# Intellectual Property Rights

## Essential patents

IPRs essential or potentially essential to normative deliverables may have been declared to ETSI. The declarations pertaining to these essential IPRs, if any, are publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the [ETSI IPR online database](#).

Pursuant to the ETSI Directives including the ETSI IPR Policy, no investigation regarding the essentiality of IPRs, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Trademarks

The present document may include trademarks and/or tradenames which are asserted and/or registered by their owners. ETSI claims no ownership of these except for any which are indicated as being the property of ETSI, and conveys no right to use or reproduce any trademark and/or tradename. Mention of those trademarks in the present document does not constitute an endorsement by ETSI of products, services or organizations associated with those trademarks.

**DECT™**, **PLUGTESTS™**, **UMTS™** and the ETSI logo are trademarks of ETSI registered for the benefit of its Members. **3GPP™**, **LTE™** and **5G™** logo are trademarks of ETSI registered for the benefit of its Members and of the 3GPP Organizational Partners. **oneM2M™** logo is a trademark of ETSI registered for the benefit of its Members and of the oneM2M Partners. **GSM®** and the GSM logo are trademarks registered and owned by the GSM Association.

# Legal Notice

This Technical Specification (TS) has been produced by the ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities. These shall be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between 3GPP and ETSI identities can be found at [3GPP to ETSI numbering cross-referencing](#).

---

# Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

## Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

- 1 presented to TSG for information;
- 2 presented to TSG for approval;
- 3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

---

## Introduction

The definition of the Conformance Tests for UE in E-UTRAN will be a complex task as the complete test suite covers RF, EMC and Protocol aspects of the UE.

Each test requires a Test Environment to be defined in which the UE has to operate to defined standards, constraints and performance. The overall task can be simplified if there are a number of well defined and agreed Common Test Environments where every one can be used for a number of tests. Hence the present document defines testing conditions that are common to several tests avoiding the need to duplicate the same information for every single test.

The present document defines default values for a variety of common areas. Where values are not specified in test cases, the defaults in the present document will apply. If specified, the test case values will take precedence.

---

# 1 Scope

The present document contains definitions of reference conditions and test signals, default parameters, reference radio bearer configurations used in radio bearer interoperability testing, common radio bearer configurations for other test purposes, common requirements for test equipment and generic set-up procedures for use in conformance tests for the 3<sup>rd</sup> Generation E-UTRAN User Equipment (UE).

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document unless the context in which the reference is made suggests a different Release is relevant (information on the applicable release in a particular context can be found in e.g. test case title, description or applicability, message description or content).

## 3 Definitions, symbols and abbreviations

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 [1] apply, unless specified below:

**B:** a value followed by "B" is a binary value.

**H:** a value followed by "H" is a hexadecimal value.

### 3.2 Symbols

For the purposes of the present document, the following symbols apply:

|               |                                                                                                                                            |
|---------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| $N_{DL}$      | Downlink EARFCN                                                                                                                            |
| $N_{RB}$      | Transmission bandwidth configuration, expressed in units of resource blocks                                                                |
| $N_{RB\_agg}$ | Aggregated Transmission Bandwidth Configuration. The number of the aggregated RBs within the fully allocated Aggregated Channel bandwidth. |

$N_{UL}$  Uplink EARFCN

### 3.3 Abbreviations

For the purposes of the present document, the abbreviations specified in TR 21.905 [1] apply, with any additional abbreviations specified below:

|         |                                                                                            |
|---------|--------------------------------------------------------------------------------------------|
| 1xRTT   | 1x Radio Transmission Technology                                                           |
| BR      | Bandwidth Reduced                                                                          |
| BR-BCCH | Bandwidth Reduced Broadcast Control Channel                                                |
| BL      | Bandwidth reduced Low complexity                                                           |
| CA      | Carrier Aggregation                                                                        |
| CC      | Component Carrier                                                                          |
| CE      | Coverage Enhancement                                                                       |
| DRB     | (user) Data Radio Bearer                                                                   |
| EARFCN  | E-UTRA Absolute Radio Frequency Channel Number                                             |
| ECM     | EPS Connection Management                                                                  |
| eIMTA   | Enhanced Interference Management and Traffic Adaptation                                    |
| EMM     | EPS Mobility Management                                                                    |
| ENB     | Evolved Node B                                                                             |
| EPRE    | Energy Per Resource Element                                                                |
| ESM     | EPS Session Management                                                                     |
| HRPD    | High Rate Packet Data                                                                      |
| MAC     | Media Access Control                                                                       |
| MBS     | Metropolitan Beacon System                                                                 |
| MCS     | Mission Critical Services                                                                  |
| MTC     | Machine Type Communication                                                                 |
| NTN     | Non-Terrestrial Networks                                                                   |
| OFDM    | Orthogonal Frequency Division Multiplexing                                                 |
| RBs     | Resource Blocks                                                                            |
| ROHC    | Robust Header Compression                                                                  |
| SS      | System Simulator                                                                           |
| TH      | Temperature High                                                                           |
| TL      | Temperature Low                                                                            |
| TP      | Transmission Point                                                                         |
| V2X     | Vehicle-to-Everything                                                                      |
| VH      | Higher extreme Voltage                                                                     |
| VL      | Lower extreme Voltage                                                                      |
| xCH_RA  | xCH-to-RS EPRE ratio for the channel xCH in all transmitted OFDM symbols not containing RS |
| xCH_RB  | xCH-to-RS EPRE ratio for the channel xCH in all transmitted OFDM symbols containing RS     |

## 4 Common test environment

### 4.1 Environmental conditions

The requirements in this clause apply to all types of UE(s).

#### 4.1.1 Temperature

The UE shall fulfil all the requirements in the full temperature range of:

**Table 4.1.1-1: Temperature Test Environment**

|                |                                                                        |
|----------------|------------------------------------------------------------------------|
| +15°C to +35°C | For normal conditions (with relative humidity up to 75 %)              |
| -10°C to +55°C | For extreme conditions (see IEC 60068-2-1 [75] and IEC 60068-2-2 [76]) |

Outside this temperature range the UE, if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 36.101 [27] clause 6.2 for extreme operation.

The normative reference for this requirement is TS 36.101 [27] Annex E.2.

Some tests are performed also in extreme temperature conditions. These test conditions are denoted as TL (temperature low,  $-10^{\circ}\text{C}$ ) and TH (temperature high,  $+55^{\circ}\text{C}$ ).

## 4.1.2 Voltage

The UE shall fulfil all the requirements in the full voltage range, i.e. the voltage range between the extreme voltages.

The manufacturer shall declare the lower and higher extreme voltages and the approximate shutdown voltage. For the equipment that can be operated from one or more of the power sources listed below, the lower extreme voltage shall not be higher, and the higher extreme voltage shall not be lower than that specified below.

**Table 4.1.2-1: Voltage Test Environment**

| Power source                | Lower extreme voltage | Higher extreme voltage | Normal conditions voltage |
|-----------------------------|-----------------------|------------------------|---------------------------|
| AC mains                    | 0.9 * nominal         | 1.1 * nominal          | nominal                   |
| Regulated lead acid battery | 0.9 * nominal         | 1.3 * nominal          | 1.1 * nominal             |
| Non regulated batteries:    |                       |                        |                           |
| Leclanché                   | 0.85 * nominal        | nominal                | nominal                   |
| Lithium                     | 0.95 * nominal        | 1.1 * nominal          | 1.1 * nominal             |
| Mercury/nickel & cadmium    | 0.90 * nominal        |                        | nominal                   |

Outside this voltage range the UE if powered on, shall not make ineffective use of the radio frequency spectrum. In no case shall the UE exceed the transmitted levels as defined in TS 36.101 [27] for extreme operation. In particular, the UE shall inhibit all RF transmissions when the power supply voltage is below the manufacturer declared shutdown voltage.

The normative reference for this requirement is TS 36.101 [27] Annex E.2.

Some tests are performed also in extreme voltage conditions. These test conditions are denoted as VL (lower extreme voltage) and VH (higher extreme voltage).

## 4.2 Common requirements of test equipment

Mobile conformance testing can be categorized into 3 distinct areas:

- RF Conformance Testing.
- EMC Conformance Testing.
- Signalling Conformance Testing.

The test equipment required for each category of testing may or not be different, depending on the supplier of the test equipment. However, there will be some generic requirements of the test equipment that are essential for all three categories of test, and these are specified in this clause.

In addition, there will be requirements to test operation in multi-system configurations (e.g. EUTRAN plus UTRAN). However, these would not form a common test equipment requirement for the three test areas and are not considered in the present document.

The test equipment shall use the same number of Tx antennas for all parts of the tests, Initial condition and Test procedure, as specified in the minimum requirement.

### 4.2.1 General functional requirements

**NOTE:** This clause has been written such that it does not constrain the implementation of different architectures and designs of test equipment.

All test equipment used to perform conformance testing on a UE shall provide a platform suitable for testing UE's that are either:

- a) FDD Mode; or
- b) TDD Mode; or
- c) both FDD/TDD Modes.

All test equipment shall provide (for the mode(s) supported) the following minimum functionality.

- The capability of emulating a single E-UTRA cell with the appropriate channels to allow the UE to register on the cell.
- The capability to allow the UE to set up an RRC connection with the system simulator, and to maintain the connection for the duration of the test.
- The capability (for the specific test):
  - to select and support an appropriate radio bearer for the downlink;
  - to set the appropriate downlink power levels;
  - to set up and support the appropriate radio bearer for the uplink;
  - to set and control the uplink power levels.

## 4.2.2 Minimum functional requirements

### 4.2.2.1 Supported Cell Configuration

The System Simulator shall provide the capability to simulate a minimum number of cells (of the appropriate E-UTRA Mode) whose number and capabilities are governed by the test cases that need to be performed (test cases are defined in 3GPP TS 36.523-1 [18](Signalling), 3GPP TS 36.521-1 [21] (RF), 3GPP TS 36.521-4 [73] (IoT NTN RF) and 3GPP TS 36.521-3 [34] (RRM). For this purpose test cases can be split into two different categories: Tests that require only one cell and Tests that require several cells.

To perform test cases requiring one cell, the system simulator must provide a cell offering the capabilities to perform all the test cases in this category.

To perform test cases requiring several cells, additional cells must be provided by the system simulator. The additional cells, however, need only provide a minimum set of capabilities so as to support the first cell in carrying out the multicell test cases.

The type and number of channels (especially physical channels) constitute an important set of capabilities for a cell. The following clauses list possible channels that may be supported by the SS. Each channel type, however, and the minimum number of channels needed are only mandatory if specific test cases require them.

The mapping between Logical and Transport channels is as described in 3GPP TS 36.321 [14]. Similarly the mapping between Transport channels and Physical channels is as described in 3GPP TS 36.211, TS 36.302 and TS 36.212. The reference measurement channels (mapping between Transport channels and Physical channels for PDSCH/PDCCH) are defined in 3GPP TS 36.521-1[21] annex A

#### 4.2.2.1.1 Supported Channels

##### 4.2.2.1.1.1 Logical channels

| Logical channel | Minimum number | Comments                                                                                  |
|-----------------|----------------|-------------------------------------------------------------------------------------------|
| BCCH            | 1              |                                                                                           |

## 4.2.2.1.1.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|----------|
| BCH               | 1              |          |
| PCH               | 1              |          |
| RACH              | 1              |          |
| DL-SCH            | n <FFS>        |          |
| UL-SCH            | n <FFS>        |          |

## 4.2.2.1.1.3 Physical channels

| Physical channel | Minimum number | Comments                                                                                                                                         |
|------------------|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| PBCH             | 1              | Physical Broadcast Channel                                                                                                                       |
| PCFICH           | 1              | The physical control format indicator channel carries information about the number of OFDM symbols used for transmission of PDCCHs in a subframe |
| PDCCH            | 1              | The physical downlink control channel carries scheduling assignments and other control information.                                              |
| MPDCCH           | 1              | The MTC physical downlink control channel carries scheduling assignments and other control information for BL/CE UE.                             |
| PDSCH            | 1              | Physical Downlink Shared Channel                                                                                                                 |
| PHICH            | [1]            | The PHICH carries the hybrid-ARQ ACK/NAK                                                                                                         |
| PUCCH            | 1              | The physical uplink control channel carries uplink control information                                                                           |
| PUSCH            | 1              | Physical Uplink Shared Channel                                                                                                                   |
| PRACH            | 1              | Physical Random Access Channel                                                                                                                   |

## 4.2.2.1.1.4 Physical signals

| Physical signal                  | Minimum number | Comments              |
|----------------------------------|----------------|-----------------------|
| Demodulation reference signal    | NA             | UL                    |
| Sounding Reference signal        | NA             | UL TBD, if applicable |
| Cell-specific Reference Signal   | NA             | DL                    |
| UE-specific reference signal     | NA             | DL                    |
| Primary synchronisation signal   | NA             | DL                    |
| Secondary synchronisation signal | NA             | DL                    |

4.2.2.2 Support of  $T_{\text{cell}}$  timing offset

The timing offset in terms of frame start timing between any pair of TDD cells shall be < [3 $\mu$ s]. For FDD cells there is no such restriction.

## 4.2.2.3 Supported Sidelink Configuration

The System Simulator shall provide the capability to simulate a minimum number of UEs whose number and capabilities are governed by the test cases that need to be performed (test cases are defined in 3GPP TS 36.523-1 [18] (Signalling), 3GPP TS 36.521-1 [21] (RF) and 3GPP TS 36.521-3 [34] (RRM). For this purpose test cases can be split into two different categories: Tests that require only one simulated UE and Tests that require several simulated UEs.

To perform test cases requiring one simulated UE, the system simulator shall provide a UE offering the capabilities to perform all the test cases in this category.

The type and number of sidelink channels (especially physical channels) constitute an important set of capabilities for a simulated UE. The following clauses list possible sidelink channels that may be supported by the SS. Each channel type, however, and the minimum number of channels needed are only mandatory if specific test cases require them.

The mapping between Logical and Transport channels is as described in 3GPP TS 36.321 [14]. Similarly the mapping between Transport channels and Physical channels is as described in 3GPP TS 36.211, TS 36.302 and TS 36.212.

#### 4.2.2.3.1 Supported Sidelink Channels

##### 4.2.2.3.1.1 Logical channels

| Logical channel | Minimum number | Comments |
|-----------------|----------------|----------|
| STCH            | 1              |          |
| SBCCH           | 1              |          |

##### 4.2.2.3.1.2 Transport channels

| Transport channel | Minimum number | Comments |
|-------------------|----------------|----------|
| SL-BCH            | 1              |          |
| SL-DCH            | 1              |          |
| SL-SCH            | 1              |          |

##### 4.2.2.3.1.3 Physical channels

| Physical channel | Minimum number | Comments                            |
|------------------|----------------|-------------------------------------|
| PSBCH            | 1              | Physical Sidelink Broadcast CHannel |
| PSCCH            | 1              | Physical Sidelink Control CHannel   |
| PSDCH            | 1              | Physical Sidelink Discovery CHannel |
| PSSCH            | 1              | Physical Sidelink Shared CHannel    |

##### 4.2.2.3.1.4 Physical signals

| Physical signal                  | Minimum number | Comments                 |
|----------------------------------|----------------|--------------------------|
| Sidelink Synchronization Signals | NA             | Sidelink Synchronization |

## 4.3 Reference test conditions

This clause contains the reference test conditions, which apply to all test cases unless otherwise specified.

### 4.3.1 Test frequencies

The test frequencies are based on the E-UTRA frequency bands defined in the core specifications.

The raster spacing is 100 KHz.

E-UTRA/FDD is designed to operate in paired bands of 3GPP TS 36.101 [27]. The reference test frequencies for the RF and Signalling test environment for each of the operating bands are defined in sub clause 4.3.1.1.

E-UTRA/TDD is designed to operate in unpaired bands of 3GPP TS 36.101 [27]. The reference test frequencies for the RF and Signalling test environment for each of the operating bands are defined in sub clause 4.3.1.2.

For non-CA Signalling testing, E-UTRA frequency to be tested is mid range and E-UTRA channel bandwidth to be tested is 5MHz for all operating bands for all test cases as the default configuration unless specific channel bandwidth is specified for the operating band below:

For Band 106, channel bandwidth to be tested is 3 MHz as the default configuration.

For Band 11, 13, 18 and 20, channel bandwidth to be tested is 10 MHz as the default configuration.

For Band 38, 39, 40, 41 and 42, channel bandwidth to be tested is 20 MHz as the default configuration.

For operating band 46, the test frequencies defined in Clause 4.3.1.2.14 and 4.3.1.2.14A are derived based on the rules defined in TS 36.104 [30], table 5.7.3-1 Note 3.

For CA Signalling testing with two component carriers, E-UTRA frequencies to be tested are according to sub clause 6.2.3.2 and the E-UTRA channel bandwidth combination is according to Table 4.3.1-1.

**Table 4.3.1-1: Default E-UTRA channel bandwidth combinations for CA Signalling testing with two component carriers**

| CA configuration<br>(Band(s),BW Class,BW<br>Combination Set) | CA Channel Bandwidth<br>combination<br>carrier 1 + carrier 2<br>[MHz + MHz] | Comment                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------|-----------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Intra-band contiguous and<br>Bandwidth Class C               | 20+20                                                                       | This channel bandwidth combination is used for all Intra-band contiguous CA configurations using Bandwidth Class C unless specific channel bandwidth combination is specified for a CA configuration or CA Bandwidth Combination Set by specific entries in this table below.    |
| Intra-band contiguous and<br>Bandwidth Class B               | 5+5                                                                         | This channel bandwidth combination is used for all Intra-band contiguous CA configurations using Bandwidth Class B unless specific channel bandwidth combination is specified for a CA configuration or CA Bandwidth Combination Set by specific entries in this table below.    |
| Inter-band CA and CA<br>Bandwidth Class Combination<br>A-A   | 10 + 10                                                                     | This channel bandwidth combination is used for all Inter-band CA configurations using Bandwidth Class Combination A-A unless specific channel bandwidth combination is specified for a CA configuration or CA Bandwidth Combination Set by specific entries in this table below. |
| CA_1A-19A                                                    | 15 + 10                                                                     | This channel bandwidth combination is used for Inter-band CA configuration CA_1A-19A.                                                                                                                                                                                            |
| CA_1A-21A                                                    | 15 + 15                                                                     | This channel bandwidth combination is used for Inter-band CA configuration CA_1A-21A.                                                                                                                                                                                            |
| CA_1A-41A                                                    | 10 + 20                                                                     | This channel bandwidth combination is used for Inter-band CA configuration CA_1A-41A.                                                                                                                                                                                            |
| CA_1A-42A                                                    | 15 + 20                                                                     | This channel bandwidth combination is used for Inter-band CA configuration CA_1A-42A.                                                                                                                                                                                            |
| CA_3A-19A                                                    | 20 + 10                                                                     | This channel bandwidth combination is used for Inter-band CA configuration CA_3A-19A.                                                                                                                                                                                            |

| CA_28A-42A | 10 + 20 | This channel bandwidth combination is used for Inter-band CA configuration CA_28A-42A.        |
| CA_39A-41A | 20+20   | This channel bandwidth combination is used for Inter-band CA configuration CA_39A-41A.        |
| CA_41C-41C | 20 + 20 | This channel bandwidth combination is used for Intra-band CA configuration CA_41C-41C.        |
| CA_41A-42A | 20 + 20 | This channel bandwidth combination is used for Inter-band CA configuration CA_41A-42A.        |
| CA_39C     | 20 + 10 | This channel bandwidth combination is used for Intra-band contiguous CA configuration CA_39C. |

For CA Signalling testing with three component carriers, E-UTRA frequencies to be tested are according to sub clause 6.2.3.2 and the E-UTRA channel bandwidth combination is according to Table 4.3.1-2.

**Table 4.3.1-2: Default E-UTRA channel bandwidth combinations for CA Signalling testing with three component carriers**

| CA configuration<br>(Band(s),BW Class,BW<br>Combination Set)                                          | CA Channel Bandwidth<br>combination<br>carrier 1 + carrier 2 + carrier 3<br>[MHz + MHz + MHz] | Comment                                                                                                                                                                                                                                                                                                                 |

| Mixed Inter-band and Intra-band contiguous CA and CA Bandwidth Class Combination A-B or B-A | 10+5+5 (A-B) or 5+5+10 (B-A) | This channel bandwidth combination is used for all mixed Inter-band and Intra-band contiguous CA configurations using Bandwidth Class combination A-B or B-A unless specific channel bandwidth combination is specified for a CA configuration or CA Bandwidth Combination Set by specific entries in this table below. |
|---------------------------------------------------------------------------------------------|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

For RF testing, E-UTRA frequencies to be tested are low range, mid range and high range for all supported operating bands by default. E-UTRA channel bandwidths to be tested are lowest bandwidth, 5MHz bandwidth and highest bandwidth for all supported operating bands by default. Actual test configurations are specified case by case and stated in test case itself as the initial conditions.

The lowest bandwidth, 5MHz bandwidth and highest bandwidth are selected from the combined table which includes nominal and additional channel bandwidth.

In the case 5MHz bandwidth is not supported by the UE, E-UTRA channel bandwidth to be tested is only lowest bandwidth and highest bandwidth.

If channel bandwidth to be tested is equal to the lowest or highest channel bandwidth, then the same channel bandwidth is not required to be tested twice.

In addition to the default channel bandwidths to be tested specified above, for Bands 2, 4, 18, 19, 20 and 25, an industry requirement of testing in 10MHz channel bandwidth is allowed for test cases in chapters 6 and 7 in TS 36.521-1 [21].

**Editor's note: For RF testing, an industry requirement of testing in 10MHz channel bandwidth is requested for Bands 2, 4, 18, 19, 20 and 25 for test cases in chapters 6 and 7 in TS 36.521-1 [21], changing the existing test points to address this is being discussed in RAN5 and will be considered pending technical justification.**

For A-GNSS, MBS, WLAN and BLE testing in TS 37.571-1 [68], the E-UTRA frequency and channel bandwidth to be tested follow the same rules as for Signalling testing above.

For intra-band non-contiguous CA (CA\_XA-XA) test frequencies have been defined following the basic assumption that CC1 uses the Low Range frequency of the band, while CC2 the High Range frequency. Additional test frequencies not following this rule, are (should be) identified by notes.

For sidelink direct communication and sidelink direct discovery, operating band and bandwidth are specified in section 5.5D and 5.6D in TS 36.101 [27]. Sidelink direct communication and sidelink direct discovery operates in half duplex mode using the uplink frequency of corresponding band.

For V2X sidelink communication, operating band and bandwidth are specified in section 5.5G and 5.6G in TS 36.101 [27]. V2X sidelink communication operates in half duplex mode using the uplink frequency of corresponding band.

#### 4.3.1.1 FDD Mode Test frequencies

##### 4.3.1.1.1 FDD reference test frequencies for operating band 1

**Table 4.3.1.1.1-1: Test frequencies for E-UTRA channel bandwidth for operating band 1**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 18025           | 1922.5                    | 25              | 2112.5                      |
|                   | 10              | 18050           | 1925                      | 50              | 2115                        |
|                   | 15              | 18075           | 1927.5                    | 75              | 2117.5                      |
|                   | 20              | 18100           | 1930                      | 100             | 2120                        |
| Mid Range         | 5/10/15/20      | 18300           | 1950                      | 300             | 2140                        |
| High Range        | 5               | 18575           | 1977.5                    | 575             | 2167.5                      |
|                   | 10              | 18550           | 1975                      | 550             | 2165                        |
|                   | 15              | 18525           | 1972.5                    | 525             | 2162.5                      |
|                   | 20              | 18500           | 1970                      | 500             | 2160                        |

## 4.3.1.1.1A FDD reference test frequencies for CA in operating band 1

Table 4.3.1.1.1A-1: Test frequencies for CA\_1C

Note 1: Carriers in increasing frequency order.

## 4.3.1.1.6 FDD reference test frequencies for operating band 6

Table 4.3.1.1.6-1: Test frequencies for E-UTRA channel bandwidth for operating band 6

| Test Frequency ID | Bandwidth [MHz]   | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                 | 20675           | 832.5                     | 2675            | 877.5                       |
|                   | 10 <sup>[1]</sup> | 20700           | 835                       | 2700            | 880                         |
| Mid Range         | 5                 | 20700           | 835                       | 2700            | 880                         |
|                   | 10 <sup>[1]</sup> | 20700           | 835                       | 2700            | 880                         |
| High Range        | 5                 | 20725           | 837.5                     | 2725            | 882.5                       |
|                   | 10 <sup>[1]</sup> | 20700           | 835                       | 2700            | 880                         |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

NOTE: For Band 6 testing, the Mobile Country Code shall be set to (MCC = '442/443').

## 4.3.1.1.7 FDD reference test frequencies for operating band 7

Table 4.3.1.1.7-1: Test frequencies for E-UTRA channel bandwidth for operating band 7

| Test Frequency ID | Bandwidth [MHz]              | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                            | 20775           | 2502.5                    | 2775            | 2622.5                      |
|                   | 10                           | 20800           | 2505                      | 2800            | 2625                        |

|                   | 10 [1]            | 21500           | 885                       | 3500            | 930                         |
| Mid Range         | 1.4/3/5<br>10 [1] | 21625           | 897.5                     | 3625            | 942.5                       |
| High Range        | 1.4               | 21793           | 914.3                     | 3793            | 959.3                       |
|                   | 3                 | 21785           | 913.5                     | 3785            | 958.5                       |
|                   | 5                 | 21775           | 912.5                     | 3775            | 957.5                       |
|                   | 10 [1]            | 21750           | 910                       | 3750            | 955                         |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

#### 4.3.1.1.8A FDD reference test frequencies for CA in operating band 8

**Table 4.3.1.1. 8 A-1: Test frequencies for CA\_8B**

| Range | CC-Combo / N <sub>RB_agg</sub> [RB] | CC1 Note1 |                 |                       |                 |                       | CC2 Note1 |                 |                       |                 |                       |
|-------|-------------------------------------|-----------|-----------------|-----------------------|-----------------|-----------------------|-----------|-----------------|-----------------------|-----------------|-----------------------|
|       |                                     | BW [RB]   | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] | BW [RB]   | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] |
| Low   | 25+50                               | 25        | 21478           | 882.8                 | 3478            | 927.8                 | 50        | 21550           | 890                   | 3550            | 935                   |
|       | 50+25                               | 50        | 21500           | 885                   | 3500            | 930                   | 25        | 21572           | 892.2                 | 3572            | 937.2                 |
|       | 50+50                               | 50        | 21500           | 885                   | 3500            | 930                   | 50        | 21599           | 894.9                 | 3599            | 939.9                 |
| Mid   | 25+50                               | 25        | 21578           | 892.8                 | 3578            | 937.8                 | 50        | 21650           | 900.0                 | 3650            | 945.0                 |
|       | 50+25                               | 50        | 21600           | 895.0                 | 3600            | 940.0                 | 25        | 21672           | 902.2                 | 3672            | 947.2                 |
|       | 50+50                               | 50        | 21576           | 892.6                 | 3576            | 937.6                 | 50        | 21675           | 902.5                 | 3675            | 947.5                 |
| High  | 25+50                               | 25        | 21678           | 902.8                 | 3678            | 947.8                 | 50        | 21750           | 910                   | 3750            | 955                   |
|       | 50+25                               | 50        | 21700           | 905                   | 3700            | 950                   | 25        | 21772           | 912.2                 | 3772            | 957.2                 |
|       | 50+50                               | 50        | 21651           | 900.1                 | 3651            | 945.1                 | 50        | 21750           | 910                   | 3750            | 955                   |

Note 1: Carriers in increasing frequency order.

## 4.3.1.1.9 FDD reference test frequencies for operating band 9

**Table 4.3.1.1.9-1: Test frequencies for E-UTRA channel bandwidth for operating band 9**

| Test Frequency ID | Bandwidth [MHz]                              | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|----------------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                                            | 21825           | 1752.4                    | 3825            | 1847.4                      |
|                   | 10                                           | 21850           | 1754.9                    | 3850            | 1849.9                      |
|                   | 15 <sup>[1]</sup>                            | 21875           | 1757.4                    | 3875            | 1852.4                      |
|                   | 20 <sup>[1]</sup>                            | 21900           | 1759.9                    | 3900            | 1854.9                      |
| Mid Range         | 5/10<br>15 <sup>[1]</sup> /20 <sup>[1]</sup> | 21975           | 1767.4                    | 3975            | 1862.4                      |
| High Range        | 5                                            | 22125           | 1782.4                    | 4125            | 1877.4                      |
|                   | 10                                           | 22100           | 1779.9                    | 4100            | 1874.9                      |
|                   | 15 <sup>[1]</sup>                            | 22075           | 1777.4                    | 4075            | 1872.4                      |
|                   | 20 <sup>[1]</sup>                            | 22050           | 1774.9                    | 4050            | 1869.9                      |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

## 4.3.1.1.10 FDD reference test frequencies for operating band 10

**Table 4.3.1.1.10-1: Test frequencies for E-UTRA channel bandwidth for operating band 10**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 22175           | 1712.5                    | 4175            | 2112.5                      |
|                   | 10              | 22200           | 1715                      | 4200            | 2115                        |
|                   | 15              | 22225           | 1717.5                    | 4225            | 2117.5                      |
|                   | 20              | 22250           | 1720                      | 4250            | 2120                        |
| Mid Range         | 5/10/15/20      | 22450           | 1740                      | 4450            | 2140                        |
| High Range        | 5               | 22725           | 1767.5                    | 4725            | 2167.5                      |
|                   | 10              | 22700           | 1765                      | 4700            | 2165                        |
|                   | 15              | 22675           | 1762.5                    | 4675            | 2162.5                      |
|                   | 20              | 22650           | 1760                      | 4650            | 2160                        |

## 4.3.1.1.11 FDD reference test frequencies for operating band 11

**Table 4.3.1.1.11-1: Test frequencies for E-UTRA channel bandwidth for operating band 11**

| Test Frequency ID | Bandwidth [MHz]       | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                     | 22775           | 1430.4                    | 4775            | 1478.4                      |
|                   | 10 <sup>[1]</sup>     | 22800           | 1432.9                    | 4800            | 1480.9                      |
| Mid Range         | 5 / 10 <sup>[1]</sup> | 22850           | 1437.9                    | 4850            | 1485.9                      |
| High Range        | 5                     | 22925           | 1445.4                    | 4925            | 1493.4                      |
|                   | 10 <sup>[1]</sup>     | 22900           | 1442.9                    | 4900            | 1490.9                      |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

## 4.3.1.1.12 FDD reference test frequencies for operating band 12

**Table 4.3.1.1.12-1: Test frequencies for E-UTRA channel bandwidth for operating band 12**

| Test Frequency ID | Bandwidth [MHz]   | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4               | 23017           | 699.7                     | 5017            | 729.7                       |
|                   | 3                 | 23025           | 700.5                     | 5025            | 730.5                       |

| NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed. |                                        |                 |                           |                 |                             |

#### 4.3.1.1.19 FDD reference test frequencies for operating band 19

**Table 4.3.1.1.19-1: Test frequencies for E-UTRA channel bandwidth for operating band 19**

| Test Frequency ID | Bandwidth [MHz]                        | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|----------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                                      | 24025           | 832.5                     | 6025            | 877.5                       |
|                   | 10 <sup>[1]</sup>                      | 24050           | 835                       | 6050            | 880                         |
|                   | 15 <sup>[1]</sup>                      | 24075           | 837.5                     | 6075            | 882.5                       |
| Mid Range         | 5/10 <sup>[1]</sup> /15 <sup>[1]</sup> | 24075           | 837.5                     | 6075            | 882.5                       |
| High range        | 5                                      | 24125           | 842.5                     | 6125            | 887.5                       |
|                   | 10 <sup>[1]</sup>                      | 24100           | 840                       | 6100            | 885                         |
|                   | 15 <sup>[1]</sup>                      | 24075           | 837.5                     | 6075            | 882.5                       |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

#### 4.3.1.1.20 FDD reference test frequencies for operating band 20

**Table 4.3.1.1.20-1: Test frequencies for E-UTRA channel bandwidth for operating band 20**

| Test Frequency ID | Bandwidth [MHz]                                           | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------------------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                                                         | 24175           | 834.5                     | 6175            | 793.5                       |
|                   | 10 <sup>[1]</sup>                                         | 24200           | 837                       | 6200            | 796                         |
|                   | 15 <sup>[1]</sup>                                         | 24225           | 839.5                     | 6225            | 798.5                       |
|                   | 20 <sup>[1]</sup>                                         | 24250           | 842                       | 6250            | 801                         |
| Mid Range         | 5/10 <sup>[1]</sup> /15 <sup>[1]</sup> /20 <sup>[1]</sup> | 24300           | 847                       | 6300            | 806                         |
| High range        | 5                                                         | 24425           | 859.5                     | 6425            | 818.5                       |
|                   | 10 <sup>[1]</sup>                                         | 24400           | 857                       | 6400            | 816                         |
|                   | 15 <sup>[1]</sup>                                         | 24375           | 854.5                     | 6375            | 813.5                       |
|                   | 20 <sup>[1]</sup>                                         | 24350           | 852                       | 6350            | 811                         |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

#### 4.3.1.1.21 FDD reference test frequencies for operating band 21

**Table 4.3.1.1.21-1: Test frequencies for E-UTRA channel bandwidth for operating band 21**

| Test Frequency ID | Bandwidth [MHz]                        | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|----------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                                      | 24475           | 1450.4                    | 6475            | 1498.4                      |
|                   | 10 <sup>[1]</sup>                      | 24500           | 1452.9                    | 6500            | 1500.9                      |
|                   | 15 <sup>[1]</sup>                      | 24525           | 1455.4                    | 6525            | 1503.4                      |
| Mid Range         | 5/10 <sup>[1]</sup> /15 <sup>[1]</sup> | 24525           | 1455.4                    | 6525            | 1503.4                      |
| High range        | 5                                      | 24575           | 1460.4                    | 6575            | 1508.4                      |
|                   | 10 <sup>[1]</sup>                      | 24550           | 1457.9                    | 6550            | 1505.9                      |
|                   | 15 <sup>[1]</sup>                      | 24525           | 1455.4                    | 6525            | 1503.4                      |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

#### 4.3.1.1.22 FDD reference test frequencies for operating band 22

**Table 4.3.1.1.22-1: Test frequencies for E-UTRA channel bandwidth for operating band 22**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 24625           | 3412.5                    | 6625            | 3512.5                      |
|                   | 10              | 24650           | 3415                      | 6650            | 3515                        |
|                   | 15              | 24675           | 3417.5                    | 6675            | 3517.5                      |

## 4.3.1.1.23 FDD reference test frequencies for operating band 23

Table 4.3.1.1.23-1: Test frequencies for E-UTRA channel bandwidth for operating band 23

| Test Frequency ID | Bandwidth [MHz]          | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|--------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4                      | 25507           | 2000.7                    | 7507            | 2180.7                      |
|                   | 3                        | 25515           | 2001.5                    | 7515            | 2181.5                      |
|                   | 5                        | 25525           | 2002.5                    | 7525            | 2182.5                      |
|                   | 10                       | 25550           | 2005                      | 7550            | 2185                        |
|                   | 15                       | 25575           | 2007.5                    | 7575            | 2187.5                      |
|                   | 20                       | 25600           | 2010                      | 7600            | 2190                        |
| Mid Range         | 1.4/3<br>5 /10 / 15 / 20 | 25600           | 2010                      | 7600            | 2190                        |
| High Range        | 1.4                      | 25693           | 2019.3                    | 7693            | 2199.3                      |
|                   | 3                        | 25685           | 2018.5                    | 7685            | 2198.5                      |
|                   | 5                        | 25675           | 2017.5                    | 7675            | 2197.5                      |
|                   | 10                       | 25650           | 2015                      | 7650            | 2195                        |
|                   | 15                       | 25625           | 2012.5                    | 7625            | 2192.5                      |
|                   | 20                       | 25600           | 2010                      | 7600            | 2190                        |

## 4.3.1.1.23A FDD reference test frequencies for CA in operating band 23

Table 4.3.1.1.23A-1: Test frequencies for CA\_23A-23A

| Test Frequency ID | CC-Combo / N <sub>RB,agg</sub> [RB] | CC1 Note1 |                 |                       |                 |                       | Wgap [MHz] | CC2 Note 1 |                 |                       |                 |                       |
|-------------------|-------------------------------------|-----------|-----------------|-----------------------|-----------------|-----------------------|------------|------------|-----------------|-----------------------|-----------------|-----------------------|
|                   |                                     | BW [RB]   | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] |            | BW [RB]    | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] |
| Max WGap          | 25+50                               | 25        | 25525           | 2002.5                | 7525            | 2182.5                | 5          | 50         | 25650           | 2015                  | 7650            | 2195                  |

Note 1: Carriers in increasing frequency order.

Table 4.3.1.1.23A-2: Test frequencies for CA\_23B

| Range        | CC-Combo / N <sub>RB,agg</sub> [RB] | CC1 Note1 |                 |                       |                 |                       | CC2 Note1 |                 |                       |                 |                       |
|--------------|-------------------------------------|-----------|-----------------|-----------------------|-----------------|-----------------------|-----------|-----------------|-----------------------|-----------------|-----------------------|
|              |                                     | BW [RB]   | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] | BW [RB]   | N <sub>UL</sub> | f <sub>UL</sub> [MHz] | N <sub>DL</sub> | f <sub>DL</sub> [MHz] |
| Low/Mid/High | 25+75                               | 25        | 25531           | 2003.1                | 7531            | 2183.1                | 75        | 25624           | 2012.4                | 7624            | 2192.4                |
|              | 50+50                               | 50        | 25551           | 2005.1                | 7551            | 2185.1                | 50        | 25650           | 2015                  | 7650            | 2195                  |

Note 1: Carriers in increasing frequency order.

## 4.3.1.1.24 FDD reference test frequencies for operating band 24

Table 4.3.1.1.24-1: Test frequencies for E-UTRA channel bandwidth for operating band 24

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 25735           | 1630                      | 7735            | 1528.5                      |
|                   | 10              | 25760           | 1632.5                    | 7760            | 1531                        |
| Mid Range         | 5               | 25785           | 1635                      | 7785            | 1533.5                      |
|                   | 10              | 25760           | 1632.5                    | 7760            | 1531                        |
| High Range        | 5               | 25975           | 1654                      | 7785            | 1533.5                      |
|                   | 10              | 25950           | 1651.5                    | 7760            | 1531                        |

Note: Low and Mid test frequencies are specified using Tx-Rx spacing of -101.5 MHz and High test frequency is specified using Tx-Rx spacing of -120.5 MHz

#### 4.3.1.1.25 FDD reference test frequencies for operating band 25

**Table 4.3.1.1.25-1: Test frequencies for E-UTRA channel bandwidth for operating band 25**

| Test Frequency ID | Bandwidth [MHz]                                    | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|----------------------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4                                                | 26047           | 1850.7                    | 8047            | 1930.7                      |
|                   | 3                                                  | 26055           | 1851.5                    | 8055            | 1931.5                      |
|                   | 5                                                  | 26065           | 1852.5                    | 8065            | 1932.5                      |
|                   | 10                                                 | 26090           | 1855                      | 8090            | 1935                        |
|                   | 15 <sup>[1]</sup>                                  | 26115           | 1857.5                    | 8115            | 1937.5                      |
|                   | 20 <sup>[1]</sup>                                  | 26140           | 1860                      | 8140            | 1940                        |
| Mid Range         | 1.4/3/5/10<br>15 <sup>[1]</sup> /20 <sup>[1]</sup> | 26365           | 1882.5                    | 8365            | 1962.5                      |
| High Range        | 1.4                                                | 26683           | 1914.3                    | 8683            | 1994.3                      |
|                   | 3                                                  | 26675           | 1913.5                    | 8675            | 1993.5                      |
|                   | 5                                                  | 26665           | 1912.5                    | 8665            | 1992.5                      |
|                   | 10                                                 | 26640           | 1910                      | 8640            | 1990                        |
|                   | 15 <sup>[1]</sup>                                  | 26615           | 1907.5                    | 8615            | 1987.5                      |
|                   | 20 <sup>[1]</sup>                                  | 26590           | 1905                      | 8590            | 1985                        |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

#### 4.3.1.1.25A FDD reference test frequencies for CA in operating band 25

|                   | 15 <sup>[1]</sup>   | 27435           | 725.5                     | 9435            | 780.5                       |
|                   | 20 <sup>[1,2]</sup> | 27460           | 728                       | 9460            | 783                         |
| High Range        | 3                   | 27645           | 746.5                     | 9645            | 801.5                       |
|                   | 5                   | 27635           | 745.5                     | 9635            | 800.5                       |
|                   | 10 <sup>[1]</sup>   | 27610           | 743                       | 9610            | 798                         |
|                   | 15 <sup>[1]</sup>   | 27585           | 740.5                     | 9585            | 795.5                       |
|                   | 20 <sup>[1]</sup>   | 27560           | 738                       | 9560            | 793                         |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.  
NOTE 2: Mid Range for 20 MHz moved due to note 2 in Table 5.6.1-1 of TS 36.101 [27].  
NOTE 3: For CA\_18A-28A and CA\_1A-18A-28A use test frequencies in Table 4.3.1.1.28-2.  
NOTE 4: For CA\_19A-28A and CA\_1A-19A-28A use test frequencies in Table 4.3.1.1.28-3.

**Table 4.3.1.1.28-2: Test frequencies for E-UTRA channel bandwidth for operating band 28 in CA\_18A-28A and CA\_1A-18A-28A**

| Test Frequency ID | Bandwidth [MHz]     | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|---------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5                   | 27235           | 705.5                     | 9235            | 760.5                       |
|                   | 10 <sup>[1]</sup>   | 27260           | 708                       | 9260            | 763                         |
| Mid Range         | 5/10 <sup>[1]</sup> | 27360           | 718                       | 9360            | 773                         |
| High Range        | 5                   | 27485           | 730.5                     | 9485            | 785.5                       |
|                   | 10 <sup>[1]</sup>   | 27460           | 728                       | 9460            | 783                         |

NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed.

**Table 4.3.1.1.28-3: Test frequencies for E-UTRA channel bandwidth for operating band 28 in CA\_19A-28A and CA\_1A-19A-28A**

| Test Frequency ID                                                                                                                     | Bandwidth [MHz]   | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|---------------------------------------------------------------------------------------------------------------------------------------|-------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range                                                                                                                             | 5                 | 27385           | 720.5                     | 9385            | 775.5                       |
|                                                                                                                                       | 10 <sup>1</sup>   | 27410           | 723                       | 9410            | 778                         |
| Mid Range                                                                                                                             | 5/10 <sup>1</sup> | 27510           | 733                       | 9510            | 788                         |
| High Range                                                                                                                            | 5                 | 27635           | 745.5                     | 9635            | 800.5                       |

| NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed. |                   |                 |                           |                 |                             |

#### 4.3.1.1.29 FDD reference test frequencies for CA in operating band 29

**Table 4.3.1.1.29-1: Test frequencies for E-UTRA channel bandwidth for operating band 29**

| Test Frequency ID                                                                                                                                                                                                                                | Bandwidth [MHz] | N <sub>UL</sub>   | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------------|---------------------------|-----------------|-----------------------------|
| Low Range                                                                                                                                                                                                                                        | 3               | NA <sup>[1]</sup> | NA                        | 9675            | 718.5                       |
|                                                                                                                                                                                                                                                  | 5               | NA <sup>[1]</sup> | NA                        | 9685            | 719.5                       |
|                                                                                                                                                                                                                                                  | 10              | NA <sup>[1]</sup> | NA                        | 9710            | 722                         |
| Mid Range                                                                                                                                                                                                                                        | 3<br>5 / 10     | NA <sup>[1]</sup> | NA                        | 9715            | 722.5                       |
| High Range                                                                                                                                                                                                                                       | 3               | NA <sup>[1]</sup> | NA                        | 9755            | 726.5                       |
|                                                                                                                                                                                                                                                  | 5               | NA <sup>[1]</sup> | NA                        | 9745            | 725.5                       |
|                                                                                                                                                                                                                                                  | 10              | NA <sup>[1]</sup> | NA                        | 9720            | 723                         |
| NOTE 1: Restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell. |                 |                   |                           |                 |                             |

#### 4.3.1.1.30 FDD reference test frequencies for operating band 30

**Table 4.3.1.1.30-1: Test frequencies for E-UTRA channel bandwidth for operating band 30**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 27685           | 2307.5                    | 9795            | 2352.5                      |
|                   | 10              | 27710           | 2310                      | 9820            | 2355                        |
| Mid Range         | 5/10            | 27710           | 2310                      | 9820            | 2355                        |
| High Range        | 5               | 27735           | 2312.5                    | 9845            | 2357.5                      |
|                   | 10              | 27710           | 2310                      | 9820            | 2355                        |

Note 1: The uplink transmission is not allowed at this band for the UE with the externally vehicle-mounted antennas.

#### 4.3.1.1.31 FDD reference test frequencies for operating band 31

**Table 4.3.1.1.31-1: Test frequencies for E-UTRA channel bandwidth for operating band 31**

| Test Frequency ID | Bandwidth [MHz]                         | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------------------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4                                     | 27767           | 453.2                     | 9877            | 463.2                       |
|                   | 3 <sup>[1]</sup>                        | 27775           | 454                       | 9885            | 464                         |
|                   | 5 <sup>[1]</sup>                        | 27785           | 455                       | 9895            | 465                         |
| Mid Range         | 1.4/3 <sup>[1]</sup> / 5 <sup>[1]</sup> | 27785           | 455                       | 9895            | 465                         |
| High Range        | 1.4                                     | 27803           | 456.8                     | 9913            | 466.8                       |
|                   | 3 <sup>[1]</sup>                        | 27795           | 456                       | 9905            | 466                         |

|                                                                                                                                       |                  |       |     |      |     |
|---------------------------------------------------------------------------------------------------------------------------------------|------------------|-------|-----|------|-----|
|                                                                                                                                       | 5 <sup>[1]</sup> | 27785 | 455 | 9895 | 465 |
| NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed. |                  |       |     |      |     |

#### 4.3.1.1.32 FDD reference test frequencies for CA in operating band 32

**Table 4.3.1.1.32-1: Test frequencies for E-UTRA channel bandwidth for operating band 32**

| Test Frequency ID                                                                                                                                                                                                                                | Bandwidth [MHz] | N <sub>UL</sub>   | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-------------------|---------------------------|-----------------|-----------------------------|

| NOTE 1: Restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell. |                 |                   |                           |                 |                             |

#### 4.3.1.1.33 to 4.3.1.1.64 Void

Note: Sub-clauses 4.3.1.1.33 to 4.3.1.1.64 are marked as void as bands 33 to 64 are TDD bands. TDD bands are specified in sub-clause 4.3.1.2.

#### 4.3.1.1.65 FDD reference test frequencies for operating band 65

**Table 4.3.1.1.65-1: Test frequencies for E-UTRA channel bandwidth for operating band 65**

| Test Frequency ID | Bandwidth [MHz]  | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|------------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4              | 131079          | 1920.7                    | 65543           | 2110.7                      |

## 4.3.1.1.108 FDD reference test frequencies for operating band 108

**Table 4.3.1.1.108-1: Test frequencies for E-UTRA channel bandwidth for operating band 108**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 6               | NA              | NA                        | 71086           | 473                         |
|                   | 7               | NA              | NA                        | 71091           | 473.5                       |
|                   | 8               | NA              | NA                        | 71096           | 474                         |
|                   | 10              | NA              | NA                        | 71106           | 475                         |
| Mid Range         | 6/7/8/10        | NA              | NA                        | 72196           | 584                         |
| High Range        | 6               | NA              | NA                        | 73306           | 695                         |
|                   | 7               | NA              | NA                        | 73301           | 694.5                       |
|                   | 8               | NA              | NA                        | 73296           | 694                         |
|                   | 10              | NA              | NA                        | 73286           | 693                         |

## 4.3.1.1.109 to 4.3.1.1.251 FFS

Note: Sub-clauses 4.3.1.1.109 to 4.3.1.1.251 are marked as FFS as bands 109 to 251 are not yet defined in TS 36.101 [27] or TS 36.102 [74].

## 4.3.1.1.252 FDD reference test frequencies for operating band 252

**Table 4.3.1.1.252-1: Test frequencies for E-UTRA channel bandwidth for operating band 252**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 261076          | 2000.7                    | 228308          | 2180.7                      |
| Mid Range         | 1.4             | 261169          | 2010                      | 228401          | 2190                        |
| High Range        | 1.4             | 261262          | 2019.3                    | 228494          | 2199.3                      |

## 4.3.1.1.253 FDD reference test frequencies for operating band 253

**Table 4.3.1.1.253-1: Test frequencies for E-UTRA channel bandwidth for operating band 253**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 261276          | 1668.7                    | 228508          | 1518.7                      |
| Mid Range         | 1.4             | 261304          | 1671.5                    | 228536          | 1521.5                      |
| High Range        | 1.4             | 261332          | 1674.3                    | 228564          | 1524.3                      |

## 4.3.1.1.254 FDD reference test frequencies for operating band 254

**Table 4.3.1.1.254-1: Test frequencies for E-UTRA channel bandwidth for operating band 254**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 261346          | 1610.7                    | 228578          | 2484.2                      |
| Mid Range         | 1.4             | 261422          | 1618.3                    | 228654          | 2491.8                      |
| High Range        | 1.4             | 261497          | 1625.8                    | 228729          | 2499.3                      |

## 4.3.1.1.255 FDD reference test frequencies for operating band 255

**Table 4.3.1.1.255-1: Test frequencies for E-UTRA channel bandwidth for operating band 255**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 261511          | 1627.2                    | 228743          | 1525.7                      |
| Mid Range         | 1.4             | 261674          | 1643.5                    | 228906          | 1542                        |
| High Range        | 1.4             | 261837          | 1659.8                    | 229069          | 1558.3                      |

## 4.3.1.1.256 FDD reference test frequencies for operating band 256

**Table 4.3.1.1.256-1: Test frequencies for E-UTRA channel bandwidth for operating band 256**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 261851          | 1980.7                    | 229083          | 2170.7                      |
| Mid Range         | 1.4             | 261994          | 1995                      | 229226          | 2185                        |
| High Range        | 1.4             | 262137          | 2009.3                    | 229369          | 2199.3                      |

## 4.3.1.2 TDD Mode Test frequencies

## 4.3.1.2.1 TDD reference test frequencies for Operating Band 33

**Table 4.3.1.2.1-1: Test frequencies for E-UTRA channel bandwidth for operating band 33**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 36025  | 1902.5                      |
|                   | 10              | 36050  | 1905                        |
|                   | 15              | 36075  | 1907.5                      |
|                   | 20              | 36100  | 1910                        |
| Mid Range         | 5/10/15/20      | 36100  | 1910                        |
| High Range        | 5               | 36175  | 1917.5                      |
|                   | 10              | 36150  | 1915                        |
|                   | 15              | 36125  | 1912.5                      |
|                   | 20              | 36100  | 1910                        |

## 4.3.1.2.2 TDD reference test frequencies for Operating Band 34

**Table 4.3.1.2.2-1: Test frequencies for E-UTRA channel bandwidth for operating band 34**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 36225  | 2012.5                      |
|                   | 10              | 36250  | 2015                        |
|                   | 15              | 36275  | 2017.5                      |
| Mid Range         | 5/10/15         | 36275  | 2017.5                      |
| High Range        | 5               | 36325  | 2022.5                      |
|                   | 10              | 36300  | 2020                        |
|                   | 15              | 36275  | 2017.5                      |

## 4.3.1.2.3 TDD reference test frequencies for Operating Band 35

**Table 4.3.1.2.3-1: Test frequencies for E-UTRA channel bandwidth for operating band 35**

| Test Frequency ID | Bandwidth [MHz]  | EARFCN [MHz] | Frequency (UL and DL) [MHz] |
|-------------------|------------------|--------------|-----------------------------|
| Low Range         | 1.4              | 36357        | 1850.7                      |
|                   | 3                | 36365        | 1851.5                      |
|                   | 5                | 36375        | 1852.5                      |
|                   | 10               | 36400        | 1855                        |
|                   | 15               | 36425        | 1857.5                      |
|                   | 20               | 36450        | 1860                        |
| Mid Range         | 1.4/3/5/10/15/20 | 36650        | 1880                        |
| High Range        | 1.4              | 36943        | 1909.3                      |
|                   | 3                | 36935        | 1908.5                      |
|                   | 5                | 36925        | 1907.5                      |
|                   | 10               | 36900        | 1905                        |
|                   | 15               | 36875        | 1902.5                      |
|                   | 20               | 36850        | 1900                        |

## 4.3.1.2.4 TDD reference test frequencies for Operating Band 36

**Table 4.3.1.2.4-1: Test frequencies for E-UTRA channel bandwidth for operating band 36**

| Test Frequency ID | Bandwidth [MHz]  | EARFCN [MHz] | Frequency (UL and DL) [MHz] |
|-------------------|------------------|--------------|-----------------------------|
| Low Range         | 1.4              | 36957        | 1930.7                      |
|                   | 3                | 36965        | 1931.5                      |
|                   | 5                | 36975        | 1932.5                      |
|                   | 10               | 37000        | 1935                        |
|                   | 15               | 37025        | 1937.5                      |
|                   | 20               | 37050        | 1940                        |
| Mid Range         | 1.4/3/5/10/15/20 | 37250        | 1960                        |
| High Range        | 1.4              | 37543        | 1989.3                      |
|                   | 3                | 37535        | 1988.5                      |

## 4.3.1.2.5 TDD reference test frequencies for Operating Band 37

**Table 4.3.1.2.5-1: Test frequencies for E-UTRA channel bandwidth for operating band 37**

| Test Frequency ID | Bandwidth [MHz] | EARFCN [MHz] | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------------|-----------------------------|
| Low Range         | 5               | 37575        | 1912.5                      |
|                   | 10              | 37600        | 1915                        |
|                   | 15              | 37625        | 1917.5                      |
|                   | 20              | 37650        | 1920                        |
| Mid Range         | 5/10/15/20      | 37650        | 1920                        |
| High Range        | 5               | 37725        | 1927.5                      |
|                   | 10              | 37700        | 1925                        |
|                   | 15              | 37675        | 1922.5                      |
|                   | 20              | 37650        | 1920                        |

## 4.3.1.2.6 TDD reference test frequencies for Operating Band 38

**Table 4.3.1.2.6-1: Test frequencies for E-UTRA channel bandwidth for operating band 38**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 37775  | 2572.5                      |
|                   | 10              | 37800  | 2575                        |
|                   | 15              | 37825  | 2577.5                      |
|                   | 20              | 37850  | 2580                        |
| Mid Range         | 5/10/15/20      | 38000  | 2595                        |
| High Range        | 5               | 38225  | 2617.5                      |
|                   | 10              | 38200  | 2615                        |
|                   | 15              | 38175  | 2612.5                      |
|                   | 20              | 38150  | 2610                        |

## 4.3.1.2.6A TDD reference test frequencies for CA in operating band 38

**Table 4.3.1.2.6A-1: Test frequencies for CA\_38C**

| Range | CC-Combo /<br>N <sub>RB_agg</sub> [RB] | CC1<br>Note1 |                    |                          | CC2<br>Note1 |                    |                          |
|-------|----------------------------------------|--------------|--------------------|--------------------------|--------------|--------------------|--------------------------|
|       |                                        | BW [RB]      | N <sub>UL/DL</sub> | f <sub>UL/DL</sub> [MHz] | BW [RB]      | N <sub>UL/DL</sub> | f <sub>UL/DL</sub> [MHz] |
| Low   | 75+75                                  | 75           | 37825              | 2577.5                   | 75           | 37975              | 2592.5                   |
|       | 100+100                                | 100          | 37850              | 2580                     | 100          | 38048              | 2599.8                   |
| Mid   | 75+75                                  | 75           | 37925              | 2587.5                   | 75           | 38075              | 2602.5                   |
|       | 100+100                                | 100          | 37901              | 2585.1                   | 100          | 38099              | 2604.9                   |
| High  | 75+75                                  | 75           | 38025              | 2597.5                   | 75           | 38175              | 2612.5                   |
|       | 100+100                                | 100          | 37952              | 2590.2                   | 100          | 38150              | 2610                     |

Note 1: Carriers in increasing frequency order.

## 4.3.1.2.7 TDD reference test frequencies for Operating Band 39

**Table 4.3.1.2.7-1: Test frequencies for E-UTRA channel bandwidth for operating band 39**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 38275  | 1882.5                      |
|                   | 10              | 38300  | 1885                        |
|                   | 15              | 38325  | 1887.5                      |
|                   | 20              | 38350  | 1890                        |
| Mid Range         | 5/10/15/20      | 38450  | 1900                        |
| High Range        | 5               | 38625  | 1917.5                      |
|                   | 10              | 38600  | 1915                        |
|                   | 15              | 38575  | 1912.5                      |
|                   | 20              | 38550  | 1910                        |

## 4.3.1.2.7A TDD reference test frequencies for CA in Operating Band 39

**Table 4.3.1.2.7A-1: Test frequencies for CA\_39C**

| Range | CC-Combo /<br>N <sub>RB_agg</sub> [RB] | CC1<br>Note1 | CC2<br>Note1 |
|-------|----------------------------------------|--------------|--------------|
|-------|----------------------------------------|--------------|--------------|

|         |                                         | BW<br>[RB] | N <sub>UL/DL</sub> | f <sub>UL/DL</sub><br>[MHz] | BW<br>[RB] | N <sub>UL/DL</sub> | f <sub>UL/DL</sub><br>[MHz] |
|---------|-----------------------------------------|------------|--------------------|-----------------------------|------------|--------------------|-----------------------------|
| Low     | 25+100                                  | 25         | 38283              | 1883.3                      | 100        | 38400              | 1895.0                      |

Note 1: Carriers in increasing frequency order.  
Note 2: This test frequency is applicable only for intra-band contiguous CA which requires channel spacing to be less than nominal channel spacing.

Table 4.3.1.2.9A-4: Test frequencies for CA\_41C-41A

## 4.3.1.2.13 TDD reference test frequencies for Operating Band 45

**Table 4.3.1.2.13-1: Test frequencies for E-UTRA channel bandwidth for operating band 45**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 46615  | 1449.5                      |
|                   | 10              | 46640  | 1452                        |
|                   | 15              | 46665  | 1454.5                      |
|                   | 20              | 46690  | 1457                        |
| Mid Range         | 5/10/15/20      | 46690  | 1457                        |
| High Range        | 5               | 46765  | 1464.5                      |
|                   | 10              | 46740  | 1462                        |
|                   | 15              | 46715  | 1459.5                      |
|                   | 20              | 46690  | 1457                        |

## 4.3.1.2.14 TDD reference test frequencies for Operating Band 46

**Table 4.3.1.2.14-1: Test frequencies for E-UTRA channel bandwidth for operating band 46**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 20              | 46890  | 5160                        |
| Mid Range         | 20              | 50690  | 5540                        |
| High Range        | 20              | 54340  | 5905                        |

NOTE 1: In Rel-13, restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.

#### 4.3.1.2.14A TDD reference test frequencies for CA in operating Band 46

**Table 4.3.1.2.14A-1: Test frequencies for CA\_46C**

| Range | CC-Combo /<br>N <sub>RB_agg</sub><br>[RB] | CC1<br>Note1 |                    |                             | CC2<br>Note1 |                    |                             |
|-------|-------------------------------------------|--------------|--------------------|-----------------------------|--------------|--------------------|-----------------------------|
|       |                                           | BW<br>[RB]   | N <sub>UL/DL</sub> | f <sub>UL/DL</sub><br>[MHz] | BW<br>[RB]   | N <sub>UL/DL</sub> | f <sub>UL/DL</sub><br>[MHz] |
| Low   | 50+100                                    | 50           | 46845              | 5155.5                      | 100          | 46989              | 5169.9                      |
| Mid   | 50+100                                    | 50           | 50616              | 5532.6                      | 100          | 50760              | 5547.0                      |
| High  | 50+100                                    | 50           | 54296              | 5900.6                      | 100          | 54440              | 5915.0                      |
| Low   | 100+100                                   | 100          | 46890              | 5160.0                      | 100          | 47088              | 5179.8                      |
| Mid   | 100+100                                   | 100          | 50692              | 5540.2                      | 100          | 50890              | 5560                        |
| High  | 100+100                                   | 100          | 54142              | 5885.2                      | 100          | 54340              | 5905                        |
| Low   | 100+50                                    | 100          | 46890              | 5160.0                      | 50           | 47034              | 5174.4                      |
| Mid   | 100+50                                    | 100          | 50571              | 5528.1                      | 50           | 50715              | 5542.5                      |
| High  | 100+50                                    | 100          | 54341              | 5905.1                      | 50           | 54485              | 5919.5                      |

NOTE 1: Carriers in increasing frequency order.  
NOTE 2: In Rel-13, restricted to E-UTRA operation when carrier aggregation is configured. The downlink operating band is paired with the uplink operating band (external) of the carrier aggregation configuration that is supporting the configured Pcell.

**Table 4.3.1.2.14A-2: Test frequencies for CA\_46D**

## 4.3.1.2.17 TDD reference test frequencies for Operating Band 53

Table 4.3.1.2.17-1: Test frequencies for E-UTRA channel bandwidth for operating band 53

| Test Frequency ID | Bandwidth<br>[MHz] | EARFCN | Frequency (UL and DL)<br>[MHz] |
|-------------------|--------------------|--------|--------------------------------|
| Low Range         | 1.4                | 60147  | 2484.2                         |
|                   | 3                  | 60155  | 2485                           |
|                   | 5                  | 60165  | 2486                           |
|                   | 10                 | 60190  | 2488.5                         |
| Mid Range         | 1.4/3/5/10         | 60198  | 2489.3                         |
| High Range        | 1.4                | 60248  | 2494.3                         |
|                   | 3                  | 60240  | 2493.5                         |
|                   | 5                  | 60230  | 2492.5                         |
|                   | 10                 | 60205  | 2490                           |

## 4.3.1.2.18 TDD reference test frequencies for Operating Band 54

Table 4.3.1.2.18-1: Test frequencies for E-UTRA channel bandwidth for operating band 54

| Test Frequency ID | Bandwidth<br>[MHz] | EARFCN | Frequency (UL and DL)<br>[MHz] |
|-------------------|--------------------|--------|--------------------------------|
| Low Range         | 1.4                | 60262  | 1670.7                         |
|                   | 3                  | 60270  | 1671.5                         |
|                   | 5                  | 60280  | 1672.5                         |
| Mid Range         | 1.4/3/5            | 60280  | 1672.5                         |
| High Range        | 1.4                | 60298  | 1674.3                         |
|                   | 3                  | 60290  | 1673.5                         |
|                   | 5                  | 60280  | 1672.5                         |

### 4.3.1.3 HRPD Test frequencies

#### 4.3.1.3.1 HRPD test frequencies for Band Class 0

**Table 4.3.1.3.1-1: Test frequencies for HRPD in Band Class 0**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.23            | 1013           | 824.70                    | 869.70                      |
| Mid Range         | 1.23            | 356            | 835.68                    | 880.68                      |
| High Range        | 1.23            | 779            | 848.37                    | 893.37                      |

#### 4.3.1.3.2 HRPD test frequencies for Band Class 1

**Table 4.3.1.3.2-1: Test frequencies for HRPD in Band Class 1**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 25             | 1851.25                   | 1931.25                     |
| Mid Range         | 1.25            | 600            | 1880.00                   | 1960.00                     |
| High Range        | 1.25            | 1175           | 1908.75                   | 1988.75                     |

#### 4.3.1.3.3 HRPD test frequencies for Band Class 3

**Table 4.3.1.3.3-1: Test frequencies for HRPD in Band Class 3**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 1120           | 888.00                    | 833.00                      |
| Mid Range         | 1.25            | 872            | 898.90                    | 843.90                      |
| High Range        | 1.25            | 76             | 915.95                    | 860.95                      |

#### 4.3.1.3.4 HRPD test frequencies for Band Class 4

**Table 4.3.1.3.4-1: Test frequencies for HRPD in Band Class 4**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 100            | 1755.00                   | 1845.00                     |
| Mid Range         | 1.25            | 300            | 1765.00                   | 1855.00                     |
| High Range        | 1.25            | 525            | 1776.25                   | 1866.25                     |

#### 4.3.1.3.5 HRPD test frequencies for Band Class 6

**Table 4.3.1.3.5-1: Test frequencies for HRPD in Band Class 6**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 125            | 1926.25                   | 2116.25                     |
| Mid Range         | 1.25            | 200            | 1930.00                   | 2120.00                     |
| High Range        | 1.25            | 350            | 1937.50                   | 2127.50                     |

## 4.3.1.3.6 HRPD test frequencies for Band Class 10

**Table 4.3.1.3.6-1: Test frequencies for HRPD in Band Class 10**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 100            | 808.50                    | 853.50                      |
| Mid Range         | 1.25            | 500            | 821.00                    | 866.00                      |
| High Range        | 1.25            | 820            | 898.50                    | 937.50                      |

## 4.3.1.3.7 HRPD test frequencies for Band Class 15

**Table 4.3.1.3.7-1: Test frequencies for HRPD in Band Class 15**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 75             | 1713.75                   | 2113.75                     |
| Mid Range         | 1.25            | 450            | 1732.50                   | 2132.50                     |
| High Range        | 1.25            | 800            | 1750.00                   | 2150.00                     |

## 4.3.1.4 1xRTT Test frequencies

## 4.3.1.4.1 1xRTT test frequencies for Band Class 0

**Table 4.3.1.4.1-1: Test frequencies for 1xRTT in Band Class 0**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.23            | 1013           | 824.70                    | 869.70                      |
| Mid Range         | 1.23            | 356            | 835.68                    | 880.68                      |
| High Range        | 1.23            | 779            | 848.37                    | 893.37                      |

## 4.3.1.4.2 1xRTT test frequencies for Band Class 1

**Table 4.3.1.4.2-1: Test frequencies for 1xRTT in Band Class 1**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 25             | 1851.25                   | 1931.25                     |
| Mid Range         | 1.25            | 600            | 1880.00                   | 1960.00                     |
| High Range        | 1.25            | 1175           | 1908.75                   | 1988.75                     |

## 4.3.1.4.3 1xRTT test frequencies for Band Class 3

**Table 4.3.1.4.3-1: Test frequencies for 1xRTT in Band Class 3**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 1120           | 888.00                    | 833.00                      |
| Mid Range         | 1.25            | 872            | 898.90                    | 843.90                      |
| High Range        | 1.25            | 76             | 915.95                    | 860.95                      |

## 4.3.1.4.4 1xRTT test frequencies for Band Class 4

**Table 4.3.1.4.4-1: Test frequencies for 1xRTT in Band Class 4**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 100            | 1755.00                   | 1845.00                     |
| Mid Range         | 1.25            | 300            | 1765.00                   | 1855.00                     |
| High Range        | 1.25            | 525            | 1776.25                   | 1866.25                     |

## 4.3.1.4.5 1xRTT test frequencies for Band Class 6

**Table 4.3.1.4.5-1: Test frequencies for 1xRTT in Band Class 6**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 225            | 1931.25                   | 2121.25                     |
| Mid Range         | 1.25            | 275            | 1933.75                   | 2123.75                     |
| High Range        | 1.25            | 375            | 1938.75                   | 2128.75                     |

## 4.3.1.4.6 1xRTT test frequencies for Band Class 10

**Table 4.3.1.4.6-1: Test frequencies for 1xRTT in Band Class 10**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 100            | 808.50                    | 853.50                      |
| Mid Range         | 1.25            | 500            | 821.00                    | 866.00                      |
| High Range        | 1.25            | 820            | 898.50                    | 937.50                      |

## 4.3.1.4.7 1xRTT test frequencies for Band Class 15

**Table 4.3.1.4.7-1: Test frequencies for 1xRTT in Band Class 15**

| Test Frequency ID | Bandwidth [MHz] | Channel Number | Frequency of Uplink [MHz] | Frequency of Downlink [MHz] |
|-------------------|-----------------|----------------|---------------------------|-----------------------------|
| Low Range         | 1.25            | 75             | 1713.75                   | 2113.75                     |
| Mid Range         | 1.25            | 450            | 1732.50                   | 2132.50                     |
| High Range        | 1.25            | 800            | 1750.00                   | 2150.00                     |

## 4.3.1.5 MFBI Test frequencies

NOTE: MFBI test frequencies are not used for TS 36.521-1, TS 36.521-3 and TS 37.571-1.

## 4.3.1.5.1 MFBI Test frequencies for operation band 2 overlapping with band 25

- same as per Table 4.3.1.1.2-1

## 4.3.1.5.2 MFBI Test frequencies for operation band 3 overlapping with band 9

**Table 4.3.1.5.2-1: Test frequencies for E-UTRA channel bandwidth for operating band 3 overlapping with band 9**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 19606           | 1750.6                    | 1606            | 1845.6                      |
|                   | 3               | 19614           | 1751.4                    | 1614            | 1846.4                      |

|                                                                                                                                       |                                                    |       |        |      |        |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|-------|--------|------|--------|
|                                                                                                                                       | 5                                                  | 19624 | 1752.4 | 1624 | 1847.4 |
|                                                                                                                                       | 10                                                 | 19649 | 1754.9 | 1649 | 1849.9 |
|                                                                                                                                       | 15 <sup>[1]</sup>                                  | 19674 | 1757.4 | 1674 | 1852.4 |
|                                                                                                                                       | 20 <sup>[1]</sup>                                  | 19699 | 1759.9 | 1699 | 1854.9 |
| Mid Range                                                                                                                             | 1.4/3/5/10<br>15 <sup>[1]</sup> /20 <sup>[1]</sup> | 19774 | 1767.4 | 1774 | 1862.4 |

|                                                                                                                                       | 3               | 26775           | 822.5                     | 8775            | 867.5                       |
|                                                                                                                                       | 5               | 26765           | 821.5                     | 8765            | 866.5                       |
| NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed. |                 |                 |                           |                 |                             |

#### 4.3.1.5.21 MFBI Test frequencies for operation band 27 overlapping with band 18

**Table 4.3.1.5.21-1: Test frequencies for E-UTRA channel bandwidth for operating band 27 overlapping with band 18**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 1.4             | 27127           | 815.7                     | 9127            | 860.7                       |
|                   | 3               | 27135           | 816.5                     | 9135            | 861.5                       |
|                   | 5               | 27145           | 817.5                     | 9145            | 862.5                       |
| Mid Range         | 1.4/3/5         | 27165           | 819.5                     | 9165            | 864.5                       |
| High Range        | 1.4             | 27203           | 823.3                     | 9203            | 868.3                       |
|                   | 3               | 27195           | 822.5                     | 9195            | 867.5                       |
|                   | 5               | 27185           | 821.5                     | 9185            | 866.5                       |

#### 4.3.1.5.22 MFBI Test frequencies for operation band 27 overlapping with band 26

**Table 4.3.1.5.22-1: Test frequencies for E-UTRA channel bandwidth for operating band 27 overlapping with band 26**

| Test Frequency ID                                                                                                                     | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|---------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range                                                                                                                             | 1.4             | 27117           | 814.7                     | 9117            | 859.7                       |
|                                                                                                                                       | 3               | 27125           | 815.5                     | 9125            | 860.5                       |
|                                                                                                                                       | 5               | 27135           | 816.5                     | 9135            | 861.5                       |
| Mid Range                                                                                                                             | 1.4/3/5         | 27160           | 819                       | 9160            | 864                         |
| High Range                                                                                                                            | 1.4             | 27203           | 823.3                     | 9203            | 868.3                       |
|                                                                                                                                       | 3               | 27195           | 822.5                     | 9195            | 867.5                       |
|                                                                                                                                       | 5               | 27185           | 821.5                     | 9185            | 866.5                       |
| NOTE 1: Bandwidth for which a relaxation of the specified UE receiver sensitivity requirement (TS 36.101 [27] Clause 7.3) is allowed. |                 |                 |                           |                 |                             |

#### 4.3.1.5.23 MFBI Test frequencies for operation band 33 overlapping with band 39

- same as per Table 4.3.1.2.1-1

## 4.3.1.5.24 MFBI Test frequencies for operation band 38 overlapping with band 41

- same as per Table 4.3.1.2.6-1

## 4.3.1.5.25 MFBI Test frequencies for operation band 39 overlapping with band 33

**Table 4.3.1.5.25-1: Test frequencies for E-UTRA channel bandwidth for operating band 39 overlapping with band 33**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 38475  | 1902.5                      |
|                   | 10              | 38500  | 1905                        |
|                   | 15              | 38525  | 1907.5                      |
|                   | 20              | 38550  | 1910                        |
| Mid Range         | 5/10/15/20      | 38550  | 1910                        |
| High Range        | 5               | 38625  | 1917.5                      |
|                   | 10              | 38600  | 1915                        |
|                   | 15              | 38575  | 1912.5                      |
|                   | 20              | 38550  | 1910                        |

## 4.3.1.5.26 MFBI Test frequencies for operation band 41 overlapping with band 38

**Table 4.3.1.5.26-1: Test frequencies for E-UTRA channel bandwidth for operating band 41 overlapping with band 38**

| Test Frequency ID | Bandwidth [MHz] | EARFCN | Frequency (UL and DL) [MHz] |
|-------------------|-----------------|--------|-----------------------------|
| Low Range         | 5               | 40415  | 2572.5                      |
|                   | 10              | 40440  | 2575                        |
|                   | 15              | 40465  | 2577.5                      |
|                   | 20              | 40490  | 2580                        |
| Mid Range         | 5/10/15/20      | 40640  | 2595                        |
| High Range        | 5               | 40865  | 2617.5                      |

## 4.3.1.5.28 MFBI Test frequencies for operation band 66 overlapping with band 10

**Table 4.3.1.5.28-1: Test frequencies for E-UTRA channel bandwidth for operating band 66 overlapping with band 10**

| Test Frequency ID | Bandwidth [MHz] | N <sub>UL</sub> | Frequency of Uplink [MHz] | N <sub>DL</sub> | Frequency of Downlink [MHz] |
|-------------------|-----------------|-----------------|---------------------------|-----------------|-----------------------------|
| Low Range         | 5               | 131997          | 1712.5                    | 66461           | 2112.5                      |
|                   | 10              | 132022          | 1715                      | 66486           | 2115                        |
|                   | 15              | 132047          | 1717.5                    | 66511           | 2117.5                      |
|                   | 20              | 132072          | 1720                      | 66536           | 2120                        |
| Mid Range         | 5/10/15/20      | 132197          | 1732.5                    | 66736           | 2140                        |
| High Range        | 5               | 132547          | 1767.5                    | 67011           | 2167.5                      |
|                   | 10              | 132522          | 1765                      | 66986           | 2165                        |
|                   | 15              | 132447          | 1757.5                    | 66961           | 2162.5                      |
|                   | 20              | 132472          | 1760                      | 66936           | 2160                        |

## 4.3.1.5.29 MFBI Test frequencies for operation band 4 overlapping with band 66

- same as per Table 4.3.1.1.4-1.

## 4.3.1.5.30 MFBI Test frequencies for operation band 10 overlapping with band 66

- same as per Table 4.3.1.1.10-1.

## 4.3.1.5.31 MFBI Test frequencies for operation band 106 overlapping with band 8

- same as per Table 4.3.1.1.106-1.

## 4.3.1.6 WLAN Test frequencies

## 4.3.1.6.1 WLAN Test frequencies for 2.4 GHz ISM Band

**Table 4.3.1.6.1-1: Test frequencies for WLAN for 2.4 GHz Band**

| Test Frequency ID | Bandwidth [MHz] | WLAN Channel Number | Centre Frequency (UL and DL)[MHz] |
|-------------------|-----------------|---------------------|-----------------------------------|
| Low Range (1)     | 20              | 1                   | 2412                              |
| Mid Range (2)     | 20              | 6                   | 2437                              |
| High Range (3)    | 20              | 11                  | 2462                              |
| High Range (4)    | 20              | 13                  | 2472                              |

## 4.3.1.6.2 WLAN Test frequencies for 5 GHz ISM Band

**Table 4.3.1.6.1-1: Test frequencies for WLAN for 5 GHz Band**

| Test Frequency ID | Bandwidth [MHz] | WLAN Channel Number | Centre Frequency (UL and DL)[MHz] |
|-------------------|-----------------|---------------------|-----------------------------------|
| Low Range (1)     | 20              | 48                  | 5240                              |
| Mid Range (2)     | 20              | 56                  | 5280                              |
| High Range (3)    | 20              | 64                  | 5320                              |

### 4.3.1.7 Bluetooth Test frequencies

#### 4.3.1.7.1 Bluetooth Test frequencies for 2.4 GHz ISM Band

**Table 4.3.1.7.1-1: Test frequencies for Bluetooth for 2.4 GHz Band**

| Test Frequency ID                                                          | Channel Bandwidth [MHz] | Operating Band (UL and DL)[MHz] |
|----------------------------------------------------------------------------|-------------------------|---------------------------------|
| Mid Range (1)                                                              | 1<br>(Note 1)           | 2402 - 2480                     |
| Note 1: Bluetooth adopts FHSS to use the Operating Band 2402MHz – 2480MHz. |                         |                                 |

### 4.3.2 Radio conditions

#### 4.3.2.1 Normal propagation condition

The downlink connection between the System Simulator and the UE is without Additive White Gaussian Noise, and has no fading or multipath effects.

The uplink connection between the UE and System Simulator is without Additive White Gaussian Noise, and has no fading or multipath effects.

### 4.3.3 Physical channel allocations

#### 4.3.3.1 Antennas

If the UE has two Rx antennas, the same downlink signal is applied to each one. Both UE Rx antennas shall be connected unless otherwise stated in the test case.

If the UE has one Rx antenna, the downlink signal is applied to it.

#### 4.3.3.2 Downlink physical channels and physical signals

The Downlink Physical channels and Physical signals used and their relative powers are specified for single SS Tx antenna in table 4.3.3.2-1 and for two SS Tx antennas in table 4.3.3.2-2. The details of downlink power allocation for PDSCH channel are described in TS 36.213 [29] clause 5.2. For BL-UE testing, PHICH is not required and MPDCCH is required.

**Table 4.3.3.2-1: Power allocation for OFDM symbols and reference signals, single SS Tx antenna**

| Physical Channel | EPRE Ratio        |
|------------------|-------------------|
| PBCH             | PBCH_RA = 0 dB    |
|                  | PBCH_RB = 0 dB    |
| PSS              | PSS_RA = 0 dB     |
| SSS              | SSS_RA = 0 dB     |
| PCFICH           | PCFICH_RB = 0 dB  |
| PDCCH            | PDCCH_RA = 0 dB   |
|                  | PDCCH_RB = 0 dB   |
| MPDCCH           | MPDCCH_RA = 0 dB  |
|                  | MPDCCH_RB = 0 dB  |
| PDSCH            | PDSCH_RA = 0 dB   |
|                  | PDSCH_RB = 0 dB   |
| PHICH            | PHICH_RB = 0 dB   |
| PMCH             | PMCH_RA = 0 dB    |
| MBSFN RS         | MBSFN_RS_RA = 0dB |
| PRS              | PRS_RA = 0 dB     |

**Table 4.3.3.2-2: Power allocation for OFDM symbols and reference signals, two SS Tx antennas**

| Physical Channel | EPRE Ratio        |
|------------------|-------------------|
| PBCH             | PBCH_RA = 0 dB    |
|                  | PBCH_RB = 0 dB    |
| PSS              | PSS_RA = 0 dB     |
| SSS              | SSS_RA = 0 dB     |
| PCFICH           | PCFICH_RB = 0 dB  |
| PDCCH            | PDCCH_RA = 0 dB   |
|                  | PDCCH_RB = 0 dB   |
| MPDCCH           | MPDCCH_RA = 0 dB  |
|                  | MPDCCH_RB = 0 dB  |
| PDSCH            | PDSCH_RA = -3 dB  |
|                  | PDSCH_RB = -3 dB  |
| PHICH            | PHICH_RB = 0 dB   |
| PMCH             | PMCH_RA = 0 dB    |
| MBSFN RS         | MBSFN_RS_RA = 0dB |
| PRS              | PRS_RA = 0 dB     |

NOTE: MBSFN RS is not defined downlink physical channels in TS 36.211 [35].

#### 4.3.3.3 Mapping of downlink physical channels and signals to physical resources

Parameters for mapping of downlink physical channels and signals are specified as follows.

Normal Cyclic Prefix

$N_{ID}^{cell}$ , Physical layer cell identity = 0 is used as the default physical layer cell identity

CFI = 3 for 1.4, 3 and 5 MHz system bandwidths

= 2 for 10, 15 and 20 MHz system bandwidths

= 2 if PMCH is configured ('mbsfn-SubframeConfiguration' is present in SIB2)

$N_g$  = 1

PHICH duration = Normal

For Signalling testing, the default system bandwidth is 3/5/10/20 MHz and single SS Tx antenna is used unless specified otherwise in the test case. The mapping of downlink physical channels to physical resources for Single Tx Antenna is described in table 4.3.3.3-1 for 3/5/10MHz system bandwidth FDD and table 4.3.3.3-2 for 5/20MHz system bandwidth TDD.

For RF testing, the mapping of DL physical channels to resource element is defined TS 36.521-1 [21] Annex C.1.

**Table 4.3.3.3-1: Mapping of DL Physical Channels to Resource Elements for Single SS Tx Antenna and 3/5/10 MHz System Bandwidth (FDD)**

| Physical channel | Time Domain Location                                       | Frequency Domain Location                                                                                                                             | Note                                                                         |
|------------------|------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| PBCH             | Symbols 0 to 3 of slot 1 of subframe 0 of each radio frame | Occupies 72 subcarriers centred on the DC subcarrier                                                                                                  | Mapping rule is specified in TS36.211 [35] sub clause 6.6.4                  |
| PSS              | Symbol 6 of slot 0 and 10 of each radio frame              | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS36.211 [35] sub clause 6.11.1.2               |
| SSS              | Symbol 5 of slots 0 and 10 of each radio frame             | Occupies 62 subcarriers centred on the DC subcarrier. Additional 10 subcarriers (5 on each side) adjacent to the centred 62 subcarriers are reserved. | Mapping rule is specified in TS36.211 [35] sub clause 6.11.2.2               |
| PCFICH           | Symbol 0 of each subframe                                  | Maps into 4 REGs uniformly spread in the frequency domain over the whole system bandwidth.                                                            | Mapping rule is specified in TS36.211 [35] sub clause 6.7.4<br>- CELL_ID = 0 |

|        |                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                        |
|--------|--------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PHICH  | Symbol 0 of each subframe                                          | Each PHICH group maps into 3 REGs in the frequency domain on the REGs not assigned to PCFICH over the whole system bandwidth,                                                                                                                                                                                                                                                                                                                                                                                                                          | Mapping rule is specified in TS36.211 [35] sub clause 6.9.3<br>- CELL_ID = 0<br>- Number of PHICH groups = $2(BW=3\text{ MHz})/4(BW=5\text{ MHz})/7(BW=10\text{ MHz})$ |
| PDCCH  | Symbols 0, 1, 2 of each subframe (BW=3MHz/5MHz)                    | The remaining REGs not allocated to both PCFICH and PHICH are used for PDCCH                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Mapping rule is specified in TS36.211 [35] sub clause 6.8.5<br>- CFI = 3 (BW=3MHz/5MHz)                                                                                |

| <p>Note 1: The channel bandwidth powers are informative, based on -85dBm/15kHz RS_EPRE, then scaled according to the number of RBs and rounded to the nearest integer dBm value. Full RE allocation with no boost or deboost is assumed.</p> <p>Note 2: The power level is specified at each UE Rx antenna.</p> |           |                   |       |       |        |        |        |

It is [FFS] whether there is a requirement to specify constant power throughout all OFDM symbols, and if so how unallocated Resource elements should be treated.

The default signal level uncertainty is +/-3dB at each test port, for any level specified. If the uncertainty value is critical for the test purpose a tighter uncertainty is specified for the related test case in TS 36.521-1 [21] Annex F or in TS 36.521-3 [34] Annex F

#### 4.3.6.1 Downlink physical layer parameters

##### 4.3.6.1.1 Physical layer parameters for DCI format 0

Default physical layer parameters for DCI format 0 are specified in table 4.3.6.1.1-1.

**Table 4.3.6.1.1-1: Physical layer parameters for DCI format 0**

| Parameter                                                 | Value                                                                                                                                                                                                                                 | Value in binary |
|-----------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Flag for format 0/format 1A differentiation               | format 0                                                                                                                                                                                                                              | "0"             |
| Hopping flag                                              | w/o Hopping                                                                                                                                                                                                                           | "0"             |
| Resource block assignment and hopping resource allocation | Depending on test parameters                                                                                                                                                                                                          | -               |
| Modulation and coding scheme and redundancy version       | Depending on test parameters                                                                                                                                                                                                          | -               |
| New data indicator                                        | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                          | -               |
| TPC command for scheduled PUSCH                           | 0 dB (accumulated TPC)                                                                                                                                                                                                                | "01"            |
| Cyclic shift for DM RS                                    | 0                                                                                                                                                                                                                                     | "000"           |
| UL index (TDD only)                                       | 2 bits as defined in sections 5.1.1.1 and 8 of TS 36.213. This field is present only for TDD configuration 0                                                                                                                          | -               |
| Downlink Assignment Index (TDD only)                      | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the total number of PDSCH subframes with and without PDCCH and PDCCH indicating downlink SPS release in the window. This field is present only for TDD configuration 1-6 | -               |
| CQI request                                               | w/o aperiodic CQI                                                                                                                                                                                                                     | "0"             |

##### 4.3.6.1.1A Physical layer parameters for DCI format 0C

Default physical layer parameters for DCI format 0C are specified in table 4.3.6.1.1A-1.

**Table 4.3.6.1.1A-1: Physical layer parameters for DCI format 0C**

| Parameter                                    | Value    | Value in binary |
|----------------------------------------------|----------|-----------------|
| Flag for format 0C/format 1A differentiation | format 0 | "0"             |

|                                      |                                                                                                                                                                                               |       |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| Resource allocation type             | This field is only present if $N_{RB}^{UL} \leq N_{RB}^{DL}$ . The interpretation of this field is provided in section 8.1 of TS 36.213.                                                      | -     |
| Frequency Hopping flag               | w/o Hopping                                                                                                                                                                                   | "0"   |
| Resource block assignment            | Depending on test parameters                                                                                                                                                                  | -     |
| Modulation and coding scheme         | 5 bits as defined in 8.6 of TS 36.213.                                                                                                                                                        | -     |
| Repetition number                    | No repetitions<br>3 bits as defined in section 8.0 of 36.213                                                                                                                                  | "000" |
| HARQ process number                  | Depending on test parameters, 3bits for FDD, 4 bits for TDD.                                                                                                                                  | -     |
| New data indicator                   | 1 bit.                                                                                                                                                                                        | -     |
| Redundancy version                   | 2 bits.                                                                                                                                                                                       | "00"  |
| TPC command for scheduled PUSCH      | 0 dB (accumulated TPC)                                                                                                                                                                        | "01"  |
| Cyclic shift for DM RS and OCC index | 3 bits as defined in 5.5.2.1.1 of TS 36.211.                                                                                                                                                  | -     |
| UL index                             | 2 bits as defined in 5.1.1.1, 7.2.1, 8 and 8.4 of TS 36.213. (this field is present only for TDD operation with uplink-downlink configuration 0)                                              | -     |
| Downlink Assignment Index (DAI)      | 2 bits as defined in section 7.3 of TS 36.213 (This field is present only for cases with TDD primary cell and either TDD operation with uplink-downlink configurations 1-6 or FDD operation.) | -     |
| CSI request                          | 1, 2 or 3 bits as defined in section 7.2.1 of TS 36.213.                                                                                                                                      | -     |
| Modulation order override            | 1 bit as defined in section x.x of TS 36.213.                                                                                                                                                 | -     |
| Precoding information                | Number of bits as specified in Table 5.3.3.1.8-1 of TS 36.212                                                                                                                                 | -     |

#### 4.3.6.1.1B Physical layer parameters for DCI format 0A

Default physical layer parameters for DCI format 0A are specified in table 4.3.6.1.1B-1.

**Table 4.3.6.1.1B-1: Physical layer parameters for DCI format 0A**

| Parameter                                    | Value                                                                                        | Value in binary |
|----------------------------------------------|----------------------------------------------------------------------------------------------|-----------------|
| Carrier indicator                            | 0 or 3 bits. This field is present according to the definitions in TS 36.213.                | not present     |
| Flag for format 0A/format 1A differentiation | format 0A                                                                                    | "0"             |
| PUSCH trigger A                              | non-triggered scheduling                                                                     | "0"             |
| Timing offset                                | 0                                                                                            | "0000"          |
| Resource block assignment                    | Depending on test parameters                                                                 | -               |
| Modulation and coding scheme                 | Depending on test parameters                                                                 | -               |
| HARQ process number                          | Depending on test parameters                                                                 | -               |
| New data indicator                           | Set for every data transmission/retransmission according to the rules specified in TS 36.321 |                 |
| Redundancy version                           | 2 bits.                                                                                      | "00"            |
| TPC command for scheduled PUSCH              | 0 dB (accumulated TPC)                                                                       | "01"            |
| Cyclic shift for DM RS and OCC index         | 3 bits as defined in 5.5.2.1.1 of TS 36.211                                                  |                 |

#### 4.3.6.1.1C Physical layer parameters for DCI format 0B

Default physical layer parameters for DCI format 0B are specified in table 4.3.6.1.1C-1.

**Table 4.3.6.1.1C-1: Physical layer parameters for DCI format 0B**

| Parameter                            | Value                                                                                        | Value in binary |
|--------------------------------------|----------------------------------------------------------------------------------------------|-----------------|
| Carrier indicator                    | 0 or 3 bits. This field is present according to the definitions in TS 36.213.                | not present     |
| PUSCH trigger A                      | non-triggered scheduling                                                                     | "0"             |
| Timing offset                        | 0                                                                                            | "0000"          |
| Number of scheduled subframes        | 4                                                                                            | "11"            |
| Resource block assignment            | Depending on test parameters                                                                 | -               |
| Modulation and coding scheme         | Depending on test parameters                                                                 | -               |
| HARQ process number                  | Depending on test parameters                                                                 | -               |
| New data indicator                   | Set for every data transmission/retransmission according to the rules specified in TS 36.321 | -               |
| Redundancy version                   | 2 bits.                                                                                      | "00"            |
| TPC command for scheduled PUSCH      | 0 dB (accumulated TPC)                                                                       | "01"            |
| Cyclic shift for DM RS and OCC index | 3 bits as defined in 5.5.2.1.1 of TS 36.211                                                  |                 |
| CSI request                          | w/o aperiodic CQI                                                                            | "0"             |
| SRS request                          | w/o SRS                                                                                      | "0"             |
| PUSCH starting position              | 25us in symbol 0                                                                             | "01"            |
| PUSCH ending symbol                  | the last symbol of the subframe                                                              | "0"             |
| Channel Access type                  | channel access Type 2                                                                        | "1"             |
| Channel Access Priority Class        | 1                                                                                            | "01"            |

#### 4.3.6.1.2 Physical layer parameters for DCI format 1

Default physical layer parameters for DCI format 1 are specified in table 4.3.6.1.2-1.

**Table 4.3.6.1.2-1: Physical layer parameters for DCI format 1**

| Parameter                            | Value                                                                                                                                                                                                                                                                                            | Value in binary |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Resource allocation header           | Resource allocation type 0                                                                                                                                                                                                                                                                       | "0"             |
| Resource block assignment            | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| Modulation and coding scheme         | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| HARQ process number                  | Depending on test parameters, 3bits for FDD, 4 bits for TDD.                                                                                                                                                                                                                                     | -               |
| New data indicator                   | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                                                                                     | -               |
| Redundancy version                   | Depending on test parameters                                                                                                                                                                                                                                                                     | "00"            |
| TPC command for PUCCH                | 0 dB (accumulated TPC)                                                                                                                                                                                                                                                                           | "01"            |
| Downlink Assignment Index (TDD only) | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -               |

#### 4.3.6.1.3 Physical layer parameters for DCI format 1A

Default physical layer parameters for DCI format 1A are specified in table 4.3.6.1.3-1.

**Table 4.3.6.1.3-1: Physical layer parameters for DCI format 1A**

| Parameter                                   | Value                                                                                                                                                                                                                                                                                            | Value in binary |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Flag for format 0/format 1A differentiation | format 1A                                                                                                                                                                                                                                                                                        | "1"             |
| Localized/Distributed VRB assignment flag   | Localized VRB assignment                                                                                                                                                                                                                                                                         | "0"             |
| Resource block assignment                   | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| Modulation and coding scheme                | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| HARQ process number                         | Depending on test parameters, 3bits for FDD, 4 bits for TDD.                                                                                                                                                                                                                                     | -               |
| New data indicator                          | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                                                                                     | -               |
| Redundancy version                          | Depending on test parameters                                                                                                                                                                                                                                                                     | "00"            |
| TPC command for PUCCH                       | 0 dB (accumulated TPC)                                                                                                                                                                                                                                                                           | "01"            |
| Downlink Assignment Index (TDD only)        | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -               |

#### 4.3.6.1.3A Physical layer parameters for DCI format 1B

Default physical layer parameters for DCI format 1B are specified in table 4.3.6.1.3A-1.

**Table 4.3.6.1.3A-1: Physical layer parameters for DCI format 1B**

| Parameter                                 | Value                                                                                                                                                                                                                                                                                            | Value in binary |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Localized/Distributed VRB assignment flag | Localized VRB assignment                                                                                                                                                                                                                                                                         | "0"             |
| Resource block assignment                 | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| Modulation and coding scheme              | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| HARQ process number                       | Depending on test parameters, 3bits for FDD, 4 bits for TDD.                                                                                                                                                                                                                                     | -               |
| New data indicator                        | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                                                                                     | -               |
| Redundancy version                        | Depending on test parameters                                                                                                                                                                                                                                                                     | "00"            |
| TPC command for PUCCH                     | 0 dB (accumulated TPC)                                                                                                                                                                                                                                                                           | "01"            |
| Downlink Assignment Index (TDD only)      | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -               |
| TPMI information for precoding            | Set for codebook index according to TS 36.211 Table 6.3.4.2.3-1 for 2 Tx antenna ports and Table 6.3.4.2.3-2 for 4 Tx antenna ports corresponding to the single layer transmission                                                                                                               | -               |

|                                |                                                                                                                                                                          |   |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|
| PMI confirmation for precoding | Set for every transmission, 1 for precoding according to the latest reported PMI on PUSCH, 0 for precoding according to the indicated TPMI in the TPMI information field | - |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|

#### 4.3.6.1.4 Physical layer parameters for DCI format 1C

Default physical layer parameters for DCI format 1C are specified in table 4.3.6.1.4-1.

**Table 4.3.6.1.4-1: Physical layer parameters for DCI format 1C**

| Parameter                      | Value                        | Value in binary |
|--------------------------------|------------------------------|-----------------|
| gap value ( $N_{RB} \geq 50$ ) | gap1                         | "0"             |
| Resource block assignment      | depending on test parameters | -               |
| Transport block size index     | depending on test parameters | -               |

#### 4.3.6.1.5 Physical layer parameters for DCI format 2

Default physical layer parameters for DCI format 2 are specified in table 4.3.6.1.5-1.

**Table 4.3.6.1.5-1: Physical layer parameters for DCI format 2**

| Parameter                                        | Value                                                                                                                                                                                                                                                                                            | Value in binary |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Resource allocation header                       | Resource allocation type 0                                                                                                                                                                                                                                                                       | "0"             |
| Resource block assignment                        | Depending on test parameters                                                                                                                                                                                                                                                                     | -               |

#### 4.3.6.1.6 Physical layer parameters for DCI format 2A

Default physical layer parameters for DCI format 2A are specified in table 4.3.6.1.6-1.

**Table 4.3.6.1.6-1: Physical layer parameters for DCI format 2A**

| Parameter                                        | Value                                                                                                                                                                                                                                                                                            | Value in binary |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Resource allocation header                       | Resource allocation type 0                                                                                                                                                                                                                                                                       | "0"             |
| Resource block assignment                        | depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| TPC command for PUCCH                            | 0 dB (accumulated TPC)                                                                                                                                                                                                                                                                           | "01"            |
| Downlink Assignment Index (TDD only)             | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -               |
| HARQ process number                              | depending on test parameters, 3bits for FDD, and 4 bits for TDD.                                                                                                                                                                                                                                 | -               |
| Transport block to codeword swap flag            | No swap                                                                                                                                                                                                                                                                                          | "0"             |
| Modulation and coding scheme (transport block 1) | depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| New data indicator (transport block 1)           | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                                                                                     | -               |
| Redundancy version (transport block 1)           | depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| Modulation and coding scheme (transport block 2) | depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| New data indicator (transport block 2)           | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                                                                                     | -               |
| Redundancy version (transport block 2)           | depending on test parameters                                                                                                                                                                                                                                                                     | -               |
| Precoding information                            | N/A for 2 Tx antenna ports. For 4 Tx antenna ports, set for every transmission according to 36.212 Table 5.3.3.1.5A-2                                                                                                                                                                            | -               |

#### 4.3.6.1.6A Physical layer parameters for DCI format 3B

Default physical layer parameters for DCI format 3B are specified in table 4.3.6.1.6A-1 for up to 5 TDD SCells configured without PUCCH/PUSCH.

**Table 4.3.6.1.6A-1: Physical layer parameters for DCI format 3B for up to 5 TDD SCells configured without PUCCH/PUSCH**

| Parameter                    | Value                                                                            | Value in binary |
|------------------------------|----------------------------------------------------------------------------------|-----------------|
| SRS request (block number 1) | 1 bit. The interpretation of this field is provided in section 8.2 of TS 36.213. | "1"             |
| TPC command (block number 1) | 0 dB (accumulated TPC)                                                           | "01"            |

#### 4.3.6.1.6B Physical layer parameters for DCI format 4A

Default physical layer parameters for DCI format 4A are specified in table 4.3.6.1.6B-1.

**Table 4.3.6.1.6B-1: Physical layer parameters for DCI format 4A for eLAA**

| Parameter | Value | Value in binary |
|-----------|-------|-----------------|
|-----------|-------|-----------------|

|                                                                           |                                                                               |             |
|---------------------------------------------------------------------------|-------------------------------------------------------------------------------|-------------|
| Carrier indicator                                                         | 0 or 3 bits. This field is present according to the definitions in TS 36.213. | not present |
| PUSCH trigger A                                                           | non-triggered scheduling                                                      | "0"         |
| Timing offset                                                             | 0                                                                             | "0000"      |
| Resource block assignment                                                 | Depending on test parameters                                                  | -           |
| HARQ process number                                                       | 2 bits.                                                                       | "00"        |
| Redundancy version                                                        | Depending on test parameters                                                  | -           |
| TPC command for scheduled PUSCH                                           | 0 dB (accumulated TPC)                                                        | "01"        |
| Cyclic shift for DM RS and OCC index                                      | 3 bits as defined in 5.5.2.1.1 of TS 36.211                                   |             |
| CSI request                                                               | w/o aperiodic CQI                                                             | "0"         |
| SRS request                                                               | w/o SRS                                                                       | "0"         |
| PUSCH starting position                                                   | 25us in symbol 0                                                              | "01"        |
| PUSCH ending symbol                                                       | the last symbol of the subframe                                               | "0"         |

#### 4.3.6.1.6C Physical layer parameters for DCI format 4B

Default physical layer parameters for DCI format 4B are specified in table 4.3.6.1.6C-1.

**Table 4.3.6.1.6C-1: Physical layer parameters for DCI format 4B for eLAA**

| Parameter                                                                 | Value                                                                         | Value in binary |
|---------------------------------------------------------------------------|-------------------------------------------------------------------------------|-----------------|
| Carrier indicator                                                         | 0 or 3 bits. This field is present according to the definitions in TS 36.213. | not present     |
| PUSCH trigger A                                                           | non-triggered scheduling                                                      | "0"             |
| Timing offset                                                             | 0                                                                             | "0000"          |
| Number of scheduled subframes                                             | 4                                                                             | "11"            |
| Resource block assignment                                                 | Depending on test parameters                                                  | -               |
| HARQ process number                                                       | Depending on test parameters                                                  | -               |
| Redundancy version                                                        | 2 bits.                                                                       | "00"            |
| TPC command for scheduled PUSCH                                           | 0 dB (accumulated TPC)                                                        | "01"            |
| Cyclic shift for DM RS and OCC index                                      | 3 bits as defined in 5.5.2.1.1 of TS 36.211                                   |                 |
| CSI request                                                               | w/o aperiodic CQI                                                             | "0"             |
| SRS request                                                               | w/o SRS                                                                       | "0"             |
| PUSCH starting position                                                   | 25us in symbol 0                                                              | "01"            |
| PUSCH ending symbol                                                       | the last symbol of the subframe                                               | "0"             |
| Channel Access type                                                       | channel access Type 2                                                         | "1"             |
| Channel Access Priority Class                                             | 1                                                                             | "01"            |
| Modulation and coding scheme and redundancy version for transport block 1 | Depending on test parameters                                                  | -               |
| New data indicator for transport block 1                                  | Depending on test parameters                                                  | -               |
| Modulation and coding scheme and redundancy version for transport block 2 | Depending on test parameters                                                  | -               |
| New data indicator for transport block 2                                  | Depending on test parameters                                                  | -               |
| Precoding information and number of layers                                | Depending on test parameters                                                  | -               |

#### 4.3.6.1.7 Physical layer parameters for DCI format 5

Default physical layer parameters for DCI format 5 are specified in table 4.3.6.1.7-1.

**Table 4.3.6.1.7-1: Physical layer parameters for DCI format 5**

| Parameter                       | Value                        | Value in binary |
|---------------------------------|------------------------------|-----------------|
| Resource for PSCCH              | Depending on test parameters | -               |
| TPC command for PSCCH and PSSCH |                              | "0"             |

|                                                           |                              |     |
|-----------------------------------------------------------|------------------------------|-----|
| Frequency hopping flag                                    | w/o hopping                  | "0" |
| Resource block assignment and hopping resource allocation |                              |     |
| Time resource pattern                                     | Depending on test parameters |     |

#### 4.3.6.1.7A Physical layer parameters for DCI format 5A

Default physical layer parameters for DCI format 5A are specified in table 4.3.6.1.7A-1.

**Table 4.3.6.1.7A-1: Physical layer parameters for DCI format 5A**

| Parameter                                                | Value                        | Value in binary |
|----------------------------------------------------------|------------------------------|-----------------|
| Carrier indicator                                        | Pcell's frequency            | "0"             |
| Lowest index of the subchannel allocation                | Depending on test parameters |                 |
| Frequency resource location                              | Depending on test parameters |                 |
| Time gap between initial transmission and retransmission | Depending on test parameters |                 |

#### 4.3.6.1.8 Physical layer parameters for DCI format 6-0A

Default physical layer parameters for DCI format 6-0A for scheduling of PUSCH are specified in table 4.3.6.1.8-1.

**Table 4.3.6.1.8-1: Physical layer parameters for DCI format 6-0A**

| Parameter                                          | Value                                                                                                                                                                                                                               | Value in binary |           |
|----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------|
| Flag format 6-0A/format 6-1A differentiation       | format 0A                                                                                                                                                                                                                           | "0"             | Condition |
| Frequency hopping flag                             | w/o Hopping                                                                                                                                                                                                                         | "0"             |           |
| Resource block assignment - narrowband index       | $n_{NB} = 0$ according to section 5.2.4 in TS 36.211                                                                                                                                                                                | "0"             | RF        |
|                                                    | See TS 36.523-3 clause 7.3.3.9                                                                                                                                                                                                      |                 | SIG       |
| Resource block assignment – UL resource allocation | Depending on test parameters<br><br>5 bits provide the resource allocation using UL resource allocation type 0 within the indicated narrowband                                                                                      | -               |           |
| Modulation and coding scheme                       | Depending on test parameters                                                                                                                                                                                                        | -               |           |
| Repetition number                                  | No repetitions                                                                                                                                                                                                                      |                 |           |
|                                                    | 2 bits as defined in section 8.0 of 36.213                                                                                                                                                                                          | "00"            |           |

#### 4.3.6.1.11 Physical layer parameters for DCI format 6-1B

Default physical layer parameters for DCI format 6-1B are specified in table 4.3.6.1.11-1.

**Table 4.3.6.1.11-1: Physical layer parameters for DCI format 6-1B**

| Parameter                                          | Value                                                                                        | Value in binary | Condition |
|----------------------------------------------------|----------------------------------------------------------------------------------------------|-----------------|-----------|
| Flag for format 6-0B/format 6-1B differentiation   | format 6-1B                                                                                  | "1"             |           |
| Resource block assignment - narrowband index       | $n_{NB} = 0$ according to clause 6.2.7 in TS 36.211                                          | "0"             | RF        |
|                                                    | See TS 36.523-3 clause 7.3.3.9                                                               |                 | SIG       |
| Resource block assignment - DL resource allocation | 6 PRBs                                                                                       | "1"             |           |
| Modulation and coding scheme                       | Depending on test parameters                                                                 | -               |           |
| Repetition number                                  | No repetitions<br>3 bits as defined in section 8.0 of TS 36.213                              | "000"           |           |
| HARQ process number                                | Depending on test parameters, 1 bit                                                          | -               |           |
| New data indicator                                 | Set for every data transmission/retransmission according to the rules specified in TS 36.321 | -               |           |
| HARQ-ACK resource offset                           | No offset<br>2 bits as defined in TS 36.213, Table 10.1.2.1-1                                | "0"             |           |
| DCI subframe repetition number                     | 0–<br>2 bits as defined in sub-clause 9.1.5 of TS 36.213                                     | "00"            |           |

| Condition | Explanation                         |
|-----------|-------------------------------------|
| RF        | For RF, performance and RRM testing |
| SIG       | For protocol testing                |

#### 4.3.6.1.12 Physical layer parameters for DCI format 6-2

Default physical layer parameters for DCI format 6-2 are specified in table 4.3.6.1.12-1 for direct indication and in Table 4.3.6.1.12-2 for paging.

**Table 4.3.6.1.12-1: Physical layer parameters for DCI format 6-2 for direct Indication (Flag=0)**

| Parameter                                         | Value             | Value in binary |
|---------------------------------------------------|-------------------|-----------------|
| Flag for paging/direct indication differentiation | Direct indication | "0"             |

|                               |                                                                                                          |   |
|-------------------------------|----------------------------------------------------------------------------------------------------------|---|
| Direct Indication information | 8 bits provide direct indication of system information update and other fields, as defined in TS 36.331. | - |
| Reserved                      | Reserved information bits are added until the size is equal to that of format 6-2 with Flag=1            | - |

**Table 4.3.6.1.12-2: Physical layer parameters for DCI format 6-2 for paging (Flag=1)**

| Parameter                                         | Value                                                   | Value in binary |
|---------------------------------------------------|---------------------------------------------------------|-----------------|
| Flag for paging/direct indication differentiation | Paging                                                  | "1"             |
| Resource block assignment                         | Depending on test parameters                            | -               |
| Modulation and coding scheme                      | Depending on test parameters                            | -               |
| Repetition number                                 | {1,2,4,8}                                               | Not configured  |
| DCI subframe repetition number                    | 0<br>2 bits as defined in sub-clause 9.1.5 of TS 36.213 | "00"            |

#### 4.3.6.1.13 Physical layer parameters for DCI format 7-0A

Default physical layer parameters for DCI format 7-0A are specified in table 4.3.6.1.13-1.

**Table 4.3.6.1.13-1: Physical layer parameters for DCI format 7-0A**

| Parameter                                               | Value                                                                                                                                                                                                                             | Value in binary |
|---------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Flag for DL/UL differentiation                          | 0                                                                                                                                                                                                                                 | "0"             |
| Resource block assignment                               | Depending on test parameters                                                                                                                                                                                                      | -               |
| Modulation and coding scheme                            | Depending on test parameters                                                                                                                                                                                                      | -               |
| HARQ process number                                     | Depending on test parameters                                                                                                                                                                                                      | -               |
| New data indicator                                      | Set for every data transmission/retransmission according to the rules specified in TS 36.321                                                                                                                                      | -               |
| Redundancy version                                      | Depending on test parameters                                                                                                                                                                                                      | "00"            |
| TPC command for scheduled PUSCH                         | 0 dB (accumulated TPC)                                                                                                                                                                                                            | "01"            |
| DMRS pattern (only for PUSCH with subslot TTI)          | 2 bits as defined in section 5.5.2.1.2 in TS 36.211                                                                                                                                                                               | "00"            |
| Cyclic shift for DMRS and IFDMA configuration           | 1 bit as defined in section 5.5.2.1.1 in TS 36.211                                                                                                                                                                                | -               |
| UL index (TDD only)                                     | 2 bits as defined in sections 5.1.1.1, 7.2.1, 8 and 8.4 of TS 36.213. This field is present only for TDD configuration 0                                                                                                          | -               |
| Downlink Assignment Index (TDD only)                    | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the total number of PDSCH slots with and without SPDCH and SPDCH indicating downlink SPS release in the window. This field is present only for TDD configuration 1-6 | -               |
| CSI request                                             | 1, 2 or 3 bits as defined in section 7.2.1 of TS 36.213                                                                                                                                                                           | -               |
| SRS request (TDD only)                                  | w/o SRS                                                                                                                                                                                                                           | "0"             |
| Beta offset indicator (only for PUSCH with subslot TTI) | 1 bit as defined in section 8.6.3 of TS 36.213                                                                                                                                                                                    | -               |
| Cyclic Shift Field mapping table for DMRS               | 1 bit as defined in section 5.5.2.1.1 of TS 36.211                                                                                                                                                                                | -               |

## 4.3.6.1.14 Physical layer parameters for DCI format 7-0B

Default physical layer parameters for DCI format 7-0B are specified in table 4.3.6.1.14-1.

**Table 4.3.6.1.14-1: Physical layer parameters for DCI format 7-0B**

| Parameter                                               | Value                                                                                                                                                                                                                               | Value in binary |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Flag for DL/UL differentiation                          | 0                                                                                                                                                                                                                                   | "0"             |

| Precoding information and number of layers              | 3 bits for transmission with 2 antenna ports and 6 bits for transmission with 4 antenna ports. The interpretation of this field is provided in Table 5.3.3.1.16-1 or Table 5.3.3.1.16-2 of TS 36.212                                | -               |

## 4.3.6.1.15 Physical layer parameters for DCI format 7-1A

Default physical layer parameters for DCI format 7-1A are specified in table 4.3.6.1.15-1.

**Table 4.3.6.1.15-1: Physical layer parameters for DCI format 7-1A**

| Parameter                                     | Value                                                                                        | Value in binary | Condition |
|-----------------------------------------------|----------------------------------------------------------------------------------------------|-----------------|-----------|
| Flag for DL/UL differentiation                | 1                                                                                            | "1"             |           |
| Resource block assignment                     | Depending on test parameters                                                                 | -               |           |
| Modulation and coding scheme                  | Depending on test parameters                                                                 | -               |           |
| HARQ process number                           | Depending on test parameters                                                                 | -               |           |
| New data indicator                            | Set for every data transmission/retransmission according to the rules specified in TS 36.321 | -               |           |
| Redundancy version                            | Depending on test parameters                                                                 | "00"            |           |
| TPC command for slot-SPUCCH or subslot-SPUCCH | 0 dB (accumulated TPC)                                                                       | "01"            |           |

|                                        |                                                                                                                                                                                                                                                                                                   |   |  |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--|
| Downlink Assignment Index              | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink -downlink configuration 1-6 | - |  |
| Used/Unused SPDCCH resource indication | 2 bits. The interpretation of this field is provided in section 6.4.2 of TS 36.211                                                                                                                                                                                                                | - |  |
| SPUCCH resource indication             | 2 bits as defined in section 10.1.2 of TS 36.213                                                                                                                                                                                                                                                  | - |  |
| Repetition number                      | 2 bits as defined in Table 5.3.3.1.17-1 of TS 36.212                                                                                                                                                                                                                                              | - |  |

#### 4.3.6.1.16 Physical layer parameters for DCI format 7-1B

Default physical layer parameters for DCI format 7-1B are specified in table 4.3.6.1.16-1.

**Table 4.3.6.1.16-1: Physical layer parameters for DCI format 7-1B**

| Parameter                                     | Value                                                                                                                                                                                                                                                                                             | Value in binary | Condition |
|-----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|-----------|
| Flag for DL/UL differentiation                | 1                                                                                                                                                                                                                                                                                                 | "1"             |           |
| Resource block assignment                     | Depending on test parameters                                                                                                                                                                                                                                                                      | -               |           |

| TPC command for slot-SPUCCH or subslot-SPUCCH             | 0 dB (accumulated TPC)                                                                                                                                                                                                                                                                           | "01"            |           |
| Downlink Assignment Index                                 | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -               |           |
| Used/Unused SPDCCH resource indication                    | 2 bits. The interpretation of this field is provided in section 6.4.2 of TS 36.211                                                                                                                                                                                                               | -               |           |
| SPUCCH resource indication                                | 2 bits as defined in section 10.1.2 of TS 36.213                                                                                                                                                                                                                                                 | -               |           |
| Repetition number                                         | 2 bits as defined in Table 5.3.3.1.17-1 of TS 36.212                                                                                                                                                                                                                                             | -               |           |
| SRS request (TDD only)                                    | 1 bit. The interpretation of this field is provided in section 8.2 of TS 36.213                                                                                                                                                                                                                  | "0"             |           |
| DMRS position indicator (only for PDSCH with subslot TTI) | 1 bit                                                                                                                                                                                                                                                                                            | "1"             |           |
| Antenna port(s), scrambling identity and number of layers | 3 bits as specified in Table 5.3.3.1.22-1, 5.3.3.1.22-2 and 5.3.3.1.22-3 in TS 36.212.                                                                                                                                                                                                           | "00"            |           |

#### 4.3.6.1.21 Physical layer parameters for DCI format 7-1G

Default physical layer parameters for DCI format 7-1G are specified in table 4.3.6.1.21-1.

**Table 4.3.6.1.21-1: Physical layer parameters for DCI format 7-1G**

| Parameter                                     | Value                                                                                        | Value in binary | Condition |
|-----------------------------------------------|----------------------------------------------------------------------------------------------|-----------------|-----------|
| Flag for DL/UL differentiation                | 1                                                                                            | "1"             |           |
| Resource block assignment                     | Depending on test parameters                                                                 | -               |           |
| Modulation and coding scheme                  | Depending on test parameters                                                                 | -               |           |
| HARQ process number                           | Depending on test parameters                                                                 | -               |           |
| New data indicator                            | Set for every data transmission/retransmission according to the rules specified in TS 36.321 | -               |           |
| Redundancy version                            | Depending on test parameters                                                                 | "00"            |           |
| TPC command for slot-SPUCCH or subslot-SPUCCH | 0 dB (accumulated TPC)                                                                       | "01"            |           |

|                                                           |                                                                                                                                                                                                                                                                                                  |     |  |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|--|
| Downlink Assignment Index                                 | 2 bits as defined in Table 7.3-X in TS 36.213. It represents the number of PDSCH with PDCCH and PDCCH indicating downlink SPS release in the window up to the present subframe. This is present for all the uplink-downlink configurations and only applies to uplink-downlink configuration 1-6 | -   |  |
| Used/Unused SPDCCH resource indication                    | 2 bits. The interpretation of this field is provided in section 6.4.2 of TS 36.211                                                                                                                                                                                                               | -   |  |

| DMRS position indicator (only for PDSCH with subslot TTI) | 1 bit                                                                                                                                                                                                                                                                                            | "1" |  |
| Antenna port(s), scrambling identity and number of layers | 3 bits as specified in Table 5.3.3.1.22-1 in TS 36.212.                                                                                                                                                                                                                                          | -   |  |

## 4.4 Reference system configurations

The reference system configurations specified in this sub clause apply to all test cases unless otherwise specified.

### 4.4.1 Simulated network scenarios

The UE will eventually have to operate in either single mode networks (FDD or TDD), dual mode networks (FDD+TDD), or inter-RAT networks ((FDD or TDD) + (UTRA FDD, UTRA TDD, GSM, HRPD or 1xRTT)).

For

Simulated network scenarios to be tested are listed in this sub clause.

NOTE 1: The number of cells specified does not necessarily correspond to the maximum number of resources to be configured simultaneously in test equipment. Please refer to Table 6.1-1 for such information.

NOTE 2: For NAS test cases see sub clause 6.3.2.

#### 4.4.1.1 Single cell network scenarios

For FDD and TDD basic single cell environment, Cell 1 is used.

#### 4.4.1.2 E-UTRA single mode multi cell network scenarios

For FDD or TDD basic intra-frequency multi cell environment, Cell 1, Cell 2 and Cell 4 are used.

For FDD or TDD basic inter-frequency multi cell environment, Cell 1, Cell 3 and Cell 6 are used.

For FDD or TDD basic inter-band cell environment, Cell 1 and Cell 10 are used.

For FDD or TDD multi tracking area intra-frequency multi cell environment, Cell 1 and Cell 11 are used.

For FDD or TDD multi tracking area inter-frequency multi cell environment, Cell 1 and Cell 23 are used.

For FDD or TDD multi PLMN inter-frequency multi cell environment, Cell 1, Cell 12, Cell 13 and Cell 14 are used.

#### 4.4.1.3 E-UTRA dual mode multi cell network scenarios

For FDD and TDD basic multi cell environment, Cell 1, Cell 10 and Cell 31 are used.

For FDD and TDD multi PLMN multi cell environment, Cell 1, Cell 28, Cell 29 and Cell 30 are used.

In addition, E-UTRA single mode multi cell network scenarios defined in clause 4.4.1.2 are combined with the dual mode scenarios defined in this clause when additional intra or inter-frequency cells are used.

#### 4.4.1.4 3GPP Inter-RAT network scenarios

For FDD and TDD basic inter-RAT cell environment with UTRA FDD or UTRA TDD, Cell 1 and Cell 5 are used.

For FDD and TDD inter-RAT cell environment with multi UTRA FDD or UTRA TDD cells, Cell 1 and Cell 7, Cell 8 and Cell 9 is used.

For FDD and TDD inter-RAT cell environment with GERAN, Cell 1 and Cell 24 are used.

For FDD and TDD inter-RAT cell environment with multi GERAN cells, Cell 1 and Cell 25, Cell 26 are used.

For FDD and TDD inter-RAT cell environment with (UTRA FDD or UTRA TDD) and GERAN, Cell 1, Cell 5 and Cell 24 are used.

#### 4.4.1.5 3GPP2 Inter-RAT network scenarios

For FDD and TDD inter-RAT cell environment with HRPD, Cell 1 and Cell 15 are used.

For FDD and TDD inter-RAT cell environment with multi HRPD cells, Cell 1 and Cell 15, Cell 16 and Cell 17 are used.

For FDD and TDD inter-RAT cell environment with 1xRTT, Cell 1 and Cell 19 are used.

For FDD and TDD inter-RAT cell environment with multi 1xRTT cells, Cell 1 and Cell 19, Cell 20 and Cell 21 are used.

#### 4.4.1.6 WLAN Inter-RAT network scenarios

For FDD and TDD inter-RAT cell environment with WLAN, Cell 1, Cell 27, Cell 27a and Cell 27b are used.

#### 4.4.1.7 Bluetooth Inter-RAT network scenarios

For FDD and TDD inter-RAT cell environment with Bluetooth, Cell 1, Cell 40 and Cell 41 are used.

### 4.4.2 Simulated cells

NOTE: For NAS test cases see subclause 6.3.2.

NOTE: Test frequency and range defined in table 4.4.2-1 do not apply to 36.521-1 test cases.

Test frequencies and simulated cells are defined in table 4.4.2-1. For E-UTRA cells, f1 is the default test frequency. For UTRA cells, f8 is the default test frequency. For GERAN cells, f11 is the default test frequency. For CDMA2000 HRPD cells, f14 is the default test frequency. For CDMA 2000 1xRTT cells, f17 is the default test frequency. For WLAN cells, f20 is the default test frequency.

Default parameters for simulated cells are specified in table 4.4.2-1A and table 4.4.2-2.

Common parameters for simulated cells are specified in subclauses 4.4.3 to 4.4.6A.

Other cell specific parameters are specified in subclause 4.4.7.

**Table 4.4.2-1: Definition of test frequencies and simulated cells**

| Test frequency | RAT    | Operating band            | Range                      | Simulated cells                                      |
|----------------|--------|---------------------------|----------------------------|------------------------------------------------------|
| f1             | E-UTRA | Operating band under test | Mid<br>(Note 1,<br>Note 5, | Cell 1, Cell 1a, Cell 2, Cell 4,<br>Cell 11 (Note 4) |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                   |                                                     |                                        |                                     |

| <p>Note 1: For signalling test, see clause 6.2.3.</p> <p>Note 2: See TS 34.108 [5] clause 5.1.</p> <p>Note 3: For signalling test, see clause 6.3.1.4. For RRM test, see clause 7.2.2.1.</p> <p>Note 4: For signalling test, simultaneous co-existence of Cell 2 with Cell 11 is not allowed.</p> <p>Note 5: For RRM test with intra-band contiguous CA, the set of contiguous component carriers are "Mid", with the test frequencies specified in clauses 4.3.1.1.xA for FDD and 4.3.1.2.xA for TDD</p> <p>Note 6: For RRM test with intra-band contiguous CA, the set of contiguous component carriers are "High", with the test frequencies specified in clauses 4.3.1.1.xA for FDD and 4.3.1.2.xA for TDD</p> <p>Note 7: For RRM test with intra-band contiguous CA, the set of contiguous component carriers are "Low", with the test frequencies specified in clauses 4.3.1.1.xA for FDD and 4.3.1.2.xA for TDD.</p> |                   |                                                     |                                        |                                     |

- Note 8: For RRM test with intra-band non-contiguous CA, the test frequencies for the set of non-contiguous component carriers are specified in clauses 4.3.1.1.xA for FDD and 4.3.1.2.xA for TDD without any regard to range. Thus "Low", "Mid" and "High" information in this table does not apply. Unless otherwise stated, test point with maximum Wgap is chosen.
- Note 9: For signalling test with band combination E-UTRA band 25 or EUTRA band 2 and HRPD/1xRTT band Class 1, F14 is 'low' and F16 is 'Mid'.
- Note 10: For RRM IncMon Test Cases.

### 4.4.3 Common parameters for simulated E-UTRA cells

The parameters specified in this sub clause apply to all simulated E-UTRA cells unless otherwise specified.

#### 4.4.3.1 Common configurations of system information blocks

For BL/CE testing the same content of system information blocks SIB2 to SIB20 are used for broadcasting on BCCH and/or BCCH-BR.

##### 4.4.3.1.1 Combinations of system information blocks

The combination of system information blocks required by a test case depends on the test case scenario. In this clause, the following combinations of system information blocks are defined.

Combination 1 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single cell scenario
- E-UTRA TDD single cell scenario
- E-UTRA FDD intra-frequency multi cell scenario
- E-UTRA TDD intra-frequency multi cell scenario
- E-UTRA FDD and E-UTRA TDD dual mode multi cell roaming scenario
- 3GPP inter-RAT E-UTRA FDD + NR FDD multi cell scenario for RRM
- 3GPP inter-RAT E-UTRA FDD + NR TDD multi cell scenario for RRM
- 3GPP inter-RAT E-UTRA TDD + NR FDD multi cell scenario for RRM
- 3GPP inter-RAT E-UTRA TDD + NR TDD multi cell scenario for RRM

Combination 2 applies to the following test case scenarios:

- E-UTRA FDD intra-frequency multi cell scenario with neighbouring cell related information
- E-UTRA TDD intra-frequency multi cell scenario with neighbouring cell related information

Combination 3 applies to the following test case scenarios:

- E-UTRA FDD inter-frequency multi cell scenario
- E-UTRA TDD inter-frequency multi cell scenario
- E-UTRA FDD inter-band multi cell scenario
- E-UTRA TDD inter-band multi cell scenario
- E-UTRA FDD and E-UTRA TDD dual mode multi cell non-roaming scenario
- E-UTRA FDD intra-band carrier aggregation component carriers cell scenario
- E-UTRA FDD inter-band carrier aggregation component carriers cell scenario
- E-UTRA TDD intra-band carrier aggregation component carriers cell scenario
- E-UTRA FDD and E-UTRA TDD inter-band carrier aggregation component carriers cell scenario
- E-UTRA FDD dual connectivity cell scenario
- E-UTRA TDD dual connectivity cell scenario

Combination 4 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + UTRA FDD multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + UTRA LCR TDD multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + UTRA FDD multi cell scenario

Combination 5 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + GERAN multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + GERAN multi cell scenario

Combination 6 applies to the following test case scenarios:

- 3GPP2 inter-RAT E-UTRA FDD + HRPD multi cell scenario
- 3GPP2 inter-RAT E-UTRA TDD + HRPD multi cell scenario
- 3GPP2 inter-RAT E-UTRA FDD + 1xRTT multi cell scenario
- 3GPP2 inter-RAT E-UTRA TDD + 1xRTT multi cell scenario

Combination 7 applies to the following test case scenarios:

- E-UTRA FDD + home eNB multi cell scenario
- E-UTRA TDD + home eNB multi cell scenario

Combination 8 applies to the following test case scenarios:

- E-UTRA FDD ETWS single cell scenario
- E-UTRA TDD ETWS single cell scenario

Combination 9 applies to the following test case scenarios:

- E-UTRA FDD inter-frequency + 3GPP inter-RAT UTRA multi-cell scenario

- E-UTRA TDD inter-frequency + 3GPP inter-RAT UTRA multi-cell scenario

Combination 10 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + UTRA FDD + GERAN multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + UTRA LCR TDD + GERAN multi cell scenario.

Combination 10a applies to the following test case scenarios:

- E-UTRA FDD inter-frequency + 3GPP inter-RAT E-UTRA FDD + UTRA FDD + GERAN multi cell scenario
- E-UTRA TDD inter-frequency + 3GPP inter-RAT E-UTRA TDD + UTRA LCR TDD + GERAN multi cell scenario

Combination 11 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + UTRA FDD + home eNB multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + UTRA LCR TDD + home eNB multi cell scenario

Combination 12 applies to the following test case scenarios:

- E-UTRA FDD inter-frequency + GERAN cell scenario
- E-UTRA TDD inter-frequency + GERAN cell scenario

Combination 13 applies to the following test case scenarios:

- E-UTRA FDD inter-frequency + home eNB
- E-UTRA TDD inter-frequency + home eNB

Combination 14 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + GERAN + home eNB multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + GERAN + home eNB multi cell scenario

Combination 15 applies to the following test case scenarios:

- 3GPP E-UTRA FDD single cell scenario + MBMS
- 3GPP E-UTRA TDD single cell scenario + MBMS
- 3GPP E-UTRA FDD intra-frequency multi cell scenario + MBMS
- 3GPP E-UTRA TDD intra-frequency multi cell scenario + MBMS

Combination 16 applies to the following test case scenarios:

- 3GPP E-UTRA FDD inter-frequency multi cell scenario + MBMS
- 3GPP E-UTRA TDD inter-frequency multi cell scenario + MBMS

Combination 17 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + CMAS single cell scenario
- 3GPP E-UTRA TDD + CMAS single cell scenario

Combination 18 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + MBMS inter-frequency multi cell scenario (non-MBMS cell broadcasting SIB15)
- 3GPP E-UTRA TDD + MBMS inter-frequency multi cell scenario (non-MBMS cell broadcasting SIB15)
- 3GPP E-UTRA FDD + SC-PTM inter-frequency multi cell scenario (non- SC-PTM cell broadcasting SIB15)

- 3GPP E-UTRA TDD + SC-PTM inter-frequency multi cell scenario (non- SC-PTM cell broadcasting SIB15)

Combination 19 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + MBMS intra-frequency multi cell scenario (MBMS cell broadcasting SIB15)
- 3GPP E-UTRA TDD + MBMS intra-frequency multi cell scenario (MBMS cell broadcasting SIB15)

Combination 20 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + MBMS inter-frequency multi cell scenario (MBMS cell broadcasting SIB15)
- 3GPP E-UTRA TDD + MBMS inter-frequency multi cell scenario (MBMS cell broadcasting SIB15)
- 3GPP E-UTRA FDD + MBMS inter-band multi cell scenario (MBMS cell broadcasting SIB15)
- 3GPP E-UTRA TDD + MBMS inter-band multi cell scenario (MBMS cell broadcasting SIB15)

Combination 21 applies to the following test case scenarios:

- E-UTRA FDD SIMTC single cell scenario
- E-UTRA TDD SIMTC single cell scenario

Combination 22 applies to the following test case scenarios:

- RAN assisted WLAN offload: E-UTRA FDD + WLAN AP scenarios
- RAN assisted WLAN offload: E-UTRA TDD + WLAN AP scenarios

Combination 23 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single cell scenario + sidelink direct communication
- E-UTRA TDD single cell scenario + sidelink direct communication
- E-UTRA FDD intra-frequency multi cell scenario + sidelink direct communication
- E-UTRA TDD intra-frequency multi cell scenario + sidelink direct communication

Combination 24 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single cell scenario + sidelink direct discovery
- E-UTRA TDD single cell scenario + sidelink direct discovery
- E-UTRA FDD intra-frequency multi cell scenario + sidelink direct discovery
- E-UTRA TDD intra-frequency multi cell scenario + sidelink direct discovery

Combination 25 applies to the following test case scenarios:

- 3GPP E-UTRA FDD single cell scenario + SC-PTM
- 3GPP E-UTRA TDD single cell scenario + SC-PTM
- 3GPP E-UTRA FDD intra-frequency multi cell scenario + SC-PTM
- 3GPP E-UTRA TDD intra-frequency multi cell scenario + SC-PTM

Combination 26 applies to the following test case scenarios:

- 3GPP E-UTRA FDD inter-frequency multi cell scenario + SC-PTM
- 3GPP E-UTRA TDD inter-frequency multi cell scenario + SC-PTM

Combination 27 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + SC-PTM intra-frequency multi cell scenario (SC-PTM cell broadcasting SIB15)

- 3GPP E-UTRA TDD + SC-PTM intra-frequency multi cell scenario (SC-PTM cell broadcasting SIB15)

Combination 28 applies to the following test case scenarios:

- 3GPP E-UTRA FDD + SC-PTM inter-frequency multi cell scenario (SC-PTM cell broadcasting SIB15)
- 3GPP E-UTRA TDD + SC-PTM inter-frequency multi cell scenario (SC-PTM cell broadcasting SIB15)
- 3GPP E-UTRA FDD + SC-PTM inter-band multi cell scenario (SC-PTM cell broadcasting SIB15)
- 3GPP E-UTRA TDD + SC-PTM inter-band multi cell scenario (SC-PTM cell broadcasting SIB15)

Combination 29 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single cell scenario + V2X sidelink communication.
- E-UTRA TDD single cell scenario + V2X sidelink communication.
- E-UTRA FDD intra-frequency multi cell scenario + V2X sidelink communication.
- E-UTRA TDD intra-frequency multi cell scenario + V2X sidelink communication.
- E-UTRA FDD inter-frequency + V2X sidelink communication with inter-frequency scheduling
- E-UTRA TDD inter-frequency + V2X sidelink communication with inter-frequency scheduling
- E-UTRA FDD inter-band + V2X sidelink communication with inter-frequency scheduling
- E-UTRA TDD inter-band + V2X sidelink communication with inter-frequency scheduling

Combination 30 applies to the following test case scenarios:

- E-UTRA FDD intra-band carrier aggregation component carriers cell scenario + E-UTRA FDD intra-frequency neighbour.
- E-UTRA FDD inter-band carrier aggregation component carriers cell scenario+ E-UTRA FDD intra-frequency neighbour.
- E-UTRA TDD intra-band carrier aggregation component carriers cell scenario+ E-UTRA FDD intra-frequency neighbour.
- E-UTRA FDD and E-UTRA TDD inter-band carrier aggregation component carriers cell scenario+ E-UTRA FDD intra-frequency neighbour.

Combination 31 applies to the following test case scenarios:

- 3GPP inter-RAT E-UTRA FDD + NR FDD multi cell scenario
- 3GPP inter-RAT E-UTRA FDD + NR TDD multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + NR FDD multi cell scenario
- 3GPP inter-RAT E-UTRA TDD + NR TDD multi cell scenario

Combination 32 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single NTN cell scenario

Combination 33 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD intra-frequency multi NTN cell scenario

**Table 4.4.3.1.1-1: Combinations of system information blocks**

| Combination No. | System information block type |       |       |       |       |       |       |       |        |        |        |        |        |        |        |        |        |        |        |        |        |        |
|-----------------|-------------------------------|-------|-------|-------|-------|-------|-------|-------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
|                 | SI B2                         | SI B3 | SI B4 | SI B5 | SI B6 | SI B7 | SI B8 | SI B9 | SI B10 | SI B11 | SI B12 | SI B13 | SI B14 | SI B15 | SI B16 | SI B17 | SI B18 | SI B19 | SI B20 | SI B21 | SI B22 | SI B23 |
|                 |                               |       |       |       |       |       |       |       | 0      | 1      | 2      | 3      | 4      | 5      | 7      | 8      | 9      | 0      | 1      | 24     | 31     | 32     |

|     |   |   |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   |   |  |
|-----|---|---|---|---|---|---|---|---|---|---|--|---|---|---|---|---|---|---|---|---|---|--|
| 1   | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   |   |  |
| 2   | X | X | X |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   |   |  |

| 19  | X | X |   |   |   |   |   |   |   |   |  | X |   | X |   |   |   |   |   |   |   |  |
| 20  | X | X |   | X |   |   |   |   |   |   |  | X |   | X |   |   |   |   |   |   |   |  |
| 21  | X | X |   |   |   |   |   |   |   |   |  |   | X |   |   |   |   |   |   |   |   |  |
| 22  | X | X |   |   |   |   |   |   |   |   |  |   |   |   | X |   |   |   |   |   |   |  |
| 23  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   | X |   |   |   |   |   |  |
| 24  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   | X |   |   |   |   |  |
| 25  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   | X |   |   |   |  |
| 26  | X | X |   | X |   |   |   |   |   |   |  |   |   |   |   |   |   | X |   |   |   |  |
| 27  | X | X |   |   |   |   |   |   |   |   |  |   |   | X |   |   |   | X |   |   |   |  |
| 28  | X | X |   | X |   |   |   |   |   |   |  |   |   | X |   |   |   | X |   |   |   |  |
| 29  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   | X |   |   |  |
| 30  | X | X | X | X |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   |   |  |
| 31  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   | X |   |  |
| 32  | X |   |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   | X |  |
| 33  | X | X |   |   |   |   |   |   |   |   |  |   |   |   |   |   |   |   |   |   | X |  |

#### 4.4.3.1.2 Scheduling of system information blocks

The scheduling configurations for combinations of system information blocks are defined in the following tables.

**Table 4.4.3.1.2-1: Scheduling for combination 1**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |

**Table 4.4.3.1.2-2: Scheduling for combination 2**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB4                                 |

**Table 4.4.3.1.2-3: Scheduling for combination 3**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB5                                 |

**Table 4.4.3.1.2-4: Scheduling for combination 4**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB6                                 |

**Table 4.4.3.1.2-5: Scheduling for combination 5**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB7                                 |

**Table 4.4.3.1.2-6: Scheduling for combination 6**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB8                                 |

**Table 4.4.3.1.2-7: Scheduling for combination 7**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB4                                 |
| 4                          | See sub clause 4.4.3.4     | SIB9                                 |

**Table 4.4.3.1.2-8: Scheduling for combination 8**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB11                                |
| 4                          | See sub clause 4.4.3.4     | SIB10                                |

**Table 4.4.3.1.2-9: Scheduling for combination 9**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 16                         | SIB2                                 |
| 2                          | See sub clause 4.4.3.4     | SIB3                                 |
| 3                          | See sub clause 4.4.3.4     | SIB5, SIB6                           |

**Table 4.4.3.1.2-10: Scheduling for combination 10**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|

#### 4.4.3.3 Common contents of system information blocks

##### - *SystemInformationBlockType2*

The IE *SystemInformationBlockType2* contains radio resource configuration information that is common for all UEs.

**Table 4.4.3.3-1: *SystemInformationBlockType2***

- *SystemInformationBlockType3*

The IE *SystemInformationBlockType3* contains cell re-selection information common for intra-frequency, inter-frequency and/or inter-RAT cell re-selection (i.e. applicable for more than one type of cell re-selection but not necessarily all) as well as intra-frequency cell re-selection information other than neighbouring cell related.

**Table 4.4.3.3-2: *SystemInformationBlockType3***

### - SystemInformationBlockType6

The IE *SystemInformationBlockType6* contains information relevant only for inter-RAT cell re-selection i.e. information about UTRA frequencies and UTRA neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency.

### - *SystemInformationBlockType7*

The IE *SystemInformationBlockType7* contains information relevant only for inter-RAT cell re-selection i.e. information about GERAN frequencies relevant for cell re-selection. The IE includes cell re-selection parameters for each frequency.

### - SystemInformationBlockType8

The IE *SystemInformationBlockType8* contains information relevant only for inter-RAT cell re-selection i.e. information about CDMA2000 frequencies and CDMA2000 neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency as well as cell specific re-selection parameters.

## - *SystemInformationBlockType24*

The IE *SystemInformationBlockType24* contains information relevant only for inter-RAT cell re-selection i.e. information about NR frequencies and NR neighbouring cells relevant for cell re-selection. The IE includes cell re-selection parameters common for a frequency.

#### 4.4.4 Common parameters for simulated UTRA cells

The parameters specified in this subclause apply to all simulated UTRA cells unless otherwise specified.

Default UTRA parameters for simulated cells are specified in table 4.4.4-1 and table 4.4.4-2.

Other parameters are specified in TS 34.108 [5].

**Table 4.4.4-1: Default parameters for simulated UTRA cells**

| cell ID | Primary scrambling code for FDD | Cell parameters ID for TDD |
|---------|---------------------------------|----------------------------|
| Cell 5  | 100                             | 0                          |
| Cell 7  | 150                             | 4                          |
| Cell 8  | 200                             | 8                          |
| Cell 9  | 250                             | 12                         |

#### 4.4.4.1 Common contents of system information blocks for UTRA cells

##### - System Information Block type 19

The system information block type 19 contains Inter-RAT frequency and priority information to be used in the cell.

#### 4.4.5 Common parameters for simulated GERAN cells

The parameters specified in this subclause apply to all simulated GERAN cells unless otherwise specified.

See TS 51.010 [25].

The contents of SYSTEM INFORMATION TYPE 2 Quarter message specified below are identical for all GERAN cells.

**Table 4.4.5-1: System Information 2 Quarter**

#### 4.4.6 Common parameters for simulated CDMA2000 cells

The parameters specified in this subclause apply to all simulated HRPD or 1xRTT cells unless otherwise specified.

See C.S0038-B [36] for HRPD cells and C.S0043-A [37] for 1xRTT cells.

#### 4.4.7 Default parameters specific for simulated cells

Default parameters specific for simulated cells are specified in this subclause.

##### 4.4.7.1 Common contents of HRPD Overhead messages

- QuickConfig

The QuickConfig message is used to indicate a change in the overhead messages' contents and to provide frequently changing information.

**Table 4.4.7.1-1: QuickConfig**

## 4.4.7.2 Common contents of 1XRTT Overhead messages

### 4.4.7.2.1 Configuration sequence number

In general, a base station maintains a configuration sequence number CONFIG\_SEQ for configuration messages transmitted on the Paging channel and increments by 1 modulo 64 whenever any of the following messages being transmitted are modified:

System Parameters Message

Neighbor List Message (Band Class 0 only)

CDMA Channel List Message

Extended System Parameters Message

Extended Neighbor List Message (band classes other than Band Class 0).

For simplicity reasons the System Simulator may use any value for this configuration sequence number CONFIG\_SEQ.

### 4.4.7.2.2 Over Head messages

- CDMA Channel List Message

| EXT_CDMA_FREQ                                | Set according to PIXIT parameter or as per clause 4.3.1.4 | 11 bits; Extended frequency assignment        |           |

#### 4.4.8 Common parameters for simulated WLAN AP's

The parameters specified in this subclause apply to all simulated WLAN APs unless otherwise specified.

Default WLAN parameters for simulated APs are specified in table 4.4.8-1.

**Table 4.4.8-1: Default parameters for simulated WLAN APs**

| Parameter                                                   | Value                                             | Condition |
|-------------------------------------------------------------|---------------------------------------------------|-----------|
| SSID                                                        | 3GPP WLAN InterWorking                            |           |
| Security                                                    | [WPA2]                                            |           |
| Hot Spot 2.0 Support                                        | Yes                                               |           |
| Trusted/Un-Trusted non 3GPP Access                          | Un-Trusted                                        |           |
| EAP-AKA Procedure                                           | CHAP                                              |           |
| Beacon RSSI                                                 | 42 (-86 dBm), NOTE 1                              | OFFLOAD   |
| Beacon RSSI                                                 | Configured at the SS according to PIXIT parameter | IMSoWLAN  |
| NOTE 1: The power level is specified at each UE Rx antenna. |                                                   |           |

| Condition | Explanation             |
|-----------|-------------------------|
| OFFLOAD   | WLAN offload scenarios  |
| IMSoWLAN  | IMS over WLAN scenarios |

**Table 4.4.8-2: Default parameters for simulated WLAN APs (2<sup>nd</sup> WLAN)**

| Parameter                                                   | Value                                             | Condition |
|-------------------------------------------------------------|---------------------------------------------------|-----------|
| SSID                                                        | 3GPP WLAN InterWorking 2                          |           |
| Security                                                    | [WPA2]                                            |           |
| Hot Spot 2.0 Support                                        | Yes                                               |           |
| Trusted/Un-Trusted non 3GPP Access                          | Un-Trusted                                        |           |
| EAP-AKA Procedure                                           | CHAP                                              |           |
| Beacon RSSI                                                 | 42 (-86 dBm), NOTE 1                              | OFFLOAD   |
| Beacon RSSI                                                 | Configured at the SS according to PIXIT parameter | IMSoWLAN  |
| NOTE 1: The power level is specified at each UE Rx antenna. |                                                   |           |

| Condition | Explanation             |
|-----------|-------------------------|
| OFFLOAD   | WLAN offload scenarios  |
| IMSoWLAN  | IMS over WLAN scenarios |

#### 4.4.9 Common parameters for simulated Bluetooth beacon's

The parameters specified in this subclause apply to all simulated Bluetooth beacons unless otherwise specified.

Default Bluetooth parameters for simulated beacons are specified in table 4.4.9-1.

**Table 4.4.9-1: Default parameters for simulated Bluetooth beacons**

| Parameter                                                   | Value                | Condition |
|-------------------------------------------------------------|----------------------|-----------|
| Bluetooth Core Specification                                | 4.0 and forward      |           |
| Classic Bluetooth/ BLE                                      | Classic Bluetooth    |           |
| LOCAL NAME                                                  | 3GPP BT InterWorking |           |
| Beacon RSSI                                                 | 42 (-86 dBm), NOTE 1 |           |
| NOTE 1: The power level is specified at each UE Rx antenna. |                      |           |

**Table 4.4.9-2: Default parameters for simulated Bluetooth beacons (2<sup>nd</sup> Bluetooth)**

| Parameter                                                   | Value                  | Condition |
|-------------------------------------------------------------|------------------------|-----------|
| Bluetooth Core Specification                                | 4.0 and forward        |           |
| Classic Bluetooth/ BLE                                      | Classic Bluetooth      |           |
| LOCAL NAME                                                  | 3GPP BT InterWorking 2 |           |
| Beacon RSSI                                                 | 42 (-86 dBm), NOTE 1   |           |
| NOTE 1: The power level is specified at each UE Rx antenna. |                        |           |

## 4.5 Generic procedures

This clause describes UE test states which can be used in the initial condition of many test cases defined in TS 36.521-1 [21], TS 36.523-1 [18] and TS 36.523-3 [34] or other procedures defined in this specification. This section also defines a set of procedures to bring the UE into these states.

### 4.5.1 UE test states

NOTE: The need to have a procedure for the transition from State 4/State 3 to State 2 is for further study and it can added if the technical motivation for this procedure can be justified.

Figure 4.5.1-1: E-UTRAN UE Test States for Basic Generic Procedures

Figure 4.5.1-2: E-UTRAN UE Test States for CIoT

NOTE: Transition to state 5 is performed only when Test Loop Mode E is required to be performed when UE is out of coverage.

In order that the UE can set up a call or session in E-UTRAN, there are a number of procedures to be undertaken in a hierarchical sequence to move between known states. The sequences are shown in figure 4.5.1-1 and the status of the relevant protocols in the UE in the different states are given in table 4.5.1-1.

Table 4.5.1-1: The E-UTRAN UE states

|            |                                                 | RRC      | ECM      | EMM            | ESM                                                                                                                    | UE Test Mode |
|------------|-------------------------------------------------|----------|----------|----------------|------------------------------------------------------------------------------------------------------------------------|--------------|
| State 1    | Switched OFF                                    | -----    | -----    | -----          | -----                                                                                                                  | -----        |
| State 2    | Registered, Idle Mode                           | RRC_IDLE | ECM-IDLE | EMM-REGISTERED | 1 default EPS bearer context active.<br>2 default EPS bearer contexts active (only for RAN Assisted WLAN interworking) | Not active   |

NOTE: Refer to TS 24.301 [28] subclause 5.5.1.1 for more details on the ESM state.

NOTE: Refer to TS 36.509 [38] for details regarding UE test mode and UE Loopback.

**Figure 4.5.1-2: HRPD UE Test States for Basic Generic Procedures**

In order for the UE to set up a session in an HRPD RAN, there are a number of procedures that need to be performed in a certain sequence to move between known UE states. These states and sequences are shown in figure 4.5.1-2. HRPD UE states are described in table 4.5.1-2.

**Table 4.5.1-2: Description of HRPD UE states**

| State | Description                                                                                                                                                                                                                                                                 |
|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| H2    | The UE is registered on the HRPD network, but has no active connection to the network. The Inter-RAT Idle State Protocol (IR-ISP) is in Monitor State. The UE should be ready to perform a non-optimised cell reselection to E-UTRAN (as per [41] cl. 8 and [42] cl. 14.1). |
| H3    | The UE is registered on the HRPD network, and has an active network connection. The UE should be ready to perform a non-optimised handover to E-UTRAN (as per [41] cl. 8).                                                                                                  |
| H2A   | Same state as State H2, but the UE is also pre-registered in E-UTRAN. The UE should be ready to perform an optimised cell reselection to E-UTRAN (as per [41] cl. 9.6).                                                                                                     |
| H3A   | Same state as State H3, but the UE is also pre-registered in E-UTRAN. The UE should be ready to perform an optimised handover to E-UTRAN (as per [41] cl. 9.5).                                                                                                             |

## 4.5.2 UE Registration (State 2)

### 4.5.2.0 General

IF `pc_ue_CategoryDL_M1` THEN use the procedure for State 2-CE according to clause 4.5.2AA ELSE use the procedure defined in the present clause.

**NOTE:** The statement to use alternate procedure for CAT M1 UE (`pc_ue_CategoryDL_M1` is set) is to enable LTE legacy protocol test cases to be used for CAT M1 UE testing. Any CAT M1 or CE specific test cases should not rely on this statement, but refer directly to the relevant CE specific state.

UE Registration depends on the specific configuration of a UE, which is expressed by PICS according to TS 36.523-2 [19]. In order to reduce complexity and to achieve testability several assumptions and definitions are made:

- An IMS capable UE is compliant to GSMA PRD IR.92 [52];
- During initial UE registration the UE requests for one or two PDN connectivities;
- When the UE requests for two PDN connectivities:
  - it re-uses the existing RRC connection for signalling regarding the 2<sup>nd</sup> PDN connectivity;
  - one of the PDN connectivities is for IMS;

- If the UE is configured with an APN for XCAP only usage (*pc\_XCAP\_only\_APN*==true), connectivity to this PDN is not established during the initial UE registration;
- As for any 2<sup>nd</sup> PDN connectivity request security protection is already established the UE provides a valid APN in the PDN CONNECTIVITY REQUEST.

In detail the following UE configurations are supported:

| Configuration                                                                                                                                            | Condition                                                                                                           | Explanation                                                                                                         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|

| NR                 | Applicable to NR test cases defined in TS 38.523-1 [71]    |

#### 4.5.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.
- If RAN Assisted WLAN interworking test cases are being performed for ANDSF rules using RAN provided thresholds, ANDSF rules to match the RAN rules defined in TS 36.304 shall be available in the UE.

#### 4.5.2.2 Definition of system information messages

The default system information messages are used.

#### 4.5.2.3 Procedure

**Table 4.5.2.3-1: UE registration procedure (state 1 to state 2)**

| Step | Procedure                                             | Message Sequence |                                   |
|------|-------------------------------------------------------|------------------|-----------------------------------|

## 4.5.2A UE Registration, UE Test Mode Activated (State 2A)

### 4.5.2A.0 General

IF pc\_ue\_CategoryDL\_M1 THEN use the procedure for State 2A-CE according to clause 4.5.2AB ELSE use the procedure defined in the present clause.

NOTE: The statement to use alternate procedure for CAT M1 UE (pc\_ue\_CategoryDL\_M1 is set) is to enable LTE legacy protocol test cases to be used for CAT M1 UE testing. Any CAT M1 or CE specific test cases should not rely on this statement, but refer directly to the relevant CE specific state.

The same assumptions and definitions apply as in clause 4.5.2.

### 4.5.2A.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 4.5.2A.2 Definition of system information messages

The default system information messages are used.

### 4.5.2A.3 Procedure

**Table 4.5.2A.3-1: UE registration with test mode activation procedure (state 1 to state 2A)**

| Step     | Procedure                                                                         | Message Sequence |         |
|----------|-----------------------------------------------------------------------------------|------------------|---------|
|          |                                                                                   | U - S            | Message |
| 1 to 9a2 | Same procedure for steps 1 to 9a2 as specified in the procedure in clause 4.5.2.3 | -                | -       |

|        |                                                                                                                                                                                                                                                                                                    |     |                                                                                                                     |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------------------------------------|
| 10     | The SS transmits an ACTIVATE TEST MODE message to activate UE radio bearer test mode procedure.                                                                                                                                                                                                    | <-- | RRC: <i>DLInformationTransfer</i><br>TC: ACTIVATE TEST MODE                                                         |
| 11     | The UE transmits an ACTIVATE TEST MODE COMPLETE message.                                                                                                                                                                                                                                           | --> | RRC: <i>ULInformationTransfer</i><br>TC: ACTIVATE TEST MODE COMPLETE                                                |
| 12     | The SS transmits a <i>SecurityModeCommand</i> message to activate AS security.                                                                                                                                                                                                                     | <-- | RRC: <i>SecurityModeCommand</i>                                                                                     |
| 13     | The UE transmits a <i>SecurityModeComplete</i> message and establishes the initial security configuration.                                                                                                                                                                                         | --> | RRC: <i>SecurityModeComplete</i>                                                                                    |

## 4.5.2AA UE Registration in cell supporting BL/CE UE (State 2-CE)

The same assumptions and definitions apply as in clause 4.5.2.

### 4.5.2AA.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 4.5.2AA.2 Definition of system information messages

The default system information messages are used with the exceptions below.

**Table 4.5.2AA.2-1: *MasterInformationBlock***

|                                                                                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------|
| Derivation Path: 36.508 Table 4.4.3.2-1 using condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA. |
|-------------------------------------------------------------------------------------------------------------------------------------------|

**Table 4.5.2AA.2-2: *SystemInformation-BR-r13***

|                                           |
|-------------------------------------------|
| Derivation Path: 36.508 Table 4.4.3.2-2A. |
|-------------------------------------------|

**Table 4.5.2AA.2-3: SystemInformationBlockType1-BR-r13**

Derivation Path: 36.508 Table 4.4.3.2-3A using condition ENHANCED COVERAGE if the BL/CE UE initial condition is intended to be in enhanced coverage; else use condition NORMAL COVERAGE.

#### 4.5.2AA.3 Procedure

**Table 4.5.2AA.3-1: UE registration procedure (state 1 to state 2-CE)**

| Step      | Procedure                                                                                                                                                                                                                                                                                                           | Message Sequence |                                            |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------------------------|
|           |                                                                                                                                                                                                                                                                                                                     | U - S            | Message                                    |
| 1         | In addition to the system information broadcasted on BCCH the SS broadcasts <i>SystemInformation-BR-r13</i> , <i>SystemInformationBlockType1-BR-r13</i> and other relevant system information blocks as required by the specified combinations of system information blocks specified for the test case on BCCH-BR. | <--              | RRC: SYSTEM INFORMATION (BCCH and BCCH-BR) |
| 2 to 18b1 | Same procedure for steps 2 to 18b1 as specified in the procedure in clause 4.5.2.3                                                                                                                                                                                                                                  | -                | -                                          |

#### 4.5.2AA.4 Specific message contents

Same specific message content as in clause 4.5.2.4 with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

### 4.5.2AB UE Registration, UE Test Mode Activated in cell supporting BL/CE UE (State 2A-CE)

The same assumptions and definitions apply as in clause 4.5.2.

#### 4.5.2AB.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

#### 4.5.2AB.2 Definition of system information messages

Same system information message content as in clause 4.5.2AA.2.

#### 4.5.2AB.3 Procedure

**Table 4.5.2AB.3-1: UE registration procedure (state 1 to state 2A-CE)**

| Step | Procedure                                                                                                                                                   | Message Sequence |                                            |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------------------------|
|      |                                                                                                                                                             | U - S            | Message                                    |
| 1    | In addition to the system information broadcasted on BCCH the SS broadcasts <i>SystemInformation-BR-r13</i> , <i>SystemInformationBlockType1-BR-r13</i> and | <--              | RRC: SYSTEM INFORMATION (BCCH and BCCH-BR) |

|            |                                                                                                                                                         |   |   |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|---|---|
|            | other relevant system information blocks as required by the specified combinations of system information blocks specified for the test case on BCCH-BR. |   |   |
| 2 to 9a2   | Same procedure for steps 2 to 9a2 as specified in the procedure in clause 4.5.2.3                                                                       | - | - |
| 10 to 20b1 | Same procedure for steps 10 to 20b1 as specified in the procedure in clause 4.5.2A.3                                                                    | - | - |

#### 4.5.2AB.4 Specific message contents

Same specific message content as in clause 4.5.2A.4 with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

### 4.5.2B UE Registration, pre-registration on HRPD (State 2B)

The same assumptions and definitions apply as in clause 4.5.2.

#### 4.5.2B.1 Initial conditions

System Simulator:

- Cell 1
- Cell 1 is transmitting SystemInformationBlockType8

User Equipment:

- The Test USIM shall be inserted.

#### 4.5.2B.2 Definition of system information messages

## 4.5.2C UE Registration, pre-registration on 1xRTT (State 2C)

The same assumptions and definitions apply as in clause 4.5.2.

### 4.5.2C.1 Initial conditions

System Simulator:

- Cell 1
- Cell 1 is transmitting SystemInformationBlockType8

User Equipment:

- The Test USIM shall be inserted.
- The UE is switched OFF.

### 4.5.2C.2 Definition of system information messages

**Table 4.5.2C.2-1: SystemInformationBlockType1 for cell 1 (Steps 1-19, Table 4.5.2C.3-2)**

#### 4.5.2C.3 Procedure

Table 4.5.2C.3-1 shows the cell power levels after the preamble.

**Table 4.5.2C.3-1: Time instances of cell power level and parameter changes**

|    | Parameter             | Unit      | Cell 1 |  | Remark |
|----|-----------------------|-----------|--------|--|--------|
| T0 | Cell-specific RS EPRE | dBm/15kHz | -60    |  | -      |

**Table 4.5.2C.3-2: UE registration with 1xRTT pre-registration procedure (state 1 to state 2C)**

| Step    | Procedure                                                                                                                                                                                                                       | Message Sequence |         |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------|
|         |                                                                                                                                                                                                                                 | U - S            | Message |
| 1 to 16 | Same procedure for steps 1 to 16 as specified in the procedure in clause 4.5.2.3                                                                                                                                                | -                | -       |
| -       | EXCEPTION: IF MULTI_PDN = TRUE THEN in parallel to the events described in steps 16A to 18 below, the generic procedure for UE establishing additional PDN connectivity as specified in TS 36.508 subclause 4.5A.16 takes place |                  |         |

|                                                                                                                      |                                                                                                                                                                                                              |     |                                       |

## 4.5.2D UE Registration, 2 PDN for RAN Assisted WLAN Interworking (State 2)

The same assumptions and definitions apply as in clause 4.5.2.

### 4.5.2D.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.

#### 4.5.2D.2 Definition of system information messages

The default system information messages are used.

#### 4.5.2D.3 Procedure

**Table 4.5.2D.3-1: UE registration procedure (state 1 to state 2)**

| Step                                                                                            | Procedure                                                                                                                     | U - S | Message Sequence Message         |
|-------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------|-------|----------------------------------|
| 1-16                                                                                            | Steps 1 to 16 of the generic test procedure for UE registration sub clause 4.5.2.3.                                           | -     | -                                |
|                                                                                                 | EXCEPTION: Step17 depends on UE configuration, executed if UE does not automatically trigger additional PDN Connection.       |       |                                  |
| 17                                                                                              | Cause the UE to request connectivity to an additional PDN (see Note 1)                                                        |       |                                  |
| 18-21                                                                                           | The generic procedure for UE establishing additional PDN connectivity as specified in TS 36.508 subclause 4.5A.16 takes place |       |                                  |
| 22                                                                                              | The SS transmits an <i>RRCConnectionRelease</i> message to release RRC connection and move to RRC_IDLE (State 2).             | <--   | RRC: <i>RRCConnectionRelease</i> |
| NOTE 1: The request of connectivity to an additional PDN may be performed by MMI or AT command. |                                                                                                                               |       |                                  |

#### 4.5.2D.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7 with the exceptions below.

| WLAN offload acceptability     | '0001'B     | Offloading the traffic of the PDN connection via a WLAN when in S1 mode is acceptable                      |                  |

| Condition    | Explanation                                                                                                 |
|--------------|-------------------------------------------------------------------------------------------------------------|
| PDN1_Offload | This condition applies if the test execution requests the first PDN connection PDN1 to be offloaded to WLAN |

## 4.5.2E MUSIM UE Registration

The same assumptions and definitions apply as in clause 4.5.2.

### 4.5.2E.1 Initial conditions

System Simulator:

- Cell A (home PLMN1) and Cell G (home PLMN2) are configured according to table 6.3.2.2-1 and table 6.3.2.2-3. Any change in the cells and their configurations shall be explicitly specified in the TC which calls the procedure in its entirety or refers to parts of it.
- The procedure shall be performed under ideal radio conditions as defined in clause 5.

User Equipment:

- The UE is a MUSIM UE.
- The UE is equipped with two USIMs with configuration as defined in below Tables 4.5.2E.1-1 and 4.5.2E.1-2.

**Table 4.5.2E.1-1: USIM A configuration**

| USIM field          | Priority | Value                                             | Access Technology Identifier |
|---------------------|----------|---------------------------------------------------|------------------------------|
| EF <sub>IMSI</sub>  |          | The HPLMN (MCC+MNC) of the IMSI is set to 001-01. |                              |
| EF <sub>FPLMN</sub> |          | 001-02                                            |                              |

**Table 4.5.2E.1-2: USIM B configuration**

| USIM field         | Priority | Value                                             | Access Technology Identifier |
|--------------------|----------|---------------------------------------------------|------------------------------|
| EF <sub>IMSI</sub> |          | The HPLMN (MCC+MNC) of the IMSI is set to 001-02. |                              |

|        |  |        |  |
|--------|--|--------|--|
| EFPLMN |  | 001-01 |  |
|--------|--|--------|--|

#### 4.5.2E.2 Definition of system information messages

The default system information messages are used.

#### 4.5.2E.3 Procedure

**Table 4.5.2E.3-1: MUSIM UE registration procedure**

| St    | Procedure                                                                                                                                                                     | Message Sequence |                | TP | Verdict |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------|----|---------|
|       |                                                                                                                                                                               | U - S            | Message        |    |         |
| 1     | The SS configures:<br>- Cell A as the "Serving cell".<br>- Cell G as a "Non-Suitable Off cell".                                                                               | -                | -              | -  | -       |
| 2     | The UE is switched on.                                                                                                                                                        | -                | -              | -  | -       |
| -     | The following messages are to be observed on Cell A unless explicitly stated otherwise.                                                                                       | -                | -              | -  | -       |
| 3     | Check: Does UE with USIM A configuration transmit ATTACH REQUEST message including UE network capability with at least one MUSIM feature set to "supported"?                  | -->              | ATTACH REQUEST | -  | P       |

### 4.5.3 Generic Radio Bearer Establishment (State 3)

IF pc\_ue\_CategoryDL\_M1 THEN use the procedure for State 3-CE according to clause 4.5.3AA ELSE use the procedure defined in the present clause.

NOTE: The statement to use alternate procedure for CAT M1 UE (pc\_ue\_CategoryDL\_M1 is set) is to enable LTE legacy protocol test cases to be used for CAT M1 UE testing. Any CAT M1 or CE specific test cases should not rely on this statement, but refer directly to the relevant CE specific state.

#### 4.5.3.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5.3.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3.3 Procedure

The establishment of generic radio bearer connection is assumed to always be mobile terminated.

**Table 4.5.3.3-1: Generic Radio Bearer establishment procedure (state 2 to state 3)**

| Step | Procedure                                                                                                                                                                                                                              | U - S | Message Sequence<br>Message                                    |

#### 4.5.3.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5.3A Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A)

IF `pc_ue_CategoryDL_M1` THEN use the procedure for State 3A-CE according to clause 4.5.3AB ELSE use the procedure defined in the present clause.

NOTE: The statement to use alternate procedure for CAT M1 UE (`pc_ue_CategoryDL_M1` is set) is to enable LTE legacy protocol test cases to be used for CAT M1 UE testing. Any CAT M1 or CE specific test cases should not rely on this statement, but refer directly to the relevant CE specific state.

#### 4.5.3A.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state, UE Test Mode Activated (State 2A for Signalling testing).
- The UE shall be in Registered, Idle Mode state, UE Test Mode Activated (State 2A-RF for RF and RRM testing).
- The UE shall be in Registered, Idle Mode state, UE Test Mode Activated (State 2A or State 2A-RF for UE positioning testing).

#### 4.5.3A.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3A.3 Procedure

Same procedure as specified in the procedure in clause 4.5.3.3.

#### 4.5.3A.4 Specific message contents

All specific message contents shall be referred to clause 4.6, 4.7 and 4.7A.

### 4.5.3AA Generic Radio Bearer Establishment (State 3-CE)

#### 4.5.3AA.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2-CE).

#### 4.5.3AA.2 Definition of system information messages

The default system information messages as specified in clause 4.5.2AA.2.

#### 4.5.3AA.3 Procedure

**Table 4.5.3AA.3-1: UE registration procedure (state 2-CE to state 3-CE)**

| Step      | Procedure                                                                           | U - S | Message Sequence Message |
|-----------|-------------------------------------------------------------------------------------|-------|--------------------------|
| 1         | Void                                                                                |       |                          |
| 2 to 10a7 | Same procedure for steps 2 to 10a7 as specified in the procedure in clause 4.5.3.3. | -     | -                        |

#### 4.5.3AA.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7 with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

### 4.5.3AB Generic Radio Bearer Establishment, UE Test Mode Activated (State 3A-CE)

#### 4.5.3AB.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state, UE Test Mode Activated (State 2A-CE for Signalling testing).
- The UE shall be in Registered, Idle Mode state, UE Test Mode Activated (State 2A-RF-CE for RF and RRM testing).

#### 4.5.3AB.2 Definition of system information messages

The default system information messages are used as specified in clause 4.5.2AA.2.

#### 4.5.3AB.3 Procedure

**Table 4.5.3AB.3-1: UE registration procedure (State 2A-CE/2A-RF-CE to state 3A-CE)**

| Step      | Procedure                                                                           | U - S | Message Sequence Message |
|-----------|-------------------------------------------------------------------------------------|-------|--------------------------|
| 1         | Void                                                                                |       |                          |
| 2 to 10a7 | Same procedure for steps 2 to 10a7 as specified in the procedure in clause 4.5.3.3. | -     | -                        |

#### 4.5.3AB.4 Specific message contents

All specific message contents shall be referred to clause 4.6, 4.7 and 4.7A with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

## 4.5.3B Generic Radio Bearer Establishment, pre-registered on HRPD (State 3B)

### 4.5.3B.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state, pre-registered on HRPD (State 2B).

### 4.5.3B.2 Definition of system information messages

The default system information messages are used.

### 4.5.3B.3 Procedure

Same procedure as specified in the procedure in clause 4.5.3.3.

### 4.5.3B.4 Specific message contents

All specific message contents shall be referred to clause 4.6, 4.7 and 4.7A.

## 4.5.3C Generic Radio Bearer Establishment, pre-registered on 1xRTT (State 3C)

### 4.5.3C.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state, pre-registered on 1xRTT (State 2C).

### 4.5.3C.2 Definition of system information messages

The default system information messages are used.

### 4.5.3C.3 Procedure

Same procedure as specified in the procedure in clause 4.5.3.3.

### 4.5.3C.4 Specific message contents

All specific message contents shall be referred to clause 4.6, 4.7 and 4.7A.

### 4.5.3D Generic Radio Bearer Establishment for RAN Assisted WLAN Interworking (State 3)

#### 4.5.3D.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2) as per 4.5.2D establishing 2 PDN connections.

#### 4.5.3D.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3D.3 Procedure

The establishment of generic radio bearer connection is assumed to always be mobile terminated.

**Table 4.5.3D.3-1: Generic Radio Bearer establishment procedure (state 2 to state 3)**

| Step   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | U - S | Message Sequence Message                                                                                                                                 |

#### 4.5.3D.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5.3E Control plane CIoT connection request (State 3-CP)

#### 4.5.3E.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.
- TS 36.508 condition CIoT-test apply.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2 or 2-CE).

#### 4.5.3E.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3E.3 Procedure

The establishment of generic radio bearer connection is assumed to always be mobile terminated.

**Table 4.5.3E.3-1: Generic control plane CIoT connection request procedure (state 3-CP)**

| Step | Procedure                                                                                                                                                                                                                                   | U - S | Message Sequence Message                                                     |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|------------------------------------------------------------------------------|
| 1    | Void                                                                                                                                                                                                                                        |       |                                                                              |
| 2    | SS sends a <i>Paging</i> message to the UE on the appropriate paging block, and including the UE identity in one entry of the IE <i>pagingRecordLists</i> .                                                                                 | <--   | RRC: <i>Paging</i> (PCCH)                                                    |
| 3    | UE transmits an <i>RRCConnectionRequest</i> message.                                                                                                                                                                                        | -->   | RRC: <i>RRCConnectionRequest</i>                                             |
| 4    | SS transmit an <i>RRCConnectionSetup</i> message.                                                                                                                                                                                           | <--   | RRC: <i>RRCConnectionSetup</i>                                               |
| 5    | The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and to initiate the session management procedure by including the CONTROL PLANE SERVICE REQUEST message. | -->   | RRC: <i>RRCConnectionSetupComplete</i><br>NAS: CONTROL PLANE SERVICE REQUEST |
| 6    | The SS transmits a SERVICE ACCEPT message.                                                                                                                                                                                                  | <--   | RRC: <i>DLInformationTransfer</i><br>NAS: SERVICE ACCEPT                     |

#### 4.5.3E.4 Specific message contents

All specific message contents shall be referred to clauses 4.6 and 4.7.

### 4.5.3EA Control plane CIoT connection request, UE Test Mode Activated (State 3A-CP)

#### 4.5.3EA.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.
- TS 36.508 condition CIoT-test apply.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2A or 2A-CE).

#### 4.5.3EA.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3EA.3 Procedure

Same procedure as specified in the procedure in clause 4.5.3E.3.

#### 4.5.3EA.4 Specific message contents

All specific message contents shall be referred to clauses 4.6 and 4.7.

### 4.5.3F User plane CIoT connection request (State 3-UP)

#### 4.5.3F.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.
- TS 36.508 conditions CIoT-test and UP-CIoT applies.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2 or 2-CE).

#### 4.5.3F.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3F.3 Procedure

The establishment of generic radio bearer connection is assumed to always be mobile terminated.

**Table 4.5.3F.3-1: Generic user plane CIoT connection request procedure (state 3-UP)**

| Step | Procedure                                                                                                                                                   | U - S | Message Sequence Message                 |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|------------------------------------------|
| 1    | Void                                                                                                                                                        |       |                                          |
| 2    | SS sends a <i>Paging</i> message to the UE on the appropriate paging block, and including the UE identity in one entry of the IE <i>pagingRecordLists</i> . | <--   | RRC: <i>Paging</i> (PCCH)                |
| 3    | UE transmits an <i>RRCCConnectionResumeRequest</i> message.                                                                                                 | -->   | RRC: <i>RRCCConnectionResumeRequest</i>  |
| 4    | SS transmit an <i>RRCCConnectionResume</i> message.                                                                                                         | <--   | RRC: <i>RRCCConnectionResume</i>         |
| 5    | The UE transmits an <i>RRCCConnectionResumeComplete</i> message.                                                                                            | -->   | RRC: <i>RRCCConnectionResumeComplete</i> |

#### 4.5.3F.4 Specific message contents

All specific message contents shall be referred to clauses 4.6 and 4.7.

### 4.5.3FA User plane CIoT connection request, UE Test Mode Activated (State 3A-UP)

#### 4.5.3FA.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.
- TS 36.508 conditions CIoT-test and UP-CIoT applies.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2 or 2-CE).

#### 4.5.3FA.2 Definition of system information messages

The default system information messages are used.

#### 4.5.3FA.3 Procedure

Same procedure as specified in the procedure in clause 4.5.3F.3.

#### 4.5.3FA.4 Specific message contents

All specific message contents shall be referred to clauses 4.6 and 4.7.

### 4.5.4 Loopback Activation (State 4)

IF *pc\_ue\_CategoryDL\_M1* THEN use the procedure for State 4-CE according to clause 4.5.4A ELSE use the procedure defined in the present clause.

NOTE: The statement to use alternate procedure for CAT M1 UE (*pc\_ue\_CategoryDL\_M1* is set) is to enable LTE legacy protocol test cases to be used for CAT M1 UE testing. Any CAT M1 or CE specific test cases should not rely on this statement, but refer directly to the relevant CE specific state.

#### 4.5.4.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Generic RB Established state, UE Test Mode Activated (State 3A).

#### 4.5.4.2 Definition of system information messages

The default system information messages are used.

#### 4.5.4.3 Procedure

**Table 4.5.4.3-1: Loopback activation procedure (state 3A to state 4)**

| Step | Procedure                                                                     | Direction | Message Sequence                                            |
|------|-------------------------------------------------------------------------------|-----------|-------------------------------------------------------------|
|      |                                                                               | UE - SS   | Message                                                     |
| 1    | The SS transmits a CLOSE UE TEST LOOP message to enter the UE test loop mode. | <--       | RRC: <i>DLInformationTransfer</i><br>TC: CLOSE UE TEST LOOP |

|   |                                                                                                                                                                          |     |                                                                      |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------------------------------------------------------------------|

|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------------------------------------------------------------------|

#### 4.5.4.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7A.

### 4.5.4A Loopback Activation in cell supporting BL/CE UE (State 4-CE)

#### 4.5.4A.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Generic RB Established, Cell supporting BL/CE UE, UE Test Mode Activated (State 3A-CE).

#### 4.5.4A.2 Definition of system information messages

Same system information message content as in clause 4.5.2AA.2.

#### 4.5.4A.3 Procedure

**Table 4.5.4A.3-1: Loopback activation procedure (state 3A-CE to state 4-CE)**

| Step | Procedure                                                                                                                                                                   | Direction | Message Sequence                                                     |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|----------------------------------------------------------------------|
|      |                                                                                                                                                                             | UE - SS   | Message                                                              |
| 1    | The SS transmits a CLOSE UE TEST LOOP message to enter the UE test loop mode.                                                                                               | <--       | RRC: <i>DLInformationTransfer</i><br>TC: CLOSE UE TEST LOOP          |
| 2    | The UE transmits a CLOSE UE TEST LOOP COMPLETE message to confirm that loopback entities for the radio bearer(s) have been created and loop back is activated (State 4-CE). | -->       | RRC: <i>ULInformationTransfer</i><br>TC: CLOSE UE TEST LOOP COMPLETE |

#### 4.5.4A.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7A.

### 4.5.4B Loopback Activation user plane (State 4A-UP)

#### 4.5.4B.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.
- TS 36.508 conditions CIoT-test and UP-CIoT applies.

User Equipment:

- User plane CIoT connection request, UE Test Mode Activated (State 3A-UP).

#### 4.5.4B.2 Definition of system information messages

The default system information messages are used.

#### 4.5.4B.3 Procedure

Same procedure as specified in the procedure in clause 4.5.4A.3.

#### 4.5.4B.4 Specific message contents

All specific message contents shall be referred to clauses 4.6 and 4.7.

### 4.5.5 HRPD registration (State H2)

**Editor's note:** The default parameter and system information will depend on progress in Clause 4.4, once it is finalised RAN5 can refer to them accordingly.

#### 4.5.5.1 Initial conditions

System Simulator:

- Cell 1 and Cell 15.
- Cell 1 has a lower reselection priority than Cell 15.
- Cell 15 is transmitting default overhead messages.

User Equipment:

- The Test USIM shall be inserted (State 1).

#### 4.5.5.2 Definition of system information messages

The default overhead messages as specified in clause 4.4 are used.

#### 4.5.5.3 Procedure

**Editor note:** procedure needs to be specified.

#### 4.5.5.4 Specific message contents

**Editor's note:** message contents need to be specified where necessary.

### 4.5.5A HRPD registration, pre-registration on E-UTRAN (State H2A)

**Editor's note:** The default parameter and system information will depend on progress in Clause 4.4, once it is finalised RAN5 can refer to them accordingly.

#### 4.5.5A.1 Initial conditions

System Simulator:

- Cell 1 and Cell 15.
- Cell 1 has a lower reselection priority than Cell 15.
- Cell 15 is transmitting default overhead messages.

User Equipment:

- The Test USIM shall be inserted (State 1).

#### 4.5.5A.2 Definition of system information messages

The default overhead messages as specified in clause 4.4 are used.

#### 4.5.5A.3 Procedure

Editor's note: procedure needs to be specified.

#### 4.5.5A.4 Specific message contents

Editor's note: message contents need to be specified where necessary.

### 4.5.6 HRPD session establishment (State H3)

Editor's note: The default parameter and system information will depend on progress in Clause 4.4, once it is finalised RAN5 can refer to them accordingly.

#### 4.5.6.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in HRPD Registered, Dormant Mode state (State H2).

#### 4.5.6.2 Definition of system information messages

The default overhead messages as specified in clause 4.4 are used.

#### 4.5.6.3 Procedure

Editor's note: procedure needs to be specified.

#### 4.5.6.4 Specific message contents

Editor's note: message contents need to be specified where necessary.

### 4.5.6A HRPD session establishment, pre-registered on E-UTRAN (State H3A)

Editor's note: The default parameter and system information will depend on progress in Clause 4.4, once it is finalised RAN5 can refer to them accordingly.

#### 4.5.6A.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in HRPD Registered, Dormant Mode, pre-registered on E-UTRAN state (State H2A).

#### 4.5.6A.2 Definition of system information messages

The default overhead messages as specified in clause 4.4 are used.

#### 4.5.6A.3 Procedure

Same procedure as specified in the procedure in clause 4.5.6.3

#### 4.5.6A.4 Specific message contents

**Editor's note: message contents need to be specified where necessary.**

### 4.5.7 Out of Coverage (State 5)

Out of coverage UE operation is applicable only for sidelink direct communication. In this case UE uses preconfigured radio parameters for transmission and reception of side link direct communication. UE remains in any cell selection state.

#### 4.5.7.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under the condition that there is no reference signal and SIB transmission by the cell.

User Equipment:

- The Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.

#### 4.5.7.2 Definition of system information messages

MIB and SIBs are not transmitted.

#### 4.5.7.3 Procedure

UE remains in any cell selection state and search for any available cell.

### 4.5.8 Out of Coverage, V2X setup (State 5-V2X)

#### 4.5.8.1 Initial conditions

System Simulator:

- No E-UTRA cell configured
- 1 GNSS simulator
- 1 simulated V2V UE (transmitter or receiver according to specific test case configuration)

User Equipment:

- If supported by the UE, the Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.

#### 4.5.8.2 Definition of system information messages

None.

#### 4.5.8.3 Procedure

UE remains in any cell selection state and search for any available cell.

### 4.5.9 Out of Coverage, Test Loopback Activation, V2X setup (State 5A-V2X)

The same assumptions and definitions apply as in clause 4.5.8. State 5A-V2X shall be invoked either in Receive Mode or in Transmit Mode, depending on the test purpose.

#### 4.5.9.1 Initial conditions

System Simulator:

- No E-UTRA cell configured
- 1 GNSS simulator
- 1 simulated V2X UE (transmitter or receiver according to specific test case configuration)

User Equipment:

- The UE shall be in Out of Coverage, V2X setup state (State 5-V2X)

#### 4.5.9.2 Definition of system information messages

None.

#### 4.5.9.3 Procedure

**Table 4.5.9.3-1: Out of Coverage, Test Loopback Activation, V2X setup procedure (state 5-V2X to state 5A-V2X)**

| Step                                                                                                                       | Procedure                                                                                                                                                                   | Message Sequence |         |

**Table 4.5.9.4-2B: AT COMMAND: +CCUTLE (Step 2B)**

Derivation Path: Table 4.7I-2: +CCUTLE with condition Close and Transmit.

**Table 4.5.9.4-3: AT COMMAND: +CUTCR (Step 3)**

Derivation Path: Table 4.7I-3: +CUTCR

## 4.5A Other generic procedures

### 4.5A.1 Procedure for IP address allocation in the U-plane

The purpose of this procedure is to allow the successful completion of IP address allocation if it is initiated by the UE therefore the result from the execution of the Procedure for IP address allocation in the U-plane shall not lead to assignment of a verdict.

Depending on the UE configuration there may be unpredictable delay in the start of the procedure. A guarding time of 1.2 sec (for satellite access (NTN) 2.48 sec) is suggested within which the procedure is expected to start. If the timer expires then the test procedure, from which the Procedure for IP address allocation in the U-plane is called, shall advance to the next specified step.

**Table 4.5A.1-1: Procedure for IP address allocation in the U-plane**

| Step | Procedure                                                                                                                                                                                                                                                                                                                                | Message Sequence |         |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------|
|      |                                                                                                                                                                                                                                                                                                                                          | U - S            | Message |
| -    | EXCEPTION: Step 1 below and Step 1 in Table 4.5A.1-2 describe behaviour that depends on the contents of the latest PDN CONNECTIVITY REQUEST message sent by the UE prior to this procedure.                                                                                                                                              | -                | -       |
| -    | EXCEPTION: In parallel to the event described in step 1 below the step specified in Table 4.5A.1-2 may take place.                                                                                                                                                                                                                       | -                | -       |
| 1    | If the "PDN type" in the latest PDN CONNECTIVITY REQUEST message prior to this procedure was 'IPv4' or 'IPv4v6' then, IPv4 address allocation by DHCPv4 may occur on the user plane bearer established for the default EPS bearer context activated with the latest ACTIVATE DEFAULT EPS BEARER CONTEXT message prior to this procedure. | -                | -       |

## 4.5A.2 Tracking area updating procedure

The procedure is defined in table 4.5A.2.1-1.

**Table 4.5A.2.1-1: Tracking area updating procedure**

| Step | Procedure                                                                                                                                                                                                                                     | Message Sequence |                                                                             |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|-----------------------------------------------------------------------------|
|      |                                                                                                                                                                                                                                               | U - S            | Message                                                                     |
| 1    | The SS transmits system information on the cell specified in the test case.                                                                                                                                                                   | <--              | RRC: SYSTEM INFORMATION (BCCH)                                              |
| 2    | The UE transmits an <i>RRCConnectionRequest</i> message on the cell specified in the test case.                                                                                                                                               | -->              | RRC: <i>RRCConnectionRequest</i>                                            |
| 3    | SS transmits an <i>RRCConnectionSetup</i> message.                                                                                                                                                                                            | <--              | RRC: <i>RRCConnectionSetup</i>                                              |
| 4    | The UE transmits an <i>RRCConnectionSetupComplete</i> message to confirm the successful completion of the connection establishment and a TRACKING AREA UPDATE REQUEST message is sent to update the registration of the actual tracking area. | -->              | RRC: <i>RRCConnectionSetupComplete</i><br>NAS: TRACKING AREA UPDATE REQUEST |
| 5    | SS responds with TRACKING AREA UPDATE ACCEPT message.                                                                                                                                                                                         | <--              | RRC: <i>DLInformationTransfer</i><br>NAS: TRACKING AREA UPDATE ACCEPT       |
| 6    | The UE transmits a TRACKING AREA UPDATE COMPLETE                                                                                                                                                                                              | -->              | RRC: <i>ULInformationTransfer</i><br>NAS: TRACKING AREA UPDATE COMPLETE     |
| 7    | The SS transmits an <i>RRCConnectionRelease</i> message to release RRC connection and move to RRC_IDLE.                                                                                                                                       | <--              | RRC: <i>RRCConnectionRelease</i>                                            |

NOTE 1: The periodic tracking area updating timer T3412 is deactivated by default during the attach procedure (TS 36.508 clause 4.7.2).

NOTE 2: The SS does not initiate authentication and NAS SECURITY MODE COMMAND are not performed (reuse of keys allocated during the attach procedure).

## 4.5A.3 Procedure for IMS signalling

The purpose of this procedure is to allow the successful completion of IMS signalling if it is initiated by the UE.

The UE may initiate IMS registration according TS 24.229 [40] clause 5.1. The procedure is applicable for UEs with IMS support (TS 36.523-2 A.4.4-1/25).

**Table 4.5A.3-1: Procedure for IMS signalling in the U-plane**

| Step | Procedure                                                                                      | Message Sequence |         |
|------|------------------------------------------------------------------------------------------------|------------------|---------|

| Note 1: Depending on the UE configuration there may be unpredictable delay in the start of the procedure. A guarding time of [10] sec is suggested within which the procedure is expected to start. If the timer expires then the test procedure, from which the Procedure for IMS signalling U-plane is called, shall advance to the next specified step |                                                                                                                                |   |   |

#### 4.5A.3.1 Specific message contents

REGISTER (Step 10a2a2)

Use the default message “REGISTER” in TS 34.229-1 [43] annex A.1.1 with conditions A1, A31 and (NOT A34).

REGISTER (Step 10a2a4)

Use the default message “REGISTER” in TS 34.229-1 [43] annex A.1.1 with conditions A2, A31 and (NOT A34).

### 4.5A.3A Procedure for IMS Signalling over UTRA

The purpose of this procedure is to allow the successful completion of IMS signalling if it is initiated by the UE.

The UE may initiate IMS registration according TS 24.229 [40] clause 5.1. The procedure is applicable for UEs with IMS support (TS 36.523-2 A.4.4-1/25).

#### 4.5A.3A.1 Initial conditions

System Simulator:

- 1 UTRA cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.
- The UE is in state Registered, Idle Mode (state 3 or 7) according to TS 34.108 [5]

#### 4.5A.3A.2 Procedure

**Table 4.5A.3A.2-1: Procedure for IMS Signalling over UTRA**

| Step  | Procedure                                                                                                | Message Sequence |                               |

|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IPv4        | If the ACTIVATE PDP CONTEXT REQUEST message, contains the PDN type as Ipv4                                                                                                                                                                                                                                                                   |
| IPv6        | If the ACTIVATE PDP CONTEXT REQUEST message, contains the PDN type as Ipv6                                                                                                                                                                                                                                                                   |
| IPv4v6      | If the ACTIVATE PDP CONTEXT REQUEST message, contains the PDN type as Ipv4v6                                                                                                                                                                                                                                                                 |
| IPv4-DHCP   | If the ACTIVATE PDP CONTEXT REQUEST message sent prior to this message, the IE Protocol configuration options contains a configuration protocol option "IPv4 address allocation via DHCPv4", length of contents = 0).<br>Note 1: This condition is used in conjunction with IPv4 or IPv4v6 as indicated in the "PDN address row" just above. |
| P-CSCF IPv6 | If the ACTIVATE PDP CONTEXT REQUEST sent prior to this message, the Protocol configuration options and the additional parameter list was included with a "P-CSCF IPv6 Address Request".<br>Note 1: This condition is only applicable for UEs with IMS support (TS 36.523-2 A.4.4-1/25).                                                      |
| P-CSCF IPv4 | If in the ACTIVATE PDP CONTEXT REQUEST message sent prior to this message, the Protocol configuration options and the additional parameter list was included with a "P-CSCF IPv4 Address Request".<br>Note 1: This condition is only applicable for UEs with IMS support (TS 36.523-2 A.4.4-1/25).                                           |
| DNS IPv6    | If the ACTIVATE PDP CONTEXT REQUEST message sent prior to this message, the Protocol configuration options and the additional parameter list was included with a "DNS IPv6 Address Request".                                                                                                                                                 |
| DNS IPv4    | If the ACTIVATE PDP CONTEXT REQUEST message sent prior to this message, the Protocol configuration options and the additional parameter list was included with a "DNS IPv4 Address Request".                                                                                                                                                 |

### 4.5A.3B Procedure for preventing IMS Signalling over GERAN

The purpose of this procedure is to prevent IMS signalling if it is initiated by the UE.

The UE may initiate IMS registration according TS 24.229 [40] clause 5.1. The procedure is applicable for UEs with IMS support (TS 36.523-2 A.4.4-1/25).

#### 4.5A.3B.1 Initial conditions

System Simulator:

- 1 GERAN cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test UICC shall be inserted. This shall contain either ISIM and USIM applications or only a USIM application on UICC.
- The UE is GPRS attached according to TS 51.010 [25]

#### 4.5A.3B.2 Procedure

**Table 4.5A.3B.2-1: Procedure for IMS Signalling over GERAN**

| Step | Procedure | Message Sequence |         |

## 4.5A.4 Generic Test Procedure for IMS Emergency call establishment in EUTRA: Normal Service

### 4.5A.4.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

### 4.5A.4.2 Definition of system information messages

The default system information messages are used.

### 4.5A.4.3 Procedure

The establishment of IMS emergency call is assumed to always be mobile originated.

**Table 4.5A.4.3-1: EUTRA/EPS signalling for IMS Emergency Call**

| St | Procedure                                                                                                                                                                                                                                                                            | Message Sequence |                                                                |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------|
|    |                                                                                                                                                                                                                                                                                      | U - S            | Message                                                        |
| 1  | Make the UE attempt an IMS emergency call                                                                                                                                                                                                                                            | -                | -                                                              |
| 2  | The UE transmits an <i>RRCCONNECTIONREQUEST</i> message with 'establishmentCause' set to 'emergency'.                                                                                                                                                                                | -->              | <i>RRCCONNECTIONREQUEST</i>                                    |
| 3  | SS transmit an <i>RRCCONNECTIONSETUP</i> message.                                                                                                                                                                                                                                    | <--              | RRC: <i>RRCCONNECTIONSETUP</i>                                 |
| 4  | The UE transmits an <i>RRCCONNECTIONSETUPCOMPLETE</i> message to confirm the successful completion of the connection establishment and to initiate the session management procedure by including the SERVICE REQUEST message.                                                        | -->              | RRC: <i>RRCCONNECTIONSETUPCOMPLETE</i><br>NAS: SERVICE REQUEST |
| 5  | The SS transmits a <i>SecurityModeCommand</i> message to activate AS security.                                                                                                                                                                                                       | <--              | RRC: <i>SecurityModeCommand</i>                                |
| 6  | The UE transmits a <i>SecurityModeComplete</i> message and establishes the initial security configuration.                                                                                                                                                                           | -->              | RRC: <i>SecurityModeComplete</i>                               |
| 7  | The SS configures a new data radio bearer, associated with the default EPS bearer context. The <i>RRCCONNECTIONRECONFIGURATION</i> message is using condition SRB2-DRB(1, 0). The DRB associated with default EPS bearer context obtained during the attach procedure is established | <--              | RRC: <i>RRCCONNECTIONRECONFIGURATION</i>                       |
| 8  | The UE transmits an <i>RRCCONNECTIONRECONFIGURATIONCOMPLETE</i> message to confirm the establishment of the new data radio bearer, associated with the default EPS bearer context.                                                                                                   | -->              | RRC: <i>RRCCONNECTIONRECONFIGURATIONCOMPLETE</i>               |
| 9  | The UE transmits a PDN CONNECTIVITY REQUEST message to request an additional PDN, with 'Request type' set to 'emergency ('0100'B) '.                                                                                                                                                 | -->              | PDN CONNECTIVITY REQUEST                                       |
| 10 | The SS configures a new data radio bearer, associated with the default EPS bearer context. <i>RRCCONNECTIONRECONFIGURATION</i> message contains the                                                                                                                                  | <--              | RRC: <i>RRCCONNECTIONRECONFIGURATION</i><br>NAS:               |

|    |                                                                                                                                                                                                                                                                                                                                                                                                                                                            |     |                                                                                                |

## 4.5A.5 Generic Test Procedure for IMS Emergency call establishment in EUTRA: Limited Service

### 4.5A.5.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE is switched on and camped on the cell in EMM-DEREGISTERED.LIMITED-SERVICE or EMM-REGISTERED.LIMITED-SERVICE state.

### 4.5A.5.2 Definition of system information messages

The default system information messages are used.

## 4.5A.5.3 Procedure

The establishment of IMS emergency call is assumed to always be mobile originated.

## 4.5A.6 Generic Test Procedure for IMS MO speech call establishment in E-UTRA

### 4.5A.6.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

### 4.5A.6.2 Definition of system information messages

The default system information messages are used.

### 4.5A.6.3 Procedure

**Table 4.5A.6.3-1: EUTRA/EPS signalling for IMS MO speech call**

| St | Procedure                              | Message Sequence |         |

#### 4.5A.6.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.7 Generic Test Procedure for IMS MT Speech call establishment in E-UTRA

#### 4.5A.7.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.7.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.7.3 Procedure

**Table 4.5A.7.3-1: EUTRA/EPS signalling for IMS MT speech call**

#### 4.5A.7.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.8 Generic Test Procedure for IMS MO video call establishment in E-UTRA

#### 4.5A.8.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.8.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.8.3 Procedure

**Table 4.5A.8.3-1: EUTRA/EPS signalling for IMS MO video call**

#### 4.5A.8.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.9 Generic Test Procedure for IMS MT video call establishment in E-UTRA

#### 4.5A.9.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.9.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.9.3 Procedure

**Table 4.5A.9.3-1: EUTRA/EPS signalling for IMS MT video call**

| St    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                | Message Sequence |                                                                                                                                                     |

#### 4.5A.9.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.10 Generic Test Procedure for IMS MO speech and aSRVCC in E-UTRA

#### 4.5A.10.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.10.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.10.3 Procedure

**Table 4.5A.10.3-1: EUTRA/EPS signalling for IMS MO speech to alerting state**

#### 4.5A.12.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

#### 4.5A.13 Void

#### 4.5A.14 Generic Test Procedure for IMS XCAP establishment in EUTRA

##### 4.5A.14.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).
- If `pc_XCAP_only_APN==true` then the UE is connected to the IMS PDN only
- else the UE is connected to the IMS PDN and the Internet PDN which is used for XCAP signalling.

##### 4.5A.14.2 Definition of system information messages

The default system information messages are used.

##### 4.5A.14.3 Procedure

**Table 4.5A.14.3-1: EUTRA/EPS signalling for XCAP**

| EPS bearer identity             | EPS bearer identity | The same value as the value set in DEACTIVATE EPS BEARER CONTEXT REQUEST message. |           |
| Procedure transaction identity  | 0                   | No procedure transaction identity assigned                                        |           |

### 4.5A.15A Generic Test Procedure for User or Network Initiated EPS Bearer Deactivation

#### 4.5A.15A.1 Initial conditions

The EPS bearer to be deactivated has been established before. The EPS bearer has to be specified.

#### 4.5A.15A.2 Definition of system information messages

The system information messages applicable in the test case are used.

## 4.5A.15A.3 Procedure

Table 4.5A.15A.3-1: Procedure for EPS Bearer Deactivation

| Step | Procedure                                                                                                                                                                                                                                                                                                                                                                                       | Message Sequence |                                                                                        |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------------------------------|
|      |                                                                                                                                                                                                                                                                                                                                                                                                 | U - S            | Message                                                                                |
| -    | EXCEPTION: Step 1Aa describes behaviour that depends on UE capabilities/configuration; the "lower case letter" identifies a step sequence that takes place if one of those is supported/configured. The SS shall wait up to 5s for the UE to trigger the PDN Disconnect procedure.<br><br>NOTE: The specified wait period of 5s is a working assumption to facilitate test case implementation. | -                | -                                                                                      |
| 1Aa  | The UE transmits a PDN DISCONNECT REQUEST                                                                                                                                                                                                                                                                                                                                                       | -->              | RRC: <i>ULInformationTransfer</i><br>PDN DISCONNECT REQUEST                            |
| 1    | The SS transmits an <i>RRCConnectionReconfiguration</i> message to deactivate an EPS bearer.                                                                                                                                                                                                                                                                                                    | <--              | RRC: <i>RRCConnectionReconfiguration</i><br>NAS: DEACTIVATE EPS BEARER CONTEXT REQUEST |
| -    | EXCEPTION: In parallel to the event described in step2 the step specified in Table 4.5A.15A.3-2 should take place.                                                                                                                                                                                                                                                                              | -                | -                                                                                      |
| 2    | The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the deactivation of EPS bearer.                                                                                                                                                                                                                                                                              | -->              | RRC: <i>RRCConnectionReconfigurationComplete</i>                                       |

#### 4.5A.16 Generic Test Procedure to establish additional PDN connectivity

The same assumptions and definitions apply as in clause 4.5.2 and in addition:

| Condition      | Explanation                                                                                                                                         |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| ADD_IMS        | true if this procedure is part of the initial registration (PDN2_IMS==true according to definitions in clause 4.5.2);<br>false for all other cases  |
| MobileData_OFF | Mobile data associated with Internet PDN is disabled on the DUT. It is configured via setting px_MobileDataOn (TS 36.523-3[20] Table 9.1-1) = false |

##### 4.5A.16.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE is in Registered, RRC\_CONNECTED state (State 2).

##### 4.5A.16.2 Definition of system information messages

The default system information messages are used.

##### 4.5A.16.3 Procedure

**Table 4.5A.16.3-1: Establishment of additional PDN connectivity**

| St  | Procedure                                                                                                                                                                                                                                                 | Message Sequence |                                                                                              |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------------------------------------|
|     |                                                                                                                                                                                                                                                           | U - S            | Message                                                                                      |
| -   | EXCEPTION: Depending upon UE configuration Step 0a1 may be performed                                                                                                                                                                                      | -                | -                                                                                            |
| 0a1 | If IMS_Internet and MobileData_OFF then the request of connectivity to an additional PDN is performed by MMI or AT command with APN "Internet".                                                                                                           | -                | -                                                                                            |
| 1   | The UE transmits a PDN CONNECTIVITY REQUEST message to request an additional PDN.                                                                                                                                                                         | -->              | RRC: <i>ULInformationTransfer</i><br>NAS: PDN CONNECTIVITY REQUEST                           |
| 2   | The SS configures a new data radio bearer, associated with the additional default EPS bearer context. <i>RRCConnectionReconfiguration</i> message contains the ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message.                                       | <--              | RRC: <i>RRCConnectionReconfiguration</i><br>NAS: ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST |
| 3   | The UE transmits an <i>RRCConnectionReconfigurationComplete</i> message to confirm the establishment of additional default bearer.                                                                                                                        | -->              | RRC: <i>RRCConnectionReconfigurationComplete</i>                                             |
| -   | EXCEPTION: In parallel to the event described in step 4 below, if initiated by the UE the generic procedure for IP address allocation in the U-plane specified in TS 36.508 subclause 4.5A.1 takes place performing IP address allocation in the U-plane. | -                | -                                                                                            |
| -   | EXCEPTION: IF ADD_IMS THEN in parallel to the event described in step 4 below the generic procedure                                                                                                                                                       | -                | -                                                                                            |

|   |                                                                                                              |     |                                                                                      |

### 4.5A.17 Generic Test Procedure for user initiated release of additional PDN connectivity

#### 4.5A.17.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2) with connectivity at least to two PDNs

#### 4.5A.17.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.17.3 Procedure

**Table 4.5A.17.3-1: Release of additional PDN connectivity**

## 4.5A.18 Generic Test Procedure for network initiated release of additional PDN connectivity

### 4.5A.18.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2) with connectivity at least to two PDNs

### 4.5A.18.2 Definition of system information messages

The default system information messages are used.

### 4.5A.18.3 Procedure

**Table 4.5A.18.3-1: Release of additional PDN connectivity**
