#### Important notice

The present document can be downloaded from the ETSI Search & Browse Standards application.

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format on ETSI deliver repository.

Users should be aware that the present document may be revised or have its status changed, this information is available in the <u>Milestones listing</u>.

If you find errors in the present document, please send your comments to the relevant service listed under <u>Committee Support Staff</u>.

If you find a security vulnerability in the present document, please report it through our <u>Coordinated Vulnerability Disclosure (CVD)</u> program.

#### Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use of or inability to use the software.

#### **Copyright Notification**

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI. The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

# Intellectual Property Rights

#### **Essential patents**

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards", which is available from the ETSI Secretariat. Latest updates are available on the ETSI IPR online database.

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

#### Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT<sup>TM</sup>**, **PLUGTESTS<sup>TM</sup>**, **UMTS<sup>TM</sup>** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP<sup>TM</sup>**, **LTE<sup>TM</sup>** and **5G<sup>TM</sup>** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M<sup>TM</sup>** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM**<sup>®</sup> and the GSM logo are trademarks registered and owned by the GSM Association.

### Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at <u>3GPP to ETSI numbering cross-referencing</u>.

## Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the <u>ETSI Drafting Rules</u> (Verbal forms for the expression of provisions).

"must" and "must not" are NOT allowed in ETSI deliverables except when used in direct citation.

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

### 1 Scope

The present specification describes the protocol for the NEF Northbound interface between the NEF and the AF. The NEF Northbound interface and the related stage 2 functional requirements are defined in 3GPP TS 23.502 [2], 3GPP TS 23.316 [28], 3GPP TS 23.288 [29] and 3GPP TS 23.548 [42].

### 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

# 3 Definitions and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

**Application AM context:** Information about the capabilities that an AF application requires from the access network for a registered UE. It is established by the AF before or during the use of the service that requires it.

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

| A-KID | AKMA Key IDentifier                                |
|-------|----------------------------------------------------|
| A-TID | AKMA Temporary UE IDentifier                       |
| AAnF  | AKMA Anchor Function                               |
| ACS   | Auto-Configuration Server                          |
| AF    | Application Function                               |
| AKMA  | Authentication and Key Management for Applications |
| AM    | Access and Mobility management                     |
| ASTI  | Access Stratum TIme distribution                   |
| BDT   | Background Data Transfer                           |

# 4 NEF Northbound Interface

### 4.1 Overview

The NEF Northbound interface is between the NEF and the AF. It specifies RESTful/RPC APIs that allow the AF to access the services and capabilities provided by 3GPP network entities and securely exposed by the NEF.

This document also specifies the procedures triggered at the NEF by API requests from the AF and by event notifications received from 3GPP network entities.

The stage 2 level requirements and signalling flows for the NEF Northbound interface are defined in 3GPP TS 23.502 [2], 3GPP TS 23.247 [53] for MBS specific aspects and 3GPP TS 26.531 [59] for data reporting provisioning and Media Streaming Event Exposure specific aspects.

The NEF Northbound interface supports the following procedures:

- 1) Procedures for Monitoring
- 2) Procedures for Device Triggering
- 3) Procedures for resource management of Background Data Transfer
- Procedures for CP Parameters, Network Configuration Parameters Provisioning, 5G LAN Parameters Provisioning, ACS Configuration Parameter Provisioning, Location Privacy Indication Parameters Provisioning and ECS address provisioning
- 5) Procedures for PFD Management

- 6) Procedures for Traffic Influence
- 7) Procedures for changing the chargeable party at session set up or during the session
- 8) Procedures for setting up an AF session with required QoS
- 9) Procedures for MSISDN-less Mobile Originated SMS
- 10)Procedures for non-IP data delivery
- 11)Procedures for analytics information exposure
- 12)Procedure for applying BDT policy
- 13) Procedures for Enhanced Coverage Restriction Control
- 14)Procedures for IPTV Configuration
- 15) Procedures for Service Parameter Provisioning
- 16) Procedures for RACS Parameter Provisioning
- 17)Procedures for Mobile Originated Location Request
- 18)Procedures for AKMA
- 19)Procedures for AF triggered Access and Mobility Influence
- 20) Procedures for AF triggered Access and Mobility Policy Authorization
- 21)Procedures for Time Synchronization Exposure
- 22)Procedures for EAS Deployment information provisioning
- 23)Procedures for TMGI allocation, deallocation, expiry timer refresh and timer expiry notification
- 24)Procedures for MBS session management and parameters provisioning.
- 25) Procedures for Data Reporting.
- 26) Procedures for Data Reporting Provisioning.
- 27) Procedures for AF specific UE ID retrieval.
- 28) Procedures for Media Streaming Event Exposure.
- 29) Procedures for MBS User Service management.
- 30) Procedures for MBS User Data Ingest Session management.

Which correspond to the following services respectively, supported by the NEF as defined in 3GPP TS 23.502 [2] or 3GPP TS 26.531 [59]:

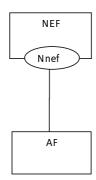

- 1) Nnef\_EventExposure service and Nnef\_APISupportCapability service
- 2) Nnef\_Trigger service
- 3) Nnef\_BDTPNegotiation service
- 4) Nnef\_ParameterProvision service
- 5) Nnef\_PFDManagement service
- 6) Nnef\_TrafficInfluence service
- 7) Nnef\_ChargeableParty service
- 8) Nnef\_AFsessionWithQoS service

- 9) Nnef\_MSISDN-less\_MO\_SMS service
- 10)Nnef\_NIDDConfiguration and Nnef\_NIDD services
- 11)Nnef\_AnalyticsExposure service
- 12)Nnef\_ApplyPolicy service
- 13)Nnef\_ECRestriction service
- 14)Nnef\_IPTVConfiguration service
- 15)Nnef\_ServiceParameter service
- 16)Nnef\_UCMFProvisioning service
- 17) Nnef\_Location service
- 18)Nnef\_AKMA service
- 19)Nnef\_AMInfluence
- 20)Nnef\_AMPolicyAuthorization service
- 21)Nnef\_TimeSynchronization and Nnef\_ASTI services
- 22)Nnef\_EASDeployment service
- 23)Nnef\_MBSTMGI service
- 24) Nnef\_MBSSession service
- 25) Nnef\_DataReporting
- 26) Nnef\_DataReportingProvisioning
- 27)Nnef\_UEId service
- 28) Nnef\_MSEventExposure service
- 29) Nnef\_MBSUserService
- 30) Nnef\_MBSUserDataIngestSession
- NOTE 1: For Nnef\_PFDManagement service, only the Nnef\_PFDManagement\_Create/Update/Delete service operations are applicable for the NEF Northbound interface.
- NOTE 2: For Nnef\_NIDD service, NF consumer other than the AF does not use the NEF Northbound interface.
- NOTE 3: For Nnef\_NIDDConfiguration service, the Nnef\_NIDDConfiguration\_Trigger service operation is only applicable for the NEF Northbound interface.
- NOTE 4: The Nnef\_APISupportCapability service is only applicable in the MonitoringEvent API when the monitoring type sets to "API\_SUPPORT\_CAPABILITY".
- NOTE 5: The Nnef\_MSEventExposure service maps to the Nnef\_EventExposure service and is applicable for the case where the event consumer AF in the Application Service Provider is deployed outside the trusted domain, as described in 3GPP TS 26.531 [59], and the subscribed event is set to "MS\_QOE\_METRICS", "MS\_CONSUMPTION", "MS\_NET\_ASSIST\_INVOCATION", "MS\_DYN\_POLICY\_INVOCATION", or "MS\_ACCESS\_ACTIVITY".

### 4.2 Reference model

The NEF Northbound interface resides between the NEF and the AF as depicted in figure 4.2.1. The overall NEF architecture is depicted in 3GPP TS 23.502 [2]. An AF can get services from multiple NEFs, and an NEF can provide services to multiple AFs.

NOTE: The AF can be provided by a third party.

#### Figure 4.2-1: Reference Architecture for the Nnef Service; SBI representation

#### Figure 4.2-2: Reference Architecture for the Nnef Service; reference point representation

### 4.3 Functional elements

### 4.3.1 NEF

The Network Exposure Function (NEF) is a functional element that supports the following functionalities:

- The NEF shall securely expose network capabilities and events provided by 3GPP NFs to AF.
- The NEF shall provide means for the AF to securely provide information to 3GPP network and may authenticate, authorize and assist in throttling the AF.
- The NEF shall be able to translate the information received from the AF to the one sent to internal 3GPP NFs, and vice versa.
- The NEF shall support to expose information (collected from other 3GPP NFs) to the AF.
- The NEF may support a PFD Function which allows the AF to provision PFD(s) and may store and retrieve PFD(s) in the UDR. The NEF further provisions PFD(s) to the SMF.
- The NEF may support the time synchronization exposure function to the AF.
- The NEF may provide means for the AF to influence access and mobility management related policies.
- The NEF may provide means for the AF to provide inputs that can be used by the PCF for deciding access and mobility management related policies.
- The NEF may provide means for the AF to provide the EAS Deployment information.
- The NEF may provide means for the AF to retrieve AF specific UE ID.
- The NEF may provide means for an untrusted event consumer AF to perform Media Streaming Event Exposure monitoring.

A specific NEF instance may support one or more of the functionalities described above and consequently an individual NEF may support a subset of the APIs specified for capability exposure.

NOTE: The NEF can access the UDR located in the same PLMN as the NEF.

### 4.3.2 AF

The Application Function (AF) may interact with the 3GPP Core Network via the NEF in order to access network capabilities.

### 4.4 Procedures over NEF Northbound Interface

### 4.4.1 Introduction

All procedures that operate across the NEF Northbound interface, as specified in 3GPP TS 23.502 [2], and in 3GPP TS 23.247 [53] for MBS specific aspects, are specified in the following clauses.

### 4.4.2 Procedures for Monitoring

The procedures for monitoring as described in clause 4.4.2 of 3GPP TS 29.122 [4] shall be applicable in 5GS with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the HSS applies to the UDM, and the NEF shall interact with the UDM by using Nudm\_EventExposure service as defined in 3GPP TS 29.503 [17];
- description of the MME/SGSN applies to the AMF, the NEF shall resolve a location area to the involved AMF(s) either by local configuration or via the NRF, and the NEF shall interact with the AMF by using Namf\_EventExposure service as defined in 3GPP TS 29.518 [18];
- description about the PCRF is not applicable;
- description about the change of IMSI-IMEI(SV) association monitoring event applies to the change of SUPI-PEI association monitoring event;
- when "monitoringType" sets to "LOCATION\_REPORTING" within the MonitoringEventSubscription data type as defined in clause 5.3.2.1.2 of 3GPP TS 29.122 [4] during the monitoring event subscription, only "CGI\_ECGI", "TA\_RA", "GEO\_AREA" and "CIVIC\_ADDR" within the Accuracy data type as defined in clause 5.3.2.4.7 of 3GPP TS 29.122 [4], are applicable for 5G MonitoringEvent API;
- after validation of the AF request, the NEF may determine a monitoring expiry time, based on operator policy and take into account the monitoring expire time if included in the request; and the NEF may provide a expiry time (determined by the NEF, UDM or AMF) to the AF even the AF does not provided before;
- if the "Loss\_of\_connectivity\_notification" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, values 0-5 are not applicable for the lossOfConnectReason attribute within MonitoringEventReport data type, the lossOfConnectReason attribute shall be set to 6 if the UE is deregistered, 7 if the maximum detection timer expires or 8 if the UE is purged;
- the AF may include a periodic reporting time indicated by the "repPeriod" attribute within MonitoringEventSubscription data type, which is only applicable for the "Location\_notification" and "NSAC" features in the NEF;
- if the "locationType" attribute sets to "LAST\_KNOWN\_LOCATION", the "maximumNumberOfReports" attribute shall set to 1 as a One-time Monitoring Request;
- description about the PDN connectivity status event applies to the PDU session status event, the description of the MME/SGSN applies to the SMF during the reporting of monitoring event procedure, the NEF receives the event notification via Nsmf\_EventExposure service as defined in 3GPP TS 29.508 [26];

- if the "Session\_Management\_Enhancement" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, the "dnn"and/or "snssai" may be provided in MonitoringEventSubscription data type for monitoring type provided "PDN\_CONNECTIVITY\_STATUS" or " DOWNLINK\_DATA\_DELIVERY\_STATUS";
- when sending the UDM/AMF/SMF event report to the AF, the NEF may store the event data in the report in the UDR as part of the data for exposure as specified in 3GPP TS 29.519 [23] by using Nudr\_DataRepository service as specified in 3GPP TS 29.504 [20];
- if the "Downlink\_data\_delivery\_status\_5G" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, in order to support the downlink data delivery status notification;
  - the AF shall send an HTTP POST message to the NEF to the resource "Monitoring Event Subscriptions" as defined in clause 5.3.3.2 of 3GPP TS 29.122 [4] for creating an subscription or send an HTTP PUT message to the NEF to the resource "Individual Monitoring Event Subscription" as defined in clause 5.3.3.3 of 3GPP TS 29.122 [4] for updating the subscription with the following difference:
    - A)within the MonitoringEventSubscription data structure the AF may additionally include packet filter descriptor(s) within the "dddTraDescriptors" attribute and the list of monitoring downlink data delivery status event(s) within the "dddStati" attribute; and
    - B)the NEF shall subscribe the events to the appropriate UDM(s) within the network by invoking the Nudm\_EventExposure\_Subscribe service operation as defined in clause 5.5.2.2 of 3GPP TS 29.503 [17];
  - 2)if the "Partial\_group\_modification" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, in order to support partial cancellation or addition of certain UE(s) within the active group event subscription, the NEF shall map the "excludedExternalIds" and/or "excludedMsisdns" attributes to the "excludeGpsiList" attribute for the partial group cancellation, or shall map the "addedExternalIds" and/or "addedMsisdns" attributes to the "includeGpsiList" attribute within the Nudm\_EventExposure service; and
  - 3)when the NEF receives the event notification as defined in clause 4.4.2 of 3GPP TS 29.508 [26], the NEF shall send an HTTP POST message to the AF as defined in clause 4.4.2.3 of 3GPP TS 29.122 [4] with the difference that within each MonitoringEventReport data structure, the NEF shall include:

A)the downlink data delivery status within the "dddStatus" attribute;

- B)the downlink data descriptor impacted by the downlink data delivery status change within the "dddTraDescriptor" attribute;
- C)the estimated buffering time within the "maxWaitTime" attribute if the downlink data delivery status is set to "BUFFERED"; and
- D)if the "Availability\_after\_DDN\_failure\_notification\_enhancement" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, the AF shall send an HTTP POST message to the NEF to the resource "Monitoring Event Subscriptions" as defined in clause 5.3.3.2 of 3GPP TS 29.122 [4] for creating an subscription or send an HTTP PUT message to the NEF to the resource "Individual Monitoring Event Subscription" as defined in clause 5.3.3 of 3GPP TS 29.122 [4] for updating the subscription with the difference that within the MonitoringEventSubscription data structure, the AF shall include packet filter descriptions within the "dddTraDescriptors" attribute;
- if the "eLCS" feature as defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, the AF may send an HTTP POST message to the NEF to the resource "Monitoring Event Subscriptions" as defined in clause 5.3.3.2 of 3GPP TS 29.122 [4] for creating an subscription or send an HTTP PUT message to the NEF to the resource "Individual Monitoring Event Subscription" as defined in clause 5.3.3.3 of 3GPP TS 29.122 [4] for updating the subscription with the following difference:
  - 1)within the MonitoringEventSubscription data structure, the AF may additionally include location QoS requirement within the "locQoS" attribute, the service identifier within the "svcId" attribute, Location deferred requested event type within the "ldrType" attribute, the validity start time and the validity end time within the "locTimeWindow" attribute, the maximum age of location estimate within the "maxAgeOfLocEst" attribute, the requesting target UE velocity within the "velocityRequested" attribute, the linear distance within the "linearDistance" attribute, the reporting target UE location estimate indication within the "reportingLocEstInd" attribute, the sampling interval within the "samplingInterval" attribute, the maximum reporting expire interval within the "maxRptExpireIntvl" attribute, the supported GAD shapes within the "supportedGADShapes" attribute, the Code word within the "codeword" attribute, and other attributes as

defined in clause 5.3.2.3.2 of 3GPP TS 29.122 [4] for location information subscription; The MonitoringEventSubscription data structure may also include the "locationArea5G" attribute containing only the "geographicAreas" attribute and the "accuracy" attribute set to the value "GEO\_AREA". The "accuracy" attribute and "locQoS" attribute are mutually exclusive. If the "MULTIQOS" feature is also supported, Multiple QoS Class is supported in the "lcsQosClass" attribute within the "locQoS" attribute for deferred MT-LR;

- 2)if the NEF identifies the location request precision higher than cell level location accuracy is required based on the "locQoS" attribute received, the NEF shall interact with the appropriate GMLC within the network by invoking the Ngmlc\_Location\_ProvideLocation service operation as defined in clause 6.1 of 3GPP TS 29.515 [35];
- 3)if the location request precision is lower than or equal to cell level, based on implementation, the NEF may interact with the GMLC by invoking the Ngmlc\_Location\_ProvideLocation service operation as defined in clause 6.1 of 3GPP TS 29.515 [35]; or retrieve the UE location privacy information from the UDM by using Nudm\_SDM service as described in clause 5.2 of 3GPP TS 29.503 [17] and if the privacy setting is verified, the NEF shall interact with the UDM for the serving AMF address by invoking the Nudm\_UECM service as described in clause 5.3 of 3GPP TS 29.503 [17]. After receiving the serving AMF address from the UDM, the NEF shall interact with the AMF by invoking the Namf\_EventExposure\_Subscribe service operation as defined in clause 5.3 of 3GPP TS 29.518 [18]; or may interact with UDM by using Nudm\_EventExposure service as defined in clause 5.5 of 3GPP TS 29.503 [17] and the NEF receives the location event notification from the AMF via Namf\_EventExposure service as defined in in clause 5.5 of 3GPP TS 29.503 [17].
- 4)based on the received AF information and local authorization policy, the NEF shall derive the LCS client type with a suitable enumeration value for the AF location request, to be provided as the "externalClientType" attribute when invoking the Ngmlc\_Location\_ProvideLocation service operation as defined in clause 6.1 of 3GPP TS 29.515 [35];

Upon receipt of successful location response from the GMLC or the AMF or the UDM, the NEF shall create or update the "Individual Monitoring Event Subscription" resource and then send an HTTP POST or PUT response to the AF as defined in clause 4.4.2.2 of 3GPP TS 29.122 [4]. Upon receipt of the location Report from the GMLC or the AMF, the NEF shall determine the monitoring event subscription associated with the corresponding Monitoring Event Report as defined in clause 4.4.2.3 of 3GPP TS 29.122 [4].

In order to delete a previous active configured monitoring event subscription at the NEF, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual Monitoring Event Subscription" which is received in the response to the request that has created the monitoring events subscription resource. The NEF shall interact with the GMLC or the AMF or the UDM to remove the request, upon receipt of the successful response from the GMLC or the AMF or the UDM, the NEF shall delete the active resource "Individual Monitoring Event Subscription" addressed by the URI and send an HTTP response to the AF with a "204 No Content" status code, or a "200 OK" status code including the monitoring event report if received;

Based on local regulations' requirements and operator policies, user consent management specified in Annex V of 3GPP TS 33.501 [6] may be required for EDGE applications to access the Nnef\_EventExposure API for UE's location retrieval. When it is the case and the NEF is used by the Edge Enabler Layer entities to access 3GPP 5GC services, the NEF acts as the consent enforcement entity, as specified in clause 5.1.3 of 3GPP TS 33.558 [56];

When user consent management shall be carried out for EDGE applications, then:

- 1)if the AF (e.g. Edge Enabler Server) does not support the "UserConsentRevocation" feature or does not indicate its support for this feature in the HTTP POST request to create a new "Individual Monitoring Event Subscription" resource with the "monitoringType" attribute set to "LOCATION\_REPORTING", the NEF shall reject the request and respond to the AF with an HTTP "403 Forbidden" status code with the response body including a ProblemDetails data structure containing the "CONSENT\_REVOCATION\_NOT\_SUPPORTED" application error within the "cause" attribute;
- 2)if the AF indicates its support for the "UserConsentRevocation" feature in the HTTP POST request to create a new "Individual Monitoring Event Subscription" resource with the "monitoringType" attribute set to "LOCATION\_REPORTING", the NEF shall check user consent for the targeted UE(s) by retrieving the user consent subscription data via the Nudm\_SDM service API of the UDM as specified in clause 5.2.2.24 of 3GPP TS 29.503 [17], subscribe to user consent revocation notifications only for those UE(s) for which user consent is granted also using the Nudm\_SDM service API of the UDM and accept the request for the creation of the event monitoring subscription only for the UE(s) for which user consent is granted;

- 3)if user consent is not granted for all the targeted UE(s), the NEF shall reject the request and respond to the AF with an HTTP "403 Forbidden" status code with the response body including a ProblemDetails data structure including the "USER\_CONSENT\_NOT\_GRANTED" application error within the "cause" attribute;
- 4) the AF shall provide within the HTTP POST request to create a new event monitoring subscription the URI via which it desires to receive user consent revocation notifications within the "revocationNotifUri" attribute. The AF may update this URI in subsequent HTTP PUT/PATCH requests to update/modify the corresponding "Individual Monitoring Event Subscription" resource;

5)when becoming aware of user consent revocation for one or several UE(s), the NEF shall:

A)stop processing the data related to the concerned UE(s);

- B)send a user consent revocation notification to the AF by sending an HTTP POST request with the request body including the ConsentRevocNotif data structure that shall contain the user consent revocation information (e.g. UE(s) for which user consent was revoked, etc.); and
- C)remove the concerned UE(s) from the corresponding "Individual Monitoring Event Subscription" resource and from the related subscriptions at the GMLC, if any; and

D)unsubscribe from user consent revocation notifications for the concerned UE(s) at the UDM;

and

- 6)at the reception of the user consent revocation notification from the NEF, the AF shall take the necessary actions to stop processing the data related to the UE(s) for which user consent was revoked;
- if user consent is revoked for all the UE(s), the AF shall delete the corresponding "Individual Monitoring Event Subscription" resource as specified above in this clause.
- if the "NSAC" feature defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, in order to support network slice status reporting:
  - the AF shall send an HTTP POST request to the NEF to the "Monitoring Event Subscriptions" resource as defined in clause 5.3.3.2.3.4 of 3GPP TS 29.122 [4] to create a subscription, or send an HTTP PUT message to the NEF to the "Individual Monitoring Event Subscription" resource as defined in clause 5.3.3.3.3.2 of 3GPP TS 29.122 [4] to update an existing subscription with the following differences:

A) within the Monitoring Event Subscription data structure:

- a) either the concerned network slice identified by the "snssai" attribute, in the case of a trusted AF, or the AF service identifier within the "afServiceId" attribute, in the case of an untrusted AF, shall be provided;
- b) the value of the "monitoringType" attribute shall be set to "NUM\_OF\_REGD\_UES" to indicate that the AF requests to be notified of the current number of registered UEs for the network slice or "NUM\_OF\_ESTD\_PDU\_SESSIONS" to indicate that the AF requests to be notified of the current number of established PDU Sessions for the network slice;
- c) the "maximumNumberOfReports" attribute set to a value of 1 shall be provided, if one-time reporting of the current network slice status information is requested;
- d) if one-time reporting is not requested, either a targeted reporting threshold within the "tgtNsThreshold" attribute (if threshold based reporting is requested) or a reporting periodicity within the "repPeriod" attribute (if periodic reporting is requested) shall be provided;
- e) if periodic reporting or one-time reporting is requested, the "nsRepFormat" attribute shall be provided to indicate the requested reporting format (i.e. numerical or percentage); and
- f) the "immediateRep" attribute shall be set to "true", if immediate reporting of the current network slice status information is requested or one-time reporting of the current network slice status information is requested;
- 2)the NEF shall then further interact with the concerned NSACF(s) to create or update the associated subscription(s) to notifications by invoking the Nnsacf\_SliceEventExposure\_Subscribe service operation as specified in 3GPP TS 29.536 [47];

If an AF service identifier was provided by the AF (case of an untrusted AF), the NEF shall translate it into the corresponding S-NSSAI prior to sending the request(s) to the NSACF(s).

After receiving a successful response from the NSACF(s), the NEF shall:

- NOTE 1: If multiple NSACFs are selected for the requested S-NSSAI, the NEF can set the event reporting type to periodic in its request to these NSACFs, irrespective of the requested reporting type by the AF (i.e. threshold based reporting or periodic reporting).
  - A)for the HTTP POST request, respond to the AF as defined in clause 5.3.3.2.3.4 of 3GPP TS 29.122 [4] with either;
    - a)a "201 Created" status code and the response body containing the created "Individual Monitoring Event Subscription" resource within the MonitoringEventSubscription data structure. The NEF shall include the current network slice status information received from the NSACF within the "monitoringEventReport" attribute, if available and the "immediateRep" attribute was provided and set to "true" in the request; or
    - b)a "200 OK" status code and the response body containing the current network slice status information received from the NSACF within the "MonitoringEventReport" data structure, if it is a one-time reporting request with the "immediateRep" attribute set to "true"; and
  - B)for the HTTP PUT request, respond to the AF with a "200 OK" status code as defined in clause 5.3.3.3.2. of 3GPP TS 29.122 [4] and the response body including the MonitoringEventSubscription data structure containing a representation of the updated "Individual Monitoring Event Subscription" resource. The NEF shall include the current network slice status information received from the NSACF within the "monitoringEventReport" attribute, if available and the "immediateRep" attribute was provided and set to "true" in the request;
- NOTE 2: When the "maximumNumberOfReports" attribute is provided and set to a value of 1 and the "immediateRep" attribute is provided and set to "true", the Individual Monitoring Event Subscription is immediately terminated after returning the current network slice status information in the HTTP POST response body.
- NOTE 3: After sending a subscription creation request for network slice status reporting with a particular reporting format (e.g. percentage) for periodic reporting, an AF cannot send a subsequent subscription creation request for the same network slice with a different reporting format (e.g. numerical) for periodic reporting.
  - 3)when the NEF receives event report(s) from the NSACF(s) as defined in 3GPP TS 29.536 [47], the NEF shall notify the AF via an HTTP POST message as defined in clause 5.3.3A.2.3 of 3GPP TS 29.122 [4] with the following differences:
    - A)within the MonitoringEventReport data type of the MonitoringNotification data type;
      - a)the value of the "monitoringType" attribute shall be set to "NUM\_OF\_REGD\_UES" or "NUM\_OF\_ESTD\_PDU\_SESSIONS" (i.e. the same value received during the HTTP POST or PUT request that created or modified the subscription);
      - b)the AF service identifier to which the notification is related, within the "afServiceId" attribute, if it was provided by the AF in the related subscription request; and
      - c)the current network slice status information as the "nSStatusInfo" attribute shall be provided, wherein:
        - I)if the event reporting is threshold based (i.e. the "tgtNsThreshold" was provided within the MonitoringEventSubscription data type), the "nSStatusInfo" attribute shall contain a confirmation for reaching the targeted threshold value, i.e. by sending the current number of registered UEs or the current number of established PDU Sessions, for the network slice identified by the "snssai" attribute provided during the subscription creation/update; and
        - II)if the event reporting is periodical (i.e. the "repPeriod" was provided within the MonitoringEventSubscription data type), the "nSStatusInfo" attribute shall provide the current network slice status information, i.e. the current number of registered UEs or the current number of established PDU Sessions for the network slice identified by the "snssai" attribute provided during the subscription creation/update; and

- NOTE 4: The handling of threshold based notifications is described in clause 4.15.3.2.10 of 3GPP TS 23.502 [2].
- NOTE 5: If the NEF interacts with multiple NSACFs for the requested S-NSSAI, the NEF performs the aggregation of the received network slice status reports from all these NSACFs and determines based on that whether a notification towards the subscribing AF needs to be sent or not (i.e. the reporting conditions to trigger a notification towards the AF are fulfilled or not).
  - 4)in order to unsubscribe from network slice status reporting, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual Monitoring Event Subscription" as defined in clause 5.3.3.3.3.5 of 3GPP TS 29.122 [4] to delete an existing network slice reporting subscription. Then the NEF shall interact with the NSACF to delete the associated subscription to notifications by invoking the Nnsacf\_SliceEventExposure\_Unsubscribe service operation as specified in 3GPP TS 29.536 [47]; and
- if the "UEId\_retrieval" feature defined in clause 5.3.4 of 3GPP TS 29.122 [4] is supported, in order to support AF specific UE ID retrieval:
  - the AF may request AF specific UE ID retrieval for an individual UE, by providing the UE's IP address in the "ueIpAddr" attribute or the UE's MAC address in the "ueMacAddr" attribute within the MonitoringEventSubscription data type;
  - 2) the AF may also provide the DNN, within the "dnn" attribute, and/or the S-NSSAI, within the "snssai" attribute, in the MonitoringEventSubscription data type;
  - 3) upon reception of the corresponding subscription request message from the AF, the NEF shall check whether the AF is authorized to perform this operation or not:
    - if the AF's request is not authorized, the NEF shall respond to the AF with a "403 Forbidden" status code with the response body including the ProblemDetails data structure containing the "cause" attribute set to the "REQUEST\_NOT\_AUTHORIZED" application error indicating AF authorisation failure; and
    - if the AF request is authorized by the NEF, then if the DNN and/or S-NSSAI information is not available in the request, the NEF shall determine the corresponding DNN and/or S-NSSAI information based on the received requesting AF Identifier, and if provided, the MTC Provider Information;
  - the NEF shall then interact with the BSF using the UE address and IP domain (if the UE IPv4 address is provided), DNN and/or S-NSSAI to retrieve the session binding information of the UE by invoking the Nbsf\_Management\_Discovery service operation as described in 3GPP TS 29.521 [9];
  - 5) if the NEF receives an error response from the BSF, the NEF shall respond to the AF with a proper error status code. If the NEF received from the BSF an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If no SUPI matching the provided UE information is returned by the BSF, the NEF shall respond to the AF with a "404 Not Found" status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_NOT\_FOUND" application error to indicate that the requested UE address is not found;
  - 6) upon success and a SUPI is returned by the BSF, the NEF shall then interact with the UDM to retrieve the AF specific UE Identifier using the received SUPI and at least one of the Application Port ID, MTC Provider Information or AF Identifier information by invoking Nudm\_SDM\_Get service as described in clause 5.2.2.2 of 3GPP TS 29.503 [17];
  - 7) upon success, the UDM responds to the NEF with an AF specific UE Identifier represented as an External Identifier for the UE which is uniquely associated with the MTC provider Information and/or AF Identifier. The NEF shall then respond to the AF with the received information, i.e. the AF specific UE Identifier represented as an External Identifier that was received from the UDM;
  - 8) if the NEF receives an error response from the UDM, the NEF shall respond to the AF with a proper error status code. If the NEF received from the UDM an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If the UDM indicates that the requested UE Identifier is not available in the subscription data, the NEF shall respond to the AF with a "404 Not Found" error status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_ID\_NOT\_AVAILABLE" application error to indicate that the AF specific UE ID is not available.

37

NOTE 6: The case where the UE's IP address provided by the AF to the NEF corresponds to an IP address that has been NATed (Network and Port Address Translation) is not supported in this release of the specification.

# 4.4.3 Procedures for Device Triggering

The procedures for device triggering as described in clause 4.4.6 of 3GPP TS 29.122 [4] shall be applicable in 5G with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the HSS applies to the UDM;
- the NEF shall interact with the UDM by using the Nudm\_SubscriberDataManagement service and the Nudm\_UEContextManagement service as defined in 3GPP TS 29.503 [17]; and
- the NEF acts as MTC-IWF.

# 4.4.4 Procedures for resource management of Background Data Transfer

The procedures for resource management of Background Data Transfer (BDT) in 5GS are described in clause 4.4.3 of 3GPP TS 29.122 [4] with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- If the feature Group\_Id is supported, an external group identifier may be included in the HTTP POST or PUT request message by the NEF. If the external group Id is sent from the AF to the NEF, the NEF shall interact with the UDM by using Nudm\_SubscriberDataManagement service as defined in 3GPP TS 29.503 [17] to translate the external group identifier into the corresponding internal group identifier;
- description of the PCRF applies to the PCF;
- the NEF shall interact with the PCF by using Npcf\_BDTPolicyControl service as defined in 3GPP TS 29.554 [19];
- if the "BdtNotification\_5G" feature is supported, the AF may include a notification URI within the "notificationDestination" attribute in the Bdt data type during the background data transfer policy negotiation. In addition, the AF may request to enable the BDT warning notification by setting the "warnNotifEnabled" attribute to true. When the NEF receives the BDT warning notification from the PCF as defined in clause 4.2.4.2 of 3GPP TS 29.554 [19] and the "warnNotifEnabled" attribute was set to true, the NEF shall send an HTTP POST message including the ExNotification data structure to the AF identified by the notification destination URI received during the background data transfer policy negotiation. The AF shall respond with an HTTP response to confirm the received notification. The AF may select one policy from the candidate of BDT policies if provided in the notification by using the HTTP PATCH message as described in clause 5.4.3.3.3.3 of 3GPP TS 29.122 [4]. If the selected policy is set to value "0" within the "selectedPolicy" attribute in the HTTP PATCH message, it implies no transfer policy is selected by the AF. The AF may also request to disable/enable the BDT warning notification by including the "warnNotifEnabled" attribute in the HTTP PATCH message; and
- The AF may include a traffic descriptor of background data within the "trafficDes" attribute in the Bdt data type during the background data transfer policy negotiation.

# 4.4.5 Procedures for CP Parameters Provisioning

The procedures for CP parameters provisioning as described in clause 4.4.9 of 3GPP TS 29.122 [4] shall be applicable in 5G with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;

38

- description of the HSS applies to the UDM;
- the NEF shall interact with the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17];
- if the ExpectedUMT\_5G feature as defined in clause 5.10.4 of 3GPP TS 29.122 [4] is supported, the expected UE moving trajectory within the "expectedUmts" attribute shall also be included in the HTTP POST/PUT request. In addition, if the ExpectedUmtTime\_5G feature as defined in clause 5.10.4 of 3GPP TS 29.122 [4] is supported, the start time and duration may be provided in the "expectedUmts" attribute to indicate when the UE arrives at a location and how long the UE stays in the location and the periodicity in the "expectedUmtDays" attribute may be provided to indicate the effective days within a week; and
- if the "UEId\_retrieval" feature defined in clause 5.10.4 of 3GPP TS 29.122 [4] is supported, in order to support the AF specific UE ID retrieval:
  - 1) the AF may request AF specific UE ID retrieval for an individual UE, by providing the UE's IP address in the "ueIpAddr" attribute or the UE's MAC address in the "ueMacAddr" attribute within the CpInfo data type;
  - 2) the AF may also provide the DNN, within the "dnn" attribute, and/or the S-NSSAI, within the "snssai" attribute, within the CpInfo data type;
  - 3) upon reception of the corresponding request message from the AF:
    - if the AF's request is not authorized, the NEF shall respond to the AF with a "403 Forbidden" status code with the response body including the ProblemDetails data structure containing the "cause" attribute set to the "REQUEST\_NOT\_AUTHORIZED" application error indicating AF authorisation failure; and
    - if the AF's request is authorized by the NEF, then if the DNN and/or S-NSSAI information is not available in the request, the NEF shall determine the corresponding DNN and/or S-NSSAI information based on the received requesting AF Identifier, and if provided, the MTC Provider Information;
  - 4) the NEF shall interact using the the BSF with UE address and IP domain (if the UE IPv4 address is provided), DNN and/or S-NSSAI to retrieve the session binding information of the UE by invoking the Nbsf\_Management\_Discovery service operation as described in 3GPP TS 29.521 [9];
  - 5) if the NEF receives an error response from the BSF, the NEF shall respond to the AF with a proper error status code. If the NEF received from the BSF an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If no SUPI matching the provided UE information is returned by the BSF, the NEF shall respond to the AF with a "404 Not Found" status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_NOT\_FOUND" application error to indicate that the requested UE address is not found;
  - 6) upon success and a SUPI is returned by the BSF, the NEF shall interact with the UDM to retrieve the AF specific UE Identifier using the received SUPI and at least one of the Application Port ID, MTC Provider Information or AF Identifier information by invoking Nudm\_SDM\_Get service as described in clause 5.2.2.2 of 3GPP TS 29.503 [17];
  - 7) upon success, the UDM responds to the NEF with the AF specific UE Identifier represented as an External Identifier for the UE which is uniquely associated with the MTC provider Information and/or AF Identifier. The NEF shall then respond to the AF with the received information, i.e. the AF specific UE Identifier represented as an External Identifier that was received from the UDM;
  - 8) if the NEF receives an error response from the UDM, the NEF shall respond to the AF with a proper error status code. If the NEF received from the UDM an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If the UDM indicates that the requested UE Identifier is not available in the subscription data, the NEF shall respond to the AF with a "404 Not Found" error status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_ID\_NOT\_AVAILABLE" application error to indicate that the AF specific UE ID is not available.
- NOTE: The case where UE's IP address provided by the AF to the NEF corresponds to an IP address that has been NATed (Network and Port Address Translation) is not supported in this release of the specification.

# 4.4.6 Procedures for PFD Management

The procedures for PFD management as described in clause 4.4.10 of 3GPP TS 29.122 [4] shall be applicable for 5GS with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF; and
- the NEF (PFDF) shall interact with the UDR for PFD management by using Nudr\_DataRepository service as defined in 3GPP TS 29.504 [20]. The PFDF is functionality within the NEF.
- If the PFDs are provisioned to at least one of the subscribed SMFs (but not all) within the allowed delay, the NEF (PFDF) may notify the AF about the failed PFD provisioning with the HTTP POST message by including the PfdReport data structure in the body of the message. In addition, the NEF may include the location area(s) of the user plane(s) which are unable to enforce the provisioned PFD(s) within the "locationArea" attribute of the PFD report(s). If the PFDs are provisioned to none of the subscribed SMFs within the allowed delay, the NEF (PFDF) shall notify the AF about the failed PFD provisioning with the HTTP POST message using appropriate failure code as defined in Table 5.11.2.2.3-1 of 3GPP TS 29.122 [4].
- NOTE 1: Unsuccessful PFDs provisioning to the subscribed SMFs within the allowed delay means that the PFDs are not provisioned successfully to the UPFs served by the failed SMFs.
- NOTE 2: The NEF maps the 3GPP network area(s) to the geographic area(s), civic address(es) or DNAI(s) if the 3GPP network area(s) is not allowed to be exposed to the 3rd party according to the operator policy.

# 4.4.7 Procedures for Traffic Influence

#### 4.4.7.1 General

In order to create a resource for the Traffic Influence, the AF shall send an HTTP POST message to the NEF to the resource "Traffic Influence Subscription", the body of the HTTP POST message may include the AF Service Identifier, external Group Identifier, any UE Indication, the UE address, GPSI, DNN, S-NSSAI, Application Identifier or traffic filtering information, Subscribed Event, Notification destination address, a list of geographicareas(s), AF Transaction Identifier, a list of DNAI(s), routing profile ID(s) or N6 traffic routing information, Indication of application relocation possibility, type of notifications, Temporal validity conditions, and if the URLLC feature is supported, Indication of AF acknowledgement to be expected and/or Indication of UE IP address preservation. If the AF\_latency feature is supported, user plane latency requirements may also be included and may support the indication of simultaneous connectivity in the "simConnInd" attribute and the minimum time interval for inactivity of traffic via source PSA in the "simConnTerm" attribute. If the EASDiscovery feature is supported, the indication may also be included. If the EDGEAPP feature is supported and the "subscribedEvents" attribute is provided, the event reporting requirements may also be included within the "eventReq" attribute. The Notification destination address shall be included if the Subscribed Event is included in the HTTP request message.

In order to update an existing traffic influence subscription, the AF shall send an HTTP PUT or PATCH message to the resource "Individual Traffic Influence Subscription" requesting to change the traffic influence parameters.

In order to delete an existing traffic influence subscription, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual Traffic Influence Subscription".

Upon receipt of the HTTP request from the AF, if the AF is authorized, the NEF shall perform the mapping as described in 3GPP TS 23.501 [3], and then perform as described in clause 4.4.7.2 if the request is identified by UE address or perform as described in clause 4.4.7.3 if the request is not identified by UE address.

If the EDGEAPP feature is supported and the "subscribedEvents" attribute is provided in the received HTTP POSTrequest, and immediate reporting was requested by the AF, then user plane path management report(s) shall be included in the HTTP POST response within the "eventReports" attribute, if available. They may also be included in the HTTP PUT/PATCH response, if available.

NOTE: The EAS IP Replacement information and the information indicating the EAS rediscovery are not provided simultaneously.

### 4.4.7.2 AF request identified by UE address

Upon receipt of the above AF request which is for an individual UE identified by IP or Ethernet address, the NEF may interact with the BSF to retrieve the related PCF information by invoking the Nbsf\_Management\_Discovery service operation as described in 3GPP TS 29.521 [9] If the NEF receives an error responsefrom the BSF, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the BSF, the NEF shall interact with the PCF by invoking the Npcf\_PolicyAuthorization service as described in 3GPP TS 29.514 [7]. After receiving a successful response from the PCF, the NEF shall:

- for the HTTP POST request, create a resource "Individual Traffic Influence Subscription" which represents the traffic influence subscription, addressed by a URI that contains the AF Identifier and an NEF-created subscription identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this traffic influence subscription:
- for the HTTP PUT or PATCH request, update a resource "Individual Traffic Influence Subscription" which
  represents the traffic influence subscription, and shall responds to the AF with a 200 OK status code with the
  "TrafficInfluSub" data structure as response body containing the representation of the modified "Individual
  Traffic Influence Subscription", or an HTTP "204 No Content" response; and
- for the HTTP DELETE request, remove all properties of the resource and delete the corresponding active resource "Individual Traffic Influence Subscription" which represents the traffic influence subscription, then shall responds to the AF with a 204 No Content status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

If the NEF receives a response with an error code from the PCF, the NEF shall not create, update or delete the resource and shall respond to the AF with a proper error status code.

### 4.4.7.3 AF request not identified by UE address

For AF request not identified by UE address, it may target an individual UE, a group of UEs or any UE. For an individual UE identified by GPSI, or a group of UEs identified by External Group Identifier, the NEF shall interact with the UDM by invoking the Nudm\_SubscriberDataManagement service as described in 3GPP TS 29.503 [17] to retrieve the SUPI or Internal Group Identifier.

The NEF shall interact with the UDR to store the received traffic influence parameters from the AF by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] and 3GPP TS 29.519 [23]. If the NEF receives an error responsefrom the UDR, the NEF shall not create, update or delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall:

- for the HTTP POST request, create a resource "Individual Traffic Influence Subscription" which represents the traffic influence subscription, addressed by a URI that contains the AF Identifier and an NEF-created subscription identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this traffic influence subscription;
- for the HTTP PUT or PATCH request, update a resource "Individual Traffic Influence Subscription" which
  represents the traffic influence subscription, and shall responds to the AF with a 200 OK status code with the
  "TrafficInfluSub" data structure as response body containing the representation of the modified "Individual
  Traffic Influence Subscription", or an HTTP "204 No Content" response; and
- for the HTTP DELETE request, delete the corresponding active resource "Individual Traffic Influence Subscription" which represents the traffic influence subscription, and shall responds to the AF with a 204 No Content status code.

#### 4.4.7.4 Handling of UP path management event notification

If the NEF receives a UP path management event notification from the SMF indicating that the subscribed event has been detected, then the NEF shall provide a notification by sending an HTTP POST message that shall include the EventNotification data type at least with the subscribed event (e.g. UP Path has changed) to the AF identified by the notification destination received during creation or modification of the Individual Traffic Influence Subscription resource and, optionally, by the AF Transaction Identifier received during the creation of the Individual Traffic Influence Subscription resource. If a URI for AF acknowledgement within the "ackUri" attribute is provided by the SMF in the event notification as defined in 3GPP TS 29.508 [26], the NEF shall also provide a URI for AF acknowledgement within the "afAckUri" attribute in the EventNotification data.

Upon receipt of the event notification, the AF shall respond with a "204 No Content" status code to confirm the received event notification.

Afterwards, if a URI for AF acknowledgement within the "afAckUri" attribute is received during the UP path management event notification, the AF may determine that an application layer relocation is needed, and may then send an HTTP POST request as acknowledgement for the UP path management event notification to inform the NEF about the result of application layer relocation. If the application layer is ready and/or the application relocation is completed, within the payload of the HTTP POST request, the AF shall include the AfAckInfo data type with the "afStatus" attribute set to "SUCCESS" and may provide within the AfResultInfo data the N6 traffic routing information associated to the target DNAI as "trafficRoute" attribute and, if the "ULBuffering" feature is supported, an indication that buffering of uplink traffic to the target DNAI is needed as "upBuffInd" attribute; otherwise, the AF shall indicate the failure by including the AfAckInfo data type in the payload with the "afStatus" attribute sets to the corresponding failure cause. The NEF Northbound interface transaction identifier generated by the AF shall also be provided as the "afTransId" attribute within the AfAckInfo data if the AF has previously provided it.

Upon receipt of the AF acknowledgement, the NEF shall respond with a "204 No Content" status code to confirm the received acknowledgement, and forward the AF acknowledgement to the SMF as described in 3GPP TS 29.508 [26].

# 4.4.8 Procedures for changing the chargeable party at session set up or during the session

The procedures for changing the chargeable party at session set up or during the session in 5GS are described in clause 4.4.4 of 3GPP TS 29.122 [4] with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the PCRF applies to the PCF;
- in the HTTP POST request, the AF may include the AF session subscribed "dnn" attribute and/or "snssai" attribute;
- if the EthChgParty\_5G feature as defined in clause 5.5.4 of 3GPP TS 29.122 [4] is supported and the request is for Ethernet UE:
  - in the HTTP POST request, the AF shall include the UE MAC address within the "macAddr" attribute instead of the UE IP address, If the AppId feature is not supported, the AF shall include the Ethernet Flow description within the "ethFlowInfo" attribute instead of the IP Flow description; otherwise, the AF shall include either the External Application Identifier within the "exterAppId" attribute or the Ethernet Flow description within the "ethFlowInfo" attribute;
  - in the HTTP PATCH request, the AF may update the Ethernet Flow description within the "ethFlowInfo" attribute or the External Application Identifier within the "exterAppId" attribute;
- the NEF may interact with BSF by using Nbsf\_Management\_Discovery service (as defined in 3GPP TS 29.521 [9]) to retrieve the PCF address; and
- the NEF shall interact with the PCF by using Npcf\_PolicyAuthorization service as defined in 3GPP TS 29.514 [7].

# 4.4.9 Procedures for setting up an AF session with required QoS

The procedures for setting up an AF session with required QoS in 5GS are described in clause 4.4.13 of 3GPP TS 29.122 [4] with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the PCRF applies to the PCF;
- the NEF may interact with BSF by using Nbsf\_Management\_Discovery service as defined in 3GPP TS 29.521 [9] to retrieve the PCF address;
- the NEF shall interact with the PCF by using Npcf\_PolicyAuthorization service as defined in 3GPP TS 29.514 [7];
- in the HTTP POST request, the AF may include a "dnn" attribute and/or a "snssai" attribute; and in the HTTP PUT request, the AF shall keep the same value(s) of the "dnn" attribute and/or the "snssai" attribute as set in the HTTP POST request if provided;
- description about the INDICATION\_OF\_SUCCESSFUL\_RESOURCES\_ALLOCATION event and INDICATION\_OF\_FAILED\_RESOURCES\_ALLOCATION event apply to the SUCCESSFUL\_RESOURCES\_ALLOCATION event and FAILED\_RESOURCES\_ALLOCATION event respectively; In addition, description about the INDICATION\_OF\_RELEASE\_OF\_BEARER, INDICATION\_OF\_LOSS\_OF\_BEARER and INDICATION\_OF\_RECOVERY\_OF\_BEARER events are not applicable in this specification.
- if the EthAsSessionQoS\_5G feature as defined in clause 5.14.4 of 3GPP TS 29.122 [4] is supported and the request is for Ethernet UE:
  - in the HTTP POST/PUT request, the AF shall include the UE MAC address within the "macAddr" attribute instead of the UE IP address. If the AppId feature is not supported, the AF shall include the Ethernet Flow description within the "ethFlowInfo" attribute instead of the IP Flow description; otherwise, the AF shall include either the External Application Identifier within the "exterAppId" attribute or the Ethernet Flow description within the "ethFlowInfo" attribute;
  - in the HTTP PATCH request, the AF may update the Ethernet Flow description within the "ethFlowInfo" attribute or the External Application Identifier within the "exterAppId" attribute;
- if the "QoSMonitoring\_5G" feature as defined in clause 5.14.4 of 3GPP TS 29.122 [4] is supported, in order to support the QoS Monitoring, the AF shall include "qosMonInfo" attribute. The AF shall also include the "directNotifInd" attribute set to true if the "ExposureToEAS" feature is supported and the direct notification is required. Within the QosMonitoringInformation data structure, the AF shall include:
  - one or more requested QoS Monitoring Parameter(s) within the "reqQosMonParams"; and
  - one or more report frequency within the "repFreqs" attribute; and
  - when the "repFreqs" attribute includes the value "PERIODIC", periodic time for the reporting and, if the feature "PacketDelayFailureReport" is supported, the maximum period with no QoS measurement results reported within the "repPeriod" attribute; and
  - when the "repFreqs" attribute includes the value "EVENT\_TRIGGERED", the AF shall include:
    - the delay threshold for downlink with the "repThreshDl" attribute;
    - the delay threshold for uplink with the "repThreshUl" attribute; and/or
    - the delay threshold for round trip with the "repThreshRp" attribute; and
    - the minimum waiting time between subsequent reports within the "waitTime" attribute; and
    - if the feature "PacketDelayFailureReport" is supported, the maximum period with no QoS measurement results reported within the "repPeriod" attribute.

If the NEF authorizes the AF request, the NEF may create a QoS monitoring notification correlation identifier for the AF transaction during the creation of the AF resource and may provision it together with the received QoS monitoring parameters to the PCF by invoking the Npcf\_PolicyAuthorization service as defined in 3GPP TS 29.514 [7] or, if the "TSC\_5G" feature is supported, to the TSCTSF by invoking the Ntsctsf\_QoSandTSCAssistance service as defined in 3GPP TS 29.565 [50];

- when the NEF receives the event notification for the AF transaction as defined in clause 4.2.2 of 3GPP TS 29.508 [26] or clauses 4.2.4.12 and 4.2.5.14 of 3GPP TS 29.514 [7] or, if the "TSC\_5G" feature is supported, clause 5.3.2.5.7 of 3GPP TS 29.565 [50], or when the AF requested direct notification, as defined in clause 5.2.2.3 of 3GPP TS 29.564 [61], the NEF shall include one or more QoS monitoring reports within the "qosMonReports" attribute. Within the QosMonitoringReport data structure, the NEF shall include:
  - the uplink packet delays within the "ulDelays" attribute; and/or
  - the downlink packet delays within the "dlDelays" attribute; and/or
  - the round trip packet delays within the "rtDelays" attribute; or
  - if the feature "PacketDelayFailureReport" is supported, the packet delay measurement failure indicator within the "pdmf" attribute; and
- NOTE 1: The PCF, the SMF, the UPF or the TSCTSF report one UL, DL and/or round-trip packet delay measurement for each periodic and/or event-triggered report as described in 3GPP TS 29.514 [7], 3GPP TS 29.508 [26], 3GPP TS 29.564 [61] and 3GPP TS 29.565 [50], i.e, the NEF can include only one element within the "ulDelays", "dlDelays", and/or "rtDelays" array(s), each one with the received report from the PCF, SMF, UPF or the TSCTSF for the UL, DL and/or round trip delay(s).
- if the "AlternativeQoS\_5G" feature is supported, the AF may include an ordered list of QoS references within the "altQosReferences" attribute and, if the "DisableUENotification\_5G" feature is also supported, an indication that the UE does not need to be informed about changes related to Alternative QoS Profiles within the "disUeNotif" attribute.

When the NEF interfaces directly with the PCF, the NEF shall transfer them to the PCF in the Npcf\_PolicyAuthorization service and subscribe to PCF event "QOS\_NOTIF" in the Npcf\_PolicyAuthorization service. When the NEF receives the notification of PCF event "QOS\_NOTIF", it shall notify the AF with "QOS\_GUARANTEED" event or with "QOS\_NOT\_GUARANTEED" event and the currently applied QoS reference if received. When the NEF receives the notification of PCF event "SUCCESSFUL\_RESOURCES\_ALLOCATION", it shall notify the AF the event together with the currently applied QoS reference if received.

If the "TSC\_5G" feature is supported, when the NEF interfaces with the TSCTSF, the NEF shall transfer the received alternative QoS references to the TSCTSF in the Ntsctsf\_QoSandTSCAssistance service and subscribe with TSCTSF to "QOS\_GUARANTEED" and "QOS\_NOT\_GUARANTEED" events. When the NEF receives the event notification from the TSCTSF, the NEF shall notify the AF with "QOS\_GUARANTEED" event or with "QOS\_NOT\_GUARANTEED" event and the currently applied QoS reference if received. When the NEF receives the notification of TSCTSF event "SUCCESSFUL\_RESOURCES\_ALLOCATION", it shall notify the AF the event together with the currently applied QoS reference if received.

- NOTE 2: Based on the operator configuration, the QoS reference identifiers received from the AF can be the same or different as the QoS reference identifiers known at the PCF. The NEF can perform a mapping for the QoS reference identifier.
- if the "TSC\_5G" feature is supported, the AF may include:
  - the TSC QoS requirement within the "tscQosReq" attribute. Within the TscQosRequirement data structure, the AF may include:
    - the input information to construct the TSC Assistance Container within the "tscaiInputUl" attribute and/or "tscaiInputDl"attribute;

And, if individual QoS parameters instead of QoS reference is provided, may include:

- requested GBR within the "reqGbrDl" attribute and/or "reqGbrUl" attribute;
- requested MBR within the "reqMbrDl" attribute and/or "reqMbrUl" attribute; and

- the maximum burst size within the "maxTscBurstSize" attribute;
- the priority within the "priority" attribute;
- the requested 5GS delay within the "req5Gsdelay" attribute.

If the NEF authorizes the AF request, the NEF may provision the received QoS requirements to the TSCTSF by invoking the Ntsctsf\_QoSandTSCAssistance\_Create/Update request as defined in 3GPP TS 29.565 [50]. The NEF determines whether to invoke the TSCTSF or to directly contact the PCF based on operator configuration. This determination may consider the AF identifier, whether the "tscaiInputUl" and/or "tscaiInputDl" attributes within the "tscQosReq" attribute were received in the subscription request, whether the "qosReference" attribute or individual QoS parameters within the "tscQosReq" attribute were received in the subscription request, and SLA between operator and application provider. A TSCTSF address may be locally configured in the NEF or the NEF uses the DNN/S-NSSAI (which may be provided in the request or determined based on the AF identifier) to discover the TSCTSF from the NRF. If the NEF directly contacts the PCF while the NEF determined to invoke the TSCTSF when authorizing the update request, the NEF shall reject the request message by sending an HTTP response to the AF with a status code set to 403 Forbidden and may include the

"INVALID\_SESSION\_UPDATE" error in the "cause" attribute of the "ProblemDetails" structure and indicate which parameters can not be served in current session in the "invalidParams" attribute of the "ProblemDetails" structure.

- NOTE 3: The NEF can determine whether the TSCTSF needs to be involved based on the DNN/S-NSSAI for the AF session according to the SLA.
- if the "AltQosWithIndParams\_5G" feature is supported, the AF may include:
  - an ordered list of alternative service requirements that include individual QoS parameter sets within the "altQosReqs" attribute and, if the "DisableUENotification\_5G" feature is also supported, an indication that the UE does not need to be informed about changes related to Alternative QoS Profiles within the "disUeNotif" attribute. Within the AlternativeServiceRequirementsData data structure, the AF shall include:
    - a reference to the alternative individual QoS related parameter(s) included in this set within the "altQosParamSetRef" attribute; and
    - at least one of the following:
      - The guaranteed bandwidth in uplink within the "gbrUl" attribute and the guaranteed bandwidth in downlink within the "gbrDl" attribute;
      - The requested packet delay budget within the "pdb" attribute;

If the NEF authorizes the AF request, and if the "TSC\_5G" feature is supported, the NEF may provision the received QoS requirements and subscribe with to the TSCTSF to "QOS\_GUARANTEED" and "QOS\_NOT\_GUARANTEED" events by invoking the Ntsctsf\_QoSandTSCAssistance\_Create request as defined in 3GPP TS 29.565 [50]. The NEF determines whether to invoke the TSCTSF or to directly contact the PCF based on operator configuration. This determination may consider the AF identifier, whether the "tscaiInputUl" and/or "tscaiInputDl" attributes within the "tscQosReq" attribute were received in the subscription request, whether the "gosReference" attribute or individual QoS parameters within the "altQosRegs" attribute were received in the subscription request, and SLA between operator and application provider. A TSCTSF address may be locally configured in the NEF or the NEF uses the DNN/S-NSSAI (which may be provided in the request or determined based on the AF identifier) to discover the TSCTSF from the NRF. When the NEF receives the notification of TSCTSF "QOS\_GUARANTEED" event or "QOS\_NOT\_GUARANTEED" event, it shall notify the AF with "QOS\_GUARANTEED" event or "QOS\_NOT\_GUARANTEED" event with the currently applied individual QoS parameter set within the "appliedQosRef" attribute if received. When the NEF receives the notification of the TSCTSF event "SUCCESSFUL\_RESOURCES\_ALLOCATION", it shall notify the AF the event together with the currently applied individual QoS parameter set within the "appliedQosRef" attribute if received. If the NEF directly contacts the PCF while the NEF determined to invoke the TSCTSF when authorizing the update request, the NEF shall reject the request message by sending an HTTP response to the AF with a status code set to 403 Forbidden and may include the "INVALID\_SESSION\_UPDATE" error in the "cause" attribute of the "ProblemDetails" structure and indicate which parameters can not be served in current session in the "invalidParams" attribute of the "ProblemDetails" structure.

NOTE 4: The NEF can determine whether the TSCTSF needs to be involved based on the DNN/S-NSSAI for the AF session according to the SLA.

When the NEF interfaces directly with the PCF, the NEF shall transfer the received QoS requirements to the PCF in the Npcf\_PolicyAuthorization service and subscribe to PCF event "QOS\_NOTIF" in the Npcf\_PolicyAuthorization service. When the NEF receives the notification of PCF event "QOS\_NOTIF", it shall notify the AF with "QOS\_GUARANTEED" event or with the "QOS\_NOT\_GUARANTEED" event and the currently applied QoS reference if received. When the NEF receives the notification of PCF event "SUCCESSFUL\_RESOURCES\_ALLOCATION", it shall notify the AF the event together with the currently applied QoS reference if received.

- If the "eNB\_5G" feature is supported, the AF may additionally subscribe the event(s) "ACCESS\_TYPE\_CHANGE" and/or "PLMN\_CHG". If the NEF authorizes the AF request, the NEF shall subscribe the event(s) at the PCF by invoking the Npcf\_PolicyAuthorization service operation.

# 4.4.10 Procedures for MSISDN-less Mobile Originated SMS

The procedures are used by the NEF to send the MSISDN-less MO-SMS to the AF in 5GS are described in clause 4.4.14 of 3GPP TS 29.122 [4] with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF; and
- the NEF shall interact with UDM by using Nudm\_SubscriberDataManagement service (as defined in 3GPP TS 29.503 [17]) to retrieve the external identifier.

# 4.4.11 Procedures for Network Configuration Parameters Provisioning

The procedures for network configuration parameters provisioning as described in clause 4.4.12 of 3GPP TS 29.122 [4] shall be applicable in 5GS with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the HSS applies to the UDM;
- the NEF shall interact with the UDM by using Nudm\_ParameterProvision service as specified in 3GPP TS 29.503 [17]; and
- if the "UEId\_retrieval" feature defined in clause 5.13.4 of 3GPP TS 29.122 [4] is supported, in order to support the AF specific UE ID retrieval:
  - the AF may request AF specific UE ID retrieval for an individual UE, by providing the UE's IP address in the "ueIpAddr" attribute or the UE's MAC address in the "ueMacAddr" attribute within the NpConfiguration data type;
  - 2) the AF may also provide the DNN, within the "dnn" attribute, and/or the S-NSSAI, within the "snssai" attribute, within the NpConfiguration data type;
  - 3) upon reception of the corresponding request message from the AF:
    - if the AF's request is not authorized, the NEF shall respond to the AF with a "403 Forbidden" status code with the response body including the ProblemDetails data structure containing the "cause" attribute set to the "REQUEST\_NOT\_AUTHORIZED" application error indicating AF authorisation failure; and
    - if the AF's request is authorized by the NEF, then if the DNN and/or S-NSSAI information is not available in the request, the NEF shall determine the corresponding DNN and/or S-NSSAI information based on the received requesting AF Identifier, and if provided, the MTC Provider Information;
  - 4) the NEF shall then interact with the BSF with the UE address and IP domain (if the UE IPv4 address is provided), DNN and/or S-NSSAI to retrieve the session binding information of the UE by invoking the Nbsf\_Management\_Discovery service operation as described in 3GPP TS 29.521 [9];
  - 5) if the NEF receives an error response from the BSF, the NEF shall respond to the AF with a proper error status code. If the NEF received from the BSF an error response including a "ProblemDetails" data structure

with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If no SUPI matching the provided UE information is returned by the BSF, the NEF shall respond to the AF with a "404 Not Found" status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_NOT\_FOUND" application error to indicate that the requested UE address is not found;

- 6) upon success and a SUPI is returned by the BSF, the NEF shall interact with the UDM to retrieve the AF specific UE Identifier using the received SUPI and at least one of the Application Port ID, MTC Provider Information or AF Identifier information by invoking Nudm\_SDM\_Get service as described in clause 5.2.2.2 of 3GPP TS 29.503 [17];
- 7) upon success, the UDM responds to the NEF with an AF specific UE Identifier represented as an External Identifier for the UE which is uniquely associated with the MTC provider Information and/or AF Identifier. The NEF shall then respond to the AF with the received information, i.e. the AF specific UE Identifier represented as an External Identifier that was received from the UDM;
- 8) if the NEF receives an error response from the UDM, the NEF shall respond to the AF with a proper error status code. If the NEF received from the UDM an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If the UDM indicates that the requested UE Identifier is not available in the subscription data, the NEF shall respond to the AF with a "404 Not Found" error status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_ID\_NOT\_AVAILABLE" application error to indicate that the AF specific UE ID is not available.
- NOTE: The case where UE IP address provided by the AF to the NEF corresponds to an IP address that has been NATed (Network and Port Address Translation) is not supported in this release.

# 4.4.12 Procedures for Non-IP data delivery

#### 4.4.12.1 General

The procedures are used by the NEF to send/receive the non-IP data to/from the AF. It comprises NIDD configuration and NIDD delivery.

The NIDD configuration may be triggered by the NEF or the AF. If it is triggered by the NEF, the NiddConfigurationTrigger API described in clause 5.5 is used and the procedure is described in clause 4.4.12.2.

#### 4.4.12.2 NIDD configuration Triggered by the NEF

If the NEF receives a NIDD connection establishment request from the SMF and if there is no NIDD configuration for the UE, the NEF may send a NIDD configuration trigger to the AF. The NEF determines the destination URI by local configuration. The NEF shall send to the determined destination URL an HTTP POST request that shall include a NiddConfigurationTrigger data type with:

- the NEF identifier,
- the AF identifier, and
- GPSI as UE identity.

The AF shall acknowledge the HTTP POST request with an HTTP 200 OK response. Then the AF may start NIDD configuration procedure as described in clause 4.4.12.3.

#### 4.4.12.3 NIDD configuration triggered by the AF and NIDD delivery

The procedures for NIDD configuration triggered by the AF and NIDD delivery are described in clause 4.4.5 of 3GPP TS 29.122 [4] with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the MME/SGSN applies to the SMF;

- for the connection establishment, the interaction between the NEF and the SMF shall use Nnef\_SMContext service as specified in 3GPP TS 29.541 [24];
- for MO NIDD, the interaction between the SMF and the NEF shall use Nnef\_SMContext service as specified in 3GPP TS 29.541 [24]; and
- for MT NIDD, the interaction between the SMF and the NEF shall use Nsmf\_NIDD service as specified in 3GPP TS 29.542 [25].

# 4.4.13 Procedures for RACS Parameter Provisioning

The procedures for RACS parameter provisioning as described in clause 4.4.15 of 3GPP TS 29.122 [4] shall be applicable in 5G with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF.

# 4.4.14 Procedures for analytics information exposure

#### 4.4.14.1 Subscription/unsubscription to notification of analytics information

The procedures are used by the AF to subscribe/unsubscribe to retrieve analytics information via NEF, and are used by the NEF to notify the AF about the requested analytics information as described in 3GPP TS 23.288 [29].

In order to subscribe to retrieve analytics information, the AF shall send an HTTP POST message to the NEF to the resource "Analytics Exposure Subscriptions", the HTTP POST request message body shall include the AnalyticsExposureSubsc data structure that shall include:

- the URI where to receive the requested notifications as "notifUri" attribute;
- the Notification Correlation Identifier assigned by the NF service consumer for the requested notifications as "notifId" attribute; and
- a description of the subscribed events as "analyEventsSubs" attribute that shall include for each event:
  - 1) an event identifier as "analyEvent" attribute.

The AnalyticsExposureSubsc data structure may include:

- event reporting requirement information as "analyRepInfo" attribute, which applies for all events in a subscription and may contain the following attributes:
  - 1) event notification method (periodic, one time, on event detection) as "notifMethod" attribute;
  - 2) maximum Number of Reports as "maxReportNbr" attribute;
  - 3) monitoring Duration as "monDur" attribute;
  - 4) repetition period for periodic reporting as "repPeriod" attribute;
  - 5) immediate reporting indication as "immRep" attribute;
  - 6) sampling ratio as "sampRatio" attribute;
  - 7) group reporting guard time as "grpRepTime" attribute;
  - 8) partitioning criteria for partitioning the impacted UEs before performing sampling as "partitionCriteria" attribute if the "EneNA" feature is supported; and
  - 9) a notification flag (used for muting and retrieving notifications) as "notifFlag" attribute if the "EneNA" feature is supported.

Each AnalyticsEventSubsc data structure may include:

- event specific filters via the "analyEventFilter" attribute; and
- the indication of the UEs to which the subscription applies via "tgtUe" attribute, which if provided shall include one of the following attributes:
  - 1) identification of an individual UE via a "gpsi" attribute;
  - 2) identification of a group of UE(s) via a "exterGroupId" attribute; or
  - 3) identification of any UE via the "anyUeInd" attribute.

Upon receipt of the HTTP POST request from the AF, if the AF is authorized, the NEF shall interact with the UDM by using Nudm\_SubscriberDataManagement service as defined in 3GPP TS 29.503 [17] to translate the GPSI or external group identifier into the corresponding SUPI or internal group identifier. After receiving a successful response from the UDM, the NEF may perform further mappings and translations (e.g. map application identifiers to DNN and S-NSSAI information, or translate attributes of data type NetworkAreaInfo to attributes of data type LocationArea5G) and it shall interact with the NWDAF to subscribe to the subscription to the analytics information by using the Nnwdaf\_EventsSubscription service as defined in 3GPP TS 29.520 [27]. If the NEF receives an error responsefrom the NWDAF, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

In order to update an existing analytics exposure subscription, the AF shall send an HTTP PUT message to the NEF to the resource "Individual Analytics Exposure Subscription" requesting to change the subscription.

In order to delete an existing analytics exposure subscription, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual Analytics Exposure Subscription".

Upon receipt of the HTTP PUT or DELETE request from the AF, if the AF is authorized, the NEF may perform further mappings and translations (e.g. map application identifiers to DNN and S-NSSAI information, or translate attributes of data type LocationArea5G to attributes of data type NetworkAreaInfo as required by the data model) and it shall interact with the NWDAF to modify or cancel the subscription to the analytics information by using the Nnwdaf\_EventsSubscription service as defined in 3GPP TS 29.520 [27]. If the NEF receives an error responsefrom the NWDAF, the NEF shall not update or delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the NWDAF, the NEF shall:

- for the HTTP POST request, create a resource "Individual Analytics Exposure Subscription" which represents the analytics exposure subscription, addressed by a URI that contains the AF Identifier and an NEF-created subscription identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this analytics exposure subscription. If not all the requested analytics events in the subscription are accepted, then the NEF may include the "failEventReports" attribute indicating the event(s) for which the subscription failed and the associated reason(s):
- for the HTTP PUT request, update a resource "Individual Analytics Exposure Subscription" which represents the analytics exposure subscription, and shall responds to the AF with a 200 OK or 204 No Content status code. When responding with a 200 OK status code, if not all the requested analytics events in the subscription are modified successfully, then the NEF may include the "failEventReports" attribute indicating the event(s) for which the modification failed and the associated reason(s); and
- for the HTTP DELETE request, remove all properties of the resource and delete the corresponding active resource "Individual Analytics Exposure Subscription" which represents the analytics exposure subscription, then shall responds to the AF with a 204 No Content status code.

If the immediate reporting indication in the "immRep" attribute within the "analyRepInfo" attribute sets to true during the HTTP POST or PUT request, the NEF shall also include the reports of the events subscribed, if available, in the HTTP POST or PUT response to the AF.

If the NEF receives an analytics information notification from the NWDAF indicating that the subscribed analytics event has been detected, the NEF may perform further mappings and translations (e.g. translate attributes of data type NetworkAreaInfo to attributes of data type LocationArea5G as required by the data model), it may determine based on

local configuration to hide from the Untrusted AF network internal information (e.g. DNN, S-NSSAI) which was included in the NWDAF notification, and it shall provide a notification by sending HTTP POST message that include the AnalyticsEventNotification data structure at least with the detected analytics event to the AF identified by the notification URI together with the notification correlation identifier received during creation/modification of the Individual Analytics Exposure Subscription. Upon receipt of the analytics event notification, the AF shall respond with a "204 No Content" status code to confirm the received notification.

When the "notifFlag" attribute is included during the creation of a subscription (HTTP POST request) and set to "DEACTIVATE", the NEF shall mute the event notification and store the available events.

When the "notifFlag" attribute is included during the update of a subscription (HTTP PUT request) and set to "DEACTIVATE", the NEF shall mute the event notification and store the available events; if it is set to the value "RETRIEVAL", the NEF shall send the stored events to the NF service consumer, mute the event notification again and store available events; if it is set to the value "ACTIVATE" and the event notifications are muted (due to a previously received "DECATIVATE" value), the NWDAF shall unmute the event notification, i.e. start sending again notifications for available events.

#### 4.4.14.2 Fetch analytics information

The procedures are used by the AF to fetch analytics information via NEF.

In order to fetch analytics information, the AF shall send an HTTP POST request message to the NEF targeting the custom operation URI "{apiRoot}/3gpp-analyticsexposure/v1/{afId}/fetch", the HTTP POST request message body shall include the AnalyticsRequest data structure that shall include:

- the identification of the analytics events, encoded within the "analyEvent" attribute;

and may include:

- the description of the analytics reporting information, encoded within the "analyRep" attribute;
- an event filter, encoded within the "analyEventFilter" attribute.
- the indication of the UEs to which the analytics request applies via either:
  - a) the identification of an individual UE via the "gpsi" attribute;
  - b) the identification of a group of UE(s) via the "exterGroupId" attribute; or
  - c) the identification of any UE via the "anyUeInd" attribute.

Upon the reception of an HTTP POST request, if the AF is authorized, the NEF shall interact with the UDM by using Nudm\_SubscriberDataManagement service as defined in 3GPP TS 29.503 [17] to translate the GPSI or external group identifier into the corresponding SUPI or internal group identifier. After receiving a successful response from the UDM, the NEF may perform further mappings and translations (e.g. map application identifiers to DNN and S-NSSAI information, or translate attributes of data type NetworkAreaInfo to attributes of data type LocationArea5G) and it shall interact with the NWDAF by using Nnwdaf\_AnalyticsInfo service as defined in 3GPP TS 29.520 [27]. If the NEF receives an error response from the NWDAF, the NEF shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable. If a successful response including analytics information (e.g. SUPI to GPSI, Internal Group ID to External Group ID, attributes of data type NetworkAreaInfo to attributes of data type LocationArea5G), it may determine based on local configuration to hide from the Untrusted AF network internal information (e.g. DNN, S-NSSAI) which was included in the NWDAF response, and it shall send an HTTP POST response to the AF by including analytics information within the AnalyticsData data structure.

# 4.4.15 Procedures for 5G LAN Parameter Provisioning

#### 4.4.15.1 General

The procedures are used by the AF to provision 5G LAN type service related parameters to the NEF. The following procedures support:

- Management of 5G Virtual Network group membership; and/or
- Management of 5G Virtual Network group data

#### 4.4.15.2 Creation of a new subscription for 5G LAN parameter provisioning

In order to create a new subscription to provision 5G LAN related parameters, the AF shall initiate an HTTP POST request to the NEF for the "5GLAN Parameters Provision Subscriptions" resource. The body of the HTTP POST message shall include the 5G LAN service related parameters within the "5gLanParams" attribute.

Upon receipt of the corresponding HTTP POST message, if the AF is authorized by the NEF to provision the parameters, the NEF shall interact with the UDM to create a subscription at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall create a new subscription and assign a subscription identifier for the "Individual 5GLAN ParametersProvision Subscription" resource. Then the NEF shall send a HTTP "201 Created" response with 5GLanParametersProvision data structure as response body and a Location header field containing the URI of the created individual subscription resource.

#### 4.4.15.3 Modification of an existing subscription for 5G LAN parameter provisioning

To modify an existing subscription to provision 5G LAN parameters, the AF shall initiate an HTTP PUT/PATCH request to the NEF for the "Individual 5GLAN Parameters Provision Subscription" resource. The body of the HTTP PUT message shall include the 5GLanParametersProvision data type as defined in clause 5.7.2.3.2. The body of the HTTP PATCH message shall include the 5GLanParametersProvisionPatch data as defined in clause 5.7.2.3.5. The External Group Identifier, DNN, S-NSSAI and PDU session type(s) within the "5gLanParams" attribute shall not be updated/modified.

Upon reception of the corresponding HTTP PUT/PATCH message, if the AF is authorized by the NEF to provision the parameters, the NEF shall interact with the UDM to modify an existing subscription at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the modification request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall update the existing subscription for the "Individual 5GLAN Parameters Provision Subscription" resource. Then the NEF shall send a HTTP response including "200 OK" status code with 5GLanParametersProvision data structure or "204 No Content" status code.

#### 4.4.15.4 Deletion of an existing subscription for 5G LAN parameter provisioning

To delete an existing subscription to 5GLAN provision parameters, the AF shall initiate an HTTP DELETE request to the NEF for the "Individual 5GLAN Parameters Provision Subscription" resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized, the NEF shall interact with the UDM to delete an existing parameters provision subscription at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM and informs the NEF with a successful response, the NEF shall delete the existing subscription for the "Individual 5GLAN Parameters Provision Subscription" resource. Then the NEF shall send a HTTP "204 No Content" response.

# 4.4.16 Procedures for applying BDT policy

In order to create a resource for the applying a previously negotiated Background Data Transfer Policy to a UE or a Group of UEs, the AF shall send an HTTP POST message to the NEF to the resource "Applied BDT Policy Subscriptions". The body of the HTTP POST message shall contain the external Group Identifier or external Identifier, and the Background Data Transfer Reference ID for a previously negotiated policy of a background data transfer.

Upon receipt of the HTTP POST request from the AF, if the AF is authorized, the NEF shall interact with the UDM by invoking the Nudm\_SubscriberDataManagement service as described in 3GPP TS 29.503 [17] to retrieve the SUPI or Internal Group Identifier.

In order to update an existing applied BDT policy subscription, the AF shall send an HTTP PATCH message to the resource "Individual Applied BDT Policy Subscription" requesting to change the applied BDT policy. The AF shall include in the body of the HTTP PATCH request the new Background Data Transfer Reference ID.

In order to delete an existing applied BDT policy subscription, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual Applied BDT Policy Subscription".

The NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20], if the NEF receives an error responsefrom the UDR, the NEF shall not create, update or delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall:

- for the HTTP POST request, create a resource "Individual Applied BDT Policy Subscription" addressed by a URI that contains the AF Identifier and an NEF-created subscription identifier, and shall respond to the AF with a "201 Created" status code, including a Location header field containing the URI of the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this resource;
- for the HTTP PATCH request, update a resource "Individual Applied BDT Policy Subscription" which represents the applied BDT policy subscription, and shall respond to the AF with a "200 OK" or "204 No Content" status code; and
- for the HTTP DELETE request, delete the corresponding active resource "Individual Applied BDT Policy Subscription", and shall respond to the AF with a "204 No Content" status code.

# 4.4.17 Procedures for Enhanced Coverage Restriction Control

The procedures for network configuration parameters provisioning as described in clause 4.4.11 of 3GPP TS 29.122 [4] shall be applicable in 5GS with the following differences:

- description of the SCS/AS applies to the AF;
- description of the SCEF applies to the NEF;
- description of the HSS applies to the UDM; and
- upon receipt of HTTP POST request from the AF to query the current status of enhanced coverage restriction, the NEF shall interact with the UDM by using the Nudm\_SubscriberDataManagement service as specified in 3GPP TS 29.503 [17].
- upon receipt of HTTP POST request from the AF to configure the enhanced converage restriction, the NEF shall interact with the UDM by using the Nudm\_ParameterProvision service as specified in 3GPP TS 29.503 [17].
- if the ECR\_WB\_5G feature is supported, in order to configure the enhanced coverage restriction for WB UE, the HTTP POST request message shall include the WB mode related enhanced coverage restriction information via the "ecrDataWbs" attribute for the WB UE.

# 4.4.18 Procedures for IPTV Configuration

The procedures are used by the AF to authorize the request and forward the request for IPTV configuration information via NEF.

In order to configure IPTV information, the AF shall send an HTTP POST message to the NEF to the resource "IPTV Configurations", the HTTP POST request message body shall include the IptvConfigData data structure that shall include:

- indication of the UEs to which the subscription applies via:
  - a) identification of an individual UE via a "gpsi" attribute; or
  - b) identification of a group of UE(s) via a "exterGroupId" attribute;
- an application identifier as "appId" attribute; and
- a list of Multicast Access Control as "multiAccCtrls" attribute;

and may include:

- an DNN as "dnn" attribute;

- an S-NSSAI as "snssai" attribute; and
- MTC Provider Information as "mtcProviderId" attribute.
- NOTE: The NEF can check the received MTC Provider Id information and reject the IPTV configuration request upon failure checking result.

In order to update an existing individual IPTV configuration, the AF shall send an HTTP PUT or HTTP PATCH message to the NEF to the resource "Individual IPTV Configuration" requesting to change the subscription. The External Group Identifier, GPSI, DNN, S-NSSAI and Application Identifier shall remain unchanged from previous values in the HTTP PUT message.

In order to delete an existing individual IPTV configuration, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual IPTV Configuration".

Upon receipt of the HTTP request from the AF, if the AF is authorized, the NEF shall interact with the UDM by invoking the Nudm\_SubscriberDataManagement service as described in 3GPP TS 29.503 [17] to retrieve the SUPI or Internal Group Identifier. Then the NEF shall interact with the UDR to create, update or delete the IPTV configuration by using the Nudr\_DataRepository service as defined in 3GPP TS 29.519 [23]. If the NEF receives an error responsefrom the UDR, the NEF shall not create, update or delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall:

- for the HTTP POST request, create a resource "Individual IPTV Configuration" which represents the IPTV configuration request, addressed by a URI that contains the AF Identifier and an NEF-created configuration identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this IPTV configuration.
- for the HTTP PUT or HTTP PATCH request, update a resource "Individual IPTV Configuration" which represents the IPTV configuration, and shall responds to the AF with a 200 OK or 204 No Content status code; and
- for the HTTP DELETE request, remove all properties of the resource and delete the corresponding active resource "Individual IPTV Configuration", then shall responds to the AF with a 204 No Content status code.

# 4.4.19 Procedures for Location Privacy Indication Parameters Provisioning

The procedures are used by the AF to provision Location Privacy Indication parameters to the NEF. The procedures are applicable for an individual UE or a group of UEs.

In order to provision Location Privacy Indication parameters, the AF shall initiate an HTTP POST request to the NEF for the "LPI Parameters Provisionings" resource. The body of the HTTP POST message shall include the Location Privacy Indication related parameters within the LpiParametersProvision data structure.

Upon receipt of the corresponding HTTP POST message, if the AF is authorized by the NEF to provision the parameters, the NEF shall interact with the UDM to create a resource at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall create a new resource and assign an identifier for the "Individual LPI Parameters Provisioning" resource. Then the NEF shall send a HTTP "201 Created" response with LpiParametersProvision data structure as response body and a Location header field containing the URI of the created individual resource.

In order to update an existing individual LPI Parameters Provisioning, the AF may send an HTTP PUT message to the resource "Individual LPI Parameters Provisioning" requesting the NEF to change all properties in the existing resource. The body of the HTTP PUT request message shall include LpiParametersProvision data type as defined in clause 5.10.2.3.2. The External Group Identifier or GPSI shall remain unchanged from previous values.

If the "PatchUpdate" feature defined in clause 5.10.3 is supported, in order to partially modify an existing LPI Parameters Provisioning resource, the AF may send an HTTP PATCH request message to the NEF on the "Individual LPI Parameters Provisioning" resource, with the request body containing the LpiParametersProvisionPatch data structure including only the attributes that shall be updated.

Upon receipt of the corresponding HTTP PUT/PATCH request message, if the AF is authorized by the NEF to provision the parameters, the NEF shall interact with the UDM to modify an existing resource at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the modification request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall update the existing resource for the "Individual LPI Parameters Provisioning" resource. Then the NEF shall send a HTTP response including "200 OK" status code with LpiParametersProvision data structure or "204 No Content" status code.

To delete an existing individual LPI Parameters Provisioning, the AF shall initiate an HTTP DELETE request to the NEF for the "Individual LPI Parameters Provisioning" resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized, the NEF shall interact with the UDM to delete an existing LPI Parameters Provisioning at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM, the NEF shall delete the existing resource for the "Individual LPI Parameters Provisioning" resource. Then the NEF shall send a HTTP "204 No Content" response.

# 4.4.20 Procedures for service specific parameter provisioning

These procedures are used by an AF to provide service specific parameters to the 5G system via the NEF.

In order to provision service specific parameters to the 5G system, the AF shall send an HTTP POST message to the NEF targetting the resource "Service Parameter Subscriptions", the HTTP POST request message body shall include the ServiceParameterData data structure that shall include:

- service description via:
  - a) a combination of DNN and S-NSSAI within the "dnn" attribute and the "snssai" attribute respectively;
  - b) an AF Service Identifier within the "afServiceId" attribute; or
  - c) an application identifier within the "appId" attribute;
- NOTE: When the feature "AfGuideURSP" is supported, the DNN, S-NSSAI and/or Application Identifier information can be provided in the "urspGuidance" attribute, hence only the "afServiceId" attribute needs to be included for providing guidance for URSP determination.
- indication of the UEs to which the subscription applies via:
  - a) identification of an individual UE within the "gpsi" attribute;
  - b) an IPv4 address of the UE within the "ueIpv4" attribute;
  - c) an IPv6 address of the UE within the "ueIpv6" attribute;
  - d) a MAC address of the UE within the "ueMac" attribute;
  - e) an identification of a group of UE(s) within the "externalGroupId" attribute; or
  - f) an identification of any UE within the "anyUeInd" attribute; and
- service parameters for at least one of the following:
  - 1)V2X service parameters via:
    - a) configuration parameters for V2X communications over PC5 within the "paramOverPc5" attribute; and
    - b) configuration parameters for V2X communications over Uu within the "paramOverUu" attribute;

2) if the "ProSe" feature is supported, 5G ProSe service parameters via:

- a) configuration parameters for 5G ProSe direct discovery within the "paramForProSeDd" attribute;
- b) configuration parameters for 5G ProSe direct communication within the "paramForProSeDc" attribute; and

c) configuration parameters for 5G ProSe UE-to-network relay, including configuration parameters for 5G ProSe UE-to-network relay UE within the "paramForProSeU2NRelUe" attribute and configuration parameters for 5G ProSe remote UE within the "ParamForProSeRemUe" attribute; and

3) if the "AfGuideURSP" feature is supported, URSP service parameters via:

a) contents for the AF guidance on URSP within the "urspGuidance" attribute, which shall include one or more URSP rule requests. Each URSP rule request may include a traffic descriptor within the "trafficDesc" attribute, a relative precedence within the "relatPrecedence" attribute and/or one or more route selection parameter sets within the "routeSelParamSets" attribute. Each route selection parameter set may include a precedence value within the "precedence" attribute, a DNN within the "dnn" attribute, an S-NSSAI within the "snssai" attribute, and a spatial validity condition within the "spatialValidityAreas" and/or "spatialValidityTais" attributes. If the request contains only one route selection parameter set, each of the optional attributes "dnn", "snssai", "precedence", "spatialValidityAreas" and "spatialValidityTais" that is missing from the request may be complemented by the NEF based on local configuration for the provided AF service identifier. It is up to the NEF to transform the information of the "spatialValidityAreas" attribute into a list of TAIs;

and may include:

- if the "AfNotifications" feature is supported:
  - a) subscription to event notification of the outcome related to invocation of service parameter provisioning within the "subNotifEvents" attribute; and
  - b) notification URI within the "notificationDestination" attribute.

In order to update an existing service parameter subscription, the AF shall send an HTTP PUT or HTTP PATCH message to the NEF targetting the resource "Individual Service Parameter Subscription" and requesting to change the subscription.

In order to delete an existing service parameter subscription, the AF shall send an HTTP DELETE message to the NEF targetting the resource "Individual Service Parameter Subscription".

Upon receipt of the HTTP request from the AF, and if the AF is authorized, the NEF shall interact with the UDM by invoking the Nudm\_SubscriberDataManagement service as described in 3GPP TS 29.503 [17] to retrieve the SUPI or Internal Group Identifier. NEF may, based on local configuration, complement missing service parameters. Additionally, based on operator's local policy, NEF may support service specific authorization as described in clause 4.15.6.10 in 3GPP TS 23.502 [2]. Then the NEF shall interact with the UDR to create, update or delete the associated service parameters by using the Nudr\_DataRepository service as defined in 3GPP TS 29.519 [23]. If information related to AfNotifications feature are received from the AF, the NEF shall also include the required information (e.g. "policDelivNotifUri" and "policDelivNotifCorreId" attributes in 3GPP TS 29.519 [23]) in UDR data creation if the NEF supports the DeliveryOutcome feature (as described in 3GPP TS 29.504 [4]). If the NEF receives an error responsefrom the UDR, the NEF shall not create, update or delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall:

- for an HTTP POST request, create an "Individual Service Parameter Subscription" resource which represents the Service Parameter provisioning request, addressed by a URI that contains the AF Identifier and a NEF-created configuration identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this Service Parameter Subscription;
- for an HTTP PUT or HTTP PATCH request, update the "Individual Service Parameter Subscription" resource which represents the service parameter provisioning request, and respond to the AF with a 200 OK or 204 No Content status code; and
- for an HTTP DELETE request, remove all properties of the resource and delete the corresponding active "Individual Service Parameter Subscription" resource, then respond to the AF with a 204 No Content status code.

55

When the NEF receives the Service Specific Authorization Update information from the UDM by Nudm\_ServiceSpecificAuthorization\_UpdateNotify service operation defined in 3GPP TS 29.503 [17], if the authorization is revoked, the NEF shall provide a notification to AF by sending HTTP POST message that include the one or more AfNotification data structure(s). Upon receipt of the notification, the AF shall respond with a "204 No Content" status code to confirm the received notification.

When the NEF receives the notification of the outcome of invocation related to AF provisioned service parameters from the PCF by Npcf\_EventExposure\_Notify service operation defined in 3GPP TS 29.523 [22], the NEF shall determine the corresponding service parameter subscription and provide a notification to AF by sending HTTP POST message that include the AfNotification data structure. Upon receipt of the notification, the AF shall respond with a "204 No Content" status code to confirm the received notification.

# 4.4.21 Procedures for ACS configuration parameter provisioning

The procedures are used by the AF to provide ACS configuration information to 5G system via NEF.

In order to provision the ACS configuration information, the AF shall send an HTTP POST message to the NEF to the resource "ACS Configuration Subscriptions", the HTTP POST message shall include AcsConfigurationData data structure as request body. The AcsConfigurationData data structure shall include:

- the URL of the ACS or the address of the ACS within the "acsInfo" attribute; and
- indication of the UEs to which the subscription applies via:
  - a) identification of an individual UE via a "gpsi" attribute; or
  - b) identification of a group of UE(s) via a "exterGroupId" attribute.

In order to update an existing ACS configuration subscription, the AF shall send an HTTP PUT message to the NEF to the resource "Individual ACS Configuration Subscription" requesting to change the subscription. The body of the HTTP PUT request message shall include AcsConfigurationData data type. The External Group Identifier or GPSI shall remain unchanged from previous values.

If the "PatchUpdate" feature defined in clause 5.12.3 is supported, in order to partially modify an existing ACS Configuration subscription, the AF shall send an HTTP PATCH request message to the NEF on the "Individual ACS Configuration Subscription" resource, with the request body containing the AcsConfigurationDataPatch data structure including only the attributes that shall be modified.

In order to delete an existing ACS configuration subscription, the AF shall send an HTTP DELETE message to the NEF to the resource "Individual ACS configuration Subscription".

Upon receipt of the corresponding HTTP message, if the AF is authorized by the NEF to provision the parameters, the NEF shall interact with the UDM to create a subscription at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17].

After receiving a successful response from the UDM, the NEF shall,

- for the HTTP POST request, create a resource "Individual ACS Configuration Subscription" which represents the ACS configuration parameter provisioning request, addressed by a URI that contains the AF Identifier and an NEF-created configuration identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this ACS Configuration Subscription.
- for the HTTP PUT/PATCH request, update/modify the concerned "Individual ACS Configuration Subscription" resource which represents the ACS configuration, and shall responds to the AF with an HTTP "200 OK" or an HTTP "204 No Content" status code.
- for the HTTP DELETE request, remove all properties of the resource and delete the corresponding active resource "Individual ACS Configuration Subscription", then shall responds to the AF with a 204 No Content status code.

# 4.4.22 Procedures for Mobile Originated Location Request

#### 4.4.22.1 General

The procedure is used by NEF to transfer the updated UE location information to AF. The following procedure support:

- Notify the AF of the updated UE location information as described in clause 6.2 of 3GPP TS 23.273 [36];

### 4.4.22.2 Location Update Notification triggered by UE

In order to notify the AF of the updated UE location information received from GMLC, the NEF shall initiate an HTTP POST request to the AF. The body of the HTTP POST message shall include the location information related to UE MO-LR within the LocUpdateData data structure.

Upon receipt of the corresponding HTTP POST message, if the AF cannot handle the location estimate of the UE, e.g. the UE does not register to the AF, the AF shall respond to the NEF with an error code. Otherwise, the AF shall handle the location estimate according to the Service Identity if provided, and send a HTTP response including "200 OK" status code with LocUpdateDataReply data structure.

# 4.4.23 Procedures for AKMA

### 4.4.23.1 General

The procedures support:

- request AKMA application key by the AF to the AAnF via the NEF as described in clause 6.3 of 3GPP TS 33.535 [37];

### 4.4.23.2 AKMA Application Key Request

In order to retrieve the AKMA application key, the AF shall send an HTTP POST request message to the resource URI "{apiRoot}/3gpp-akma/v1/retrieve". The HTTP POST request includes the identification of AF and an A-KID.

Upon receipt of the corresponding HTTP POST message from the AF, if the AF's request is authorized by the NEF, then the NEF shall interact with the AAnF to retrieve the AKMA application key by using Naanf\_AKMA service as defined in 3GPP TS 29.535 [38]. After receiving a successful response from the AAnF, the NEF shall respond to the AF with a 200 OK status code, including a  $K_{AF}$  and the expiration time of the  $K_{AF}$ , and if "anonInd" attribute contained in AkmaAfKeyRequest data type is not set to "true" in the incoming request, optionally the GPSI (external ID) which may be translated from the SUPI received from the AAnF. The SUPI shall not be included in the response to the external AF. If the NEF receives an error responsefrom the AAnF, the NEF shall respond to the AF with a proper error status code.

If the NEF receives a response from the AAnF with an HTTP "403 Forbidden" status code and the response message body including a ProblemDetails data structure with the "cause" attribute set to the "K\_AKMA\_NOT\_PRESENT" application error, then the NEF shall relay this response to the AF.

# 4.4.24 Procedures for Time Synchronization Exposure

### 4.4.24.0 General

Time synchronization exposure allows an AF to configure time synchronization in 5GS. For (g)PTP operation, the Time synchronization service allows an AF to subscribe to the UE and 5GC capabilities and availability for time synchronization service (as described in clause 4.4.24.1) and to configure the (g)PTP instance in 5GS as described in clause 4.4.24.2. For 5G access stratum based time distribution, the AF can influence the 5G access stratum time distribution as described in clause 4.4.24.3. The time synchronization exposure is provided by NEF that uses the service provided by TSCTSF. The AF that is part of operator's trust domain may invoke the services directly with TSCTSF.

NOTE: The AF can use either the procedure for configuring the (g)PTP instance in 5GS as described in clause 4.4.24.2 or the procedure for controlling the 5G access stratum time distribution as described in clause 4.4.24.3 for a particular UE. The procedures are not intended to be used in conjunction with each other by the AF. However, the (g)PTP instance activation, modification, and deactivation can influence the 5G access stratum time distribution for the UEs that are part of the impacted PTP instance.

#### 4.4.24.1 Subscription and unsubscription to notification of Time Synchronization Capabilites

The procedures are used by the AF to subscribe to notifications and to explicitly cancel a previous subscription to notification of capabilities of the time synchronization service for a list of UE(s), a group of UEs or any UE using a DNN/S-NSSAI combination via the NEF.

In order to subscribe to the notification of capabilities of UE and 5GC, and availability for the time synchronization service, the AF shall send an HTTP POST rmessage to the NEF to the customized operation URI "{apiRoot}/3gpp-time-sync/v1/{afId}/subscriptions". The HTTP POST request message body shall include the TimeSyncExposureSubsc data structure that shall include:

- one of the indication of the UEs to which the time synchronization capabilities is requested via:

1)identification of a list of individual UEs within a "gpsis" attribute;

2)indication of any UE within the "anyUeInd" attribute if DNN and S-NSSAI are provisioned; or

3)identification of a group of UE(s) via a "exterGroupId" attribute.

- subscription to event(s) notification as "subscribedEvents" attribute when the NF service consumer needs to subscribe to notifications;
- notification URI within the "subsNotifUri" attribute; and
- notification correlation Id within the "subsNotifId" attribute;

and may include:

- either the DNN within the "dnn" attribute and the "snssai" attribute or the AF Service Identifier within the "afServiceId" attribute;
- the requested event filter(s) within the "eventFilters" attribute;
- notification methods within the "notifMethod" attribute;
- maximum number of reports within the "maxReportNbr" attribute;
- expiry time within the "expiry" attribute; and
- report period within the "repPeriod" attribute.

Upon the reception of an HTTP POST request, if the AF is authorized, the NEF shall select a TSCTSF based on the local configuration or discover the TSCTSF via Nnrf\_NFDiscovery service as defined in 3GPP TS 29.510 [57] for a DNN/S-NSSAI combination, if not configured. If the DNN and the S-NSSAI is omitted in the AF request, prior the TSCTSF discovery the NEF shall determine the corresponding DNN and S-NSSAI based on the received AF Service Identifier. After the NEF obtains the TSCTSF, the NEF shall invoke the Ntsctsf\_TimeSynchronization\_CapsSubscribe request service operation as defined in clause 5.2.2.2 of 3GPP TS 29.565 [50] to the selected TSCTSF. If the NEF receives an error responsefrom the TSCTSF, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

NOTE: It is assumed that there is only one TSCTSF set for a given DNN/S-NSSAI in this release of the specification.

After receiving a successful response from the TSCTSF, the NEF shall create an "Individual Time Synchronization Exposure Subscription" resource which represents the time synchronization exposure subscription request, addressed by a URI that contains the AF Identifier and a NEF-created configuration identifier, and shall respond to the AF with a 201 Created status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header in subsequent requests to the NEF to refer to this "Individual Time Synchronization".

In order to update an existing subscription, the AF shall send an HTTP PUT message to the NEF targeting the resource "Individual Time Synchronization Exposure Subscription". The body of the HTTP PUT request message shall include the TimeSyncExposureSubsc data type. Upon receipt of the corresponding HTTP PUT message, if the AF is authorized by the NEF, the NEF shall interact with the TSCTSF by invoking Ntsctsf\_TimeSynchronization\_CapsSubscribe request service operation as defined in clause 5.2.2.2.3 of 3GPP TS 29.565 [50]. After receiving a successful response from the TSCTSF, the NEF shall update a resource "Individual Time Synchronization Exposure Subscription" which represents the exposure subscription, and responds to the AF with a 200 OK with TimeSyncExposureSubsc data structure or 204 No Content status code.

When the NEF receives the notification of the capabilities of the time synchronization service from the TSCTSF as defined in clause 5.2.2.4.2 of 3GPP TS 29.565 [50], the NEF shall provide a notification to AF by sending HTTP POST message that includes the TimeSyncExposureSubsNotif data structure in the request body. Upon receipt of the notification, the AF shall respond with a "204 No Content" status code to confirm the received notification.

In order to delete an existing subscription, the AF shall send an HTTP DELETE message to the NEF targeting the resource "Individual Time Synchronization Exposure Subscription". The NEF shall interact with the TSCTSF by invoking the Ntsctsf\_TimeSynchronization\_CapsUnsubscribe service operation as defined in clause 5.2.2.3.2 of 3GPP TS 29.565 [50] and delete the corresponding active "Individual Time Synchronization Exposure Subscription" resource, then respond to the AF with a 204 No Content status code.

#### 4.4.24.2 Time Synchronization Exposure Configuration

The procedures are used by the AF to activate, modify or deactivate the (g)PTP instances by performing the time synchronization configuration at the NEF.

In order to configure the time synchronization parameters, the AF shall initiate an HTTP POST request to the NEF for the "Time Synchronization Exposure Configurations" resource. The body of the HTTP POST message shall include the Time Synchronization related parameters within the TimeSyncExposureConfig data structure.

Upon receipt of the corresponding HTTP POST message and the request is authorized by the NEF, the NEF invokes the Ntsctsf\_TimeSynchronization\_ConfigCreate service operation with the corresponding TSCTSF as defined in 3GPP TS 29.565 [50]. After receiving a successful response from the TSCTSF, the NEF shall create a new resource and assign an identifier for the "Individual Time Synchronization Exposure Configuration" resource. Then the NEF shall send a HTTP "201 Created" response with TimeSyncExposureConfig data structure as response body and a Location header field containing the URI of the created individual resource.

In order to update an existing Individual Time Synchronization Exposure Configuration, the AF may send an HTTP PUT message to the resource "Individual Time Synchronization Exposure Configuration" requesting the NEF to change all properties in the existing resource. The body of the HTTP PUT request message shall include TimeSyncExposureConfig data type as defined in clause 5.15.4.3.6. The user plane node Id shall remain unchanged from previous values.

Upon receipt of the corresponding HTTP PUT message and the request is authorized by the NEF, the NEF shall interact with the TSCTSF to modify an existing resource at the TSCTSF by using Ntsctsf\_TimeSynchronization\_ConfigUpdate service operation as defined in 3GPP TS 29.565 [50]. If the modification request is accepted by the TSCTSF and the TSCTSF informs the NEF with a successful response, the NEF shall update the existing resource for the "Individual Time Synchronization Exposure Configuration" resource. Then the NEF shall send a HTTP response including "200 OK" status code with TimeSyncExposureConfig data structure or "204 No Content" status code.

When the NEF receives the notification of the current state of time synchronization service configuration from the TSCSF by Ntsctsf\_TimeSynchronization\_ConfigUpdateNotify service operation defined in 3GPP TS 29.565 [50], the NEF shall provide a notification to AF by sending HTTP POST message that include the TimeSyncExposureConfigNotif data structure in the request body. Upon receipt of the notification, the AF shall respond with a "204 No Content" status code to confirm the received notification.

To delete an existing "Individual Time Synchronization Exposure Configuration", the AF shall initiate an HTTP DELETE request to the NEF for the "Individual Time Synchronization Exposure Subscription" resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized, the NEF shall interact with the TSCTSF to delete an existing Individual Time Synchronization Exposure Configuration at the TSCTSF by using Ntsctsf\_TimeSynchronization\_ConfigDelete service operation as defined in 3GPP TS 29.565 [50]. If the request is accepted by the TSCTSF, the NEF shall delete the existing resource for the "Individual Time Synchronization Exposure Configuration" resource. Then the NEF shall send a HTTP "204 No Content" response.

#### 4.4.24.3 Management of 5G access stratum time distribution

The procedures are used by the AF to activate, update or delete the 5G access stratum time distribution for one UE or group of UEs.

In order to configure the 5G access stratum time distribution parameters, the AF shall initiate an HTTP POST request to the NEF for the "ASTI Configurations" resource. The body of the HTTP POST message shall include the 5G access stratum time distribution parameters within the AccessTimeDistributionData data structure as defined in clause 5.22.4.3.2.

Upon receipt of the corresponding HTTP POST message and the request is authorized by the NEF, the NEF shall select a TSCTSF based on the local configuration or discover the TSCTSF via Nnrf\_NFDiscovery service as defined in 3GPP TS 29.510 [57] for the GPSI or external group identifier, if not configured. After the NEF obtains the TSCTSF, the NEF invokes the Ntsctsf\_ASTI\_Create service operation with the corresponding TSCTSF, if available, as defined in 3GPP TS 29.565 [50]. After receiving a successful response from the TSCTSF, the NEF shall create a new resource and assign an identifier for the "Individual ASTI Configuration" resource. Then the NEF shall send a HTTP "201 Created" response with AccessTimeDistributionData data structure as response body and a Location header field containing the URI of the created individual resource. If the NEF receives an error responsefrom the TSCTSF, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

In order to update an existing Individual ASTI Configuration, the AF may send an HTTP PUT message to the resource "Individual ASTI Configuration" requesting the NEF to change all properties in the existing resource. The body of the HTTP PUT request message shall include the AccessTimeDistributionData data type.

Upon receipt of the corresponding HTTP PUT message and the request is authorized by the NEF, the NEF shall interact with the TSCTSF to modify an existing resource at the TSCTSF by using Ntsctsf\_\_ASTI\_Update service operation as defined in 3GPP TS 29.565 [50]. If the modification request is accepted by the TSCTSF and the TSCTSF informs the NEF with a successful response, the NEF shall update the existing resource for the "Individual ASTI Configuration" resource. Then the NEF shall send a HTTP response including "200 OK" status responsewith

AccessTimeDistributionData data structure or "204 No Content" status code. If the NEF receives an error code from the TSCTSF, the NEF shall not update the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

To delete an existing Individual ASTI Configuration, the AF shall initiate an HTTP DELETE request to the NEF for the "Individual ASTI Configuration" resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized, the NEF shall interact with the TSCTSF to delete an existing Individual ASTI Configuration at the TSCTSF by using Ntsctsf\_ASTI\_Delete service operation as defined in 3GPP TS 29.565 [50]. If the request is accepted by the TSCTSF, the NEF shall delete the existing resource for the "Individual ASTI Configuration" resource. Then the NEF shall send a HTTP "204 No Content" response. If the NEF receives an error responsefrom the TSCTSF, the NEF shall not delete the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

AF may request and query the status of the access stratum time distribution sending the HTTP POST request, "retrieve" custom operation, to the resource"ASTI Configurations". The body of the HTTP POST request message shall include the StatusRequestData data type as defined in clause 5.22.4.3.3.

Upon receipt of the corresponding HTTP POST message, if the AF is authorized, the NEF shall interact with the TSCTSF by using Ntsctsf\_ASTI\_Get service operation as defined in 3GPP TS 29.565 [50]. Upon receipt of response

from the TSCTSF, the NEF shall shall send a HTTP "200 OK" response with the StatusResponseData data structure as defined in clause 5.22.4.3.4 in the payload. If the NEF receives an error responsefrom the TSCTSF, the NEF shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

# 4.4.25 Procedures for ECS address Provisioning

The procedures are used by the AF to provision ECS address(es) to the NEF. The procedures are applicable for an individual UE or a group of UEs.

In order to create an Individual ECS Address Provision Configuration resource, the AF shall initiate an HTTP POST request to the NEF for the "ECS Address Provision Configurations" resource. The body of the HTTP POST message shall include within the EcsAddressProvision data structure the ECS address(es) via the "ecsServerAddr" attribute, may include the spatial validity condition via the "spatialValidityCond" attribute and target of UE information via the "tgtUe" attribute. Upon receipt of the corresponding HTTP POST message, if the AF is authorized by the NEF to provision the ECS address(es), the NEF shall interact with the UDM to create a resource at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall create a new resource and assign an identifier for the "Individual ECS Address Provision Configuration" resource. Then the NEF shall send a HTTP "201 Created" response with EcsAddressProvision data structure as response body and a Location header field containing the URI of the created individual resource.

In order to update an existing Individual ECS Address Provision Configuration, the AF shall send an HTTP PUT message to the resource "Individual ECS Address Provision Configuration" requesting the NEF to change all properties in the existing resource. The body of the HTTP PUT request message shall include the EcsAddressProvision data type. Upon receipt of the corresponding HTTP PUT message, if the AF is authorized by the NEF to provision the ECS address(es), the NEF shall interact with the UDM to modify an existing resource at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the modification request is accepted by the UDM and the UDM informs the NEF with a successful response, the NEF shall update the existing resource for the "Individual ECS Address Provision Configuration" resource. Then the NEF shall send a HTTP response including "200 OK" status code with EcsAddressProvision data structure or "204 No Content" status code.

To delete an existing Individual ECS Address Provision Configuration, the AF shall initiate an HTTP DELETE request to the NEF for the "Individual ECS Address Provision Configuration" resource. Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized, the NEF shall interact with the UDM to delete the existing resource at the UDM by using Nudm\_ParameterProvision service as defined in 3GPP TS 29.503 [17]. If the request is accepted by the UDM, the NEF shall delete the existing resource for the "Individual ECS Address Provision Configuration" resource. Then the NEF shall send a HTTP "204 No Content" response.

# 4.4.26 Procedures for AM Policy Authorization

#### 4.4.26.1 General

The procedures are used by AF to send request to NEF for AM Policy Authorization, and for NEF to authorize an AF triggered AM Policy Authorization request and trigger a respective Npcf\_AMPolicyAuthorization request. This service also allows the AF to subscribe/unsubscribe the notification of event(s) for the existing AF application AM context.

The following procedures support:

- Create/Modify/Delete of AF triggered application AM context; and
- Subscribe/Unsubscribe/Notify event(s) for the existing AF application AM context.

#### 4.4.26.2 Creation of a new Individual Application AM Context

In order to create a new Individual application AM context resource for a given AF, the AF shall initiate an HTTP POST request to the NEF for the "Application AM Contexts" resource. The HTTP POST request message body shall include the AppAmContextExpData data structure that shall include:

- identification of an individual UE via a "gpsi" attribute;

61

and may include:

- subscription to AM policy event(s) notification as "evSubscs" attribute. For each subscribed event, the AF may include the description of the event reporting mode, as e.g. whether immediate reporting is required;
- a high throughput requirement Indication as "highThruInd" attribute;
- service coverage requirements as "covReqs" attribute; and
- policy duration requirement as "policyDuration" attribute.

Upon receipt of the corresponding HTTP POST message, if the AF is authorized by the NEF to request the AM policy authorization, the NEF shall trigger a respective Npcf\_AMPolicyAuthorization\_Create request as defined in 3GPP TS 29.534 [43]. If the request is accepted by the PCF and the PCF informs the NEF with a successful response, the NEF shall create a new "Individual application AM Context" and assign an application AM context identifier for the "Individual application AM Context" resource.

Then the NEF shall send a HTTP "201 Created" response with:

- AppAmContextExpRespData data structure as response body, including the created "Individual application AM Context" resource and, if immediate reporting was requested for the subscribed event(s), the currently available value(s), if received from the PCF; and
- a Location header field containing the URI of the created "Individual application AM Context" resource to the AF.

If the NEF receives an error response from the PCF, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.26.3 Modification of an existing individual Application AM Context

In order to modify an existing individual Application AM Context resource, the AF shall initiate an HTTP PATCH request to the NEF for the "Individual application AM Context" resource. The body of the HTTP PATCH message shall include the AppAmContextExpUpdateData data type as defined in clause 5.17.1.3.3.3.

Upon receipt of the corresponding HTTP PATCH message, if the AF is authorized by the NEF to modify the AM policy authorization request, the NEF shall interact with the PCF to modify an existing application AM context by using Npcf\_AMPolicyAuthorization\_Update request as defined in 3GPP TS 29.534 [43]. If the modification request is accepted by the PCF and the PCF informs the NEF with a successful response, the NEF shall update the existing application AM context for the "Individual application AM Context" resource. Then the NEF shall send a HTTP response including "200 OK" status code with AppAmContextExpRespData data structure (including the updated resource representation and, if immediate reporting was requested for the new subscribed event(s), the currently available value(s), if received from the PCF) or "204 No Content" status code to the AF.

If the NEF receives an error response from the PCF, the NEF shall not modify the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.26.4 Deletion of an existing individual Application AM Context

To delete an existing application AM context, the AF shall initiate an HTTP DELETE request to the NEF for the "Individual application AM Context" resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized to delete the application AM context, the NEF shall interact with the PCF to delete an existing application AM context at the PCF by using Npcf\_AMPolicyAuthorization\_Delete request as defined in 3GPP TS 29.534 [43]. If the request is accepted by the PCF and informs the NEF with a successful response, the NEF shall delete the existing application AM context for the "Individual application AM Context" resource. Then the NEF shall send a HTTP "204 No Content" response to the AF.

If the NEF receives an error response from the PCF, the NEF shall take proper error handling action and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure

with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.26.5 Create or modify subscription to notification of AM policy event

In order to create or modify the subscription to notification of AM policy event(s) for the application AM context, the AF shall send an HTTP PUT message to the NEF to the sub-resource "AM Policy Events Subscription", the HTTP PUT message shall include the AmEventsSubscData data structure as request body.

Upon receipt of the HTTP request from the AF, if the AF is authorized, the NEF shall interact with the PCF to subscribe to, or modify the subscription to the AM policy event notification by using Npcf\_AMPolicyAuthorization\_Subscribe request as defined in 3GPP TS 29.534 [43]. If the request is accepted by the PCF and the PCF informs the NEF with a successful response, the NEF shall create a new AM policy event subscription sub-resource in an existing application AM context or modify an existing AM policy event subscription to the "AM Policy Events Subscription" sub-resource. Then the NEF shall send:

- for a subscription creation request, an HTTP "201 Created" response with:
  - a. AmEventsSubscRespData data structure as response body, including the created "AM Policy Events Subscription" resource and, if immediate reporting was requested for the subscribed event(s), the currently available value(s), if received from the PCF; and
  - b. a Location header field containing the URI of the created individual subscription resource to the AF; or
- for a subscription update request, an HTTP "200 OK" response code with AmEventsSubscRespData data structure with the updated "AM Policy Events Subscription" resource or HTTP "204 No Content" response code and, if immediate reporting was requested for the subscribed event(s), the currently available value(s), if received from the PCF;

as response body to the AF.

If the NEF receives an error response from the PCF, the NEF shall not create or modify the sub-resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.26.6 Unsubscription to notification of AM policy event

In order to delete existing subscribed AM policy event(s) within the existing Individual application AM context, the AF shall initiate the HTTP DELETE request message to the NEF to the "AM Policy Events Subscription" sub-resource.

Upon receipt of the corresponding HTTP DELETE message, if the AF is authorized to delete the notification of AM policy event(s), the NEF shall interact with the PCF to delete an existing subscription of notification to AM policy event(s) within the existing application AM context at the PCF by using Npcf\_AMPolicyAuthorization\_Unsubscribe request as defined in 3GPP TS 29.534 [43]. If the request is accepted by the PCF and informs the NEF with a successful response, the NEF shall delete the existing subscription to notification of AM policy event(s) within the existing application AM context for the "AM Policy Events Subscription" resource. Then the NEF shall send a HTTP "204 No Content" response to the AF.

If the NEF receives an error response from the PCF, the NEF shall take proper error handling action and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.26.7 Notification of AM policy event

If the NEF receives an AM policy event notification from the PCF indicating that the subscribed AM policy event has been detected, the NEF shall provide a notification to AF by sending HTTP POST message that include the AmEventsNotification data structure in the request body. Upon receipt of the AM policy event notification, the AF shall respond with a "204 No Content" status code to confirm the received notification to the NEF.

# 4.4.27 Procedures for AF triggered Access and Mobility Influence

### 4.4.27.1 General

The procedures are used by the AF to provision the Access and Mobility(AM) policy related request via NEF to one or multiple UEs that may have already registered or not. This service also allows the NEF to send the notification of service area coverage outcome events to the AF.

# 4.4.27.2 Create the AM Influence Subscription

In order to create a resource for the AM Influence, the AF shall send an HTTP POST request message to the NEF for the "AM Influence Subscription" resource. The request message may include the AF Transaction Identifier, GPSI, DNN, S-NSSAI, External Group Identifier, list of application identifier(s), AF Service Identifier, throughput requirements, service area coverage requirements represented by list of geographical areas, policy duration, subscribed event(s) and the notification destination address.

The request may target one or multiple UEs that may have already registered or not. For an individual UE identified by GPSI, or a group of UEs identified by External Group Identifier, the NEF shall interact with the UDM by invoking the Nudm\_SubscriberDataManagement service as described in 3GPP TS 29.503 [17] to retrieve the SUPI or Internal Group Identifier. For all UEs, the NEF will not interact with the UDM.

The NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] to store the policy data in the UDR.

If the NEF receives an error response from the UDR, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall create a resource "Individual AM Influence Subscription", which represents the AM influence subscription, addressed by a URI that contains the AF Identifier and an NEF-created subscription identifier. The NEF shall respond to the AF with a "201 Created" status code, including a Location header field containing the URI for the created resource. The AF shall use the URI received in the Location header when it subsequently sends requests to the NEF to reference this AM influence subscription.

# 4.4.27.3 Modifiy the AM Influence Subscription

In order to update an existing AM influence subscription, the AF shall send an HTTP PUT or HTTP PATCH request message to the NEF for the "Individual AM Influence Subscription" resource. The NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] to update the policy data in the UDR.

If the NEF receives an error response from the UDR, the NEF shall not update the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall update the "Individual AM Influence Subscription" resource which represents the AM influence subscription, and shall respond to the AF with an HTTP "200 OK" or "204 No Content" response message.

# 4.4.27.4 Delete the AM Influence Subscription

In order to delete an existing AM influence subscription, the AF shall send an HTTP DELETE request message to the NEF for the "Individual AM Influence Subscription" resource. The NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] to delete the policy data in the UDR. If the NEF receives an error responsefrom the UDR, the NEF shall take proper error handling actions and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

After receiving a successful response from the UDR, the NEF shall delete the "Individual AM Influence Subscription" resource which represents the AM influence subscription, and shall respond to the AF with an HTTP "204 No Content" response message.

#### 4.4.27.5 Notification of service area coverage outcome events

When the NEF receives the notification of service area coverage outcome events from the PCF as defined in 3GPP TS 29.534 [43], the NEF shall provide a notification by sending an HTTP POST message to the AF. The HTTP POST message shall include the subscribed event (service area coverage outcome event) to the AF identified by the notification destination received during the creation/modification of the AM Influence resource.

Upon receipt of the event notification, the AF shall respond with a "204 No Content" status code to confirm the received event notification.

# 4.4.28 Procedures for Northbound EAS Deployment Information management

### 4.4.28.1 General

The procedures are used by AF to provide, update or delete EAS Deployment Information to NEF, and for NEF to authorize the AF provisioned EAS Deployment Information to be stored in the UDR.

The following procedures support:

- Create/Update/Delete the AF provisioned EAS Deployment information;

### 4.4.28.2 Creation of a new Individual EAS Deployment information resource

In order to create a new Individual EAS Deployment information resource for a given AF, the AF shall initiate an HTTP POST request to the NEF for the "EAS Deployment Information" resource. The HTTP POST request message body shall include the EasDeployInfo data structure that shall include:

- FQDN(s) of an application deployed in the Local part of the DN via an "fqdnPatternList" attribute;

and may include:

- an AF service identifier as the "afServiceId" attribute;
- an DNN as "dnn" attribute;
- an S-NSSAI as "snssai" attribute;
- an external Group Identifier as "externalGroupId" attribute;
- identification of an application as "appId" attribute; and
- list of DNS server identifier and/or IP address(s) of the EAS in the local DN for each DNAI as "dnaiInfos" attribute.

Upon receipt of the corresponding HTTP POST message, if the AF is authorized by the NEF to provide the EAS Deployment Information, the NEF shall interact with the UDM by using Nudm\_SubscriberDataManagement service as defined in 3GPP TS 29.503 [17] to translate the external group identifier into the corresponding internal group identifier and the NEF may derive DNN and S-NSSAI from the AF Service Identifier if not received explicitly. Then the NEF shall interact with the UDR to create the associated EAS Deployment information by using the Nudr\_DataRepository service as defined in 3GPP TS 29.504 [20]. If the request is accepted by the UDR and the UDR informs the NEF with a successful response, the NEF shall create a new "Individual EAS Deployment Information" resource. Then the NEF shall send a HTTP "201 Created" response with the EasDeployInfo data structure including the contents of the created EAS Deployment Information resource in theresponse body and a Location header field containing the URI of the created individual EAS Deployment Information resource. If the NEF receives an error responsefrom the UDR, the NEF shall not create the resource and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.28.3 Modification of an existing individual EAS Deployment Information resource

In order to modify an existing individual EAS Deployment Information resource, the AF shall initiate an HTTP PUT request to the "Individual EAS Deployment Information" resource. The request body shall include the EasDeployInfo data structure. The "afServiceId" value shall remain unchanged from the previous value, if available in the HTTP PUT message.

Upon receipt of the corresponding HTTP PUT request message, if the AF is authorized by the NEF to modify the existing individual EAS Deployment Information resource, the NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] to modify the EAS Deployment Information in the UDR.

If the modification request is accepted by the UDR and the UDR informs the NEF with a successful response, the NEF shall update the existing individual EAS Deployment Information resource. Then the NEF shall send a HTTP response including "200 OK" status code with EasDeployInfo data structure or "204 No Content" status code.

If the NEF receives an error response from the UDR, the NEF shall not update the "Individual EAS Deployment Information" resource and shall respond a proper error status code to the AF. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.28.4 Deletion of an existing individual EAS Deployment Information resource

In order to delete an existing EAS Deployment Information, the AF shall send an HTTP DELETE request message to the NEF for the "Individual EAS Deployment Information" resource. The NEF shall interact with the UDR by invoking the Nudr\_DataRepository service as described in 3GPP TS 29.504 [20] to delete the EAS Deployment Information in the application data in the UDR.

After receiving a successful response from the UDR, the NEF shall delete the "Individual EAS Deployment Information" resource and shall respond to the AF with an HTTP "204 No Content" response message.

If the NEF receives an error response from the UDR, the NEF shall take proper error handling actions and shall respond to the AF with a proper error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.28.5 Deletion of EAS Deplyoment Information based on given criteria

In order to delete existing EAS Deployment Information resource(s) which match given attributes, the NF service consumer shall send an HTTP POST request with "{apiRoot}/3gpp-eas-deployment/<apiVersion>/remove-edis" as URI. The POST request body shall contain an EdiDeleteCriteria data structure. The EdiDeleteCriteria data structure provided in the request body shall include at least one of the following:

- an AF identifier within the "afId" attribute;
- DNN and slice information within the "dnnSnssai" attribute;

Upon the reception of this HTTP POST request, if the NF service consumer is authorized by the NEF to delete the EAS Deployment Information, the NEF shall determine the EAS Deployment Information resources that match the provided criteria and interact with the UDR to delete the associated EAS Deployment Information by using the Nudr\_DataRepository service as defined in 3GPP TS 29.504 [20]. If the request is accepted by the UDR and the UDR informs the NEF with a successful response, the NEF shall send a HTTP "204 No Content" response. If the NEF receives an error code from the UDR, the NEF shall respond to the AF with a proper error status code.

# 4.4.29 Procedures for MBS Management

### 4.4.29.1 General

The procedures described in the clauses below are used by an AF to interact with the 5GC for MBS management as defined in 3GPP TS 23.247 [53] and 3GPP TS 26.502 [65], in order to carry out the following procedures:

- MBS TMGI management procedures.

66

- MBS Session management procedures.
- MBS User Service management procedures.
- MBS User Data Ingest Session management procedures.

#### 4.4.29.2 Procedures for MBS TMGI management

#### 4.4.29.2.1 General

The procedures described in the clauses below are used by an AF to request and manage TMGI(s) for MBS session(s) as defined in clause 7.1 of 3GPP TS 23.247 [53].

#### 4.4.29.2.2 Procedure for MBS TMGI(s) allocation or MBS TMGI(s) expiry time refresh

This procedure is used by an AF to request the allocation of TMGI(s) for new MBS session(s) or the refresh of the expiry time of already allocated MBS TMGI(s).

In order to request the allocation of TMGI(s) for new MBS session(s) or the refresh of the expiry time of already allocated MBS TMGI(s), an AF shall send a Nnef\_MBSTMGI\_Allocation request message to the NEF using the HTTP POST method with the request body including the TmgiAllocRequest data structure that shall contain:

- within the "afId" attribute, the identifier of the AF that is sending the request;
- within the "tmgiParams" attribute, the parameters (e.g. number of TMGI(s) to be allocated, etc.) to request the allocation of TMGI(s) for new MBS session(s) or the refresh of the expiry time of already allocated TMGI(s);
- within the "suppFeat" attribute, the features supported by the AF, if feature negotiation needs to take place;

and may contain:

- within the "notificationUri" attribute, the notification URI via which the AF desires to receive notifications on timer expiry for TMGI(s);
- within the "requestTestNotification" attribute, an indication on whether the NEF should send a test notification, if the "Notification\_test\_event" feature is supported;
- within the "websockNotifConfig" attribute, the configuration parameters to set up notification delivery over Websocket protocol, if the "Notification\_websocket" feature is supported; and/or
- within the either "mbsServiceArea" attribute or the "extMbsServiceArea" attribute, the MBS service area for the TMGI(s) to be allocated, which may be needed for a local MBS service.

The NEF shall then check whether the AF is authorized to perform this operation or not as defined in clause 6.1.1 of 3GPP TS 23.247 [53]. If the AF is authorized, then:

- if the MBS Service Area information is provided via the "extMbsServiceArea" attribute, the NEF shall translate the received geographical area(s) or civic address(es) to a list of TAI(s) and/or cell ID(s);
- the NEF shall determine the target MB-SMF either by querying the NRF to discover and select an MB-SMF (service) instance that can handle this request, or based on local configuration;
- if the received MBS Service Area information cannot be covered by the MB-SMF Service Area of a single MB-SMF, the NEF shall reject the request and respond to the AF with an HTTP "403 Forbidden" status code with the response body including the ProblemDetailsTmgiAlloc data structure containing:
  - the ProblemDetails data structure containing the "cause" attribute set to the "MBS\_SERVICE\_AREA\_TOO\_LARGE" application error; and optionally
  - the ReducedMbsServArea data structure containing the reduced MBS Service Area information;

and

- the NEF shall convey this MBS TMGI(s) allocation request or expiry time refresh request to the selected MB-SMF using the Nmbsmf\_TMGI service API as defined in 3GPP TS 29.532 [52].

Upon reception of a successful response from the MB-SMF as defined in 3GPP TS 29.532 [52], the NEF shall forward the received information (e.g. allocated MBS TMGI(s), expiry time or updated expiry time of existing MBS TMGI(s), etc.) to the AF in a Nnef\_MBSTMGI\_Allocation response message with an HTTP "200 OK" status code and the response body including the TmgiAllocResponse data structure that shall contain:

- within the "tmgiInfo" attribute, the MBS TMGI(s) allocation information or the refreshed expiry time for already allocated MBS TMGI(s); and
- within the "suppFeat" attribute, the features supported by both the AF and the NEF, if feature negotiation needs to take place and the AF provided the list of its supported features in the corresponding request body.

On failure or if the NEF receives an error response from the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.19.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.2.3 Procedure for MBS TMGI(s) deallocation

This procedure is used by an AF to request the deallocation of previously allocated MBS TMGI(s).

In order to request the deallocation of previously allocated MBS TMGI(s), an AF shall send a Nnef\_MBSTMGI\_Deallocation request message to the NEF using the HTTP POST method with the request body including the TmgiDeallocRequest data structure that shall contain :

- within the "afId" attribute, the identifier of the AF that is sending the request; and
- within the "tmgis" attribute, the list of MBS TMGI(s) for which deallocation is requested.

The NEF shall then check whether the AF is authorized to perform this operation or not as defined in clause 6.1.1 of 3GPP TS 23.247 [53]. If the AF is authorized, the NEF shall convey this MBS TMGI(s) deallocation request to the MB-SMF using the Nmbsmf\_TMGI service API as defined in 3GPP TS 29.532 [52].

Upon reception of a successful response from the MB-SMF confirming the deallocation of the TMGI(s), the NEF shall forward this confirmation to the AF in a Nnef\_MBSTMGI\_Deallocation response message with an HTTP "204 No Content" status code.

On failure or if the NEF receives an error response from the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.19.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.2.4 Procedure for MBS TMGI(s) timer expiry notification

This procedure is used by the NEF to notify an already subscribed AF of timer expiry for previously allocated MBS TMGI(s).

In order to notify an AF of timer expiry for previously allocated MBS TMGI(s), the NEF shall send a Nnef\_MBSTMGI\_ExpiryNotify request message to the AF using the HTTP POST method with the request body including the ExpiryNotif data structure that shall contain:

- within the "tmgis" attribute, the list of MBS TMGI(s) for which the timer has expired.

Upon reception of this notification request, the AF shall acknowledge its successful reception by sending a Nnef\_MBSTMGI\_ExpiryNotify response message with an HTTP "204 No Content" status code.

On failure, the AF shall take proper error handling actions, as specified in clause 5.19.7, and respond to the NEF with an appropriate error status code.

#### 4.4.29.3 Procedures for MBS session management

#### 4.4.29.3.1 General

The procedures described in the clauses below are used by an AF to create, update or delete MBS session(s) and to subscribe to / unsubscribe from MBS Session Status event(s) reporting at the NEF.

This service is applicable for both broadcast and multicast sessions or, for a location dependent MBS session, the part of an MBS Session within an MBS service area, as defined in 3GPP TS 23.247 [53].

#### 4.4.29.3.2 Procedure for MBS session creation

This procedure is used by an AF to request the creation of a multicast or a broadcast MBS session or, for a location dependent MBS session, the part of an MBS Session within an MBS service area.

In order to request the creation of an MBS Session, an AF shall send a Nnef\_MBSSession\_Create request to the NEF using the HTTP POST method and targeting the "MBS Sessions" collection resource with the request message body including the MbsSessionCreateReq data structure that shall contain:

- within the "afId" attribute, the identifier of the AF that is sending the request; and
- within the "mbsSession" attribute, the characteristics of the MBS session that is to be created.

The "mbsSession" attribute shall be encoded using the MbsSession data structure that shall contain:

- within the "mbsSessionId" attribute, the identifier of the MBS Session (e.g. SSM, TMGI), if available;
- within the "tmgiAllocReq" attribute, the TMGI allocation request indication, if the "mbsSessionId" attribute is either absent or does not contain a TMGI; and
- within the "serviceType" attribute, the MBS service type (i.e. multicast or broadcast);
- within the "locationDependent" attribute, the location dependent MBS session indication, if the request is related to a location dependent MBS;

and may further contain:

- for a multicast or a broadcast MBS session:
  - within the "ingressAddrReq" attribute, the ingress transport address request indication to indicate whether the allocation of an ingress transport address is requested or not;
  - within the "extMbsServiceArea" attribute, the MBS service area, for a location dependent MBS session or a local MBS session;
  - within the "activationTime" attribute, the MBS session activation time;
  - within the "terminationTime" attribute, the MBS session termination time;
  - within the "mbsServInfo" attribute, the MBS Service Information for the MBS session; and
  - within the "mbsSessionSubsc" attribute, the parameters to request the creation of a subscription to MBS session status event(s) reporting;
- for a multicast MBS session:
  - within the "activityStatus" attribute, the MBS session activity status (i.e. active or inactive); and
  - within the "anyUeInd" attribute, the indication of whether any UE may join the MBS session;
- for a broadcast MBS session:
  - within the "mbsFsaIdList" attribute, the list of MBS frequency selection area Identifiers (i.e. FSA IDs).

At the reception of this HTTP POST request for MBS session creation:

- the NEF may decide to interact with the PCF for MBS policy authorization of the received MBS Service Information;
- if the NEF decides to interact with the PCF, then:
  - if the NEF did not receive an MBS Session Identifier or received a TMGI allocation request within the "tmgiAllocReq" attribute, the NEF shall request TMGI allocation to the MB-SMF using the Nmbsmf\_TMGI service API, as specified in 3GPP TS 29.532 [52];
  - if the received MBS Session Creation request is for the creation of an MBS Session that is part of a location dependent MBS, i.e. the "locationDependent" attribute is present and set to "true", and there is a need to select the same PCF for all the MBS Sessions composing the location dependent MBS, the NEF shall interact with the BSF using the Nbsf\_Management service API to check whether there is already a PCF serving the MBS Sessions of the location dependent MBS based on the MBS Session Identifier, as specified in 3GPP TS 29.532 [52]. Then:
- NOTE 1: Interacting with the BSF to discover whether there is already a PCF serving the MBS Session is not necessary in a deployment with a single PCF.
  - if there is a PCF already serving the MBS Sessions of the location dependent MBS, the NEF shall use this PCF for MBS policy authorization of the received MBS Service Information;
  - if there is no PCF already serving the MBS Sessions of the location dependent MBS or the NEF did not interact with the BSF, the NEF shall interact with the NRF using the Nnrf\_NFDiscovery service API to discover a PCF (service) instance to serve the MBS Session possibly based on the MBS Session Identifier, as specified in 3GPP TS 29.510 [57];
  - the NEF shall then interact with the selected PCF (service) instance using the Npcf\_MBSPolicyAuthorization service API for MBS policy authorization of the received MBS Service Information and the creation of a corresponding MBS Application Session Context at the PCF, as specified in 3GPP TS 29.537 [63]; and
- if MBS session authorization is successful or when the NEF decides to not interact with the PCF for MBS policy authorization, the NEF shall interact with the MB-SMF using the Nmbsmf\_MBSSession service API to request the creation of a corresponding MBS session at the MB-SMF as specified in 3GPP TS 29.532 [52];
- if the MBS Service Area information is provided within the "extMbsServiceArea" attribute, the NEF shall translate the received geographical area(s) or civic address(es) to a list of cell ID(s) and/or list of TAI(s) before relaying it to the MB-SMF; and
- if the NEF discovers the target MB-SMF based on the MBS Service Area and the received MBS Service Area information cannot be covered by the MB-SMF Service Area of a single MB-SMF, the NEF shall reject the request and respond to the AF with an HTTP "403 Forbidden" status code with the response body including the ProblemDetailsTmgiAlloc data structure containing:
  - the ProblemDetails data structure containing the "cause" attribute set to the "MBS\_SERVICE\_AREA\_TOO\_LARGE" application error; and optionally
  - the ReducedMbsServArea data structure containing the reduced MBS Service Area information.

Upon reception of a successful response from the MB-SMF and successful MBS session creation at the NEF, the NEF shall return a Nnef\_MBSSession\_Create response with an HTTP "201 Created" status code to the AF including a "Location" header that shall contain the URI of the created "Individual MBS Session" resource, and the response body including the MbsSessionCreateRsp data structure that shall contain:

- within the "mbsSession" attribute, a representation of the created Individual MBS Session resource encoded using the MbsSession data structure, including:
  - the area session ID assigned by the MB-SMF in the case of a location dependent MBS within the "areaSessionId" attribute;
  - the allocated TMGI for the MBS session, if the MBS session creation request included a "tmgiAllocReq" attribute requesting TMGI allocation for the MBS session, within the "tmgi" attribute;
  - if unicast transport is used over N6mb/Nmb9, the ingress MB-UPF tunnel information, within the "ingressTunAddr" attribute;

- if the "serviceType" value is "BROADCAST" and any MBS FSA ID(s) received from the MB-SMF, the list of MBS FSA ID(s) within the "mbsFsaIdList" attribute; and
- if the "ReducedMbsServArea" feature is supported and the MB-SMF reduced the MBS Service Area initially requested by the AF, the reduced MBS Service Area that can be supported by the MB-SMF within either the "redMbsServArea" attribute or the "extRedMbsServArea" attribute;

and

- within the "eventList" attribute, a list of MBS Session Status Event(s) report(s), if available.

If the MBS session creation request contained a request to also create a subscription to MBS session status event(s) within the "mbsSessionSubsc" attribute, the the NEF shall also create a corresponding "Individual MBS Session Subscription" resource and return a representation of it in the HTTP POST response body within the "mbsSessionSubsc" attribute of the MbsSession data structure. The "mbsSessionSubsc" attribute shall contains the identifier of the created "Individual MBS Session Subscription" resource within the "subscriptionId" attribute. The AF shall construct the URI of the created "Individual MBS Session Subscription" resource by appending the path segments "/subscriptions/{subscriptionId}", where the "subscriptionId" takes the value of the received "subscriptionId" attribute, to the URI of the created "Individual MBS Session" resource received within the HTTP Location header.

On failure or if the NEF receives an error code from the PCF, the NRF or the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.3.3 Procedure for MBS session update

This procedure is used by an AF to request the modification of an existing multicast or a broadcast MBS session or, for a location dependent MBS session, the part of an MBS Session within an MBS service area.

In order to request the modification of an existing MBS Session, an AF shall send a Nnef\_MBSSession\_Update request using the HTTP PATCH method and targeting the URI of the corresponding "Individual MBS Session" resource and the request message body including an array of PatchItem data structure(s) containing the requested modifications. For a multicast or a broadcast MBS session, only the "mbsServiceArea" attribute, and/or the "mbsServInfo" attribute may be modified. For a multicast MBS session, the "activityStatus" attribute may also be modified. For a broadcast MBS session, the "mbsFsaIdList" attribute may also be modified.

At the reception of this HTTP PATCH request for MBS session modification:

- if updated MBS Service Information is provided and the NEF decided to interact with the PCF during MBS Session Creation as specified in clause 4.4.29.3.2, the NEF shall also interact with the PCF for MBS policy authorization of the received updated MBS Service Information and the update of the corresponding MBS Application Session Context, as specified in 3GPP TS 29.537 [63];
- if MBS session authorization is successful or when the NEF does not interact with the PCF, the NEF shall
  interact with the MB-SMF to request the modification of the corresponding MBS session at the MB-SMF as
  specified in 3GPP TS 29.532 [52];
  - if the NEF receives an "indication that the PCF shall be contacted" within the "contactPcfInd" attribute from the PCF as specified in 3GPP TS 29.537 [63], the NEF shall relay this indication to the MB-SMF;

and

- if updated MBS Service Area information is provided within the "extMbsServiceArea" attribute, the NEF shall translate the received geographical area(s) or civic address(es) to a list of cell ID(s) and/or list of TAI(s) before relaying it to the MB-SMF.

Upon reception of a successful response from the MB-SMF and successful MBS session modification, the NEF shall return a Nnef\_MBSSession\_Update response with an HTTP "204 No Content" status code, or when the "ReducedMbsServArea" feature is supported, with either:

 if no updated MBS Service Area was provided in the corresponding request or an updated MBS Service Area was provided in the corresponding request and was fully accepted by the MB-SMF, an HTTP "204 No Content" status code. - if an updated MBS Service Area was provided in the corresponding request but and only partially accepted by the MB-SMF (i.e., the MB-SMF reduced the MBS Service Area), an HTTP "200 OK" status code with the response body including the reduced MBS service area information within the MbsSessionUpdateResp data structure.

On failure or if the NEF receives an error response from the PCF or the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.3.4 Procedure for MBS session deletion

This procedure is used by an AF to request the deletion of an existing multicast or a broadcast MBS session or, for a location dependent MBS session, the part of an MBS Session within an MBS service area.

In order to request the deletion of an existing MBS Session, an AF shall send a Nnef\_MBSSession\_Delete request using the HTTP DELETE method and targeting the URI of the corresponding "Individual MBS Session" resource.

At the reception of this HTTP DELETE request for MBS session deletion:

- if the NEF decided to interact with the PCF during MBS Session Creation as specified in clause 4.4.29.3.2, the NEF shall also interact with the PCF to request the deletion of the corresponding MBS Application Session Context, as specified in 3GPP TS 29.537 [63]; and
- the NEF shall interact with the MB-SMF to request the deletion of the corresponding MBS Session.

Upon success, the NEF shall return a Nnef\_MBSSession\_Delete response with an HTTP "204 No Content" status code.On failure or if the NEF receives an error response from the PCF or the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.3.5 Procedure for MBS session status subscription

This procedure is used by an AF to request to create a subscription to MBS session status event(s) reportingfor a multicast or a broadcast MBS session or, for a location dependent MBS session, the part of an MBS Session within an MBS service area.

In order to request the creation of a new subscription to MBS Session status event(s) reporting, an AF shall send a Nnef\_MBSSession\_StatusSubscribe request to the NEF using the HTTP POST method and targeting the "MBS Session Subscriptions" collection resource, with the request body including the MbsSessionSubsc data structure.

On successful MBS session subscription creation, the NEF shall return a Nnef\_MBSSession\_StatusSubscribe response with an HTTP "201 Created" status code to the AF, including a "Location" header containing the URI of the created "Individual MBS Session Subscription" resource and the response body containing a representation of the created resource within the MbsSessionSubsc data structure.

On failure or if the NEF receives an error response from the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.3.6 Procedure for MBS session status unsubscription

This procedure is used by an AF to request the deletion of an existing subscription to MBS session status event(s) reportingfor a multicast or a broadcast MBS session or, for a location dependent MBS session, the part of an MBS Session within an MBS service area.

In order to request the deletion of an existing subscription to MBS Session status event(s) reporting, an AF shall send a Nnef\_MBSSession\_StatusUnsubscribe request to the NEF using the HTTP DELETE method and targeting the corresponding "Individual MBS Session Subscription" resource.

On successful deletion of the subscription, the NEF shall return a Nnef\_MBSSession\_StatusUnsubcribe response with an HTTP "204 No Content" status code.

On failure or if the NEF receives an error response from the MB-SMF, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.3.7 Procedure for MBS session status notification

This procedure is used by the NEF to send MBS session status event(s) notifications to a previously subscribed AF.

In order to send an MBS Session status event(s) notification, the NEF shall send a Nnef\_MBSSession\_StatusNotify request to the AF using the HTTP POST method and targeting the notification URI provided by the AF during the corresponding MBS session subscription creation/modification, with the request body including the MbsSessionStatusNotif data structure that shall contain:

- within the "eventList" attribute, the reported MBS session event(s) ) and the related information, encoded via the MbsSessionEventReportList data structure that shall contain:
  - within the "eventReportList" attribute, one or several MBS session event report(s), with each one of them encoded using the MbsSessionEventReport data structure that shall contain:
    - within the "eventType" attribute, the reported MBS session status event;
    - within the "timeStamp" attribute, the time at which the event is generated, if available;
    - within the "ingressTunAddrInfo" attribute, the ingress tunnel address to use to send MBS session data over N6mb/Nmb9 interface, if the "eventType" attribute is set to "INGRESS\_TUNNEL\_ADD\_CHANGE";

and

- within the "eventList" attribute, the list of MBS session events to be reported, encoded via the MbsSessionEventReportList data structure that shall contain;
  - within the "eventReportList" attribute, one or several individual MBS session event report(s), with each one of them encoded within the MbsSessionEventReport data structure that shall contain:
    - within the "broadcastDelStatus" attribute, the broadcast delivery status (e.g. whether the MBS session is ACTIVATED or TERMINATED), if the "eventType" attribute is set to "BROADCAST\_DELIVERY\_STATUS".

Upon reception of this notification request, the AF shall acknowledge its successful reception by sending a Nnef\_MBSSession\_StatusNotify response with an HTTP "204 No Content" status code.

On failure, the AF shall take proper error handling actions, as specified in subclause 5.20.7, and respond to the NEF with an appropriate error status code.

#### 4.4.29.4 Procedures for MBS Parameters Provisioning

#### 4.4.29.4.1 General

The procedures described in the clauses below are used by an AF to perform MBS parameters provisioning, e.g. multicast MBS Session Authorization information provisioning as defined in clause 7.2.9 of 3GPP TS 23.247 [53].

#### 4.4.29.4.2 Procedure for multicast MBS Session Authorization information provisioning

This procedure is used by an AF to request the creation/update/deletion of an MBS Session Authorization information provisioning for a multicast MBS group.

In order to request the creation of an MBS Parameters Provisioning for the purpose of MBS Session Authorization information provisioning for a multicast MBS group, an AF shall trigger the Nnef\_MBSSession API by sending an

HTTP POST request to the NEF targeting the "MBS Parameters Provisionings" collection resource, with the request body including the MbsPpData data structure that shall contain:

- within the "afId" attribute, the identifier of the AF that is sending the request;
- within the "mbsSessAuthData" attribute, the MBS Session Authorization information data to be provisioned, encoded via the MbsSessAuthData data structure that shall contain:
  - within the "extGroupId" attribute, the external group identifier of the targeted multicast MBS Group; and
  - within the "gpsisList" attribute, the list of the GPSI(s) of the member UE(s) constituting the multicast MBS group, if the multicast MBS group has not yet been created or the list of its member(s) needs to be updated; and
  - within the "mbsSessionIdList" attribute, the identifier(s) of the multicast MBS Session(s) that the multicast MBS group is authorized to join;

and

within the "suppFeat" attribute, the features supported by the AF, if applicable (i.e. feature negociation needs to take place).

The NEF shall then check whether the AF is authorized to perform this operation or not as defined in clause 7.2.9 of 3GPP TS 23.247 [53]. If the AF is authorized, the NEF shall trigger the Nudm\_ParameterProvision service API of the UDM to request the provisioning of the received MBS Session Authorization information.

Upon reception of a successful response from the UDM as defined in 3GPP TS 29.503 [17], the NEF shall respond to the AF with an HTTP "200 OK" status code including a Location header field containing the URI of the created resource, and the response body containing the MbsPpData data structure containing a representation of the created "Individual MBS Parameters Provisioning" resource.

In order to request the update of an existing "Individual MBS Parameters Provisioning" resource for the purpose of MBS Session Authorization information provisioning for a multicast MBS group, an AF shall trigger the Nnef\_MBSSession API by sending to the NEF either:

- an HTTP PUT request targeting the concerned "Individual MBS Parameters Provisioning" resource with the request body including the MbsPpData data structure; or
- an HTTP PATCH request targeting the concerned "Individual MBS Parameters Provisioning" resource with the request body including the MbsPpDataPatch data structure.

After authorizing the request, the NEF shall interact with the UDM via the the Nudm\_ParameterProvision service API to request the provisioning of the received updated MBS Session Authorization information.

Upon reception of a successful response from the UDM as defined in 3GPP TS 29.503 [17], the NEF shall respond to the AF with an HTTP "200 OK" status code with the response body containing a representation of the updated Individual MBS Parameters Provisioning resource within the MbsPpData data structure, or an HTTP "204 No Content" status code.

In order to request the deletion of an existing "Individual MBS Parameters Provisioning" resource for the purpose of MBS Session Authorization information provisioning for a multicast MBS group, an AF shall trigger the Nnef\_MBSSession API by sending an HTTP DELETE request targeting the concerned "Individual MBS Parameters Provisioning" resource to the NEF. After authorizing the request, the NEF shall interact with the UDM via the the Nudm\_ParameterProvision service API to request to update accordingly the MBS Session Authorization information.

Upon reception of a successful response from the UDM as defined in 3GPP TS 29.503 [17], the NEF shall respond to the AF with an HTTP "204 No Content" status code.

On failure or if the NEF receives an error code from the UDM, the NEF shall take proper error handling actions, as specified in clause 5.20.7, and respond to the AF with an appropriate error status code.

NOTE: The stage 2 Nnef\_ParameterProvisioning API for MBS Parameters Provisioning is implemented in stage 3 via the Nnef\_MBSSession API.

### 4.4.29.5 Procedures for MBS User Service management

#### 4.4.29.5.1 General

The procedures described in the clauses below are used by an external/untrusted AF (e.g. MBS Application Provider that lies outside the trusted DN) to manage MBS User Services via the NEF, i.e. create, retrieve, update and delete an MBS User Service, as defined in 3GPP TS 26.502 [65].

### 4.4.29.5.2 Procedure for MBS User Service creation

This procedure is used by an AF to request the creation of a new MBS User Service at the NEF.

In order to request the creation of an MBS User Service, an AF shall send a Nnef\_MBSUserService\_Create request to the NEF using the HTTP POST method and targeting the "MBS User Services" collection resource, with the request message body including the MBSUserService data structure, as specified in clause 5.26.2.3.2.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserService service API of the MBSF to request the creation of the corresponding MBS User Service at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserService\_Create response with an HTTP "201 Created" status code including a "Location" header field that shall contain the URI of the created resource, and the response body containing a representation of the created "Individual MBS User Service" resource within the MBSUserService data structure, as specified in clause 5.26.2.2.3.2.

On failure or if the NEF receives an error response from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.26.7, and respond to the AF with an appropriate error status code.

### 4.4.29.5.3 Procedure for MBS User Service retrieval

This procedure is used by an AF to request the retrieval of an existing MBS User Service at the NEF.

In order to request the retrieval of an existing MBS User Service, an AF shall send a Nnef\_MBSUserService\_Retrieve request using the HTTP GET method and targeting the URI of the concerned "Individual MBS User Service" resource, as specified in clause 5.26.2.3.3.1.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserService service API of the MBSF to request the retrieval of the corresponding MBS User Service at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserService\_Retrieve response with an HTTP "200 OK" status code and the response body containing a representation of the requested Individual MBS User Service resource within the MBSUserService data structure, as specified in clauses 5.26.2.3.3.1.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.26.7, and respond to the AF with an appropriate error status code.

#### 4.4.29.5.4 Procedure for MBS User Service update/modification

This procedure is used by an AF to request the update/modification of an existing MBS User Service at the NEF.

In order to request the update of an existing MBS User Service, an AF shall send a Nnef\_MBSUserService\_Update request using the HTTP PUT method and targeting the URI of the corresponding "Individual MBS User Service" resource, with the request body including the MBSUserService data structure, as specified in clause 5.26.2.3.3.2.

In order to request the modification of an existing MBS User Service, an AF shall send a

Nnef\_MBSUserService\_Update request using the HTTP PATCH method and targeting the URI of the corresponding "Individual MBS User Service" resource, with the request body including the MBSUserServicePatch data structure, as specified in clause 5.26.2.3.3.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserService service API of the MBSF to request the update/modification of the corresponding MBS User Service at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserService\_Update response with an HTTP "200 OK" status code with the response body containing a representation of the updated Individual MBS User Service resource within the MBSUserService data structure, or an HTTP "204 No Content" status code, as specified in clause 5.26.2.3.3.2 or clause 5.26.2.3.3.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.26.7, and respond to the AF with an appropriate error status code.

#### 4.4.29.5.5 Procedure for MBS User Service deletion

This procedure is used by an AF to request the deletion of an existing MBS User Service at the NEF.

In order to request the deletion of an existing MBS User Service, an AF shall send a Nnef\_MBSUserService\_Delete request using the HTTP DELETE method and targeting the URI of the concerned "Individual MBS User Service" resource, as specified in clause 5.26.2.3.3.4.

NOTE: The Nnef\_MBSUserService\_Delete service operation corresponds to the stage 2 Nnef\_MBSUserService\_Destroy service operation defined in 3GPP TS 26.502 [65].

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserService service API of the MBSF to request the deletion of the corresponding MBS User Service at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserService\_Delete response with an HTTP "204 No Content" status code, as specified in clause 5.26.2.3.3.4.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.26.7, and respond to the AF with an appropriate error status code.

### 4.4.29.6 Procedures for MBS User Data Ingest Session management

#### 4.4.29.6.1 General

The procedures described in the clauses below are used by an external/untrusted AF (e.g. MBS Application Provider that lies outside the trusted DN) to manage an MBS User Data Ingest Session along with its subordinate MBS Distribution Session(s) via the NEF, i.e. create, retrieve, update/modify and delete an MBS User Data Ingest Session, create, retrieve, update/modify and delete an MBS User Data Ingest Session Status subscription, and manage the related MBS User Data Ingest Session Status notifications, as defined in 3GPP TS 26.502 [65].

#### 4.4.29.6.2 Procedure for MBS User Data Ingest Session creation

This procedure is used by an AF to request the creation of a new MBS User Data Ingest Session at the NEF.

In order to request the creation of an MBS User Data Ingest Session, including a set of subordinate MBS Distribution Session(s), an AF shall send a Nnef\_MBSUserDataIngestSession\_Create request message to the NEF using the HTTP POST method and targeting the "MBS User Data Ingest Sessions" collection resource, with the request message body including the MBSUserDataIngSession data structure, as specified in clause 5.27.2.2.3.2.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession API of the MBSF to request the creation of the corresponding MBS User Data Ingest Session at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_Create response message with an HTTP "201 Created" status code including a "Location" header field that shall contain the URI of the created resource, and the response body containing a representation of the created "Individual MBS User Data Ingest Session" resource within the MBSUserDataIngSession data structure, as specified in clause 5.27.2.2.3.2.

On failure or if the NEF receives an error response from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.3 Procedure for MBS User Data Ingest Session retrieval

This procedure is used by an AF to request the retrieval of an existing MBS User Data Ingest Session at the NEF.

In order to request the retrieval of an existing MBS User Data Ingest Session, an AF shall send a Nnef\_MBSUserDataIngestSession\_Retrieve request message using the HTTP GET method and targeting the URI of the concerned "Individual MBS User Data Ingest Session" resource, as specified in clause 5.27.2.3.3.1.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession service API of the MBSF to request the retrieval of the corresponding MBS User Data Ingest Session at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_Retrieve response message with an HTTP "200 OK" status code and the response body containing a representation of the requested Individual MBS User Data Ingest Session resource within the MBSUserDataIngSession data structure, as specified in clauses 5.27.2.3.3.1.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.4 Procedure for MBS User Data Ingest Session update/modification

This procedure is used by an AF to request the update/modification of an existing MBS User Data Ingest Session at the NEF.

In order to request the update of an existing MBS User Data Ingest Session, an AF shall send a Nnef\_MBSUserDataIngestSession\_Update request message using the HTTP PUT method and targeting the URI of the corresponding "Individual MBS User Data Ingest Session" resource, with the request body including the MBSUserDataIngSession data structure, as specified in clause 5.27.2.3.3.2.

In order to request the modification of an existing MBS User Data Ingest Session, an AF shall send a Nnef\_MBSUserDataIngestSession\_Update request message using the HTTP PATCH method and targeting the URI of the corresponding "Individual MBS User Data Ingest Session" resource, with the request body including the MBSUserDataIngSessionPatch data structure, as specified in clause 5.27.2.3.3.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession service API of the MBSF to request the update/modification of the corresponding MBS User Data Ingest Session at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_Update response message with an HTTP "200 OK" status code with the response body containing a representation of the updated Individual MBS User Data Ingest Session resource within the MBSUserDataIngSession data structure, or an HTTP "204 No Content" status code, as specified in clause 5.27.2.3.3.2 or clause 5.27.2.3.3.3.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.5 Procedure for MBS User Data Ingest Session deletion

This procedure is used by an AF to request the deletion of an existing MBS User Data Ingest Session at the NEF.

In order to request the deletion of an existing MBS User Data Ingest Session, an AF shall send a Nnef\_MBSUserDataIngestSession\_Delete request message using the HTTP DELETE method and targeting the URI of the concerned "Individual MBS User Data Ingest Session" resource, as specified in clause 5.27.2.3.3.4.

NOTE: The Nnef\_MBSUserDataIngestSession\_Delete service operation corresponds to the stage 2 Nnef\_MBSUserDataIngestSession\_Destroy service operation defined in 3GPP TS 26.502 [65].

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession service API of the MBSF to request the deletion of the corresponding MBS User Data Ingest Session at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_Delete response message with an HTTP "204 No Content" status code, as specified in clause 5.27.2.3.3.4.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.6 Procedure for MBS User Data Ingest Session Status Subscription

This procedure is used by an AF to subscribe to MBS User Data Ingest Session status event(s) reporting at the NEF.

In order to request the creation of an MBS User Data Ingest Session Status Subscription, an AF shall send a Nnef\_MBSUserDataIngestSession\_StatusSubscribe request message to the NEF using the HTTP POST method and targeting the "MBS User Data Ingest Session Status Subscriptions" collection resource, with the request message body including the MBSUserDataIngStatSubsc data structure, as specified in clause 5.27.2.4.3.2.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession API of the MBSF to request the creation of the corresponding MBS User Data Ingest Session Status Subscription at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_StatusSubscribe response message with an HTTP "201 Created" status code including a "Location" header field that shall contain the URI of the created resource, and the response body containing a representation of the created "Individual MBS User Data Ingest Session Status Subscription" resource within the MBSUserDataIngStatSubsc data structure, as specified in clause 5.27.2.4.3.2.

On failure or if the NEF receives an error response from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.7 Procedure for MBS User Data Ingest Session Status update/modification

This procedure is used by an AF to request the update/modification of an existing MBS User Data Ingest Session Status Subscription at the NEF.

In order to request the update of an existing MBS User Data Ingest Session Status Subscription, an AF shall send a Nnef\_MBSUserDataIngestSession\_StatusSubscribeMod request message using the HTTP PUT method and targeting the URI of the corresponding "Individual MBS User Data Ingest Session Status Subscription" resource, with the request body including the MBSUserDataIngStatSubsc data structure, as specified in clause 5.27.2.5.3.2.

In order to request the modification of an existing MBS User Data Ingest Session Status Subscription, an AF shall send a Nnef\_MBSUserDataIngestSession\_StatusSubscribeMod request message using the HTTP PATCH method and targeting the URI of the corresponding "Individual MBS User Data Ingest Session Status Subscription" resource, with the request body including the MBSUserDataIngStatSubscPatch data structure, as specified in clause 5.27.2.5.3.3.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession service API of the MBSF to request the update/modification of the corresponding MBS User Data Ingest Session Status Subscription at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_StatusSubscribeMod response message with an HTTP "200 OK" status code with the response body containing a representation of the updated Individual MBS User Data Ingest Session resource within the MBSUserDataIngStatSubsc data structure, or an HTTP "204 No Content" status code, as specified in clause 5.27.2.5.3.2 or clause 5.27.2.5.3.3.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.8 Procedure for MBS User Data Ingest Session Status Unsubscription

This procedure is used by an AF to request the deletion of an existing MBS User Data Ingest Session Status Subscription at the NEF.

In order to request the deletion of an existing MBS User Data Ingest Session Status Subscription, an AF shall send a Nnef\_MBSUserDataIngestSession\_StatusUnsubscribe request message using the HTTP DELETE method and targeting the URI of the concerned Individual MBS User Data Ingest Session Stats Subscription resource, as specified in clause 5.27.2.5.3.4.

The NEF shall then check whether the AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Nmbsf\_MBSUserDataIngestSession service API of the MBSF to request the deletion of the corresponding MBS User Data Ingest Session Status Subscription at the MBSF, as specified in 3GPP TS 29.580 [66].

Upon reception of a successful response from the MBSF, as defined in 3GPP TS 29.580 [66], the NEF shall return a Nnef\_MBSUserDataIngestSession\_StatusUnsubscribe response message with an HTTP "204 No Content" status code, as specified in clause 5.27.2.5.3.4.

On failure or if the NEF receives an error code from the MBSF, the NEF shall take proper error handling actions, as specified in clause 5.27.7, and respond to the AF with an appropriate error status code. If the NEF received within an error response a ProblemDetails data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

#### 4.4.29.6.9 Procedure for MBS User Data Ingest Session Status Notification

This procedure is used by the NEF to send MBS User Data Ingest Session status change notifications to a previously subscribed AF.

Upon reception of an MBS User Data Ingest Session Status Notification from the MBSF, as specified in 3GPP TS 29.580 [66], the NEF shall relay this notification to the AF by sending a

Nnef\_MBSUserDataIngestSession\_StatusNotify request message to the AF using the HTTP POST method and targeting the notification URI provided by the AF during the creation of the corresponding MBS User Data Ingest Session Status Subscription, with the request body including the MBSUserDataIngStatNotif data structure, as specified in clause 5.27.4.2.3.1.

Upon successful reception of this notification request, the AF shall acknowledge its successful reception by sending a Nnef\_MBSUserDataIngestSession\_StatusNotify response message with an HTTP "204 No Content" status code, as specified in clause 5.27.4.2.3.1.

On failure, the AF shall take proper error handling actions, as specified in subclause 5.27.7, and respond to the NEF with an appropriate error status code.

# 4.4.30 Procedures for Data Reporting

### 4.4.30.1 General

The procedures in this clause are used by an AF to obtain data collection and reporting information and provide Data Reports, as defined in clause 4.2 of 3GPP TS 26.531 [59] and 3GPP TS 26.532 [60].

## 4.4.30.2 Procedure for Data Reporting Session Management

This procedure is used by an AF to request the creation/update/delection of a Data Reporting Session in order to obtain data collection and reporting information.

In order to request the creation of a Data Reporting Session, an AF shall send a Nnef\_DataReporting\_Create request to the NEF using the HTTP POST method, targeting the "Data Reporting Sessions" collection resource with the request message body including the DataReportingSession data structure as defined in clause 5.23.2.2.3.1.

In order to read an existing Individual Data Reporting Session, an AF shall send a Nnef\_DataReporting\_Retrieve request to the NEF using the HTTP GET method, targeting the concerned "Individual Data Reporting Session" resource. If successful, the response message body contains the requested DataReportingSession data structure as defined in clause 5.23.2.3.3.1.

In order to request the update of an existing Data Reporting Session, an AF shall send a Nnef\_DataReporting\_Update request to the NEF using the HTTP PUT method, targeting the concerned "Individual Data Reporting Session" resource with the request message body including the updated resource representation within the DataReportingSession data structure as defined in clause 5.23.2.3.2.

In order to request the deletion of an existing Data Reporting Session, an AF shall send a Nnef\_DataReporting\_Delete request to the NEF using the HTTP DELETE method, targeting the concerned "Individual Data Reporting Session" resource as defined in clause 5.23.2.3.3.

At the reception of the HTTP POST GET/PUT/DELETE requests from the AF, the NEF shall trigger the necessary interaction with the DCAF as specified in 3GPP TS 26.532 [60] and:

- for an HTTP GET request, retrieve the requested "Individual Data Reporting Session" resource and respond to the AF with an HTTP "200 OK" status code;
- for an HTTP POST request, create a new "Individual Data Reporting Session" resource and respond to the AF with an HTTP "200 OK" status code including an HTTP Location header field containing the URI of the created resource and the response body including a representation of the created "Individual Data Reporting Session" resource within the DataReportingSession data structure;
- for an HTTP PUT request, update the concerned "Individual Data Reporting Session" resource and respond to the AF with an HTTP "200 OK" status code with the response body including a representation of the updated "Individual Data Reporting Session" resource within the DataReportingSession data structure; and
- for an HTTP DELETE request, delete the corresponding "Individual Data Reporting Session" resource, and respond to the AF with an HTTP "204 No Content" status code.

### 4.4.30.3 Procedure for Data Report

This procedure is used by an AF to send collected UE Data Reports to the NEF.

In order to send a collected UE Data Report, an AF shall use the "Report" custom operation. The AF shall send for this purpose an HTTP POST request targeting the URI "{apiRoot}/3gpp-data-reporting/v1/sessions/{sessionId}/report", with the request message body including the DataReport data structure specified in 3GPP TS 26.532 [60]. Upon successful reception of the report, the NEF shall respond to the AF with an HTTP "200 OK" status code.

# 4.4.31 Procedures for Data Reporting Provisioning

### 4.4.31.1 General

The procedures in this clause are used by an AF to supply data collection and reporting provisioning information in the form of Data Reporting Provisioning resources, as defined in clause 4.2 of 3GPP TS 26.531 [59] and 3GPP TS 26.532 [60].

### 4.4.31.2 Procedure for Data Reporting Provisioning Session Management

This procedure is used by an AF to request the creation/deletion of a Data Reporting Provisioning Session in order to supply data collection and reporting provisioning information.

In order to request the creation of a Data Reporting Provisioning Session, an AF shall send a Nnef\_DataReportingProvisioning\_Create request to the NEF using the HTTP POST method and targeting the "Data Reporting Provisioning Sessions" collection resource, with the request message body including the DataReportingProvisioningSession data structure as defined in clause 5.24.2.2.3.1.

In order to read an existing "Individual Data Reporting Provisioning Session" resource, an AF shall send a Nnef\_DataReportingProvisioning\_Retrieve request to the NEF using the HTTP GET method and targeting the concerned "Individual Data Reporting Provisioning Session" resource, as defined in clause 5.24.2.3.3.1.

In order to request the deletion of an existing Data Reporting Provisioning Session, an AF shall send a Nnef\_DataReportingProvisioning\_Delete request to the NEF using the HTTP DELETE method and targeting the concerned "Individual Data Reporting Provisioning Session" resource as defined in clause 5.24.2.3.3.

At the reception of the HTTP POST/GET/DELETE request from the AF, the NEF shall trigger the necessary interactions with the DCAF as specified in 3GPP TS 26.532 [60] and:

- for an HTTP POST request, create a new "Individual Data Reporting Provisioning Session" resource and respond to the AF with an HTTP "200 OK" status code including an HTTP Location header field containing the URI of the created resource and the response body including a representation of the created "Individual Data Reporting Provisioning Session" resource within the DataReportingProvisioningSession data structure;
- for an HTTP GET request, respond to the AF with an HTTP "200 OK" status code with the response body including the representation of the requested "Individual Data Reporting Provisioning Session" resource within the DataReportingProvisioningSession data structure; and
- for an HTTP DELETE request, delete the corresponding "Individual Data Reporting Provisioning Session" resource and respond to the AF with an HTTP "204 No Content" status code.

### 4.4.31.3 Procedure for Data Reporting Configuration management

This procedure is used by an AF to manage Data Reporting Configuration.

In order to request the creation of a Data Reporting Configuration, an AF shall send a Nnef\_DataReportingProvisioning\_CreateConfiguration request to the NEF using the HTTP POST method and targeting the "Data Reporting Configurations" collection resource, with the request message body including the DataReportingConfiguration data structure as defined in clause 5.24.2.5.3.1.

In order to read an existing Data Reporting Configuration, an AF shall send a Nnef\_DataReportingProvisioning\_RetrieveConfiguration request to the NEF using the HTTP GET method and targeting the concerned "Individual Data Reporting Configuration" resource., as defined in clause 5.24.2.4.3.1.

In order to request the update of an existing Data Reporting Configuration, an AF shall send a Nnef\_DataReportingProvisioning\_UpdateConfiguration request to the NEF using the HTTP PUT method, targeting the concerned "Individual Data Reporting Configuration" resource with the request message body including the updated resource representation within the DataReportingConfiguration data structure as defined in clause 5.24.2.5.3.3.

In order to request the modification of an existing Data Reporting Configuration, an AF shall send a Nnef\_DataReportingProvisioning\_UpdateConfiguration request to the NEF using the HTTP PATCH method and targeting the concerned "Individual Data Reporting Configuration" resource with the request message body containing the DataReportingConfigurationPatch data structure, as defined in clause 5.24.2.5.3.3A.

In order to request the deletion of an existing Data Reporting Configuration, an AF shall send a Nnef\_DataReportingProvisioning\_DeleteConfiguration request to the NEF using the HTTP DELETE method and targeting the concerned "Individual Data Reporting Configuration" resource as defined in clause 5.24.2.5.3.4.

At the reception of the HTTP POST/GET/PUT/PATCH/DELETE requests from the AF, the NEF shall trigger the necessary interactions with the DCAF as specified in 3GPP TS 26.532 [60] and:

- for an HTTP POST request, create a new "Individual Data Reporting Configuration" resource and respond to the AF with an HTTP "200 OK" status code including an HTTP Location header field containing the URI of the created resource and the response body including a representation of the created "Data Reporting Configuration" resource within the DataReportingConfiguration data structure;

- for an HTTP GET request, respond to the AF with an HTTP "200 OK" status code with the response body including the representation of the requested "Individual Data Reporting Configuration " resource within the DataReportingConfiguration data structure;
- for an HTTP PUT/PATCH request, update/modify the concerned "Individual Data Reporting Configuration" resource and respond to the AF with an HTTP "200 OK" status code with the response body including a representation of the updated/modified "Individual Data Reporting Configuration" resource within the DataReportingConfiguration data structure, or with an HTTP "204 No Content" status code; and
- for an HTTP DELETE request, delete the corresponding "Individual Data Reporting Configuration" resource and respond to the AF with an HTTP "204 No Content" status code.

### 4.4.32 Procedures for AF specific UE ID retrieval

### 4.4.32.1 General

The procedures described in the clauses below are used by an AF to request the NEF to provide an AF specific UE ID, as described in clause 4.15.10 of 3GPP TS 23.502 [2].

### 4.4.32.2 Retrieve AF specific UE ID service operation

In order to retrieve AF specific UE ID information, the AF shall send an HTTP POST request message to the NEF targeting the resource URI "{apiRoot}/3gpp-ueid/v1/retrieve", with the request body including the UeIdReq data structure.

Upon reception of the HTTP POST request message from the AF, the NEF shall check whether the AF is authorized to perform this operation or not:

- if AF is not authorized, the NEF shall respond to the AF with a "403 Forbidden" status code with the response body including the ProblemDetails data structure containing the "cause" attribute set to the "REQUEST\_NOT\_AUTHORIZED" application error indicating the AF authorisation failure; and
- if the AF's request is authorized, then if the DNN and/or S-NSSAI information is not available in the request, the NEF shall determine the corresponding DNN and/or S-NSSAI information based on the requesting AF Identifier, and if provided, the MTC Provider Information.

The NEF shall then interact with the BSF using the UE address and IP domain (if the UE IPv4 address is provided), DNN and/or S-NSSAI to retrieve the session binding information of the UE by invoking the Nbsf\_Management\_Discovery service operation, as described in 3GPP TS 29.521 [9].

If the NEF receives an error response from the BSF, the NEF shall respond to the AF with a proper error status code. If the NEF received from the BSF an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If no SUPI matching the provided UE information is returned by the BSF, the NEF shall respond to the AF with a "404 Not Found" status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_NOT\_FOUND" application error to indicate that the requested UE address is not found.

Upon success and a SUPI is returned by the BSF, the NEF shall then interact with UDM to retrieve the AF specific UE Identifier using the received SUPI and at least one of the Application Port ID, MTC Provider Information or AF Identifier information by invoking Nudm\_SDM\_Get service, as described in clause 5.2.2.2 of 3GPP TS 29.503 [17]. Upon success, the UDM responds to the NEF with the AF specific UE Identifier represented as an External Identifier for the UE which is uniquely associated with the Application Port ID, MTC provider Information and/or AF Identifier. The NEF shall then respond to the AF with the received information, i.e. the AF specific UE Identifier represented as an External as an External Identifier that was received from the UDM.

If the NEF receives an error response from the UDM, the NEF shall respond to the AF with a proper error status code. If the NEF received from the UDM an error response including a "ProblemDetails" data structure with the "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error. If the UDM indicates that the requested UE Identifier is not available in the subscription data, the NEF shall respond to the AF with a "404 Not Found" error status code with the response body including a ProblemDetails data structure containing the "cause" attribute set to the "UE\_ID\_NOT\_AVAILABLE" application error to indicate that the AF specific UE ID is not available.

NOTE: The case where UE's IP address provided by the AF to the NEF corresponds to an IP address that has been NATed (Network and Port Address Translation) is not supported in this release of the specification.

# 4.4.33 Procedures for Media Streaming Event Exposure

#### 4.4.33.1 General

The procedures described in the clauses below are used by an external/untrusted event consumer AF to subscribe, update and delete a subscription to Media Streaming Exposure event(s) reporting via the NEF, also for a data collection AF to notify the observed Media Streaming event(s) which has been subscribed, as defined in 3GPP TS 26.512 [67].

### 4.4.33.2 Procedure for Media Streaming Event Exposure Subscription Creation

This procedure is used by an event consumer AF to subscribe to at least one Media Streaming Exposure event at the NEF.

In order to subscribe to at least one Media Streaming Exposure event, an event consumer AF shall send a Nnef\_MSEventExposure\_Subscribe request message to the NEF using the HTTP POST method and targeting the "Media Streaming Event Exposure Subscriptions" collection resource, with the request message body including the AfEventExposureSubsc data structure, as specified in clause 5.28.2.2.3.2.

The NEF shall then check whether the event consumer AF is authorized to perform this operation or not. If the event consumer AF is authorized, the NEF shall then trigger the Naf\_EventExposure API of the data collection AF to request the creation of the corresponding Application Event Subscriptions at the AF, as specified in 3GPP TS 29.517 [58].

Upon reception of a successful response from the data collection AF, as defined in 3GPP TS 29.517 [58], the NEF shall return a Nnef\_MSEventExposure\_Subscribe response message with an HTTP "201 Created" status code including a "Location" header field that shall contain the URI of the created resource, i.e. "{apiRoot}/3gpp-ms-event-exposure/v1/subscriptions/{subscriptionId}", and the response body containing a representation of the created "Individual Media Streaming Event Exposure Subscription" resource within the AfEventExposureSubsc data structure, as specified in clause 5.28.2.3.2.

On failure or if the NEF receives an error response from the data collection AF, the NEF shall take proper error handling actions, as specified in clause 5.28.7, and respond to the event consumer AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

### 4.4.33.3 Procedure for Media Streaming Event Exposure Subscription Update

This procedure is used by an event consumer AF to update an existing Media Streaming Event Exposure Subscription at the NEF.

In order to update an existing Media Streaming Event Exposure Subscription, the event consumer AF shall send a Nnef\_MSEventExposure\_Subscribe request message to the NEF using the HTTP PUT method and targeting the "Individual Media Streaming Event Exposure Subscription" resource, with the request message body including the AfEventExposureSubsc data structure, as specified in clause 5.28.2.3.3.2.

The NEF shall then check whether the event consumer AF is authorized to perform this operation or not. If the event consumer AF is authorized, the NEF shall then trigger the Naf\_EventExposure API of the data collection AF to request the update of the corresponding Individual Application Event Subscription at the AF, as specified in 3GPP TS 29.517 [58].

Upon reception of a successful response from the data collection AF, as defined in 3GPP TS 29.517 [58], the NEF shall return a Nnef\_MSEventExposure\_Subscribe response message with an HTTP "200 OK" status code with the AfEventExposureSubsc data structure or "204 No Content" status code, as specified in clause 5.28.2.3.3.2.

On failure or if the NEF receives an error response from the data collection AF, the NEF shall take proper error handling actions, as specified in clause 5.28.7, and respond to the event consumer AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

## 4.4.33.4 Procedure for Media Streaming Event Exposure Unsubscription

This procedure is used by an event consumer AF to request the deletion of an existing Media Streaming Event Exposure Subscription at the NEF.

In order to request the deletion of an existing Media Streaming Event Exposure Subscription, an event consumer AF shall send a Nnef\_MSEventExposure\_Unsubscribe request message using the HTTP DELETE method and targeting the URI of the concerned "Individual Media Streaming Event Exposure Subscription" resource.

The NEF shall then check whether the event consumer AF is authorized to perform this operation or not. If the AF is authorized, the NEF shall then trigger the Naf\_EventExposure service API of the data collection AF to request the deletion of the corresponding Application Event Subscription at the AF, as specified in 3GPP TS 29.517 [58].

Upon reception of a successful response from the data collection AF, as defined in 3GPP TS 29.517 [58], the NEF shall return a Nnef\_MSEventExposure\_Unsubscribe response message with an HTTP "204 No Content" status code.

On failure or if the NEF receives an error code from the data collection AF, the NEF shall take proper error handling actions, as specified in clause 5.28.7, and respond to the event consumer AF with an appropriate error status code. If the NEF received within an error response a "ProblemDetails" data structure with a "cause" attribute indicating an application error, the NEF shall relay this error response to the AF with a corresponding application error, when applicable.

## 4.4.33.5 Procedure for Media Streaming Event Exposure Notification

This procedure is used by the NEF to send a Media Streaming Event Exposure notification to a previously subscribed event consumer AF.

In order to send a Media Streaming Event Exposure notification, the NEF shall send a Nnef\_MSEventExposure\_Notify request message to the AF using the HTTP POST method and targeting the notification URI provided during the creation/update of the corresponding subscription, with the request body including the AfEventExposureNotif data structure as specified in clause 5.28.4.2.3.1.

Upon success, the event consumer AF shall send a Nnef\_MSEventExposure\_Notify response message with an HTTP "204 No Content" status code.

On failure, the event consumer AF shall take proper error handling actions, as specified in subclause 5.28.7, and respond to the NEF with an appropriate error status code.

# 5 NEF Northbound APIs

# 5.1 Introduction

The NEF Northbound APIs are a set of APIs defining the related procedures and resources for the interaction between the NEF and the AF.

Tables 5.1-1 summarizes the APIs defined in this specification.

| Service Name                 | Clause<br>defined | Description                                                       | OpenAPI Specification<br>File                 | API Name                                 | Annex |
|------------------------------|-------------------|-------------------------------------------------------------------|-----------------------------------------------|------------------------------------------|-------|
| TrafficInfluence             | 5.4               | Traffic Influence API                                             | TS29522_TrafficInfluenc<br>e.yaml             | 3gpp-traffic-<br>influence               | A.2   |

# 5.2 Information applicable to several APIs

The usage of HTTP, content type and URI structure definition, as specified in clauses 5.2.2, 5.2.3 and 5.2.4 of 3GPP TS 29.122 [4] respectively, shall be applicable for NEF Northbound APIs.

The notification, error handling, feature negotiation, HTTP custom headers as specified in clauses 5.2.5, 5.2.6, 5.2.7, 5.2.8 of 3GPP TS 29.122 [4] respectively, shall be applicable for NEF Northbound APIs except that the SCEF is replaced by the NEF and the SCS/AS is replaced by the AF.

The conventions for Open API specification files as specified in clause 5.2.9 of 3GPP TS 29.122 [4] shall be applicable for NEF Northbound APIs.

# 5.3 Reused APIs

This clause describes the northbound APIs which are applicable for both EPS and 5GS.

| API Name                  | Differences                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Table 5.3-1: Reused APIs applicable for both EPS and 5GS

# 5.4 TrafficInfluence API

# 5.4.1 Resources

### 5.4.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-traffic-influence/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-traffic-influence" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.4.1.1-1 and the resources and HTTP methods used for the TrafficInfluence API.

#### {apiRoot}/3gpp-traffic-influence/v1

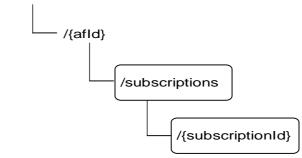

Figure 5.4.1.1-1: Resource URI structure of the TrafficInfluence API

Table 5.4.1.1-1 provides an overview of the resources and HTTP methods applicable for the TrafficInfluence API.

| Resource name                  | Resource URI                         | HTTP method | Description                                                                          |
|--------------------------------|--------------------------------------|-------------|--------------------------------------------------------------------------------------|
| Traffic Influence Subscription | /{afld}/subscriptions                | GET         | Read all subscriptions for a given AF                                                |
|                                |                                      | POST        | Create a new subscription to<br>traffic influence                                    |
|                                |                                      | GET         | Read a subscription to traffic<br>influence                                          |
| Individual Traffic Influence   | /{afld}/subscriptions/{subscriptionl | PUT         | Modify all of the properties of<br>an existing subscription to<br>traffic influence  |
| Subscription                   | d}                                   | РАТСН       | Modify part of the properties of<br>an existing subscription to<br>traffic influence |
|                                |                                      | DELETE      | Delete a subscription to traffic<br>influence                                        |

 Table 5.4.1.1-1: Resources and methods overview

### 5.4.1.2 Resource: Traffic Influence Subscription

#### 5.4.1.2.1 Introduction

This resource allows a AF to read all active traffic influence subscribtions for the given AF.

#### 5.4.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-traffic-influence/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.4.1.2.2-1.

#### Table 5.4.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

#### 5.4.1.2.3 Resource Methods

#### 5.4.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.4.1.2.2.

#### 5.4.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.4.1.2.3.2-1.

### Table 5.4.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.4.1.2.3.2-2 and the response data structures and response codes specified in table 5.4.1.2.3.2-3.

#### Table 5.4.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.4.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                  | Ρ     | Cardinality      | Response                     | Description                                                                                                                                                                                                                                                                 |

#### Table 5.4.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.4.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.4.1.2.3.3 POST

The POST method creates a new subscription resource to traffic influence subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.4.1.2.3.3-1 and the response data structures and response codes specified in table 5.4.1.2.3.3-2.

#### Table 5.4.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                                 |
|-----------------|---|-------------|-----------------------------------------------------------------------------|
| TrafficInfluSub | Μ | 1           | Parameters to register a subscription to influencing traffic routing and/or |
|                 |   |             | notification about UP management events with the NEF.                       |

| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                   |                                                                                                                                   |  |

#### Table 5.4.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to<br>the structure: {apiRoot}/3gpp-traffic-<br>Influence/v1/{afld}/subscriptions/{subscriptionId} |

### 5.4.1.3 Resource: Individual Traffic Influence Subscription

#### 5.4.1.3.1 Introduction

This resource allows a AF to register a subscription to influencing traffic routing and/or notification about UP management events with the NEF.

#### 5.4.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-traffic-influence/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.4.1.3.2-1.

#### Table 5.4.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                          |
|----------------|-----------|-------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld           | string    | Identifier of the AF.               |
| subscriptionId | string    | Identifier of the subscription.     |

#### 5.4.1.3.3 Resource Methods

5.4.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.4.1.3.2.

#### 5.4.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.4.1.3.3.2-1.

#### Table 5.4.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.4.1.3.3.2-2 and the response data structures and response codes specified in table 5.4.1.3.3.2-3.

#### Table 5.4.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.4.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type               | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|-------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TrafficInfluSub         | М | 1               | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                        |
| N/A                     |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                     |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The ma<br>also ap | - | y HTTP error st | atus codes fo                | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                    |

#### Table 5.4.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.4.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.4.1.3.3.3 PUT

The PUT method is used to replace an existing subscription resource to update a subscription. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.4.1.3.3.3-1 and the response data structures and response codes specified in table 5.4.1.3.3.3-2.

#### Table 5.4.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                                        |
|-----------------|---|-------------|------------------------------------------------------------------------------------|
| TrafficInfluSub | М |             | Modify an existing subscription to influencing traffic routing and/or notification |
|                 |   |             | about UP management events with the NEF.                                           |

#### Table 5.4.1.3.3.3-2: Data structures supported by the PUT Response Body on this resource

| Data type                | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                        |
|--------------------------|---|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TrafficInfluSub          | М | 1               | 200 OK                       | The subscription was replaced successfully and a representation is returned.                                                                                                                                                                                       |
| N/A                      |   |                 | 204 No<br>Content            | The subscription was replaced successfully.                                                                                                                                                                                                                        |
| N/A                      |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                      |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The ma<br>also app |   | y HTTP error st | tatus codes for              | the PUT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                       |

#### Table 5.4.1.3.3.3-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.4.1.3.3.4 PATCH

The PATCH method allows to change some properties of an existing traffic influence subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.4.1.3.3.4-1 and the response data structures and response codes specified in table 5.4.1.3.3.4-2.

#### Table 5.4.1.3.3.4-1: Data structures supported by the PATCH Request Body on this resource

| Data type            | Ρ | Cardinality | Description                                                            |
|----------------------|---|-------------|------------------------------------------------------------------------|
| TrafficInfluSubPatch | М | 1           | Partial update of a subscription to influencing traffic routing and/or |
|                      |   |             | notifications about UP management events with the NEF.                 |

| Data type                | P | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                        |
|--------------------------|---|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TrafficInfluSub          | М | 1               | 200 OK                       | The subscription was partial modified successfully and a representation is returned.                                                                                                                                                                               |
| N/A                      |   |                 | 204 No<br>Content            | The subscription was partial modified successfully.                                                                                                                                                                                                                |
| N/A                      |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                      |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The ma<br>also app |   | y HTTP error st | atus codes for               | the PATCH method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                     |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.4.1.3.3.5 DELETE

The DELETE method deletes the traffic influence subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.4.1.3.3.5-1.

| Table 5.4.1.3.3.5-1: URI ( | query parameters supported by  | y the DELETE method on this resource |
|----------------------------|--------------------------------|--------------------------------------|
|                            | quoi y paramotoro capportoa by |                                      |

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.4.1.3.3.5-2 and the response data structures and response codes specified in table 5.4.1.3.3.5-3.

#### Table 5.4.1.3.3.5-2: Data structures supported by the DELETE Request Body on this resource

# 5.4.2 Notifications

#### 5.4.2.1 Introduction

Upon receipt of a UP management event notification from the SMF indicating the subscribed event (e.g. a DNAI has changed) is detected, the NEF shall send an HTTP POST message including the notified event to the AF.

Upon receipt of the event notification, the AF may send an HTTP POST request as acknowledgement for the UP path management event notification to inform the NEF about the result of application layer relocation.

The NEF and the AF shall support the notification mechanism as described in clause 5.2.5 of 3GPP TS 29.122 [4].

Table 5.4.2.1-1: Notifications overview

| Notification                             | Callback URI              | HTTP method or<br>custom operation | Description<br>(service operation)                                                                                                        |
|------------------------------------------|---------------------------|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|
| Event Notification                       | {notificationDestination} | POST                               | The UP management event notification from the<br>NEF to the AF.                                                                           |
| Acknowledgement of<br>event notification | {afAckUri}                | POST                               | The Acknowledgement of Event Notification is<br>used by the AF to acknowledge the NEF about<br>handling result of the event notification. |

### 5.4.2.2 Event Notification

#### 5.4.2.2.1 Description

The Event Notification is used by the NEF to report the UP path management event notification from the SMF to the AF.

### 5.4.2.2.2 Target URI

The Callback URI "**{notificationDestination}**" shall be used with the callback URI variables defined in table 5.4.2.2.1.

| Name                    | Data type | Definition                                                                                                                                                                                                                         |
|-------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| notificationDestination |           | Callback reference provided by the AF during creation/modification of the subscription within the TrafficInfluSub data type as defined in table 5.4.3.3.2-1 or the TrafficInfluSubPatch data type as defined in table 5.4.3.3.3-1. |

#### 5.4.2.2.3 Operation Definition

#### 5.4.2.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.4.2.2.3.1-1 and the response data structures and response codes specified in table 5.4.2.2.3.1-2.

#### Table 5.4.2.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type         | Ρ | Cardinality | Description                                                            |
|-------------------|---|-------------|------------------------------------------------------------------------|
| EventNotification | М | 1           | The UP management event notification is provided by the NEF to the AF. |

#### Table 5.4.2.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data  | type | Ρ | Cardinality                                 | Response<br>codes            | Description                                                                                                                                                                                                                                                                                         |
|-------|------|---|---------------------------------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A   |      |   |                                             | 204 No<br>Content            | The event notification is received successfully.                                                                                                                                                                                                                                                    |
| N/A   |      |   |                                             | 307<br>Temporary<br>Redirect | Temporary redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A   |      |   |                                             | 308<br>Permanent<br>Redirect | Permanent redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

| Location | string    | М |             | An alternative URI representing the end point of an alternative |
|          |           |   |             | AF towards which the notification should be redirected.         |

### Table 5.4.2.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI representing the end point of an alternative |
|          |           |   |             | AF towards which the notification should be redirected.         |

### 5.4.2.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the EventNotification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

### 5.4.2.3 Acknowledgement of event notification

### 5.4.2.3.1 Description

The Acknowledgement of Event Notification is used by the AF to acknowledge the NEF about handling result of the event notification (e.g. UP path change).

## 5.4.2.3.2 Target URI

The Callback URI "{afAckUri}" shall be used with the callback URI variables defined in table 5.4.2.3.2-1.

### Table 5.4.2.3.2-1: Callback URI variables

| Name     | Data type | Definition                                                                  |
|----------|-----------|-----------------------------------------------------------------------------|
| afAckUri | Link      | Callback reference provided by the NEF during event notification within the |
|          |           | EventNotification data type as defined in Table 5.4.3.3.4-1.                |

### 5.4.2.3.3 Operation Definition

### 5.4.2.3.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.4.2.3.3.1-1 and the response data structures and response codes specified in table 5.4.2.3.3.1-2.

### Table 5.4.2.3.3.1-1: Data structures supported by the POST Request Body on this resource

# 5.4.3 Data Model

### 5.4.3.1 General

This clause specifies the application data model supported by the TrafficInfluence API.

Table 5.4.3.1-1 specifies the data types defined for the TrafficInfluence API.

| Data type            | Clause<br>defined | Description                                                                                     | Applicability |
|----------------------|-------------------|-------------------------------------------------------------------------------------------------|---------------|
| AfAckInfo            | 5.4.3.3.6         | Represents acknowledgement information of a traffic influence event notification.               |               |
| AfResultInfo         | 5.4.3.3.5         | Identifies the result of application layer handling.                                            |               |
| AfResultStatus       | 5.4.3.4.4         | Represents the status of application handling result.                                           |               |
| EventNotification    | 5.4.3.3.4         | Represents a traffic influence event notification.                                              |               |
| SubscribedEvent      | 5.4.3.4.3         | Represents the type of UP path management events for which the AF requests to be notified.      |               |
| TrafficInfluSub      | 5.4.3.3.2         | Represents a traffic influence subscription.                                                    |               |
| TrafficInfluSubPatch | 5.4.3.3.3         | Represents parameters to request the modification of a traffic influence subscription resource. |               |

### 5.4.3.2 Reused data types

The data types reused by the TrafficInfluence API from other specifications are listed in table 5.4.3.2-1.

| Data type            | Reference                                         | Comments                                                                                                               |
|----------------------|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Dnai                 | 3GPP TS 29.571 [8]                                | Identifies a DNAI.                                                                                                     |
| DnaiChangeType       | 3GPP TS 29.571 [8]                                | Describes the types of DNAI change.                                                                                    |
| Dnn                  | 3GPP TS 29.571 [8]                                | Identifies a DNN.                                                                                                      |
| DurationSec          | 3GPP TS 29.571 [8]                                | Identifies a period of time in units of seconds.                                                                       |
| EasIpReplacementInfo | 3GPP TS 29.571 [8]                                | Represents EAS IP replacement information.                                                                             |
| EthFlowDescription   | 3GPP TS 29.514 [7]                                | Contains the Ethernet data flow information. (NOTE)                                                                    |
| ExternalGroupId      | 3GPP TS 29.122 [4]                                | External Group Identifier for a user group.                                                                            |
| FlowInfo             | 3GPP TS 29.122 [4]                                | Contains the IP data flow information.                                                                                 |
| GeographicalArea     | Clause 5.17.3.3.4                                 | Identifies a geographical area.                                                                                        |
| Gpsi                 | 3GPP TS 29.571 [8]                                | Identifies a GPSI.                                                                                                     |
| IpAddr               | 3GPP TS 29.571 [8]                                | Identifes an IP address.                                                                                               |
| Ipv4Addr             | 3GPP TS 29.122 [4]                                | Identifies an IPv4 address.                                                                                            |
| Ipv6Addr             | 3GPP TS 29.122 [4]                                | Identifies an IPv6 address.                                                                                            |
| Ipv6Prefix           | 3GPP TS 29.571 [8]                                | Identifies an IPv6 Prefix.                                                                                             |
| Link                 | 3GPP TS 29.122 [4]                                | Identifies a referenced resource.                                                                                      |
| MacAddr48            | 3GPP TS 29.571 [8]                                | Identifies a MAC address.                                                                                              |
| ReportingInformation | 3GPP TS 29.523 [22]                               | Represents the event reporting requirements.                                                                           |
| RouteToLocation      | 3GPP TS 29.571 [8]                                | Describes the traffic routes to the locations of the application.                                                      |
| Snssai               | 3GPP TS 29.571 [8]                                | Identifies the S-NSSAI.                                                                                                |
| SupportedFeatures    | 3GPP TS 29.571 [8]                                | Used to negotiate the applicability of the optional features defined in table 5.4.4-1.                                 |
| TemporalValidity     | 3GPP TS 29.514 [7]                                | Indicates the time interval(s) during which the AF request is to be applied                                            |
| Uinteger             | 3GPP TS 29.571 [8]                                | Unsigned integer.                                                                                                      |
| UintegerRm           | 3GPP TS 29.571 [8]                                | This data type is defined in the same way as the "Uinteger" data type, but with the OpenAPI "nullable: true" property. |
| WebsockNotifConfig   | 3GPP TS 29.122 [4]                                | Contains the configuration parameters to set up notification delivery over Websocket protocol.                         |
|                      | et of MAC addresses w<br>specified in clause 5.4. | th a specific range in the traffic filter, feature<br>4 shall be supported.                                            |

Table 5.4.3.2-1: Re-used Data Types

# 5.4.3.3 Structured data types

#### 5.4.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

# 5.4.3.3.2 Type: TrafficInfluSub

This type represents a traffic influence subscription. The same structure is used in the subscription request and subscription response.

Table 5.4.3.3.2-1: Definition of type TrafficInfluSub

| Attribute name              | Data type                  | Р | Cardinality | Description                                                                                                                                                                                                                        | Applicability<br>(NOTE 1)   |
|-----------------------------|----------------------------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| afServiceId                 | string                     | 0 | 01          | Identifies a service on behalf of which the AF is issuing the request.                                                                                                                                                             |                             |
| afAppId                     | string                     | 0 | 01          | Identifies an application.<br>(NOTE 3)                                                                                                                                                                                             |                             |
| afTransId                   | string                     | 0 | 01          | Identifies an NEF Northbound<br>interface transaction,<br>generated by the AF.                                                                                                                                                     |                             |
| appReloInd                  | boolean                    | 0 | 01          | Identifies whether an<br>application can be relocated<br>once a location of the<br>application has been selected.<br>Set to "true" if it can be<br>relocated; otherwise set to<br>"false". Default value is "false"<br>if omitted. |                             |
| dnn                         | Dnn                        | 0 | 01          | Identifies a DNN, a full DNN<br>with both the Network Identifier<br>and Operator Identifier, or a<br>DNN with the Network Identifier<br>only.                                                                                      |                             |
| snssai                      | Snssai                     | 0 | 01          | Identifies an S-NSSAI.                                                                                                                                                                                                             |                             |
| externalGroupId             | ExternalGroupId            | 0 | 01          | Identifies a group of users.<br>(NOTE 2)                                                                                                                                                                                           |                             |
| anyUeInd                    | boolean                    | 0 | 01          | Identifies whether the AF<br>request applies to any UE (i.e.<br>all UEs). This attribute shall set<br>to "true" if applicable for any<br>UE, otherwise, set to "false".                                                            |                             |
| subscribedEvents            | array(SubscribedE<br>vent) | 0 | 1N          | (NOTE 2)<br>Identifies the requirement to be<br>notified of the event(s).                                                                                                                                                          |                             |
| gpsi                        | Gpsi                       | 0 | 01          | Identifies a user.                                                                                                                                                                                                                 |                             |

This attribute shall be present<br>in an HTTP POST response if<br>the immediate reporting<br>indication in the "immRep"<br>attribute within the "eventReq"<br>attribute is set to true and the<br>"subscribedEvents" was<br>present in the corresponding<br>HTTP POST request and the<br>report(s) are available.         This attribute may also be<br>present in an HTTP PUT or<br>PATCH response when the<br>report(s) are available. | EDGEAPP                |
| suppFeat          | SupportedFeatures               | С | 01 | report(s) are available.<br>Indicates the list of Supported<br>features used as described in<br>clause 5.4.4.<br>This attribute shall be provided<br>in the POST request and in the<br>response of successful<br>resource creation.                                                                                                                                                                                                                                                                        |                        |

| NOTE 1: | Properties marked with a feature as defined in clause 5.4.4 are applicable as described in clause 5.2.7 of 3GPP TS 29.122 [4]. If no feature is indicated, the related property applies for all the features.                                                                                 |
|---------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE 2: | One of individual UE identifier (i.e. "gpsi", "macAddr", "ipv4Addr" or "ipv6Addr"), External Group Identifier (i.e. "externalGroupId") or any UE indication "anyUeInd" shall be included.                                                                                                     |
| NOTE 3: | One of "afAppId", "trafficFilters" or "ethTrafficFilters" shall be included.                                                                                                                                                                                                                  |
| NOTE 4: | The indication of traffic correlation shall be provided only when the AF requires that all the PDU sessions related to the 5G VN group member UEs should be correlated by a common DNAI in the user plane for the traffic as described in 3GPP TS 23.501 [3], clause 5.6.7.1 and clause 5.29. |

# 5.4.3.3.3 Type: TrafficInfluSubPatch

This type represents a subscription of traffic influence parameters provided by the AF to the NEF. The structure is used for HTTP PATCH request.

```
Table 5.4.3.3.3-1: Definition of type TrafficInfluSubPatch
```

| Attribute name    | Data type                     | Ρ | Cardinality | Description                                                                                                                                                                                                                                                                                           | Applicability          |
|-------------------|-------------------------------|---|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| appReloInd        | boolean                       | 0 | 01          | Identifies whether an application can<br>be relocated once a location of the<br>application has been selected.<br>(NOTE)                                                                                                                                                                              |                        |
| trafficFilters    | array(FlowInfo)               | 0 | 1N          | Identifies IP packet filters.                                                                                                                                                                                                                                                                         |                        |
| ethTrafficFilters | array(EthFlowD<br>escription) | 0 | 1N          | Identifies Ethernet packet filters.                                                                                                                                                                                                                                                                   |                        |
| trafficRoutes     | array(RouteToL<br>ocation)    | 0 | 1N          | Identifies the N6 traffic routing<br>requirement.<br>(NOTE)                                                                                                                                                                                                                                           |                        |
| tfcCorrInd        | boolean                       | 0 | 01          | Indication of traffic correlation.<br>May only be included when<br>"externalGroupId" attribute was<br>included within the TrafficInfluSub data<br>type previously.<br>It is used to indicate that for the group<br>of UEs, the targeted PDU sessions<br>should be correlated by a common<br>DNAI.     |                        |
| tempValidities    | array(Temporal<br>Validity)   | 0 | 1N          | Indicates the time interval(s) during<br>which the AF request is to be applied.<br>(NOTE)                                                                                                                                                                                                             |                        |
| validGeoZonelds   | array(string)                 | 0 | 1N          | Identifies a geographic zone that the<br>AF request applies only to the traffic of<br>UE(s) located in this specific zone.<br>(NOTE)<br>This attribute is deprecated; the<br>attribute "geoAreas" should be used<br>instead.                                                                          |                        |
| geoAreas          | array(Geograph<br>icalArea)   | 0 | 1N          | Identifies geographical areas within<br>which the AF request applies. (NOTE)<br>This attribute deprecates<br>validGeoZoneIds attribute.                                                                                                                                                               |                        |
| afAckInd          | boolean                       | 0 | 01          | Identifies whether the AF<br>acknowledgement of UP path event<br>notification is expected.<br>- "true" indicates that the AF<br>acknowledgement of UP path<br>event notification is expected.<br>- "false" indicates that the AF<br>acknowledgement of UP path<br>event notification is not expected. | URLLC                  |

### 5.4.3.4 Simple data types and enumerations

#### 5.4.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.4.3.4.2 Simple data types

The simple data types defined in table 5.4.3.4.2-1 shall be supported.

#### Table 5.4.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

### 5.4.3.4.3 Enumeration: SubscribedEvent

The enumeration SubscribedEvent represents the type of UP path management events for which the AF requests to be notified. It shall comply with the provisions defined in table 5.4.3.4.3-1.

| Enumeration value | Description                                                                  |
|-------------------|------------------------------------------------------------------------------|
| UP_PATH_CHANGE    | The AF requests to be notified when the UP path changes for the PDU session. |

### Table 5.4.3.4.3-1: Enumeration SubscribedEvent

#### 5.4.3.4.4 Enumeration: AfResultStatus

The enumeration AfResultStatus represents the status of application handling result. It shall comply with the provisions defined in table 5.4.3.4.4-1.

| Enumeration value | Description                                                                     |  |
|-------------------|---------------------------------------------------------------------------------|--|
| SUCCESS           | The application layer is ready or the relocation is completed.                  |  |
| TEMP_CONGESTION   | STION The application relocation fails due to temporary congestion.             |  |
| RELOC_NO_ALLOWED  | The application relocation fails because application relocation is not allowed. |  |
| OTHER             | The application relocation fails due to other reason.                           |  |

#### Table 5.4.3.4.4-1: Enumeration AfResultStatus

# 5.4.4 Used Features

The table below defines the features applicable to the TrafficInfluence API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature<br>number      | Feature Name            | Description                                                                                                                                                                       |
|------------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                      | Notification_websocket  | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported.   |
| 2                      | Notification_test_event | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                           |
| 3                      | URLLC                   | This feature indicates support of Ultra Reliable Low Latency Communication (URLLC) requirements (i.e. AF application relocation acknowledgement and UE address(es) preservation). |
| 4                      | MacAddressRange         | Indicates the support of a set of MAC addresses with a specific range in the traffic filter.                                                                                      |
| 5                      | AF_latency              | This feature indicates support for Edge relocation considering user plane latency.                                                                                                |
| 6                      | EASDiscovery            | This feature indicates the support of EAS (re)discovery.                                                                                                                          |
| 7                      | EASIPreplacement        | This feature indicates the support of provisioning of EAS IP replacement info.                                                                                                    |
| 8                      | ExposureToEAS           | This feature indicates support for the indication provided by the AF of direct event notification of QoS monitoring events from the UPF to the Local NEF or the AF in 5GC.        |
| 9                      | SimultConnectivity      | This feature indicates support of temporary simultaneous connectivity over source and target PSA at edge relocation.                                                              |
| 10                     | ULBuffering             | This feature indicates support for Uplink buffering indication for edge relocation.                                                                                               |
| 11                     | EDGEAPP                 | This feature controls the support of EDGE applications related functionalities (e.g. support the provisioning of event reporting requirements).                                   |
| Feature:<br>Descriptio |                         | ed to refer to the bit and to the feature, e.g. "Notification".                                                                                                                   |

Table 5.4.4-1: Features used by TrafficInfluence API

# 5.4.5 Error handling

### 5.4.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.4.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the TrafficInfluence API.

# 5.4.5.3 Application Errors

The application errors defined for TrafficInfluence API are listed in table 5.4.5.3-1.

### Table 5.4.5.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.5 NiddConfigurationTrigger API

# 5.5.1 Resources

There is no resource defined for this API.

# 5.5.2 Notifications

# 5.5.2.1 Introduction

Upon receipt of a NIDD connection establishment request from the SMF and there is no NIDD configuration for the UE, the NEF may send an HTTP POST message in order to trigger the AF to start the NIDD configuration procedure as described in clause 5.6.3.2.3.4 of 3GPP TS 29.122 [4].

### Table 5.5.2.1-1: Notifications overview

| Notification       | Callback URI      | HTTP method or<br>custom operation | Description<br>(service operation)         |
|--------------------|-------------------|------------------------------------|--------------------------------------------|
| Event Notification | {notificationUri} | POST                               | Request for the NIDD Configuration Trigger |

# 5.5.2.2 Event Notification

The Callback URI "{notificationUri}" shall be used with the callback URI variables defined in table 5.5.2.2-1.

### Table 5.5.2.2-1: Callback URI variables

| Name            | Data type | Definition                                                                    |
|-----------------|-----------|-------------------------------------------------------------------------------|
| notificationUri | Link      | A URI indicating the notification destination where N33 notification requests |
|                 |           | shall be delivered to.                                                        |
|                 |           | This URI shall be preconfigured in the NEF.                                   |

# 5.5.2.3 Operation Definition

### 5.5.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.5.2.3.1-1 and the response data structures and response codes specified in table 5.5.2.3.1-2.

### Table 5.5.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type         | Ρ | Cardinality | Description                                                      |
|-------------------|---|-------------|------------------------------------------------------------------|
| NiddConfiguration | М | 1           | The NIDD Configuration Trigger is provided by the NEF to the AF. |
| Trigger           |   |             |                                                                  |

### Table 5.5.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                    | Ρ | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                                                                              |  |  |  |  |
|------------------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| NiddConfigurationTriggerReply                                                                                                | М | 1           | 200 OK                       | The trigger is received successfully.                                                                                                                                                                                                                                                                                    |  |  |  |  |
| N/A                                                                                                                          |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during Configuration<br>Trigger. The response shall include a Location<br>header field containing an alternative URI<br>representing the end point of an alternative AF<br>where the notification should be sent.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |  |  |  |  |
| N/A                                                                                                                          |   |             | 308<br>Permanent<br>Redirect | Permanent redirection, during Configuration<br>Trigger. The response shall include a Location<br>header field containing an alternative URI<br>representing the end point of an alternative AF<br>where the notification should be sent.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |  |  |  |  |
| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of<br>3GPP TS 29.122 [4] also apply. |   |             |                              |                                                                                                                                                                                                                                                                                                                          |  |  |  |  |

### Tabl 5.5.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

## Table 5.5.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI representing the end point of an alternative |
|          |           |   |             | AF towards which the notification should be redirected.         |

### 5.5.2.3.2 Notification via Websocket

Not specified in the present specification.

# 5.5.3 Data Model

## 5.5.3.1 General

This clause specifies the application data model supported by the NiddConfigurationTrigger API.

# 5.5.3.2 Reused data types

The data types reused by the NiddConfigurationTrigger API from other specifications are listed in table 5.5.3.2-1.

| Data type         | Reference          | Comments                                                                               |
|-------------------|--------------------|----------------------------------------------------------------------------------------|
| Gpsi              | 3GPP TS 29.571 [8] | Identifies a GPSI.                                                                     |
| SupportedFeatures |                    | Used to negotiate the applicability of the optional features defined in table 5.5.4-1. |

# Table 5.5.3.2-1: Re-used Data Types

# 5.5.3.3 Structured data types

### 5.5.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

## 5.5.3.3.2 Type: NiddConfigurationTrigger

This type represents a NIDD configuration trigger which is sent from the NEF to the AF.

| Table 5.5.3.3.2-1: Definition of type NiddConfigurationTrigger | Table 5.5.3.3.2-1: Definition of | type NiddConfigurationTrigger |
|----------------------------------------------------------------|----------------------------------|-------------------------------|
|----------------------------------------------------------------|----------------------------------|-------------------------------|

| Attribute name | Data type         | Р | Cardinality | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Applicability<br>(NOTE) |

# 5.5.3.4 Simple data types and enumerations

### 5.5.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.5.3.4.2 Simple data types

The simple data types defined in table 5.5.3.4.2-1 shall be supported.

#### Table 5.5.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.5.4 Used Features

The table below defines the features applicable to the NiddConfigurationTrigger API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.5.4-1: Features used by NiddConfigurationTrigger API

| ſ | Feature | Feature Name | Description |
|---|---------|--------------|-------------|
|   | number  |              |             |

# 5.5.5 Error handling

### 5.5.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.5.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the NiddConfigurationTrigger API.

# 5.5.5.3 Application Errors

The application errors defined for NiddConfigurationTrigger API are listed in table 5.5.5.3-1.

### Table 5.5.5.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.6 AnalyticsExposure API

# 5.6.1 Resources

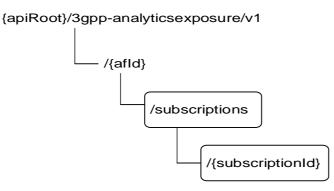

### 5.6.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-analyticsexposure/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-analyticsexposure" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.6.1.1-1 and the resources and HTTP methods used for the AnalyticsExposure API.

### Figure 5.6.1.1-1: Resource URI structure of the AnalyticsExposure API

Table 5.6.1.1-1 provides an overview of the resources and HTTP methods applicable for the AnalyticsExposure API.

| Table 5.6.1.1-1: | Resources and | methods | overview |

# 5.6.1.2 Resource: Analytics Exposure Subscriptions

#### 5.6.1.2.1 Introduction

This resource allows a AF to read all active analytics exposure subscribtions for the given AF, or allows a AF to create a new subscription to retrieve analytics information.

### 5.6.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-analyticsexposure/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.6.1.2.2-1.

## Table 5.6.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

### 5.6.1.2.3 Resource Methods

5.6.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.6.1.2.2.

### 5.6.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.6.1.2.3.2-1.

Table 5.6.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name      | Data type             | Ρ | Cardinality | Description                                        |
|-----------|-----------------------|---|-------------|----------------------------------------------------|
| supp-feat | SupportedFeat<br>ures | 0 | 01          | The features supported by the NF service consumer. |

This method shall support the request data structures specified in table 5.6.1.2.3.2-2 and the response data structures and response codes specified in table 5.6.1.2.3.2-3.

### Table 5.6.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.6.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                         | Ρ | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                                 |
|-----------------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AnalyticsEx<br>posureSubsc) | М | 0N              | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                                    |
| N/A                               |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The<br>response shall include a Location header field containing an<br>alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| N/A                               |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The<br>response shall include a Location header field containing an<br>alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.6.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### 5.6.1.2.3.3 POST

The POST method creates a new subscription resource to analytics exposure subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.6.1.2.3.3-1 and the response data structures and response codes specified in table 5.6.1.2.3.3-2.

### Table 5.6.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                  | Ρ | Cardinality | Description                                                                          |
|----------------------------|---|-------------|--------------------------------------------------------------------------------------|
| AnalyticsExposur<br>eSubsc | М | 1           | Parameters to request a subscription to retrieve analytics information with the NEF. |

### Table 5.6.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                                                                               | Ρ | Cardinality | Response<br>codes            | Description                                                                                                                       |  |

| subscriptionId | string    | Identifier of the subscription resource. |

## 5.6.1.3.3 Resource Methods

5.6.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.6.1.3.2.

### 5.6.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.6.1.3.3.2-1.

Table 5.6.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name      | Data type             | Ρ | Cardinality | Description                                        |
|-----------|-----------------------|---|-------------|----------------------------------------------------|
| supp-feat | SupportedFeat<br>ures | 0 | 01          | The features supported by the NF service consumer. |

This method shall support the request data structures specified in table 5.6.1.3.3.2-2 and the response data structures and response codes specified in table 5.6.1.3.3.2-3.

### Table 5.6.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

### 5.6.1.3.3.4 DELETE

The DELETE method deletes the analytics exposure subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.6.1.3.3.4-1.

#### Table 5.6.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.6.1.3.3.4-2 and the response data structures and response codes specified in table 5.6.1.3.3.4-3.

### Table 5.6.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

# 5.6.1A Custom Operations without associated resources

# 5.6.1A.1 Overview

Custom operations used for this API are summarized in table 5.6.1A.1-1. "apiRoot" is set as described in clause 5.2.4 of 3GPP TS 29.122 [4].

| Operation name | Custom operation URI                             | Mapped HTTP<br>method | Description                               |
|----------------|--------------------------------------------------|-----------------------|-------------------------------------------|
|                | piRoot}/3gpp-<br>alyticsexposure/v1/{afld}/fetch |                       | Request to fetch analytics<br>information |

### Table 5.6.1A.1-1: Custom operations without associated resources

# 5.6.1A.2 Operation: fetch

### 5.6.1A.2.1 Description

The custom operation allows a service consumer to fetch analytics information via the NEF.

### 5.6.1A.2.2 Operation Definition

This operation shall support the response data structures and response codes specified in tables 5.6.1A.2.2-1 and 5.6.1A.2.2-2.

### Table 5.6.1A.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                           |
|------------------|---|-------------|-------------------------------------------------------|
| AnalyticsRequest | Μ | 1           | Parameters to request to fetch analytics information. |

### Table 5.6.1A.2.2-2: Data structures supported by the POST Response Body on this resource

# 5.6.2 Notifications

### 5.6.2.1 Introduction

Upon receipt of analytics information notification from the NWDAF indicating the subscribed analytics event is detected, the NEF shall send an HTTP POST message including the notified analytics event to the AF. The NEF and the AF shall support the notification mechanism as described in clause 5.2.5 of 3GPP TS 29.122 [4].

### Table 5.6.2.1-1: Notifications overview

| Notification       | Callback URI | HTTP method or<br>custom operation | Description<br>(service operation)                                    |
|--------------------|--------------|------------------------------------|-----------------------------------------------------------------------|
| Event Notification | {notifUri}   |                                    | The analytics event notification is<br>provided by the NEF to the AF. |

# 5.6.2.2 Event Notification

The Callback URI "{notifUri}" shall be used with the callback URI variables defined in table 5.6.2.2-1.

#### Table 5.6.2.2-1: Callback URI variables

| Name     | Definition                                                                                    |
|----------|-----------------------------------------------------------------------------------------------|
| notifUri | Callback reference provided by the AF during creation/modification of the subscription within |
|          | the AnalyticsExposureSubsc data type as defined in Table 5.6.3.3.2-1.                         |

## 5.6.2.3 Operation Definition

### 5.6.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.6.2.3.1-1 and the response data structures and response codes specified in table 5.6.2.3.1-2.

#### Table 5.6.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                        |
|------------------|---|-------------|--------------------------------------------------------------------|
| AnalyticsEventNo | Μ | 1           | The analytics event notification is provided by the NEF to the AF. |
| tification       |   |             |                                                                    |

### Table 5.6.2.3.1-2: Data structures supported by the POST Response Body on this resource

|          |           |   |             | AF towards which the notification should be redirected.         |

### Table 5.6.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |

### 5.6.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the AnalyticsEventNotification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.6.3 Data Model

# 5.6.3.1 General

This clause specifies the application data model supported by the AnalyticsExposure API.

Table 5.6.3.1-1 specifies the data types defined for the AnalyticsExposure API.

| Data type                  | Clause<br>defined | Description                                                                                                            | Applicability       |
|----------------------------|-------------------|------------------------------------------------------------------------------------------------------------------------|---------------------|
| AbnormalExposure           | 5.6.3.3.15        | Represents a user's abnormal behavior information.                                                                     | Abnormal_Behavior   |
| AnalyticsData              | 5.6.3.3.14        | Represents analytics data.                                                                                             |                     |
| AnalyticsEvent             | 5.6.3.4.3         | Event that is subscribed.                                                                                              |                     |
| AnalyticsEventFilter       | 5.6.3.3.13        | Represents analytics event filter information.                                                                         |                     |
| AnalyticsEventFilterSubsc  | 5.6.3.3.6         | Represents an analytics event filter.                                                                                  |                     |
| AnalyticsEventNotif        | 5.4.3.3.4         | Represents an analytics event to be reported.                                                                          |                     |
| AnalyticsEventNotification | 5.6.3.3.3         | Represents an analytics event(s) notification.                                                                         |                     |
| AnalyticsEventSubsc        | 5.6.3.3.5         | Represents a subscribed analytics event.                                                                               |                     |
| AnalyticsExposureSubsc     | 5.6.3.3.2         | Represents an analytics exposure subscription.                                                                         |                     |
| AnalyticsFailureCode       | 5.6.3.4.4         | Identifies the failure reason.                                                                                         |                     |
| AnalyticsFailureEventInfo  | 5.6.3.3.20        | Represents an event for which the subscription request was not successful and including the associated failure reason. |                     |
| AnalyticsRequest           | 5.6.3.3.12        | Represents the parameters to request to retrieve analytics information.                                                |                     |
| CongestInfo                | 5.6.3.3.16        | Represents a UE's user data congestion information.                                                                    | Congestion          |
| CongestionAnalytics        | 5.6.3.3.17        | Represents data congestion analytics for transfer over the user plane, control plane or both.                          |                     |
| NetworkPerfExposure        | 5.6.3.3.19        | Represents network performance information.                                                                            | Network_Performance |
| QosSustainabilityExposure  | 5.6.3.3.18        | Represents a QoS sustainability information.                                                                           | QoS_Sustainability  |
| TargetUeld                 | 5.6.3.3.7         | Represents the target UE(s) information.                                                                               |                     |
| UeLocationInfo             | 5.6.3.3.10        | Represents a UE location information.                                                                                  |                     |
| UeMobilityExposure         | 5.6.3.3.9         | Represents a UE mobility information.                                                                                  | Ue_Mobility         |

### Table 5.6.3.2-1: Re-used Data Types

# 5.6.3.3 Structured data types

### 5.6.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

## 5.6.3.3.2 Type: AnalyticsExposureSubsc

This type represents an analytics exposure subscription. The same structure is used in the subscription request and subscription response.

|                                                                                                                    |                            |        |                 | is a prediction.                           |                |
|                                                                                                                    |                            |        |                 | Minimum = 0. Maximum = 100.                |                |
| NOTE 1: Either                                                                                                     | relativeRatio or absoluteI | Num    | shall be provid | led.                                       |                |
| NOTE 2: If the r                                                                                                   | equested period identified | d by t | he "startTs" ar | nd "endTs" attributes in the "EventReporti | ngRequirement" |
| type is a future time period, which means the analytics result is a prediction. If no sufficient data is collected |                            |        |                 |                                            |                |
| to provide the confidence of the prediction before the time deadline, a zero confidence shall be returned.         |                            |        |                 |                                            |                |
| NOTE 3: The NetworkAreaInfo data within the LocationArea5G data is not applicable.                                 |                            |        |                 |                                            |                |

### Table 5.6.3.3.19-1: Definition of type NetworkPerfExposure

5.6.3.3.20 Type AnalyticsFailureEventInfo

### Table 5.6.3.3.20-1: Definition of type AnalyticsFailureEventInfo

| Attribute name | Data type            | Ρ | Cardinality | Description                   | Applicability |
|----------------|----------------------|---|-------------|-------------------------------|---------------|
| event          | AnalyticsEvent       | М | 1           | Event that is subscribed.     |               |
| failureCode    | AnalyticsFailureCode | М | 1           | Identifies the failure reason |               |

## 5.6.3.4 Simple data types and enumerations

### 5.6.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

## 5.6.3.4.2 Simple data types

The simple data types defined in table 5.6.3.4.2-1 shall be supported.

### Table 5.6.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

### 5.6.3.4.3 Enumeration: AnalyticsEvent

The enumeration represents the type of analytics events of which the AF requests to be notified. It shall comply with the provisions defined in table 5.6.3.4.3-1.

| Enumeration             | Description                                                                                        | Applicability       |
|-------------------------|----------------------------------------------------------------------------------------------------|---------------------|
| value                   |                                                                                                    |                     |
| UE_MOBILITY             | The AF requests to be notified about analytics information of UE mobility.                         | Ue_Mobility         |
| UE_COMM                 | The AF requests to be notified about analytics information of UE<br>communication.                 | Ue_Communication    |
| ABNORMAL_BEH<br>AVIOR   | The AF requests to be notified about analytics information of UE's<br>abnormal behavior.           | Abnormal_Behavior   |
| CONGESTION              | The AF requests to be notified about analytics information of user data<br>congestion information. | Congestion          |
| NETWORK_PER<br>FORMANCE | The AF requests to be notified about analytics information of network<br>performance information.  | Network_Performance |
| QOS_SUSTAINA<br>BILITY  | The AF requests to be notified about analytics information of QoS sustainability.                  | QoS_Sustainability  |
| DISPERSION              | The AF requests to be notified about analytics information of Dispersion<br>information.           | Dispersion          |
| DN_PERFORMA<br>NCE      | The AF requests to be notified about analytics information of DN performance information.          | DnPerformance       |
| SERVICE_EXPE<br>RIENCE  | The AF requests to be notified about analytics information of service experience.                  | ServiceExperience   |

Table 5.6.3.4.3-1: Enumeration AnalyticsEvent

## 5.6.3.4.4 Enumeration: AnalyticsFailureCode

| Enumeration value  | Description                                                        | Applicability |
|--------------------|--------------------------------------------------------------------|---------------|
| BOTH_STAT_PRED_NO  | The event is rejected since the start time is in the past and the  |               |
| T_ALLOWED          | end time is in the future, which means the NF service consumer     |               |
|                    | requested both statistics and prediction for the analytics.        |               |
| UNAVAILABLE_DATA   | The event is rejected since necessary data to perform the service  |               |
|                    | is unavailable.                                                    |               |
| UNSATISFIED_REQUES | Indicates that the requested event is rejected since the analytics | EneNA         |
| TED_ANALYTICS_TIME | information is not ready when the time indicated by the            |               |
|                    | "timeAnaNeeded" attribute (as provided during the creation or      |               |
|                    | modification of subscription) is reached.                          |               |
| OTHER              | The event is rejected due to other reasons.                        |               |

### Table 5.6.3.4.4-1: Enumeration AnalyticsFailureCode

# 5.6.4 Used Features

The table below defines the features applicable to the AnalyticsExposure API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature<br>number | Feature Name            | Description                                                                                                                                                                                                                                         |
|-------------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                 | Ue_Mobility             | This feature indicates support for the analytics event related to UE mobility.                                                                                                                                                                      |
| 2                 | Ue_Communication        | This feature indicates support for the analytics event related to UE communication information.                                                                                                                                                     |
| 3                 | Abnormal_Behavior       | This feature indicates support for the analytics event related to UE's abnormal behaviour.                                                                                                                                                          |
| 4                 | Congestion              | This feature indicates support for the analytics event related to UE's user data congestion information.                                                                                                                                            |
| 5                 | Network_Performance     | This feature indicates support for the analytics event related to network performance.                                                                                                                                                              |
| 6                 | QoS_Sustainability      | This feature indicates support for the analytics event related to QoS sustainability.                                                                                                                                                               |
| 7                 | Notification_websocket  | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported.                                                                     |
| 8                 | Notification_test_event | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                                                                                             |
| 9                 | Dispersion              | This feature indicates support for the analytics event related to Dispersion analytics.                                                                                                                                                             |
| 10                | EneNA                   | This feature indicates support for the enhancements of network data analytics requirements.                                                                                                                                                         |
| 11                | DnPerformance           | This feature indicates the support of the analytics event related to DN performance.                                                                                                                                                                |
| 12                | ServiceExperience       | This feature indicates support for the event related to service experience.                                                                                                                                                                         |
| 13                | CongestionExt           | This feature indicates support for the extensions to the event related to user data congestion, including support of GPSI and/or list of Top applications. Supporting this feature also requires the support of feature Congestion.                 |
| 14                | Abnormal_Behavior_Ext   | This feature indicates support for the extensions to the event related to<br>abnormal behavior, including support of exposing DNN and S-NSSAI<br>information.<br>Supporting this feature also requires the support of feature<br>Abnormal_Behavior. |
| 15                | QoS_Sustainability_Ext  | This feature indicates support for the extensions to the event related to QoS sustainability, including support of exposing S-NSSAI information.<br>Supporting this feature also requires the support of feature QoS_Sustainability.                |

Table 5.6.4-1: Features used by AnalyticsExposure API

# 5.6.5 Error handling

## 5.6.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

## 5.6.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the AnalyticsExposure API.

# 5.6.5.3 Application Errors

The application errors defined for the AnalyticsExposure API are listed in table 5.6.5.3-1.

| Application Error                        | HTTP status code             | Description                                                                                                                                                                                                   |
|------------------------------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BOTH_STAT_PRED_NOT_ALLOWED               | 400 Bad Request              | For the requested observation period, the start<br>time is in the past and the end time is in the<br>future, which means the AF requested both<br>statistics and prediction for the analytics.                |
| UNAVAILABLE_DATA                         | 500 Internal Server<br>Error | Indicates the requested statistics in the past is rejected since necessary data to perform the service is unavailable.                                                                                        |
| UNSATISFIED_REQUESTED_ANALYTICS<br>_TIME | 500 Internal Server<br>Error | Indicates that the requested event is rejected<br>since the analytics information is not ready<br>when the time indicated by the<br>"timeAnaNeeded" attribute (as provided<br>during the request) is reached. |

# Table 5.6.5.3-1: Application errors

# 5.7 5GLANParameterProvision API

# 5.7.1 Resources

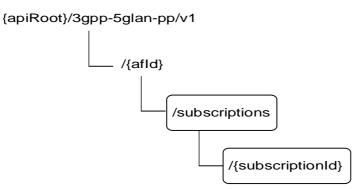

# 5.7.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-5glan-pp/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-5glan-pp" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.7.1.1-1 and the resources and HTTP methods used for the 5GLANParameterProvision API.

# Figure 5.7.1.1-1: Resource URI structure of the 5GLANParameterProvision API

Table 5.7.1.1-1 provides an overview of the resources and HTTP methods applicable for the 5GLANParameterProvision API.

| Resource name                                         | Resource URI                         | HTTP method | Description                                                                                   |
|-------------------------------------------------------|--------------------------------------|-------------|-----------------------------------------------------------------------------------------------|
| 5GLAN Parameters Provision                            | /{afld}/subscriptions                | GET         | Read all subscriptions for a given AF                                                         |
| Subscriptions                                         |                                      | POST        | Create a new subscription to<br>provision parameters                                          |
| Individual 5GLAN Parameters<br>Provision Subscription |                                      | GET         | Read an existing subscription<br>identified by {subscriptionId}                               |
|                                                       | /{afld}/subscriptions/{subscriptionl | PUT         | Modify all of the properties of<br>an existing subscription<br>identified by {subscriptionId} |
|                                                       | d}                                   | РАТСН       | Modify some properties of an<br>existing subscription identified<br>by {subscriptionId}       |
|                                                       |                                      | DELETE      | Delete a subscription identified by {subscriptionId}                                          |

# Table 5.7.1.1-1: Resources and methods overview

# 5.7.1.2 Resource: 5GLAN Parameters Provision Subscriptions

# 5.7.1.2.1 Introduction

This resource allows a AF to read all active 5GLAN parameters provision subscribtions for the given AF, or create an new individual 5GLAN parameters provision subscription to provision parameters to the NEF.

# 5.7.1.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-5glan-pp/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.7.1.2.2-1.

# Table 5.7.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

# 5.7.1.2.3 Resource Methods

#### 5.7.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.7.1.2.2.

5.7.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.7.1.2.3.2-1.

### Table 5.7.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.7.1.2.3.2-2 and the response data structures and response codes specified in table 5.7.1.2.3.2-3.

# Table 5.7.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

# Table 5.7.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                        | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|----------------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(5GLanPara metersProvision) | М | 0N              | 200 OK                       | All the subscription information for the AF in the request URI are returned.                                                                                                                                                                                    |
| N/A                              |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                              |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

### Table 5.7.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.7.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

### 5.7.1.2.3.3 POST

The POST method creates a new resource to individual 5GLAN parameters provision subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.7.1.2.3.3-1 and the response data structures and response codes specified in table 5.7.1.2.3.3-2.

### Table 5.7.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                    | Ρ | Cardinality | Description                                                  |
|------------------------------|---|-------------|--------------------------------------------------------------|
| 5GLanParameter<br>sProvision | М | 1           | Parameters to create a subscription to provision parameters. |

# Table 5.7.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                    | Р | Cardinality | Response<br>codes | Description                                                                                                                       |
|------------------------------|---|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 5GLanParameter<br>sProvision | Μ | 1           | 201<br>Created    | The subscription was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |

NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply.

### Table 5.7.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                      |
|----------|-----------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-5glan-<br>pp/v1/{afld}/subscriptions/{subscriptionId} |

# 5.7.1.3 Resource: Individual 5GLAN Parameters Provision Subscription

### 5.7.1.3.1 Introduction

This resource allows a AF to read, update or delete an existing subscription to provision 5GLAN parameters.

# 5.7.1.3.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-5glan-pp/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.7.1.3.2-1.

# Table 5.7.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                               |
|----------------|-----------|------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |
| afld           | string    | Identifier of the AF.                    |
| subscriptionId | string    | Identifier of the subscription resource. |

# 5.7.1.3.3 Resource Methods

### 5.7.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.7.1.3.2.

### 5.7.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.7.1.3.3.2-1.

### Table 5.7.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.7.1.3.3.2-2 and the response data structures and response codes specified in table 5.7.1.3.3.2-3.

# Table 5.7.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

# Table 5.7.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                    | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|------------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5GLanParameter<br>sProvision | Μ | 1               | 200 OK                       | The information for the subscription in the request URI are returned.                                                                                                                                                                                           |
| N/A                          |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

# 5.7.1.3.3.3 PUT

The PUT method modifies an existing resource to update a subscription. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.7.1.3.3.3-1 and the response data structures and response codes specified in table 5.7.1.3.3.3-2.

### Table 5.7.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                              |

## 5.7.1.3.3.4 DELETE

The DELETE method deletes an existing individual 5GLAN parameters provision subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.7.1.3.3.4-1.

#### Table 5.7.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.7.1.3.3.4-2 and the response data structures and response codes specified in table 5.7.1.3.3.4-3.

### Table 5.7.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

### Table 5.7.1.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                       |

# 5.7.1.3.3.5 PATCH

The PATCH method allows to change some properties of an existing resource to update a subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.7.1.3.3.5-1 and the response data structures and response codes specified in table 5.7.1.3.3.5-2.

# Table 5.7.1.3.3.5-1: Data structures supported by the PATCH Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                              |
|-----------------|---|-------------|----------------------------------------------------------|
| 5GLanParameter  | Μ | 1           | Modify an existing subscription to provision parameters. |
| sProvisionPatch |   |             |                                                          |

# 5.7.1A Notifications

Notifications are not applicable to this API.

# 5.7.2 Data Model

# 5.7.2.1 General

This clause specifies the application data model supported by the 5GLANParameterProvision API.

Table 5.7.2.1-1 specifies the data types defined for the 5GLANParameterProvision API.

### Table 5.7.2.1-1: 5GLANParameterProvision API specific Data Types

| Data type Clause defined      |           | Description                                                                                             | Applicability |
|-------------------------------|-----------|---------------------------------------------------------------------------------------------------------|---------------|
| 5GLanParameters               | 5.7.2.3.3 | Represents 5G LAN service related parameters that need to be provisioned.                               |               |
| 5GLanParametersPatch          | 5.7.2.3.6 | Represents 5G LAN service related parameters that need to be modified.                                  |               |
| 5GLanParametersProvision      | 5.7.2.3.2 | Represents an individual 5G LAN parameters provision subscription resource.                             |               |
| 5GLanParametersProvisionPatch | 5.7.2.3.5 | Represents the 5G LAN parameters to request the modification of a subscription to provision parameters. |               |
| AaaUsage                      | 5.7.2.4.3 | Represents the usage of the DN-AAA server.                                                              |               |
| AppDescriptor                 | 5.7.2.3.4 | Represents an operation system and the<br>corresponding applications.                                   |               |
| AppDescriptorRm               | 5.7.2.3.7 | Represents the same as the AppDescriptor data type but with the "nullable: true" property.              |               |

# 5.7.2.2 Reused data types

The data types reused by the 5GLANParameterProvision API from other specifications are listed in table 5.7.2.2-1.

| Table | 5.7.2.2 | -1: Re | -used | Data | Types |
|-------|---------|--------|-------|------|-------|
|-------|---------|--------|-------|------|-------|

| Data type              | Reference           | Comments                                                                               |
|------------------------|---------------------|----------------------------------------------------------------------------------------|
| ApplicationId          | 3GPP TS 29.571 [8]  |                                                                                        |
| Dnn                    | 3GPP TS 29.571 [8]  | Identifies a DNN.                                                                      |
| ExternalGroupId        | 3GPP TS 29.122 [4]  | External Group Identifier for a user group.                                            |
| Gpsi                   | 3GPP TS 29.571 [8]  | Identifies a GPSI.                                                                     |
| Ipv4Addr               | 3GPP TS 29.571 [8]  | Identifies an IPv4 address.                                                            |
| lpv6Addr               | 3GPP TS 29.571 [8]  | Identifies an IPv6 address.                                                            |
| Link                   | 3GPP TS 29.122 [4]  | Identifies a referenced resource.                                                      |
| MtcProviderInformation | 3GPP TS 29.571 [8]  | Indicates MTC provider information for 5G VN Group Configuration authorization.        |
| Osld                   | 3GPP TS 29.519 [23] | Operating System.                                                                      |
| PduSessionType         | 3GPP TS 29.571 [8]  | PDU session type.                                                                      |
| Snssai                 | 3GPP TS 29.571 [8]  | Identifies the S-NSSAI.                                                                |
| SupportedFeatures      | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of the optional features defined in table 5.7.3-1. |

# 5.7.2.3 Structured data types

# 5.7.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

# 5.7.2.3.2 Type: 5GLanParametersProvision

# Table 5.7.2.3.2-1: Definition of type 5GLanParametersProvision

| Attribute name | Data type         | Р | Cardinality | Description                      | Applicability |
|----------------|-------------------|---|-------------|----------------------------------|---------------|
| self           | Link              | С | 01          | Identifies the individual        |               |
|                |                   |   |             | parameters provision             |               |
|                |                   |   |             | subscription resource.           |               |
|                |                   |   |             | Shall be present in the HTTP     |               |
|                |                   |   |             | GET response when reading        |               |
|                |                   |   |             | all the subscriptions for an AF. |               |
| 5gLanParams    | 5GLanParameters   | М | 1           | Represents the 5G LAN            |               |
|                |                   |   |             | service related parameters.      |               |

5.7.2.3.8 Void

# 5.7.2.4 Simple data types and enumerations

# 5.7.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.7.2.4.2 Simple data types

The simple data types defined in table 5.7.2.4.2-1 shall be supported.

### Table 5.7.2.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.7.2.4.3 Enumeration: AaaUsage

### Table 5.7.2.4.3-1: Enumeration AaaUsage

The enumeration AaaUsage represents the usage of the DN-AAA server.

| Enumeration value | Description                                             |
|-------------------|---------------------------------------------------------|
| "AUTH"            | Secondary authentication/authorization by DN-AAA server |
| "IP_ALLOC"        | UE IP address allocation by DN-AAA server               |

# 5.7.3 Used Features

The table below defines the features applicable to the 5GLANParameterProvision API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

# Table 5.7.3-1: Features used by 5GLANParameterProvision API

| Feature<br>number | Feature Name         | Description                                                                          |
|-------------------|----------------------|--------------------------------------------------------------------------------------|
| 1                 | multipleSessionTypes | Indicates that multiple allowed PDU Session Types can be provided for a 5G VN group. |

# 5.7.4 Error handling

# 5.7.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.7.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the 5GLANParameterProvision API.

# 5.7.4.3 Application Errors

The application errors defined for 5GLANParameterProvision API are listed in table 5.7.4.3-1.

# Table 5.7.4.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.8 ApplyingBdtPolicy API

# 5.8.1 Resources

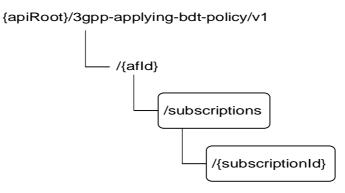

# 5.8.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-applying-bdt-policy/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-applying-bdt-policy" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.8.1.1-1 and the resources and HTTP methods used for the ApplyingBdtPolicy API.

# Figure 5.8.1.1-1: Resource URI structure of the ApplyingBdtPolicy API

Table 5.8.1.1-1 provides an overview of the resources and HTTP methods applicable for the ApplyingBdtPolicy API.

| Resource name                                 | Resource URI                               | HTTP method | Description                                                                |
|-----------------------------------------------|--------------------------------------------|-------------|----------------------------------------------------------------------------|
| Applied BDT Policy                            | /{afld}/subscriptions                      | GET         | Read all applied BDT policy subscriptions for a given AF.                  |
| Subscriptions                                 |                                            | POST        | Create a new applied policy subscription.                                  |
|                                               |                                            | GET         | Read an applied BDT policy subscription.                                   |
| Individual Applied BDT Policy<br>Subscription | /{afld}/subscriptions/{subscriptionl<br>d} | РАТСН       | Modify BDT Reference ID of an<br>existing subscription to a BDT<br>policy. |
|                                               |                                            | DELETE      | Delete an applied BDT policy subscription                                  |

# Table 5.8.1.1-1: Resources and methods overview

# 5.8.1.2 Resource: Applied BDT Policy Subscriptions

### 5.8.1.2.1 Introduction

This resource allows a AF to read all applied BDT policy subscriptions for the given AF.

# 5.8.1.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-applying-bdt-policy/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.8.1.2.2-1.

# Table 5.8.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

### 5.8.1.2.3 Resource Methods

5.8.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.8.1.2.2.

5.8.1.2.3.2 GET

The GET method allows to read all active applied BDT policy subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.8.1.2.3.2-1.

#### Table 5.8.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.8.1.2.3.2-2 and the response data structures and response codes specified in table 5.8.1.2.3.2-3.

# Table 5.8.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

### Table 5.8.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                   | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|-----------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AppliedBdt<br>Policy) | М | 0N              | 200 OK                       | The applied BDT Policy subscriptions for the AF in the request URI are returned.                                                                                                                                                                                |
| N/A                         |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                         |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The mai<br>also app   |   | y HTTP error st | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                    |

### Table 5.8.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.8.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.8.1.2.3.3 POST

The POST method creates an applied BDT policy subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.8.1.2.3.3-1 and the response data structures and response codes specified in table 5.8.1.2.3.3-2.

#### Table 5.8.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                    |
|------------------|---|-------------|----------------------------------------------------------------|
| AppliedBdtPolicy | М | 1           | Parameters to create a subscription of the applied BDT policy. |

#### Table 5.8.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type        | Р | Cardinality | Response<br>codes | Description                                                                                                                       |
|------------------|---|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| AppliedBdtPolicy | М | 1           | 201<br>Created    | The subscription was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |

NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply.

### Table 5.8.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                             |
|----------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-applying-bdt-policy/v1/{afId}/subscriptions/{SubscriptionId} |

# 5.8.1.3 Resource: Individual Applied BDT Policy Subscription

### 5.8.1.3.1 Introduction

This resource allows a AF to read or delete an active subscription of applied BDT policy.

# 5.8.1.3.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-applying-bdt-policy/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.8.1.3.2-1.

# Table 5.8.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                               |
|----------------|-----------|------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |

| subscriptionId | string    | Identifier of the subscription resource. |

# 5.8.1.3.3 Resource Methods

### 5.8.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.8.1.3.2.

### 5.8.1.3.3.2 GET

The GET method allows to read the active applied BDT policy for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.8.1.3.3.2-1.

### Table 5.8.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.8.1.3.3.2-2 and the response data structures and response codes specified in table 5.8.1.3.3.2-3.

# Table 5.8.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

# 5.8.1.3.3.3 PATCH

The PATCH method allows to change some properties of an existing applied BDT policy subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.8.1.3.3.3-1 and the response data structures and response codes specified in table 5.8.1.3.3.2-2.

# Table 5.8.1.3.3.3-1: Data structures supported by the PATCH Request Body on this resource

### 5.8.1.3.3.4 DELETE

The DELETE method deletes an existing applied BDT policy subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.8.1.3.3.4-1.

#### Table 5.8.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.8.1.3.3.4-2 and the response data structures and response codes specified in table 5.8.1.3.3.4-3.

#### Table 5.8.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

# 5.8.2 Notifications

Notifications are not applicable to this API.

# 5.8.3 Data Model

# 5.8.3.1 General

This clause specifies the application data model supported by the ApplyingBdtPolicy API.

Table 5.8.3.1-1 specifies the data types defined for the ApplyingBdtPolicy API.

### Table 5.8.3.1-1: ApplyingBdtPolicy API specific Data Types

| Data type             | Clause<br>defined | Description                                                                                    | Applicability |
|-----------------------|-------------------|------------------------------------------------------------------------------------------------|---------------|
| AppliedBdtPolicy      | 5.8.3.3.2         | Represents an applied BDT policy.                                                              |               |
| AppliedBdtPolicyPatch | <u> </u>          | Represents the parameters to request the modification of a subscription to applied BDT policy. |               |

# 5.8.3.2 Reused data types

The data types reused by the ApplyingBdtPolicy API from other specifications are listed in table 5.8.3.2-1.

| Data type         | Reference          | Comments                                                                |
|-------------------|--------------------|-------------------------------------------------------------------------|
| BdtReferenceld    | 3GPP TS 29.122 [4] | Identifier of a selected BDT policy.                                    |
| Gpsi              | 3GPP TS 29.571 [8] | Identifies a GPSI.                                                      |
| ExternalGroupId   | 3GPP TS 29.122 [4] | External Group Identifier for a user group.                             |
| SupportedFeatures |                    | Used to negotiate the applicability of the optional features defined in |
|                   |                    | table 5.8.4-1.                                                          |

# Table 5.8.3.2-1: Re-used Data Types

# 5.8.3.3 Structured data types

# 5.8.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

# 5.8.3.3.2 Type: AppliedBdtPolicy

This type represents an applied BDT policy which is sent from the AF to the NEF.

| Attribute name   | Data type                   | Р         | Cardinality    | Description                                                                                                                                                                                            | Applicability<br>(NOTE) |

# 5.8.3.4 Simple data types and enumerations

# 5.8.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.8.3.4.2 Simple data types

The simple data types defined in table 5.8.3.4.2-1 shall be supported.

# Table 5.8.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.8.4 Used Features

The table below defines the features applicable to the ApplyingBdtPolicy API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

# Table 5.8.4-1: Features used by ApplyingBdtPolicy API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

# 5.8.5 Error handling

# 5.8.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.8.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the ApplyingBdtPolicy API.

# 5.8.5.3 Application Errors

The application errors defined for ApplyingBdtPolicy API are listed in table 5.8.5.3-1.

# Table 5.8.5.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.9 IPTVConfiguration API

# 5.9.1 Resources

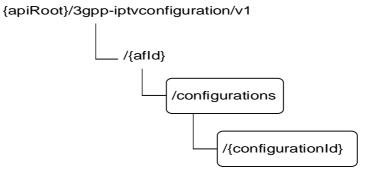

# 5.9.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-iptvconfiguration/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-iptvconfiguration" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.9.1.1-1 and the resources and HTTP methods used for the IPTVConfiguration API.

# Figure 5.9.1.1-1: Resource URI structure of the IPTVConfiguration API

Table 5.9.1.1-1 provides an overview of the resources and HTTP methods applicable for the IPTVConfiguration API.

Table 5.9.1.1-1: Resources and methods overview

| Resource name       | Resource URI                         | HTTP method | Description                                                                                      |
|---------------------|--------------------------------------|-------------|--------------------------------------------------------------------------------------------------|
| IPTV Configurations | /{afld}/configurations               | GET         | Read all configurations for a given AF                                                           |
|                     |                                      | POST        | Create a new IPTV<br>configuration                                                               |
|                     |                                      | GET         | Read an existing configuration<br>identified by {configurationId}                                |
|                     | /{afld}/configurations/{configuratio | PUT         | Modify all of the properties of<br>an existing configuration<br>identified by {configurationId}  |
|                     | nld}                                 | РАТСН       | Modify some of the properties<br>of an existing configuration<br>identified by {configurationId} |
|                     |                                      | DELETE      | Delete a configuration identified<br>by {configurationId}                                        |

# 5.9.1.2 Resource: IPTV Configurations

# 5.9.1.2.1 Introduction

This resource allows a AF to read all active IPTV configurations for the given AF, or create an new individual IPTV configuration in the NEF.

# 5.9.1.2.2 Resource Definition

# Resource URI: {apiRoot}/3gpp-iptvconfiguration/v1/{afId}/configurations

This resource shall support the resource URI variables defined in table 5.9.1.2.2-1.

# Table 5.9.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

# 5.9.1.2.3 Resource Methods

# 5.9.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.9.1.2.2.

# 5.9.1.2.3.2 GET

The GET method allows to read all active configurations for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.9.1.2.3.2-1.

# Table 5.9.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.9.1.2.3.2-2 and the response data structures and response codes specified in table 5.9.1.2.3.2-3.

# Table 5.9.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.9.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### 5.9.1.2.3.3 POST

The POST method creates a new resource to individual IPTV configuration for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.9.1.2.3.3-1 and the response data structures and response codes specified in table 5.9.1.2.3.3-2.

# Table 5.9.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Ρ | Cardinality       | Description                                          |

|          |           |   |             | iptvconfiguration/v1/{afld}/configurations/{configurationId}                                |

# 5.9.1.3 Resource: Individual IPTV Configuration

### 5.9.1.3.1 Introduction

This resource allows a AF to read, update or delete an existing IPTV Configuration.

# 5.9.1.3.2 Resource Definition

# Resource URI: {apiRoot}/3gpp-iptvconfiguration/v1/{afId}/configurations/{configurationId}

This resource shall support the resource URI variables defined in table 5.9.1.3.2-1.

| Name            | Data type | Definition                                |
|-----------------|-----------|-------------------------------------------|
| apiRoot         | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].       |
| afld            | string    | Identifier of the AF.                     |
| configurationId | string    | Identifier of the configuration resource. |

# Table 5.9.1.3.2-1: Resource URI variables for this resource

# 5.9.1.3.3 Resource Methods

5.9.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.9.1.3.2.

### 5.9.1.3.3.2 GET

The GET method allows to read the active configuration for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.9.1.3.3.2-1.

# Table 5.9.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.9.1.3.3.2-2 and the response data structures and response codes specified in table 5.9.1.3.3.2-3.

### Table 5.9.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

# Table 5.9.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type      | Р      | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                             |
|----------------|--------|-----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IptvConfigData | М      | 1               | 200 OK                       | The information for the configuration in the request URI are returned.                                                                                                                                                                                                  |
| N/A            |        |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during resource retrieval. The response<br>shall include a Location header field containing an alternative<br>URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |

### 5.9.1.3.3.3 PUT

The PUT method modifies an existing resource to update a configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.9.1.3.3.3-1 and the response data structures and response codes specified in table 5.9.1.3.3.3-2.

### Table 5.9.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type      | Ρ | Cardinality | Description                       |
|----------------|---|-------------|-----------------------------------|
| IptvConfigData | М | 1           | Modify an existing configuration. |
|                |   |             |                                   |

5.9.1.3.3.4 DELETE

The DELETE method deletes an existing individual configuration for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.9.1.3.3.4-1.

### Table 5.9.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.9.1.3.3.4-2 and the response data structures and response codes specified in table 5.9.1.3.3.4-3.

# Table 5.9.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

### 5.9.1.3.3.5 PATCH

The PATCH method allows to change some properties of an existing resource to update a configuration. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.9.1.3.3.5-1 and the response data structures and response codes specified in table 5.9.1.3.3.5-2.

### Table 5.9.1.3.3.5-1: Data structures supported by the PATCH Request Body on this resource

# 5.9.1A Notifications

Notifications are not applicable to this API.

# 5.9.2 Data Model

# 5.9.2.1 General

This clause specifies the application data model supported by the IPTVConfiguration API.

Table 5.9.2.1-1 specifies the data types defined for the IPTVConfiguration API.

| Data type                        | Clause<br>defined | Description                                                                              | Applicability |
|----------------------------------|-------------------|------------------------------------------------------------------------------------------|---------------|
| AccessRightStatus                | 5.9.2.4.3         | Represents the access right status for parameter provision.                              |               |
| IptvConfigData                   | 5.9.2.3.2         | Represents an individual IPTV Configuration resource.                                    |               |
| IptvConfigDataPatch              | 5.9.2.3.4         | Represents the parameters to request the modification of an IPTV Configuration resource. |               |
| MulticastAccessControl 5.9.2.3.3 |                   | Represents multicast address access control<br>information.                              |               |

Table 5.9.2.1-1: IPTVConfiguration API specific Data Types

# 5.9.2.2 Reused data types

The data types reused by the IPTVConfiguration API from other specifications are listed in table 5.9.2.2-1.

| Data type              | Reference          | Comments                                                                               |  |
|------------------------|--------------------|----------------------------------------------------------------------------------------|--|
| Dnn                    | 3GPP TS 29.571 [8] | Identifies a DNN.                                                                      |  |
| ExternalGroupId        | 3GPP TS 29.122 [4] | External Group Identifier for a user group.                                            |  |
| Gpsi                   | 3GPP TS 29.571 [8] | Identifies a GPSI.                                                                     |  |
| Ipv4Addr               | 3GPP TS 29.571 [8] | Identifies an IPv4 address.                                                            |  |
| lpv6Addr               | 3GPP TS 29.571 [8] | Identifies an IPv6 address.                                                            |  |
| Link                   | 3GPP TS 29.122 [4] |                                                                                        |  |
| MtcProviderInformation | 3GPP TS 29.571 [8] | Indicates MTC provider information.                                                    |  |
| Snssai                 | 3GPP TS 29.571 [8] | Identifies the S-NSSAI.                                                                |  |
| SupportedFeatures      | 3GPP TS 29.571 [8] | Used to negotiate the applicability of the optional features defined in table 5.9.3-1. |  |

# 5.9.2.3 Structured data types

# 5.9.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

#### Type: IptvConfigData 5.9.2.3.2

| Attribute name    | Data type               | Р        | Cardinality       | Description                       | Applicability |
|-------------------|-------------------------|----------|-------------------|-----------------------------------|---------------|
| self              | Link                    | С        | 01                | Identifies the individual IPTV    |               |
|                   |                         |          |                   | configuration resource URI.       |               |
|                   |                         |          |                   | Shall be present in the HTTP      |               |
|                   |                         |          |                   | GET response when reading         |               |
|                   |                         |          |                   | all the configurations for an AF. |               |
| gpsi              | Gpsi                    | С        | 01                | Identifies GPSI. (NOTE)           |               |
| exterGroupId      | ExternalGroupId         | С        | 01                | Represents a group of users.      |               |
|                   |                         |          |                   | (NOTE)                            |               |
| afAppId           | string                  | Μ        | 1                 | Identifies an application.        |               |
| dnn               | Dnn                     | 0        | 01                | Identifies a DNN, a full DNN      |               |
|                   |                         |          |                   | with both the Network Identifier  |               |
|                   |                         |          |                   | and Operator Identifier, or a     |               |
|                   |                         |          |                   | DNN with the Network Identifier   |               |
|                   |                         |          |                   | only.                             |               |
| snssai            | Snssai                  | 0        | 01                | Identifies an S-NSSAI.            |               |
| multiAccCtrls     | map(MulticastAc         | Μ        | 1N                | Identifies a list of multicast    |               |
|                   | cessControl)            |          |                   | address access control            |               |
|                   |                         |          |                   | information.                      |               |
|                   |                         |          |                   | Any string value can be used      |               |
|                   |                         |          |                   | as a key of the map.              |               |
| mtcProviderId     | MtcProviderInfor        | 0        | 01                | Indicates MTC provider            |               |
|                   | mation                  |          |                   | information.                      |               |
| suppFeat          | SupportedFeatur         | Μ        | 1                 | Indicates the negotiated          |               |
|                   | es                      |          |                   | supported features.               |               |
| NOTE: Only one of | the "gpsi" or "exterGro | oupld" a | ttribute shall be | e provided.                       |               |

# Table 5.9.2.3.2-1: Definition of type lptvConfigData

#### 5.9.2.3.3 Type: MulticastAccessControl

# Table 5.9.2.3.3-1: Definition of type MulticastAccessControl

| Attribute name  | Data type                  | Ρ        | Cardinality    | Description                                                                      | Applicability |
|-----------------|----------------------------|----------|----------------|----------------------------------------------------------------------------------|---------------|
| srclpv4Addr     | lpv4Addr                   | 0        | 01             | Identifies the source IPv4<br>address of IPTV multicast<br>channel.              |               |
| srclpv6Addr     | lpv6Addr                   | 0        | 01             | Identifies the source IPv6<br>address of IPTV multicast<br>channel.              |               |
| multicastV4Addr | lpv4Addr                   | 0        | 01             | Identifies the multicast IPv4<br>address of IPTV multicast<br>channel.<br>(NOTE) |               |
| multicastV6Addr | lpv6Addr                   | 0        | 01             | Identifies the multicast IPv6<br>address of IPTV multicast<br>channel.<br>(NOTE) |               |
| accStatus       | AccessRightStatus          | М        | 1              | Represents access right status of the multicast channel.                         |               |
| NOTE: At least  | one of the "multicastV4Add | r" or "n | nulticastV6Add | Ir" attribute shall be provided.                                                 |               |

# 5.9.2.3.4 Type: lptvConfigDataPatch

| Attribute name | Data type       | Р | Cardinality | Description                    | Applicability |
|----------------|-----------------|---|-------------|--------------------------------|---------------|
| multiAccCtrls  | map(MulticastAc | 0 | 1N          | Identifies a list of multicast |               |
|                | cessControl)    |   |             | address access control         |               |
|                |                 |   |             | information.                   |               |
|                |                 |   |             | Any string value can be used   |               |
|                |                 |   |             | as a key of the map.           |               |

Table 5.9.2.3.4-1: Definition of type IptvConfigDataPatch

# 5.9.2.4 Simple data types and enumerations

# 5.9.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.9.2.4.2 Simple data types

The simple data types defined in table 5.9.2.4.2-1 shall be supported.

### Table 5.9.2.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.9.2.4.3 Enumeration: AccessRightStatus

The enumeration AccessRightStatus represents the parameters provision type of which the AF requests to provision. It shall comply with the provisions defined in table 5.9.2.4.3-1.

### Table 5.9.2.4.3-1: Enumeration AccessRightStatus

| Enumeration value | Description                                           |
|-------------------|-------------------------------------------------------|
| FULLY_ALLOWED     | The User is fully allowed to access to the channel.   |
| PREVIEW_ALLOWED   | The User is preview allowed to access to the channel. |
| NO_ALLOWED        | The User is not allowed to access to the channel.     |

# 5.9.3 Used Features

The table below defines the features applicable to the IPTVConfiguration API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

# Table 5.9.3-1: Features used by IPTVConfiguration API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

# 5.9.4 Error handling

# 5.9.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.9.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the IPTVConfiguration API.

# 5.9.4.3 Application Errors

The application errors defined for IPTVConfiguration API are listed in table 5.9.4.3-1.

### Table 5.9.4.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.10 LpiParameterProvision API

# 5.10.1 Resources

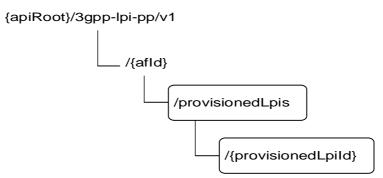

# 5.10.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-lpi-pp/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-lpi-pp" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.10.1.1-1 and the resources and HTTP methods used for the LpiParameterProvision API.

# Figure 5.10.1.1-1: Resource URI structure of the LpiParameterProvision API

Table 5.10.1.1-1 provides an overview of the resources and HTTP methods applicable for the LpiParameterProvision API.

| Resource name                                                                                                                                                                                                                           | Resource URI                                   | HTTP method | Description                                                                                                                              |  |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| LPI Parameters Provisionings                                                                                                                                                                                                            | /{afId}/provisionedLpis                        | GET         | Read all LPI Parameters<br>Provisioning resources for a<br>given AF                                                                      |  |  |
| LFT Farameters Frovisionings                                                                                                                                                                                                            | (NOTE)                                         | POST        | Create a new Individual LPI<br>Parameters Provisioning<br>resource                                                                       |  |  |
|                                                                                                                                                                                                                                         |                                                | GET         | Read an existing Individual LPI<br>Parameters Provisioning<br>resource identified by<br>{provisionedLpild}                               |  |  |
| Individual LPI Parameters<br>Provisioning                                                                                                                                                                                               | /{afld}/provisionedLpis/{prov<br>isionedLpild} | PUT         | Update all of the properties of<br>an existing Individual LPI<br>Parameters Provisioning<br>resource identified by<br>{provisionedLpild} |  |  |
| riovisioning                                                                                                                                                                                                                            |                                                | РАТСН       | Modify an existing Individual<br>LPI Parameters Provisioning<br>resource identified by<br>{provisionedLpild}.                            |  |  |

| NOTE: The path segment "provisionedLpis" does not follow the related naming convention defined in clause 5.2.<br>The path segment is however kept as currently defined in this specification for backward compatibility considerations. |                                                |             |                                                                                                                                          |  |  |

### Table 5.10.1.1-1: Resources and methods overview

# 5.10.1.2 Resource: LPI Parameters Provisionings

### 5.10.1.2.1 Introduction

This resource allows a AF to read all active LPI Parameters Provisionings for the given AF, or create an new individual LPI Parameters Provisioning resource to provision parameters to the NEF.

# 5.10.1.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-lpi-pp/v1/{afId}/provisionedLpis

This resource shall support the resource URI variables defined in table 5.10.1.2.2-1.

# Table 5.10.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

# 5.10.1.2.3 Resource Methods

### 5.10.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.10.1.2.3.

#### 5.10.1.2.3.2 GET

The GET method allows to read all active LPI Parameters Provisioning resources for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.10.1.2.3.2-1.

### Table 5.10.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.10.1.2.3.2-2 and the response data structures and response codes specified in table 5.10.1.2.3.2-3.

# Table 5.10.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

# Table 5.10.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                         | Ρ   | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                             |
|-----------------------------------|-----|-----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

5.10.1.2.3.3 POST

The POST method creates a new resource to LPI Parameters Provisionings for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.10.1.2.3.3-1 and the response data structures and response codes specified in table 5.10.1.2.3.3-2.

# Table 5.10.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                                |

| provisionedLpild | string    | Identifier of the provisioning resource. |

### 5.10.1.3.3 Resource Methods

### 5.10.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.10.1.3.3.

### 5.10.1.3.3.2 GET

The GET method allows to read an active Individual LPI Parameters Provisioning resource for a given AF and provisionedLpiId. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.10.1.3.3.2-1.

### Table 5.10.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.10.1.3.3.2-2 and the response data structures and response codes specified in table 5.10.1.3.3.2-3.

# Table 5.10.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

### 5.10.1.3.3.3 PUT

The PUT method updates an existing resource to update an existing Individual LPI Parameters Provisioning resource. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.10.1.3.3.3-1 and the response data structures and response codes specified in table 5.10.1.3.3.3-2.

### Table 5.10.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | -           | An alternative URI of the resource located in an alternative NEF. |

#### 5.10.1.3.3.3A PATCH

The PATCH method modifies an existing resource to update an existing individual LPI Parameters Provisioning resource. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.10.1.3.3.3A-1 and the response data structures and response codes specified in table 5.10.1.3.3.3A-2.

#### Table 5.10.1.3.3.3A-1: Data structures supported by the PATCH Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                           |
|------------------|---|-------------|-----------------------------------------------------------------------|

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.10.1.3.3.4 DELETE

The DELETE method deletes an existing individual LPI Parameters Provisioning resource for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.10.1.3.3.4-1.

#### Table 5.10.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.10.1.3.3.4-2 and the response data structures and response codes specified in table 5.10.1.3.3.4-3.

#### Table 5.10.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

#### Table 5.10.1.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                   |
|-----------|---|-------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A       |   |             | 204 No<br>Content            | The resource was removed successfully.                                                                                                                                                                                                                        |
| N/A       |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during resource termination. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A       |   |             | 308<br>Permanent<br>Redirect | Permanent redirection, during resource termination. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

NOTE: The mandatory HTTP error status codes for the DELETE method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply.

#### Table 5.10.1.3.3.4-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

## 5.10.2 Data Model

### 5.10.2.1 General

This clause specifies the application data model supported by the LpiParameterProvision API.

Table 5.10.2.1-1 specifies the data types defined for the LpiParameterProvision API.

#### Table 5.10.2.1-1: LpiParameterProvision API specific Data Types

| Data type              | Clause<br>defined | Description                                                    | Applicability |
|------------------------|-------------------|----------------------------------------------------------------|---------------|
| LpiParametersProvision | 5.10.2.3.2        | Represents an individual LPI Parameters Provisioning resource. |               |

### 5.10.2.2 Reused data types

The data types reused by the LpiParameterProvision API from other specifications are listed in table 5.10.2.2-1.

Table 5.10.2.2-1: Re-used Data Types

| Data type              | Reference           | Comments                                                                                  |
|------------------------|---------------------|-------------------------------------------------------------------------------------------|
| ExternalGroupId        | 3GPP TS 29.122 [4]  | External Group Identifier for a user group.                                               |
| Gpsi                   | 3GPP TS 29.571 [8]  | Identifies a GPSI.                                                                        |
| Link                   | 3GPP TS 29.122 [4]  | Identifies a referenced resource.                                                         |
| Lpi                    | 3GPP TS 29.503 [17] | Identifies the Location Privacy Indication information.                                   |
| MtcProviderInformation | 3GPP TS 29.571 [8]  | Indicates MTC provider information for LCS privacy parameter configuration authorization. |
| SupportedFeatures      | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of the optional features defined in table 5.10.3-1.   |

### 5.10.2.3 Structured data types

#### 5.10.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

#### 5.10.2.3.2 Type: LpiParametersProvision

| Attribute name                | Data type                  | Р         | Cardinality      | Description                      | Applicability |
|-------------------------------|----------------------------|-----------|------------------|----------------------------------|---------------|
| self                          | Link                       | С         | 01               | Identifies the individual        |               |
|                               |                            |           |                  | parameters provisioning          |               |
|                               |                            |           |                  | resource.                        |               |
|                               |                            |           |                  | This attribute shall be supplied |               |
|                               |                            |           |                  | by the NEF in HTTP responses     |               |
|                               |                            |           |                  | that include an object of        |               |
|                               |                            |           |                  | LpiParametersProvision type.     |               |
| exterGroupId                  | ExternalGroupId            | 0         | 01               | Identifies a group of UEs.       |               |
|                               |                            |           |                  | (NOTE 1)                         |               |
| gpsi                          | Gpsi                       | 0         | 01               | Identifies an UE with GPSI.      |               |
|                               |                            |           |                  | (NOTE 1))                        |               |

| mtcProviderId                                                                   | MtcProviderInform | 0 | 01          | Indicates MTC provider      |               |
|                                                                                 | ation             |   |             | information for LCS privacy |               |
|                                                                                 |                   |   |             | parameter configuration     |               |
|                                                                                 |                   |   |             | authorization. (NOTE 1)     |               |
|                                                                                 |                   |   |             | on and then the NEF may:    |               |
| <ul> <li>override it with local configured value and send it to UDM;</li> </ul> |                   |   |             |                             |               |
| - send it directly to the UDM; or                                               |                   |   |             |                             |               |
| <ul> <li>reject the LPI Parameter Provisioning modification request.</li> </ul> |                   |   |             |                             |               |

#### 5.10.2.4 Simple data types and enumerations

#### 5.10.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.10.2.4.2 Simple data types

The simple data types defined in table 5.10.2.4.2-1 shall be supported.

#### Table 5.10.2.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.10.3 Used Features

The table below defines the features applicable to the LpiParameterProvision API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.10.3-1: Features used by LpiParameterProvision API

| Feature<br>number | Feature Name | Description                                                                                                                         |
|-------------------|--------------|-------------------------------------------------------------------------------------------------------------------------------------|
| 1                 | PatchUpdate  | Indicates the support of enhancements to the northbound interfaces (e.g. support the partial modification of an existing resource). |

# 5.10.4 Error handling

### 5.10.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.10.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the LpiParameterProvision API.

### 5.10.4.3 Application Errors

The application errors defined for LpiParameterProvision API are listed in table 5.10.4.3-1.

### Table 5.10.4.3-1: Application errors

| Application E | Error HTTP status code | Description | Applicability |
|---------------|------------------------|-------------|---------------|
|               |                        |             |               |

# 5.11 ServiceParameter API

# 5.11.1 Resources

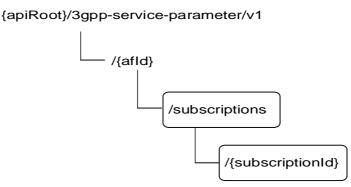

### 5.11.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-service-parameter/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-service-parameter" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.11.1.1-1 and the resources and HTTP methods used for the ServiceParameter API.

#### Figure 5.11.1.1-1: Resource URI structure of the ServiceParameter API

Table 5.11.1.1-1 provides an overview of the resources and HTTP methods applicable for the ServiceParameter API.

| Resource name                               | Resource URI                         | HTTP method | Description                                                                                    |
|---------------------------------------------|--------------------------------------|-------------|------------------------------------------------------------------------------------------------|
| Service Parameter                           | /{afld}/subscriptions                | GET         | Read all subscriptions for a given AF.                                                         |
| Subscripions                                |                                      | POST        | Create a new service parameter subscription.                                                   |
|                                             |                                      | GET         | Read an existing subscription<br>identified by {subscriptionId}                                |
| Individual Service Parameter<br>Subscripion | /{afld}/subscriptions/{subscriptionl | PUT         | Modify all of the properties of<br>an existing subscription.<br>identified by {subscriptionId} |
|                                             | d}                                   | РАТСН       | Modify some of the properties<br>of an existing subscription<br>identified by {subscriptionId} |
|                                             |                                      | DELETE      | Delete a subscription identified by {subscriptionId}                                           |

Table 5.11.1.1-1: Resources and methods overview

### 5.11.1.2 Resource: Service Parameter Subscriptions

### 5.11.1.2.1 Introduction

This resource allows a AF to read all active Service Parameter Subscriptions for the given AF, or create an new individual service parameter subscription in the NEF.

### 5.11.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-service-parameter/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.11.1.2.2-1.

#### Table 5.11.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

### 5.11.1.2.3 Resource Methods

5.11.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.11.1.2.3.

### 5.11.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.11.1.2.3.2-1.

| Table 5.11.1.2.3.2-1: URI query parameters supported by the GET method on this resource |
|-----------------------------------------------------------------------------------------|
|-----------------------------------------------------------------------------------------|

| Name                                                                                                                                                                                                                                                            | Data type        | Ρ | Cardinality | Description                                                                                                                               | Applicability |  |

| NOTE: The man<br>also appl      |   | y HTTP error st | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                                |

### Table 5.11.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | -           | An alternative URI of the resource located in an alternative NEF. |

### Table 5.11.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.11.1.2.3.3 POST

The POST method creates a new resource to individual service parameter subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.11.1.2.3.3-1 and the response data structures and response codes specified in table 5.11.1.2.3.3-2.

#### Table 5.11.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                | Ρ | Cardinality | Description                                                     |
|--------------------------|---|-------------|-----------------------------------------------------------------|
| ServiceParameter<br>Data | М | 1           | Parameters to create a service parameter subscription resource. |

### Table 5.11.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                  | Ρ | Cardinality      | Response<br>codes | Description                                                                                                                                |
|----------------------------|---|------------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| ServiceParameter<br>Data   | Μ | 1                | 201<br>Created    | The subscription resource was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |
| NOTE: The man<br>also appl |   | y HTTP error sta | atus codes for    | the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                              |

#### Table 5.11.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                               |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-service-<br>parameter/v1/{afld}/subscriptions/{subscriptionId} |

### 5.11.1.3 Resource: Individual Service Parameter Subscription

#### 5.11.1.3.1 Introduction

This resource allows a AF to read, update or delete an existing service parameter subscription.

### 5.11.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-service-parameter/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.9.1.3.2-1.

#### Table 5.11.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                               |
|----------------|-----------|------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |
| afld           | string    | Identifier of the AF.                    |
| subscriptionId | string    | Identifier of the subscription resource. |

#### 5.11.1.3.3 Resource Methods

#### 5.11.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.11.1.3.3.

#### 5.11.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.11.1.3.3.2-1.

#### Table 5.11.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.11.1.3.3.2-2 and the response data structures and response codes specified in table 5.11.1.3.3.2-3.

#### Table 5.11.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.11.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                | Р   | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|--------------------------|-----|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ServiceParameter<br>Data | М   | 1               | 200 OK                       | The information for the subscription in the request URI are returned.                                                                                                                                                                                           |
| N/A                      |     |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. #### 5.11.1.3.3.3 PUT

The PUT method modifies an existing resource to update a configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.9.1.3.3.3-1 and the response data structures and response codes specified in table 5.9.1.3.3.3-2.

#### Table 5.11.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

#### 5.11.1.3.3.4 DELETE

The DELETE method deletes an existing individual subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.11.1.3.3.4-1.

#### Table 5.11.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|

| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.11.1.3.3.5 PATCH

The PATCH method allows to change some properties of an existing resource to update a subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.11.1.3.3.5-1 and the response data structures and response codes specified in table 5.11.1.3.3.5-2.

#### Table 5.11.1.3.3.5-1: Data structures supported by the PATCH Request Body on this resource

| Data type                     | Ρ | Cardinality | Description                              |
|-------------------------------|---|-------------|------------------------------------------|
| ServiceParameter<br>DataPatch | Μ | 1           | Partial update an existing subscription. |

# 5.11.1A Notifications

### 5.11.1A.1 Introduction

Upon NEF notify a Service Parameter Authorization Update (e.g. to revoke an authorization) to AF, or forward a notification event related to invocation of service parameter provisioning, e.g. the notification of outcome of UE Policies Delivery to AF, the NEF shall send an HTTP POST message including the notified event to the AF. The NEF and the AF shall support the notification mechanism as described in clause 5.2.5 of 3GPP TS 29.122 [4].

| Notification     | Callback URI              | HTTP method or<br>custom operation | Description<br>(service operation)                                                                                                                                    |
|------------------|---------------------------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AF Notifications | {notificationDestination} |                                    | The notification of service parameter<br>authorization updates and/or notification event<br>related to the result of invocation of service<br>parameter provisioning. |

### 5.11.1A.2 AF Notifications

### 5.11.1A.2.1 Description

The AF Notifications are used by the NEF to send the Service Parameter Authorization Update (e.g. to revoke an authorization) to the AF, and/or to send AF subscribed event notification of the outcome related to the invocation of service parameter provisioning to the AF.

### 5.11.1A.2.2 Target URI

The Callback URI "**{notificationDestination}**" shall be used with the callback URI variables defined in table 5.11.1A.2.2-1.

| Name                    | Data type | Definition                                                                                                                                                                                                                                     |
|-------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| notificationDestination |           | Callback reference provided by the AF during creation/modification of the subscription within the ServiceParameterData data type as defined in Table 5.11.2.3.2-1 or the ServiceParameterDataPatch data type as defined in Table 5.11.2.3.3-1. |

#### Table 5.11.1A.2.2-1: Callback URI variables

### 5.11.1A.3 Operation Definition

### 5.11.1A.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.11.1A.3.1-1 and the response data structure with response codes specified in table 5.11.1A.3.1-2.

### Table 5.11.1A.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type                 | Ρ | Cardinality | Description                                                                                                                                                                       |
|---------------------------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AfNotificatio<br>n) | М |             | Notifications upon AF Service Parameter Authorization Update, and/or AF subscribed event notification of the outcome related to the invocation of service parameter provisioning. |

#### Table 5.11.1A.3.1-2: Data structures supported by the POST Response Body on this resource

| Data type | Ρ | Cardinality                                | Response<br>codes            | Description                                                                                                                                                                                                                                                                                         |
|-----------|---|--------------------------------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A       |   |                                            | 204 No<br>Content            | The event notification is received successfully.                                                                                                                                                                                                                                                    |
| N/A       |   |                                            | 307<br>Temporary<br>Redirect | Temporary redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A       |   |                                            | 308<br>Permanent<br>Redirect | Permanent redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
|           |   | y HTTP error status<br>122 [4] also apply. | codes for the                | POST method listed in table 5.2.6-1 of                                                                                                                                                                                                                                                              |

#### Table 5.11.1A.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

### Table 5.11.1A.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

### 5.11.1A.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the AF subscribed outcome event notification related to the invocation of service parameter provisioning may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.11.2 Data Model

### 5.11.2.1 General

This clause specifies the application data model supported by the ServiceParameter API.

Table 5.11.2.1-1 specifies the data types defined for the ServiceParameter API.

| Data type                   | Clause<br>defined | Description                                                                                                                                 | Applicability   |
|-----------------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| AfNotification              | 5.11.2.3.6        | Contains the reported event notification or the                                                                                             | AfNotifications |
|                             |                   | service parameters authorization update result.                                                                                             |                 |
| AuthorizationResult         | 5.11.2.4.4        | LIC emplication requests a natural connection with                                                                                          | AfNotifications |
| ConnectionCapabilities      | 5.11.2.4.6        | UE application requests a network connection with certain capabilities.                                                                     | AfGuideURSP     |
| Event                       | 5.11.2.4.3        | Identifies the AF subscribed events.                                                                                                        | AfNotifications |
| EventInfo                   | 5.11.2.3.7        | Indicates the event information.                                                                                                            | AfNotifications |
| Failure                     | 5.11.2.4.5        | Represents the failure reason for the unsuccessful result.                                                                                  | AfNotifications |
| GeographicalArea            | 5.17.3.3.4        | Identifies the geographical area information.                                                                                               | AfGuideURSP     |
| ParameterOverPc5            | 5.11.2.4.2        | Represents configuration parameters for V2X communications over PC5 reference point.                                                        |                 |
| ParameterOverPc5Rm          | 5.11.2.4.2        | Represents the same as the ParameterOverPc5 data type but with the "nullable: true" property.                                               |                 |
| ParameterOverUu             | 5.11.2.4.2        | Represents configuration parameters for V2X<br>communications over Uu reference point.                                                      |                 |
| ParameterOverUuRm           | 5.11.2.4.2        | Represents the same as the ParameterOverUu data type but with the "nullable: true" property.                                                |                 |
| ParamForProSeDc             | 5.11.2.4.2        | Represents the service parameters for 5G ProSe<br>direct communications.                                                                    | ProSe           |
| ParamForProSeDcRm           | 5.11.2.4.2        | This data type is defined in the same way as the<br>ParamForProSeDc data type, but with the OpenAPI<br>nullable property set to true.       | ProSe           |
| ParamForProSeDd             | 5.11.2.4.2        | Represents the service parameters for 5G ProSe direct discovery.                                                                            | ProSe           |
| ParamForProSeDdRm           | 5.11.2.4.2        | This data type is defined in the same way as the ParamForProSeDd data type, but with the OpenAPI nullable property set to true.             | ProSe           |
| ParamForProSeRemUe          | 5.11.2.4.2        | Represents the service parameters for 5G ProSe remote UE.                                                                                   | ProSe           |
| ParamForProSeRemUeRm        | 5.11.2.4.2        | This data type is defined in the same way as the<br>ParamForProSeRemUe data type, but with the<br>OpenAPI nullable property set to true.    | ProSe           |
| ParamForProSeU2NRelUe       | 5.11.2.4.2        | Represents the service parameters for 5G ProSe<br>UE-to-network relay UE.                                                                   | ProSe           |
| ParamForProSeU2NRelUeRm     | 5.11.2.4.2        | This data type is defined in the same way as the<br>ParamForProSeU2NRelUe data type, but with the<br>OpenAPI nullable property set to true. | ProSe           |
| RouteSelectionParameterSet  | 5.11.2.3.5        | Contains parameters that can be used to guide the Route Selection Descriptors of the URSP.                                                  | AfGuideURSP     |
| ServiceParameterData        | 5.11.2.3.2        | Represents an individual Service Parameter subscription resource.                                                                           |                 |
| ServiceParameterDataPatch   | 5.11.2.3.3        | Represents the parameters to request the<br>modification of a service parameter subscription<br>resource.                                   |                 |
| TrafficDescriptorComponents | 5.11.2.3.8        | Traffic descriptor components for the requested URSP.                                                                                       | AfGuideURSP     |
| UrspRuleRequest             | 5.11.2.3.4        | Contains parameters that can be used to guide the URSP.                                                                                     | AfGuideURSP     |

Table 5.11.2.1-1: ServiceParameter API specific Data Types

## 5.11.2.2 Reused data types

The data types reused by the ServiceParameter API from other specifications are listed in table 5.9.2.2-1.

| Data type                     | Reference          | Comments                                                             |
|-------------------------------|--------------------|----------------------------------------------------------------------|
| AppDescriptor                 | Clause 5.7.2.3.4   | Application descriptor describes the operation systems and the       |
|                               |                    | corresponding applications for each operation systems.               |
| Dnn                           | 3GPP TS 29.571 [8] | Identifies a DNN.                                                    |
| EthFlowDescription            | 3GPP TS 29.514 [7] | Defines a packet filter for an Ethernet flow.                        |
| ExternalGroupId               | 3GPP TS 29.122 [4] | External Group Identifier for a user group.                          |
| Gpsi                          | 3GPP TS 29.571 [8] | Identifies a GPSI.                                                   |
| IpAddr                        | 3GPP TS 29.571 [8] | UE IP Address.                                                       |
| IPv4Addr                      | 3GPP TS 29.571 [8] | Identifies an IPv4 address.                                          |
| IPv6Addr                      | 3GPP TS 29.571 [8] | Identifies an IPv6 address.                                          |
| Link                          | 3GPP TS 29.122 [4] |                                                                      |
| MacAddr48                     | 3GPP TS 29.571 [8] | Identifies an MAC address.                                           |
| <b>MtcProviderInformation</b> | 3GPP TS 29.571 [8] | Indicates MTC provider information.                                  |
| Snssai                        | 3GPP TS 29.571 [8] | Identifies the S-NSSAI.                                              |
| SupportedFeatures             | 3GPP TS 29.571 [8] | Used to negotiate the applicability of the optional features defined |
|                               |                    | in table 5.11.3-1.                                                   |
| Tai                           | 3GPP TS 29.571 [8] | Tracking Area Identity information.                                  |
| Uinteger                      | 3GPP TS 29.571 [8] | Unsigned integer.                                                    |

# Table 5.11.2.2-1: Re-used Data Types

# 5.11.2.3 Structured data types

### 5.11.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

5.11.2.3.2 Type: ServiceParameterData

Table 5.11.2.3.2-1: Definition of type ServiceParameterData

| Attribute name            | Data type                 | Р | Cardinality | Description                                                             | Applicability   |
|---------------------------|---------------------------|---|-------------|-------------------------------------------------------------------------|-----------------|
| self                      | Link                      | С | 01          | Identifies the individual service                                       |                 |
|                           |                           |   |             | parameter subscription resource URI.                                    |                 |
|                           |                           |   |             | Shall be present by the NEF in HTTP responses that include an object of |                 |
|                           |                           |   |             | ServiceParameterData type.                                              |                 |
| dnn                       | Dnn                       | 0 | 01          | Identifies a DNN. (NOTE 2) (NOTE 3)                                     |                 |
| snssai                    | Snssai                    | Õ | 01          | Identifies an S-NSSAI. (NOTE 2)                                         |                 |
|                           |                           | _ |             | (NOTE 3)                                                                |                 |
| afServiceId               | string                    | 0 | 01          | Identifies a service on behalf of which                                 |                 |
|                           |                           |   |             | the AF is issuing the request.<br>(NOTE 2) (NOTE 3)                     |                 |
| appld                     | string                    | 0 | 01          | Identifies an application identifier.<br>(NOTE 2)                       |                 |
| gpsi                      | Gpsi                      | 0 | 01          | Identifies GPSI. (NOTE 1)                                               |                 |
| uelpv4                    | lpv4Addr                  | 0 | 01          | The IPv4 address of the served UE.                                      |                 |
| •                         |                           | _ |             | (NOTE 1)                                                                |                 |
| uelpv6                    | lpv6Addr                  | 0 | 01          | The IPv6 address of the served UE.<br>(NOTE 1)                          |                 |
| ueMac                     | MacAddr48                 | 0 | 01          | The MAC address of the served UE.                                       |                 |

| dnn                | Dnn                       | 0       | 01             | Identifies a DNN.                                                                                                                                                                                                                                    |               |
| snssai             | Snssai                    | 0       | 01             | Identifies an S-NSSAI.                                                                                                                                                                                                                               |               |
| eventInfo          | EventInfo                 | 0       | 01             | Indicates the event information.                                                                                                                                                                                                                     |               |
| NOTE: At least one | e of "reportEvent" attrib | ute and | "authResult" a | ttribute shall be included.                                                                                                                                                                                                                          |               |

## Table 5.11.2.3.6-1: Definition of type AfNotification

# 5.11.2.3.7 Type: EventInfo

## Table 5.11.2.3.7-1: Definition of type EventInfo

| Attribute name | Data type | Р | Cardinality | Description                                                                                                                                          | Applicability |
|----------------|-----------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| failureCause   | Failure   | 0 |             | Identify the failure reason for<br>an unsuccessful result. May<br>present if the reportEvent<br>attribute value is<br>"UNSUCCESS_UE_POL_DEL<br>_SP". |               |

### 5.11.2.3.8 Type: TrafficDescriptorComponents

| Attribute name | Data type                         | Р | Cardinality | Description                                                                                                                                                                                                                                                                                                                | Applicability |
|----------------|-----------------------------------|---|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| appDescs       | map(AppDescriptor<br>)            | С | 1N          | Describes the operation<br>systems and the corresponding                                                                                                                                                                                                                                                                   |               |
|                |                                   |   |             | applications for each operation<br>systems. The key of map is<br>osld. (NOTE 2)                                                                                                                                                                                                                                            |               |
| flowDescs      | array(string)                     | С | 1N          | Destination IP 3 tuple(s) (IP<br>address or IPv6 network prefix,<br>port number, protocol ID of the<br>protocol above IP). The content<br>of the string has the same<br>encoding as the IPFilterRule<br>AVP value as defined in<br>IETF RFC 6733 [54],<br>applicable only to the<br>destination IP 3 tuple(s).<br>(NOTE 3) |               |
| domainDescs    | array(string)                     | С | 1N          | FQDN(s) or a regular<br>expression which are used as<br>a domain name matching<br>criteria. (NOTE 4)                                                                                                                                                                                                                       |               |
| ethFlowDescs   | array(EthFlowDesc<br>ription)     | С | 1N          | Descriptor(s) for destination<br>information of non-IP traffic in<br>which only ethernet flow<br>description is defined.<br>(NOTE 3)                                                                                                                                                                                       |               |
| dnns           | array(Dnn)                        | С | 1N          | This is matched against the DNN information provided by the application.                                                                                                                                                                                                                                                   |               |
| connCaps       | array(ConnectionC<br>apabilities) | С | 1N          | This is matched against the<br>information provided by a UE<br>application when it requests a<br>network connection with certain<br>capabilities.                                                                                                                                                                          |               |

#### Table 5.11.2.3.8-1: Definition of type TrafficDescriptorComponents

not include an OS version number. The OSAppId does not include a version number for the application. NOTE 3: "flowDescs" attribute and "ethFlowDescs" attribute are mutually exclusive.

NOTE 4: The match of this traffic descriptor component does not require successful DNS resolution of the FQDN provided by the UE Application.

### 5.11.2.4 Simple data types and enumerations

### 5.11.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.11.2.4.2 Simple data types

The simple data types defined in table 5.11.2.4.2-1 shall be supported.

| Type Name                   | Type Definition | Description                                                                                                                                                                                             | Applicability |
|-----------------------------|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| ParameterOverPc5            | string          | Configuration parameters for V2X communication over PC5. Its encoding shall comply with the UE policies for V2X communication over PC5 as defined in clause 5.3 of 3GPP TS 24.588 [33].                 |               |
| ParameterOverPc5R<br>m      | string          | This data type is defined in the same way as the<br>"ParameterOverPc5" data type, but with the OpenAPI<br>"nullable: true" property.                                                                    |               |
| ParameterOverUu             | string          | Configuration parameters for V2X communication over<br>Uu. Its encoding shall comply with the UE policies for V2X<br>communication over Uu as defined in clause 5.4 of<br>3GPP TS 24.588 [33].          |               |
| ParameterOverUuRm           | string          | This data type is defined in the same way as the<br>"ParameterOverUu" data type, but with the OpenAPI<br>"nullable: true" property.                                                                     |               |
| ParamForProSeDd             | string          | Configuration parameters for 5G ProSe direct discovery.<br>Its encoding shall comply with the UE policies for 5G<br>ProSe direct discovery defined in clause 5.3 of<br>3GPP TS 24.555 [49].             | ProSe         |
| ParamForProSeDdR<br>m       | string          | This data type is defined in the same way as the<br>"ParamForProSeDd" data type, but with the OpenAPI<br>"nullable: true" property.                                                                     | ProSe         |
| ParamForProSeDc             | string          |                                                                                                                                                                                                         | ProSe         |
| ParamForProSeDcR<br>m       | string          | This data type is defined in the same way as the<br>"ParamForProSeDc" data type, but with the OpenAPI<br>"nullable: true" property.                                                                     | ProSe         |
| ParamForProSeU2NR<br>elUe   | string          | Configuration parameters for 5G ProSe UE-to-network<br>relay UE. Its encoding shall comply with the UE policies<br>for 5G ProSe UE-to-network relay UE defined in<br>clause 5.5 of 3GPP TS 24.555 [49]. | ProSe         |
| ParamForProSeU2NR<br>elUeRm | string          | This data type is defined in the same way as the<br>"ParamForProSeU2NRelUe" data type, but with the<br>OpenAPI "nullable: true" property.                                                               | ProSe         |
| ParamForProSeRem<br>Ue      | string          | encoding shall comply with the UE policies for 5G ProSe remote UE defined in clause 5.6 of 3GPP TS 24.555 [49].                                                                                         | ProSe         |
| ParamForProSeRem<br>UeRm    | string          | This data type is defined in the same way as the<br>"ParamForProSeRemUe" data type, but with the OpenAPI<br>"nullable: true" property.                                                                  | ProSe         |

Table 5.11.2.4.2-1: Simple data types

### 5.11.2.4.3 Enumeration: Event

#### Table 5.11.2.4.3-1: Enumeration Event

The enumeration Event represents the AF subscribe to event notification of the outcome related to the invocation of AF provisioned service parameters.

| Enumeration value       | Description                                                                                     |
|-------------------------|-------------------------------------------------------------------------------------------------|
| SUCCESS_UE_POL_DEL_SP   | Successful UE Policy Delivery related to the invocation of AF provisioned Service Parameters.   |
| UNSUCCESS_UE_POL_DEL_SP | Unsuccessful UE Policy Delivery related to the invocation of AF provisioned Service Parameters. |

### 5.11.2.4.4 Enumeration: AuthorizationResult

The enumeration AuthorizationResult represents the NEF notify the AF about the service parameters authorization updates result, e.g. to revoke an authorization.

| Enumeration value | Description                                                |
|-------------------|------------------------------------------------------------|
| AUTH_REVOKED      | Indicated the service parameters authorization is revoked. |

Table 5.11.2.4.4-1: Enumeration AuthorizationResult

#### 5.11.2.4.5 Enumeration: Failure

The enumeration Failure represents the failure reason for the unsuccessful result.

| Table 5.11.2.4.5-1: | Enumeration Failure |
|---------------------|---------------------|
|---------------------|---------------------|

| Enumeration value   | Description                                                                                                                                                                                                       |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UNSPECIFIED         | Indicates the PCF received the UE sent UE policy delivery service cause #111 (Protocol error, unspecified).                                                                                                       |
| UE_NOT_REACHABLE    | Indicates the PCF received the notification from the AMF that the UE is not reachable.                                                                                                                            |
| UNKNOWN             | Indicates unknown reasons upon no response from the UE, e.g. UPDS message type is not defined or not implemented by the UE, or not compatible with the UPDS state, in which the UE shall ignore the UPDS message. |
| UE_TEMP_UNREACHABLE | Indicates the PCF received the notification from the AMF that the UE is not reachable but the PCF will retry again.                                                                                               |

### 5.11.2.4.6 Enumeration: ConnectionCapabilities

The enumeration ConnectionCapabilities represents the information provided by a UE application when it requests a network connection with certain capabilities.

| Enumeration value | on value Description                                             |  |  |  |
|-------------------|------------------------------------------------------------------|--|--|--|
| IMS               | Indicates the connection capability to support IMS service.      |  |  |  |
| MMS               | Indicates the connection capability to support MMS service.      |  |  |  |
| SUPL              | Indicates the connection capability to support SUPL service.     |  |  |  |
| INTERNET          | Indicates the connection capability to support Internet service. |  |  |  |

### Table 5.11.2.4.6-1: Enumeration ConnectionCapabilities

# 5.11.3 Used Features

The table below defines the features applicable to the ServiceParameter API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature<br>number | Feature Name            | Description                                                                                                                                                                     |  |
|-------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 1                 | ProSe                   | This feature indicates the support of UE policy and N2 information provisioning for 5G ProSe.                                                                                   |  |
| 2                 | enNB                    | Indicates the support of enhancements to the northbound interfaces.                                                                                                             |  |
| 3                 | AfNotifications         | This feature indicates the support of AF subscribed event(s) notifications.                                                                                                     |  |
| 4                 | Notification_websocket  | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |  |
| 5                 | Notification_test_event | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                         |  |
| 6                 | AfGuideURSP             | This feature indicates the support of AF guidance for URSP determination.                                                                                                       |  |

## 5.11.4 Error handling

### 5.11.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.11.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the ServiceParameter API.

#### 5.11.4.3 Application Errors

The application errors defined for ServiceParameter API are listed in table 5.11.4.3-1.

### Table 5.11.4.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.12 ACSParameterProvision API

### 5.12.1 Resources

### 5.12.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-acs-pp/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-acs-pp" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.12.1.1-1 and the resources and HTTP methods used for the ACSParameterProvision API.

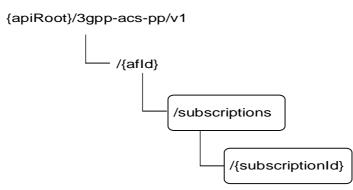

Figure 5.12.1.1-1: Resource URI structure of the ACSParameterProvision API

Table 5.12.1.1-1 provides an overview of the resources and HTTP methods applicable for the ACSParameterProvision API.

| Resource name                | Resource URI                         | HTTP method | Description                                                                                    |
|------------------------------|--------------------------------------|-------------|------------------------------------------------------------------------------------------------|
| ACS Configuration            | /{afld}/subscriptions                | GET         | Read all subscriptions for a given AF.                                                         |
| Subscripions                 |                                      | POST        | Create a new ACS configuration subscription.                                                   |
|                              |                                      | GET         | Read an existing subscription<br>identified by {subscriptionId}                                |
| Individual ACS Configuration | /{afld}/subscriptions/{subscriptionl | PUT         | Update all of the properties of<br>an existing subscription<br>identified by {subscriptionId}. |
| Subscripion                  | d}                                   | РАТСН       | Modify an existing subscription identified by {subscriptionId}.                                |
|                              |                                      | DELETE      | Delete a subscription identified<br>by {subscriptionId}                                        |

 Table 5.12.1.1-1: Resources and methods overview

### 5.12.1.2 Resource: ACS Configuration Subscriptions

#### 5.12.1.2.1 Introduction

This resource allows a AF to read all active ACS Configuration Subscriptions for the given AF, or create an new individual ACS Configuration subscription in the NEF.

#### 5.12.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-acs-pp/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.12.1.2.2-1.

#### Table 5.12.1.2.2-1: Resource URI variables for this resource

| Name    | Definition                           |
|---------|--------------------------------------|
| apiRoot | Clause 5.2.4 of 3GPP TS 29.122 [4].  |
| afId    | Identifier of the AF of type string. |

#### 5.12.1.2.3 Resource Methods

#### 5.12.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.12.1.2.3.

#### 5.12.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.12.1.2.3.2-1.

#### Table 5.12.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.12.1.2.3.2-2 and the response data structures and response codes specified in table 5.12.1.2.3.2-3.

#### Table 5.12.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.12.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                       | Ρ | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|---------------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AcsConfigur<br>ationData) | М | 0N              | 200 OK                       | All the subscription information for the AF in the request URI are returned.                                                                                                                                                                                    |
| N/A                             |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                             |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The man<br>also app       |   | y HTTP error st | atus codes fo                | r the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                  |

#### Table 5.12.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.12.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.12.1.2.3.3 POST

The POST method creates a new resource to individual ACS Configuration subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.12.1.2.3.3-1 and the response data structures and response codes specified in table 5.12.1.2.3.3-2.

#### Table 5.12.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                | Ρ | Cardinality | Description                                                                 |
|--------------------------|---|-------------|-----------------------------------------------------------------------------|
| AcsConfiguration<br>Data | Μ | 1           | Parameters to create an individual ACS Configuration subscription resource. |

| Data type                | Ρ | Cardinality | Response<br>codes | Description                                                                                                                                |  |  |  |
|--------------------------|---|-------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| AcsConfiguration<br>Data | Μ | 1           | 201<br>Created    | The subscription resource was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |  |  |  |
|                          |   |             |                   |                                                                                                                                            |  |  |  |

#### Table 5.12.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                    |
|----------|-----------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-acs-<br>pp/v1/{afld}/subscriptions/{subscriptionId} |

### 5.12.1.3 Resource: Individual ACS Configuration Subscription

#### 5.12.1.3.1 Introduction

This resource allows a AF to read, update or delete an existing ACS Configuration subscription.

#### 5.12.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-acs-pp/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.9.1.3.2-1.

#### Table 5.12.1.3.2-1: Resource URI variables for this resource

| Name           | Definition                                              |
|----------------|---------------------------------------------------------|
| apiRoot        | Clause 5.2.4 of 3GPP TS 29.122 [4].                     |
| afld           | Identifier of the AF of type string.                    |
| subscriptionId | Identifier of the subscription resource of type string. |

#### 5.12.1.3.3 Resource Methods

5.12.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.12.1.3.3.

5.12.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.12.1.3.3.2-1.

#### Table 5.12.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.12.1.3.3.2-2 and the response data structures and response codes specified in table 5.12.1.3.3.2-3.

#### Table 5.12.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.12.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                 | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|---------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AcsConfiguration<br>Data  | М | 1               | 200 OK                       | The information for the subscription in the request URI are returned.                                                                                                                                                                                           |
| N/A                       |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                       |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The mar<br>also app |   | y HTTP error st | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                    |

### Table 5.12.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | -           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.12.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.12.1.3.3.3 PUT

The PUT method updates an existing resource to update a configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.9.1.3.3.3-1 and the response data structures and response codes specified in table 5.9.1.3.3.3-2.

#### Table 5.12.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type                | Ρ | Cardinality | Description                      |
|--------------------------|---|-------------|----------------------------------|
| AcsConfiguration<br>Data | Μ | 1           | Modify an existing subscription. |

#### Table 5.12.1.3.3.3-2: Data structures supported by the PUT Response Body on this resource

| Data type                | Р | Cardinality | Response<br>codes | Description                                                                                                  |
|--------------------------|---|-------------|-------------------|--------------------------------------------------------------------------------------------------------------|
| AcsConfiguration<br>Data | М | 1           | 200 OK            | The subscription resource was updated successfully and a representation of the updated resource is returned. |
| n/a                      |   |             | 204 No<br>Content | The subscription resource was updated successfully.                                                          |

| N/A   |                                         | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
|-------|-----------------------------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A   |                                         | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. #### 5.12.1.3.3.3A PATCH

The PATCH method modifies an existing resource to update an existing ACS Configuration Subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.9.1.3.3.3A-1 and the response data structures and response codes specified in table 5.9.1.3.3.3A-2.

#### Table 5.12.1.3.3.3A-1: Data structures supported by the PATCH Request Body on this resource

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.12.1.3.3.4 DELETE

The DELETE method deletes an existing individual subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.12.1.3.3.4-1.

#### Table 5.12.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.12.1.3.3.4-2 and the response data structures and response codes specified in table 5.12.1.3.3.4-3.

#### Table 5.12.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

## 5.12.2 Data Model

### 5.12.2.1 General

This clause specifies the application data model supported by the ACSParameterProvision API.

Table 5.12.2.1-1 specifies the data types defined for the ACSParameterProvision API.

| Data type                 | Clause<br>defined | Description                                                                                | Applicability |
|---------------------------|-------------------|--------------------------------------------------------------------------------------------|---------------|
| AcsConfigurationData      | 5.12.2.3.2        | Represents an individual ACS Configuration subscription resource.                          |               |
| AcsConfigurationDataPatch |                   | Represents the parameters to request to modify an existing ACS Configuration subscription. | PatchUpdate   |

### 5.12.2.2 Reused data types

The data types reused by the ACSParameterProvision API from other specifications are listed in table 5.12.2.2-1.

#### Table 5.12.2.2-1: Re-used Data Types

| Data type              | Reference          | Comments                                                                |
|------------------------|--------------------|-------------------------------------------------------------------------|
| AcsInfo                | 3GPP TS 29.571 [8] | Contains the information of ACS                                         |
| ExternalGroupId        | 3GPP TS 29.122 [4] | External Group Identifier for a user group.                             |
| Gpsi                   | 3GPP TS 29.571 [8] | Identifies a GPSI.                                                      |
| Link                   | 3GPP TS 29.122 [4] |                                                                         |
| MtcProviderInformation | 3GPP TS 29.571 [8] | Indicates MTC provider information.                                     |
| SupportedFeatures      | 3GPP TS 29.571 [8] | Used to negotiate the applicability of the optional features defined in |
|                        |                    | table 5.9.4-1.                                                          |

### 5.12.2.3 Structured data types

### 5.12.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

### 5.12.2.3.2 Type: AcsConfigurationData

| Attribute name       | Data type                  | Р         | Cardinality      | Description                                                                                                                                                                                                                                                                | Applicability |

| mtcProviderId        | MtcProviderInfor<br>mation | 0         | 01               | Indicates MTC provider<br>information.                                                                                                                                                                                                                                     |               |
| suppFeat             | SupportedFeatur<br>es      | М         | 1                | Indicates the list of Supported<br>features used as described in<br>clause 5.12.3.<br>This parameter shall be<br>supplied by the NF service<br>consumer in the POST request<br>that requested the creation of<br>an individual ACS configuration<br>Subscription resource. |               |
| NOTE: Only one of th | ne "gpsi" or "exterGro     | oupld" at | tribute shall be | e provided.                                                                                                                                                                                                                                                                |               |

### Table 5.12.2.3.2-1: Definition of type AcsConfigurationData

### 5.12.2.3.3 Type: AcsConfigurationDataPatch

### Table 5.12.2.3.3-1: Definition of type AcsConfigurationDataPatch

| Attribute name | Data type                  | Р | Cardinality | Description                            | Applicability |
|----------------|----------------------------|---|-------------|----------------------------------------|---------------|
| acsInfo        | AcsInfo                    | 0 | 01          | Contains the information of ACS.       |               |
| mtcProviderId  | MtcProviderInfor<br>mation | 0 |             | Indicates MTC provider<br>information. |               |

### 5.12.2.4 Simple data types and enumerations

### 5.12.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.12.2.4.2 Simple data types

The simple data types defined in table 5.12.2.4.2-1 shall be supported.

#### Table 5.12.2.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.12.3 Used Features

The table below defines the features applicable to the ACSParameterProvision API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Table 5.12.3-1: Features used by ACSParameterProvision / | ۱۹ |
|----------------------------------------------------------|----|
|----------------------------------------------------------|----|

| Feature<br>number | Feature Name | Description                                                                                                                                      |
|-------------------|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                 | PatchUpdate  | Indicates the support of enhancements to the northbound interfaces (e.g. support the partial modification of an existing subscription resource). |

# 5.12.4 Error handling

### 5.12.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.12.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the ACSParameterProvision API.

### 5.12.4.3 Application Errors

The application errors defined for ACSParameterProvision API are listed in table 5.12.4.3-1.

### Table 5.12.4.3-1: Application errors

| Application Error | HTTP status code | Description | Applicability |
|-------------------|------------------|-------------|---------------|
|                   |                  |             |               |

# 5.13 MoLcsNotify API

# 5.13.1 Resources

There is no resource defined for this API.

# 5.13.2 Notifications

### 5.13.2.1 Introduction

Upon receipt of a UE location information update notification from the GMLC, the NEF shall send an HTTP POST message in order to notify the AF of the updated UE location information.

### 5.13.2.2 Event Notification

Callback URI: {notificationDestination} shall be used with the callback URI variables defined in table 5.13.2.2-1.

| Name                    | Definition                                                                                       |
|-------------------------|--------------------------------------------------------------------------------------------------|
| notificationDestination | A URI indicating the notification destination where N33 notification requests shall be delivered |
|                         | to.                                                                                              |
|                         | This URI shall be preconfigured in the NEF.                                                      |

#### Table 5.13.2.2-1: Callback URI variables

### 5.13.2.3 Operation Definition

#### 5.13.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.13.2.3.1-1 and the response data structures and response codes specified in table 5.13.2.3.1-2.

#### Table 5.13.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type     | Ρ | Cardinality | Description                                       |  |  |  |  |  |
|---------------|---|-------------|---------------------------------------------------|--|--|--|--|--|
| LocUpdateData | Μ | 1           | Delivers UE location to AF during MO-LR procedure |  |  |  |  |  |

#### Table 5.13.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                    | Ρ | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                                                                  |  |  |  |
|------------------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| LocUpdateDataReply                                                                                                           | Μ | 1           | 200 OK                       | The notification is received successfully.                                                                                                                                                                                                                                                                   |  |  |  |
| N/A                                                                                                                          |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during notification. The response<br>shall include a Location header field containing an<br>alternative URI representing the end point of an<br>alternative AF where the notification should be sent.                                                                                 |  |  |  |
|                                                                                                                              |   |             |                              | Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].                                                                                                                                                                                                                                    |  |  |  |
| N/A                                                                                                                          |   |             | Redirect                     | Permanent redirection, during notification. The response<br>shall include a Location header field containing an<br>alternative URI representing the end point of an<br>alternative AF where the notification should be sent.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |  |
| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of<br>3GPP TS 29.122 [4] also apply. |   |             |                              |                                                                                                                                                                                                                                                                                                              |  |  |  |

#### Table 5.13.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type |   | Cardinality | Description                                                                                                                |  |  |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------|--|--|
| Location | string    | М |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |  |  |

#### Table 5.13.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

# 5.13.3 Data Model

### 5.13.3.1 General

This clause specifies the application data model supported by the MoLcsNotify API.

# 5.13.3.2 Reused data types

The data types reused by the MoLcsNotify API from other specifications are listed in table 5.13.3.2-1.

| Data type         | Reference           | Comments                                                     |
|-------------------|---------------------|--------------------------------------------------------------|
| SupportedFeatures | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of the optional features |
|                   |                     | defined in table 5.13.4-1.                                   |
| Gpsi              | 3GPP TS 29.571 [8]  | Identifies a GPSI.                                           |
| LocationInfo      | 3GPP TS 29.122 [4]  | Represent user location information for exposure.            |
| LcsQosClass       | 3GPP TS 29.572 [34] | LCS QoS Class.                                               |
| ServiceIdentity   | 3GPP TS 29.515 [35] | Service identity                                             |

### 5.13.3.3 Structured data types

### 5.13.3.3.1 Introduction

This clause defines the structured data types to be used by the MoLcsNotify API.

### 5.13.3.3.2 Type: LocUpdateData

This type represents a UE updated location information from the NEF to the AF.

| Attribute name | Data type         | Р | Cardinality | Description                                                                  | Applicability |
|----------------|-------------------|---|-------------|------------------------------------------------------------------------------|---------------|
| gpsi           | Gpsi              | М | 1           | Generic Public Subscription<br>identifier                                    |               |
| locInfo        | LocationInfo      | М | 1           | Represent user location information for exposure.                            |               |
| lcsQosClass    | LcsQosClass       | М | 1           | LCS QoS Class.                                                               |               |
| svcld          | ServiceIdentity   | 0 | 01          | Service Identity may be specified by the UE for LCS request.                 |               |
| suppFeat       | SupportedFeatures | М | 1           | Indicates the list of Supported features used as described in clause 5.13.4. |               |

### 5.13.3.3.3 Type: LocUpdateDataReply

This data type represents a reply to a MO LCS notification and is sent from the AF to the NEF.

### Table 5.13.3.3.3-1: Definition of type LocUpdateDataReply

| Attribute name | Data type         | Р | Cardinality | Description                                                                  | Applicability |
|----------------|-------------------|---|-------------|------------------------------------------------------------------------------|---------------|
| suppFeat       | SupportedFeatures | Μ |             | Indicates the list of Supported features used as described in clause 5.13.4. |               |

### 5.13.3.4 Simple data types and enumerations

### 5.13.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.13.3.4.2 Simple data types

The simple data types defined in table 5.13.3.4.2-1 shall be supported.

## Table 5.13.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.13.4 Used Features

The table below defines the features applicable to the MoLcsNotify API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

### Table 5.13.4-1: Features used by MoLcsNotify API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

# 5.13.5 Error handling

# 5.13.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.13.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MoLcsNotify API.

# 5.13.5.3 Application Errors

The application errors defined for MoLcsNotify API are listed in table 5.13.5.3-1.

## Table 5.13.5.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.14 AKMA API

# 5.14.1 Introduction

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-akma/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-akma" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

# 5.14.2 Resources

There are no resources defined for this API in this release of the specification.

# 5.14.3 Custom Operations without associated resources

# 5.14.3.1 Overview

The structure of the custom operation URIs of the AKMA API is shown in Figure 5.14.3.1-1.

## {apiRoot}/3gpp-akma/v1

## Figure 5.14.3.1-1: Custom operation URI structure of the AKMA API

Table 5.14.3.1-1 provides an overview of the custom operations and applicable HTTP methods.

### Table 5.14.3.1-1: Custom operations without associated resources

| Operation name | Custom operation URI | Mapped HTTP<br>method | Description                                             |
|----------------|----------------------|-----------------------|---------------------------------------------------------|
| Retrieve       | /retrieve            |                       | Request to retrieve AKMA<br>Application Key information |

# 5.14.3.2 Operation: Retrieve

## 5.14.3.2.1 Description

The custom operation allows a service consumer to retrieve AKMA application key information via the NEF.

## 5.14.3.2.2 Operation Definition

This operation shall support the request and response data structures and response codes specified in tables 5.14.3.2.2-1 and 5.14.3.2.2-2.

# Table 5.14.3.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type     | Ρ | Cardinality | Description                                                         |
|---------------|---|-------------|---------------------------------------------------------------------|

# 5.14.4 Notifications

Notifications are not applicable to this API.

# 5.14.5 Data Model

# 5.14.5.1 General

This clause specifies the application data model supported by the AKMA API.

# 5.14.5.2 Reused data types

The data types reused by the AKMA API from other specifications are listed in table 514.5.2-1.

## Table 5.14.5.2-1: Re-used Data Types

| Data type         | Reference          | Comments                                                      |

Table 5.14.5.4.2-1: Simple data types

# 5.14.6 Used Features

The table below defines the features applicable to the AKMA API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |
|                   |              |             |

# 5.14.7 Error handling

## 5.14.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.14.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the AKMA API.

# 5.14.7.3 Application Errors

The application errors defined for the AKMA API are listed in table 5.14.7.3-1.

| Application Error  | HTTP status code | Description                                                                                                                                        |
|--------------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| K_AKMA_NOT_PRESENT | 403 Forbidden    | Indicates that the KAKMA identified by the A-<br>KID provided in the AKMA Application Key<br>retrieval request body is not present at the<br>AAnF. |

## Table 5.14.7.3-1: Application errors

# 5.15 TimeSyncExposure API

# 5.15.1 Resources

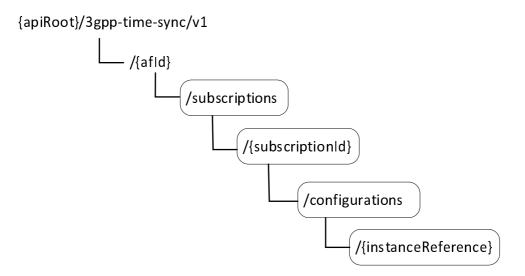

# 5.15.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-time-sync/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "**3gpp-time-sync**" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.15.1.1-1 and the resources and HTTP methods used for the TimeSyncExposure API.

### Figure 5.15.1.1-1: Resource URI structure of the TimeSyncExposure API

Table 5.15.1.1-1 provides an overview of the resources and HTTP methods applicable for the TimeSyncExposure API.

| Resource name                                               | Resource URI                               | HTTP method | Description                                                                                      |
|-------------------------------------------------------------|--------------------------------------------|-------------|--------------------------------------------------------------------------------------------------|
| Time Synchronization                                        | /(afld) /autoparintiana                    | GET         | Read all subscriptions for a given AF                                                            |
| Exposure Subscriptions                                      | /{afld}/subscriptions                      | POST        | Create a new subscription to<br>time synchronization exposure                                    |
|                                                             |                                            | GET         | Read a subscription to time<br>synchronization exposure                                          |
| Individual Time<br>Synchronization Exposure<br>Subscription | /{afld}/subscriptions/{subscriptionl<br>d} | PUT         | Modify all of the properties of<br>an existing subscription to time<br>synchronization exposure  |
|                                                             |                                            | DELETE      | Delete a subscription to time<br>synchronization exposure                                        |
| Time Synchronization                                        | /{afld}/subscriptions/{subscriptionl       | GET         | Read all configurations for a given AF and subscription                                          |
| Exposure Configurations                                     | d}/configurations                          | POST        | Create a new configuration to time synchronization exposure                                      |
|                                                             |                                            | GET         | Read a configuration to time<br>synchronization exposure                                         |
| Individual Time                                             | /{afld}/subscriptions/{subscriptionl       | PUT         | Modify all of the properties of<br>an existing configuration to time<br>synchronization exposure |
| Synchronization Exposure<br>Configuration                   | d}/configurations/{instanceReferen<br>ce}  | DELETE      | Delete a configuration to time<br>synchronization exposure                                       |
|                                                             |                                            | DELETE      | DELETE a new configuration of<br>5G access stratum time<br>distribution.                         |

Table 5.15.1.1-1: Resources and methods overview

# 5.15.1.2 Resource: Time Synchronization Exposure Subscriptions

### 5.15.1.2.1 Introduction

This resource allows an AF to read all active time synchronization exposure subscribtions for the given AF, or allows an AF to create a new Individual Time Synchronization Exposure Subscription in the NEF.

#### 5.15.1.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-time-sync/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.15.1.2.2-1.

## Table 5.15.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

### 5.15.1.2.3 Resource Methods

#### 5.15.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.15.1.2.2.

#### 5.15.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.2.3.2-1.

### Table 5.15.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name      | Data type             | Ρ | Cardinality | Description                                        |
|-----------|-----------------------|---|-------------|----------------------------------------------------|
| supp-feat | SupportedFeat<br>ures | 0 | 01          | The features supported by the NF service consumer. |

This method shall support the request data structures specified in table 5.15.1.2.3.2-2 and the response data structures and response codes specified in table 5.15.1.2.3.2-3.

#### Table 5.15.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.15.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                        | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                     |  |  |
|----------------------------------|---|-------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| array(TimeSyncE<br>xposureSubsc) | M | 0N          | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                        |  |  |
| N/A                              |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |  |  |
| N/A                              |   |             | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |  |  |
|                                  |   |             |                              |                                                                                                                                                                                                                                                                 |  |  |

#### Table 5.15.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.15.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.15.1.2.3.3 POST

The POST method creates a new subscription resource to time synchronization exposure subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.15.1.2.3.3-1 and the response data structures and response codes specified in table 5.15.1.2.3.3-2.

#### Table 5.15.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                        |
|-----------------|---|-------------|--------------------------------------------------------------------|
| TimeSyncExposur | М | 1           | Contains the information for the creation of a new Individual Time |
| eSubsc          |   |             | Synchronization Exposure Subscription resource.                    |

### Table 5.15.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                 | Ρ | Cardinality | Response<br>codes | Description                                                                                                                       |  |
|---------------------------------------------------------------------------------------------------------------------------|---|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|--|
| TimeSyncExposu<br>reSubsc                                                                                                 | М | 1           | 201<br>Created    | The subscription was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |  |
| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                   |                                                                                                                                   |  |

## Table 5.15.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                       |
|----------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-time-<br>sync/v1/{afld}/subscriptions/{subscriptionId} |

# 5.15.1.3 Resource: Individual Time Synchronization Exposure Subscription

## 5.15.1.3.1 Introduction

This resource allows an AF to read, update or delete an existing Individual Time Synchronization Exposure Subscription.

## 5.15.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-time-sync/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.15.1.3.2-1.

### Table 5.15.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                               |
|----------------|-----------|------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |
| afld           | string    | Identifier of the AF.                    |
| subscriptionId | string    | Identifier of the subscription resource. |

### 5.15.1.3.3 Resource Methods

### 5.15.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.15.1.3.2.

5.15.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.3.3.2-1.

#### Table 5.15.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name      | Data type             | Ρ | Cardinality | Description                                        |
|-----------|-----------------------|---|-------------|----------------------------------------------------|
| supp-feat | SupportedFeat<br>ures | 0 | 01          | The features supported by the NF service consumer. |

This method shall support the request data structures specified in table 5.15.1.3.3.2-2 and the response data structures and response codes specified in table 5.15.1.3.3.2-3.

### Table 5.15.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Р | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

## Table 5.15.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                 | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|---------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TimeSyncExposu<br>reSubsc | М | 1               | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                        |
| N/A                       |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                       |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The man<br>also app | • | y HTTP error st | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                    |

#### Table 5.15.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### Table 5.15.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

### 5.15.1.3.3.3 PUT

The PUT method modifies an existing subscription resource to update a subscription. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.15.1.3.3.3-1 and the response data structures and response codes specified in table 5.15.1.3.3.2-2.

#### Table 5.15.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type                 | Ρ | Cardinality | Description                                                    |
|---------------------------|---|-------------|----------------------------------------------------------------|
| TimeSyncExposur<br>eSubsc | Μ | 1           | Modify an existing Time Synchronization Exposure Subscription. |

| Data type                 | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                        |
|---------------------------|---|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TimeSyncExposu<br>reSubsc | М | 1               | 200 OK                       | The subscription was updated successfully.                                                                                                                                                                                                                         |
| N/A                       |   |                 | 204 No<br>Content            | The subscription was updated successfully.                                                                                                                                                                                                                         |
| N/A                       |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                       |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The mar<br>also app |   | y HTTP error st | atus codes for               | the PUT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                       |

### Table 5.15.1.3.3.3-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.15.1.3.3.3-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

## 5.15.1.3.3.4 DELETE

The DELETE method deletes the time synchronization exposure subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.3.3.4-1.

#### Table 5.15.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Р | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.15.1.3.3.4-2 and the response data structures and response codes specified in table 5.15.1.3.3.4-3.

### Table 5.15.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

## Table 5.15.1.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type | P | Cardinality                         | Response<br>codes            | Description                                                                                                                                                                                                                                                       |
|-----------|---|-------------------------------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A       |   |                                     | 204 No                       | The subscription was terminated successfully.                                                                                                                                                                                                                     |

# 5.15.1.4 Resource: Time Synchronization Exposure Configurations

## 5.15.1.4.1 Introduction

This resource allows an AF to read all active time synchronization exposure configuration for the given AF and subscription, or allows an AF to create a new time synchronization configuration and activate the time synchronization service with the configuration.

#### 5.15.1.4.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-time-sync/v1/{afId}/subscriptions/{subscriptionId}/configurations

This resource shall support the resource URI variables defined in table 5.15.1.4.2-1.

#### Table 5.15.1.4.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                               |
|----------------|-----------|------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |
| afld           | string    | Identifier of the AF.                    |
| subscriptionId | string    | Identifier of the subscription resource. |

## 5.15.1.4.3 Resource Methods

## 5.15.1.4.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.15.1.4.3.

#### 5.15.1.4.3.2 GET

The GET method allows to read all active configurations for a given AF and subscription. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.4.3.2-1.

#### Table 5.15.1.4.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.15.1.4.3.2-2 and the response data structures and response codes specified in table 5.15.1.4.3.2-3.

### Table 5.15.1.4.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.15.1.4.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                         | Ρ      | Cardinality      | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|-----------------------------------|--------|------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(TimeSyncE<br>xposureConfig) | М      | 0N               | 200 OK                       | The configuration information for the AF in the request URI are returned.                                                                                                                                                                                       |
| N/A                               |        |                  | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                               |        |                  | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### Table 5.15.1.4.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### 5.15.1.4.3.3 POST

The POST method creates a new configuration resource to activate time synchronization service for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.15.1.4.3.3-1 and the response data structures and response codes specified in table 5.15.1.4.3.3-2.

### Table 5.15.1.4.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                  | Ρ | Cardinality | Description                                                                        |
|----------------------------|---|-------------|------------------------------------------------------------------------------------|
| TimeSyncExposur<br>eConfig | М | 1           | Parameters to create a configuration and to activate time synchronization service. |

### Table 5.15.1.2.4.3-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                 | Ρ | Cardinality | Response<br>codes | Description                                                                                                                       |
|---------------------------------------------------------------------------------------------------------------------------|---|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| TimeSyncExposu<br>reConfig                                                                                                | Μ | 1           | 201<br>Created    | The subscription was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |
| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                   |                                                                                                                                   |

## Table 5.15.1.4.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                                                                 |
|----------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | Contains the URI of the newly created resource, according to<br>the structure: {apiRoot}/3gpp-time-<br>sync/v1/{afId}/subscriptions/{subscriptionId}/configurations/{in<br>stanceReference} |

## 5.15.1.5 Resource: Individual Time Synchronization Exposure Configuration

## 5.15.1.5.1 Introduction

This resource allows an AF to read/modify/cancel a configuration to active/modify/deactivate Time Synchronization service with the NEF.

## 5.15.1.5.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-timesync/v1/{afId}/subscriptions/{subscriptionId}/configuration/{instanceReference}

This resource shall support the resource URI variables defined in table 5.15.1.5.2-1.

#### Table 5.15.1.5.2-1: Resource URI variables for this resource

| Name              | Data type | Definition                               |
|-------------------|-----------|------------------------------------------|
| apiRoot           | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].      |
| afld              | string    | Identifier of the AF.                    |
| subscriptionId    | string    | Identifier of the subscription resource. |
| instanceReference | string    | Identifier of the PTP instance resource  |

## 5.15.1.5.3 Resource Methods

5.15.1.5.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.15.1.5.2.

#### 5.15.1.5.3.2 GET

The GET method allows to read the active configuration for a given AF, subscription Id and configuration Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.5.3.2-1.

### Table 5.15.1.5.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.15.1.5.3.2-2 and the response data structures and response codes specified in table 5.15.1.5.3.2-3.

#### Table 5.15.1.5.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.15.1.5.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                  | Р | Cardinality      | Response<br>codes            | Description                                                                                                                                                                                                                                                                 |
|----------------------------|---|------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TimeSyncExposu<br>reConfig | М | 1                | 200 OK                       | The configuration information for the AF in the request URI are returned.                                                                                                                                                                                                   |
| N/A                        |   |                  | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The<br>response shall include a Location header field containing an<br>alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| N/A                        |   |                  | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].             |
| NOTE: The man<br>also app  | - | y HTTP error sta | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                                |

### Table 5.15.1.5.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

## Table 5.15.1.5.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

### 5.15.1.5.3.3 PUT

The PUT method modifies an existing configuration resource to update a configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.15.1.5.3.3-1 and the response data structures and response codes specified in table 5.15.1.5.3.3-2.

#### Table 5.15.1.5.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type                  | Ρ | Cardinality | Description                                                     |
|----------------------------|---|-------------|-----------------------------------------------------------------|
| TimeSyncExposur<br>eConfig | М | 1           | Modify an existing Time Synchronization Exposure Configuration. |

| Table 5.15.1.5.3.3-2: Data structures supported by the PUT Respo | onse Body on this resource |
|------------------------------------------------------------------|----------------------------|
|                                                                  |                            |

| Data type                  | P | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                        |
|----------------------------|---|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TimeSyncExposu<br>reConfig | М | 1               | 200 OK                       | The subscription was updated successfully.                                                                                                                                                                                                                         |
| N/A                        |   |                 | 204 No<br>Content            | The subscription was updated successfully.                                                                                                                                                                                                                         |
| N/A                        |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                        |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### Table 5.15.1.5.3.3-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.15.1.5.3.4 DELETE

The DELETE method deletes the time synchronization exposure subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.15.1.5.3.4-1.

### Table 5.15.1.5.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.15.1.5.3.4-2 and the response data structures and response codes specified in table 5.15.1.5.3.4-3.

#### Table 5.15.1.5.3.4-2: Data structures supported by the DELETE Request Body on this resource

# 5.15.2 Custom Operations without associated resources

None.

# 5.15.3 Notifications

# 5.15.3.1 Introduction

### Table 5.15.3.1-1: Notifications overview

| Notification                                       | Callback URI     | HTTP method or<br>custom operation | Description<br>(service operation)                                      |
|----------------------------------------------------|------------------|------------------------------------|-------------------------------------------------------------------------|
| Time Synchronization<br>Capability Notification    | {subsNotifUri}   |                                    | Time Synchronization Capability<br>Notification for a list of UEs.      |
| Time Synchronization<br>Configuration Notification | {configNotifUri} |                                    | Current State of Time<br>Synchronization configuration<br>Notification. |

# 5.15.3.2 Time Synchronization Capability Notification

## 5.15.3.2.1 Description

The Notification is used by the NEF to report the Time Synchronization Capability to the AF.

## 5.15.3.2.2 Callback URI

The Callback URI "{subsNotifUri}" shall be used with the callback URI variables defined in table 5.15.3.2.2-1.

| Name | Definition                                                                                                               |
|------|--------------------------------------------------------------------------------------------------------------------------|
|      | Callback reference provided by the AF during creation/modification of the subscription as defined in Table 5.15.4.3.2-1. |

#### Table 5.15.3.2.2-1: Callback URI variables

## 5.15.3.2.3 Operation Definition

#### 5.15.3.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.15.3.2.3.1-1 and the response data structures and response codes specified in table 5.15.3.2.3.1-2 and the Location Headers specified in table 5.15.3.2.3.1-3 and table 5.15.3.2.3.1-4.

## Table 5.15.3.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type                       | Ρ | Cardinality | Description                                                                            |
|---------------------------------|---|-------------|----------------------------------------------------------------------------------------|
| TimeSyncExposu M<br>reSubsNotif | Λ |             | Provides the time synchroniziation capabilities of a list of UEs by the NEF to the AF. |

#### Table 5.15.3.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data ty | уре | Ρ | Cardinality                                | Response<br>codes            | Description                                                                                                                                                                                                                                                                                         |
|---------|-----|---|--------------------------------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A     |     |   |                                            | 204 No<br>Content            | The event notification is received successfully.                                                                                                                                                                                                                                                    |
| N/A     |     |   |                                            | 307<br>Temporary<br>Redirect | Temporary redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A     |     |   |                                            | 308<br>Permanent<br>Redirect | Permanent redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

#### Table 5.15.3.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

### Table 5.15.3.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |

#### 5.15.3.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the Time Synchroniaition Capability Notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.15.3.3 Time Synchronization Configuration Notification

## 5.15.3.3.1 Description

The Notification is used by the NEF to report the state of Time Synchronization service configuration to the AF.

## 5.15.3.3.2 Callback URI

The Callback URI "{configNotifUri}" shall be used with the callback URI variables defined in table 5.15.3.3.2-1.

| Table 5.15.3.3.2-1: Callba | ack URI variables |
|----------------------------|-------------------|
|----------------------------|-------------------|

| Name | Definition                                                                                                                |
|------|---------------------------------------------------------------------------------------------------------------------------|
|      | Callback reference provided by the AF during creation/modification of the configuration as defined in Table 5.15.4.3.6-1. |

## 5.15.3.3.3 Operation Definition

### 5.15.3.3.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.15.3.3.3.1-1 and the response data structures and response codes specified in table 5.15.3.3.3.1-2 and the Location Headers specified in table 5.15.3.3.3.1-3 and table 5.15.3.3.3.1-4.

#### Table 5.15.3.3.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                                  |
|----------------|---|-------------|------------------------------------------------------------------------------|
| TimeSyncExposu | М | 1           | Provides the current state of time synchroniziation service configuration by |

|----------|-------------|----------------------------------------------------------------------------------------------------------------------------|
| М        |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |
|          |             | M 1                                                                                                                        |

## Table 5.15.2.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

#### 5.15.3.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the state of Time Synchroniaition Service Configuration Notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.15.4 Data Model

## 5.15.4.1 General

This clause specifies the application data model supported by the TimeSyncExposure API.

Table 5.15.4.1-1 specifies the data types defined for the TimeSyncExposure API.

| Data type                   | Clause<br>defined | Description                                                                                                    | Applicability |
|-----------------------------|-------------------|----------------------------------------------------------------------------------------------------------------|---------------|
| AsTimeResource              | 5.15.4.4.8        | Identifies the supported 5G clock quality.                                                                     |               |
| ConfigForPort               | 5.15.4.3.18       | Contains configuration information for each port.                                                              |               |
| EventFilter                 | 5.15.4.3.10       | Contains the filter conditions to match for notifying the event(s) of time synchronization capabilities.       |               |
| GmCapable                   | 5.15.4.4.5        | Identifies the supported grandmaster.                                                                          |               |
| InstanceType                | 5.15.4.4.7        | Identifies supported PTP instance type.                                                                        |               |
| Protocol                    | 5.15.4.4.4        | Identifies the supported protocol.                                                                             |               |
| PtpCapabilitiesPerUe        | 5.15.4.3.11       | Contains the supported PTP capabilities per UE.                                                                |               |
| PtpInstance                 | 5.15.4.3.12       | Contains PTP instance configuration and activation information requested by the AF.                            |               |
| StageOfConfiguration        | 5.15.4.3.17       | Contains the PTP port state of the time<br>synchronization configuration.                                      |               |
| StateOfDstt                 | 5.15.4.3.19       | Contains the PTP port state of a DS-TT                                                                         |               |
| SubscribedEvent             | 5.15.4.4.6        | Identifies the supported event.                                                                                |               |
| SubsEventNotification       | 5.15.4.3.8        | Represents the notification about a subscribed Individual Event.                                               |               |
| TimeSyncCapability          | 5.15.4.3.3        | Contains the time synchronization capability.                                                                  |               |
| TimeSyncExposureConfig      | 5.15.4.3.6        | Contains the Time Synchronization Configuration parameters.                                                    |               |
| TimeSyncExposureConfigNotif | 5.15.4.3.9        | Contains the notification of time synchronization service state.                                               |               |
| TimeSyncExposureSubsc       | 5.15.4.3.2        | Contains the requested parameters for the<br>subscription to time synchronization capability<br>notifications. |               |
| TimeSyncExposureSubsNotif   | 5.15.4.3.7        | Contains the notification of time synchronization capability.                                                  |               |

# 5.15.4.2 Reused data types

The data types reused by the TimeSyncExposure API from other specifications are listed in table 5.15.4.2-1.

| Data type          | Reference           | Comments                               |
|--------------------|---------------------|----------------------------------------|
| DateTime           | 3GPP TS 29.571 [8]  |                                        |
| Dnn                | 3GPP TS 29.571 [8]  | Identifies a DNN.                      |
| ExternalGroupId    | 3GPP TS 29.122 [4]  | External Group Identifier for a user   |
|                    |                     | group.                                 |
| NotificationMethod | 3GPP TS 29.508 [26] |                                        |
| Gpsi               | 3GPP TS 29.571 [8]  | Identifies a GPSI.                     |
| Snssai             | 3GPP TS 29.571 [8]  | Identifies the S-NSSAI.                |
| SupportedFeatures  |                     | Used to negotiate the applicability of |
|                    |                     | the optional features defined in       |
|                    |                     | table 5.15.5-1.                        |
| Uinteger           | 3GPP TS 29.571 [8]  | Unsigned integer.                      |
| Uri                | 3GPP TS 29.571 [8]  | Identifies a referenced resource.      |

# Table 5.15.4.2-1: Re-used Data Types

# 5.15.4.3 Structured data types

## 5.15.4.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

5.15.4.3.2 Type: TimeSyncExposureSubsc

Table 5.15.4.3.2-1: Definition of type TimeSyncExposureSubsc

| Attribute name  | Data type              | Ρ | Cardinality | Description                                                                    | Applicability |
|-----------------|------------------------|---|-------------|--------------------------------------------------------------------------------|---------------|
| exterGroupId    | ExternalGroupId        | С | 01          | Identifies a group of UE(s) for which the time synchronization                 |               |
|                 |                        |   |             | capabilities is requested.                                                     |               |

## 5.15.4.3.19 Type: StateOfDstt

## Table 5.15.4.3.19-1: Definition of type StateOfDstt

| Attribute name | Data type                  | Ρ     | Cardinality      | Description                        | Applicability          |
|----------------|----------------------------|-------|------------------|------------------------------------|------------------------|
| gpsi           | Gpsi                       | Μ     | 1                | Identifies the UE/DS-TT which      |                        |
|                |                            |       |                  | the parameters below apply.        |                        |
| state          | boolean                    | Μ     | 1                | When the PTP port state is         |                        |
|                |                            |       |                  | Leader, Follower or Passive, it    |                        |
|                |                            |       |                  | is included and set to true to     |                        |
|                |                            |       |                  | indicate the state of              |                        |
|                |                            |       |                  | configuration for DS-TT port is    |                        |
|                |                            |       |                  | active; when PTP port state is     |                        |
|                |                            |       |                  | in any other case, it is included  |                        |
|                |                            |       |                  | and set to false to indicate the   |                        |
|                |                            |       |                  | state of configuration for DS-TT   |                        |
|                |                            |       |                  | port is inactive. Default value is |                        |
|                |                            |       |                  | false.                             |                        |
| NOTE: Leader   | and Follower terms in this | s spe | cification are a | ligned with NOTE 2 in clause 5.27  | 7.1.2.2.1 of TS 23.501 |
| [3].           |                            |       |                  |                                    |                        |

# 5.15.4.4 Simple data types and enumerations

## 5.15.4.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

## 5.15.4.4.2 Simple data types

The simple data types defined in table 5.15.4.4.2-1 shall be supported.

## Table 5.15.4.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

## 5.15.4.4.3 Void

## 5.15.4.4.4 Enumeration: Protocol

## Table 5.15.4.4.4-1: Enumeration Protocol

| Enumeration<br>value | Description                                                                  | Applicability |
|----------------------|------------------------------------------------------------------------------|---------------|
| ETH                  | Indicates Ethernet as defined in IEEE Std 1588 [45] Annex E is<br>supported. |               |
| IPV4                 | Indicates IPv4 as defined in IEEE Std 1588 [45] Annex C is supported.        |               |
| IPV6                 | Indicates IPv6 as defined in IEEE Std 1588 [45] Annex D is supported         |               |

## 5.15.4.4.5 Enumeration: GmCapable

## Table 5.15.4.4.5-1: Enumeration GmCapable

| Enumeration<br>value | Description                    | Applicability |  |  |
|----------------------|--------------------------------|---------------|--|--|
| GPTP                 | gPTP grandmaster is supported. |               |  |  |
| PTP                  | PTP grandmaste is supported.   |               |  |  |

## 5.15.4.4.6 Enumeration: SubscribedEvent

### Table 5.15.4.4.6-1: Enumeration SubscribedEvent

| Enumeration value                      | Description                                                                                   |
|----------------------------------------|-----------------------------------------------------------------------------------------------|
| AVAILABILITY_FOR_TI<br>ME_SYNC_SERVICE | The AF requests to be notified when the UE is availablility for time synchronization service. |

## 5.15.4.4.7 Enumeration: InstanceType

## Table 5.15.4.4.7-1: Enumeration InstanceType

| Enumeration<br>value   | Description                                                                | Applicability |
|------------------------|----------------------------------------------------------------------------|---------------|
| BOUNDARY_CL<br>OCK     | Indicates Boundary Clock as defined in IEEE Std 1588 [45].                 |               |
| E2E_TRANS_CL<br>OCK    | Indicates End-to-End Transparent Clock as defined in IEEE Std 1588 [45].   |               |
| P2P_TRANS_CL<br>OCK    | Indicates Peer-to-Peer Transparent Clock as defined in IEEE Std 1588 [45]. |               |
| P2P_RELAY_INS<br>TANCE | Indicates PTP Relay instance as defined in IEEE Std 802.1AS [46]           |               |

## 5.15.4.4.8 Enumeration: AsTimeResource

The enumeration AsTimeResource represents the supported 5G clock quality (i.e. the source of time used by the 5GS). It shall comply with the provisions defined in table 5.15.4.4.8-1.

| Enumeration value   | Description                                                   | Applicability |
|---------------------|---------------------------------------------------------------|---------------|
| ATOMIC_CLOCK        | Indicates atomic clock is supported.                          |               |
| GNSS                | Indicates Global Navigation Satellite System is<br>supported. |               |
| TERRESTRIAL_RADIO   | Indicates terrestrial radio is supported.                     |               |
| SERIAL_TIME_CODE    | Indicates serial time code is supported.                      |               |
| PTP                 | Indicates PTP is supported.                                   |               |
| NTP                 | Indicates NTP is supported.                                   |               |
| HAND_SET            | Indicates hand set is supported.                              |               |
| INTERNAL_OSCILLATOR | Indicates internal oscillator is supported.                   |               |
| OTHER               | Indicates other source of time is supported.                  |               |

# 5.15.5 Used Features

The table below defines the features applicable to the TimeSyncExposure API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Table 5.15.5-1: Features used b | y TimeSyncExposure API |
|---------------------------------|------------------------|
|---------------------------------|------------------------|

| Feature<br>number | Feature Name            | Description                                                                                                                                                                   |  |
|-------------------|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 1                 | Notification_websocket  | The delivery of notifications over Websocket is supported as defined in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |  |
| 2                 | Notification_test_event | The testing of notification connection is supported as defined in 3GPP TS 29.122 [4].                                                                                         |  |

# 5.15.6 Error handling

# 5.15.6.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

## 5.15.6.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the TimeSyncExposure API.

## 5.15.6.3 Application Errors

The application errors defined for the TimeSyncExposure API are listed in table 5.15.6.3-1.

## Table 5.15.6.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.16 EcsAddressProvision API

# 5.16.1 Resources

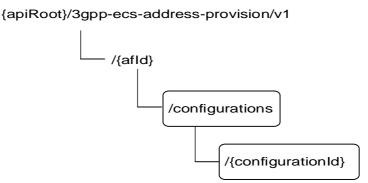

## 5.16.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-ecs-address-provision/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-ecs-address-provision" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.16.1.1-1 and the resources and HTTP methods used for the EcsAddressProvision API.

### Figure 5.16.1.1-1: Resource URI structure of the EcsAddressProvision API

Table 5.16.1.1-1 provides an overview of the resources and HTTP methods applicable for the EcsAddressProvision API.

| Resource name                                     | Resource URI                                 | HTTP method | Description                                                                                     |
|---------------------------------------------------|----------------------------------------------|-------------|-------------------------------------------------------------------------------------------------|
| ECS Address Provision                             | /{afld}/configurations                       | GET         | Read all configurations for a<br>given AF identified by {afld}                                  |
| Configurations                                    | /{and//configurations                        | POST        | Create a new configuration to<br>provision ECS address(es)                                      |
|                                                   |                                              | GET         | Read an existing configuration<br>identified by {configurationId}                               |
| Individual ECS Address<br>Provision Configuration | /{afld}/configurations/{configuratio<br>nld} | PUT         | Modify all of the properties of<br>an existing configuration<br>identified by {configurationId} |
|                                                   |                                              | DELETE      | Delete a configuration identified<br>by {configurationId}                                       |

Table 5.16.1.1-1: Resources and methods overview

# 5.16.1.2 Resource: ECS Address Provision Configurations

## 5.16.1.2.1 Introduction

This resource allows a AF to read all active ECS Address Provision Configurations for a given AF, or create an new Individual ECS Address Provision Configuration to the NEF.

# 5.16.1.2.2 Resource Definition

## Resource URI: {apiRoot}/3gpp-ecs-address-provision/v1/{afId}/configurations

This resource shall support the resource URI variables defined in table 5.16.1.2.2-1.

## Table 5.16.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |  |
|---------|-----------|-------------------------------------|--|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |  |
| afld    | string    | Identifier of the AF.               |  |

# 5.16.1.2.3 Resource Methods

## 5.16.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.16.1.2.2.

## 5.16.1.2.3.2 GET

The GET method allows to read all active configurations for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.16.1.2.3.2-1.

## Table 5.16.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.16.1.2.3.2-2 and the response data structures and response codes specified in table 5.16.1.2.3.2-3.

## Table 5.16.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

## 5.16.1.2.3.3 POST

The POST method creates a new resource to Individual ECS Address Provision Configuration for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.16.1.2.3.3-1 and the response data structures and response codes specified in table 5.16.1.2.3.3-2.

### Table 5.16.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                    |
|------------------|---|-------------|----------------------------------------------------------------|
| EcsAddressProvis | Μ | 1           | Parameters to create a confirguation to provision ECS address. |
| ion              |   |             |                                                                |

### Table 5.16.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                 | Ρ | Cardinality | Response<br>codes | Description                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------|---|-------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------|
| EcsAddressProvi<br>sion                                                                                                   | М | 1           | 201<br>Created    | The configuration was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |
| NOTE: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                   |                                                                                                                                    |

#### Table 5.16.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-ecs-address-<br>provision/v1/{afld}/configurations/{configurationId} |

## 5.16.1.3 Resource: Individual ECS Address Provision Configuration

## 5.16.1.3.1 Introduction

This resource allows a AF to read, update or delete an existing Individual ECS Address Provision Configuration.

## 5.16.1.3.2 Resource Definition

## Resource URI: {apiRoot}/3gpp-ecs-address-provision/v1/{afId}/configurations/{configurationId}

This resource shall support the resource URI variables defined in table 5.16.1.3.2-1.

| Name            | Data type | Definition                                |
|-----------------|-----------|-------------------------------------------|
| apiRoot         | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].       |
| afld            | string    | Identifier of the AF.                     |
| configurationId | string    | Identifier of the configuration resource. |

### Table 5.16.1.3.2-1: Resource URI variables for this resource

### 5.16.1.3.3 Resource Methods

#### 5.16.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.16.1.3.2.

#### 5.16.1.3.3.2 GET

The GET method allows to read the active configuration for a given AF and a given configuration Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.16.1.3.3.2-1.

### Table 5.16.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.16.1.3.3.2-2 and the response data structures and response codes specified in table 5.16.1.3.3.2-3.

### Table 5.16.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

### Table 5.16.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.16.1.3.3.3 PUT

The PUT method is used to replace an existing Individual ECS Address Provision Configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.16.1.3.3.3-1 and the response data structures and response codes specified in table 5.16.1.3.3.3-2.

#### Table 5.16.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                         |
|------------------|---|-------------|---------------------------------------------------------------------|
| EcsAddressProvis | М | 1           | Replace an existing Individual ECS Address Provision Configuration. |
| ion              |   |             |                                                                     |

#### Table 5.16.1.3.3.3-2: Data structures supported by the PUT Response Body on this resource

| 1 200 OK                     | The configuration was updated successfully.                                                                                                                                                                                                                         |

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | -           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.16.1.3.3.3-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.16.1.3.3.4 DELETE

The DELETE method deletes an existing Individual ECS Address Provision Configuration. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.7.1.3.3.4-1.

#### Table 5.7.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.7.1.3.3.4-2 and the response data structures and response codes specified in table 5.7.1.3.3.4-3.

#### Table 5.7.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### 5.16.1A Notifications

Notifications are not applicable to this API.

### 5.16.2 Data Model

### 5.16.2.1 General

This clause specifies the application data model supported by the EcsAddressProvision API.

Table 5.16.2.1-1 specifies the data types defined for the EcsAddressProvision API.

| Data type           | Clause<br>defined | Description                                                 | Applicability |
|---------------------|-------------------|-------------------------------------------------------------|---------------|
| EcsAddressProvision | <u> </u>          | Represents ECS address provision configuration information. |               |

#### Table 5.16.2.1-1: EcsAddressProvision API specific Data Types

#### 5.16.2.2 Reused data types

The data types reused by the EcsAddressProvision API from other specifications are listed in table 5.16.2.2-1.

#### Table 5.16.2.2-1: Re-used Data Types

| Data type           | Reference          | Comments                                                                |
|---------------------|--------------------|-------------------------------------------------------------------------|
| EcsServerAddr       | 3GPP TS 29.571 [8] |                                                                         |
| Link                | 3GPP TS 29.122 [4] | Identifies a referenced resource.                                       |
| SpatialValidityCond | 3GPP TS 29.571 [8] |                                                                         |
| SupportedFeatures   | 3GPP TS 29.571 [8] | Used to negotiate the applicability of the optional features defined in |
|                     |                    | table 5.16.3-1.                                                         |

#### 5.16.2.3 Structured data types

#### 5.16.2.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

#### 5.16.2.3.2 Type: EcsAddressProvision

#### Table 5.16.2.3.2-1: Definition of type EcsAddressProvision

| Attribute name      | Data type          | Ρ | Cardinality | Description                       | Applicability |
|---------------------|--------------------|---|-------------|-----------------------------------|---------------|
| self                | Link               | С | 01          | Identifies the individual         |               |
|                     |                    |   |             | configuration resource.           |               |
|                     |                    |   |             | Shall be present in the HTTP      |               |
|                     |                    |   |             | GET response when reading         |               |
|                     |                    |   |             | all the configurations for an AF. |               |
| ecsServerAddr       | EcsServerAddr      | М | 1           | Represents the ECS                |               |
|                     |                    |   |             | address(es).                      |               |
| spatialValidityCond | SpatialValidityCon | 0 | 01          | Spatial validity condition.       |               |
|                     | d                  |   |             |                                   |               |
| tgtUe               | TargetUeld         | 0 | 01          | Target UE information.            |               |
| suppFeat            | SupportedFeatures  | М | 1           | Indicates the negotiated          |               |
|                     |                    |   |             | supported features.               |               |

#### 5.16.2.4 Simple data types and enumerations

#### 5.16.2.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.16.2.4.2 Simple data types

The simple data types defined in table 5.16.2.4.2-1 shall be supported.

#### Table 5.16.2.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

### 5.16.3 Used Features

The table below defines the features applicable to the EcsAddressProvision API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.16.3-1: Features used by EcsAddressProvision API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

### 5.16.4 Error handling

#### 5.16.4.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

#### 5.16.4.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the EcsAddressProvision API.

#### 5.16.4.3 Application Errors

The application errors defined for EcsAddressProvision API are listed in table 5.16.4.3-1.

#### Table 5.16.4.3-1: Application errors

| Application Error | HTTP status code | Description | Applicability |
|-------------------|------------------|-------------|---------------|
|                   |                  |             |               |

## 5.17 AMPolicyAuthorization API

### 5.17.1 Resources

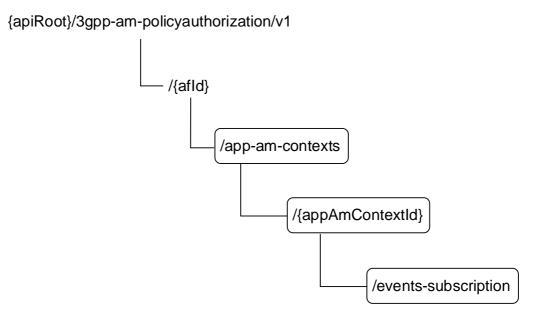

#### 5.17.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-am-policyauthorization/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-ampolicyauthorization" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.17.1.1-1 and the resources and HTTP methods used for the AMPolicyAuthorization API.

#### Figure 5.17.1.1-1: Resource URI structure of the AMPolicyAuthorization API

Table 5.17.1.1-1 provides an overview of the resources and HTTP methods applicable for the AMPolicyAuthorization API.

| Resource name                        | Resource URI                                                         | HTTP method | Description                                                                                                                                             |
|--------------------------------------|----------------------------------------------------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application AM Contexts              | /{afId}/app-am-contexts                                              | POST        | Create a new Individual<br>application AM context<br>resource and may create the<br>child AM Policy Events<br>Subscription sub-resource.                |
|                                      |                                                                      | GET         | Reads an existing Individual application AM context resource.                                                                                           |
| Individual application AM<br>Context | /{afId}/app-am-<br>contexts/{appAmContextId}                         | РАТСН       | Updates an existing Individual<br>application AM context<br>resource. It can also create or<br>update an AM Policy Events<br>Subscription sub-resource. |
|                                      |                                                                      | DELETE      | Deletes an existing Individual<br>application AM context<br>resource and the child AM<br>Policy Events Subscription sub-<br>resource.                   |
| AM Policy Events Subscription        | /{afId}/app-am-<br>contexts/{appAmContextId}/event<br>s-subscription | PUT         | Creates a new AM Policy<br>Events Subscription sub-<br>resource or modifies an existing<br>AM Policy Events Subscription<br>sub-resource.               |
|                                      |                                                                      | DELETE      | Deletes an AM Policy Events<br>Subscription sub-resource.                                                                                               |

Table 5.17.1.1-1: Resources and methods overview

#### 5.17.1.2 Resource: Application AM Contexts

#### 5.17.1.2.1 Introduction

This resource allows an AF to request the creation of a new Individual application AM context resource.

#### 5.17.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-am-policyauthorization/v1/{afId}/app-am-contexts

This resource shall support the resource URI variables defined in table 5.17.1.2.2-1.

#### Table 5.17.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

#### 5.17.1.2.3 Resource Methods

#### 5.17.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.17.1.2.2.

#### 5.17.1.2.3.2 POST

The POST method creates a new resource to Individual application AM context for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.17.1.2.3.2-1 and shall support the response data structures and response codes specified in table 5.17.1.2.3.2-2.

#### Table 5.17.1.2.3.2-1: Data structures supported by the POST Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                            |
|----------------|---|-------------|------------------------------------------------------------------------|
| AppAmContextEx | Μ | 1           | Contains the exposure information for the creation of a new Individual |
| pData          |   |             | application AM context resource.                                       |

#### Table 5.17.1.2.3.2-2: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                   | Ρ     | Cardinality   | Response<br>codes | Description                                                                                                                                                  |  |  |
|-----------------------------------------------------------------------------------------------------------------------------|-------|---------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| AppAmContextEx                                                                                                              | Μ     | 1             | 201               | Successful case.                                                                                                                                             |  |  |
| pRespData                                                                                                                   |       |               | Created           | The Individual application AM context resource was created successfully.<br>The URI of the created resource shall be returned in the "Location" HTTP header. |  |  |
| ProblemDetails                                                                                                              | 0     | 01            | 500 Internal      | (NOTE 2)                                                                                                                                                     |  |  |
|                                                                                                                             |       |               | Server Error      |                                                                                                                                                              |  |  |
| NOTE 1: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |       |               |                   |                                                                                                                                                              |  |  |
| NOTE 2: Failure c                                                                                                           | auses | are described | in clause 5.17.   | 5.                                                                                                                                                           |  |  |

#### Table 5.17.1.2.3.2-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                                   |
|----------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-am-policyauthorization/v1/{afId}/ app-am-contexts/{appAmContextId} |

#### 5.17.1.3 Resource: Individual Application AM Context

#### 5.17.1.3.1 Introduction

This resource allows an AF to read, update or delete an existing Individual application AM context.

#### 5.17.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-am-policyauthorization/v1/{afId}/app-am-contexts/{appAmContextId}

This resource shall support the resource URI variables defined in table 5.17.1.3.2-1.

#### Table 5.17.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                                                                          |
|----------------|-----------|-------------------------------------------------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].                                                 |
| afld           | string    | Identifier of the AF.                                                               |
| appAmContextId | string    | Identifier of the application AM context formatted according to IETF RFC 3986 [44]. |

#### 5.17.1.3.3 Resource Methods

#### 5.17.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.17.1.3.2.

#### 5.17.1.3.3.2 GET

The GET method allows to read the existing application AM context for a given AF and a given application AM context Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.17.1.3.3.2-1.

#### Table 5.17.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.17.1.3.3.2-2, the response data structures and response codes specified in table 5.17.1.3.3.2-3 and the Location Headers specified in table 5.17.1.3.3.2-4 and table 5.17.1.3.3.2-5.

#### Table 5.17.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.17.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                   | Ρ     | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                       |
|-----------------------------|-------|-----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AppAmContextEx              | М     | 1               | 200 OK                       | Successful case.                                                                                                                                                                                                                                                  |
| pData                       |       |                 |                              | The exposure information of an existing Individual application AM context in the request URI is returned.                                                                                                                                                         |
| N/A                         |       |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during the AM context retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                         |       |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during the AM context retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

#### 5.17.1.3.3.3 PATCH

The PATCH method is used to modify an existing Individual application AM context. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.17.1.3.3.3-1.

#### Table 5.17.1.3.3.3-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.17.1.3.3.3-2, the response data structures and response codes specified in table 5.17.1.3.3.3-3 and the Location Headers specified in table 5.17.1.3.3.3-4 and table 5.17.1.3.3.3-5.

#### Table 5.17.1.3.3.3-2: Data structures supported by the PATCH Request Body on this resource

#### 5.17.1.3.3.4 DELETE

The DELETE method deletes an existing Individual application AM context. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.17.1.3.3.4-1.

#### Table 5.17.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.17.1.3.3.4-2 and the response data structures and response codes specified in table 5.17.1.3.3.4-3, and the Location Headers specified in table 5.17.1.3.3.4-4 and table 5.17.1.3.3.4-5.

#### Table 5.17.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

#### Table 5.17.1.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type      | Р      | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                         |
|----------------|--------|-----------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A            |        |                 | 204 No                       | Successful case.                                                                                                                                                                                                                                                    |
|                |        |                 | Content                      | The application AM context was terminated successfully.                                                                                                                                                                                                             |

### 5.17.1.4 Resource: AM Policy Events Subscription

#### 5.17.1.4.1 Introduction

This resource allows an AF to create a new AM policy events subscription sub-resource or modifies an existing AM policy events subscription sub-resource.

#### 5.17.1.4.2 Resource Definition

# $Resource \ URI: \ apiRoot \ 3gpp-am-policy authorization \ v1/\{afId\}/app-am-contexts/\{appAmContextId\}/events-subscription$

This sub-resource shall support the resource URI variables defined in table 5.17.1.4.2-1.

| Name           | Data type | Definition                                                                          |
|----------------|-----------|-------------------------------------------------------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].                                                 |
| afld           | string    | Identifier of the AF.                                                               |
| appAmContextId | •         | Identifier of the application AM context formatted according to IETF RFC 3986 [44]. |

#### 5.17.1.4.3 Resource Methods

#### 5.17.1.4.3.1 General

The following clauses specify the resource methods supported by the sub-resource as described in clause 5.17.1.4.2.

#### 5.17.1.4.3.2 PUT

The PUT method allows to create a new AM policy events subscription sub-resource in an existing application AM context or modifies an existing AM policy events subscription sub-resource. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.17.1.4.3.2-1.

#### Table 5.17.1.4.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.17.1.4.3.2-2, the response data structures and response codes specified in table 5.17.1.4.3.2-3 and the Location Headers specified in table 5.17.1.4.3.2-4, table 5.17.1.4.3.2-5 and table 5.17.1.4.3.2-6.

#### Table 5.17.1.4.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                                    |

| Location | String    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.17.1.4.3.2-6: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.17.1.4.3.3 DELETE

The DELETE method deletes existing subscribed AM policy event(s) within the existing Individual application AM context. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.17.1.4.3.3-1.

#### Table 5.17.1.4.3.3-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.17.1.4.3.3-2 and the response data structures and response codes specified in table 5.17.1.4.3.3-3 and the Location Headers specified in table 5.17.1.4.3.3-4 and table 5.17.1.4.3.3-5.

#### Table 5.17.1.4.3.3-2: Data structures supported by the DELETE Request Body on this resource

| Location | String    | М |             | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

### 5.17.2 Notifications

#### 5.17.2.1 Introduction

Upon receipt of AM Event Notification from the PCF indicating the subscribed AM policy event is detected, the NEF shall send an HTTP POST message including the notified AM policy event to the AF. The NEF and the AF shall support the notification mechanism as described in clause 5.2.5 of 3GPP TS 29.122 [4].

#### Table 5.17.2.1-1: Notifications overview

| Notification          | Callback URI    | HTTP method or<br>custom operation | Description<br>(service operation)                                               |
|-----------------------|-----------------|------------------------------------|----------------------------------------------------------------------------------|
| AM Event Notification | {eventNotifUri} |                                    | The AM policy changes event<br>notification is provided by the NEF<br>to the AF. |

### 5.17.2.2 AM Event Notification

#### 5.17.2.2.1 Description

The AM Event Notification is used by the NEF to report one or several observed AM policy change events to AF that has subscribed to such Notifications via the AM policy events subscription sub-resource.

#### 5.17.2.2.2 Callback URI

The Callback URI "{eventNotifUri}" shall be used with the callback URI variables defined in table 5.17.2.2.2-1.

#### Table 5.17.2.2.2-1: Callback URI variables

| Name          | Definition                                                                                    |
|---------------|-----------------------------------------------------------------------------------------------|
| eventNotifUri | Callback reference provided by the AF during creation/modification of the subscription within |
|               | the AM policy events subscription sub-resource as defined in Table 5.17.3.3.2-1 or            |
|               | Table 5.17.3.3.3-1 or Table 5.6.2.4-1 of 3GPP TS 29.534 [43].                                 |

#### 5.17.2.2.3 Operation Definition

#### 5.17.2.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.17.2.2.3.1-1 and the response data structures and response codes specified in table 5.17.2.2.3.1-2 and the Location Headers specified in table 5.17.2.2.3.1-3 and table 5.17.2.2.3.1-4.

#### Table 5.17.2.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                               |
|------------------|---|-------------|---------------------------------------------------------------------------|
| AmEventsNotifica | М | 1           | Provides information about the observed access and mobility policy change |
| tion             |   |             | events by the NEF to the AF.                                              |

#### Table 5.17.2.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------|
| Location | String    | М | 1           | An alternative URI representing the end point of an alternative |
|          |           |   |             | AF towards which the notification should be redirected.         |

#### Table 5.17.2.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------|
| Location | String    | М |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |

#### 5.17.2.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the AM Event Notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

### 5.17.3 Data Model

### 5.17.3.1 General

This clause specifies the application data model supported by the AMPolicyAuthorization API.

Table 5.17.3.1-1 specifies the data types defined for the AMPolicyAuthorization API.

| Data type                 | Clause<br>defined | Description                                                                                                                                                                       | Applicability |
|---------------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| AppAmContextExpData       | 5.17.3.3.2        | Represents an Individual application AM context exposure resource.                                                                                                                |               |
| AppAmContextExpRespData   | 5.17.3.5.1        | Represents a response to a modification or<br>creation request of an Individual Application AM<br>context resource. It may contain the notification of<br>the already met events. |               |
| AppAmContextExpUpdateData | 5.17.3.3.3        | Contains the modification(s) to be applied to the<br>Individual application AM context exposure<br>resource.                                                                      |               |
| GeographicalArea          | 5.17.3.3.4        | Contains geographical area information (e.g. a civic address or shapes).                                                                                                          |               |

Table 5.17.3.1-1: AMPolicyAuthorization API specific Data Types

### 5.17.3.2 Reused data types

The data types reused by the AMPolicyAuthorization API from other specifications are listed in table 5.17.3.2-1.

| Data type             | Reference           | Comments                                                             |
|-----------------------|---------------------|----------------------------------------------------------------------|
| AmEventsNotification  | 3GPP TS 29.534 [43] | Describes the notification about the events occurred within an       |
|                       |                     | Individual application AM context resource.                          |
| AmEventsSubscData     | 3GPP TS 29.534 [43] | Identifies the AM policy events the application subscribes to.       |
| AmEventsSubscDataRm   | 3GPP TS 29.534 [43] | This data type is defined in the same way as the                     |
|                       |                     | "AmEventsSubscData" data type, but with the OpenAPI "nullable:       |
|                       |                     | true" property.                                                      |
| AmEventsSubscRespData | 3GPP TS 29.534 [43] | It represents a response to an AM policy events subscription         |
|                       |                     | request and contains the created/updated AM Policy Events            |
|                       |                     | Subscription resource. It may also include the Notification of the   |
|                       |                     | events met at the time of subscription.                              |
| CivicAddress          | 3GPP TS 29.572 [34] | Identifies the civic address.                                        |
| DurationSec           | 3GPP TS 29.122 [4]  | Indicates the time duration.                                         |
| DurationSecRm         | 3GPP TS 29.122 [4]  | Indicates the time duration, same as the "DurationSec" data type,    |
|                       |                     | but with the OpenAPI "nullable: true" property.                      |
| GeographicArea        | 3GPP TS 29.572 [34] | Identifies the geographical information with shapes.                 |
| Gpsi                  | 3GPP TS 29.571 [8]  | Identifies a GPSI.                                                   |
| Link                  | 3GPP TS 29.122 [4]  | Identifies a referenced resource.                                    |
| SupportedFeatures     | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of the optional features defined |
|                       |                     | in table 5.17.4-1.                                                   |
| WebsockNotifConfig    | 3GPP TS 29.122 [4]  | Contains the configuration parameters to set up notification         |
|                       |                     | delivery over Websocket protocol.                                    |

Table 5.17.3.2-1: Re-used Data Types

### 5.17.3.3 Structured data types

#### 5.17.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

## 5.17.3.3.2 Type: AppAmContextExpData

| Attribute name              | Data type                   | Р | Cardinality | Description                                                                                                                                                                                                                                                                                                                                                  | Applicability               |
|-----------------------------|-----------------------------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| self                        | Link                        | С | 01          | Identifies the individual<br>configuration resource.<br>Shall be present in the HTTP<br>GET response when reading<br>all the configurations for an<br>AF.                                                                                                                                                                                                    |                             |
| evSubscs                    | AmEventsSubscDa<br>ta       | 0 | 01          | Represents the subscription<br>to one or more AM policy<br>events.                                                                                                                                                                                                                                                                                           |                             |
| gpsi                        | Gpsi                        | М | 1           | Identifies the GPSI.                                                                                                                                                                                                                                                                                                                                         |                             |
| highThruInd                 | boolean                     | С | 01          | Indicates whether high<br>throughput is desired for the<br>indicated UE traffic. Set to<br>"true" if high throughput is<br>desired; otherwise set to<br>"false". Default value is<br>"false" if omitted. (NOTE)                                                                                                                                              |                             |
| covReqs                     | array(Geographical<br>Area) | С | 1N          | Identifies the allowed geographical areas. (NOTE)                                                                                                                                                                                                                                                                                                            |                             |
| policyDuration              | DurationSec                 | 0 | 01          | Indicates the time duration that the policy shall last.                                                                                                                                                                                                                                                                                                      |                             |
| suppFeat                    | SupportedFeatures           | C | 01          | Indicates the negotiated<br>supported features<br>It shall be supplied by the AF<br>in the POST request that<br>requests a creation of an<br>Individual application AM<br>context resource.<br>It shall be supplied by the<br>NEF in the response to the<br>POST request that requests<br>a creation of an Individual<br>application AM context<br>resource. |                             |
| requestTestNotificati<br>on | boolean                     | 0 | 01          | Set to true by the AF to<br>request the NEF to send a<br>test notification as defined in<br>clause 5.2.5.3 of<br>3GPP TS 29.122 [4]. Set to<br>false or omitted otherwise.                                                                                                                                                                                   | Notification_te<br>st_event |
| websockNotifConfig          | WebsockNotifConfi           | 0 | 01          | Configuration parameters to set up notification delivery                                                                                                                                                                                                                                                                                                     | Notification_w<br>ebsocket  |

#### 5.17.3.4 Simple data types and enumerations

#### 5.17.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.17.3.4.2 Simple data types

The simple data types defined in table 5.17.3.4.2-1 shall be supported.

#### Table 5.17.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

#### 5.17.3.5 Data types describing alternative data types or combinations of data types

#### 5.17.3.5.1 Type: AppAmContextExpRespData

# Table 5.17.3.5.1-1: Definition of type AppAmContextExpRespData as a list of non-exclusive alternatives

| Data type            | Cardinality | Description                                                                           | Applicability |
|----------------------|-------------|---------------------------------------------------------------------------------------|---------------|
| AmEventsNotification |             | It represents the notification of a match event                                       |               |
|                      |             | during the creation or modification of the<br>Individual application AM context data. |               |
| AppAmContextExpData  | 1           | It represents the Individual application AM                                           |               |
|                      |             | context resource.                                                                     |               |

### 5.17.4 Used Features

The table below defines the features applicable to the AMPolicyControl API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Table 5.17.4-1: Features used b | v AMPolicvAuthorization API    |
|---------------------------------|--------------------------------|
|                                 | y and oney, achorization / a r |

| Feature<br>number | Feature Name            | Description                                                                                                                                                                     |
|-------------------|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1                 | Notification_websocket  | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |
| 2                 | Notification_test_event | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                         |

### 5.17.5 Error handling

#### 5.17.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

#### 5.17.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the AMPolicyAuthorization API.

#### 5.17.5.3 Application Errors

The application errors defined for the AMPolicyAuthorization API are listed in table 5.17.5.3-1.

| Application Error                    | HTTP status code             | Description                                                                                                                                             |
|--------------------------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| INVALID_POLICY_REQUEST               | 400 Bad Request              | The HTTP request is rejected because the service information for the AM context is invalid or insufficient for the PCF to perform the requested action. |
| APPLICATION_AM_CONTEXT_NOT_FOU<br>ND | 404 Not Found                | The HTTP request is rejected because the<br>specified Individual Application AM Context<br>does not exist.                                              |
| POLICY_ASSOCIATION_NOT_AVAILABLE     | 500 Internal Server<br>Error | The PCF failed in executing binding with the UE/AM Policy Context.                                                                                      |

#### Table 5.17.5.3-1: Application errors

## 5.18 AMInfluence API

### 5.18.1 Resources

#### 5.18.1.1 Overview

All resource URIs of this API should have the following root:

#### {apiRoot}/3gpp-am-influence/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-am-influence" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.18.1.1-1 and the resources and HTTP methods used for the AMInfluence API.

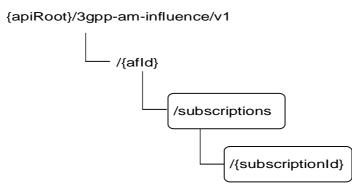

Figure 5.18.1.1-1: Resource URI structure of the AMInfluence API

Table 5.18.1.1-1 provides an overview of the resources and HTTP methods applicable for the AMInfluence API.

| Resource name             | Resource URI                         | HTTP method | Description                                                                      |
|---------------------------|--------------------------------------|-------------|----------------------------------------------------------------------------------|
| AM Influence Subscription | /{afld}/subscriptions                | GET         | Read all subscriptions for a given AF.                                           |
|                           | /{and}/subscriptions                 | POST        | Create a new subscription to<br>AM influence.                                    |
|                           |                                      | GET         | Read a subscription to AM influence.                                             |
| Individual AM Influence   | /{afld}/subscriptions/{subscriptionl | PUT         | Modify all of the properties of<br>an existing subscription to AM<br>influence.  |
| Subscription              | d}                                   | РАТСН       | Modify part of the properties of<br>an existing subscription to AM<br>influence. |
|                           |                                      | DELETE      | Delete a subscription to AM influence.                                           |

#### Table 5.18.1.1-1: Resources and methods overview

### 5.18.1.2 Resource: AM Influence Subscription

#### 5.18.1.2.1 Introduction

This resource allows an AF to read all active AM influence subscribtions and create a new subscription resource for a given AF.

#### 5.18.1.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-am-influence/v1/{afId}/subscriptions

This resource shall support the resource URI variables defined in table 5.18.1.2.2-1.

#### Table 5.18.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

#### 5.18.1.2.3 Resource Methods

#### 5.18.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.18.1.2.2.

5.18.1.2.3.2 GET

The GET method allows to read all active subscriptions for a given AF. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.18.1.2.3.2-1.

#### Table 5.18.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.18.1.2.3.2-2 and the response data structures and response codes specified in table 5.18.1.2.3.2-3.

#### Table 5.18.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.18.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                 | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|---------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AmInfluSub<br>)     | М | 0N              | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                        |
| N/A                       |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                       |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The mar<br>also app |   | y HTTP error st | atus codes fo                | r the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                  |

#### Table 5.18.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.18.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | Μ |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.18.1.2.3.3 POST

The POST method creates a new subscription resource to AM influence subscription for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.18.1.2.3.3-1 and the response data structures and response codes specified in table 5.18.1.2.3.3-2.

#### Table 5.18.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type  | Ρ | Cardinality | Description                                                                    |
|------------|---|-------------|--------------------------------------------------------------------------------|
| AmInfluSub | Μ |             | Parameters to create a resource for the AM Influence and/or notification about |
|            |   |             | service area coverage outcome events with the NEF.                             |

#### Table 5.18.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                  | Ρ | Cardinality      | Response<br>codes | Description                                                                                                                       |
|----------------------------|---|------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| AmInfluSub                 | Μ | 1                | 201<br>Created    | The subscription was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |
| NOTE: The man<br>also appl |   | y HTTP error sta | atus codes for    | the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                     |

#### Table 5.18.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                          |
|----------|-----------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-am-<br>Influence/v1/{afld}/subscriptions/{subscriptionId} |

#### 5.18.1.3 Resource: Individual AM Influence Subscription

#### 5.18.1.3.1 Introduction

This resource allows an AF to read, update or delete an existing AM Influence subscription.

#### 5.18.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-am-influence/v1/{afId}/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.18.1.3.2-1.

#### Table 5.18.1.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                          |
|----------------|-----------|-------------------------------------|
| apiRoot        | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld           | string    | Identifier of the AF.               |
| subscriptionId | string    | Identifier of the subscription.     |

#### 5.18.1.3.3 Resource Methods

#### 5.18.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.18.1.3.2.

5.18.1.3.3.2 GET

The GET method allows to read the active subscription for a given AF and subscription Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.18.1.3.3.2-1.

#### Table 5.18.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.18.1.3.3.2-2 and the response data structures and response codes specified in table 5.18.1.3.3.2-3.

#### Table 5.18.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.18.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type               | P | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                     |
|-------------------------|---|-----------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AmInfluSub              | М | 1               | 200 OK                       | The subscription information for the AF in the request URI are returned.                                                                                                                                                                                        |
| N/A                     |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                     |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The ma<br>also ap |   | y HTTP error st | tatus codes for              | r the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                  |

#### Table 5.18.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.18.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.18.1.3.3.3 PUT

The PUT method is used to replace an existing subscription resource to update a subscription. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.18.1.3.3.3-1 and the response data structures and response codes specified in table 5.18.1.3.3.3-2.

#### Table 5.18.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type  | Ρ | Cardinality | Description                                   |
|------------|---|-------------|-----------------------------------------------|
| AmInfluSub | М | 1           | Modify an existing AM Influence subscription. |

#### Table 5.18.1.3.3.3-2: Data structures supported by the PUT Response Body on this resource

| Data type  | Р | Cardinality | Response<br>codes | Description                                                                  |
|------------|---|-------------|-------------------|------------------------------------------------------------------------------|
| AmInfluSub | М | 1           | 200 OK            | The subscription was replaced successfully and a representation is returned. |
| N/A        |   |             | 204 No<br>Content | The subscription was replaced successfully.                                  |

| N/A   |                          | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
|-------|--------------------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A   |                          | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: | The mandator also apply. | y HTTP error status codes fo | r the PUT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                     |

#### Table 5.18.1.3.3.3-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.18.1.3.3.4 PATCH

The PATCH method allows to change some properties of an existing AM influence subscription. The AF shall initiate the HTTP PATCH request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.18.1.3.3.4-1 and the response data structures and response codes specified in table 5.18.1.3.3.4-2.

#### Table 5.18.1.3.3.4-1: Data structures supported by the PATCH Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                                 |
|-----------------|---|-------------|-----------------------------------------------------------------------------|
| AmInfluSubPatch | М | 1           | Partial update of a subscription to AM influence and/or notifications about |
|                 |   |             | service area coverage outcome events with the NEF.                          |

#### Table 5.18.1.3.3.4-2: Data structures supported by the PATCH Response Body on this resource

| Data type  | P | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                        |
|------------|---|-------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AmInfluSub | М | 1           | 200 OK                       | The subscription was partial modified successfully and a representation is returned.                                                                                                                                                                               |
| N/A        |   |             | 204 No<br>Content            | The subscription was partial modified successfully.                                                                                                                                                                                                                |
| N/A        |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A        |   |             | 308<br>Permanent<br>Redirect | Permanent redirection, during subscription modification. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

#### 3GPP TS 29.522 version 17.16.0 Release 17

277

NOTE: The mandatory HTTP error status codes for the PATCH method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply.

#### Table 5.18.1.3.3.4-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.18.1.3.3.4-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.18.1.3.3.5 DELETE

The DELETE method deletes an existing individual AM influence subscription for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.18.1.3.3.5-1.

#### Table 5.18.1.3.3.5-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.18.1.3.3.5-2 and the response data structures and response codes specified in table 5.18.1.3.3.5-3.

#### Table 5.18.1.3.3.5-2: Data structures supported by the DELETE Request Body on this resource

### 5.18.2 Notifications

#### 5.18.2.1 Introduction

Upon receipt of a service area coverage outcome event from the PCF, the NEF shall send an HTTP POST message including the notified event to the AF. The NEF and the AF shall support the notification mechanism as described in clause 5.2.5 of 3GPP TS 29.122 [4].

#### Table 5.18.2.1-1: Notifications overview

| Notification       | Callback URI              | HTTP method or<br>custom operation | Description<br>(service operation)                              |
|--------------------|---------------------------|------------------------------------|-----------------------------------------------------------------|
| Event Notification | {notificationDestination} | POST                               | The service area coverage outcome event from the NEF to the AF. |

#### 5.18.2.2 Event Notification

#### 5.18.2.2.1 Description

The Event Notification is used by the NEF to report notification of the service area coverage outcome event from the PCF to the AF.

#### 5.18.2.2.2 Target URI

The Callback URI "**{notificationDestination}**" shall be used with the callback URI variables defined in table 5.18.2.2.2-1.

#### Table 5.18.2.2.2-1: Callback URI variables

| Name                    | Data type | Definition                                                                                                                                                                                                                 |
|-------------------------|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| notificationDestination |           | Callback reference provided by the AF during creation/modification of the subscription within the AmInfluSub data type as defined in Table 5.18.3.3.2-1 or the AmInfluSubPatch data type as defined in Table 5.18.3.3.3-1. |

#### 5.18.2.2.3 Operation Definition

#### 5.18.2.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.18.2.2.3.1-1 and the response data structures and response codes specified in table 5.18.2.2.3.1-2.

#### Table 5.18.2.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type         | Ρ | Cardinality | Description                                                             |
|-------------------|---|-------------|-------------------------------------------------------------------------|

#### Table 5.18.2.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

#### 5.18.2.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the AmInfluEventNotif may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

### 5.18.3 Data Model

#### 5.18.3.1 General

This clause specifies the application data model supported by the AMInfluence API.

Table 5.18.3.1-1 specifies the data types defined for the AMInfluence API.

| Data type            | Clause<br>defined | Description                                                                                 | Applicability |
|----------------------|-------------------|---------------------------------------------------------------------------------------------|---------------|
| AmInfluEvent         | 5.18.3.4.3        | Represents the service area coverage outcome event.                                         |               |
| AmInfluEventNotif    | 5.18.3.3.4        | Represents an AM influence event notification.                                              |               |
| AmInfluSub           | 5.18.3.3.2        | Represents an AM influence subscription.                                                    |               |
| AmInfluSubPatch      | 5.18.3.3.3        | Represents parameters to request the modification of an AM influence subscription resource. |               |
| DnnSnssaiInformation | 5.18.3.3.5        | Represents a (DNN, SNSSAI) combination.                                                     |               |

Table 5.18.3.1-1: AMInfluence API specific Data Types

### 5.18.3.2 Reused data types

The data types reused by the AMInfluence API from other specifications are listed in table 5.18.3.2-1.

| Data type          | Reference           | Comments                                                                                                             |
|--------------------|---------------------|----------------------------------------------------------------------------------------------------------------------|
| Dnn                | 3GPP TS 29.571 [8]  | Identifies a DNN.                                                                                                    |
| DurationSec        | 3GPP TS 29.122 [4]  | Indicates the time duration.                                                                                         |
| DurationSecRm      | 3GPP TS 29.122 [4]  | Indicates the time duration, same as the<br>"DurationSec" data type, but with the OpenAPI                            |
| External Orac unit | 20000 TO 20 422 [4] | "nullable: true" property.                                                                                           |
| ExternalGroupId    | 3GPP TS 29.122 [4]  | External Group Identifier for a user group.                                                                          |
| GeographicalArea   | 5.17.3.3.4          | Identifies the geographical area information.                                                                        |
| Gpsi               | 3GPP TS 29.571 [8]  | Identifies a GPSI.                                                                                                   |
| LinkRm             | 3GPP TS 29.122 [4]  | Indicates a referenced resource, same as the "Link"<br>data type, but with the OpenAPI "nullable: true"<br>property. |
| Link               | 3GPP TS 29.122 [4]  | Identifies a referenced resource.                                                                                    |
| Snssai             | 3GPP TS 29.571 [8]  | Identifies the S-NSSAI.                                                                                              |
| SupportedFeatures  | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of the optional features defined in table 5.18.4-1.                              |
| WebsockNotifConfig | 3GPP TS 29.122 [4]  | Contains the configuration parameters to set up<br>notification delivery over Websocket protocol.                    |

#### Table 5.18.3.2-1: Re-used Data Types

### 5.18.3.3 Structured data types

#### 5.18.3.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

#### 5.18.3.3.2 Type: AmInfluSub

This type represents an AM influence subscription. The same structure is used in the subscription request and subscription response.

Table 5.18.3.3.2-1: Definition of type AMInfluSub

| Attribute name              | Data type                       | Р      | Cardinality | Description                                                                                                                                                                                                                      | Applicability<br>(NOTE 1)   |
|-----------------------------|---------------------------------|--------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| afTransId                   | string                          | М      | 1           | Identifies an NEF Northbound<br>interface transaction request,<br>generated by the AF.                                                                                                                                           |                             |
| gpsi                        | Gpsi                            | 0      | 01          | Identifies a user with GPSI.                                                                                                                                                                                                     |                             |
| externalGroupId             | ExternalGroupId                 | 0      | 01          | (NOTE 3)<br>Identifies a group of users.                                                                                                                                                                                         |                             |
|                             |                                 |        |             | (NOTE 3)                                                                                                                                                                                                                         |                             |
| anyUeInd                    | boolean                         | 0      | 01          | Identifies whether the AF<br>request applies to any UE (i.e.<br>all UEs). This attribute shall set<br>to "true" if applicable for any<br>UE, otherwise, set to "false".<br>(NOTE 2) (NOTE 3)                                     |                             |
| dnnSnssaiInfos              | array(DnnSnssaiInf<br>ormation) | 0      | 1N          | Each of the element identifies a combination of (DNN, S-                                                                                                                                                                         |                             |
| afAppIds                    | array(string)                   | 0      | 1N          | NSSAI).<br>Identifies application(s).                                                                                                                                                                                            |                             |
| highThruInd                 | boolean                         | O<br>C | 01          | Indicates application(s).<br>Indicates whether high<br>throughput is desired for UE<br>traffic. Set to "true" if high<br>throughput is desired;<br>otherwise set to "false". Default<br>value is "false" if omitted.<br>(NOTE 4) |                             |
| geoAreas                    | array(Geographical<br>Area)     | С      | 1N          | Identifies geographical areas of<br>the user where the request is<br>applicable. (NOTE 4)                                                                                                                                        |                             |
| policyDuration              | DurationSec                     | 0      | 01          | Indicates the time duration that the policy shall last.                                                                                                                                                                          |                             |
| self                        | Link                            | С      | 01          | Link to the created resource.<br>This parameter shall be<br>supplied by the NEF in HTTP<br>responses that include an<br>object of AmInfluSub type.                                                                               |                             |
| subscribedEvents            | array(AmInfluEvent              | 0      | 1N          | Identifies the requirement to be notified of the event(s).                                                                                                                                                                       |                             |
| notificationDestinatio<br>n | Link                            | С      | 01          | Contains the Callback URL to<br>receive the notification from the<br>NEF.<br>It shall be present if the<br>"subscribedEvents" is present.                                                                                        |                             |
| requestTestNotificati<br>on | boolean                         | 0      | 01          | Set to true by the AF to request<br>the NEF to send a test<br>notification as defined in<br>clause 5.2.5.3 of<br>3GPP TS 29.122 [4]. Set to<br>false or omitted otherwise.                                                       | Notification_te<br>st_event |
| websockNotifConfig          | WebsockNotifConfi<br>g          | 0      | 01          | Configuration parameters to set up notification delivery over Websocket protocol.                                                                                                                                                | Notification_w<br>ebsocket  |
| suppFeat                    | SupportedFeatures               | С      | 01          | Indicates the list of Supported<br>features used as described in<br>clause 5.18.4.<br>This attribute shall be provided<br>in the POST request and in the<br>response of successful<br>resource creation.                         |                             |

| NOTE 2: | If target to any UE, then "anyUeInd" attribute together with "dnnSnssaiInfos" attribute or "afAppIds"          |
|---------|----------------------------------------------------------------------------------------------------------------|
|         | attribute shall be included.                                                                                   |
| NOTE 3: | One of individual UE identifier (i.e. "gpsi" attribute), External Group Identifier (i.e. "externalGroupId") or |
|         | any UE indication "anyUeInd" shall be included.                                                                |
| NOTE 4: | Any of the "highThruInd" attribute or "geoAreas" attribute shall be included.                                  |

#### 5.18.3.3.3 Type: AmInfluSubPatch

This type represents AM influence subscription parameters provided by the AF to the NEF. The structure is used for HTTP PATCH request.

| Attribute name              | Data type                       | Р | Cardinality | Description                                                                                                                                     | Applicability     |
|-----------------------------|---------------------------------|---|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|
| highThruInd                 | boolean                         | 0 | 01          | Indicates whether high<br>throughput is desired for UE<br>traffic. Set to "true" if high<br>throughput is desired;<br>otherwise set to "false". |                   |
| geoAreas                    | array(Geographical<br>Area)     | 0 | 1N          | Identifies geographical areas of<br>the user where the UE is<br>located. (NOTE 1)                                                               |                   |

### 5.18.3.3.4 Type: AmInfluEventNotif

#### Table 5.18.3.3.4-1: Definition of type AmInfluEventNotif

| Attribute name | Data type                   | Р | Cardinality | Description                                                                            | Applicability<br>(NOTE 1) |
|----------------|-----------------------------|---|-------------|----------------------------------------------------------------------------------------|---------------------------|
| afTransId      | string                      | М | 1           | Identifies the AF request for AM policy influence that the event report is related to. |                           |
| event          | AmInfluEvent                | М | 1           | Notified event.                                                                        |                           |
| geoAreas       | array(Geographic<br>alArea) | С | 1N          | Identifies geographical areas of the user where the UE is located.                     |                           |

#### 5.18.3.3.5 Type: DnnSnssaiInformation

| Attribute name | Data type | Ρ | Cardinality | Description                                                                                                                                | Applicability |
|----------------|-----------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| dnn            | Dnn       | 0 |             | Identifies a DNN, a full DNN with both<br>the Network Identifier and Operator<br>Identifier, or a DNN with the Network<br>Identifier only. |               |
| snssai         | Snssai    | 0 | 01          | Identifies an S-NSSAI.                                                                                                                     |               |

#### Table 5.18.3.3.5-1: Definition of type DnnSnssailnformation

#### 5.18.3.4 Simple data types and enumerations

#### 5.18.3.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.18.3.4.2 Simple data types

The simple data types defined in table 5.18.3.4.2-1 shall be supported.

#### Table 5.18.3.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

#### 5.18.3.4.3 Enumeration: AmInfluEvent

The enumeration AmInfluEvent represents the service area coverage outcome event. It shall comply with the provisions defined in table 5.18.3.4.3-1.

#### Table 5.18.3.4.3-1: Enumeration AmInfluEvent

| Enumeration value              | Description                                  |
|--------------------------------|----------------------------------------------|
| SERVICE_AREA_COVR<br>G_OUTCOME | Indicates the service area coverage outcome. |

### 5.18.4 Used Features

The table below defines the features applicable to the AMInfluence API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature<br>number | Feature Name                                                                                                                                                    | Description                                                                                                                                                                     |  |  |  |  |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| 1                 | Notification_websocket                                                                                                                                          | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |  |  |  |  |
| 2                 | Notification_test_event         The testing of notification connection is supported as described in<br>3GPP TS 29.122 [4].                                      |                                                                                                                                                                                 |  |  |  |  |
|                   | Feature: A short name that can be used to refer to the bit and to the feature, e.g. "Notification".<br>Description: A clear textual description of the feature. |                                                                                                                                                                                 |  |  |  |  |

### 5.18.5 Error handling

### 5.18.5.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.18.5.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the AMInfluence API.

### 5.18.5.3 Application Errors

The application errors defined for AMInfluence API are listed in table 5.18.5.3-1.

### Table 5.18.5.3-1: Application errors

| Application Error | HTTP status code | Description | Applicability |
|-------------------|------------------|-------------|---------------|
|                   |                  |             |               |

## 5.19 MBSTMGI API

### 5.19.1 Introduction

The Nnef\_MBSTMGI service shall use the MBSTMGI API.

The API URI of MBSTMGI API shall be:

#### {apiRoot}/3gpp-mbs-tmgi/v1

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-mbs-tmgi".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above root URI.

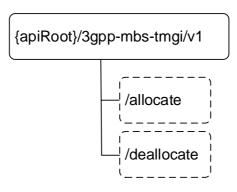

## 5.19.2 Resources

There are no resources defined for this API in this release of the specification.

## 5.19.3 Custom Operations without associated resources

### 5.19.3.1 Overview

The structure of the custom operation URIs of the MBSTMGI API is shown in Figure 5.19.3.1-1.

#### Figure 5.19.3.1-1: Custom operation URI structure of the MBSTMGI API

Table 5.19.3.1-1 provides an overview of the custom operations and applicable HTTP methods.

#### Table 5.19.3.1-1: Custom operations without associated resources

| Operation name | Custom operation URI | Mapped HTTP method | Description                                                                                                                       |
|----------------|----------------------|--------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Allocate       | /allocate            | POST               | Request the allocation of TMGI(s) for<br>new MBS session(s) or the refresh of<br>the expiry time of already allocated<br>TMGI(s). |
| Deallocate     | /deallocate          | POST               | Request the deallocation of TMGI(s).                                                                                              |

#### 5.19.3.2 Operation: Allocate

#### 5.19.3.2.1 Description

The custom operation enables an AF to request the allocation of TMGI(s) for new MBS session(s) or the refresh of the expiry time of already allocated TMGI(s).

#### 5.19.3.2.2 Operation Definition

This operation shall support the request and response data structures and response codes specified in table 5.19.3.2.2-1 and table 5.19.3.2.2-2.

#### Table 5.19.3.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                                    |
|------------------|---|-------------|--------------------------------------------------------------------------------|
| TmgiAllocRequest | М | 1           | Represents the parameters to request the allocation of TMGI(s) for new MBS     |
|                  |   |             | session(s) or the refresh of the expiry time of already allocated MBS TMGI(s). |

| Data type                                                                                                                   | Ρ | Cardinality | Response<br>codes         | Description                                                                                                                                                                                                                         |  |  |
|-----------------------------------------------------------------------------------------------------------------------------|---|-------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| TmgiAllocRespon<br>se                                                                                                       | Μ | 1           | 200 OK                    | Successful case: The TMGI allocation information (e.g. allocated MBS TMGIs, expiry time) or the refreshed expiry time for the concerned already allocated MBS TMGI(s) is/are returned to the requesting AF.                         |  |  |
| n/a                                                                                                                         |   |             | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
| n/a                                                                                                                         |   |             | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]  |  |  |
| ProblemDetailsT<br>mgiAlloc                                                                                                 | 0 | 01          | 403 Forbidden             | (NOTE 2)                                                                                                                                                                                                                            |  |  |
| NOTE 1: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                           |                                                                                                                                                                                                                                     |  |  |
| NOTE 2: Failure cases are described in clause 5.19.7.                                                                       |   |             |                           |                                                                                                                                                                                                                                     |  |  |

#### Table 5.19.3.2.2-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                             |
|----------|-----------|---|-------------|---------------------------------------------------------|

| Name     | Data type | Ρ | Cardinality | Description                                             |
|----------|-----------|---|-------------|---------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an |
|          |           |   |             | alternative NEF.                                        |

#### 5.19.3.3 Operation: Deallocate

#### 5.19.3.3.1 Description

The custom operation enables an AF to request the deallocation of TMGI(s).

#### 5.19.3.3.2 Operation Definition

This operation shall support the request and response data structures and response codes specified in table 5.19.3.3.2-1 and table 5.19.3.3.2-2.

#### Table 5.19.3.3.2-1: Data structures supported by the POST Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                               |
|-----------------|---|-------------|---------------------------------------------------------------------------|
| TmgiDeallocRequ | Μ | 1           | Represents the MBS TMGI(s) deallocation request information (e.g. list of |
| est             |   |             | MBS TMGI(s) to be deallocated).                                           |

# 5.19.4 Notifications

### 5.19.4.1 General

Notifications shall comply to clause 5.2.5 of 3GPP TS 29.122 [4].

| Table 5.19.4.1-1 | Notifications | overview |
|------------------|---------------|----------|
|------------------|---------------|----------|

| Notification                                   | Callback URI      | HTTP method or<br>custom operation | Description<br>(service operation)                             |
|------------------------------------------------|-------------------|------------------------------------|----------------------------------------------------------------|
| Notification of Allocated<br>MBS TMGI(s) Timer | {notificationUri} |                                    | Enable the NEF to notify an AF of the timer expiry for already |
| Expiry                                         |                   |                                    | allocated MBS TMGI(s).                                         |

### 5.19.4.2 Notification of Allocated MBS TMGI(s) Timer Expiry

### 5.19.4.2.1 Description

The Notification is used by the NEF to report timer expiry of already allocated TMGI(s) to the AF.

### 5.19.4.2.2 Target URI

The Callback URI "{notificationUri}" shall be used with the callback URI variables defined in table 5.19.4.2.2-1.

| Name | Definition                                                                              |
|------|-----------------------------------------------------------------------------------------|
|      | Callback URIprovided by the AF during the MBS TMGI(s) allocation or expiry time refresh |
|      | request as defined in table 5.19.5.2.2-1.                                               |

### Table 5.19.4.2.2-1: Callback URI variables

### 5.19.4.2.3 Operation Definition

#### 5.19.4.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.19.4.2.3.1-1 and the response data structures and response codes specified in table 5.19.4.2.3.1-2.

#### Table 5.19.4.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type   | Ρ | Cardinality | Description                                                                                                                  |
|-------------|---|-------------|------------------------------------------------------------------------------------------------------------------------------|
| ExpiryNotif | М |             | Represents the MBS TMGI(s) timer expiry notification information (e.g. list of MBS TMGI(s) for which the timer has expired). |
|             |   |             | IMBS TMGI(S) for which the timer has expired).                                                                               |

#### Table 5.19.4.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data  | type | Ρ | Cardinality | Response<br>codes         | Description                                                                                                                                                                                                                                                                                                        |  |  |
|-------|------|---|-------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| n/a   |      |   |             | 204 No Content            | The notification is received successfully.                                                                                                                                                                                                                                                                         |  |  |
| n/a   |      |   |             | 307 Temporary<br>Redirect | Temporary redirection, during event notification. The<br>response shall include a Location header field containing<br>an alternative URI representing the end point of an<br>alternative AF where the notification should be sent.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
| n/a   |      |   |             | 308 Permanent<br>Redirect | Permanent redirection, during event notification. The response shall include a Location header field containing an alternative URI representing the end point of an alternative AF where the notification should be sent.<br>Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].             |  |  |
| NOTE: |      |   |             |                           |                                                                                                                                                                                                                                                                                                                    |  |  |

### Table 5.19.4.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

#### Table 5.19.4.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative<br>AF towards which the notification should be redirected. |

### 5.19.4.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the Notification of Allocated MBS TMGI(s) Timer Expiry may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.19.5 Data Model

### 5.19.5.1 General

This clause specifies the application data model supported by the MBSTMGI API. Table 5.19.5.1-1 specifies the data types defined for the MBSTMGI API.

| Data type               | Clause defined | Description                                                                                                                                             | Applicability |
|-------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| ExpiryNotif             | 5.19.5.2.5     | Represents TMGI(s) timer expiry<br>notification information.                                                                                            |               |
| ProblemDetailsTmgiAlloc | 5.19.5.4.1     | Represents an extension to the<br>ProblemDetails data structure with<br>additional error information related to<br>TMGI Allocation.                     |               |
| ReducedMbsServArea      | 5.19.5.2.6     | Represents the reduced MBS Service area information.                                                                                                    |               |
| TmgiAllocRequest        | 5.19.5.2.2     | Represents the full set of parameters to<br>initiate a TMGI(s) allocation request or<br>the refresh of the expiry time of already<br>allocated TMGI(s). |               |
| TmgiAllocResponse       | 5.19.5.2.3     | Represents TMGI(s) allocation<br>information or the refreshed expiry time<br>for already allocated TMGI(s).                                             |               |
| TmgiDeallocRequest      | 5.19.5.2.4     | Represents information to request the deallocation of TMGI(s).                                                                                          |               |

### Table 5.19.5.1-1: MBSTMGI specific Data Types

Table 5.19.5.1-2 specifies data types re-used by the MBSTMGI API from other specifications, including a reference to their respective specifications and when needed, a short description of their use within the MBSTMGI API.

| Data type              | Reference           | Comments                                                                                                                           | Applicability |
|------------------------|---------------------|------------------------------------------------------------------------------------------------------------------------------------|---------------|
| ExternalMbsServiceArea | 3GPP TS 29.571 [8]  | Represents an external MBS service area.                                                                                           |               |
| MbsServiceArea         | 3GPP TS 29.571 [8]  | Represents an MBS service area.                                                                                                    |               |
| Tmgi                   | 3GPP TS 29.571 [8]  | Contains a TMGI.                                                                                                                   |               |
| TmgiAllocate           | 3GPP TS 29.532 [52] | Contains parameters to initiate a TMGI(s)<br>allocation request or the refresh of the expiry<br>time of already allocated TMGI(s). |               |
| TmgiAllocated          | 3GPP TS 29.532 [52] | Contains the TMGI(s) allocation information or the refreshed expiry time for already allocated TMGI(s).                            |               |
| Uri                    | 3GPP TS 29.122 [4]  | Contains a TMGI.                                                                                                                   |               |
| WebsockNotifConfig     | 3GPP TS 29.122 [4]  | Contains the configuration parameters to set up notification delivery over Websocket protocol.                                     |               |

### 5.19.5.2 Structured data types

### 5.19.5.2.1 Introduction

This clause defines the structured data types to be used in resource representations.

## 5.19.5.2.2 Type: TmgiAllocRequest

| Attribute name              | Data type                  | Р              | Cardinality | Description                                                                                                                                                                                                                                                  | Applicability               |
|-----------------------------|----------------------------|----------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| afld                        | string                     | М              | 1           | Contains the identifier of the                                                                                                                                                                                                                               |                             |
| tmgiParams                  | TmgiAllocate               | М              | 1           | AF that is sending the request.<br>Contains the parameters to<br>request the allocation of<br>TMGI(s) for new MBS<br>session(s) or the refresh of the<br>expiry time of already allocated<br>MBS TMGI(s).                                                    |                             |
| notificationUri             | Uri                        | 0              | 01          | The notification URI via which<br>the AF desires to receive<br>notifications on timer expiry for<br>MBS TMGI(s).                                                                                                                                             |                             |
| mbsServiceArea              | MbsServiceArea             | 0              | 01          | Indicates the MBS service area<br>for the TMGI(s) to be allocated.<br>This attribute may be provided<br>by the AF for a local MBS<br>service.<br>(NOTE)                                                                                                      |                             |
| extMbsServiceAr<br>ea       | ExternalMbsServiceAr<br>ea | 0              | 01          | Indicates the external MBS<br>service area for the TMGI(s) to<br>be allocated.<br>This attribute may be provided<br>by the AF for a local MBS<br>service.<br>(NOTE)                                                                                          |                             |
| requestTestNotific<br>ation | boolean                    | ο              | 01          | Indicates whether sending a<br>test notification shall be<br>performed.<br>Set to "true" by the AF to<br>request the NEF to send a test<br>notification as defined in<br>clause 5.2.5.3 of<br>3GPP TS 29.122 [4].<br>Set to "false" or omitted<br>otherwise. | Notification_te<br>st_event |

### 5.19.5.2.4 Type: TmgiDeallocRequest

### Table 5.19.5.2.4-1: Definition of type TmgiDeallocRequest

| Attribute name | Data type   | Р | Cardinality | Description                                                    | Applicability |
|----------------|-------------|---|-------------|----------------------------------------------------------------|---------------|
| afld           | string      | М |             | Contains the identifier of the AF that is sending the request. |               |
| tmgis          | array(Tmgi) | М | 1 N         | Contains the list of TMGI(s) to be deallocated.                |               |

### 5.19.5.2.5 Type: ExpiryNotif

### Table 5.19.5.2.5-1: Definition of type ExpiryNotif

| Attribute name | Data type   | Р | Cardinality | Description                                                                        | Applicability |
|----------------|-------------|---|-------------|------------------------------------------------------------------------------------|---------------|
| tmgis          | array(Tmgi) | М | 1N          | Contains the list of previously allocated MBS TMGI(s) for which the timer expired. |               |

### 5.19.5.2.6 Type: ReducedMbsServArea

| Attribute name            | Data type                         | Ρ | Cardinality | Description                                                                                                                                                                                                       | Applicability |
|---------------------------|-----------------------------------|---|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| educedMbsServ<br>vrea     | MbsServiceArea                    | С | 01          | Represents the reduced MBS<br>service area information that can be<br>supported by a single MB-SMF.<br>(NOTE 1) (NOTE 3)                                                                                          |               |
| educedExtMbsS<br>rvArea   | ExternalMbsService<br>Area        | С | 01          | Represents the reduced external<br>MBS service area information that<br>can be supported by a single MB-<br>SMF.<br>(NOTE 1) (NOTE 4)                                                                             |               |
| educedMbsServ<br>Areas    | array(MbsServiceAre<br>a)         | с | 1N          | Represents the additional reduced<br>MBS Service Areas. Each reduced<br>MBS Service Area provided within<br>each array element of this attribute<br>can be supported by a single MB-<br>SMF.<br>(NOTE 2) (NOTE 4) |               |
| educedExtMbsS<br>ervAreas | array(ExternalMbsSe<br>rviceArea) | с | 1N          | Represents the additional reduced<br>external MBS Service Areas. Each<br>reduced MBS Service Area provided<br>within each array element of this<br>attribute can be supported by a<br>single MB-SMF.              |               |

### Table 5.19.5.2.6-1: Definition of type ReducedMbsServArea

NOTE 3: If the "reducedMbsServArea" attribute is present, then the "reducedExtMbsServAreas" attribute shall not be present.

NOTE 4: If the "reducedExtMbsServArea" attribute is present, then the "reducedMbsServAreas" attribute shall not be present.

### 5.19.5.3 Simple data types and enumerations

### 5.19.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.19.5.3.2 Simple data types

The simple data types defined in Table 5.19.5.3.2-1 shall be supported.

### Table 5.19.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

5.19.5.4 Data types describing alternative data types or combinations of data types

5.19.5.4.1 Type: ProblemDetailsTmgiAlloc

### Table 5.19.5.4.1-1: Definition of type ProblemDetailsTmgiAlloc as a list of to be combined data types

| Data type              | Cardinality | Description                                        | Applicability |
|------------------------|-------------|----------------------------------------------------|---------------|
| ProblemDetails         | 1           | Contains additional error related information.     |               |
| ReducedMbsServAre<br>a | 01          | Contains the reduced MBS Service Area information. |               |

## 5.19.6 Used Features

The table below defines the features applicable to the MBSTMGI API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature number | Feature Name                | Description                                                                                                                                                                     |
|----------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1              | Notification_websoc ket     | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |
| 2              | Notification_test_ev<br>ent | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                         |

# 5.19.7 Error handling

### 5.19.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following subclauses shall apply.

### 5.19.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MBSTMGI API.

### 5.19.7.3 Application Errors

The application errors defined for the MBSTMGI API are listed in table 5.19.7.3-1.

### Table 5.19.7.3-1: Application errors

| Application Error          | HTTP status code | Description                                                                                                                                                                                  |
|----------------------------|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBS_SERVICE_AREA_TOO_LARGE | 403 Forbidden    | Indicates that the TMGI allocation request is<br>rejected because the provided MBS Service<br>Area cannot be supported by the network as it<br>is too large to be served by a single MB-SMF. |

# 5.20 MBSSession API

### 5.20.1 Introduction

The Nnef\_MBSSession service shall use the MBSSession API.

The API URI of MBSSession API shall be:

#### {apiRoot}/3gpp-mbs-session/v1

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-mbs-session".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above root URI.

### 5.20.2 Resources

### 5.20.2.1 Overview

This clause describes the structure for the Resource URIs as shown in figure 5.20.2.1-1 and the resources and HTTP methods used for the MBSSession API.

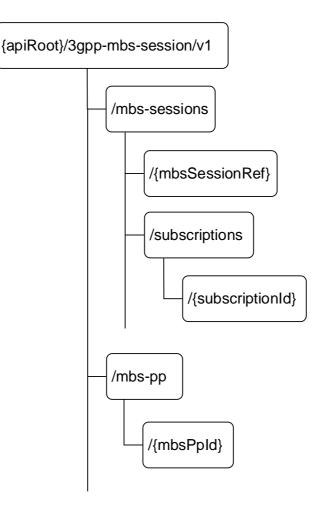

Figure 5.20.2.1-1: Resource URI structure of the MBSSession API

Table 5.20.2.1-1 provides an overview of the resources and applicable HTTP methods.

| Resource name             | Resource URI (relative path under API<br>URI) | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                                                |
|---------------------------|-----------------------------------------------|------------------------------------------|---------------------------------------------------------------------------------------------------|
| MBS Sessions              | /mbs-sessions                                 | POST                                     | Create an MBS Session.                                                                            |
| Individual MBS Session    | /mbs-sessions/{mbsSessionRef}                 | PATCH                                    | Modify an existing<br>Individual MBS Session<br>resource.                                         |
|                           | ///////////////////////////////////////       | DELETE                                   | Delete an existing<br>Individual MBS Session<br>resource.                                         |
| MBS Session Subscriptions | /mbs-sessions/subscriptions                   | GET                                      | Retrieve all the MBS<br>Session Subscriptions                                                     |
|                           | ///////////////////////////////////////       | POST                                     | Create an MBS Session<br>Subscription.                                                            |
| Individual MBS Session    | (who consists a law constant of a shared)     | GET                                      | Retrieve an existing<br>Individual MBS Session<br>Subscription resource.                          |
| Subscription              | /mbs-sessions/subscriptions/{subscriptionId}  | DELETE                                   | Delete an existing<br>Individual MBS Session<br>Subscription resource.                            |
| MBS Parameters            | /                                             | GET                                      | Retrieve all the MBS<br>Parameters Provisioning<br>resources.                                     |
| Provisionings             | /mbs-pp                                       | POST                                     | Request the creation of a<br>new MBS Parameters<br>Provisioning.                                  |
|                           |                                               | GET                                      | Retrieve an existing<br>individual MBS Parameters<br>Provisioning resource.                       |
| Individual MBS Parameters |                                               | PUT                                      | Request the update of an existing Individual MBS Parameters Provisioning resource.                |
| Provisioning              | /mbs-pp/{mbsPpId}                             | PATCH                                    | Request the modification of<br>an existing Individual MBS<br>Parameters Provisioning<br>resource. |
|                           |                                               | DELETE                                   | Request the deletion of an existing Individual MBS Parameters Provisioning resource.              |

### 5.20.2.2 Resource: MBS sessions

### 5.20.2.2.1 Introduction

This resource represents the collection of MBS sessions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.20.2.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-sessions

This resource shall support the resource URI variables defined in table 5.20.2.2.1.

### Table 5.20.2.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.20.1. |

#### 5.20.2.2.3 **Resource Methods**

#### 5.20.2.2.3.1 POST

This method enables an AF to request the creation of an MBS session resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.2.3.1-1.

### Table 5.20.2.2.3.1-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| N/A  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.2.3.1-2 and the response data structures and response codes specified in table 5.20.2.2.3.1-3.

### Table 5.20.2.2.3.1-2: Data structures supported by the POST Request Body on this resource

| Data type           | Ρ | Cardinality | Description                                                 |
|---------------------|---|-------------|-------------------------------------------------------------|
| MbsSessionCreateReq | Μ | 1           | Representation of the MBS session to be created at the NEF. |

### Table 5.20.2.2.3.1-3: Data structures supported by the POST Response Body on this resource

| Data type                                                                                                                  | Р | Cardinality | Response<br>codes | Description                                                                                                                                                                            |  |  |  |  |
|----------------------------------------------------------------------------------------------------------------------------|---|-------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| MbsSessionCreateRsp                                                                                                        | М | 1           | 201 Created       | Successful case. A representation of the created<br>Individual MBS Session resource is returned.<br>The URI of the created resource shall be returned<br>in an HTTP "Location" header. |  |  |  |  |
| ProblemDetails                                                                                                             | 0 | 01          | 400 Bad Request   | (NOTE 2)                                                                                                                                                                               |  |  |  |  |
| ProblemDetailsTmgiAlloc                                                                                                    | 0 | 01          | 403 Forbidden     | (NOTE 2)                                                                                                                                                                               |  |  |  |  |
| ProblemDetails                                                                                                             | 0 | 01          | 404 Not Found     | (NOTE 2)                                                                                                                                                                               |  |  |  |  |
| NOTE 1: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                   |                                                                                                                                                                                        |  |  |  |  |
| NOTE 1: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]             |   |             |                   |                                                                                                                                                                                        |  |  |  |  |

NOTE 2: Failure cases are described in clause 5.20.7.

### Table 5.20.2.2.3.1-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                      |
|----------|-----------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М | 1           | Contains the URI of the newly created<br>resource, according to the structure:<br>{apiRoot}/3gpp-mbs-session/v1/mbs-<br>sessions/{mbsSessionRef} |

#### 5.20.2.2.4 **Resource Custom Operations**

There are no resource custom operations defined for this resource in this release of the specification.

#### 5.20.2.3 Resource: Individual MBS Session

#### 5.20.2.3.1 Introduction

This resource represents an Individual MBS Session managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.20.2.3.2 **Resource Definition**

### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-sessions/{mbsSessionRef}

This resource shall support the resource URI variables defined in table 5.20.2.3.2-1.

### Table 5.20.2.3.2-1: Resource URI variables for this resource

| Name          | Data type | Definition                                                                          |
|---------------|-----------|-------------------------------------------------------------------------------------|
| apiRoot       | string    | See clause 5.20.1.                                                                  |
| mbsSessionRef | string    | Contains the identifier of the Individual MBS Session resource assigned by the NEF. |

### 5.20.2.3.3 Resource Standard Methods

#### 5.20.2.3.3.1 PATCH

The HTTP PATCH method enables an AF to request the modification of an existing Individual MBS Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.3.3.1-1.

### Table 5.20.2.3.3.1-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.3.3.1-2 and the response data structures and response codes specified in table 5.20.2.3.3.1-3.

#### Table 5.20.2.3.3.1-2: Data structures supported by the PATCH Request Body on this resource

| Data type        | Ρ | Cardinality | Description                                                                                                                                                                  |
|------------------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(PatchItem) | М | 1           | Represents the list of modifications to be applied to the concerned existing<br>Individual MBS Session resource, as specified in clause 4.6.1.1.3 of<br>3GPP TS 29.501 [32]. |

#### Table 5.20.2.3.3.1-3: Data structures supported by the PATCH Response Body on this resource

| Data type                                        | Ρ   | Cardinality | Response<br>codes         | Description                                                                                                                                                                                                                         |
|--------------------------------------------------|-----|-------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| n/a                                              |     |             | 204 No Content            | Successful response. The Individual MBS Session resource was successfully modified.                                                                                                                                                 |
| MbsSessionUpda<br>teResp                         | Μ   | 1           | 200 OK                    | Successful response. The Individual MBS Session was successfully updated and MBS Session update related information shall be returned in the response body.                                                                         |
| n/a                                              |     |             | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                                              |     |             | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |

| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

### 5.20.2.3.3.3 DELETE

This method enables an AF to request the deletion of an Individual MBS Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.3.3.3-1.

#### Table 5.20.2.3.3.3-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.3.3.3-2 and the response data structures and response codes specified in table 5.20.2.3.3.3-3.

#### Table 5.20.2.3.3.3-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |

### 5.20.2.3.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

### 5.20.2.4 Resource: MBS Session Subscriptions

### 5.20.2.4.1 Introduction

This resource represents the collection of MBS Session Subscriptions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.20.2.4.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-sessions/subscriptions

This resource shall support the resource URI variables defined in table 5.20.2.4.2-1.

### Table 5.20.2.4.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.20.1. |

### 5.20.2.4.3 Resource Methods

5.20.2.4.3.1 GET

This method enables an AF to request to retrieve all the MBS Session Subscription resources managed by the NEF.

This method shall support the URI query parameters specified in table 5.20.2.4.3.1-1.

### Table 5.20.2.4.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.4.3.1-2 and the response data structures and response codes specified in table 5.20.2.4.3.1-3.

### Table 5.20.2.4.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

### Table 5.20.2.4.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                                                                                                               | Ρ | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                         |  |  |  |  |  |
|-------------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| array(MbsSessionSubsc)                                                                                                  | М | 0N          | 200 OK                       | Successful case. All the MBS Session<br>Subscription resources managed by the NEF are<br>returned.                                                                                                                                  |  |  |  |  |  |
| n/a                                                                                                                     |   |             | 307 Temporary<br>Redirect    | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |  |  |  |  |  |
| n/a                                                                                                                     |   |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |  |  |  |  |  |
| NOTE: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                              |                                                                                                                                                                                                                                     |  |  |  |  |  |

### Table 5.20.2.4.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

### Table 5.20.2.4.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

### 5.20.2.4.3.2 POST

This method enables an AF to request the creation of an MBS Session Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.4.3.2-1.

### Table 5.20.2.4.3.2-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.4.3.2-2 and the response data structures and response codes specified in table 5.20.2.4.3.2-3.

### Table 5.20.2.4.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type       | Ρ | Cardinality | Description                                                 |
|-----------------|---|-------------|-------------------------------------------------------------|
| MbsSessionSubsc | Μ | 1           | Representation of the MBS session to be created at the NEF. |

### Table 5.20.2.4.3.2-3: Data structures supported by the POST Response Body on this resource

| Data type                               | Ρ                                                                                                            | Cardinality | Response<br>codes | Description                                                                                                                                                                                      |  |  |  |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------|-------------|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| MbsSessionSubsc                         | М                                                                                                            | 1           | 201 Created       | Successful case. A representation of the created<br>Individual MBS Session Subscription resource is<br>returned.<br>The URI of the created resource is returned in an<br>HTTP "Location" header. |  |  |  |
| NOTE: The mandatory HTTF<br>also apply. | NOTE: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |             |                   |                                                                                                                                                                                                  |  |  |  |

### Table 5.20.2.4.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М | 1           | Contains the URI of the newly created resource, according<br>to the structure:<br>{apiRoot}/3gpp-mbs-session/v1/mbs-<br>sessions/subscriptions/{subscriptionId} |

### 5.20.2.4.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

### 5.20.2.5 Resource: Individual MBS Session Subscription

### 5.20.2.5.1 Introduction

This resource represents an Individual MBS Session Subscription managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.20.2.5.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-sessions/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.20.2.5.2-1.

#### Table 5.20.2.5.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                                                      |
|----------------|-----------|-----------------------------------------------------------------|
| apiRoot        | string    | See clause 5.20.1.                                              |
| subscriptionId | string    | Identifier of the Individual MBS Session Subscription resource. |

### 5.20.2.5.3 Resource Methods

5.20.2.5.3.1 GET

This method enables an AF to request to retrieve an existing Individual MBS Session Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.5.3.1-1.

### Table 5.20.2.5.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.5.3.1-2 and the response data structures and response codes specified in table 5.20.2.5.3.1-3.

### Table 5.20.2.5.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.20.2.5.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                               | Ρ     | Cardinality   | Response                     | Description                                                                                                                                                                                                                         |
|-----------------------------------------|-------|---------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         |       |               | codes                        |                                                                                                                                                                                                                                     |
| MbsSessionSubsc                         | М     | 1             | 200 OK                       | Successful case. The requested Individual MBS Session Subscription resource is returned.                                                                                                                                            |
| n/a                                     |       |               | 307 Temporary<br>Redirect    | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| n/a                                     |       |               | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| NOTE: The mandatory HTTF<br>also apply. | errc? | r status code | for the GET meth             | nod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                   |

### Table 5.20.2.5.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

#### Table 5.20.2.5.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

### 5.20.2.5.3.2 DELETE

This method enables an AF to request the deletion of an existing Individual MBS Session Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.5.3.2-1.

### Table 5.20.2.5.3.2-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.5.3.2-2 and the response data structures and response codes specified in table 5.20.2.5.3.2-3.

### Table 5.20.2.5.3.2-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.20.2.5.3.2-3: Data structures supported by the DELETE Response Body on this resource

| Data type            | Ρ      | Cardinality | Response                  | Description                                                                                                                                            |
|----------------------|--------|-------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      |        | -           | codes                     | -                                                                                                                                                      |
| n/a                  |        |             | 204 No Content            | Successful case. The concerned Individual MBS<br>Session Subscription resource is successfully<br>deleted.                                             |
| n/a                  |        |             | 307 Temporary<br>Redirect | Temporary redirection. The response shall<br>include a Location header field containing an<br>alternative target URI located in an alternative<br>NEF. |
|                      |        |             |                           | Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].                                                                              |
| n/a                  |        |             | 308 Permanent<br>Redirect | Permanent redirection. The response shall<br>include a Location header field containing an<br>alternative target URI located in an alternative<br>NEF. |
|                      |        |             |                           | Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].                                                                              |

| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

#### Table 5.20.2.5.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI of the resource located in an<br>alternative NEF. |

### 5.20.2.5.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

### 5.20.2.6 Resource: MBS Parameters Provisionings

### 5.20.2.6.1 Introduction

This resource represents the collection of MBS Parameters Provisionings managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

#### 5.20.2.6.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-pp

This resource shall support the resource URI variables defined in table 5.20.2.6.2-1.

### Table 5.20.2.6.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.20.1. |

### 5.20.2.6.3 Resource Methods

#### 5.20.2.6.3.1 GET

This method enables an AF to request to retrieve all the MBS Parameters Provisionings resources managed by the NEF.

This method shall support the URI query parameters specified in table 5.20.2.6.3.1-1.

### Table 5.20.2.6.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.6.3.1-2 and the response data structures and response codes specified in table 5.20.2.6.3.1-3.

#### Table 5.20.2.6.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

### Table 5.20.2.6.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                            | Ρ     | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                         |
|--------------------------------------|-------|----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(MbsPpData)                     | М     | 1N             | 200 OK                       | Successful case. All the Individual MBS<br>Parameters Provisionings resources managed by<br>the NEF are returned.                                                                                                                   |
| n/a                                  |       |                | 307 Temporary<br>Redirect    | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| n/a                                  |       |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| NOTE: The mandatory HTTF also apply. | errc? | or status code | for the GET meth             | nod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                   |

### Table 5.20.2.6.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

### Table 5.20.2.6.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI of the resource located in an<br>alternative NEF. |

#### 5.20.2.6.3.2 POST

This method enables an AF to request the creation of a new MBS Parameters Provisioning at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.6.3.2-1.

#### Table 5.20.2.6.3.2-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.6.3.2-2 and the response data structures and response codes specified in table 5.20.2.6.3.2-3.

#### Table 5.20.2.6.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type | Ρ | Cardinality | Description                                                 |
|-----------|---|-------------|-------------------------------------------------------------|
| MbsPpData | Μ | 1           | Representation of the MBS session to be created in the NEF. |

#### Table 5.20.2.6.3.2-3: Data structures supported by the POST Response Body on this resource

| Data type                            | Ρ    | Cardinality   | Response<br>codes | Description                                                                                                                                                                                               |
|--------------------------------------|------|---------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MbsPpData                            | М    | 1             | 201 Created       | Successful case. A representation of the created<br>Individual MBS Parameters Provisioning resource<br>is returned.<br>The URI of the created resource shall be returned<br>in an HTTP "Location" header. |
| NOTE: The mandatory HTTF also apply. | erro | r status code | for the POST me   | thod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                        |

### Table 5.20.2.6.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                       |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М | 1           | Contains the URI of the newly created resource, according<br>to the structure: {apiRoot}/3gpp-mbs-session/v1/mbs-<br>pp/{mbsPpId} |

### 5.20.2.6.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

### 5.20.2.7 Resource: Individual MBS Parameters Provisioning

### 5.20.2.7.1 Introduction

This resource represents an Individual MBS Parameters Provisioning resource managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.20.2.7.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-mbs-session/v1/mbs-pp/{mbsPpId}

This resource shall support the resource URI variables defined in table 5.20.2.7.2-1.

### Table 5.20.2.7.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                                                         |
|---------|-----------|--------------------------------------------------------------------|
| apiRoot | string    | See clause 5.20.1.                                                 |
| mbsPpId | string    | Identifier of the Individual MBS Parameters Provisioning resource. |

### 5.20.2.7.3 Resource Methods

### 5.20.2.7.3.1 GET

This method enables an AF to request to retrieve an existing Individual MBS Parameters Provisioning resource managed by the NEF.

This method shall support the URI query parameters specified in table 5.20.2.7.3.1-1.

### Table 5.20.2.7.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.7.3.1-2 and the response data structures and response codes specified in table 5.20.2.7.3.1-3.

### Table 5.20.2.7.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

### Table 5.20.2.7.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                               | Ρ     | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                         |
|-----------------------------------------|-------|----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MbsPpData                               | М     | 1              | 200 OK                       | Successful case. The requested Individual MBS Parameters Provisioning resource is successfully returned.                                                                                                                            |
| n/a                                     |       |                | 307 Temporary<br>Redirect    | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| n/a                                     |       |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| NOTE: The mandatory HTTF<br>also apply. | erro? | or status code | for the GET meth             | nod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                   |

### Table 5.20.2.7.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI of the resource located in an<br>alternative NEF. |

#### Table 5.20.2.7.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI of the resource located in an<br>alternative NEF. |

#### 5.20.2.7.3.2 PUT

This method enables an AF to request the update of an existing Individual MBS Parameters Provisioning resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.7.3.2-1.

### Table 5.20.2.7.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.7.3.2-2 and the response data structures and response codes specified in table 5.20.2.7.3.2-3.

#### Table 5.20.2.7.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type | Ρ | Cardinality | Description                                                                            |
|-----------|---|-------------|----------------------------------------------------------------------------------------|
| MbsPpData | М | 1           | Represents the updated Individual MBS Parameters Provisioning resource representation. |

### Table 5.20.2.7.3.2-3: Data structures supported by the PUT Response Body on this resource

| Data type                   | Р | Cardinality     | Response<br>codes         | Description                                                                                                                                                                                                                         |
|-----------------------------|---|-----------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MbsPpData                   |   |                 | 200 OK                    | Successful response. The Individual MBS Parameters<br>Provisioning resource is successfully updated and a<br>representation of the updated resource is returned in the<br>response body.                                            |
| n/a                         |   |                 | 204 No Content            | Successful response. The Individual MBS Parameters<br>Provisioning resource is successfully updated and no<br>content is to be returned in the response body.                                                                       |
| n/a                         |   |                 | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                         |   |                 | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE 1: The mar<br>also app |   | y HTTP error st | atus code for the         | PUT method listed in Table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                            |

### Table 5.20.2.7.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.20.2.7.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

### 5.20.2.7.3.3 PATCH

This method enables an AF to request the modification of an existing Individual MBS Parameters Provisioning resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.7.3.3-1.

### Table 5.20.2.7.3.3-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.7.3.3-2 and the response data structures and response codes specified in table 5.20.2.7.3.3-3.

#### Table 5.20.2.7.3.3-2: Data structures supported by the PATCH Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                                                    |
|----------------|---|-------------|------------------------------------------------------------------------------------------------|
| MbsPpDataPatch | М | 1           | Represents the requested modifications to the Individual MBS Parameters Provisioning resource. |

### Table 5.20.2.7.3.3-3: Data structures supported by the PATCH Response Body on this resource

| Data type | Ρ | Cardinality                         | Response<br>codes         | Description                                                                                                                                                                                                                                                |
|-----------|---|-------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MbsPpData |   |                                     | 200 OK                    | Successful response. The Individual MBS Parameters<br>Provisioning resource is successfully modified and a<br>representation of the updated resource is returned in the<br>response body.                                                                  |
| n/a       |   |                                     | 204 No Content            | Successful response. The Individual MBS Parameters<br>Provisioning resource is successfully modified and no<br>content is to be returned in the response body.                                                                                             |
| n/a       |   |                                     | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of                                               |

| N        | ame | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----|-----------|---|-------------|-------------------------------------------------------------------|
| Locatior | ı   | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

### 5.20.2.7.3.4 DELETE

This method enables an AF to request the deletion of an existing Individual MBS Parameters Provisioning resource at the NEF.

This method shall support the URI query parameters specified in table 5.20.2.7.3.4-1.

### Table 5.20.2.7.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.20.2.7.3.4-2 and the response data structures and response codes specified in table 5.20.2.7.3.4-3.

#### Table 5.20.2.7.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.20.2.7.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type                                     | Р | Cardinality | Response                  | Description                                                                                                                                   |

|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

### 5.20.2.7.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

### 5.20.3 Custom Operations without associated resources

There are no customoperations without associated resources defined for this API in this release of the specification.

### 5.20.4 Notifications

### 5.20.4.1 General

Notifications shall comply to clause 5.2.5 of 3GPP TS 29.122 [4].

### Table 5.20.4.1-1: Notifications overview

| Notification                       | Callback URI      | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                              |
|------------------------------------|-------------------|------------------------------------------|---------------------------------------------------------------------------------|
| MBS Session Status<br>Notification | {notificationUri} | POST                                     | Enables to notify a previously subscribed AF on MBS session status information. |

### 5.20.4.2 MBS Session Status Notification

### 5.20.4.2.1 Description

The MBS Session Status Notification is used by the NEF to report MBS session status information to a subscribed AF.

### 5.20.4.2.2 Target URI

The Callback URI "{notificationUri}" shall be used with the callback URI variables defined in table 5.20.4.2.2-1.

### Table 5.20.4.2.2-1: Callback URI variables

| Name            | Data type | Definition                                                                              |
|-----------------|-----------|-----------------------------------------------------------------------------------------|
| notificationUri | IUfi      | Callback URIprovided by the AF during the creation/modification of the<br>subscription. |

### 5.20.4.2.3 Operation Definition

#### 5.20.4.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.20.4.2.3.1-1 and the response data structures and response codes specified in table 5.20.4.2.3.1-2.

#### Table 5.20.4.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type                 | Ρ | Cardinality | Description                                                             |
|---------------------------|---|-------------|-------------------------------------------------------------------------|
| MbsSessionStatu<br>sNotif | М | 1           | Represents the MBS Session Status information to be reported to the AF. |

### Table 5.20.4.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data type | Ρ | Cardinality                                 | Response<br>codes         | Description                                                                                                                                                                                    |
|-----------|---|---------------------------------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|          |           |   |             | AF towards which the notification should be redirected.         |

#### Table 5.20.4.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

### 5.4.2.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the MBS Session Status Notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

### 5.20.5 Data Model

### 5.20.5.1 General

This clause specifies the application data model supported by the MBSSession API. Table 5.20.5.1-1 specifies the data types defined for the MBSSession API.

| Data type             | Clause defined | Description                                                                               | Applicability      |
|-----------------------|----------------|-------------------------------------------------------------------------------------------|--------------------|
| MbsPpData             | 5.20.5.2.6     | Represents MBS Parameters Provisioning data.                                              |                    |
| MbsPpDataPatch        | 5.20.5.2.8     | Represents the requested modification to<br>existing MBS Parameters Provisioning<br>data. |                    |
| MbsSessAuthData       | 5.20.5.2.7     | Represents the MBS Session Authorization data.                                            |                    |
| MbsSessionCreateReq   | 5.20.5.2.2     | Represents the parameters to request MBS Session creation.                                |                    |
| MbsSessionCreateResp  | 5.20.5.2.3     | Represents the parameters to be returned in an MBS Session creation response.             |                    |
| MbsSessionSubsc       | 5.20.5.2.4     | Represents an MBS Session Subscription.                                                   |                    |
| MbsSessionStatusNotif | 5.20.5.2.5     | Represents an MBS Session Status<br>notification.                                         |                    |
| MbsSessionUpdateResp  | 5.20.5.2.9     | Represents MBS Session update related<br>information.                                     | ReducedMbsServArea |

| Table 5.20.5.1-1: MBSSession | specific Data Types |
|------------------------------|---------------------|
|------------------------------|---------------------|

Table 5.20.5.1-2 specifies data types re-used by the MBSSession API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the MBSSession API.

| Data type                 | Reference           | Comments                                                                                                            | Applicability |
|---------------------------|---------------------|---------------------------------------------------------------------------------------------------------------------|---------------|
| 5MbsAuthorizationInfo     | 3GPP TS 29.503 [17] | Contains the MBS Session authorization information.                                                                 |               |
| DateTime                  | 3GPP TS 29.122 [4]  | Represents a date and a time                                                                                        |               |
| ExternalGroupId           | 3GPP TS 29.122 [4]  | Represents the External Group Identifier for a user group.                                                          |               |
| ExternalMbsServiceArea    | 3GPP TS 29.571 [8]  | Represents an external MBS service area.                                                                            |               |
| Gpsi                      | 3GPP TS 29.571 [8]  | Represents a GPSI.                                                                                                  |               |
| MbsServiceArea            | 3GPP TS 29.571 [8]  | Represents an MBS service area.                                                                                     |               |
| MbsSession                | 3GPP TS 29.571 [8]  | Represents MBS session information.                                                                                 |               |
| MbsSessionId              | 3GPP TS 29.571 [8]  | Represents the identifier of an MBS Session.                                                                        |               |
| MbsSessionEventReportList | 3GPP TS 29.571 [8]  | Represents the list of MBS Session Event Report(a).                                                                 |               |
| MbsSessionSubscription    | 3GPP TS 29.571 [8]  | Represents an MBS Session Subscription                                                                              |               |
| PatchItem                 | 3GPP TS 29.571 [8]  | Represents the requested modifications to a resource via the PATCH method.                                          |               |
| ProblemDetailsTmgiAlloc   | 5.19.5.4.1          | Represents an extension to the<br>ProblemDetails data structure with additional<br>information.                     |               |
| SupportedFeatures         | 3GPP TS 29.571 [8]  | Represents the list of supported feature(s) and<br>used to negotiate the applicability of the<br>optional features. |               |
| Tmgi                      | 3GPP TS 29.571 [8]  | Represents a TMGI.                                                                                                  |               |
| TunnelAddress             | 3GPP TS 29.571 [8]  | Represents a Tunnel Address (UDP/IP).                                                                               |               |
| Uri                       | 3GPP TS 29.122 [4]  | Represents a URI.                                                                                                   |               |

### Table 5.20.5.1-2: Re-used Data Types

### 5.20.5.2 Structured data types

### 5.20.5.2.1 Introduction

This clause defines the structures to be used in resource representations.

### 5.20.5.2.2 Type: MbsSessionCreateReq

| Table 5.20.5.2.2-1: Definition of ty | pe MbsSessionCreateReq |
|--------------------------------------|------------------------|
|--------------------------------------|------------------------|

| Attribute name | Data type         | Ρ | Cardinality | Description                                                                                                                                                                             | Applicability |
|----------------|-------------------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| afld           | string            | М | 1           | Contains the identifier of the AF that is sending the request.                                                                                                                          |               |
| mbsSession     | MbsSession        | Μ | 1           | MBS session to be created.                                                                                                                                                              |               |
| suppFeat       | SupportedFeatures | с | 01          | Contains the list of supported features.<br>This attribute shall be provided in the<br>HTTP POST request to create a new<br>MBS session, if feature negotiation<br>needs to take place. |               |

### 5.20.5.2.3 Type: MbsSessionCreateRsp

### Table 5.20.5.2.3-1: Definition of type CreateRspData

| Attribute name | Data type                     | Ρ | Cardinality | Description                                                                                                                                                                                                         | Applicability |
|----------------|-------------------------------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| mbsSession     | MbsSession                    | Μ | 1           | Represents the created MBS session.                                                                                                                                                                                 |               |
| eventList      | MbsSessionEv<br>entReportList | С | 01          | Contains a list of MBS Session Status Event(s) report(s), if available.                                                                                                                                             |               |
| suppFeat       | SupportedFeat<br>ures         | С | 01          | Contains the list of supported features.<br>This attribute shall be provided in the HTTP<br>POST response to a request to create a new<br>MBS session, if it was present in the<br>corresponding HTTP POST request. |               |

## 5.20.5.2.4 Type: MbsSessionSubsc

### Table 5.20.5.2.4-1: Definition of type MbsSessionSubsc

| Attribute name | Data type                  | Ρ | Cardinality | Description                                                                                              | Applicability |
|----------------|----------------------------|---|-------------|----------------------------------------------------------------------------------------------------------|---------------|
| afld           | string                     | М | 1           | Contains the identifier of the AF that is sending the request.                                           |               |
| subscription   | MbsSessionSu<br>bscription | М | 1           | Represents the parameters of the MBS Session Status subscription to be created                           |               |
|                |                            |   |             | Contains the identifier of the created Individual MBS Session Subscription resource.                     |               |
| subscriptionId | string                     | С | 01          | This attribute shall only be present in the HTTP<br>POST response to an MBS session creation<br>request. |               |

5.20.5.2.5 Type: MbsSessionStatusNotif

### Table 5.20.5.2.5-1: Definition of type MbsSessionStatusNotif

| Attribute name | Data type                     | Ρ | Cardinality | Description                                                             | Applicability |
|----------------|-------------------------------|---|-------------|-------------------------------------------------------------------------|---------------|
| eventList      | MbsSessionEv<br>entReportList | М | · ·         | Contains the reported MBS session event(s) and the related information. |               |

### 5.20.5.2.6 Type: MbsPpData

| Attribute name  | Data type         | Ρ | Cardinality | Description                                                                                                                                                                                 | Applicability |
|-----------------|-------------------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| afld            | string            | М | 1           | Contains the identifier of the AF that is sending the request.                                                                                                                              |               |
| mbsSessAuthData | MbsSessAuthData   | с | 01          | Contains the MBS Session Authorization<br>data that the AF requests to provision.<br>This attribute shall be present when the AF<br>request to provision MBS Session<br>Authorization data. |               |
| suppFeat        | SupportedFeatures | с | 01          | Contains the list of supported features<br>among the ones defined in clause 5.20.6.<br>This attribute shall be provided when feature<br>negocation needs to take place.                     |               |

### 5.20.5.2.7 Type: MbsSessAuthData

### Table 5.20.5.2.7-1: Definition of type MbsSessAuthData

| Attribute name   | Data type             | Ρ | Cardinality | Description                                                                                                                                                        | Applicability |
|------------------|-----------------------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| extGroupId       | ExternalGroupId       | М | 1           | Represents the external group<br>identifier of the targeted multicast<br>MBS Group.                                                                                |               |
| gpsisList        | map(Gpsi)             | с | 1N          | Represents the list of the GPSI(s) of<br>the member UE(s) constituting the<br>multicast MBS group.<br>Any value of type string can be used<br>as a key of the map. |               |
|                  |                       |   |             | This attribute shall be present only if<br>the multicast MBS group has not yet<br>been created or the list of its<br>member(s) needs to be updated.                |               |
| mbsSessionIdList | 5MbsAuthorizationInfo | М | 1           | Contains the identifier(s) of the<br>multicast MBS Session(s) that the<br>multicast MBS group is authorized to<br>join.                                            |               |

5.20.5.2.8 Type: MbsPpDataPatch

### Table 5.20.5.2.8-1: Definition of type MbsPpDataPatch

| Attribute name  | Data type         | Ρ | Cardinality | Description                                                                                   | Applicability |
|-----------------|-------------------|---|-------------|-----------------------------------------------------------------------------------------------|---------------|
| mbsSessAuthData | MbsSessAuthData   | 0 | 01          | Contains the modified MBS Session<br>Authorization data that the AF requests to<br>provision. |               |
| suppFeat        | SupportedFeatures | 0 |             | Contains the modified list of supported features among the ones defined in clause 5.20.6.     |               |

### 5.20.5.2.9 Type: MbsSessionUpdateResp

| Attribute name            | Data type                  | Ρ     | Cardinality      | Description                                                                                                                                                                                                                                                                                                                                     | Applicability |
|---------------------------|----------------------------|-------|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| reducedMbsServ<br>Area    | MbsServiceArea             | C     | 01               | This attribute shall be present only if the<br>requested MBS Service Area cannot be<br>covered by the MB-SMF Service Area of a<br>single MB-SMF, and the MB-SMF reduced the<br>MBS Service Area accordingly.<br>When present, it shall contain the reduced<br>MBS Service Area in which the MBS session<br>has been updated.<br>(NOTE)          |               |
| reducedExtMbsS<br>ervArea | ExternalMbsServi<br>ceArea | C     | 01               | This attribute shall be present only if the<br>requested MBS Service Area cannot be<br>covered by the MB-SMF Service Area of a<br>single MB-SMF, and the MB-SMF reduced the<br>MBS Service Area accordingly.<br>When present, it shall contain the reduced<br>external MBS Service Area in which the MBS<br>session has been updated.<br>(NOTE) |               |

### 5.20.5.3 Simple data types and enumerations

### 5.20.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.20.5.3.2 Simple data types

The simple data types defined in table 5.20.5.3.2-1 shall be supported.

### Table 5.20.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.20.6 Used Features

The table below defines the features applicable to the MBSSession API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

| Feature number | Feature Name           | Description                                                                                                                                                                                                                                                                       |
|----------------|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1              | ReducedMbsServ<br>Area | <ul> <li>This feature indicates the support of the MBS Service Area reduction functionality.</li> <li>The following sub-functionalities are supported: <ul> <li>Support to return the reduced MBS Service Area in an MBS Session creation/update response.</li> </ul> </li> </ul> |

### Table 5.20.6-1: Supported Features

# 5.20.7 Error handling

### 5.20.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

### 5.20.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MBSSession API.

### 5.20.7.3 Application Errors

The application errors defined for the MBSSession API are listed in table 5.20.7.3-1.

| Application Error                    | HTTP status code | Description                                                                                                                                                                                          |
|--------------------------------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| INVALID_MBS_SERVICE_INFO             | 400 Bad Request  | The provided MBS Service Information is<br>invalid (e.g. invalid QoS reference), incorrect<br>or insufficient to perform MBS policy<br>authorization.                                                |
| FILTER_RESTRICTIONS_NOT_OBSERVE<br>D | 400 Bad Request  | The MBS IP flow(s) description provided<br>within the MBS Service Information cannot be<br>handled due to the restrictions defined in<br>clause 5.3.8 of 3GPP TS 29.214 [64] not<br>being observed.  |
| MBS_SERVICE_AREA_TOO_LARGE           | 403 Forbidden    | Indicates that the MBS Session creation<br>request is rejected because the provided MBS<br>Service Area cannot be supported by the<br>network as it is too large to be served by a<br>single MB-SMF. |
| MBS_SERVICE_INFO_NOT_AUTHORIZED      | 403 Forbidden    | The provided MBS Service Information is<br>rejected.                                                                                                                                                 |
| MBS_SESSION_ALREADY_CREATED          | 403 Forbidden    | The requested MBS session has already been<br>created at the NEF/MB-SMF.                                                                                                                             |
| OVERLAPPING_MBS_SERVICE_AREA         | 403 Forbidden    | The provided MBS service area overlaps with<br>the MBS service area of an existing MBS<br>Session that shares the same MBS session<br>Identifier.                                                    |
| UNKNOWN_TMGI                         | 404 Not Found    | The TMGI provided in the request does not<br>exist.                                                                                                                                                  |
| MBS_SESSION_CONTEXT_NOT_FOUND        | 404 Not Found    | The targeted Individual MBS Session does not exist.                                                                                                                                                  |
| UNKNOWN_MBS_SERVICE_AREA             | 404 Not Found    | The requested MBS service area (e.g. identified by the Area Session ID) cannot be found.                                                                                                             |

### Table 5.20.7.3-1: Application errors

# 5.21 EASDeployment API

## 5.21.1 Resources

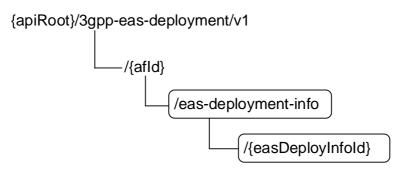

### 5.21.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-eas-deployment/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "3gpp-eas-deployment" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.21.1.1-1 and the resources and HTTP methods used for AF provisioned EAS Deployment information management in the northbound EASDeployment API.

#### Figure 5.21.1.1-1: Resource URI structure of the northbound EASDeployment API

Table 5.21.1.1-1 provides an overview of the resources and HTTP methods applicable for the northbound EASDeployment API.

| Resource name              | Resource URI                | HTTP method | Description                    |
|----------------------------|-----------------------------|-------------|--------------------------------|
|                            |                             | GET         | Read all EAS Deployment        |
|                            |                             | 02.         | information for a given AF.    |
| EAS Deployment Information | /{afId}/eas-deployment-info |             | Create a new Individual EAS    |
|                            |                             | POST        | Deployment information         |
|                            |                             |             | resource.                      |
|                            |                             | GET         | Reads an active Individual EAS |
|                            |                             |             | Deployment Information         |
|                            | /{afId}/eas-deployment-     |             | resource.                      |
| Individual EAS Deployment  |                             |             | Update an existing Individual  |
| Information                | info/{easDeployInfold}      | PUT         | EAS Deployment Information     |
| mornation                  | into/{easDeployintoid}      |             | resource.                      |
|                            |                             |             | Deletes an existing Individual |
|                            |                             | DELETE      | EAS Deployment Information     |
|                            |                             |             | resource.                      |

Table 5.21.1.1-1: Resources and methods overview

### 5.21.1.2 Resource: EAS Deployment Information

#### 5.21.1.2.1 Introduction

This resource allows an AF to request the creation of a new Individual EAS Deployment Information resource.

### 5.21.1.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-eas-deployment/v1/{afId}/eas-deployment-info

This resource shall support the resource URI variables defined in table 5.21.1.2.2-1.

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

### Table 5.21.1.2.2-1: Resource URI variables for this resource

### 5.21.1.2.3 Resource Methods

#### 5.21.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.21.1.2.2.

### 5.21.1.2.3.2 GET

The GET method allows to read all active EAS Deployment information for a given AF and subscription. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.21.1.2.3.2-1.

#### Table 5.21.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.21.1.2.3.2-2, the response data structures and response codes specified in table 5.21.1.2.3.2-3, and the location headers specified in table 5.21.1.2.3.2-4 and table 5.21.1.2.3.2-5.

#### Table 5.21.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

| Data type                | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                                                  |  |
|--------------------------|---|-------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| array(EasDeployl<br>nfo) | М | 0N          | 200 OK                       | The configuration information for the AF in the request URI are returned.                                                                                                                                                                                                                    |  |
| N/A                      |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during EAS deployment information<br>retrieval. The response shall include a Location header field<br>containing an alternative URI of the resource located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |
| N/A                      |   |             | 308<br>Permanent<br>Redirect | Permanent redirection, during EAS deployment information<br>retrieval. The response shall include a Location header field<br>containing an alternative URI of the resource located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |
|                          |   |             |                              |                                                                                                                                                                                                                                                                                              |  |

### Table 5.21.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### Table 5.21.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

### 5.21.1.2.3.3 POST

The POST method creates a new resource of Individual EAS Deployment Information for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.21.1.2.3.3-1, the response data structures and response codes specified in table 5.21.1.2.3.3-2, and the Location Headers specified in table 5.21.1.2.3.3-3.

### Table 5.21.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type     | Ρ | Cardinality | Description                                                             |
|---------------|---|-------------|-------------------------------------------------------------------------|
| EasDeployInfo | М | 1           | EAS Deployment Information, indicates how edge services are deployed in |
|               |   |             | each Local DN.                                                          |

### Table 5.21.1.2.3.3-2: Data structures supported by the POST Response Body on this resource

| Data type                  | Ρ | Cardinality                                                                               | Response<br>codes | Description                                                                                                                                                            |  |

### Table 5.21.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                               |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-eas-deployment/v1/{afld}/eas-deployment-info/{easDeployInfold} |

### 5.21.1.3 Resource: Individual EAS Deployment Information

### 5.21.1.3.1 Introduction

This resource allows an AF to read, update or delete an existing Individual EAS Deployment Information.

### 5.21.1.3.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-eas-deployment/v1/{afId}/eas-deployment-info/{easDeployInfoId}

This resource shall support the resource URI variables defined in table 5.21.1.3.2-1.

| Name            | Data type | Definition                                                                                 |
|-----------------|-----------|--------------------------------------------------------------------------------------------|
| apiRoot         | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].                                                        |
| afld            | string    | Identifier of the AF.                                                                      |
| easDeployInfold | string    | Identifier of the EAS Deployment Information formatted according to<br>IETF RFC 3986 [44]. |

| Table 5.21.1.3.2-1: Resource | URI variables | for this resource |
|------------------------------|---------------|-------------------|
|------------------------------|---------------|-------------------|

### 5.21.1.3.3 Resource Methods

#### 5.21.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.21.1.3.2.

#### 5.21.1.3.3.2 GET

The GET method allows to read the existing EAS Deployment Information for a given AF and a given EAS Deployment Information Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.21.1.3.3.2-1.

#### Table 5.21.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.21.1.3.3.2-2, the response data structures and response codes specified in table 5.21.1.3.3.2-3, and the Location Headers specified in table 5.21.1.3.3.2-4 and table 5.21.1.3.3.2-5.

#### Table 5.21.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

### Table 5.21.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type               | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                                                      |
|-------------------------|---|-----------------|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EasDeployInfo           | М | 1               | 200 OK                       | Successful case.<br>The exposure information of an existing Individual EAS<br>Deployment Information in the request URI is returned.                                                                                                                                                             |
| N/A                     |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during the EAS Deployment Information<br>retrieval. The response shall include a Location header field<br>containing an alternative URI of the resource located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| N/A                     |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during the EAS Deployment Information<br>retrieval. The response shall include a Location header field<br>containing an alternative URI of the resource located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |

### Table 5.21.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.21.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

#### 5.21.1.3.3.3 PUT

The PUT method is used to modify an existing Individual EAS Deployment Information resource. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.21.1.3.3.3-1.

### Table 5.21.1.3.3.3-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.21.1.3.3.3-2, the response data structures and response codes specified in table 5.21.1.3.3.3-3, and the Location Headers specified in table 5.21.1.3.3.3-4 and table 5.21.1.3.3.3-5.

#### Table 5.21.1.3.3.3-2: Data structures supported by the PUT Request Body on this resource

| Data type     | Ρ | Cardinality | Description                                                |
|---------------|---|-------------|------------------------------------------------------------|
| EasDeployInfo | М | 1           | Modify the Individual EAS Deployment Information resource. |

| NOTE: The ma<br>also ap |   | y HTTP error si | tatus codes for              | r the PUT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                                                      |

### Table 5.21.1.3.3.3-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | String    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.21.1.3.3.3-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                  |
|----------|-----------|---|-------------|--------------------------------------------------------------|
| Location | String    | М | 1           | An alternative URI of the resource located in an alternative |
|          |           |   |             | NEF.                                                         |

### 5.21.1.3.3.4 DELETE

The DELETE method deletes an existing Individual EAS Deployment Information resource. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.21.1.3.3.4-1.

#### Table 5.21.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.21.1.3.3.4-2, the response data structures and response codes specified in table 5.21.1.3.3.4-3, and the Location Headers specified in table 5.21.1.3.3.4-4 and table 5.21.1.3.3.4-5.

#### Table 5.21.1.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |
|           |   |             |             |

#### Table 5.21.1.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type      | Ρ      | Cardinality     | Response       | Description                                                     |
|----------------|--------|-----------------|----------------|-----------------------------------------------------------------|

# 5.21.2 Custom Operations without associated resources

# 5.21.2.1 Overview

The structure of the custom operation URIs of the Nnef\_EASDeployment service is shown in Figure 5.21.2.1-1.

### Figure 5.21.2.1-1: Custom operation URI structure of the Nnef\_EASDeployment API

Table 5.21.2.1-1 provides an overview of the custom operations and applicable HTTP methods.

### Table 5.21.2.1-1: Custom operations without associated resources

| Custom operation URI                                                     | Mapped HTTP<br>method | Description                                                                     |
|--------------------------------------------------------------------------|-----------------------|---------------------------------------------------------------------------------|
| {apiRoot}/3gpp-eas-<br>deployment/ <apiversion>/remove-edis</apiversion> |                       | Request the NEF to delete EAS Deployment Information based on given attributes. |

# 5.21.2.2 Operation: remove-edis

#### 5.21.2.2.1 Description

The operation is used by the NF service consumer to delete EAS Deployment Information based on given attributes.

### 5.21.2.2.2 Operation Definition

This operation shall support the request data structures shown in Table 5.21.2.2.2-1 and the response data structures and error codes specified in Table 5.21.2.2.2.2.

#### Table 5.21.2.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type         | Ρ | Cardinality | Description                                                                        |
|-------------------|---|-------------|------------------------------------------------------------------------------------|
| EdiDeleteCriteria | М |             | Information about the criteria to be used for EAS Deployment Information deletion. |

#### Table 5.21.2.2.2-2: Data structures supported by the POST Response Body on this resource

|-----------|---|-------------|-------------------|----------------------------------------------------------------------------------|
| n/a       |   |             |                   | Successful request to remove EAS Deployment Information based on given criteria. |
|           |   |             |                   |                                                                                  |

# 5.21.3 Notifications

None.

# 5.21.4 Data Model

# 5.21.4.1 General

This clause specifies the application data model supported by the EASDeployment API. Table 5.21.4.1-1 specifies the data types defined for the EASDeployment API.

| Data type           | Clause defined | Description                                                                                       | Applicability |
|---------------------|----------------|---------------------------------------------------------------------------------------------------|---------------|
| EasDeployInfo       | 5.21.4.3.2     | EAS Deployment Information, indicates<br>how edge services are deployed in<br>each Local DN.      |               |
| EdiDeleteCriteria   | 5.21.4.3.5     | Contains criteria for deleting EAS<br>Deployment Information.                                     |               |
| DnaiInformation     | 5.21.4.3.3     | list of DNS server identifier and/or IP<br>address(s) of the EAS in the local DN<br>for the DNAI. |               |
| DnsServerldentifier | 5.21.4.3.4     | DNS server identifier (consisting of IP address and port).                                        |               |

Table 5.21.4.1-1: EASDeployment API specific Data Types

# 5.21.4.2 Reused data types

The data types reused by the EASDeployment API from other specifications are listed in table 5.21.4.2-1.

Table 5.21.4.2-1: Re-used Data Types

| Data type               | Reference          | Comments                                    |
|-------------------------|--------------------|---------------------------------------------|
| Afld                    | 5.14.5.4.2         | Represents an AF identifier.                |
| Dnai                    | 3GPP TS 29.571 [8] | Identifies a DNAI.                          |
| Dnn                     | 3GPP TS 29.571 [8] | Identifies a DNN.                           |
| DnnSnssaiInformation    | 5.18.3.3.5         | Contains DNN and S-NSSAI information.       |
| ExternalGroupId         | 3GPP TS 29.122 [4] | External Group Identifier for a user group. |
| FqdnPatternMatchingRule | 3GPP TS 29.571 [8] | Identifies the FQDN pattern matching rule.  |
| lpAddr                  | 3GPP TS 29.571 [8] | IP Address.                                 |
| Snssai                  | 3GPP TS 29.571 [8] | Identifies the S-NSSAI.                     |
| Uinteger                | 3GPP TS 29.571 [8] | Unsigned integer.                           |
| Link                    | 3GPP TS 29.122 [4] | Identifies a referenced resource.           |

# 5.21.4.3 Structured data types

# 5.21.4.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

# 5.21.4.3.2 Type: EasDeployInfo

| Attribute name  | Data type                          | Р | Cardinality | Description                                                                                                                                                                 | Applicability |
|-----------------|------------------------------------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| self            | Link                               | С | 01          | Identifies the individual EAS<br>Deployment information<br>resource.<br>Shall be present in the HTTP<br>GET response when reading<br>all the configurations for an AF.      |               |
| afServiceId     | string                             | 0 | 01          | Identifies a service on behalf of which the AF is issuing the request.                                                                                                      |               |
| fqdnPatternList | array(FqdnPattern<br>MatchingRule) | М | 1N          | Supported FQDN pattern(s) for<br>application(s) deployed in the<br>Local part of the DN where<br>each FQDN pattern is<br>described by a FQDN Pattern<br>Matching Rule.      |               |
| appld           | string                             | 0 | 01          | Identifies the application for<br>which the EAS Deployment<br>Information corresponds to.                                                                                   |               |
| dnn             | Dnn                                | 0 | 01          | DNN for the EAS Deployment Information.                                                                                                                                     |               |
| snssai          | Snssai                             | 0 | 01          | S-NSSAI for the EAS<br>Deployment Information.                                                                                                                              |               |
| externalGroupId | ExternalGroupId                    | 0 | 01          | External Group ID for the EAS<br>Deployment Information.                                                                                                                    |               |
| dnailnfos       | map(DnaiInformati<br>on)           | 0 | 1N          | list of DNS server identifier<br>(consisting of IP address and<br>port) and/or IP address(s) of<br>the EAS in the local DN for<br>each DNAI. The key of map is<br>the DNAI. |               |

#### Table 5.21.4.3.5-1: Definition of type EdiDeleteCriteria

# 5.21.4.4 Simple data types and enumerations

### 5.21.4.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.21.4.4.2 Simple data types

The simple data types defined in table 5.21.4.4.2-1 shall be supported.

#### Table 5.21.4.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.21.5 Used Features

The table below defines the features applicable to the EASDeployment API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.21.5-1: Features used by EASDeployment API

| Feature number | Feature Name | Description |
|----------------|--------------|-------------|
|                |              |             |

# 5.21.6 Error handling

# 5.21.6.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

## 5.21.6.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the EASDeployment API.

### 5.21.6.3 Application Errors

The application errors defined for EASDeployment API are listed in table 5.21.6.3-1.

### Table 5.21.6.3-1: Application errors

| Application Error | HTTP status<br>code | Description | Applicability |
|-------------------|---------------------|-------------|---------------|
|                   |                     |             |               |

# 5.22 ASTI API

# 5.22.1 Resources

### 5.22.1.1 Overview

All resource URIs of this API should have the following root:

### {apiRoot}/3gpp-asti/v1

"apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4]. "apiName" shall be set to "**3gpp-asti**" and "apiVersion" shall be set to "v1" for the current version defined in the present document. All resource URIs in the clauses below are defined relative to the above root URI.

This clause describes the structure for the Resource URIs as shown in figure 5.22.1.1-1 and the resources and HTTP methods used for the ASTI API.

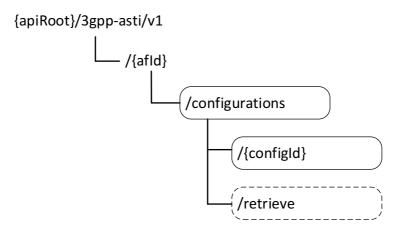

Figure 5.22.1.1-1: Resource URI structure of the ASTI API

Table 5.22.1.1-1 provides an overview of the resources and HTTP methods applicable for the ASTI API.

| Resource name                 | Resource URI                      | HTTP method        | Description                                                                                     |
|-------------------------------|-----------------------------------|--------------------|-------------------------------------------------------------------------------------------------|
|                               | /(ofld)/configurations            | GET                | Read all configurations of 5G access stratum time distribution for a given AF and subscription. |
| ASTI Configurations           | /{afld}/configurations            | POST               | Create a new configuration of<br>5G access stratum time<br>distribution.                        |
|                               | /{afld}/configurations/retrieve   | retrieve<br>(POST) | Retrieval of the status of<br>access stratum time<br>distribution.                              |
| Individual ASTI Configuration |                                   | PUT                | Modify a configuration<br>configuration of 5G access<br>stratum time distribution.              |
|                               | /{afld}/configurations/{configld} | DELETE             | Delete a configuration of 5G<br>access stratum time<br>distribution.                            |
|                               |                                   | GET                | Query the status of the access time distribution                                                |

#### Table 5.22.1.1-1: Resources and methods overview

# 5.22.1.2 Resource: ASTI Configurations

### 5.22.1.2.1 Introduction

This resource allows an AF to read all active configurations of 5G access stratum time distribution for a given AF, or allows an AF to create a new new configuration of 5G access stratum time distribution.

### 5.22.1.2.2 Resource Definition

Resource URI: {apiRoot}/3gpp-asti/v1/{afId}/configurations

This resource shall support the resource URI variables defined in table 5.22.1.2.2-1.

#### Table 5.22.1.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition                          |
|---------|-----------|-------------------------------------|
| apiRoot | string    | Clause 5.2.4 of 3GPP TS 29.122 [4]. |
| afld    | string    | Identifier of the AF.               |

#### 5.22.1.2.3 Resource Methods

5.22.1.2.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.22.1.2.2.

#### 5.22.1.2.3.2 GET

The GET method allows to read all active configurations of 5G access stratum time distribution for a given AF and subscription. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.22.1.2.3.2-1.

#### Table 5.22.1.2.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.22.1.2.3.2-2 and the response data structures and response codes specified in table 5.22.1.2.3.2-3.

#### Table 5.22.1.2.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

#### Table 5.22.1.2.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                             | Ρ | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                                                      |
|---------------------------------------|---|-----------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array(AccessTime<br>DistributionData) | М | 0N              | 200 OK                       | The configuration information for the AF are returned.                                                                                                                                                                                                           |
| N/A                                   |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection, during configuration retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| N/A                                   |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection, during configuration retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE: The man<br>also app             |   | y HTTP error st | tatus codes for              | r the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                   |

#### Table 5.22.1.2.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.22.1.2.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.22.1.2.3.3 POST

The POST method creates a new configuration of 5G access stratum time distribution for a given AF. The AF shall initiate the HTTP POST request message and the NEF shall respond to the message. The NEF shall construct the URI of the created resource.

This method shall support the request data structures specified in table 5.22.1.2.3.3-1 and the response data structures and response codes specified in table 5.22.1.2.3.3-2.

#### Table 5.22.1.2.3.3-1: Data structures supported by the POST Request Body on this resource

| Data type                      | Ρ | Cardinality | Description                                                                  |
|--------------------------------|---|-------------|------------------------------------------------------------------------------|
| AccessTimeDistri<br>butionData | М | 1           | Parameters to create a configuration of 5G access stratum time distribution. |

| Data type                      | Р | Cardinality | Response<br>codes | Description                                                                                                                        |  |  |
|--------------------------------|---|-------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------|--|--|
| AccessTimeDistri<br>butionData | М | 1           | 201<br>Created    | The configuration was created successfully.<br>The URI of the created resource shall be returned in the<br>"Location" HTTP header. |  |  |
|                                |   |             |                   |                                                                                                                                    |  |  |

#### Table 5.22.1.2.3.3-3: Headers supported by the 201 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                             |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ |             | Contains the URI of the newly created resource, according to the structure: {apiRoot}/3gpp-<br>asti/v1/{afId}/configurations/{configId} |

#### 5.22.1.2.4 Resource Custom Operations

#### 5.22.1.2.4.1 Overview

### Table 5.22.1.2.4.1-1: Custom operations

| <b>Operation Name</b> | Custom operation URI     | Mapped HTTP method | Description                                  |
|-----------------------|--------------------------|--------------------|----------------------------------------------|
| retrieve              | /configurations/retrieve | retrieve (POST)    | Request the status of the 5G access          |
|                       |                          |                    | stratum time distribution for a list of UEs. |

#### 5.22.1.2.4.2 Operation: retrieve

#### 5.22.1.2.4.2.1 Description

This custom operation retrieves the status of the access stratum time distribution for a list of UEs.

#### 5.22.1.2.4.2.2 Operation Definition

This operation shall support the request data structures specified in table 5.22.1.2.4.2.2-1 and the response data structure and response codes specified in table 5.22.1.2.4.2.2-2.

#### Table 5.22.1.2.4.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type         | Ρ | Cardinality | Description                                                             |
|-------------------|---|-------------|-------------------------------------------------------------------------|
| StatusRequestData | Μ | 1           | Parameters to be sent by the NF service consumer when the status of     |
|                   |   |             | the 5G access stratum time distribution for a list of UEs is requested. |

#### Table 5.22.1.2.4.2.2-2: Data structures supported by the POST Response Body on this resource

| Data type     | Ρ                                                                                    | Cardinality | Response codes | Description                                                  |  |  |
|---------------|--------------------------------------------------------------------------------------|-------------|----------------|--------------------------------------------------------------|--|--|
| StatusRespons | Μ                                                                                    | 1           | 200 OK         | Status of the 5G access stratum time distribution for a list |  |  |
| eData         |                                                                                      |             |                | of UEs is returned.                                          |  |  |
| NOTE: The r   | The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of |             |                |                                                              |  |  |
| 3GPI          | 3GPP TS 29.122 [4] also apply.                                                       |             |                |                                                              |  |  |

# 5.22.1.3 Resource: Individual ASTI Configuration

## 5.22.1.3.1 Introduction

This resource allows an AF to read/modify/cancel a configuration of 5G access stratum time distribution with the NEF.

### 5.22.1.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-asti/v1/{afId}/configurations/{configId}

This resource shall support the resource URI variables defined in table 5.22.1.3.2-1.

#### Table 5.22.1.3.2-1: Resource URI variables for this resource

| Name     | Data type | Definition                                |
|----------|-----------|-------------------------------------------|
| apiRoot  | string    | Clause 5.2.4 of 3GPP TS 29.122 [4].       |
| afld     | string    | Identifier of the AF.                     |
| configId | string    | Identifier of the configuration resource. |

### 5.22.1.3.3 Resource Methods

#### 5.22.1.3.3.1 General

The following clauses specify the resource methods supported by the resource as described in clause 5.22.1.3.2.

#### 5.22.1.3.3.2 GET

The GET method allows to read the active configuration for a given AF and configuration Id. The AF shall initiate the HTTP GET request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.22.1.3.3.2-1.

#### Table 5.22.1.3.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Р | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| N/A  |           |   |             |             |

This method shall support the request data structures specified in table 5.22.1.3.3.2-2 and the response data structures and response codes specified in table 5.22.1.3.3.2-3.

#### Table 5.22.1.3.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| N/A       |   |             |             |

### Table 5.22.1.3.3.2-3: Data structures supported by the GET Response Body on this resource

| Data type                      | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                                                      |
|--------------------------------|---|-------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AccessTimeDistri<br>butionData | М | 1           | 200 OK                       | The configuration information for the AF in the request URI are returned.                                                                                                                                                                                        |
| N/A                            |   |             | 307<br>Temporary<br>Redirect | Temporary redirection, during configuration retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |

| N/A   |                         |                  | 308<br>Permanent<br>Redirect | Permanent redirection, during configuration retrieval. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |
|-------|-------------------------|------------------|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOTE: | The mandato also apply. | ry HTTP error st | atus codes for               | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                                     |

#### Table 5.22.1.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.22.1.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### 5.22.1.3.3.3 PUT

The PUT method modifies an existing configuration resource to update a configuration. The AF shall initiate the HTTP PUT request message and the NEF shall respond to the message.

This method shall support the request data structures specified in table 5.22.1.3.3.3-1 and the response data structures and response codes specified in table 5.22.1.3.3.3-2.

#### Table 5.22.1.3.3.3-1: Data structures supported by the PUT Request Body on this resource

| Data type                      | Ρ | Cardinality | Description                                                              |
|--------------------------------|---|-------------|--------------------------------------------------------------------------|
| AccessTimeDistri<br>butionData | М | 1           | Modify an existing configuration of 5G access stratum time distribution. |

#### Table 5.22.1.3.3.3-2: Data structures supported by the PUT Response Body on this resource

| Data type                      | Р | Cardinality          | Response<br>codes            | Description                                                                                                                                                                                                                                                         |
|--------------------------------|---|----------------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AccessTimeDistri<br>butionData | М | 1                    | 200 OK                       | The configuration was updated successfully.                                                                                                                                                                                                                         |
| N/A                            |   |                      | 204 No<br>Content            | The configuration was updated successfully.                                                                                                                                                                                                                         |
| N/A                            |   |                      | 307<br>Temporary<br>Redirect | Temporary redirection, during configuration modification. #### 5.22.1.3.3.4 DELETE

The DELETE method deletes the configuration of 5G access stratum time distribution for a given AF. The AF shall initiate the HTTP DELETE request message and the NEF shall respond to the message.

This method shall support the URI query parameters specified in table 5.22.1.3.3.4-1.

#### Table 5.22.1.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|

| Data type                  | Clause<br>defined | Description                                                                                                                                             | Applicability |
|----------------------------|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| AccessTimeDistributionData | 5.22.4.3.2        | Contains the parameters for the creation of 5G access stratum time distribution configuration.                                                          |               |
| ActiveUe                   | 5.22.4.3.5        | Contains the UE identifier whose status of the access stratum time distribution is active and the optional requested time synchronization error budget. |               |
| StatusRequestData          | 5.22.4.3.3        | Contains the parameters for retrieval of the status<br>of the access stratum time distribution for a list of<br>UEs.                                    |               |
| StatusResponseData         | 5.22.4.3.4        | Contains the parameters for the status of the access stratum time distribution for a list of UEs.                                                       |               |

# 5.22.4.2 Reused data types

The data types reused by the TimeSyncExposure API from other specifications are listed in table 5.22.4.2-1.

### Table 5.22.4.2-1: Re-used Data Types

| Data type               | Reference           | Comments                               |
|-------------------------|---------------------|----------------------------------------|
| AsTimeDistributionParam | 3GPP TS 29.565 [50] | Contains the 5G access stratum time    |
|                         |                     | distribution parameters.               |
| ExternalGroupId         | 3GPP TS 29.122 [4]  | External Group Identifier for a user   |
|                         |                     | group.                                 |
| Gpsi                    | 3GPP TS 29.571 [8]  | Identifies a GPSI.                     |
| SupportedFeatures       | 3GPP TS 29.571 [8]  | Used to negotiate the applicability of |
|                         |                     | the optional features defined in       |
|                         |                     | table 5.22.5-1.                        |

# 5.22.4.3 Structured data types

# 5.22.4.3.1 Introduction

This clause defines the structured data types to be used in resource representations.

### 5.22.4.3.2 Type: AccessTimeDistributionData

### Table 5.22.4.3.2-1: Definition of type AccessTimeDistributionData

| gpsis a | ( <b>C</b> )                                |   | Cardinality | Description                                                                                                                                                                                                                                                         | Applicability |
|---------|---------------------------------------------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
|         | array(Gpsi)                                 | С | 1N          | Identifies a list of UE(s).<br>(NOTE)                                                                                                                                                                                                                               |               |
| 1       | ExternalGroupl<br>d                         | С | 0.1         | Represents a group of<br>users. (NOTE)                                                                                                                                                                                                                              |               |
|         | AsTimeDistribut<br>ionParam                 | Μ | 1           | 5G access stratum time<br>distribution parameters                                                                                                                                                                                                                   |               |
|         | SupportedFeatu<br>res<br>sis" or "exterGrou |   | 01          | Represents the features<br>supported by the NF service<br>consumer. This parameter<br>shall be supplied by the NF<br>service consumer in the<br>POST request and the<br>response that requested the<br>creation of an Individual<br>ASTI Configuration<br>resource. |               |

# 5.22.4.3.3 Type: StatusRequestData

### Table 5.22.4.3.3-1: Definition of type StatusRequestData

| Attribute name | Data type   | Ρ | Cardinality | Description                 | Applicability |
|----------------|-------------|---|-------------|-----------------------------|---------------|
| gpsis          | array(Gpsi) | М | 1N          | Identifies a list of UE(s). |               |

# 5.22.4.3.4 Type: StatusResponseData

### Table 5.22.4.3.4-1: Definition of type StatusResponseData

| Attribute name | Data type       | Ρ | Cardinality | Description                                                                                                                                                                  | Applicability |
|----------------|-----------------|---|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| inactiveUes    | array(Gpsi)     | 0 | 1N          | Indicate the UE(s) whose status of the access stratum time distribution is inactive.                                                                                         |               |
| activeUes      | array(ActiveUe) | 0 | 1N          | Contains the UE identifier(s)<br>whose status of the access<br>stratum time distribution is<br>active and the optional<br>requested time<br>synchronization error<br>budget. |               |

# 5.22.4.3.5 Type: ActiveUe

## Table 5.22.4.3.5-1: Definition of type ActiveUe

| Attribute name  | Data type | Ρ | Cardinality | Description                                                                                     | Applicability |
|-----------------|-----------|---|-------------|-------------------------------------------------------------------------------------------------|---------------|
| gpsi            | Gpsi      | М | 1           | Indicate the UE whose<br>status of the access stratum<br>time distribution is active.           |               |
| timeSyncErrBdgt | Uinteger  | 0 | 01          | Indicates the time<br>synchronization error<br>budget in terms of time units<br>of nanoseconds. |               |

# 5.22.4.4 Simple data types and enumerations

# 5.22.4.4.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.22.4.4.2 Simple data types

The simple data types defined in table 5.22.4.4.2-1 shall be supported.

## Table 5.22.4.4.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.22.5 Used Features

The table below defines the features applicable to the ASTI API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

## Table 5.22.5-1: Features used by ASTI API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

# 5.22.6 Error handling

# 5.22.6.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.22.6.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the ASTI API.

# 5.22.6.3 Application Errors

The application errors defined for the ASTI API are listed in table 5.22.6.3-1.

#### Table 5.22.6.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.23 DataReporting API

# 5.23.1 Introduction

The Nnef\_DataReporting service shall use the DataReporting API.

The API URI of DataReporting API shall be:

{apiRoot}/<apiName>/<apiVersion>

The request URIs used in HTTP requests shall have the Resource URI structure defined in clause 5.2.4 of 3GPP TS 29.122 [2], i.e.:

{apiRoot}/<apiName>/<apiVersion>/<apiSpecificSuffixes>

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-data-reporting".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above API URI.

# 5.23.2 Resources

This clause describes the structure for the Resource URIs as shown in Figure 5.23.2-1 and the resources and HTTP methods used for the DataReporting API.

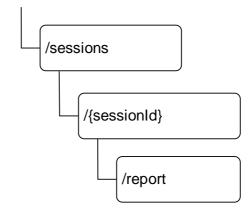

Figure 5.23.2-1: Resource URI structure of the DataReporting API

Table 5.23.2-1 provides an overview of the resources and applicable HTTP methods.

| Resource name                        | Resource URI (relative path under API<br>URI) | HTTP<br>method<br>or<br>custom<br>operation | Description<br>(service operation)                                   |
|--------------------------------------|-----------------------------------------------|---------------------------------------------|----------------------------------------------------------------------|
| Data Reporting Sessions              | /sessions                                     | POST                                        | Create a Data Reporting<br>Session                                   |
| Individual Data Reporting<br>Session | /sessions/{sessionId}                         | GET                                         | Retreive an existing Individual Data Reporting Session resource.     |
|                                      |                                               | PUT                                         | Update an Individual existing<br>Data Reporting Session<br>resource. |
|                                      |                                               | DELETE                                      | Delete an existing Individual<br>Data Reporting Session<br>resource. |
|                                      |                                               | report<br>(POST)                            | Report data.                                                         |

Table 5.23.2-1: Resources and methods overview

# 5.23.2.2 Resource: Data Reporting Sessions

### 5.23.2.2.1 Introduction

This resource represents the collection of Data Reporting Sessions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.23.2.2.2 Resource definition

#### Resource URL: {apiRoot}/3gpp-data-reporting/v1/sessions

This resource shall support the resource URL variables defined in table 5.23.2.2.1.

### Table 5.23.2.2.1: Resource URL variables for this resource

| Name    | Data type | Definition          |  |  |  |
|---------|-----------|---------------------|--|--|--|
| apiRoot | string    | See clause 5.213.1. |  |  |  |

#### 5.23.2.2.3 Resource Methods

5.23.2.2.3.1 POST

This method enables an AF to request the creation of a Data Reporting Session at the NEF.

This method shall support the URI query parameters specified in table 5.23.2.2.3.1-1.

### Table 5.23.2.2.3.1-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.23.2.2.3.1-2 and the response data structures and response codes specified in table 5.23.2.2.3.1-4.

#### Table 5.23.2.2.3.1-2: Data structures supported by the POST request body on this resource

| Data type                                                                                                                               | Ρ | Cardinality | Description                                                       |  |
|-----------------------------------------------------------------------------------------------------------------------------------------|---|-------------|-------------------------------------------------------------------|--|
| DataReportingSession                                                                                                                    | М | 1           | Representation of the Data Reporting Session to be created in the |  |
| (NOTE)     NEF.<br>NOTE: The "sessionId" attribute of the DataReportingSession data type shall not be provided as it is not applicable. |   |             |                                                                   |  |

#### Table 5.23.2.2.3.1-3: Data structures supported by the POST response body on this resource

| Data type                                                                                                                      | Ρ      | Cardinality | Response<br>codes | Description                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------|--------|-------------|-------------------|----------------------------------------------------------------------------------------------------------------|
| DataReportingSession<br>(NOTE 2)                                                                                               | М      | 1           | 201 Created       | Successful case. A representation of the created<br>Individual Data Reporting Session resource is<br>returned. |
|                                                                                                                                |        |             |                   | The URI of the created resource shall be<br>returned in an HTTP "Location" header.                             |
| NOTE 1: The mandatory HTTP error status codes for the POST method listed in table 5.2.6-1 of<br>3GPP TS 29.122 [4] also apply. |        |             |                   |                                                                                                                |
| NOTE 2: The "sessionId" attribute applicable.                                                                                  | of the | DataReporti | ngSession dat     | a type shall not be provided as it is not                                                                      |

### Table 5.23.2.2.3.1-4: Headers supported by the 201 response code on this resource

| HTTP response header | Data type | Ρ | Cardinality | Description                                                                                                                     |
|----------------------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------|
| Location             | string    | Μ |             | The URI of the newly created resource,<br>according to the structure: {apiRoot}/3gpp-<br>data-reporting/v1/sessions/{sessionId} |

# 5.23.2.3 Resource: Individual Data Reporting Session

### 5.23.2.3.1 Introduction

This resource represents an Individual Data Reporting Session managed bythe NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.23.2.3.2 Resource Definition

### Resource URL: {apiRoot}/3gpp-data-reporting/v1/sessions/{sessionId}

This resource shall support the resource URI variables defined in table 5.23.2.3.2-1.

# Table 5.23.2.3.2-1: Resource URL variables for this resource

| Name      | Data type | Definition                                                                    |  |  |  |
|-----------|-----------|-------------------------------------------------------------------------------|--|--|--|
| apiRoot   | string    | See clause 5.23.1                                                             |  |  |  |
| sessionId | string    | Represents the identifier of the Individual Data Reporting Sessions resource. |  |  |  |

### 5.23.2.3.3 Resource standard methods

#### 5.23.2.3.3.1 GET

This method enables an AF to retrieve an existing Individual Data Reporting Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.23.2.3.3.1-1.

#### Table 5.23.2.3.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.23.2.3.3.1-2 and the response data structures and response codes specified in table 5.23.2.3.3.1-3.

#### Table 5.23.2.3.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.23.2.3.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                              | Ρ     | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                         |
|----------------------------------------|-------|----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DataReportingSession                   | М     | 1              | 200 OK                       | Successful case. The requested Individual Data Reporting Session resource is returned to the AF.                                                                                                                                    |
| n/a                                    |       |                | 307 Temporary<br>Redirect    | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| n/a                                    |       |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| NOTE 1: The mandatory HTTF also apply. | errc, | or status code | for the GET meth             | nod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                   |
| NOTE 2: The "sessionId" attrib         | ute c | of the DataRep | ortingSession da             | ata type shall not be provided as it is not applicable.                                                                                                                                                                             |

#### Table 5.23.2.3.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                              |
|----------|-----------|---|-------------|----------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI located in an alternative NEF. |

#### Table 5.23.2.3.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

5.23.2.3.3.2 PUT

This method enables an AF to update an existing Individual Data Reporting Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.23.2.3.3.2-1.

#### Table 5.23.2.3.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
|      |           |   |             |             |

This method shall support the request data structures specified in table 5.23.2.3.3.2-2 and the response data structures and response codes specified in table 5.23.2.3.3.2-4.

### Table 5.23.2.3.3.2-2: Data structures supported by the PUT request body on this resource

| Data type                                                                                                            | Ρ | Cardinality | Description                                                |  |  |  |
|----------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------------------------------------|--|--|--|
| DataReportingSession                                                                                                 | М | 1           | Parameters to update the Individual Data Reporting Session |  |  |  |
|                                                                                                                      |   |             | resource.                                                  |  |  |  |
| NOTE: The "sessionId" attribute of the DataReportingSession data type shall not be provided as it is not applicable. |   |             |                                                            |  |  |  |

#### Table 5.23.2.3.3.2-3: Data structures supported by the PUT response body on this resource

|                    | Data type     | Ρ | Cardinality | Response<br>codes         | Description                                                                                                                                                                                                                                                                    |
|--------------------|---------------|---|-------------|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| DataRepo           | ortingSession | М | 1           | 200 OK                    | The Individual Data Reporting Session<br>resource was updated successfully and a<br>representation of the created resource is<br>returned in the response body.                                                                                                                |
| n/a                |               |   |             | 204 No Content            | The Individual Data Reporting Session resource was successfully updated and no content is to be returned in the response body.                                                                                                                                                 |
| n/a                |               |   |             | 307 Temporary<br>Redirect | Temporary redirection. The response shall<br>include a Location header field containing<br>an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in                                                                                 |
| n/a                |               |   |             | 308 Permanent<br>Redirect | clause 5.2.10 of 3GPP TS 29.122 [4].<br>Permanent redirection. The response shall<br>include a Location header field containing<br>an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in<br>clause 5.2.10 of 3GPP TS 29.122 [4]. |
| NOTE 1:<br>NOTE 2: | also apply.   |   |             |                           | ed in Table 5.2.6-1 of 3GPP TS 29.122 [4]<br>e shall not be provided as it is not                                                                                                                                                                                              |

### Table 5.23.2.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.23.2.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

### 5.23.2.3.3.3 DELETE

This method enables an AF to request the deletion of an Individual Data Reporting Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.23.2.3.3-1.

#### Table 5.23.2.3.3.3-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| n/a  |           |   |             |             |

This method shall support the request data structures specified in table 5.23.2.3.3.2 and the response data structures and response codes specified in table 5.23.2.3.3.3.3.

#### Table 5.23.2.3.3.3-2: Data structures supported by the DELETE request body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.23.2.3.3.3-3: Data structures supported by the DELETE response body on this resource

| Data type | Р | Cardinality                        | Response<br>Codes         | Description                                                                                                                                                                                                                         |
|-----------|---|------------------------------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| n/a       |   |                                    | 204 No Content            | Successful response. The Individual Data Reporting Session resource was successfully deleted.                                                                                                                                       |
|           |   |                                    | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
|           |   |                                    | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |

| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

5.23.2.3.4 Resource custom operations

5.23.2.3.4.1 Overview

| Operation name | Custom operaration URI       | Mapped HTTP<br>method | Description                                   |
|----------------|------------------------------|-----------------------|-----------------------------------------------|
| Report         | /sessions/{sessionId}/report |                       | Enables to send collected UE data<br>reports. |

5.23.2.3.4.2 Operation: Report

5.23.2.3.4.2.1 Description

The custom operation enables an AF to send collected UE data reports to the NEF.

#### 5.23.2.3.4.2.2 Operation Definition

This operation shall support the request data structures specified in table 5.23.2.3.4.2.2-1 and the response data structures and response codes specified in table 5.23.2.3.4.2.2-2.

#### Table 5.23.2.3.4.2.2-1: Data structures supported by the POST request body on this resource

| Data type  | Ρ | Cardinality | Description                                     |
|------------|---|-------------|-------------------------------------------------|
| DataReport | Μ | 1           | UE data reported by the data collection client. |

#### Table 5.23.2.3.4.2.2-2: Data structures supported by the POST response body on this resource

| Data type                 | Р      | Cardinality    | Response              | Description                                                                               |
|---------------------------|--------|----------------|-----------------------|-------------------------------------------------------------------------------------------|
|                           |        |                | codes                 |                                                                                           |
| DataReportingSession      | 0      | 01             | 200 OK                | The UE data report was successfully received.                                             |
| n/a                       |        |                | 307                   | Temporary redirection. The response shall include a                                       |
|                           |        |                | Temporary             | Location header field containing an alternative target                                    |
|                           |        |                | Redirect              | URI located in an alternative NEF.                                                        |
|                           |        |                |                       | Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].                 |
| n/a                       |        |                | 308                   | Permanent redirection. The response shall include a                                       |
|                           |        |                | Permanent<br>Redirect | Location header field containing an alternative target URI located in an alternative NEF. |
|                           |        |                |                       | Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]                  |

# 5.23.3 Custom Operations without associated resources

There are no custom operations without associated resources defined for this API in this release of the specification.

# 5.23.4 Notifications

There are no notifications defined for this API in this release of the specification.

# 5.23.5 Data Model

## 5.23.3.1 General

This clause specifies the application data model supported by the DataReporting API. Table 5.23.5.1-1 specifies the data types defined for the DataReporting API.

|     | Data type | Clause<br>defined | Description |
|-----|-----------|-------------------|-------------|
| n/a |           |                   |             |

Table 5.23.5.1-2 specifies data types re-used by the DataReporting API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the DataReporting API.

#### Table 5.23.5.1-2: Re-used Data Types

| Data type            | Reference           | Comments                                                    | Applicability |
|----------------------|---------------------|-------------------------------------------------------------|---------------|
| DataReport           | 3GPP TS 26.532 [60] | Reported data by the AF.                                    |               |
| DataReportingSession | 3GPP TS 26.532 [60] | Configuration by the AF specifying the data to be reported. |               |

# 5.23.6 Used Features

The table below defines the features applicable to the DataReporting API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.23.6-1: Features used by DataReporting API

| Feature number | Feature Name | Description |
|----------------|--------------|-------------|
|                |              |             |

# 5.23.7 Error handling

# 5.23.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

## 5.23.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the DataReporting API.

### 5.23.7.3 Application Errors

The application errors defined for the DataReporting API are listed in table 5.23.7.3-1.

### Table 5.23.7.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.24 DataReportingProvisioning API

# 5.24.1 Introduction

The Nnef\_DataReportingProvisioning service shall use the DataReportingProvisioning API.

The API URI of the DataReportingProvisioning API shall be:

{apiRoot}/<apiName>/<apiVersion>

The request URIs used in HTTP requests shall have the Resource URI structure defined in clause 5.2.4 of 3GPP TS 29.122 [4], i.e.:

{apiRoot}/<apiName>/<apiVersion>/<apiSpecificSuffixes>

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-data-reporting-provisioning".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above API URI.

# 5.24.2 Resources

This clause describes the structure for the Resource URIs as shown in Figure 5.24.2-1 and the resources and HTTP methods used for the DataReportingProvisioning API.

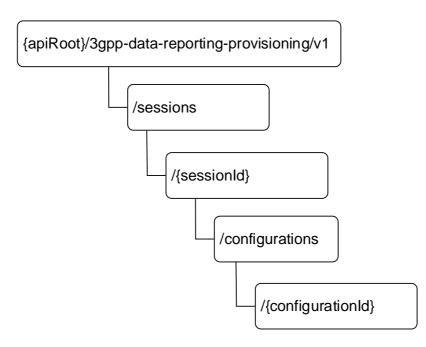

Figure 5.24.2-1: Resource URI structure of the DataReportingProvisioning API

Table 5.24.2-1 provides an overview of the resources and applicable HTTP methods.

| Resource name                                     | Resource URI (relative path<br>under API URI)              | HTTP<br>method | Description<br>(service operation)                                                     |
|---------------------------------------------------|------------------------------------------------------------|----------------|----------------------------------------------------------------------------------------|
| Data Reporting<br>Provisioning Sessions           | /sessions                                                  | POST           | Create a Data Reporting<br>Provisioning Session.                                       |
| Individual Data Reporting<br>Provisioning Session | /sessions/{sessionId}                                      | GET            | Retreive an existing<br>Individual Data Reporting<br>Provisioning Session<br>resource. |
|                                                   |                                                            | DELETE         | Delete an existing<br>Individual Data Reporting<br>Provisioning Session<br>resource.   |
| Data Reporting<br>Configuration                   | /sessions/{sessionId}/<br>configurations                   | POST           | Create a new Data<br>Reporting Configuration.                                          |
| Individual Data Reporting<br>Configuration        | /sessions/{sessionId}/<br>configurations/{configurationId} | GET            | Retrieves an existing<br>individual Data Reporting<br>Configuration resource.          |
|                                                   |                                                            | PUT            | Update an existing<br>individual Data Reporting<br>Configuration resource.             |
|                                                   |                                                            | PATCH          | Modify an existing<br>Individual Data Reporting<br>Configuration resource.             |
|                                                   |                                                            | DELETE         | Delete an existing<br>Individual Data Reporting<br>Configuration resource.             |

Table 5.24.2-1: Resources and methods overview

# 5.24.2.2 Resource: Data Reporting Provisioning Sessions

### 5.24.2.2.1 Introduction

This resource represents the collection of Data Reporting Provisioning Sessions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

# 5.24.2.2.2 Resource definition

### Resource URL: {apiRoot}/3gpp-data-reporting-provisioning/v1/sessions

This resource shall support the resource URI variables defined in table 5.24.2.2.1.

### Table 5.24.2.2.1: Resource URL variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.24.1. |

# 5.24.2.2.3 Resource Methods

# 5.24.2.2.3.1 POST

This method enables an AF to request the creation of a Data Reporting Provisioning Session at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.2.3.1-1.

# Table 5.24.2.2.3.1-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| N/A  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.24.2.2.3.1-2 and the response data structures and response codes specified in table 5.24.2.2.3.1-4.

# Table 5.24.2.2.3.1-2: Data structures supported by the POST request body on this resource

| Data type                                      | Ρ                                                                                                                                         | Cardinality | Description                                                                                    |  |  |  |  |  |

# 5.24.2.3 Resource: Individual Data Reporting Provisioning Session

# 5.24.2.3.1 Introduction

This resource represents an Individual Data Reporting Provisioning Session managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

### 5.24.2.3.2 Resource Definition

### Resource URL: {apiRoot}/3gpp-data-reporting-provisioning/v1/sessions/{sessionId}

This resource shall support the resource URI variables defined in table 5.24.2.3.2-1.

#### Table 5.24.2.3.2-1: Resource URL variables for this resource

| Name      | Data type | Definition                                                                     |
|-----------|-----------|--------------------------------------------------------------------------------|
| apiRoot   | string    | See clause 5.24.1                                                              |
| sessionId | string    | Represents the identifierof the Individual Data Reporting Provisioning Session |
|           |           | resource.                                                                      |

#### 5.24.2.3.3 Resource standard methods

5.24.2.3.3.1 GETThis method enables an AF to retrieve an existing Individual Data Reporting Provisioning Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.3.3.1-1.

#### Table 5.24.2.3.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |
|      |           | • |             |             |               |

This method shall support the request data structures specified in table 5.24.2.3.3.1-2 and the response data structures and response codes specified in table 5.24.2.3.3.1-3.

#### Table 5.24.2.3.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |

The response shall include<br>a Location header field containing an alternative<br>target URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |  |  |  |  |
| also apply.<br>NOTE 2: The "provisioningSes      | OTE 1: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |             |                              |                                                                                                                                                                                                                                     |  |  |  |  |

### Table 5.24.2.3.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                              |
|----------|-----------|---|-------------|----------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI located in an alternative NEF. |

#### Table 5.24.2.3.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                 |
|----------|-----------|---|-------------|-----------------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative target URI of the resource located in an<br>alternative NEF. |

5.24.2.3.3.2 Void

#### 5.24.2.3.3.3 DELETE

This method enables an AF to request the deletion of an existing Individual Data Reporting Provisioning Session resource at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.3.3.3-1.

#### Table 5.24.2.3.3.3-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
| n/a  |           |   |             |             |

This method shall support the request data structures specified in table 5.24.2.3.3.3-2 and the response data structures and response codes specified in table 5.24.2.3.3.3-3.

#### Table 5.24.2.3.3.3-2: Data structures supported by the DELETE request body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.24.2.3.3.3-3: Data structures supported by the DELETE response body on this resource

| Data type | P | Cardinality | Response<br>Codes         | Description                                                                                                                                                                                                                         |  |  |  |

# 5.24.2.4 Resource: Data Reporting Configurations

#### 5.24.2.4.1 Introduction

This resource represents the collection of Data Reporting Configurations managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

#### 5.24.2.4.2 Resource definition

#### Resource URL: {apiRoot}/3gpp-data-reporting-provisioning/v1/sessions/{sessionId}/configurations

This resource shall support the resource URI variables defined in table 5.24.2.4.2-1.

#### Table 5.24.2.4.2-1: Resource URL variables for this resource

| Name      | Data type | Definition                                                                              |
|-----------|-----------|-----------------------------------------------------------------------------------------|
| apiRoot   | string    | See clause 5.24.1.                                                                      |
| sessionId | •         | Represents the identifier of the existing Data Reporting Provisioning Session resource. |

### 5.24.2.4.3 Resource Methods

#### 5.24.2.4.3.1 POST

This method enables an AF to request the creation of a Data Reporting Configuration at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.4.3.1-1.

#### Table 5.24.2.4.3.1-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.24.2.4.3.1-2 and the response data structures and response codes specified in table 5.24.2.4.3.1-4.

### Table 5.24.2.4.3.1-2: Data structures supported by the POST request body on this resource

| Data type                         | Ρ | Cardinality | Description                                                                  |  |  |  |  |  |

| Location | string    | М |             | An alternative target URI of the resource located in an<br>alternative NEF. |

# 5.24.2.5 Resource: Individual Data Reporting Configuration

## 5.24.2.5.1 Introduction

This resource represents an Individual Data Reporting Configuration resource managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

### 5.24.2.5.2 Resource Definition

#### Resource URL: {apiRoot}/3gpp-data-reportingprovisioning/v1/sessions/{sessionId}/configurations/{configurationId}

This resource shall support the resource URI variables defined in table 5.24.2.5.2-1.

### Table 5.24.2.5.2-1: Resource URL variables for this resource

| Name            | Data type | Definition                                                                         |
|-----------------|-----------|------------------------------------------------------------------------------------|
| apiRoot         | string    | See clause 5.24.1                                                                  |
| sessionId       | string    | Represents the identifier of the Individual Data Reporting Provisioning Session    |
|                 |           | resource.                                                                          |
| configurationId | string    | Represents the identifier of the Individual Data Reporting Configuration resource. |

### 5.24.2.5.3 Resource standard methods

#### 5.24.2.5.3.2 GET

This method enables an AF to retrieve an existing Individual Data Reporting Configuration resource at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.5.3.2-1.

#### Table 5.24.2.5.3.2-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.24.2.5.3.2-2 and the response data structures and response codes specified in table 5.24.2.5.3.2-3.

#### Table 5.24.2.5.3.2-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.24.2.5.3.2-3: Data structures supported by the GET Response Body on this resource

## 5.24.2.5.3.3 PUT

This method enables an AF to update an existing Individual Data Reporting Configuration resource at the NEF.

This method shall support the URI query parameters specified in table 5.24.2.5.3.3-1.

#### Table 5.24.2.5.3.3-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description |
|------|-----------|---|-------------|-------------|
|      |           |   |             |             |

This method shall support the request data structures specified in table 5.24.2.5.3.3-2 and the response data structures and response codes specified in table 5.24.2.5.3.3-3.

### Table 5.24.2.5.3.3-2: Data structures supported by the PUT request body on this resource

| Data type                                                                                                   | Ρ | Cardinality | Description                                                     |  |  |  |

# 5.24.3 Custom Operations without associated resources

There are no custom operations without associated resources defined for this API in this release of the specification.

# 5.24.4 Notifications

There are no notifications defined for this API in this release of the specification.

# 5.24.5 Data Model

# 5.24.5.1 General

This subclause specifies the application data model supported by the DataReportingProvisioning API. Table 5.24.5.1-1 specifies the data types defined for the DataReportingProvisioning API.

| Table 5.24.5.1-1: DataReportingProvisioning specific Data Ty | pes |
|--------------------------------------------------------------|-----|
|--------------------------------------------------------------|-----|

|    | Data type | Clause<br>defined | Description |
|----|-----------|-------------------|-------------|
| n/ | /a        |                   |             |

Table 5.24.5.1-2 specifies data types re-used by the DataReportingProvisioning API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the DataReportingProvisioning API.

| Data type                        | Reference           | Comments                                                                                                   | Applicability |
|----------------------------------|---------------------|------------------------------------------------------------------------------------------------------------|---------------|
| DataReportingProvisioningSession | 3GPP TS 26.532 [60] | Configuration by the AF specifying the data to be collected, processed and reported.                       |               |
| DataReportingConfiguration       |                     | Configuration data related to UE data collection and reporting.                                            |               |
| DataReportingConfigurationPatch  |                     | Contains the requested modifications to the configuration data regarding UE data collection and reporting. |               |

Table 5.24.5.1-2: DataReportingProvisioning re-used Data Types

# 5.24.6 Used Features

The table below defines the features applicable to the DataReportingProvisioning API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.24.6-1: Features used by DataReportingProvisioning API

| Feature number | Feature Name | Description |
|----------------|--------------|-------------|
|                |              |             |

# 5.24.7 Error handling

## 5.24.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following subclauses shall apply.

## 5.24.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the DataReportingProvisioning API.

# 5.24.7.3 Application Errors

The application errors defined for the DataReportingProvisioning API are listed in table 5.24.7.3-1.

#### Table 5.24.7.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.25 UEId API

# 5.25.1 Introduction

The Nnef\_UEId service shall use the UEId API.

The API URI of UEId API shall be:

#### {apiRoot}/3gpp-ueid/v1

with the following components:

- "apiRoot" is set as described in clause 5.2.4 in 3GPP TS 29.122 [4].

- "apiName" shall be set to "3gpp-ueid".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above root URI.

# 5.25.2 Resources

There are no resources defined for this API in this release of the specification.

# 5.25.3 Custom Operations without associated resources

### 5.25.3.1 Overview

The structure of the custom operation URIs of the UEId API is shown in Figure 5.25.3.1-1.

#### {apiRoot}/3gpp-ueid/v1

### Figure 5.25.3.1-1: Custom operation URI structure of the UEId API

Table 5.25.3.1-1 provides an overview of the custom operations and applicable HTTP methods.

### Table 5.25.3.1-1: Custom operations without associated resources

| Operation name | Custom operation URI | Mapped HTTP<br>method | Description                                           |
|----------------|----------------------|-----------------------|-------------------------------------------------------|
| Retrieve       | /retrieve            |                       | Request to retrieve AF specific<br>UE ID information. |

# 5.25.3.2 Operation: Retrieve

#### 5.25.3.2.1 Description

The custom operation allows a service consumer to retrieve AF specific UE ID information via the NEF.

### 5.25.3.2.2 Operation Definition

This operation shall support the request and response data structures and response codes specified in table 5.25.3.2.2-1 and table 5.25.3.2.2-2.

#### Table 5.25.3.2.2-1: Data structures supported by the POST Request Body on this resource

| Data type | Ρ | Cardinality | Description                                                      |
|-----------|---|-------------|------------------------------------------------------------------|
| UeldReq   | Μ | 1           | Parameters to request to retrieve AF specific UE ID information. |

| Table 5.25.3.2.2-2: Data structures supported by the POST Response Body on this resource |
|------------------------------------------------------------------------------------------|
|                                                                                          |

| Data type               | P | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                                  |
|-------------------------|---|----------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| ProblemDetails          | 0 | 01             | 403<br>Forbidden             | If the AF request is not authorized, the NEF shall respond with "403 Forbidden".                                                                                                                                                             |
| ProblemDetails          | 0 | 01             | 404 Not<br>Found             | If the requested UE ID does not exist or not available in the subscription, the NEF shall respond with "404 Not Found".                                                                                                                      |
| n/a                     |   |                | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a Location<br>header field containing an alternative URI of the resource<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                     |   |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a Location<br>header field containing an alternative URI of the resource<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]  |
| NOTE: The ma<br>also ap |   | y HTTP error s | tatus codes fo               | r the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                              |

#### Table 5.25.3.2.2-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.25.3.2.2-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | Μ | 1           | An alternative URI of the resource located in an alternative NEF. |

# 5.25.4 Notifications

There are no Notifications defined for this API in this release of the specification.

# 5.25.5 Data Model

# 5.25.5.1 General

This clause specifies the application data model supported by the UEId API. Table 5.25.5.1-1 specifies the data types defined for the UEId API.

#### Table 5.25.5.1-1: UEId service specific Data Types

| Data type | Clause defined | Description                                                         | Applicability |
|-----------|----------------|---------------------------------------------------------------------|---------------|
| UeldReq   | 5.25.5.2.2     | Represents the parameters to<br>requestAF specific UE ID retrieval. |               |
| UeldInfo  | 5.25.5.2.3     | Represents AF specific UE ID<br>information.                        |               |

Table 5.25.5.1-2 specifies data types re-used by the UEId API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the UEId API.

| Data type              | Reference          | Comments                            |
|------------------------|--------------------|-------------------------------------|
| Dnn                    | 3GPP TS 29.571 [8] | Identifies a DNN.                   |
| ExternalId             | 3GPP TS 29.122 [4] | Represents an External Identifier.  |
| lpAddr                 | 3GPP TS 29.571 [8] | Identifes an IP address.            |
| MacAddr48              | 3GPP TS 29.571 [8] | Identifies a MAC address.           |
| MtcProviderInformation | 3GPP TS 29.571 [8] | Indicates MTC provider information. |
| Port                   | 3GPP TS 29.122 [4] | Identifies an application port ID.  |
| Snssai                 | 3GPP TS 29.571 [8] | Identifies the S-NSSAI.             |
| Uinteger               | 3GPP TS 29.571 [8] | Represents a unsigned integer.      |

# 5.25.5.2.3 Type: UeldInfo

# Table 5.25.5.2.3-1: Definition of type UeldInfo

| Attribute name | Data type  | Р | Cardinality | Description                                                                | Applicability |
|----------------|------------|---|-------------|----------------------------------------------------------------------------|---------------|
| externalId     | ExternalId | М | 1           | Contains the AF specific UE ID                                             |               |
|                |            |   |             | in the form of an external<br>identifier uniquely identifying<br>the user. |               |

# 5.25.5.3 Simple data types and enumerations

# 5.25.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

# 5.25.5.3.2 Simple data types

The simple data types defined in table 5.25.5.3.2-1 shall be supported.

#### Table 5.25.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.25.6 Used Features

The table below defines the features applicable to the UEId API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.25.6-1: Features used by UEId API

| Feature<br>number | Feature Name | Description |
|-------------------|--------------|-------------|
|                   |              |             |

# 5.25.7 Error handling

# 5.25.7.1 General

HTTP error handling shall be supported as specified in subclause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following subclauses shall apply.

# 5.25.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the UEId API.

# 5.25.7.3 Application Errors

The application errors defined for the UEId API are listed in table 5.25.7.3-1.

# Table 5.25.7.3-1: Application errors

| Application Error      | HTTP status code | Description                                                      |
|------------------------|------------------|------------------------------------------------------------------|
| REQUEST_NOT_AUTHORIZED | 403 Forbidden    | Indicates that the request is not authorized.                    |
| UE_ID_NOT_AVAILABLE    | 404 Not Found    | Indicates that the requested AF specific UE ID is not available. |
| UE_NOT_FOUND           | 404 Not Found    | Indicates that the requested UE address is not found.            |

# 5.26 MBSUserService API

# 5.26.1 Introduction

The Nnef\_MBSUserService service shall use the MBSUserService API.

The API URI of MBSUserService API shall be:

#### {apiRoot}/3gpp-mbs-us/v1

with the following components:

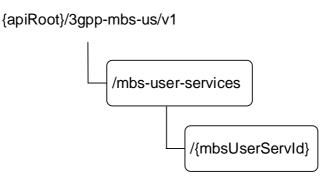

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-mbs-us".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

All resource URIs in the clauses below are defined relative to the above root URI.

# 5.26.2 Resources

# 5.26.2.1 Overview

This clause describes the structure for the Resource URIs as shown in figure 5.26.2.1-1 and the resources and HTTP methods used for the MBSUserService API.

# Figure 5.26.2.1-1: Resource URI structure of the MBSUserService API

Table 5.26.2.1-1 provides an overview of the resources and applicable HTTP methods.

| Resource name                  | Resource URI (relative path under API<br>URI) | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                  |
|--------------------------------|-----------------------------------------------|------------------------------------------|---------------------------------------------------------------------|
| MBS User Services              | /mbs-user-services                            | GET                                      | Retrieve all the active MBS<br>User Services managed by<br>the NEF. |
|                                |                                               | POST                                     | Request the creation of a new MBS User Service.                     |
| Individual MBS User<br>Service |                                               | GET                                      | Retrieve an existng MBS<br>User Service managed by<br>the NEF.      |
|                                |                                               | PUT                                      | Update an existng MBS<br>User Service managed by<br>the NEF.        |
|                                | /mbs-user-services/{mbsUserServId}            | PATCH                                    | Modify an existng MBS<br>User Service managed by<br>the NEF.        |
|                                |                                               | DELETE                                   | Delete an existng MBS<br>User Service managed by<br>the NEF.        |

#### Table 5.26.2.1-1: Resources and methods overview

# 5.26.2.2 Resource: MBS User Services

# 5.26.2.2.1 Introduction

This resource represents the collection of MBS User Services managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

# 5.26.2.2.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-us/v1/mbs-user-services

This resource shall support the resource URI variables defined in table 5.26.2.2.1.

#### Table 5.26.2.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.26.1. |

#### 5.26.2.2.3 Resource Standard Methods

5.26.2.2.3.1 GET

This method allows an AF to retrieve all the active MBS User Service resources at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.2.3.1-1.

#### Table 5.26.2.2.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.2.3.1-2 and the response data structures and response codes specified in table 5.26.2.2.3.1-3.

#### Table 5.26.2.2.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.26.2.2.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                          | Р | Cardinality     | Response<br>codes            | Description                                                                                                                                                                                                                         |
|------------------------------------|---|-----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| array <i>(</i> MBSUserS<br>ervice) | М | 0N              | 200 OK                       | Successful case. All the active MBS User Services managed by the NEF are returned.                                                                                                                                                  |
| n/a                                |   |                 | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a Location<br>header field containing an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                                |   |                 | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a Location<br>header field containing an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The ma<br>also app           |   | y HTTP error st | atus code for                | the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                        |

#### Table 5.26.2.2.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.26.2.2.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.26.2.2.3.2 POST

This method enables an AF to request the creation of an MBS User Service resource at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.2.3.2-1.

#### Table 5.26.2.2.3.2-1: URI query parameters supported by the POST method on this resource

| p/a   | Name | Data type | Ρ | Cardinality | Description | Applicability |
|-------|------|-----------|---|-------------|-------------|---------------|
| 1// 4 | n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.2.3.2-2 and the response data structures and response codes specified in table 5.26.2.2.3.2-3.

### Table 5.26.2.2.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                                           |
|----------------|---|-------------|---------------------------------------------------------------------------------------|
| MBSUserService | М | 1           | Contains the parameters to request the creation of a new MBS User Service at the NEF. |

| Data type                         | Р                                                                                                            | P Cardinality Response Description |             |                                                                                                                                                                                                                                                                                                           |  |  |  |  |  |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------|------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| MBSUserService                    | м                                                                                                            | 1                                  | 201 Created | Successful case. A new MBS User Service is successfully<br>created and a representation of the created Individual MBS<br>User Service resource is returned.<br>An HTTP "Location" header that contains the resource URI<br>of the created Individual MBS User Service resource shall<br>also be included. |  |  |  |  |  |
| NOTE: The mandator<br>also apply. | NOTE: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |                                    |             |                                                                                                                                                                                                                                                                                                           |  |  |  |  |  |

#### Table 5.26.2.2.3.2-3: Data structures supported by the POST Response Body on this resource

#### Table 5.26.2.2.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                  |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ | 1           | Contains the URI of the newly created resource, according to the<br>structure:<br>{apiRoot}/3gpp-mbs-us/v1/mbs-user-services/{mbsUserServId} |

### 5.26.2.2.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.26.2.3 Resource: Individual MBS User Service

#### 5.26.2.3.1 Introduction

This resource represents an Individual MBS User Service managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.26.2.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-us/v1/mbs-user-services/{mbsUserServId}

This resource shall support the resource URI variables defined in table 5.26.2.3.2-1.

#### Table 5.26.2.3.2-1: Resource URI variables for this resource

| Name          | Data type | Definition                                                                                      |
|---------------|-----------|-------------------------------------------------------------------------------------------------|
| apiRoot       | string    | See clause 5.26.1.                                                                              |
| mbsUserServId | string    | Contains the unique identifier of the Individual MBS User Service resource assigned by the NEF. |

# 5.26.2.3.3 Resource Standard Methods

#### 5.26.2.3.3.1 GET

This method allows an AF to retrieve an existing Individual MBS User Service resource at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.3.3.1-1.

#### Table 5.26.2.3.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.3.3.1-2 and the response data structures and response codes specified in table 5.26.2.3.3.1-3.

#### Table 5.26.2.3.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.26.2.3.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                       | Ρ                                                                                                           | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                         |  |
|---------------------------------|-------------------------------------------------------------------------------------------------------------|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| MBSUserService                  | М                                                                                                           | 1           | 200 OK                       | Successful case. The requested Individual MBS User Service resource is successfully returned.                                                                                                                                       |  |
| n/a                             |                                                                                                             |             | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a Location<br>header field containing an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |
| n/a                             |                                                                                                             |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a Location<br>header field containing an alternative target URI located in an<br>alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |
| NOTE: The mandat<br>also apply. | NOTE: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |             |                              |                                                                                                                                                                                                                                     |  |

#### Table 5.26.2.3.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

## Table 5.26.2.3.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.26.2.3.3.2 PUT

This method enables an AF to request the update of an existing Individual MBS User Service resource at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.3.3.2-1.

#### Table 5.26.2.3.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.3.3.2-2 and the response data structures and response codes specified in table 5.26.2.3.3.2-3.

### Table 5.26.2.3.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type      | Ρ | Cardinality | Description                                                                                            |
|----------------|---|-------------|--------------------------------------------------------------------------------------------------------|
| MBSUserService | М | 1           | Contains the updated representation of the Individual MBS User Service resource that is to be updated. |

#### Table 5.26.2.3.3.2-3: Data structures supported by the PUT Response Body on this resource

| Data type                      | Ρ | Cardinality    | Response<br>codes         | Description                                                                                                                                                                                                                         |
|--------------------------------|---|----------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserService                 | м | 1              | 200 OK                    | Successful case. The concerned Individual MBS User<br>Service resource is successfully updated and a<br>representation of the updated resource is returned in the<br>response body.                                                 |
| n/a                            |   |                | 204 No Content            | Successful case. The concerned Individual MBS User<br>Service resource is successfully updated and no content<br>is returned in the response body.                                                                                  |
| n/a                            |   |                | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                            |   |                | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The manda<br>also apply. |   | HTTP error sta | atus code for the P       | UT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                             |

#### Table 5.26.2.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.26.2.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

### 5.26.2.3.3.3 PATCH

This method enables an AF to request the modification of an existing Individual MBS User Service resource at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.3.3-1.

#### Table 5.26.2.3.3.3-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.3.3.3-2 and the response data structures and response codes specified in table 5.26.2.3.3.3-3.

#### Table 5.26.2.3.3.3-2: Data structures supported by the PATCH Request Body on this resource

| Data type               | Ρ | Cardinality | Description                                                                                      |
|-------------------------|---|-------------|--------------------------------------------------------------------------------------------------|
| MBSUserService<br>Patch | М | 1           | Contains the parameters to request the modification of the Individual MBS User Service resource. |

#### Table 5.26.2.3.3.3-3: Data structures supported by the PATCH Response Body on this resource

| Data type                 | Р | Cardinality     | Response<br>codes         | Description                                                                                                                                                                                                                                                |
|---------------------------|---|-----------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserService            | М | 1               | 200 OK                    | Successful case. The concerned Individual MBS User<br>Service resource is successfully modified and a<br>representation of the updated resource is returned in the<br>response body.                                                                       |
| n/a                       |   |                 | 204 No Content            | Successful response. The Individual MBS User Service resource was successfully modified and no content is returned in the response body.                                                                                                                   |
| n/a                       |   |                 | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of                                               |
| n/a                       |   |                 | 308 Permanent<br>Redirect | 3GPP TS 29.122 [4].<br>Permanent redirection. | Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.26.2.3.3.4 DELETE

This method enables an AF to request the deletion of an existing Individual MBS User Service resource at the NEF.

This method shall support the URI query parameters specified in table 5.26.2.3.3.4-1.

#### Table 5.26.2.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.26.2.3.3.4-2 and the response data structures and response codes specified in table 5.26.2.3.3.4-3.

### Table 5.26.2.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |

| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

# 5.26.2.3.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.26.3 Custom Operations without associated resources

There are no custom operations without associated resources defined for this API in this release of the specification.

# 5.26.4 Notifications

There are no notifications defined for this API in this release of the specification.

# 5.26.5 Data Model

# 5.26.5.1 General

This clause specifies the application data model supported by the MBSUserService API. Table 5.26.5.1-1 specifies the data types defined for the MBSUserService API.

## Table 5.26.5.1-1: MBSUserService specific Data Types

| Data type | Clause defined | Description | Applicability |
|-----------|----------------|-------------|---------------|
|           |                |             |               |

Table 5.26.5.1-2 specifies data types re-used by the MBSUserService API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the MBSUserService API.

#### Table 5.26.5.1-2: Re-used Data Types

| Data type           | Reference           | Comments                                                                               | Applicability |
|---------------------|---------------------|----------------------------------------------------------------------------------------|---------------|
| MBSUserService      | 3GPP TS 29.580 [66] | Represents MBS User Service parameters.                                                |               |
| MBSUserServicePatch |                     | Represents the requested modifications to an MBS User Service resource representation. |               |

# 5.26.5.2 Structured data types

#### 5.26.5.2.1 Introduction

This clause defines the structures to be used in resource representations.

There are no structured data types defined for this API in this release of the specification.

# 5.26.5.3 Simple data types and enumerations

### 5.26.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.26.5.3.2 Simple data types

The simple data types defined in table 5.26.5.3.2-1 shall be supported.

#### Table 5.26.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.26.6 Used Features

The table below defines the features applicable to the MBSUserService API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.26.6-1: Features used by MBSUserService API

| Feature number | Feature Name | Description |
|----------------|--------------|-------------|
|                |              |             |
|                |              |             |

# 5.26.7 Error handling

# 5.26.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.26.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MBSUserService API.

# 5.26.7.3 Application Errors

The application errors defined for the MBSUserService API are listed in table 5.26.7.3-1.

#### Table 5.26.7.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.27 MBSUserDataIngestSession API

# 5.27.1 Introduction

The Nnef\_MBSUserDataIngestSession service shall use the MBSUserDataIngestSession API.

The API URI of MBSUserDataIngestSession API shall be:

### {apiRoot}/3gpp-mbs-ud-ingest/v1

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-mbs-ud-ingest".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

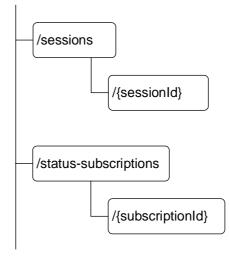

All resource URIs in the clauses below are defined relative to the above root URI.

# 5.27.2 Resources

# 5.27.2.1 Overview

This clause describes the structure for the Resource URIs as shown in figure 5.27.2.1-1 and the resources and HTTP methods used for the MBSUserDataIngestSession API.

{apiRoot}/3gpp-mbs-ud-ingest/v1

# Figure 5.27.2.1-1: Resource URI structure of the MBSUserDataIngestSession API

Table 5.27.2.1-1 provides an overview of the resources and applicable HTTP methods.

| Resource name                                           | Resource URI (relative path under API<br>URI) | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                                                     |
|---------------------------------------------------------|-----------------------------------------------|------------------------------------------|--------------------------------------------------------------------------------------------------------|
| MBS User Data Ingest                                    | /sessions                                     | GET                                      | Retrieve all the active MBS<br>User Data Ingest Sessions<br>managed by the NEF.                        |
| Sessions                                                | /36330113                                     | POST                                     | Request the creation of a<br>new MBS User Data Ingest<br>Session.                                      |
|                                                         |                                               | GET                                      | Retrieve an existing<br>Individual MBS User Data<br>Ingest Session managed by<br>the NEF.              |
| Individual MBS User Data                                | /sessions/{sessionId}                         | PUT                                      | Update an existing<br>Individual MBS User Data<br>Ingest Session managed by<br>the NEF.                |
| Ingest Session                                          |                                               | PATCH                                    | Modify an existing<br>Individual MBS User Data<br>Ingest Session managed by<br>the NEF.                |
|                                                         |                                               | DELETE                                   | Delete an existing<br>Individual MBS User Data<br>Ingest Session managed by<br>the NEF.                |
| MBS User Data Ingest<br>Session Status<br>Subscriptions | latatus subscriptions                         | GET                                      | Retrieve all the active MBS<br>User Data Ingest Session<br>Status Subscriptions<br>managed by the NEF. |
|                                                         | /status-subscriptions                         | POST                                     | Request the creation of a<br>new MBS User Data Ingest<br>Session Status<br>Subscription.               |

| Individual MBS User Data<br>Ingest Session Status<br>Subscription |                                        | GET    | Retrieve an existing<br>Individual MBS User Data<br>Ingest Session Status<br>Subscription managed by<br>the NEF. |
|-------------------------------------------------------------------|----------------------------------------|--------|------------------------------------------------------------------------------------------------------------------|
|                                                                   | /status-subscriptions/{subscriptionId} | PUT    | Update an existing MBS<br>User Data Ingest Session<br>Status Subscription<br>managed by the NEF.                 |
|                                                                   |                                        | PATCH  | Modify an existing MBS<br>User Data Ingest Session<br>Status Subscription<br>managed by the NEF.                 |
|                                                                   |                                        | DELETE | Delete an existing<br>Individual MBS User Data<br>Ingest Session Status<br>Subscription managed by<br>the NEF.   |

# 5.27.2.2 Resource: MBS User Data Ingest Sessions

### 5.27.2.2.1 Introduction

This resource represents the collection of MBS User Data Ingest Sessions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

# 5.27.2.2.2 Resource Definition

# Resource URI: {apiRoot}/3gpp-mbs-ud-ingest/v1/sessions

This resource shall support the resource URI variables defined in table 5.27.2.2.2-1.

# Table 5.27.2.2.1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.27.1. |

# 5.27.2.2.3 Resource Standard Methods

### 5.27.2.2.3.1 GET

This method allows an AF to retrieve all the active MBS User Data Ingest Sessions managed by the NEF.

This method shall support the URI query parameters specified in table 5.27.2.2.3.1-1.

#### Table 5.27.2.2.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |
|      |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.2.3.1-2 and the response data structures and response codes specified in table 5.27.2.2.3.1-3.

### Table 5.27.2.2.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

| Data type                                                                                                               | Ρ | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                         |  |  |  |
|-------------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| array(MBSUserDataIngSession)                                                                                            | М | 0N          | 200 OK                       | Successful case. All the active MBS User Data<br>Ingest Sessions managed by the NEF are returned.                                                                                                                                   |  |  |  |
| n/a                                                                                                                     |   |             | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |  |  |  |
| n/a                                                                                                                     |   |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4]. |  |  |  |
| NOTE: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                              |                                                                                                                                                                                                                                     |  |  |  |

#### Table 5.27.2.2.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.2.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

# 5.27.2.2.3.2 POST

This method enables an AF to request the creation of an MBS User Data Ingest Session at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.2.3.2-1.

#### Table 5.27.2.2.3.2-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.2.3.2-2 and the response data structures and response codes specified in table 5.27.2.2.3.2-3.

#### Table 5.27.2.2.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type             | Ρ | Cardinality | Description                                                                                       |
|-----------------------|---|-------------|---------------------------------------------------------------------------------------------------|
| MBSUserDataIngSession | М | 1           | Contains the parameters to request the creation of a new MBS User Data Ingest Session at the NEF. |

## Table 5.27.2.2.3.2-3: Data structures supported by the POST Response Body on this resource

| Data type             | Ρ                                                                                                            | Cardinality | Response<br>Codes | Description                                                                                                                                                                                                                                                                                                                       |  |  |
|-----------------------|--------------------------------------------------------------------------------------------------------------|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| MBSUserDataIngSession | М                                                                                                            | 1           | 201<br>Created    | Successful case. A new MBS User Data Ingest Session is<br>successfully created and a representation of the created<br>Individual MBS User Data Ingest Session resource is<br>returned.<br>An HTTP "Location" header that contains the URI of the<br>created Individual MBS User Data Ingest Session resource<br>is also included. |  |  |
| ,                     | NOTE: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |             |                   |                                                                                                                                                                                                                                                                                                                                   |  |  |
| also apply.           |                                                                                                              |             |                   |                                                                                                                                                                                                                                                                                                                                   |  |  |

#### Table 5.27.2.2.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                            |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ | 1           | Contains the URI of the newly created resource, according to the<br>structure:<br>{apiRoot}/3gpp-mbs-ud-ingest/v1/sessions/{sessionId} |

### 5.27.2.2.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.27.2.3 Resource: Individual MBS User Data Ingest Session

#### 5.27.2.3.1 Introduction

This resource represents an Individual MBS User Data Ingest Session resource managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.27.2.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-ud-ingest/v1/sessions/{sessionId}

This resource shall support the resource URI variables defined in table 5.27.2.3.2-1.

## Table 5.27.2.3.2-1: Resource URI variables for this resource

| Name      | Data type | Definition                                                                                                     |
|-----------|-----------|----------------------------------------------------------------------------------------------------------------|
| apiRoot   | string    | See clause 5.27.1.                                                                                             |
| sessionId | Istring   | Contains the unique identifier of the Individual MBS User Data Ingest<br>Session resource assigned by the NEF. |

# 5.27.2.3.3 Resource Standard Methods

#### 5.27.2.3.3.1 GET

This method allows an AF to retrieve an existing "Individual MBS User Data Ingest Session" resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.3.3.1-1.

#### Table 5.27.2.3.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.3.3.1-2 and the response data structures and response codes specified in table 5.27.2.3.3.1-3.

#### Table 5.27.2.3.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.27.2.3.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                       | Ρ                                                                                                           | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                         |  |  |
|---------------------------------|-------------------------------------------------------------------------------------------------------------|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| MBSUserDataIngSession           | М                                                                                                           | 1           | 200 OK                       | Successful case. The requested Individual MBS User Data Ingest Session resource is successfully returned.                                                                                                                           |  |  |
| n/a                             |                                                                                                             |             | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
| n/a                             |                                                                                                             |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
| NOTE: The mandatory also apply. | NOTE: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |             |                              |                                                                                                                                                                                                                                     |  |  |

#### Table 5.27.2.3.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.3.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.27.2.3.3.2 PUT

This method enables an AF to request the update of an existing "Individual MBS User Data Ingest Session" resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.3.3.2-1.

#### Table 5.27.2.3.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.3.3.2-2 and the response data structures and response codes specified in table 5.27.2.3.3.2-3.

#### Table 5.27.2.3.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type                 | Ρ | Cardinality | Description                                                                                                        |
|---------------------------|---|-------------|--------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIng<br>Session | М | 1           | Contains the updated representation of the Individual MBS User Data Ingest Session resource that is to be updated. |

#### Table 5.27.2.3.3.2-3: Data structures supported by the PUT Response Body on this resource

| Data type                       | Ρ   | Cardinality    | Response<br>codes         | Description                                                                                                                                                                                                                         |
|---------------------------------|-----|----------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIngSession           | М   | 1              | 200 OK                    | Successful case. The concerned Individual MBS User<br>Data Ingest Session resource is successfully updated<br>and a representation of the updated resource is<br>returned in the response body.                                     |
| n/a                             |     |                | 204 No<br>Content         | Successful case. The concerned Individual MBS User<br>Data Ingest Session resource is successfully updated<br>and no content is returned in the response body.                                                                      |
| n/a                             |     |                | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target<br>URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                             |     |                | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target<br>URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The mandatory also apply. | ΗТТ | P error status | s code for the PU         | T method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                              |

#### Table 5.27.2.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

#### 5.27.2.3.3.3 PATCH

This method enables an AF to request the modification of an existing "Individual MBS User Data Ingest Session" resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.3.3.3-1.

# Table 5.27.2.3.3.3-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.3.3.3-2 and the response data structures and response codes specified in table 5.27.2.3.3.3-3.

#### Table 5.27.2.3.3.3-2: Data structures supported by the PATCH Request Body on this resource

| Data type                      | Ρ | Cardinality | Description                                                                                                  |
|--------------------------------|---|-------------|--------------------------------------------------------------------------------------------------------------|
| MBSUserDataIng<br>SessionPatch | М | · ·         | Contains the parameters to request the modification of the Individual MBS User Data Ingest Session resource. |

#### Table 5.27.2.3.3.3-3: Data structures supported by the PATCH Response Body on this resource

| Data type                            | Р | Cardinality | Response<br>codes            | Description                                                                                                                                                                                                                         |
|--------------------------------------|---|-------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIngSession                | М | 1           | 200 OK                       | Successful case. The concerned Individual MBS User<br>Data Ingest Session resource is successfully modified<br>and a representation of the updated resource is returned<br>in the response body.                                    |
| n/a                                  |   |             | 204 No<br>Content            | Successful response. The Individual MBS User Data<br>Ingest Session resource is successfully modified and no<br>content is returned in the response body.                                                                           |
| n/a                                  |   |             | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                                  |   |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The mandatory<br>3GPP TS 29.12 |   |             | s code for the P             | ATCH method listed in table 5.2.6-1 of                                                                                                                                                                                              |

#### Table 5.27.2.3.3.3-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.3.3.3-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.27.2.3.3.4 DELETE

This method enables an AF to request the deletion of an existing "Individual MBS User Data Ingest Session" resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.3.3.4-1.

#### Table 5.27.2.3.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Р | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.3.3.4-2 and the response data structures and response codes specified in table 5.27.2.3.3.4-3.

#### Table 5.27.2.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.27.2.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

| Data type                                                                                                                       | Р | Cardinality | Response<br>Codes         | Description                                                                                                                                                                                                                         |  |  |
|---------------------------------------------------------------------------------------------------------------------------------|---|-------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| n/a                                                                                                                             |   |             | 204 No<br>Content         | Successful response. The Individual MBS User Data Ingest Session resource is successfully deleted.                                                                                                                                  |  |  |
|                                                                                                                                 |   |             | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
|                                                                                                                                 |   |             | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |
| NOTE 1: The mandatory HTTP error status code for the DELETE method listed in table 5.2.6-1 of<br>3GPP TS 29.122 [4] also apply. |   |             |                           |                                                                                                                                                                                                                                     |  |  |

| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

# 5.27.2.3.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.27.2.4 Resource: MBS User Data Ingest Session Status Subscriptions

#### 5.27.2.4.1 Introduction

This resource represents the collection of MBS User Data Ingest Session Status Subscriptions managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

#### 5.27.2.4.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-ud-ingest/v1/status-subscriptions

This resource shall support the resource URI variables defined in table 5.27.2.4.2-1.

#### Table 5.27.2.4.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.27.1. |

#### 5.27.2.4.3 Resource Standard Methods

#### 5.27.2.4.3.1 GET

This method allows an AF to retrieve all the active MBS User Data Ingest Session Status Subscriptions managed by the NEF.

This method shall support the URI query parameters specified in table 5.27.2.4.3.1-1.

#### Table 5.27.2.4.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.4.3.1-2 and the response data structures and response codes specified in table 5.27.2.4.3.1-3.

#### Table 5.27.2.4.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

#### Table 5.27.2.4.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                                   | Ρ    | Cardinality    | Response                     | Description                                                                                                                                                                                                                                  |
|---------------------------------------------|------|----------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             |      |                | codes                        |                                                                                                                                                                                                                                              |
| array(MBSUserDataIngStatSubsc)              | М    | 0N             | 200 OK                       | Successful case. All the active MBS User Data<br>Ingest Session Status Subscriptions managed by<br>the NEF are returned.                                                                                                                     |
| n/a                                         |      |                | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include<br>a Location header field containing an alternative<br>URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| n/a                                         |      |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include<br>a Location header field containing an alternative<br>URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10<br>of 3GPP TS 29.122 [4]. |
| NOTE: The mandatory HTTP err<br>also apply. | or s | status code fo | r the GET me                 | ethod listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                                          |

#### Table 5.27.2.4.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.4.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

#### 5.27.2.4.3.2 POST

This method enables an AF to request the creation of a new MBS User Data Ingest Sesstion Status Subscription at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.4.3.2-1.

#### Table 5.27.2.4.3.2-1: URI query parameters supported by the POST method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.4.3.2-2 and the response data structures and response codes specified in table 5.27.2.4.3.2-3.

#### Table 5.27.2.4.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type               | Ρ | Cardinality | Description                                                                                                           |
|-------------------------|---|-------------|-----------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIngStatSubsc | М |             | Contains the parameters to request the creation of a new MBS User Data Ingest Session Status Subscription at the NEF. |

#### Table 5.27.2.4.3.2-3: Data structures supported by the POST Response Body on this resource

| Data type                          | Ρ                                                                                                            | Cardinality | Response<br>Codes | Description                                                                                                                                                                                                                                                                                                                                                                                   |  |  |  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------|-------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| MBSUserDataIngStatSubsc            | М                                                                                                            | 1           | 201<br>Created    | Successful case. A new MBS User Data Ingest Session<br>Status Subscription is successfully created and a<br>representation of the created Individual MBS User Data<br>Ingest Session Status Subscription resource is returned.<br>An HTTP "Location" header that contains the URI of the<br>created Individual MBS User Data Ingest Session Status<br>Subscription resource is also included. |  |  |  |
| NOTE: The mandatory HT also apply. | NOTE: The mandatory HTTP error status code for the POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] |             |                   |                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |

#### Table 5.27.2.4.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                              |
|----------|-----------|---|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | м | 1           | Contains the URI of the newly created resource, according to the structure:<br>{apiRoot}/3gpp-mbs-ud-ingest/v1/status-<br>subscriptions/{subscriptionId} |

# 5.27.2.4.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.27.2.5 Resource: Individual MBS User Data Ingest Session Status Subscription

# 5.27.2.5.1 Introduction

This resource represents an Individual MBS User Data Ingest Session Status Subscription managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.27.2.5.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-mbs-ud-ingest/v1/status-subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.27.2.5.2-1.

#### Table 5.27.2.5.2-1: Resource URI variables for this resource

| Name      | Data type | Definition                                                                                                                         |
|-----------|-----------|------------------------------------------------------------------------------------------------------------------------------------|
| apiRoot   | string    | See clause 5.27.1.                                                                                                                 |
| sessionId | Istring   | Contains the unique identifier of the Individual MBS User Data Ingest<br>Session Status Subscription resource assigned by the NEF. |

#### 5.27.2.5.3 Resource Standard Methods

#### 5.27.2.5.3.1 GET

This method allows an AF to retrieve an existing "Individual MBS User Data Ingest Session Status Subscription" resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.5.3.1-1.

#### Table 5.27.2.5.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.5.3.1-2 and the response data structures and response codes specified in table 5.27.2.5.3.1-3.

### Table 5.27.2.5.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

| Data type                             | Р   | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                         |
|---------------------------------------|-----|----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIngStatSubsc               | М   | 1              | 200 OK                       | Successful case. The requested Individual MBS User<br>Data Ingest Session Status Subscription resource is<br>successfully returned.                                                                                                 |
| n/a                                   |     |                | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                                   |     |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The mandatory HT<br>also apply. | ΓTΡ | error status c | code for the C               | GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                            |

# Table 5.27.2.5.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.27.2.5.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

# 5.27.2.5.3.2 PUT

The PATCH method allows an AF to update an existing "Individual MBS User Data Ingest Session Status Subscription" resource managed by the NEF.

This method shall support the URI query parameters specified in table 5.27.2.5.3.2-1.

#### Table 5.27.2.5.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.5.3.2-2 and the response data structures and response codes specified in table 5.27.2.5.3.2-3.

#### Table 5.27.2.5.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type                   | Ρ | Cardinality | Description                                                                                                                                |
|-----------------------------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| MBSUserDataIng<br>StatSubsc | М | 1           | Contains the parameters to request the modification of an existing "Individual MBS User Data Ingest Session Status Subscription" resource. |

### 5.27.2.5.3.3 PATCH

The PATCH method allows an AF to modify an existing "Individual MBS User Data Ingest Session Status Subscription" resource managed by the NEF.

This method shall support the URI query parameters specified in table 5.27.2.5.3.3-1.

#### Table 5.27.2.5.3.3-1: URI query parameters supported by the PATCH method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.27.2.5.3.3-2 and the response data structures and response codes specified in table 5.27.2.5.3.3-3.

# Table 5.27.2.5.3.3-2: Data structures supported by the PATCH Request Body on this resource

| Data type                        | Ρ | Cardinality | Description                                                                                                                                |

# 5.27.2.5.3.4 DELETE

This method enables an AF to request the deletion of an existing Individual MBS User Data Ingest Session Status Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.27.2.5.3.4-1.

#### Table 5.27.2.5.3.4-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |

# 5.27.2.5.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.27.3 Custom Operations without associated resources

There are no custom operations without associated resources defined for this API in this release of the specification.

# 5.27.4 Notifications

# 5.27.4.1 General

Notifications shall comply to clause 5.2.5 of 3GPP TS 29.122 [4].

| Notification                                           | Callback URI | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                                                                        |
|--------------------------------------------------------|--------------|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| MBS User Data Ingest<br>Session Status<br>Notification | {notifUri}   |                                          | This operation enables the NEF to notify a previously subscribed AF on status changes of an MBS User Data Ingest Session. |

### Table 5.27.4.1-1: Notifications overview

# 5.27.4.2 MBS User Data Ingest Session Status Change Notification

# 5.27.4.2.1 Description

The MBS user data ingest session status change notification is used by the NEF to report one or several observed MBS user data ingest session status change events to a previously subscribed AF.

# 5.27.4.2.2 Target URI

The Callback URI "{notifUri}" shall be used with the callback URI variables defined in table 5.27.4.2.2-1.

#### Table 5.27.4.2.2-1: Callback URI variables

| Name     | Definition                                                                           |
|----------|--------------------------------------------------------------------------------------|
| notifUri | Callback reference provided by the AF during the creation/update/modification of the |
|          | corresponding MBS User Data Ingest Session Status Subscription.                      |

# 5.27.4.2.3 Operation Definition

#### 5.27.4.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.27.4.2.3.1-1 and the response data structures and response codes specified in table 5.27.4.2.3.1-2.

#### Table 5.27.4.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |  |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|--|
| Location | string    | М | 1           | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |  |

#### Table 5.27.4.2.3.1-4: Headers supported by the 308 Response Code on this resource

|   | Name     | Data type P |   | Cardinality | Description                                                                                                             |  |
|---|----------|-------------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|--|
| l | _ocation | string      | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |  |

#### 5.27.4.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the MBS User Data Ingest Session Status Change Notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.27.5 Data Model

# 5.27.5.1 General

This clause specifies the application data model supported by the MBSUserDataIngestSession API. Table 5.27.5.1-1 specifies the data types defined for the MBSUserDataIngestSession API.

#### Table 5.27.5.1-1: MBSUserDataIngestSession specific Data Types

| Data type | Clause defined | Description | Applicability |
|-----------|----------------|-------------|---------------|
|           |                |             |               |

Table 5.27.5.1-2 specifies data types re-used by the MBSUserDataIngestSession API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the MBSUserDataIngestSession API.

| Data type                    | Reference           | Comments                                                                                                 | Applicability |
|------------------------------|---------------------|----------------------------------------------------------------------------------------------------------|---------------|
| MBSUserDataIngSession        | 3GPP TS 29.580 [66] | Represents MBS User Data Ingest<br>Session parameters.                                                   |               |
| MBSUserDataIngSessionPatch   | 3GPP TS 29.580 [66] | Represents the requested modifications<br>to an MBS User Data Ingest Session<br>resource representation. |               |
| MBSUserDataIngStatNotif      | 3GPP TS 29.580 [66] | Represents an MBS User Data Ingest<br>Session Status Notification.                                       |               |
| MBSUserDataIngStatSubsc      | 3GPP TS 29.580 [66] | Represents an MBS User Data Ingest<br>Session Status Subscription.                                       |               |
| MBSUserDataIngStatSubscPatch | 3GPP TS 29.580 [66] | Represents the requested modifications<br>to an MBS User Data Ingest Session<br>Status Subscription.     |               |

# 5.27.5.2 Structured data types

#### 5.27.5.2.1 Introduction

This clause defines the structures to be used in resource representations.

There are no structured data types defined for this API in this release of the specification.

### 5.27.5.3 Simple data types and enumerations

#### 5.27.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

#### 5.27.5.3.2 Simple data types

The simple data types defined in table 5.27.5.3.2-1 shall be supported.

#### Table 5.27.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.27.6 Used Features

The table below defines the features applicable to the MBSUserDataIngestSession API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

Table 5.27.6-1: Features used by MBSUserDataIngestSession API

| Feature number | Feature Name                | Description                                                                                                                                                                     |  |  |
|----------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| 1              | Notification_webs ocket     | The delivery of notifications over Websocket is supported as described in 3GPP TS 29.122 [4]. This feature requires that the Notification_test_event feature is also supported. |  |  |
| 2              | Notification_test_<br>event | The testing of notification connection is supported as described in 3GPP TS 29.122 [4].                                                                                         |  |  |

# 5.27.7 Error handling

# 5.27.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.27.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MBSUserDataIngestSession API.

# 5.27.7.3 Application Errors

The application errors defined for the MBSUserDataIngestSession API are listed in table 5.27.7.3-1.

#### Table 5.27.7.3-1: Application errors

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 5.28 MSEventExposure API

# 5.28.1 Introduction

The Nnef\_MSEventExposure service shall use the MSEventExposure API.

The API URI of MSEventExposure API shall be:

#### {apiRoot}/3gpp-ms-event-exposure/v1

with the following components:

- "apiRoot" is set as defined in clause 5.2.4 of 3GPP TS 29.122 [4].
- "apiName" shall be set to "3gpp-ms-event-exposure".
- "apiVersion" shall be set to "v1" for the current version defined in the present document.

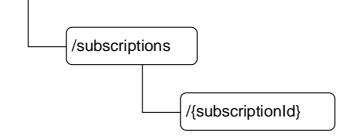

All resource URIs in the clauses below are defined relative to the above root URI.

# 5.28.2 Resources

# 5.28.2.1 Overview

This clause describes the structure for the Resource URIs as shown in figure 5.28.2.1-1 and the resources and HTTP methods used for the MSEventExposure API.

### {apiRoot}/3gpp-ms-event-exposure/v1

# Figure 5.28.2.1-1: Resource URI structure of the MSEventExposure API

Table 5.28.2.1-1 provides an overview of the resources and applicable HTTP methods.

| Resource name                                               | Resource URI (relative path under API<br>URI) | HTTP<br>method or<br>custom<br>operation | Description<br>(service operation)                                                         |
|-------------------------------------------------------------|-----------------------------------------------|------------------------------------------|--------------------------------------------------------------------------------------------|
| Media Streaming Event                                       | (autoprinting)                                | GET                                      | Reads all the existing<br>Media Streaming Event<br>Exposure Subscriptions.                 |
| Exposure Subscriptions                                      | /subscriptions                                | POST                                     | Request the creation of a<br>Media Streaming Event<br>Subscription.                        |
|                                                             |                                               | GET                                      | Read an existing Individual<br>Media Streaming Event<br>Exposure Subscription<br>resource. |
| Individual Media Sreaming<br>Event Exposure<br>Subscription | /subscriptions/{subscriptionId}               | PUT                                      | Update an existing<br>Individual Media Streaming<br>Event Exposure<br>Subscription.        |
|                                                             |                                               | DELETE                                   | Delete an existing<br>Individual Media Streaming<br>Event Exposure<br>Subscription.        |

# 5.28.2.2 Resource: Media Streaming Event Exposure Subscriptions

### 5.28.2.2.1 Introduction

This resource represents the collection of Media Streaming Event Exposure Subscription resources managed by the NEF.

This resource is modelled with the Collection resource archetype (see clause C.2 of 3GPP TS 29.501 [3]).

### 5.28.2.2.2 Resource Definition

### Resource URI: {apiRoot}/3gpp-ms-event-exposure/v1/subscriptions

This resource shall support the resource URI variables defined in table 5.28.2.2.1.

#### Table 5.28.2.2.2-1: Resource URI variables for this resource

| Name    | Data type | Definition         |
|---------|-----------|--------------------|
| apiRoot | string    | See clause 5.28.1. |

#### 5.28.2.2.3 Resource Standard Methods

### 5.28.2.2.3.1 GET

This method allows an AF to retrieve all the active Media Streaming Event Exposure Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.28.2.2.3.1-1.

#### Table 5.28.2.2.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.28.2.2.3.1-2 and the response data structures and response codes specified in table 5.28.2.2.3.1-3.

### Table 5.28.2.2.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

| Data type                                                                                                               | Ρ | Cardinality | Response codes               | Description                                                                                                                                                                                                                                  |  |  |  |  |
|-------------------------------------------------------------------------------------------------------------------------|---|-------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
| array(AfEventExposureSubsc)                                                                                             | м | 0N          | 200 OK                       | Successful case. All the active Media Streaming<br>Event Exposure Subscriptions managed by the NEF<br>are returned.                                                                                                                          |  |  |  |  |
| n/a                                                                                                                     |   |             | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative URI of<br>the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |  |  |  |  |
| n/a                                                                                                                     |   |             | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [4].          |  |  |  |  |
| NOTE: The mandatory HTTP error status code for the GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4] also apply. |   |             |                              |                                                                                                                                                                                                                                              |  |  |  |  |

# Table 5.28.2.2.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |

| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

# 5.28.2.2.3.2 POST

This method enables an AF to request the creation of a new Media Streaming Event Exposure Subscription at the NEF.

This method shall support the URI query parameters specified in table 5.28.2.2.3.2-1.

#### Table 5.28.2.2.3.2-1: URI query parameters supported by the POST method on this resource

|      |           | - |             |             | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| Name | Data type | Р | Cardinality | Description | Applicability |
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.28.2.2.3.2-2 and the response data structures and response codes specified in table 5.28.2.2.3.2-3.

#### Table 5.28.2.2.3.2-2: Data structures supported by the POST Request Body on this resource

| Data type            | Ρ | Cardinality | Description                                                                                                      |
|----------------------|---|-------------|------------------------------------------------------------------------------------------------------------------|
| AfEventExposureSubsc | М | 1           | Contains the parameters to request the creation of a new Media Streaming Event Exposure Subscription at the NEF. |

| also apply.          |      |                 |                   |                                                                                                                                                                                                                                                                                                                                                                                               |

#### Table 5.28.2.2.3.2-4: Headers supported by the 201 response code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                                                       |
|----------|-----------|---|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Location | string    | Μ | 1           | Contains the URI of the newly created resource, according to the structure:<br>{apiRoot}/3gpp-ms-event-exposure/v1/subscriptions/{subscriptionId} |

### 5.28.2.2.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.28.2.3 Resource: Individual Media Streaming Event Exposure Subscription

#### 5.28.2.3.1 Introduction

This resource represents an Individual Media Streaming Event Exposure Subscription managed by the NEF.

This resource is modelled with the Document resource archetype (see clause C.1 of 3GPP TS 29.501 [3]).

#### 5.28.2.3.2 Resource Definition

#### Resource URI: {apiRoot}/3gpp-ms-event-exposure/v1/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in table 5.28.2.3.2-1.

#### Table 5.28.2.3.2-1: Resource URI variables for this resource

| Name           | Data type | Definition                                                                                                                    |
|----------------|-----------|-------------------------------------------------------------------------------------------------------------------------------|
| apiRoot        | string    | See clause 5.28.1.                                                                                                            |
| subscriptionId | Istring   | Contains the unique identifier of the Individual Media Streaming Event<br>Exposure Subscription resource assigned by the NEF. |

# 5.28.2.3.3 Resource Standard Methods

5.28.2.3.3.1 GET

This method allows an AF to retrieve an existing Individual Media Streaming Event Exposure Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.28.2.3.3.1-1.

#### Table 5.28.2.3.3.1-1: URI query parameters supported by the GET method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.28.2.3.3.1-2 and the response data structures and response codes specified in table 5.28.2.3.3.1-3.

#### Table 5.28.2.3.3.1-2: Data structures supported by the GET Request Body on this resource

| Data type | Ρ | Cardinality | Description |
|-----------|---|-------------|-------------|
| n/a       |   |             |             |

### Table 5.28.2.3.3.1-3: Data structures supported by the GET Response Body on this resource

| Data type                      | Р    | Cardinality    | Response<br>codes            | Description                                                                                                                                                                                                                         |
|--------------------------------|------|----------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AfEventExposureSubsc           | М    | 1              | 200 OK                       | Successful case. The requested Individual Media Streaming<br>Event Exposure Subscription resource is successfully<br>returned.                                                                                                      |
| n/a                            |      |                | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                            |      |                | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target URI<br>located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The mandator also apply. | y HT | TP error statu | is code for the              | e GET method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                          |

#### Table 5.28.2.3.3.1-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### Table 5.28.2.3.3.1-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

#### 5.28.2.3.3.2 PUT

This method enables an AF to request the update of an existing Individual Media Streaming Event Exposure Subscription resource at the NEF.

This method shall support the URI query parameters specified in table 5.28.2.3.3.2-1.

#### Table 5.28.2.3.3.2-1: URI query parameters supported by the PUT method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.28.2.3.3.2-2 and the response data structures and response codes specified in table 5.28.2.3.3.2-3.

#### Table 5.28.2.3.3.2-2: Data structures supported by the PUT Request Body on this resource

| Data type                | Ρ | Cardinality | Description                                                                                                                          |
|--------------------------|---|-------------|--------------------------------------------------------------------------------------------------------------------------------------|
| AfEventExposure<br>Subsc | М |             | Contains the updated representation of the Individual Media Streaming<br>Event Exposure Subscription resource that is to be updated. |

### Table 5.28.2.3.3.2-3: Data structures supported by the PUT Response Body on this resource

| Data type                         | Ρ    | Cardinality   | Response<br>codes         | Description                                                                                                                                                                                                                         |
|-----------------------------------|------|---------------|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AfEventExposureSubsc              | М    | 1             | 200 OK                    | Successful case. The concerned Individual Media<br>Streaming Event Exposure Subscription resource is<br>successfully updated and a representation of the<br>updated resource is returned in the response body.                      |
| n/a                               |      |               | 204 No Content            | Successful case. The concerned Individual Media<br>Streaming Event Exposure Subscription resource is<br>successfully updated and no content is returned in the<br>response body.                                                    |
| n/a                               |      |               | 307 Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative target<br>URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| n/a                               |      |               | 308 Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative target<br>URI located in an alternative NEF.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| NOTE: The mandator<br>also apply. | у НТ | TP error stat | us code for the PL        | IT method listed in table 5.2.6-1 of 3GPP TS 29.122 [4]                                                                                                                                                                             |

## Table 5.28.2.3.3.2-4: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1           | An alternative URI of the resource located in an alternative NEF. |

### Table 5.28.2.3.3.2-5: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                       |
|----------|-----------|---|-------------|-------------------------------------------------------------------|
| Location | string    | М | 1 1         | An alternative URI of the resource located in an alternative NEF. |

## 5.28.2.3.3.3 DELETE

This method enables an AF to request the deletion of an existing Individual Media Streaming Event Exposure resource at the NEF.

This method shall support the URI query parameters specified in table 5.28.2.3.3.1.

### Table 5.28.2.3.3.3-1: URI query parameters supported by the DELETE method on this resource

| Name | Data type | Ρ | Cardinality | Description | Applicability |
|------|-----------|---|-------------|-------------|---------------|
| n/a  |           |   |             |             |               |

This method shall support the request data structures specified in table 5.28.2.3.3.3-2 and the response data structures and response codes specified in table 5.28.2.3.3-3.

### Table 5.28.2.3.3.3-2: Data structures supported by the DELETE Request Body on this resource

| Data type | Ρ | Cardinality | Description |

# 5.28.2.3.4 Resource Custom Operations

There are no resource custom operations defined for this resource in this release of the specification.

# 5.28.3 Custom Operations without associated resources

There are no custom operations without associated resources defined for this API in this release of the specification.

# 5.28.4 Notifications

# 5.28.4.1 General

Notifications shall comply to clause 5.2.5 of 3GPP TS 29.122 [4].

| Notification                                   | Callback URI | HTTP method or<br>custom operation | Description<br>(service operation)                                                                                     |
|------------------------------------------------|--------------|------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Media Streaming Event<br>Exposure Notification | {notifUri}   |                                    | This operation enables the NEF to<br>notify a previously subscribed AF<br>on the Media Streaming Exposure<br>Event(s). |

## Table 5.28.4.1-1: Notifications overview

# 5.28.4.2 Media Streaming Event Exposure Notification

# 5.28.4.2.1 Description

The Media Streaming Event Exposure notification is used by the NEF to report one or several observed Media Streaming event(s) to a previously subscribed AF.

## 5.28.4.2.2 Target URI

The Callback URI "{notifUri}" shall be used with the callback URI variables defined in table 5.28.4.2.2-1.

### Table 5.28.4.2.2-1: Callback URI variables

| Name     | Definition                                                                                  |
|----------|---------------------------------------------------------------------------------------------|
| notifUri | Callback reference provided by the AF during the creation/update of the corresponding Media |
|          | Streaming Event Exposure Subscription.                                                      |

# 5.28.4.2.3 Operation Definition

5.28.4.2.3.1 Notification via HTTP POST

This method shall support the request data structures specified in table 5.28.4.2.3.1-1 and the response data structures and response codes specified in table 5.28.4.2.3.1-2.

### Table 5.28.4.2.3.1-1: Data structures supported by the POST Request Body on this resource

| Data type                | Ρ | Cardinality | Description                                               |
|--------------------------|---|-------------|-----------------------------------------------------------|
| AfEventExposure<br>Notif | Μ | 1           | Contains the Media Streaming Event Exposure Notification. |
|                          |   |             |                                                           |

## Table 5.28.4.2.3.1-2: Data structures supported by the POST Response Body on this resource

| Data ty | ре | Ρ | Cardinality                                | Response<br>codes            | Description                                                                                                                                                                                                                                                                             |
|---------|----|---|--------------------------------------------|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N/A     |    |   |                                            | 204 No<br>Content            | The Media Streaming Event Notification is successfully received.                                                                                                                                                                                                                        |
| N/A     |    |   |                                            | 307<br>Temporary<br>Redirect | Temporary redirection. The response shall include a<br>Location header field containing an alternative URI<br>representing the end point of an alternative AF where the<br>notification should be sent.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
| N/A     |    |   |                                            | 308<br>Permanent<br>Redirect | Permanent redirection. The response shall include a<br>Location header field containing an alternative URI<br>representing the end point of an alternative AF where the<br>notification should be sent.<br>Redirection handling is described in clause 5.2.10 of<br>3GPP TS 29.122 [4]. |
|         |    |   | y HTTP error status<br>I22 [4] also apply. | codes for the                | POST method listed in table 5.2.6-1 of                                                                                                                                                                                                                                                  |

#### Table 5.28.4.2.3.1-3: Headers supported by the 307 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                     |
|----------|-----------|---|-------------|-----------------------------------------------------------------|
| Location | string    | Μ |             | An alternative URI representing the end point of an alternative |
|          |           |   |             | AF towards which the notification should be redirected.         |

### Table 5.28.4.2.3.1-4: Headers supported by the 308 Response Code on this resource

| Name     | Data type | Ρ | Cardinality | Description                                                                                                             |
|----------|-----------|---|-------------|-------------------------------------------------------------------------------------------------------------------------|
| Location | string    | М |             | An alternative URI representing the end point of an alternative AF towards which the notification should be redirected. |

### 5.28.4.2.3.2 Notification via Websocket

If supported by both AF and NEF and successfully negotiated, the Media Streaming event notification may alternatively be delivered through the Websocket mechanism as defined in clause 5.2.5.4 of 3GPP TS 29.122 [4].

# 5.28.5 Data Model

# 5.28.5.1 General

This clause specifies the application data model supported by the MSEventExposure API. Table 5.28.5.1-1 specifies the data types defined for the MSEventExposure API.

#### Table 5.28.5.1-1: MSEventExposure specific Data Types

| Data type | Clause defined | Description | Applicability |
|-----------|----------------|-------------|---------------|
|           |                |             |               |

Table 5.28.5.1-2 specifies data types re-used by the MSEventExposure API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the MSEventExposure API.

| Data type            | Reference | Comments                                                                                                                                                                                             | Applicability |
|----------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| AfEventExposureNotif |           | Represents a Media Streaming event notification.                                                                                                                                                     |               |
| AfEventExposureSubsc |           | Represents a Media Streaming event<br>exposure subscription. Only applicable to the<br>UE application events exposed via Data<br>Collection AF as defined in clause 4.1.1 of<br>3GPP TS 29.517 [58]. |               |

Table 5.28.5.1-2: Re-used Data Types

# 5.28.5.2 Structured data types

## 5.28.5.2.1 Introduction

This clause defines the structures to be used in resource representations.

There are no structured data types defined for this API in this release of the specification.

# 5.28.5.3 Simple data types and enumerations

## 5.28.5.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

### 5.28.5.3.2 Simple data types

The simple data types defined in table 5.28.5.3.2-1 shall be supported.

### Table 5.28.5.3.2-1: Simple data types

| Type Name | Type Definition | Description | Applicability |
|-----------|-----------------|-------------|---------------|
|           |                 |             |               |

# 5.28.6 Used Features

The table below defines the features applicable to the MSEventExposure API. Those features are negotiated as described in clause 5.2.7 of 3GPP TS 29.122 [4].

#### Table 5.28.6-1: Features used by MSEventExposure API

| Feature number | Feature Name | Description |
|----------------|--------------|-------------|
|                |              |             |

# 5.28.7 Error handling

# 5.28.7.1 General

HTTP error handling shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [4].

In addition, the requirements in the following clauses shall apply.

# 5.28.7.2 Protocol Errors

In this Release of the specification, there are no additional protocol errors applicable for the MSEventExposure API.

# 5.28.7.3 Application Errors

The application errors defined for the MSEventExposure API are listed in table 5.28.7.3-1.

| Application Error | HTTP status code | Description |
|-------------------|------------------|-------------|
|                   |                  |             |

# 6 Security

TLS shall be used to support the security communication between the NEF and the AF over NEF Northbound interface as defined in clause 12 of 3GPP TS 33.501 [6]. The access to the NEFnorthbound APIs shall be authorized by means of OAuth2 protocol (see IETF RFC 6749 [13]), based on local configuration, using the "Client Credentials" authorization grant. If OAuth2 is used, a client, prior to consuming services offered by the NEF Northbound APIs, shall obtain a "token" from the authorization server.

7 Using Common API Framework

# 7.1 General

When CAPIF is used with an NEF that is used for external exposure, the NEF shall support the following as defined in 3GPP TS 29.222 [12]:

- the API exposing function and related APIs over CAPIF-2/2e and CAPIF-3/3e reference points;
- the API publishing function and related APIs over CAPIF-4/4e reference point;
- the API management function and related APIs over CAPIF-5/5e reference point; and
- at least one of the security methods for authentication and authorization, and related security mechanisms.

In a centralized deployment as defined in 3GPP TS 23.222 [11], where the CAPIF core function and API provider domain functions are co-located, the interactions between the CAPIF core function and API provider domain functions may be independent of CAPIF-3/3e, CAPIF-4/4e and CAPIF-5/5e reference points.

# 7.2 Security

When CAPIF is used for external exposure, before invoking the API exposed by the NEF, the AF as API invoker shall negotiate the security method (PKI, TLS-PSK or OAUTH2) with CAPIF core function and ensure the NEF has enough credential to authenticate the AF (see 3GPP TS 29.222 [12], clause 5.6.2.2 and clause 6.2.2.2).

If PKI or TLS-PSK is used as the selected security method between the AF and the NEF, upon API invocation, the NEF shall retrieve the authorization information from the CAPIF core function as described in 3GPP TS 29.222 [12], clause 5.6.2.4.

As indicated in 3GPP TS 33.122 [14], the access to the NEF northbound APIs may be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [13]), using the "Client Credentials" authorization grant, where the CAPIF core function (see 3GPP TS 29.222 [12]) plays the role of the authorization server.

NOTE 1: In this release, only "Client Credentials" authorization grant is supported.

If OAuth2 is used as the selected security method between the AF and the NEF, the AF, prior to consuming services offered by the NEF northbound APIs, shall obtain a "token" from the authorization server, by invoking the Obtain\_Authorization service, as described in 3GPP TS 29.222 [12], clause 5.6.2.3.2.

The NEF northbound APIs do not define any scopes for OAuth2 authorization. It is the NEF responsibility to check whether the AF is authorized to use an API based on the "token". Once the NEF verifies the "token", it shall check whether the NEF identifier in the "token" matches its own published identifier, and whether the API name in the "token" matches its own published API name. If those checks are passed, the AF has full authority to access any resource or operation for the invoked API.

- NOTE 2: For aforementioned security methods, the NEF needs to apply admission control according to access control policies after performing the authorization checks.
- NOTE 3: The security requirement in the current clause does not apply for the NiddConfigurationTrigger and the MsisdnLessMoSms APIs since they are the NEF initiated interaction with the AF. How the security scheme works for the NiddConfigurationTrigger and MsisdnLessMoSms APIs is left to configuration.

# Annex A (normative): OpenAPI representation for NEF Northbound APIs

# A.1 General

This Annex is based on the OpenAPI Specification [5] and provides corresponding representations of all APIs defined in the present specification.

NOTE 1: An OpenAPIs representation embeds JSON Schema representations of HTTP message bodies.

This Annex shall take precedence when being discrepant to other parts of the specification with respect to the encoding of information elements and methods within the API(s).

NOTE 2: The semantics and procedures, as well as conditions, e.g. for the applicability and allowed combinations of attributes or values, not expressed in the OpenAPI definitions but defined in other parts of the specification also apply.

Informative copies of the OpenAPI specification files contained in this 3GPP Technical Specification are available on a Git-based repository that uses the GitLab software version control system (see clause 5B of the 3GPP TR 21.900 [21] and clause 5.3.1 of the 3GPP TS 29.501 [32] for further information).
