Important notice

The present document can be downloaded from:
<https://www.etsi.org/standards-search>

The present document may be made available in electronic versions and/or in print. The content of any electronic and/or print versions of the present document shall not be modified without the prior written authorization of ETSI. In case of any existing or perceived difference in contents between such versions and/or in print, the prevailing version of an ETSI deliverable is the one made publicly available in PDF format at www.etsi.org/deliver.

Users of the present document should be aware that the document may be subject to revision or change of status.

Information on the current status of this and other ETSI documents is available at
<https://portal.etsi.org/TB/ETSIDeliverableStatus.aspx>

If you find errors in the present document, please send your comment to one of the following services:
<https://portal.etsi.org/People/CommitteeSupportStaff.aspx>

If you find a security vulnerability in the present document, please report it through our
Coordinated Vulnerability Disclosure Program:
<https://www.etsi.org/standards/coordinated-vulnerability-disclosure>

Notice of disclaimer & limitation of liability

The information provided in the present deliverable is directed solely to professionals who have the appropriate degree of experience to understand and interpret its content in accordance with generally accepted engineering or other professional standard and applicable regulations.

No recommendation as to products and services or vendors is made or should be implied.

No representation or warranty is made that this deliverable is technically accurate or sufficient or conforms to any law and/or governmental rule and/or regulation and further, no representation or warranty is made of merchantability or fitness for any particular purpose or against infringement of intellectual property rights.

In no event shall ETSI be held liable for loss of profits or any other incidental or consequential damages.

Any software contained in this deliverable is provided "AS IS" with no warranties, express or implied, including but not limited to, the warranties of merchantability, fitness for a particular purpose and non-infringement of intellectual property rights and ETSI shall not be held liable in any event for any damages whatsoever (including, without limitation, damages for loss of profits, business interruption, loss of information, or any other pecuniary loss) arising out of or related to the use or inability to use the software.

Copyright Notification

No part may be reproduced or utilized in any form or by any means, electronic or mechanical, including photocopying and microfilm except as authorized by written permission of ETSI.

The content of the PDF version shall not be modified without the written authorization of ETSI.

The copyright and the foregoing restriction extend to reproduction in all media.

Intellectual Property Rights

Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

DECT™, PLUGTESTS™, UMTS™ and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™** and **LTE™** are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

Legal Notice

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found under <https://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document specifies the stage 3 protocol and data model for PIN-9 interface between the PIN application server and PIN server. It provides stage 3 protocol definitions and message flows, and specifies the API for each service offered by the PIN server over PIN-9 interface. The stage 2 functional requirements are defined in 3GPP TS 23.542 [10].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
 - For a specific reference, subsequent revisions do not apply.
 - For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms given in TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in TR 21.905 [1].

Personal IoT Network (PIN): A configured and managed group of PIN Element(s) that are able to communicate with each other directly, communicate with each other via PIN Element(s) with Gateway Capability (i.e. PEGC(s)), or use a PEGC to communicate with devices or servers that are outside of the PIN via the 5G network. A PIN includes at least

one PEGC and is managed by PIN Element(s) with Management Capability (i.e. PEMC(s)) with the support by an AF if AF is deployed.

PIN Element with Gateway Capability (PEGC): A PIN Element with the ability to provide DN connectivity via the 5G network for other PIN Elements and/or is able to provide relay functionality for communication between PIN Elements. Only a UE is able to act as a PEGC.

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in TR 21.905 [1].

PAS	PIN Application Server
PEGC	PIN Element with Gateway Capability
PIN	Personal IoT Network
PINAPP	Personal IoT Network Application

4 Overview

The Personal IoT Network (PIN) Server forms part of the Application layer support for Personal IoT Networks defined in 3GPP TS 23.542 [10]. It is aimed to support the server-side functionalities required for managing the PIN. The PIN Server provides the following functionalities:

- support application server registration management procedure;
- support application server service switch subscription procedure; and
- support application server service continuity subscription procedure.

Figure 4-1 shows the reference point representation of the architecture for Personal IoT Network Application.

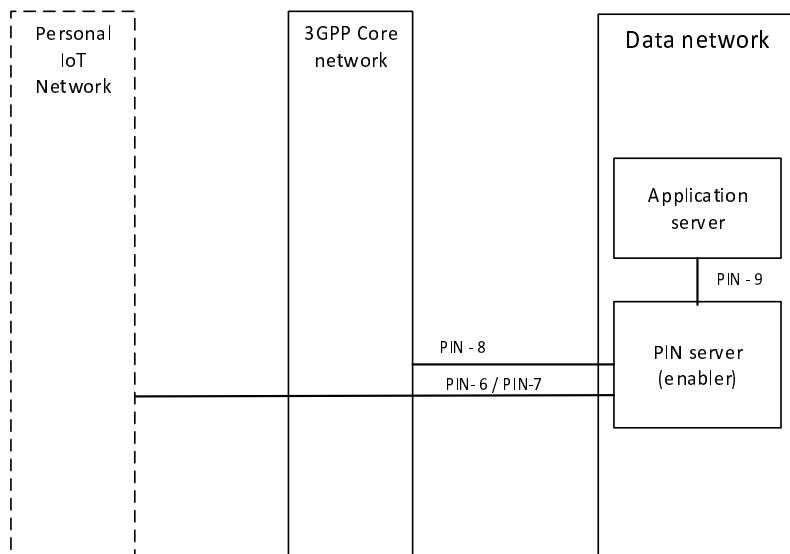

Figure 4-1: PINAPP architecture

PIN-9 reference point exists between the application server and PIN server for the interactions related to enabling PINAPP.

5 Services offered by PIN Server

5.1 Introduction

Table 5.1-1: List of PIN server APIs

Service Name	Service Operations	Operation Semantics	Consumer(s)
PIN_ASRegistration	Request	Request/Response	e.g. PAS
	Update	Request/Response	e.g. PAS
	Deregister	Request/Response	e.g. PAS
PIN_ASServiceSwitch	Subscribe	Request/Response	e.g. PAS
	Notify	Request	e.g. PAS
	Update	Request/Response	e.g. PAS
	Delete	Request/Response	e.g. PAS
PIN_ASServiceContinuity	Subscribe	Request/Response	e.g. PAS
	Notify	Request	e.g. PAS
	Update	Request/Response	e.g. PAS
	Delete	Request/Response	e.g. PAS

Table 5.1-2 summarizes the corresponding PIN server APIs defined in this specification.

Table 5.1-2: PIN server API Descriptions

Service Name	Claus e	Description	OpenAPI Specification File	API Name	Annex
PIN_ASRegistration	5.2	Service for AS registration	TS29583_PIN_ASRegistration.yaml	pin-as-registration	A.2
PIN_ASServiceSwitch	5.3	Service for reporting service switch	TS29583_PIN_ASServiceSwitch.yaml	pin-as-serviceswitch	A.3
PIN_ASServiceContinuity	5.4	Service for reporting service continuity	TS29583_PIN_ASServiceContinuity.yaml	pin-as-servicecontinuity	A.4

NOTE: When 3GPP TS 29.122 [2] is referenced for the common protocol and interface aspects for API definition in the clauses under clause 5, the service producer (i.e. PIN Server) takes the role of the SCEF and the service consumer takes the role of the SCS/AS.

5.2 PIN_ASRegistration Service

5.2.1 Service Description

The PIN_ASRegistration API, as defined in 3GPP TS 23.542 [10], allows a PAS to register, update its registration and deregister at a given PIN server via PIN-9 interface.

5.2.2 Service Operations

5.2.2.1 Introduction

The service operation defined for PIN_ASRegistration API is shown in the table 5.2.2.1-1.

Table 5.2.2.1-1: Operations of the PIN_ASRegistration API

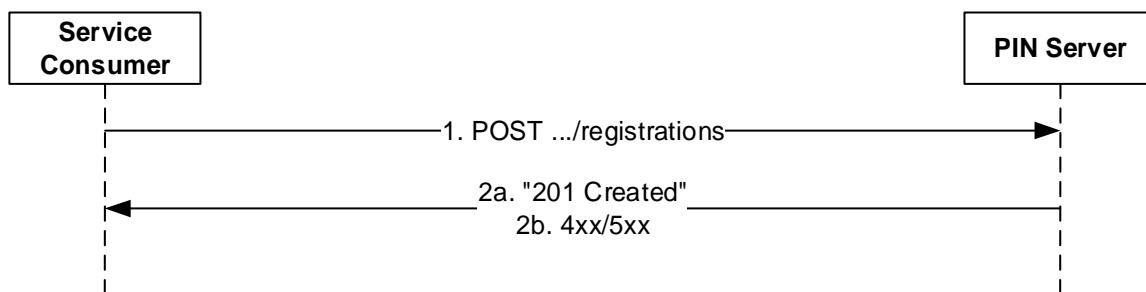

Service operation name	Description	Initiated by
PIN_ASRegistration_Request	This service operation is used by the service consumer to register to the PIN server.	e.g. PAS
PIN_ASRegistration_Update	This service operation is used by the service consumer to update the registration information to the PIN server.	e.g. PAS
PIN_ASRegistration_Deregister	This service operation is used by the service consumer to deregister from the PIN server.	e.g. PAS

5.2.2.2 PIN_ASRegistration_Request

5.2.2.2.1 General

This service operation is used by the PAS to register itself to a PIN server.

5.2.2.2.2 PAS Registration Creation

**Figure 5.2.2.2.2-1: Procedure for PAS Registration Creation**

1. When the service consumer needs to register to the PIN server, the service consumer shall send the HTTP POST request message to the PIN Server targeting the "PAS Registrations" collection resource, with the request body including the PASRegistration data structure.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "201 Created" status code with the response body containing a representation of the created "Individual PAS Registration" resource within the PASRegistration data structure.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.1.7.

5.2.2.3 PIN_ASRegistration_Update

5.2.2.3.1 General

This service operation is used by the PAS to update its registration information at a given PIN server.

5.2.2.3.2 Updating an existing Registration

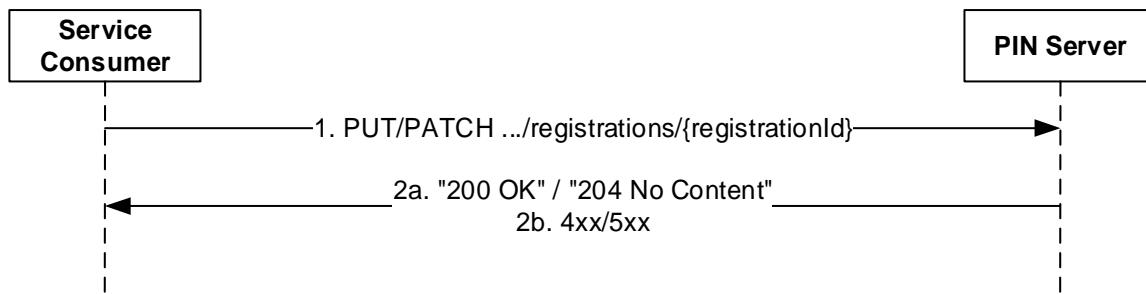

Figure 5.2.2.3.2-1: Procedure for update of a registration

1. When the service consumer needs to update the registration information to the PIN server, the service consumer shall send the HTTP PUT/PATCH message to the PIN server targeting the "Individual PAS Registration" collection resource, with the request body including the PASRegistrationPatch data structure.
- 2a. Upon success, if the PAS is authorized, the PIN server shall respond with an HTTP PUT response including "200 OK" status code with the response body containing the fully updated PAS registration information of the resource within the PASRegistration data structure or HTTP PATCH response including "204 No Content" status code.
- 2b. On failure, the PIN server shall send the error response as specified in clause 6.1.7.

5.2.2.4 PIN_ASRegistration_Deregister

5.2.2.4.1 General

This service operation is used by the PAS to deregister itself from a given PIN server.

5.2.2.4.2 Deregistering the Registration

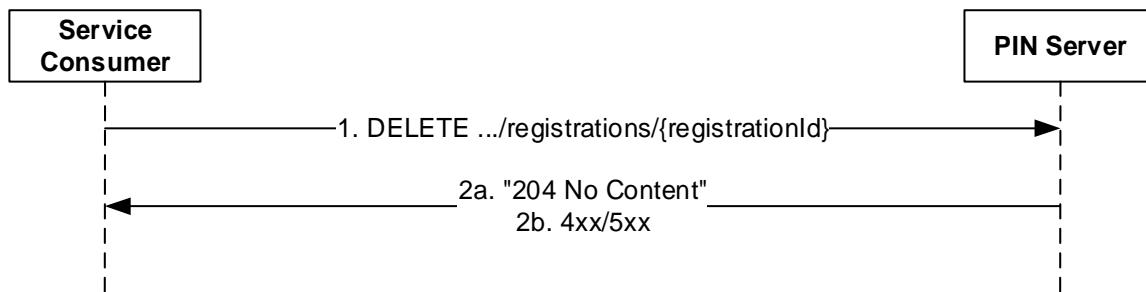

Figure 5.2.2.4.2-1: Procedure for Deregistering the Registration

1. When the service consumer needs to deregister from the PIN server, the service consumer shall send an HTTP DELETE request to the PIN server targeting the corresponding "Individual PAS Registration" resource.
- 2a. Upon success, if the PAS is authorized, the PIN server shall respond with an HTTP "204 No Content" status code.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP DELETE response body, as specified in clause 6.1.7.

If the PIN server determines that the received HTTP DELETE request needs to be redirected, the PIN server may respond with an HTTP "307 Temporary Redirect" status code or an HTTP "308 Permanent Redirect" status code including an HTTP "Location" header containing an alternative URI representing the end point of an alternative PIN server where the message should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [2].

5.3 PIN_ASServiceSwitch Service

5.3.1 Service Description

The PIN_ASServiceSwitch API, as defined in 3GPP TS 23.542 [10], allows a PAS to obtain the information about the service switch at a given PIN server via PIN-9 interface.

5.3.2 Service Operations

5.3.2.1 Introduction

The service operation defined for PIN_ASServiceSwitch API is shown in the table 5.3.2.1-1.

Table 5.3.2.1-1: Operations of the PIN_ASServiceSwitch API

Service operation name	Description	Initiated by
PIN_ASServiceSwitch_Subscribe	This service operation is used by the PAS to subscribe to PIN server, for reporting of service switch information.	PAS
PIN_ASServiceSwitch_Notify	This service operation is used by the PIN server to notify the PAS about the service switch information.	PIN server
PIN_ASServiceSwitch_Update	This service operation is used by the PAS to update its subscription at PIN server, for reporting of service switch information.	PAS
PIN_ASServiceSwitch_Unsubscribe	This service operation is used by the PAS to remove its subscription at PIN server, for reporting of service switch information.	PAS

5.3.2.2 PIN_ASServiceSwitch_Subscribe

5.3.2.2.1 General

This service operation is used by the PAS to subscribe to PIN server, for reporting of service switch information.

5.3.2.2.2 Service Switch Information Subscription Creation

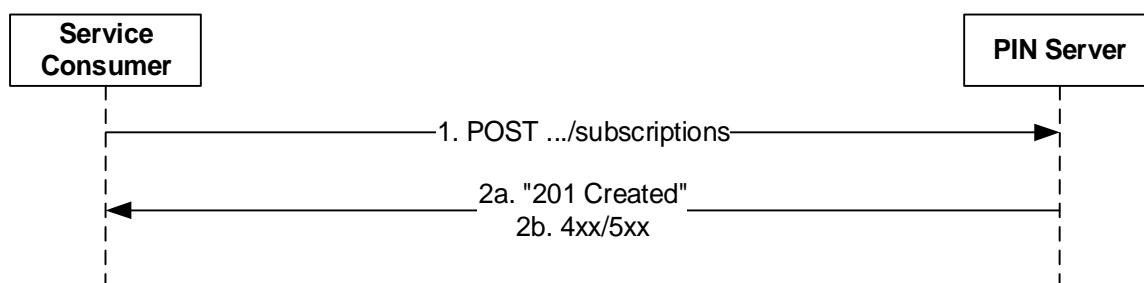

Figure 5.3.2.2.2-1: Procedure for PAS Subscription Creation

1. When the service consumer needs to subscribe to service switch information at the PIN server, the service consumer shall send the HTTP POST request message to the PIN Server targeting the "Service Switch Information Subscriptions" collection resource, with the request body including the ServiceSwitchInfo data structure.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "201 Created" status code with the response body containing a representation of the created "Individual Service Switch Information Subscription" resource within the ServiceSwitchInfo data structure.

2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.2.7.

5.3.2.3 PIN_ASServiceSwitch_Notify

5.3.2.3.1 General

This service operation is used by the PIN server to notify the PAS about the service switch information.

5.3.2.3.2 Service Switch Information Notification

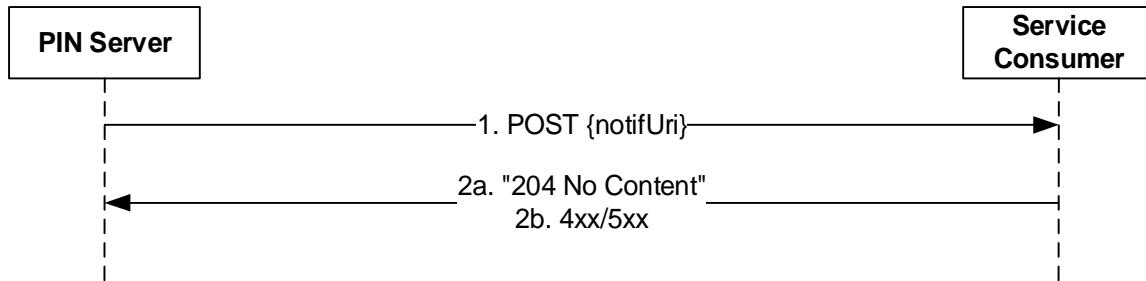

Figure 5.3.2.3.2-1: Procedure for Service Switch Information Notification

1. When the service consumer needs to notify the service switch information at the PIN server, the service consumer shall send the HTTP POST request message to the PIN Server targeting the "Service Switch Information Subscriptions" collection resource, with the request body including the ServiceSwitchInfoNotification data structure.
- 2a. Upon success, if the PAS is authorized, the PAS shall process the Service Switch Information Notification and shall respond to the PIN server with "204 No Content" message.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.2.7.

5.3.2.4 PIN_ASServiceSwitch_Update

5.3.2.4.1 General

This service operation is used by the PAS to update a service switch subscription with the PIN Server.

5.3.2.4.2 Service Switch Information Update

To update service switch information reporting subscription at the PIN server, the PAS shall send a HTTP PATCH or PUT message to the PIN server on resource URI identifying the "Individual Service Switch Information Subscription" resource representation, as specified in clause 6.2.3.3.3.2 for HTTP PATCH message and in clause 6.2.3.3.3.3 for HTTP PUT message.

The HTTP PUT message shall replace all properties in the existing resource with the service switch information subscription in the request.

The HTTP PATCH message shall modify the properties in the existing resource with the service switch information subscription information in the request.

Upon receiving the HTTP PUT or HTTP PATCH message from the PAS, the PIN server shall process the request message and verify whether the PAS is authorized to modify the requested subscription resource or not:

- a) if the PAS is authorized to modify the requested subscription resource, the PIN server shall:
 - 1) update the resource identified by Resource URI of the PAS service switch information subscription with the updated information received in the HTTP PATCH or PUT request message;

- 2) upon successful update of PAS service switch information, return the updated PAS service switch information subscription in the "200 OK" response message or respond with the "204 No Content" message indicating to the PAS that the PAS service switch information subscription is updated successfully. In the response message, the PIN server may provide an updated expiration time to indicate to the PAS when the updated subscription will automatically expire.
- b) if the PAS is not authorized to modify the requested subscription resource, the PIN server shall:
- 1) take proper error handling actions, as specified in clause 6.2.7; and
 - 2) send an HTTP response message with an appropriate error status code.

If the PIN server determines that the received HTTP PATCH or PUT message needs to be redirected, the PIN server may respond with an HTTP "307 Temporary Redirect" status code or an HTTP "308 Permanent Redirect" status code including an HTTP "Location" header containing an alternative URI representing the end point of an alternative PIN server where the message should be sent. Redirection handling is described in clause 5.2.10 of 3GPP TS 29.122 [2].

If the expiration time is provided, then to maintain the subscription, the PAS shall send an update subscription prior to subscription expiry time and the PIN server shall reset the expiration time in the PIN server. If the update subscription request is not sent before the expiry time, then the PIN server shall treat the PAS subscription as unsubscribed and remove the corresponding PAS service switch information subscription resource.

5.3.2.5 PIN_ASServiceSwitch_Unsubscribe

5.3.2.5.1 General

This service operation is used by the PAS to remove its subscription at PIN server, for reporting of service switch information.

5.3.2.5.2 Unsubscribing the Service Switch Information

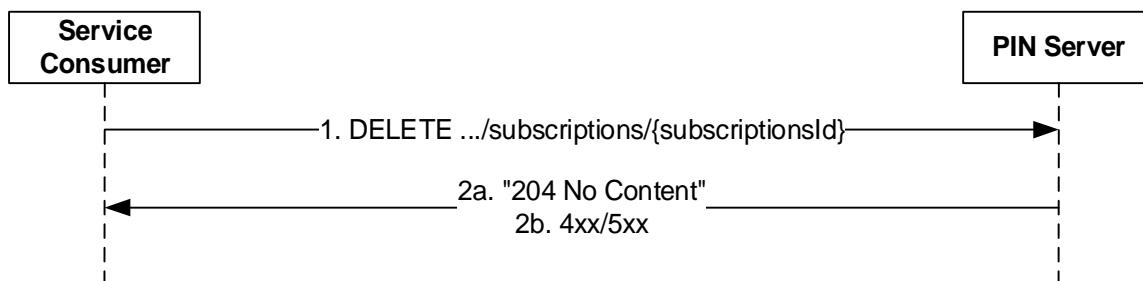

Figure 5.3.2.5.2-1: Procedure for Unsubscribing the Service Switch Information

1. When the service consumer needs to unsubscribe its service switch information subscription from the PIN server, the service consumer shall send the HTTP DELETE request message to the PIN Server targeting the "Individual Service Switch Information Subscription" collection resource.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "204 No content" status code to indicate the successful removal of the subscription information.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.2.7.

5.4 PIN_ASServiceContinuity Service

5.4.1 Service Description

The PIN_ASServiceContinuity API, as defined in 3GPP TS 23.542 [10], allows a PAS to obtain the information about the service continuity at a given PIN server via PIN-9 interface.

5.4.2 Service Operations

5.4.2.1 Introduction

The service operation defined for PIN_ASServiceContinuity API is shown in the table 5.4.2.1-1.

Table 5.4.2.1-1: Operations of the PIN_ASServiceContinuity API

Service operation name	Description	Initiated by
PIN_ASServiceContinuity_Subscribe	This service operation is used by the PAS to subscribe to PIN server, for reporting of service continuity information.	PAS
PIN_ASServiceContinuity_Notify	This service operation is used by the PIN server to notify the PAS about the service continuity information.	PIN server
PIN_ASServiceContinuity_Update	This service operation is used by the PAS to update its subscription at PIN server, for reporting of service continuity information.	PAS
PIN_ASServiceContinuity_Unsubscribe	This service operation is used by the PAS to remove its subscription at PIN server, for reporting of service continuity information.	PAS

5.4.2.2 PIN_ASServiceContinuity_Subscribe

5.4.2.2.1 General

This service operation is used by the PAS to subscribe to PIN server, for reporting of service continuity information.

5.4.2.2.2 Service Continuity Information Subscription Creation

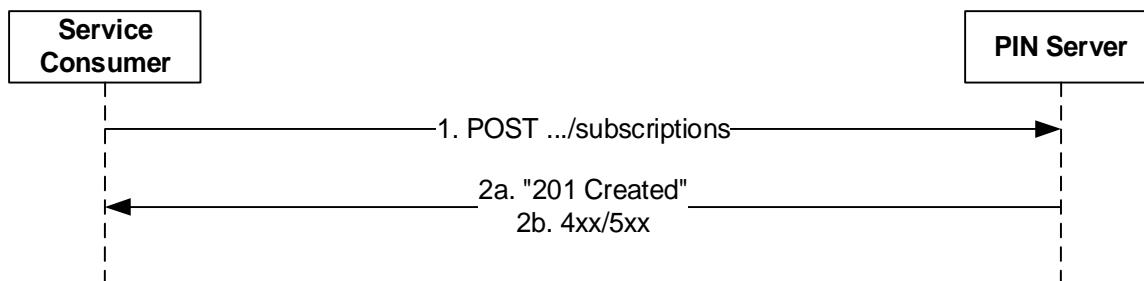

Figure 5.4.2.2.2-1: Procedure for Continuity Information Subscription Creation

1. When the service consumer needs to subscribe to service continuity information at the PIN server, the service consumer shall send the HTTP POST request message to the PIN Server targeting the "Service Continuity Information Subscriptions" collection resource, with the request body including the ServiceContinuityInfo data structure.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "201 Created" status code with the response body containing a representation of the created "Individual Service Continuity Information Subscription" resource within the ServiceContinuityInfo data structure.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.3.7.

5.4.2.3 PIN_ASServiceContinuity_Notify

5.4.2.3.1 General

This service operation is used by the PIN server to notify the PAS about the service continuity information.

5.4.2.3.2 Service Continuity Information Notification

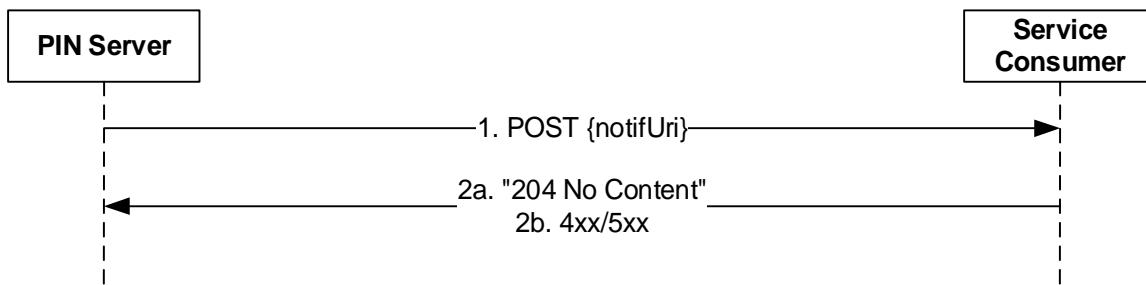

Figure 5.4.2.3.2-1: Procedure for Service Continuity Information Notification

1. When the service consumer needs to notify the service continuity information at the PIN server, the service consumer shall send the HTTP POST request message to the PIN Server targeting the "Service Continuity Information Subscriptions" collection resource, with the request body including the ServiceContinuityInfoNotification data structure.
- 2a. Upon success, if the PAS is authorized, the PAS shall process the Service Continuity Information Notification and shall respond to the PIN server with "204 No Content" message.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.3.7.

5.4.2.4 PIN_ASServiceContinuity_Update

5.4.2.4.1 General

This service operation is used by the PAS to update a service continuity subscription with the PIN Server.

5.5.2.4.2 Service Continuity Information Update

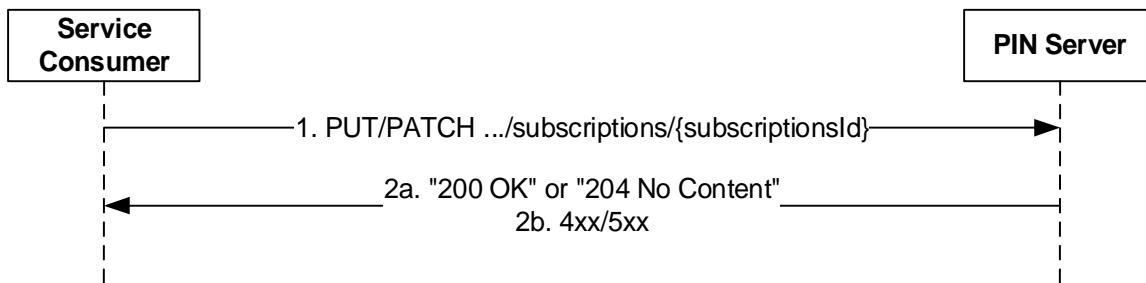

Figure 5.4.2.4.2-1: Procedure for the Service Continuity Information Update

1. When the service consumer needs to update service continuity information reporting subscription at the PIN server, the service consumer shall send the HTTP PATCH or HTTP PUT request message to the PIN Server targeting the "Individual Service Continuity Information Subscription" collection resource, with the request body including the ServiceContinuityInfo data structure.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "204 No content" or an HTTP "200 OK" status code with the response body containing a representation of the created "Individual Service Continuity Information Subscription" resource within the ServiceContinuityInfoPatch data structure.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.3.7.

5.4.2.5 PIN_ASServiceContinuity_Unsubscribe

5.4.2.5.1 General

This service operation is used by the PAS to remove its subscription at PIN server, for reporting of service continuity information.

5.4.2.5.2 Unsubscribing the Service Continuity Information

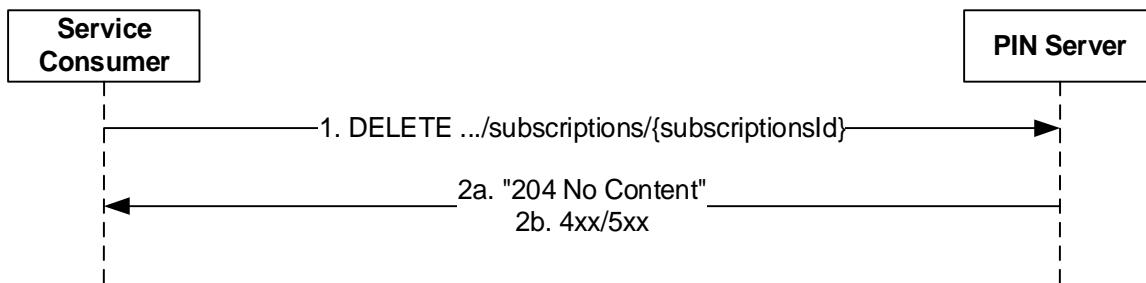

Figure 5.4.2.5.2-1: Procedure for Unsubscribing the Service Continuity Information

1. When the service consumer needs to unsubscribe its service continuity information subscription from the PIN server, the service consumer shall send the HTTP DELETE request message to the PIN Server targeting the "Individual Service Continuity Information Subscription" collection resource.
- 2a. Upon success, if the PAS is authorized, the PIN Server shall respond with an HTTP "204 No content" status code to indicate the successful removal of the subscription information.
- 2b. On failure, the appropriate HTTP status code indicating the error shall be returned and appropriate additional error information should be returned in the HTTP POST response body, as specified in clause 6.3.7.

6 API Definitions

6.1 PIN_ASRegistration Service API

6.1.1 Introduction

The PIN_ASRegistration service shall use the PIN_ASRegistration service API.

The API URI of the PIN_ASRegistration service API shall be:

{apiRoot}/{*apiName*}/{*apiVersion*}

The request URIs used in HTTP requests shall have the Resource URI structure defined in clause 5.2.4 of 3GPP TS 29.122 [2], i.e.:

{apiRoot}/{*apiName*}/{*apiVersion*}/{*apiSpecificSuffixes*}

with the following components:

- The {*apiRoot*} shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].
- The <*apiName*> shall be "pin-as-registration".
- The <*apiVersion*> shall be "v1".
- The <*apiSpecificSuffixes*> shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].

NOTE: When 3GPP TS 29.122 [2] is referenced for the common protocol and interface aspects for API definition in the clauses under clause 5, the service producer (i.e. PIN Server) takes the role of the SCEF and the service consumer takes the role of the SCS/AS.

6.1.2 Usage of HTTP

The provisions of clause 5.2.2 of 3GPP TS 29.122 [2] shall apply for the PIN_ASRegistration API.

6.1.3 Resources

6.1.3.1 Overview

This clause describes the structure for the Resource URIs and the resources and methods used for the service.

Figure 6.1.3.1-1 depicts the resource URIs structure for the PIN_ASRegistration API.

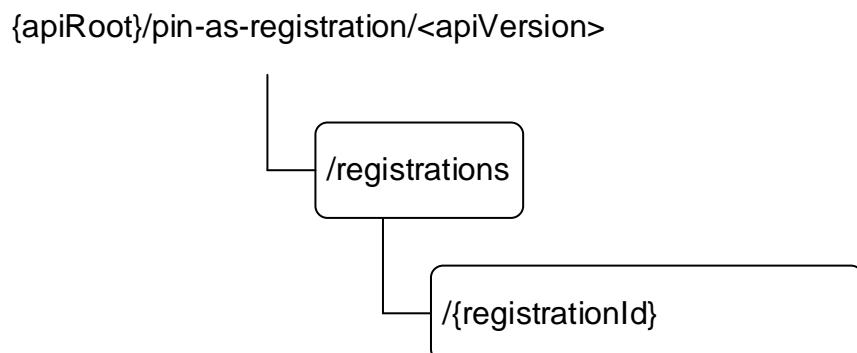

Figure 6.1.3.1-1: Resource URI structure of the PIN_ASRegistration API

Table 6.1.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 6.1.3.1-1: Resources and methods overview

Resource purpose/name	Resource URI (relative path after API URI)	HTTP method or custom operation	Description (service operation)
PAS Registrations	/registrations	POST	Register a new PAS at the PIN server.
Individual PAS Registration	/registrations/{registrationId}	GET	Fetch an individual PAS registration resource.
		PUT	Fully replace an individual PAS registration resource.
		PATCH	Partially modify an individual PAS registration resource.
		DELETE	Remove an individual PAS registration resource.

6.1.3.2 Resource: PAS Registrations

6.1.3.2.1 Description

This resource represents all the PAS that are registered to the PIN server.

6.1.3.2.2 Resource Definition

Resource URI: {apiRoot}/pin-as-registration/<apiVersion>/registrations

This resource shall support the resource URI variables defined in table 6.1.3.2.2-1.

Table 6.1.3.2.2-1: Resource URI variables for this resource

Name	Data type	Definition
apiRoot	string	See clause 6.1.1.

6.1.3.2.3 Resource Standard Methods

6.1.3.2.3.1 POST

This method shall support the URI query parameters specified in table 6.1.3.2.3.1-1.

Table 6.1.3.2.3.1-1: URI query parameters supported by the POST Request Body on this resource

Name	Data type	P	Cardinality	Description	Applicability
n/a					

This method shall support the request data structures specified in table 6.1.3.2.3.1-2 and the response data structures and response codes specified in table 6.1.3.2.3.1-3.

Table 6.1.3.2.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description	
PASRegistration	M	1	PAS registration request information.	

Table 6.1.3.2.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
PASRegistration	M	1	201 Created	PAS information is successfully registered to the PIN server. The URI of the created resource shall be returned in the "Location" HTTP header.

NOTE: The mandatory HTTP error status code for the HTTP POST method listed in table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.1.3.2.3.1-4: Headers supported by the POST method on this resource

Name	Data type	P	Cardinality	Description
n/a				

Table 6.1.3.2.3.1-5: Headers supported by the 201 response code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	Contains the URI of the newly created resource, according to the structure: {apiRoot}/pin-as-registration/<apiVersion>/registrations/{registrationId}

Table 6.1.3.2.3.1-6: Links supported by the 200 Response Code on this endpoint

Name	Resource name	HTTP method or custom operation	Link parameter(s)	Description
n/a				

6.1.3.2.4 Resource Custom Operations

None.

6.1.3.3 Resource: Individual PAS Registration**6.1.3.3.1 Description**

This Individual PAS Registration resource represents an individual PAS registered at a given PIN server.

6.1.3.3.2 Resource Definition

Resource URI: {apiRoot}/pin-as-registration/<apiVersion>/registrations/{registrationId}

This resource shall support the resource URI variables defined in the table 6.1.3.3.2-1.

Table 6.1.3.3.2-1: Resource URI variables for this resource

Name	Data Type	Definition
apiRoot	string	See clause 6.1.1.
registrationId	string	Identifies a PAS registration.

6.1.3.3.3 Resource Standard Methods**6.1.3.3.3.1 GET**

This method retrieves the PAS information registered at the PIN server. This method shall support the URI query parameters specified in table 6.1.3.3.3.1-1.

Table 6.1.3.3.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.1-2 and the response data structures and response codes specified in table 6.1.3.3.3.1-3.

Table 6.1.3.3.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.3.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
PASRegistration	M	1	200 OK	The PAS registration information at the PIN server.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [6].
NOTE: The mandatory HTTP error status code for the GET method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.1.3.3.3.1-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.1.3.3.3.1-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.1.3.3.3.2 PUT

This method updates the PAS registration information at the PIN server by completely replacing the existing registration data. This method shall support the URI query parameters specified in the table 6.1.3.3.3.2-1.

Table 6.1.3.3.3.2-1: URI query parameters supported by the PUT method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.2-2 and the response data structures and response codes specified in table 6.1.3.3.3.2-3.

Table 6.1.3.3.3.2-2: Data structures supported by the PUT Request Body on this resource

Data type	P	Cardinality	Description
PASRegistration	M	1	Details of the PAS registration information to be updated.

Table 6.1.3.3.3.2-3: Data structures supported by the PUT Response Body on this resource

Data type	P	Cardinality	Response codes	Description
PASRegistration	M	1	200 OK	The Individual PAS registration information updated successfully and the updated PAS registration information is returned in the response.
n/a			204 No Content	The Individual PAS registration information updated successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].

NOTE: The mandatory HTTP error status code for the PUT method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.1.3.3.3.2-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.1.3.3.3.2-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.1.3.3.3.3 DELETE

This method deregisters a PAS registration from the PIN server. This method shall support the URI query parameters specified in the table 6.1.3.3.3.3-1.

Table 6.1.3.3.3.3-1: URI query parameters supported by the DELETE method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.3-2 and the response data structures and response codes specified in table 6.1.3.3.3.3-3.

Table 6.1.3.3.3.3-2: Data structures supported by the DELETE Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.3.3.3-3: Data structures supported by the DELETE Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a			204 No Content	The individual PAS registration information matching the registrationId is deleted.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the DELETE method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.1.3.3.3.3-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.1.3.3.3.3-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.1.3.3.4 PATCH

This method partially updates the PAS registration information at the PIN server. This method shall support the URI query parameters specified in the table 6.1.3.3.3.4-1.

Table 6.1.3.3.3.4-1: URI query parameters supported by the PATCH method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.4-2 and the response data structures and response codes specified in table 6.1.3.3.3.4-3.

Table 6.1.3.3.3.4-2: Data structures supported by the PATCH Request Body on this resource

Data type	P	Cardinality	Description
PASRegistrationPatch	M	1	Details of the PAS registration information to be updated

Table 6.1.3.3.3.4-3: Data structures supported by the PATCH Response Body on this resource

Data type	P	Cardinality	Response codes	Description
PASRegistration	M	1	200 OK	The Individual PAS registration information was updated successfully and the updated PAS registration information is returned in the response.
n/a			204 No Content	The Individual PAS registration information was updated successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [6].

NOTE: The mandatory HTTP error status code for the PUT method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.1.3.3.3.4-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.1.3.3.3.4-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.1.3.3.4 Resource Custom Operations

None.

6.1.4 Custom Operations without associated resources

None.

6.1.5 Notifications

None.

6.1.6 Data Model

6.1.6.1 General

This clause specifies the application data model supported by the API.

Table 6.1.6.1-1 specifies the data types defined for the PIN_ASRegistration API.

Table 6.1.6.1-1: PIN_ASRegistration API specific Data Types

Data type	Section defined	Description	Applicability
ConnectivityInfo	6.1.6.2.3	Contains the connectivity information used to communicate with the PAS.	
PASRegistration	6.1.6.2.2	Represents the PAS registration information.	
PASRegistrationPatch	6.1.6.2.4	Represents the requested modifications to the PAS registration information.	

Table 6.1.6.1-2 specifies data types re-used by the PIN_ASRegistration API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the PIN_ASRegistration API.

Table 6.1.6.1-2: PIN_ASRegistration API re-used Data Types

Data type	Reference	Comments	Applicability
DateTime	3GPP TS 29.122 [2]	Used to capture the expiration time of PAS registration.	
DateTimeRm	3GPP TS 29.571 [11]	Used to capture the expiration time of PAS registration patch.	
Fqdn	3GPP TS 29.571 [11]	Used to express the Fully Qualified Domain Name of PAS end point.	
Ipv4Addr	3GPP TS 29.122 [2]	Identifies the IPv4 address of the PAS.	
Ipv6Addr	3GPP TS 29.122 [2]	Identifies the IPv6 address of the PAS.	
SupportedFeatures	3GPP TS 29.571 [11]	Represents the list of supported feature(s) and used to negotiate the applicability of the optional features.	
Uri	3GPP TS 29.122 [2]	Represents a URI.	

6.1.6.2 Structured data types

6.1.6.2.1 Introduction

This clause defines the structures to be used in resource representations.

6.1.6.2.2 Type: PASRegistration

Table 6.1.6.2.2-1: Definition of type PASRegistration

Attribute name	Data type	P	Cardinality	Description	Applicability
conInfo	ConnectivityInfo	M	1	Contains the connectivity information used to communicate with the PAS.	
passId	string	M	1	Identifies the PIN service that provided by the PAS.	
expTime	DateTime	O	0..1	Identifies the expiration time for the PAS registration. To maintain an active registration status, a registration update is required before the expiration time. If the expiration time is not present, then it indicates that the registration of PAS never expires.	
suppFeat	SupportedFeatures	C	0..1	Contains the list of supported features among the ones defined in clause 6.1.8. This attribute shall be present only when feature negotiation needs to take place.	

6.1.6.2.3 Type: ConnectivityInfo

Table 6.1.6.2.3-1: Definition of type ConnectivityInfo

Attribute name	Data type	P	Cardinality	Description	Applicability
fqdn	Fqdn	O	0..1	Fully Qualified Domain Name of the PAS.	
ipv4Addr	Ipv4Addr	O	0..1	IPv4 address of the PAS.	
ipv6Addr	Ipv6Addr	O	0..1	IPv6 address of the PAS.	
uri	Uri	O	0..1	URI information of the PAS.	

NOTE: At least one of the attributes shall be provided.

6.1.6.2.4 Type: PASRegistrationPatch

Table 6.1.6.2.4-1: Definition of type PASRegistrationPatch

Attribute name	Data type	P	Cardinality	Description	Applicability
passId	string	O	0..1	Identifies the PIN service that provided by the PAS.	
conInfo	ConnectivityInfo	O	0..1	Contains the connectivity information used to communicate with the PAS.	
expTime	DateTime	O	0..1	Identifies the expiration time for the PAS registration. If the expiration time is not present, then it indicates that the registration of PAS never expires.	

NOTE: At least one of the attributes shall be provided.

6.1.6.3 Simple data types and enumerations

6.1.6.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

6.1.6.3.2 Simple data types

The simple data types defined in table 6.1.6.3.2-1 shall be supported.

Table 6.1.6.3.2-1: Simple data types

Type Name	Type Definition	Description	Applicability
n/a			

6.1.7 Error Handling

6.1.7.1 General

For the PIN_ASRegistration API, HTTP error responses shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [2]. Protocol errors and application errors specified in clause 5.2.6 of 3GPP TS 29.122 [2] shall be supported for the HTTP status codes specified in table 5.2.6-1 of 3GPP TS 29.122 [2].

In addition, the requirements in the following clauses are applicable for the PIN_ASRegistration API.

6.1.7.2 Protocol Errors

No specific procedures for the PIN_ASRegistration API are specified.

6.1.7.3 Application Errors

The application errors defined for the PIN_ASRegistration API are listed in Table 6.1.7.3-1.

Table 6.1.7.3-1: Application errors

Application Error	HTTP status code	Description
n/a		

6.1.8 Feature negotiation

The optional features in table 6.1.8-1 are defined for the PIN_ASRegistration API. They shall be negotiated using the extensibility mechanism defined in clause 5.2.7 of 3GPP TS 29.122 [2].

Table 6.1.8-1: Supported Features

Feature number	Feature Name	Description
n/a		

6.1.9 Security

The provisions of clause 6 of 3GPP TS 29.122 [2] shall apply for the PIN_ASRegistration API.

6.2 PIN_ASServiceSwitch API

6.2.1 Introduction

The PIN_ASServiceSwitch service shall use the PIN_ASServiceSwitch API.

The API URI of the PIN_ASServiceSwitch API shall be:

{apiRoot}/{*apiName*}/{*apiVersion*}

The request URIs used in HTTP requests shall have the Resource URI structure defined in clause 5.2.4 of 3GPP TS 29.122 [2], i.e.:

{apiRoot}/<apiName>/<apiVersion>/<apiSpecificSuffixes>

with the following components:

- The {apiRoot} shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].
- The <apiName> shall be "pin-as-servicesswitch".
- The <apiVersion> shall be "v1".
- The <apiSpecificSuffixes> shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].

NOTE: When 3GPP TS 29.122 [2] is referenced for the common protocol and interface aspects for API definition in the clauses under clause 5, the service producer (i.e. PIN Server) takes the role of the SCEF and the service consumer takes the role of the SCS/AS.

6.2.2 Usage of HTTP

The provisions of clause 5.2.2 of 3GPP TS 29.122 [2] shall apply for the PIN_ASServiceSwitch API.

6.2.3 Resources

6.2.3.1 Overview

This clause describes the structure for the Resource URIs and the resources and methods used for the service.

Figure 6.2.3.1-1 depicts the resource URIs structure for the PIN_ASServiceSwitch API.

{apiRoot}/pin-as-servicesswitch/<apiVersion>

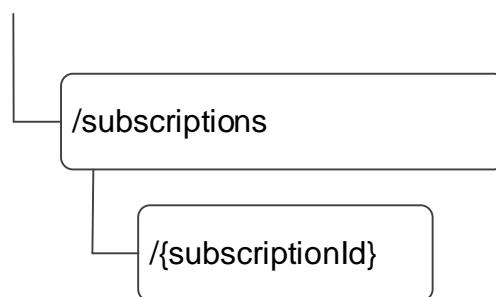

Figure 6.2.3.1-1: Resource URI structure of the PIN_ASServiceSwitch API

Table 6.2.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 6.2.3.1-1: Resources and methods overview

Resource purpose/name	Resource URI (relative path after API URI)	HTTP method or custom operation	Description (service operation)
Service Switch Information Subscriptions	/subscriptions	POST	Create a subscription for reporting of service switch information to the PAS.
Individual Service Switch Information Subscription	/subscriptions/{subscriptionId}	GET	Retrieve the Individual service switch information subscription information identified by subscriptionId.
		PUT	Fully replace the individual service switch information subscription identified by subscriptionId.
		PATCH	Partially update the individual service switch information subscription identified by subscriptionId.
		DELETE	Remove the individual service switch information subscription identified by subscriptionId.

6.2.3.2 Resource: Service Switch Information Subscriptions

6.2.3.2.1 Description

This resource represents all service switch information subscriptions at a given PIN server.

6.2.3.2.2 Resource Definition

Resource URI: {apiRoot}/pin-as-serviceswitch/<apiVersion>/subscriptions

This resource shall support the resource URI variables defined in the table 6.2.3.2.2-1.

Table 6.2.3.2.2-1: Resource URI variables for this resource

Name	Data Type	Definition
apiRoot	string	See clause 6.2.1.

6.2.3.2.3 Resource Standard Methods

6.2.3.2.3.1 POST

This method creates the service switch information subscription at the PIN server for reporting of the service switch information. This method shall support the URI query parameters specified in the table 6.2.3.2.3.1-1.

Table 6.2.3.2.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.2.3.2.3.1-2 and the response data structures and response codes specified in table 6.2.3.2.3.1-3.

Table 6.2.3.2.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description
ServiceSwitchInfo	M	1	Create a new service switch information subscription.

Table 6.2.3.2.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceSwitchInfo	M	1	201 Created	<p>The individual service switch information subscription resource created successfully. The information about the confirmed subscription at the PIN server is provided in the response body.</p> <p>The URI of the created resource shall be returned in the "Location" HTTP header.</p>
NOTE: The mandatory HTTP error status code for the POST method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.2.3.2.3.1-4: Headers supported by the 201 response code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	Contains the URI of the newly created resource, according to the structure: {apiRoot}/pin-as-serviceswitch/<apiVersion>/subscriptions/{subscriptionId}

Table 6.2.3.2.3.1-5: Links supported by the 200 Response Code on this endpoint

Name	Resource name	HTTP method or custom operation	Link parameter(s)	Description
n/a				

6.2.3.2.4 Resource Custom Operations

None.

6.2.3.3 Resource: Individual Service Switch Information Subscription

6.2.3.3.1 Description

This resource represents the individual service switch information subscription of a PAS at a given PIN server.

6.2.3.3.2 Resource Definition

Resource URI: **{apiRoot}/pin-as-serviceswitch/<apiVersion>/subscriptions/{subscriptionId}**

This resource shall support the resource URI variables defined in the table 6.2.3.3.2-1.

Table 6.2.3.3.2-1: Resource URI variables for this resource

Name	Data Type	Definition
apiRoot	string	See clause 6.2.1.
subscriptionId	string	Identifies an individual service switch information subscription.

6.2.3.3.3 Resource Standard Methods

6.2.3.3.3.1 GET

This method retrieves the service switch information subscription information at PIN server. This method shall support the URI query parameters specified in the table 6.2.3.3.3.1-1.

Table 6.2.3.3.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.2.3.3.3.1-2 and the response data structures and response codes specified in table 6.2.3.3.3.1-3.

Table 6.2.3.3.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.2.3.3.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceSwitchInfo	M	1	200 OK	The service switch information subscription information is returned by the PIN server.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the GET method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.2.3.3.3.1-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.2.3.3.3.1-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.2.3.3.3.2 PATCH

This method partially updates the individual service switch information subscription information at the PIN server. This method shall support the URI query parameters specified in the table 6.2.3.3.3.2-1.

Table 6.2.3.3.3.2-1: URI query parameters supported by the PATCH method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.2.3.3.3.2-2 and the response data structures and response codes specified in table 6.2.3.3.3.2-3.

Table 6.2.3.3.3.2-2: Data structures supported by the PATCH Request Body on this resource

Data type	P	Cardinality	Description
ServiceSwitchInfo Patch	M	1	Request to partially update the individual service information subscription matching the subscriptionId at the PIN server.

Table 6.2.3.3.3.2-3: Data structures supported by the PATCH Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceSwitchInfo	M	1	200 OK	The individual service switch information subscription matching the subscriptionId was modified successfully and the updated service switch information subscription information is returned in the response.
n/a			204 No Content	The individual service switch information subscription matching the subscriptionId was modified successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].

NOTE: The mandatory HTTP error status code for the PATCH method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.2.3.3.3.2-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.2.3.3.3.2-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.2.3.3.3.3 PUT

This method updates the service switch information subscription information at the PIN server by completely replacing the existing subscription data. This method shall support the URI query parameters specified in the table 6.2.3.3.3.3-1.

Table 6.2.3.3.3.3-1: URI query parameters supported by the PUT method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.2.3.3.3.3-2 and the response data structures and response codes specified in table 6.2.3.3.3.3-3.

Table 6.2.3.3.3.3-2: Data structures supported by the PUT Request Body on this resource

Data type	P	Cardinality	Description
ServiceSwitchInfo	M	1	Details of individual service switch information subscription matching the subscriptionId to be updated at the PIN server.

Table 6.2.3.3.3.3-3: Data structures supported by the PUT Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceSwitchInfo	M	1	200 OK	The individual service switch information subscription matching the subscriptionId was modified successfully and the updated service switch subscription information is returned in the response.
n/a			204 No Content	The individual service switch information subscription matching the subscriptionId was modified successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].

NOTE: The mandatory HTTP error status code for the PUT method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.2.3.3.3.3-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.2.3.3.3.3-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.2.3.3.3.4 DELETE

This method removes the service switch information subscription information from the PIN server. This method shall support the URI query parameters specified in the table 6.2.3.3.3.4-1.

Table 6.2.3.3.3.4-1: URI query parameters supported by the DELETE method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.2.3.3.3.4-2 and the response data structures and response codes specified in table 6.2.3.3.3.4-3.

Table 6.2.3.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.2.3.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a	M	1	204 No Content	The individual service switch information subscription matching the subscriptionId is deleted.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the DELETE method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.2.3.3.3.4-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.2.3.3.3.4-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.2.3.3.3 Resource Custom Operations

None.

6.2.4 Custom Operations without associated resources

None.

6.2.5 Notifications

6.2.5.1 General

Table 6.2.5.1-1: Notifications overview

Notification	Callback URI	HTTP method or custom operation	Description (service operation)
Service Switch Information Notification	{notificationAddr}	POST	Notifies the subscriber PAS the service switch information.

6.2.5.1 Service Switch Information Notification

6.2.5.1.1 Description

Service Switch Information Notification is used by the PIN server to notify a PAS with service switch information matching the filter criteria.

6.2.5.1.2 Target URI

The callback URI **{notificationAddr}** shall be used with the callback URI variables defined in table 6.2.5.1.2-1.

Table 6.2.5.1.2-1: Callback URI variables

Name	Data type	Definition
notificationAddr	Uri	Callback reference provided by the PAS during service switch information subscription creation or update procedure.

6.2.5.1.3 Standard Methods

6.2.5.1.3.1 POST

This method shall support the request data structures specified in table 6.2.5.1.3.1-1 and the response data structures and response codes specified in table 6.2.5.1.3.1-2.

Table 6.2.5.1.3.1-1: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description
ServiceSwitchInfoNotification	M	1	Notification of service switch information.

Table 6.2.5.1.3.1-2: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a			204 No Content	The receipt of the Notification is acknowledged.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI representing the end point of an alternative EAS where the notification should be sent. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI representing the end point of an alternative EAS where the notification should be sent. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the POST method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.2.5.1.3.1-3: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI representing the end point of an alternative PAS towards which the notification should be redirected.

Table 6.2.5.1.3.1-4: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI representing the end point of an alternative PAS towards which the notification should be redirected.

6.2.6 Data Model

6.2.6.1 General

This clause specifies the application data model supported by the API.

Table 6.1.6.1-1 specifies the data types defined for the PIN_ASServiceSwitch API.

Table 6.2.6.1-1: PIN_ASServiceSwitch API specific Data Types

Data type	Section defined	Description	Applicability
EventType	6.2.6.3.2	Represents the event type for service switch information subscription.	
ServiceSwitchInfo	6.2.6.2.2	Represents the service switch information subscription.	
ServiceSwitchInfoPatch	6.2.6.2.3	Used to request the partial update of service switch information subscription.	
ServiceSwitchInfoNotification	6.2.6.2.4	Service switch information for notification	
ServiceSwitchReportInfo	6.2.6.2.5	List of notifications that include the information of the service switch.	

Table 6.2.6.1-2 specifies data types re-used by the PIN_ASServiceSwitch API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the PIN_ASServiceSwitch API.

Table 6.2.6.1-2: PIN_ASServiceSwitch API re-used Data Types

Data type	Reference	Comments	Applicability
DateTime	3GPP TS 29.122 [2]	Used to capture the expiration time of PAS subscription for service switch information reporting.	
FlowInfo	3GPP TS 29.122 [2]	Represents IP flow information.	
SupportedFeatures	3GPP TS 29.571 [11]	Represents the list of supported feature(s) and used to negotiate the applicability of the optional features.	
Uri	3GPP TS 29.122 [2]	Represents a URI.	

6.2.6.2 Structured data types

6.2.6.2.1 Introduction

6.2.6.2.2 Type: ServiceSwitchInfo

Table 6.2.6.2.2-1: Definition of type ServiceSwitchInfo

Attribute name	Data type	P	Cardinality	Description	Applicability
subsEvent	EventType	M	1	Identifies the event type for which the subscriber is to be notified.	
notificationAddr	Uri	M	1	URI where the notification should be delivered to. This attribute shall be present in HTTP POST message to PIN server and maybe present in HTTP PUT request.	
pinId	string	M	1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
expTime	DateTime	O	0..1	Indicates the expiration time of the subscription. To maintain an active registration status, a registration update is required before the expiration time. If the expiration time is not present, then it indicates that the PAS subscription never expires.	
suppFeat	Supported Features	C	0..1	Contains the list of supported features among the ones defined in clause 6.2.8. This attribute shall be present only when feature negotiation needs to take place.	

6.2.6.2.3 Type: ServiceSwitchInfoPatch

Table 6.2.6.2.3-1: Definition of type ServiceSwitchInfoPatch

Attribute name	Data type	P	Cardinality	Description	Applicability
expTime	DateTime	O	0..1	Indicates the proposed expiration time of the subscription.	
notificationAddr	Uri	O	0..1	Updated URI where the service switch information notification should be delivered to.	
pinId	string	O	0..1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
subsEvent	EventType	O	0..1	Updated event type for which the subscriber is to be notified.	

6.2.6.2.4 Type: ServiceSwitchInfoNotification

Table 6.2.6.2.4-1: Definition of type ServiceSwitchInfoNotification

Attribute name	Data type	P	Cardinality	Description	Applicability
subsid	string	M	1	Identifies the individual service switch information subscription for which the service switch information notification is delivered.	
replInfo	ServiceSwitchReportInfo	M	1	List of service switch report information applicable to the subscription identifier.	

6.2.6.2.5 Type: ServiceSwitchReportInfo

Table 6.2.6.2.5-1: Definition of type ServiceSwitchReportInfo

Attribute name	Data type	P	Cardinality	Description	Applicability
acld	string	M	1	Identifies an application client identifier.	
pinId	string	M	1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
sessionId	string	M	1	Identifies an application session.	
targetPinId	string	M	1	Identifies the target PINE that the service is switched to.	
sessionDes	FlowInfo	O	0..1	Identifies the descriptor of application traffic flows	

6.2.6.3 Simple data types and enumerations

6.2.6.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

6.2.6.3.2 Enumeration: EventType

The enumeration EventType represents the supported event type of service switch.

Table 6.2.6.3.2-1: Enumeration EventType

Enumeration value	Description	Applicability
SERVICE_SWITCH_INFO	Service switch happens in the PIN	

6.2.7 Error Handling

6.2.7.1 General

For the PIN_ASServiceSwitch API, HTTP error responses shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [2]. Protocol errors and application errors specified in clause 5.2.6 of 3GPP TS 29.122 [2] shall be supported for the HTTP status codes specified in table 5.2.6-1 of 3GPP TS 29.122 [2].

In addition, the requirements in the following clauses are applicable for the PIN_ASServiceSwitch API.

6.2.7.2 Protocol Errors

No specific protocol errors for the PIN_ASServiceSwitch API are specified.

6.2.7.3 Application Errors

No specific application errors for the PIN_ASServiceSwitch API are specified.

6.2.8 Feature negotiation

The optional features in table 6.2.8-1 are defined for the PIN_ASServiceSwitch API. They shall be negotiated using the extensibility mechanism defined in clause 5.2.7 of 3GPP TS 29.122 [2].

Table 6.2.8-1: Supported Features

Feature number	Feature Name	Description
n/a		

6.2.9 Security

The provisions of clause 6 of 3GPP TS 29.122 [2] shall apply for the PIN_ASServiceSwitch API.

6.3 PIN_ASServiceContinuity API

6.3.1 Introduction

The PIN_ASServiceContinuity service shall use the PIN_ASServiceContinuity API.

The API URI of the PIN_ASServiceContinuity API shall be:

{apiRoot}/{*apiName*}/{*apiVersion*}

The request URIs used in HTTP requests shall have the Resource URI structure defined in clause 5.2.4 of 3GPP TS 29.122 [2], i.e.:

{apiRoot}/{*apiName*}/{*apiVersion*}/*{*apiSpecificSuffixes*}

with the following components:

- The {apiRoot} shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].

- The <apiName> shall be "pin-as-servicecontinuity".
- The <apiVersion> shall be "v1".
- The <apiSpecificSuffixes> shall be set as described in clause 5.2.4 of 3GPP TS 29.122 [2].

NOTE: When 3GPP TS 29.122 [2] is referenced for the common protocol and interface aspects for API definition in the clauses under clause 5, the service producer (i.e. PIN Server) takes the role of the SCEF and the service consumer takes the role of the SCS/AS.

6.3.2 Usage of HTTP

The provisions of clause 5.2.2 of 3GPP TS 29.122 [2] shall apply for the PIN_ASServiceContinuity API.

6.3.3 Resources

6.3.3.1 Overview

This clause describes the structure for the Resource URIs and the resources and methods used for the service.

Figure 6.3.3.1-1 depicts the resource URIs structure for the PIN_ASServiceContinuity API.

{apiRoot}/pin-as-servicecontinuity/<apiVersion>

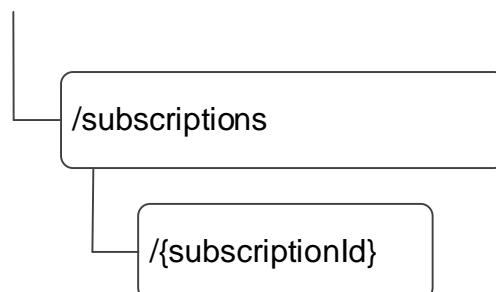

Figure 6.3.3.1-1: Resource URI structure of the PIN_ASServiceContinuity API

Table 6.3.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 6.3.3.1-1: Resources and methods overview

Resource purpose/name	Resource URI (relative path after API URI)	HTTP method or custom operation	Description (service operation)
Service Continuity Information Subscriptions	/subscriptions	POST	Create a subscription for reporting of service continuity information to the PAS.
Individual Service Continuity Information Subscription	/subscriptions/{subscriptionId}	GET	Retrieve the Individual service continuity information subscription information identified by subscriptionId.
		PUT	Fully replace the individual service continuity information subscription identified by subscriptionId.
		PATCH	Partially update the individual service continuity information subscription identified by subscriptionId.

		DELETE	Remove the individual service continuity information subscription identified by subscriptionId.
--	--	--------	---

6.3.3.2 Resource: Service Continuity Information Subscriptions

6.3.3.2.1 Description

This resource represents all service continuity information subscriptions at a given PIN server.

6.3.3.2.2 Resource Definition

Resource URI: {apiRoot}/pin-as-servicecontinuity/<apiVersion>/subscriptions

This resource shall support the resource URI variables defined in the table 6.3.3.2.2-1.

Table 6.3.3.2.2-1: Resource URI variables for this resource

Name	Data Type	Definition
apiRoot	string	See clause 6.3.1.

6.3.3.2.3 Resource Standard Methods

6.3.3.2.3.1 POST

This method creates the service continuity information subscription at the PIN server for reporting of the service continuity information. This method shall support the URI query parameters specified in the table 6.3.3.2.3.1-1.

Table 6.3.3.2.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.3.3.2.3.1-2 and the response data structures and response codes specified in table 6.3.3.2.3.1-3.

Table 6.3.3.2.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description
ServiceContinuityInfo	M	1	Create a new service continuity information subscription.

Table 6.3.3.2.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceContinuityInfo	M	1	201 Created	<p>The individual service continuity information subscription resource created successfully. The information about the confirmed subscription at the PIN server is provided in the response body.</p> <p>The URI of the created resource shall be returned in the "Location" HTTP header.</p>

NOTE: The mandatory HTTP error status code for the POST method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.3.3.2.3.1-4: Headers supported by the 201 response code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	Contains the URI of the newly created resource, according to the structure: {apiRoot}/pin-as-servicecontinuity/<apiVersion>/subscriptions/{subscriptionId}

Table 6.3.3.2.3.1-5: Links supported by the 200 Response Code on this endpoint

Name	Resource name	HTTP method or custom operation	Link parameter(s)	Description
n/a				

6.3.3.2.4 Resource Custom Operations

None.

6.3.3.3 Resource: Individual Service Continuity Information Subscription

6.3.3.3.1 Description

This resource represents the individual service continuity information subscription of a PAS at a given PIN server.

6.3.3.3.2 Resource Definition

Resource URI: {apiRoot}/pin-as-servicecontinuity/<apiVersion>/subscriptions/{subscriptionId}

This resource shall support the resource URI variables defined in the table 6.3.3.3.2-1.

Table 6.3.3.3.2-1: Resource URI variables for this resource

Name	Data Type	Definition
apiRoot	string	See clause 6.3.1.
subscriptionId	string	Identifies an individual service continuity information subscription.

6.3.3.3.3 Resource Standard Methods

6.3.3.3.3.1 GET

This method retrieves the service continuity information subscription information at PIN server. This method shall support the URI query parameters specified in the table 6.3.3.3.3.1-1.

Table 6.3.3.3.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.3.3.3.3.1-2 and the response data structures and response codes specified in table 6.3.3.3.3.1-3.

Table 6.3.3.3.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.3.3.3.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceContinuityInfo	M	1	200 OK	The service continuity information subscription information is returned by the PIN server.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the GET method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.3.3.3.3.1-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.3.3.3.3.1-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.3.3.3.3.2 PATCH

This method partially updates the individual service continuity information subscription information at the PIN server. This method shall support the URI query parameters specified in the table 6.3.3.3.3.2-1.

Table 6.3.3.3.3.2-1: URI query parameters supported by the PATCH method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.3.3.3.3.2-2 and the response data structures and response codes specified in table 6.3.3.3.3.2-3.

Table 6.3.3.3.3.2-2: Data structures supported by the PATCH Request Body on this resource

Data type	P	Cardinality	Description
ServiceContinuityInfoPatch	M	1	Request to partially update the individual service information subscription matching the subscriptionId at the PIN server.

Table 6.3.3.3.3.2-3: Data structures supported by the PATCH Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceContinuityInfo	M	1	200 OK	The individual service continuity information subscription matching the subscriptionId was modified successfully and the updated service continuity information subscription information is returned in the response.
n/a			204 No Content	The individual service continuity information subscription matching the subscriptionId was modified successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the PATCH method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.3.3.3.3.2-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.3.3.3.3.2-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.3.3.3.3

PUT

This method updates the service continuity information subscription information at the PIN server by completely replacing the existing subscription data. This method shall support the URI query parameters specified in the table 6.3.3.3.3.3-1.

Table 6.3.3.3.3.3-1: URI query parameters supported by the PUT method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.3.3.3.3.3-2 and the response data structures and response codes specified in table 6.3.3.3.3.3-3.

Table 6.3.3.3.3.3-2: Data structures supported by the PUT Request Body on this resource

Data type	P	Cardinality	Description
ServiceContinuityInfo	M	1	Details of individual service continuity information subscription matching the subscriptionId to be updated at the PIN server.

Table 6.3.3.3.3.3-3: Data structures supported by the PUT Response Body on this resource

Data type	P	Cardinality	Response codes	Description
ServiceContinuityInfo	M	1	200 OK	The individual service continuity information subscription matching the subscriptionId was modified successfully and the updated service continuity subscription information is returned in the response.
n/a			204 No Content	The individual service continuity information subscription matching the subscriptionId was modified successfully.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the PUT method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.3.3.3.3.3-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.3.3.3.3.3-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.3.3.3.4 DELETE

This method removes the service continuity information subscription information from the PIN server. This method shall support the URI query parameters specified in the table 6.3.3.3.4-1.

Table 6.3.3.3.4-1: URI query parameters supported by the DELETE method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.3.3.3.4-2 and the response data structures and response codes specified in table 6.3.3.3.4-3.

Table 6.3.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.3.3.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a	M	1	204 No Content	The individual service continuity information subscription matching the subscriptionId is deleted.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI of the resource located in an alternative PIN server. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
NOTE: The mandatory HTTP error status code for the DELETE method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.				

Table 6.3.3.3.3.4-4: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

Table 6.3.3.3.3.4-5: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI of the resource located in an alternative PIN server.

6.3.3.3.3 Resource Custom Operations

None.

6.3.4 Custom Operations without associated resources

None.

6.3.5 Notifications

6.3.5.1 General

Table 6.3.5.1-1: Notifications overview

Notification	Callback URI	HTTP method or custom operation	Description (service operation)
Service Continuity Information Notification	{notificationAddr}	POST	Notifies the subscriber PAS the service continuity information.

6.3.5.1 Service Continuity Information Notification

6.3.5.1.1 Description

Service Continuity Information Notification is used by the PIN server to notify a PAS with service continuity information matching the filter criteria.

6.3.5.1.2 Target URI

The callback URI {notificationAddr} shall be used with the callback URI variables defined in table 6.3.5.1.2-1.

Table 6.3.5.1.2-1: Callback URI variables

Name	Data type	Definition
notificationAddr	Uri	Callback reference provided by the PAS during service continuity information subscription creation or update procedure.

6.3.5.1.3 Standard Methods

6.3.5.1.3.1 POST

This method shall support the request data structures specified in table 6.3.5.1.3.1-1 and the response data structures and response codes specified in table 6.3.5.1.3.1-2.

Table 6.3.5.1.3.1-1: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description
ServiceContinuityInfoNotification	M	1	Notification of service continuity information.

Table 6.3.5.1.3.1-2: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a			204 No Content	The receipt of the Notification is acknowledged.
n/a			307 Temporary Redirect	Temporary redirection. The response shall include a Location header field containing an alternative URI representing the end point of an alternative EAS where the notification should be sent. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].
n/a			308 Permanent Redirect	Permanent redirection. The response shall include a Location header field containing an alternative URI representing the end point of an alternative EAS where the notification should be sent. Redirection handling is described in clause 5.2.10 of TS 29.122 [2].

NOTE: The mandatory HTTP error status code for the POST method listed in Table 5.2.6-1 of 3GPP TS 29.122 [2] also apply.

Table 6.3.5.1.3.1-3: Headers supported by the 307 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI representing the end point of an alternative PAS towards which the notification should be redirected.

Table 6.3.5.1.3.1-4: Headers supported by the 308 Response Code on this resource

Name	Data type	P	Cardinality	Description
Location	string	M	1	An alternative URI representing the end point of an alternative PAS towards which the notification should be redirected.

6.3.6 Data Model

6.3.6.1 General

This clause specifies the application data model supported by the API.

Table 6.1.6.1-1 specifies the data types defined for the PIN_ASServiceContinuity API.

Table 6.3.6.1-1: PIN_ASServiceContinuity API specific Data Types

Data type	Section defined	Description	Applicability
EventType	6.3.6.3.2	Represents the event type for service continuity information subscription.	
ServiceContinuityInfo	6.3.6.3.2	Represents the service continuity information subscription.	
ServiceContinuityInfoPatch	6.3.6.3.3	Used to request the partial update of service continuity information subscription.	
ServiceContinuityInfoNotification	6.3.6.3.4	Service continuity information for notification	
ServiceContinuityReportInfo	6.3.6.3.5	List of notifications that include the information of the service continuity.	

Table 6.3.6.1-2 specifies data types re-used by the PIN_ASServiceContinuity API from other specifications, including a reference to their respective specifications, and when needed, a short description of their use within the PIN_ASServiceContinuity API.

Table 6.3.6.1-2: PIN_ASServiceContinuity API re-used Data Types

Data type	Reference	Comments	Applicability
DateTime	3GPP TS 29.122 [2]	Used to capture the expiration time of PAS subscription for service continuity information reporting.	
FlowInfo	3GPP TS 29.122 [2]	Represents IP flow information.	
SupportedFeatures	3GPP TS 29.571 [11]	Represents the list of supported feature(s) and used to negotiate the applicability of the optional features.	
Uri	3GPP TS 29.122 [2]	Represents a URI.	

6.3.6.2 Structured data types

6.3.6.2.1 Introduction

6.3.6.2.2 Type: ServiceContinuityInfo

Table 6.3.6.2.2-1: Definition of type ServiceContinuityInfo

Attribute name	Data type	P	Cardinality	Description	Applicability
subsEvent	EventType	M	1	Identifies the event type for which the subscriber is to be notified.	
notificationAddr	Uri	M	1	URI where the notification should be delivered to. This attribute shall be present in HTTP POST message to PIN server and maybe present in HTTP PUT request.	
pinId	string	M	1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
expTime	DateTime	O	0..1	Indicates the expiration time of the subscription. To maintain an active registration status, a registration update is required before the expiration time. If the expiration time is not present, then it indicates that the PAS subscription never expires.	
suppFeat	Supported Features	C	0..1	Contains the list of supported features among the ones defined in clause 6.2.8. This attribute shall be present only when feature negotiation needs to take place.	

6.3.6.2.3 Type: ServiceContinuityInfoPatch

Table 6.3.6.2.3-1: Definition of type ServiceContinuityInfoPatch

Attribute name	Data type	P	Cardinality	Description	Applicability
expTime	DateTime	O	0..1	Indicates the proposed expiration time of the subscription.	
notificationAddr	Uri	O	0..1	Updated URI where the service continuity information notification should be delivered to.	
pinId	string	O	0..1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
subsEvent	EventType	O	0..1	Updated event type for which the subscriber is to be notified.	

6.3.6.2.4 Type: ServiceContinuityInfoNotification

Table 6.3.6.2.4-1: Definition of type ServiceContinuityInfoNotification

Attribute name	Data type	P	Cardinality	Description	Applicability
subslid	string	M	1	Identifies the individual service continuity information subscription for which the service continuity information notification is delivered.	
replinfo	ServiceContinuityReportInfo	M	1	List of service continuity report information applicable to the subscription identifier.	

6.3.6.2.5 Type: ServiceContinuityReportInfo

Table 6.3.6.2.5-1: Definition of type ServiceContinuityReportInfo

Attribute name	Data type	P	Cardinality	Description	Applicability
acld	string	M	1	Identifies an application client identifier.	
pegcld	string	M	1	Identifies a PEGC.	
pinld	string	M	1	Identifies a PIN. (see 3GPP TS 23.542 [10]). Its encoding shall comply with the UE policy part type URSP as defined in clause 5.2 of 3GPP TS 24.526 [12].	
serviceId	string	M	1	Identifies a PIN service.	
sessionId	string	M	1	Identifies an application session.	
targetPinld	string	M	1	Identifies the target PINE.	
sessionDes	FlowInfo	O	0..1	Identifies the descriptor of application traffic flows	

6.3.6.3 Simple data types and enumerations

6.3.6.3.1 Introduction

This clause defines simple data types and enumerations that can be referenced from data structures defined in the previous clauses.

6.3.6.3.2 Enumeration: EventType

The enumeration EventType represents the supported event type of service continuity.

Table 6.3.6.3.2-1: Enumeration EventType

Enumeration value	Description	Applicability
SERVICE_CONTINUITY_INFO	Service continuity happens in the PIN	

6.3.7 Error Handling

6.3.7.1 General

For the PIN_ASServiceContinuity API, HTTP error responses shall be supported as specified in clause 5.2.6 of 3GPP TS 29.122 [2]. Protocol errors and application errors specified in clause 5.2.6 of 3GPP TS 29.122 [2] shall be supported for the HTTP status codes specified in table 5.2.6-1 of 3GPP TS 29.122 [2].

In addition, the requirements in the following clauses are applicable for the PIN_ASServiceContinuity API.

6.3.7.2 Protocol Errors

No specific protocol errors for the PIN_ASServiceContinuity API are specified.

6.3.7.3 Application Errors

No specific application errors for the PIN_ASServiceContinuity API are specified.

6.3.8 Feature negotiation

The optional features in table 6.3.8-1 are defined for the PIN_ASServiceContinuity API. They shall be negotiated using the extensibility mechanism defined in clause 5.2.7 of 3GPP TS 29.122 [2].

Table 6.3.8-1: Supported Features

Feature number	Feature Name	Description
n/a		

6.3.9 Security

The provisions of clause 6 of 3GPP TS 29.122 [2] shall apply for the PIN_ASServiceContinuity API.

7 Using Common API Framework

7.1 General

When CAPIF is used with a PIN Server service, the PIN Server shall support the following functionalities as defined in 3GPP TS 29.222 [7]:

- the API exposing function and the related APIs over CAPIF-2/2e and CAPIF-3/3e reference points;
- the API publishing function and the related APIs over CAPIF-4/4e reference point;
- the API management function and the related APIs over CAPIF-5/5e reference point; and
- at least one of the security methods for authentication and authorization, and the related security mechanisms.

In a centralized deployment as defined in 3GPP TS 23.222 [6], where the CAPIF core function and the API provider domain functions are co-located, the interactions between the CAPIF core function and the API provider domain functions may be independent of the CAPIF-3/3e, CAPIF-4/4e and CAPIF-5/5e reference points.

When CAPIF is used with a PIN Server service, the PIN Server shall register all the northbound APIs features in the CAPIF Core Function.

7.2 Security

When CAPIF is used for external exposure, before invoking an API exposed by the PIN Server, the service API consumer acting as an API invoker shall negotiate the security method (PKI, TLS-PSK or OAuth 2.0) with the CAPIF core function and ensure that the PIN Server has enough credentials to authenticate the service API consumer, as defined in clauses 5.6.2.2 and 6.2.2.2 of 3GPP TS 29.222 [7].

If PKI or TLS-PSK is selected as the security method to be used between the service API consumer and the PIN Server, upon API invocation, the PIN Server shall retrieve the authorization information from the CAPIF core function as described in clause 5.6.2.4 of 3GPP TS 29.222 [7].

As indicated in 3GPP TS 33.122 [8], the access to the PIN Server APIs may be authorized by means of the OAuth 2.0 protocol (see IETF RFC 6749 [9]), using the "Client Credentials" authorization grant, where the CAPIF core function (see 3GPP TS 29.222 [7]) plays the role of the authorization server.

NOTE 1: In this release, only "Client Credentials" authorization grant is supported.

If OAuth 2.0 is selected as the security method to be used between the service API consumer and the PIN Server, the service API consumer shall, prior to consuming the services offered by the PIN Server APIs, obtain a "token" from the authorization server, by invoking the Obtain_Authorization service operation as described in clause 5.6.2.3.2 of 3GPP TS 29.222 [7].

The PIN Server APIs do not define any scopes for OAuth 2.0 authorization. It is the PIN Server responsibility to check whether the service API consumer is authorized to use an API based on the provided "token". Once the PIN Server verifies the "token", it shall check whether the PIN Server identifier in the "token" matches its own published identifier, and whether the API name in the "token" matches its own published API name. If those checks are passed, the service API consumer has full authority to access any resource or operation provided by the invoked API.

NOTE 2: For the aforementioned security methods, the PIN Server needs to apply admission control according to access control policies after performing the authorization checks.

Annex A (normative): OpenAPI specification

A.1 General

This Annex specifies the formal definition of the API(s) defined in the present specification. It consists of OpenAPI specifications in YAML format.

This Annex takes precedence when being discrepant to other parts of the specification with respect to the encoding of information elements and methods within the API(s).

NOTE 1: The semantics and procedures, as well as conditions, e.g. for the applicability and allowed combinations of attributes or values, not expressed in the OpenAPI definitions but defined in other parts of the specification also apply.

Informative copies of the OpenAPI specification files contained in this 3GPP Technical Specification are available on a Git-based repository that uses the GitLab software version control system (see clause 5.3.1 of 3GPP TS 29.501 [5] and clause 5B of 3GPP TR 21.900 [7]).
