| 1-14 | Steps 5-18 expected sequence defined in 20.1.4 of TS 34.229-1 [43]. MTSI MO CAT and speech call for EPS. | -                | -       |

#### 4.5A.21.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.22 Communication with the ProSe Function: Initial Access

#### 4.5A.22.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.22.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.22.3 Procedure

The procedure is only applicable for `pc_Provide_ProSe_APN == true`.

The HTTP signalling between the UE and the ProSe function is done over TLS i.e. the UE connects to TCP port 443 (HTTPS) and starts TLS handshake.

**Table 4.5A.22.3-1: Communication with the ProSe Function**

| St   | Procedure                                                                                                                                                                                                                                                                                 | Message Sequence |                                                                                             |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------------------------------------------------------------------------------------------|
|      |                                                                                                                                                                                                                                                                                           | U - S            | Message                                                                                     |
| 1    | The UE transmits an <code>RRConnectionRequest</code> message with 'establishmentCause' set to 'mo-Data'.                                                                                                                                                                                  | -->              | <i>RRConnectionRequest</i>                                                                  |
| 2    | SS transmit an <code>RRConnectionSetup</code> message.                                                                                                                                                                                                                                    | <--              | RRC: <i>RRConnectionSetup</i>                                                               |
| 3    | The UE transmits an <code>RRConnectionSetupComplete</code> message to confirm the successful completion of the connection establishment and to initiate the session management procedure by including the SERVICE REQUEST message.                                                        | -->              | RRC: <i>RRConnectionSetupComplete</i><br>NAS: SERVICE REQUEST                               |
| 4    | The SS transmits a <code>SecurityModeCommand</code> message to activate AS security.                                                                                                                                                                                                      | <--              | RRC: <i>SecurityModeCommand</i>                                                             |
| 5    | The UE transmits a <code>SecurityModeComplete</code> message and establishes the initial security configuration.                                                                                                                                                                          | -->              | RRC: <i>SecurityModeComplete</i>                                                            |
| 6    | The SS configures a new data radio bearer, associated with the default EPS bearer context. The <code>RRConnectionReconfiguration</code> message is using condition SRB2-DRB(1, 0). The DRB associated with default EPS bearer context obtained during the attach procedure is established | <--              | RRC: <i>RRConnectionReconfiguration</i>                                                     |
| 7    | The UE transmits an <code>RRConnectionReconfigurationComplete</code> message to confirm the establishment of the new data radio bearer, associated with the default EPS bearer context.                                                                                                   | -->              | RRC: <i>RRConnectionReconfigurationComplete</i>                                             |
| 8-10 | Steps 1-3 of procedure 4.5A.16.3.                                                                                                                                                                                                                                                         | -                | -                                                                                           |
| -    | EXCEPTION: In parallel to the event described in step 11 below, the behaviour described in Table 4.5A.22.3-2 takes place.                                                                                                                                                                 | -                | -                                                                                           |
| 11   | The UE transmits an <code>ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT</code> message.                                                                                                                                                                                                      | -->              | RRC: <i>ULInformationTransfer</i><br>NAS: <i>ACTIVATE DEFAULT EPS BEARER CONTEXT ACCEPT</i> |

#### 4.5A.22.4 Specific message contents

HTTP specific message contents shall be referred to clause 4.7E.

ProSe specific message contents shall be referred to clause 4.7F.

TLS specific message contents shall be referred to clause 4.7H.

Further specific message contents shall be referred to clause 4.6 and 4.7.

## 4.5A.22A Communication with the ProSe Function: Subsequent Access

### 4.5A.22A.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered Idle Mode state (State 2), or in state Generic RB Established (State 3).
- The Communication with the ProSe Function: Initial Access in subclause 4.5A22 has taken place since the UE was switched on.

### 4.5A.22A.2 Definition of system information messages

The default system information messages are used.

### 4.5A.22A.3 Procedure

The procedure is only applicable for `pc_Provide_ProSe_APN == true`.

The HTTP signalling between the UE and the ProSe function is done over an already established TLS connection.

**Table 4.5A.22A.3-1: Communication with the ProSe Function**

| St        | Procedure                                                                                                                                                                                                              | Message Sequence |                                                         |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------------------------------------------------------|
|           |                                                                                                                                                                                                                        | U - S            | Message                                                 |
| -         | EXCEPTION: Steps 1a1 to 1a7 describe behaviour that depends on UE configuration; the "lower case letter" identifies a step sequence that takes place if the UE is in RRC_IDLE state.                                   | -                | -                                                       |
| 1a1       | The UE transmits an RRCConnectionRequest message with 'establishmentCause' set to 'mo-Data'.                                                                                                                           | -->              | RRC: RRCConnectionRequest                               |
| 1a2       | SS transmit an RRCConnectionSetup message.                                                                                                                                                                             | <--              | RRC: RRCConnectionSetup                                 |
| 1a3       | The UE transmits an RRCConnectionSetupComplete message to confirm the successful completion of the connection establishment and to initiate the session management procedure by including the SERVICE REQUEST message. | -->              | RRC: RRCConnectionSetupComplete<br>NAS: SERVICE REQUEST |
| 1a4       | The SS transmits a SecurityModeCommand message to activate AS security.                                                                                                                                                | <--              | RRC: SecurityModeCommand                                |
| 1a5       | The UE transmits a SecurityModeComplete message and establishes the initial security configuration.                                                                                                                    | -->              | RRC: SecurityModeComplete                               |
| 1a6       | The SS configures two new data radio bearers, associated with the two default EPS bearer contexts. The RRCConnectionReconfiguration message is using condition SRB2-DRB(2, 0).                                         | <--              | RRC: RRCConnectionReconfiguration                       |
| 1a7       | The UE transmits an RRCConnectionReconfigurationComplete message to confirm the establishment of the new data radio bearers, associated with the default EPS bearer contexts.                                          | -->              | RRC: RRCConnectionReconfigurationComplete               |
| 2-10      | Void                                                                                                                                                                                                                   |                  |                                                         |
| -         | EXCEPTION: Steps 10a1 to 10d2 describe behaviour which depends on the ProSe Procedure being applied                                                                                                                    | -                | -                                                       |
| 10a1-10d2 | Steps 10a1-10d2 of Table 4.5A.22.3-2.                                                                                                                                                                                  | -                | -                                                       |

#### 4.5A.22A.4 Specific message contents

HTTP specific message contents shall be referred to clause 4.7E.

ProSe specific message contents shall be referred to clause 4.7F.

Further specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.23 Generic Test Procedure for IMS registration in EPC / WLAN

#### 4.5A.23.1 Initial conditions

System Simulator:

- WLAN Cell 27 according to Table 4.4.8-1 with condition IMSoWLAN.

User Equipment:

- The UE is in state Switched OFF (state 1).

#### 4.5A.23.2 Definition of system information messages

N/A

#### 4.5A.23.3 Procedure

**Table 4.5A.23.3-1: IMS registration in EPC / WLAN**

| St   | Procedure                                                                                                                   | Message Sequence |         |
|------|-----------------------------------------------------------------------------------------------------------------------------|------------------|---------|
|      |                                                                                                                             | U - S            | Message |
| 1    | The UE is switched on                                                                                                       | -                | -       |
| 2    | The UE associates with the WLAN AP and obtains the local IP address                                                         | -                | -       |
| 3    | The UE performs a dynamic selection of ePDG using DNS query                                                                 | -                | -       |
| 4    | The UE establishes an IPsec tunnel using the IKEv2 protocol as defined in 3GPP TS 33.402 [55] clause 8.2.2, Figure 8.2.2-1. | -                | -       |
| 5-13 | The UE performs the IMS registration procedure according TS 34.229-1 [43] subclause C.2c (steps 2-9).                       | -                | -       |

#### 4.5A.23.4 Specific message contents

## 4.5A.25 Generic Test Procedure for XCAP establishment in EPC / WLAN

This procedure is applicable only for the case when pc\_WLAN\_XCAP\_without\_PDN is set to false.

### 4.5A.25.1 Initial conditions

System Simulator:

- WLAN Cell 27 according to Table 4.4.8-1 with condition IMSoWLAN.

User Equipment:

- The UE has selected an ePDG and is registered onto the IMS network according to clause 4.5A.23.

### 4.5A.25.2 Definition of system information messages

N/A

### 4.5A.25.3 Procedure

**Table 4.5A.25.3-1: IMS XCAP establishment in EPC / WLAN**

| St | Procedure                                                                                                                                      | Message Sequence |         |
|----|------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------|
|    |                                                                                                                                                | U - S            | Message |
| 1  | Make the UE attempt XCAP signalling.                                                                                                           | -->              | -       |
| 2  | The UE establishes an additional PDN and IPsec tunnel using the IKEv2 protocol as defined in 3GPP TS 33.402 [55] clause 8.2.2, Figure 8.2.2-1. | -                | -       |

### 4.5A.25.4 Specific message contents

N/A

## 4.5A.26 Generic Test Procedure for eCall over IMS establishment in EUTRA: Normal Service

### 4.5A.26.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE is in state Registered, Idle Mode (State 2)

### 4.5A.26.2 Definition of system information messages

The default system information messages are used.

### 4.5A.26.3 Procedure

The establishment of eCall over IMS is assumed to always be mobile originated.

Note: The trigger to initiate MO call will be part of test case from where the generic procedure is called.

Table 4.5A.26.3-1: EUTRA/EPS signalling for eCall over IMS

| St    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Message Sequence |                                                                                                |

### 4.5A.27 Generic Test Procedure for eCall over IMS establishment in EUTRA: eCall Only Support

#### 4.5A.27.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE is in state Switched OFF (State 1).

#### 4.5A.27.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.27.3 Procedure

The establishment of eCall over IMS is assumed to always be mobile originated.

Note: The generic procedure is defined as per TS 23.401 [24] clause 4.3.12.1.

**Table 4.5A.27.3-1: EUTRA/EPS signalling for eCall over IMS (eCall only Support)**

| St   | Procedure                                                                                                                                                                                                                                                                                                                                                                                       | Message Sequence |                                                                                                              |

### 4.5A.30 Generic Test Procedure for IMS Re-registration in E-UTRAN

The purpose of this procedure is to allow the successful completion of IMS Re-registration if it is initiated by the UE when moving from HPLMN to VPLMN and vice versa on E-UTRAN.

#### 4.5A.30.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.30.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.30.3 Procedure

All specific  
message  
contents shall  
be referred to

clause 4.6 and 4.7 with exceptions below.

REGISTER (Step 1a2a8)

Use the default message “REGISTER” in TS 34.229-1 [43] annex A.1.1 with conditions A2, A31 and (NOT A34).

### 4.5A.31 Generic Test Procedure for UUAA-SM in EPS

The purpose of this procedure is to allow the successful completion of USS UAV Authorization/Authentication - Session Management in EPS.

#### 4.5A.31.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

#### 4.5A.31.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.31.3 Procedure

**Table 4.5A.31.3-1: Procedure for UUAA-SM in EPS**

| St | Procedure                                                                                                                                            | Message Sequence |                                             |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|---------------------------------------------|
|    |                                                                                                                                                      | U – S            | Message                                     |
| 1  | Configure the UE to request transport of UUAA parameters (see Note 1)                                                                                | -                | -                                           |
| 2  | Cause the UE to request connectivity to an additional PDN for UAS services (see Note 2)                                                              | -                | -                                           |
| 3  | The UE transmits a SERVICE REQUEST message.                                                                                                          | -->              | SERVICE REQUEST                             |
| 4  | The SS establishes SRB2 and DRB associated with default EPS bearer context obtained during the attach procedure.                                     | -                | -                                           |
| 5  | Check: Does the UE transmit a PDN CONNECTIVITY REQUEST message with service-level-AA container including CAA-level UAV ID requesting additional PDN? | -->              | PDN CONNECTIVITY REQUEST                    |
| 6  | The SS transmits an ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST message with IE EPS Bearer Identity set to new EPS bearer context.                   | <--              | ACTIVATE DEFAULT EPS BEARER CONTEXT REQUEST |

|                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                            |     |                                            |

## 4.5A.32 Generic Test Procedure for IMS bootstrap data channel establishment in E-UTRA

### 4.5A.32.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall execute 4.5A.6 or 4.5A.7 or 4.5A.8 or 4.5A.9.

### 4.5A.32.2 Definition of system information messages

The default system information messages are used.

### 4.5A.32.3 Procedure

**Table 4.5A.32.3-1: EUTRA/EPS signalling for IMS bootstrap data channel establishment**

| St | Procedure                                                                                                                                                                                                                                                                                                                                        | Message Sequence |                                                                                                  |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|--------------------------------------------------------------------------------------------------|
|    |                                                                                                                                                                                                                                                                                                                                                  | U - S            | Message                                                                                          |
| 1  | The SS configures a new RLC-UM data radio bearer with condition DRB (1,0), associated with the dedicated EPS bearer context. <i>RRConnectionReconfiguration</i> message contains the ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST message. EPS bearer context #12 (QCI 9) according to table 6.6.2-1B: Reference dedicated EPS bearer contexts. | <--              | RRC: <i>RRConnectionReconfiguration</i><br>NAS:<br>ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST |
| 2  | The UE transmits an <i>RRConnectionReconfigurationComplete</i> message to confirm the establishment of the new data radio bearer, associated with the dedicated EPS bearer. EPS bearer context #12 (QCI 9) according table to 6.6.2-1B: Reference dedicated EPS bearer contexts.                                                                 | -->              | RRC:<br><i>RRConnectionReconfigurationComplete</i>                                               |

|   |                                                                           |     |                                                                                |
|---|---------------------------------------------------------------------------|-----|--------------------------------------------------------------------------------|
| 3 | The UE transmits an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message. | --> | RRC: ULInformationTransfer<br>NAS:ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT |
|---|---------------------------------------------------------------------------|-----|--------------------------------------------------------------------------------|

#### 4.5A.32.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

### 4.5A.33 Generic Test Procedure for IMS MO add RTT establishment in E-UTRA

#### 4.5A.33.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall execute 4.5A.19.

#### 4.5A.33.2 Definition of system information messages

The default system information messages are used.

#### 4.5A.33.3 Procedure

**Table 4.5A.33.3-1: EUTRA/EPS signalling for IMS MO add RTT**

| St  | Procedure                                                                                                                                                                                                                                                                                                                                        | Message Sequence |                                                                                               |

### 4.5A.35.4 Specific message contents

All specific message contents shall be referred to clause 4.6 and 4.7.

## 4.5A.36 Generic Test Procedure for IMS Emergency call and RTT establishment in EUTRA: Normal Service

### 4.5A.36.1 Initial conditions

System Simulator:

- Parameters are set to the default parameters for the basic single cell environment, as defined in subclause 4.4, unless otherwise specified in the test case.

User Equipment:

- The UE shall be in Registered, Idle Mode state (State 2).

### 4.5A.36.2 Definition of system information messages

The default system information messages are used.

### 4.5A.36.3 Procedure

The establishment of IMS emergency call is assumed to always be mobile originated.

**Table 4.5A.36.3-1: EUTRA/EPS signalling for IMS Emergency Call and RTT**

| St | Procedure                                                                                                                                                                                                                                                                                                                                                                                        | Message Sequence |                                                                                               |

## 4.7 Default NAS message and information element contents

This clause contains the default values of common NAS messages and information elements, which apply to all test cases unless otherwise specified. All the messages and information elements are listed in alphabetical order.

## 4.7.1 Security protected NAS messages

In subclauses 4.7.2 and 4.7.3 in this document, all the NAS messages are described in the plain NAS message format.

When a NAS message is security protected, the message shall be contained by SECURITY PROTECTED NAS MESSAGE unless contained by another NAS message.

The default contents of SECURITY PROTECTED NAS MESSAGE message are defined in table 4.7.1-1.

**Table 4.7.1-1: SECURITY PROTECTED NAS MESSAGE**

| Message authentication code           | The calculated value of MAC-I for this message.      | The value of MAC-I is calculated by SS using Sequence number sent by UE. | SENT-BY-SS         |
|                                       | The same value as the XMAC-I value calculated by SS. |                                                                          | SENT-BY-UE         |
| Sequence number                       | The internal counter of the SS                       |                                                                          | SENT-BY-SS         |
|                                       | Any allowed value                                    |                                                                          | SENT-BY-UE         |
| NAS message                           | Set according to specific message content            |                                                                          |                    |

| Condition          | Explanation                                                                             |
|--------------------|-----------------------------------------------------------------------------------------|
| UNCIPHERED         | This condition applies to unciphered NAS message exchange                               |
| CIPHERED           | This condition applies to ciphered NAS message exchange                                 |
| UNCIPHERED-NEW     | This condition applies to unciphered NAS message exchange with new EPS security context |
| CIPHERED-NEW       | This condition applies to ciphered NAS message exchange with new EPS security context   |
| CIPHERED-PARTIALLY | This condition applies to partially ciphered NAS message exchange                       |
| SENT-BY-SS         | Use for the message sent from SS to UE                                                  |
| SENT-BY-UE         | Use for the message sent from UE to SS                                                  |

When a valid NAS security context exists, unless specified otherwise in other clauses of the present specification or in a test case, for every DL NAS message sent within SECURITY PROTECTED NAS MESSAGE message, the condition CIPHERED applies.

## 4.7.2 Contents of EMM messages

### - ATTACH ACCEPT

This message is sent by the SS to the UE.

**Table 4.7.2-1: ATTACH ACCEPT**

## 4.7B.2 UTRA NAS messages

This section contains default message contents for UTRA NAS messages.

In 3GPP TS 36.523-1 [18]:

- UTRA NAS messages are defined as exceptions, IE by IE, to the messages defined in this section;
- UTRA NAS messages not defined in this section are specified completely.

The following messages are not specified in this section:

- AUTHENTICATION REQUEST (CS)
- AUTHENTICATION RESPONSE (CS)
- DETACH REQUEST (CS & PS)
- DETACH ACCEPT (CS & PS)
- IDENTITY REQUEST (CS & PS)
- IDENTITY RESPONSE (CS & PS)
- P-TMSI REALLOCATION COMMAND (PS)
- P-TMSI REALLOCATION COMPLETE (PS)
- SERVICE REQUEST (PS)

This message is sent by the SS to the UE.

**Table 4.7H-3: ServerKeyExchange**

| Field             | Value/remark         | Comment | Condition |
|-------------------|----------------------|---------|-----------|
| psk identity hint | "3GPP-bootstrapping" |         |           |

- **ServerHelloDone**

This message is sent by the SS to the UE.

**Table 4.7H-4: ServerHelloDone**

| Field                    | Value/remark | Comment | Condition |
|--------------------------|--------------|---------|-----------|
| Note: No fields present. |              |         |           |

- **ClientKeyExchange**

This message is sent by the UE to the SS.

**Table 4.7H-5: ClientKeyExchange**

| Field        | Value/remark                                          | Comment | Condition |
|--------------|-------------------------------------------------------|---------|-----------|
| psk identity | Concatenation of "3GPP-bootstrapping", ":", and B-TID |         |           |

- **ChangeCipherSpec**

This message is sent by the UE or the SS.

**Table 4.7H-6: ChangeCipherSpec**

| Field | Value/remark | Comment | Condition |
|-------|--------------|---------|-----------|
| Enum  | 1            |         |           |

- **Finished**

This message is sent by the UE or the SS.

**Table 4.7H-7: Finished**

| Field  | Value/remark             | Comment                                                                                                                                  | Condition |
|--------|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| opaque | Not checked              |                                                                                                                                          | UE        |
| opaque | SS generated verify_data | The verify data contains the hash of the handshake messages. For details, see the RFC for TLS defined in annex E of 3GPP TS 33.310 [63]. | SS        |

| Condition | Explanation     |
|-----------|-----------------|
| UE        | Sent by the UE. |
| SS        | Sent by the SS. |

## 4.71 Default AT Command message and information element

### - AT Command +CATM

This AT Command is sent by the SS to the UE.

**Table 4.71-1: +CATM**

| Derivation Path: 27.007 clause 15 |              |                     |              |
|-----------------------------------|--------------|---------------------|--------------|
| Field                             | Value/remark | Comment             | Condition    |
| +CATM=                            |              |                     |              |
| <status>                          | 0            |                     | Deactivation |
| <status>                          | 1            |                     | Activation   |
| <test_loop_mode>                  | 1            | UE test loop mode E | Activation   |

| Condition    | Explanation                  |
|--------------|------------------------------|
| Activation   | Activate UE test loop mode.  |
| Deactivation | Deactivate UE test loop mode |

### - AT Command +CCUTLE

This AT Command is sent by the SS to the UE.

**Table 4.71-2: +CCUTLE**

| Derivation Path: 27.007 clause 15 |              |         |           |
|-----------------------------------|--------------|---------|-----------|
| Field                             | Value/remark | Comment | Condition |
| + CCUTLE =                        |              |         |           |
| <status>                          | 1            |         | Open      |
| <status>                          | 0            |         | Close     |
| <direction>                       | 1            |         | Transmit  |
| <direction>                       | 0            |         | Receive   |
| <format>                          | 1            |         | Receive   |
| <length>                          | 1            |         | Receive   |
| <monitor_list>                    | HEX '0000AA' |         | Receive   |

| Condition | Explanation                                            |
|-----------|--------------------------------------------------------|
| Open      | Open UE test loop back mode E.                         |
| Close     | Close UE test loop back mode E                         |
| Transmit  | UE is configured to transmit V2X communication packets |
| Receive   | UE is configured to receive V2X communication packets  |

### - AT Command +CUTCR

This AT Command is sent by the SS to the UE.

**Table 4.71-3: +CUTCR**

| Derivation Path: 27.007 clause 15 |              |                                          |           |
|-----------------------------------|--------------|------------------------------------------|-----------|
| Field                             | Value/remark | Comment                                  | Condition |
| +CUTCR                            |              | This AT command has no additional fields |           |

## - AT Command +CUSPCREQ

This AT Command is sent by the SS to the UE.

**Table 4.7I-4: +CUSPCREQ**

| Derivation Path: 27.007 clause 15 |              |                                          |           |
|-----------------------------------|--------------|------------------------------------------|-----------|
| Field                             | Value/remark | Comment                                  | Condition |
| +CUSPCREQ                         |              | This AT command has no additional fields |           |

## 4.8.2.2 SRB and DRB combinations

### 4.8.2.2.1 Combinations on DL-SCH and UL-SCH

#### 4.8.2.2.1.1 SRB1 and SRB2 for DCCH + n x AM DRB + m x UM DRB, where n=1..N and m=0..M

This SRB and DRB combination is setup with UE Registration procedure and the Generic Radio Bearer Establishment or Generic Radio Bearer Establishment, UE Test Mode Activated procedure using specific message content - the default *RRCCConnectionReconfiguration* message with condition SRB2-DRB(n, m).

## 4.8.3 UTRA reference radio parameters and combinations

Table 4.8.3-1 defines UTRA reference radio parameters and combinations to be used in E-UTRA and UTRA inter-RAT test cases.

**Table 4.8.3-1: UTRA reference radio parameters and combinations**

| Condition           | Reference configuration           | Comment                                                                                                                                                                                                                                                                                |

## 4.8.4 GERAN reference PDP context parameters

Table 4.8.4-1 defines GERAN reference PDP context parameters to be used in E-UTRA and GERAN inter-RAT test cases.

**Table 4.8.4-1: GERAN reference PDP context parameters**

| Condition | Reference configuration                        | Comment                                                                                                                                                                                                                                             |
|-----------|------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| GPRS      | TS 51.010-1 subclause 40.5, Test PDP context3. | Test PDP context3 is the default Test PDP context which is used in the GERAN Inter-RAT GPRS test cases where no particular Test PDP contexts are specified. Compression is always turned off if nothing else is stated explicitly in the test case. |

## 4.9 Common test USIM, CSIM and ISIM parameters

This clause defines default parameters for programming the elementary files of the test UICC when running conformance test cases defined in 3GPP TS 36.523-1[18].

### 4.9.1 General

See clause 8.1 in 3GPP TS 34.108 [5].

#### 4.9.1.1 Definitions

See clause 8.1.1 in 3GPP TS 34.108 [5].

#### 4.9.1.2 Definition of the test algorithm for authentication

Same as clause 8.1.2 in 3GPP TS 34.108[5].

##### 4.9.1.2.1 Authentication and key derivation in the test USIM, CSIM and ISIM and SS

UE and SS calculate Ck, Ik, AUTN, RES[XRES] as in clause 8.1.2.1 in 3GPP TS 34.108 [5]. Derivation of  $K_{ASME}$  and other E-UTRA Keys shall be as defined in Annex A of 3GPP TS 33.401 [31], using Key derivation function HMAC-SHA-256 algorithm.

##### 4.9.1.2.2 Generation of re-synchronization parameters in the USIM, CSIM and ISIM

Same as clause 8.1.2.1 in 3GPP TS 34.108[5].

##### 4.9.1.2.3 Using the authentication test algorithm for UE conformance testing

See clause 8.1.2.3 in 3GPP TS 34.108 [5].

### 4.9.2 Default parameters for the test USIM, CSIM and ISIM

Same as clause 8.2 in 3GPP TS 34.108 [5].

### 4.9.3 Default settings for the Elementary Files (EFs)

The format and coding of elementary files of the USIM are defined in 3GPP TS 31.101 [32] and 3GPP TS 31.102 [33] . Those of the ISIM are defined in 3GPP TS 31.101 [32] and 3GPP TS 31.103 [45]. Those of the CSIM are defined in 3GPP2 C.S0065-B [48].

The settings of the elementary files at the MF and USIM ADF (Application DF) level resp. the ISIM ADF (Application DF) level are the same as section 8.3 in 3GPP TS 34.108 [5] resp. section 4.2 in 3GPP TS 34.229-1 Annex E [43] and 3GPP TS 34.229-3 Annex B.1 [47] with the exceptions listed below. The settings of the elementary files at the CSIM ADF (Application DF) level as specified below. Note that some files may be updated by the UE based on information received from the SS.

#### 4.9.3.1 Modified contents of the USIM Elementary Files and additional USIM Elements files at the DF ProSe level

EF<sub>AD</sub> (Administrative Data)

- Additional information:

Byte 3 (second byte of additional information):

b3 is used to indicate whether the USIM enables the Public Safety UE to use the ME provisioning parameters for Public Safety usage, in the cases described in TS 24.334 [57].

- b3=1: the ME is authorized to use the parameters stored in the USIM or in the ME for ProSe services for Public Safety usage, as described in TS 24.334 [57] without contacting the ProSe Function.

#### EF<sub>EPSLOC</sub> (EPS location information)

File size: 18 Bytes

Default values: Bytes 1 to 12 (HEX): FF FF FF FF FF FF FF FF FF FF FF FF(GUTI)

Bytes 13 to 17 (HEX): 42 F6 18 FF FE (Last visited registered TAI)

Byte 18 (BIN): 00000001 (EPS update status = "not updated")

Bytes 13 to 17: TAI-MCC = 246 (bytes 13 to 14) and TAI-MNC = 81 (byte 15) are frequently used. The TAC (bytes 16 to 17) is set to "FF FE" since this, in conjunction with byte 18 setting of "01", is used to ensure that the UE performs Attach at the beginning of a test.

Bytes in this file (e.g. GUTI in bytes 1 to 12) may be updated as a result of a tracking area update attempt by the UE.

#### EF<sub>EPSNSC</sub> (EPS NAS Security Context)

The programming of this EF follows default parameter written in 3GPP TS 31.102 [23], annex E.

#### EF<sub>NASCONFIG</sub> (Non Access Stratum Configuration)

File size: 28 Bytes

Default values: Bytes 1 to 28 (HEX): FF FF ... FF

The programming of this EF follows the specific USIM requirements given in 3GPP TS 36.523-1 [18].

#### EF<sub>UST</sub> (USIM Service Table):

| Services                                     |       | Activated | Version |
|----------------------------------------------|-------|-----------|---------|
| Service n°101                                | ProSe | Optional  |         |
| Note: Only ProSe related services indicated. |       |           |         |

#### EF<sub>PROSE\_ANN</sub> (ProSe Announcing Parameters)

If service n°1 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

Two PLMNs are authorised for restricted ProSe direct discovery for public safety. Consequently two records associated with each different PLMN are provided.

##### PLMN1

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 05 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use restricted ProSe direct discovery announcing for public safety consists of MCC = 001 and MNC = 01. An authorized announcing range is not specified.

##### PLMN2

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 07 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use restricted ProSe direct discovery announcing for public safety consists of MCC = 001 and MNC = 02. An authorized announcing range is not specified.

Model Tag '82'

Coding: Value = '03' (the UE is authorised for Restricted Model A announcing policy and for Restricted Model B discoverer policy)

#### EF<sub>PROSE\_MON</sub> (ProSe Monitoring Parameters)

If service n°1 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

Two PLMNs are authorised for restricted ProSe direct discovery monitoring for public safety. Consequently two records associated with each different PLMN are provided.

##### PLMN1

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 05 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use restricted ProSe direct discovery monitoring for public safety consists of MCC = 001 and MNC = 01.

##### PLMN2

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 07 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use ProSe direct discovery monitoring for public safety consists of MCC = 001 and MNC = 02.

#### Model Tag '82'

Coding: Value = '03' (the UE is authorised for Restricted Model A monitoring policy and for Restricted Model B discoverer policy)

#### EF<sub>PROSEFUNC</sub> (HPLMN ProSe Function)

If service n°2 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): 80 05 01 AC 16 02 67

The type of the HPLMN ProSe Function address is set to IPv4 and the address equals the IP address of the Internet PDN (= 172.22.2.103).

#### EF<sub>PROSE\_RADIO\_COM</sub> (ProSe Direct Communication Radio Parameters)

If service n°3 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

This EF contains the radio parameters to be used for ProSe direct communication for public safety when the UE is not served by E-UTRAN, as described in TS 24.334 [57].

File size: 100 Bytes

Default values: Bytes 1 to 12 (HEX): A0 FF 80 12 32 D9 4A 63 55 A3 32

Bytes 13 to 24 (HEX): D2 D1 63 55 A3 32 D6 0D 63 59 47

Bytes 25 to 36 (HEX): 81 25 00 13 1D DE 02 00 00 00 04 29

Bytes 37 to 48 (HEX): 50 00 00 03 00 18 00 28 C0 00 00 00

Bytes 49 to 60 (HEX): 03 F0 60 03 00 05 00 FF FF 00 00 00

Bytes 61 to 72 (HEX): 1F 84 80 12 B2 D9 4A 63 55 A3 B2 D2

Bytes 73 to 84 (HEX): D1 63 55 A3 B2 D6 0D 63 59 47 81 25

Bytes 85 to 96 (HEX): 00 13 1D DE 02 00 00 00 04 29 50 00

Bytes 97 to 108 (HEX): 00 03 00 18 00 28 30 00 00 00 03 F0

Bytes 109 to 120 (HEX): 60 03 00 05 00 00 00 FF FF 00 00 1F

Bytes 121 to 122 (HEX): 84

High level requirements

**ProSe Direct Communication not served by E-UTRAN:**

- Coding: Value = '03'; indicates that UE is authorised to perform one-to-many and one-to-one ProSe direct communication when not served by E-UTRAN

**ProSe Radio parameters information:**

First data object:

Geographical Area - Polygon Tag '80'

Point 1

Degrees of latitude: 35.753056

Degrees of longitude: 139.689167

Point 2

Degrees of latitude: 35.735278

Degrees of longitude: 139.689167

Point 3

Degrees of latitude: 35.744167

Degrees of longitude: 139.709167

Point 4

Degrees of latitude: 35.753056

Degrees of longitude: 139.709167

Radio parameters Tag '81' (First data object)

Coded as *SL-Preconfiguration* in Table 6.8.1.1-1 condition SLCONF1 using Band 3 and 5MHz bandwidth as example.

Second data object:

Geographical Area - Polygon Tag '80'

Point 1

Degrees of latitude: -35.753056

Degrees of longitude: 139.689167

Point 2

Degrees of latitude: -35.735278

Degrees of longitude: 139.689167

Point 3

Degrees of latitude: -35.744167

Degrees of longitude: 139.669167

Radio parameters Tag '81' (First data object)

Coded as *SL-Preconfiguration* in Table 6.8.1.1-1 condition SLCONF2 using Band 3 and 5MHz bandwidth as example.

#### EF<sub>PROSE\_RADIO\_MON</sub> (ProSe Direct Discovery Monitoring Radio Parameters)

If service n°4 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

This EF contains the radio parameters to be used for ProSe direct communication for public safety when the UE is not served by E-UTRAN, as described in TS 24.334 [57].

High level requirements

#### **ProSe Direct Discovery monitoring not served by E-UTRAN:**

- Coding: Value = '03'; indicates that UE is authorised to perform ProSe direct discovery model A monitoring and ProSe direct discovery model B discoveree operation when not served by E-UTRAN

ProSe Radio parameters information same as the one in EF<sub>PROSE\_RADIO\_COM</sub>

#### EF<sub>PROSE\_RADIO\_ANN</sub> (ProSe Direct Discovery Announcing Radio Parameters)

If service n°5 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

This EF contains the radio parameters to be used for ProSe direct communication for public safety when the UE is not served by E-UTRAN, as described in TS 24.334 [57].

High level requirements

#### **ProSe Direct Discovery monitoring not served by E-UTRAN:**

- Coding: Value = '03'; indicates that UE is authorised to perform ProSe direct discovery model A announcing and ProSe direct discovery model B discoverer operation when not served by E-UTRAN

ProSe Radio parameters information same as the one in EF<sub>PROSE\_RADIO\_COM</sub>EF<sub>PROSE\_POLICY</sub> (ProSe Policy Parameters)

If service n°6 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

This EF contains the policy parameters to be used for ProSe direct communication for public safety, as described in TS 24.334 [57].

File size: 63 Bytes

Default values: Bytes 1 to 12 (HEX): A0 3D 80 03 00 00 01 81 03 00 00 01  
 Bytes 13 to 24 (HEX): 82 04 E0 00 00 02 83 01 01 84 04 AC  
 Bytes 25 to 36 (HEX): 16 02 68 85 22 00 00 00 00 00 00  
 Bytes 37 to 48 (HEX): 00 00 00 00 00 00 00 00 00 00 00  
 Bytes 49 to 60 (HEX): 00 00 00 00 00 00 00 00 00 00 00  
 Bytes 61 to 63 (HEX): 02 01 10

The value of the ProSe Layer-2 Group ID is 1.

The value of ProSe UE ID is 2.

The value of ProSe Group IP multicast address is 224.0.0.1

Address type value is '01' (indicates IPv4)

The IPv4 address of the source, i.e. Device Under Test is 172.22.2.104.

For the Group related security. The value of PGK is 2, the value of PGK Id is 1, and, the algorithm is 128-EEA1.

#### EF<sub>PROSE\_PLMN</sub> (ProSe PLMN Parameters)

If service n°3 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

Specifies the PLMNs in which the UE is authorised to perform ProSe direct communication when served by E-UTRAN.

Two PLMNs are authorised for ProSe direct communication. Consequently two records associated with each different PLMN are provided.

##### PLMN1

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 05 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use ProSe direct communication consists of MCC = 001 and MNC = 01.

##### PLMN2

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 07 80 03 00 F1 10

The PLMN code of the operator in which the UE is authorized to use ProSe direct communication consists of MCC = 001 and MNC = 02.

#### EF<sub>PROSE\_GC</sub> (ProSe Group Counter)

If service n°7 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

File size: 10 Bytes

Default values: Bytes 1 to 9 (HEX): 80 07 00 00 01 00 02 00 03

The value of the ProSe Layer-2 Group ID is 1.

The value of PTK ID is 2.

The Counter for the PGK used in the group is 3.

#### EF<sub>PST</sub> (ProSe Service Table)

If service n°101 is "available" in the ProSe Service Table (EF<sub>UST</sub>), this file shall be present.

File size: 2 Bytes

Default values: Bytes 1 to 2 (HEX): 24 00

This translates to:

| Services     |                                                    | Activated         | Version |
|--------------|----------------------------------------------------|-------------------|---------|
| Service n°1: | ProSe direct discovery parameters                  | Optional          |         |
| Service n°2: | HPLMN ProSe Function                               | Optional          |         |
| Service n°3: | ProSe Direct Communication radio parameters        | Optional          |         |
| Service n°4: | ProSe Direct Discovery monitoring radio parameters | Optional          |         |
| Service n°5: | ProSe Direct Discovery announcing radio parameters | Optional          |         |
| Service n°6: | ProSe policy parameters                            | Optional          |         |
| Service n°7: | ProSe group counter                                | Optional          |         |
| Service n°8: | ProSe Usage Information Reporting configuration    | Optional (Note 1) |         |

| Services                                                                            |                                                             | Activated         | Version |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------|-------------------|---------|
| Service n°9:                                                                        | UICC ProSe Direct Communication usage information reporting | Optional          |         |
| Service n°10:                                                                       | ProSe Group Member Discovery parameters                     | Optional          |         |
| Service n°11:                                                                       | ProSe Relay parameters                                      | Optional (Note 2) |         |
| Note 1: If service n°9 is "available", then service n°8 shall also be "available".  |                                                             |                   |         |
| Note 2: If service n°10 is "available", then service n°1 shall also be "available". |                                                             |                   |         |

#### EF<sub>PROSE\_UIRC</sub> (ProSe UsageInformationReportingConfiguration)

If service n°8 is "available" in the ProSe Service Table (EF<sub>PST</sub>), this file shall be present.

This EF contains the description of the configuration to be used by the UE for reporting the usage information for direct communication for public safety, as described in TS 24.334 [57].

ProSe UsageInformationReportingConfiguration parameters information:

| Description                                          | Value | Comments                                                                                                                                                                                                  |
|------------------------------------------------------|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ProSe ServerAddress                                  |       | No server address is provided, the UE shall upload the usage information reports to the IP address of the HPLMN ProSe Function.                                                                           |
| ProSe CollectionPeriod                               | 1     | The time interval, in unit of minutes, at which the UE shall generate the usage information reports                                                                                                       |
| ProSe ReportingWindow                                | 5     | The time window, in unit of minutes, during which the UE shall upload the usage information report to the server                                                                                          |
| ProSe ReportGroupParameters                          | 1     | The UE shall report the group parameters in the usage information                                                                                                                                         |
| ProSe ReportTimeStampsFirstTransmissionAnd Reception | 1     | The UE shall report the time stamps of the first transmission/reception during the collection period in the usage information                                                                             |
| ProSe ReportDataTransmitted                          | 3     | The UE shall report the amount of data transmitted during the collection period in the usage information with location information                                                                        |
| ProSe ReportDataReceived                             | 3     | The UE shall report the amount of data received during the collection period in the usage information with location information                                                                           |
| ProSe ReportTimeStampsOutOfCoverage                  | 1     | The UE shall report the time stamps when it went in and out of E-UTRAN coverage during the collection period in the usage information                                                                     |
| ProSe ReportLocationInCoverage                       | 1     | The UE shall report the list of locations of the UE when in E-UTRAN coverage during the collection period in the usage information                                                                        |
| ProSe ReportRadioParameters                          | 1     | The UE shall report the radio parameters used for ProSe direct communication (i.e. indicator of which radio resources used and radio frequency used) during the reporting period in the usage information |

#### EF<sub>PROSE\_GM\_DISCOVERY</sub> (ProSe Group Member Discovery Parameters)

If service n°10 is "available" in the ProSe Service Table, this file shall be present.

This EF contains the ProSe discovery parameters for public safety, as described in TS 24.334 [57]. This file shall be used only if the ME is authorized as per content of EFAD or received service authorization from the ProSe Function.

User Info ID = 1. Indicates the user information which is sent by the announcing or discoverer or discoveree UE over the air during Group Member Discovery procedures.

Discovery Group ID = 1. Indicates the group ID of the discovery group that the UE belongs to when group member discovery is performed.

Application Layer Group ID = 1. Indicates the Application Layer Group ID identifying an application layer group that the UE belongs to

**EF<sub>PROSE\_RELAY</sub> (ProSe Relay Parameters)**

If service n°11 is "available" in the ProSe Service Table, this file shall be present.

This EF contains the authorized PLMNs for ProSe UE-to-network relay for public safety, as described in TS 24.334 [57]. This file shall be used only if the ME is authorized as per content of EFAD or received service authorization from the ProSe Function.

**PLMN1**

File size: 7 Bytes

Default values: Bytes 1 to 7 (HEX): A0 05 80 03 00 F1 10

Relay type Value = '02' (the UE is not authorised to act as a ProSe UE-to-network relay, and, the UE is authorised to use a ProSe UE-to-network relay).

**EF<sub>PROSE\_RELAY\_DISCOVERY</sub> (ProSe Relay Discovery Parameters)**

If service n°11 is "available" in the ProSe Service Table, this file shall be present.

This EF contains the ProSe direct discovery parameters when it is used for ProSe UE-to-network relay discovery for public safety, as described in TS 24.334 [37]. This file shall be used only if the ME is authorized as per content of EFAD or received service authorization from the ProSe Function.

User Info ID = 1. Indicates the user information which is sent by the announcing or discoverer or discoveree UE over the air during Group Member Discovery procedures.

**Remote UE parameters information**

Relay Service Code = 1. Indicates the connectivity service that the ProSe UE-to-network relay provides to public safety applications.

User Info ID of Relay = 2. Indicates the user information of the ProSe UE-to-network relay that the remote UE seeks to discover during ProSe UE-to-network relay discovery procedures.

IP Versions '01' (indicates IPv4)

For Security Content. The value of PSDK is 2.

Bitmask of keys = '07' DUSK, DUCK and DUIK are to be used

DUCK encryption bitmask - all bits set to '1'. 184-bit bitmask which uses bit "1" to mark the positions of the bits for which the DUCK encryption is applied

#### 4.9.3.2 Modified contents of the CSIM Elementary Files

**EF<sub>COUNT</sub> (Call Count)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>IMSI\_M</sub> (IMSI\_M)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>IMSI\_T</sub> (IMSI\_T)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>TMSI</sub> (TMSI)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>AH</sub>** (Analog Home SID)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>AOP</sub>** (Analog Operational Parameters)

The programming of this EF is a test house option.

**EF<sub>ALOC</sub>** (Analog Location and Registration Indicators)

The programming of this EF is a test house option.

**EF<sub>CDMAHOME</sub>** (CDMA Home SID, NID)

Record size: 5 Bytes

Record count:6

Record 1:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 00 (Band Class: 0 (800 MHz cellular band))

Record 2:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 01 (Band Class: 1 (1.8 to 2.0 GHz PCS band))

Record 3:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 03 (Band Class: 3 (832 to 925 MHz JTACS band))

Record 4:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 04 (Band Class: 4 (1.75 to 1.87 GHz Korean PCS band))

Record 5:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 05 (Band Class: 5 (450 MHz NMT band))

Record 6:

Default values: Bytes 1 to 2 (HEX): E8 03 (CDMA Home SID (SIDp): 1000)

Bytes 3 to 4 (HEX): AE 08 (CDMA Home NID (NIDp): 2222)

Bytes 5 (HEX): 06 (Band Class: 6 (2 GHz IMT-2000 band))

**EF<sub>ZNREGI</sub> (CDMA Zone-Based Registration Indicators)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>SNREGI</sub> (CDMA System-Network Registration Indicators)**

The programming of this EF is a test house option.

**EF<sub>DISTREGI</sub> (CDMA Distance-Based Registration Indicators)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>ACCOLC</sub> (Access Overload Class ACCOLCp)**

The 4 LSB of this 1 byte file are der-bit access overload class indicator is derived from the last digit of the associated decimal representation of the IMSI\_M vis decimal to binary conversion.

File size: 1 byte

Default value: Bits 4 to 7 are reserved and set to '0000'. Bits 0 to 3 are derived from the last digit of the associated decimal representation of the IMSI\_M via decimal to binary conversion.

**EF<sub>TERM</sub> (Call Termination Mode Preferences)**

The programming of this EF is a test house option.

**EF<sub>SSCI</sub> (Suggested Slot Cycle Index)**

The programming of this EF is a test house option.

**EF<sub>ACP</sub> (Analog Channel Preferences)**

The programming of this EF is a test house option.

**EF<sub>PRL</sub> (Preferred Roaming List)**

File size: 18 Bytes

Default values: Bytes 1 to 18 (HEX): 00 12 00 00 00 00 40 01 21 00 02 80 00 50 00 00 6E DB

The interpretation of the default values read as follows:

PRL ID – 0

Preferred only – 0

Default roaming indication – 0

Number of Acquisition Records – 1

Number of system records – 1

**EF<sub>RUIMID</sub> (Removable UIMID)**

This EF stores a 32-bit electronic identification number (ID) unique to the CSIM or a 32-bit pseudo-UIMID of the CSIM. It is specified by the CSIM manufacturer.

**EF<sub>CSIM\_ST</sub> (CSIM Service Table)**

Services will be allocated and activated as follows.

| Services     |                  | Activated | Version |
|--------------|------------------|-----------|---------|
| Service n°1: | Local Phone Book | Option    |         |

| Services      |                                            | Activated | Version |
|---------------|--------------------------------------------|-----------|---------|
| Service n°2:  | Fixed Dialling Numbers (FDN)               | Option    |         |
| Service n°3:  | Extension 2                                | Option    |         |
| Service n°4:  | Service Dialling Numbers (SDN)             | Option    |         |
| Service n°5:  | Extension3                                 | Option    |         |
| Service n°6:  | Short Message Storage                      | Yes       |         |
| Service n°7:  | Short Message Parameters (SMP)             | Yes       |         |
| Service n°8:  | HRPD                                       | Yes       |         |
| Service n°9:  | Service Category Program for BC-SMS        | Option    |         |
| Service n°10: | CDMA Home Service Provider Name            | Yes       |         |
| Service n°11: | Data Download via SMS Broadcast (for CCAT) | Option    |         |
| Service n°12: | Data Download via SMS-PP (for CCAT)        | Option    |         |
| Service n°13: | Call Control (for CCAT)                    | Option    |         |
| Service n°14: | 3GPD-SIP                                   | Option    |         |
| Service n°15: | 3GPD-MIP                                   | Option    |         |
| Service n°16: | AKA                                        | Yes       |         |
| Service n°17: | IP-based Location Services (LCS)           | Option    |         |
| Service n°18: | BCMCS                                      | Option    |         |
| Service n°19: | Multimedia Messaging Service (MMS)         | Option    |         |
| Service n°20: | Extension 8                                | Option    |         |
| Service n°21: | MMS User Connectivity Parameters           | Option    |         |
| Service n°22: | Application Authentication                 | Option    |         |
| Service n°23: | Group Identifier Level 1                   | Option    |         |
| Service n°24: | Group Identifier Level 2                   | Option    |         |
| Service n°25: | De-Personalization Control Keys            | Option    |         |
| Service n°26: | Cooperative Network List                   | Option    |         |
| Service n°27: | Outgoing Call Information (OCI)            | Option    |         |
| Service n°28: | Incoming Call Information (ICI)            | Option    |         |
| Service n°29: | Extension 5                                | Option    |         |
| Service n°30: | Multimedia Storage                         | Option    |         |
| Service n°31: | Image (EFIMG)                              | Option    |         |
| Service n°32: | Enabled Services Table                     | Yes       |         |
| Service n°33: | Capability Configuration Parameters (CCP)  | Option    |         |
| Service n°34: | SF_EUIMID-based EUIMID                     | Option    |         |
| Service n°35: | Messaging and 3GPD Extensions              | Option    |         |
| Service n°36: | Root Certificates                          | Option    |         |
| Service n°37: | WAP Browser                                | Option    |         |
| Service n°38: | Java                                       | Option    |         |
| Service n°39: | Reserved for CDG                           | No        |         |
| Service n°40: | Reserved for CDG                           | No        |         |
| Service n°41: | IPv6                                       | Option    |         |
| Service n°42: | Proactive CSIM (for CCAT)                  | Option    |         |

#### EF<sub>SPC</sub> (Service Programming Code)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

#### EF<sub>OTAPASPC</sub> (OTAPA/SPC\_Enabled)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

#### EF<sub>NAMLOCK</sub> (NAM\_LOCK)

The programming of this EF is a test house option.

#### EF<sub>OTA</sub> (OTASP/OTAPA Features)

The programming of this EF is a test house option.

#### EF<sub>SP</sub> (Service Preferences)

The programming of this EF is a test house option.

**EF<sub>ESN\_MEID\_ME</sub> (ESN\_ME or MEID\_ME)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>LI</sub> (Language Indication)**

The programming of this EF is a test house option.

**EF<sub>FDN</sub> (Fixed Dialling Numbers)**

The programming of this EF is a test house option.

**EF<sub>SMS</sub> (Short Messages)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>SMSP</sub> (Short Message Service Parameters)**

Record size: 12 Bytes

Record count: 1

Record 1:

Default values: Bytes 1 to 23 (HEX): 00 02 10 02 5D FE FF FF 02 F5 FF FF FF FF FF FF FF  
08 03 08 01 C0

The interpretation of the default values in this record read as follows:

Teleservice Identifier: CDMA Cellular Messaging Teleservice [CMT-95]

Parameter Indicators: MSG\_ENCODING, Validity Period, Bearer Data

Message Encoding: 7-bit ASCII

Validity Period: Indefinite

Bearer Data:

Priority Indicator: Emergency

**EF<sub>SMSS</sub> (SMS Status)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>SSFC</sub> (Supplementary Services Feature Code Table)**

The programming of this EF is a test house option.

**EF<sub>SPN</sub> (CDMA Home Service Provider Name)**

File size: 35 Bytes

Default values: Bytes 1 to 35 (HEX): 01 02 01 44 65 66 61 75 6C 74 20 53 65 72 76 69 63 65 20 50 72 6F  
76 69 64 65 72 20 4E 61 6D 65 FF FF FF

The interpretation of the default values read as follows:

Display Condition: Display of registered system is required

Character Encoding: 7-bit ASCII

Language Indicator: 1 (English)

Service Provider Name: “Default Service Provider Name”

EF<sub>USGIND</sub> (UIMID/SF\_EUIMID Usage Indicator)

The programming of this EF is a test house option.

EF<sub>AD</sub> (Administrative Data)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>MDN</sub> (Mobile Directory Number)

The programming of this EF is a test house option.

EF<sub>MAXPRL</sub> (Maximum PRL)

The programming of this EF is a test house option.

EF<sub>SPCS</sub> (SPC Status)

If EF<sub>SPC</sub> is set to default value of ‘00 00 00’, then EF<sub>SPCS</sub> shall be set to ‘00’, otherwise it shall be set to ‘01’.

EF<sub>ECC</sub> (Emergency Call Codes)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>ME3GPDOPC</sub> (ME 3GPD Operation Capability)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>3GPDOPM</sub> (3GPD Operation Mode)

The programming of this EF is a test house option.

EF<sub>SIPCAP</sub> (SimpleIP Capability Parameters)

The programming of this EF is a test house option.

EF<sub>MIPCAP</sub> (MobileIP Capability Parameters)

The programming of this EF is a test house option.

EF<sub>SIPUPP</sub> (SimpleIP User Profile Parameters)

The programming of this EF is a test house option.

EF<sub>MIPUPP</sub> (MobileIP User Profile Parameters)

The programming of this EF is a test house option.

EF<sub>SIPSP</sub> (SimpleIP Status Parameters)

The programming of this EF is a test house option.

EF<sub>MIPSP</sub> (MobileIP Status Parameters)

The programming of this EF is a test house option.

**EF<sub>SIPPAPSS</sub> (SimpleIP PAP SS Parameters)**

The programming of this EF is a test house option.

**EF<sub>PUZL</sub> (Preferred User Zone List)**

The programming of this EF is a test house option.

**EF<sub>MAXPUZL</sub> (Maximum PUZL)**

The programming of this EF is a test house option.

**EF<sub>MECRP</sub> (ME-specific Configuration Request Parameters)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>HRPDCAP</sub> (HRPD Access Authentication Capability Parameters)**

File size: 3 Bytes

Default values: Bytes 1 to 3 (HEX): 20 F8 80

The interpretation of the default values read as follows:

Maximum NAI Length: 32

Maximum Length of Shared Secret: 31

Authentication Algorithms: PPP CHAP

**EF<sub>HRPDUPP</sub> (HRPD Access Authentication User Profile Parameters)**

File size: 14 Bytes

Default values: Bytes 1 to 14 (HEX): 0D 0B 61 62 63 40 78 79 7A 2E 63 6F 6D 10

The interpretation of the default values read as follows:

HRPD Profile NAI: "abc@xyz.com"

HRPD Profile Authentication Algorithm: CHAP

**EF<sub>CSSPR</sub> (CUR\_SSPR\_P\_REV)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>ATC</sub> (Access Terminal Class)**

The programming of this EF is a test house option.

**EF<sub>EPRL</sub> (Extended Preferred Roaming List)**

File size: 129 Bytes

Default values: Bytes 1 to 16 (HEX): 00 81 00 00 03 00 01 80 00 04 00 0A 04 01 64 03

Bytes 17 to 32 (HEX): 0B 0B 04 01 64 03 F5 0A 04 0A 58 08 19 0B 04 0A

Bytes 33 to 48 (HEX): 58 0C 97 0A 02 31 13 0B 02 30 C8 71 C0 02 00 10

Bytes 49 to 64 (HEX): 1F 01 00 C8 FF FF 00 80 00 38 E0 08 00 00 80 00

Bytes 65 to 80 (HEX): 71 E0 12 00 10 1F 01 00 C8 FF FF 00 80 00 38 E0

Bytes 81 to 96 (HEX): 18 00 00 80 00 71 C0 22 00 10 1F 01 00 C8 FF FF

Bytes 97 to 112 (HEX): 00 80 80 38 E0 28 00 00 80 80 71 E0 02 00 10 1F

Bytes 113 to 128 (HEX): 01 00 C8 FF FF 00 80 80 38 E0 08 00 00 80 80 2B

Byte 129 (HEX): 6B

The interpretation of the default values read as follows:

PRL ID – 0

List Type: IS-683D

Preferred only – 0

Default roaming indication – 0

Number of acquisition records – 6

- Index: 0, Type: CDMA Generic, Band: 0, Channel: 356 and 779
- Index: 1, Type: HDR Generic Band: 0, Channel: 356 and 1013
- Index: 2, Type: CDMA Generic, Band: 1, Channel: 600 and 25
- Index: 3, Type: HDR Generic, Band: 1, Channel: 600 and 1175
- Index: 4, Type: CDMA Generic, Band: 6, Channel: 275
- Index: 5, Type: HDR Generic, Band: 6, Channel: 200

Number of records in the Common Subnet Table – 0

Number of system records – 8

- Acquisition Index: 1, Type: IS-856, Roam Indicator: 0, Subnet ID: /0, Association Tag: 0
- Acquisition Index: 3, Type: IS-856, Roam Indicator: 0, Subnet ID: /0, Association Tag: 0
- Acquisition Index: 5, Type: IS-856, Roam Indicator: 0, Subnet ID: /0, Association Tag: 1
- Acquisition Index: 1, Type: IS-856, Roam Indicator: 0, Subnet ID: /0, Association Tag: 1
- Acquisition Index: 0, Type: MCC-MNC-based, Roam Indicator: 0, Subnet ID: MCC-MNC SID/NID, MCC: 001, MNC: 01, SID: 200, NID: 65535100, Association Tag: 0
- Acquisition Index: 2, Type: MCC-MNC-based, Roam Indicator: 0, Subnet ID: MCC-MNC SID/NID, MCC: 001, MNC: 01, SID: 200, NID: 65535100, Association Tag: 0
- Acquisition Index: 4, Type: MCC-MNC-based, Roam Indicator: 0, Subnet ID: MCC-MNC SID/NID, MCC: 001, MNC: 01, SID: 200, NID: 65535100, Association Tag: 1
- Acquisition Index: 0, Type: MCC-MNC-based, Roam Indicator: 0, Subnet ID: MCC-MNC SID/NID, MCC: 001, MNC: 01, SID: 200, NID: 65535, Association Tag: 1

EF<sub>MSPL</sub> (Multimode system selection System Priority List)

File size: 18 Bytes

Default values: Bytes 1 to 18 (HEX): 00 0F 01 00 01 01 01 03 07 08 02 0C 00 3E 00 FF FF FF

The interpretation of the default values read as follows:

Current MMSS\_P\_REV – 1

MLPL Version ID – 1

MLPL Identification – 1

Number of MLPL Records – 1

- Index: 1, Location Parameter Type Value: default, MSPL Index: 1

EF<sub>MLPL</sub> (Multimode system selection Location associated Priority List)

File size: 18 Bytes

Default values: Bytes 1 to 18 (HEX): 00 09 01 00 01 01 01 00 01 FF FF FF FF FF FF FF FF

The interpretation of the default values read as follows:

Current MMSS\_P\_REV – 1

MSPL Version ID – 1

MSPL Block 1:

MSPL Identification – 1,

Number of MSPL ID1 records – 3

- Index 1: System Type: EUTRA, Priority Class: Home Only, System Priority: 1, Higher Priority Search Time: 64 minutes, Network Capability Indicator: no Network CAP used
- Index 2: System Type: cdma2000 HRPD, Priority Class: Home + Preferred, System Priority: 1, Higher Priority Search Time: 64 minutes, Network Capability Indicator: no Network CAP used
- Index 3: System Type: cdma2000 AI, Priority Class: Any, System Priority: 1, Higher Priority Search Time: 64 minutes, Network Capability Indicator: no Network CAP used

EF<sub>BCSMScfg</sub> (Broadcast Short Message Configuration)

The programming of this EF is a test house option.

EF<sub>BCSMSpref</sub> (Broadcast Short Message Preference)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>BCSMStable</sub> (Broadcast Short Message Table)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>BCSMSP</sub> (Broadcast Short Message Parameter)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>BAKPARA</sub> (Currently used BAK Parameters)

The programming of this EF is a test house option.

EF<sub>UpBAKPARA</sub> (Updated BAK Parameters)

The programming of this EF is a test house option.

EF<sub>MMSN</sub> (MMS Notification)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>EXT8</sub> (Extension 8)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>MMSICP</sub> (MMS Issuer Connectivity Parameters)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>MMSUP</sub> (MMS User Preferences)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>MMSUCP</sub> (MMS User Connectivity Parameters)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>AuthCapability</sub> (Authentication Capability)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>3GCIK</sub> (3G Cipher and Integrity Keys)**

The programming of this EF is a test house option.

**EF<sub>DCK</sub> (De-Personalization Control Keys)**

The programming of this EF is a test house option.

**EF<sub>GID1</sub> (Group Identifier Level 1)**

The programming of this EF is a test house option.

**EF<sub>GID2</sub> (Group Identifier Level 2)**

The programming of this EF is a test house option.

**EF<sub>CDMACNL</sub> (CDMA Co-operative Network List)**

The programming of this EF is a test house option.

**EF<sub>HOME\_TAG</sub> (Home System Tag)**

The programming of this EF is a test house option.

**EF<sub>GROUP\_TAG</sub> (Group Tag List)**

The programming of this EF is a test house option.

**EF<sub>SPECIFIC\_TAG</sub> (Specific Tag List)**

The programming of this EF is a test house option.

**EF<sub>CALL\_PROMPT</sub> (Call Prompt List)**

The programming of this EF is a test house option.

**EF<sub>SF\_EUIMID</sub> (Short Form EUIMID)**

Specified by CSIM Manufacturer.

**EF<sub>EST</sub> (Enabled Service Table)**

The programming of this EF is a test house option.

**EF<sub>HiddenKey</sub> (Key for hidden phone book entries)**

The programming of this EF is a test house option.

**EF<sub>LCSVER</sub> (LCS Protocol Version)**

The programming of this EF is a test house option.

**EF<sub>LCSCP</sub> (LCS Connectivity Parameter)**

The programming of this EF is a test house option.

**EF<sub>SDN</sub> (Service Dialling Numbers)**

The programming of this EF is a test house option.

**EF<sub>EXT2</sub>(Extension2)**

The programming of this EF is a test house option.

**EF<sub>EXT3</sub>(Extension3)**

The programming of this EF is a test house option.

**EF<sub>ICI</sub> (Incoming Call Information)**

The programming of this EF is a test house option.

**EF<sub>OCI</sub> (Outgoing Call Information)**

The programming of this EF is a test house option.

**EF<sub>EXT5</sub> (Extension 5)**

The programming of this EF is a test house option.

**EF<sub>CCP2</sub> (Capability Configuration Parameters 2)**

The programming of this EF is a test house option.

**EF<sub>AppLabels</sub> (Application Labels)**

The programming of this EF is a test house option.

**EF<sub>Model</sub> (Device Model Information)**

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

**EF<sub>RC</sub> (Root Certificates)**

The programming of this EF is a test house option.

**EF<sub>SMSCAP</sub> (SMS Capabilities)**

File size: 4 Bytes

Default values: Bytes 1 to 4 (HEX): 3C 08 07 01

The interpretation of the default values read as follows:

SMS Retry Period: 60 seconds

SMS Retry Interval: 8 seconds

SMS Flags:

Send On Access: True

Send on Traffic: True

Send as Standard EMS: True

SMS Preferred Service Option: SO 6

EF<sub>MIPFlags</sub> (MobileIP Flags)

The programming of this EF is a test house option.

EF<sub>3GPDUPPEExt</sub> (3GPD User Profile Parameters Extension)

The programming of this EF is a test house option.

EF<sub>IPv6CAP</sub> (IPv6 Capabilities)

The programming of this EF is a test house option.

EF<sub>TCPConfig</sub> (TCp Configurations)

The programming of this EF is a test house option.

EF<sub>DGC</sub> (Data Generic Configurations)

The programming of this EF is a test house option.

EF<sub>WAPBrowserCP</sub> (WAP Browser Connectivity Parameters)

The programming of this EF is a test house option.

EF<sub>WAPBrowserBM</sub> (WAP Browser Bookmarks)

The programming of this EF follows default parameter written in 3GPP2 C.S0065-B [48], Annex E.

EF<sub>MMSConfig</sub> (MMS Configuration)

The programming of this EF is a test house option.

EF<sub>JDL</sub> (Java Download URL)

The programming of this EF is a test house option.

#### 4.9.3.3 Modified contents of the USIM Elementary Files and additional USIM Elements files at the MCPTT level

EF<sub>UST</sub> (USIM Service Table)

| Services                                                  | Description | Activated | Version |
|-----------------------------------------------------------|-------------|-----------|---------|
| Service n°109                                             | MCPTT       | Optional  |         |
| Note: Only the relevant MCPTT related services indicated. |             |           |         |

**EF<sub>MST</sub> (MCPTT Service Table)**

If service n°109 is "available" in the USIM Service Table or service n°15 is "available" in the ISIM Service Table, this file shall be present. This EF indicates the coding of the MCPTT management objects and which MCPTT services are available. If a service is not indicated as available in the MCPTT Service Table, the ME shall not select this service.

Coding of the MCPTT management objects = '00' (XML format).

| Services     | Description                | Activated | Version |
|--------------|----------------------------|-----------|---------|
| Service n°1: | UE configuration data      |           |         |
| Service n°2: | User configuration data    |           |         |
| Service n°3: | Group configuration data   |           |         |
| Service n°4: | Service configuration data |           |         |

**EF<sub>MCPTT\_CONFIG</sub> (MCPTT configuration data)**

If service n°1, 2, 3 or 4 is "available" in the MCPTT Service Table, this file shall be present.

Encoded in XML format (as specified in the MCPTT Service Table).

| MCPTT configuration data objects                                                                                          | Tag Values | Condition                                                                 |
|---------------------------------------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------|
| MCPTT UE configuration data                                                                                               | '80'       | Shall be present if service n°1 is "available" in the MCPTT service table |
| MCPTT User configuration data                                                                                             | '81'       | Shall be present if service n°2 is "available" in the MCPTT service table |
| MCPTT Group configuration data                                                                                            | '82'       | Shall be present if service n°3 is "available" in the MCPTT service table |
| MCPTT Service configuration data                                                                                          | '83'       | Shall be present if service n°4 is "available" in the MCPTT service table |
| Note: MCPTT configuration data objects, as specified in 3GPP TS 24.483 [66] Annex B.2, Annex B3, Annex B.4 and Annex B.5. |            |                                                                           |

#### 4.9.3.4 Modified contents of the USIM Elementary Files and additional USIM Elements files at the DF<sub>V2X</sub> level

**EF<sub>UST</sub> (USIM Service Table):**

| Services                                   |     | Activated | Version |
|--------------------------------------------|-----|-----------|---------|
| Service n°119                              | V2X | Optional  |         |
| Note: Only V2X related services indicated. |     |           |         |

**EF<sub>VST</sub> (V2X Service Table)**

If service n°119 is "available" in the USIM Service Table, this file shall be present. This EF indicates the coding of the V2X management objects and which V2X services are available.

File size: 2 Bytes

Default values: Bytes 1 to 2 (HEX): 00 01

Coding of the V2X management objects is XML format described in TS 24.385 [97].

Service n°1 V2X configuration data is supported.

**EF<sub>V2X\_CONFIG</sub> (V2X configuration data)**

This EF contains zero, one or more V2X configuration data objects, as specified in TS 24.385 [97].

File size: 1+X Bytes

Default values: Bytes 1 (HEX): 80

Bytes 2 to X (HEX): Coding result of V2X management objects

Coding of the V2X management objects is XML format described in TS 24.385.

V2X configuration data object tag:

| V2X configuration data objects                                | Tag Values | Condition                                                               |
|---------------------------------------------------------------|------------|-------------------------------------------------------------------------|
| V2X configuration data                                        | '80'       | Shall be present if service n°1 is "available" in the V2X service table |
| Note: V2X configuration data objects, as specified in 4.10.2. |            |                                                                         |

#### 4.9.3.5 Modified contents of the Elementary Files for eCall over IMS

For the eCall over IMS test cases EFs shall be extended as follows:

- Table 4.9.3.5-1 specifies the EF extensions for test cases for eCall capable supporting UEs,
- Table 4.9.3.5-2 specifies the EF extensions for test cases for eCall only supporting UEs.

**Table 4.9.3.5-1: EF extensions eCall capable UEs**

| EF field             | Value                                                                                                                                                     |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| EF <sub>UST</sub>    | Service n°4 Service Dialling Numbers (SDN), Service n°99 URI support by UICC, Service n°89 eCall Data and Service n°112 eCall Data over IMS are available |
| EF <sub>EST</sub>    | Services n°1 Fixed Dialling Numbers (FDN) is disabled                                                                                                     |
| EF <sub>SDN</sub>    | Last two entries of SDNs, eCall Test Number (123456) and eCall reconfiguration number (345678)                                                            |
| EF <sub>SDNURI</sub> | Last two entries of SDNs, eCall Test Number (tel:123456) and eCall reconfiguration number (tel:345678)                                                    |

**Table 4.9.3.5-2: EF extensions for eCall only UEs**

| EF field             | Value                                                                                                                                                   |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| EF <sub>UST</sub>    | Service n°2 Fixed Dialling Numbers (FDN), Service n°99 URI support by UICC, Service n°89 eCall Data and Service n°112 eCall Data over IMS are available |
| EF <sub>EST</sub>    | Service n°1 Fixed Dialling Numbers (FDN) is enabled                                                                                                     |
| EF <sub>FDN</sub>    | Two entries of FDNs, eCall Test Number (123456) and eCall reconfiguration number (345678)                                                               |
| EF <sub>FDNURI</sub> | Two entries of FDNs, eCall Test Number (tel:123456) and eCall reconfiguration number (tel:345678)                                                       |

#### 4.9.3.6 Modified contents of the Elementary Files for MPS when access to EPC/5GC is WLAN

For the MPS when access to EPC/5GC is WLAN test cases, EFs shall be extended as follows:

- Table 4.9.3.6-1 specifies the EF extensions for test cases for MPS when access to EPC/5GC is WLAN,

**Table 4.9.3.6-1: EF extensions for MPS when access to EPC/5GC is WLAN UEs**

| EF field                | Value                                                                                                                           |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| EF <sub>UAC_AIC</sub>   | Byte 1:<br>b1 = 1 (UE is configured for Multimedia Priority Service in the HPLMN, EHPLMN or a visited PLMN of the home country) |
| EF <sub>NASCONFIG</sub> | Additional NAS configuration parameters:<br>b2 = 1 (MPS access is enabled)<br>b3 = 1 (high priority access is enabled)          |

## 4.10 V2X reference configuration

This clause contains the default reference pre-configurations, which apply to all V2X test cases unless otherwise specified.

### 4.10.1 Reference configuration for V2X Sidelink Communication

ROHC compression is not applied in test cases simulating in coverage and out-of-coverage scenarios.

Ciphering is not configured on SLRB.

#### 4.10.1.1 V2X Sidelink Communication *Preconfiguration* for out-of-network coverage operation

The IE *SL-V2X-Preconfiguration* contains the resource pool information for V2X sidelink communication.

**Table 4.10.1.1-1: SL-V2X-Preconfiguration**

| Derivation Path: 36.331 clause 9.3.2                                        |                                      |         |           |
|-----------------------------------------------------------------------------|--------------------------------------|---------|-----------|
| Information Element                                                         | Value/remark                         | Comment | Condition |
| SL-V2X-Preconfiguration-r14 ::= SEQUENCE {                                  |                                      |         |           |

### 4.10.2 V2X management data object configuration

V2X management data object is specified in 3GPP TS 24.385. This subclause provides the default content of V2X management object for conformance testing.

The V2X management data object can be configured in USIM or pre-configured in ME.

| Derivation Path: TS 24.385 clause 5 |           |         |
|-------------------------------------|-----------|---------|
| V2X management objects              | MO Values | Comment |

|                          |                                                                                                                |                                                                                                                                  |

## 4.11 GNSS Requirements for V2X and MCS testing

### 4.11.1 General

This clause defines the GNSS scenarios and requirements which apply for all V2X and MCS test cases that require simulated GNSS signals, unless otherwise specified.

The term SV ID used in this clause is defined as the satellite PRN for GPS and Modernized GPS, as Code Number for Galileo, as the satellite Slot Number for GLONASS and as the Ranging Code Number for BDS.

### 4.11.2 GNSS Scenarios

The following GNSS scenarios shall be used.

- Rinex navigation data: the required navigation data file(s) available in the GNSS orbital data sig zip file specified in TS 37.571-5 [68] Annex B are given in Table 4.11.2-1.

**Table 4.11.2-1: Rinex navigation data files for V2X and MCS testing**

| GNSS supported by UE                                                                                        | Rinex file(s) <sup>(1)</sup>         |
|-------------------------------------------------------------------------------------------------------------|--------------------------------------|
| GPS                                                                                                         | Sig GNSS GPS 2020_9_17 Rinex.txt     |
| GLONASS                                                                                                     | Sig GNSS GLONASS 2020_9_17 Rinex.txt |
| Galileo                                                                                                     | Sig GNSS Galileo 2020_9_17 Rinex.txt |
| BDS                                                                                                         | Sig GNSS BDS 2020_9_17 Rinex.txt     |
| Note 1: Where the UE supports more than one GNSS then all the relevant Rinex navigation data files are used |                                      |

- UE location(s) and motion:

Latitude: the simulated latitude(s) are given in Table 4.11.2-3

Longitude: the simulated longitude(s) are given in Table 4.11.2-3

Height: the simulated height is 30m

Motion: the simulated motion(s) are given in Table 4.11.2-2

**Table 4.11.2-2: UE location(s) and motion(s) for V2X and MCS testing**

| Scenario number and description | Step # | Action (Location details given in Table 4.11.2-3) | Notes |
|---------------------------------|--------|---------------------------------------------------|-------|
|---------------------------------|--------|---------------------------------------------------|-------|

|                                                                                                                                                                                                                                                                                                                                                     |   |                                                                                                   |                                                                                                                                                                                                                                             |

|                                                                                                                                                                                                                                                                                                                                                     | 5 | Static at location #8                                                                             |                                                                                                                                                                                                                                             |
| Note 1: Geographical area #1 is defined in clause 4.9.3.1 and is defined by four points with the following coordinates:<br>Point 1: latitude: 35.753056, longitude: 139.689167<br>Point 2: latitude: 35.735278, longitude: 139.689167<br>Point 3: latitude: 35.744167, longitude: 139.709167<br>Point 4: latitude: 35.753056, longitude: 139.709167 |   |                                                                                                   |                                                                                                                                                                                                                                             |

Table 4.11.2-3: Location descriptions for V2X and MCS testing

| Location number | Description for information only                                                       | Latitude (degrees) | Longitude (degrees) |
|-----------------|----------------------------------------------------------------------------------------|--------------------|---------------------|
| #1              | Approximate centre of Geographical area #1                                             | 35.74428           | 139.69916           |
| #2              | Approximately 1720m due west of location #1, outside Geographical area #1              | 35.74428           | 139.68017           |
| #3              | Centre of zone id0 inside Geographical area #1, see Table 4.11.2-4 and Figure 4.11.2-1 | 35.74478           | 139.70333           |
| #4              | Centre of zone id1 inside Geographical area #1, see Table 4.11.2-4 and Figure 4.11.2-1 | 35.74478           | 139.70540           |
| #5              | Centre of zone id3 inside Geographical area #1, see Table 4.11.2-4 and Figure 4.11.2-1 | 35.74523           | 139.70716           |

|    |                                                                                        |          |           |
|----|----------------------------------------------------------------------------------------|----------|-----------|
| #6 | Centre of zone id2 inside Geographical area #1, see Table 4.11.2-4 and Figure 4.11.2-1 | 35.74523 | 139.70508 |
| #7 | Approximately 100m due west of location #1, inside Geographical area #1                | 35.74428 | 139.69806 |
| #8 | Approximately 100m due west of location #7, inside Geographical area #1                | 35.74428 | 139.69695 |

Table 4.11.2-4: Zone id calculations for V2X testing

| Description        | Latitude (degrees) | Longitude (degrees) | Long distance from 0,0 in m (x)<br>Note 1 | Lat distance from 0,0 in m (y)<br>Note 1 | Values for zone_id calculation (Nx, Ny = 2, L = 100, W = 50 Note 2)<br>Note 3 |
|--------------------|--------------------|---------------------|-------------------------------------------|------------------------------------------|-------------------------------------------------------------------------------|
| Centre of zone id0 | 35.74478           | 139.70333           | 11061850                                  | 3957225                                  | y <sub>1</sub> = 0, x <sub>1</sub> = 0                                        |
| Centre of zone id1 | 35.74478           | 139.70540           | 11061950                                  | 3957225                                  | y <sub>1</sub> = 0, x <sub>1</sub> = 1                                        |
| Centre of zone id2 | 35.74523           | 139.70508           | 11061850                                  | 3957275                                  | y <sub>1</sub> = 1, x <sub>1</sub> = 0                                        |
| Centre of zone id3 | 35.74523           | 139.70716           | 11061950                                  | 3957275                                  | y <sub>1</sub> = 1, x <sub>1</sub> = 1                                        |

Note 1: all distances are +/- 1m  
Note 2: zone length (longitude) is set to 100m, zone width (latitude) is set to 50m in accordance with TS 36.523-1 [18] Table 24.1.8.3.3-1 and Table 24.1.9.3.3-1, this allows for the accuracy with which a UE can define its position which is assumed to be +/- 15m. Zone id longitude modulus and zone id latitude modulus are set to 2 in accordance with TS 36.523-1 [18] Table 24.1.8.3.3-1 and Table 24.1.9.3.3-1.  
Note 3: zone ids are calculated according to TS 36.331 [17] clause 5.10.13.2

Figure 4.11.2-1: Zones and motions for scenario #3 for V2X testing (not to scale)

- Nominal start time:

17<sup>th</sup> September 2020 23:40:00 (GPS time)\

- Visible satellites to be simulated are given in Table 4.11.2-5 and are above 15 degrees elevation with respect to the UE. These satellites have been selected to give a reasonable HDOP for the duration of the test.

**Table 4.11.2-5: Satellites to be simulated for V2X and MCS testing**

| GNSS supported by UE                                                                            | SV IDs of Satellites to be simulated <sup>(1)</sup> |
|-------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| GPS                                                                                             | 3, 4, 6, 17, 19, 28                                 |
| GLONASS                                                                                         | 3, 4, 5, 10, 18, 19                                 |
| Galileo                                                                                         | 3, 5, 13, 15, 21, 27                                |
| BDS                                                                                             | 38, 40, 42, 43, 59, 60                              |
| Note 1: Where the UE supports more than one GNSS then all the relevant satellites are simulated |                                                     |
| Note 2: For BDS, the satellite types are as follows: GEO: 59, 60, IGSO: 38, 40, MEO: 42, 43     |                                                     |

- The levels of the simulated satellites are given in Table 4.11.2-6 and shall be generated with an accuracy of +/- 3 dB. These conditions are defined for when there is no GNSS assistance data available at the UE and are specified in TS 36.133 [39] clause B.6.

**Table 4.11.2-6: GNSS Reference Signal Power Requirements**

| System                                                                                                   | Parameters                                      | Unit | Value  |
|----------------------------------------------------------------------------------------------------------|-------------------------------------------------|------|--------|
|                                                                                                          | Number of generated satellites per system       | -    | 6      |
| GPS <sup>(1)</sup>                                                                                       | Reference signal power level for all satellites | dBm  | -128.5 |
| Galileo                                                                                                  | Reference signal power level for all satellites | dBm  | -127   |
| GLONASS                                                                                                  | Reference signal power level for all satellites | dBm  | -131   |
| BDS                                                                                                      | Reference signal power level for all satellites | dBm  | -133   |
| NOTE 1: "GPS" here means GPS L1 C/A, Modernized GPS, or both, dependent on UE capabilities.              |                                                 |      |        |
| NOTE 2: The DUT UE shall support at least one system and will be configured for the supported system(s). |                                                 |      |        |

- Ionospheric model: simulated values are given in Tables 4.11.2-7 and 4.11.2-8.

**Table 4.11.2-7: Klobuchar ionospheric model for GPS or GLONASS or BDS if supported by the UE**

| Model element | Units                          | Value/remark    |
|---------------|--------------------------------|-----------------|
| alfa0         | seconds                        | 4.6566129 10E-9 |
| alfa1         | sec/semi-circle                | 1.4901161 10E-8 |
| alfa2         | sec/(semi-circle) <sup>2</sup> | -5.96046 10E-8  |
| alfa3         | sec/(semi-circle) <sup>3</sup> | -5.96046 10E-8  |
| beta0         | seconds                        | 79872           |
| beta1         | sec/semi-circle                | 65536           |
| beta2         | sec/(semi-circle) <sup>2</sup> | -65536          |
| beta3         | sec/(semi-circle) <sup>3</sup> | -393216         |

**Table 4.11.2-8: neQuick ionospheric model for Galileo if supported by the UE**

| Model Element | Units                               | Value/remark |
|---------------|-------------------------------------|--------------|
| ai0           | solar flux unit                     | 64.4         |
| ai1           | solar flux unit/degree              | 0            |
| ai2           | solar flux unit/degree <sup>2</sup> | 0            |

- Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [70].

## 4.12 GNSS Requirements for aerial testing

### 4.12.1 General

This clause defines the GNSS scenarios and requirements which apply for all aerial test cases that require simulated GNSS signals, unless otherwise specified.

The term SV ID used in this clause is defined as the satellite PRN for GPS and Modernized GPS, as Code Number for Galileo, as the satellite Slot Number for GLONASS and as the Ranging Code Number for BDS.

## 4.12.2 GNSS Scenarios

The following GNSS scenarios shall be used.

- Rinex navigation data: the required navigation data file(s) available in the GNSS orbital data sig zip file specified in TS 37.571-5 [68] Annex B are given in Table 4.12.2-0.

**Table 4.12.2-0: Rinex navigation data files for Aerial testing**

| GNSS supported by UE                                                                                        | Rinex file(s) <sup>(1)</sup>         |
|-------------------------------------------------------------------------------------------------------------|--------------------------------------|
| GPS                                                                                                         | Sig GNSS GPS 2020_9_17 Rinex.txt     |
| GLONASS                                                                                                     | Sig GNSS GLONASS 2020_9_17 Rinex.txt |
| Galileo                                                                                                     | Sig GNSS Galileo 2020_9_17 Rinex.txt |
| BDS                                                                                                         | Sig GNSS BDS 2020_9_17 Rinex.txt     |

| #3              | 43.308318          | -5.697122           | See test case              |       |

- Nominal start time:

Current date at 07:31:00 (GPS time).

- Visible satellites to be simulated are given in Table 4.12.2-3 and are above 15 degrees elevation with respect to the UE. These satellites have been selected to give a reasonable HDOP for the duration of the test.

**Table 4.12.2-3: Satellites to be simulated for Aerial testing**

| GNSS supported by UE                                                                            | SV IDs of Satellites to be simulated <sup>(1)</sup> |
|-------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| GPS                                                                                             | 3, 4, 6, 17, 19, 28                                 |
| GLONASS                                                                                         | 3, 4, 5, 10, 18, 19                                 |
| Galileo                                                                                         | 3, 5, 13, 15, 21, 27                                |
| BDS                                                                                             | 38, 40, 42, 43, 59, 60                              |
| Note 1: Where the UE supports more than one GNSS then all the relevant satellites are simulated |                                                     |
| Note 2: For BDS, the satellite types are as follows: GEO: 59, 60, IGSO: 38, 40, MEO: 42, 43     |                                                     |

- The levels of the simulated satellites are given in Table 4.11.2-6 and shall be generated with an accuracy of +/- 3 dB.
- Ionospheric model: simulated values are given in Tables 4.11.2-7 and 4.11.2-8.
- Tropospheric model: STANAG with SRI equal to 324.8, as defined in STANAG 4294 [70].

## 4.13 UE position requirements for NTN testing

Clauses 4.14 and 8.1.5B define the common test environment which applies to all test cases executed for eMTC and NB-IoT NTN UEs, unless otherwise specified.

- UE's positioning engine (e.g., standalone GNSS receiver) shall be enabled to allow it to acquire the position. UE position during the test is stationary. Below position shall be used to pre-configure UE position:
  - Latitude: 25.08439333
  - Longitude: 121.56076999
  - Altitude: 0

## 4.14 Common test environment for Vertical UEs

### 4.14.1 eMTC NTN

This clause defines the common test environment which applies to all test cases executed for eMTC NTN UEs, unless otherwise specified.

- Test configures following IEs with condition NTN of *MasterInformationBlock* in Table 4.4.3.2-1, *SystemInformationBlockType1-BR* in Table 4.4.3.3-3A, *SystemInformationBlockType31* in Table 4.4.3.3-21 and *RadioResourceConfigCommonSIB-DEFAULT* in Table 4.6.3-14.
- Test uses system information combination 32 for single cell scenario and combination 33 for intra-frequency multi cell scenario.

## 5 Test environment for RF test

This section contains all the exceptions of the common test parameters specified in clause 4 for specific needs of test cases defined in TS 36.521-1 [21]. Exceptions specified in clause 5 overwrite the parameter settings of clause 4; exceptions defined within the test cases overwrite parameter settings of clause 4 and 5.

### 5.1 Requirements of test equipment

No common RF test environment requirements are specified in addition to the common requirements described in clause 4.2. Specific RF requirements are indicated within the test cases defined in TS 36.521-1 [21].

### 5.2 RF Reference system configurations

#### 5.2.1 Common parameters for simulated E-UTRA cells

For BL/CE testing the same content of system information blocks SIB2, SIB3, SIB5 and SIB13 are used for broadcasting on BCCH and/or BCCH-BR.

##### 5.2.1.1 Combinations of system information blocks

The combination of system information blocks required by a test case depends on the test case scenario. In this clause, the following combinations of system information blocks are defined.

Combination 1 is the default combination which applies to the following test case scenarios:

- E-UTRA FDD single cell scenario
- E-UTRA TDD single cell scenario
- E-UTRA FDD intra-frequency multi cell scenario
- E-UTRA TDD intra-frequency multi cell scenario

Combination 2 applies to the following test case scenarios:

- E-UTRA FDD + MBMS
- E-UTRA TDD + MBMS

Combination 3 applies to the following test case scenarios:

- E-UTRA FDD intra-band carrier aggregation component carriers cell scenario
- E-UTRA FDD inter-band carrier aggregation component carriers cell scenario
- E-UTRA TDD intra-band carrier aggregation component carriers cell scenario

The combinations of system information blocks for test cases in TS 36.521-1 [21] is defined in table 5.2.1.1-1.

**Table 5.2.1.1-1: Combinations of system information blocks**

| Combination No. | System information block type |      |      |      |      |      |      |      |       |       |       |       |
|-----------------|-------------------------------|------|------|------|------|------|------|------|-------|-------|-------|-------|
|                 | SIB2                          | SIB3 | SIB4 | SIB5 | SIB6 | SIB7 | SIB8 | SIB9 | SIB10 | SIB11 | SIB12 | SIB13 |
| 1               | X                             | X    |      |      |      |      |      |      |       |       |       |       |
| 2               | X                             | X    |      |      |      |      |      |      |       |       |       | X     |
| 3               | X                             | X    |      | X    |      |      |      |      |       |       |       |       |

### 5.2.1.2 Scheduling of system information blocks

The scheduling configurations for combinations of system information blocks are defined in the following tables. SIB1 will be transmitted during subframes#5 which SFN mod 2 = 0, and SIB2+SIB3 will be transmitted during subframes#5 which SFN mod 2 = 1 with 8 radio frames periodicity. SIB5 will be transmitted during subframes#5 which SFN mod 2 = 1 with 64 radio frames periodicity

**Table 5.2.1.2-1: Scheduling for combination 1**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 8                          | SIB2, SIB3                           |

**Table 5.2.1.2-2: Scheduling for combination 2**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 8                          | SIB2, SIB3                           |
| 2                          | 64                         | SIB13                                |

**Table 5.2.1.2-3: Scheduling for combination 3**

| Scheduling Information No. | Periodicity [radio frames] | Mapping of system information blocks |
|----------------------------|----------------------------|--------------------------------------|
| 1                          | 8                          | SIB2, SIB3                           |
| 2                          | 64                         | SIB5                                 |

### 5.2.1.3 Common contents of system information messages

#### - MasterInformationBlock

As defined in Table 4.4.3.2-1 without exceptions.

#### - SystemInformation

As defined in Table 5.2.1.3-1As defined in Table without exceptions.

## 5.2A.1A Registered, Idle Mode, UE Test Mode Activated (State 2A-RF)

### 5.2A.1A.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 5.2A.1A.2 Definition of system information messages

The default system information messages are used.

### 5.2A.1A.3 Procedure

**Table 5.2A.1A.3-1: UE registration with test mode activation procedure (state 1 to state 2A-RF)**

| Step     | Procedure                                                                                                            | Message Sequence |                                                                      |
|----------|----------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------------|
|          |                                                                                                                      | U - S            | Message                                                              |
| 1 to 9a2 | Steps 1 to 9a2 as specified in the procedure in clause 4.5.2.3 take place                                            | -                | -                                                                    |
| 10       | The SS transmits an <b>ACTIVATE TEST MODE</b> message to activate UE radio bearer test mode procedure.               | <--              | RRC: <i>DLInformationTransfer</i><br>TC: ACTIVATE TEST MODE          |

## 5.2A.1AA Registered, Idle Mode, UE Test Mode Activated in cell supporting BL/CE UE (State 2A-RF-CE)

The same assumptions and definitions apply as in clause 5.2A.1A.

### 5.2A.1AA.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 5.2A.1AA.2 Definition of system information messages

The default system information messages are used with the exceptions below.

**Table 5.2A.1AA.2-1: MasterInformationBlock**

Derivation Path: 36.508 Table 4.4.3.2-1 using condition CEmodeB if the test case specifically tests CE mode B else

|                        |
|------------------------|
| use condition CEmodeA. |
|------------------------|

**Table 5.2A.1AA.2-2: SystemInformation-BR-r13**

### 5.2A.1AA.3 Procedure

For RF testing of BL-UE use the same procedure as in clause 5.2A.1A.3 with the exception below:

- BR-BCCH replaces BCCH.

For RF testing of non-BL UE supporting CE use the procedure in Table 5.2A.1AA.3-1.

**Table 5.2A.1AA.3-1: UE registration procedure (state 1 to state 2A-RF-CE)**

| Step     | Procedure                                                                                                                                                                                                                                                                                                           | U - S | Message Sequence Message                   |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|--------------------------------------------|
| 1        | In addition to the system information broadcasted on BCCH the SS broadcasts <i>SystemInformation-BR-r13</i> , <i>SystemInformationBlockType1-BR-r13</i> and other relevant system information blocks as required by the specified combinations of system information blocks specified for the test case on BCCH-BR. | <--   | RRC: SYSTEM INFORMATION (BCCH and BCCH-BR) |
| 2 to 9a2 | Same procedure for steps 2 to 9a2 as specified in the procedure in clause 4.5.2.3                                                                                                                                                                                                                                   | -     | -                                          |
| 10 to 19 | Same procedure for steps 10 to 19 as specified in the procedure in clause 5.2A.1A.3                                                                                                                                                                                                                                 | -     | -                                          |

### 5.2A.1AA.4 Specific message contents

Same specific message content as in clause 5.2A.1A.4 with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

## 5.2A.2 Generic Default Radio Bearer Establishment, UE Test Mode Activated (State 3A-RF)

In tests referring to test mode State 3A-RF, in order to avoid any uncontrollable transmission of uplink U-plane data, test mode State 4A-RF (specified in 5.2A.3) may be used and configured instead.

### 5.2A.2.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 5.2A.2.2 Definition of system information messages

The default system information messages are used.

### 5.2A.2.3 Procedure

**Table 5.2A.2.3-1: UE registration with default EPS bearer establishment and test mode activation procedures**

| Step    | Procedure                                                                   | Message Sequence |                                |
|---------|-----------------------------------------------------------------------------|------------------|--------------------------------|
|         |                                                                             | U - S            | Message                        |
| 1       |                                                                             | <--              | RRC: SYSTEM INFORMATION (BCCH) |
| 2 to 18 | Steps 2 to 18 as specified in the procedure in clause 5.2A.1A.3 take place. | -                | -                              |

For Rel-11 or higher UEs, that support *frequencyBandRetrieval\_r11*, where the UE has not sent all supported [band combinations in UECapabilityInformation](#) (Step 15 of table 5.2A.2.3-1) the following procedure shall be executed after the completion of the procedure in table 5.2A.2.3-1:

**Table 5.2A.2.3-2: Retrieval of additional UE capabilities for Rel-11 and higher UEs that support frequencyBandRetrieval\_r11**

| Step   | Procedure                                                                 | Message Sequence |         |
|--------|---------------------------------------------------------------------------|------------------|---------|
|        |                                                                           | U - S            | Message |
| 1 to 3 | Steps 1 to 3 as specified in the procedure in clause 5.2A.7.3 take place. | -                | -       |

### 5.2A.2.4 Specific message contents

All specific message contents shall be referred to clause 5.2A.1A.4 with the exception below:

- In addition to any other conditions use the condition CEmodeB if the test case specifically tests CE mode B else use condition CEmodeA.

## 5.2A.2A DC MCG/SCG Dedicated RB established, UE Test Mode Activate (State 3A-RF-DC1)

### 5.2A.2A.1 Initial conditions

System Simulator:

- 2 cells, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Generic Default RB Established, UE Test Mode Activated (State 3A-RF).

### 5.2A.2A.2 Definition of system information messages

The default system information messages are used.

### 5.2A.2A.3 Procedure

The establishment of MCG/SCG dedicated radio bearer connection is assumed to always be mobile terminated.

**Table 5.2A.2A.3-1: Procedure for MCG/SCG dedicated bearer establishment**

| Step | Procedure                                                                                                                                                                                            | Message Sequence |                                                                                         |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|-----------------------------------------------------------------------------------------|
|      |                                                                                                                                                                                                      | U - S            | Message                                                                                 |
| 1    | The SS adds the PSCell and configures a new SCG data radio bearer and the associated dedicated EPS bearer context.                                                                                   | <--              | RRC: RRCConnectionReconfiguration<br>NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT REQUEST |
| 2    | The UE transmits an RRCConnectionReconfigurationComplete message to confirm the establishment of the new SCG data radio bearer, associated with the dedicated EPS bearer context in the NAS message. | -->              | RRC: RRCConnectionReconfigurationComplete                                               |
| 3    | The UE transmits an ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT message.                                                                                                                            | -->              | NAS: ACTIVATE DEDICATED EPS BEARER CONTEXT ACCEPT                                       |

#### 5.2A.2A.4 Specific message contents

All specific message contents shall be referred to clause 5.2A.1A.4, with exceptions as below.

**Table 5.2A.2A.4-1: RRCConnectionReconfiguration (Step 1, Table 5.2A.2A.3-1)**

|                                                                           |
|---------------------------------------------------------------------------|
| Derivation Path: 36.508, Table 4.6.1-8 using condition PSCell_Add_SCG_DRB |
|---------------------------------------------------------------------------|

### 5.2A.2AA Generic Default Radio Bearer Establishment, UE Test Mode Activated in cell supporting BL/CE UE (State 3A-RF-CE)

In tests referring to test mode State 3A-RF-CE, in order to avoid any uncontrollable transmission of uplink U-plane data, test mode State 4A-RF-CE (specified in 5.2A.3AA) may be used and configured instead.

#### 5.2A.2AA.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

#### 5.2A.2AA.2 Definition of system information messages

The default system information messages are used with the exceptions below.

**Table 5.2A.2AA.2-1: MasterInformationBlock**

|                                                                                                                                           |

| }                                                                          |           |                                                                                                          |                                          |

| Condition  | Explanation                           |
|------------|---------------------------------------|
| 1.4 MHz BW | Used for cells with 1.4 MHz bandwidth |
| 3 MHz BW   | Used for cells with 3 MHz bandwidth   |
| 5 MHz BW   | Used for cells with 5 MHz bandwidth   |
| 10 MHz BW  | Used for cells with 10 MHz bandwidth  |
| 15 MHz BW  | Used for cells with 15 MHz bandwidth  |
| 20 MHz BW  | Used for cells with 20 MHz bandwidth  |

### 5.2A.2AA.3 Procedure

For RF testing of BL-UE use the procedure in Table 5.2A.2AA.3-1. For RF testing of non-BL UE supporting CE use the procedure in Table 5.2A.2AA.3-2.

**Table 5.2A.2AA.3-1: UE registration with default EPS bearer establishment and test mode activation procedures**

| Step    | Procedure                                                                   | Message Sequence |                                   |
|---------|-----------------------------------------------------------------------------|------------------|-----------------------------------|
|         |                                                                             | U - S            | Message                           |
| 1       |                                                                             | <--              | RRC: SYSTEM INFORMATION (BR-BCCH) |

### 5.2A.2B DC Split Default RB established, UE Test Mode Activate (State 3A-RF-DC2)

#### 5.2A.2B.1 Initial conditions

Same as in sub-clause 5.2A.2A.1.

#### 5.2A.2B.2 Definition of system information messages

The default system information messages are used.

#### 5.2A.2B.3 Procedure

The establishment of split dedicated radio bearer connection is assumed to always be mobile terminated.

**Table 5.2A.2B.3-1: Procedure for Dual Connectivity Split default bearer establishment**

| Step | Procedure                                                                                            | Message Sequence |                                           |
|------|------------------------------------------------------------------------------------------------------|------------------|-------------------------------------------|
|      |                                                                                                      | U - S            | Message                                   |
| 4    | The SS adds a PSCell and configures new split data radio bearer                                      | <--              | RRC: RRCConnectionReconfiguration         |
| 5    | The UE transmits an RRCConnectionReconfigurationComplete message to confirm the establishment of the | -->              | RRC: RRCConnectionReconfigurationComplete |

|  |                                                                         |  |  |
|--|-------------------------------------------------------------------------|--|--|
|  | split data radio bearer with UL transmission of PDCP SDUs on the PSCell |  |  |
|--|-------------------------------------------------------------------------|--|--|

5.2A.2B.4 Specific message contents

All specific message contents shall be referred to clause 5.2A.1A.4, with exceptions as below.

**Table 5.2A.2B.4-1: RRCConnectionReconfiguration (Step 4, Table 5.2A.2A.3-1)**

|                                                                             |
|-----------------------------------------------------------------------------|
| Derivation Path: 36.508, Table 4.6.1-8 using condition PSCell_Add_Split_DRB |
|-----------------------------------------------------------------------------|

5.2A.2C Generic Default Radio Bearer Establishment, UE Test Mode Activated, V2X Setup (State 3A-RF-V2X)

5.2A.2C.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- 1 V2V transmitter for receiver characteristics or 1 V2V receiver for transmitter characteristics
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

5.2A.2C.2 Definition of system information messages

The default system information messages are used with the exceptions below:

**Table 5.2A.1B.2-1: SystemInformationBlockType21**

|                                           |
|-------------------------------------------|
| Derivation Path: 36.508 Table 4.4.3.3-19. |
|-------------------------------------------|

5.2A.2C.3 Procedure

For RF testing of V2X Communication, use the same procedure as in clause 5.2A.2.3.

5.2A.2C.4 Specific message contents

All specific message contents shall be referred to clause 5.2A.1A.4, with exceptions as below:

**Table 5.2A.2A.4-1: RRCConnectionReconfiguration (Step 16, Table 5.2A.1A.3-1)**

|                                                                              |
|------------------------------------------------------------------------------|
| Derivation Path: 36.508, Table 4.6.1-8B using conditions SETUP and SCHEDULED |
|------------------------------------------------------------------------------|

5.2A.3 Loopback Activation without looped data (State 4A-RF)

Editor’s note: Test mode State 4A-RF is used and configured as an alternative to test mode State 3A-RF, to avoid any uncontrollable transmission of uplink U-plane data.

5.2A.3.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Generic RB Establishment state, UE Test Mode Activated (State 3A-RF).

### 5.2A.3.2 Definition of system information messages

The default system information messages are used.

### 5.2A.3.3 Procedure

**Table 5.2A.3.3-1: UE registration with default EPS bearer establishment and test mode activation procedures**

| Step | Procedure                                                                                                                                                      | Message Sequence |                                                                      |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------------|
|      |                                                                                                                                                                | U - S            | Message                                                              |
| 1    | The SS transmits a CLOSE UE TEST LOOP message to enter the UE test loop mode.                                                                                  | <--              | RRC: <i>DLInformationTransfer</i><br>TC: CLOSE UE TEST LOOP          |
| 2    | The UE transmits a CLOSE UE TEST LOOP COMPLETE message to confirm that loopback entities for the radio bearer(s) have been created and loop back is activated. | -->              | RRC: <i>ULInformationTransfer</i><br>TC: CLOSE UE TEST LOOP COMPLETE |

### 5.2A.3.4 Specific message contents

All specific message contents shall be referred to clause 4.5.4.4, with the exceptions below.

**Table 5.2A.3.4-1: CLOSE UE TEST LOOP (in the preamble)  
(Step 1 in Table 5.2A.3.3-1)**

### 5.2A.3A DC MCG/SCG DRBs Loopback Activation without looped data (State 4A-RF-DC1)

Editor's note: Test mode State 4B-RF is used and configured as an alternative to test mode State 3B-RF, to avoid any uncontrollable transmission of uplink U-plane data.

5.2A.3A.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in DC MCG/SCG Dedicated RB established, UE Test Mode Activated (State 3A-RF-DC1).

5.2A.3A.2 Definition of system information messages

Same as in sub-clause 5.2A.3.2.

5.2A.3A.3 Procedure

Same as in sub-clause 5.2A.3.3.

5.2A.3A.4 Specific message contents

Same as in sub-clause 5.2A.3.4.

5.2A.3AA Loopback Activation without looped data in cell supporting BL/CE  
UE (State 4A-RF-CE)

Editor's note: Test mode State 4A-RF-CE is used and configured as an alternative to test mode State 3A-RF-CE, to avoid any uncontrollable transmission of uplink U-plane data.

5.2A.3AA.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Generic RB Establishment state, UE Test Mode Activated (State 3A-RF).

5.2A.3AA.2 Definition of system information messages

The default system information messages are used with the exceptions below.

Table 5.2A.3AA.2-1: *MasterInformationBlock*

|                                                                                                                                           |

### 5.2A.3AA.3 Procedure

**Table 5.2A.3.3-1: UE registration with default EPS bearer establishment and test mode activation procedures**

| Step | Procedure                                                                                                                                                      | Message Sequence |                                                                      |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|----------------------------------------------------------------------|
|      |                                                                                                                                                                | U - S            | Message                                                              |
| 1    | The SS transmits a CLOSE UE TEST LOOP message to enter the UE test loop mode.                                                                                  | <--              | RRC: <i>DLInformationTransfer</i><br>TC: CLOSE UE TEST LOOP          |
| 2    | The UE transmits a CLOSE UE TEST LOOP COMPLETE message to confirm that loopback entities for the radio bearer(s) have been created and loop back is activated. | -->              | RRC: <i>ULInformationTransfer</i><br>TC: CLOSE UE TEST LOOP COMPLETE |

### 5.2A.3AA.4 Specific message contents

Same as in clause 5.2A.3.4.

## 5.2A.3B DC Split DRB Loopback Activation without looped data (State 4A-RF-DC2)

**Editor's note:** Test mode State 4C-RF is used and configured as an alternative to test mode State 3C-RF, to avoid any uncontrollable transmission of uplink U-plane data.

### 5.2A.3B.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in DC Split Default RB established, UE Test Mode Activated (State 3A-RF-DC2).

### 5.2A.3B.2 Definition of system information messages

Same as in sub-clause 5.2A.3.2.

### 5.2A.3B.3 Procedure

Same as in sub-clause 5.2A.3.3.

### 5.2A.3B.4 Specific message contents

Same as in sub-clause 5.2A.3.4.

## 5.2A.3C Loopback Activation without looped data, V2X Setup (State 4A-RF-V2X)

**Editor's note:** Test mode State 4A-RF-V2X is used and configured as an alternative to test mode State 3A-RF-V2X, to avoid any uncontrollable transmission of uplink U-plane data.

### 5.2A.3C.1 Initial conditions

System Simulator:

- 1 cell, default parameters.

- 1 GNSS simulator
- 1 V2V transmitter for receiver characteristics or 1 V2V receiver for transmitter characteristics
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The UE shall be in Generic RB Establishment state, UE Test Mode Activated, V2X Setup (State 3A-RF-V2X).

### 5.2A.3C.2 Definition of system information messages

Same as in sub-clause 5.2A.3.2.

### 5.2A.3C.3 Procedure

Same as in sub-clause 5.2A.3.3.

### 5.2A.3C.4 Specific message contents

All specific message contents shall be referred to clause 5.2A.3.4, with exceptions as below:

**Table 5.2A.3C.4-1: ACTIVATE TEST MODE: V2X Communication**

Derivation Path: 36.508, Table 4.7A-1 using condition UE TEST LOOP MODE E

**Table 5.2A.3C.4-2: CLOSE UE TEST LOOP: V2X Communication**

Derivation Path: 36.508, Table 4.7A-3 using condition UE TEST LOOP MODE E

## 5.2A.4 Procedure to configure SCC

**Table 5.2A.4.-1: UE RRC reconfiguration with sCELLToAdd**

| Step | Procedure                                                                                                  | Message Sequence |                                                 |
|------|------------------------------------------------------------------------------------------------------------|------------------|-------------------------------------------------|
|      |                                                                                                            | U - S            | Message                                         |
| 1    | The SS transmits an <i>RRConnectionReconfiguration(sCellToAddModList)</i> message to establish the SCC(s). | <--              | RRC: <i>RRConnectionReconfiguration</i>         |
| 2    | The UE transmits an <i>RRConnectionReconfigurationComplete</i>                                             | -->              | RRC: <i>RRConnectionReconfigurationComplete</i> |
| 3    | If not all SCCs are established, then repeat step 1 and 2.                                                 |                  |                                                 |

### 5.2 A.41. Specific message contents

All specific message contents shall be referred to clause 4.5.2A.4, with exceptions as below.

#### 5.2A.4.1.1 Exceptions for all CA tests

RRConnectionReconfiguration

## 5.2A.7 Procedure to retrieve additional UE Capabilities for Rel-11 and higher UEs that support frequencyBandRetrieval\_r11

### 5.2A.7.1 Initial conditions

System Simulator:

- 1 cell, default parameters.
- The procedure shall be performed under ideal radio conditions as defined in clause 5

User Equipment:

- The Test USIM shall be inserted.

### 5.2A.7.2 Definition of system information messages

The default system information messages are used.

### 5.2A.7.3 Procedure

**Table 5.2A.7.3-1: Procedure to retrieve additional UE capabilities**

| Step | Procedure                                                                                                                                                                                                    | Message Sequence |                                     |

### 5.5.1.3 SRB and DRB combinations

#### 5.5.1.3.1 Combinations on DL-SCH and UL-SCH

##### 5.5.1.3.1.1 SRB1 and SRB2 for DCCH + n x AM DRB + m x UM DRB, where n=1 and m=0

This SRB and DRB combination is setup in UE Registration procedure and the Generic Radio Bearer Establishment with UE Test Mode Activated using specific message content - the default *RRCConnectionReconfiguration* message with condition SRB2-DRB(n, m).

## 5.6 Test environment for NTN testing

This section defines the test environment which applies to all RF and DEMOD test cases executed for IoT NTN UEs, unless otherwise specified.

## 5.6.1 UE location

UE shall determine its location during the test using any of the following means.

1. UE location for the test shall be provided to the UE via pre-configured means. During the test the UE location is not expected to change unless explicitly stated as a requirement for the test.
2. Other options such as providing UE location via AT command are not precluded.

UE location provided to the UE before the start of the test for RF Tx/Rx and DEMOD test cases for both GSO and NGSO config is as follows:

Longitude: 121.56076999

Latitude: 25.08439333 (NGSO satellites), 55.0 (GSO satellites)

Altitude: 0

## 5.6.2 Ephemeris Information

Ephemeris information in this section has been generated as described in clause 5 in TR36.905 [77].

### 5.6.2.0 Assumptions for Ephemeris generation

This section provides the assumptions used to generate Ephemeris information for GSO and NGSO orbits:

1. Ephemeris information is generated for 3 types of satellites: GSO (inclination equal to 7°), LEO-600 and LEO-1200.
2. UE location is as defined in section 5.6.1.
3. PositionVelocity state vectors are used for EphemerisInfo signalling.
4. For GSO, an altitude of 35,786 km is considered. For NGSO, 2 different altitudes are considered: 600 km and 1200 km.
5. One-way delay between UE and satellite to be in the range of 119.375 ms to 128.79 ms for GSO and between 2 ms (lowest value for LEO orbit 600 km) and 6.67 ms (highest value for LEO orbit 1200 km)
6. Doppler (frequency) shift up to [0.93] ppm for GSO and up to 24ppm for NGSO (LEO-600).

### 5.6.2.1 Ephemeris for zero Doppler conditions

All eMTC NTN test cases defined in sections 6, 7 and 8 in TS 36.521-4 [73], unless otherwise stated, shall use the ephemeris configuration in tables 5.6.2.1-1 to 5.6.2.1-3, corresponding to zero Doppler and constant delay for the type of satellite under test, keeping such information constant throughout the duration of each measurement in the test:

- In case UE supports only NGSO satellites, ephemeris values in Table 5.6.2.1-3 shall be used except for test cases 8.2.1.1.1 and 8.3.1.1.1, where ephemeris values in Table 5.6.1.2.1-2 shall be used.

- In case UE supports both GSO and NGSO satellites, ephemeris values in Table 5.6.1.2.1-1 shall be used except for test cases 8.2.1.1.1 and 8.3.1.1.1, where ephemeris values in Table 5.6.1.2.1-2 shall be used.

## 5.6.3 eMTC NTN message contents for RF Tx/Rx, Demodulation tests

### 5.6.3.1 ServingSatelliteInfo-r17 values in SIB31

The *ServingSatelliteInfo-r17* values including the *EphemerisInfo-r17* values in SIB31 shall be periodically signalled to the UE during test based on the Ephemeris information in clause 5.6.2 (kept constant throughout the duration of each measurement in the test).

## 6 Test environment for Signalling test

### 6.1 Requirements of test equipment

The requirements of test equipment specified in this subclause apply to Signalling test cases defined in TS 36.523-1 [18], in addition to the common requirements of test equipment specified in clause 4.2 of this specification.

Test equipment shall be able to simulate cells of Radio Access Technology (RAT) E-UTRA, UTRA, GSM or HRPD / 1xRTT. Regardless of respective RAT, the overall number and configuration of cells to be simulated simultaneously by test equipment shall not exceed the resources specified in the following Table 6.1-1:

**Table 6.1-1: Maximum resources in terms of number / configuration of cells to be simulated simultaneously in a test setup**

| Simulation of                                                                                                                                                                                                 | Max. number / configuration of cells (SISO / SIMO) | Max. number / configuration of cells (MIMO) |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|---------------------------------------------|
| E-UTRA single-mode networks (FDD or TDD)                                                                                                                                                                      | 3x cells                                           | n/a                                         |
| E-UTRA dual-mode networks (FDD and TDD)                                                                                                                                                                       | 3x cells                                           | n/a                                         |
| E-UTRA networks involving Carrier Aggregation                                                                                                                                                                 | 4x cells                                           | n/a                                         |

| Mixed E-UTRA / GSM networks                                                                                                                                                                                   | 3x cells                                           | n/a                                         |
| Mixed E-UTRA / HRPD or 1xRTT networks                                                                                                                                                                         | 3x cells                                           | n/a                                         |
| Mixed E-UTRA / UTRA / GSM networks                                                                                                                                                                            | 3x cells                                           | n/a                                         |
| Note 1: No differentiation between cell configuration types (as defined in clause 6.3.3) here, because these types are relevant to specific test cases and their TTCN-3 implementation only.                  |                                                    |                                             |
| Note 2: Only network scenarios specified in clause 4.4.1 and 6.3.2.1 have been covered.                                                                                                                       |                                                    |                                             |
| Note 3: In case of Carrier Aggregation, each cell can act as a PCell, an SCell, or a standalone cell (not used as a CA component carrier). In Release 10 a maximum of 1 SCell can be aggregated with a PCell. |                                                    |                                             |
| Note 4: Virtual Cells are not included in the maximum cell number as they do not require resources in the SS.                                                                                                 |                                                    |                                             |

Exceptions to the requirements outlined above are possible but need special evidence to be provided explicitly in the test case prose and should be allowed only if the test case purpose cannot be met otherwise.

Test equipment shall be able to simulate one or more UEs with PC5 interface for sidelink direct communication and/or sidelink direct discovery or V2X sidelink communication.

### 6.2 Reference test conditions

The reference test conditions specified in this subclause apply to all Signalling test cases defined in TS 36.523-1 [18] unless otherwise specified, in addition to the common reference test conditions specified in subclause 4.3 of this specification.

#### 6.2.1 Physical channel allocations

##### 6.2.1.1 Antennas

If the UE has two or more Rx antennas, the same downlink signal is applied to each one, except if MIMO is tested. All UE Rx antennas shall be connected.

If the UE has one Rx antenna, the downlink signal is applied to it.

##### 6.2.1.2 Downlink physical channels and physical signals

Power allocation of downlink physical channels for Signalling test cases is specified in table 6.2.1.2-1.

**Table 6.2.1.2-1: Power allocation for OFDM symbols and reference signals for Signalling test cases**

| Physical Channel                  | EPRE Ratio                                    | Comment                                                                               |
|-----------------------------------|-----------------------------------------------|---------------------------------------------------------------------------------------|
| PBCH                              | PBCH_RA = 0 dB                                |                                                                                       |
|                                   | PBCH_RB = 0 dB                                |                                                                                       |
| PSS                               | PSS_RA = 0 dB                                 |                                                                                       |
| SSS                               | SSS_RA = 0 dB                                 |                                                                                       |
| PCFICH                            | PCFICH_RB = 0 dB                              |                                                                                       |
| PDCCH                             | PDCCH_RA = 0 dB                               |                                                                                       |
|                                   | PDCCH_RB = 0 dB                               |                                                                                       |
| PDSCH (BCCH, BR-BCCH, CCCH, PCCH) | PDCCH_RA = 0 dB                               | To be consistent with default physical channel configuration in TS 36.331 [17], 9.2.4 |
|                                   | PDCCH_RB = 0 dB                               |                                                                                       |
| PDSCH (DCCH, DTCH)                | PDSCH_RA = -3 dB                              | To reduce interference from PDSCH of intra-frequency neighbour cells                  |
|                                   | PDSCH_RB = -3 dB                              | To reduce interference from PDSCH of intra-frequency neighbour cells                  |
| PHICH                             | PHICH_RB = 0 dB                               |                                                                                       |
| PMCH                              | PMCH_RA = 0 dB                                |                                                                                       |
| MBSFN RS                          | MBSFN_RS_RA = 0dB                             |                                                                                       |
| WUS                               | As per <i>WUS-Config-v1560.powerBoost-r15</i> | According to TS 36.213 [29] clause 5.2 and the contents of Table 4.6.3-5              |
| PRS                               | PRS_RA = 0 dB                                 |                                                                                       |

NOTE: MBSFN RS is not defined downlink physical channels in TS 36.211 [35].

### 6.2.1.3 Mapping of downlink physical channels and signals to physical resources

Same as clause 4.3.3.3

### 6.2.1.4 Uplink physical channels and physical signals

The SideLink Physical channels and Physical signals used and their powers relative to configured SS-UE power are specified in table 6.2.1.4-1.

**Table 6.2.1.4-1: Relative power allocation for OFDM symbols and signals for SideLink test cases**

| Physical Channel | EPRE Ratio |
|------------------|------------|
| PSSS             | 0 dB       |
| SSSS             | 0 dB       |
| PSDCH            | 0 dB       |
| PSBCH            | 0 dB       |
| PSCCH            | 0 dB       |
| PSSCH            | 0 dB       |

### 6.2.1.5 Mapping of uplink physical channels and signals to physical resources

[FFS].

## 6.2.2 Signal levels

### 6.2.2.1 Downlink signal levels

The default settings of suitable cells and non-suitable cells for E-UTRA are specified in table 6.2.2.1-1.

Cells which are expected to be undetectable for UE under test shall fulfil the condition of non-suitable "Off" cell in table 6.2.2.1-1.

**Table 6.2.2.1-1: Default settings of suitable / non-suitable cells**

| Power level type                                                                                                                                                | E-UTRAN<br>(Note 1-3) |             | UTRAN                                | GERAN                |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-------------|--------------------------------------|----------------------|
|                                                                                                                                                                 | Unit                  | Power level |                                      |                      |
| Serving cell                                                                                                                                                    | dBm/15kHz             | -85         | Table 6.1.1 (FDD) / 6.1.6a (TDD) [5] | Table 6.1.10 [5]     |
| Suitable neighbour intra-frequency cell                                                                                                                         | dBm/15kHz             | -91         | Table 6.1.2 (FDD) / 6.1.7 (TDD) [5]  | n/a                  |
| Suitable neighbour inter-frequency cell                                                                                                                         | dBm/15kHz             | -97         | Table 6.1.2 (FDD) / 6.1.7 (TDD) [5]  | Table 6.1.10 [5]     |
| Non-suitable cell                                                                                                                                               | dBm/15kHz             | -115        | Table 6.1.3 (FDD) / 6.1.8 (TDD) [5]  | Table 6.1.11 [5]     |
| Non-suitable "Off" cell                                                                                                                                         | dBm/15kHz             | ≤ -145      | Table 6.1.4 (FDD) / 6.1.9 (TDD) [5]  | Cell is switched-off |
| Note 1: The power level is specified in terms of cell-specific RS EPRE instead of RSRP as RSRP is a measured value and cannot be directly controlled by the SS. |                       |             |                                      |                      |
| Note 2: Power levels are specified based on the precondition that q-Hyst, a3-Offset and hysteresis are 0 dB.                                                    |                       |             |                                      |                      |
| Note 3: The power level is specified at each UE Rx antenna.                                                                                                     |                       |             |                                      |                      |

The default signal level uncertainty is specified in table 6.2.2.1-2 for any level specified, unless a tighter uncertainty is specified by a test case in TS 36.523-1 [18].

**Table 6.2.2.1-2: SS signal level uncertainty**

|                                                                                                                                                                                                     | Absolute signal level<br>uncertainty for each cell | Relative signal level<br>uncertainty between<br>multiple cells |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|----------------------------------------------------------------|
| Intra-frequency                                                                                                                                                                                     | +/-3 dB at each test port                          | +/-3 dB                                                        |
| Inter-frequency                                                                                                                                                                                     | +/-3 dB at each test port                          | See Note 1                                                     |
| Note 1: For Inter-frequency cells the relative signal level uncertainty between multiple cells is determined by the absolute uncertainty of each cell, and does not have any additional constraint. |                                                    |                                                                |

Cell-specific RS EPRE setting should be equal to or higher than -115 dBm except for Non-suitable "Off" cell. The figure is chosen to ensure that for all bands the DL signal is within the RSRP measurement range specified in TS 36.133 [39] clauses 9.1.2 and 9.1.3, taking into account the SS default absolute signal level uncertainty.

NOTE: (The power spectral density of a white noise source; specified in TS 36.133 [39]) can be assumed to be -Infinity [dBm/15kHz] for all intra and inter frequency test cases. It is applicable to both idle mode and connected mode in TS 36.523-1 [18], unless otherwise specified in specific test cases.

For test cases requiring AWGN (Noc), the default level uncertainty is specified in table 6.2.2.1-3 for any level specified, unless a tighter uncertainty is specified by a test case in TS 36.523-1 [18].

**Table 6.2.2.1-3: SS AWGN level uncertainty**

|                 | Absolute AWGN level<br>uncertainty for each<br>frequency |
|-----------------|----------------------------------------------------------|
| Intra-frequency | +/-3 dB at each test port                                |
| Inter-frequency | +/-3 dB at each test port                                |

## 6.2.2.2 Measurement accuracy and side conditions

Measurement accuracy shall be considered in setting downlink power levels.

RSRP measurement accuracy in E-UTRA RRC\_IDLE state is specified in table 6.2.2.2-1, derived from TS 36.133 [39] clauses 4.2.2.3 and 4.2.2.4. This measurement accuracy is applicable to idle mode test cases specified in TS 36.523-1 [18]. For the serving cell and suitable neighbour cells, the following side conditions shall be satisfied including the effect of signal level uncertainty.

- RSRP  $\geq$  -121 dBm
- RSRP  $\hat{E}_s/I_{ot} \geq$  -4 dB
- SCH\_RP  $\geq$  -121 dBm
- SCH  $\hat{E}_s/I_{ot} \geq$  -4 dB

**Table 6.2.2.2-1: RSRP measurement accuracy in E-UTRA RRC\_IDLE state**

|                 | Absolute RSRP measurement accuracy | Relative RSRP measurement accuracy |
|-----------------|------------------------------------|------------------------------------|
| Intra-frequency | +/-6 dB                            | +/-3 dB                            |
| Inter-frequency | +/-6 dB                            | +/-5 dB                            |

RSRP measurement accuracy in E-UTRA RRC\_CONNECTED state is specified in table 6.2.2.2-2, derived from TS 36.133 [39] clauses 9.1.2 and 9.1.3 selecting Normal condition. The ranges and side conditions in TS 36.133 [39] clauses 9.1.2 and 9.1.3 apply. This measurement accuracy is applicable to connected mode test cases specified in TS 36.523-1 [18]. For the serving cell and suitable neighbour cells, the following side conditions shall be satisfied including the effect of signal level uncertainty.

- RSRP  $\geq$  -124 dBm
- RSRP  $\hat{E}_s/I_{ot} >$  -6 dB-  $I_o$  : -118 dBm/15kHz ... -70 dBm/BWChannel (for absolute RSRP measurement accuracy)
- $I_o$  : -118 dBm/15kHz ... -50 dBm/BWChannel (for relative RSRP measurement accuracy)

**Table 6.2.2.2-2: RSRP measurement accuracy in E-UTRA RRC\_CONNECTED state**

|                 | Absolute RSRP measurement accuracy | Relative RSRP measurement accuracy |
|-----------------|------------------------------------|------------------------------------|
| Intra-frequency | +/-6 dB                            | +/-3 dB                            |
| Inter-frequency | +/-6 dB                            | +/-6 dB                            |

Signal level difference between the serving cell and any suitable intra-frequency neighbour cell shall be nominally 6 dB to satisfy the measurement accuracy requirement and its side conditions specified in TS 36.133 [39]. This figure is chosen based on the following preconditions for intra-frequency cells.

- Interference to reference signals from reference signals of other cells is eliminated by Physical Cell Identity shifting as specified in TS 36.523-3 [20].
- Interference to reference signals from PDSCH with SI-RNTI of other cells is negligible because it's sparse enough.
- Interference to reference signals from PDSCH of the serving cell is controlled by satisfying the conditions of clauses 6.2.2.1 and 6.2.2.2.
- Interference to P-SS/S-SS from P-SS/S-SS of other cells is eliminated by frame timing shifting as specified in TS 36.523-3 [20].
- Interference to P-SS/S-SS from PDSCH of other cells is eliminated by PDSCH resource allocation as specified in TS 36.523-3 [20].

### 6.2.2.3 Uplink signal levels

The default settings of SS-UE is specified in table 6.2.2.3-1.

**Table 6.2.2.3-1: Default settings of SS-UE power**

| Power level type      | SS-UE (Note 1) |             | Absolute signal level uncertainty for each SS-UE |
|-----------------------|----------------|-------------|--------------------------------------------------|
|                       | Unit           | Power level |                                                  |
| SS-UE (default value) | dBm/15kHz      | -85         | +/-3 dB                                          |

|                                                                               |
|-------------------------------------------------------------------------------|
| Note 1: The power level is specified at each Rx antenna of the UE under test. |
|-------------------------------------------------------------------------------|

## 6.2.3 Default test frequencies

The default channel bandwidth of 1.4/3/5/10/20 MHz is applied to the signalling test. The test frequencies are defined so that no frequency overlapping takes place, in order to avoid unnecessary inter-frequency interference.

For sidelink direct discovery, the default channel bandwidth of 5/10/15/20 MHz is applied to the signalling test for all ProSe bands except band 14 where default bandwidth is 5/10 MHz and bands 31, 72 where default bandwidth is 5 MHz. For sidelink direct communication the default channel bandwidth of 10 MHz is applied to the signalling test except bands 31, 72 where bandwidth is 5 MHz.

For V2X communication, the default channel bandwidth of 10/20 MHz is applied to the signalling test for all V2X bands.

For eMTC NTN, the default channel bandwidth of 1.4 MHz is applied to the signalling test for all eMTC NTN bands.

For Band 13, Band 18, Band 31 and Band 72, only one test frequency  $f_1$  is defined. All operating Bands except Band 13, Band 18, Band 31 and Band 72 can accommodate at least two test frequencies  $f_1$  and  $f_2$  ( $f_1 < f_2$ ). An additional test frequency  $f_3$  can be defined for the operating Bands with at least triple of the default bandwidth. The fourth test frequency  $f_4$  ( $f_3 < f_1 < f_4 < f_2$ ) is applicable to the operating Bands which have at least quadruple of the default bandwidth.

To the single cell signalling test with channel bandwidth different from the default bandwidths of the operating bands, Mid Range defined in clause 4.3.1 is applied.

### 6.2.3.1 Test frequencies for signalling test

Test frequencies for signalling test are specified in table 6.2.3.1-1, 6.2.3.1-1a, 6.2.3.1-1d and 6.2.3.1-1e for FDD and table 6.2.3.1-2 and 6.2.3.1-2a for TDD. Except  $f_4$  and a few  $f_1$ ,  $f_5$  which are specified according to EARFCN of the concerned operating Bands, the majority of the test frequencies in table 6.2.3.1-1, 6.2.3.1-1a, 6.2.3.1-1d, 6.2.3.1-1e, 6.2.3.1-2 and 6.2.3.1-2a are specified in terms of Low, Mid and High which are referred to the Low Range, Mid Range and High Range in clause 4.3.1.

Test frequencies for signalling test of MFBI are specified in table 6.2.3.1-1b, 6.2.3.1-1c and 6.2.3.1-1f for FDD and table 6.2.3.1-2b and 6.2.3.1-2c for TDD. Except  $f_4$  and a few  $f_1$ ,  $f_5$  which are specified according to EARFCN of the concerned operating Bands, the majority of the test frequencies in table 6.2.3.1-1b, 6.2.3.1-1c, 6.2.3.1-1d, 6.2.3.1-1e, 6.2.3.1-2b and 6.2.3.1-2c are specified in terms of Low, Mid and High which are referred to the Low Range, Mid Range and High Range in clause 4.3.1.

**Table 6.2.3.1-1: Test frequencies for E-UTRA FDD(5MHz)**

| E-UTRA<br>Operating<br>Band | Bandwidth<br>[MHz] | f1, f5          |                 | f2, f6          |                 | f3, f7          |                 | f4              |                 |
|-----------------------------|--------------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
|                             |                    | N <sub>UL</sub> | N <sub>DL</sub> | N <sub>UL</sub> | N <sub>DL</sub> | N <sub>UL</sub> | N <sub>DL</sub> | N <sub>UL</sub> | N <sub>DL</sub> |
| 1                           | 60                 | Mid             | Mid             | High            | High            | Low             | Low             | 18350           | 350             |
| 2                           | 60                 | Mid             | Mid             | High            | High            | Low             | Low             | 18950           | 950             |
| 3                           | 75                 | Mid             | Mid             | High            | High            | Low             | Low             | 19625           | 1625            |
| 4                           | 45                 | Mid             | Mid             | High            | High            | Low             | Low             | 20225           | 2225            |
| 5                           | 25                 | Mid             | Mid             | High            | High            | Low             | Low             | 20575           | 2575            |
| 6                           | 10                 | Low             | Low             | High            | High            | N/A             | N/A             | N/A             | N/A             |
| 7                           | 70                 | Mid             | Mid             | High            | High            | Low             | Low             | 21150           | 3150            |
