Type URI	tosca.datatypes.nfv.NsOperationAdditionalParameters

7.2.18.2 Properties

None.

7.2.18.3 Definition

The syntax of the NsOperationAdditionalParameters data type shall comply with the following definition:

```
tosca.datatypes.nfv.NsOperationAdditionalParameters:
  derived_from: toasca.datatypes.Root
  description: Is an empty base type for deriving data types for describing NS-
specific additional parameters to be passed when invoking NS lifecycle management
operations
  #properties:
```

7.2.19 toasca.datatypes.nfv.NsMonitoringParameter

7.2.19.1 Description

This data type is used to specify information on virtualised resource related performance metrics to be monitored at the NS level. Table 7.2.19.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.2.19.1-1: Type name, shorthand, and URI

Shorthand Name	NsMonitoringParameter
Type Qualified Name	toscanfv:NsMonitoringParameter
Type URI	tosca.datatypes.nfv.NsMonitoringParameter

7.2.19.2 Properties

The properties of the NsMonitoringParameter data type shall comply with the provisions set out in table 7.2.19.2-1.

Table 7.2.19.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Human readable name of the monitoring parameter.
performance_metric	yes	string	valid values: byte_incoming_sap byte_outgoing_sap packet_incoming_sap packet_outgoing_sap byte_incoming byte_outgoing packet_incoming packet_outgoing	Identifies a performance metric to be monitored. Performance metric values shall be either set to: <ul style="list-style-type: none"> • A measurement name defined in clause 7.3 of ETSI GS NFV-IFA 027 [7]. In this case the NFVO computes these measurements from lower-level metrics collected from the VIM. • A measurement name defined in clause 7.1 of ETSI GS NFV-IFA 027 [7], without appending a sub-counter. In this case the NFVO collects these metrics from the VIM for all network resources allocated to all NS virtual links.
collection_period	no	scalar-unit.time		Describes the periodicity at which to collect the performance information.

7.2.19.3 Definition

The syntax of the NsMonitoringParameter data type shall comply with the following definition:

```

tosca.datatypes.nfv.NsMonitoringParameter:
  derived_from: toska.datatypes.Root
  description: Represents information on virtualised resource related performance
  metrics applicable to the NS.
  properties:
    name:
      type: string
      description: Human readable name of the monitoring parameter
      required: true
    performance_metric:
      type: string
      description: Identifies a performance metric to be monitored, according to
      ETSI GS NFV-IFA 027.
      required: true
      constraints:
        - valid_values: [byte_incoming_sap, byte_outgoing_sap,
        packet_incoming_sap, packet_outgoing_sap, byte_incoming, byte_outgoing,
        packet_incoming, packet_outgoing ]
    collection_period:
      type: scalar-unit.time
      description: Describes the periodicity at which to collect the performance
      information.
      required: false

```

7.2.19.4 Examples

None.

7.2.19.5 Additional Requirements

None.

7.2.20 `tosca.datatypes.nfv.VnfMonitoringParameter`

The `VnfMonitoringParameter` data type is defined in clause 9.2.9 of the present document.

7.3 Artifact Types

None.

7.4 Capabilities Types

7.4.1 `tosca.capabilities.nfv.VirtualLinkable`

7.4.1.1 Description

The `VirtualLinkable` capability type is defined in clause 9.4.1 of the present document.

7.4.2 `tosca.capabilities.nfv.Forwarding`

7.4.2.1 Description

The `Forwarding` capability type describes the capabilities related to nodes which can be pointed by `tosca.relationships.nfv.ForwardTo` relationship type. Table 7.4.2.1-1 specifies the declared names for this capability type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

NOTE: The forwarding capability represents the ability of a CP or SAP to receive and forward traffic flows. Traffic flows can be received by a CP from an NS Virtual Link and forwarded to the VNF or PNF to which the CP is attached. Symmetrically, traffic flows can be received by an external CP of the VNF or PNF and forwarded to an NS Virtual Link. Traffic flows can be received by a SAP from an external link and forwarded to the NS to which the SAP is attached. Symmetrically, traffic flows can be received from the NS to which the SAP is attached and forwarded to an external link. An ingress CP is an external CP that forwards traffic to a VNF, PNF or NS while and egress CP is an external CP that forwards traffic outside a VNF, PNF or NS. The same CP may but need not play both roles.

Table 7.4.2.1-1: Type name, shorthand, and URI

Shorthand Name	<code>Forwarding</code>
Type Qualified Name	<code>toscanfv:Forwarding</code>
Type URI	<code>tosca.capabilities.nfv.Forwarding</code>

7.4.2.2 Properties

None.

7.4.2.3 Definition

The syntax of the `Forwarding` capability type shall comply with the following definition:

```
tosca.capabilities.nfv.Forwarding:
  derived_from: toasca.capabilities.Root
```

7.5 Requirements Types

None.

7.6 Relationship Types

7.6.1 `tosca.relationships.nfv.VirtualLinksTo`

7.6.1.1 Description

The `VirtualLinksTo` relationship type is defined in clause 9.6.1 of the present document representing an association relationship between the VNF or PNF or Sap of a Nested NS and `NsVirtualLink` node types when used in an NSD.

7.6.2 `tosca.relationships.nfv.ForwardTo`

7.6.2.1 Description

The `ForwardTo` relationship type represents an association between two node types which are a part of NFP. Table 7.6.2.1-1 specifies the declared names for this relationship type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.6.2.1-1: Type name, shorthand, and URI

Shorthand Name	<code>ForwardTo</code>
Type Qualified Name	<code>toscanfv:ForwardTo</code>
Type URI	<code>tosca.nodes.relationships.ForwardTo</code>

7.6.2.2 Properties

None.

7.6.2.3 Definition

The syntax of the `ForwardTo` relationship type shall comply with the following definition:

```
tosca.relationships.nfv.ForwardTo:
  derived_from: toasca.relationships.Root
  valid_target_types: [ toasca.capabilities.nfv.Forwarding ]
```

7.7 Interface Types

7.7.1 `tosca.interfaces.nfv.Nslcm`

7.7.1.1 Description

The `tosca.interfaces.nfv.Nslcm` interface type contains a set of TOSCA operations corresponding to the following NS LCM operations defined in ETSI GS NFV-IFA 013 [i.8]:

- Instantiate NS
- Scale NS
- Update NS
- Heal NS
- Terminate NS

The interface also contains TOSCA operations corresponding to preamble and postamble to the execution of the aforementioned base operations. The name of these operations is constructed according to the following pattern:

<base_operation_name>_start for a preamble

<base_operation_name>_end for a postamble

The designations ("_start", "_end") in the name of TOSCA operations are postfixes so that related operations are adjacent in an alphabetical listing.

Table 7.7.1.1-1 specifies the declared names for this interface type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.7.1.1-1: Type name, shorthand, and URI

Shorthand Name	Nslcm
Type Qualified Name	toscanfv:Nslcm
Type URI	tosca.interfaces.nfv.Nslcm

7.7.1.2 Definition

The syntax of the Nslcm interface type shall comply with the following definition:

```
tosca.interfaces.nfv.Nslcm:
  derived_from: toska.interfaces.Root
  description: This interface encompasses a set of TOSCA operations corresponding to
  NS LCM operations defined in ETSI GS NFV-IFA 013. as well as to preamble and postamble
  procedures to the execution of the NS LCM operations.
  instantiate_start:
    description: Preamble to execution of the instantiate operation
  instantiate:
    description: Base procedure for instantiating an NS, corresponding to the
  Instantiate NS operation defined in ETSI GS NFV-IFA 013.
    # inputs:
    # additional_parameters:
    # type: toska.datatypes.nfv.NsOperationAdditionalParameters
    # required: false
  instantiate_end:
    description: Postamble to the execution of the instantiate operation
  terminate_start:
    description: Preamble to execution of the terminate operation
  terminate:
    description: Base procedure for terminating an NS, corresponding to the
  Terminate NS operation defined in ETSI GS NFV-IFA 013.
  terminate_end:
    description: Postamble to the execution of the terminate operation
  update_start:
    description: Preamble to execution of the update operation
  update:
    description: Base procedure for updating an NS, corresponding to the Update NS
  operation defined in ETSI GS NFV-IFA 013.
  update_end:
    description: Postamble to the execution of the update operation
  scale_start:
    description: Preamble to execution of the scale operation
  scale:
    description: Base procedure for scaling an NS, corresponding to the Scale NS
  operation defined in ETSI GS NFV-IFA 013.
    # inputs:
    # additional_parameters:
    # type: toska.datatypes.nfv.NsOperationAdditionalParameters
```

```

    # required: false
  scale_end:
    description: Postamble to the execution of the scale operation
  heal_start:
    description: Preamble to execution of the heal operation
  heal:
    description: Base procedure for healing an NS, corresponding to the Heal NS
operation defined in ETSI GS NFV-IFA 013.
    # inputs:
    # additional_parameters:
    #   type: toasca.datatypes.nfv.NsOperationAdditionalParameters
    #   required: false
  heal_end:
    description: Postamble to the execution of the heal operation

```

7.7.1.3 Additional Requirements

The implementation and inputs keynames specified in TOSCA-Simple-Profile-YAML-v1.2 [3] for an operation definition may be included for each operation listed in the Nslcm interface definition.

When a TOSCA operation representing an NS LCM operation does not have an associated implementation keyname, the default implementation provided by the NFVO for this NS LCM operation applies.

The NSD consumer shall make available all parameters from the message invoking the NS LCM operation as inputs to the corresponding TOSCA interface operations. The `inputs` keyname can be used to specify additional input parameters for executing the operation.

In the operation definitions on the Nslcm interface, the `additional_parameters` (NS-specific extension of the `tosca.datatypes.nfv.NsOperationAdditionalParameters`) of inputs section describes the name and type of the additional parameters that can be submitted in the NS LCM operation request. Refer example in clause 7.2.17.

The implementation of preamble and postamble TOSCA operations (e.g. `instantiate_start`), if present, is invoked with the same parameters as the corresponding base TOSCA operation (e.g. `instantiate`). The inputs of the preamble and postamble operations shall not be defined in the NSD.

If an implementation is associated to a TOSCA operation that represents a preamble or a postamble to an NS LCM operation, the implementation logic is executed before or after the execution of the NS LCM operation implementation, respectively.

7.7.1.4 Support of LCM scripts

In ETSI GS NFV-IFA 014 [2], the definition of the "LifeCycleManagementScript" information element of the NSD associates LCM scripts with events, where an event can be an external or an internal stimulus. These events are mapped to TOSCA operations of the NS node type in the following way:

- external stimuli are mapped to TOSCA operations corresponding to the NS LCM operations defined in ETSI GS NFV-IFA 013 [i.8];
- internal stimuli are mapped to preamble and postamble of these TOSCA operations.

LCM scripts can be regarded as artifacts that provide an NS-specific implementation of the TOSCA operation corresponding to the stimulus.

The script input parameters shall be provided to the script according to the declaration in the `inputs` field of the operation definition. The artifact type definition shall enable identifying the DSL used by the script. The artifact type definition for Python is provided in section 5.4.4.1 of TOSCA-Simple-Profile-YAML-v1.2 [3]. The artifact definition for Mistral is provided in clause A.7.2 of the present document.

7.7.1.5 Examples

The following example template fragments illustrate the concept. An LCM script is associated with the `instantiate_end` operation. As no LCM script is associated to the `instantiate` operation, its default implementation runs and before running the `post-instantiate-script`. The `inputs` section of the `instantiate_end` operation definition provides additional input values to the `post-instantiate-script`, and the TOSCA artifacts definition conveys the type of DSL used as a scripting language.

7.8 Node Types

7.8.1 toska.nodes.nfv.NS

7.8.1.1 Description

The NFV Network Service (NS) node type describes an NS in terms of deployment, operational behaviour, and requirements, as defined by ETSI GS NFV-IFA 014 [2]. Table 7.8.1.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.8.1.1-1: Type name, shorthand, and URI

Shorthand Name	NS
Type Qualified Name	toscanfv:NS
Type URI	tosca.nodes.nfv.NS

7.8.1.2 Properties

The properties of the NS node type shall comply with the provisions set out in table 7.8.1.2-1.

Table 7.8.1.2-1: Properties

Name	Required	Type	Constraints	Description
descriptor_id	yes	string		Identifier of this NS descriptor. See note 2.
designer	yes	string		Identifies the designer of the NSD.
version	yes	string		Identifies the version of the NSD.
name	yes	string		Provides the human readable name of the NSD.
invariant_id	yes	string		Identifies an NSD in a version independent manner. This attribute is invariant across versions of NSD. See note 2.
flavour_id	yes	string		Identifier of this NS DF within the NSD.
ns_profile	no	tosca.datatypes.nfv.NsProfile		Specifies a profile of an NS, when this NS is used as nested NS within another NS. See note 1.
NOTE 1: This property is only used in an NS node template, when it is representing a nested NS within another NS.				
NOTE 2: The value of the descriptor_id string shall comply with an UUID format as specified in section 3 of IETF RFC 4122 [9].				

7.8.1.3 Attributes

None.

7.8.1.4 Requirements

The requirements of the NS node type shall comply with the provisions set out in table 7.8.1.4-1.

Table 7.8.1.4-1: Requirements

Name	Required	Capability type	Constraints	Description
virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Describes the requirements for linking to virtual link

7.8.1.5 Capabilities

None.

7.8.1.6 Definition

The syntax of the NS node type shall comply with the following definition:

```
tosca.nodes.nfv.NS:
  derived_from: toasca.nodes.Root
  properties:
    descriptor_id:
      type: string # UUID
      description: Identifier of this NS descriptor
```

```

    required: true
  designer:
    type: string
    description: Identifies the designer of the NSD.
    required: true
  version:
    type: string
    description: Identifies the version of the NSD.
    required: true
  name:
    type: string
    description: Provides the human readable name of the NSD.
    required: true
  invariant_id: # UUID
    type: string
    description: Identifies an NSD in a version independent manner. This
attribute is invariant across versions of NSD
    required: true
  flavour_id:
    type: string
    description: Identifier of the NS Deployment Flavour within the NSD
    required: true
  ns_profile:
    type: tosca.datatypes.nfv.NsProfile
    description: Specifies a profile of a NS, when this NS is used as nested
NS within another NS.
    required: false
  requirements:
    - virtual_link:
        capability: tosca.capabilities.nfv.VirtualLinkable
        relationship: tosca.relationships.nfv.VirtualLinksTo
        node: tosca.nodes.nfv.NsVirtualLink
        occurrences: [ 0, 1 ]
  interfaces:
    Nslcm:
      type: tosca.interfaces.nfv.Nslcm

```

7.8.1.7 Artifact

None.

7.8.1.8 Additional requirements

For a given NSD, a new NS node type shall be defined following the below requirements:

- a) The node type shall be derived from: `tosca.nodes.nfv.NS`.
- b) All properties listed in `tosca.nodes.nfv.NS` where the "required:" field is set to "true" shall be included with their values indicated as constraints.
- c) Properties listed in `tosca.nodes.nfv.NS` where the "required:" field is set to "false" may be included.
- d) The capabilities, requirements, interfaces of `tosca.nodes.nfv.NS` shall be preserved.
- e) Depending on the number of SAPs of the NS, additional requirements for `VirtualLinkable` capability shall be defined with the occurrences set to `[0, 1]`. In this case, it is the NSD author's choice to use the requirement for `VirtualLinkable` capability defined in the `tosca.nodes.nfv.NS` node type or use only the additional requirements defined in the derived NS specific node type. In the latter case, the `virtual_link` requirement should be included in the node type definition with occurrences `[0, 0]`.

7.8.2 toska.nodes.nfv.Sap

7.8.2.1 Description

The Service Access Point (SAP) node type describes a connection point where an NS can be accessed, as defined by ETSI GS NFV-IFA 014 [2]. Table 7.8.2.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.8.2.1-1: Type name, shorthand, and URI

Shorthand Name	Sap
Type Qualified Name	toscanfv:Sap
Type URI	tosca.nodes.nfv.Sap

7.8.2.2 Properties

The properties applied to Sap node are derived from Cp node type as defined in clause 9.8.1 of the present document.

7.8.2.3 Attributes

None.

7.8.2.4 Requirements

The requirements of the Sap node type shall comply with the provisions set out in table 7.8.2.4-1.

Table 7.8.2.4-1: Requirements

Name	Required	Capability type	Constraints	Description
external_virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Specifies that CP instances require to be connected to a node that has a VirtualLinkable capability
internal_virtual_link	yes	tosca.capabilities.nfv.VirtualLinkable		Specifies that CP instances require to be connected to a node that has a VirtualLinkable capability

7.8.2.5 Capabilities

None.

7.8.2.6 Definition

The syntax of the Sap node type shall comply with the following definition:

```
tosca.nodes.nfv.Sap:
  derived_from: toska.nodes.nfv.Cp
  description: node definition of SAP.
  requirements:
    - external_virtual_link:
      capability: toska.capabilities.nfv.VirtualLinkable
      relationship: toska.relationships.nfv.VirtualLinksTo
      occurrences: [0, 1]
    - internal_virtual_link:
      capability: toska.capabilities.nfv.VirtualLinkable
      relationship: toska.relationships.nfv.VirtualLinksTo
      occurrences: [1, 1]
```

7.8.2.7 Additional requirements

A node template of this type is used to represent a Sap only in the case the Sap is connected to an NsVirtualLink inside an NSD. The node template has the following requirements:

- `internal_virtual_link` requirement to allow to connect it to an NsVirtualLink inside an NSD;
- `external_virtual_link` requirement to allow to connect it to an NsVirtualLink outside an NSD.

In the case where a Sap is exposed by a VNF external connection point, a PNF external connection point or a Sap of the nested NS, the Sap node type does not apply.

7.8.2.8 Example

In a typical scenario, the Sap node template will be part of a service template representing a certain NS deployment flavour. The service template substitutes for a NS specific node type. In this substitution, the `virtual_link` requirement is mapped to the `external_virtual_link` requirement of the Sap node. This example is illustrated in clause A.7.3.

When a Sap re-exposes a VNF external connection point, the service template does not require an explicit node template of type Sap in a typical scenario where a NS specific node type is substituted by a service template representing a certain NS deployment flavour. In this substitution, the `virtual_link` requirement is mapped to the `virtual_link` requirement of the VNF node. This example is illustrated in clause A.7.2.

7.8.3 `tosca.nodes.nfv.NsVirtualLink`

7.8.3.1 Description

The NsVirtualLink node type represents the NsVirtualLinkDesc information element as defined in ETSI GS NFV-IFA 014 [2], which describes the requirements for a virtual link of a network service. Table 7.8.3.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.8.3.1-1: Type name, shorthand, and URI

Shorthand Name	NsVirtualLink
Type Qualified Name	toscanfv:NsVirtualLink
Type URI	tosca.nodes.nfv.NsVirtualLink

7.8.3.2 Properties

The properties of the NsVirtualLink node type shall comply with the provisions set out in table 7.8.3.2-1.

Table 7.8.3.2-1: Properties

Name	Required	Type	Constraints	Description
<code>vl_profile</code>	yes	<code>tosca.datatype.nfv.NsVIProfile</code>		Specifies instantiation parameters for a virtual link of a particular NS deployment flavour.
<code>connectivity_type</code>	yes	<code>tosca.datatypes.nfv.ConnectivityType</code>		Network service virtual link connectivity type.
<code>test_access</code>	no	list of string	Valid values: <code>passive_monitoring</code> , <code>active_loopback</code>	Test access facilities available on the VL.
<code>description</code>	no	string		Human readable information on the purpose of the virtual link (e.g. VL for control plane traffic).

7.8.3.3 Attributes

None.

7.8.3.4 Requirements

None.

7.8.3.5 Capabilities

The capabilities of the NsVirtualLink node type shall comply with the provisions set out in table 7.8.3.5-1.

Table 7.8.3.5-1: Capabilities

Name	Type	Constraints	Description
virtual_linkable	tosca.capabilities.nfv.VirtualLinkable		VirtualLinkable capability

7.8.3.6 Definition

The syntax of the NsVirtualLink node type shall comply with the following definition:

```

tosca.nodes.nfv.NsVirtualLink:
  derived_from: toska.nodes.Root
  description: node definition of Virtual Links
  properties:
    vl_profile:
      type: toska.datatypes.nfv.NsVlProfile # only covers min/max bitrate
requirements
  description: Specifies instantiation parameters for a virtual link of a
particular NS deployment flavour.
  required: true
  connectivity_type:
    type: toska.datatypes.nfv.ConnectivityType
    required: true
  test_access:
    type: list
    description: Test access facilities available on the VL
    required: false
  entry_schema:
    type: string
    constraints:
      - valid_values: [ passive_monitoring, active_loopback ]
  description:
    type: string
    required: false
    description: Human readable information on the purpose of the virtual link
(e.g. VL for control plane traffic).
  capabilities:
    virtual_linkable:
      type: toska.capabilities.nfv.VirtualLinkable

```

7.8.3.7 Artifact

None.

7.8.3.8 Additional Requirements

None.

7.8.3.9 Example

None.

7.8.4 `tosca.nodes.nfv.Cp`

7.8.4.1 Description

The Cp node type is defined in clause 9.8.1 of the present document.

7.8.5 `tosca.nodes.nfv.NfpPositionElement`

7.8.5.1 Description

The NfpPositionElement node type represents the NfpPositionElement information element as defined in ETSI GS NFV-IFA 014 [2], which describes one or two CPD(s) or SAPD(s) for a given Vnf, Pnf or Ns. Table 7.8.5.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

A NfpPositionElement node type has a requirement for a forwarding capability to be exposed by the VNFs, PNFs or NSs, in order to re-expose this capability to an NfpPosition node type.

NOTE: The NfpPosition and NfpPositionElement node types of the VNFFG model describe the entities in VIM for enabling packets/frames to traverse the constituent VNFs, PNFs or Nested NSs of the Network Forwarding Path.

Table 7.8.5.1-1: Type name, shorthand, and URI

Shorthand Name	NfpPositionElement
Type Qualified Name	toscanfv:NfpPositionElement
Type URI	tosca.nodes.nfv.NfpPositionElement

7.8.5.2 Properties

None.

7.8.5.3 Attributes

None.

7.8.5.4 Requirements

The requirements of the NfpPositionElement node type shall comply with the provisions set out in table 7.8.5.4-1.

Table 7.8.5.4-1: Requirements

Name	Required	Capability Type	Constraints	Description
profile_element	yes	tosca.capabilities.nfv.Forwarding		Describes the requirement for the constituent of the NfpPositionElement.

7.8.5.5 Capabilities

The capabilities of the NfpPositionElement node type shall comply with the provisions set out in table 7.8.5.5-1.

Table 7.8.5.5-1: Capabilities

Name	Type	Constraints	Description
forwarding	tosca.capabilities.nfv.Forwarding		NfpPositionElement forwarding capability

7.8.5.6 Definition

The syntax of the NfpPositionElement node type shall comply with the following definition:

```
tosca.nodes.nfv.NfpPositionElement
  derived_from: toasca.nodes.Root
  description: node definition of NfpPositionElement
  capabilities:
    forwarding:
      type: toasca.capabilities.nfv.Forwarding
  requirements:
    - profile_element:
      capability: toasca.capabilities.nfv.Forwarding
      relationship: toasca.relationships.nfv.ForwardTo
      occurrences: [ 1, 2 ] #When the number of occurrences is 1, the ingress
and egress traffic is associated to a single VnfExtCp or Sap; When the number of
occurrences is 2, the ingress VnfExtCp or Sap is associated to the first value and
the egress VnfExtCp or Sap is associated to the second value.
```

7.8.5.7 Artifact

None.

7.8.5.8 Additional Requirements

The valid node types for the "profile_element" requirements shall be limited to VNF, PNF, NS and SAP.

7.8.5.9 Example

None.

7.8.6 toasca.nodes.nfv.NFP

7.8.6.1 Description

The NFP node type associates traffic flow criteria to a list of descriptors associated to the connection points and service access points to be visited by traffic flows matching these criteria. Table 7.8.6.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.8.6.1-1: Type name, shorthand, and URI

Shorthand Name	NFP
Type Qualified Name	toscanfv:NFP
Type URI	tosca.nodes.nfv.NFP

7.8.6.2 Properties

None.

7.8.6.3 Attributes

None.

7.8.6.4 Requirements

The requirements of the NFP node type shall comply with the provisions set out in table 7.8.6.4-1.

Table 7.8.6.4-1: Requirements

Name	Required	Capability type	Constraints	Description
nfp_position	yes	tosca.capabilities.nfv.Forwarding		

7.8.6.5 Capabilities

None.

7.8.6.6 Definition

The syntax of the NFP node type shall comply with the following definition:

```
tosca.nodes.nfv.NFP:
  derived_from: toska.nodes.Root
  description: node definition of NFP
  requirements:
    - nfp_position:
      capability: toska.capabilities.nfv.Forwarding
      node: toska.nodes.nfv.NfpPosition
      relationship: toska.relationships.nfv.ForwardTo
      occurrences: [ 1, UNBOUNDED ]
```

7.8.7 toska.nodes.nfv.NfpPosition

7.8.7.1 Description

The NfpPosition node type describes the reference of one or more NfpPositionElements and rules on how to route traffic flows among VnfExtCp or SAP instances corresponding to these elements. Table 7.8.7.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

NOTE: The NfpPosition and NfpPositionElement node types of the VNFFG model describe the entities in VIM for enabling packets/frames to traverse the constituent VNFs, PNFs or Nested NSs of the Network Forwarding Path.

Table 7.8.7.1-1: Type name, shorthand, and URI

Shorthand Name	NfpPosition
Type Qualified Name	toscanfv:NfpPosition
Type URI	tosca.nodes.nfv.NfpPosition

7.8.7.2 Properties

The properties of the NfpPosition node type shall comply with the provisions set out in table 7.8.7.2-1.

Table 7.8.7.2-1: Properties

Name	Required	Type	Constraints	Description
forwarding_behaviour	no	string	Possible values: "all", "lb", "ff"	Identifies a rule to apply to forward traffic to CP or SAP instances corresponding to the referenced NfpPositionElement(s). The minimum list of rules to be supported shall include: all = Traffic flows shall be forwarded simultaneously to all CP or SAP instances created from the referenced CP profile(s). lb (load balancing) = Traffic flows shall be forwarded to one CP or SAP instance created from the referenced CP profile(s) selected based on a load-balancing algorithm. The following value may be used as well: ff (fast failover) = Traffic flows shall be forwarded to the next CP or SAP in case they cannot be forwarded to a CP or SAP instance created from the referenced CP profile(s). See note.
forwarding_behaviour_input_parameters	no	map of string		Provides input parameters to configure the forwarding behaviour (e.g. identifies a load balancing algorithm). This property is reserved for future use in the present document.
NOTE: When no rules are provided and there are multiple CP or SAP instances corresponding to the referenced CP profile(s), the VIM and/or the NFVI are expected to apply NFP-independent rules determined by means outside the scope of the present document.				

7.8.7.3 Attributes

None.

7.8.7.4 Requirements

The requirements of the NfpPosition node type shall comply with the provisions set out in table 7.8.7.4-1.

Table 7.8.7.4-1: Requirements

Name	Required	Capability type	Constraints	Description
element	yes	tosca.capabilities.nfv.Forwarding		Specifies that an NfpPosition requires a node that has a forwarding capability.

7.8.7.5 Capabilities

The capabilities of the NfpPosition node type shall comply with the provisions set out in table 7.8.7.5-1.

Table 7.8.7.5-1: Capabilities

Name	Type	Constraints	Description
forwarding	tosca.capabilities.nfv.Forwarding		NfpPosition forwarding capability

7.8.7.6 Definition

The syntax of the NfpPosition node type shall comply with the following definition:

```

tosca.nodes.nfv.NfpPosition:
  derived_from: tosca.nodes.Root
  description: node definition of NFP position
  properties:
    forwarding_behaviour:
      type: string
      description: Identifies a rule to apply to forward traffic to CP or SAP
instances corresponding to the referenced NfpPositionElement(s).
      constraints:
        - valid_values: [ all, lb, ff ]
        required: false
# forwarding_behaviour_input_parameters:
# description: Provides input parameters to configure the forwarding behaviour.
# type: map
# required: false
# entry_schema:
# type: string
  capabilities:
    forwarding:
      type: tosca.capabilities.nfv.Forwarding
  requirements:
    - element:
      capability: tosca.capabilities.nfv.Forwarding
      node: tosca.nodes.nfv.NfpPositionElement
      relationship: tosca.relationships.nfv.ForwardTo
      occurrences: [ 1, UNBOUNDED ]

```

7.8.7.7 Artifact

None.

7.8.7.8 Additional Requirements

None.

7.8.7.9 Example

See clause A.14.

7.8.8 tosca.nodes.nfv.Forwarding

7.8.8.1 Description

The Forwarding node type represents a point in the NS topology that can participate as a forwarding target in a network forwarding path. A template of this type is inserted between a virtual link (VirtualLinkable) requirement of a VNF/PNF node template (in effect, an external connection point of the VNF/PNF) or a Sap and the virtual link template satisfying this requirement. Table 7.8.8.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

NOTE: The Forwarding node type is only used for the VNFFGD design. A node template with this type is only present in an NSD if at least one template of the VNFFG group type is included in the NSD.

Table 7.8.8.1-1: Type name, shorthand, and URI

Shorthand Name	Forwarding
Type Qualified Name	tosca.nfv:Forwarding
Type URI	tosca.nodes.nfv.Forwarding

7.8.8.2 Properties

None.

7.8.8.3 Attributes

None.

7.8.8.4 Requirements

The requirements of the Forwarding node type shall comply with the provisions set out in table 7.8.8.4-1.

Table 7.8.8.4-1: Requirements

Name	Capability Type	Constraints	Description
virtual_link	tosca.capabilities.nfv.VirtualLinkable		Describes the requirement for linking to a virtual linkable node type.

7.8.8.5 Capabilities

The capabilities of the Forwarding node type shall comply with the provisions set out in table 7.8.8.5-1.

Table 7.8.8.5-1: Capabilities

Name	Type	Constraints	Description
forwarding	tosca.capabilities.nfv.Forwarding		The forwarding capability exposed by the node.
virtual_linkable	tosca.capabilities.nfv.VirtualLinkable		The virtual linkable capability exposed by the node.

7.8.5.6 Definition

The syntax of the Forwarding node type shall comply with the following definition:

```

tosca.nodes.nfv.Forwarding:
  derived_from: toska.nodes.Root
  capabilities:
    virtual_linkable:
      type: toska.capabilities.nfv.VirtualLinkable
    forwarding:
      type: toska.capabilities.nfv.Forwarding
      occurrences: [ 1, 2 ] #When the number of occurrences is 1, the ingress
and egress traffic is associated to a single VnfExtCp, PnfExtCp or Sap; When the
number of occurrences is 2, the ingress VnfExtCp, PnfExtCp or Sap is associated to
the first value and the egress VnfExtCp, PnfExtCp or Sap is associated to the
second value.
    requirements:
      - virtual_link:
          capability: toska.capabilities.nfv.VirtualLinkable
          relationship: toska.relationships.nfv.VirtualLinksTo

```

7.8.8.7 Artifact

None.

7.8.8.8 Additional Requirements

None.

7.8.8.9 Example

See clause A.14.

7.9 Group Types

7.9.1 `tosca.groups.nfv.NsPlacementGroup`

7.9.1.1 Description

The `NsPlacementGroup` group type is used for describing the affinity or anti-affinity relationship applicable between VNF instances created using different VNFDs, the Virtual Link instances created using different VLDs or the nested NS instances created using different NSDs when used in an NSD.

Table 7.9.1.1-1 specifies the declared names for this group type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.9.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>NsPlacementGroup</code>
Type Qualified Name	<code>toscanfv:NsPlacementGroup</code>
Type URI	<code>tosca.groups.nfv.NsPlacementGroup</code>

7.9.1.2 Properties

The properties of the `NsPlacementGroup` group type shall comply with the provisions set out in table 7.9.1.2-1.

Table 7.9.1.2-1: Properties

Name	Required	Type	Constraints	Description
<code>description</code>	yes	string		Human readable description of the group

7.9.1.3 Definition

The syntax of the `NsPlacementGroup` group type shall comply with the following definition:

```
tosca.groups.nfv.NsPlacementGroup:
  derived_from: toasca.groups.Root
  description: NsPlacementGroup is used for describing the affinity or anti-affinity
relationship applicable between VNF instances created using different VNFDs, the
Virtual Link instances created using different VLDs or the nested NS instances created
using different NSDs when used in a NSD.
  properties:
    description:
      type: string
      description: Human readable description of the group
      required: true
  members: [tosca.nodes.nfv.VNF, toasca.nodes.nfv.NsVirtualLink, toasca.nodes.nfv.NS]
```

7.9.1.4 Additional Requirements

A group with type `tosca.groups.nfv.NsPlacementGroup` shall contain more than one member when used as the target of an `AffinityRule` or `AntiAffinityRule` policy.

7.9.2 `tosca.groups.nfv.VNFFG`

7.9.2.1 Description

The VNF Forwarding Graph (VNFFG) group type describes a topology of the NS or a portion of the NS and optionally forwarding rules, applicable to the traffic conveyed over this topology, as defined by ETSI GS NFV-IFA 014 [2]. Table 7.9.2.1-1 specifies the declared names for this group type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.9.2.1-1: Type name, shorthand, and URI

Shorthand Name	VNFFG
Type Qualified Name	<code>toscanfv:VNFFG</code>
Type URI	<code>tosca.groups.nfv.VNFFG</code>

7.9.2.2 Properties

The properties of the VNFFG group type shall comply with the provisions set out in table 7.9.2.2-1.

Table 7.9.2.2-1: properties

Name	Required	Type	Constraints	Description
<code>description</code>	yes	string		Human readable description of the group

7.9.2.3 Definition

The syntax of the VNFFG group type shall comply with the following definition:

```
tosca.groups.nfv.VNFFG:
  derived_from: toasca.groups.Root
  description: the VNFFG group type describes a topology of the NS or a portion of
the NS, and optionally forwarding rules, applicable to the traffic conveyed over
this topology
  properties:
    description:
      type: string
      description: Human readable description of the group
      required: true
    members: [ toasca.nodes.nfv.NFP, toasca.nodes.nfv.VNF, toasca.nodes.nfv.PNF,
tosca.nodes.nfv.NS, toasca.nodes.nfv.NsVirtualLink,
tosca.nodes.nfv.NfpPositionElement ]
```

7.9.2.4 Additional Requirements

None.

7.9.2.5 Example

See clause A.14.

7.10 Policy Types

7.10.1 NsAffinityRule, NsAntiAffinityRule

7.10.1.1 Description

The NsAffinityRule and NsAntiAffinityRule policy describes the affinity or anti-affinity rules applicable for the defined target.

If there is only one node template with node type `tosca.nodes.nfv.VNF` or `tosca.nodes.nfv.NsVirtualLink` set as the targets, the NsAffinityRule or NsAntiAffinityRule applies between the instances to be created based on the same VNFD, or between VLs to be created based on the same VLD as described in ETSI GS NFV-IFA 014 [2].

If there are more than one node templates with node type `tosca.nodes.nfv.VNF` or `tosca.nodes.nfv.NsVirtualLink` or `tosca.nodes.nfv.NS` set as the targets, or a group with type `tosca.groups.nfv.PlacementGroup` which contains more than one members set as targets, the NsAffinityRule or NsAntiAffinityRule applies between VNF instances created using different VNFD, the Virtual Link instances created using different VLD or the nested NS instances created using different NSD. as described in ETSI GS NFV-IFA 014 [2].

Tables 7.10.1.1-1 and 7.10.1.1-2 specify the declared names for the policy types. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.10.1.1-1: Type name, shorthand, and URI

Shorthand Name	NsAffinityRule
Type Qualified Name	toscanfv:NsAffinityRule
Type URI	tosca.policies.nfv.NsAffinityRule

Table 7.10.1.1-2: Type name, shorthand, and URI

Shorthand Name	NsAntiAffinityRule
Type Qualified Name	toscanfv:NsAntiAffinityRule
Type URI	tosca.policies.nfv.NsAntiAffinityRule

7.10.1.2 Properties

The properties of the NsAffinityRule and NsAntiAffinityRule types shall comply with the provisions set out in table 7.10.1.2-1.

Table 7.10.1.2-1: Properties

Name	Required	Type	Constraints	Description
scope	Yes	String	Valid values : "nfvi_pop", "zone", "zone_group", "nfvi_node".	Specifies the scope of the local affinity rule.

7.10.1.3 Targets

The targets of the NsAffinityRule and NsAntiAffinityRule policy types shall comply with the provisions set out in table 7.10.1.3-1 when used in an NSD.

Table 7.10.1.3-1: Targets

Name	Required	Type	Constraints	Description
targets	Yes	string[]	Valid types: tosca.nodes.nfv.VNF, tosca.nodes.nfv.NsVirtualLink, tosca.nodes.nfv.NS, tosca.groups.nfv.NsPlacementGroup	In case of LocalAffinityOrAntiAffinityRule as defined in ETSI GS NFV-IFA 014 [2], the valid type of the targets is tosca.nodes.nfv.VNF or tosca.nodes.nfv.NsVirtualLink. In case of affinityOrAntiAffinityGroup as defined in ETSI GS NFV-IFA 014 [2], the valid types of the targets are: tosca.nodes.nfv.VNF, tosca.nodes.nfv.NsVirtualLink and tosca.nodes.nfv.NS or a tosca.groups.nfv.NsPlacementGroup.

7.10.1.4 Definition

The syntax of the NsAffinityRule policy type shall comply with the following definition:

```
tosca.policies.nfv.NsAffinityRule:
  derived_from: tosca.policies.Placement
  description: The NsAffinityRule describes the affinity rules applicable for the
defined targets
  properties:
    scope:
      type: string
      description: Specifies the scope of the local affinity rule.
      required: true
      constraints:
        - valid_values: [ nfvi_node, zone, zone_group, nfvi_pop ]
    targets: [tosca.nodes.nfv.VNF, tosca.nodes.nfv.NsVirtualLink, tosca.nodes.nfv.NS,
tosca.groups.nfv.NsPlacementGroup ]
```

The syntax of the NsAntiAffinityRule policy type shall comply with the following definition:

```
tosca.policies.nfv.NsAntiAffinityRule:
  derived_from: tosca.policies.Placement
  description: The NsAntiAffinityRule describes the anti-affinity rules applicable
for the defined targets
  properties:
    scope:
      type: string
      description: Specifies the scope of the local affinity rule..
      required: true
      constraints:
        - valid_values: [ nfvi_node, zone, zone_group, nfvi_pop ]
    targets: [tosca.nodes.nfv.VNF, tosca.nodes.nfv.NsVirtualLink, tosca.nodes.nfv.NS,
tosca.groups.nfv.NsPlacementGroup ]
```

7.10.1.5 Examples

The following example template fragments illustrate the concepts:

```
node_templates:
  VNF_1:
    type: tosca.nodes.nfv.exampleVNF

policies:
  policy_affinity_local_VNF_1:
    type: tosca.policies.nfv.AffinityRule
```

```

targets: [ VNF_1 ]
properties:
  scope: nfvi_node

```

The above example illustrates a local affinity rule for all the instances of VNF_1.

```

node_template:
  VNF_1:
    type: toasca.nodes.nfv.Vdu.exampleVNF_1

  VNF_2:
    type: toasca.nodes.nfv.Vdu.exampleVNF_2

groups:
  affinityOrAntiAffinityGroup_1:
    type: toasca.groups.nfv.PlacementGroup
    members: [ VNF_1, VNF_2 ]

policies:
  policy_antiaffinity_group_1:
    type: toasca.policies.nfv.AntiAffinityRule
    targets: [ affinityOrAntiAffinityGroup_1 ]
    properties:
      scope: nfvi_node

```

The above example illustrates an anti-affinity policy among a group which contains VNF_1 and VNF_2 as members.

7.10.2 toasca.policies.nfv.NsSecurityGroupRule

7.10.2.1 Description

The NsSecurityGroupRule policy type when used in an NSD specifies the matching criteria for the ingress and/or egress traffic to and from visited SAPs. Table 7.10.2.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.10.2.1-1: Type name, shorthand, and URI

Shorthand Name	NsSecurityGroupRule
Type Qualified Name	toscanfv:NsSecurityGroupRule
Type URI	toasca.policies.nfv.NsSecurityGroupRule

7.10.2.2 Properties

None

7.10.2.3 targets

The targets of the SecurityGroupRule policy types shall comply with the provisions set out in table 7.10.2.3-1.

Table 7.10.2.3-1: Targets

Name	Required	Type	Constraints	Description
targets	yes	string[]	Valid types: toasca.nodes.nfv.Sap.	Target connection points of Sap.

7.10.2.4 Definition

The syntax of the NsSecurityGroupRule policy type shall comply with the following definition:

```
tosca.policies.nfv.NsSecurityGroupRule:
  derived_from: toasca.policies.nfv.Abstract.SecurityGroupRule
  description: The NsSecurityGroupRule type is a policy type specified the
  matching criteria for the ingress and/or egress traffic to/from visited SAPs.
  targets: [ toasca.nodes.nfv.Sap ]
```

7.10.2.5 Additional Requirements

None.

7.10.3 toasca.policies.nfv.NfpRule

7.10.3.1 Description

The NfpRule policy type represents the NFP rule attribute of the Nfpd information element as defined in ETSI GS NFV-IFA 014 [2], which describes the conditions that shall be met in order for the NFP to be applicable to the packet. Table 7.10.3.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.10.3.1-1: Type name, shorthand, and URI

Shorthand Name	NfpRule
Type Qualified Name	toscanfv:NfpRule
Type URI	tosca.policies.nfv.NfpRule

7.10.3.2 Properties

The properties of the NFP policy type shall comply with the provisions set out in table 7.10.3.2-1.

Table 7.10.3.2-1: Properties

Name	Required	Type	Constraints	Description
ether_destination_address	no	string		Indicates a destination Mac address.
ether_source_address	no	string		Indicates a source Mac address.
ether_type	no	string	ipv4, ipv6	Indicates the protocol carried over the Ethernet layer.
vlan_tag	no	list of string		Indicates a VLAN identifier in an IEEE 802.1Q-2014 tag [16]. Multiple tags can be included for QinQ stacking.
protocol	no	string		Indicates the L4 protocol, For IPv4 [17] this corresponds to the field called "Protocol" to identify the next level protocol. For IPv6 [18] this corresponds to the field called the "Next Header" field. Permitted values: Any keyword defined in the IANA [19] protocol registry, e.g.: <ul style="list-style-type: none"> • TCP • UDP • ICMP

Name	Required	Type	Constraints	Description
dscp	no	string		For IPv4 [17] a string of "0" and "1" digits that corresponds to the 6-bit Differentiated Services Code Point (DSCP) field of the IP header. For IPv6 [18] a string of "0" and "1" digits that corresponds to the 6 differentiated services bits of the traffic class header field.
source_port_range	no	range	0 - 65535	Indicates a range of source ports.
destination_port_range	no	range	0 - 65535	Indicates a range of destination ports.
source_ip_address_prefix	no	string		Indicates the source IP address range in CIDR format.
destination_ip_address_prefix	no	string		Indicates the destination IP address range in CIDR format.
extended_criteria	no	list of tosca.data types.nfv.Mask		Indicates values of specific bits in a frame.

7.10.3.3 Targets

The targets of the NfpRule policy types shall comply with the provisions set out in table 7.10.3.3-1.

Table 7.10.3.3-1: Targets

Name	Required	Type	Constraints	Description
targets	yes	string[]	Valid types: tosca.nodes.nfv.NFP.	The NFPs to which the rule applies.

7.10.3.4 Definition

The syntax of the NfpRule policy type shall comply with the following definition:

```

tosca.policies.nfv.NfpRule:
  derived_from: tosca.policies.Root
  description: policy definition of NfpRule
  properties:
    ether_destination_address:
      description: Indicates a destination Mac address.
      type: string
      required: false
    ether_source_address:
      description: Indicates a source Mac address.
      type: string
      required: false
    ether_type:
      description: Indicates the protocol carried over the Ethernet layer.
      type: string
      constraints:
        - valid_values: [ ipv4, ipv6 ]
      required: false
    vlan_tag:
      description: Indicates a VLAN identifier in an IEEE 802.1Q-2014 tag [16].
      Multiple tags can be included for QinQ stacking.
      type: list
      entry_schema:
        type: string
        required: false
    protocol:

```

```

    description: 'Indicates the L4 protocol, For IPv4 [17] this corresponds to
the field called "Protocol" to identify the next level protocol. For IPv6 [18]
this corresponds to the field is called the "Next Header" field. Permitted values:
Any keyword defined in the IANA [19] protocol registry.'
    type: string
    required: false
  dscp:
    description: For IPv4 [17] a string of "0" and "1" digits that corresponds
to the 6-bit Differentiated Services Code Point (DSCP) field of the IP header. For
IPv6 [18] a string of "0" and "1" digits that corresponds to the 6 differentiated
services bits of the traffic class header field.
    type: string
    required: false
  source_port_range:
    description: Indicates a range of source ports.
    type: range
    required: false
    constraints:
      - in_range: [ 0, 65535 ]
  destination_port_range:
    description: Indicates a range of destination ports.
    type: range
    required: false
    constraints:
      - in_range: [ 0, 65535 ]
  source_ip_address_prefix:
    description: Indicates the source IP address range in CIDR format.
    type: string
    required: false
  destination_ip_address_prefix:
    description: Indicates the destination IP address range in CIDR format.
    type: string
    required: false
  extended_criteria:
    description: Indicates values of specific bits in a frame.
    type: list
    entry_schema:
      type: tosca.datatypes.nfv.Mask
    required: false
  targets: [ tosca.nodes.nfv.NFP ]

```

7.10.3.5 Example

None.

7.10.4 tosca.policies.nfv.NsMonitoring

7.10.4.1 Description

The NsMonitoring policy type is a policy type representing the virtualised resource related performance metrics to be monitored during the lifetime of network service instance as defined in ETSI GS NFV-IFA 014 [2] and ETSI GS NFV-IFA 027 [7]. Table 7.10.4.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.10.4.1-1: Type name, shorthand, and URI

Shorthand Name	NsMonitoring
Type Qualified Name	toscanfv:NsMonitoring
Type URI	tosca.policies.nfv.NsMonitoring

7.10.4.2 Properties

The properties of the NsMonitoring policy type shall comply with the provisions set out in table 7.10.4.2-1.

Table 7.10.4.2-1: Properties

Name	Required	Type	Constraints	Description
ns_monitoring_parameters	yes	list of toscadatatypes.nfv.NsMonitoringParameter		Specifies a virtualised resource related performance metric to be monitored on the NS level.

7.10.4.3 targets

The targets of the NsMonitoring policy types shall comply with the provisions set out in table 7.10.4.3-1.

Table 7.10.4.3-1: Targets

Name	Required	Type	Constraints	Description
targets	yes	string	Valid types: toscanodes.nfv.NS	Specifies the services node type(s) to which the monitoring policy applies.

7.10.4.4 Definition

The syntax of the NsMonitoring policy type shall comply with the following definition:

```
tosca.policies.nfv.NsMonitoring:
  derived_from: toscapolicies.Root
  description: Policy type is used to identify information to be monitored
during the lifetime of a network service instance as defined in ETSI
GS NFV-IFA 014 [2].
  properties:
    ns_monitoring_parameters:
      type: list
      description: Specifies a virtualised resource related performance metric
to be monitored on the NS level.
      required: true
      entry_schema:
        type: toscadatatypes.nfv.NsMonitoringParameter
      constraints:
        - min_length: 1
    targets: [ toscanodes.nfv.NS ]
```

7.10.4.5 Additional Requirements

When a policy of this type is specified in an NS service template, the targets set shall only include NS node template names that correspond to this NS or to a nested NS.

7.10.5 tosca.policies.nfv.VnfMonitoring

7.10.5.1 Description

The VnfMonitoring policy type is a policy type representing the virtualised resource related performance metrics to be monitored during the lifetime of VNF instance as defined in ETSI GS NFV-IFA 014 [2] and ETSI GS NFV-IFA 027 [7]. Table 7.10.5.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 7.10.5.1-1: Type name, shorthand, and URI

Shorthand Name	VnfMonitoring
Type Qualified Name	toscanfv:VnfMonitoring
Type URI	tosca.policies.nfv.VnfMonitoring

7.10.5.2 Properties

The properties of the VnfMonitoring policy type shall comply with the provisions set out in table 7.10.5.2-1.

Table 7.10.5.2-1: Properties

Name	Required	Type	Constraints	Description
vnf_monitoring_parameters	yes	list of tosca.datatypes.nfv.VnfMonitoringParameter		Specifies a virtualised resource related performance metric to be monitored on the VNF level.

7.10.5.3 targets

The targets of the VnfMonitoring policy types shall comply with the provisions set out in table 7.10.5.3-1.

Table 7.10.5.3-1: Targets

Name	Required	Type	Constraints	Description
targets	yes	string	Valid types: tosca.nodes.nfv.VNF	Specifies the VNF node type(s) to which the monitoring policy applies.

7.10.5.4 Definition

The syntax of the VnfMonitoring policy type shall comply with the following definition:

```
tosca.policies.nfv.VnfMonitoring:
  derived_from: tosca.policies.Root
  description: Policy type is used to identify information to be monitored
during the lifetime of a VNF instance as defined in ETSI GS NFV-IFA 014 [2].
  properties:
    vnf_monitoring_parameters:
      type: list
      description: Specifies a virtualised resource related performance metric
to be monitored on the NS level.
      required: true
      entry_schema:
        type: tosca.datatypes.nfv.VnfMonitoringParameter
      constraints:
        - min_length: 1
  targets: [ tosca.nodes.nfv.VNF ]
```

7.10.5.5 Additional Requirements

When a policy of this type is specified in an NS service template, the targets set shall only include VNF node template names representing constituent VNFs for the NS deployment flavour corresponding to this NS.

7.10.6 `tosca.policies.nfv.Abstract.SecurityGroupRule`

7.10.6.1 Description

The `Abstract.SecurityGroupRule` policy type is defined in clause 9.10.1 of the present document.

7.11 NSD TOSCA service template design

7.11.1 General

The TOSCA service template design for an NSD in the general case uses two levels of service templates as described in clause 7.11.2. In this design, the top level contains an abstract NS node template, i.e. without an implementation of the creation operation and is therefore substituted by one of the lower level service templates. This design is applicable regardless of whether the NS has one or multiple deployment flavours.

In the particular case of an NS with only one deployment flavour there is an alternative design which is described in clause 7.11.3 and which uses only one service template.

7.11.2 Single or multiple deployment flavour design with TOSCA-Simple-Profile-YAML-v1.2

NSD shall be implemented as one top-level service template and one or multiple lower level service templates, where each lower level service template represents a deployment flavour. A separate YAML file with an NS specific node type definition which shall be derived from `tosca.nodes.nfv.NS` node type as defined in clause 7.8.1 shall be provided and is also considered as a part of an NSD. The top level service template shall be the main entry point of the NSD file structure as specified in ETSI GS NFV-SOL 007 [i.11], i.e. the Entry-definitions file.

See clause A.11 for an example of NSD design with multiple deployment flavours.

The top level service template shall comply with TOSCA-Simple-Profile-YAML-v1.2 [3] and shall include:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.3;
- b) an import statement referencing the definitions of all low level service template(s);
- c) an import statement referencing a yaml file which contains an NS specific node type definition;
- d) a topology template with a node template of the NS-specific node type, which shall include the `flavour_id` and other properties and the requirements as defined in clause 7.8.1; and
- e) optionally, import statements referencing additional NS-specific files containing only type definitions used by this TOSCA service template.

The deployment and lifecycle management of instances of this NS node type is done by means of substitution by any of the lower level service templates.

The lower level service template is an implementable TOSCA service template for the deployment of a specific deployment flavour.

The lower level service template shall comply with TOSCA-Simple-Profile-YAML-v1.2 [3] and shall include:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.3;
- b) an import statement referencing a yaml file which contains an NS specific node type definition which shall be derived from `tosca.nodes.nfv.NS` node type as defined in clause 7.8.1;

- c) one of more import statements respectively referencing the yaml file which contains the included VNF specific node type definition if any or the included PNF specific node type definition if any or the included NS specific node type definition if any;

If the imported files contain a topology template, this topology template shall be ignored during the parsing of the NSD.

- d) optionally, import statements referencing additional NS-specific files containing type definitions used by this TOSCA service template; and
- e) a topology template describing the internal topology of the NS with:
 - substitution_mappings indicating:
 - the same node type as defined in the NS specific node type definition service template;
 - a flavour_id property value which identifies the DF corresponding to this low level template within the NSD;
 - the mapping of the virtual_link requirements on SAPs;
 - a node template referencing the NS specific node type, implementations of the operations of the LCM interface to be executed by the NFVO, if applicable; and
 - additional node templates of type VNF, PNF, NS, NsVirtualLink, Sap, etc. that define the topology and composition of the NS flavour, the dependency requirements as defined in TOSCA-Simple-Profile-YAML-v1.2 [3] may be used between different VNF node templates, or between a VNF node template and a nested NS node template, or between different nested NS node templates to specify the order in which instances of the VNFs and/or nested NSs have to be created.

NOTE 1: The format and structure of an NSD file structure is defined in ETSI GS NFV-SOL 007 [i.11].

NOTE 2: All the imported type definition files as indicated either in the top level service template or in any of the lower level service template are considered as parts of an NSD.

When the flavour_id of an NS has been chosen (e.g. through an input parameter of an NS instantiation request received by a NFVO) among the values included in the NS node type imported into the top level service template, it is then used as the property constraint for selecting a particular lower level TOSCA service template inside the NSD file structure by using abstract node template matching with substitution as described in TOSCA-Simple-Profile-YAML-v1.2 [3].

7.11.3 Single deployment flavour design with TOSCA-Simple-Profile-YAML-v1.1

In case of single deployment flavour scenario, TOSCA-Simple-Profile-YAML-v1.1 [4] may be used to describe the NSD with a single TOSCA service template.

NOTE 1: The present document does not preclude this pattern using TOSCA-Simple-Profile-YAML-v1.2 [3].

In this case one single service template is used as specified in TOSCA-Simple-Profile-YAML-v1.1 [4] and includes:

- a) an import statement referencing the TOSCA types definition file as defined in clause B.3;
- b) one of more import statements respectively referencing the yaml file which contains the included VNF specific node type definition if any or the included PNF specific node type definition if any or the included NS specific node type definition if any;

If the imported files contain a topology template, this topology template shall be ignored during the parsing of the NSD.

- c) optionally, import statements referencing additional NS-specific files containing only type definitions used by this TOSCA service template;
- d) either an NS specific node type definition derived from the `tosca.nodes.nfv.NS` node type, as defined in clause 7.8.1 or an import statement referencing a file that contains such definition; and

- e) a topology template describing the internal topology of the NS with:
- substitution_mappings indicating the same NS specific node type and the mapping of the virtual_link requirements on SAPs;
 - a node template of this NS specific node type with the flavour_id and other properties and, if applicable, implementations of the operations of the LCM interface to be executed by the NFVO; and
 - additional node templates of type VNF, PNF, NS, NsVirtualLink, Sap, etc. that define the topology and composition of the NS flavour, the dependency requirements as defined in TOSCA-Simple-Profile-YAML-v1.2 [3] may be used between different VNF node templates, or between a VNF node template and a nested NS node template, or between different nested NS node templates to specify the order in which instances of the VNFs and/or nested NSs have to be created.

See clause A.8 for an example of NSD design with single deployment flavour.

NOTE 2: The service template is deployed stand-alone, i.e. without performing a substitution. However including the substitution_mappings rule indicate its ability to substitute a node template of the NS specific node type, which may appear in an NSD.

NOTE 3: All the imported type definition files as indicated in the service template are considered as parts of an NSD.

8 PNFD TOSCA model

8.1 Introduction

The PNFD information model specified by ETSI GS NFV-IFA 014 [2] is mapped to the TOSCA concepts. It represents as TOSCA topology template to be used by NFVO for preparing network connection.

Table 8.1-1 shows the TOSCA Type "derived from" values used when applying the TOSCA Simple YAML Profile [3] to the PNFD.

Table 8.1-1: Mapping of ETSI GS NFV-IFA 014 [2] information elements with TOSCA types

ETSI NFV Information Element ETSI GS NFV-IFA 014 [2]	TOSCA type	Derived from
Pnf	tosca.nodes.nfv.PNF	tosca.nodes.Root
PnfExtCpd (PNF External Connection Point)	tosca.nodes.nfv.PnfExtCp	tosca.nodes.Root

Figure 8.1-1 provides an overview of the TOSCA node types used to build a service template for a PNFD.

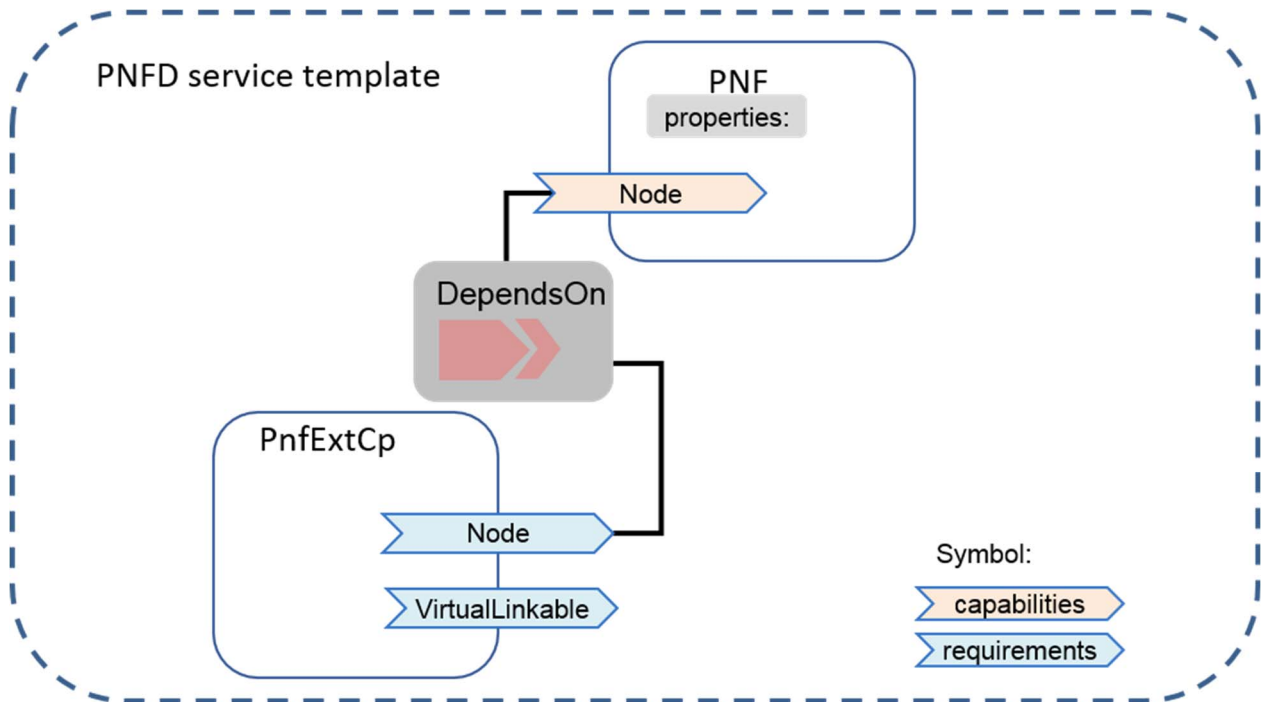

Figure 8.1-1: Service template PNF overview

8.2 Data Types

8.2.1 `tosca.datatypes.nfv.CpProtocolData`

8.2.1.1 Description

The `CpProtocolData` data type is defined in clause 9.2.6 of the present document.

8.2.2 `tosca.datatypes.nfv.AddressData`

8.2.2.1 Description

The `AddressData` data type is defined in clause 9.2.3 of the present document.

8.2.3 `tosca.datatypes.nfv.L2AddressData`

8.2.3.1 Description

The `L2AddressData` data type is defined in clause 9.2.1 of the present document.

8.2.4 `tosca.datatypes.nfv.L3AddressData`

8.2.4.1 Description

The `L3AddressData` data type is defined in clause 9.2.2 of the present document.

8.2.5 tosca.datatypes.nfv.LocationInfo

8.2.5.1 Description

The LocationInfo data type represents geographical information on the location where a PNF is deployed as specified in ETSI GS NFV-IFA 011 [1]. Table 8.2.5.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.2.5.1-1: Type name, shorthand, and URI

Shorthand Name	LocationInfo
Type Qualified Name	toscanfv:LocationInfo
Type URI	tosca.datatypes.nfv.LocationInfo

8.2.5.2 Properties

The properties of the LocationInfo data type shall comply with the provisions set out in table 8.2.5.2-1.

Table 8.2.5.2-1: Properties

Name	Required	Type	Constraints	Description
country_code	yes	string		Shall be a two-letter ISO 3166 [10] country code in capital letters.
civic_address_element	no	list of tosca.datatypes.nfv.Ci vicAddressElement		Elements composing the civic address where the PNF is deployed.
geographic_coordinates	no	tosca.datatypes.nfv.Ge ographicCoordinates		Geographic coordinates (e.g. Altitude, Longitude, Latitude) where the PNF is deployed.

8.2.5.3 Definition

The syntax of the LocationInfo data type shall comply with the following definition:

```
tosca.datatypes.nfv.LocationInfo:
  derived_from: tosca.datatypes.Root
  description: Represents geographical information on the location where a PNF is
  deployed.
  properties:
    country_code:
      type: string #two-letter ISO 3166 country code
      description: Country code
      required: true
    civic_address_element:
      type: list
      entry_schema
      type: tosca.datatypes.nfv.CivicAddressElement
      description: Elements composing the civic address where the PNF is deployed.
      required: false
    geographic_coordinates:
      type: tosca.datatypes.nfv.GeographicCoordinates
      description: Geographic coordinates (e.g. Altitude, Longitude, Latitude) where
  the PNF is deployed.
      required: false
```

8.2.5.4 Examples

```
<some_tosca_entity>:
  properties:
    geographical_location_info:
      country_code: FR
      civic_address_element:
        - element_1
          ca_type: 3
          ca_value: Paris
```

8.2.5.5 Additional Requirements

None.

8.2.6 tosca.datatypes.nfv.CivicAddressElement

8.2.6.1 Description

The CivicAddressElement data type represents an element of a civic location as specified in IETF RFC 4776 [11]. Table 8.2.6.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.2.6.1-1: Type name, shorthand, and URI

Shorthand Name	CivicAddressElement
Type Qualified Name	toscanfv: CivicAddressElement
Type URI	tosca.datatypes.nfv.CivicAddressElement

8.2.6.2 Properties

The properties of the CivicAddressElement data type shall comply with the provisions set out in table 8.2.6.2-1.

Table 8.2.6.2-1

Name	Required	Type	Constraints	Description
ca_type	yes	string		Describe the content type of caValue. The value of caType shall comply with section 3.4 of IETF RFC 4776 [11].
ca_value	yes	string		Content of civic address element corresponding to the caType. The format caValue shall comply with section 3.4 of IETF RFC 4776 [11].

8.2.6.3 Definition

The syntax of the CivicAddressElement data type shall comply with the following definition:

```
tosca.datatypes.nfv.CivicAddressElement:
  derived_from: tosca.datatypes.Root
  description: Represents an element of a civic location as specified in IETF
RFC 4776 [11].
  properties:
    ca_type:
      type: string # RFC4776
      description: caType as per RFC4776
      required: true
    ca_value:
```

```

type: string # RFC4776
description: caValue as per RFC4776.
required: true

```

8.2.6.4 Examples

See clause 8.2.5.4.

8.2.6.5 Additional Requirements

None.

8.2.7 `tosca.datatypes.nfv.GeographicCoordinates`

8.2.7.1 Description

The `GeographicCoordinates` data type represents a geographic coordinate location as specified in IETF RFC 6225 [21]. Table 8.2.7.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.2.7.1-1: Type name, shorthand, and URI

Shorthand Name	<code>GeographicCoordinates</code>
Type Qualified Name	<code>toscanfv: GeographicCoordinates</code>
Type URI	<code>tosca.datatypes.nfv.GeographicCoordinates</code>

8.2.7.2 Properties

The properties of the `GeographicCoordinates` data type shall comply with the provisions set out in table 8.2.7.2-1.

Table 8.2.7.2-1: Properties

Name	Required	Type	Constraints	Description
<code>latitude_uncertainty</code>	no	string		Describe the content of <code>latitude_uncertainty</code> . The value of <code>latitude_uncertainty</code> shall comply with <code>LatUnc</code> in section 2.3 of IETF RFC 6225 [21].
<code>latitude</code>	yes	string		Describe the content of <code>latitude</code> . The value of <code>latitude</code> shall comply with <code>Latitude</code> in section 2.3 of IETF RFC 6225 [21].
<code>longitude_uncertainty</code>	no	string		Describe the content of <code>longitude_uncertainty</code> . The value of <code>longitude_uncertainty</code> shall comply with <code>LongUnc</code> in section 2.3 of IETF RFC 6225 [21].
<code>longitude</code>	yes	string		Describe the content type of <code>longitude</code> . The value of <code>longitude</code> shall comply with <code>Longitude</code> in section 2.3 of IETF RFC 6225 [21].
<code>altitude_type</code>	yes	string		Describe the content type of <code>altitude_type</code> . The value of <code>altitude_type</code> shall comply with <code>AType</code> in section 2.4 of IETF RFC 6225 [21].
<code>altitude_uncertainty</code>	no	string		Describe the content of <code>altitude_uncertainty</code> . The value of <code>altitude_uncertainty</code> shall comply with <code>AltUnc</code> in section 2.4 of IETF RFC 6225 [21].
<code>altitude</code>	yes	string		Describe the content of <code>altitude</code> . The value of <code>altitude</code> shall comply with <code>Altitude</code> in section 2.4 of IETF RFC 6225 [21].

8.2.7.3 Definition

The syntax of the GeographicCoordinates data type shall comply with the following definition:

```
tosca.datatypes.nfv.GeographicCoordinates:
  derived_from: toasca.datatypes.Root
  description: Represents an element of a geographic coordinate location as
  specified in IETF RFC 6225 [21].
  properties:
    latitude_uncertainty:
      type: string # RFC 6225
      description: LatUnc as per RFC 6225
      required: false
    latitude:
      type: string # RFC 6225
      description: Latitude value as per RFC 6225
      required: true
    longitude_uncertainty:
      type: string # RFC 6225
      description: LongUnc as per RFC 6225
      required: false
    longitude:
      type: string # RFC 6225
      description: Longitude value as per RFC 6225
      required: true
    altitude_type:
      type: string # RFC 6225
      description: AType value as per RFC 6225
      required: true
    altitude_uncertainty:
      type: string # RFC 6225
      description: AltUnc as per RFC 6225
      required: false
    altitude:
      type: string # RFC 6225
      description: Altitude value as per RFC 6225
      required: true
```

8.2.7.4 Examples

None.

8.2.7.5 Additional Requirements

None.

8.3 Artifact Types

None.

8.4 Capabilities Types

8.4.1 `tosca.capabilities.nfv.VirtualLinkable`

8.4.1.1 Description

The `VirtualLinkable` capability type is defined in clause 9.4.1 of the present document.

8.5 Requirements Types

None.

8.6 Relationship Types

8.6.1 `tosca.relationships.nfv.VirtualLinksTo`

8.6.1.1 Description

The `VirtualLinksTo` relationship type is defined in clause 9.6.1 of the present document representing an association relationship between a PNF external connection point and an `NsVirtualLink` node type.

8.7 Interface Types

None.

8.8 Node Types

8.8.1 `tosca.nodes.nfv.PNF`

8.8.1.1 Description

The Physical Network Function (PNF) node type describes a PNF in terms of deployment behaviour requirements, which it contains PNF identifier, version and functional description and so on as defined by ETSI GS NFV-IFA 014 [2]. Table 8.8.1.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.8.1.1-1: Type name, shorthand, and URI

Shorthand Name	PNF
Type Qualified Name	<code>tosca:PNF</code>
Type URI	<code>tosca.nodes.nfv.PNF</code>

8.8.1.2 Properties

The properties of the PNF node type shall comply with the provisions set out in table 8.8.1.2-1.

Table 8.8.1.2-1: Properties

Name	Required	Type	Constraints	Description
descriptor_id	yes	string		Identifier of this PNFD information element. It uniquely identifies the PNFD. See note.
function_description	yes	string		Describes the PNF function.
provider	yes	string		Identifies the provider of the PNFD.
version	yes	string		Identifies the version of the PNFD.
descriptor_invariant_id	yes	string		Identifier of this PNFD in a version independent manner. This attribute is invariant across versions of PNFD. See note.
name	yes	string		Name to identify the PNFD.
geographical_location_info	no	tosca.datatype.nfv.LocationInfo		Provides information about the geographical location (e.g. geographic coordinates or address of the building, etc.) of the PNF.

NOTE: The value of the descriptor_id string and the value of the descriptor_invariant_id string shall comply with an UUID format as specified in section 3 of IETF RFC 4122 [9].

8.8.1.3 Attributes

None.

8.8.1.4 Requirements

The requirements of the VNF node type shall comply with the provisions set out in table 8.8.1.4-1.

Table 8.8.1.4-1: Requirements

Name	Required	Capability type	Constraints	Description
virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Describes the requirements for linking to virtual link

8.8.1.5 Capabilities

None.

8.8.1.6 Definition

The syntax of the PNF node type shall comply with the following definition:

```

tosca.nodes.nfv.PNF:
  derived_from: toasca.nodes.Root
  properties:
    descriptor_id: # instead of pnf_id
      type: string # UUID
      required: true
      description: Identifier of this PNFD information element. It uniquely
identifies the PNFD.
    function_description:
      type: string
      required: true
      description: Describes the PNF function.
    provider:
      type: string
      required: true
      description: Identifies the provider of the PNFD.
    version:

```

```

    type: string
    required: true
    description: Identifies the version of the PNFD.
  descriptor_invariant_id: # instead of pnfd-invariant-id
    type: string # UUID
    required: true
    description: Identifier of this PNFD in a version independent manner. This
attribute is invariant across versions of PNFD.
  name:
    type: string
    required: true
    description: Name to identify the PNFD.
  geographical_location_info:
    type: tosca.datatypes.nfv.LocationInfo
    required: false
    description: Provides information about the geographical location (e.g.
geographic coordinates or address of the building, etc.) of the PNF.
  requirements:
    - virtual_link:
      capability: tosca.capabilities.nfv.VirtualLinkable
      relationship: tosca.relationships.nfv.VirtualLinksTo
      occurrences: [ 0, 1 ]
  # Additional requirements shall be defined in the PNF specific node type
  (deriving from tosca.nodes.nfv.PNF) corresponding to NS virtual links that need to
  connect to PnfExtCps

```

8.8.1.7 Artifact

None.

8.8.1.8 Additional Requirements

For a given PNFD, a new PNF node type shall be defined following the below requirements:

- a) The node type shall be derived from: `tosca.nodes.nfv.PNF`.
- b) All properties listed in `tosca.nodes.nfv.PNF` where the "required:" field is set to "true" shall be included with their values indicates as constraints.
- c) The requirements of `tosca.nodes.nfv.PNF` shall be preserved.
- d) Depending on the number of external connection points of the PNF that need to connect to NS virtual links, additional requirements for `VirtualLinkable` capability shall be defined. In this case, it is the PNFD author's choice to use the requirement for `VirtualLinkable` capability defined in the `tosca.nodes.nfv.PNF` node type or use only the additional requirements defined in the derived PNF specific node type. In the latter case, the `virtual_link` requirement should be included in the node type definition with occurrences [0, 0].

8.8.1.9 Example

See clause A.10.

8.8.2 `tosca.nodes.nfv.PnfExtCp`

8.8.2.1 Description

The `PnfExtCp` node type describes the characteristics of an external interface, a.k.a. an external CP, where to connect the PNF to a VL, as defined by ETSI GS NFV-IFA 014 [2]. Table 8.8.2.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.8.2.1-1: Type name, shorthand, and URI

Shorthand Name	PnfExtCp
Type Qualified Name	tosca.nfv.PnfExtCp
Type URI	tosca.nodes.nfv.PnfExtCp

8.8.2.2 Properties

The properties applied to PnfExtCp node are derived from Cp node type.

8.8.2.3 Attributes

None.

8.8.2.4 Requirements

The requirements of the PnfExtCp node type shall comply with the provisions set out in table 8.8.2.4-1.

Table 8.8.2.4-1: Requirements

Name	Required	Capability type	Constraints	Description
external_virtual_link	no	tosca.capabilities.nfv.VirtualLinkable		Specifies that CP instances require to be connected to a node that has a VirtualLinkable capability.

8.8.2.5 Capabilities

None.

8.8.2.6 Definition

The syntax of the PnfExtCp node type shall comply with the following definition:

```
tosca.nodes.nfv.PnfExtCp:
  derived_from: toska.nodes.nfv.Cp
  description: node definition of PnfExtCp.
  requirements:
    - external_virtual_link:
      capability: toska.capabilities.nfv.VirtualLinkable
      relationship: toska.relationships.nfv.VirtualLinksTo
      occurrences: [0, 1]
```

8.8.3 toska.nodes.nfv.Cp

8.8.3.1 Description

The Cp node type is defined in clause 9.8.1 of the present document.

8.9 Group Types

None.

8.10 Policy Types

8.10.1 `tosca.policies.nfv.PnfSecurityGroupRule`

8.10.1.1 Description

The `PnfSecurityGroupRule` policy type when used in a PNF specifies the matching criteria for the ingress and/or egress traffic to and from visited PNF external connection points. Table 8.10.1.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 8.10.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>PnfSecurityGroupRule</code>
Type Qualified Name	<code>toscanfv:PnfSecurityGroupRule</code>
Type URI	<code>tosca.policies.nfv.PnfSecurityGroupRule</code>

8.10.1.2 Properties

None.

8.10.1.3 `targets`

The targets of the `SecurityGroupRule` policy types shall comply with the provisions set out in table 8.10.1.3-1.

Table 8.10.1.3-1: Targets

Name	Required	Type	Constraints	Description
<code>targets</code>	yes	string[]	Valid types: <code>tosca.nodes.nfv.PnfExtCp</code>	Target connection points of <code>PnfExtCp</code>

8.10.1.4 Definition

The syntax of the `NsSecurityGroupRule` policy type shall comply with the following definition:

```
tosca.policies.nfv.PnfSecurityGroupRule:
  derived_from: toasca.policies.nfv.Abstract.SecurityGroupRule
  description: The PnfSecurityGroupRule type is a policy type specified the
  matching criteria for the ingress and/or egress traffic to/from visited PNF
  external connection points.
  targets: [ toasca.nodes.nfv.PnfExtCp ]
```

8.10.1.5 Additional Requirements

None.

8.10.2 `tosca.policies.nfv.Abstract.SecurityGroupRule`

8.10.2.1 Description

The `Abstract.SecurityGroupRule` policy type is defined in clause 9.10.1 of the present document.

8.11 PNF TOSCA service template design

8.11.1 General

One single TOSCA service template is used to design a PNF which shall comply with TOSCA-Simple-Profile-YAML-v1.2 [3] and includes:

NOTE 1: The present document does not preclude this pattern using TOSCA-Simple-Profile-YAML-v1.1 [4].

- a) an import statement referencing the TOSCA types definition file as defined in clause B.4;
- b) a PNF specific node type definition derived from the `tosca.nodes.nfv.PNF` node type, as defined in clause 8.8.1; and
- c) a topology template describing the internal topology of the PNF with:
 - `substitution_mappings` indicating the same PNF specific node type and the mapping of the `virtual_link` requirements on PNF external connection point;
 - a node template of this PNF specific node type with the properties as defined in `tosca.nodes.nfv.PNF`; and
 - additional node templates of type `PnfExtCp` that define the connection information of the PNF.

See clause A.10 for an example of PNF design.

NOTE 2: The service template is deployed stand-alone, i.e. without performing a substitution. However including the `substitution_mappings` rule indicate its ability to substitute a node template of the PNF specific node type, which may appear in an NSD.

9 Common Definitions

9.1 Introduction

This clause defines the TOSCA type definitions which are used by at least two types of deployment templates among those identified in clause 5.1.

9.2 Data Types

9.2.1 `tosca.datatypes.nfv.L2AddressData`

9.2.1.1 Description

The `L2AddressData` data type describes the information on the MAC addresses to be assigned to a connection point as defined in ETSI GS NFV-IFA 011 [1]. Table 9.2.1.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>L2AddressData</code>
Type Qualified Name	<code>toscanfv:L2AddressData</code>
Type URI	<code>tosca.datatypes.nfv.L2AddressData</code>

9.2.1.2 Properties

The properties of the `L2AddressData` data type shall comply with the provisions set out in table 9.2.1.2-1.

Table 9.2.1.2-1: Properties

Name	Required	Type	Constraints	Description
mac_address_assignment	yes	boolean		Specify if the address assignment is the responsibility of management and orchestration function or not. If it is set to True, it is the management and orchestration function responsibility.

9.2.1.3 Definition

The syntax of the L2AddressData data type shall comply with the following definition:

```

tosca.datatypes.nfv.L2AddressData:
  derived_from: toska.datatypes.Root
  description: Describes the information on the MAC addresses to be assigned to a
connection point.
  properties:
    mac_address_assignment:
      type: boolean
      description: Specifies if the address assignment is the responsibility of
management and orchestration function or not. If it is set to True, it is the
management and orchestration function responsibility
      required: true

```

9.2.1.4 Examples

```

<some_tosca_entity>:
  properties:
    l2_address_data:
      mac_address_assignment: true

```

9.2.1.5 Additional Requirements

None.

9.2.2 toska.datatypes.nfv.L3AddressData

9.2.2.1 Description

The L3AddressData data type supports providing information about Layer 3 level addressing scheme and parameters applicable to a CP, as defined in ETSI GS NFV-IFA 011 [1]. Table 9.2.2.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.2.1-1: Type name, shorthand, and URI

Shorthand Name	L3AddressData
Type Qualified Name	toscanfv:L3AddressData
Type URI	tosca.datatypes.nfv.L3AddressData

9.2.2.2 Properties

The properties of the L3AddressData data type shall comply with the provisions set out in table 9.2.2.2-1.

Table 9.2.2.2-1: Properties

Name	Required	Type	Constraints	Description
ip_address_assignment	yes	boolean		Specify if the address assignment is the responsibility of management and orchestration function or not. If it is set to True, it is the management and orchestration function responsibility.
floating_ip_activated	yes	boolean		Specify if the floating IP scheme is activated on the Connection Point or not.
ip_address_type	no	string	Valid values: ipv4, ipv6	Define address type. The address type should be aligned with the address type supported by the layer_protocols properties of the connection point.
number_of_ip_address	no	Integer	greater_than: 0	Minimum number of IP addresses to be assigned.

9.2.2.3 Definition

The syntax of the L3AddressData data type shall comply with the following definition:

```

tosca.datatypes.nfv.L3AddressData:
  derived_from: tosca.datatypes.Root
  description: Provides information about Layer 3 level addressing scheme and
parameters applicable to a CP
  properties:
    ip_address_assignment:
      type: boolean
      description: Specifies if the address assignment is the responsibility of
management and orchestration function or not. If it is set to True, it is the
management and orchestration function responsibility
      required: true
    floating_ip_activated:
      type: boolean
      description: Specifies if the floating IP scheme is activated on the
Connection Point or not
      required: true
    ip_address_type:
      type: string
      description: Defines address type. The address type should be aligned with the
address type supported by the layer_protocols properties of the connection point
      required: false
      constraints:
        - valid_values: [ ipv4, ipv6 ]
    number_of_ip_address:
      type: integer
      description: Minimum number of IP addresses to be assigned
      required: false
      constraints:
        - greater_than: 0

```

9.2.2.4 Examples

```

<some_tosca_entity>:
properties:
  l3_address_data:
    ip_address_assignment: true
    floating_ip_activated: true
    ip_address_type: ipv4
    number_of_ip_address: 4

```

9.2.2.5 Additional Requirements

None.

9.2.3 `tosca.datatypes.nfv.AddressData`

9.2.3.1 Description

The AddressData data type describes information about the addressing scheme and parameters applicable to a CP, as defined in ETSI GS NFV-IFA 011 [1]. Table 9.2.3.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.3.1-1: Type name, shorthand, and URI

Shorthand Name	AddressData
Type Qualified Name	toscanfv:AddressData
Type URI	tosca.datatypes.nfv.AddressData

9.2.3.2 Properties

The properties of the AddressData data type shall comply with the provisions set out in table 9.2.3.2-1.

Table 9.2.3.2-1: Properties

Name	Required	Type	Constraints	Description
address_type	yes	string	Valid values: mac_address ip_address.	Describes the type of the address to be assigned to a connection point The content type shall be aligned with the address type supported by the layerProtocol property of the connection point.
l2_address_data	no	tosca.datatypes.nfv.L2AddressData	Shall be present when the address_type is mac_address.	Provides the information on the MAC addresses to be assigned to a connection point.
l3_address_data	no	tosca.datatypes.nfv.L3AddressData	Shall be present when the address_type is ip_address.	Provides the information on the IP addresses to be assigned to a connection point.

9.2.3.3 Definition

The syntax of the AddressData data type shall comply with the following definition:

```

tosca.datatypes.nfv.AddressData:
  derived_from: toasca.datatypes.Root
  description: Describes information about the addressing scheme and parameters
  applicable to a CP
  properties:
    address_type:
      type: string
      description: Describes the type of the address to be assigned to a connection
      point. The content type shall be aligned with the address type supported by the
      layerProtocol property of the connection point
      required: true
      constraints:
        - valid_values: [ mac_address, ip_address ]
    l2_address_data:
      type: toasca.datatypes.nfv.L2AddressData
      description: Provides the information on the MAC addresses to be assigned to a
      connection point.
      required: false
    l3_address_data:
      type: toasca.datatypes.nfv.L3AddressData
      description: Provides the information on the IP addresses to be assigned to a
      connection point
      required: false

```

9.2.3.4 Examples

```

<some_tosca_entity>:
  properties:
    address_data:
      address_type: ip_address
    l3_address_data:
      ip_address_assignment: true
      floating_ip_activated: true
      ip_address_type: ipv4
      number_of_ip_address: 4

```

9.2.3.5 Additional Requirements

None.

9.2.4 toasca.datatypes.nfv.ConnectivityType

9.2.4.1 Description

The ConnectivityType data type describes the protocol exposed by a virtual link and the flow pattern supported by the virtual link, as defined in ETSI GS NFV-IFA 011 [1]. Table 9.2.4.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.4.1-1: Type name, shorthand, and URI

Shorthand Name	ConnectivityType
Type Qualified Name	toscanfv:ConnectivityType
Type URI	tosca.datatypes.nfv.ConnectivityType

9.2.4.2 Properties

The properties of the ConnectivityType shall comply with the provisions set out in table 9.2.4.2-1.

Table 9.2.4.2-1: Properties

Name	Required	Type	Constraints	Description
layer_protocols	yes	list of string	Valid values: ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire	Identifies the protocol a virtualLink gives access to (ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire). The top layer protocol of the virtualLink protocol stack shall always be provided. The lower layer protocols may be included when there are specific requirements on these layers.
flow_pattern	no	string	Valid values: line, tree, mesh	Identifies the flow pattern of the connectivity.

9.2.4.3 Definition

The syntax of the ConnectivityType data type shall comply with the following definition:

```

tosca.datatypes.nfv.ConnectivityType:
  derived_from: toasca.datatypes.Root
  description: describes additional connectivity information of a virtualLink
  properties:
    layer_protocols:
      type: list
      description: Identifies the protocol a virtualLink gives access to (ethernet,
  mpls, odu2, ipv4, ipv6, pseudo-wire). The top layer protocol of the virtualLink
  protocol stack shall always be provided. The lower layer protocols may be included
  when there are specific requirements on these layers.
      required: true
      entry_schema:
        type: string
        constraints:
          - valid_values: [ ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire ]
    flow_pattern:
      type: string
      description: Identifies the flow pattern of the connectivity
      required: false
      constraints:
        - valid_values: [ line, tree, mesh ]

```

9.2.4.4 Examples

```

<some_tosca_entity>:
  properties:
    connectivity_type:
      layer_protocol:
        - ipv4
      flow_pattern: mesh

```

9.2.4.5 Additional Requirements

None.

9.2.5 tosca.datatypes.nfv.LinkBitrateRequirements

9.2.5.1 Description

The LinkBitrateRequirements data type describes the requirements in terms of bitrate for a virtual link. Table 9.2.5.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.5.1-1: Type name, shorthand, and URI

Shorthand Name	LinkBitrateRequirements
Type Qualified Name	toscanfv:LinkBitrateRequirements
Type URI	tosca.datatypes.nfv.LinkBitrateRequirements

9.2.5.2 Properties

The properties of the LinkBitrateRequirements data type shall comply with the provisions set out in table 9.2.5.2-1.

Table 9.2.5.2-1: Properties

Name	Required	Type	Constraints	Description
root	yes	integer	greater_or_equal: 0	Specifies the throughput requirement in bits per second of the link (e.g. bitrate of E-Line, root bitrate of E-Tree, aggregate capacity of E-LAN).
leaf	no	integer	greater_or_equal: 0	Specifies the throughput requirement in bits per second of leaf connections to the link when applicable to the connectivity type (e.g. for E-Tree and E-LAN branches).

9.2.5.3 Definition

The syntax of the LinkBitrateRequirements data type shall comply with the following definition:

```
tosca.datatypes.nfv.LinkBitrateRequirements:
  derived_from: tosca.datatypes.Root
  description: describes the requirements in terms of bitrate for a virtual link
  properties:
    root:
      type: integer # in bits per second
      description: Specifies the throughput requirement in bits per second of the
link (e.g. bitrate of E-Line, root bitrate of E-Tree, aggregate capacity of E-LAN).
      required: true
      constraints:
        - greater_or_equal: 0
    leaf:
      type: integer # in bits per second
      description: Specifies the throughput requirement in bits per second of leaf
connections to the link when applicable to the connectivity type (e.g. for E-Tree and
E LAN branches).
      required: false
      constraints:
        - greater_or_equal: 0
```

9.2.5.4 Examples

None.

9.2.5.5 Additional Requirements

None.

9.2.6 toasca.datatypes.nfv.CpProtocolData

9.2.6.1 Description

The CpProtocolData data type describes and associates the protocol layer that a CP uses together with other protocol and connection point information. Table 9.2.6.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.6.1-1: Type name, shorthand, and URI

Shorthand Name	CpProtocolData
Type Qualified Name	toscanfv:CpProtocolData
Type URI	tosca.datatypes.nfv.CpProtocolData

9.2.6.2 Properties

The properties of the CpProtocolData data type shall comply with the provisions set out in table 9.2.6.2-1.

Table 9.2.6.2-1: Properties

Name	Required	Type	Constraints	Description
associated_layer_protocol	yes	string	Valid values: ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire	One of the values of the property layer_protocols of the CP.
address_data	no	list of toasca.datatypes.nfv.AddressData		Provides information on the addresses to be assigned to the CP.

9.2.6.3 Definition

The syntax of the CpProtocolData data type shall comply with the following definition:

```
tosca.datatypes.nfv.CpProtocolData:
  derived_from: toasca.datatypes.Root
  description: Describes and associates the protocol layer that a CP uses together
with other protocol and connection point information
  properties:
    associated_layer_protocol:
      type: string
      description: One of the values of the property layer_protocols of the CP
      required: true
      constraints:
        - valid_values: [ ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire ]
    address_data:
      type: list
      description: Provides information on the addresses to be assigned to the CP
  entry_schema:
    type: toasca.datatypes.nfv.AddressData
    required: false
```

9.2.6.4 Examples

None.

9.2.6.5 Additional Requirements

None.

9.2.7 toasca.datatypes.nfv.Qos

9.2.7.1 Description

The QoS describes QoS data type a given VL used in a VNF deployment flavour. Table 9.2.7.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.7.1-1: Type name, shorthand, and URI

Shorthand Name	Qos
Type Qualified Name	toscanfv:Qos
Type URI	tosca.datatypes.nfv.Qos

9.2.7.2 Properties

The properties of the Qos data type shall comply with the provisions set out in table 9.2.7.2-1.

Table 9.2.7.2-1: Properties

Name	Required	Type	Constraints	Description
latency	yes	scalar-unit.time	greater_than: 0 s	Specifies the maximum latency.
packet_delay_variation	yes	scalar-unit.time		Specifies the maximum jitter.
packet_loss_ratio	no	float	in_range: [0,1]	Specifies the maximum packet loss ratio.

9.2.7.3 Definition

The syntax of the Qos data type shall comply with the following definition:

```
tosca.datatypes.nfv.Qos:
  derived_from: toasca.datatypes.Root
  description: describes QoS data for a given VL used in a VNF deployment flavour
  properties:
    latency:
      type: scalar-unit.time #Number
      description: Specifies the maximum latency
      required: true
      constraints:
        - greater_than: 0 s
    packet_delay_variation:
      type: scalar-unit.time #Number
      description: Specifies the maximum jitter
      required: true
      constraints:
        - greater_or_equal: 0 s
    packet_loss_ratio:
      type: float
      description: Specifies the maximum packet loss ratio
      required: false
      constraints:
        - in_range: [ 0.0, 1.0 ]
```

9.2.7.4 Examples

None.

9.2.7.5 Additional Requirements

None.

9.2.8 `tosca.datatypes.nfv.VnfProfile`

9.2.8.1 Description

The `VnfProfile` data type describes a profile for instantiating VNFs of a particular NS DF according to a specific VNFD and VNF DF as defined in ETSI GS NFV-IFA 014 [2]. Table 9.2.8.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.8.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VnfProfile</code>
Type Qualified Name	<code>toscanfv:VnfProfile</code>
Type URI	<code>tosca.datatypes.nfv.VnfProfile</code>

9.2.8.2 Properties

The properties of the `VnfProfile` data type shall comply with the provisions set out in table 9.2.8.2-1.

Table 9.2.8.2-1: Properties

Name	Required	Type	Constraints	Description
<code>instantiation_Level</code>	no	string		Identifier of the instantiation level of the VNF DF to be used for instantiation. If not present, the default instantiation level as declared in the VNFD shall be used.
<code>min_number_of_instances</code>	yes	integer	<code>greater_or_equal : 0</code>	Minimum number of instances of the VNF based on this VNFD that is permitted to exist for this <code>VnfProfile</code> .
<code>max_number_of_instances</code>	yes	integer	<code>greater_or_equal : 0</code>	Maximum number of instances of the VNF based on this VNFD that is permitted to exist for this <code>VnfProfile</code> .

9.2.8.3 Definition

The syntax of the `VnfProfile` data type shall comply with the following definition:

```
tosca.datatypes.nfv.VnfProfile:
  derived_from: toska.datatypes.Root
  description: describes a profile for instantiating VNFs of a particular NS DF
  according to a specific VNFD and VNF DF.
  properties:
    instantiation_level:
      type: string
      description: Identifier of the instantiation level of the VNF DF to be used
      for instantiation. If not present, the default instantiation level as declared in the
      VNFD shall be used.
      required: false
    min_number_of_instances:
      type: integer
      description: Minimum number of instances of the VNF based on this VNFD that is
      permitted to exist for this VnfProfile.
```

```

    required: true
    constraints:
      - greater_or_equal: 0
  max_number_of_instances:
    type: integer
    description: Maximum number of instances of the VNF based on this VNFD that is
    permitted to exist for this VnfProfile.
    required: true
    constraints:
      - greater_or_equal: 0

```

9.2.8.4 Example

None.

9.2.8.5 Additional Requirements

None.

9.2.9 `tosca.datatypes.nfv.VnfMonitoringParameter`

9.2.9.1 Description

This data type provides information on virtualised resource related performance metrics applicable to VNF. Table 9.2.9.1-1 specifies the declared names for this data type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.2.9.1-1: Type name, shorthand, and URI

Shorthand Name	VnfMonitoringParameter
Type Qualified Name	toscanfv:VnfMonitoringParameter
Type URI	tosca.datatypes.nfv.VnfMonitoringParameter

9.2.9.2 Properties

The properties of the VnfMonitoringParameter data type shall comply with the provisions set out in table 9.2.9.2-1.

Table 9.2.9.2-1: Properties

Name	Required	Type	Constraints	Description
name	no	string		Human readable name of the monitoring parameter.
performance_metric	yes	string	valid values: v_cpu_usage_mean_vnf v_cpu_usage_peak_vnf v_memory_usage_mean_vnf v_memory_usage_peak_vnf v_disk_usage_mean_vnf v_disk_usage_peak_vnf byte_incoming_vnf_ext_cp byte_outgoing_vnf_ext_cp packet_incoming_vnf_ext_cp packet_outgoing_vnf_ext_cp	Identifies a performance metric to be monitored. Performance metric values shall be set to a measurement name defined in clause 7.2 of ETSI GS NFV-IFA 027 [7], without appending a sub-counter. In this case the VNFM computes these measurements from lower-level metrics collected from the VIM.
collection_period	no	scalar-unit.time		Describes the periodicity at which to collect the performance information.

9.2.9.3 Definition

The syntax of the VnfMonitoringParameter data type shall comply with the following definition:

```

tosca.datatypes.nfv.VnfMonitoringParameter:
  derived_from: toska.datatypes.Root
  description: Represents information on virtualised resource related performance
metrics applicable to the VNF.
  properties:
    name:
      type: string
      description: Human readable name of the monitoring parameter
      required: true
    performance_metric:
      type: string
      description: Identifies a performance metric to be monitored, according to
ETSI GS NFV-IFA 027.
      required: true
      constraints:
        - valid_values: [ v_cpu_usage_mean_vnf, v_cpu_usage_peak_vnf,
v_memory_usage_mean_vnf, v_memory_usage_peak_vnf, v_disk_usage_mean_vnf,
v_disk_usage_peak_vnf, byte_incoming_vnf_ext_cp, byte_outgoing_vnf_ext_cp,
packet_incoming_vnf_ext_cp, packet_outgoing_vnf_ext_cp ]
    collection_period:
      type: scalar-unit.time
      description: Describes the periodicity at which to collect the performance
information.
      required: false
      constraints:
        - greater_than: 0 s

```

9.2.9.4 Examples

See clause A.8.

9.2.9.5 Additional Requirements

None.

9.3 Artifact Types

None.

9.4 Capabilities Types

9.4.1 `tosca.capabilities.nfv.VirtualLinkable`

9.4.1.1 Description

A node type that includes the `VirtualLinkable` capability indicates that it can be pointed by `tosca.relationships.nfv.VirtualLinksTo` relationship type, which is used to model the association between a `VduCpd` and an `intVirtualLinkDesc` and the association between a `VnfExtCpd` and an `intVirtualLinkDesc` as specified in ETSI GS NFV-IFA 011 [1] as well as the association represented by the `NsVirtualLinkConnectivity` information element in ETSI GS NFV-IFA 014 [2]. Table 9.4.1.1-1 specifies the declared names for this capability type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.4.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualLinkable</code>
Type Qualified Name	<code>toscanfv:VirtualLinkable</code>
Type URI	<code>tosca.capabilities.nfv.VirtualLinkable</code>

9.4.1.2 Properties

None.

9.4.1.3 Definition

The syntax of the `VirtualLinkable` capability type shall comply with the following definition:

```
tosca.capabilities.nfv.VirtualLinkable:
  derived_from: toasca.capabilities.Node
  description: A node type that includes the VirtualLinkable capability indicates
that it can be pointed by toasca.relationships.nfv.VirtualLinksTo relationship type
```

9.4.2 Void

9.5 Requirements Types

None.

9.6 Relationship Types

9.6.1 `tosca.relationships.nfv.VirtualLinksTo`

9.6.1.1 Description

This relationship type represents an association between the `VduCp` and `VnfVirtualLink` node types or the association between either a `VnfExtCp`, a `PnfExtCp` or a `Sap` and an `NsVirtualLink` node types. Table 9.6.1.1-1 specifies the declared names for this relationship type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.6.1.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VirtualLinksTo</code>
Type Qualified Name	<code>toscanfv:VirtualLinksTo</code>
Type URI	<code>tosca.relationships.nfv.VirtualLinksTo</code>

9.6.1.2 Properties

None.

9.6.1.3 Definition

The syntax of the `VirtualLinksTo` relationship type shall comply with the following definition:

```
tosca.relationships.nfv.VirtualLinksTo:
  derived_from: toasca.relationships.DependsOn
  description: Represents an association relationship between the VduCp and
  VnfVirtualLink node types or the association between either a VnfExtCp, a PnfExtCp or
  a Sap and an NsVirtualLink node types.
  valid_target_types: [ toasca.capabilities.nfv.VirtualLinkable ]
```

9.6.2 Void

9.6.3 `tosca.relationships.nfv.VipVirtualLinksTo`

9.6.3.1 Description

This relationship type represents an association between the `VipCp` and a `VnfVirtualLink` node types or between the former and an `NsVirtualLink` node types. Table 9.6.3.1-1 specifies the declared names for this relationship type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.6.3.1-1: Type name, shorthand, and URI

Shorthand Name	<code>VipVirtualLinksTo</code>
Type Qualified Name	<code>toscanfv:VipVirtualLinksTo</code>
Type URI	<code>tosca.relationships.nfv.VipVirtualLinksTo</code>

9.6.3.2 Properties

None.

9.6.3.3 Definition

The syntax of the VipVirtualLinksTo relationship type shall comply with the following definition:

```
tosca.relationships.nfv.VipVirtualLinksTo:
  derived_from: toasca.relationships.DependsOn
  description: Represents an association relationship between the VipCp and a
  VnfVirtualLink node types or between the former and a NsVirtualLink node types.
  valid_target_types: [ toasca.capabilities.nfv.VirtualLinkable ]
```

9.7 Interface Types

None.

9.8 Node Types

9.8.1 toasca.nodes.nfv.Cp

9.8.1.1 Description

A Cp node type represents the Cpd information element as defined in ETSI GS NFV-IFA 011 [1], which describes network connectivity to a compute resource or a VL. This is an abstract type used as parent for the various Cp node types. Table 9.8.1.1-1 specifies the declared names for this node type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.8.1.1-1: Type name, shorthand, and URI

Shorthand Name	Cp
Type Qualified Name	toscanfv:Cp
Type URI	tosca.nodes.nfv.Cp

9.8.1.2 Properties

The properties of the Cp node type shall comply with the provisions set out in table 9.8.1.2-1.

Table 9.8.1.2-1: Properties

Name	Required	Type	Constraints	Description
layer_protocols	yes	list of string	Valid values: ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire	Identifies which protocol the connection point uses for connectivity purposes.
role	no	string	valid values: root, leaf	Identifies the role of the port in the context of the traffic flow patterns in the VNF or parent NS. For example a VNF with a tree flow pattern within the VNF will have legal cpRoles of ROOT and LEAF.
description	no	string		Provides human-readable information on the purpose of the connection point (e.g. connection point for control plane traffic).

Name	Required	Type	Constraints	Description
protocol	no	list of tosca.datatypes.nfv.CpProtocolData		Provides information on the addresses to be assigned to the connection point(s) instantiated from this Connection Point Descriptor.
trunk_mode	no	boolean		Information about whether the CP instantiated from this Cp is in Trunk mode (802.1Q or other). When operating in "trunk mode", the Cp is capable of carrying traffic for several VLANs. Absence of this property implies that trunkMode is not configured for the Cp i.e. It is equivalent to boolean value "false".

9.8.1.3 Attributes

None.

9.8.1.4 Requirements

None.

9.8.1.5 Capabilities

None.

9.8.1.6 Definition

The syntax of the Cp node type shall comply with the following definition:

```

tosca.nodes.nfv.Cp:
  derived_from: toska.nodes.Root
  description: Provides information regarding the purpose of the connection point
  properties:
    layer_protocols:
      type: list
      description: Identifies which protocol the connection point uses for
connectivity purposes
      required: true
    entry_schema:
      type: string
      constraints:
        - valid_values: [ ethernet, mpls, odu2, ipv4, ipv6, pseudo-wire ]
    role: #Name in ETSI GS NFV-IFA 011: cpRole
      type: string
      description: Identifies the role of the port in the context of the traffic
flow patterns in the VNF or parent NS
      required: false
      constraints:
        - valid_values: [ root, leaf ]
    description:
      type: string
      description: Provides human-readable information on the purpose of the
connection point
      required: false
    protocol:
      type: list

```

```

    description: Provides information on the addresses to be assigned to the
    connection point(s) instantiated from this Connection Point Descriptor
    required: false
    entry_schema:
      type: tosca.datatypes.nfv.CpProtocolData
    trunk_mode:
      type: boolean
      description: Provides information about whether the CP instantiated from this
      Cp is in Trunk mode (802.1Q or other). When operating in "trunk mode", the Cp is
      capable of carrying traffic for several VLANs. Absence of this property implies that
      trunkMode is not configured for the Cp i.e. It is equivalent to boolean value "false".
      required: false

```

9.8.1.7 Additional requirements

The 'protocol' property shall not be included in a derived PnfExtCp node and shall be included in all other cases.

9.9 Group Types

None.

9.10 Policy Types

9.10.1 tosca.policies.nfv.Abstract.SecurityGroupRule

9.10.1.1 Description

The Abstract.SecurityGroupRule type represents an abstract policy type without any target requirements. Table 9.10.1.1-1 specifies the declared names for this policy type. These names shall be used as specified in TOSCA-Simple-Profile-YAML-v1.2 [3].

Table 9.10.1.1-1: Type name, shorthand, and URI

Shorthand Name	Abstract.SecurityGroupRule
Type Qualified Name	toscanfv:Abstract.SecurityGroupRule
Type URI	tosca.policies.nfv.Abstract.SecurityGroupRule

9.10.1.2 Properties

The properties of the Abstract.SecurityGroupRule policy type shall comply with the provisions set out in table 9.10.1.2-1.

Table 9.10.1.2-1: Properties

Name	Required	Type	Constraints	Description
description	no	string		Human readable description of the security group rule.
direction	yes	string	ingress, egress	The direction in which the security group rule is applied. The direction of 'ingress' or 'egress' is specified against the associated CP. I.e. 'ingress' means the packets entering a CP, while 'egress' means the packets sent out of a CP.
ether_type	yes	string	ipv4, ipv6	Indicates the protocol carried over the Ethernet layer.
protocol	yes	string	see note	Indicates the protocol carried over the IP layer. Permitted values: any protocol defined in the IANA protocol registry [19], e.g. TCP, UDP, ICMP, etc.
port_range_min	yes	integer	0 - 65535	Indicates minimum port number in the range that is matched by the security group rule. If a value is provided at design-time, this value may be overridden at run-time based on other deployment requirements or constraints.
port_range_max	yes	integer	0 – 65535	Indicates maximum port number in the range that is matched by the security group rule. If a value is provided at design-time, this value may be overridden at run-time based on other deployment requirements or constraints.
NOTE:	"protocol" constraints values: hopopt, icmp, igmp, ggp, ipv4, st, tcp, cbt, egp, igp, bbn_rcc_mon, nvp_ii, pup, argus, emcon, xnet, chaos, udp, mux, dcn_meas, hmp, prm, xns_idp, trunk_1, trunk_2, leaf_1, leaf_2, rdp, irtp, iso_tp4, netblt, mfe_nsp, merit_inp, dccp, 3pc, idpr, xtp, ddp, idpr_cmtpr, tp++, il, ipv6, sdrp, ipv6_route, ipv6_frag, idrp, rsvp, gre, dsr, bna, esp, ah, i_nlsp, swipe, narp, mobile, tisp, skip, ipv6_icmp, ipv6_no_nxt, ipv6_opts, cftp, sat_expak, kryptolan, rvd, ippc, sat_mon, visa, ipcv, cpnx, cphb, wsn, pvp, br_sat_mon, sun_nd, wb_mon, wb_expak, iso_ip, vmtp, secure_vmtp, vines, ttp, iptm, nsfnet_igp, dgp, tcf, eigrp, ospfigp, sprite_rpc, larp, mtp, ax.25, ipip, micp, scc_sp, etherip, encap, gmtpr, ifmp, pnni, pim, aris, scps, qnx, a/n, ip_comp, snp, compaq_peer, ipx_in_ip, vrrp, pgm, l2tp, ddx, iatp, stp, srp, uti, smp, sm, ptp, isis, fire, crtp, crudp, sscopmce, iplt, sps, pipe, sctp, fc, rsvp_e2e_ignore, mobility, udp_lite, mpls_in_ip, manet, hip, shim6, wesp, rohc.			

9.10.1.3 Definition

The syntax of the Abstract.SecurityGroupRule policy type shall comply with the following definition:

```

tosca.policies.nfv.Abstract.SecurityGroupRule:
  derived_from: toasca.policies.Root
  description: The Abstract.SecurityGroupRule type represents an abstract policy
  type without any target requirements
  properties:
    description:
      type: string
      description: Human readable description of the security group rule.
      required: false
    direction:
      type: string
      description: The direction in which the security group rule is applied.
      The direction of 'ingress' or 'egress' is specified against the associated CP.
      I.e., 'ingress' means the packets entering a CP, while 'egress' means the packets
      sent out of a CP.
      required: true
      constraints:
        - valid_values: [ ingress, egress ]
      default: ingress

```

```

ether_type:
  type: string
  description: Indicates the protocol carried over the Ethernet layer.
  required: true
  constraints:
    - valid_values: [ ipv4, ipv6 ]
  default: ipv4
protocol:
  type: string
  description: Indicates the protocol carried over the IP layer. Permitted
values include any protocol defined in the IANA protocol registry, e.g. TCP, UDP,
ICMP, etc.
  required: true
  constraints:
    - valid_values: [ hopopt, icmp, igmp, ggp, ipv4, st, tcp, cbt, egg, igp,

  type: integer
  description: Indicates minimum port number in the range that is matched by
the security group rule. If a value is provided at design-time, this value may be
overridden at run-time based on other deployment requirements or constraints.
  required: true
  constraints:
    - greater_or_equal: 0
    - less_or_equal: 65535
  default: 0
port_range_max:
  type: integer
  description: Indicates maximum port number in the range that is matched by
the security group rule. If a value is provided at design-time, this value may be
overridden at run-time based on other deployment requirements or constraints.
  required: true
  constraints:
    - greater_or_equal: 0
    - less_or_equal: 65535
  default: 65535

```

9.10.1.4 Additional Requirements

The design of security group rule follows a permissive model where all security group rules applied to a connection point are dealt with in an "OR" logic fashion, i.e. the traffic is allowed if it matches any security group rule applied to this connection point.

Annex A (informative): Examples

A.1 Deployment flavour design mapping

A.1.1 Introduction

This clause describes the main design principle for VNF/NS deployment flavour and the mapping between VNF deployment flavour elements to TOSCA concept.

A.1.2 Design principle for VNFD deployment flavour

Each Deployment flavour as specified in ETSI GS NFV-IFA 011 [1] describes a given deployment configuration of a VNF in terms of its internal topology and resource needs. Different deployment flavours can define different topologies of the same VNF, with different scalingAspect, different VDUs and different internal connectivity requirements. The idea of VNF deployment flavour as specified in [1] is that each deployment flavour describes the required vduProfiles and virtualLinkProfiles which are the additional instantiation data for the given VDUs and virtualLinks, once a specific deployment flavour has been chosen at the instantiation time, in order to successfully deploy the given VDUs and virtualLinks, the bindings between the VDU with the corresponding VduProfile and the virtualLinkDesc with the corresponding virtualLinkProfile are required.

To achieve the concept of deployment flavour by using TOSCA, the main design principle is to describe each deployment flavour as a standalone implementable TOSCA service template, and binding VDU and virtualLink with the corresponding VduProfile and virtualLinkProfile, respectively, together at the design time. Once a specific deployment flavour has been chosen at the instantiation time, the corresponding TOSCA service template will be used for deploying the VNF with the given deployment flavour.

Figure A.1.2-1 shows the general principle for a VNF deployment flavour design.

Figure A.1.2-1: General principle for a VNF deployment flavour design

A.1.3 Design principle for NSD deployment flavour

The design principle for NSD deployment flavour is the same with the VNFD deployment flavour design. Each NS deployment flavour is described as a standalone implementable TOSCA service template, the constituent VNF, virtualLink and nested NS is bound with the corresponding VnfProfile, VirtualLinkProfile and NsProfile respectively together at the design time. Once a specific deployment flavour has been chosen at the instantiation time, the corresponding TOSCA service template will be used for deploying the NS with the given deployment flavour.

Figure A.1.3-1 shows the general principle for a NS deployment flavour design.

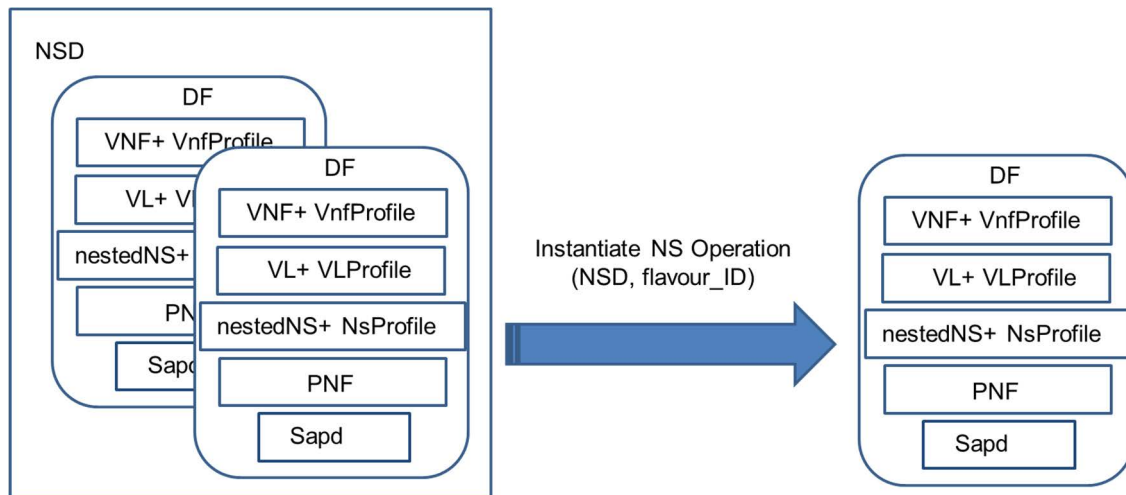

Figure A.1.3-1: General principle for a NS deployment flavour design

A.2 VNFD with deployment flavour modelling design example

Deployment flavours are represented as deployable TOSCA topology templates. This way one VNF service template represents one deployment flavour, and different deployment flavours are described by different VNF service templates. This is in line with the idea that different deployment flavours can define different topologies of the same VNF, with different scaling aspects, different VDUs and different internal connectivity.

In order to represent a VNF a top-level service template is used. This top-level service template contains a topology template with only an abstract VNF node which defines the common parts of the different deployment flavours (such as product information, modifiable attributes and parts of the lifecycle management interface definition). It also sets a constraint on the deployment flavour property (the required value of the flavour_id property); this constraint comes from the VNF instantiation request which contains a flavour_id selected among those available in the VNFD.

As a result, the VNFM will look into the available further service templates representing the different VNF deployment flavours of the VNF and use the one that has the matching flavour_id property value to substitute for the abstract VNF. These are the low-level service templates.

Figure A.2-1: VNFD overview with deployment flavour

A VNFD contains a TOSCA top-level Service Template as entry point in the VNF package and one or more TOSCA low-level Service templates representing the different deployment flavours (see figure A.2-1). The VNFD is interpreted by an NFVO or VNF manager. In this example, the templates describe two variants of the VNF each corresponding to a deployment flavour: a simple one and a complex one. The simple VNF consists of one server: a DB backend whereas, the complex VNF variant consists of minimum three DB backend servers and one serviceNode, which may be scaled out in one-size increments.

            type: MyCompany.datatypes.nfv.VnfInstantiateAdditionalParameters

```

The vnf node template in the sunshine.vnfd.tosca.yaml file is abstract and is subject to substitution; the lower-level templates in the subsequent sections provide these substitutions. The actual lower-level template is selected based on the node type and a value constraint on the flavour_id property.

Each low level service template contains a node template of type MyCompany.SunshineDB.1_0.1_0 with implementation of the LCM interfaces.

SunshineDB (simple): Lower level

sunshinedbsimple.vnfd.tosca.yaml

This example illustrates one Vdu.Compute nodes (dbBackend) with two connection points and two virtual links (see figure A.2-2). The flavour_id is "Simple".

A.3 VNF external connection point

A.3.1 General

A VNF external connection point may either be an internal connection point (a VDU connection point) which is re-exposed externally, i.e. it may be connected to an external virtual link, or a virtual link port. In the latter case the external connection point node has an association relationship of type `VirtualLinksTo` to the internal virtual link node.

The following clauses illustrate the use of both models of VNF external connection point, re-exposure of an internal connection point and connected to an internal virtual link.

A.3.2 External connection point re-exposing an internal connection point

In this case there is no need for a `VnfExtCp` node template. When substituting the VNFD low level service template for the abstract VNF node, the `virtual_link` requirement of the abstract VNF node is mapped to the VDU connection point's `virtual_link` requirement. This is shown in figure A.3.2-1. In this case the VNF Service Template does not include a node template of type `tosca.nodes.nfv.VnfExtCp`, but the functionality of it is provided by a VDU connection point.

Figure A.3.2-1: VNFD with an VDU connection point acting as VnfExtCp

The following snippet shows the relevant part of the service template:

```

tosca_definitions_version: tosca_simple_yaml_1_2
imports:
  - etsi_nfv_sol001_vnfd_types.yaml # all of TOSCA VNFD types as defined in ETSI
    GS NFV-SOL 001

node_types:
  tosca.nodes.nfv.exampleVNF:
    derived from: tosca.nodes.nfv.VNF
    # properties:
    # omitted for brevity
    requirements:
      - virtual_link:
          capability: tosca.capabilities.nfv.VirtualLinkable
    ...

topology_template:
  ...

substitution_mappings:
  node_type: tosca.nodes.nfv.exampleVNF
  requirements:
    virtual_link: [vduCp_B2, virtual_link]

node_templates:
  vduCp_B2:
    type: tosca.nodes.nfv.VduCp
    # properties omitted for brevity
    requirements:
      - virtual_binding: VDU-B
      # - virtual_link: # mapped to virtual_link requirement of VNF node

# other node template definitions (VDU-A, VDU-B, intVL, etc.):
  ...

```

A.3.3 External connection point connected to an internal virtual link

In this case a VnfExtCp node template is needed. When substituting the VNFD low level service template for the abstract VNF node type, the virtual_link requirement of the abstract VNF node maps to the external_virtual_link requirement of the VnfExtCp node. The internal_virtual_link requirement of the VnfExtCp node is fulfilled with the corresponding capability of the internal VirtualLink node. This is shown in figure A.3.3-1.

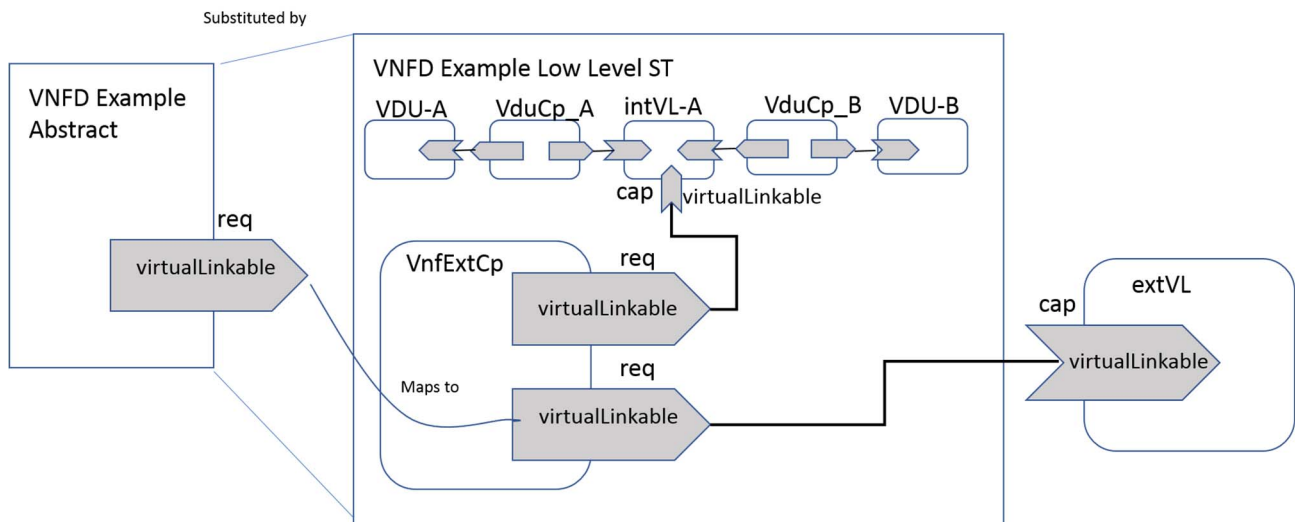

Figure A.3.3-1: VNFD with a VnfExtCp connected to an internal virtual link

The following snippet shows the corresponding node template definition:

```
tosca_definitions_version: tosca_simple_yaml_1_2
imports:
  - etsi_nfv_sol001_vnfd_types.yaml # all of TOSCA VNFD types as defined in ETSI
    GS NFV-SOL 001
node_types:
  tosca.nodes.nfv.exampleVNF:
    derived from: tosca.nodes.nfv.VNF
    # properties omitted for brevity
    requirements:
      - virtual_link:
          capability: tosca.capabilities.nfv.VirtualLinkable
topology_template:
  ...
substitution_mappings:

  requirements:
    virtual_link: [myMRFExtCp, external_virtual_link]
node_templates:
  myMRFExtCp:
    type: tosca.nodes.nfv.VnfExtCp
    # properties omitted for brevity
    ...
    requirements:
      # - external_virtual_link: # mapped to virtual_link requirement of VNF node
      - internal_virtual_link: intVL-A
```

```

intVL-A:
  type: toasca.nodes.nfv.VnfVirtualLink
  properties:
    connectivity_type:
      layer_protocols: [ ipv4 ]
      flow_pattern: mesh
    description: Internal VL
    vl_profile:
      max_bitrate_requirements:
        root: 1000000
        leaf: 100000
      min_bitrate_requirements:
        root: 100000
        leaf: 10000
    qos:
      latency: 100 ms
      packet_delay_variation: 80 ms
      packet_loss_ratio: 0.00001

# Other node templates e.g. VDU-A, VDU-B, VduCP_A, etc.:
...

```

A.4 VNFD modelling design example by using TOSCA composition

The following example in figure A.4-1 shows a VNFD that contains three VDUs, which are interconnected by two virtualLinks.

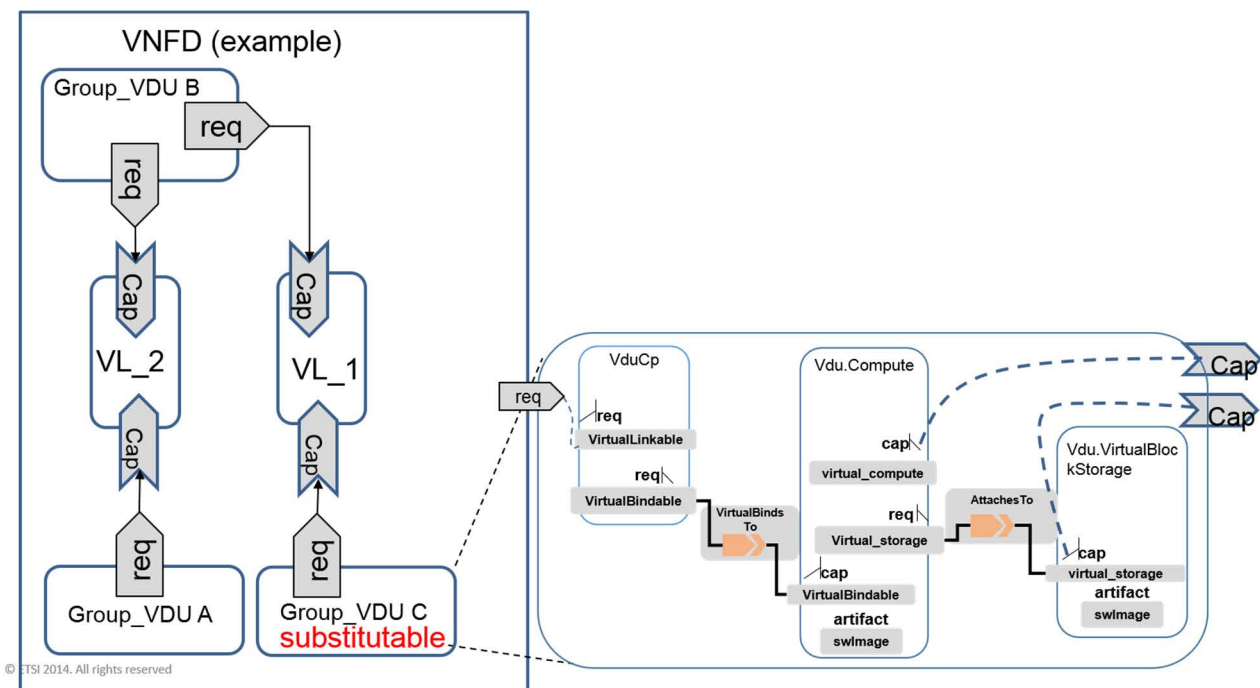

Figure A.4-1: Example of using substitution mapping for the VNFD design

In this example, a separate service template is used to describe the composition of Vdu.Compute, Vdu.VirtualBlockStorage and VduCp, and then substituted as a node template in a VNFD service template. `tosca.nodes.nfv.groupVDU_A`, `tosca.nodes.nfv.groupVDU_B`, `tosca.nodes.nfv.groupVDU_C` types are used for `substitution_mapping`.

```
tosca_definitions_version: toska_simple_yaml_1_2
imports:
  - etsi_nfv_sol001_vnfd_types.yaml # all of TOSCA VNFD types as defined in ETSI
  GS NFV-SOL 001

topology_template:
  description: Template of a VNFD example

  node_templates:
    Group_VDU_A:
      type: toska.nodes.nfv.groupVDU_A
      requirements:
        - virtual_link: VL_2

    Group_VDU_B:
      type: toska.nodes.nfv.groupVDU_B
      requirements:
        - virtual_link: VL_2
        - virtual_link1: VL_1

    Group_VDU_C:
      type: toska.nodes.nfv.groupVDU_C # the description of this type is described
                                      # in another service template.
      requirements:
        - virtual_link: VL_1

    VL_1:
      type: toska.nodes.nfv.VnfVirtualLink
      # properties omitted here for brevity

    VL_2:
      type: toska.nodes.nfv.VnfVirtualLink
      # properties omitted here for brevity
```

The TOSCA service template example of Group_VDU C is showing in figure A.4-2.

```

A.5 VNFD with Single deployment flavour modelling design example

In this example, there is one deployment flavour applied to this VNFD, and TOSCA-Simple-Profile-yaml-v1.1 is used for designing and processing this VNFD TOSCA model.

The one service template design illustrated by this example is only applicable when the VNF has only one deployment flavour.

The service template is the main entry point in the VNF Package, i.e. the Entry-definitions file, and is deployed as a stand-alone service template, i.e. without substituting for a node template. However, the service template still contains substitution_mappings to indicate its ability to substitute for a node template of the specific node type.

The service template contains a node template of type MyCompany.SunshineDB.1_0.1_0. The node template contains the properties defined in the node type definition and implementations for the LCM interfaces.

sunshinesimple.vnfd.tosca.yaml

This example illustrates a VNF with one VDU.Compute nodes (dbBackend) with two VDU connection points and one VNF virtual link (see figure A.5-1). The VNF is also connected to an external virtual link. The flavour_id is "simple".

Figure A.5-1: SunshineDB (simple)

A.6.2 ScalingAspect and InstantationLevels policies with non-uniform deltas

This example shows instantiationLevel, ScalingAspect policies and group types in the complex scaling scenario where scaling aspect delta is based on "delta" (non-uniform) values for Processing Auxiliary VNFC.

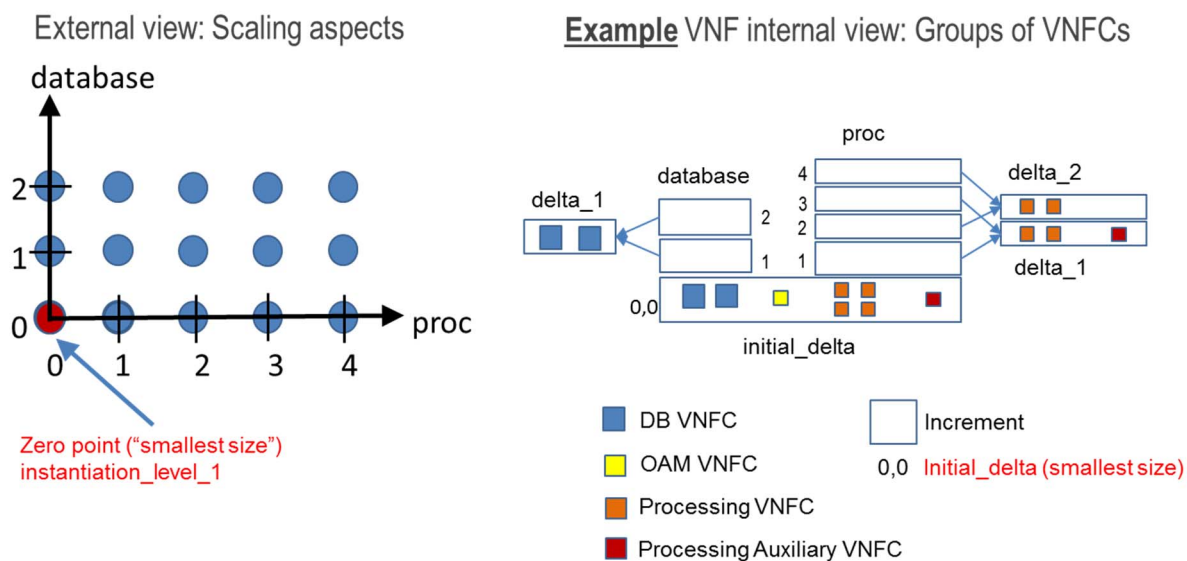

Figure A.6.2-1: Complex scaling example with non-uniform delta

For simplicity, virtual link is not illustrated and instantiation level is one level (default) in this example, as these properties are already illustrated in clause A.6.1.

The "Proc" aspect contains a uniform delta part ("processing" and a non-uniform part ("processing_auxiliary").

The "DB" aspect contains a non-uniform part ("db"), and no delta information for "oam".

```

A.7 Service Access Point

A.7.1 General

A SAP may either be a VNF external connection point (or a PNF external connection points or a Sap of a nested NS of this NS) which is exposed as CP of one of the NS constituents (VnfExtCp, PnfExtCp, nested NS Sap externally, or be exposed as a new CP on NS virtual link. This is shown in figure A.7.1-1. In the latter case the Sap node has an association relationship of type VirtualLinksTo to the NsVirtualLink node.

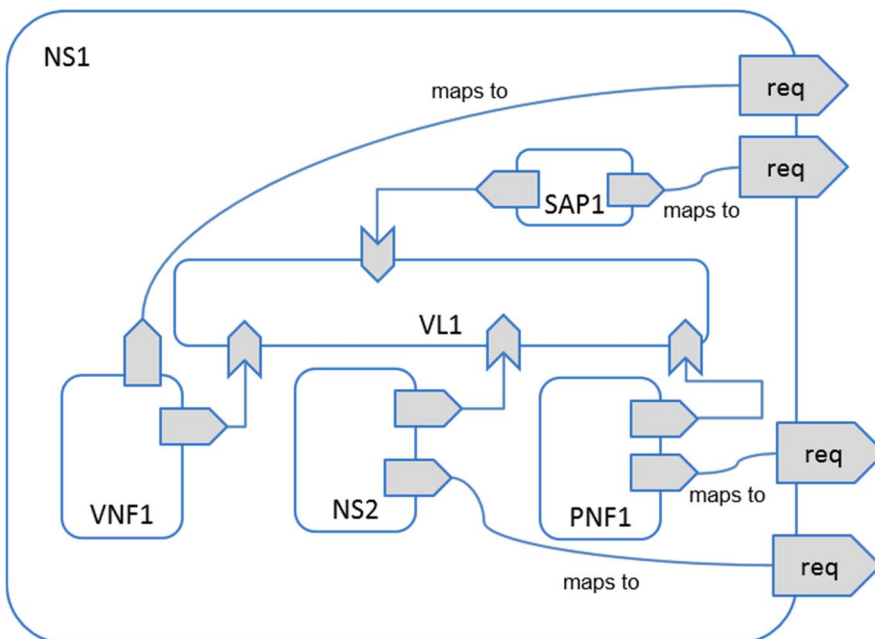

Figure A.7.1-1: Overview of SAP options

The following clauses illustrate the use of both models of SAP, re-exposure of a VNF external connection point and connected to an NS virtual link.

A.7.2 VNF External connection point exposing as a SAP

In this case, Sap node template is not required. When substituting the NSD service template for the abstract NS node, the virtual_link requirement of the abstract NS node is mapped to the VNF external connection point's virtual_link requirement. This is shown in figure A.7.2-1. In this case the NS Service Template does not include a node template of type toasca.nodes.nfv.Sap, but the functionality of it is provided by a VNF external connection point.

Figure A.7.2-1: VNF_2 External connection point (VnfExtCp) exposed as a Sap

The following snippet shows the relevant part of the NS service template:

```
tosca_definitions_version: toasca_simple_yaml_1_2
imports:
  - etsi_nfv_sol001_nsd_types.yaml # all of TOSCA NSD types as defined in ETSI
    GS NFV-SOL 001
```

```

node_types:
  toska.nodes.nfv.exampleNS
  derived from: toska.nodes.nfv.NS
  # properties:
  # properties omitted for brevity
  requirements:
    - virtual_link:
      capability:
        toska.capabilitites.nfv.VirtualLinkable
  ...

topology_template:
  ...

substitution_mappings:
  node_type: toska.nodes.nfv.exampleNS
  requirements:
    virtual_link: [VNF_2, virtual_link_2] # the External connection point of VNF_2
                                           # will be used as the Sap of this NS

node_templates:
  VNF_2:
    type: toska.nodes.nfv.exampleVNF2
    # properties omitted for brevity
    requirements:
      - virtual_link_1: NsVirtualLink_1 # connects to the External connection
                                         # point which maps to the
                                         # virtual_link_1 requirement of VNF_2
      # - virtual_link_2: # mapped to virtual_link requirement of NS node

# other node template definitions (VNF_1, NsVirtualLink_1 etc.):
  ...

```

A.7.3 SAP connected to an NS virtual link

In this case, a Sap node template is required. When substituting the NSD service template for the abstract NS node type, the `virtual_link` requirement of the abstract NS node maps to the `virtual_link` requirement of the Sap node. This is shown in figure A.7.3-1.

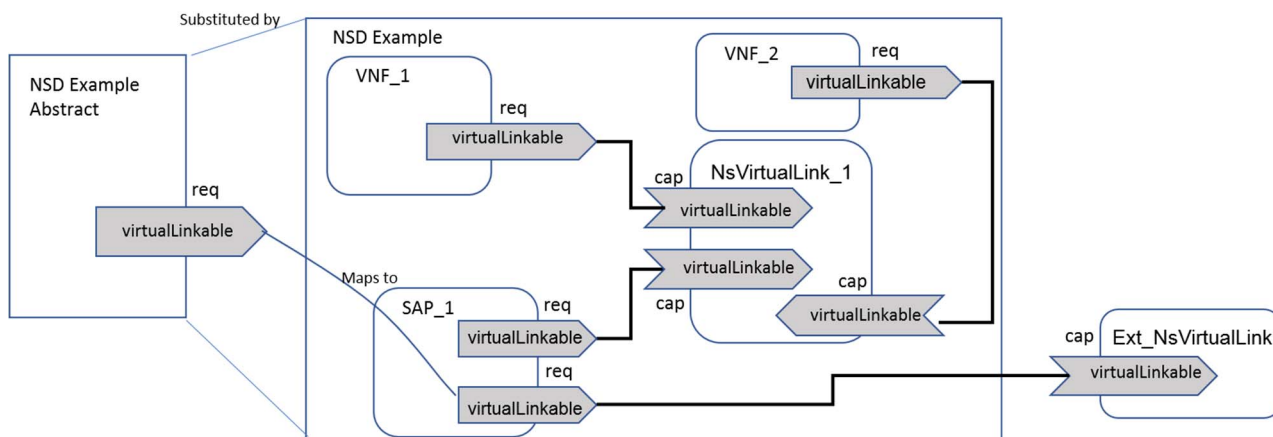

Figure A.7.3-1: SAP_1 exposed as new CP on an internal virtual link

The following snippet shows the corresponding node template definition:

```
tosca_definitions_version: toska_simple_yaml_1_2
imports:
  - etsi_nfv_sol001_nsd_types.yaml # all of TOSCA NSD types as defined in ETSI
    GS NFV-SOL 001

node_types:
  toska.nodes.nfv.exampleNS
  derived from: toska.nodes.nfv.NS
  # properties:
  # properties omitted for brevity
  requirements:
    - virtual_link:
        capability:
          toska.capabilitites.nfv.VirtualLinkable

topology_template:
  ...

  substitution_mappings:
    node_type: toska.nodes.nfv.exampleNS
    requirements:
      virtual_link: [SAP_1, external_virtual_link] #SAP_1 is the Sap of the NS

  node_templates:
    SAP_1:
      type: toska.nodes.nfv.Sap
      # properties omitted for brevity
      ...
      requirements:
        - internal_virtual_link: NsVirtualLink_1
          # - external_virtual_link: # map to virtual_link requirement of the NS node

  # Other node templates e.g. VNF_1, VNF_2, NsVirtualLink_1, etc.:
  ...
```

A.8 NSD with Single deployment flavour modelling design example

In this example, there is one deployment flavour applied to this NSD, and TOSCA-Simple-Profile-yaml-v1.1 is used for designing and processing this NSD TOSCA model.

The one service template design illustrated by this example is only applicable when the NS has only one deployment flavour.

The service template is the main entry point in the NSD file structure, i.e. the Entry-definitions file, and is deployed as a stand-alone service template, i.e. without substituting for a node template. However, the service template still contains `substitution_mappings` to indicate its ability to substitute for a node template of the specific node type.

example_NS.yaml

This example illustrates an NS which contains two VNF: VNF_1 and VNF_2, they connect through NsVirtualLink_1. One of the VnfExtCp of VNF_2 is exposed as the Sap of this NS. The flavour_id is "simple". In the VNF_2 node template, it defines a dependency requirement to VNF_1, which indicates that all the instances of VNF_1 have to be deployed first before deploy the instances of VNF_2. NsMonitoring and VnfMonitoring policies represent information to be monitored during the lifetime of a network service and VNF instances.

Figure A.8-1: example_NS (simple)

```

        performance_metric: v_cpu_usage_mean_vnf
        collection_period: 1 s
      - name: VNF_2_v_disk_usage_mean_vnf
        performance_metric: v_disk_usage_mean_vnf
        collection_period: 1 s
      - name: VNF_2_v_memory_usage_mean_vnf
        performance_metric: v_memory_usage_mean_vnf

```

```
collection_period: 1 s
targets: [ VNF_2 ]
```

The above example illustrates three policies (1 NS-level policy and 2 VNF-level policies). Each of the policies has different monitoring parameters. In the case, where the values of `vnf_monitoring_parameters` are the same across all constituent VNFs, a single `VnfMonitoring` policy can be used with a `targets` referencing all VNF node types.

A.9 Mapping between NFV IM and TOSCA concepts

A.9.1 Introduction

This clause describes the mapping between the NFV information model and the TOSCA concepts.

A.9.2 Mapping between ETSI GS NFV-IFA 011 IM and TOSCA concepts

Table A.9.2-1 illustrates the mapping between the information model as specified in ETSI GS NFV-IFA 011 [1] and the corresponding TOSCA concepts.

Table A.9.2-1: Mapping between ETSI GS NFV-IFA 011 [1] IM and TOSCA concepts

ETSI GS NFV-IFA 011 [1] information element	TOSCA concept
VNFD (clause 7.1.2)	TOSCA service template(s) in the VNF package
VnfExtCpd (clause 7.1.4)	node template with type <code>tosca.nodes.nfv.VnfExtCp</code> or <code>tosca.nodes.nfv.VduCp</code>
VnfLcmOperationsConfiguration (clause 7.1.5)	property of VNF node type with data type <code>tosca.datatypes.nfv.VnfConfigurableProperties</code>
Vdu (clause 7.1.6)	node template with type <code>tosca.nodes.nfv.Vdu.Compute</code>
VLd (clause 7.1.7)	node template with type <code>tosca.nodes.nfv.VnfVirtualLink</code>
DeploymentFlavour (clause 7.1.8)	lower level service template(s) in the VNF package
VduProfile (clause 7.1.8.3)	property of <code>Vdu.Compute</code> node type with data type <code>tosca.datatypes.nfv.VduProfile</code>
VirtualLinkProfile (clause 7.1.8.4)	property of <code>VnfVirtualLink</code> node type with data type <code>tosca.datatypes.nfv.VIProfile</code>
VirtualLinkDescFlavour (clause 7.1.8.5)	Only qos attribute in <code>VirtualLinkDescFlavour</code> has been defined as property of the <code>VIProfile</code> data type
InstantiationLevel (clause 7.1.8.7)	policy with type <code>tosca.policies.nfv.InstantiationLevels</code>
VduLevel (clause 7.1.8.9)	policy with type <code>tosca.policies.nfv.VduInstantiationLevels</code>
LocalAffinityOrAntiAffinityRule (clause 7.1.8.11)	policy with type <code>tosca.policies.nfv.AffinityRule</code> or <code>tosca.policies.nfv.AntiAffinityRule</code>
AffinityOrAntiAffinityGroup (clause 7.1.8.12)	policy with type <code>tosca.policies.nfv.AffinityRule</code> or <code>tosca.policies.nfv.AntiAffinityRule</code>
VirtualComputeDesc (clause 7.1.9.2.2)	VirtualCompute capability of the <code>Vdu.Compute</code> node template
VirtualStorageDesc with BlockStorageData (clause 7.1.9.4.3)	node template with type <code>tosca.nodes.nfv.Vdu.VirtualBlockStorage</code>
VirtualStorageDesc with ObjectStorageData (clause 7.1.9.4.4)	node template with type <code>tosca.nodes.nfv.Vdu.VirtualObjectStorage</code>
VirtualStorageDesc with FileStorageData (clause 7.1.9.4.5)	node template with type <code>tosca.nodes.nfv.Vdu.VirtualFileStorage</code>
ScalingAspect (clause 7.1.10.2)	policy with type <code>tosca.policies.nfv.ScalingAspects</code>
ScalingDelta (clause 7.1.10.4)	policy with type <code>tosca.policies.nfv.VduScalingAspectDeltas</code> and/or <code>tosca.policies.nfv.VirtualLinkBitrateScalingAspectDeltas</code>
VnfIndicator (clause 7.1.11.2)	interface with type <code>tosca.interfaces.nfv.VnfIndicator</code> and related attributes of the VNF node type

ETSI GS NFV-IFA 011 [1] information element	TOSCA concept
MonitoringParameter (clause 7.1.11.3)	property of the VNF, Vdu.Compute and VnfVirtualLink node types
VnfConfigurableProperties (clause 7.1.12)	property of VNF node template with data type <code>tosca.datatypes.nfv.VnfConfigurableProperties</code>
LifeCycleManagementScript (clause 7.1.13)	interface with type <code>tosca.interfaces.nfv.Vnflcm</code>
VnfInfoModifiableAttributes (clause 7.1.14)	property of VNF node template with data type <code>tosca.datatypes.nfv.VnfInfoModifiableAttributes</code>

A.9.3 Mapping between ETSI GS NFV-IFA 014 IM and TOSCA concepts

Table A.9.3-1 illustrates the mapping between the information model as specified in ETSI GS NFV-IFA 014 [2] and the corresponding TOSCA concepts.

Table A.9.3-1: Mapping between ETSI GS NFV-IFA 014 [2] IM and TOSCA concepts

ETSI GS NFV-IFA 014 [2] information element	TOSCA concept
NSD (clause 6.2.2)	TOSCA service template(s) in the NSD file structure
Sapd (clause 6.2.3)	node template with type <code>tosca.nodes.nfv.Sap</code> or the <code>virtual_link</code> requirement in the <code>substitution_mapping</code>
MonitoredData (clause 6.2.6)	policy with type <code>tosca.policies.nfv.VnfMonitoring</code> and <code>tosca.policies.nfv.NsMonitoring</code>
VnfIndicatorData (clause 6.2.7)	Not supported in this version of the present document
LifeCycleManagementScript (clause 6.2.9)	Interface with type <code>Nslcm</code>
NsDf (clause 6.3)	lower level service template(s) in the NSD file structure
VnfProfile (clause 6.3.3)	property of VNF node template with data type <code>tosca.datatypes.nfv.VnfProfile</code>
VirtualLinkProfile (clause 6.3.4)	property of <code>NsVirtualLink</code> node template with data type <code>tosca.datatypes.nfv.VIProfile</code>
AffinityOrAntiAffinityGroup (clause 6.3.5)	policy with type <code>tosca.policies.nfv.NsAffinityRule</code> or <code>tosca.policies.nfv.NsAntiAffinityRule</code>
NsVirtualLinkConnectivity (clause 6.3.7)	requirement and capability between <code>PnfExtCp</code> or <code>VnfExtCp</code> and <code>NsVirtualLink</code> node templates
NsLevel (clause 6.3.9)	Not supported in this version of the present document
NsScaleInfo (clause 6.3.10)	Not supported in this version of the present document
NsProfile (clause 6.3.11)	property of NS node template with data type <code>tosca.datatypes.nfv.NsProfile</code>
Dependencies (clause 6.3.12)	dependency requirements
Vnffgd (clause 6.4.2)	group with type <code>tosca.groups.nfv.VNFFG</code>
Nfpd (clause 6.4.3)	node template with type <code>tosca.nodes.nfv.NFP</code>
NfpPositionElement (clause 6.4.6)	node template with type <code>tosca.nodes.nfv.NfpPositionElement</code>
NfpPositionDesc (clause 6.4.5)	node template with type <code>tosca.nodes.nfv.NfpPosition</code>
NsVirtualLinkDesc (clause 6.5.2)	node template with type <code>tosca.nodes.nfv.NsVirtualLink</code>
VirtualLinkDf (clause 6.5.4)	Only the <code>serviceAvailabilityLevel</code> and <code>qos</code> attributes in <code>VirtualLinkDf</code> have been defined as properties of the <code>NsVIProfile</code> data type. The flavour id is not mapped to a property as there is only one flavour of a particular NS virtual link per NS service template
Pnfd (clause 6.6.2)	A standalone TOSCA service template
PnfExtCpd (clause 6.6.4)	node template with type <code>tosca.nodes.nfv.PnfExtCp</code>
NsScalingAspect (clause 6.7.2)	Not supported in this version of the present document
VnfToLevelMapping (clause 6.7.4)	Not supported in this version of the present document
VirtualLinkToLevelMapping (clause 6.7.5)	Not supported in this version of the present document
NsToLevelMapping (clause 6.7.6)	Not supported in this version of the present document

A.10 PNFD modelling design example

In this example, TOSCA-Simple-Profile-yaml-v1.1 is used for designing and processing a PNFD TOSCA model.

The service template contains a node template of type `MyCompany.examplePnf.1_0` which represents the main part of the PNF and a node template of type `tosca.nodes.nfv.PnfExtCp` representing the PNF external connection point.

examplePnf.yaml

This example illustrates a PNF with one external connection point, `pnfExtCp_1`. All the rest parts of the PNF is described as a single box, e.g. called `pnf_mainPart` in the PNFD.

Figure A.10-1: examplePnf

A.11 NSD with Multiple deployment flavour modelling design example

Deployment flavours are represented as deployable TOSCA topology templates. This way one NS service template represents one NS deployment flavour, and different deployment flavours are described by different NS service templates. This is in line with the concept that different deployment flavours can define different topologies of the same NS, with different scaling aspects, different constituent VNFs, PNFs and nested NSs, and different internal connectivity.

In order to represent an NS, a top-level service template is used. This top-level service template contains a topology template with only an abstract NS node which defines the common parts of the different deployment flavours (such as designer, version and parts of the lifecycle management interface definition). It also sets a constraint on the deployment flavour property (the required value of the flavour_id property); this constraint comes from the NS instantiation request which contains a flavour_id selected among those available in the NSD.

As a result, the NFVO will look into the available further service templates representing the different NS deployment flavours of the NS and use the one that has the matching flavour_id property value to substitute for the abstract NS. These are the low-level service templates.

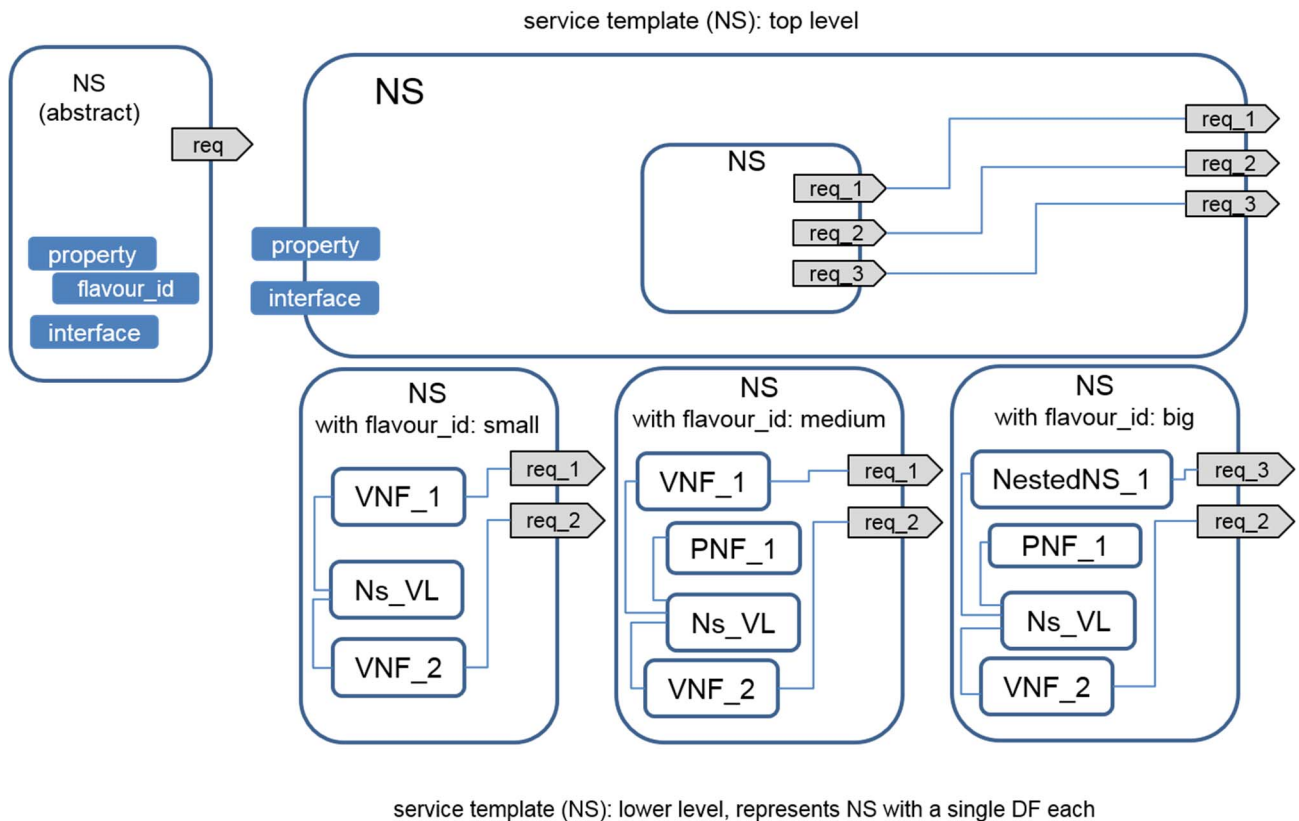

Figure A.11-1: NSD overview with multiple deployment flavour

An NSD contains a TOSCA top-level Service Template as entry point in the NSD file structure and one or more TOSCA low-level Service templates representing the different deployment flavours (see figure A.11-1). The NSD is interpreted by an NFVO. In this example, the templates describe two variants of the NS each corresponding to a deployment flavour: a small and a big one. The small NS consists of two VNFs one NS Virtual link and, the big VNF variant consists of three VNFs and one NS Virtual link.

NSD-top level MyExampleNs.yaml

```

tosca_definitions_version: toska_simple_yaml_1_2

description: my service
imports:
  - etsi_nfv_sol001_nsd_types.yaml
  - MyExampleNs_Type.yaml # contains the NS node type definition
  - MyExampleNs_small.yaml
  - MyExampleNs_big.yaml

topology_template:
  inputs:
    flavour_id:
      type: string
      description: NS deployment flavour selected by the consumer. It is provided in
the SOL005 API

  node_templates:
    myexampleNs:

        additional_parameters:
          MyCompany.datatypes.nfv.NsInstantiateNsAdditionalParameters

```

The NS node template in the **myexample_NS.yaml** file is abstract and is subject to substitution; the lower-level templates in the subsequent sections provide these substitutions. The actual lower-level template is selected based on the node type and a value constraint on the `flavour_id` property.

Each low level service template contains a node template of type `tosca.MyExampleNS` with implementation of the LCM interfaces.

MyExampleNs (small): Lower level, contains 2 VNFs and 1 NS virtual link.

A.12 NSD with nested NS design example

A TOSCA service template representing an NSD may contain a node template of some specific NS node type as one of its constituents. The latter is a nested NS. When the containing NS is deployed, the node template of the nested NS is substituted by the topology template representing the nested NS.

Figure A.12-1 illustrates a network service NS_1 that consists of one VNF (VNF_1), one NsVirtualLink (NS_VL_1) and one nested NS (NS_2).

The nested NS consists of two VNFs (VNF_3 and VNF_4) and one NsVirtualLink (NS_VL_2).

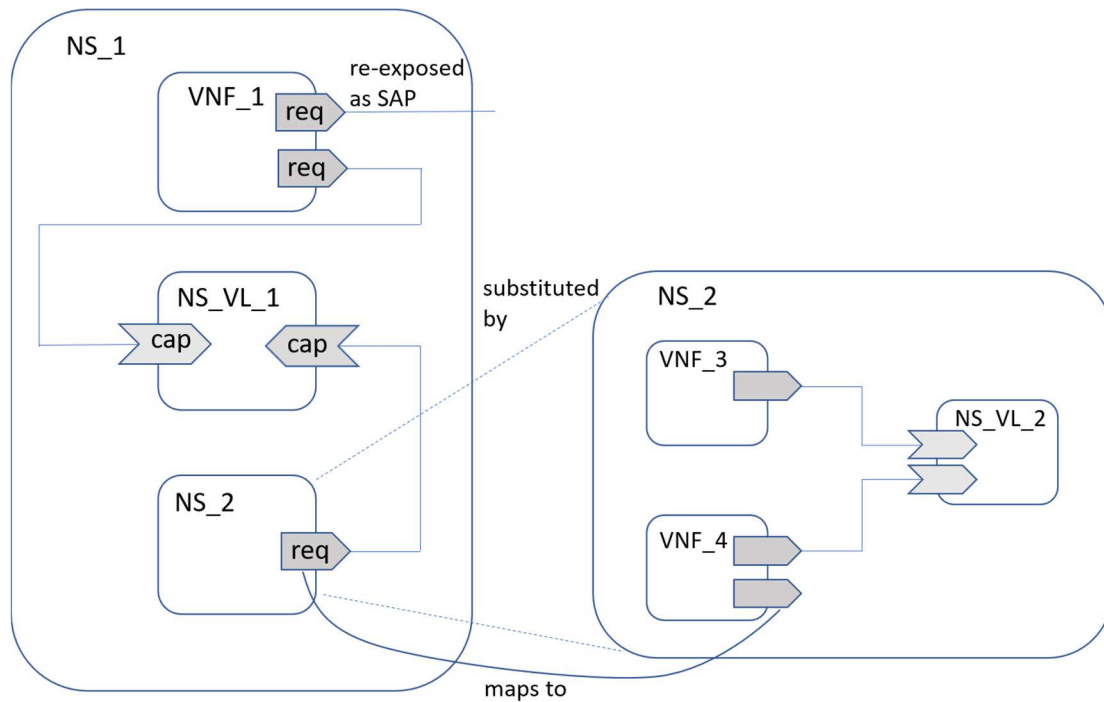

Figure A.12-1: Example of a network service containing a nested network service

The following snippet shows the topology template representing a particular flavour of NS_1.

```
tosca_definitions_version: toska_simple_yaml_1_2
description: myExampleNs with small flavour

A.13 Virtual IP address connection point

Virtual IP address connection points (VipCps) are used to allocate one or multiple IP addresses that are shared by other CP instances, which may be instances of the same or of different VduCp or VnfExtCp nodes.

Load balancing

In the following example two or more instances of a particular VNFC are created. The respective instances of the VduCp, in addition to their default IP address which is assigned according to the 'protocol' property, share a virtual IP address. The multiple instances are created for load sharing purposes.

In this particular example the VduCp is re-exposed as VnfExtCp. Therefore the VipCp is also re-exposed as VnfExtCp.

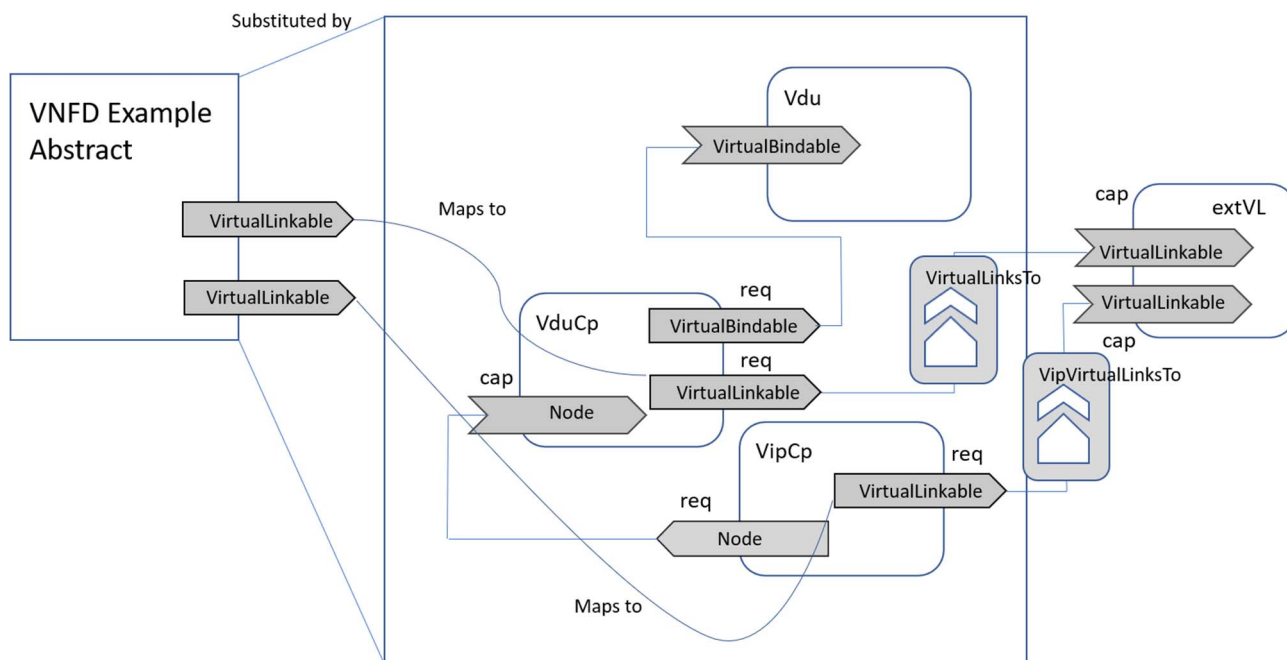

Figure A.13-1: VNFD with a VDU connection point acting as VnfExtCp and sharing a virtual IP address

In this example the VduCp and the VipCp are exposed as VnfExtCps. Thus, the VNF abstract node has two requirements for a VirtualLinkable capability. One of them uses the VirtualLinksTo relationship and the other one uses the VipVirtualLinksTo relationship. Both requirements are considered in the substitution mapping.

The following service template shows the relevant parts of the TOSCA VNFD corresponding to figure A.13-1. For simplicity, a single deployment flavour VNF is assumed.

```

tosca_definitions_version: tosca_simple_yaml_1_1
description: Relational database, simple
imports:
  - etsi_nfv_sol001_vnfd_types.yaml # all of TOSCA VNFD types as defined in ETSI
    GS NFV-SOL 001 for a VNFD

```

```

    layer_protocols: [ ipv4 ]
  description: >

```

Virtual IP connection point. It holds one IP address shared by all instances (between 2 and 5 according to the vdu_profile) of the Vdu-A-Cp node. Floating IP address is not used in the VipCp. Thus, incoming packets are forwarded with unmodified destination address to one of the instances of Vdu-A-Cp. A router external to the VNF with Equal-Cost Multi-Path (ECMP) load balancing functionality is assumed to be properly configured to route the packets accordingly to the available instances applying load balancing, i.e. one packet is only forwarded to one instance.

requirements:

- target: Vdu-A-Cp
- # - virtual_link: # the target node is determined in the NSD

High availability

In the following example, a VNF uses two VNFCs to provide high availability of a service. One of them is the active one receiving IP packets, the other one is in stand-by mode. The VNF logic determines which VNFC is the active and which is the stand-by. The respective VduCp instances, in addition to their default IP address which is assigned according to the 'protocol' property, share a virtual IP address. At any point in time, only one of the VduCp instances, the one belonging to the active VNFC, is bound to the virtual IP address, i.e. only one receives the packets. During the life of the VNF the binding may change, for example in case of failure of the active VNFC, or if determined by the VNF logic. In order to bind the virtual IP address, the active VNFC sends a gratuitous ARP (G-ARP) message with the mapping of the VIP address to its MAC address. A router external to the VNF updates its routing tables when receiving the G-ARP and thereafter routes packets that have the virtual IP address as destination address to the active VNFC.

In this particular example the VduCps are re-exposed as VnfExtCps. Therefore the VipCp is also re-exposed as VnfExtCp.

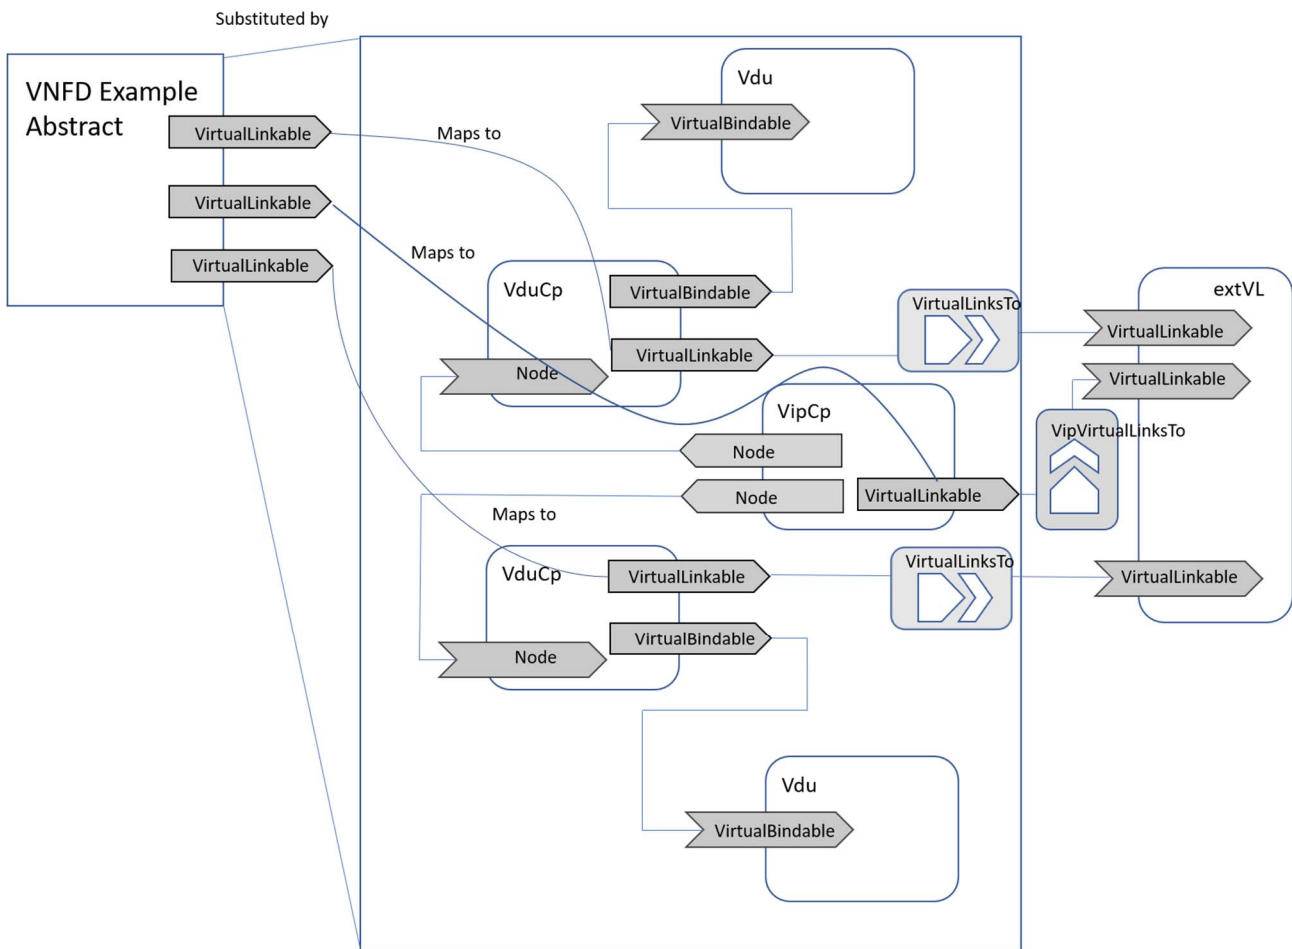

Figure A.13-2: VNFD with two VDU connection points acting as VnfExtCps and sharing a virtual IP address

In this example the two VduCps and the VipCp are exposed as VnfExtCps. Therefore the VNF abstract node has three requirements for a VirtualLinkable capability. Two of them use the VirtualLinksTo relationship and the third one uses the VipVirtualLinksTo relationship. The three of them are considered in the substitution mapping.

The following service template shows the relevant parts of the TOSCA VNFD corresponding to figure A.13-2. For simplicity, a single deployment flavour VNF is assumed.

        address_data:
          - address_type: ip_address
            l3_address_data:
              ip_address_assignment: true
              floating_ip_activated: true
              number_of_ip_address: 1
    trunk_mode: false
    layer_protocols: [ ipv4 ]
    description: >
      Virtual IP connection point. It holds one IP address shared by the instances
      of the Vdu-A-Cp and the Vdu-B-Cp nodes (one instance of each). Floating IP address is
      used. Thus, incoming packets are first NATed to the virtual IP address and then
      forwarded with the virtual IP address as destination address to the instance of Vdu-A-
      Cp or Vdu-B-Cp that currently has the address binding.
  requirements:
    - target: Vdu-A-Cp
    - target: Vdu-B-Cp
    # - virtual_link: # the target node is determined in the NSD

```

In the example above, the VipCp uses a floating IP address. Thus, the incoming packets are expected to have the floating IP as destination address and they are first NATed to the virtual IP address and then forwarded to the instance of the VduCp that currently has the binding to the virtual IP address.

If the VipCp does not use floating IP address, the incoming packets are expected to have the virtual IP address as destination address.

A.14 NSD with VNF Forwarding Graph design example

The following template fragment illustrates a VNF FG data model for a Network Service. The NS consists of VNF_1, VNF_2, VNF_3 and NsVirtualLink_1 as its constituents. VNF_1, VNF_2 and VNF_3 node templates have virtual link requirements pointing to node templates of the type toasca.nodes.nfv.Forwarding defined in clause 7.8.8 which in turn have virtual link requirements pointing to the NS virtual links *or to external virtual links (i.e. transport links beyond the SAPs)* to which these VNFs are attached.

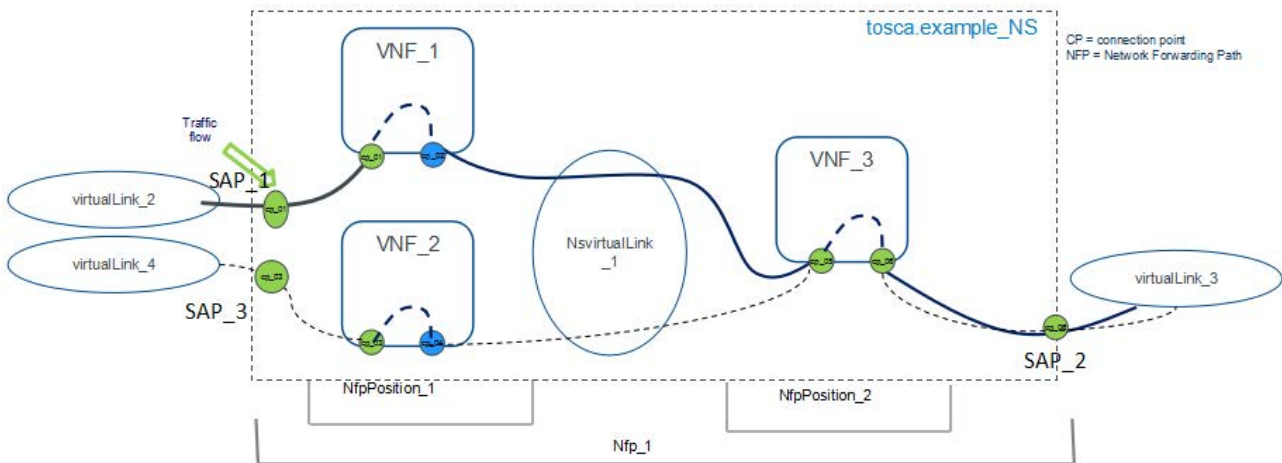

Figure A.14-1: Example Network Forwarding Path

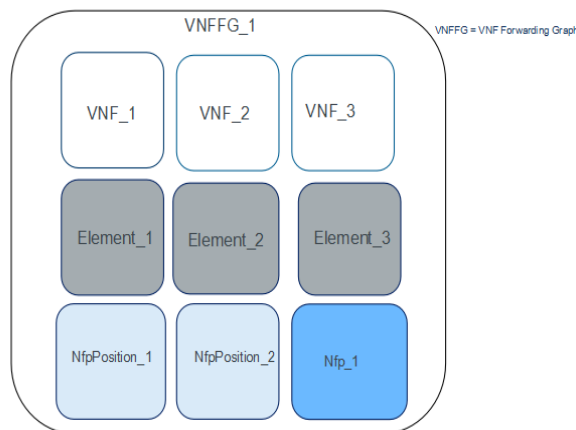

Figure A.14-2: Example VNFFG_1 group with constituent elements

```

Annex B (normative): etsi_nfv_sol001_type definitions

B.1 Purpose

All type definitions specified in clauses 6, 7, 8 and 9 of the present document are gathered in four definition files.

The file names are structured as follows:

- etsi_nfv_sol001_common_types.yaml, for the common type definitions provided in clause 9 which are used by at least two types of deployment templates among those identified in clause 5.1;
- etsi_nfv_sol001_vnfd_types.yaml, for the definitions provided in clause 6 and only used in a VNFD service template design;
- etsi_nfv_sol001_nsd_types.yaml, for the definitions provided in clause 7 and only used in an NSD service template design;
- etsi_nfv_sol001_pnfd_types.yaml, for the definitions provided in clause 8 and only used in a PNFD service template design.

B.2 VNFD type definitions file

The file etsi_nfv_sol001_vnfd_types.yaml contains all type definitions specified in clause 6 of the present document and is contained in archive gs_nfv-sol001v020801p0.zip which accompanies the present document. This file is also available at the following URL:

https://forge.etsi.org/rep/nfv/SOL001/raw/v2.8.1/etsi_nfv_sol001_vnfd_types.yaml

NOTE 1: The file etsi_nfv_sol001_vnfd_types.yaml includes a TOSCA import definition referencing etsi_nfv_sol001_common_types.yaml file. If the later file is included in the VNF package, the import definition can reference the local file using appropriate path in the VNF package.

This file is a TOSCA service template that only contains definitions. The template_version in the metadata section within this template is structured as x.y.z, where x, y and z represent the version of this file and are set respectively to "2", "8" and "1" for this version of the present document. In subsequent versions of the present document, "x", "y" and "z" in the template_version will be incremented only if there are changes in the VNFD type definitions.

A TOSCA service template representing a VNFD complying with the present document shall contain import statement referencing this file, as defined in clause 5.6.1.

NOTE 2: This file may, but need not, be included in the VNF Package.

B.3 NSD type definitions file

The file etsi_nfv_sol001_nsd_types.yaml contains all type definitions specified in clause 7 of the present document and is contained in archive gs_nfv-sol001v020801p0.zip which accompanies the present document. This file is also available at the following URL:

https://forge.etsi.org/rep/nfv/SOL001/raw/v2.8.1/etsi_nfv_sol001_nsd_types.yaml

NOTE 1: The file etsi_nfv_sol001_nsd_types.yaml includes a TOSCA import definition referencing etsi_nfv_sol001_common_types.yaml file. If the later file is included in the NSD file archive, the import definition can reference the local file using appropriate path in the NSD file archive.

This file is a TOSCA service template that only contains definitions. The `template_version` in the metadata section within this template is structured as `x.y.z`, where `x`, `y` and `z` represent the version of this file and are set respectively to "2", "8" and "1" for this version of the present document. In subsequent versions of the present document, "x", "y" and "z" in the `template_version` will be incremented only if there are changes in the NSD type definitions.

A TOSCA service template representing an NSD complying with the present document shall contain import statement referencing this file, as defined in clause 5.6.2.

NOTE 2: This file may, but need not, be included in the NSD file archive.

B.4 PNFD type definitions file

The file `etsi_nfv_sol001_pnfd_types.yaml` contains all type definitions specified in clause 8 of the present document and is contained in archive `gs_nfv-sol001v020801p0.zip` which accompanies the present document. This file is also available at the following URL:

https://forge.etsi.org/rep/nfv/SOL001/raw/v2.8.1/etsi_nfv_sol001_pnfd_types.yaml

NOTE: The file `etsi_nfv_sol001_pnfd_types.yaml` includes a TOSCA import definition referencing `etsi_nfv_sol001_common_types.yaml` file.

This file is a TOSCA service template that only contains definitions. The `template_version` in the metadata section within this template is structured as `x.y.z`, where `x`, `y` and `z` represent the version of this file and are set respectively to "2", "8" and "1" for this version of the present document. In subsequent versions of the present document, "x", "y" and "z" in the `template_version` will be incremented only if there are changes in the PNFD type definitions.

A TOSCA service template representing a PNFD complying with the present document shall contain import statement referencing this file, as defined in clause 5.6.3.

B.5 Common type definitions file

The file `etsi_nfv_sol001_common_types.yaml` contains the type definitions as specified in clause 9 and used by at least two types of deployment templates and is contained in archive `gs_nfv-sol001v020801p0.zip` which accompanies the present document. This file is also available at the following URL:

https://forge.etsi.org/rep/nfv/SOL001/raw/v2.8.1/etsi_nfv_sol001_common_types.yaml

This file is a TOSCA service template that only contains definitions. The `template_version` in the metadata section within this template is structured as `x.y.z`, where `x`, `y` and `z` represent the version of this file and are set respectively to "2", "8" and "1" for this version of the present document. In subsequent versions of the present document, "x", "y" and "z" in the `template_version` will be incremented only if there are changes in the common type definitions.

NOTE: This file may, but need not, be included in the VNF package or NSD file archive.

Annex C (normative): Conformance

C.1 Purpose

The present document specifies a data model for the VNFD, the NSD and the PNFD, by using the grammar defined in the TOSCA Simple Profile in YAML specification [3] or [20]. This annex specifies the requirements to be fulfilled for claiming conformance to the present document.

C.2 NFV TOSCA YAML service template

A VNFD, an NSD or a PNFD conforms to the present document if it complies with all the requirements below:

- 1) A VNFD conformant to the present document shall comply with the requirements in clause 6 of the present document and to the specification of the elements of the TOSCA Simple Profile in YAML specification [3] or [20] it uses, unless otherwise stated in clause 6 of the present document.
- 2) An NSD conformant to the present document shall comply with the requirements in clause 7 of the present document and to the specification of the elements of the TOSCA Simple Profile in YAML specification [3] it uses, unless otherwise stated in clause 7 of the present document.
- 3) A PNFD conformant to the present document shall comply with the requirements in clause 8 of the present document and to the specification of the elements of the TOSCA Simple Profile in YAML specification [3] it uses, unless otherwise stated in clause 8 of the present document.
- 4) When using or referring to the TOSCA normative types listed in table C.2-1, it is valid according to the definitions given in clauses 6, 7, 8 and 9 of the present document and to section 5 of the TOSCA Simple Profile in YAML specification [3].

Table C.2-1: TOSCA normative types used in the present document

Types	VNFD	NSD	PNFD
tosca.datatypes.Root	X	X	X
tosca.artifacts.Deployment.Image	X		
tosca.artifacts.Implementation	X		
tosca.capabilities.Root	X	X	
tosca.capabilities.Node	X	X	X
tosca.relationships.Root	X	X	
tosca.relationships.DependsOn	X	X	X
tosca.interfaces.Root	X	X	
tosca.nodes.Root	X	X	X
tosca.groups.Root	X	X	
tosca.policies.Root	X	X	X
tosca.policies.Placement	X	X	

- 5) A VNFD conformant to the present document shall comply with VNFD TOSCA service template design specified in clause 6.11 of the present document.
- 6) A NSD conformant to the present document shall comply with NSD TOSCA service template design specified in clause 7.11 of the present document.
- 7) A PNFD conformant to the present document shall comply with PNFD TOSCA service template design specified in clause 8.11 of the present document.
- 8) A VNFD and NSD conformant to the present document shall comply with rules for Type extension defined in clause 5.7 of the present document.

C.3 NFV TOSCA processor

A processor or program conforms to the present document as NFV TOSCA processor for VNFD, NFV TOSCA processor for NSD or NFV TOSCA processor for PNFD if it complies with all the requirements below:

- 1) It can parse and recognize the elements of any VNFD, NSD or PNFD that conform to the present document, and shall generate errors for those documents that fail to conform to the present document.
- 2) It shall comply with all requirements and implement the semantics associated with the definitions specified in clauses 6, 7, 8 and 9 of the present document.
- 3) It shall resolve the import definitions as described in clause 5.6 of the present document.

Annex D (informative): Mapping between properties of TOSCA types and API attributes

D.1 Introduction

This annex provides the mapping between properties of TOSCA types defined in the present document and defined in the following API specifications: ETSI GS NFV-SOL 002 [i.4], ETSI GS NFV-SOL 003 [i.9], and ETSI GS NFV-SOL 005 [i.10].

NOTE: See also annex A "Mapping operations to protocol elements" of ETSI GS NFV-SOL 002 [i.4], ETSI GS NFV-SOL 003 [i.9] and ETSI GS NFV-SOL 005 [i.10] for each operation.

D.2 VNFD-related constructs

Table D.2-1 provides the mapping between the properties of TOSCA types related to the VNFD and API attributes, which include: resource or notification data type (and referenced structured data type when available), attribute name and type in the resource or notification data type, and the interface operation in which the data type is used.

NOTE: In the "Data model" column of the table, an arrow "->" indicates the navigation through the resource, notification and referenced structured data types.

Table D.2-1: Mapping of API attributes and TOSCA constructs

ETSI GS NFV-SOL 001	SOL APIs		
Type and Property or entity name	Type and attribute name	Data model	Operation (see note 1)
tosca.nodes.nfv.VNF -> descriptor_id	(Identifier) vnfdId	VnfInstance	Create VNF Identifier (see SOL002 and SOL003) Query VNF (see SOL002 and SOL003)
		VnfInfoModificationRequest	Modify VNF Information (see SOL002 and SOL003)
		VnfInfoModifications	
		VnfLcmOpOcc -> VnfInfoModifications	Get Operation Status (see SOL002 and SOL003)
		VnfLcmOperationOccurrenceNoti fication -> VnfInfoModifications	Notify about VNF LCM (see SOL002 and SOL003)
		VnfPkgInfo	Create VNF package (see SOL005) Query/Read VNF Package Info (see SOL003 and SOL005)

NOTE 1: The entry "SOL002" in the "Operation" column refers to ETSI GS NFV-SOL 002 [i.4], "SOL003" refers to ETSI GS NFV-SOL 003 [i.9] and "SOL005" refers to ETSI GS NFV-SOL 005 [i.10].			
NOTE 2: This is an empty base type to be extended to a VNF specific type per LCM operation. The extended VNF specific and LCM operation specific type is the one that actually maps to the additionalParams in the API.			
NOTE 3: Only when <code>VduCp</code> is re-exposed as <code>VnfExtCp</code> .			
NOTE 4: Additional mappings corresponding to input parameter sets of VNF LCM operations in UpdateNS requests may be added in future versions of the present document.			

D.3 NSD-related constructs

Table D.3-1 provides the mapping between the properties of TOSCA types related to the NSD and API attributes, which include: resource or notification data type (and referenced structured data type when available), attribute name and type in the resource or notification data type, and the interface operation in which the data type is used.

NOTE: In the "Data model" column of the table, an arrow "->" indicates the navigation through the resource, notification and referenced structured data types.

Table D.3-1: Mapping of API attributes and TOSCA constructs

Annex E (informative): TOSCA Imperative workflows

E.1 Purpose

This annex specifies TOSCA Imperative workflows for the NSD and the VNFD by using the grammar defined in TOSCA Simple Profile-YAML-v1.3 [20].

E.2 TOSCA Imperative workflows for the NSD

E.2.1 Introduction

TOSCA Imperative workflows based on TOSCA-Simple-Profile-YAML-v1.3 [20] may be used by the NFVO to fulfil the NS LCM operations described in ETSI GS NFV-IFA 013 [i.8]. TOSCA Imperative workflows provide an additional method for implementation of LCM operations in the Nslcm interface defined in clause 7.7.1.1 of the present document.

NOTE: Even if TOSCA Imperative workflows is described in the NSD, the NFVO will still process the NSD with Nslcm operations as defined in clause 7.7.1.1. Since this is an additional method for implementation of NS LCM operations, execution of workflows instead of NS LCM operations is optional and up to the NFVO implementation.

TOSCA Imperative workflows defined in the NSD describe procedures for the NFVO to manage the lifecycle of network services.

Workflows are comprised of steps associated with the NS LCM operations and additional steps that are preamble and postamble to the execution of the former steps. The name of the preamble and postamble steps is constructed according to the following pattern:

<NS_LCM_base_operation_workflow_name>_start_<step_name> for preamble steps

<NS_LCM_base_operation_workflow_name>_end_<step_name> for postamble steps

Preamble steps are specified before the execution of workflow steps. Postamble steps are specified after the execution of workflow steps.

External and internal stimuli described in clause 7.7.1.4 of the present document, are mapped to workflows as below:

- External stimuli are mapped to TOSCA Imperative workflows, i.e.
<NS_LCM_base_operation_workflow_name>
- Internal stimuli are mapped to preamble and postamble steps of the workflow

E.2.2 Definition of an NS workflow

The syntax of TOSCA Imperative workflows for LCM operations on the NS has the following definition:

```
workflows:
  description: TOSCA Imperative workflows corresponding to NS LCM operations
  defined in ETSI GS NFV-IFA 013.
  instantiate:
    description: This workflow is invoked upon receipt of an Instantiate NS
    request
    # inputs:
    steps:
      instantiate_start_<step_name>: # Invoked before steps for instantiate LCM
    operation
```

```

    # steps for instantiate workflow
    instantiate_end_<step_name> : # Invoked after steps for instantiate LCM
operation

    terminate:
    description: This workflow is invoked upon receipt of Terminate NS request
    # inputs:
    steps:
    terminate_start_<step_name> : # Invoked before steps for terminate LCM
operation
    # steps for terminate workflow
    terminate_end_<step_name>: # Invoked after steps for terminate LCM operation

```

E.2.3 Examples

The following example template fragment, based on clause A.8 of the present document, illustrates the use of TOSCA Imperative workflows for NS LCM operations.

When the NFVO executes TOSCA Imperative workflows in the NSD, it uses standard APIs for LCM operations defined in the Or-Vnfm interface and delegates the task to VNFM; The VNFM in turn executes corresponding TOSCA Operations on the VNF, as explained in clause 6.7.1 of the present document.

NOTE 1: The NSD consumer makes available all parameters from the message invoking the NS base LCM operation as inputs to the corresponding TOSCA workflows. The additional parameters for NS base LCM operations are defined as workflow inputs.

NOTE 2: It is out of scope of the present document to specify mapping of SOL003/SOL005 API execution results with the success and failure of workflows.

```

  . . .

  terminate_VNF_2: # Step: Terminate VNF_2
    target: VNF_2
    activities:
      call_operation: toasca.interfaces.nfv.Vnflcm.terminate
  # invoking Vnflcm.terminate operation enables NFVO to use internal implementation of
  #Vnflcm.terminate operation which results in an ETSI GS NFV-SOL 003 API call towards
  #the VNFM to call VnfTerminate operation. This enables VNFM to execute LCM operations
  #to terminate VNF_2
    on_success:
      terminate_end_step_1
      . . .
  # postamble steps for terminate operation. These correspond to closing steps
  #internal to the NFVO after terminate operation.

  terminate_end_step_1:
    . . .

```

NOTE 3: As the `on_success` keyword is not used between steps inside the workflow for NS LCM base operation, the order of execution is decided by the NFVO.

NOTE 4: As the `on_failure` keyword is not present inside the workflow for NS LCM base operation, the error handling is decided by the NFVO.

Annex F (informative): Non-Backward Compatible Changes in the present document

F.1 Introduction

This annex provides the list of non-backward compatible changes during the development of the present document.

F.2 Non-Backward Compatible changes between version 2.7.1 and 2.6.1

Table F.2-1 provides a list of non-backward compatible changes between version 2.7.1 and version 2.6.1 of the present document.

Table F.2-1: Non-backward compatible changes

No.	Description	Clause
1	nfvi_constraints type changed from list of string to map of string.	6.8.3
2	The definition of SecurityGroupRule is changed in version 2.7.1, a new policy type tosca.policies.nfv.Abstract.SecurityGroupRule is introduced in the definition, which SecurityGroupRule policy is derived from.	6.10.13
3	PlacementGroup used to be applied for both VNFD and NSD in version 2.6.1, but in version 2.7.1, it is only applied to VNFD.	6.9
4	AffinityRule, AntiAffinityRule used to be applied for both VNFD, NSD in version 2.6.1, but in version 2.7.1, it is only applied to VNFD.	6.10.10
5	SecurityGroupRule policy type used to be applied for VNFD, PNFD and NSD in version 2.6.1, but in version 2.7.1, it is only applied to VNFD.	6.10.13
6	boot_order type changed from list of string to Boolean.	6.8.3
7	boot_data type changed from string to BootData data type	6.8.3

Annex G (informative): Change History

Date	Version	Information about changes
2016.05	0.0.1	Implemented NFVSOL(16)000005r1_GS_NFV_SOL001_ToC
2016.07	0.02	Implemented NFVSOL(16)000026r1, NFVSOL(16)000027r1, NFVSOL(16)000028r2
2017.09	0.1.0	Implemented NFVSOL(17)000539r3, NFVSOL(17)000540r3, NFVSOL(17)000542r2, NFVSOL(17)000544r1
2017.10	0.2.0	Implemented NFVSOL(17)000543r3, NFVSOL(17)000566, NFVSOL(17)000567r1, NFVSOL(17)000568r1, NFVSOL(17)000569 Editorial modification for clause numbering and format.
2017.11	0.3.0	Clean-up done by <i>editHelp</i> Implemented NFVSOL(17)000545r4, NFVSOL(17)000559r2, NFVSOL(17)000560r2, NFVSOL(17)000570r1, NFVSOL(17)000575r1, NFVSOL(17)000616r1, NFVSOL(17)000641
2017.12	0.4.0	Implemented NFVSOL(17)000642r1, NFVSOL(17)000675r1, NFVSOL(17)000756
2018.01	0.5.0	Implemented NFVSOL(17)000621r6, NFVSOL(17)000676r3, NFVSOL(17)000677r2, NFVSOL(17)000736r1, NFVSOL(18)000004r2
2018.03	0.6.0	Implemented NFVSOL(18)000049, NFVSOL(18)000025r1, NFVSOL(18)00048R1, NFVSOL(18)00040, NFVSOL(18)00023r2, NFVSOL(18)00024r2, NFVSOL(18)00029r1, NFVSOL(18)00063r5, NFVSOL(18)000077, NFVSOL(18)000046r2, NFVSOL(18)000074r2, NFVSOL(17)0000611r5, NFVSOL(18)000041r1, NFVSOL(18)000038r3, NFVSOL(18)000028, NFVSOL(18)000044r2, NFVSOL(18)000055r2, NFVSOL(18)000045r1
2018.03	0.6.1	Implemented NFVSOL(18)000052r1, NFVSOL(18)000094r5, NFVSOL(18)000043r3, NFVSOL(18)0000112r1, NFVSOL(18)0000117r2, NFVSOL(18)0000124r1, NFVSOL(18)0000129r1, NFVSOL(18)000042r2, NFVSOL(18)0000115r2
2018.04	0.6.2	Implemented NFVSOL(18)000113r2, NFVSOL(18)000119r2, NFVSOL(18)000121, NFVSOL(18)000135, NFVSOL(18)000116r1, NFVSOL(18)000157, NFVSOL(18)000158r1
2018.05	0.6.3	Implemented NFVSOL(18)000168, NFVSOL(18)000169r2, NFVSOL(18)000173, NFVSOL(18)000174r2
2018.05	0.7.0	Implemented NFVSOL(18)000156r7, NFVSOL(18)000142r3, NFVSOL(18)000147, NFVSOL(18)000193r2, NFVSOL(18)000201, NFVSOL(18)000202, NFVSOL(18)000203r2, NFVSOL(18)000205r1, NFVSOL(18)000160r1, NFVSOL(18)000199r2, NFVSOL(18)000200r3, NFVSOL(18)000192r1, NFVSOL(18)000194r2, NFVSOL(18)000231r1, NFVSOL(18)000223r1, NFVSOL(18)000183r2
2018.06	0.8.0	Implemented NFVSOL(18)000287, NFVSOL(18)00012r11, NFVSOL(18)000197r2, NFVSOL(18)000198r3, NFVSOL(18)000286, NFVSOL(18)000292, NFVSOL(18)000294r1, NFVSOL(18)000295r1, NFVSOL(18)000301r2, NFVSOL(18)000302r2, NFVSOL(18)000240r1, NFVSOL(18)000253r3, NFVSOL(18)000254r2, NFVSOL(18)000256r2
2018.06	0.9.0	Implemented NFVSOL(18)000288r2 Adding etsi_nfv_sol001_vnfd_0_9_0_type.yaml and SOL001 Graphics v0_9_0.pptx in the draft GS zip package Editorial changes for all the TOSCA type definitions.
2018.08	0.10.0	Implemented NFVSOL(18)000331r4, NFVSOL(18)000335r2, NFVSOL(18)000351r1, NFVSOL(18)000374r1, NFVSOL(18)000376, NFVSOL(18)000382, NFVSOL(18)000395r1, NFVSOL(18)000402r2, NFVSOL(18)000404, NFVSOL(18)000405r2, NFVSOL(18)000406r1, NFVSOL(18)000408r2, NFVSOL(18)000409r1, NFVSOL(18)000411r1, NFVSOL(18)000413, NFVSOL(18)000416r2, NFVSOL(18)000422r4, NFVSOL(18)000423r4, NFVSOL(18)000424r2, NFVSOL(18)000425r2, NFVSOL(18)000430r1, NFVSOL(18)000336r4, NFVSOL(18)000380, NFVSOL(18)000387r2, NFVSOL(18)000394r1, NFVSOL(18)000410r2, NFVSOL(18)000447r3, NFVSOL(18)000427, NFVSOL(18)000403r3, NFVSOL(18)000420r4, NFVSOL(18)000393r1, NFVSOL(18)000415, NFVSOL(18)000398r1, NFVSOL(18)000399r3, NFVSOL(18)000414r2, NFVSOL(18)000379r3, NFVSOL(18)000428r5, NFVSOL(18)000429r4, NFVSOL(18)000465r1, NFVSOL(18)000479, NFVSOL(18)000375r4, NFVSOL(18)000488r2, NFVSOL(18)000492r1

Date	Version	Information about changes
2018.09	0.11.0	Implemented NFVSOL(18)000486r7, NFVSOL(18)000495r1, NFVSOL(18)000497r3, NFVSOL(18)000498, NFVSOL(18)000500r3, NFVSOL(18)000503r1, NFVSOL(18)000504r1, NFVSOL(18)000505r1, NFVSOL(18)000508, NFVSOL(18)000514r2, NFVSOL(18)000515r1, NFVSOL(18)000516r1, NFVSOL(18)000524r1, NFVSOL(18)000529r2, NFVSOL(18)000530r1, NFVSOL(18)000536r1, NFVSOL(18)000538r1, NFVSOL(18)000541r3, NFVSOL(18)000544r1, NFVSOL(18)000545r1
2018.10	0.12.0	Implemented NFVSOL(18)000507r3, NFVSOL(18)000621r4, NFVSOL(18)000547r1, NFVSOL(18)000567r1, NFVSOL(18)000574, NFVSOL(18)000579, NFVSOL(18)000590r1
2018.11	0.13.0	Implemented NFVSOL(18)000563r5, NFVSOL(18)000575r5, NFVSOL(18)000586r2, NFVSOL(18)000587r1, NFVSOL(18)000589r2, NFVSOL(18)000591, NFVSOL(18)000592, NFVSOL(18)000604r2, NFVSOL(18)000606r1, NFVSOL(18)000607r5, NFVSOL(18)000608, NFVSOL(18)000609, NFVSOL(18)000612, NFVSOL(18)000614r1, NFVSOL(18)000615, NFVSOL(18)000616r2, NFVSOL(18)000617r3, NFVSOL(18)000619r3, NFVSOL(18)000620r5, NFVSOL(18)000628r2, NFVSOL(18)000629r1, NFVSOL(18)000630, NFVSOL(18)000631r1, NFVSOL(18)000632, NFVSOL(18)000634, NFVSOL(18)000635, NFVSOL(18)000636r3, NFVSOL(18)000637, NFVSOL(18)000655r2, NFVSOL(18)000658r3, NFVSOL(18)000659, NFVSOL(18)000660, NFVSOL(18)000665r1, NFVSOL(18)000666, NFVSOL(18)000678r1, NFVSOL(18)000679, NFVSOL(18)000682, NFVSOL(18)000684r1, NFVSOL(18)000687
2019.03	2.5.2	Implemented NFVSOL(19)000063r4, NFVSOL(19)000068r1, NFVSOL(19)000069r2, NFVSOL(19)000070r1, NFVSOL(19)00080, NFVSOL(19)000107r1, NFVSOL(19)000120r1, NFVSOL(19)000121, NFVSOL(19)00039r5, NFVSOL(19)00087r2, NFVSOL(19)00067r5, NFVSOL(19)00077, NFVSOL(19)00082r3, NFVSOL(19)00085, NFVSOL(19)00086, NFVSOL(19)000106r1
2019.03	2.5.3	Implemented NFVSOL(19)000084r4, NFVSOL(19)0000101r2, NFVSOL(19)0000165, NFVSOL(19)0000166, NFVSOL(19)0000167r1, NFVSOL(19)0000170r4, NFVSOL(19)0000173, NFVSOL(19)0000163, NFVSOL(19)0000119
2019.03.22	2.5.4	Editorial modification made by ETSI Secretariat allowing to structure the SOL repository on ETSI Forge in a future proof and maintainable way: <ul style="list-style-type: none"> • Forge structure updated: "v2.6.1" tag created. • Yaml filenames updated: version numbers removed from filenames (still included in file header). • Import statements updated: version number removed from imported filenames. • Draft updated: <ul style="list-style-type: none"> – Updated all references to yaml files – Updated the forge URLs – In B.1: removed the sentence explaining the meaning of x_y_z_ in the filename structure
2019.04.23	2.5.5	2 comments were raised during the Remote Consensus approval: both requesting to implement the WG SOL approved Change Request in NFVSOL(19)000229r3 onto the final SOL001 draft (see these 2 comments in the RC report). The present version implements NFVSOL(19)000229r3: adding machine readable meta info inside the yaml file indicating the SOL001 release version to which they apply + other editorial changes.
2019.05	2.6.2	Implemented NFVSOL(19)000162r1, NFVSOL(19)000194r2, NFVSOL(19)000222r2, NFVSOL(19)000241r2, NFVSOL(19)000242r2
2019.06	2.6.3	Implemented NFVSOL(19)000160r9, NFVSOL(19)000239r3, NFVSOL(19)000248, NFVSOL(19)000262r2, NFVSOL(19)000263r3, NFVSOL(19)000268r3, NFVSOL(19)000269, NFVSOL(19)000270r3, NFVSOL(19)000303r1, NFVSOL(19)000307, NFVSOL(19)000279, NFVSOL(19)000280, NFVSOL(19)000296r3, NFVSOL(19)000301r1, NFVSOL(19)000305r1, NFVSOL(19)000338, NFVSOL(19)000340, NFVSOL(19)000342r1, NFVSOL(19)000344r2, NFVSOL(19)000345r4, NFVSOL(19)000266r7
2019.08	2.6.4	Implemented NFVSOL(19)000325r8, NFVSOL(19)000346r6, NFVSOL(19)000347r2, NFVSOL(19)000380r1, NFVSOL(19)000383r1, NFVSOL(19)000384r1, NFVSOL(19)000385, NFVSOL(19)000389r1, NFVSOL(19)000428r2, NFVSOL(19)000449
2019.09	2.6.5	Implemented NFVSOL(19)000386r8, NFVSOL(19)000408r4, NFVSOL(19)000451r8, NFVSOL(19)000559

Date	Version	Information about changes
2019.11	2.6.6	Implemented NFVSOL(19)000727r1_SOL001Ed271_Miscellaneous_corrections, NFVSOL(19)000642r1_SOL001ed271_Annex_Mapping_table_for_SOL_API_NSD_relat ed_cons, NFVSOL(19)000645r3_SOL001ed271_NBWC_issue_list_annex, NFVSOL(19)000700r1_SOL001ed271_updating_mapping_table_in_A_9, NFVSOL(19)000577r2_SOL001Ed271_-_Standards_Configurable_Properties, NFVSOL(19)000593_SOL001ed271_adding_introduction_in_clasue_9_1, NFVSOL(19)000595_SOL001ed271_resolving_requirement_occurance_issue, NFVSOL(19)000597r3_SOL001ed271_deployment_flavour_related_CSAR_design_for_ NSD, NFVSOL(19)000598r2_SOL001ed271_TOSCA_Imperative_workflows_NSD_Editor_s_ Notes, NFVSOL(19)000599r2_SOL001ed271_TOSCA_Imperative_workflows_Example_Editor s_Notes, NFVSOL(19)000607r2_SOL001ed271_VNFFG_clause_6_8_2_6_Editor_s_note_handli ng, NFVSOL(19)000608r2_SOL001ed271_VNFFG_clause_7_8_2_6_Editor_s_note_handli ng, NFVSOL(19)000609r2_SOL001ed271_VNFFG_clause_7_8_5_1_Editor_s_notes_handl ing, NFVSOL(19)000610_SOL001ed271_VNFFG_clause_7_8_6_1_Editor_s_note_handling , NFVSOL(19)000611r2_SOL001ed271_adding_TOSCA-Simple-Profile-yaml- v1_3_reference, NFVSOL(19)000616_SOL001ed271_ConnectivityType, NFVSOL(19)000617r3_SOL001ed271_nfviConstraint, NFVSOL(19)000633_SOL001ed271_VnfIndicators_editor_s_notes_resolution, NFVSOL(19)000636r2_SOL001ed271_NS_workflow_defintion_update, NFVSOL(19)000702_SOL001ed271_adding_reference_for_SwImageData, NFVSOL(19)000703r1_SOL001ed271_forwarding_behaviour_input_parameters, NFVSOL(19)000704r1_SOL001ed271_correction_on_NfpPositionElement_definition, NFVSOL(19)000705r1_SOL001ed271_correction_on_descriptor_id, NFVSOL(19)000741r1_SOL001ed271_NfpPositionElement_node_type_improvement, NFVSOL(19)000596r3_SOL001ed271_deployment_flavour_related_CSAR_design_for_ VNFD, NFVSOL(19)000725r2_SOL001ed271_vnfd_common_yaml_file_for_v1_3, NFVSOL(19)000744r2_SOL001ed271_Clause_7_1_Introduction_improvement, NFVSOL(19)000566r9_SOL001ed271_adding_boot_data_type, NFVSOL(19)000674r1_SOL001Ed271_Monitoring_Parameters_- Aligment_with_IFA027
2019.11	2.6.7	Implemented NFVSOL(19)000780r3_SOL001ed271__VnfIndicator_id_Issue_1, NFVSOL(19)000784r1_SOL001ed271_solving_remaining_editor_s_notes, NFVSOL(19)000785r1_SOL001ed271_solving_remaining_monitoring_issues, NFVSOL(19)000789_SOL001ed271_adding_boot_data_in_NBWC_list_table, NFVSOL(19)000719r12_SOL001ed271_forwarding_capability_for_VNF_node_type
2020.04	2.7.2	Implemented NFVSOL(20)000238r1_SOL001ed281_adding_NS_DF_design_principle_in_annex, NFVSOL(20)000268r2_SOL001ed281_VNF_node_type_definitions rapporteur changes: editorial, changing "will" to "with" in annex C.2 and C.3.
2020.05	2.7.3	Implemented NFVSOL(20)000243_SOL001ed281_release_2_mirror_updating_annex_C, NFVSOL(20)000263_SOL001ed281_Rel- 2_mirror_VNF_specific_datatypes_naming_rules, NFVSOL(20)000326_SOL001ed281_corrections_of_specific_node_tpye, NFVSOL(20)000334_SOL001ed281_Rel-2_mirror_VNF_specific_types_naming_rules, NFVSOL(20)000375r2_SOL001ed281_PNFD_geographic_coordinates_support, NFVSOL(20)000377r1_SOL001ed281_add_VNF_related_type_names_in_clause_6, NFVSOL(20)000379_SOL001ed281_add_NS_related_type_names_in_clause_7, NFVSOL(20)000381_SOL001ed281_clarification_of_using_VnfMonitoringParameter, NFVSOL(20)000383_SOL001ed281_clarification_on_ip_address_type, NFVSOL(20)000385r1_SOL001ed281_clarification_on_VirtualLinkable_capability, NFVSOL(20)000193r7_SOL001ed281_example_corrections
2020.06	2.7.4	Implemented NFVSOL(20)000493_SOL001ed281_NS_specific_node_type_file, NFVSOL(20)000516r1_SOL001ed281_Fixing_optional_properties_with_defaults, NFVSOL(20)000539_SOL001ed281_Rel-2_mirror_of_267_Ignoring_imported_topology
