Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (https://ipr.etsi.org/).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECTTM, **PLUGTESTS**TM, **UMTS**TM and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP**TM and **LTE**TM are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M**TM logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**[®] and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under https://webapp.etsi.org/key/queryform.asp.

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

In the present document, modal verbs have the following meanings:

shall indicates a mandatory requirement to do somethingshall not indicates an interdiction (prohibition) to do something

The constructions "shall" and "shall not" are confined to the context of normative provisions, and do not appear in Technical Reports.

The constructions "must" and "must not" are not used as substitutes for "shall" and "shall not". Their use is avoided insofar as possible, and they are not used in a normative context except in a direct citation from an external, referenced, non-3GPP document, or so as to maintain continuity of style when extending or modifying the provisions of such a referenced document.

should indicates a recommendation to do something

should not indicates a recommendation not to do something

may indicates permission to do something

need not indicates permission not to do something

The construction "may not" is ambiguous and is not used in normative elements. The unambiguous constructions "might not" or "shall not" are used instead, depending upon the meaning intended.

can indicates that something is possiblecannot indicates that something is impossible

The constructions "can" and "cannot" are not substitutes for "may" and "need not".

will indicates that something is certain or expected to happen as a result of action taken by an agency

the behaviour of which is outside the scope of the present document

will not indicates that something is certain or expected not to happen as a result of action taken by an

agency the behaviour of which is outside the scope of the present document

might indicates a likelihood that something will happen as a result of action taken by some agency the

behaviour of which is outside the scope of the present document

might not indicates a likelihood that something will not happen as a result of action taken by some agency

the behaviour of which is outside the scope of the present document

In addition:

is (or any other verb in the indicative mood) indicates a statement of fact

is not (or any other negative verb in the indicative mood) indicates a statement of fact

The constructions "is" and "is not" do not indicate requirements.

1 Scope

The present document specifies the Artificial Intelligence / Machine Learning (AI/ML) management capabilities and services for 5GS where AI/ML is used, including management and orchestration (e.g. MDA, see 3GPP TS 28.104 [2]) and 5G networks (e.g. NWDAF, see 3GPP TS 23.288 [3]).

The present document also describes the functionality and service framework for AI/ML management.

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions of terms, symbols and abbreviations

3.1 Terms

For the purposes of the present document, the terms given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

ML entity: an entity that is either an ML model or contains an ML model and ML model related metadata, it can be managed as a single composite entity.

NOTE 1: Metadata may include e.g. the applicable runtime context for the ML model.

ML model: mathematical algorithm that can be "trained" by data and human expert input as examples to replicate a decision an expert would make when provided that same information.

NOTE 2: The ML models are proprietary and not in scope for standardization.

ML model training: capabilities of an ML training function to take data, run it through an ML model, derive the associated loss and adjust the parameterization of that ML model based on the computed loss.

ML training: capabilities and associated end-to-end processes to enable an ML training function to perform ML model training (as defined above).

NOTE 3: ML training capabilities may include interaction with other parties to collect and format the data required for ML model training.

ML training function: a function with ML training capabilities.

AI/ML inference function: a function that employs an ML model to conduct inference.

3.2 Symbols

Void.

3.3 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and TS 28.533 [15]. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1] and TS 28.533 [15].

AI Artificial Intelligence ML Machine Learning

4 Concepts and overview

4.1 Overview

The AI/ML techniques and relevant applications are being increasingly adopted by the wider industries and proved to be successful. These are now being applied to telecommunication industry including mobile networks.

Although AI/ML techniques in general are quite mature nowadays, some of the relevant aspects of the technology are still evolving while new complementary techniques are frequently emerging.

The AI/ML techniques can be generally characterized from different perspectives including the followings:

- Learning methods

The learning methods include supervised learning, semi-supervised learning, unsupervised learning and reinforcement learning. Each learning method fits one or more specific category of inference (e.g. prediction), and requires specific type of training data. A brief comparison of these learning methods is provided in table 4.1-1.

Table 4.1-1: Comparison of Learning methods

	Supervised learning	Semi-supervised learning	Unsupervised learning	Reinforcement learning
Category of inference	Regression	Regression	Association,	Reward-based
	(numeric),	(numeric),	Clustering	behaviour
	classification	classification	_	
Type of training data	Labelled data (Note)	Labelled data	Unlabelled data	Not pre-defined
		(Note), and		
		unlabelled data		
NOTE: The labelled data refers to a set of training or testing data that have been assigned with one or more labels in order to add context and meaning				

- Learning complexity:

- As per the learning complexity, there are Machine Learning (i.e. basic learning) and Deep Learning.

- Learning architecture

- Based on the topology and location where the learning tasks take place, the AI/ML can be categorized to centralized learning, distributed learning and federated learning.

- Learning continuity

From learning continuity perspective, the AI/ML can be offline learning or continual learning.

Artificial Intelligence/Machine Learning (AI/ML) capabilities are used in various domains in 5GS, including management and orchestration (e.g. MDA, see 3GPP TS 28.104 [2]) and 5G networks (e.g. NWDAF, see 3GPP TS 23.288 [3]).

The AI/ML-inference function in the 5GS uses the ML model for inference.

Each AI/ML technique, depending on the adopted specific characteristics as mentioned above, may be suitable for supporting certain type/category of use case(s) in 5GS.

To enable and facilitate the AI/ML capabilities with the suitable AI/ML techniques in 5GS, the ML model and AI/ML inference function need to be managed.

The present document specifies the AI/ML management related capabilities and services, which include the followings:

ML training.

4A AI/ML management functionality and service framework

4A.1 Functionality and service framework for ML training

An ML training Function playing the role of ML training MnS producer, may consume various data for ML training purpose.

As illustrated in Figure 4A.1-1 the ML training capability is provided via ML training MnS in the context of SBMA to the authorized consumer(s) by ML training MnS producer.

Figure 4A.1-1: Functional overview and service framework for ML training

The internal business logic of ML training leverages the current and historical relevant data, including those listed below to monitor the networks and/or services where relevant to the ML model, prepare the data, trigger and conduct the training:

- Performance Measurements (PM) as per 3GPP TS 28.552 [4], 3GPP TS 32.425 [5] and Key Performance Indicators (KPIs) as per 3GPP TS 28.554 [6].
- Trace/MDT/RLF/RCEF data, as per 3GPP TS 32.422 [7].
- QoE and service experience data as per 3GPP TS 28.405 [9].
- Analytics data offered by NWDAF as per 3GPP TS 23.288 [3].
- Alarm information and notifications as per 3GPP TS 28.532 [11].
- CM information and notifications.
- MDA reports from MDA MnS producers as per 3GPP TS 28.104 [2].
- Management data from non-3GPP systems.
- Other data that can be used for training.

5 Void

6 AI/ML management use cases and requirements

6.1 General

The use cases and requirements for AI/ML management are specified in the following clauses.

6.2 ML training

6.2.1 Description

In operational environment before the ML entity is deployed to conduct inference, the ML model associated with the ML entity needs to be trained (e.g. by ML training function which may be a separate or an external entity to the AI/ML inference function).

NOTE: In the present document, ML entity training refers to ML model training associated with an ML entity.

The ML Entity is trained by the ML training MnS producer, and the training can be triggered by request(s) from one or more ML training MnS consumer(s), or initiated by the ML training MnS producer (e.g. as result of model evaluation).

6.2.2 Use cases

6.2.2.1 ML training requested by consumer

The ML training capabilities are provided by an ML training MnS producer to one or more consumer(s).

Figure 6.2.2.1-1: ML training requested by ML training MnS consumer

The ML training may be triggered by the request(s) from one or more ML training MnS consumer(s). The consumer may be for example a network function, a management function, an operator, or another functional differentiation To trigger an ML training, the ML training MnS consumer requests the ML training MnS producer to train the ML model. In the ML training request, the consumer should specify the ML entity capability name which indicates the function or purpose of the ML entity, e.g. CoverageProblemAnalysis. The ML training MnS producer can perform the training according to the designated capability name. The consumer may provide the data source(s) that contain(s) the training data which are considered as inputs candidates for training. To obtain the valid training outcomes, consumers may also designate their requirements for model performance (e.g. accuracy, etc) in the training request.

The ML training MnS producer provides a response to the consumer indicating whether the request was accepted.

If the request is accepted, the MLT MnS producer decides when to start the ML training with consideration of the request(s) from the consumer(s). Once the training is decided, the producer performs the followings:

- selects the training data, with consideration of the consumer provided candidate training data. Since the training data directly influences the algorithm and performance of the trained ML Entity, the ML training MnS producer may examine the consumer's provided training data and decide to select none, some or all of them. In addition, the ML training MnS producer may select some other training data that are available;
- trains the ML entity using the selected training data;
- provides the training results to the ML training MnS consumer(s).

6.2.2.2 ML training initiated by producer

The ML training may be initiated by the ML training MnS producer, for instance as a result of performance evaluation of the ML model, based on feedback or new training data received from the consumer, or when new training data which are not from the consumer describing the new network status/events become available.

When the ML training MnS producer decides to start the ML training, the producer performs the followings:

- selects the training data;
- trains the ML entity using the selected training data;
- provides the training results to the ML training MnS consumer(s) who have subscribed to receive the ML training results.

6.2.2.3 ML model and ML entity selection

For a given machine learning-based use case, different entities or AI/ML inference function may have different requirements and capabilities. For example, one consumer with specific responsibility and wish to have an AI/ML inference function supported by an ML model or entity trained for city central business district where mobile users move at speeds not exceeding 30 km/hr. On the other hand, another consumer, for the same use case may support a rural environment and as such wishes to have an ML model and AI/ML inference function fitting that type of environment. The different consumers need to know the available versions of ML entities, with the variants of trained ML models or entities and to select the appropriate one for their respective conditions.

6.2.2.4 Managing ML training processes

This machine learning capability relates to means for managing and controlling ML model/entity training processes.

To achieve the desired outcomes of any machine learning relevant use-case, the ML model applied for such analytics and decision making, needs to be trained with the appropriate data. The training may be undertaken in a managed function or in a management function.

In either case, the network management system not only needs to have the required training capabilities but needs to also have the means to manage the training of the ML models/entities. The consumers need to be able to interact with the training process, e.g., to suspend or restart the process; and also need to manage and control the requests related to any such training process.

6.2.2.5 Handling errors in data and ML decisions

Traditionally, the ML models/entities (e.g. , ML entity1 and ML entity2 in figure 6.2.2.5-1) are trained on good quality data, i.e. , data that were collected correctly and reflected the real network status to represent the expected context in which the ML entity is meant to operate. Good quality data is void of errors, such as:

- Imprecise measurements, with added noise (such as RSRP, SINR, or QoE estimations).
- Missing values or entire records, e.g., because of communication link failures.
- Records which are communicated with a significant delay (in case of online measurements).

Without errors, an ML entity can depend on a few precise inputs, and does not need to exploit the redundancy present in the training data. However, during inference, the ML entity is very likely to come across these inconsistencies. When this happens, the ML entity shows high error in the inference outputs, even if redundant and uncorrupted data are available from other sources.

Figure 6.2.2.5-1: The propagation of erroneous information

As such the system needs to account for errors and inconsistencies in the input data and the consumers should deal with decisions that are made based on such erroneous and inconsistent data. The system should:

1) enable functions to undertake the training in a way that prepares the ML entities to deal with the errors in the training data, i.e., to identify the errors in the data during training;

2) enable the ML training MnS consumers to be aware of the possibility of erroneous input data that are used by the ML entity.

6.2.3 Requirements for ML training

REQ-ML_ERROR-03	The 3GPP management system shall enable a producer of data services (e.g. a gNB) to provide to an authorized consumer (e.g. an ML TRAINING function) a Value Quality Score of the data, which is the numerical value that represents the dependability/quality of a given observation and measurement type.	Handling errors in data and ML decisions (clause 6.2.2.5)
REQ-ML_ERROR-04	The 3GPP management system shall enable a producer of ML decisions (e.g. an Al/ML inference function) to provide to an authorized consumer of Al/ML decisions (e.g. a controller) an Al/ML decision confidence score which is the numerical value that represents the dependability/quality of a given decision generated by the inference function.	Handling errors in data and ML decisions (clause 6.2.2.5)

7.2 Class diagram

7.2.1 Relationships

This clause depicts the set of classes (e.g. IOCs) that encapsulates the information relevant to ML model training. For the UML semantics, see TS 32.156 [13].

Figure 7.2.1-1: NRM fragment for ML training

7.2.2 Inheritance

Figure 7.2.2-1: Inheritance Hierarchy for ML training related NRMs

7.3 Class definitions

7.3.1 MLTrainingFunction

7.3.1.1 Definition

The IOC MLTrainingFunction represents the entity that undertakes ML training and is also the container of the MLTrainingRequest IOC(s).

The entity represented by MLTrainingFunction MOI supports training of one or more MLEntity(s).

7.3.1.2 Attributes

Table 7.3.1.2-1

Attribute name	Support Qualifier	isReadable	isWritable	isInvariant	isNotifyable
mLEntityList	M	T	F	F	F

7.3.1.3 Attribute constraints

None.

7.3.1.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.2 MLTrainingRequest

7.3.2.1 Definition

The IOC MLTrainingRequest represents the ML model training request that is created by the ML training MnS consumer.

The MLTrainingRequest MOI is contained under one MLTrainingFunction MOI. Each MLTrainingRequest is associated to at least one MLEntity.

The MLTrainingRequest may have a source to identify where it is coming from, and which may be used to prioritize the training resources for different sources. The sources may be for example the network functions, operator roles, or other functional differentiations.

Each MLTrainingRequest may indicate the expectedRunTimeContext that describes the specific conditions for which the MLEntity should be trained.

In case the request is accepted, the ML training MnS producer decides when to start the ML training. Once the MnS producer decides to start the training based on the request, the ML training MnS producer instantiates one or more MLTrainingProcess MOI(s) that are responsible to perform the followings:

- collects (more) data for training, if the training data are not available or the data are available but not sufficient for the training;
- prepares and selects the required training data, with consideration of the consumer's request provided candidate training data if any. The ML training MnS producer may examine the consumer's provided candidate training data and select none, some or all of them for training. In addition, the ML training MnS producer may select some other training data that are available in order to meet the consumer's requirements for the MLentity training;
- trains the MLEntity using the selected and prepared training data.

The MLTrainingRequest may have a requestStatus field to represent the status of the specific MLTrainingRequest:

- The attribute values are "NOT_STARTED", "TRAINING_IN_PROGRESS", "SUSPENDED", "FINISHED", and "CANCELLED".
- When value turns to "TRAINING_IN_PROGRESS", the ML training MnS producer instantiates one or more MLTrainingProcess MOI(s) representing the training process(es) being performed per the request and notifies the MLT MnS consumer(s) who subscribed to the notification.

When all of the training process associated to this request are completed, the value turns to "FINISHED".

7.3.2.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.3 MLTrainingReport

7.3.3.1 Definition

The IOC MLTrainingReport represents the ML model training report that is provided by the training MnS producer.

The MLTrainingReport MOI is contained under one MLTrainingFunction MOI.

7.3.3.2 Attributes

	ML model training that was requested by the MnS consumer (via
	MLTrainingRequest MOI).
lastTrainingRef Support Qualifier	Condition: The MLTrainingReport MOI represents the report for the ML
	model training that was not initial training (i.e. the model has been trained
	before).

7.3.3.4 Notifications

The common notifications defined in clause 7.6 are valid for this IOC, without exceptions or additions.

7.3.4 MLTrainingProcess

7.3.4.1 Definition

The IOC MLTrainingProcess represents the ML training process.

One MLTrainingProcess $\,$ MOI $\,$ may be instantiated for each MLTrainingRequest $\,$ MOI or a set of MLTrainingRequest $\,$ MOIs.

For each MLEntity under training, a MLTrainingProcess is instantiated, i.e. an MLTrainingProcess is associated with exactly one MLEntity. The MLTrainingProcess may be associated with one or more MLTrainingRequest MOI.

The MLTrainingProcess does not have to correspond to a specific MLTrainingRequest, i.e. a MLTrainingRequest does not have to be associated to a specific MLTrainingProcess. The MLTrainingProcess may be managed separately from the MLTrainingRequest MOIs, e.g. the MLTrainingRequest MOI may come from consumers which are network functions while the operator may wish to manage the MLTrainingProcess that is instantiated following the requests. Thus, the MLTrainingProcess may be associated to either one or more MLTrainingRequest MOI.

Each MLTrainingProcess instance needs to be managed differently from the related MLEntity, although the MLTrainingProcess may be associated to only one MLEntity. For example, the MLTrainingProcess may be triggered to start with a specific version of the MLEntity and multiple MLTrainingProcess instances may be

triggered for different versions of the MLEntity. In either case the MLTrainingProcess instances are still associated with the same MLEntity but are managed separately from the MLEntity.

Each MLTrainingProcess has a priority that may be used to prioritize the execution of different MLTrainingProcess instances.

Each MLTrainingProcess may have one or more termination conditions used to define the points at which the MLTrainingProcess may terminate.

The "progressStatus" attribute represents the status of the ML model training and includes information the ML training MnS consumer can use to monitor the progress and results. The data type of this attribute is "ProcessMonitor" (see 3GPP TS 28.622 [12]). The following specializations are provided for this data type for the ML training process:

- The "status" attribute values are "RUNNING", "CANCELLING", "SUSPENDED", "FINISHED", and "CANCELLED". The other values are not used.
- The "timer" attribute is not used.
- When the "status" is equal to "RUNNING" the "progressStateInfo" attribute shall indicate one of the following states: "COLLECTING_DATA", "PREPARING_TRAINING_DATA", "TRAINING".
- No specifications are provided for the "resultStateInfo" attribute. Vendor specific information may be provided though.

When the training is completed with "status" equal to "FINISHED", the MLT MnS producer provides the training report, by creating an MLTrainingReport MOI, to the MLT MnS consumer.

7.3.4.2 Attributes

NOTE: The isWritable qualifier is "T" if the attribute is used in MLTrainingRequest; The isWritable qualifier is "F"					

NOTE: The isviritable qualifier is "1" if the attribute is used in MLTrainingRequest; The isviritable qualifier is "F" otherwise.

7.4.1.3 Attribute constraints

None.

7.4.1.4 Notifications

The notifications specified for the IOC using this <<dataType>> for its attribute(s), shall be applicable.

7.4.2 MLEntity <<dataType>>

7.4.2.1 Definition

This data type represents the properties of an ML entity. ML training may be requested for either an ML model or ML entity. ML model is not to be standardized.

For each MLEntity under training, one or more MLTrainingProcess are instantiated.

The MLEntity may contain 3 types of contexts - TrainingContext which is the context under which the MLEntity has been trained, the ExpectedRunTimeContext which is the context where an MLEntity is expected to be applied or/and the RunTimeContext which is the context where the MLmodel or entity is being applied.

7.4.2.2 Attributes

	allowedValues for " mLTrainingProcess.progressStatus.status " = "RUNNING": - COLLECTING_DATA - PREPARING_TRAINING_DATA - TRAINING The allowed values for "	
	mLTrainingProcess.progressStatus.status " =	
inferenceOutputName	"CANCELLED" are vendor specific. It indicates the name of an inference output of an ML entity. allowedValues: the name of the MDA output IEs (see 3GPP TS 28.104 [2]), name of analytics output IEs of NWDAF (see TS 23.288 [3]), RAN-intelligence inference output IE name(s), and vendor's specific extensions.	Type: String multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
performanceMetric	It indicates the performance metric used to evaluate the performance of an ML entity, e.g. "accuracy", "precision", "F1 score", etc. allowedValues: N/A.	Type: String multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
performanceScore	It indicates the performance score (in unit of percentage) of an ML entity when performing inference on a specific data set (Note). The performance metrics may be different for different kinds of ML models depending on the nature of the model. For instance, for numeric prediction, the metric may be accuracy; for classification, the metric may be a combination of precision and recall, like the "F1 score".	Type: Real multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
cancelRequest	allowedValues: { 0100 }. It indicates whether the ML training MnS consumer cancels the ML training request. Setting this attribute to "TRUE" cancels the ML training request. Cancellation is possible when the requestStatus is the "NOT_STARTED", " TRAINING_IN_PROGRESS", and "SUSPENDED" state. Setting the attribute to "FALSE" has no observable result. Default value is set to "FALSE". allowedValues: TRUE, FALSE.	Type: Boolean multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: FALSE isNullable: False
suspendRequest	It indicates whether the ML training MnS consumer suspends the /ML training request. Setting this attribute to "TRUE" suspends the ML training request. Suspension is possible when the requestStatus is not the "FINISHED" state. Setting the attribute to "FALSE" has no observable result. Default value is set to "FALSE". allowedValues: TRUE, FALSE.	Type: Boolean multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: FALSE isNullable: False

Attribute Name	Documentation and Allowed Values	Properties
cancelProcess	It indicates whether the ML training MnS consumer cancels the ML training process. Setting this attribute to "TRUE" cancels the ML	Type: Boolean multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: FALSE isNullable: False Type: Boolean multiplicity: 01
	Setting this attribute to "TRUE" suspends the ML training request. Suspension is possible when the "mLTrainingProcess.progressStatus.status" is not the "FINISHED", "CANCELLING" or "CANCELLED" state. Setting the attribute to "FALSE" has no observable result. Default value is set to "FALSE". allowedValues: TRUE, FALSE.	isOrdered: N/A isUnique: N/A defaultValue: FALSE isNullable: False
inferenceEntityRef	It describes the target entities that will use the ML entity for inference.	Type: DN (see 3GPP TS 32.156 [13]) multiplicity: * isOrdered: False isUnique: True defaultValue: None isNullable: False
dataProviderRef	It describes the entities that have provided or should provide data needed by the ML entity e.g. for training or inference	TS 32.156 [13]) multiplicity: * isOrdered: False isUnique: True defaultValue: None isNullable: False
areNewTrainingDataUsed	It indicates whether the other new training data have been used for the ML model training. allowedValues: TRUE, FALSE.	multiplicity: 1 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
trainingDataQualityScore	It indicates numerical value that represents the dependability/quality of a given observation and measurement type. The lowest value indicates the lowest level of dependability of the data, i.e. that the data is not usable at all. allowedValues: { 0100 }.	Type: Real multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
decisionConfidenceScore	It is the numerical value that represents the dependability/quality of a given decision generated by the AI/ML inference function. The lowest value indicates the lowest level of dependability of the decisions, i.e. that the data is not usable at all. allowedValues: { 0100 }.	Type: Real multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
expectedRuntimeContext	This describes the context where an MLEntity is expected to be applied or/and the RunTimeContext	Type: MLContext multiplicity: 01 isOrdered: N/A isUnique: N/A defaultValue: None isNullable: False
trainingContext	This specify the context under which the MLEntity has been trained. allowedValues: NA	

Attribute Name	Documentation and Allowed Values	Properties	
runTimeContext	This specifies the context where the MLmodel or	Type: MLContext	
	entity is being applied.	multiplicity: 1	
		isOrdered: N/A	
	allowedValues: NA	isUnique: N/A	
		defaultValue: None	
		isNullable: False	
capabilityName	It indicates the name of a capability for which an ML	type: String	
	entity can generate inference.	multiplicity: 1	
		isOrdered: N/A	
	allowedValues: N/A.	isUnique: N/A	
		defaultValue: None	
		isNullable: False	
NOTE: When the performanceScore is to indicate the performance score for ML training, the data set is the training data set.			

7.5.2 Constraints

None.

7.6 Common notifications

7.6.1 Configuration notifications

This clause presents a list of notifications, defined in 3GPP TS 28.532 [11], that an MnS consumer may receive. The notification header attribute objectClass/objectInstance shall capture the DN of an instance of a class defined in the present document.

Table 7.6.1-1

Name	Qualifier	Notes
notifyMOICreation	0	
notifyMOIDeletion	0	
notifyMOIAttributeValueChanges	0	
notifyEvent	0	

8 Service components

8.1 Service components for ML model training MnS

The components for ML model training MnS are listed in table 8.1-1.

Table 8.1-1: Components for ML model training MnS

Management service component type A	Management service component type B	Management service component type C
	MLTrainingFunction IOC;	N/A
	MLTrainingRequest IOC;	
	MLTrainingReport IOC;	
TS 28.532 [11]).	MLTrainingProcess IOC.	

9 Solution Set (SS)

The present document defines the following NRM Solution Set definitions for ML management:

- YAML based Solution Set (Annex B).

Annex A (informative): PlantUML source code for NRM class diagrams

A.1 General

@enduml

This annex contains the PlantUML source code for the NRM diagrams defined in clause 7.2 of the present document.

A.2 PlantUML code for Figure 7.2.1-1: NRM fragment for ML model training

```
@startuml
skinparam ClassStereotypeFontStyle normal
skinparam ClassBackgroundColor White
skinparam shadowing false
skinparam monochrome true
hide members
hide circle
'skinparam maxMessageSize 250
class ManagedEntity <<Pre><<Pre>class>>
class MLEntity <<dataType>>
class MLTrainingFunction <<InformationObjectClass>>
class MLTrainingRequest <<InformationObjectClass>>
class MLTrainingReport <<InformationObjectClass>>
class MLTrainingProcess <<InformationObjectClass>>
ManagedEntity "1" *-- "*" MLTrainingFunction: <<names>>
MLTrainingFunction "1" -d-> "*" MLEntity
MLTrainingFunction "1" *-- "*" MLTrainingProcess: <<names>>
MLTrainingFunction "1" *-- "*" MLTrainingRequest: <<names>>
MLTrainingFunction "1" *-- "*" MLTrainingReport: <<names>>
MLTrainingProcess "1" <-r-> "1" MLTrainingReport MLTrainingReport "1" --> "1" MLTrainingReport MLTrainingRequest "*" -l-> "1" MLEntity
MLTrainingRequest "*" -r-> "*" MLTrainingProcess
note left of ManagedEntity
  Represents the following IOCs:
    Subnetwork or
    ManagedFunction or
    ManagedElement
  end note
```

A.3 PlantUML code for Figure 7.2.2-1: Inheritance Hierarchy for ML model training related NRMs

@startuml

skinparam ClassStereotypeFontStyle normal skinparam ClassBackgroundColor White skinparam shadowing false skinparam monochrome true hide members hide circle 'skinparam maxMessageSize 250 class Top <<InformationObjectClass>> class ManagedFunction <<InformationObjectClass>> class MLTrainingFunction <<InformationObjectClass>> class MLTrainingRequest <<InformationObjectClass>> class MLTrainingProcess <<InformationObjectClass>> class MLTrainingReport <<InformationObjectClass>> ManagedFunction < | -- MLTrainingFunction Top < | -- MLTrainingRequest
Top < | -- MLTrainingProcess Top < -- MLTrainingReport

@enduml

Annex B (normative): OpenAPI definition of the AI/ML NRM

B.1 General

This annex contains the OpenAPI definition of the AI/ML NRM in YAML format.

The information models of the AI/ML NRM are defined in clause 7.

Mapping rules to produce the OpenAPI definition based on the information model are defined in 3GPP TS 32.160 [14].

B.2 Solution Set (SS) definitions

B.2.1 OpenAPI document "TS28105_AiMINrm.yaml"

2023-09	SA#101	SP-230948	0034	-	F	Clarify ML models as proprietary	17.5.0
2023-09	SA#101	SP-230948	0038	1	F	Restore the wrongly voided clause "5 Service and functional framework"	17.5.0
2023-12	SA#102	SP-231467	0042	1	F	Correction on ModelPerformance	17.6.0
2023-12	SA#102	SP-231490	0044	-	F	Rel-17 CR TS 28.105 Corrections of ML training related use cases description	17.6.0
2023-12	SA#102	SP-231490	0046	-	F	Rel 17 CR TS 28.105 Remove unused decision entity term	17.6.0
2023-12	SA#102	SP-231490	0048	-	F	Rel 17 CR TS 28.105 Clarify the description of confidenceIndication attribute	17.6.0
2023-12	SA#102	SP-231467	0060	1	F	Rel-17 TS 28.105 Restore definition of attribute mLEntityList - Not implemented due to wrong baseline used	17.6.0
2023-12	SA#102	SP-231467	0062	1	F	CR TS 28.105 Rel-17 Correction of IOC name	17.6.0
2023-12	SA#102	SP-231467	0064	1	F	TS 28.105 Rel-17 Correction of attribute properties	17.6.0
2023-12	SA#102	SP-231490	0070	-	F	Rel 17 CR TS 28.105 Fix incorrect figure label	17.6.0
2022-09	SA#102					Alignment with content with FORGE	17.6.0
2022-09	SA#102	SP-231467	0067	1	F	Rel 17 CR TS 28.105 Resolve issues related to the usage of confidenceIndication attribute – Partially implemented (no revision mark for 1st Change)	17.6.0
2024-03	SA#103	SP-240155	0074	1	F	Rel-17 Correct trainingRequestSource attribute type	17.7.0
2024-03	SA#103	SP-240162	0079	1	F	Rel 17 CR TS 28.105 Add additional reference related to NWDAF	17.7.0
2024-03	SA#103	SP-240162	0081	1	F	Rel 17 CR TS 28.105 Add missing abbreviations	17.7.0
2024-06	SA#104	SP-240838	0087	1	F	Rel 17 CR TS 28.105 Remove priority and terminationConditions attributes	17.8.0
2024-06	SA#104	SP-240838	0097	1	F	Rel-17 CR TS 28.105 Rename attribute inferencetype and correct attribute capabilityName	17.8.0
2024-06	SA#104	SP-240838	0106	1	F	Rel-17 CR TS 28.105 Remove use cases for ML entity selection	17.8.0
2024-06	SA#104	SP-240804	0141	1	F	Rel-17 CR TS 28.105 correct the AI/ML technique overview	17.8.0
